

(2) Technical Note on Field Study of the Basic Design

TECHNICAL NOTE

**THE BASIC DESIGN STUDY ON THE PROJECT FOR
ESTABLISHMENT OF ENVIRONMENTAL MONITORING SYSTEM
IN ISLAMIC REPUBLIC OF PAKISTAN**

Based on the agreed Minutes of Discussions (M/D) for the captioned Study signed between the Pakistani side and Japanese side on February 26, 2005, the field study in Pakistan has been completed in close corporation between JICA Study Team and counterparts of the Pak-EPA and Provincial-EPAs.

In the course of the field study, many technical items have been discussed for the Project to be implemented under the Japan's Grant Aid, and both sides agreed of the main items described in attached sheets. This is summarized to further work for the Project in Japan.

Both sides agreed that the Minutes of Discussion (M/D) dated on February 26, 2005 would prevail this Technical Note (T/N), in case any discrepancy or question arises between the M/D and the T/N.

March 18, 2005

Noda Norihiro
Project Manager
Basic Design Team
CTI Engineering International Co., Ltd.

18/03/2005
Asif S. Khan
Director General
Pakistan Environmental Protection Agency
Ministry of Environment

1. Confirmation of the PC-1

The Pakistani side submitted to the Team an OFFICE MEMORANDAM (No. 2 (218) ENV/PD/2005) dated March 3, 2005 of Planning and Development Div, upon an inquiry letter (No. 3 (5) /2002-Dir (EIA)) dated February 28, 2005. This OFFICE MEMORANDAM says that the Pak-EPA may go ahead with the implementation of the Project, while ensuring that the project works would be undertaken as per approved PC-1's scope and financing.

2. Equipment to be provided under Japan's Grant Aid

JICA Study Team submitted to Pak-EPA a list of the equipment (see Appendix-1), which was prepared as result of discussions with counterparts of Pak-EPA and Prov-EPAs during the field study. Pak-EPA and Prov-EPAs agreed with the Team about the equipment properly selected for the Grant Aid.

3. Air Monitoring Network System

Pakistani side agreed that the air monitoring network system consisted of fixed monitoring stations, mobile monitoring stations, Prov.-EPAs and Pak-EPA as shown in Appendix-2 should be connected through best available medium in Pakistan. A fixed amount of monitoring data accumulated in Prov.-EPA will be transmitted to the Data Surveillance Center in Pak-EPA. Both sides agreed that the numbers of fixed and mobile air monitoring stations should be determined by the following three factors: ①financial capability of the provincial EPA, ②human resources to operate the fixed and mobile air monitoring stations, and ③the distribution maps of air pollution. Pakistani side explained that federal resources would be also available to operate and maintain the system. According to this agreement Pakistani side promised the relevant documents to Japanese side by the end of March 2005.

4. The Locations of Fixed Automatic Air Quality Monitoring Station

Pakistani side proposed the candidate sites for the fixed air monitoring stations as shown in the following table. JICA Study Team investigated and verified the appropriateness of each site during the field study. The Team explained that the suitable sites would be finalized among these candidate sites. Pakistani side suggested to consider that the fixed monitoring stations should be located at ground.

MM

✓

	Candidate Site
(1) Pak-EPA	1) Rooftop of the Data Surveillance & Training Center 1) Rooftop of the EPA's Building,
(2) Sindh-EPA	2) Mazar-i-Quid Park, 3) Rooftop of the Karachi Municipal Cooperation, 4) Rooftop of the Municipal Library 5) Rooftop of the Revenue Office
(3) Punjab-EPA	1) Rooftop of the new EPA building, 2) Rooftop of the Lahore City District Office
(4) NWFP-EPA	1) Rooftop of the EPA's Building
(5) Balotistan-EPA	1) Rooftop of the Commercial Building at the Meezan Market 2) Rooftop of the Quetta City District Office or Town Nazim Office. 3) Rooftop of the Media Place in the City Office

5. Layout Plan of the Data Surveillance / Training Center

Pak-EPA explained to the Team about their layout plan of the captioned building. Upon this the Team explained to Pak-EPA that further work would continue in Japan to finalize the layout plan. The analytical laboratories will be accommodated in this building to meet the requirement of Pakistani side. Pakistani side suggested to consider a basement of the building.

6. Layout Plan of the New Equipment

In order to install the equipment to be provided by the Project, the layout plans of new equipment as well as existing equipment were agreed between Pakistani side and the Team as shown in Appendix-3. The costs related to rehabilitation of laboratories including transportation and installation of the existing equipment shall be bore by Pakistani side.

7. Staffing and Training Plan for the Project

The Pakistani side explained to the Team that a total staff of about 100 would be recruited for Pak-EPA and 4 provincial EPAs within 2 years, as indicated by the PC-1 (approved by ECNEC in December 2004). In this connection the Japanese side requested detailed training plans for new staff and present staff to meet the demand of required capacity building, because PC-1 does not describe detailed training plans. The Pakistani side submitted their training plans to the Study Team, as shown in Appendix-4.

8. Construction Schedule of a New Building for Punjab-EPA

Punjab EPA explained to the Team that construction work for a new building for Punjab-EPA would be

N. N

commenced on April 2005 and fully completed by June 2006. Responding to this, the Team explained to the Pakistani side that procurement and installation plan for the equipment would be formulated based on the schedule.

9. Request for Technical Guidance under the Grant Aid (Soft Component)

Pakistan side requested that Technical Guidance (Soft Component) should be provided to the staff of Pak-EPA and Prov.-EPAs in relationship with the Project. Upon this request the Japanese side explained the importance of proper technical guidance, referring to the Soft Component to be designed within the BD Study. The Japanese side also explained that the Soft Component would be designed in Japan based on the training plans of the Pakistani side, as attached in Appendix-5.

10. Request for Counterpart Training

Pakistani side requested to the Team that Counterpart Training should be considered in connection with the Grant Aid. The Team explained to Pakistani side that the request would be conveyed to JICA.

11. Request for Laboratory Furniture and Training Equipment/Furniture

Pakistani side requested to consider laboratory furniture and training equipment/furniture. Upon this request Japanese side explained that the request would be conveyed to JICA.

12. Undertakings of Each Government

Both Pakistani and Japanese sides agreed that the following major undertakings should be covered by Japanese side, Pak-EPA and Prov.-EPAs, as presented in the following tables.

nn

(1) Procurement and Installation of the Equipment

	To be covered by			Remarks
	Japan	Pak-EPA	Prv.-EPA	
Procurement, transportation and installation of the equipment	O			
Technical guidance for the new equipment	O			Soft Component
To secure relevant utilities and renovation work for the existing laboratories and sites of fixed monitoring station.			O	Before installation work
To set up the existing equipment on the proposed location.			O	Same as above
To transfer and install the existing equipment from existing laboratory to new laboratory		O	O	Same as above (Pak-EPA& Panjab-EPA)

(2) Construction of the Data Surveillance & Training Center

	To be covered by			Remarks
	Japan	Pak-EPA	Prv.-EPA	
To construct a new building for the Project with furniture required for the Project	O			
To fill soil up to the level of the front road on the Project site		O		Before construction work
To remove the trees existing in the Project site		O		Same as above
To bring the utility lines (electricity, telephone, water, gas, sewage etc.) up to connection points on the boundary line of the site		O		
To build permanent fence, gate and other items of exterior work, including gardening with plantations		O		
To facilitate ordinary furniture for staff required in relationship with the Project		O		
To build a well as additional water source beside the piped water supply by CDA		O

D-40 Water Bath (Large)	Capacity: 20-30 liters, Temp. 3°C above ambient to 100°C, stability <0.2°C.	Capacity: Approx 10 liters (ex: 920 X 320 X 100mm), temp. 3°C above ambient to 100°C, stability <0.2°C.	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 2 2 1 0 0 5 BS: 1 1 1 1 1 5				
D-41 CH100 Distillation Unit with Heater	All glass parts with heating metal.	Heating method: Electric heating, Four zone type (Approx 3.6Kw, equivalent to JIS K-0102). It can be used for phenol distillation.	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-42 F100 Distillation Unit with Heater	All glass parts with heating metal.	Heating method: Electric heating, Four zone type (Approx 3.6Kw, equivalent to JIS K-0102). It can be used for phenol distillation.	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-43 SH1400 Distillation Unit with Heater	All glass parts with heating metal.	Heating method: Electric heating, Four zone type (Approx 3.6Kw, equivalent to JIS K-0102). It can be used for phenol distillation.	PC1: 0 0 0 0 0 0 PS: 1 1 1 1 1 5 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-44 Filter System for Suspended Solid (SS)	Vacuum filtration holders with one or three way valves for independent control with high quality filter papers for gravimetric analysis and vacuum filtration process.	Filter holders with flask: for filter paper: dia. 47 mm, glass flask: ca 300 ml, [Manifold] No. of branch: 3 pc, [Glass filter] Diameter: dia. 47 mm, [Vacuum filtration pump]	PC1: 2 2 2 1 1 8 PS: 2 2 2 1 1 8 Ext: 0 0 1 0 0 1 BS: 1 1 1 1 1 5				
D-45 Analytical Balance, 210g	Maximum loading weight 210g and readability up to 0.1mg, > 0.1mg.	Type: suspended pan or top loading. Weighting capacity of more than 200 g. Reading of less than 0.1 mg. Allowance of less than ± 0.2 mg. Pan diameter of ca 80 mm	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 2 1 3 2 1 9 BS: 0 1 0 0 1 2				
D-46 Analytical Balance, 220g	Maximum loading weight 220g and readability up to 0.01mg, > 0.1mg=>Change to Macro Balance 2000g	Max weighting capacity of 2000 g. Allowance of less than 0.1 g. Stabilization time less than 2 sec., Pan diameter of ca 100 mm	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-47 Low Temperature Incubator	Refrigerated incubator, Temperature range: -5 to 50°C.	Incubator, Temperature range: -5 to 50°C. Capacity: Approx. 380 liter, Temperature accuracy: Less than +/- 1 degreeC, Temperature display: Digital	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 1 2 1 0 1 5 BS: 1 0 1 1 1 4				
D-48 High Speed Homogenizer	To disperse, disintegrate & to homogenize solids in aqueous and organic solvents buffer, system with variable speed motor of 8000-20000 rpm, include beakers and test tube holders.	(To be deleted)	PC1: 1 1 1 1 1 5 PS: 0 0 0 0 0 0 Ext: 0 0 0 0 0 0 BS: 0 0 0 0 0 0				
D-49 Vacuum Filter Unit	Bacteriostatic water with vacuum filtration pump, Capacity: filter up to 5-10 liter/min.	Bacteriostatic: 90mm (300ml), Flask: Glass: 200ml, Vacuum pump, Capacity: 25 liters/min (Exhaust, approx 100Pa).	PC1: 1 1 1 1 1 5 PS: 0 0 0 0 0 0 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-50 Furnace	Digitally controllable furnace, Capacity: 600-700 cements. Dual LED display actual and set, Maximum continuous operating temperature 1200°C.	Electric tubular furnace, Digital temperature controller, Range of temperature: Normal temperature 1150°C and max. 1200°C, Size-in inside: φ48-300mm	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-51 Muffle Furnace	Auxiliary to 1200°C with temperature control system.	Capacity: approx. 9-liter, Heating element: Completely enclosed with no exposure to furnace chamber, Temperature range: More than 1150 degreeC, Temperature accuracy: +/- 1 degreeC, Temperature display: Digital, Temperature control: Thermocouple	PC1: 1 1 1 1 1 5 PS: 0 0 0 0 0 0 Ext: 1 1 1 1 1 5 BS: 1 1 1 1 1 5				
D-52 Linear Air Flow Cabinet	Air flow cabinet with UV light, Fluorescent light and fixture to protect the user & environment from biohazardous particulates.	UV light, Fluorescent light and fixture to protect the user & environment from biohazardous particulates. Type: Desk top type, Air velocity: Approx. 0.45 m/sec., Collection efficiency: More than 99.99% at 3 micron size, Total dimension (W x D x H): Approx. 750 x 500 x 1335	PC1: 1 1 1 1 1 5 PS: 0 0 0 0 0 0 Ext: 0 0 0 0 0 0 BS: 1 1 1 1 1 5				
D-53 Autoclave	Microprocessor control autoclave, programmable both with slow & fast exhaust. Unit include 3-t shelves and up to 60 minutes/program cycle time.	Temp. control range: Should cover 100 to 125 degreesC, Temp. control accuracy: Less than +/- 1 degreeC, Pressure range: 0 to 1.64 kPa, Temp. control: Microprocessor control, Timer: 1 to 60 min., Drum container capacity: More than 50 L.	PC1: 1 1 1 1 1 5 PS: 1 1 1 1 1 5 Ext: 1 1 1 0 0 2 BS: 1 1 1 1 1 5				
D-54 Refrigerator	Maintain temperature to 4°C with glass door laboratory refrigerator, Capacity: 600 liters. Uniformity of temperature ± 0.5-1°C.	(To be deleted)	PC1: 1 1 1 1 1 5 PS: 0 0 0 0 0 0 Ext: 1 0 0 1 0 2 BS: 0 0 0 0 0 0

Appendix-3

Appendix-4

Training Courses Proposed by EPA

A. General Environment

Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
G-1	Introduction on Environmental Problems	To introduce the basic problems of our environment on water and ambient air, to explain the governmental roles of EPA and to promote awareness of the population	1 day	0 day	[E]A staff, Professors of university, expert	Pak-EPA and Provincial industries, students and citizens	None

B. Ambient Air Quality

Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-1	Outline of air pollution	To understand definition of air pollution, global environmental issues, control regulation, effect of air pollution on human health, vegetation and formation of acid rain, and sources of air pollution	1 day	0 day	EPA Professors of university, experts	Pak-EPA and Provincial industries, students and citizens	None

C. Monitoring

Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-2	Automatic air monitoring instrument	To understand principle of the monitoring instruments such as NOx, SO ₂ , O ₃ , CO, NMHC, SPM monitor and meteorological measurement instruments, allocation of the station, operation and maintenance, examination of reliability, telemeter system, summarizing data	2 days	10 days	Manufactures of instruments, Professors of university, experts	Pak-EPA and Provincial industries, students and citizens	Completion of A-1

M, M

Z

Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-3	Manual analysis for air quality	To understand sampling methods, basic concept of measuring, dust, fall measurement, acid deposition measurement, methods of analyzing particulate matter, wet measurement method of gaseous pollutants, methods of analyzing volatile organic compounds	2 days	10 days	Professors of university, JICA experts, volunteer	Pak-EPA and Provincial EPA	Completion of A-1 and A-2
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-4	Emission from mobile sources and control	To understand exhaust gas measurement for motor vehicles, Measuring exhaust gas, automatic measurement, measuring equipment, vehicle testing system and control equipment such as catalytic converter and diesel particulate filter	5 days	2 days	Engineer of instrument producing company, JICA expert	Pak-EPA and Provincial EPA, Industries	Completion of A-3
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-5	Air predicting techniques	To understand meteorological measuring method, diffusion theory, wind tunnel experiment, emission factor, statistical forecasting method, CMB (Chemical Mass Balance) method	5 days	0 day	Staff of SUPARCO & PCSIR, Meteorological Dpt, JICA experts	Pak-EPA and Provincial EPA	Completion of A-2 and A-4
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
A-6	Instrument analysis for air quality	To understand management and operation of the instruments such as UV-VIS spectrometer, Atomic absorption, Gas Chromatograph, Total Organic Carbon Analyzer, Inductive Coupled Plasma, Fluorescence X-ray Analyzer, Ion Chromatograph, High Performance Liquid Chromatograph	3 days each	8 days each	Manufacturers of instrument company, JICA experts, volunteer	Pak-EPA and Provincial EPA	Completion of A-2, A-3 and A-4

Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-1	Outline of water pollution	To understand definition of water pollution, global environmental issues, ocean pollution, groundwater quality management, control regulation, effect of water pollution on human health, water body, agriculture, and sea system and sources of water pollution	1 day	0 day	EPA professors of university, experts volunteers	Pak-EPA and Province Industries staff, of JICA senior students and citizens	None
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-2	Water measurement instrument	To understand principle of the monitoring instruments such as pH, conductivity, COD, and CN monitor and other measurement instruments, allocation of the station, operation and maintenance, examination of reliability, telemeter system, summarizing data	2 days	3 days	Manufacturers of instruments, Professors of university, JOCV	Pak-EPA and Province EPA	Completion of W-1
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-3	Manual analysis for water quality	To understand washing and keeping of glassware, pure water making and purity check, dilution standing solutions, absorption analysis, titration	1 day	10 days	Professors of JICA university, senior volunteer, JOCV	Pak-EPA and Province EPA	Completion of W-2
Course	Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-4	Emission from stationary sources) and control	To understand measuring and analytical method of air pollutants in exhaust gas, Measuring flow gas automatic measurement, fuel test and control equipment	2 days	10 days	Engineer of instrument producing company, JICA expert	Pak-EPA and Province Industries	Completion of W-1 and W-2

M.N

Z

Course Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-5 Water measuring methods and equipment measurement	To understand measuring and analytical method of effluent from industries and treatment plant, and control equipment	2 days	5 days	Engineer of instrument producing company, JICA expert	Pak-EPA and Province Industries	Completion of W-1, W-2 and W-3
Course Name	Content	Lecture	Practice	Possible Lecturer	Participant	Condition for Participation
W-6 Industrial waste water treatment technology	To understand basic concept, wastewater treatment facilities design, maintenance and operation of treatment plant, pretreatment, wastewater purification by biological treatment, advanced treatment process and reuse, sludge treatment and volume reduction, and some examples	5 days	0 day	Engineer of instrument producing company, JICA expert	Pak-EPA and Province Industries	Completion of W-5

Appendix-5

Basic Design Study for
the Project for Establishment of
Environmental Monitoring System

Tentative Schedule of Training Programs

Training to be Conducted by EPA
[Hatched Bar] On-the-Job Training (OJT) to be Provided by Japanese Side (Manufacturer)

[Solid Line] Soil Component

[Crossed-out Box] Technical Corporation

NOTE : The Project and all Trainings to be Provided by Japanese Side all Subject to the Japanese Governments Approved
