Appendix 16 Socio-economic Framework

As supporting and/or complementary data and information for **Chapter 16**, the following tables are provided in this Appendix:

Table A16.1.1 covering population estimated by province for the years 2000, 2010 and 2020

Table A16.2.1 covering GDP estimate for the years 2010 and 2020, and in respect to major regions including Red River Delta, corresponding to low assumption case

Table A16.2.2 Ditto (high assumption case)

Table A16.2.3 Ditto (average of the low and high assumption cases)

Table A16.2.4 covering GDP trend by region from 1995 to 2020

Table A16.2.5 covering province-wise GDP share to RRD Total

Table A16.2.6 covering production and consumption of stone for the years 1999, 2010 and 2020

Table A16.2.7 covering production and consumption of sand for the years 1999, 2010 and 2020

Table A16.2.8 covering production and consumption of cement for the years 1999, 2010 and 2020

Table A16.2.9 covering production and consumption of fertilizer for the years 1999, 2010 and 2020

Table A16.2.10 covering production and consumption of coal for the years 1999, 2010 and 2020

Table A16.1.1 Population Estimate by Province

(unit:'000 persons)

Appendix 18 Transport Demand Forecast

As supporting and/or complementary data and information for **Chapter 18**, the following tables are provided in this Appendix:

Table A18.2.1	: OD tables of the total for the years 2001, 2010 and 2020
Table A18.2.2	: Ditto of constructions materials for the same years
Table A18.2.3	: Ditto of cement for the same years
Table A18.2.4	: Ditto of fertilizer for the same years
Table A18.2.5	: Ditto of coal
Table A18.2.6	: Ditto of others
Table A18.2.7	: Cargo flow in the Red River Hanoi Segment for the year 2001
Table A18.2.8	: Ditto for the year 2010
Table A18.2.9	: Ditto for the year 2020
Table A18.2.10	: Cargo throughput by province (assumption 0: No excluding)
Table A18.2.11	: Ditto (assumption 1: Excluding loading of coal)
Table A18.2.12	: Ditto (assumption 2: excluding loading of cement)
Table A18.2.13	: Ditto in the Northern Region (assumption 3: excluding loading of construction material and clay)
Table A18.2.14	: Ditto (assumption 4: excluding unloading of coal and others at Hai Duong)
Table A18.2.15	: Ditto (assumption 5: excluding unloading of coal and others at Ha Nam)
Table A18.2.16	: Ditto (assumption 6: excluding loading and unloading of all commodities at Hai Phong and Quang Ninh)
Table A18.2.17	: Ditto (assumption 7: excluding unloading of coal in Thai Binh)
Table A18.2.18	: Ditto (assumption 8: excluding loading/unloading of cargoes related to dam construction in Song La and Thuyen Quang)
Table A18.2.19	: Ditto (assumption 9: excluding intra movement of all cargoes)
Table A18.2.20	: Ditto (assumption 10: excluding all assumptions 1 – 9)

Appendix 19 Japanese Standard on Dimensions of Waterways & Berths

In Japan, the following standards are applied in general, according to the Technical Standards and Commentaries of Port and Harbour Facilities in Japan (1999 edition) published by the Japan Port and Harbour Association, stipulated by the Ordinance of the Minister of Transport, which was issued in April 1999.

Table A19.1.1 Japanese Standard on Dimensions of Waterways & Berths

Standard Size of Cargo Vessel				Least Dimensions of Waterways						Dimensions of Berths	
DWT	Length (m)	Breadth (m)	draft (m)	Depth (m)	Width 1 (m)	Width 2 (m)	Width 3 (m)	Width 4 (m)	Radius (m)	Length (m)	Crest Level (HWL+ m)
500	51	9.0	3.3	4.0	26	51	77	102	204	60	0.3 - 1.0
700	57	9.5	3.4	4.0	29	57	86	114	228	70	0.3 - 1.0
1,000	67	10.9	3.9	4.5	34	67	101	134	268	80	0.5 - 1.5
2,000	83	13.1	4.9	5.5	42	83	125	166	332	100	0.5 - 1.5
3,000	94	14.6	5.6	6.5	47	94	141	188	376	110	0.5 - 1.5
5,000	109	16.8	6.5	7.5	55	109	164	218	436	130	0.5 - 1.5

Note) Width 1: For a one-way channel

Width 2: For a double-way channel

Width 3: For a double-way channel (long or with heavy traffic)

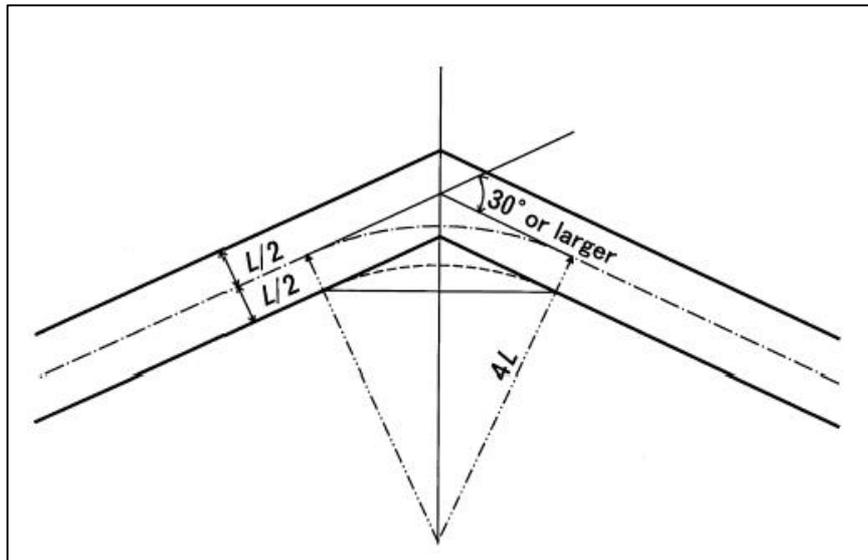

Width 4: For a double-way channel (long and with heavy traffic)

(1) Alignment of navigation channel

- + When a navigation channel has a bend, the intersection angle of centerlines of channels at the bend shall be made as small as possible.
- + In the determination of the intersection angle at a bend of navigation channel, it is necessary to consider the turning diameters, the sailing speeds, the ratio of vessel's draft to water depth, the number of navigation aids deployed, etc.
- + It is advisable that the intersection angle of channel centerlines at a bend will not exceed approximately 30°. When the angle exceeds 30°, the centerline of the channel at the bend should be made as an arc having the radius of curvature larger than about four times the length overall of the target vessel. The width of the channel at such a bend should be equal to or larger than the required width, except for cases where the target vessel has good turning performance or where a sufficient number of signals or other facilities have been provided to allow safe and smooth ship maneuvering.
- + At a bend of a double-way channel where the intersection angle is 30° or

greater and the channel width is equal to L (the length overall of the target vessel), it is necessary to increase the channel width at the bend with a corner cut.

Figure A19.1.1 Width Increase with Corner Cut at Bend Section

(2) Width of navigation channel

- + In the determination of the width of a navigation channel, due consideration shall be given to the types and dimensions of target vessels, the traffic volume and length of the channel, and natural conditions.
- + The following values are adopted as the standard width ("L" indicates the length overall of the target vessel):
 - (a) For a double-way channel, an appropriate width that is $1.0L$ or larger is adopted, except for:
 - cases in which the length of the navigation channel is relatively long: $1.5L$
 - cases in which the target vessels frequently pass in both ways through the channel: $1.5L$
 - cases in which the target vessels frequently pass in both ways through the channel and the length of the channel is relatively long: $2.0L$
 - (b) For a one-way channel, an appropriate width that is $0.5L$ or larger is adopted. When the width becomes less than $1.0L$, it is desirable to introduce sufficient safety measures such as the provision of facilities to

assist navigation.

(3) Water depth of berth & navigation channel

- + The water depth of a berth and a navigation channel shall be set in principle by adding an appropriate keel clearance to the maximum draft. For the keel clearance, a value equal to about 10% of the maximum draft is used as a standard.

(4) Length of berth

- + The length of a berth shall be set in principle by adding the lengths of the bow and stern mooring ropes to the length overall of the target vessel. The bow and stern ropes are usually set at an angle of 30 to 45° with the quay face, because these ropes are used to prevent both the longitudinal movement (in the bow and stern directions) and lateral movement (in the onshore and offshore directions) of the vessel.
