Subject : Re : Bridges in Iraq

Dear Takebayashi

Your last E-mail dated Dece., 23-2004 , we want to clarify the following :

1. We have no information about the American Company Contract International because this company did not deal with our commission for roads and bridges.
2. Samawah Governorate is very safe Governorate and we are ready to cooperate for security of project sites in the Governorate .
3. The Iraqi contractors themselves are responsible for their security of their projects by agreement with the local tribes .
4. At last SCRB announces the project funded by the US grant aid after coordinating with (PCO- GRD) office and the operation is going well without troubles and we do not expect any troubles during implementation of these projects since they are serving Iraqi citizens who are very glad for these projects .
5. So we are also ready to announce the projects of the Japanes Grant Aid and supervise the implementation under Japanese pursuance and we hope that the security situation in Iraq will approved in near future
6. We hope that you will not be affected by the news on different media and we are ready for any help we can do

Tank you with best regards

**Mustafa Abdul Rahman
DG. of S.C.R.B
Baghdad – Iraq**

Planning and design department

Co-ordination Meeting on site

Minutes of meeting with Mr. Shuichi Takano of MOFA

Date : 4th Amy 2005

Time: 3:00Pm

Venue: Japanese Camp in Samawah.

Presents by:

- 1- Mr. Shuichi Takano of MOFA
- 2- architect Mustafa Jasim of Dar Iraq
- 3- Engineer Haider A. Ali of Dar Iraq
- 4- Mr. Takayuki Maeda of MOFA.

The meeting was started at 3:00pm and finished at 6:00 pm

Matters discussed was as listed below:

- 1- copy of road layout and drainage design was extended to MOFA for their reference
- 2- overall discussion for the existing drainage system as per drawing prepared by PCI and Dar Iraq.
- 3- detailed discussion of the design drawing as per new road alignment and both parties has agreed of the design layout and proposed solutions.
- 4- overall explanation of the project scope of work was discussed and clearly clarified for the whole project.
- 5- MOFA extended copy of proposed contractual guide line s following scope of work :
 - a- Drainage cleaning and repairing task.
 - b- new proposed drainage design task
 - c-new road alignment with sidewalk and road marking task
 - d-new street lighting.
 - e- planting and landscaping
- 6- at the end both parties has reach to the level of understanding the scope of work and packaging of the project to be discussed clearly with all related departments of Samawah Authority in the next day meeting.

Prepared by

Mr. Mustafa Jasim

Team leader – Dar Iraq.

Minutes of meeting with MOFA, GSDF and Related Departments of Samawah Authority

Date : 5th Amy 2005

Time: 9:00 AM

Venue: Japanese Camp in Samawah.

Agenda of meeting: Samawah promenade project- design of Cornish Street

Presented by:

1- Mr. Shuichi Takano of MOFA

2- architect Mustafa Jasim of Dar Iraq / JICA

3- Engineer Haider A. Ali of Dar Iraq /JICA

4- Mr. Takayuki Maeda of MOFA.

5- Mr. Hiroyasu Kobayashi of MOFA

6- Masatomo Sakurai of GSDF

7- Assel Ahmed of Dar Iraq / JICA.

8- Abdul Kereem Turkey head of the Sewerage department of Samawah.

9- Sarmed Hamuodi sewerage Engineer of Sewerage department of Samawa

10- Emmad Mohammed Ali head of the municipality of Samawah

11- Engineer Abbas of Electrical department of Samawah.

The first meting was held at 9:30 with the sewerage department and the following

matters was discussed:

1- copies of drainage design for Cornish street (A3 size drawing scale 1:500) was extended to all parties

2- detailed discussion of the design drawing for Cornish street for each 150 meter station as shown in the drawing and few comments and amendment was made on spot.

3- changing in some of the connected pipes diameter was suggested in certain location to accommodate the flow as new inlets added

4- explanation of the cleaning procedure was discussed and co-ordination of sewerage department was requested for the cleaning and repairing of existing drainage pipes with manholes and inlets.

5- overall explanation of the project scope of work was discussed and clearly clarified with sewerage department.

6- Brief discussion and explanation from the sewerage department for the 87 million sewerage project for whole SAMAWAH CITY.

7- there is no clear information of that sewerage project status, as the sewerage department emphasis their doubt of the implementation of the project.

8- Mr. Hiroyasu Kobayashi of MOFA confirm that the sewerage project will be conducted soon based on the information from Mr. Abdul Sattar the head of planning department.

9- as per the discussion additional survey need to be conducted for the invert level of the existing manholes and inlets. technical solution will be proposed based on the result of new survey

10-

11- MOFA extended copy of proposed contractual guide line s following scope of work :

a- Drainage cleaning and repairing task.

b- new proposed drainage design task

c-new road alignment with sidewalk and road marking task

d-new street lighting.

e- planting and landscaping

6- at the end both parties has reach to the level of understanding the scope of work and packaging of the project to be discussed clearly with all related departments of Samawah Authority in the next day meeting.

The Second meting was held at 11:30 with the head of municipality of Samawah and the following matters was discussed:

A- Road and sidewalk design:

1- copies of Road and sidewalk design (A3 size drawing scale 1:500) was extended to all parties

1- over all agreement of the new road alignment with the following comments

a- the project did not provide sufficient car park for the tenants and users of the Cornish street. This point was clearly explained to Mr. Emmad that without reducing the width of the river side walk, it is impossible to provide additional parking. The scarifying of the river sidewalk was strongly rejected by Mr. Emmad.

b- solution of traffic jam at intersection to be reviewed.

c- median in certain portion of street need to be redesigned to accommodate the existing manholes also median design to be reviewed along the street.

2- Mr. Kobayashi of MOFA clearly stated that providing such parking will be indicated in the drawing but will be designed and constructed by others.

B- landscape design:

1- copies of **landscape design** (A3 size drawing scale 1:500) was extended to all parties

- 2- it was clearly informed that 40 NOS. of palm trees and 40 NOS. for Benches will be provided for Cornish street sidewalk .
- 3- other planting and shrubs can be proposed but will be provided by UNDP in co ordination with Municipality of Samawah
- 4- new Fountain design to added to the street near to the cafeteria area station 250 – 350 .

The Third meting was held at 11:30 with the Engineer Abbas of electrical department of Samawah and the following matters was discussed:

- 1- copies of **Electrical design** (A3 size drawing scale 1:500) was extended to all parties
- 2- over all discussion for the layout as well as the detail of the design and was agreed by all parties with no comments.
- 3- connections of power supply to be investigated on site.
- 4- MOFA was requested the Estimate Cost of the design from Dar Iraq to be provided as soon as possible.

General Notes:

- 1- Additional request for estimate cost of each scope of work for the Cornish street as per the contractual guide line distributed by MOFA at meeting.
- 2- Contractual packages need to be clarified as per the general policy from JICA.
- 3- new requests and comments need more time to be studied and design to be reviewed from all departments.
- 4- new required survey as per meeting comments will be conducted tomorrow by our Drainage and electrical engineer.

Prepared by

Mr. Mustafa Jasim

Team leader – Dar Iraq.

Sent: Sunday, June 05, 2005 5:01 AM

Subject: Minutes of Meetings in Samawah, Sat. 4-6-2005

Dear all

The following are the minutes of meeting for the the meeting that had hold today in the camp in Samawah in order to discuss the Cornish street development project. The meeting was between MOFA, represented by Mr. Ebata and Eng. Haider, Dar Iraq, represented by me; Transportation Eng. Haider Saad; and Electrical Eng. Asseel, Sewage Dept., represented by Eng. Sarmad, and Municipality Dept., represented by Eng. Emad the director. The meeting started at 11:00 A.M.

Main issues in the drainage system design:

1. Cancelling type-A as showing in the drawing No. (D-7) and only type-B, which is shown in the same drawing, will be used. Accordingly, the item no. 2.02.2 in the BOQ of the DRAINAGE WORKS will be canceled and the item 2.02.3 will be named as (catch basin) only without any indication for the type.
2. There is a new inlet in the middle of Cornish street between ST 1+250 and ST 1+260 as shown in the drawing no. (D-6).
3. The item 2.04 should be canceled because it is belong to the canceled portion of Cornish street.
4. Near ST 0+970 there is a MH that is damaged due to placing of concrete columns in vicinity or at this MH as shown in the drawing no. (D-4). Under the request of Sewage Dept. they proposed to place two manholes and inlets as a by pass for this damaged MH but I proposed only constracting new manhole almost a head of this damaged MH with new one inlet only and they accepted it. I had asked MOFA to submit this proposal to PCI first for approvel but Mr. Ebata said that MOFA is very hurry to submit the tender for tendering within this week and accordingly he accepted this proposel and changed the BOQ instantaneously as following; a new MH will be constracted and the Qty of the item 2.02.1 will be (1) instead of (0), the no. of new inlets will be (12) instead of (11), and the total length of the 400mm diameter as shown in the item 2.01.2 will be (88m) instead of (38m).

5. The items (2.01.1) and (2.01.4) should be canceled because there are no 500mm and 200mm diameters, respectively, that will be used within Cornish street.

Main issues in the transportation and land scape design:

1. The quantity of the required new curbstones can be significantly reduced to about 500m instead of 2380m as shown in the item no. (1.08.1) in the BOQ of the ROAD WORK . This huge reduction is due to the fact that only new curbstones will be provided to the street protions that will be damaged due to new widening, while all other existing curbstones will be still the same and they only need painting.

2. From Station 1+070.00 to Station 1+220.00 the walkway of the river side will be developed by the UNDP as we informed from Mr. Emad and accordingly we can excluded the walkway of this part from our scope.

3. From the saved mony that can be gained from applying the steps (1) and (2) above, the colored interlocking blocks should be provided along the walk way of the river side instead of using successive areas of these interlocking blocks and concrete pavement.

4. Providing about (40) traffic signs.

5. Providing additional (3-4) pedesterian crossing marking as shown in the drawing no. (E-1).

6. The paints that will be used for curbstones and marking should be of international protection specifications, i.e. high temperature resistance, ...etc.

7. The details of the new curbstones should follow the existing ones.

8. The type of the wood that will be used in the proposed benches as shown in the drawing no. (G-7) should be of the type locally named (Jawee).

9. It is proposed that instead of using granular base and sub-base layers for the details of the new road portions (widenings) as shown in the drawing no. (B-1), a reinforced concrete layer with thickness 25cm should be sufficient.

10. The road intersection at the 20th revolution bridge (the intersection at the end of the Cornish street and the beginning of both Civil Defence and Hospital streets) need to be re-designed due to the daily traffic jam. Accordingly, the construction limit line is proposed to be at the end of Cornish street exactly (after ST 1+320 for Cornish street).

11. The municipality requested (20) palms and (17) trees similar to that one placed near the 20th revolution bridge. All these palms and trees should be of height not less than (3m).

12. The construction joints should be shown with details in the drawings wherever they used in the carriageway and the walkway.

Best Regards

Resident Coordinator

Haider A. Ali, Samawah

Sent: Monday, June 06, 2005 3:51 AM

Subject: Minutes of Meeting in Samawah, Sunday 5-6-2005

Dear All

Today at 3:30 P.M. a meeting was held between MOFA, represented by Mr. Kobaiaashi and Mr. Ebata, and Dar Iraq, reprented by me; Electrical Eng. Asseel; and Transportation Eng. Haider Saad. The meeting had focused on explaining the proposel designs of CIVIL DEFENCE STREET, HOSPITAL STREET PACKAGE 1, AND HOSPITAL STREET PACKAGE 2 in addition to explaining the comments of the involved governerate dministrations. The following are the results of this meeting:

1- CIVIL DEFENCE STREET: We explained the proposel design and the comments of the administrations to Mr. Kobaiaashi and Mr. Ebata . MOFA and us believe that much money will be saved within this street.

2- HOSPITAL STREET (PACKAGE 1 & 2): We explained the proposel design and the comments of the administrations to Mr. Kobaiaashi and Mr. Ebata. MOFA gave its necessary comments about providing parking lanes before the Hospital and cancelling the parking lanes indicated at the residential area according to the request of Municipality Dept. and deleting the idea of providing manhole for each two houses within the package 2 according to the request of Sewage Dept..

3- I asked MOFA about the part of Cornish street where Mr. Emad said that UNDP will be responsible for developing it, as I explained in the last E-mail, but MOFA explained that it is still waiting for confirm from UNDP before excluding this part from our scope.

4- Mr. Kobaiaashi said that the available budged for whole this project is 3,000,000 \$ only but he think that the expensed budged will be less than this sum and accordingly any additional requirements can be also done accoding to the saved money and the priority of needs.

5- Mr. Ebata is asking PCI for the answers of the comments submitted by Mr. Emad during last meeting as soon as possible because MOFA had submitted the tenders of the electrical and drainage works today but it can not submit the tender of the roads and land scape works until any necessary changes and modifications are made by PCI.

6- Mr. Ebata asked for the time of finishing the design of the two remainning streets.

Dear Mr. Tanaka, the comments of the involved administrations about the CIVIL DEFENCE STREET, HOSPITAL STREET PACKAGE 1, AND HOSPITAL STREET PACKAGE 2 with the photos that had been taken for the meetings and the required surveys will be submitted to PCI after we return to Baghdad about two days latter because we need to explain these comments on the associated drawings.

Regards
Resident Coordinator
Haider A. Ali

Subject: Samawah Sewage Dept. Comments for Civil Defense Street

Dear Mr. Tanaka

Kindly regards the comments of Sewage Dept. about Civil Defense Street. These comments confirmed by formal paper from the Dept. as an answer for the changes suggested by our proposal according to the request of the director, Mr. Karim which is attached with this E-mail. This formal paper will be explained below:

- 1- Near ST 0+30 and ST 0+50 there are two inlets that will be removed due to the new layout of the road. These two inlets should be substituted by two new inlets according to the new layout.
- 2- The proposed new system near ST 0+710.78 to the end of the street, i.e. to ST 0+940 is not needed because this area is too high and the runoff water is speedily run to the connected streets.
- 3- As a note, the direction of the flow after the fountain is going toward the Al-Mualimeen PS until ST 0+460 and then the drainage pipe will go inside the street at the left (in the direction of the Al-Mualimeen PS) which is called (Haji Salman's Street).

Best Regards

Haider A. Ali.

Subject: Comments on Hospital Street-Package One

Dear Mr. Tanaka

Kindly regards the comments of Sewage Dept. about Hospital Street – Package (1). These comments confirmed also by formal paper from the Dept. as an answer for the changes suggested by our proposal design for the Hospital street with its two packages which is the same one sent in last E-mail, according to the request of the director Mr. Karim which is attached with this E-mail too. This formal paper will be explained below:

- 1- There are no comments about the proposed design from ST 0+00 until ST 0+720.
- 2- For the new proposed drainage pipe started from ST 0+910 toward ST 0+720, we can not connect this pipe with the manhole placing at the middle of the intersection, i.e. at ST 0+720, because the depth of this manhole is bout (1m) according to my site investigation for the manholes' depths at Ammar street and Hospital street.

The manholes inside Ammar street which are placing at the median, are also not sufficient where the depth of the 1st manhole at the median is about (0.6m) and the 2nd insider one is less than (1m) and the 3rd insider one is about (1m) and so.

The manholes inside Hospital street starting from the intersection at ST 0+720 toward Cornish street, which are placing at the median, are also insufficient except the manhole placing at ST 0+520 because the depth of this manhole is about (2.2m). The depth of the other manholes is not sufficient where these depths, according to street surface level, until the indicated sufficient manholes are as following: 1st MH is about (1.20m), 2nd MH is about (1.25m), 3rd MH is about (1.30m), and 4th MH is about (1.35m).

If we consider longitudinal slope of (0.2%) and we started the depth of the 1st new MH which is indicated at the ST 0+910 then the invert level of the new drainage pipe will be equal to (1.38m) at the existing MH at ST 0+720 ,where its depth is mismatch with the calculated depth. And this invert level will be equal to (1.80m) at the sufficient existing MH placing at ST 0+520, therefore it is recommended to extend this new drainage pipe in vicinity to the existing pipe at the median from ST 0+700 to ST 0+520 until the sufficient

MH placing at ST 0+520 which its depth is about (2.2m) and this is the recommendation of Sewage Dept. too as explained in their formal paper.

- 3- The proposed open channel crossing the median for the new storm water system from ST 0+910 to ST 0+740, such as the one placing at ST 0+760, is completely refused by both Sewage and Municipality Depts. And they insist on placing inlet instead of it which is less expensive because placing channel crossing the median needs new curbstones and pavement for it which is relatively equal or more in expenses compared with using inlet.

Best Regards

資料 5 事業事前計画表

5. 事業事前計画表

事業事前計画表

| |
|--|
| 1. 対象事業名 |
| イラク国 サマーワ及び周辺地区道路・橋梁整備計画 概略設計調査 |
| 2. 我が国が援助することの必要性・妥当性（要請の背景） |
| <p>2003 年のイラク戦争後、我が国政府は、イラクの再建に対する積極的な支援を表明し、「当面の支援」として総額 15 億ドルの無償資金協力の実施を発表するとともに、電力、教育、水・衛生、保健、雇用等、イラク国民の生活基盤の再建及び治安の改善に資する分野を重点支援分野と位置付けた。</p> <p>前政権時代、ムサンナー県を始めとしたイラク南部地域は経済発展から取り残されており、道路・橋梁を始めとした交通インフラの整備が遅れている。特に、バグダッドとバスラ、クウェートを結ぶイラク国最重要幹線道路である国道 8 号線はサマーワ市内にて深刻な交通渋滞のためボトルネックとなっており、増大する復興需要に十分対応できなくなるおそれがあると共に、国道 8 号線が市内を通過するサマーワ市では市民生活に多大なる影響を及ぼしている。また・サマーワ市内では十分な道路維持管理が実施されず・市内道路の損傷も著しい。また、ムサンナー県では県内を東西に流れるユーフラテス河沿いに人口と産業（農業）が集中しており、県内の主要な道路の多くはユーフラテス河沿いに位置し、多くの橋梁がユーフラテス河にかかっている。これらの橋梁は地域住民の生活物資の運搬を始め、生活を維持するための必要不可欠なものであるものの、多くの橋梁が損傷もしくは浮橋等の仮橋の状態であり・自衛隊の給水活動への障害ともなり、地域住民にとって BHN 確立への大きな支障となっている。</p> <p>サマーワ市を中心としたムサンナー県の戦後復興に当たって障害となるこれらの状況を改善するため、イラク政府は、サマーワ市及びその周辺地区における道路・橋梁の建設・補修を無償資金協力にて実施することをわが国に要請した。</p> <p>上記要請を受け、日本国政府は JICA に本件調査の実施を指示した。JICA は 2004 年 9 月、11 月に調査団をクウェート/アンマンに派遣し、その現地調査結果に基づき、概算事業費並びに橋梁整備の優先順位に関する中間報告を 2005 年 2 月 8 日に外務省に提出した。その後、整備実施調査対象橋梁が未決定である。</p> <p>一方、JICA は日本国政府の指示を受け、2004 年 12 月に草の根無償案件として取り扱うことを前提にサマーワ市内の散歩道整備計画も対象として概略設計調査に新たに加えた。JICA は 2005 年 3 月、4 月、5 月に調査団をクウェート/アンマンに派遣し、その現地調査結果に基づき、2005 年 6 月 21 日に図面を含む概略設計結果を外務省に提出した。</p> |
| 3. 事業の目的 |
| (1) サマーワ市及びその周辺地区における道路・橋梁を建設することにより、国道 8 号線を利用する広域交通機能及びサマーワ周辺の道路網機能を改善し、地域経済の活性化及び復興活動の効率化を図ることを目的とする。 |

(2) サマーワ市内 3 街路につき、都市計画・景観設計的視点から整備コンセプト計画及び概略設計を行い、草の根無償案件としての実施に供する。

4. 事業の内容

(1) 5 橋梁の建設

(a) 対象橋梁

サマーワ北橋、マジッド橋、ヒラール橋、ダラージ橋、マーディ橋

(b) 概要

単純 PC 橋、橋長 192~270m、幅員 12~13m

(c) 総事業費

各橋梁個別に建設の場合：約 161 億円（1 橋当たり約 30~36 億円）

全 5 橋梁段階建設の場合：約 139 億円

(d) スケジュール

1 橋当たり工期：約 24 ヶ月

全 5 橋段階建設の場合の工期：33 ヶ月

(e) 実施体制

主管官庁：イラク国 建設住宅省（MOCH）

実施機関：イラク国 建設住宅省（MOCH）道路橋梁局（SCRB）

調達代理人：日本国政府機関

(2) サマーワ散歩道

(a) 対象街路

河岸通り、女子校前通り、病院前通り

(b) 概要

河岸通り（870m）、女子校前通り（890m）、病院前通り（(1)890m、(2)470m）における交差点改良、道路拡幅舗装整備、排水系統整備、街路灯整備、歩道舗装整備、ベンチ設置、植栽帯整備、植栽（ナツメヤシ）整備

(c) 総事業費

河岸通り、女子校前通り、病院前通り(1)、病院前通り(2)の各 1 億円を上限とする。

(d) スケジュール

発注手続き期間（約 2 ヶ月）を含め約 12 ヶ月の工期を予定

(e) 実施体制

草の根無償

主管官庁：イラク国サマーワ市民生局、ムサンナー県下水道局・電力局

5. プロジェクトの成果

(1) 5 橋梁

裨益人口 — サマーワ北橋：約 300,000 人、マジッド橋：約 20,000 人、

ヒラール橋：約 15,000 人、ダラージ橋：約 40,000 人、

マーディ橋：約 300,000 人

| |
|---|
| (2) サマーワ散歩道 裨益人口 約 300,000 人 |
| 6. 外部要因リスク |
| (1) 5 橋梁 <ul style="list-style-type: none"> (a) 地雷・不発弾が存在する。 <ul style="list-style-type: none"> — 十分な事前調査を行う。 (b) 本プロジェクトを直接又は間接に狙ったテロ攻撃が発生する。 <ul style="list-style-type: none"> — 事業の仕組みの中にテロ攻撃の可能性を組み込む。 (c) 邦人の現場立入が困難であるため適切な施工管理がなされない。 <ul style="list-style-type: none"> — 邦人の現場立入が無い前提で工事管理計画を作成する。 (d) 適切な工事保険の付保が出来ない。 <ul style="list-style-type: none"> — 通常の保険に代わる仕組み（発注者自家保険）を作り上げる。 |
| (2) サマーワ散歩道 草の根無償案件としてはやや複雑なプロジェクトであり、施工管理に不備が発生する。 <ul style="list-style-type: none"> — 概略設計成果物の内容に配慮する。 |
| 7. 今後の評価計画 |
| (1) 事後評価に用いる成果指標 5 橋梁：車種別の日平均交通量、サマーワ散歩道：サマーワ市民の反応（満足度） |
| (2) 評価のタイミング 5 橋梁、サマーワ散歩道とも <ul style="list-style-type: none"> ① 事業終了時の全体の事後評価 ② 施設供用開始後 5 年後を目処に再度全体の事後評価 |

SAMAWAH PROMENADE DEVELOPMENT PROJECT BENCH MARKS DETAILS

1. Location:

The locations of the two B.M.'s are decided in coordination and approval of Mr. Abdul Sahib Abdul Kareem, the director of Roads and Bridges Directorate in Samawah as follows:

1. The location of the first B.M. is in vicinity with Al-Shuhadaa Bridge within the limit of Cornish Street.
2. The location of the second B.M. is in vicinity of Samawah hospital's fence within the hospital boundary. This B.M. is at a distance of about 31.5m measured from the gate at the end of the Hospital Street.

2. Specifications:

The two B.M.'s are fixed on the locations specified above using concrete with square section of 200mm * 200mm and total depth of 800mm (700mm beneath NGL and 100mm over NGL). The steel section indicating the exact level of the B.M. is fixed 50mm above the face of concrete.

3. Levels:

Based on Mr. Abdul Sahib Abdul Kareem instruction, to use the level of the scale role of Samawah Water Recourses Department placed at 20th Revolution Bridge, as the reference level to the project, the following levels were indicated knowing that the level of the scale role is (10m).

- 3.1 The level at the top of the first B.M. is (11.099m).
- 3.2 The level at the top of the second B.M. is (9.695m).

4. Coordinates:

4.1 UTM system:

- | | | |
|----------------------------|----------|-----------|
| 4.1.1 For the first B.M.: | N 525579 | E 3465800 |
| 4.1.2 For the second B.M.: | N 526023 | E 3465057 |

4.2 DMS system:

4.2.1 For the first BM:

N 31 Degree 18 Minute 45.0 Second
E 45 Degree 17 Minute 52.0 Second

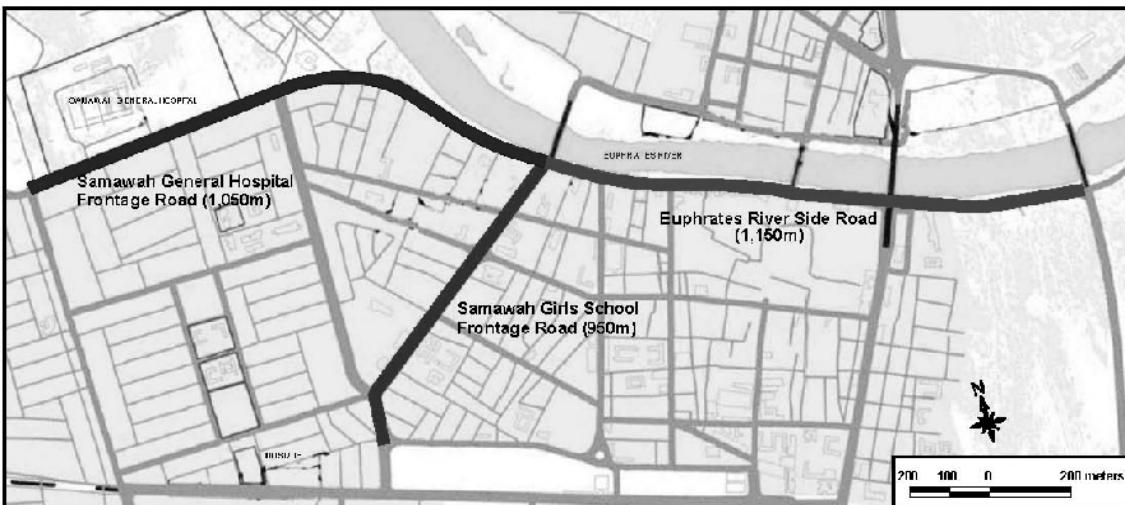

4.2.2 For the second BM:

N 31 Degree 19 Minute 08.7 Second
E 45 Degree 16 Minute 24.6 Second

Existing drainage system Survey

Existing Drainage System in the three (3) Streets of Promenade

2005 May

SAMAWAH PROMENADE DEVELOPMENT PLAN

Existing Drainage System in the three (3) Streets of Promenade

Comments on Site Investigation:

Cornish Street :-

1. From section (1-1) to section (2-2) :-

• Existing services as per investigation on field

- 1- There is no drainage system for domestic waste water as the area considered an agriculture usage.
- 2- There are 7no.s of side inlets (two of them are located at lowest points under the concrete bridge). These inlets are located at depressed spots for collecting rain water and discharging it directly to river, and were distributed in irregular distance, ranging from (35 to 65)m along the curbstone of river side walk .
- 3- At the residential side, there is a sewage pumping station (Al- Shariqi PS1) placed near to the concrete bridge for collecting the sewage of the residential area beyond this station and pumping it through PVC pipe (size of 200 mmØ) along the side walk and discharging to main MH .located at Al-Shouhadaa Bridge . From this MH to be discharge to the river.
- 4- There is an overflow Ductile (of 400mm Ø) pipe connected from the PS1 crossing the street. (laid at a depth of about 4m) This pipe is functioning as an overflow for discharging the sewage flow directly to river during a temporarily shut down in electricity in the Al-Sharqi PS1. The duty of this pipe had been canceled for several years due to the generation of sewage odors in all of the surrounded areas the sewage Dept. is considering to re-use this pipe during shutting off in power and this definitely will re-generate the undesirable odors. The solution of this problem requested from sewage Dept. is providing an electrical generator so that any interruption in electrical current will be easily deal and we recommend this solution.
- 5- There are two exposed steel pipes of a size (\varnothing 250mm) laid in the middle and along with side walk of residential side and third one of the same type under construction. These two pipes are responsible for suctioning water from the river to the oil refinery and cement factory and the third one which is under construction is for some duty to the refinery factory.

• Investigation Comments / proposal for solution:

- 1- Providing side inlets at subsequence distance, say each 25m, these inlets recommended to be placed at river side so that the direction of the slope of the new pavement will be toward river side. These inlets should discharge directly to river and each one of them is independent and not connected with the others to avoid horizontal blocking.
- 2- The MH that collecting the flow discharging from Al-Sharqia PS and Al-Shuhadaa PS should be rehabilitated . Although this MH is placed at the other side of Al-Shuhadaa Bridge and it is out of limit of Kornish Street but an undesirable odor are generated from it in addition to a bad feature presenting from this spot.

1. From section (2-2) to section (3-3) :-

- Existing services as per investigation on field
- 1- There are 4 sewages collecting pipes crossing the street at this portion from residential side toward the river, as indicating in the attached drawings.
- 2- There are side inlets provided of the most depressed spots in the street. The destination of the effluent from these is toward the river.
- 3- There are few manholes which have used by connecting some of the inlets mentioned previously with them.

• **Investigation Comments / proposal for solution:**

- 1- Providing side inlets at relatively fixed distances, say each 25 m, at river side where each inlet is independent. These inlet either fixed in such a way so that a one inlet will be provided at river side only and accordingly, slope of street for the new pavement will be toward river side only or providing an opposite inlets at each selected distance where the one in the residential side will discharge toward the one in the river side, if two opposite direction of the slope for the new pavement is suggested.

1- From section (3-3) to section (4-4) :

- Existing services as per investigation on field
- 1- The slope of this portion of street is reflecting towards the residential side and according to the side inlets are providing at residential side in combination with MH providing at the walk way . These MHs and associated inlets are starting from a MH placed at a distance of 40 m from the second edge of Al-Musagaf bazaar toward section (4-4). This line is discharging towards Al-Garbi PS2.
- 2- There are 7 sewage collected pipes cross this portio n
- 3- Al-Garbi sewage pumping station placed at the corner of Al-Shabia Street in Kornish street side. Three drain lines are discharging at this PS as indicated obviously in the attached drawings which is discharging the collected sewage toward the river.
- 4- From 20th Revolution Bridge towards Al-Garbi PS there is a drain line consists of MHs and side inlets in association it at each about 25 m as shown in the attached drawings with . This line is connected with a drain line coming from Girls School Street and discharging at Al-Garbi PS2. This line has been discovered accidentally since 2001 and then rehabilitated and re-used. This line has also a pipe discharging directly to river near 20th Revolution Bridge which is used for over flow case of electricity shut down in Al-Garbi PS2.

• **Investigation Comments / proposal for solution :**

- 1- Comments No.1 for section 2-2 and 3-3 would be applicable at this section.
- 2- In addition to the suggestion above , all the previous inlets should be cancelled

- 3- For more improvement of existing the drain line cleaning of the drain line and MHs is recommended beside the replacing of the covers of the MHs (both the concrete and the metal covers).
- 4- The idea of U ditch was refused by the sewerage dept. due to expected misuse of resident along the street which will require contains cleaning and maintenance.

Civil Defense Street (Girls School Frontage Road) :

1- From section (5-5) to section (6-6)

- **Existing services:**

- 1-There is a drain line consists of MHs placed at each 20m – 25m each MH is associated with two side inlets at each side of the median .This line is concrete pipe of size Ø 400mm laid at the median and connected with each other along the street, and discharging to Al-Garbi PS2.
- 2- There are two sewage pipes discharging to this drain line both of these two pipes are concrete of size Ø 400 mm .
- 3-There is a pumping pipe laid under the side walk of the right – side of street towards the river .This is PVC pipe of size Ø 200 mm discharging the sewage from Al-Mualimeen Ps to the river .

- **Investigation Comments / proposal for solution :**

Cleaning this line and its MHs and side inlets and placing the covers of the MHs (both the concrete and metal covers) .

2- From section (6-6) to section (7-7) :

- **Existing services as per investigation on field**

- 1- The same drain line at previous portion is continuous along this portion, as mentioned by the sewerage dept. this drain line in this portion is out of duty, but it is still working.
- 2- Many of the inlets in bad conditions and some of them were covered by overlay pavement. Part of the drain line is blocked either by debris or by overlay pavement or due to lacing concrete blocks for security situation starting from far station building to the end of this portion.
- 3- The pumping pipe from Al-Mualimeen PS3 is laid at the middle and along the median and adjacent to the drain line. There is a leak problem in this pipe appears in front of the fire station.
- 4- There are three pipes cross this portion two of them are discharging to this drain pipe and the third one is discharging from this line in addition to the pumping pipe mentioned previously which is cross the end of this portion .

- **Investigation Comments / proposal for solution:**

Similarly to that for the portion between section (5-5) and section (6-6)

3-From section (7-7) to section (8-8) :

- **Existing services as per investigation on field**

This portion has only a drain line for rain water only at the opposite side to the Al-Mualimeen PS3. This line is concrete pipe of size Ø 400 mm and consists of MH and side inlet at each about 20m – 25 m as shown in the attached drawing .

- **Investigation Comments / proposal for solution :**

Similarly to that for the portion between section (5-5) and section (6-6)

4- From section (8-8) to section (9-9)

There is no drain system available in this portion.

Hospital Street:

1- From section (4-4) to section (10-10)

- **Existing services as per Investigation field :**

- 1- There is no sewage pipes connecting on this portion.
- 2- There are only two side inlets , first one at the intersection of the bridge and the other is at distance of about 130 m from the first one .
- 3- There is an expectation from sewage Dept. of an existing drain line with its MHs in this portion. This line with it's Mhs might be covered by several overlaying pavement for years ago.

- **Investigation Comments / proposal for solution :**

Due to the neighborhood of this portion with the river , it is recommended to provide inlet at each fixed distance , say 25 m , where this inlet is discharging directly to river .

2-From section (10-10) to section (11-11) :

- **Existing services as per investigation on field:**

- 1- There are MHs and side inlets at the end of this portion only.
- 2- There is a PVC pipe of size Ø 400 mm discharging into the first MH and a PVC pipe of size Ø 500 mm discharging out of the second MH (main MH) towards the river

- **Investigation Comments / proposal for solution :**

According to the fact that this portion is laying away from the river , it is recommended to provide side inlet at any side of the street or even two at each side where these inlets are longitudinally connected toward the first MH or to a proposal location for new MH .

3- From section (11-11) to section (12-12)

- Existing services as per investigation on field

There is a PVC drain pipe of size Ø 500 mm laid at the median with its MHs and side inlets which are placed at about each 25m shown in the attached drawing .

This line is slope towards section (12-12) and discharging toward this direction for usually times which is turn toward Al-Mualimeen PS through Ammar Street and also work as overflow for peak hours of discharging by flowing anti-direction for this normal direction toward the Main MH available in the previous portion .

- **Investigation Comments / proposal for solution :**

It is recommended to provide side inlets at each side of street connected directly to the MHs provided at the median

3- From section (12-12) to section (13-13)

- Existing services as per investigation on field

- 1- there is no drain system for rain water except two side inlets , the first one is at the corner of the section (12-12) and the second one is at the corner of the section (13-13) .Accordingly , during raining season , this section turns to be like pounds and water is suctioned from this section by using tank vehicle from sewage Dept.
- 2- Along the opposite side from the hospital , there is an open channel collect sewage that is seepaging from the septic tanks of the houses .
- 3- This area is high class area .

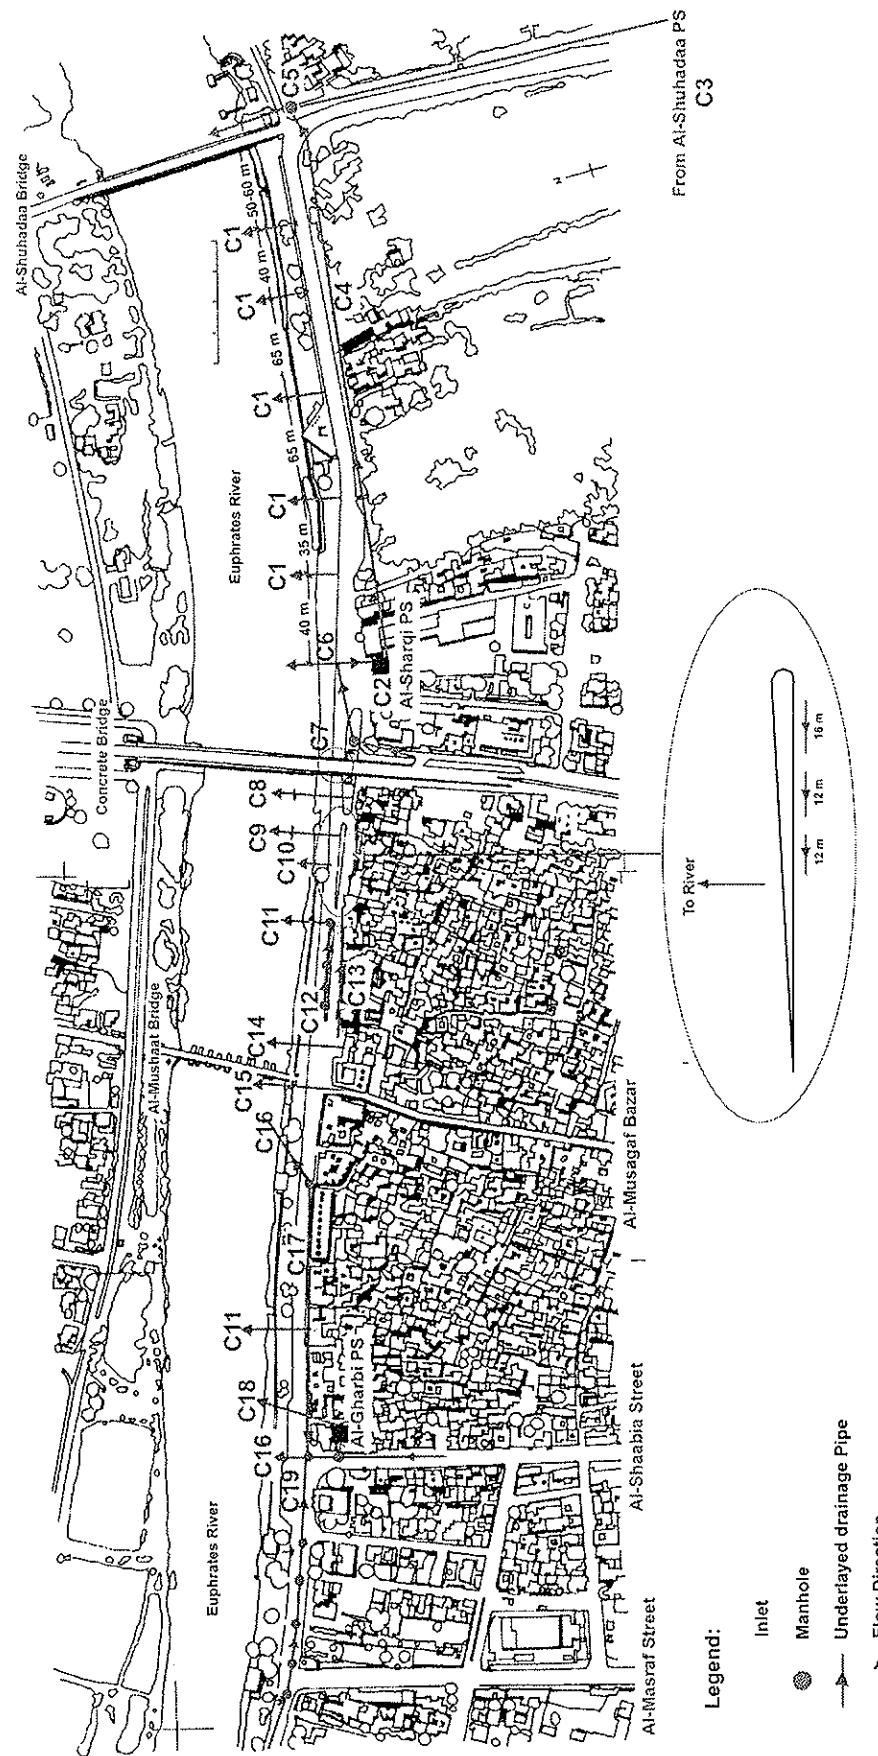

- **Investigation Comments / proposal for solution:**

It is recommended that a rain water system should be provided at this portion .This system may take several characteristics such as side inlet at each side of street discharge directly to a MH at the median or one side inlet at one side discharge directly to a MH and a drain , pipe connecting between these MHs and discharge either to one end or to two ends of this portion or using series connected side inlets say each 3 side inlets are directly connected and then discharge to a MH and so . Chosen suitable system will depend on the final selected slope (both longitudinal and cross level) for the new pavement and the type of final discharge of the new drain pipe from whether it will connect to a new MHs or to an existing MHs and to one end of this portion or divided to connect to the two ends of this portion following the available and final invert levels because there are two existed drain pipes one as remarked in the section (12-12) side and the other as remarked in the section (13-13) side , i.e. the end of hospital street .

Drainage System Survey

April 2005

**Kornish Street
As Built Layout For The Existing Drainage System**

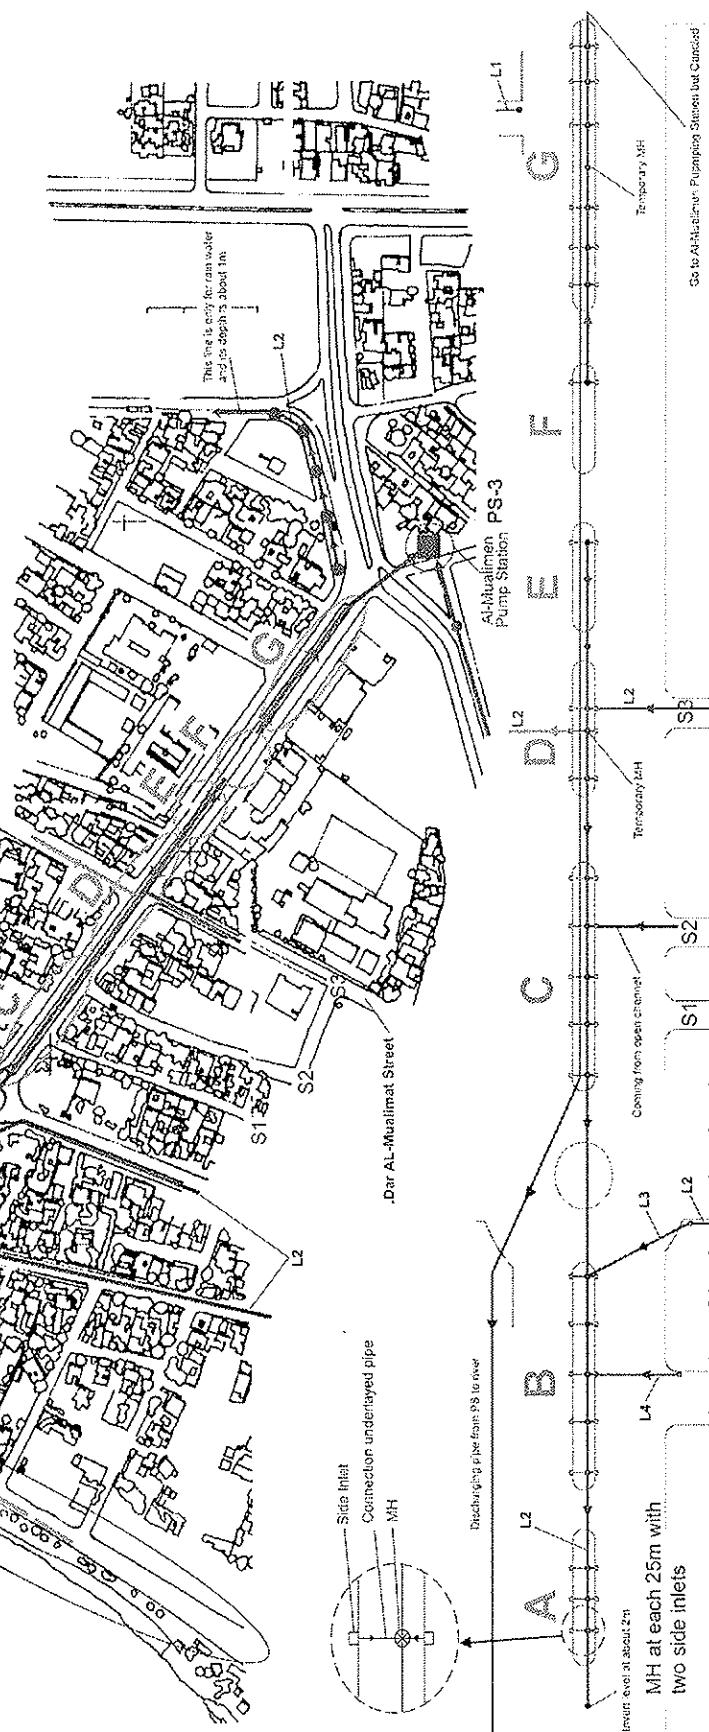

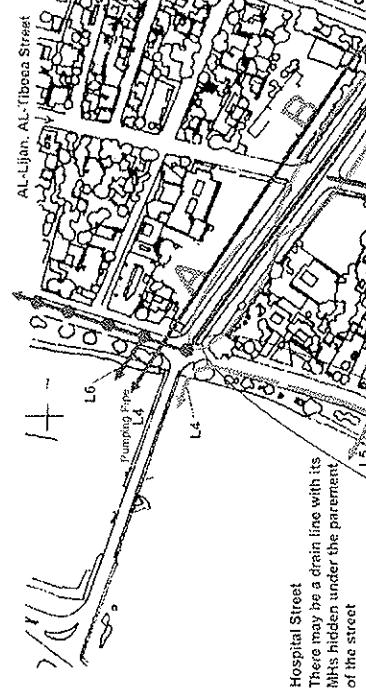

Note: C1-C19 refer to investigation comments as per documents attached.

Cornish Street

- C1. Side inlet connecting with \varnothing 200 PVC pipe that discharging to river.
- C2. Sewage Dept. comment:
There are several interruptions in electricity current in the remarked pumping station there fore in electrical Generator should be provided this station of size 150 KVA, otherwise an overflow pipe remarked in frontage of this station will re-generate odor over all the area.

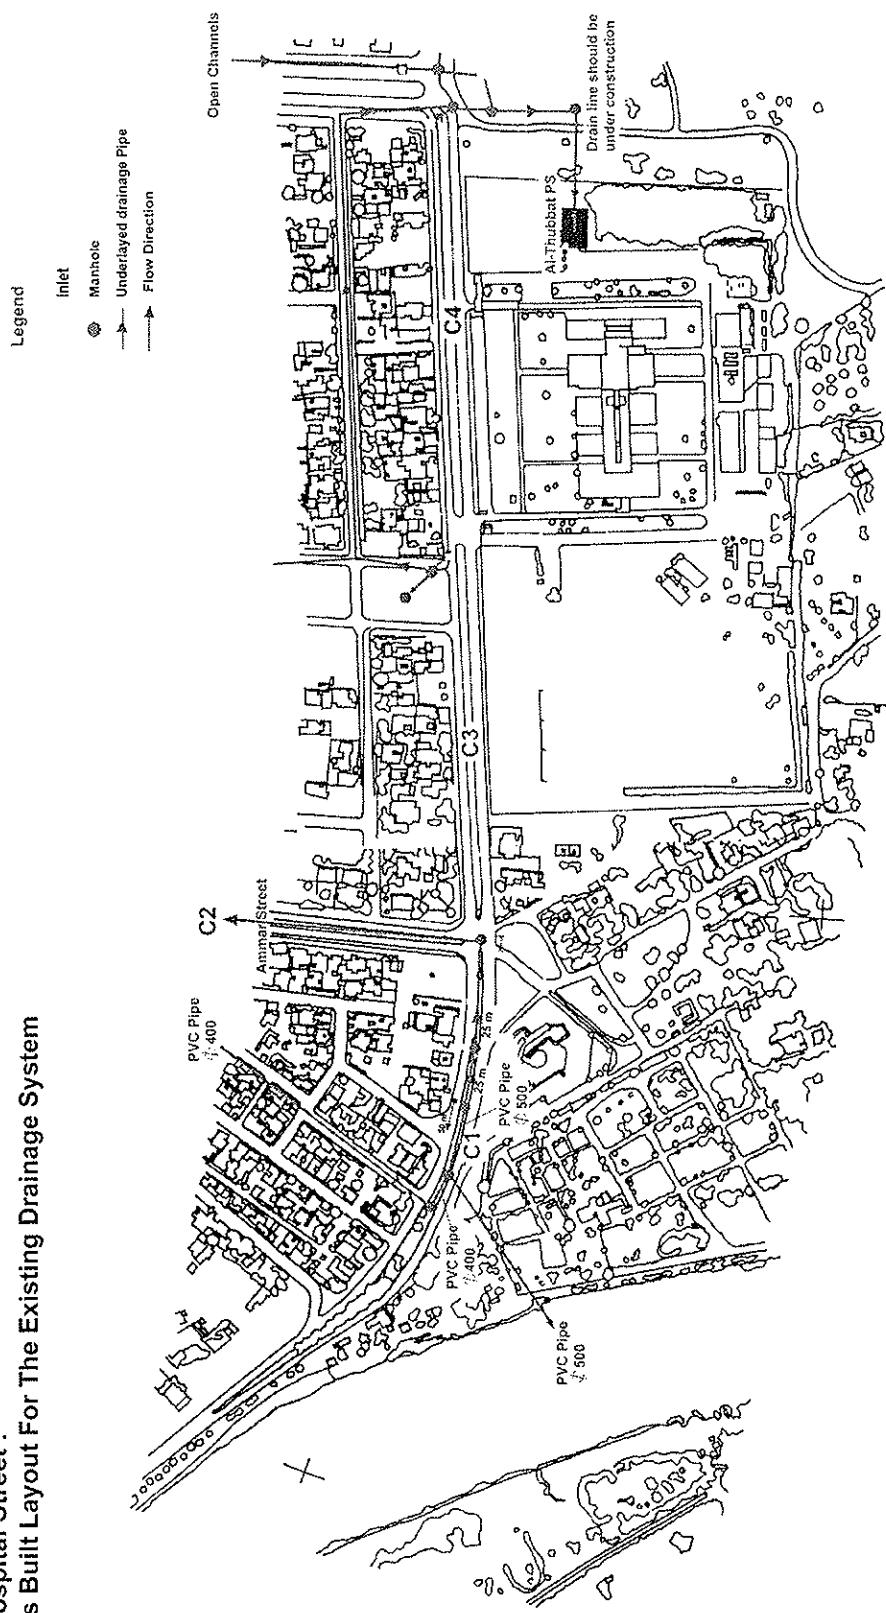

- C3. The pumping pipe from this station as remarked is of \varnothing 300 ductile for 600 M length and of \varnothing 250 PVC for 20 M length.
- C4. PVC sewage pumping pipe from AL-Sharqi PS of size \varnothing 200 laid along the middle of the walk way.
- C5. Main MH collection the flows discharging from \varnothing 250 pumping pipe coming from AL-Sharqi pumping station and \varnothing 200 PVC pumping pipe coming from AL_Shraqi pumping station and discharging to river through \varnothing 250 PVC pipe.
- C6. Over flow pipe \varnothing 400 ductile depth (4m) since 1999. Currently canceled but sewage Dept. attempt to open it again.
- C7. There are two inlets in adjacent under the bridge at about (3m) from the left edge.
- C8. \varnothing 300 PVC sewage pipe.
- C9. \varnothing 300 Asbest sewage pipe.
- C10. Inlet \varnothing 200 PVC pipe.
- C11. \varnothing 400 ductile pipe.
- C12. There is inlet beside this MH.
- C13. \varnothing 250 PVC pipe.
- C14. \varnothing 250 Asbest pipe.
- C15. \varnothing 400 asbest pipe.
- C16. Overflow \varnothing 250 Asbest pipe
- C17. \varnothing 500 concrete pipe. At each 25M there is a MH and an inlet connected with each other, also the drain pipes of the adjacent buildings are connected to these MHS.
- C18. \varnothing 200 steel and then PVC pumping pipe from Al-Garbi PS discharging to the river.
- C19. \varnothing 500 concrete pipe. At each 25m there is a MH at a distance of about (5m-8m) from river sides curb stone and in front of it there is a side inlet.

Civil Defence Street

Existing Median Layout (As Per Site Investigation)

**Hospital Street :
As Built Layout For The Existing Drainage System**

Comments :

C1: During peak flow, this line works as overflow by flowing in slope anti-direction towards the MH

C3: Within this portion there is no drain system and thus rain water is collected in this part as ponds and the sewage Dept. is suctioning these ponds by using tank vehicles

C2: Ø400 concrete pipe constructed since 1980 underlaid in the middle of the median and discharging to Al-mualimen PS

C4: Within this portion there are exposed open channels that are filled with sewage which is resulted from seepage from septic tanks of houses
