

**Minutes of Discussion
on
Draft Final Report
for
The Study on Rural Water Supply in Mwanza and Mara Regions
in
the United Republic of Tanzania**

Agreed Upon between

Ministry of Water

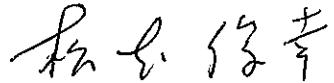

and

JICA Study Team

August 9, 2006 Dar es Salaam

Christopher N. Sayi
Director,
Division of Rural Water Supply
Ministry of Water

Toshiyuki Matsumoto
Team Leader
JICA Study Team

The meeting on the draft final report was held on 17th July 2006, between the Ministry of Water and the IICA Study Team for the Study on Rural Water Supply in Mwanza and Mara Regions (herein after referred to as the Team) on the outcome of the Study after the completion of draft final report. The main issues in the meeting were the explanation on the DF/R, and clarification of the schedules of comments, questions and corrections on the DF/R.

However, in the meeting, the concept on served population for the Water Supply Plan and service coverage with the hand pumps under the Water Supply Plan and Priority Project were not fully accepted by the Tanzanian side. Therefore, the Team decided to hold the additional meeting to explain and discuss major issues for the mutual understanding on the DF/R.

The 2nd meeting on the DF/R was held on 9th August 2006, between the Team and the Tanzanian side. Major issues and the contents of the discussion are as follows in reference with the comments and opinions discussed on the last meeting;

- 1) The concept of the Water Supply Plan
- 2) The alternative plan for the Water Supply Plan and Priority Project
- 3) The current status on the comments, questions and corrections on the DF/R

For the preparation of the second meeting, a letter was dispatched on 28th July 2006 to the Tanzania side for clarification of their understanding and explanation of our concept (see ANNEX1)

The contents of the discussions on the second DF/R meeting are as follows;

1. Served Population Rate for the Water Supply Plan

The Team re-explained the concept of the water supply plan for the selected 428 villages using the materials they prepared for the meeting (see ANNEX2). The Team mentioned that they targeted the coverage rate of 100% in accordance with the suggestion of the Tanzanian side, and decided to add 626 medium wells to achieve the higher coverage rate in consideration of the natural and socio-economic condition.

The Tanzanian side replied that the concept of their water supply plan is to achieve 100% in individual villages, and the study must follow this concept.

The Team mentioned that their concept is understandable and it is always possible to make a plan as 100% just on the figure. However, the Study shall make realistic water supply plan for the individual villages as there is always limitation on the water source potential and the ability and affordability to maintain those water source facilities by the villagers.

The Team also explained about the contribution of the Water Supply Plan in comparison with the current Water Supply Plan formulated by the NRWSSP. The calculation of the population coverage rate, in consideration of the revised Water Supply Plan, achievement of the coverage rate will be 10-30% higher than the original plan formulated by the NRWSSP.

The Tanzanian side understood the result and concept of the Water Supply Plan by the Team. Therefore, the Team will attach the revised Water Supply Plan with additional medium wells to the Final Report.

It is also confirmed that the Water Supply Plan for the 428 villages is supplementary plan for the Tanzanian side to reduce their cost and efforts to make additional water supply plan. The Plan is not assumed to be implemented by the Japanese fund but by the internal and external budget allocation by the Ministry of Water.

2. The Water Supply Plan for the Priority Project

In response to the last meeting on the DF/R, the Team presented four (4) water supply plans for the Priority Project to update the coverage rate (see ANNEX2).

The contents of alternative water supply plan presented to the Tanzania side are as follows;

- 1) The original water supply plan presented in the last meeting
- 2) The revised water supply plan removing four (4) hand pump planned villages which has low service coverage rate within the budget of original water supply plan.
- 3) The revised water supply plan removing nineteen (19) hand pump planned villages which has low service coverage rate and adds the one piped scheme within the budget of original water supply plan.
- 4) 131 Medium boreholes with hand pump was added to the original water supply plan but the budget was higher than the original water supply plan

The Tanzanian side accepted alternative 4) as the Water Supply Plan for the Priority Project.

3. The current status on the comments, questions and corrections on the DF/R

The Tanzanian side is currently working out to collect the comments, questions and corrections on the DF/R, and promised to hand over their opinion in the earliest stage.

ATTACHMENT

ANNEX1 The letter and comments of the Team to the Tanzanian side on the Minutes of Meeting on DF/R

ANNEX2 Resume for the meeting held on 9th August, 2006 and the materials for the explanation.

LIST OF PARTICIPANTS OF THE MEETING

(Tanzania side)

Mr. Christopher N. Sayi	Director, Division of Rural Water Supply (DRWS), Ministry of Water
Mr. Reuben Kwigizile	Assistant Director, Division of Rural Water Supply (DRWS), Ministry of Water

(Japanese Side)

JICA Study Team	
Mr. Toshiyuki Matsumoto	Team Leader
Mr. Kensuke Ichikawa	Hydrogeologist

Ministry of Water (MoW)

Re: DF/R for the Study on Rural Water Supply in Mwanza and Mara Regions in the United Republic of Tanzania

Dear Sir,

Thank you very much for your time at the meeting held on July 17, 2006 on the above mentioned issue.

We would like to express our sincere apology for our quick visit to your office, and asking for comments and discussions within a very limited time frame. We were also afraid that our explanation on the water supply plan was not sufficient to tell the whole story of our idea.

Therefore, we would like to ask you to have a further meeting to explain in more detail about the water supply plan formulated by the study team, and the alternative water supply plan after consideration of comments from your side.

Just before seeking your convenient time for the meeting, please kindly refer to the attached comments from the study team referring to the conversations had at the meeting. It would be highly appreciated if you could provide us with your advice on those comments, so that we can make further analysis on the water supply plan and priority projects with the consent of both parties.

Thank you in advance for your attention to this matter

KOKUSAI KOGYO CO., LTD.

JICA Study Team

CC: Mr. Eng. Reuben Kwigizile
Assistant Director
Division of Rural Water Supply (DRWS),
Ministry of Water (MoW)

1. Re-confirmations on the discussion made on the 17th July 2006

It is our fault that we did not discuss these issues at a much earlier stage. However, it is essential for us to reconfirm the interpretation made by the Ministry of Water on the National Water Policy, 2002 (NAWAPO 2002) for our further understanding.

1-1. Service Coverage rate on 2015

Millennium Development Goal (MDG) states that the target coverage rate of water supply in 2025 is 90%. We formulated the water supply plan using the target coverage rate of 75% in 2015 knowing that 60% service coverage should be achieved in 2010.

We understand and agreed that your explanation of the MDGs target coverage rate is applied nation-wide, not for respective projects in the local areas. Therefore we shall apply the figure of 100% as the coverage rate for the water supply plan in the study.

However, we still believe that the target of 75% coverage rate for formulation of the water supply plan will not be against the national strategy. It is better to achieve as high as possible target, but it is not realistic considering the natural condition of the area, and also from a maintenance and operation point of view.

We must not forget that most of the water supply facilities in the study area are not functioning due to poor maintenance and operation as well as lack of adequate water source management. To realize good O&M by the villagers and to ensure the necessary time frame to arrange the institution to support sustainable water supply, a gradual process of implementation shall also be considered.

1-2. The Concept of Service Coverage

The service coverage rate by the priority project shall also be 100% in accordance with your comment. The study aimed to satisfy the figure. However, both from natural condition and social condition made it difficult.

From our past experiences of the implementation project in Tanzania, the most cost effective and low risk water source/facility for rural areas is extracting groundwater by hand pump. However, as indicated in the NAWAPO 2002, 75% of the country is underlain

by the Precambrian Basement Complex which is difficult to identify as the potential target point for the groundwater exploitation. The study area is mostly occupied by this Basement Complex as well.

It is recommended to consider the realistic groundwater service coverage which has a variation by the village.

1-3. Water for the Rural Water Supply

Our concept of the sources of domestic water supply is again stated as;

- 1) Safety (good water quality not to harm human health)
- 2) Sustainability (the amount of extraction shall not disturb the hydrological cycle)
- 3) Availability throughout a year (continuously supply water through a year)
- 4) Cost effectiveness (the rural water supply system shall be operated by the users and the maintenance cost shall be shared by the users with affordable cost)

The above mentioned concepts are based on the NAWAPO 2002 (refer to the Chapter 4 describes about the sustainability and quality).

2. Alternative Water Supply Plan on Priority Project

In consideration with our Minutes of Meeting dated on 17th July 2006, we considered to make some amendments in accordance with the suggestions and comments made in the meeting.

The following are the alternative water supply plans which were considered by the study team after the meeting.

- 1) Consider the additional medium boreholes in the hand pump planned villages.
- 2) Withdraw the villages which have low service coverage rate for the hand pump.
- 3) Stay in the draft final water supply plan formulated in the study.

The above point of 2) is under consideration because of the decrease in the number of the planned villages.

We anticipate further discussion to the above mentioned subjects.

ANNEX 2

Discussion on the Draft Final Report for the Study on Rural Water Supply in Mwanza and Mara Regions in the United Republic of Tanzania

August 2006 JICA Study Team

1. Water Supply Plan and Served Population Rate for Water Supply Plan

1-1 Water Supply Plan

1-2 NRWSSP Plan and Served Population Rate for Water Supply Plan

2. Increase of Water Supply Population and Implementation Schedule for Water Supply Plan

August 25, 2006

Mr. Toshiyuki MATSUMOTO
Team Leader
JICA Study Team
The Study on Rural Water Supply in Mwanza and Mara Regions
Overseas Operations Department
Tokyo 102-0075, **JAPAN**
Fax +81-3-33237-5477

**SUB: TARGET YEAR FOR WATER SUPPLY PLAN FOR THE
PROJECT FOR THE STUDY ON RURAL WATER SUPPLY
IN MWANZA AND MARA REGIONS**

Reference is made to your letter Ref.No.2/TM/01 dated 21/8/2006 regarding the above subject.

We have gone through your suggestion on the plan for implementing the water supply plan for the project for the study on rural water supply in Mwanza and Mara regions and wish to comment as follows:

The water supply plan covers 428 villages of the two regions of Mwanza and Mara. However, the two regions have a total of more than 1,000 villages. Since the plan will be implemented through the support from the government of Japan as well as other donors including our government, we suggest that the final report should indicate which schemes have been prioritized for implementation by the government of Japan and leave the rest schemes for financing by other assistance. The government of Japan may be approached by us for further grant aid when the current prioritized project has been implemented.

The water coverage contribution of the priority project only should be indicated as over and above the current water coverage.

C. N. SAYI
for: **PERMANENT SECRETARY**
