THE STUDY ON FLOOD CONTROL PROJECT IMPLEMENTATION SYSTEM FOR PRINCIPAL RIVERS IN THE PHILIPPINES

Under

THE PROJECT FOR ENHANCEMENT OF CAPABILITIES IN FLOOD CONTROL AND SABO ENGINEERING OF THE DEPARTMENT OF PUBLIC WORKS AND HIGHWAYS

ANNEXES

SEPTEMBER 2004

LIST OF ANNEXES

Annex 1	Flood Damage Data During Destructive Tropical Disturbances	A-1
Annex 2	Flood Damage Data by River Basin	A-8
Annex 3	Inventory of Hydrological Data Collection	A-28
Annex 4	Station Density of the Streamflow Gauging in Principal River	
	Basins	A-55
Annex 5	Hydrological Observation Procedures	A-69
Annex 6	Survey Photos on Hydrological Observation	A-78
Annex 7	Functions and Roles of NEDA Secretariat in the Central Office	A-96
Annex 8	Sustainable Development of Laguna de Bay Environment (SDLBE) Project	A-100
Annex 9	Flood Forecasting and Warning System for Dam Operation	A-109
Annex 10	Organizational Charts of Bureaus of DPWH	A-114
Annex 11	Project Summary on Community Based Approach in Reforestation	A-125
Annex 12	Survey on the Qualifications of Local Consultants and	
	Contractors for Flood Control Projects	A-129
Annex 13	List of Flood Control, Irrigation, Watershed Management and Related Projects Implemented by the National Agencies	A-134
Annex 14	Process and Outline of PCM Workshop 1	A-152
Annex 15	Information Regarding PCM Workshop 2 Attached to the Letter of Invitation	A-153
Annex 16	Problem Trees from PCM Workshop 1	A-164
Annex 17	Responses to Survey Questions in PCM Workshop 2	A-174
Annex 18	Information Regarding Seminar on Flood Control in Japan	A-191

South Cotabato	2	Buluan Lake river watershed	Lake Sebu
Zamboanga del Sur	1	Sibangan, Sibuguey and Labangan watersheds	Siayan and Sindangan
Total	508		

Damaged Infrastructures:

Mactan Bridge – connecting Cebu and Mactan island Murcia Road (84 kms) - Municipality of Murcia, Negros Occidental 8 meters of embankment – Tagoloan, Misasmis Oriental

Around 129 interisland private and government owned vessels/ships sunk/capsized/damaged. Since TY Ruping had generated high and big waves, 383 fishing boats/bancas (motorized and non-motorized) were washed ashore/over turned and were reported missing.

Subsequent flooding caused by heavy rains and strong winds totally cut off supply of basic necessities. Power and communication lines were destroyed by strong winds and floodwaters in Mindoro Oriental (affecting 15 towns), Negros Occidental, Iloilo, Bacolod City, Cadiz City, Antique, Cebu City, Surigao del Norte, Surigao del Sur (12 towns), Bohol, Leyte and Samar provinces.

Major and small rivers swelled and inundated several areas such as low-lying towns and shores of Negros Occidental, Surigao del Norte, Misamis Oriental. Samar, Leyte, Cebu and Bohol. In Tagaloan, Misamis Oriental, 8 meters of river embankment gave way due to strong water current of the Tagoloan river. In Bohol, rivers overflowed and numerous coconut trees, banana plantations, corn and other crops were washed out.

The areas that bore the brunt of TY Ruping were the shorelines and river systems as several fishing boats and fishermen were lost. Some of the casualties were electrocuted, or swept by floodwaters or buried by landslides.

Annex 2 Affected Rivers/Basins/Watersheds and Infrastructure Damages Recorded for the Last 15 years (2/14)

TS URING

Date of Occurrence:	November 2-6, 1991
Affected Regions:	VI & VIII
Population Affected:	Families – 43,397; Persons – 223,985
Casualties:	Dead - 5,101; Injured - 293; Missing - 4,256
Houses Damaged:	Totally – 5,232; Partially – 25,272
Cost of Damages:	P 1,044.30M – Infrastructure - P513.318 M
	Agriculture - P 531.05 M

Affected rivers/basins/watersheds:

Region Province	Casualties	Affected	Affected Municipalities/ Barangays	
Region Trovince	(dead)	River/basin/watershed	Anceica Municipanties/ Darangays	
Region VI				
Antique	-	Cangaronan and Sibalom	10 / 19

Bohol (shoreline)	44	Mananga rivers		
Region VIII				
Leyte	388		3 / 256	
Ormoc City	4,555	Anilao and Mabasag rivers		
Tacloban City	-			
TOTAL	5,101			

Damaged Infrastructures:

Region VIII

18 bridges were destroyed isolating the towns of Albuera, Dulag, Burawen & Julita 7 bridges suffered severe damage due to scoured approaches.

18 minor river banks protection were likewise damaged.

Almost all barangays in Ormoc City were washed out.

Region VI

Roads and bridges were damaged along Bacolod-Murcia-Don Salvador Benedicto-Calatrava national road.

Flood control structures damaged were manta-Angan seawall, Pasil concrete river bank protection, Calatrava port and Sagay river conctrete seawall.

In La Castellan, 2 bridges were totally washed out while in Bago City, 1 bridge was partially destroyed.

Cogon and Punta bridges in Ormoc City were washed out by flashfloods.

The catastrophe in Ormoc City can be attributed to the following factors:

- a. The concentration of unusually heavy and intense rainfall brought about by TY Uring;
- b. The drainage pattern dendritic river system the river basin is characterized by numerous tributaries rendering a common concentration time causing floodwaters to converge almost at the same time;
- c. The physiographic profile of the watersheds the loose and unstable soil resulted to massive erosion producing a lot of debris which accumulated and eventually clogged the pathway of floodwaters at the Cogon and Punta bridges and resulted into a temporary damming effect; and
- d. The flashflood which resulted from the damming effect coincided with the high tide in Ormoc Bay.

Annex 2 Affected Rivers/Basins/Watersheds and Infrastructure Damages Recorded for the Last 15 years (3/14)

TD DITANG

Date of Occurrence:	July 17 – 21, 19	992	
Affected Regions:	III & NCR		
Population Affected:	Families – 27,9	02; Persons – 1	34,417
Casualties:	Dead – 36;	Injured – 6;	Missing – 77
Houses Damaged:	Totally – 478;	Partially – 1,30)5
Cost of Damages:	P 471.00M		

Affected rivers/basins/watersheds:

Region /	Casualties	Affected	Affected Municipalities/ Barangava	
Province	(dead)	River/basin/watershed	Affected Municipanties/ barangays	
Zambales		Botolan and San Marcelino	5 barangays in Castillejos: San Jose, San	
		watersheds	Agustin, San Pablo, Magsayasay and Sta Maria	
			13 barangays in San Marcelino: Cawat,	
			Rabanes, Rizal, san Guillermo, Lucero, San	
			Isidro, lapaz, Insungan, Lanatin, Nagbunga,	
			Walac, Consuelo Sur and Consuelo Norte	
Tarlac		Bamban river Camiling, Tarlac, Paniqui, La Paz, Cond		
			and Gerona	
Pampanga	Pampanga Pampanga and Guagua San Luis, San Simon		San Luis, San Simon, Arayat, Lubao,

Total	126		

Damaged Infrastructures:

Sta Lucia bridge in Capaz was washed out. Collapse of river dikes in Sto. Tomas, Pampanga

In Region II, the province of Nueva Viscaya registered the most number of casualties (32) due to flooding and landslides. Most of the casualties were victims of drowning in floodwaters in Regions I, II and III.

Annex 2 Affected Rivers/Basins/Watersheds and Infrastructure Damages Recorded for the Last 15 years (5/14)

TS MONANG

Date of Occurrence:	Dec 3 – 4, 1993
Affected Regions:	NCR, II, IV and V
Affected Areas:	4 Regions, 14 Provinces, 5 Cities, 152 Municipalities and
	982 Barangays
Population Affected:	Families – 264,912; Persons – 1,361,267
Casualties:	Dead -273 ; Injured -607 ; Missing -90
Houses Damaged:	Totally – 60,357; Partially – 160,164
Cost of Damages:	P 2,463.61M - Infrastructure - P928.92 M
	Agriculture - P1,379.85 M
	Private Properties - P154.84 M

Affected rivers/basins/watersheds

Province	Casualties (dead)	River/basin/watershed	Affected Towns & Barangays
Cagayan	1	Lower Cagayan river	2 towns & 7 barangays
Laguna	1	Caliraya-Pagsanjan watershed	28 towns, 121 barangays
Marinduque	19	Boac river	4 towns, 162 barangays
Mindoro Oriental	-	Naujan lake, Bongabong, Bulalakao, Malaylay & Magaswangtubig riyers	16 municipalities
Palawan			3 towns, 27 barangays
Quezon	30	Infanta & Iyam watersheds	17 towns, 58 barangays
Rizal	-	Montalban river	3 towns, 3 barangays
Albay	4	Guinobatan watershed	17 towns, 20 barangays
Camarines Norte	44	Bicol river & tributaries	12 municipalities
Camarines Sur	156	Sipocot-Libmanan river	37 towns, 582 barangays
Catanduanes	13	Bato and Pajo rivers	11 municipalities

The strong winds and intense rainfall caused the considerable damages both to life and properties. Worst hit was Region V or the Bicol region, particularly the province of Camarines Sur where 156 lives were claimed by TS Monang.

The Bicol river and its tributaries and other nearby rivers exceeded their carrying capacities resulting to flooding. Most of the casualties were drowned or swept by floodwaters. Others were struck by damaged infrastructures and uprooted trees.

Affected rivers/basins/watersheds

The rains brought about by TY Pepang inundated some parts of Negros Occidental by as much as 6 feet. Rivers within the Panay and Kabankalan river basins overflowed rendering most highways impassable. TY Pepang was the worst typhoon that hit Negros Occidental after TY Ruping in 1990 and TY Puring in 1993. The storm caught the residents by surprise. The worst hot municipalities were Escalante, Calatrava, Toboso, San Carlos, Sagay and Don Salvador Benedicto. The storm left a wide swath of destruction in terms of agricultural crops which were on their vegetative, reproductive, ripening and harvestable stages. There was a complete cut-off of irrigation water to the areas being served by the Bago River Irrigation System

The strong winds of TY Pepang knocked down communication, water and power transmission facilities. The Manapla electric cooperatives reported that 241 of its electric poles and 159 poles of MPC transmission lines were either toppled, broken or leaning at the height of the typhoon. About 6,500 telephone lines in Bacolod City were knocked down and were rendered not operational. The high number of casualties can be attributed mainly on the failure of the people to prepare for the disturbance.

TY Rosing was a very intense typhoon when it passed very close to Catanduanes. Moving westward, it crossed Camarines Norte, Laguna, Riza, Cavite, Bataan and Metro Manila.

The effect of TY Rosing was severely felt in the Southern Tagalog and Bicol regions. At the height of TY Rosing, there were disruptions of vital communication links. Likewise power and water supplies particularly in Regions IV and V which were heavily devastated. Several roads and bridges were damaged rendering them impassable to all types of vehicles. Landslides in Bicol and Southern Tagalog regions isolated some municipalities and barangays from the city/town proper.

Deaths totaled 936 which were mostly caused by drowning and landslides.

Affected rivers/basins/watersheds

With its strength, TY Gading battered the provinces it crossed and worst hit was Pangasinan where 100-year old trees and infrastructures were uprooted. Storm surge was also recorded in the coastal towns of Pangasinan. Continuous moderate to light rain occurred over the Agno river basin from September 15 to 19 resulting to flooding in the Pangasinan Plain including the low lying areas of Ilocos region, Nueva Viscaya and Isabela. Binga and Ambuklao dam exceeded their normal flood levels which prompted the opening of the spillway gates. Agno and its tributaries including the Sinocalan river overflowed.

Most of the casualties came from Pangasinan and were victims of flooding as well as strong winds due to fallen or damaged infrastructures.

As per records from the Office of Civil Defense, damages due to the effects of the two(2) disturbances were combined but in reality most of the listed damages under TY Emang can be attributed to TS Gading.

TY REMING

Date of Occurrence:	Oct 26 – Nov 1, 2000
Affected Regions:	I, II, III, IV, V, VI, VIII, NCR & CAR
Population Affected:	Families – 486,416; Persons – 2,432,942
Casualties:	Dead -114 ; Injured -314 ; Missing -10
Houses Damaged:	Totally – 16,910; Partially – 125,790
Cost of Damages:	P 3,944.44M

The 24-rainfall recorded over Tayabas, Quezon was about 313.3 mm on October 28 while over Catarman, Samar, 276.6 mm of rainfall was registered on the 27th of October.

The wide coverage of TY Reming and its track and duration in the PAR resulted to the occurrence of moderate to heavy rainfall affecting a wider area. TY Reming brought considerable damages to life and property.

TY Feria's onslaught triggered the following incidents:

- 1. Two (2) baby tornadoes struck San Jose City, Oriental Mindoro and San Fernando City, La Union.
- Series of rockslides occurred in the main thoroughfares in CAR and several landslides occurred in the following areas: Sarrat, Bangui and Poblacion, Sugpon in Ilocos Sur; Yagyagan-Naguilian Road in La Union, Capintan, Carranglan in Nueva Ecija; Balangan-Sablan Road; Baguio Sto. Rosario Valley Campo Sioco; Puguis, Tublay in Benguet; Haselma, Baguio City.
- 3. Three(3) dikes were breached in the following areas: Gualsec dike in Malasique and Caranglan dike in Alcala, Pangasinan; protective dikes in Aliaga and Sto. Domingo, Nueva Ecija; protective dikes in Brgys. Paco and Caloong, Valenzuela.
- 4. MBCB Messiah vessel capsized in the vicinity of Iloilo river entrance due to rough seas and strong winds.
- 5. Storm surges brought about by southwest monsoon winds induced by TY Feria affected 43 barangays and 22 municipalities in Antique, Negros Occidental, Aklan, Bacolod City and Iloilo City in Region VI; 14 municipalities in in Zamboanga del Norte, 3 barangays in Zamboanga City and 1 barangay in Dapitan City in Region IX. All coastal towns in Ilocos Norte particularly Pagudpud were struck by big waves.

Most of the casualties were either drowned or buried by landslides. About 116 of the total 188 casualties came from the Cordillera Administrative Region.

Affected rivers/basins/watersheds

As Nanang hovered over the Visayan islands, it poured abnormally high rainfall which persisted for almost half a day. Although no account of the maximum rainfall was observed over the area, the intense precipitation drawn to the Mt. Mambajao Volcano was enhanced by orographic effect and flashflood ensued in the municipality of Mahinog. Falling boulders of rocks swept by flood waters wiped out houses and other structures.

# Annex 5

Hydrological Observation Procedures

#### Annex 5 HYDROLOGICAL OBSERVATION PROCEDURES

#### Rainfall Observation

Rainfall Observation is done in two ways: 1) Non-recording using 8-inch Standard Raingage which holds 2.0 inches of rain or 50.8 millimeter of rain, and; 2) Automatic Rainfall Recorder which uses Tipping Bucket Recording Raingage.

#### Procedures for non-recording instrument:

- 1. Insert a dry measuring stick through a small hole in the funnel until it reaches the bottom of the measuring cylinder.
- 2. Read the upper limit of the wetted portion to the nearest tenths of a centimeter.
- 3. After taking measurement empty the tube and reassemble the gage.
- 4. Record the depth of rainfall on the prescribed form, millimeters as the unit of measurement.
- 5. If the day rainfall exceeds 2 inches or 50.8 mm, transfer the accumulated water in the outer cylinder to the measuring tube and combine the measurements. Shown below is the formula given by PAGASA:

Total Rainfall		Original Tubeful		Full Tubes		Remaining
Amount	=	of Water	+	of Water from	+	Water in the
				the overflow can		overflow can

- 6. Special observation is taken, in addition to regular observations after heavy rains which may have caused severe flooding in downstream areas.
- 7. Completely fill up the prescribed form with station name, coordinates, time and date of observation and total amount of rainfall accumulated.

#### Procedure for automatic rainfall recorder:

- 1. Changed the charts daily at about 8:00 A.M. except when there is no rainfall or rainfall is less than 0.5mm. Record the station name, date and time of chart placement at the back of the chart.
- 2. Adjust the recorder pen to the "0-mm line" upon placing new chart.
- 3. Record: 1) date and time of removal from the drum, 2) non-recorded raingage measurement, 3) chart total rainfall amount for the period, and; correction factor, if any, after the removal of the chart.

The standard procedure and general instruction to Observer are presented in detail in the *Manual of Water Data Standards, Volume 2 of NWRB*. Based on the data gathered from FOC-PAGASA shown below is the process flow being implemented at all surface and climat stations.

#### Figure 1 Process Flow applicable to all PAGASA Surface Stations

#### Water Level Observation

Water level is observed at the established river gauging stations of DPWH. Instrument used in measuring water level are staff gage, water level recorders and stilling wells.

#### Staff Gage

- 1. Water level is observed every 8:00 A.M and 5:00 P.M except during heavy rains where extra readings are made depending on the degree of flow rise.
- 2. Read the water level and record on the form provided by the regional office of DPWH. Completely fill up the form including station name, location, and name of the gagekeeper.
- 3. Immediately report cases of damaged or washed out staff gage to the hydrographic engineers.

#### Water Level Recorder

Water level recorder provides automatic record of river stage. It produces a graphic or punched tape record of the rise and fall of a water surface with respect to time. The float movement causes pen or stylus motion and the clock mechanism moves the chart. Since the width of the strip chart is usually 25 cm., the range of available time scale is 3 cm. to 24.4 cm. per day. Thus, 1:5 scale means 25 cm will register 1.25 meter change in water surface elevation. The gagekeeper is tasked to safeguard the instrument and the housing of the water level recorder.

#### Stilling Wells

River stage may be automatically sensed by a float in a stilling well connected to the stream by intake pipes or by a bubble gage system that does not require a stilling well. Stilling wells are either dug at the suitable bank site least affected by erosion and flood waters, reinforced by means of corrugated G.I sheets molded into cylindrical sections or installed at the downstream portion of a bridge pier. The well can also be made of reinforce concrete pipe one-half meter or larger in diameter.

Connection of the well to the stream must be through a four-inch or larger diameter G.I. pipe placed at right angle to stream but not so large as to cause water level in the well to fluctuate with the same magnitude as that of the water level in the stream. Protection against entry of silt or sediments and flush pipe mechanism must be provided in order to have an efficient intake system and thus insure high sensitivity of the float to changes in water level. A filter is placed in the pipe to neutralize the effect of dynamic waves.

The well should be long enough for its bottom to be at least 30 cm. Below the minimum and its top to be above the level of a 50-year flood.

There are more instruments used in measuring water level but the most commonly used in the Philippines are the three presented above. Manual of Water Data Standards, Volume No. 1, Streamflow and Lake or River Stage gives detailed information on gaging network, design, installation, procedures and other pertinent data relevant to river gauging stations.

#### Establishment of Rating Curve

The computation for Rating Curves requires stream velocity measurement. At present the Hydrology Team uses current meter and float method in measuring velocity.

The principle of current meter is based on proportionality between the velocity of the stream and the revolution of the rotor. Thus, when it is placed at a point in a stream and the number of revolutions is counted for a given duration, the velocity can be determined.

While float method is the simplest and most practical way in measuring stream velocity. Surface floats include wooden disks, partly filled bottles or cans. Rod floats are wooden rods with weights attached at one end so that it will float upright. The stream reach must be long enough to give a float travel time of at least twenty seconds. The mean velocity of the stream will be equal to the float velocity multiplied by 0.85 for surface floats depending upon the stream cross-section and velocity distribution.

#### **Development of Rating Curves**

*Current meter measurements* are made to define a curve showing the relationship of stage with discharge. The curve allows translation of stage reading into discharge at any given time corresponding to the stage reading for the calculation of mean daily discharge or estimation of the instantaneous peak discharge.

Published report of NWRB, "*Manual of Water Data Standards, Volume 1, Streamflow and Lake or River Stage*" presents the development and construction of rating curves. Rating curves are plotted on a graphical sheet, wherein stage is located on the vertical axis and discharge on the horizontal axis. Two ways of plotting points are done on arithmetic or logarithmic paper.

- 1. Arithmetic Plotting rating curve plotted in an arithmetic paper shows parabolic curve which can be defined by the equation:  $Q = aH^n + b$
- 2. Logarithmic Plotting the above equation will appear as a straight line if plotted in logarithmic scale. Thus, if log Q = Y; log H = X; and b = B; then the above equation is linearized as follows: Y = nX + B
- 3. Fitting of the curve can be by eye inspection or by the method of least squares. The low flow discharge is plotted to a sensitive scale as an inset. In plotting stage-discharge point, symbol "O" (circle and dot) is used and then identified with the corresponding discharge measurement number. The inset should be drawn only when sufficient low discharges are available.

"Inventory Survey and Basic Analysis of Hydrological Data for DPWH Technical Standards and Guidelines, March 2002" presents *slope-area method* in the formulation of discharge rating curve to 120 selected rivers in the Philippines; Parameters required at the section under study and the upstream and downstream sections are section properties, roughness coefficient and distances between sections. The procedure for the formulation of discharge rating curve is as follows:

1. With the known values of the section properties, the channel geometric characteristics are defined. From the measured water surface level and discharge, the channel roughness is estimated using the Manning equation:

$$n = (AR^{0.66}S^{0.50})/Q$$

where n = channel roughness; A = sectional area; S = energy gradient; R = hydraulic radius (i.e. ratio of area to wetted perimeter); Q = measured discharge.

The estimated channel roughness gives indicative value at that particular water surface level. This also guides in assigning other channel roughness at different water levels.

- 2. The discharge is determined using the section properties and the assumed channel roughness at particular water surface level.
- 3. The discharge is determined using the Manning equation expressed as:

$$Q = (AR^{0.66}S^{0.50})/n \text{ or } Q = K_d S^{0.50}$$

Where  $K_d =$  conveyance capacity.

The conveyance capacity is a factor fully dependent on the section properties and channel roughness and is expressed as:

$$K_d = (AR^{0.66})/n$$

- 4. With an assumed water surface, the conveyance capacity is determined using a selected value of the channel roughness. The selected channel roughness is based on channel condition, estimated roughness from measured flow and judgment of the hydraulic engineer.
- 5. The corresponding flow is determined using the Manning equation. However, it may be noted that upstream discharge may be different from downstream discharge due to non-uniform flow condition. The discharge is corrected to compensate for the energy loss due to possible change in section shape from upstream to downstream.
- 6. The above procedure is repeated for another water surface level.
- 7. The rating curve is then plotted with discharge along the vertical axis against water level (or water depth) along the horizontal axis.
- 8. The discharge rating curve is fitted with an equation expressed as:

#### $Q = k (H-h)^n$

Where: Q = Discharge (m3/s) H = Water elevation (m) h = Elevation of water for zero discharge (m) k, n = Constants derived from curve fitting

Figure 3 presents the activities of the Hydrology Team and BRS in processing streamflow data.

## SYSTEM FOR ACQUISITION, PROCESSING AND TRANSMISSION OF HYDROLOGIC DATA

The standard procedure in acquiring, processing and transmitting hydrologic data; stremflow, synoptic, agromet and climat; are presented in the flow chart below. BRS implements activities for streamflow data and PAGASA the data of rainfall stations.

List of Flood Control, Irrigation, Watershed Management and Related Projects Implemented by the National Agencies

#### Annex 7 Functions and Roles of NEDA Secretariat in the Central Office

The three major offices comprising the NEDA Secretariat, and the bureau-level Staffs under each are as follows:

(1) National Development Office (NDO):

The NDO provides technical staff support to the NEDA Board in coordinating the formulation of national and sectoral policies, plans and programs. It also monitors macroeconomic and sectoral performance, prepares the necessary economic reports, and conducts economic and development studies on macro-level plans and policies.

#### (a) National Planning and Policy Staff (NPPS)

Provides technical staff support in coordinating the formulation of national development plans and policies;

Evaluates and conducts studies on macro-level plans and policies;

Develops and applies macroeconomic models and other statistical tools for planning, forecasting and policy analysis; and

Monitors macroeconomic performance and prepares economic reports.

#### (b) Agriculture Staff (AS)

Provides technical staff support in coordinating the formulation of national plans and policies for the agricultures, natural resources and agrarian reform sectors;

Evaluates and conducts studies on policies in the said sectors;

Provides technical staff support in the evaluation and review of proposed programs and projects in the said sectors;

Provides technical assistance in program and project identification, development and evaluation; and

Monitors sectoral performance.

(c) Trade, Industry and Utilities Staff (TIUS)

Provides technical staff support in coordinating the formulation of national plans and policies for the trade, industry and tourism sectors;

Evaluates and conducts studies on trade and industrial policies, including those involving the regulation and pricing of public utilities;

Provides technical staff support in the evaluation of proposed industrial projects involving significant government exposure;

Assists in coordinating the formulation of national approaches to international relations and cooperation in trade and other economic matters;

Assists in the review and evaluation of the various investment priorities, plans and applicable investment incentives; and

Monitors sectoral performance.

(d) Infrastructure Staff (IS)

Provides technical staff support in coordinating the formulation of physical plans for the transportation, communications, water, power and energy, and social infrastructure sectors;

Evaluates and conducts studies on policies in the said sectors;

Provides technical staff support in the evaluation and review of proposed programs and projects in the said sectors;

Provides technical assistance in program and project identification,

development and evaluation; and Monitors sectoral performance.

(e) Social Development Staff (SDS)

Provides technical staff support in coordinating the formulation of national policies and plans in education and manpower development, health and nutrition, family planning, housing, social services, and community organization;

Evaluates and conducts studies on policies covering the said sectors;

Provides technical staff support in the evaluation and review of proposed programs and projects in the said sectors;

Provides technical assistance in program and project identification, development and evaluation; and

Monitors sectoral performance.

- (f) Public Investment Staff (PIS)
  - Provides technical staff support in the coordination and review of the flow of official development assistance to the country to ensure consistency with national development priorities;

Provides technical staff support in the review of proposed programs and projects on a global basis;

Provides technical staff support in the preparation of a rolling medium-term public investment program, where the sources and uses of funds for priority programs and projects are indicated;

Develops and recommends the criteria and system for evaluating projects; and Monitors the status of proposed and pipeline projects for possible funding assistance by foreign donor institutions.

(2) Regional Development Office (RDO)

The RDO provides technical staff support as may be required by the implementing agencies in the regions. It also monitors regional and interregional development policies; plans and programs; prepares integrated reports on regional planning; and conducts studies on regional development policies.

(a) Regional Development Coordination Staff (RDCS)

Provides technical staff support in coordinating the formulation of interregional development policies, plans and programs;

Serves as a link between the Regional Development Councils and the national agencies of government involved in regional planning and program implementation;

Monitors and evaluates the formulation of regional policies, plans and programs by the Regional Development Councils and other agencies of government;

Prepares integrated reports on regional development;

Coordinates with the Regional Development Councils in the preparation of physical and land use plans; and

Conducts studies on regional development policies.

(b) Project Monitoring Staff (PMS)

Monitors the progress of implementation of approved development programs, based on reports from the central offices of line agencies and the NEDA regional offices;

Identifies bottlenecks and proposes solutions to problems of implementation; Prepares integrated reports on the status of approved development projects;

Monitors the implementation of ongoing projects, including the utilization of foreign exchange proceeds by these projects;

Provides technical assistance to the NEDA regional offices in project monitoring and assessment; and

Conducts post project evaluation and impact analyses.

#### (c) Regional Offices (NRO)

Serves as the technical staff of the Regional Development Council (RDC) in the region;

Provides staff assistance to the RDC in the coordination of plan formulation and implementation at the regional level;

Provides staff assistance to implementing agencies in the region in identifying and developing programs and projects;

Evaluates and reviews proposed regional programs and projects for consideration by the RDC;

Monitors and assesses project implementation in the region; and

Coordinates with regional offices of other departments and agencies and with the local government units in the region in the performance of their assigned tasks.

#### (3) Central Support Office (CSO)

The CSO provides the NEDA Secretariat technical assistance and support services in the areas of development administration, internal management improvement, legal services, development information, and administrative services.

(a) Management Staff (MS)

Conducts studies, formulates recommendations and provides technical assistance on development administration matters;

Develops guidelines and provides technical assistance in the preparation, monitoring and assessment of the development administration framework of the national development plan, including the monitoring of administrative reforms and developments in the public sector;

Serves as internal management improvement unit, conducts studies, formulates recommendations and provides technical assistance on organization and management matters; and

Develops and maintains an internal control system within the NEDA Secretariat and monitors and evaluates on a continuing basis the implementation of internal control policies and measures.

#### (b) Legal Staff (LS)

Provides legal advice and assistance in the formulation and implementation of development policies, plans and programs;

Provides legal service on operational matters;

Conducts legal research and specialized studies; and

Maintains a database on and monitors laws, administrative issuances, court decisions, and other legal issuances relative to economic and social development.
(c) Administrative Staff (AdS)

Develops, implements and updates on a continuing basis a comprehensive and integrated human resources development program for the NEDA Secretariat personnel;

Provides services related to personnel transactions and benefits, and discipline, health and safety services;

Provides financial and accounting services; and

Provides security services and general support services in the areas of records and communications; procurement and property, supply equipment maintenance, utilization and disposal; transport; general utility and housekeeping; and building and office facilities maintenance.

## (d) Information Technology Coordination Staff (ITCS)

Conducts and coordinates the studies, formulates recommendations and provides technical staff support and assistance on information technology (IT);

Develops and coordinates the implementation and maintenance of IT-related information systems in support of NEDA's development planning, policy formulation and other functions and operations;

Coordinates the formulation and implementation of a continuing NEDA IT development activities of NEDA offices and staffs, including its regional offices;

Establishes and maintains a viable information network with other government agencies and instrumentalities for more effective development planning and decision making.

(e) Development Information Staff (DIS)

Develops and maintains public information programs to meet the requirements of the NEDA and the public;

Prepares press releases and articles for public dissemination and coordinates press briefings and interviews;

Undertakes the preparation and dissemination of NEDA publications and other information materials and provides editorial and other information-related services to the NEDA Secretariat; and

Maintains the NEDA Secretariat library and undertakes the acquisition, cataloguing, maintenance and safekeeping of library materials, and provides circulation, reference and interlibrary
