

**The Study on National Power Development Plan for the period of 2006-2015, perspective up to 2025 in Vietnam**

**Power Demand & Daily Load Curve Forecasting**

(CONTENTS)

1. Prefatory Conditions
2. Power Demand Forecasting(PDF)
3. Daily Load Curve Forecasting (DLC)

December 2005

**Conditions of Economic Scenario**

"ECONOMIC DEVELOPMENT FORECAST SERVING STUDY ON ENERGY DEVELOPMENT FOR THE PERIOD UP TO 2050"

Globalization of Economy  
Regional economic development  
Developing towards high value added economy

	2010/05	2015/10	2020/15	2025/20	2025/05
High growth	8.5	8.5	8.5	8.0	8.4
Middle growth	7.6	7.2	7.2	7.0	7.3
Slow growth	6.2	7.0	7.0	7.0	6.8

2

**Consistency of short term plan**

- ① The Vietnam government has approved the power demand forecasting for the next five years (2006 – 2010).
- ② For keeping the consistency between the short plan and PDP6th, the power demand are forecasted under the given power demand growth rates of the three years, 2006, 2007 and 2008.

Cases	Power demand in five year plan(2006~2008)	Social Economic Scenarios
High	18%	High growth scenario
Base	17%	High growth scenario
Low	16%	Middle growth scenario

3

**Concept of Power Demand Forecasting**

- ① The models linked to social economic plan.
- ② Power demand forecasted by Region.
- ③ Power demand affected by Energy price.
- ④ Power demand forecasted by Business sector.
- ⑤ Energies to power stations are calculated
- ⑥ Primary energy consumption should be calculated.
- ⑦ Daily load curves are forecasted by Regression analysis.
- ⑧ Load factor are forecasted.

4

**Main precondition of PDF**

① GDP growth rate

According to the social economy development plan, GDP growth rate are targeted as follows, the growth rates from 2005 to 2015 are rather higher than the further years.

Case	Unit	2005/2000	2010/2005	2015/2010	2020/2015	2025/2020
High	%	7.4	8.5	8.5	8.0	8.4
Base	%	7.4	8.5	8.5	8.0	8.4
Low	%	7.4	7.2	7.2	7.0	7.3

(Source) ECONOMIC DEVELOPMENT FORECAST SERVING STUDY ON ENERGY DEVELOPMENT FOR THE PERIOD UP TO 2050

5

② Crude oil price(WTI)

Hearing that the crude oil price keeps high in the next 2 or 3 years, it is considered that WTI crude oil price is kept at the level of \$60/bbl from 2005 to 2008 (Vietnam crude oil price is \$50/bbl level).

After 2009, the crude oil price is predicted with \$40/bbl. (Vietnam crude oil price is \$30 - \$35/bbl in the years).

Case	Unit	2004	2005	2006	2007	2008	2009	2025
High	bbl/\$							
Base	bbl/\$	40	60	60	60	60	40	...
Low	bbl/\$							

6

### ③ Power ratio of Industry sector

The power ratio in 2005 is 15.9% including renewable energies (RE), and it is 22% excluding RE. In 2025, the ratio will be expected with 36% including RE.

Case	Unit	2005	2010	2015	2020	2025
High	%	15.9	24.3	31.1	35.3	38.7
Base	%	15.9	23.4	29.6	33.8	36.1
Low	%	15.9	23.2	29.3	33.5	35.6

$$\text{Power ratio} = \text{Power demand} / \text{Energy demand} * 100$$

7

### <Power ratios in the neighboring countries>

The power ratios of Industry sector in the other countries are as follows. The 32% in Philippines and the 26% in Japan and Taiwan are outstanding. %

	1995	1996	1997	1998	1999	2000
Japan	26.5	26.8	27.1	27.4	26.7	26.6
Taiwan	22.1	22.2	22.9	23.3	24.4	26.2
Australia	20.3	19.9	20.0	21.4	21.9	22.0
Indonesia	12.4	11.9	14.3	13.8	13.9	12.9
Korea	19.0	19.6	19.4	19.2	19.4	20.0
China	5.1	5.3	5.5	5.8	6.0	6.1
Thailand	22.7	20.6	22.5	22.4	23.9	25.4
Malaysia	18.0	19.8	21.4	21.4	23.1	22.2
Philippines	19.7	19.7	20.2	26.9	20.4	31.7

### ④ Power ratio of Commercial sector

Big demand is predicted in commercial sector in future. Commercial sector will use many appliances like air conditioner in their office and building, then the power ratio of the sectors becomes higher.

Case	Unit	2005	2010	2015	2020	2025
High	%	11.3	22.3	26.4	30.9	37.1
Base	%	11.3	21.7	25.6	30.0	34.9
Low	%	11.3	20.8	26.0	31.4	37.9

9

### <Power ratios of commercial and residential use >

Power ratios of Thailand with 71% and Taiwan with 67% are outstanding. The temperature in these countries is so high that the electricity is consumed for the air-conditioning.

	1995	1996	1997	1998	1999	2000
Japan	43.9	43.9	45.4	47.1	47.8	44.8
Taiwan	64.5	63.6	65.9	66.2	65.8	67.2
Australia	52.3	53.0	53.7	54.4	55.3	55.5
Indonesia	3.8	4.3	4.8	5.3	5.4	5.8
Korea	18.0	19.3	21.0	25.7	24.0	27.6
China	6.3	7.0	8.0	9.5	10.0	10.0
Thailand	70.5	70.3	72.6	75.0	72.2	71.2
Malaysia	55.2	49.7	65.0	68.2	61.0	63.4
Philippines	39.0	40.6	47.2	45.2	43.7	40.0

10

### ⑤ Power ratio of Residential use

The total energy demand for residential use contains renewable energies (The shares is 70~80%). In 2005, the power ratio excluding renewable energies is 35%.

The power ratio in 2025 is 28% in the following table. However, the power ratio excluding renewable energies is 60 to 70% in 2025.

Case	Unit	2005	2010	2015	2020	2025
High	%	11.3	17.9	23.3	26.5	28.9
Base	%	11.3	17.2	22.3	25.5	27.7
Low	%	11.3	16.7	21.6	24.8	27.1

11

### Results of PDF

- ① The power demand increases with 11.2% in Base case, 11.4% in High case 10.0% in Low case from 2005 to 2025.
- ② The power demand reaches 381,000GWh in Base case, 399,000GWh in High case and 309,000GWh in Low case in 2025.

Base	2005	2010	2015	2020	2025	25/05
Power Demand	46,000	97,000	165,000	257,000	381,000	
Growth rate	15.2 %	16.1%	11.2%	9.3%	8.2%	11.2%
Elasticity	2.1	1.9	1.3	1.1	1.0	1.3

High	2005	2010	2015	2020	2025	25/05
Power Demand	46,000	101,100	172,400	267,600	398,600	
Growth rate	15.2 %	17.2%	11.2%	9.2%	8.3%	11.4%
Elasticity	2.1	2.0	1.3	1.1	1.0	1.4

12

## Power Demand Forecast by sector (2005~2025)

High case and Base case are the almost same.

## Comparison of PDF

The power demand forecast of PDP6th, PDP5th and Revised PDP5th are compared as follows.

<Power Demand Forecasting in PDP5th, R-PDP5th, PDP6th > (GWh)

Base	2005	2010	2015	2020	2025
PDP6th(Base case)	46,000	97,100	165,000	257,300	381,200
PDP5th (Base case)	37,100	61,600	95,700	146,600	
R-PDP5th(Base case)	44,900	80,500	124,200	178,600	

Times	2005	2010	2015	2020	20/05
PDP6th(Base case)	1.02	1.21	1.33	1.44	12.2%
R-PDP5th(Base case)	1.00	1.00	1.00	1.00	9.6%

## <Comparing PDP6th, PDP5th and Revised PDP5th>

## Simulation

### (1) Energy conservation simulation

#### <Energy conservation in Base case>

Sectors	2005-2010	2011-2025
Agriculture & Fishery	0	-1
Industry	0	-1
Transportation	0	0
Commercials & Service	0	-1
Residentials	0	-1

#### <Energy conservation in Alternative case>

Sectors	2005-2010	2011-2025
Agriculture & Fishery	0	0
Industry	0	0
Transportation	0	0
Commercials & Service	0	0
Residentials	0	0

## Simulation results of Energy conservation effect

Cases	Sectors	Unit	2005	2010	2015	2020	2025	25/05
Base	Manufacturing	GWh	20,909	46,325	81,559	131,066	199,298	12%
	Commercials	GWh	2,022	6,168	10,528	17,319	27,550	14%
	Residentials	GWh	20,173	38,042	59,777	85,629	119,109	9%
	Total	GWh	45,997	97,118	164,975	257,286	381,223	11%
Alternative	Manufacturing	GWh	20,909	46,325	85,762	144,923	231,724	13%
	Commercials	GWh	2,022	6,168	11,070	19,150	32,032	15%
	Residentials	GWh	20,173	38,042	62,858	94,682	138,489	10%
	Total	GWh	45,997	97,118	172,885	282,245	437,838	12%

## (2) Energy price (FO linked to \$40 oil price) Simulation

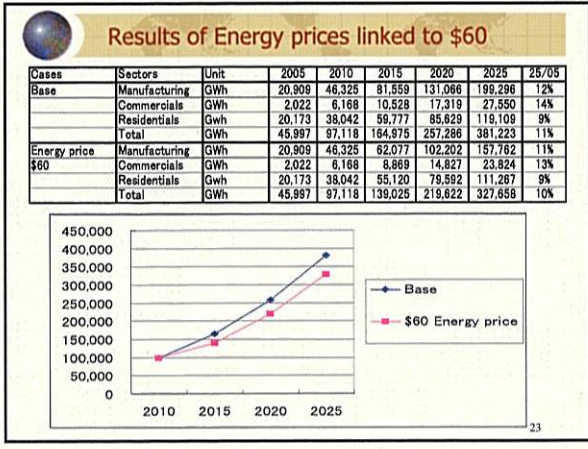

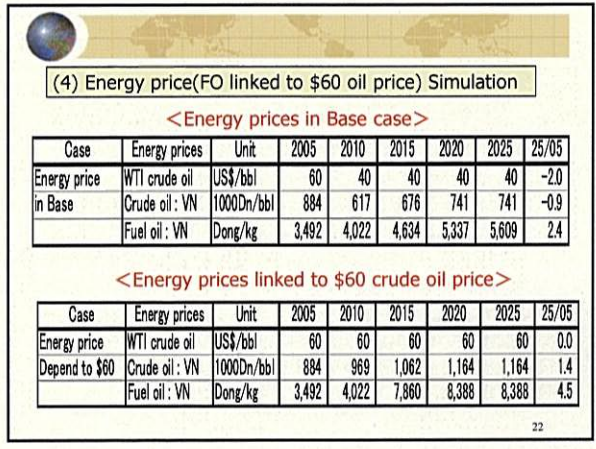

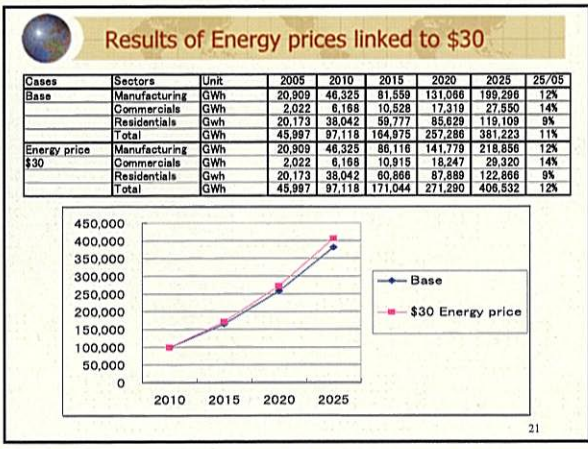

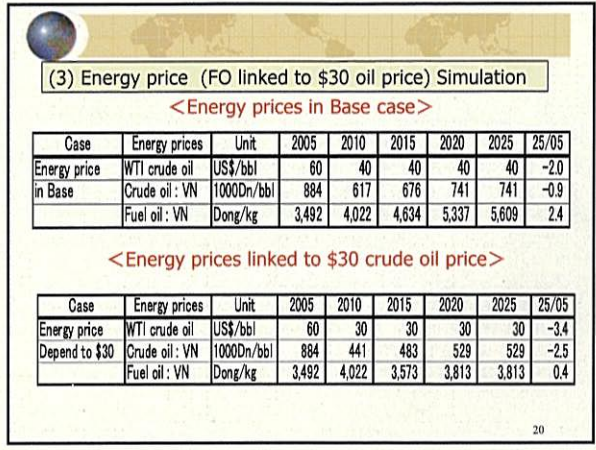

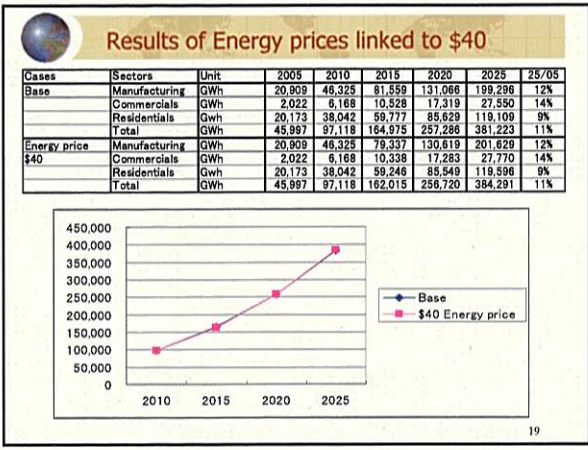

#### <Energy prices in Base case>

Case	Energy prices	Unit	2005	2010	2015	2020	2025	25/05
Energy price in Base	WTI crude oil	US\$/bbl	60	40	40	40	40	-2.0
	Crude oil : VN	1000Dn/bbl	884	617	676	741	741	-0.9
	Fuel oil : VN	Dong/kg	3,492	4,022	4,634	5,337	5,609	2.4

#### <Energy prices linked to \$40 crude oil price>

Case	Energy prices	Unit	2005	2010	2015	2020	2025	25/05
Energy price Depend to \$40	WTI crude oil	US\$/bbl	60	40	40	40	40	-2.0
	Crude oil : VN	1000Dn/bbl	884	969	1,062	1,164	1,164	1.4
	Fuel oil : VN	Dong/kg	3,492	4,022	5,002	5,338	5,338	2.1

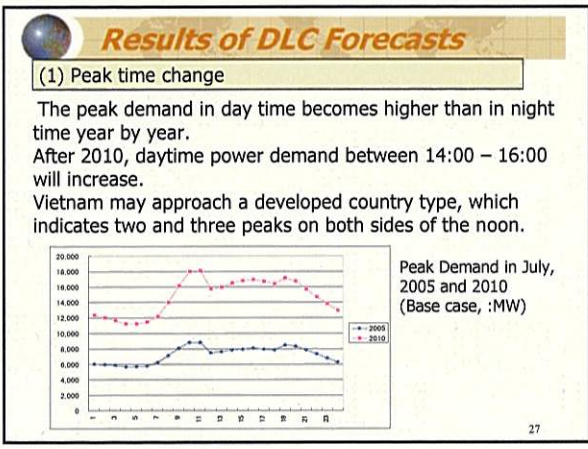

- ### Daily load curve forecast model
- 1 Collect "Dispatched data" from 1996 to 2004,
  - 2 Collect explanation variables( POP, GDP, Temperature , Humidity, Electrification HH),
  - 3 Classify DLC data( Peak, Weekday, Holiday),
  - 4 Make forecasting equations by regression analysis ,
  - 5 Adjust DLC by annual power demand from PDF model,
  - 6 Estimate load factor by regression analysis,
  - 7 Calculate Peak demand.
- 26

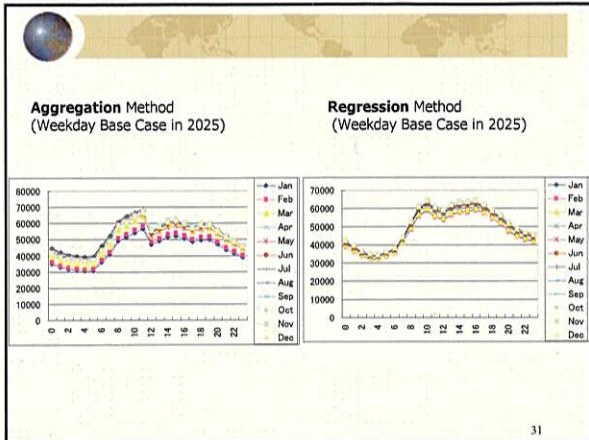

### (3) Comparison of peak demand (Base case)

	Plan	Unit	2005	2010	2015	2020	2025
Peak demand	PDP6th	MW	9,859	19,998	32,354	48,298	71,153
	PDP5th	MW	7,797	12,003	18,197	27,204	
	R-PDP5th	MW	9,199	15,256	22,575	31,432	
Growth rate	PDP6th	%		18.7	15.2	10.1	8.3
	PDP5th	%		10.1	9.0	8.7	8.4
	R-PDP5th	%		12.0	10.6	8.2	6.8

29

(2) Comparison of Peak Demand Forecasting

	Aggregation	Regression
2005	18:00 Nov 9,512MW	17:00 Nov 9,859 MW
2010	18:00 Nov 19,533MW	17:00 Nov 19,937 M W
2015	11:00 Nov 32,196MW	17:00 Nov 32,255 MW
2020	10:00 Oct 48,972MW	17:00 Nov 48,215 MW
2025	11:00 Nov 71,416MW	14:00 Oct 71,176 MW
