

A5. SOCIAL ENVIRONMENT

The peoples of the Study area are mostly from the ethnic group of Gorontalo, however, it is known that there are also small village settlements implanted by government sponsored migrations from Bali and Jawa islands (about 35,000 persons in 1999) and the Gorontalo Province becomes naturally composed of various peoples from the other areas of Indonesia. Indonesian language is widely spoken in Gorontalo Province like in North Sulawesi, but the Gorontalo people speaks also their distinct language.

In terms of political aspect, the first Governor of the Province was elected in September 2001 after its separation from North Sulawesi Province. In 2002, a new Kecamatan (Telaga Biru) has been established and it seems that there are also some other projects for new administrative boundaries; i.e. creation of new Kabupatens. The eventual changes are foreseen, like establishment of new Dinas at each administrative level.

A5.1 Present Social Conditions

The description in this section was prepared mainly on the basis of interviews with relevant government officials as well as the statistics compiled by BPS (Badan Pusat Statistik: National Statistics Office), "Kota Gorontalo Dalam Angka Tahun 2000" and "Kabupaten Gorontalo Dalam Angka 2000". In addition to these data, "Desa/Kelurahan profil (tahun 2000)" was collected for further investigation of the area.

(1) Demography and Population

The Study Area has one major urban center, Kota Gorontalo which is made up of three Kecamatan, namely Kota Barat, Kota Utara and Kota Selatan. On the basis of the demographic statistics of BPS of each of the Kecamatans, an aggregated demographic profile is prepared as below.

| City (Kota)/ District (Kab.) | Area (km ²) | Population (year 2000) | Average Pop. density/ km ² |
|---------------------------------|-------------------------|---------------------------|--|
| Whole Area | 2,623 (100 %) | 495,302 (100%) | 188.8 |
| Kota Gorontalo | 64.4 (2.5%) | 134,937 (27.2%) | 2,094.6 |
| Kabupaten Gorontalo | 2,558 (97.5%) | 360,365 (72.8%) | 140.9 |

Eleven Kecamatans of the study area consist of 204 villages (Desa and Kelurahan) in total and their demographic data and those of all the villages of the area are presented in the Tables A5.1.1 by Kecamatan and Table A5.1.2 by village. The population density varies from village to village, 6.2 persons of Desa Lonuo (situated in a mountainous area of Kec. Kabilia) to 6,370 of Desa Mongolato (Kec. Telaga) which is situated along the principal road beside Lake Limboto and some villages of Kota Selatan exceed even the order of 10,000. Only Kecamatan Limboto recorded a decrease of population between year 1990 and 2000.

Regarding the religion, Islam is the dominant religion in the area. Muslim is the majority (98.1% of the population) and among the minorities there are Christian (1.6%), and Hindu and Buddhist (0.4%).

(2) Education

Education is available up to high school level even in the rural area. Each Kecamatan has at least one senior high school and more than two junior high schools. Teachers' distribution is different from one Kecamatan to another, but the statistics show that the pupil/teacher ratio is maintained mostly between 12 and 16 pupils per teacher. There are normally more girls than boys in schools at all the educational level and both in Kabupaten and Kota.

(3) Health

Although detailed information is not available for the Kabupaten, a very high number of diarrhea cases was reported at the Kabupaten level (1999). In Kota Gorontalo, various digestive system disorder such as gastroenteritis, gastritis and appendicitis, were also commonly observed. In addition, respiratory and eye diseases and skin problem are also reported in Kota Gorontalo.

In terms of health related facilities, there exist various categories of facilities and their total number for Kota Gorontalo is 187 units and 1,011 for Kabupaten Gorontalo. As for the personnel in the sector, the statistics shows a low profile in the region. Only 100 doctors in total, either general or specialized doctors, are on service to treat more than 400,000 people in the area. Some specific information on each items is summarised in the following tables.

| <i>Facilities</i> | Kab. | Kota | <i>Medical Personnel</i> | Kab. | Kota |
|--------------------------------|-------|------|--------------------------|------|------|
| Public Hospital | 1 | 1 | Specialist | 2 | 9 |
| Special Hospital | 1 | 0 | General Practitioner | 66 | 23 |
| Public Health Centre | 33 | 6 | Dentist | 12 | 8 |
| Sub Public Health Centre | 176 | 32 | Pharmacist | 5 | 11 |
| Land mobile PHC | 27 | 6 | Health master | 7 | 1 |
| Sea mobile PHC | 3 | 1 | Nurse | 454 | 98 |
| PHC with beds | 12 | 1 | Other Paramedics | 178 | 105 |
| Dispensaries | 1 | 9 | | | |
| Integrated health service post | 754 | 127 | Total | 724 | 255 |
| Main Pharmacy | n.d. | 0 | | | |
| Drug stores | 3 | 4 | | | |
| Total | 1,011 | 187 | | | |

source: Sulawesi Utara Dalam Angka 1999

(4) Social Institutions

Table A5.1.3 summarises types of existing social institutions at the village level. These institutions are basically established by either government's initiatives or community's own initiatives or with religious background. According to the results of social survey conducted by the present study, although social institutions exist widely in the region, the residents seem to get a support from their own extended families in the case of flood disaster.

A5.2 Land Acquisition Procedures and Compensation

BPN (Badan Pertanahan Nasional: National Land Agency, formally called as Agralia by 1988) is the main agency to treat land related matters. The fundamental law concerned is "Undan Poko Agralia No.5/1960" established in 1960. The BPN is responsible for issuing land certificates in response to the application of land holders. The situation of the issue of land certificate in Kota Gorontalo is presented below.

The land certificates seen in the table are classified according to its utilization and owner as follows: HM (Hak Milik: Private land), HGB (Hak guna bangunam: for government building), P (Hak pakai: only its utilisation is permitted), PL (Hak pengelolaan: Public infrastructure such as Sea port) and HGU (Hak guna usaha: only agricultural use is

permitted).

Land Certificates Issued in Kota Gorontalo111 (From 1961 to Sept. 1997)

| No. | Kecamatan | HM | HGB | P | PL | HGU | Total |
|-----|--------------|--------|-------|------|----|-----|--------|
| 1 | Kota Utara | 6,664 | 818 | 141 | - | - | 7,623 |
| 2 | Kota Barat | 3,126 | 190 | 109 | 1 | - | 3,426 |
| 3 | Kota Selatan | 9,419 | 406 | 1349 | - | 3 | 10,250 |
| | TOTAL | 19,209 | 1,414 | 672 | 1 | 3 | 21,299 |

[Note] 1) Before BPN (1960 - 1988) = 12,272 lots; Annual average = 438

2) After BPN (1989 - 1997) = 9,027; Annual average = 1,128

In terms of land utilization, each of the three Kecamatans of Kota Gorontalo has its own characteristics. For example, Kota Utara is rich in Sawah (rice paddy) and residential areas are concentrated in Kota Selatan. The BPN's map of land property shows most of the land along the principal rivers and outflow of the Lake Limboto is recognized as "Hak milik adat (traditional private property)".

But here, the meaning of "adat (custom, tradition)" seems different from that in Minahasa region, because there should not be "Tanah milik adat (tanah adat: traditional land)" in Gorontalo Province, which is seen only in Minahasa region. Although all the land in Minahasa is considered as "Tanah swapraja" (Tanah Negra: state owned land), people live and cultivate for a long time, often for more than one generation, and the people there come to consider that the land belonged to themselves. Since some of the residents in Gorontalo had lived in Minahasa before and called their land as "Tanah adat", they maybe adopted the same term to their using lands in Gorontalo.

(1) Land acquisition procedures

For the government to acquire the lands which are already occupied and used, there are two alternatives. First, government assists the people to move from the flood prone areas and gives in return compensation in form of money. By doing so, the people will be able to look for new land to build their houses. Second option is that government provides the people with land of safe area for their use. In this alternative, government is supposed to obtain land by itself and then give to the persons to be moved.

For land acquisition procedures, two sets of regulations below are concerned. In addition to these, Keppres Number 2 (Keppres No.21 / 1993) was issued to treat the land acquisition by private companies.

| | |
|---|---|
| Keputusan Presiden (Presidential Decree) | Peraturan Pelaksanaanya (Implementation regulation) |
| 1. Keppres No.55 / 1993 | Peraturan Menteri Negara Agraria/ Kepala BPN No.1 / 1994 |
| 2. Keppres No.21 /1993 | Peraturan Menteri Negara Agraria/ Kepala BPN No.3 / 1994 |

(2) Compensation

Compensation is usually provided in the form of land or money and is obligatory especially for formal land owners who already have appropriate land certificates. However, a certain kind of compensation is to be considered for the residents without land certificate who it seems are the majority in the flood prone area of the region according to our observation.

Compensation procedure for the latter case would be complex and need to be carefully elaborated. Formal procedure of land acquisition including compensation payment, which is supposed to be coordinated and administered by a Land Acquisition Committee, is summarised in Table A5.2.1. The BPN provincial office was established in 2002, which covers now the acquisition of the lands extending in both Kabupaten and Kotamadya and also in the case of residents' objection on the compensation.

A5.3 NGOs and Other Organizations Active in the Study Area

According to BPS's statistics, there exist numerous Youth Associations in the study area (Table A5.3.1). Different data show also the presence of relatively developed Scout activities and their involvement in community development.

In addition to the BPS's information, a list of NGOs active in the sector of water resource management was provided by PPTPA (Panitia Pelaksana Tata Pengaturan Air/River Basin Water Resources Development Implementation Board at Kabupaten level) of Kab.

Gorontalo. Other information on NGO in the region was incorporated with the list and tabulated in the Table A5.3.2.

As Youth Associations and NGOs are usually made up by local people and work with local populations, their involvement in activities of flood mitigation should be considered as important, especially for facilitating the communication between people and the government. The collaboration between such organizations and the government should be promoted. They could be involved in organizing the residents at the community level and transmitting a government's warning message to concerned communities, supplying necessities for flood victims, and monitoring the increase of river water level, for example.

A5.4 Social Survey

Table A.5.4.1 summarises past flood incidents in the study area since 1996. There are villages which suffer from flood attacks repeatedly. The Study Team conducted a social survey with questionnaire including some of those villages, in order to grasp flood damages and the present living situation of the residents in the region.

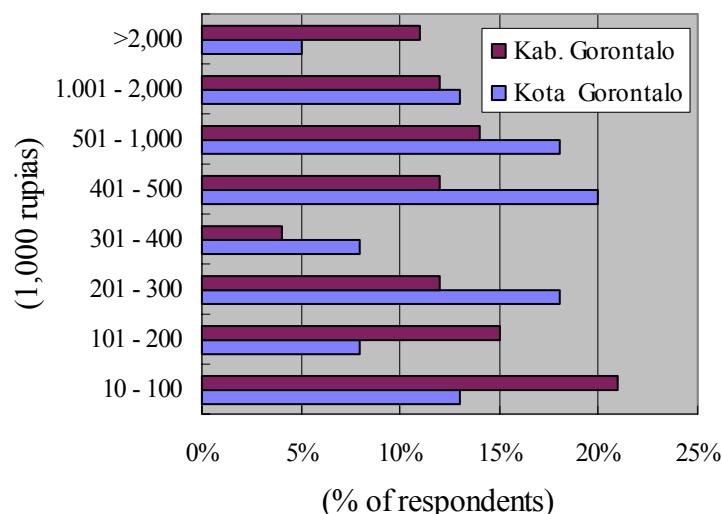

A total of 20 sites were chosen from among villages located in the flood prone areas and also those along the four principal rivers of the area, namely the Bone, Bolango, Biyonga and Alo-Pohu rivers, and their branches. Twenty households are chosen for the interview at each village from three different economic strata: rich, middle class and poor. The villages selected are presented in Tables A5.4.2, A5.4.3 and Figure A5.4.1. The survey in the villages was conducted during August - September 2001. A total of 400 respondents consist of 219 men (head of household) and 181 women (housewife: 92 % or woman as a head of household: 8 %), 80 Kota residents and 320 of Kabupaten.

Most of the interviewed residents have repeatedly experienced floods and the damage varies from 10,000 to 25,000,000 rupias according to the respondents' self-estimation. In terms of perception on floods, it can be said that people feel insecurity vis-a-vis floods in general, but it seems also that they somehow accept the incidence as something inevitable. The related results are shown in the below graphs.

In addition to these findings, it was revealed during the interview that many residents did not hold a proper land certificate. Although the survey results shows that more than 80 % of the respondents answered that lands were their own property, the matter of land

certificate could be another story. It is possible that their land occupation be judged as “informal” (not approved by the government) and such residents become disadvantageous to formal measures taken by the government, in the case of an eventual transmigration from the present premises.

DAMAGES ESTIMATION BY RESIDENTS

PEOPLE'S PERCEPTION ON FLOOD

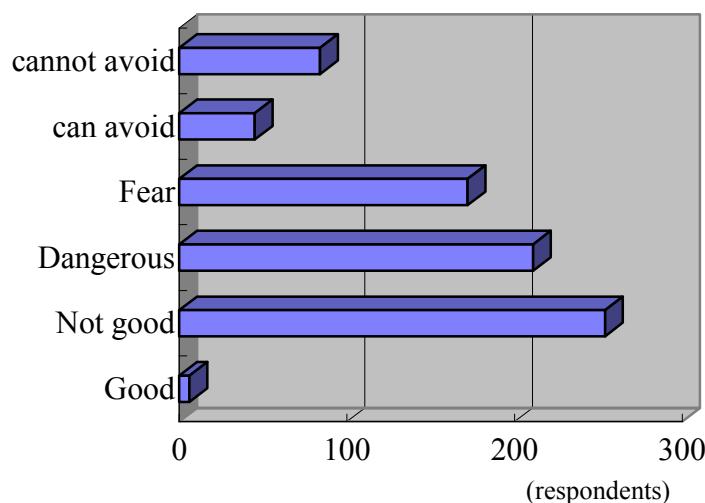

Table A5.1.1 POPULATION OF STUDY AREA BY KECAMATAN

| Kecamatan (Sub-District) | Number of Villages | Area (Ha) 1993 | Household 2000 | Population 1990 | Population 2000 | Pop. density /km2 2000 | Ave. number of family members |

Table A5.2.1 PROCEDURE FOR LAND ACQUISITION

| Steps | main parties concerned |
|---|------------------------|
| 1 Identification of the location | |
| < Request for identification of land | Governor |
| < Coordination Meeting for investigation (compared with RTRW) | Bupati/ Walikota |
| < Approval of acquisition of requested lands | BPN |
| < Request for land acquisition | Bappeda Agency |
| 2 Land acquisition request | |
| < Preparatory work | Committee |
| < Information dissemination/sharing ("sosialisasi") | Agency |
| < Determination of area boundary | Land owners |
| < Inventory preparation | Local residents |
| < Publication of inventory results | |
| 3 Consultation | |
| < Negotiation on the compensation | Committee |
| < Notification of results of the consultation | Land owners Agency |
| 4 Objections to the Committee's decision | |
| < Submission of objections to the Governor | Committee |
| < Examination by "Provincial" Committee | Land owners |
| < Governor's decision | Agency |
| 5 Payment of compensation (implement compensation measures) | |
| < Preparation of nominative list of beneficiaries | Committee |
| < Payment /others | Land owners Agency |
| 6 Pronouncement of the release of land rights and transfer of the land | |
| < Pronouncement of release of land rights / transfer of use right | Committee |
| < Proceed cancellation of land rights | Land owners Agency |
| 7 Cancellation of land rights | |
| < Formation of Estimating Committee by national level | Estimating Committee |
| < Cancellation of land rights | |
| < Request for a new land right | |
| 8 Issue of land certificate | |

notes

Committee: Land Acquisition Committee / Panitia Pengadaan Tanah
 (members are from various agencies including Bappeda and Kimpraswil, and heads of local governmental bodies such as Kabupaten, Kota, Kelurahan/Desa and Kecamatan)
 * Committee charges 4 % of total compensation amount (of which 1% as a consultation fee, 1% administration fee and 2 % operation fee)

BPN: Badan Pertanahan Nasional / National Land Agency
 * Lands in Kabupaten are treated by Kabupaten BPN, those in Kota by Kotamadya and lands extending in two administrative territories are in charge of the provincial one.

Agency: Project executing government agency
 * In case of a private investment, this can be read as a private company.

RTRW: Regional Spatial Plan
