

CHAPTER 7.

RECOMMENDATION

CHAPTER 7. RECOMMENDATION

7-1. Recommendation Related to Topographic Map Production to SSGC

To develop the technology of topographic map production by SSGC, Study team recommends followings.

(1) Technical matters

1) Training of System Engineer

Nowadays computer technology is being continuously improved. (day by day on a global mass scale). At the same time the technology of spatial data processing is being developed quickly too by mapping firms. During the project implementation the Study team has revealed that SSGC needs more specific (concrete) knowledge and technology for system development to process mapping data. Topographic mapping can be done by the standard function of MicroStation but to accelerate work progress and to save expenses of mapping production, higher-level system development is needed. Otherwise the transferred technology from Study team to SSGC on the development of spatial data for mapping won't be effective in future.

Training of System engineers for SSGC can be carried out by .their participation in training programs of foreign governmental organizations. But the training period should be more than half year depending on the course and ability of participant.

Another way is to invite foreign expert on the technical assistance program. The expert will give the opportunity to learn system development in trainees situations (circumstances) and a number of trainees can participate at the same time.

2) Operators for digitization

Operators for map digitizing should have knowledge of photogrammetry and cartography, such as photograph interpretation and understand symbols specification, at least. The speed of digitizing is very important to consume work quantity. Operator's knowledge will help to reach high productivity of mapping work.

(2) Administrative matters

1) Disclosure of Topographic maps and data

Before completion of map production, Study team addressed to the counterpart, SSGC, to provide the approval of disclosure of Topographic maps for the future wide usage of map data. The Kyrgyz government officially took action on this request and sent the official letter to the Study team through JICA Kyrgyz Republic office.

However publishing of topographic map was approved only for maps of 1:25,000 and 1:100,000 scale. Study team requested SSGC to continue work on production of new topographic map data in future for other parts of Kyrgyz Republic to assist the development and improvement of social economy in the Kyrgyz Republic.

As a result of above mentioned matters, it is considered important for SSGC to apply effort for laying down laws, regulations and standards of survey and map production that SSGC carried out, and to prepare the standards based on transferred technology, such as symbol specification for digitizing, working manual and so on.

2) Maintenance Budget

Taking into consideration the governmental budget for the management and maintenance of SSGC, it is not clear whether the maintenance and running cost of SSGC are sufficient or not. However, to develop additional production aids such as computer, plotter and other peripheral devices and software, to make more income, is necessary. SSGC is producing several map products such as city map, trekking map, tourism map and so on. But SSGC has to manage more their own income taking into consideration established (lay down) laws and regulations.

(3) Future production of Topographic map data

JICA Study team recommended SSGC to continue map-revising. Nowadays, digital mapping data is more convenient for the use and easy for processing, updating and handling. SSGC is the only one organization that has a right and power to create the National base map in Kyrgyz Republic. JICA Study team expects that in future SSGC can produce or revise mapping data applying transferred technology.

SSGC commented as following to recommendation of JICA Study team.

- Due to the development of computer technology mapping works are improving and work progress can be achieved promptly comparing to the conventional

method. But hardware and software required for this technology are quite expensive. (Mapping work is improving very quickly to get prompt work progress nowadays comparing with conventional method because of the computer technology. This technology is convenient to employ but costly to purchase hardware and software.)

- SSGC meets lack of budget to apply their skill to the latest technology.
 - Transferred technology might be efficient for the next 5 or 6 years. SSGC is expecting to have further cooperation to update the technology again on other areas of Kyrgyz Republic (paragraph 4).

(4) Future plan of SSGC

SSGC is planning to produce maps for tourism development in other areas of Kyrgyz Republic applying the same technology in future. The map scale should be 1:50,000 because of multi purpose mapping. Study team investigated and gave advice to SSGC on the cost of satellite image and possibility of its acquisition and scene territories of satellite images covering Kyrgyz Republic. Following table 7-1 shows cost of satellite image data acquisition including archives data. Figure 7-1-1 and 7-1-2 show SPOT 5 satellite archives image data covering condition on Kyrgyz Republic.

No.	Satellite Image categories	Price	Additional Charge
1	SPOT 5- 2.5m B/W	5,400 euro	Programmed data acquisition;
2	SPOT 5- 5m B/W	2,700 euro	Additional 800 euro. Process
3	SPOT 5- 10m Color	2,700 euro	Level 1A –a. 60 x 60km

Table 7-1. Cost of SPOT Satellite Image

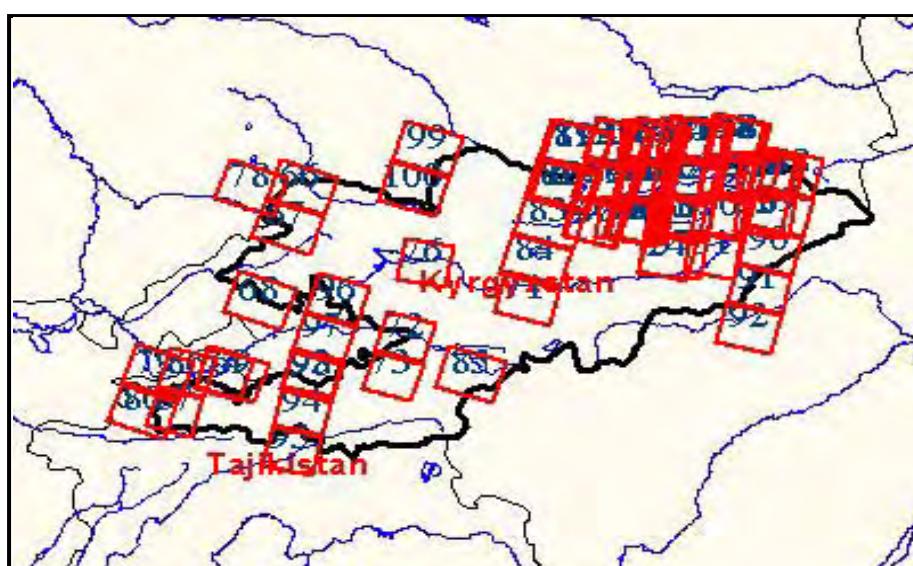

Figure 7-1-1. SPOT 5 archives Scene Territory

Figure 7-1-2. SPOT 5 archives Scene Territory

The targeting area of future project is shown in the following figure 7-2. There are 5 blocks of topographic maps to be prepared as priority. Priority is shown as a number with circle. Technology has been transferred to topographic mapping of 1:25,000 and 1:100,000 . Basically mapping of various scales are not so much different except large-scale maps. Taking into consideration this fact, JICA study team recommends to send Japanese experts to Kyrgyz Republic to ensure further mapping technology for production necessary mapping data.

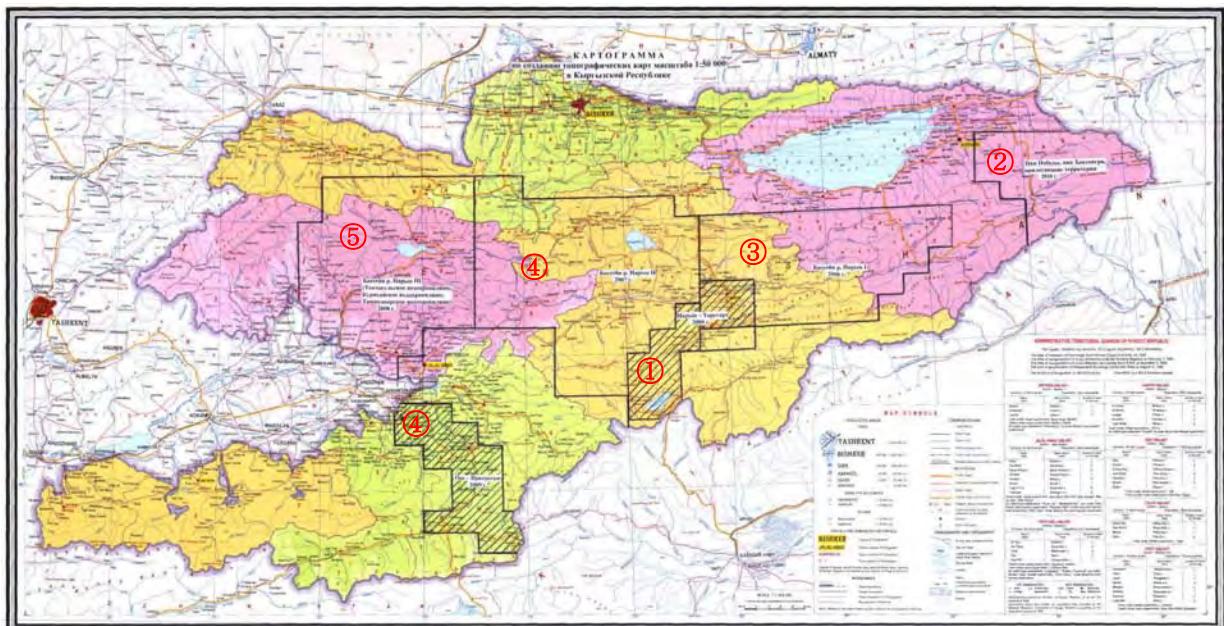

Figure 7-2. Expected area of future project

5) Application of Topographic map

Study team proposed SSGC to produce following products as the examples of application of topographic map.

1) Trekking Map

Towards the active utilization of digital map data, the Study team examined the method and organization for the arrangement, utilization and updating of map data. Study team proposed SSGC to produce trekking map as an example of map data application. The target place for trekking map production was Karakol city, the eastern part of Issyk-Kul area. Study team made field reconnaissance to collect landmark information for the Trekking map during Phase 2 study. Trekking map was displayed and distributed to the attendants of 2nd technology transfer seminar. At the same time, as the example of topographic map data use, Study team created simple GIS at the Karakol city with the same purpose of trekker usage. This GIS application was disclosed in seminar held at the end of 3rd stage of the project.

During preparation of trekking map data, SSGC specialists carried out digitizing and processing of digital data for 26% of the trekking map territory (figure 7-3-2) without any assistance of Study team. This fact confirmed that technology was transferred successfully.

Figure 7-3-1. Trekking Map front face

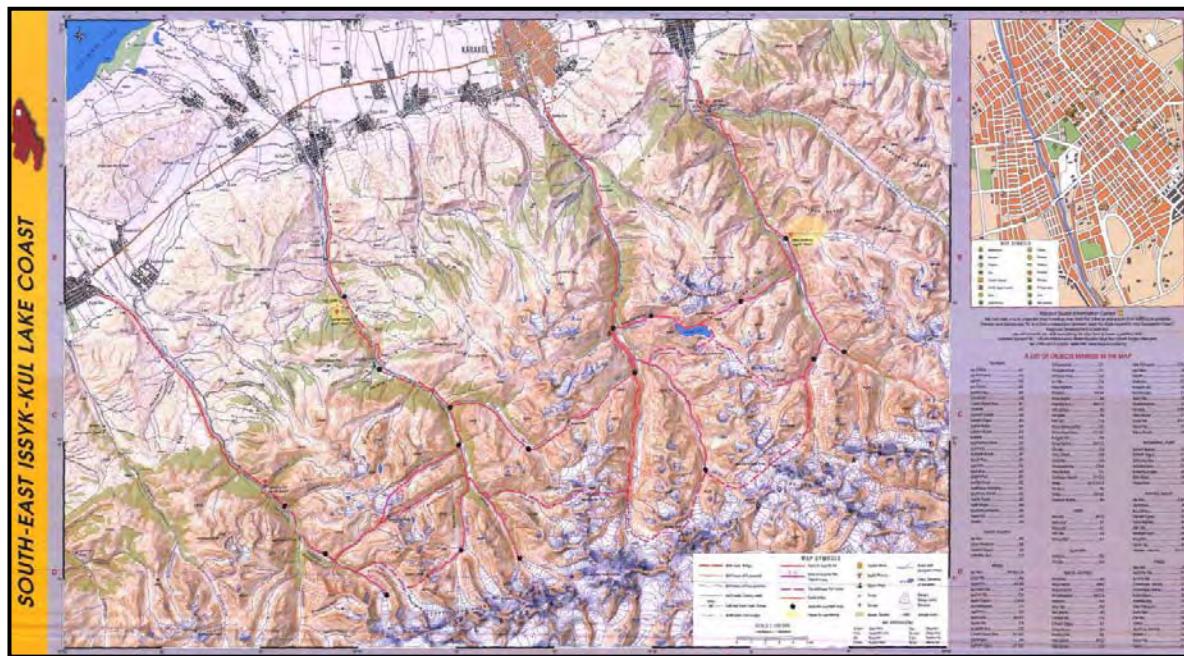

Figure 7-3-2. Trekking Map main face

Study team and SSGC distributed trekking map to the related organizations including tourist companies. The names of organization and companies are shown in the table 7-2

No.	Name of Organizations	Place	No. of Sets
1	Parliament of Kyrgyz Republic	Bishkek	5
2	KATEL, mobile company	Bishkek	5
	Tourist company "TienShan Travel"	Bishkek	5
3	Hotel "AK-KEME"	Bishkek	5
4	Hotel "Hyatt"	Bishkek	5
5	Hotel "Issyk-Kul"	Bishkek	5
6	Hotel "Dostyk"	Bishkek	5
7	Hotel "Silk Road"	Bishkek	5
8	Gosregistr of Issyk-Kul rayon	Cholpon-Ata	5
9	Issyk-Kul state historical & cultural museum	Cholpon-Ata	5
10	Tourist Information Center	Kara-Kol	10
11	Issyk-Kul Oblast Government	Kara-Kol	5
12	"Green Yard" guest house	Kara-Kol	5
13	Tourist company "Turkestan"	Kara-Kol	5

Table 7-2. Organizations for Trekking map distribution

2) LSG (Local Self Government) map

1:25,000 and 1:100,000 LSG maps were produced from Topographic map data as the one of the topographic map data usage. Maps were presented in the seminar. These maps can be used for local governance and development of social life. Map data is in digital format, therefore, it is easy to arrange and process data for required purposes. Updating of map is also easy and simple as suitable computers and software are available. In another case, local government can apply to SSGC to update the map or express necessary data for local government use on the LSG map. This is the typical way of profitable practical use of mapping data. Following figure 7-4 is the sample of LSG map scaled in 1:100,000

Figure 7-4. Example of Topographic Data Application of 1:100,000 LSG Map

7-2. Recommendation on Usage of GIS data

The results of the Study are summarized as follows.

- 1:100,000 scale topographic and digital map data covering approximately 14,000km².
- 1:25,000 scale topographic and digital map data covering approximately 2,300km².
- Provision of personal computer with peripheral equipment
- Provision of software for digital mapping, satellite image processing, operating and mapping manuals, etc.
- Transfer of technology related to the study

The 1:25,000 and 1:100,000 topographic and digital map data, covering 2,300km², 14,000km² around the Issyk-Kul area, can be used immediately for not only development of the area but various administrative purpose as it is a revised version of the existing 1:25,000 and 1:100,000 topographic maps respectively.

At the same time, some of ground features were structuralized to GIS basic data for individual scale topographic maps. This can provide a fundamental basis for GIS development in Issyk-Kul area, which can be used for various user interest and applications as basic spatial data.

The Study team recommends the Kyrgyz Government to create a unified database by adding necessary information to the basic data of individual scales provided by JICA Study team. This unified database should be developed for both analytical and management objectives in the next future stage. The expected GIS database for the Issyk-Kul zone is summarized in the following table 7-3..

No.	Field and Purposes	Advantages	Input data	Availability of input data
1	Water resources management Purpose: To implement appropriate water control (inlet-outlet and quality of water)	-Data are maintained in a standard format -Revision and updating are easier -Data and information are easier to search, analyze and represent -Data are more valuable added products -Data can be shared and exchanged freely -Productivity is improved and more efficient -Time and money are saved	-River flow quantity (Average and extreme record) -Subsurface water quality and water level -Seasonal water quantity of irrigation and drainage -Pollution -Soil classification and water permeability	yes yes yes unknown unknown
2	Agricultural Land use Purpose: To evaluate and determine acceptable arable land	-do-	-Irrigation lands and rain-fed lands -Crops, cropping pattern and production statistics -Abandoned fields and causes -Land ownership	yes yes unknown yes
3	Environment and ecology Purpose: To restore natural environment and ecology	-do-	-Land use classification -Land cover classification -Wildlife distribution and classification -NOAA NVI image -Hydrological data -Contamination in water bodies -Micro-topography/detailed vegetation classification of vicinity of Issyk-Kul lake	yes yes yes yes yes unknown yes
4	Social environment Purpose: To acquire and maintain minimum living standard	-do-	-Population statistics -Social infrastructures Public health -Education	yes To be updated yes yes

Table 7-3. Expected GIS database for Issyk-Kul area

Study team expects that central and local government organizations, research institutions and international organizations have already acquired and studied most part of the above mentioned data.

However some data needs to be updated and oriented as geo-referenced data, other information needs to be acquired and analyzed.

To develop a Geographic Information System for the Issyk-Kul area, the following conditions should be established and observed.

- (1) Open classified framework data related to other agencies, experts and wide range of private users

The input data for the expected GIS database should be digitized by one central organization, as State Service of Geodesy and Cartography, which is one of the major counterpart agencies in this study. The digitized data can be utilized on the framework data shared by concerning organizations. Data updating should be managed by such organizations.

- (2) Cooperation between various agencies and experts for exchanging the existing data in different fields

An interagency committee should be established to make coordination effective and the development of the inventory, analytical and management GIS application less redundant. Regular meetings should be held by experts of various fields to exchange their topics and opinions on updating input data, method of analysis, etc. For instance, in Japan, Information Exchange Organ has been established in order to facilitate information exchange.

- (3) Sound user interests in GIS applications

Specific applications of GIS, such as water management, agricultural land use, environment and ecology and social environment should be demonstrated for users.

- (4) Important factor for a suitable GIS

- 1) Data input

The cost of data input will make about 80% of the total GIS cost. More attention should be given to selection and classification of required Geo-spatial data by taking into consideration the digitizing method. To minimize the cost, detail assessment of available data should be done because it is quite expensive to develop new Geo-spatial data. We recommend to utilize satellite image data for Kyrgyz Republic for

development and updating of input data effectively. Satellite image data can cover wide area at lower cost comparing to aerial photographs.

2) Maintenance of data base

In the Kyrgyz Republic, routine maintenance of database is carried out by limited professional personnel and equipment. It is suggested to concentrate these works at one central organization.

3) Education

The GIS project should be supported not only by top managers but also by other administrative staff and engineers. Therefore, GIS education has to be extended to all members of GIS user organization.

4) Data sharing

Data sharing is one of the most important keys to minimize the total cost of data input and maximize the use of the database. Political and administrative problems should be solved to promote the data sharing for successful GIS.

I INTRODUCTION

In response to the request of the Government of the Kyrgyz Republic (hereinafter referred to as "GOK"), the Government of Japan (hereinafter referred to as "GOJ") has decided to conduct the Study on Integrated Development Plan of Issyk-Kul Zone in the Kyrgyz Republic (hereinafter referred to as "the Study") in accordance with the relevant laws and regulations in force in Japan.

Accordingly, Japan International Cooperation Agency (hereinafter referred to as "JICA"), the official agency responsible for the implementation of the technical cooperation programs of GOJ, will undertake the Study in close cooperation with the authorities concerned of the GOK.

The present document sets forth the Scope of Work with regard to the Study which shall be implemented taking into consideration of related technical regulations and standards in force in the Kyrgyz Republic.

II OBJECTIVES OF THE STUDY

The objectives of the Study are as follows:

- (1) to formulate Integrated Development Master Plan of Issyk-Kul Zone;
- (2) to prepare digital topographic maps for Issyk-Kul Zone with the scale of 1:100,000 and 1:25,000 and apply them to Integrated Development Master Plan of Issyk-Kul Zone; and
- (3) to pursue technology transfer to the counterparts through the Study.

III STUDY AREA

The Study shall cover Issyk-Kul zone.

- (1) The Study area of Integrated Development Master Plan shall cover the surrounding of Issyk-Kul Lake inside the watershed. This area is shown in Appendix-1
- (2) The object area of 1:100,000 scale map shall be approximately 14,000 km² and the object area of 1:25,000 scale map shall be approximately 2,300 km². These areas are shown in Appendix -2.

IV SCOPE OF THE STUDY

In order to achieve the objectives mentioned above, the Study shall cover the following items:

1. Review and analysis of the present conditions
 - (1) review of national development plans and existing study reports in the Kyrgyz Republic
 - (2) analysis of competition powers of every industry in the Kyrgyz Republic
 - (3) investigation of the present conditions of the tourism industry including the tourism resources and the tourism markets in the Kyrgyz Republic
 - (4) investigation of the present conditions of every industry of Issyk-Kul Zone
 - (5) review of the present conditions of existing topographic maps
2. Formulation of Integrated Development Master Plan with the target year of 2025

Integrated Development Master Plan for Issyk-Kul Zone shall be made with emphasis on the followings.

- (1) formulation of a land use plan using digital topographic maps, an industrial development plan and a foreign investment promotion plan
- (2) formulation of a tourism development plan
- (3) formulation of an environmental preservation plan
- (4) formulation of a development plan about infrastructure including transportation such as roads, railways and water transportation, electric power, telecommunication, waterworks and sewage.
- (5) verification of plans with digital topographic maps
- (6) suggestion of means and systems about utilization of new digital topographic maps
- (7) selection of prior projects and preparation of plans of implementation about them
- (8) support of formulation of a development plan for Issyk-Kul administrative district
- (9) suggestion of the policy about regional development plan nationwide

3. Production of new digital topographic maps with the scale of 1:100,000 and 1:25,000

- (1) preliminary survey for designing control points
- (2) control point survey, and pricking
- (3) aerial photography (1:30,000)
- (4) creation of geometrically corrected Spot Imagery
- (5) interpretation of Spot Imagery with the aid of aerial photography
- (6) field identification
- (7) digital compilation and editing of topographic data
- (8) structuralization and symbolization
- (9) production of digital mapping data files
- (10) production of printing films

4. Overall evaluation and recommendation

V STUDY SCHEDULE

The Study will be carried out in accordance with the attached tentative schedule (Appendix-3). (The Schedule is tentative and subject to be modified when both parties agree upon, if any necessity arises during the course of the Study.)

VI REPORTS

JICA shall prepare and submit the following reports in English and Russian to GOK. In case any doubt arises in interpretation, the English version shall prevail.

(1) Inception Report

Thirty (30) copies (ten (10) copies in English and twenty (20) copies in Russian) at the commencement of the Study.

(2) Progress Report 1

Thirty (30) copies (ten (10) copies in English and twenty (20) copies in Russian) within six (6) months after commencement of the Study.

(3) Interim Report

Thirty (30) copies (ten (10) copies in English and twenty (20) copies in Russian) within fifteen (15) months after commencement of the Study.

(4) Progress Report 2

Thirty (30) copies (ten (10) copies in English and twenty (20) copies in Russian) within eighteen (18) months after commencement of the Study.

(5) Draft Final Report

Thirty (30) copies (ten (10) copies in English and twenty (20) copies in Russian) within twenty-seven (27) months after commencement of the Study.

GOK shall submit its comments within one (1) month after the receipt of the Draft Final Report.

(6) Final Report

Thirty (30) (ten (10) copies in English and twenty (20) copies in Russian) within one (1) month after the receipt of the comments on the Draft Final Report.

(7) Final Product of Topographic Mapping (made only in Russian)

a. Aerial Photographs

- (a) one (1) set of negative films
- (b) one (1) set of contact prints and one (1) set of contact prints for the area that shall be covered by topographic maps with the scale of 1:25,000

b. Digital Topographic Data

- (a) two (2) sets of digital mapping data files in CD-Rom
- (b) two (2) sets of DEM data files

c. Topographic Map

- (a) one (1) set of printing films
- (b) five hundred (500) sets of printed maps
- (c) two (2) sets of printed maps by ink-jet printer

VII UNDERTAKING OF THE GOVERNMENT OF THE KYRGYZ REPUBLIC

1. To facilitate the smooth conduct of the Study, GOK shall undertake the following necessary measures:

- (1) to permit the members of the Japanese Study Team to enter, leave and sojourn in the Kyrgyz Republic in connection with their assignment therein, and take necessary measures to exempt them from or pay on their behalf alien registration requirements and consular fees;
- (2) to take necessary measures to exempt the members of the Japanese Study Team from (or pay on their behalf) all kinds of taxes, customs duties, and other charges and payments (import taxes and others) required to pay according to the Kyrgyz Republic legislation on equipment, machinery and other materials brought into and out of the Kyrgyz Republic for the conduct of the Study;
- (3) to take necessary measures to exempt the members of the Japanese Study Team from or pay on their behalf income tax and charges of any kind imposed on or in connection with any emoluments or allowances paid to the members of the Japanese Study Team for their services in connection with the implementation of the Study;
- (4) to provide necessary facilities to the Japanese Study Team for remittance as well as utilization of the funds introduced into the Kyrgyz Republic from Japan in connection with the implementation of the Study;
- (5) to secure necessary permission to use aircraft for aerial photography in connection with the implementation of the Study; and

(6) to secure permission for the Japanese Study Team to take all data (including topographic maps, negative films of aerial photographs, contact prints of aerial photographs) related to the Study out of the Kyrgyz Republic.

2. GOK shall bear claims, if any arises, against the members of the Japanese Study Team resulting from, occurring in the course of, or otherwise connected with, the discharge of their duties in the implementation of the Study, except when such claims arise from gross negligence or willful misconduct on the part of the members of the Japanese Study Team.

3. The State Commission on Architecture and Construction under the government of the Kyrgyz Republic (hereinafter referred to as "SCAC") and the State Service of Geodesy and Cartography under the State Agency on Registration of Rights to Immovable Property of the Kyrgyz Republic (hereinafter referred to as "SSGC") shall act as counterpart agencies to the Japanese Study Team. And SCAC shall act also as a coordinating body in relation with other governmental and non-governmental organizations for the smooth implementation of the Study.

4. GOK shall, at its own expense, provide the Japanese Study Team with the following, in cooperation with the other organizations concerned:

- (1) security related information on as well as necessary measures to ensure the safety of the Japanese Study Team;
- (2) information on as well as support in obtaining medical services;
- (3) available data and information related to the Study;
- (4) counterpart personnel;
- (5) suitable office space with available office equipment and furniture; and
- (6) credentials or identification cards.

VIII OTHERS

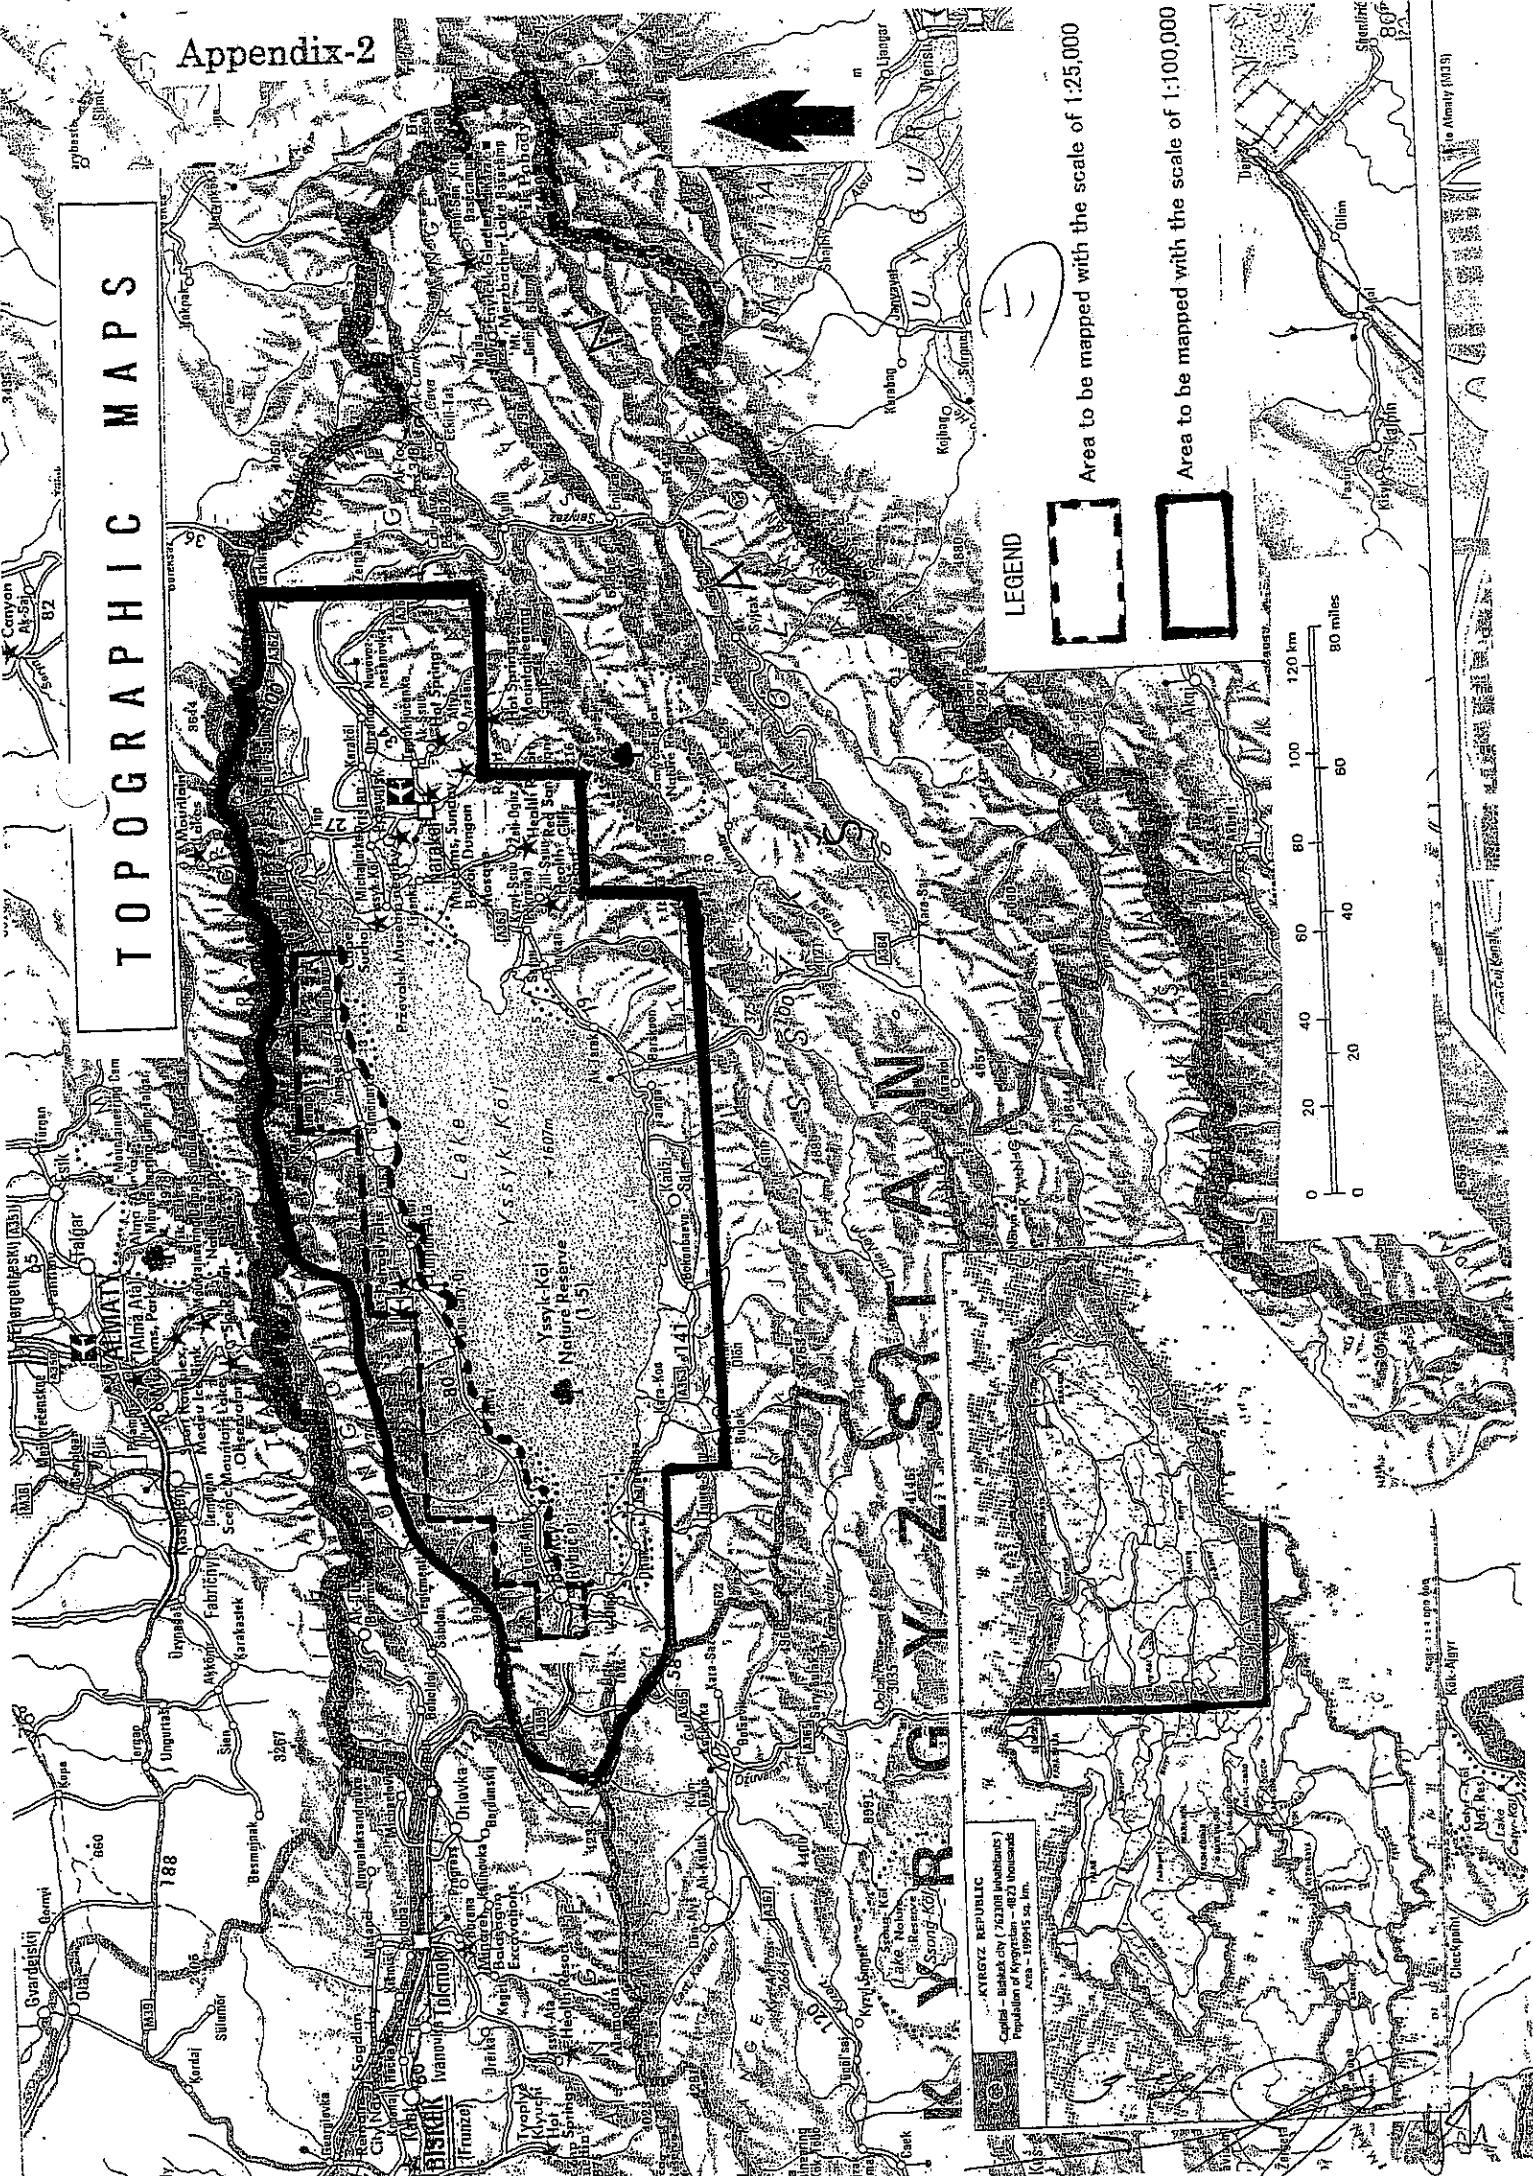

(1) SCAC, SSGC and JICA shall consult with each other in respect of any matter that may arise from or in connection with the Study.

(2) Four (4) originals of the Scope of Work are prepared both in English and Russian respectively. In case any doubt arises in interpretation, the English text shall prevail.

The Preparatory Study Team, organized by Japan International Cooperation Agency (hereinafter referred to as "JICA") and headed by Mr. Junsaku Koizumi, visited the Kyrgyz Republic in July 2003, to discuss the Scope of Work for the Study on Integrated Development Plan of Issyk-Kul Zone in the Kyrgyz Republic (hereinafter referred to as "the Study").

During the stay of the Preparatory Study Team in the Kyrgyz Republic, a series of meetings on the Study were held between the Preparatory Study Team and Kyrgyzstan authorities represented by Ministry of Finance of the Kyrgyz Republic (hereinafter referred to as "MOF"), the State Commission on Architecture and Construction under the Government of the Kyrgyz Republic (hereinafter referred to as "SCAC") and the State Service of Geodesy and Cartography under the State Agency on Registration of Rights to Immovable Property of the Kyrgyz Republic (hereinafter referred to as "SSGC"), and both sides agreed and signed the Scope of Work for the Study. The list of attendees at the meetings appears in Appendix-1.

The main items discussed by both sides are as follows:

1. TITLE OF THE STUDY

Both sides agreed that the Study title should be "The Study of Integrated Development Plan of Issyk-Kul Zone in the Kyrgyz Republic." Both sides confirmed that the Study would be implemented in order to contribute to 'General Scheme of Territorial Development of Issyk-Kul Lake Resort-Recreation Zone,' which would be formulated by the Government of the Kyrgyz Republic.

2. STEERING COMMITTEE

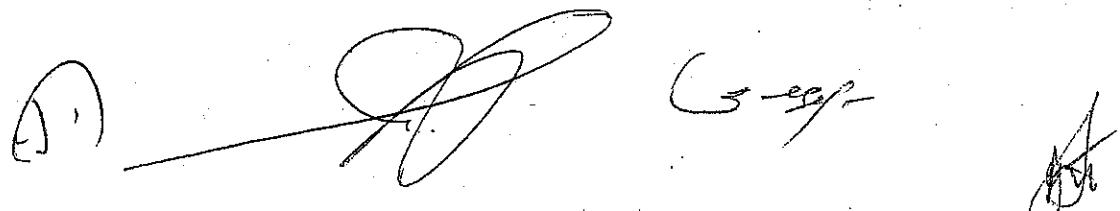

Both sides agreed that SCAC, which shall act as a coordinating body, shall establish a Steering Committee composed of the following organizations under the chairmanship of Prime Minister:

- (1) Office of the President
- (2) Prime Minister's Office
- (3) MOF
- (4) SCAC
- (5) SSGC
- (6) State Committee for Tourism, Sports and Youth Policy
- (7) Ministry of Ecology and Emergency Situations
- (8) Ministry of Foreign Trade and Industry
- (9) Ministry of Agriculture, Water Resources and Processing Industry
- (10) Ministry of Local Self-Management and Regional Development
- (11) Ministry of Transport and Communication
- (12) Issyk-Kul State Administration Office

and if necessary in the course of the Study, SCAC will add other organizations to the Committee.

3. COUNTERPART PERSONNEL

Both sides agreed that SCAC and SSGC would assign fulltime suitable counterpart personnel

before the Study is commenced.

Counterpart personnel would have voice and vote in the deliberations during the Study and the preparation of each report.

4. COUNTERPART TRAINING

SCAC and SSGC requested that the Kyrgyz counterpart personnel should take advantage of the related training course in Japan to promote an effective technology transfer.

The Preparatory Study Team promised to convey this request to JICA Headquarters.

5. COLLABORATION WORKS FOR TECHNOLOGY TRANSFER CONCERNING PREPARING DIGITAL TOPOGRAPHIC MAPS

In order to facilitate technology transfer in the course of implementation of the Study, SSGC shall collaborate with the Japanese Study Team to execute following works;

- (1) Creation of digital topographic maps with the scale of 1:100,000 --- 1,000km²
- (2) Creation of digital topographic maps with the scale of 1:25,000 --- 200km²

6. UNDERTAKING OF KYRGYZ SIDE

(1) In reference to VII 1. (6) of the Scope of Work, the Preparatory Study Team mentioned that the Japanese Study Team would need to take all data (including topographic maps, negative films of aerial photographs, contact prints of aerial photographs) related to the Study out of the Kyrgyz Republic in order to prepare digital topographic maps. Kyrgyz side promised that the Kyrgyz Republic would take necessary procedures before the commencement of the Study.

(2) In reference to VII 4. (5) of the Scope of Work, both sides agreed that SCAC and SSGC would provide offices with suitable spaces with local and international telephone lines in the buildings of SCAC and SSGC.

7. INFORMATION DISCLOSURE

Japanese side requested that all information and reports acquired and prepared through the implementation of the Study should be widely disclosed to the public. Kyrgyz side promised to make appropriate efforts to realize the disclosure of them.

8. OTHERS

Four (4) originals of the Minutes of Meetings are prepared both in English and Russian respectively. In case any doubt arises in interpretation, the English text shall prevail.

A photograph of three handwritten signatures. From left to right: a signature consisting of a large 'J' and a smaller 'A'; a stylized signature of 'G. Gaf'; and a signature consisting of a large 'G' and a smaller 'A'.

LIST OF ATTENDANTS

Kyrgyz Side

Ministry of Finance of the Kyrgyz Republic

Mr. Emirlan T. Toromyrzaev	First Deputy Minister
Mr. Uchkunbek A. Tashbaev	Head, External Relations Division, Investment Policy Department
Ms. Nadia Yusupova	Chief Specialist, External Relations Division, Investment Policy Department
