Bảng 7.2

Kế hoạch quản lý và giám sát môi trường

	Area/Target		Locations	Monitoring parameters	Frequency	Methodology
Physical Environment	Water regime	Huong river basin	Existing hydrological station(s)	Rainfall, water level, run-off velocity and discharge.	Continuously.	Same as on going method.
	Water quality	Ta Trach reservoir	One station: representative point in the reservoir.	Physical, chemical and biological parameters in Surface Water Quality Standard of Vietnam (TCVN 5942, 1995).	Monthly (12 times a year)	Water sampling and laboratory tests.
		Huong river	Four stations: 1) Van Nien water supply factory. 2) Gia Vien water supply factory. 3) Down stream of sewage discharge from Hue city. 4) Sinh confluence.	Ditto	Monthly (12 times a year) for sampling station 1) and 2). Dry season and rainy season (2 times a year) for sampling station 3) and 4).	Ditto
		Tam Giang – Cau Hai lagoon	One station: representative point in the lagoon near Thuan An estuary.	Physical, chemical and biological parameters in Surface Water Quality Standard of Vietnam (TCVN 5942, 1995) and Coastal Water Quality Standard of Vietnam (TCVN 5945, 1995)	Monthly (12 times a year)	Ditto
	Erosion and sedimentation	Ta Trach reservoir	Surrounding areas of Ta Trach reservoir and inflow point of Ta Trach river into the reservoir	The magnitude of erosion, sedimentation and other risks of other earth related disaster.	Yearly, and when necessary, e.g. after flooding.	Ocular observation and on-site survey if necessary.
		Huong river including Ta Trach river	River banks	The magnitude of erosion along the river.	Ditto	Ditto
Tam Giang – Cau Hai lagoon		Tuan An estuary	The change of erosion/sedimentation caused by the existences of Ta Trah dam and Tao Long barrage.	Ditto	Ditto	
Ecological Environment	Flora	Terrestrial flora	Reservoir bed (area to be submerged) prior to the construction work. If the transplantation of precious species executed, the transplantation site.	Higher level plants and trees including precious species	Once at pre-construction period. If the transplantation of precious species executed, twice a year (dry season and rainy season) .	On-site identification and description on community and population and interview to local residents.
	Fauna	Terrestrial fauna	Reservoir bed (area to be submerged) prior to the construction work. If the transplantation of precious species executed, the transplantation site.	Mammals, birds, reptiles and amphibians	Ditto	On-site identification and description on breeding grounds and population and interview to local residents.
		Aquatic organisms	Ta Trach reservoir, Huong river and Tam Giang – Cau Hai lagoon	1) Composition and quantity of natural fishes including migratory fishes, phytoplankton, zooplankton and benthic organisms. 2) Composition, quantity, growth rate and production of raised fishes.	Once at pre-construction period and twice at operation period a year (dry season and rainy season).	On-site identification by net-catching and interview to local fisher forks and officials working at relevant organizations.
Social Environment	Resettlement	Effectiveness of action plan	Ta Trach dam, resettlement areas	Actual progress of and compliance with the plan. Socio-economic conditions and requirement of stakeholders.	Once at pre-construction stage, and continuously after construction work starts until achievement to self-sustenance.	Field observation, interview or inquiry, consultation with stakeholders.
	Health and sanitation	Construction workers, residents near reservoir	Ta Trach dam	Health condition of construction workers and sanitary condition of campsites during construction stage. Number of out-patients and morbidity trend after completion.	Twice a year during construction stage (dry season and rainy season). Once a year after completion.	Field observation, interview or inquiry, recording file review.
	Noise and dust	Dam construction	Residential areas near dam construction site	Nuisance status of noise and dust, Noise level and dust concentration if necessary.	Once a month during construction stage for qualitative confirmation, Field measurement when necessary.	Field observation, interview or inquiry, field measurement if necessary.

Bảng 8.2 Phương hướng phát triển nông nghiệp tại tỉnh Thừa Thiên Huế (1/2)

Sector	Development Direction	Target in 2010(Annual Production)	Approach
<b>Food Crops</b> (Paddy)	Food security	Annual production of 25,000 ton, equivalent to 200 kg per capita. Expansion of area under 2 crops of paddy per annum through development and improvement of 26,000 ha paddy field.	<ul style="list-style-type: none"> <li>- Development of infrastructure (expansion and rehabilitation of irrigation and drainage, protection from early flood, farm road network, post harvest facilities),</li> <li>- Improvement of farming practice (new variety, pest control, crop management, etc.)</li> <li>- Rural community development to improve living standard of farmers and rural population,</li> </ul>
(Other Food Crop)		Expansion of cropped area of maize, cassava and potato in hilly area, 5 districts of 1) Phong Dien, 2) Huong Thy, 3) Huong Tra, 4) Nam Dong and 5) A Luoi.	<ul style="list-style-type: none"> <li>- Expansion of irrigation area for dry season crop in flat to gently sloped area,</li> <li>- Improved farming practice (new variety, pest management, etc.)</li> <li>- Rural community development (- do -)</li> </ul>
Annual Industrial Crops	Export	Groundnut: annual production of 5,000 ha Tobacco: 1,500 ha to 1,800 ha	- do -
<b>Perennial Crop</b> (Rubber)	Export and vegetation cover on slopes	Rubber: annual production of 3,300 ton in the form of rubber latex 5,500 ha in hilly area of districts 1) Nam Dong, 2) Phong Dien (Phong Son and Hoa My).	<ul style="list-style-type: none"> <li>- Conversion of low productive annual crop land into perennial crop land, particularly steep slopes,</li> <li>- Development of infrastructure (nursery production, access road, collection center, post harvest, storage, marketing, transport)</li> </ul>
(Horticulture)	Domestic consumption, tourist demand, vegetation cover on slopes	5,000 ha of spice and semi-tropical fruits (pepper, orange, lemon, persimmon, banana, etc.)	<ul style="list-style-type: none"> <li>- Conversion of land (- do -)</li> <li>- Development of infrastructure for production and marketing,</li> </ul>

Bảng 8.2 Phương hướng phát triển nông nghiệp tại tỉnh Thừa Thiên Huế (2/2)

Sector	Development Direction	Target in 2010(Annual Production)	Approach
<b>Livestock</b>	Domestic consumption (watershed management) and forest products	280,000 heads of pigs, 35,000 heads of cattle, 35,000 heads of buffalo, increase of chicken eggs,	<ul style="list-style-type: none"> <li>- Technical improvement (artificial insemination, rearing practice, etc.),</li> <li>- Development and improvement of infrastructure (improvement of grass land, rearing and grazing facilities, veterinary services, livestock health care, marketing, transportation)</li> </ul>
<b>Forest</b>	Vegetation cover on slopes	Total forest area of 305,000 ha, of which 190,000 ha in natural forest and 115,000 ha in plantation	<ul style="list-style-type: none"> <li>- Natural forest: acceleration of natural re-generation, protection from disease/ insect/ fire, reduction of crop cultivation on steep slopes, introduction of agro-forestry,</li> <li>- Plantation: development of nursery facilities, technical training for forest farmers,</li> <li>- Forest community development for watershed management (- do -),</li> </ul>
<b>Fishery</b>			
(Marine Catch)	Domestic consumption and export	Annual production of 17,600 ton	<ul style="list-style-type: none"> <li>- Improvement and development of infrastructure (fishery port, cold store, wholesale market, processing, transport)</li> <li>- Technical and managerial training of fishermen and organizing fishermen's group,</li> <li>- Fishermen's community development (- do-),</li> </ul>
(Aqua culture)	Export and increase of farm income	Annual production of 4,800 ton in 4,500 ha for brackish water and 2,100 ha of fresh water.	<ul style="list-style-type: none"> <li>- Careful expansion of aqua-culture in lagoon and mangrove area.</li> <li>- Development of basic infrastructure (supply of seed flies and nurseries, applied research, extension of technology, marketing and processing)</li> <li>- Technical training of aqua culture farmers, organizing farmers group,</li> <li>- Aqua culture farmers' community development (- do-),</li> </ul>

Bảng 8.3 Dự án phát triển nông nghiệp liên quan đến tài nguyên nước tại lưu vực sông Hương (1/2)

Project	Status	Location	Feature and Component	Remarks
1. Projects related to Ta Trach Reservoir				
1.1 Irrigation Rehabilitation and Drainage Improvement in downstream area of Ta Trach Reservoir	Feasibility study completed in August 2000.	About 40,000 ha in gross extending over down-stream area of Ta Trach Reservoir.  Net irrigation area of 25,900 ha on the low flood plains of the Bo and Huong Rivers.	- Rehabilitation of irrigation facilities, - Improvement of drainage, - Protection of flood, tidal wave and salt water intrusion.	- Increasing of cropping intensity (present 178% to future 200%).  - 9,053 ha to be irrigated by the Bo River, and 16,847 ha by the Huong River
1.2 Thao Long Barrage	Construction on going.	Barrage located in the mouth of the Huong River	- Construction of dam, gates, shipping lock and a bridge  - 15 gates with one way flap	- To prevent salt water intrusion  - To store fresh water in the river channel
1.3 Settlement of Household from the proposed Ta Trach Reservoir	Preliminary settlement plan completed in June 1999.  To be implemented by the province	Two communes (340 households) in Duong Hoa and Nam Dong communes of Nam Dong District.	- Establishment of infrastructure for rural community for settlers  - Introduction of industrial crops along with food crops for income generation of settlers	- Industrial crops of sugarcane, pineapple, coffee and rubber.  - Social support to be attached for organizing community  - Agro-processing industries to be established (sugarcane mill under operation).
1.4 Watershed Management and Forest Community Development	Preliminary study	Upstream area of the river basin	- 45,000 ha for natural re-generation and  - 70,000 ha of forest plantation	- Agro-forestry for income generation of local habitants  - Forest community development to be applied for local population.

Bảng 8.3 Dự án phát triển nông nghiệp liên quan đến tài nguyên nước tại lưu vực sông Hương (2/2)

Project	Status	Location	Feature and Component	Remarks
1.2 Truoi Reservoir	Construction on going, and to be completed in 2002.	Truoi River in the south-eastern part of the province.	<ul style="list-style-type: none"> <li>- Total irrigation area of 1,100 ha on right bank and 6,900 ha on left bank</li> <li>- Left bank including the area irrigated by the Huong River.</li> </ul>	<ul style="list-style-type: none"> <li>- Diversion of water from to the Nong River.</li> <li>- Existing intake in the Nong River to be utilized.</li> </ul>
2. Co Bi Irrigation Project	Preliminary study	Co Bi hamlet in the middle reach of the Bo River	<ul style="list-style-type: none"> <li>- Intake for irrigation purpose</li> </ul>	<ul style="list-style-type: none"> <li>- Irrigation area to be identified</li> </ul>
3. Small Scale Irrigation Development	under consideration	Small area sporadically located in small spots	<ul style="list-style-type: none"> <li>- Expansion of irrigation area in paddy field, upland crop field, and tree crops</li> </ul>	<ul style="list-style-type: none"> <li>- Water source and irrigation area to be identified</li> <li>- Components for rural community development to be accompanied.</li> </ul>
4. Fishery Development in the Existing Reservoirs	under consideration	Water surface of existing reservoirs	<ul style="list-style-type: none"> <li>- Fish catch in the reservoir with release of fish fries</li> </ul>	<ul style="list-style-type: none"> <li>- Intensive culture to be avoided for water quality deterioration</li> <li>- Rural community development to be attached</li> </ul>
5. Shrimp and Fish Culture Development in Brackish Water Area	under consideration	Cultivated land along the coastal line, particularly land affected by salt water	<ul style="list-style-type: none"> <li>- Conversion of low productive crop land to aqua culture ponds</li> </ul>	<ul style="list-style-type: none"> <li>- Increase of productivity of land</li> <li>- Excessive expansion of aqua culture to be prevented in lagoon area</li> <li>- Rural community development to be attached with social support</li> </ul>

HUONG RIVER IRRIGATION SCHEME 25,900 ha			Huong North: 12,569 ha Huong South: 13,341 ha
Item	Rehab./new quantity	Rehabilitation and/or new civil works	Remarks
<b>(1) Rivers</b>			
Improvement Bo River *)	0 km	dredging/ bank protection/ etc.	depends on recommendations of flood control study
Improvement Huong River *)	0 km	dredging/ bank protection/ etc.	
<b>(2) Dams and Reservoirs</b>			
<i>main dams &amp; barrage</i>			
Thao Long Barrage *)	0 no	barrage w. bridge under construction	responsibility of Huong River Enterprises
Ta Trach Dam *)	0 no	dam & other works planned	
Truoi Dam *)	0 no	construction nearly completed	
<i>small dams</i>			
Phu Bai Dam *)	0 no	rehabilitation (nearly) completed	responsibility of Huong River Enterprises
Khe Nuoc Dam	0 no	dam & other works planned	
Chau Son Dam	0 no	none; assumed in good condition	
minor dams	0 no	none; assumed in good condition	
<b>(3) Main canal/ drain network</b>			
main canals/ drains	(excluding Huong and Bo rivers) 50 km	re-shaping/ dredging	responsibility of Huong River Enterprises
<b>(4) Main inlets and outlets</b>			
<i>main inlets on Huong River</i>			
Nham Bieu, with supporting pumping station *)	0 no	none; constructed 1996	4@2.50; vert.gates and 2 pumps
Phu Cam *)	0 no	none; old, but good condition	6@4.00; flap gates
Dap Da *)	0 no	none; dam with road	22@2.50; doors 2@2.50; lift gates
La Y spillway, combined with inlet sluice *)	0 no	none; recently rehabilitated	
<i>main outlets on lagoon</i>			
<i>North Huong Area</i>			
Quan Cua	0 no	rehabilitation completed	2@2.20; vert.gates
An Xuan	0 no	rehabilitation completed	2@2.50; vert.gates
Ha Do *)	0 no	bad condition; demolish	2@2.2+1@2.5;vert.gates
<new Cau Long;to be planned>	1 no	new/replace; increase capacity	
<i>South Huong Area</i>			
Cong Quan *)	0 no	none; good condition; capacity too small	12@2.20; doors
<additional Cong Quan;planned>	1 no	new; additional to Cong Quan	6@3.00; lift+flap gates
Cau Long *)	0 no	bad condition; demolish	
<new Cau Long;to be planned>	1 no	new/replace; increase capacity	
<i>Small outlets</i>			
small outlets	25 no	new/ replace	1 opening w. vert.gate
<i>flood regulators on Bo River</i>			
regulators	2 no	new; to be designed	
<b>(5) Pumping stations</b>			
pump houses	10 no	major maintenance/ reconstruct	responsibility of - - - -
pumps & engines	80 no	replace/ additional	
<b>(6) Embankments and roads</b>			
dikes along Huong River	0 km	earthwork and protection	responsibility of - - - - flood control study
dikes along Bo River	0 km	earthwork and protection	
dikes along main canals/ drains	200 km	re-shape	flood control study
lagoon dikes	30 km	re-shape & slope/ crest protection	
<b>(7) Secondary system</b>			
secondary canals (d/s of pumping station)	500 km	re-shaping and lining	responsibility of - - - -
secondary drains	200 km	re-shaping	
<b>(8) Tertiary system; on-farm works 2)</b>			
structures in canals/ drains/ etc. }	25,900 ha		responsibility of communes, etc.
tertiary canals/ drains/ dikes }			
on-farm works }			
<b>(9) Fishponds 3)</b>			
supply canals, discharge drains	0 km	construct/ re-shape	respons. of private organisations
inlet/ outlet structures	0 no	construct/ re-shape	
ponds	0 ha	(re)-excavation	
<b>NOTES:</b>			*) works inspected during field trips
1) rehab. length is total of both sides			
2) rehabilitation tertiary system: <b>av.cost/ha</b> , based on <b>av.no/km</b> density per ha			
3) fishponds are constructed, operated, maintained, etc. by private organisations
