Findings	Are the achievement of the Project Yes. Compared to other schemes of JICA, the outcomes of the project is efficiently obtained Purpose and the Outputs reasonable compared to the amount Were there any alternative method		All of inputs to the Project are well utilized in project activities and contribute to the achievement of outputs. The Efficiency of the Project is not bad. However, due to the austerity measures taken from September, 2004, all training courses are now temporally suspended and efficiency of the Project is reduced to that extent. In the meantime, the project is trying to enhance the technical level of counterpart personnel by research activities using hydraulic laboratory and other measure and the efficiency will recover if the austerity measures are minitated		If DPWH can continue to put resources (fund and personnel) into the project Overall Goal can be achieved within 10 years. However it is not clear whether DPWH can secure the necessary fund under the current austerity financial situation. CP comments: I Within 10 years, I strongly believe, DPWH engineers nationwide will be knowledgeable enough to apply, whatever is stated in the TSG, manuals and guidelines formulated by the project. FCSEC and other related offices will definitely provide the appropriate technical assistance to achieve this goal.] We have to formulate/develop supplemental manuals (i.e., manual for socio-economic analysis, criteria for evaluation of flood prone areas) and conduct more training/seminars on how to effectively utilize these reference materials. Further, we have to conduct applied research utilizing the hydraulic laboratory to clarify or check some introduced manuels in the TSG we have downlowed with these activities was and action the training/seminars on the bar to formulate develop supplemental manuals (i.e., manual for socio-economic analysis, criteria for evaluation of flood prone areas) and conduct more training/seminars on the hodraulic laboratory to clarify or check some introduced manuels in the TSG we have devolved With these activities was and activities the provide the provide the provide the sective but in the test of the TSG we have devolved with these activities was and activities was and the provide the provide the sective but in the test of t	JICA Experts because of their expertise	River control is the base of the national governance. If the Overall goal is achieved, it will give the strong impact on the national development plan. Mitigation of water-induced and sediment-related disasters will relate to the socio-economic growth of the country, due to the reduction of casualties and damage to properties usually accompanying these disasters.	
Necessary information/data (indicator)	Are the achievement of the Project Purpose and the Outputs reasonable compared to the amount Were there any alternative method	to obtain higher results with same Were there any alternative method to obtain outputs with less cost?	All of inputs to the Project are well is not bad. However, due to the aus efficiency of the Project is reduced t personnel by research activities usin mitiasted			<ol> <li>Engineers of the DPWH offices other than the offices where OJT training program was conducted/extended shall be trained by the DPWH.</li> </ol>	Will the achievement of Overall Goal give impact on the national Development Plan of the Philippines?(towards the achievement of Super Goal. etc.)	Is the Project designed in such a way that the Overall Goal will be achieved if the Project Purpose is achieved and the Important Assumptions are met?
Questions	Cost efficiency		Overall Efficiency	Overall Goal	(Attainability) •Based on the results of Inputs, Activities and Outputs, is the Overall Goal likely to be achieved by May 2010? (1s it verifiable after 5 years?)		(Impact of Overall Goal)	(Cause and Effect)

## EVALUATION GRID BY 5 CRITERIA

Evaluation *	<	¢.	-A-	A-	
Findings	Recognition of the importance of FCSEC is increased among DPWH, though there exist financial problems. CP comments: I Actually, I think the policies relative to flood control shall be given more attention by the Philippine Government, especially now that FCSEC is capable of providing the needed technical assistance in order to realize the over-all goal. I Policy direction on flood control must be fully supported by legislation/law.	<u>IE comments:</u> Financial aspect is a big issue but the budget for the flood control was not reduced and increased in the new mid-term development plan (2005-2010) <u>CP comments:</u> It is difficult to predict, since every year, budget for flood control related projects are decreasing annually or flood control structures only form part of road projects. The Philippine Government does not focus on flood control related projects. However, I strongly believe, with proper representation and explanation, the Government will realize how essential it is to allocate huider for	<u>IE comments:</u> This will be observed in general but severe financial situation of the Philippines might cause the design that does not meet the TSG. CP comments: I As for DPWH, the utilization of the above TSG and other manuals/guidelines are achievable. It is unsure for other civil engineering companies.	<u>IE comments</u> : This will be observed in general but severe financial situation of the Philippines might cause this impossible . CPcomments :: With the manuals and guidelines prepared under the project, the appropriate planning and design shall be imposed in order to have an effective structure with the correct parameters as	Firstly, for sustainability FCSEC must be made a permanent institution, as originally envisioned. Secondly, more cooperation period is necessary to achieve the significant level of enhancement. The priority of flood control and sabo should be increased nearly to the level of roads/highways because of the fact that without these structures, other vital infrastructures are also affected/damaged. The priority of flood control and sabo should be increased nearly to the level of roads/highways because of the fact that without these structures, other vital infrastructures are also affected/damaged. The priority to flood control and sabo should be increased nearly to the level of roads/highways because priority to flood control and sabo should be increased nearly to the level of roads/highways because the Philippine Government as represented by DPWH should take action on giving emphasis and priority to flood control and sabo structures, not only as a component of roads and highways. Effective planning and design and correct implementation/construction of flood control and sabo projects shall improve not only the socio-economic status of this country, but it will promote safety and avoid loss of lives and properties and mitigate water-induced disasters. Budget, Personnel, Support from top management.
recessed y mormation/ data (indicator)	<ol> <li>Flood control policy of the DPWH remains as important as present days.</li> </ol>	2 Total budget for locally funded flood control and sabo works does not decrease drastically.	3 DPWH and civil engineering companies observe the technical standards and guidelines (TSG), and other technical manuals and guidelines.	4 Reasonable quantities/sizes of structures should be constructed with appropriate planning and designing.	Any important conditions to achieve the overall goal other than the above assumptions?
Questions	(Important Assumptions: Important Assumptions as shown in next colum was set in PDM. Are such assumptions appropriate as of now? Will such asumptions come to realty?				Other any important conditions

Evaluation *				A-	A	A	В	A	. v
Findings	<u>CPcomments:</u> Basically, our government have limited budget, therefore it takes time to realize a comprehensive and integrated flood control system nationwide. With the assumption that priority in the construction of flood control and sabo facilities in DPWH is drastically increased. If DPWH will give appropriate attention to the construction of flood control and sabo facilities, I think this will be attained within 10 years.	<u>CPccomments:</u> I NEDA has formulated policies and strategies that include priority in flood control, drainage and sabo. Even DPWH, manuals and guidelines are disseminated through a department circular that imposes the use of the said manuals and guidelines, thus if these manuals are used, the Super Goal Optimization of the interval of condist whether whether the same set of the Super Goal	<u>we comments</u> in the unitcut to predict whether the above assumptions will be realized, I am basing my comment from the present budgetary status that the Department of Budget and Management (DBM) has approved. But am still hopeful that with the proper representation, the Government will realize the limportance of the construction and maintenance of these flood control structures.	CPcomments: Maybe in futurte <u>IE comments:</u> TSGs were officially approved by DPWH. Acknowledgement to the importance of water control management is increasing and might bring the new legistrations.	1 Reduction of disasters will definitely have a positive impact to the poor who are usually vulnerable to water induced disaster.	Formation of FCSEC it self is a impact of this project. It is still a temporary PMO but budget has been increase and personnel are kept. The issue is to make it a permanent organization.	1 Water-induced disasters causes negative impact on the environment, if these disasters will be mitigated or lessened, environment will, to some extent, be protected. 1 Proper planning, design, construction lead to a better environment protection. However, The damage caused by the disaster is so big that the less attention is paid to the environment at moment	Influenced by FCSEC, other departments are also started to decide their technical standards.	LE comments: Motivation of FCSEC is increased and had a positive impact on the staffs of other sections of DPWH. Cownterpart personnel obtained theoretical way of thinking. <u>CP comments:</u> I Most FCSEC counterparts learn and develop good working relationship with JICA Experts I Improvement and enhancement of Professional knowledge is acquired, although, because of the limited number of FCSEC personnel, workloads of each and every member of the Office pile up.
Necessary information/data (indicator)	Attainability of the Water-induced disasters will be Super Goal mitigated through improved effectiveness of disaster prevention facilities and structures constructed or/and maintained by the DPWH in accordance with the technical manuals and guidelines, and flood & sediment control measures developed by the Project.	<ol> <li>Supported by policies of the government</li> <li>National budgest for flood control</li> </ol>	projects shall be sustained.	Are there any •inpact on the government policy, impact, positive or laws, regulations, standards, negative, other norms, etc. than the achievement of the	Impact on cultural/social aspect, such as gender, poverty, human	<ul> <li>Impact on personal affais, organizations, budget, etc., of counterpart organizations</li> </ul>	Impact on Environmental protection	<ul> <li>Impact on Technical aspect</li> </ul>	Impact on counterpart personnel, motivation, work load, income, etc.
Questions	Attainability of the Super Goal	Important Assumptions		Are there any impact, positive or negative, other than the achievement of the	Overall Goal?

Findings	negatively Not observed. , religion,	Not observed.	Overall Evaluation When the Overall Goal and the Super Goal will be achieved largely depends on the availability of fund for flood control and sabo projects. The current financial situation of the Philippine Government is very tight and it is difficult to predict the attainability of the Overall Goal and the Super Goal. But, partly because of the terrible disasters which occurred in recent years, people and the government are now more conscious about importance of the flood control and sabo engineering. It is expected that the overall goal will be attained within 10 years. The foundation of FCSEC itself is one of important impacts of the project. But it is still a temporary organization of PMO and it is desired to make it as a permanent organization. It is observed that some other positive impacts, such as on motivation of counterpart personnel, on legislation of river control, etc., are started to anear. While no nearity to make it gively to anear.	<u>IE comments:</u> Political support may stay at current level or inclease. <u>CP comments:</u> I do not know personally, but I hope that the top management will design a strategy wherein FCSEC and the Over-all Goal of Project ENCA will be continuously promoted.	<u>IE comments</u> :Discussion on legistration of river control is started. <u>CP comment</u> : FCSEC drafted an executive order to be signed by the President of the Philippines regarding establishment of FCSEC as a permanent institution.	No concrete plan yet.
Necessary information/data (indicator)	<ul> <li>Any impact which acted negatively to specific people by race, religion, gender social status, etc.</li> </ul>	<ul> <li>Any negative impact such as contamination of water and air, noise, increase of work load of female population, etc.</li> </ul>	When the Overall Goal and the Super Goal will be achieved The current financial situation of the Philippine Government the Super Goal. But, partly because of the terrible disasters conscious about importance of the flood control and sabo en The foundation of FCSEC itself is one of important impacts make it as a permanent organization. It is observed that some other positive impacts, such as on itatted to anear, while no negative impacts, such as on itatted to anear.	Policy and •Will the political support be legistration aspect continued after the end of the Project?	•Are the related laws and regulations well established or likely to be established?	Is the scheme to expand the training to local offices of DPWH other than those where OJT was conducted?
Questions			Overall Evaluation of Impacts	Policy and legistration aspect

Evaluation *	Å	B-	Å	m
Findings	IE comment: FCSEC is a PMO organization, a temporaly organization with the possibility of being canceled if the project is finished, and, in the project end back, there is not the security that security, security of a budget can leave security of the staff. On this account permanency of the FCSEC organization and forward an argument with a DPWH executive officer and am reporting a request book from FCSEC. I hear that it is examined that FCSEC continues to exist as a permanent organization in DPWH. The training that DPWH recognized officially is carried out along a year training plan of AMMS of tDPWH. Training can be continued if the current personnel of FCSEC remains, but there may be still a problem in maintaining quality of the training. <u>CP comment:</u> Generally, it will depend on the on-going rationalization in DPWH.	is the ownership of the counterpart Ownership is high but enhancing of human resources is the time consuming matter. The bigger problem organizations well secured? exists in the financial issues.	Expert comment:. Expert comment:. Even if there is a little l, preparations for budget security is considered to be it to a budget in 2005. The l future thinks that a budget according to the present conditions is got. The budget that is l need is got, and the will that is going to pay a budget in the Philippines side as much as possible is felt, but often has what activity may stop only by a budget of the Philippines side so that disbursement of a budget is delayed frequently. • It is I Like other organizations, we also experienced some budget problem. This is a general situation in the overall viewpoint. We managed to maximize the expected outputs out of limited resources.	<u>IE comment:</u> It is expected that DPWH gets a budget to be necessary for a project for of continuation and priority. I think that there is a little possibility to increase by leaps and bounds when I think about I finance circumstances. However, with a limited budget, the possibility that a river improvement work is done by precise technology is low. <u>CP comment:</u> There is always possibility of increase of budget requirement in the future, depending on the Plan of Operation. Frankly speaking, it is very difficult to predict to have sufficient budget allocation, but we always look for a bright future that there is always possibility.
Necessary information/data (indicator)	<ul> <li>Institutional strength of counterpart organizations to continue the activities(personnel assignment, decision making process, etc.)</li> </ul>	Is the ownership of the counterpart organizations well secured?	Was the budget sufficiently allocated for the activity?	How is the possibility that the expenses for the activities will increase in future? Will there be enough financial sources to cover it?

## Annex 6 Technical Documents prepared under the Project

	Title	Distrubuted	Date of Issue	No of Issu
1	Technical Standards and Guidelines for Planning and Design Vol I : Flood Control	Concerned Organization of DPWH RO, DEOs Trainees	Mar, 2002	1,000
2	Technical Standards and Guidelines for Planning and Design Vol II : Urban Drainage	same as above	Mar, 2002	1,000
3	Technical Standards and Guidelines for Planning and Design Vol III : Sabo(Erosion and Sediment Movement Control) Works	same as above	Mar, 2002	1,000
4	Technical Standards and Guidelines for Planning and Design Vol IV : Natural Slope Failure Countermeasures	same as above	Mar, 2002	1,000
5	Technical Standards and Guidelines for Planning and Design Discharge Rating Curves	same as above	Mar, 2002	500
6	Manual on Investigation of Damaged Structures	Trainees	Mar, 2002	1,000
7	Profile of Damaged Flood Control Structures	Trainees	Dec, 2002	400
8	Profile of Damaged Flood Control Structures (2nd Edition)	Trainees	Mar, 2003	600
9	Manual on Flood Control Planning	Concerned Organization of DPWH RO, DEOs Trainees	Mar, 2003	1.700
10	Specific Discharge Curve Rainfall Intensity Duration Curve Isohyet of Probable 1-day Rainfall	same as above	Mar, 2003	2,200
11	Manual on Runoff Computation with HEC-HMS	same as above	Mar, 2003	1,700
12	Manual on Non-Uniform Flow Computation with HEC-RAS	same as above	Mar, 2003	1,700
13	Typical Design Drawings - Flood Control Structures	same as above	Mar, 2003	2,600
14	Manual on Design of Flood Control Structures	same as above	Mar, 2003	2,600
15	Manual on Maintenance of Flood Control Structures	same as above	undetaking	
16	Manual on Construction Supervision of Flood Control Structures	same as above	printing
