                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ha<br>ha                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | -<br>Irri. 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | -<br>Irri.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

AT - 39

1/: Paddy grown under rainfed condition in irrigated field 2/: Palawija in irrigated field 3/: Palawija in upland field 4/: Cropping intensity in each land use category; Irri. Paddy Field, in rainfed field & upland field, respectively and overall to subject area 5/: Irrigation performances --- Cropping intensity of irrigated paddy & palawija in irrigated field; not including paddy grown under rainfed conditions 6/: Overall annual average paddy yield (annual paddy production ÷ annual total cropped area of paddy) 7/: Cropping intensity in irrigated field

Table A-6.2.1	Prioritization for Rehabilitation by Weighted Scoring Method
---------------	--------------------------------------------------------------

Issue for Evaluation	Full Score	Evaluation Index	Weight	Weighted Score	Situation for High Priority
1 Issue of Irrigation System	50.0				
1 1 Rate of Utilization of Irrigation Potential	10.0	(1) Less than 50 %	1.0	10.0	Severe problem on irrigation
(=present irrigation paddy area / irrigated paddy	10.0	(2) 50 - 69 %	0.8	8.0	program achievement
area with project x 100)		(3) 70 - 100 %	0.5	5.0	program demovement.
1.2 Urgency of Rehabilitation	25.0				Severe problem on irrigation
1.2.1 Function of Water Resources Facility	10.0	<ol> <li>Serious condition for operation (Evaluation: D)</li> </ol>	1.0	10.0	facilities
		(2) Not functioning well (Evaluation: C)	0.8	8.0	
		<ul><li>(3) Partially deteriorated (Evaluation: B)</li><li>(4) Functioning well (Evaluation: A)</li></ul>	0.6 0.4	6.0 4.0	
	7.0		1.0	7.0	
1.2.2 Function of Main Canal System	/.0	(1) Serious condition for operation (Evaluation: D) (2) Not functioning well (Evaluation: C)	1.0	/.0	
		<ul> <li>(2) Not functioning well (Evaluation: C)</li> <li>(3) Partially deteriorated (Evaluation: P)</li> </ul>	0.8	3.0	
		<ul><li>(4) Functioning well (Evaluation: A)</li></ul>	0.0	2.8	
1.2.3 Function of Secondary Canal System	5.0	(1) Serious condition for operation (Evaluation: D)	1.0	5.0	
1.2.5 Tunetion of Secondary Canal System	0.0	<ul><li>(2) Not functioning well (Evaluation: C)</li></ul>	0.8	4.0	
		(3) Partially deteriorated (Evaluation: B)	0.6	3.0	
		(4) Functioning well (Evaluation: A)	0.4	2.0	
1.2.4 Function of On-farm System	3.0	(1) Serious condition for operation (Evaluation: D)	1.0	3.0	
		(2) Not functioning well (Evaluation: C)	0.8	2.4	
		(3) Partially deteriorated (Evaluation: B)	0.6	1.8	
		(4) Functioning well (Evaluation: A)	0.4	1.2	
1.3 Sustainability of Irrigation System	15.0	(1) M d 50	1.0		Severe problem on
1.3.1 Age of the Facility	1.5	(1) More than 50 years (2) $20 - 40$ years	1.0	/.5	sustainability
		(2) $50 - 49$ years (3) $15 - 29$ years	0.8	0.0	
		(4) Less than 15 years	0.4	3.0	
1.3.2 Technical Level	75	(1) Non-technical level	1.0	75	
	1.0	(2) Semi-technical level	0.8	6.0	
		(3) Technical level	0.5	3.8	
2 Issue of Agricultural Productivity	20.0				
2.1 Current Cropping Intensity of Paddy	10.0	(1) Less than 100 %	1.0	10.0	Severe problem on agriculture
(=annual cropping intensity of ruduy)	10.0	(1) Less than 100 /0 (2) 100 - 149 %	0.8	8.0	(low productivity)
( unital cropped and or paddy / subject and it		(3) 150 - 199 %	0.6	6.0	(ion productivity)
100)		(4) More than 200 %	0.4	4.0	
2.2 Current Unit Yield of Paddy	10.0	(1) Less than 60 % of planned target yield	1.0	10.0	Severe problem on agriculture
(=weighted average unit yield of irrigated & rainfed		(2) 60 - 79 % of planned target yield	0.8	8.0	(low productivity)
paddy in the scheme)		(3) 80 - 100 % of planned target yield	0.5	5.0	
3 Issue of Society	15.0				Severe social problem
3.1 Contribution to Regional Economy	7.5	(1) Less than 30 % of with project beneficiaries	1.0	7.5	
(Current Number of Beneficiaries)		(2) 30 - 59 % of with project beneficiaries	0.8	6.0	
		(3) 60 - 89 % of with project beneficiaries	0.6	4.5	
		(4) More than 90 % of with project beneficiaries	0.4	3.0	
3.2 Provision of Social Infrastructure	7.5	(1) Less than 40 % of total canal length of main & secondary canal	1.0	7.5	
(Current ratio of Inspection Road Provision)		(2) 40 - 59 % of total canal length of main & secondary canal	0.8	6.0	
		(3) 60 - 79 % of total canal length of main & secondary canal	0.6	4.5	
		(4) 80 - 100 % of total canal length of main & secondary canal	0.4	3.0	
4 Issue of Economic and Financial Impact	15.0				High economic and financial
4.1 Feasibility	7.5	(1) More than 20 %	1.0	7.5	impact
(EIRR)		(2) 15 - 19 %	0.8	6.0	
		(3) 10 - 14 %	0.6	4.5	
		(4) Less than 10 %	0.4	3.0	
4.2 Rate of Increase of Gross Agricultural Retern per ha	7.5	(1) More than 200 %	1.0	7.5	
(=planned annual gross retern per ha / current		(2) 150 - 199 % (3) Less than 150 %	0.8	6.0

#### Figure A-7.3.1 Action Plan of Recovery Program of Irrigation Agriculture : North Sumatra

# PART II

## FEASIBILITY STUDY FOR SELECTED MODEL SCHEME

## **CHAPTER 1 PRESENT CONDITION**

## **1.1** Natural Conditions

#### (1) Location

The project area lies in the central part of North Sumatra province about 160 km southeast from Medan, the capital city of the province. Administratively, the project area is within the jurisdiction of one Kecamatan (Pulo Rakyat) of Asahan district.

## (2) Climate and Hydrology

The project area lies in the tropical monsoon zone. The annual average temperature is about 26°C with very little seasonal variation throughout a year. The temperature varies from a maximum of 32 °C to a minimum of 22 °C. The climate conditions of the area are shown in Table B-1.1.1.

The area is affected by the northeast monsoon from the China Sea in September through December and southwest monsoon from the Indian Ocean in March through May. The main wet season begins in the coastal area facing the Strait of Malacca with heaviest rain in October and it reaches the coast of the Indian Ocean after one to one and a half months. In the secondary rainy season, however, due to the existence of a mountain range over 2,000 m high to the west of the area, the influence of the monsoon is weakened and hence the area receives considerable rainfall even in the dry season. There are no severe dry months.

The annual rainfall is about 2,000 mm in the project area and about 2,000 to 3,500 mm to the west towards the mountains. In general the water resources in the area are ample. The relative humidity is high at 88% on average ranging between 90% in the highest month and 87% in the lowest.

(3) River System and River Runoff

The major river in the project area is the Asahan River. The catchment area of the Asahan River at Pulau Raja site is:  $4,608 \text{ km}^2$  and annual mean discharge is estimated at  $150 \text{ m}^3$ /s. The Asahan River originates from Lake Toba regulating the water level at about El. 905 m and runs about 150 km, into the Strait of Malacca after joining the Silau River at Tanjung Balai.

#### (4) Topography and geology

The topography of the project area is mostly wide and flat alluvial plain lower than El. 20 m including lower swampy areas.

The area at the elevation of 10 m to 15 m has terrace deposits mainly composed of sand and silt forming belts, projected low ridges and isolated islands. Alluvial plain deposit, including that in the vast swampy area, mostly consists of fine silt to clayey soils inter bedded by thin soil layers and organic soil layers.

#### 1.2 Socio-economy

Administratively, the Scheme is located in Pulau Rakyat Sub-district (the project sub-district), one of 17 sub-districts of Asahan District. The beneficiary area of the Scheme extends into 2 villages (the project *desas*: Padang Mahondang and Ofa Padang Mahondang). The administrative area of the project sub-district is 251.0 km² and that of the project *desas* is 91.3 km².

The population of the project sub-district was 30,631 and in the project *desas* was 8,088 in 2002. Number of households and the average family size in the sub-district are 6,834 and 4.5 persons, respectively. The same in the *desas* are respectively 2,324 and 3.5. There were no transmigrant households in the *desas*. The rural population of the sub-district accounts for 90% of the total.

Major socio-economic features of the sub-district and *desas* are presented in the following table.

Indicators	Project Sub-district	Project Desas
Area (km ² )	251.0	91.3
No. of <i>Desas</i>	11	2
Population	30,631	8,088
No. of Households	6,834	2,324
Average Family Size	4.5	3.5
Population (Age group: $15 - 64$ )	18,927	-
Population (Age group: $\geq =/>65$ )	1,931	-
Labor Force per Family	2.9	-
Origin of Residents	Local residents ( $\Rightarrow$ 100%)	Local residents ( $\Rightarrow$ 100%)

Socio-economic Features of Project Sub-district & Desas

Source: Kabupaten Asahan Dalam Angka & Kecamatan Pulau Rakyat Dalam Angka, 2002

The agriculture sector is the main economic activity both in the sub-district and the *desas*. The primary sub-sector in the sub-district is estate crop production and the main commodity is oil palm followed by rubber. The primary sub-sector in the *desas* is food crops production and the main commodity is paddy. The production of the estate crops is carried out mostly by the estate, PT. Perkebunan Nusantara, which operates a large oil palm processing factory in the sub-district. While, the production of estate crops, rubber and oil palm, is also carried out by small holders in both the sub-district and the *desas*. The secondary agriculture sub-sector in the

sub-district is food crop production. The main crop is paddy and production of other crops is rather limited.

Other agricultural activities in the sub-district include the livestock sub-sector, though its scale is limited to the said two sub-sectors.

## **1.3** Present Irrigation and Drainage Condition

## (1) General

The history of irrigation in the project area is relatively short. In former times the main focus for agricultural development was placed on tree crop plantations such as oil palm, rubber and coconuts. Paddy schemes in the area have been developed only in the last 20 years by Kimpraswil (former DPU), North Sumatra province and district public service office of Asahan District.

Irrigation schemes in the area are of the gravity irrigation type diverting irrigation water from the Asahan River through the free intake facility located about 2 km downstream of the national highway.

The irrigation scheme is found to be very poor since the end of 1990's due to poor function of the existing free intake facility, especially in the dry season. In the dry season, the water level of the Asahan River becomes lower than the required intake water level, so that irrigable area becomes very small.

(2) Inventory of the Existing System

Field investigation of the existing irrigation facilities was carried out by the JICA Team prior to the formulating the rehabilitation plan in September and October 2003.

The survey results indicate that the existing irrigation scheme in the project area is broadly divided into two areas according to the present agricultural condition. The land with an area of 700 ha is utilized as irrigated paddy field with semi-technical level in the wet season and the other land with an area of about 2,200 ha is rainfed paddy.

The Location map of project area is shown in Figure B-1.3.1.

(3) Present Conditions and Problems

Inventory of the major existing irrigation and drainage facilities in the project area was drawn up for the preparation of the development plan of the pre-feasibility level. Based on the inventory, structural conditions of all the existing facilities were assessed according to the criteria that categorize the conditions of the existing facilities into four classes on the basis of the degree of deterioration. According to the results of the inventory, all facilities were classified into D (to be replaced and/or reconstructed) and summarized as follows:

- (a) Malfunctioning of the free intake
- (b) Absolute shortage of canal length
- (c) Inadequate provision and deterioration of irrigation facilities
- (d) Poor drainage conditions
- (e) Lack of water management activities
- (4) Rural Infrastructure

There are no inspection roads along the canals. The village roads in the project area are unpaved earth surface of only 3-4 m wide and are very poorly maintained and hence impassable in the wet season.

(5) Operation and Maintenance

The existing scheme was constructed by PWRS North Sumatra and maintained by its branch office at Kisaran. However, no proper operation and maintenance have been practiced since the end of 1990's after Asahan District Government took over management activities of irrigation schemes.

Following are photographs of the existing condition of the scheme.

1. Upstream View of Asahan River at Intake Site

 Inlet Channel of Intake from Asahan River (No removal of sediment and eroded earth)

 Condition of Intake (Free Intake System) (No O&M for a long time)

4. Condition of Main Canal at 2 km Point (Out of Services)

5. Condition of Terminal Facility (Out of Services)

6. Village Road and Paddy Field

## 1.4 Agriculture

The basic agriculture features of the Scheme are presented in summarized form in Table B-1.4.1 and discussed in the following sections.

## 1.4.1 Agro-demography

The agro-demographic features of the project sub-district are estimated based on the results of the Agriculture Census, 1993 (district & sub-district), 2003 (*Desa* Padang Mahondang) carried out by BPS¹ and information provided by BPP as presented in Table B-1.4.1 and summarized in the following table.

¹ Based on "Sensus Pertanian 1993, Hasil Pendaftaran Rumatangga, Kantor Statistik Kabupaten Asahan" & "Tentative results of Agriculture Census 2003, BPS Asahan"

Agro-demographic Indicators	Project Sub-district ^{*1}	Padang Mahondang ^{*2}
Proportion of Farm Households to Total Households	51 %	93 %
Proportion of Farm Households Having Activity in		
- Food Crops Farming	31 %	76 %
- Horticulture Crops Farming	5 %	8 %
- Estate Crops Production	74 %	33 %
- Livestock	96 %	18 %

#### Agro-demographic Features of Project Sub-district

Note *1: Results of the Census on the rural areas of the sub-district

*2: Tentative results of Agriculture Census, 2003, BPS Asahan

On the basis of the tables, the number of farm households of the project sub-district and *desas* in 2002 is estimated at some 3,490 accounting for 51% of the total 6,834 households and some 2,160 accounting for 93 % of the total 2,324households, respectively. Primary farming activity of the farm households in the sub-district is estate crops production followed by food crops production. Farm households having activity in estate crops production represent some 74% of the total farm households. While, in the project *desas* a similar percentage of the households are involved in food crop production.

The current land holding status in the project sub-district and *desa* were estimated based on the number of farm households and the present agricultural land use as shown in Table B-1.4.1. On the basis of the tables, the land holding status of the project *desas* could be assumed as follows;

Indicators	Project Desas
Average Farm Land Holding Size/Farm Household	2.47 ha
Average Holding Size of Paddy Field/Farm Household	1.22 ha
Distribution of Farm Household by Holding Size	
- < 0.5 ha	35 %
$- \ge 0.5$ ha	65 %

**Estimated Land Holding Status in Project Desas** 

#### 1.4.2 Land Use

According to the JICA study report², the land use of the Scheme in 1990 was estimated as: irrigated paddy field 1,100 ha, rainfed paddy field 1,400 ha and others 830 ha. While, from the information provided by the irrigation services office (Balai PSDA Bah Bolon-Asahan) and the statistic data on cropped areas of the Asahan District Agriculture Services Office, the present land use statuses are estimated as: irrigated paddy field 724 ha, rainfed paddy field currently in use 436

² Master Plan Study on Lower Asahan River Basin Development, JICA, 1990

ha, others 2,071 ha and 3,231 ha in total. The oil palm planted land is roughly estimated at some 600 ha.

The present land use of the Scheme has been estimated on the basis of the said information as the availability of reliable information on the same is limited. The present status assumed is shown in Table B-1.4.1 and in the following table.

Innicated	Ra	ainfed Paddy Fie	Trac Cran Land			
Daddy Field	Currently	Long Fal	low Land	(Oil Dalm)	Total	
Faulty Fleid	Used	Bush Light Forest		(On Failil)		
724 ha	436 ha	736 ha	735 ha	600 ha	3,231 ha	
22.4 %	13.5 %	22.8 %	22.7 %	18.6 %	100 %	

Present Land Use of Padang Mahondang Scheme

As shown in the table, the vegetation covers of the long fallow land are assumed to be bush (50%) and light forest (50%).

The deterioration of the irrigation scheme could be attributed to the decrease of irrigation water intake caused by the draw-down of the river. The existence of the large long fallow lands is due mainly to the low productivity in rainfed paddy fields due to poor drainability of the fields and partly to the shortage of labor forces.

## 1.4.3 Cropping Schedule and Pattern

The prevailing cropping schedules and patterns in the Scheme are identified as shown below and in Table B-1.4.1.

Cropping Schedules

-	Paddy (planting ~ harvest):	Wet Season: Nov Feb. ~ Feb Apr.
		Dry Season: May - July ~ Aug Oct.
-	Palawija:	Cultivation both in wet and dry season
		(area limited)

#### Cropping Pattern

- Irrigated Paddy Field: wet dry season: paddy -paddy/ palawija/ fallow
- Rainfed Paddy Field: wet dry season: paddy/ palawija/ fallow fallow

(cropped area limited)

## 1.4.4 Cropped Area and Cropping Intensity

The irrigation performances in irrigated paddy fields expressed by cropped area and cropping intensity and the cropped area and cropping intensity in rainfed paddy fields are estimated based on the information provided by the District Water Resources Office, the statistical data of the District Agriculture Services Office and on the past records on cropped areas shown in Table B-1.4.2. The results are shown in Table B-1.4.1 and summarized below.

Cropped Area	Irrigated Paddy	Rainfed Paddy	Palawija	Total	C.I
Wet Season	350 ha	810 ha	53 ha	1,213 ha	46%
Dry Season	163 ha	-	62 ha	225 ha	9%
Annual	513 ha	810 ha	115 ha	1,438 ha	55%

Note: C.I: Cropping intensity to 2,631 ha

As shown in the tables, the overall cropped area and cropping intensity of paddy in the Scheme is respectively estimated as low as: wet season 1,160 ha, dry season 163 ha, annual 1,323 ha and wet season 44%, dry season 6%, annual 50%. The irrigation performance in the irrigated fields expressed by cropping intensity is 131% in total; paddy 123% and palawija 9%. The annual cropped area of palawija is around 115 ha and the cropping intensity total is 4%. The overall cropping intensity in the Scheme stands at 55%.

#### 1.4.5 Crop Yield and Production

The present yield levels of paddy and palawija in the Scheme are estimated on the bases of the findings of the Phase I Study (estimation of irrigated paddy yield), the field observation and information provided by PPLs deployed in the Scheme and representatives of farmers organizations as follows;

<b>-</b>	9	3
Crops	Wet Season	Dry Season
Irrigated Paddy	4.0 t/ha	4.0 t/ha
Rainfed Paddy *1	2.5 t/ha	-
Rainfed Paddy	2.0 t/ha	-
Palawija (maize composite)	3.0 t/ha	3.0 t/ha

Current Crop Yields in Padang Mahondang Scheme

Note *1: Paddy in irrigated fields grown under rainfed conditions

On the bases of the estimated yields and the cropped areas, the crop productions at present are estimated as shown in Table B-1.4.1 and summarized below.

Present Crop Prod	luction in Padang	g Mahondang Sc	heme
0	THE C	D G	

Crops	Wet Season	Dry Season	Annual
Paddy	3,207 t	652 t	3,859 t
Palawija (maize composite)	159 t	186 t	345 t

#### 1.4.6 Farming Practices and Crop Budget

The current prevailing farming practices for paddy are as shown in Table B-1.4.3 and summarized below.

	5
Variety	Improved variety: IR 64 & Ciherang (115 days)
Nursery	Seeding rate: 30 kg/ha; period 20 ~ 25 days
Land Preparation	By machinery (hand tractor)
Planting	Manual transplanting (regular/random)
Fertilization	NPK applied (irrigated field); volume depending
Harvesting	Manual; threshing by power/pedal thresher

**Farming Practices** 

Current crop budgets of major crops (irrigated & rainfed paddy and palawija) in the Scheme are studied based on the data collected through the Inventory Survey and crop budget analyses made by the District Agriculture Services Office, Asahan as shown in Table B-1.4.3 and summarized in the following table.

Commodity	Yield	Gross Return	Production Cost	Net Return
Commodity	(t/ha)	(Rp.000)	(Rp.000)	(Rp.000)
Irrigated Paddy ^{*1}	4.0	5,200	2,170	3,030
Rainfed Paddy *2	2.5	3,250	1,500	1,750
Rainfed Paddy *3	2.0	2,600	1,390	1,210
Maize (composite)	3.0	3,300	1,050	2,250

Financial Net Return per Ha

Note *1: Wet & dry season paddy

*2: Paddy grown under rainfed condition in irrigation command area

*3: Paddy grown in rainfed paddy field

#### 1.4.7 Marketing

The prevailing marketing practices of paddy in the Scheme is "selling paddy just after harvest at field" followed by "selling paddy after drying". The prevailing marketing channel of paddy is "selling paddy to collector/middleman" followed by "selling paddy to rice mill". The marketing practice of palawija is "selling to collector/ middleman" followed by "selling at local market".

#### 1.4.8 Farm Economy

The primary objective of the farm economic analysis under the present Study is to examine capacity-to-pay or possible contribution of O&M costs by beneficiary farmers after the project. Further, the limited accessibility to reliable sources on farm household income and expenditures prevent examining farm economic conditions. Accordingly, the present farm economic analysis has been made on 1 ha of irrigated paddy field or rainfed paddy field by estimating net farm income from the field. The results of the farm economic analyses thus made are presented as follows:

Land Use Category	Net Farm Income (Rp. 000)	Cropping Pattern Assumed	
Irrigated Paddy Field	4,840	Paddy (1ha) - paddy (0.47ha)/palawija (0.17ha)	
Rainfed Paddy Field *1	1,750	Paddy (1ha) - fallow	
Rainfed Paddy Field	1,320	Paddy (0.89ha) - palawija (0.11ha)	

#### Estimated Net Farm Income from 1 ha of Paddy Field

Note *1: Paddy field in irrigation command area, but being under rainfed condition

#### 1.4.9 Agricultural Support Institutions, Farmers' Organizations and Extension

#### (1) Agricultural Support Institutions and Farmer Organizations

The main governmental agricultural support institutions providing technical and institutional support in and around the Scheme include the Rural Extension Services Center (BPP), District Agriculture Services Office, District Food Security & Agriculture Extension Office, seed farm and the Seed Supervision & Certification Branch Office at district level as shown in Table B-1.4.1. The organizational set-ups of the District Offices are illustrated in Figure B-1.4.1. The district institutions are placed under the jurisdiction of the district governor, although the technical guidance and support linkages with the central and provincial agencies are still maintained. BPPs and Field Extension Workers (PPLs) are placed under the District Food Security & Agriculture Extension Office of Asahan District Government.

A number of farmers' organizations involved in agricultural activities are formed in the project sub-district and *desas*. Among these, the major ones are the Farmers' Group (*Kelompok Tani*/KT) and Water Users' Association (P3A). The number of KTs formed in the project sub-district and their development status assessed by district agricultural agencies are shown in Table B-1.4.1. In the project sub-district, 48 KTs with a total membership of about 1,950 have been formed. Of 48 KT, 13% are classified as primary level (*pemula*), 52% as secondary level (*lanjut*), 33% are middle level (*madya*) and 2% is advance level (*maju*).

There are 2 KUDs, 2 KOPTAN, 1 UPJA and 1 BRI Village Unit in the project sub-district, though the KUDs has no activity at present. General problems encountered by KUD are reported to be: i) cooperative funds still limited, ii) management capability still poor and iii) awareness of members on cooperative activities, member's rights & responsibilities and cooperative principles are still limited.

#### (2) Agricultural Extension

One of the main features of the decentralization policy in the agriculture sector is the devolution of agricultural extension activities to the district government. Therefore, the functions of the provincial extension agencies have faded away and their current main functions are to provide technical guidance and support to district agencies. The arrangements for institutions for the agricultural extension services are not uniform among districts.

The extension services to farmers in Indonesia are basically provided by PPLs of district agricultural agencies, who are to guide and serve farmers through farmers' groups in their working area. PPLs are deployed by sub-district basis to BPPs.

The number of PPLs assigned to BPP in the project sub-district is 5 of which 2 PPLs are deployed in and around the Scheme. However, the BPP office in the sub-district has not been established and activities of PPLs are constrained, as well, due to limitations of transportation, extension materials & equipment and operation funds. The weaknesses or problems involved in the current extension services are:

- Limitation of funds for implementation of extension activities, insufficient number of extension staff and; limited capabilities of extension staffs especially on post-harvest and marketing issues, and
- Coordination & collaboration of extension agencies and agriculture services offices yet to be established to introduce holistic approaches for extension.

## 1.4.10 Agricultural Facilities and Machinery

The numbers of agricultural facilities and machinery including rice mills, tractors, water pumps, threshers, paddy dryers etc. possessed in the project sub-district are shown in Table B-1.4.1. There will be a shortage in the availability of hand tractors when land preparation works of all the paddy fields in the Scheme are to be carried out by machinery, which will result in prolonging the planting season of paddy in the area. The capacity of rice mills in and around the Scheme is sufficient to meet milling requirements in the areas as such requirement is mostly for family consumption and most of the paddy is marketed without husking.

#### 1.4.11 Agricultural Development Constraints

The major agricultural development constraints identified in the Scheme include;

- Shortage of irrigation water supply both in wet and dry season,
- Poor land drainability, especially in rainfed paddy fields,
- Existence of a large extent of long unused fallow lands,
- Land use conversion to oil palm and decrease of food crop farmers; may have resulted in labor shortages and lands that have long laid fallow,
- Recommended farming practices not yet fully adopted due to various reasons,

- Rat infestation, especially in rainfed paddy fields located close to fallow lands,
- Limited activities of KTs and other farmer organizations,
- Insufficient extension services; lack of facilities and equipment (BPP), insufficient capability of extension staff especially in post-harvest & marketing aspects, limitation of operational funds & transportation and limited coverage of extension services and activities of PPLs, and
- Low intensity of farm roads.

## 1.5 Institution

(1) District Government Authorities

The Asahan District Government, under the control of Regent (*Bupati*), is composed of one secretariat, 24 internal units and 17 external units, having 10,372 civil servants as a whole. These civil servants consist of one first rank officer, 10 second rank, 87 third rank and 329 fourth rank officers as management staff and 9,945 rank-and-file staff. The educational background of civil servants is that the majority (55%) has graduated from senior secondary school followed by diploma graduates (22%) and university graduates (11%).

Revenue and expenditure condition of Asahan District Government for the last three years from 2000 to 2002 is as summarized below.

Fiscal Year	Revenue (Million Rp.)	Expenditure (Million Rp.)	
2000	119,214	149,189	
2001	275,103	307,505	
2002	329,108	329,285	

**Revenue and Expenditure** 

Development expenditure as one component of the above expenditure was Rp.52,082 million in 2000, Rp.96,744 million in 2001 and Rp.98,310 million in 2002. The genuine revenues of Asahan District Government amounted to Rp.14,300 million in 2002. Actual receipts and expenditures of Asahan District Government in 1999/00 and 2000 are shown in Table B-1.5.1.

(2) Water Resources and Irrigation Sector Authority

In Asahan District, water resources and irrigation sector administration is under the jurisdiction of the Settlement and Regional Infrastructure Services (Dinas

*KIMPRASWIL*). This organization is composed of five Sub-Services, one Division and five branch offices as shown in Figure B-1.5.1.

In Water Resources Sub-Services (*Sub Dinas*), there are four sections and one bureau to handle administration activities with 75 staff in total. This Sub-Services unit is responsible for management of 22 public irrigation schemes including the Padang Mahondang irrigation scheme. Among 22 irrigation schemes, there are nine technical irrigation schemes commanding 13,627 ha, 12 semi-technical irrigation schemes covering 11,991 ha and 1simple irrigation scheme of 3,231 ha. Budget utilized by water resources and irrigation sector amounted to Rp.988 million in 1999/00 and Rp.428 million in 2000. The share in the development expenditure is 3.9% in 1999/00 and 1.7% in 2000.

The Asahan Water Resources Sub-Services office is closely coordinated with Bah Bolon – Asahan Water Resources and River Basin Management Unit (*Balai* PSDA/UPT) which is a branch office of PWRS North Sumatra covering Simalungun and Asahan Districts as well as Pematang Siantar and Tanjung Balai Municipalities, especially concerning water resources development planning aspect. In accordance with the framework of water resources development policy as shown in Figure B-1.5.2, any proposal of water resources sector development from Asahan District Government is to be reviewed by *Balai* PSDA/UPT Bolon – Asahan. Based on review result, recommendations for implementation are to be fed back to the district government.

(3) Water Users' Association

For Padang Mahondang irrigation scheme, provincial and district governments set up the target to establish two WUA in the registered area of 3,231 ha. One of the target WUA was established in May 1993 and approved by *Bupati* in June 1993. Since then, however, its performance has been dormant due to non-functional irrigation system so that there remain only 26 members at present in WUA Padang Mahondang. Of course no representative and board member of director is available. The monitoring and evaluation record on WUA performance made by *Balai* PSDA/UPT Bolon – Asahan reveals that WUA Padang Mahondang is recognized as "Not yet developed".

The followings are major items pointed out by face-to-face interview respondents consisting of eight WUA member farmers and two non-members based on the rapid rural appraisal method:

- This scheme was initially developed on the facility-oriented basis without paying any attention to beneficiary farmer's needs resulting in that very limited number of farmers were interested in irrigation water since the

beginning;

- WUA was also established according to top-down direction;
- No irrigation water is distributed for the dry season cropping because irrigation system does not function totally from intake to tertiary block;
- During the wet season, irrigation water supply is not a critical issue as paddy can grow depending on rainfall;
- Even though WUA membership fee is stipulated at 25 kg of dry paddy per 1 ha for one crop season in the article of WUA, nobody wants to follow this rule because no merit can be expected from participation to WUA due to no guarantee of irrigation water supply;
- Operation and maintenance works at the tertiary level are voluntarily carried out by a limited number of farmers in a part of the irrigation area; and
- To reactivate WUA and encourage non-member farmers to participate in or establish WUA, function recovery of irrigation system is prerequisite in this area and further betterment of drainage condition is preferable.
- (4) Federation of WUA

In response to administrative instruction by Ministry of Home Affairs, *Bupati* of Asahan District Government has promoted to organize the existing WUA into a federation in the respective irrigation schemes. In the service area of *Balai* PSDA/UPT Bolon -Asahan, a total of 13 WUA Federation (FWUA) was established and approved by *Bupati* as of January 2001. Although this promotion backed up by the World Bank is in line with PKPI based on Government Regulation No.77/2001 on Irrigation, action actually taken is obviously depending on top-down system. Therefore, the article of FWUA is signed by the chief of village (*Kupara Desa*), not the representative of member WUA. In some cases, no consultation was obtained from representatives of member WUA.

## CHAPTER 2 BASIC CONDITIONS IN FORMULATING REHABILITATION PLAN

## 2.1 Irrigation

## 2.1.1 Rehabilitation Plan for Irrigation Facilities

## (1) Purposes of Rehabilitation

The rehabilitation plan will be based on the field investigation results and the discussions made with the officials of the provincial government concerned and the project management office as follows:

- 1) To provide an intake structure to draw stable irrigation water throughout the year,
- 2) To prevent inflow of sediment into the canal from the river,
- 3) To improve and introduce a technical irrigation network system,
- 4) To extend the irrigation command area with irrigation facilities,
- 5) To design diversion/turnout structures by providing water measurement devices for the introduction of an appropriate water management technology,
- 6) To provide such infrastructures as inspection roads and farm roads for O/M of irrigation facilities and future mechanized farming, and
- To provide project facilities such as a site operation houses (50m²), vehicles, motor cycles, and office equipment for the project office.
- (2) Criteria applied for Facilities Design

Design of facilities to be rehabilitated is based on the "Irrigation Design Standards" (from KP-01 to 13) prepared by the Ministry of Settlement and Regional Infrastructure (former Ministry of Public Works) in December 1986. In evaluating rehabilitation of irrigation facilities, the "Technical Guideline for Rehabilitation and Upgrading, Irrigation Networks" prepared in August 1999 is basically applied.

## 2.1.2 Assessment of Inventory Survey Results

## (1) Number of Facilities

According to the survey results, there are 1 free intake (diversion weir) and 4 irrigation canals with a total length of 14 km, consisting of 1 main canal and 3 secondary canals. The number of related structures on the irrigation canals is 25 in total, consisting of 8 on the main canal and 17 on the secondary canals. The inspection roads are partially provided; however, they are almost un-trafficable along both the main and secondary canals.

Facility	Number	Length (km)	No. of Structures	
Intake	1	Free intake from	1	
	1	Asahan River	1	
Main Canal	1	3.575	8	
Secondary Canal	3	9.225	17	

**Features of Irrigation Facilities** 

The main and secondary canals are unlined. The structures on the irrigation canals are made of stone masonry except bridges that are of concrete construction.

(2) Structural Conditions of Facilities

On the basis of the results of the investigation, the conditions of the structures have been assessed and classified, by the state of rehabilitation into the following four categories:

- A: Functioning well, no rehabilitation is needed.
- B: Partially damaged/deteriorated, minor rehabilitation is needed.
- C: Not functioning well, large scale rehabilitation is needed.
- D: Seriously damaged, replacement or reconstruction is needed.

As a result of evaluation, conditions of all the structures are classified into category D, because of poor construction and/or deteriorated due to no operation for a long time since the end of the 1990s.

(3) Irrigation and Drainage Condition

The land use condition in the project areas, based on rough surveys and interviews with the *Balai* and farmers are as follows:

- (a) Soil conditions at eastern lower part are found to be unsuitable for paddy cultivation, and
- (b) Lower part land less than El. 5 m is swampy, poorly drained and inundating during the rainy season.
- (4) Maximum Irrigable Area

Based on the existing irrigation map prepared by the *Balai* PSDA/UPT Bolon -Asahan and the discussions with PWRS and the *Balai* regarding the area for irrigation, the maximum irrigable area is determined to be 2,631 ha in case that the water source availability is sufficient. Through the water balance study mentioned in Chapter 3, the irrigable area of 2,631 ha is verified and determined as the subject area.

## 2.2 Agriculture

The basic concepts applied for the formulation of the agriculture plans for the present Study are as enumerated below.

- Formulation of agriculture plans placing emphasis on paddy production envisaging contribution to the food security in Indonesia and to introduce a double cropping of paddy as a basic cropping pattern to the greatest possible extent; to which the general consensus of the beneficiaries in the current irrigated fields have been obtained at the public consultation meetings of preliminary nature held during the Phase II Study,
- 2) Tree crop planted land is excluded from the target area of the present rehabilitation plan (Farmers intension to be assessed in detail in further studies to follow),
- 3) Irrigation agriculture performances and experiences in the advanced schemes among the target schemes of the Phase I Study in the province are to be fully taken into consideration in the formulation of the agricultural plan,
- 4) The plan envisages improvement of crop productivity and realization of increase of cropping intensity through the efficient use of irrigation water,
- 5) The current agricultural status, including crop selection, cropping schedule, cropping pattern and cropping intensity in the Scheme and also the past records shown in Table B-1.4.2 should be dully assessed and taken into planning so that the formulated plans will be sustainable for beneficiaries intentions and capabilities, and
- 6) Major constraints for the attainment of the agriculture development targets are to be dully addressed to the greatest possible extent in the agriculture extension services strengthening.

## 2.3 Institutional Strengthening Concept and Target

The current situation of WUA's performance in the scheme can be described as "Not developed yet". The main reason is the existing physical condition of the irrigation system under which no sustainable irrigation water supply can be guaranteed to farmers according to their requirements. Therefore, full recovery of the irrigation system's function is a precondition to encourage farmers to activate the existing WUA as well as to accelerate establishment of new WUA and participate in these new WUA in non-WUA tertiary blocks. In this regard, the basic concept for promoting WUA establishment in Padang Mahondang irrigation area is to raise farmers' awareness to the necessity of WUA establishment as well as the role, function and activities of WUA in parallel with implementation of irrigation system rehabilitation works.

Another concept for institutional strengthening is to enable officials of the Asahan District Government to understand and practice the new irrigation management policy and also to improve the capacity of organization units involved in the irrigation management and those staff capabilities in line with the new irrigation management policy.

The target of institutional strengthening is to establish WUA in the service area of each tertiary system of the scheme when its function is fully recovered.
# CHAPTER 3 DEVELOPMENT PLAN

# **3.1 Determination of Irrigation Area**

(1) Data and Information used for the Formulation of the Rehabilitation Plan

Data and information used for the formulation of the rehabilitation plan are as follows:

1) General topographic map

National Geographic Bureau (Scale: 1/50,000, 1981)

Peta Luasan Daerah Irrigashi Dan Rawa Caban Dinas P.U. Pengairan Asahan (Scale: 1/250,000)

- Meteorological and hydrological data Meteorological records at the Medan meteorological station Discharge record of the Asahan River at the Pulau Raja site
- 3) Design references

Master Plan Study on Lower Asahan River Basin Development (JICA, 1990)

Design Report on Lower Asahan River Flood Control Project (DGWRD, 1990)

Inventory Survey Report of the Existing Facilities (JICA Team, 2003)

(2) Project Area

The registered area of the scheme is 3,231ha. The target area had been almost entirely developed as paddy field in the past, except for oil palm planted land. The area of oil palm land is estimated at approximately 600 ha. Taking into account the said conditions, the target area for the present development plan is determined to be 2,631 ha by excluding oil palm planted land from the project area as stated in Chapter 2 and as shown below.

Ū	
Registration Area	3,231 ha
Tree Crop Land (oil palm)	600 ha
Project Area	2,631 ha

Project Area

# (3) Assessment of Water Demands in the Field

The irrigation water requirements have been estimated based on a planning guideline prepared by MOSRI. Consumptive use of water has been estimated on the basis of the modified Penman method proposed by FAO. A percolation rate of 2

mm/day is applied. The water requirement of land preparation for paddy is assumed to be 250 mm. The overall irrigation efficiency is assumed to be 60%.

On the conditions and assumptions stated in (2) and above, the unit diversion irrigation water requirement for paddy is estimated at 1.16 liters/sec/ha (in May and November), and details are shown in Table B-3.1.1 to B-3.1.3.

(4) Confirmation of Available Water from the Asahan River

Based on the calculation results stated above, the intake discharge is estimated at Q =  $3.157 \text{ m}^3$ /s for the maximum irrigation area of 2,631 ha. The average runoff of the Asahan River is 112 m³/s, and probable runoff expected 4 out of 5 years is estimated at 70 m³/s, water demand for the project area will be satisfied by the river runoff.

# **3.2 Proposed Project Works**

### **3.2.1** Conditions of Existing Facilities

(1) Free Intake

The existing free intake is not functioning and hence it is completely out of service due to the following conditions/reasons:

- (a) The river water level of the Asahan River during the dry season is lower than the required intake water level and no irrigation water can be drawn off the river.
- (b) Due to the large fluctuation in river water level and lack of facilities such as trash racks, and poor design of location of the intake, the approach channel of intake has been closed with sand and debris.
- (c) Due to poor maintenance of the approach channel of the intake, large quantities of sediments have been piled and hence the water inflow to the intake has been stopped.

### (2) Irrigation Canal and Related Structures

Existing irrigation canal is unlined earth canal 1-2 m wide. Due to poor maintenance, many sediments and trees/grasses are found inside of the canal. As a result, canal flow is blocked off. In addition, collapse of canal slopes are found along the entire length. Related structures, such as division structure, off-take structure, drainage culvert, and bridge have been damaged or are out of order.

(3) Inspection Road

Conditions of inspection roads and other related facilities are very poor and almost impassable through the year.

# (4) Possibility of Rehabilitation of Existing Facilities

As the existing conditions of the irrigation facilities could be described as almost out of order as stated above, large-scale rehabilitation or replacement will be required. The design capacity of existing structures is determined to be sufficient to irrigate 700 to 1,000 ha. Therefore, the rehabilitation and/or upgrading of the existing facilities seem to be hardly possible. Therefore, it is proposed to newly design the system with a development area of 2,631 ha as shown in DRAWINGS attached at the end of this report.

Prior to the design of irrigation facilities, the following considerations are made:

- (a) Location of intake should be relocated upstream from the existing site.
- (b) Type of diversion structure shall be of free intake type and diversion weir type (fixed or barrage type) shall not be considered because of high construction costs and the effect of back water on the upstream.
- (c) Several countermeasures for the prevention of sediment inflow to the intake and stable intake water throughout the year should be considered for the selection of the intake site and the design purpose.
- (d) Canals and related structures are to be designed for irrigation with an area of 2,631 ha.
- (e) Technical level of facilities is to be raised to technical irrigation. (Existing grade is semi-technical or simple level)
- (f) Drainage canals in the northeastern area should be provided with an appropriate capacity.

## **3.2.2** Irrigation Diagram

Prior to the design of irrigation facilities, the irrigation diagram was prepared for the irrigation command area of 2,631 ha. The proposed irrigation diagram is shown in DRAWINGS attached at the end of this report.

## **3.2.3** Design of Irrigation Facilities

## (1) Diversion Structure

To determine the type of diversion structure, the following countermeasures are considered, taking into account the conditions of the existing structure:

- (a) To prevent inflow of bed load from the river
- (b) To keep water intake stable throughout the year
- (c) Required intake level at intake site is set at El. 13.0 m

The site selection is based on the available topographic map and the profile of the Asahan River that was prepared in 1990 during the detail design of the Asahan

flood control project. The bottom elevation of the existing free intake is to be set at El. 11.50 m as a result of the survey by the JICA Team.

The gradient of the Asahan River is estimated at 1/3,000 and the river bed elevation at the existing intake point is about El. 9 m. It seems to be very difficult to draw water off the river without intake of much bed level and the river bed elevation is only 2.5 m.

To avoid such design failure, the following design considerations are made:

- (a) To select the location of the proposed intake for drawing water off the river during low level period, the river bed elevation is to be El. 10 m, which is situated about 3 km upstream from the existing intake.
- (b) To avoid inflow of bed load directly into the canal, a sand trap pond is to be provided in front of the intake gate. A gap of 1 m between the sand trap pond and the intake bed level is required.
- (c) To avoid inflow of bed load during medium to high water level, the width of the intake should be as great as possible.
- (d) In addition to the above design considerations, a settling basin after the intake is considered.

Drawing of intake is shown in DRAWINGS attached at the end of this report.

(2) Irrigation Canal and Related Structures

Based on the proposed irrigation network, design of irrigation canals and related structures are made. Summary of canal and related structure are as follows.

Canal	Number	Length (km)	Related Structure (nos.)
Main	1	9.0	12
Secondary	4	13.0	Not designed

Summary of Irrigation Canal and Related Structures (New construction)

The list of irrigation canals and the related structures on the main canal are shown in Table B-3.2.1 and the hydraulic dimension of the main canal is shown in Table B-3.2.2.

Reference drawings of intake and canals are shown in DRAWINGS attached at end of this report.

(3) Drainage Canals and Facilities

Design of drainage canals and facilities has been made at a preliminary level and applied to the cost estimate.

# (4) Work Quantities

The work quantities have been calculated based on the development plan. Work quantities for each structural item have been calculated as shown in Table B-3.2.3. Regarding the calculation of work quantities of the secondary canals, estimate of work quantities has been made in proportion to the area of the secondary system.

# 3.3 Agriculture

# 3.3.1 Land Use Plan

In the agricultural land use plan, the conversion of the current rainfed fields into irrigated fields and the development of the entire project area into irrigated paddy fields (2,440 ha) are planned as shown in Table B-3.3.1 and as follows;

Land Use Category	Present (ha)	With Project (ha)	Increment (ha)
Irrigated Paddy Field	724	2,440	1,716
Rainfed Paddy Field	1,907	-	- 1,907
- Currently Used	436	-	- 436
- Long Fallow Land	1,471	-	- 1,471
Right-of-ways *1	-	191	191
Project Area	2,631	2,631	0

Land Use Plan

Note *1: Right-of-ways assumed to be 10% of rainfed paddy field

# **3.3.2** Planned Cropping Pattern and Schedule

Under the present Study, the selection of crops to be introduced in the planned cropping pattern in the Scheme has been made basically observing the currently prevailing cropping pattern and cropped area in the area and the past records on the same, which represents farmers intention and capabilities to a certain extent. Based on such approach, the crop selection has been made as follows:

- (a) Paddy has been selected as a main crop in the planned cropping pattern as stated in the development concepts (Chapter 2) and as farmers' preferences for a crop and the volume of market demands. However, the introduction of double cropping of paddy is limited to 50% on the basis of the past cropping records in the Scheme and considering the availability of labor force³.
- (b) Maize is selected as a representative palawija to be introduced in the planned cropping pattern since it is the most common palawija currently cropped in and around the Scheme. Further, from the demand/supply

³ Sufficient number of labor forces are available in the project *desas*, but part of them are worked as estate labor. Possibility to count them as labor forces for irrigation farming in the Scheme is to be confirmed.

condition and profitability of crops, hybrid maize appears to be the most promising crop among palawija. Similarly, maize is the most promising palawija in terms of national economy. The palawija area has been set at 10% of the paddy field in the dry season.

The planned cropping pattern and schedule have been formulated on the basis of: i) current cropping pattern & schedule in the Scheme and ii) recommended cropping schedules of the District Agriculture Office, iii) climatic conditions and iv) water balance study as shown in Figure B-3.3.1 and summarized below.

Season	Pattern (Crop & Intensity)	Schedule
Wet Season	Paddy (100%)	Mid. Oct end Nov. ~ early Jan early Mar.
	Paddy (50%)	Beg. May - mid. June ~ early Aug Mid. Sep.
Dry Season	Palawija (maize; 10%)	Mid. Jan end Jan. ~ mid Apr end Apr.
Annual	Paddy - Paddy/Palawija (160%)	

Planned Cropping Pattern & Schedule

# 3.3.3 Planned Cropped Area and Cropping Intensity

In accordance with the planned cropping pattern and the selected crops discussed earlier, the target cropped areas and cropping intensities in the scheme under the present Study are planned as shown in Table B-3.3.1 and summarized below.

Cron	Wet Season		Dry Season		Annual	
Стор	Area (ha)	Ratio (%)	Area (ha)	Ratio (%)	Area (ha)	Ratio (%)
Paddy	2,440	100	1,220	50	3,660	150
Palawija (maize)	-	-	244	10	244	10
Total	2,440	100	1,464	160	3,904	160

Planned Cropped Area & Cropping Intensity (%)

The increase of annual cropped area of some 2,300 ha of paddy and about 130 ha of palawija from the present level is planned under the Study as shown in Table B-3.3.1. Further, the increase of paddy cropping intensity of 100%, the same of palawija cropping intensity of 6% and the same of overall intensity of 105% is envisaged.

# 3.3.4 Target Crop Yields and Crop Production Plan

Target yields of paddy and palawija are estimated based on yield levels attained by the existing farmers in the Scheme, yield levels in advanced irrigation schemes in Asahan District and information on potential yield levels provided by PPLs and also considering the poorly drained land conditions of current rainfed fields as shown in Table B-3.3.1 and summarized below.

Cropping Season/Crops	Present Yield	Target Yield	Increase
In Current Irrigated Field			
- Wet Season Irrigated Paddy	4.0 t/ha	5.0 t/ha	1.0 t/ha
- Dry Season Irrigated Paddy	4.0 t/ha	5.0 t/ha	1.0 t/ha
In Current Rainfed Field			
- Wet Season Paddy	2.0 - 2.5 t/ha	4.0 t/ha	1.5 - 2.0 t/ha
- Dry Season Paddy	-	4.5 t/ha	-
Palawija (maize) ^{*1}	3.0 t/ha	5.0 t/ha	2.0 t/ha

Target Yields under the Study

Note *1: Target yield --- hybrid maize; Present yield --- composite maize

The target yield of 5.0 t/ha is an increase of 1.0 t/ha from the present yield level of 4.0 t/ha in irrigated fields. The target yield of 4.0 & 4.5 t/ha is an increase of 1.5 to 2.5 t/ha from the present yield of 2.0 to 2.5 t/ha in rainfed fields as shown in Table B-3.3.1.

On the basis of the target crops yields and the planned cropping pattern, the with-project crop productions are estimated as shown in Table B-3.3.1 and summarized in the following table.

Crop	Present (ton)	With Project (ton)	Increment (ton)
Paddy	3,859	16,088	12,229
Palawija	345	1,220	875

**Planned Crop Production** 

As shown in the table, the production increase of some 12,200 tons of paddy and 900 tons of palwija (maize) are estimated under the with-project condition.

# 3.3.5 Crop Budgets

The planned crop budgets estimated for irrigated paddy and palawija (maize hybrid) are estimated as shown in Table B-3.3.2 and summarized below.

Crops	Crop Season	Yield (t/ha)	Gross Return (Rp. 000)	Production Cost (Rp. 000)	Net Return (Rp. 000)
Irrigated Paddy	Wet/Dry	5.0	6,500	2,490	4,010
Inni asta d Da d da. *1	Wet	4.0	5,200	2,170	3,030
Irrigated Paddy	Dry	4.5	5,850	2,410	3,440
Maize (hybrid)	Dry	5.0	5,500	2,240	3,260

Planned Crop Budget per Ha

Note *1: Newly irrigated field under the project

### **3.3.6 Farm Economy**

The farm economic analyses under the present Study have been made to examine capacity-to-pay or possible contribution of O&M costs by beneficiary farmers after

the project and was based on 1 ha of irrigated paddy field or rainfed paddy field by estimating net farm income from the fields as discussed earlier in Section 1.4.8.

The results of the farm economic analyses thus made are summarized below:

Land Liza Catagony	Net Fa	rm Income (Rp.	Cropping Pattern	
Land Use Calegory	Present	With Project	Increment	Assumed
Irrigated Paddy Field	4,840	6,340	1,500	$\mathbf{D}_{2}$ 11 (11.2) and 11 (0.51.2)
Irrigated Paddy *1	1,750	5,080	3,330	Paddy (Ina) - paddy (0.5na)
Irrigated Paddy *2	1,320	5,080	3,760	/palawija (0.1na)

Estimated Net Farm Income from 1ha of Field

Note *1: Paddy field in current irrigation command area being under rainfed condition *2: Newly irrigated field from rainfed field

# 3.3.7 Agriculture Extension Services Strengthening Plan

# (1) Constraints for Development

Major constraints for the attainment of the set agriculture development targets, which are to be duly addressed to the greatest possible extent in the agriculture extension services strengthening (AESS) under the present plan, include;

- 1) Farmers' Groups (KTs) yet to be empowered to a great extent, especially toward the introduction of agri-business oriented farming activities in collaboration with group members and groups (Constraints 1),
- Insufficient extension services; insufficient capabilities of agriculture services & extension staff, especially in post-harvest & marketing aspects, lack of facilities and equipment (BPP), limitation of operational funds & transportation and limited coverage of extension services and activities of PPLs (Constraints 2),
- 3) Farmers in newly irrigated fields have no or limited experiences in irrigated paddy cultivation; intensive technical guidance and support for these target groups are essential in the fields of irrigated paddy production, tertiary level and on-farm water management (Constraints 3),
- 4) Technical development on irrigated paddy production in areas currently under poorly drained conditions, especially in long fallow land (Constraints 4),
- 5) Addressing the shortage of hand tractors for land preparation is slated under the with-project condition; strengthening of UPJA is essential from the initial stage of the rehabilitation plan in order to attain the expected project benefits from an early stage of the development (Constraints 5),
- 6) Participatory approaches for development yet to be introduced; to these constraints a mass guidance or campaign, workshop and farmer/farmers' groups training or empowerment will be essential (Constraints 6), and

- 7) Other constraints include: i) serious rat infestation in rainfed areas, ii) recommended farming practices not yet adopted and iii) poor or no irrigation water management due to limitation of water supply; all to be addressed through the ordinal extension services activities.
- (2) Agriculture Extension Services Strengthening (AESS)

The extension services strengthening programs formulated to meet the requirements discussed in the section above are presented in Table B-3.3.3 and summarized as follows;

Institutional Strengthening Package Program (Constraint 2)

- Establishment of Regional & Sub-regional Task Force Team for AESS
- Staff empowerment program (capacity building of regional & sub-regional & extension staffs)
- Strengthening of extension facilities

Farmer Organizations Empowerment Package Program (Constraint 1 & 5)

- Empowerment of KTs toward agri-business oriented groups.
- Empowerment & formation of UPJA

Technical Guidance Package Program (Constraint 3 & 4)

- Technical development, technical demonstrations, farmer/farmers' group training, study tours, field schools etc.

Participation Enhancement Package Program (Constraint 6)

- Workshops, mass guidance & campaigns etc.

Under the present plan, the provision of farm inputs or farm credit has not been accommodated since the requirements for the same could not be estimated and the justification of dual investments of public funds to the target scheme in addition to a heavy investment for rehabilitation works is doubtful.

The implementation of these strengthening programs should be started from the commencement of the construction works and continue for the period of at least 5 years or up to 3 years after the completion of the construction works. The proposed implementation schedules for AESS are shown in Table B-3.3.1 and Table B-3.3.4 in detail. The overall program costs are estimated at Rp. 530 million as shown in Table B-3.3.4.

# 3.4 Institutional Strengthening Plan

To realize the targets, the institutional strengthening plan for the scheme consists of two programs in the initial stage, i.e. institutional capacity building and staff capability improvement program, and WUA establishment acceleration program. After WUA is established, step-upped programs will be implemented as follow-up activities of WUA. These are WUA strengthening program, FWUA and MWUA initial setting-up program, on-the-job training program on operation and maintenance of tertiary irrigation systems, and a guidance to set and collect irrigation management fees.

(1) Institutional Capacity Building and Staff Capability Improvement Program

This program contains two components. One is to enable irrigation officials of the Asahan District to understand and practice the new irrigation management policy. The other is to improve the capacity of organizational units of the Asahan District Government involved in irrigation management and those staff capabilities in line with the new irrigation management policy.

The first component will be done through undertaking a series of seminars and workshops to be facilitated by the central government after the legal framework for water resources and irrigation management is completed. Its program formulation and budget arrangement will be also made by the central government.

The second component should reflect the above nationwide dissemination of the new irrigation policy by the central government. This component will be done as follows:

- To evaluate the capacity of district/municipal government authorities and the capability of those staff involved in irrigation management activities;
- To identify needs for improving institutional capacity and staff capability to cope with the new irrigation management policy as well as supporting requirements for fulfillment of such needs through technical assistance by central/provincial government; and
- To formulate implementation programs on institutional capacity building and staff capability improvement for the respective district/municipal government authorities involved in irrigation management.

Regarding budget arrangements for implementing these programs, the main source is the Asahan District Government budget to cover the cost for institutional capacity building and staff capability improvement, while the supplemental source is provincial government budget to cover the cost for implementation of the supporting menus.

In implementing the institutional capacity building and staff capability improvement program, a group of trainers will be organized by inviting well experienced specialists from consultants, NGOs and universities. Monitoring and supervision of the program implementation should be carried out continuously by relevant organizational units at the provincial level throughout the program implementation stage with periodical reporting on performance and impact of the program implementation.

(2) WUA Establishment Acceleration Program

To accelerate WUA establishment in the respective tertiary block of the scheme in order to ensure participatory irrigation management, the program is to be implemented based on the following steps:

- hold socialization meetings and workshops to invite representatives and members of Farmers' Groups that are available in non-WUA tertiary blocks for the purpose of accelerating WUA establishment and promoting participatory irrigation management;
- confirm farmer's awareness to establish and participate in WUA as well as needs for guidance about procedures and practices of WUA establishment;
- formulate a guidance menu list, and make a package program of guidance menus to accelerate WUA establishment in non-WUA tertiary blocks to which irrigation water is distributed; and
- estimate unit cost of each guidance menu and total cost of the package program.

Budget to implement the package program for WUA establishment acceleration is to be covered by the project financing.

In implementing the WUA establishment acceleration program before starting rehabilitation works, consultants, NGOs and/or universities are to be recruited as facilitators and supporters in the irrigation command area.

(3) WUA Strengthening Program

The WUA Strengthening Program will be conducted based on the following steps:

- hold WUAs' awareness raising workshops to reconfirm weak points elaborated from recapitulating data on the M&E record on WUA's performance;
- identify technical assistant requirements for improving WUA's capacity to manage organization, capability to conduct operation and maintenance of tertiary irrigation systems, and/or activities to set and collect WUA member's fees;
- formulate a technical assistant menu list and make a package program of technical assistance menus according to WUA's needs to improve its capacity, capability and/or activities; and
- estimate unit cost of each technical assistant menu and total cost of the package program.

Budget for implementing the package program for strengthening WUA is to be covered by the project financing.

In implementing the WUA strengthening program before starting rehabilitation works, consultants, NGOs and/or universities are to be recruited as facilitators and implementers in the irrigation scheme area.

# (4) FWUA and MWUA Initial Setting-up Program

The FWUA and MWUA initial setting-up program will be conducted based on the following steps:

- imbue the local society with the necessity of setting up representative groups of WUA to cope with the participatory irrigation management policy if FWUA/MWUA has not been established;
- formulate a guidance menu list, and make a package program of guidance menus to support initial setting-up of FWUA/MWUA according to the current situation in the scheme; and
- estimate unit cost of each guidance menu and total cost of the package program.

Budget for implementing the initial setting-up program of FWUA and MWUA is to be covered by the project financing.

In implementing the initial setting-up of the FWUA and MWUA program, consultants, NGOs and/or universities are to be recruited as facilitators and supporters in the irrigation command area.

(5) Training Program on Operation and Maintenance of Tertiary Irrigation Systems

This training program will be done after completing the rehabilitation works of the irrigation systems. For this purpose, however, preparation of training manuals and programs should be done in parallel with the final stage of rehabilitation works. Also the concept of training programs should synchronize the irrigation water allocation plan to tertiary blocks as well as the cropping pattern and planting schedule in the irrigation scheme.

As this training will be done as one of the rehabilitation project components, a consultant under the project manager is to be responsible for preparing training manuals, formulating training programs, estimating training costs and implementing training programs. To ensure effective and efficient implementation of training on operation and maintenance of tertiary irrigation systems, NGOs and other volunteers will be encouraged to become involved in training activities at the

field level in addition to the project staff, District Government officials and the consultant.

Budget arrangements based on the consultant's cost estimate are the responsibility of the project manager.

(6) Guidance Program for Setting and Collection of Irrigation Service Fees

In parallel with preparation of the guidance manuals, the following points will be considered:

- identify issues on book keeping systems, fee determination methods, payment forms, fee collection systems and payment schedules;
- identify issues affecting the fee allocation system to cover administration, operation, maintenance and other miscellaneous costs;
- identify incentives to members;
- formulate a guidance menu list and a package program of guidance menus for setting and collection of irrigation water service fees; and
- estimate unit cost of each guidance menu and total cost of the package program.

Budget arrangements based on the consultant's cost estimate are the responsibility of the project manager.

In formulating and implementing the guidance program for setting and collection of irrigation water service charges, special attention will be paid to recruit a consultant with specific experience matching with the above terms.

(7) Cost Estimate for Institutional Strengthening Plan

The overall cost for the proposed institutional strengthening plan in the above is estimated at Rp. 335 million in total. The breakdown of estimated cost is as follows:

- Rp. 10 million for Institutional capacity building and staff capability improvement program for Water Resources Sub-service of Asahan District *KIMPRASWIL* based on unit cost of Rp. 5 million and 2-time implementation;
- Rp. 50 million for WUA establishment acceleration program targeting beneficiary farmers in non-WUA tertiary blocks based on unit cost of Rp. 20,000/ha and the existing WUA's coverage area of 2,507 ha;
- Rp. 29 million for WUA strengthening program to reactivate the existing WUA Pahang Mahondang based on unit cost of Rp. 40,000/ha and WUA's coverage area of 724 ha;
- Rp. 65 million for FWUA and MWUA initial setting-up program based on

unit cost of Rp. 20,000/ha and the proposed recovery area of 3,231 ha;

- Rp. 116 million for training program on operation and maintenance of tertiary irrigation systems based on unit cost of Rp. 36,000/ha and the proposed recovery area of 3,231 ha; and
- Rp. 65million for guidance program for setting and collection of irrigation service fees based on unit cost of Rp. 20,000/ha and the proposed recovery area of 3,231 ha.

# 3.5 Environmental Aspects

Environmental assessment is now accepted as key part of development planning and is as important as economic analysis in project evaluation. In this Study, however, such assessment has not yet been conducted, as the objective of the Study is to recover the function of the existing infrastructures. Nonetheless, environmental assessment for the rehabilitation project is no less important than that of a new development project as far as environmental impact exists. In this regard, it is proposed to carry out environmental assessment prior to the implementation of the project on the basis of the following law and regulation:

- Law No.23/1997 concerning environmental management, and
- Government Regulation No.27/1999 concerning environmental impact assessment

## CHAPTER 4 COST ESTIMATE

#### 4.1 Conditions of Project Cost Estimate

Project costs for the proposed project works including construction cost for rehabilitation, consulting services fee, administration cost (salary for the office staff and expenditures for office management), and costs for institutional and extension service strengthening are estimated on the basis of the following conditions:

- (a) All the civil works of the project will be executed on a contract basis. Contractors will be selected through international competitive bidding.
- (b) Physical contingency of each work is assumed to be 20% in due consideration of the Pre-F/S design level.
- (c) Price contingency is not counted taking into account the short construction period.
- (d) Costs for institutional strengthening and extension service strengthening are assumed to be 2% of the total costs of civil works construction.
- (e) Cost for the consulting services is assumed to be 7% of the costs for civil works and works described in (d) above.
- (f) Administration cost of the project office is assumed to be 2.5% of the costs for civil works and works described in (d).
- (g) Exchange rate used for the estimate is US\$1.00 = Yen 118.9 = Rp. 8,279 as of May 2003, and
- (h) Currency for cost estimate is expressed in Indonesian Rupiah (Rp.)

## 4.2 Project Cost

(1) Direct Construction Cost

The direct construction cost is estimated based on the calculated work quantities of the proposed project works and unit prices of the works. The unit prices are based on those for similar works quoted in recent engineer's estimates of the North Sumatra Province such as PTSL-II Project.

The direct construction cost is estimated at Rp. 43,245 Million (equivalent to US 1,985 per ha or Rp. 16.4 million, A= 2,631 ha). The breakdown of direct construction costs is shown in Table-B.4.2.1 and summarized as follows:

	Work Description	Amount (million. Rp.)
I.	Intake	4,577
II.	Main Canal Works	12,869
III.	Secondary Canal Works	12,866
IV.	Drainage Works	5,147
V.	On-Farm Development	6,216
VI.	Project Facilities	1,570
	Total	43,245

#### **Summary of Direct Construction Cost**

# (2) Other Costs

Other costs are estimated as shown below:

- Costs for institutional and extension service strengthening:	Rp. 865x 1,000
- Cost for the consulting services:	Rp. 3,087x 1,000
- Administration cost of the project office:	Rp. 1,103 x 1,000

(3) Project Costs

Project costs are estimated at Rp. 48.3 billion as shown in the following table:

	Work Description	Costs (million Rp.)
I.	Civil works	43,245
II.	Institutional and extension service strengthening	865
III.	Consulting services	3,087
IV.	Project administration cost	1,103
	Total	48,300

# **Breakdown of Project Costs**

# CHAPTER 5 PROJECT IMPLEMENTATION

## 5.1 General

The implementation of rehabilitation work of the Padang Mahondang Irrigation Scheme is urgently required for the recovery of function of the existing irrigation scheme to cope with progressing deterioration of the facilities. Implementation schedule of the rehabilitation work after the feasibility study is shown in Figure B-5.3.1 and briefed as follows:

- (a) Preparation of Implementation Program (I/P) and budget arrangements,
- (b) Establishment of project office,
- (c) Preparation of detailed design with tender documents including field survey and investigation,
- (d) Tender and selection of contractor(s),
- (e) Execution of civil construction and taking over of completed irrigation scheme, and
- (f) Execution of strengthening program such as institutional and extension services.

## 5.2 Implementation Schedule

### 5.2.1 Schedule on Initiation Stage and Construction Works

(1) Establishment of Project Office

The project office so-called "Function Recovery Project Office" is to be established at Dinas PSDA. Organization and staffing are to be restructured and transferred from other divisions. At the same time, "Function Recovery Forum" is also established. (Details are presented in Chapter 7 of Part 1 of this Report)

(2) Preparation of I/P and Budget Arrangements

Preparation of I/P is to be made by the Dinas PSDA for the submission to DGWR for its approval. DGWR has to make arrangement for budget by means of national fund and/or loan from the international lending agencies.

(3) Preparation of Detail Design

Immediately after completion of budget arrangement and office establishment, the detailed design including field survey and field investigation, and preparation of the tender documents are to be followed. Period for the detail design is estimated to be less than 12 months.

(4) Tender and Selection of Contractor(s)

Tender and its schedule are to be as follows:

- Number of contract: 2 contracts
- Tender call to contract signing: 6 months
- Construction period: 2 years
- (5) Construction and Taking Over

Immediately after the contract signing, the construction is commenced. The construction management works including supervision work and quality control are to be carried out by the construction section of the project office. The completed scheme of the rehabilitation works is to be inspected, and after verification by the authority, the scheme is taken over by the provincial government for the commencement of operation.

## 5.2.2 Strengthening Program

The strengthening programs both institutional and extension service program are commenced with following elements and schedule.

(1) Institutional Strengthening Program

Elements of institutional strengthening program are as follows:

- (a) Institutional capacity building and staff improvement program,
- (b) WUA strengthening program,
- (c) FWUA and MWUA initial setting-up program,
- (d) WUA establishment acceleration program,
- (e) Training for operation and maintenance of tertiary irrigation system program, and
- (f) Guidance program for collection and expense of irrigation management fee.
- (2) Extension Services Strengthening Program

Elements of extension services strengthening program are as follows:

- (a) Formulation of strengthening program,
- (b) Formulation of task force team,
- (c) Formulation of implementation program, and
- (d) Implementation of strengthening program.
- (3) Budgeting and Budget Implementation

In discussing the preparation of budget proposals and implementing of budget to be allocated to the function recovery program, special attention has to be paid to the following key issues related to the modified irrigation management policy in line with the draft of new Law on Water Resources:

- (a) Arrangement of irrigation management responsibility between irrigation water suppliers and water users,
- (b) Arrangement of irrigation management responsibility among government authorities,
- (c) Funding criteria, and
- (d) Mechanism of budget arrangement and utilization

Among irrigation management activities, the responsibility of planning and design works for development, rehabilitation and upgrading purposes is arranged to governments at central and provincial level to assure quality of outputs from these works. Regarding implementation of physical works, it can be considered that the budget availability, staff capability and contractor capacity are crucial factors at district/municipal level. Therefore, it can be considered rational that irrigation schemes commanding more than 1,000 ha (Registered area of the Padang Mahodang Irrigation Scheme is 2,905 ha.) are to be handled by provincial governments in a sense of participatory irrigation management.

## CHAPTER 6 PROJECT EVALUATION

## 6.1 General

The economic evaluation of the present Study has been made to assess the financial and economic feasibility of the rehabilitation plan (the project). The approaches or assumptions applied for the project evaluation are as follows;

- Economic evaluation has been made by estimating project benefits between the without-project and the with-project conditions,
- For the project evaluation, economic internal rate of return (EIRR), financial return per ha, economic benefit-cost ratio (B/C) and economic benefit minus cost (B-C) have been examined,
- For the evaluation, project benefits have estimated based on crop production benefits and indirect or intangible benefits have not been counted,
- To assess the economic viability of the project to possible changes in project costs, project benefits and build-up period, a sensitivity analysis has been made,
- For financial evaluation of the project, the capacity to pay of beneficiary farmers have been analyzed,
- Without-project condition has been assumed to be the same as the present condition as the reliable prediction or estimation of the without-project conditions was not possible and impractical,
- The useful life of the Project was taken as 30 years from project implementation,
- Exchange rate of Indonesian Rupiah (Rp.) to US. Dollar (US\$) was taken to be Rp. 8,279 equivalent to US\$ 1.00 (as of May, 2003), and
  - Constant prices at 2003 level were used in the economic evaluation.

# 6.2 Economic Evaluation

### 6.2.1 Project Costs

(1) Project Costs

The project costs for economic evaluation would consist of i) construction cost, ii) institutional & extension services strengthening costs, iii) consulting services cost, iv) administration cost, v) O&M costs, and vi) replacement cost. The economic project costs have been calculated from the financial project costs by applying the standard conversion factor with 0.90. The economic project costs estimated accordingly are shown in Table B-6.2.1.

# 6.2.2 Project Benefits

(1) Economic Prices of Farm Inputs and Outputs

Economic prices of farm inputs and outputs were estimated in order to evaluate the expected project benefits. Economic prices of trade goods such as rice, maize, soybeans, groundnuts and fertilizers were estimated on the basis of the projected world market prices of these commodities forecast by the World Bank. Non-trade goods were valued at financial prices which were estimated on the basis of current market or farm gate prices. Farm labor was valued at the shadow wage rate of 0.80. The economic prices of farm inputs and outputs applied for the economic evaluation are presented in Table B-6.2.2 and B-6.2.3.

(2) Project Benefits

Only the crop production benefits are assessed as the project benefits as stated earlier. The net project benefits are defined as the difference in net return from crop production between the with-project and the with-out project conditions. The without-project condition has been assumed to be the same as the present condition as stated earlier. The economic crop budgets applied for the estimation of the net return under the project are as presented in Table B-6.2.4 and B-6.2.5. The project benefits expressed as the incremental net production value from crop production are estimated as shown in Table B-6.2.6.

The annual economic project benefits at full development stage (the incremental net production value) have been estimated at Rp. 10.74 billion as shown in Table B-6.2.6 and summarized below.

3		
Net I	Production Value (Rp. mil	lion)
Without Project	With Project	Increment
2,747	13,487	10,740

Economic Project Benefits/Incremental Net Production Value *1

Note *1: At full development stage

The benefits would gradually increase up to the full benefit in the 5th year after the completion of construction works.

# 6.2.3 EIRR, B/C and B-C

The annual economic costs and benefits flows and the results of the economic evaluation (EIRR, B/C & B - C) are presented in Table B-6.2.7 and as summarized below.

#### **Results of Economic Analysis**

EIRR	B/C	B - C
17.3 %	1.65	Rp. 25.0 billion
D/C P D C + 10	0/1. / /	

B/C & B - C at 10% discount rate

## 6.2.4 Sensitivity Analysis

To examine the project economic viability to changes in project cost, project benefits and build-up period, the sensitivity analyses have been made on the four cases as follows.

Case		EIRR (%)
0. No Changes	-	17.3
1. Change in Project Costs	+ 10 %	15.9
2. Change in Project Benefits	- 10 %	15.6
3. Benefit Delay	1 year delay	15.0
4.1+2+3	-	12.5

**Results of Sensitivity Analysis** 

#### 6.3 Financial Evaluation

The capacities to pay of beneficiary farmers have been assessed based on the farm budget analyses on 1 ha of paddy field under the with and without project condition, which have been made by applying the results of the farm economic analyses made in Section 1.4.8 and 3.3.6, as shown in Table B-6.3.1 and as summarized below:

	Net Reserve on 1 ha of Paddy Field						
Land Use Category	(C	apacity to Pay: Rp.000))					
	Without Project	With Project	Increase				
Irrigated Paddy Field *1	4,840	5,710	870				
Irrigated Paddy ^{*2}	1,750	4,060	2,310				
Irrigated Paddy ^{*3}	1,320	4,060	2,740				

Results of Farm Budget Analyses on 1 ha of Paddy Field

Note *1: Farmers in current irrigated field.

*2: Farmers in current irrigation command area being under rainfed condition.

*3: Farmers newly irrigated field from rainfed field.

The capacity to pay of beneficiary farmers will increase from Rp. 1.3-4.8 million to Rp. 4.1-5.7 million or the increase of Rp. 0.9-2.7 million under the future with project condition. The increases would enable the farmers to bear their contributions to O&M cost of irrigation system.

### 6.4 Indirect Benefits and Socio-economic Impacts

After implementation of the Project, various indirect benefits and socio-economic impacts are expected as mentioned below.

# (1) Employment Opportunities

The Project would create a demand for farm labors due to the increased farming activity, more intensive use of land and higher agricultural production. In addition, the construction of the Project would increase employment opportunities in the area. During the construction stage, the majority of workers would be unskilled laborers, and most of whom would come from farmers and ordinary laborers in and around the Project area.

# (2) Farmers Income

After implementation of the Project, income of farmers is expected to increase considerably as a direct result of the increase in crop production. Such increase in income would contribute to improving farmers' living standards. Moreover, it is expected that farmers' purchasing power would increase along with improvement of their living standards, and this increased purchasing power would benefit the development of the regional economy.

# (3) Marketing of Farm Inputs and Outputs

Future marketing in the project area is likely to expand as compared with the present condition. With anticipated higher agricultural production, more farm products could be marketed by the farmers and the proportion of sales would also increase relative to consumption. The merchants would have a larger turnover which could increase their incomes.

Marketing functions would not only be influenced by agricultural outputs. It is estimated that when agricultural production develops as a result of the Project, the Project area would be a good market for farm supplies. The farmers need to operate with farm supplies such as tools, equipment and bags. Both ends of marketing channels could, therefore, expect substantial beneficial impacts from the Project.

(4) Food Supply

The incremental production of paddy of some 12,200 tons under the with project condition will directly contribute to the supply-demand balance of rice and the food security in Indonesia.

# (5) Other Effects

Implementation of the Project would certainly lead to changes in rural socio-economy in the area. By the construction of inspection roads along the canals, the local transportation system would also be improved, which will contribute to the improvement of rural socio-economic activities.

1/: Paddy grown under	rainfed condition	ns in irrigated f	ïelds			

(1/2)

## Table B-3.3.1 Agriculture Plan

## 4. Planned Crop Yield

					-	
Cror	Present/Wit	hout Project	With	Increment (t/ha)		
Стор	Wet Season	Dry Season	Wet Season	Dry Season	Wet	Dry
Irrigated Paddy	4.0 t/ha	4.0 t/ha	5.0 t/ha	5.0 t/ha	1.0	1.0
Irrigated Paddy 1/	-	-	4.0 t/ha	4.5 t/ha	1.5-2.0	-
Rainfed Paddy 2/	2.5 t/ha	-	-	-	-	-
Rainfed Paddy	2.0 t/ha	-	-	-	-	-
Palawija (maize)	3.0 t/ha	3.0 t/ha	-	5.0 t/ha	-	2.0

1/: With project irrigated paddy yield in current rainfed fields (1,716 ha)

2/: Paddy grown under rainfed conditions in irrigated fields (374 ha)

## 5. Planned Crop Production

Crop	Prese	ent/Without Pr	roject		Increment		
Стор	Wet Season	Dry Season	Annual	Wet Season	Dry Season	Annual	Annual
Irrigated Paddy	1,400	652	2,052	3,620	3,620	7,240	5,188
Irrigated Paddy 1/				6,864	1,984	8,848	8,848
Rainfed Paddy 2/	935		935				-935
Rainfed Paddy	872		872				-872
Paddy Total	3,207	652	3,859	10,484	5,604	16,088	12,229
Palawija (maize)	159	186	345		1,220	1,220	875

1/: With project irrigated paddy yield in current rainfed fields (wet: 1,716 ha; dry: 496ha)

2/: Paddy grown under rainfed conditions in irrigated fields (374 ha)

#### 6. Extension Services Strengthening Plan

Major development constraints & extension services required for the earlier attainment of the project target.

Major Constraints for Agriculture Development:

- Farmers groups (KTs) yet to be empowered to a great extent,
- Insufficient extension services, insufficient capabilities of extension staffs especially in post-harvest & marketing aspects,
- Technical constraints; farmers limited experiences in irrigated farming, poor water management, long fallow land etc.
- Shortage of hand tractors for future expansion of irrigated fields, and
- Participatory approaches for agriculture development yet to be introduced.
- Extension Services Required:
  - Institutional Strengthening Package Program
  - Farmer Organizations Empowerment Package Program
  - Technical Guidance Package Program
  - Participation Enhancement Package Program

#### **Implementation Plan of AESS (tentative)**

Renovation of Office Space Extension Equipment & facilities Total	Rp. 50 million/un ( office space at the sub-district office) <u>Rp. 10 million/unit</u> Rp. million 50					

#### Table B-3.3.3 (3/7): Program Description Sheet: Farmer Organizations Empowerment Package Program

#### 4. Kelompok Tani Empowerment Sub-program

4-1. Program Background

The primary constraint for the introduction of business oriented agriculture activities in the project area appears to be capabilities of individual farmers and farmers groups toward the same. While, the decentralization policy as well as the economic development policy of Indonesia will bring in privatization of agriculture including agriculture support activities currently being undertaken by the government. This dictates the necessity of the establishment of producers groups (better be called so rather than farmers groups) who are well organized and are technically capable, business minded and market oriented legal bodies.

4-2. Program Objectives

The program challenges against a long lasting and envisaged theme of the Indonesian agriculture to establish and strengthening of farmers group (*Kelompok Tani*). Therefore, the program aims to establish units of "Producers & Marketing Group (P&MG)".

Major activities of P&MG will include group purchase of farm inputs and group marketing of products.

4-3. Program Activities and Descriptions

The activities (program components) involved in this program are:

- Establishment of Farmer Groups Empowerment Task Force Team (FGE TFT)
- Inventory on agricultural farmer groups
- Selection of target areas & groups
- Socialization of programs & workshops
- Implementation of empowerment programs
- Formation of new organization, "producers & marketing groups"
- Monitoring & evaluation
- 4-4. Program Descriptions

The descriptions of individual activities (program components) are as follows;

4-4-1. Establishment of Farmer Groups Empowerment Task Force Team (FGE TFT)

Formation of Task Force Team

Task:	Responsible for KT & UPJA Empowerment Program in a district
Chief:	Chief of Agriculture Services Office
Member:	Agricultural technical agencies
	Chief of sub-district agriculture services office
Secretary:	Agriculture Services Office

Empowerment of Task Force Team

- Induction training of members under Staff Empowerment Program
- Official establishment of Task Force Team by District Governor
- 4-4-2. Inventory on Agricultural Farmer Groups (Kelompok Tani/KT)
  - Inventory on KTs formed by sub-district
  - Identification of area covered, membership, activities, financial status, constraints, future plans etc.
- 4-4-3. Selection of Target Areas & KTs

Selection of target areas & KTs for further programs by sub-district

#### Table B-3.3.3(4/7): Program Description Sheet: Farmer Organizations Empowerment Package Program

## TableB-3.3.3 (5/7): Program Description Sheet: Farmer Organizations Empowerment Package Program

	5. UPJA Empowerment & Formation Sub-program
5-1.	Program Background and Objectives In the project area, land preparation works for food crop production are mostly carried out by using hand tractor under hiring service arrangement. UPJA (Farm Machinery Hiring Services Farmer Group) system was introduced under SPL OECF in the province and there are 10 UPJAs in Asahan District. UPJAs are providing hiring services of hand tractor, power thresher, RMU, water pump and drier. With the expansion of irrigated paddy field under the rehabilitation plan, the number of UPJAs in and around the project area is extremely limited and the expansion of UPJA services is considered inevitable to provide hiring services to farming community.
	UPJAs themselves are facing problems of management and services system. The present program envisages to empower the existing and new-coming UPJAs in and around the project area in order them to perform anticipated functions.
5-2.	Program Activities
	The activities (program components) involved in this program are:
	<ul> <li>Review of current UPJA system jointly by province and district</li> <li>UPJA Empowerment Sub-program</li> <li>UPJA Formation Sub-program</li> <li>Monitoring &amp; evaluation</li> </ul>
5-3.	Program Descriptions
5.	-3-1. UPJA Empowerment Sub-program
	(1) Review of Current UPJA System
	The review of current UPJA system and improvement of the system, if deemed necessary, is considered essential under the province and district joint workshop as follows;
	<ul> <li>Inventory on UPJA performances and review of current UPJA system by individual districts</li> <li>Workshop for joint review of UPJA system by province and district: <ul> <li>Participated by Provincial &amp; District Food Crops Agriculture Services Offices</li> <li>Formulation of draft standard UPJA system by provincial agencies</li> </ul> </li> <li>Formulation of standard UPJA system by provincial agencies</li> <li>Workshop with UPJAs at district level</li> <li>Formulation of updated UPJA system by individual district agencies</li> </ul>
	(2) UPJA Empowerment Training Package Program
	<ul> <li>Training program to UPJA management staffs on the updated system, management, planning, accounting, institutional issues, monitoring requirements etc.</li> <li>Study tour to advanced UPJAs</li> <li>Preparation of UPJA empowerment plan by individual UPJA</li> </ul>
	(3) Operator & Mechanic Refresher Training
	Refresher training of operators & mechanic on O&M and service discipline etc.
5.	-3-2. UPJA Formation Sub-program
	(1) UPJA Formation Program
	<ul> <li>Formation of UPJA farmer groups</li> <li>Training program to UPJA management staffs on the updated system, management, planning, accounting, institutional issues, monitoring requirements etc.</li> <li>Provision of farm machinery (hand tractor 1 unit; power thresher 1 unit; trailer 1 units per UPJA)</li> </ul>

#### TableB-3.3.3 (6/7): Program Description Sheet: Farmer Organizations Empowerment Package Program

#### (2) Operator & Mechanic Training

Training of operators & mechanic on O&M and service discipline etc.

- 5-3-4. Monitoring & Evaluation
  - Monitoring & evaluation of the program by district and extension staffs
  - Monitoring & evaluation of UPJA activities to be done by UPJA themselves
- 5-4. Approaches for Program Implementation and Selection of Target UPJAs
  - The initial step is the province & district joint review of current UPJA system and the review of current system followed at individual district level.
  - All the existing UPJAs to be supported with this program, and new-coming UPJAs if possible.
  - Operator and mechanic refresher training to be held annually at district level, depending needs basis.

#### 5-5. Program Volumes

Tentatively assumed that the program completes in 4 years.

5-6. Estimated Program Cost

Roughly estimated program costs are as follows;

Item	Estimated Cost (Rp.000)	Remarks
1. UPJA Empowerment Sub-program		
(1) Review of Current UPJA System	-	Administrative budget
- Joint workshop by province and district:	-	
- Workshop with UPJAs at district level	-	
(2) UPJA Empowerment Sub-program	10,000	per 3 UPJAs
- Empowerment Package Program	5,000	
- Operator & Mechanic Refresher Training	5,000	
(3) Administrative & miscellaneous cost	1,000	$\Rightarrow$ 10 % of (2)
Estimated Program Cost	11,000	
2. UPJA Formation Sub-program	77,000	per 3 UPJAs
(1) Formation of UPJA farmer groups	2,000	
(2) UPJA formation training program	5,000	
(3) Operator & Mechanic Training	5,000	
(4) Provision of farm machinery	65,000	
(5) Administrative & miscellaneous cost	4,000	$\Rightarrow$ 5 % of 1 to 4
Estimated Program Cost	81,000

## Table B-6.2.5 Economic Crop Budget per Ha under With Project

1/: Current irrigated field --- paddy grown in field currently irrigated condition

Current rainfed field --- paddy grown in field currently under rainfed condition

2/: Paddy --- yield level < 4.5 Rp. 2,000; yield level  $\geq$  4.5 Rp. 3,000; Maize hybrid Rp.22,000/kg

3/: Contract work for transplanting assumed --- Financial cost x 0.8

4/: Financial cost x 0.8

## Table B-6.2.6Financial and Economic Net Production Values under<br/>With and Without Project Conditions
