CHAPTER-4 SOLAR POWER SYSTEM AND INSTALLATION

I. General Conditions

1. Scope of Work

The Scope of the Work for the Contractor shall include followings, but not limited to:

(1) Site survey, engineering design, manufacturing, factory test, procurement, marine and inland transportation to the Project site, installation at the Project site, acceptance test and commissioning for the Project implementation in due conformity with the Tender Documents.

(2) The Goods for Solar Power System, that is defined as "Photovoltaic (PV) System" shall include followings at least:

1) Solar Module

2) Mounting Structure

3) Power Conditioner

4) Grid back-up Board

5) Junction Box

6) Storage Battery

7) All necessary cables for the above

(3) The Contractor shall include the interconnection of PV system to 400V underground distribution lines maintained by Island Development Committee (IDC) in accordance with the regulation by Maldives Electricity Bureau (MEB).

(4) The Contractor shall furnish appropriate measures to prevent any operational malfunction or physical damage on the existing diesel engine generators and/or underground distribution system.

2. Operating Conditions

The PV system shall be designed to serve emergency load for Multi-purpose building and Island office in case of natural disaster. In addition, the system shall upgrade the reliability and quality of power supply by interconnecting PV system with existing distribution lines.

(1) Ordinary Operating Conditions

1) During the period batteries can be charged;

Generated power at PV system will be supplied for batteries and load inside facilities. In case there is excess capacity of PV system, reverse power flow to interconnected distribution lines shall be allowed.

2) During the period batteries are overcharged;

Generated power at PV system will be supplied for load inside facilities. In case there is excess capacity of PV system, reverse power flow to interconnected distribution lines shall be allowed.

(2) Emergency Operating Conditions

1) During the period PV system can generate power (daytime);

Generated power at PV system together with discharged power from storage batteries will be supplied for emergency load inside facilities.

2) During the period PV system cannot generate power (nighttime);

Discharged power from storage batteries will be supplied for emergency load inside facilities.

In addition to the above item (1) and (2), when the battery voltage has reached the deep discharge voltage, discharged power from storage batteries will not be supplied for emergency load inside facilities.

3. Technical Standard

The Goods to be procured shall be manufactured according to one (or more) of the following standard:

(1) NEC National Electrical Code

(2) IEC International Electrotechnical Commission

(3) UL Underwriters' Laboratories

(4) JIS Japan Industrial Standard

(5) JPL Jet Propulsion Laboratory

(6) CE Communaute' Europe'ene

4. Meteorological Conditions

The country belongs to the tropical monsoon zone and is subject to two prevailing strong wind characteristic of the Indian Ocean, i.e., North-East wind from November to April and South-West wind from May to October with a lot of rain and thunderstorm. The roof mounted PV interconnected system shall be designed to operate under following climate conditions.

(1) The monthly average temperature shows little fluctuation with the season, ranging between 28 to 29°C. The maximum operating temperature shall be 35°C.

(2) Monthly mean relative humidity shows little fluctuation with the season, ranging approximately between 70 – 80%.

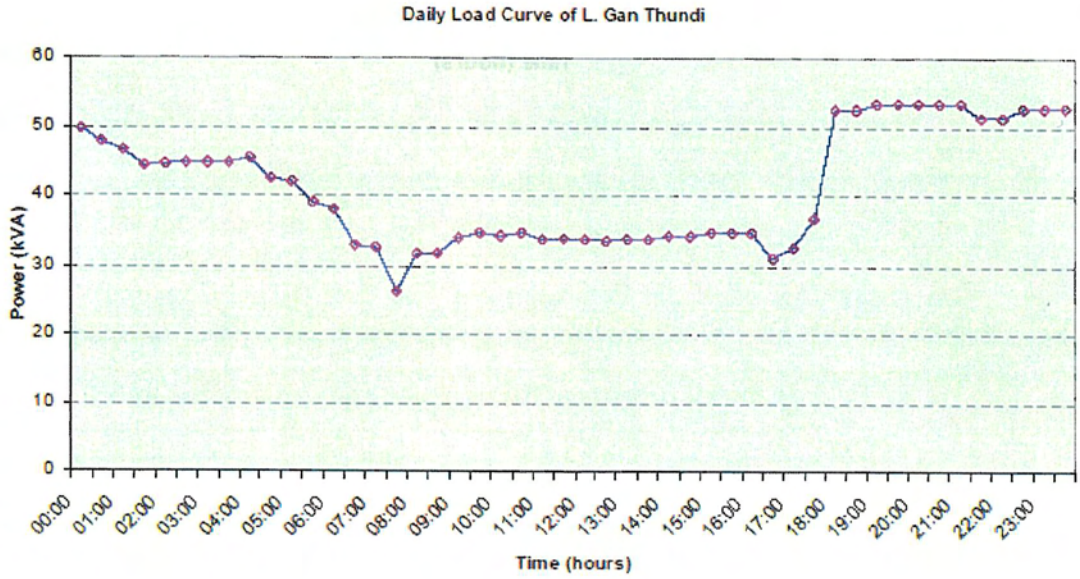
(3) Laamu Atoll has relatively high amount of rainfall with an annual total rainfall of around 2000mm. Generally rainfall is most abundant during October and November and least during February and March. The other months are between 100 – 200mm.

(4) Wind direction is variable in between the monsoon seasons. Maximum wind velocity can be as high as 45 m/sec(design wind velocity) during the SW monsoon season.

II. Existing Site Conditions

1. Multi-purpose building

The island (Gan-Thundi) has total four generators: 2 x 60 kVA, 85 kVA and 140 kVA and the power system is not synchronized. The nighttime electricity load to the island is provided by the biggest generator (140 KVA – DEUTZ) and day time load is met by two smaller generators. As the system is not synchronized, the two daytime generators feed power to the grid separately using different feeders. The estimated load pattern of the island from the data collected is shown in the figure below. Based on the estimated load pattern there is no need to run two generators during day time because just a smaller generator would be enough to cover the daytime load.



Presently, power supply to the site is not available but 3 phase distribution lines to the site will be installed by the island committee to use with solar PV system and other power supply for the building.

2. Island Office

The Fonadhoo Island has three powerhouses located at the three district of the island. Center District power house is planned to supply power for the upcoming island office. The Centre District powerhouse has 3 generators: 108 kW, 40 kW and 96 kW. The system is non-synchronized so only one generator is used at a time. A typical daily load curve of the island measured is shown below.

Presently, power supply to the site is not available but 3 phase distribution lines to the site will be installed by the island committee to use with solar PV system and other power supply for the building.

III. Technical Specifications for the System Components

All system components shall be procured in accordance with **Schedule V Technical Specifications sheet** in **Part-II Forms of Tender, Volume-I.**

IV. Requirement for the Installation and Commissioning Work of the Goods

1. General

The Contractor shall carry out the following works under the Project.

(1) Supply, transportation and delivery of the Goods to each Project site.

(2) Check of the Goods after delivering them to the Project site.

(3) Delivery of the packing list of the Goods to End-user and get their signatures on the packing list.

(4) Installation and commissioning of the PV system interconnected with existing distribution network.

(5) Acceptance Test of the PV system

(6) Obtaining all the necessary approvals for the PV system by the Employer.

(7) Handover of the PV system to End-user after approval by the Employer.

Work responsibilities of the Contractor and End-User (Island Committee) are shown on the following Table TS-5-1.

Table TS-5-1: Work demarcation between the Contractor and End-User

Work Item	Contractor	End-user (Island Committee)
Procurement of PV system	◘	
Transportation of all equipment to the Project site	◘	
Proper storage and maintenance of equipment at the Project site during installation work period	◘	
Extension of 3 phase 4 wires, 400V LV Distribution Cables to the Project site		◘
Connection of LV Cables to Distribution Board in the facility	◘	

2. Inspections and Tests

The Contractor shall take account of following inspections and tests of the Goods at their own expense.

(1) Factory test

The factory test and inspection of the Goods to be procured under the Project shall be carried out by the Contractor at manufacturer's factories and/or proper places to ensure that the Goods complies with the provisions of the Contract.

Test and inspection items shall consist of the following:

- Quantity inspection

- Visual inspection
- Dimensions of the equipment and materials
- Any technical inspections to check the conformity with Technical Specification

The Contractor shall provide all necessary test equipment, materials, special tools, consumable items, etc., for the factory test and inspection.

The Contractor shall submit all the reports of the factory test and inspection to the Employer for approval with evidential photographs of the Goods at the factory test and inspection.

(2) Pre-shipment inspection

The Contractor shall carry out pre-shipment inspection by internationally recognized inspector at the port of embarkation. Contents of the inspection shall include quantity, weight, packing, marking conditions, and any other data concerning the shipment of the Goods. The Contractor shall submit the inspection report with other necessary shipping documents to request a payment for all equipment and materials.

3. Installation of PV system

Layout and sections showing proper orientation and tilt of the PV panels shall be submitted and approved by the Employer prior to installation with support documentation to maximize output from the system.

The Contractor shall provide simulating calculations confirming the solar radiation on each surface plane, yearly generated energy from the PV system. The Contractor shall install kWh Meters in order to monitor and check the value of generated energy from the PV system. Minimum requirement for the annual performance of PV system shall be 135 kWh/m^2.

All support structures components shall be mounted on the roof without any drilling on the roof surface. The structures shall be designed to allow the fixing of modules on the support structures with module tilt angle adjustable. No manual/auto tracking/tilting adjustment device is necessary.

The Contractor shall provide calculations confirming the design wind force on the support structure with maximum wind velocity (45 m/sec) can be assured.

4. Drawings

The Contractor shall submit **two (2) sets** of the at least following drawings (but not limited) to the Employer for approval.

Table TS-5-2: Submission schedule of all drawings

No.	Name of Drawings	Date of Submission
1	Single line diagram of PV system	Not later than thirty (30) days after awarding the contract
2	Equipment layout on the roof	
3	Simulated calculation for generated energy	
4	Equipment layout inside Electrical Room	
5	Detailed Equipment specifications and Dimensional drawings, catalogues for ➢ Solar Module ➢ Junction box ➢ Power Conditioner ➢ Transformers ➢ Grid back-up board	
6	➢ Battery ➢ Others, if necessary	
7	Factory Test/Inspection Report	Within seven (7) days after the Test/Inspection
8	As built drawings	At the completion of the installation work
9	Installation completion report	

"No.9 Installation completion report" shall have the following description and data.

- Statement that the Goods have been supplied and site installation work and commissioning has been completed, with the evidence of approval of the Acceptance Test Report.
- Description of the Contractor's activities up to the completion of the Project, including actual time schedule.
- Statement that all the documents, drawings and manuals have been supplied with all records of documentation and correspondence as evidence.
- Statement that clearing of the Project Site has been completed with photographic evidence.
- Completion photographs showing the actual progress of the work.

5. Technical Transfer

The Contractor shall conduct necessary technical transfer to Island Committee in the Project site for the purpose of securing proper operation & maintenance of the PV system.

Also it is requested for the Contractor to simulate and submit a report to recognize necessary annual investment by the Island Committee required for periodical replacement of equipment (eg. storage battery).

6. Acceptance Test

The Acceptance Test shall be carried out by the Contractor at the completion of the installation work of the Goods, in the presence of the all concerned parties and the Employer.

The Acceptance Test shall consist of the following:

- Visual inspection
- Function and Performance test

The visual inspection shall comprise a dimensional and system check, quantity check of the Goods supplied under the Contract and the check of workmanship according to the approved drawings.

The function and performance test shall comprise the functional check and confirmation of performance through the actual operation of the facilities in accordance with the provisions of

the Contract. The Contractor shall provide, at his own expense, all staff, equipment and materials, tools including consumable items for the Acceptance Test.

7. Warranty

The Contractor shall warrant that all Goods have no defect arising from design, manufacturing, transportation or installation work. The warranty on complete installation shall remain valid for one (1) year from the date of commissioning.

The Contractor shall arrange one (1) year warranty inspection carried out under the witness of the End-user and/or the Employer, immediately after one year warranty period is expired. The inspection will be carried out to check the operating condition of the Equipment and workmanship of the installation work. When the inspection is completed, the Contractor shall prepare one-year warranty inspection report. If any defects are found in the inspection, the following items should be described on the report for the approval by the End-user:

- Contents of countermeasure such as remedy, repair and/or replacement
- Time schedule up to the completion of the countermeasure

Project Location and Layout Plan

SCALE	SHEET NO.	REV. NO.
Not to Scale	A-01	

External Works

Boundary Wall : Along the whole perimeter line (Length of wall is shown on the site layout)
Concrete block with cement sand plaster, sprayed texture paint finish, wall height 1,500
Provide 1 main gate and 1 sub-gate, constructed by stainless steel pipe with padlocks
Facility nameplate on the wall, stainless steel 300 x 500, described by English and Dhivehi, painted by silkscreen (Refer to A-09 miscellaneous details of Multi-Purpose building)

Landscaping : Approach; hard surface pavement (inter-locking block) width 3,000

Tree plantation, 6 young coconut trees and 4 young broadleaf trees (planting location and kind of species to be instructed on site)

Flag Pole : Stainless steel pipe, concrete foundation 1,000 x 1,000 x 700 depth, pole height 6,000, 1 set

Nameplate : Stainless steel nameplate 200 x 400, described by Dhivehi and English, painted by silkscreen [FONADHOO ISLAND OFFICE] beside the main entrance door
(Refer to A-09 miscellaneous details of Multi-Purpose Building)

External Finish

Roofing : Colourbond profile roofing metal sheet (per sample approval)
Soler Cell foundation see Sht. No. A-05.

Eaves Ceiling: Waterproof ceiling board, partially ventilation hole, V.P.

Fascia : Timber fascia 30 x 250 (upper and lower) O.P.

Rain gutter : P.V.C. rain gutter, with chamber and downspourt 100 dia

Canopy ceiling : Waterproof ceiling board with V.P.

Wall : Textured Spray paint on cement sand plaster (per sample approval)

Skirting : Same as wall finish but dark colour paint height 300

Barm : Coloured interlocking block 80thk.

Terrace/Stair : Porcelain tile floor 300 x 300, non-slip surface

Slope : Mortar troweled finish with non-slip groove 5mm depth @30, Underside; Exposed natural concrete.

Internal Finish

DRAWING TITLE
Island Office
(Fonadhoo, Laamu Atoll)
Ceiling Plan - 1st Floor Plan

SCALE	SHEET NO.	REV. NO.
1 : 100	A-12	

1. Materials

Reinforcing bar shall conform to Table-1

Table-1

Round bar	JIS 3101/3112 SR235 or equal
Deformed bar	JIS G3112 SD295A or equal

Concrete Strength Fc28=21N/mm2

2. Material Tests

No material test are needed for standard JIS and/or equivalent product as a rule, however, a certificate of standard should be submitted to the Engineer for approval. If no certificate, following tests shall be required,

Test	Yield point, tensile strength and elongation
Testing method	Tenseil tests by JIS3112/JIS3117 or equal
Number of tests	Once for weight of every 20ton for every diameter.
Remarks	Number of test pieces in once test shall be at least three

3. Processing and Assembly

3-1 Reinforcing bars with dangerous bends, cracks, splits or other defects, may not be used under any circumstances

3-2 The diameter for deformed reinforcing bar shall be conform to Table-2

3-3 Reinforcing splices shall be lap joint, and the lap length shall be conform to Table-3 However, lap joint is not permitted for the reinforcing bar over 29mm Dia. The place of the lap joint shall be in compression zone

3-4 Reinforsing bars shall be cut by shearcuttersorsaws. Gas cutting is permitted where unavoidable, if approved by the Engineer

3-5 Spot welding and arc strike is not permitted for reinforcing bars,

3-6 Install hooks at each end of reinforcing bars.

(1) The main reinforcing bars located at the four corners of a column at lap joint, and at the top of column at the highest story

(2) Hoop, stirrup and yoke bar

4. Minimum thickness of cover concrete for reinforcing bars

Type of structural elements			Minimum thickness of cover concrete
Elements not in contact with soil	Slab and walls	With finishing	20mm
		No finishing	30mm
	Column Beam	With finishing	40mm
		No finishing	40mm
Elements contact with soil	Column, beam, floor, slab, wall		50mm
	Foundation, retaining wall		70mm

5. Minimum clearance between the reinforcing bars

Clearance shall be more than 25mm and 1.25 times the maximum size of coarse aggregate and 1.5 times of largest outsaid diameter of reinforcing bar

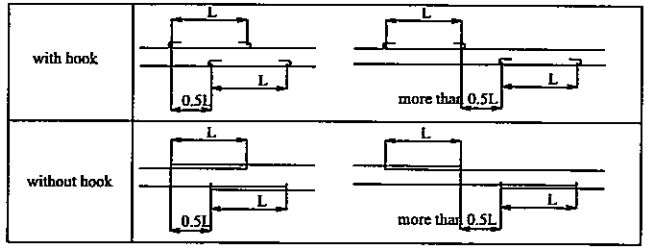
Table-2 Minimum diameter for bending of reinforcing bars

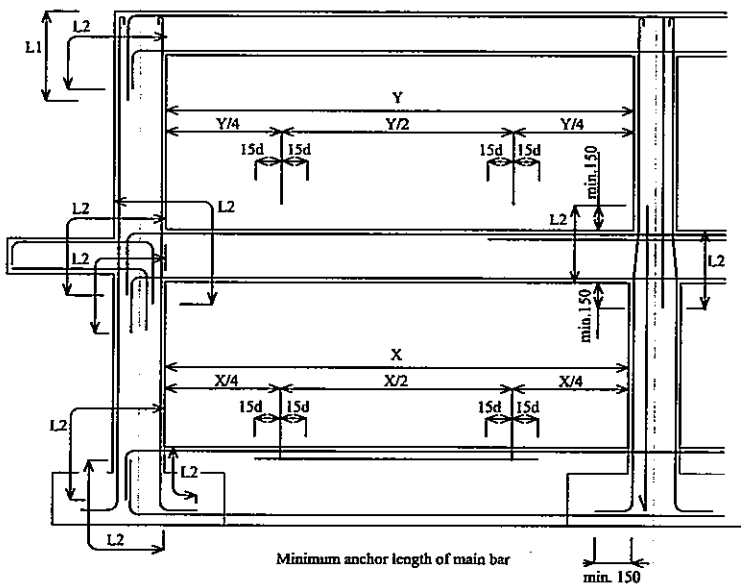
Bending Shape			Under 16mm Dia.	19 to 38mmDia.	Previous location
180°		D	More than 3d	More than 4d	Main bars for column and beam etc.
135°		D	More than 3d	More than 4d	Stirrup,hoop,spiral bar
90°		D	More than 3d	More than 4d	Stirrup,hoop,spiral bar
Less than 90°		D	More than 4d	More than 6d	

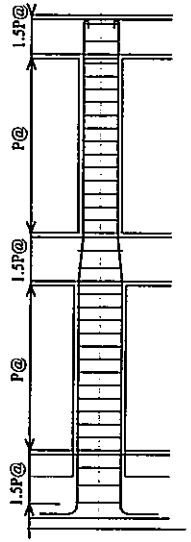
Table-3 Minimum lap length and Anchor length

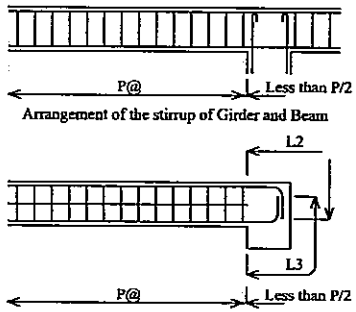
Concrete Design strength	without hook				with hook			
	L1	L2	L3		L1	L2	L3	
			Small Beam	Slab			Small Beam	Slab
Over Fc28=21N/mm2 but under Fc28=27N/mm2	40d	35d	25d	10d and over 150mm	30d	25d	15d	——

Table-4 Location of neighboring joints









NOTES:

* Installation of supporting base for solar cell panel on the roof is required. Location and number is instructed by solar system documents.

DRAWING TITLE
Multi-purpose Building
(Thundi, Gan Island, Laamu Atoll)
Project Location and Layout Plan

SCALE	SHEET NO.	REV. NO.
Not to Scale	A-01	

External Works

Boundary Wall : Along the whole perimeter line (Length of wall is shown on the site layout)
Concrete block with cement sand plaster, sprayed texture paint finish, wall height = 1,500
Provide 1 main gate and 2 sub-gates; constructed by stainless steel pipe with padlocks.
Facility nameplate on the wall; stainless steel 300 x 500, described by Dhivehi and English, painted by silkscreen (refer to miscellaneous detail)

Landscaping : Approach; hard surface pavement (inter-locking block) width=3,000, other area: Natural sandy finishes.

Tree plantation, 6 young coconut trees and 4 young broadleaf trees (planting location and kind of species to be instructed on site)

Flag Pole : Stainless steel pipe, concrete foundation 1,000 x 3,000 x 700 depth, Pole height = 6,000, 3 sets

Nameplate : Stainless steel nameplate 200 x 400, described by Dhivehi and English, painted by silkscreen
For [Island Office] [Island Court] [Police Office] [Post Office] [Banking Booth] [Community Hall]

External Finish

Roofing : Colourbond profile roofing metal sheet (per sample approval), Sunshade: corrugated glass fiber reinforced sheet.
Soler Cell foundation see Sht. No. A-05.

Eaves Ceiling: Waterproof ceiling board, partially ventilation hole, with V.P.

Fascia : Timber fascia 30 x 250 (upper and lower) with O.P.
(Fascia at entrance canopy: timber with oil paint)

Rain gutter : P.V.C. rain gutter with chamber and Downspout 100dia.

Canopy ceiling : Waterproof ceiling board with V.P.

Wall : Textured spray paint on cement sand plaster (per sample approval)

Skirting : Same as wall finish but dark colour paint
height = 300

Barm : Coloured interlocking block 80thk.

Terrace/Stair : Porcelain floor tile 300 x 300, non-slip surface

Slope : Mortar troweled finish with non-slip groove 5mm depth @30, Underside; Exposed natural concrete.

Internal Finish

Floor	Room	Location	Finishing
Ground Floor	Utility Room Store Room	Floor	Mortar troweled finish, Slab on-grade: 100 thk., Foundation for Water Tanks.
		Skirting	Nil
		Wall	Cement sand plaster 25 thk.
		Ceiling	Exposed natural concrete
	Toilet, Handicapped Toilet	Floor	Porcelain tile 200 x 200
		Skirting	Nil
		Wall	Ceramic tile 200 x 200
		Ceiling	Waterproof ceiling board 6 thk. Ceiling height 2,800
	Reception / Security	Floor	Porcelain tile 300 x 300
		Skirting	Ceramic tile, height 100
		Wall	Cement sand plaster 25 thk. with E.P.1set of Reception Counter
		Ceiling	Gypsum ceiling board 12 thk. Ceiling height 2,500
	Community Multi-space	Floor	Coloured interlocking block 150 x 250 x 80thk. (design pattern to be required)
		Skirting	-
		Wall	-
		Ceiling	Exposed Natural Concrete
1st Floor	Island Office (Island Chief, Assist, Island Chiefs, Administration, Meeting Room, Committee Room, Investigation Room, Communication Room, Sock Room, Tea Room, Sore & Equipment Room)	Floor	Porcelain tile 300 x 300
		Skirting	Ceramic tile, height 100
		Wall	Cement sand plaster 25 thk. with E.P.
		Ceiling	Gypsum ceiling board 12 thk. Height 3,400 (Store & Equipment room : without ceiling)
	Island Court (Senior Magistrate's Room, Magistrate's Room, Senior Staff Room, Investigation Room, Meeting Room, Stock Room, Equipment's Room, Reception & Counter Area, Tea Room)	Floor	Porcelain tile 300 x 300
		Skirting	Ceramic tile, height 100
		Wall	Cement sand plaster 25 thk. with E.P.
		Ceiling	Gypsum ceiling board 12 thk. Ceiling height 3,400
	Police Office (Office, Investigation Room, Reception, Store Room, Tea Room Cell-1, Cell-2)	Floor	Porcelain tile 300 x 300 (Cell-1 &2 : Mortar troweled finish)
		Skirting	Ceramic tile, height 100 (Cell-1 &2:cement sand plaster H100, 25 thk. with E.P.)
		Wall	Cement sand plaster 25 thk. with E.P.
		Ceiling	Gypsum ceiling board 12 thk. Ceiling height 3,350 (Cell-1 & 2 : RC Slab 150 thk. w/E.P.)
	Post Office (Mail Operation Room, Office, Reception, Tea Room)	Floor	Porcelain tile 300 x 300
		Skirting	Ceramic tile, height 100
		Wall	Cement sand plaster 25 thk. with E.P.
		Ceiling	Gypsum ceiling board 12 thk. Ceiling height 3,400
	Banking Booth (Back Room, Chief Officer's Room, Front Room, Tea Room, Strong Room/Record Room)	Floor	Porcelain tile 300 x 300
		Skirting	Ceramic tile, height 100
		Wall	Cement sand plaster 25 thk. with E.P.
		Ceiling	Gypsum ceiling board 12 thk. H=3,300 (Strong Room: R.C Slab 200 thk.)
	Toilet Bath Room (Common)	Floor	Porcelain tile 200 x 200
		Skirting	Nil
		Wall	Ceramic tile 200 x 200
		Ceiling	Waterproof ceiling board, Ceiling height 2,800 V.P
Common	Nameplate	Room name : Stainless steel nameplate 200 x 400, English and Dhivehi, painted by silkscreen, at beside of each entrance door Toilet sign : Plastic nameplate 100 x 200, pictogram sign for Gent. and Lady

DRAWING TITLE
Multi-purpose Building
(Thundi, Gan Island, Laamu Atoll)
Ceiling Plan - 1st Floor Plan

SCALE	SHEET NO.	REV. NO.
1 : 150	A-14	

1. Materials

Reinforcing bar shall conform to Table-1

Table-1

Round bar	JIS 3101/3112 SR235 or equal
Deformed bar	JIS G3112 SD295A or equal

Concrete Strength Fc28=21N/mm2

2. Material Tests

No material test are needed for standard JIS and/or equivalent product as a rule, however, a certificate of standard should be submitted to the Engineer for approval. If no certificate, following tests shall be required,

Test	Yield point, tensile strength and elongation
Testing method	Tenseil tests by JIS3112/JIS3117 or equal
Number of tests	Once for weight of every 20ton for every diameter.
Remarks	Number of test pieces in once test shall be at least three

3. Processing and Assembly

3-1 Reinforcing bars with dangerous bends, cracks, splits or other defects, may not be used under any circumstances

3-2 The diameter for deformed reinforcing bar shall be conform to Table-2

3-3 Reinforcing splices shall be lap joint, and the lap length shall be conform to Table-3 However, lap joint is not permitted for the reinforcing bar over 29mm Dia. The place of the lap joint shall be in compression zone

3-4 Reinforsing bars shall be cut by shearcuttersorsaws. Gas cutting is permitted where unavoidable, if approved by the Engineer

3-5 Spot welding and arc strike is not permitted for reinforcing bars,

3-6 Install hooks at each end of reinforcing bars.

(1) The main reinforcing bars located at the four corners of a column at lap joint, and at the top of column at the highest story

(2) Hoop, stirrup and yoke bar

4. Minimum thickness of cover concrete for reinforcing bars

Type of structural elements			Minimum thickness of cover concrete
Elements not in contact with soil	Slab and walls	With finishing	20mm
		No finishing	30mm
	Column Beam	With finishing	40mm
		No finishing	40mm
Elements contact with soil	Column, beam, floor, slab, wall		50mm
	Foundation, retaining wall		70mm

5. Minimum clearance between the reinforcing bars

Clearance shall be more than 25mm and 1.25 times the maximum size of coarse aggregate and 1.5 times of largest outsaid diameter of reinforcing bar

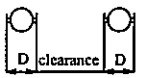

Table-2 Minimum diameter for bending of reinforcing bars

Bending Shape			Under 16mm Dia.	19 to 38mmDia.	Previous location
180°		D	More than 3d	More than 4d	Main bars for column and beam etc.
135°		D	More than 3d	More than 4d	Stirrup,hoop,spiral bar
90°		D	More than 3d	More than 4d	Stirrup,hoop,spiral bar
Less than 90°		D	More than 4d	More than 6d	

Table-3 Minimum lap length and Anchor length

Concrete Design strength	without hook				with hook			
	L1	L2	L3		L1	L2	L3	
			Small Beam	Slab			Small Beam	Slab
Over Fc28=21N/mm2 but under Fc28=27N/mm2	40d	35d	25d	10d and over 150mm	30d	25d	15d	—
