

7.2 Current Electrification Status of Villages and Localities

Population and current electrification information on villages and localities with 200 or more population are summarized in Appendix Table 7.2-1 based on Population and Housing Census in 1991 and 2001. There are some localities which were defined as “a Locality” in Census 1991 but have been promoted to “Village” in Census 2001. Appendix Table 7.2-1 indicates such promoted villages as “Promoted” or “New Village”. Villages and localities which have already been grid-electrified and planned to be electrified in the near future are indicated as a mark “○” and “●” respectively in the Table. The Table also shows the number of households connected to the grid in the grid-electrified villages in accordance with BPC’s information.

7.3 Priority of PV Electrification to Selected Villages and Localities

The priority of PV electrification to selected villages and localities are shown in Appendix Table 7.3-1 based on criteria mentioned in Section 7.4 “Selection of PV Electrified Villages” and zoning concept described in Section 7.5 “10-year PV Electrification Program”

Appendix Table 7.2-1 Village/ Locality (population 200 or more) Information in Botswana

Elect rate= Grid connection up to Sep, 2000/ No. of Dwell(perspective) in 2001
