**Upgrading Feasibility Study**

Nepal Electricity Authority (NEA)

Japan International Cooperation Agency (JICA)

#### 1. Background of the Project

In order to support poverty reduction efforts in Nepal, Government of Nepal has been implementing rural electrification and hydroelectric development projects by using its abundant water resource particularly in its Tenth Plan (2002-2007). The present total installed capacity in Nepal is 614 MW as of July 2006. Hydropower's share is 90 % of the total installed capacity which is 99 % of annually generated energy. On the other hand, power demand in the country has been growing approximately at a rate of 8 % per annum in recent ten years period (1995 to 2005).

The run-of-river (ROR) type of hydropower plants dominate the Nepal's hydro capacity. Since ROR type of hydropower plants can only marginally regulate river discharge for power generation, Nepal has been facing shortage of power in the dry season. Hence, Nepal Electricity Authority (NEA) has felt the necessity to develop storage type of hydropower plants which can seasonally regulate river discharge for generation in the dry period.

NEA conducted studies on storage type of hydropower projects and identified *Upper Seti* Storage Hydroelectric Project as a potential one. The Government of Nepal then requested the Government of Japan to implement an upgrading feasibility study (hereinafter referred to the Study) under the technical assistance of Japan International Cooperation Agency (JICA). The JICA Study team commenced the Study in February 2005.

#### 2. Objective of the Study

The Study aims at formulating the optimum plan for development and assessing the technical economical and financial, and environmental viabilities of the Project.

#### 3. Schedule of the Study

The Study commenced in February 2005 and it will be completed by June 2007.

#### 4. Range of the Study Area

The Study area of the Upper Seti Hydroelectric Storage Project is located in Tanahu District in Central Nepal and the transmission line route is from the powerhouse site at Damauli to the existing main transmission lines in Bharatpur. The Study area is assumed as follows:

♦ The Watershed:

Approx. 1,502 km<sup>2</sup>

♦ The Reservoir area and its vicinity:

Approx. 120 km<sup>2</sup>

The Project in the phase of construction and operation is likely to bring direct and indirect impacts to the following areas:

· The dam site, powerhouse site and associated access roads, camps and construction facilities

- The Lower Reservoir(downstream part of the reservoir), an approximately 15 km Seti River stretch that has limited habitation, is forested, and has narrow gorges, and
- The Upper Reservoir (upstream part of the reservoir), an approximately 12 km Seti River stretch
  which consists of relatively flat elevated and irrigated rice terraces, lower fertile land of Seti
  River, scattered settlements and the semi-urban of Bhimad Bazaar community
- Downstream of the dam site, low land of the Seti River banks which will be affected by the peaking flow

#### 5. Optimum Project Layout and Scale

The JICA Study Team conducted an optimization study to select the most technically and economically feasible development plan which will have less impact on natural, socio-economic and cultural environment.

The optimization study was carried out based on data and information supplied by NEA, and the results of the following surveys/studies performed by the JICA Study Team;

- ♦ Supplementary environmental survey results including mitigation
- ♦ Geological investigation results
- ♦ Hydrological study results
- ♦ Power demand in the country

Based on the above data, Project cost including construction cost, compensation cost, mitigation cost and necessary cost for each case has been estimated. Its benefit based on an alternative thermal power plant has been also estimated. Hence, the ratio of benefit and cost is an index of economical evaluation for each case in consideration of environmental mitigation.

In the comparison study, the following factors were compared systematically;

- Five layouts which were introduced in the 1st stakeholder meeting conducted in June 2006
- ♦ Full supply water level in the reservoir between EL. 395 m to 435 m

More than 300 cases were compared, and the optimum case from the current study was selected which has the following features.

- ♦ Layout of Tailrace located at downstream of confluence of Seti River and Madi River
- ♦ A storage project with an installed capacity of 132 MW, reservoir length of 27 km, Full Supply Level of 420 m and reservoir area of approximately 7.9 km² located on Seti River. However, Fully Supply Level might be changed considering other

#### environmental indicators.

#### An underground powerhouse

The JICA Study Team will continue this study, and design the Project at Upgraded feasibility study level, estimate project cost, and conduct overall economic and financial analysis by the time of completion of the Study. After the JICA Study, NEA will continue with the process for construction such as detailed design, tendering for construction works, and will implement the construction works.

#### 6. Project Affected Area

The affected areas are categorized into the four areas as follows;

1	Reservoir areas	Bhimad, Chhang, Majkot, Rising Ranipokhari, Kotdurbar, Jamune, Kahun Shivapur VDCs, Vyas Municipality
2	Dam, powerhouse, tailrace and switch yards	Kahun Shivapur, Vyas Municipality
3	Project facility structures (access roads, camps, batching yards and spoil disposal	Kahun Shivapur, Vyas Municipality

	yards)	
4	Downstream areas	Kahun Shivapur, Pokhari Bhanjyang, Keshavtar, Dharampani, Baidi, Chhipchhipe, Devghat, Deurali VDCs

Particularly, the project will affect reservoir areas and project facility structure sites covering 7VDCs, namely Bhimad, Chhang, Majkot, Rising Ranipokhari, Kotdurbar, Jamune, Kahun Shivapur VDCs and Vyas Municipality.

#### 7. Supplemental EIA Survey Results

The EIA report prepared by NEA was reviewed and revisions of a Scoping Document of supplemental EIA survey were carried out by the JICA Study Team in early 2006. This document gives recognition to the JICA Environmental and Social Considerations Guidelines. A supplemental EIA survey was initiated with a local environmental consultant and completed in November 2006. These Supplemental EIA investigations focused on the following main issues.

#### 7-1. Natural Environment

- Watershed planning issues and impacts on the topography and land use due to creation of reservoir, including mitigation actions in respect of erosion and landslides
- Impact on the topography and land use due to construction of permanent and temporary structures on both sides of the Seti River near its confluence with the Madi

- Impacts on the downstream Seti River due to reservoir water regulation and daily fluctuations in the flow of the river
- Impacts on reservoir water quality due to "algae blooms" requiring mitigating actions
- Alternative actions for the loss of 456 ha of National Protected and Community Forests
- Impact on wildlife resources, with over 16 species of mammals indicated as protected under present CITES Appendices and IUCN Red Data List, and this aspect to be confirmed and

mitigation actions to be proposed

- Impacts on aquatic ecology and fisheries including a serious impact which is difficult to
  mitigate and which will require construction of a fish hatchery with stocking of local species
  both in the reservoir area and in upstream zones of the Seti River, as per Kali Gandaki A HEP
  and with assistance of the Begnas Lake Fish Hatchery operation
- An Initial Environmental Evaluation of the Project's 38.4 km long 220 kV transmission line from the powerhouse at Damauli to Bharatpur was carried out which indicated acceptable impacts.

#### 7-2. Socio-economic and Cultural Environment

- Impacts on cultivated area including some 166
  ha in reservoir area
- Impacts on infrastructure such as 7 stretches motorable gravel road, 1 bridge, 7 suspension bridges, 22 foot trails, 1 causeway, 2 irrigation canals and 4 electric distribution line routes
- Impacts on community structures including 1 temple, 6 resting places and 1 ghat (cremation site)

- Impacts on annual agricultural production loss of 854 Metric ton
- Impacts on approximately 1057 household landowners in terms of land acquisition (reservoir areas and project facility sites)
- Impacts on structures to be acquired including houses, cow sheds, toilets of 155 households (reservoir areas and project facility sites)
- Some 122 households require relocation as their residential structures are affected (from Chhang, Rising Ranipokhari, Jamune, Kahun Shivapur VDC, and Vyas municipality), out of which 32 households are without legal land holdings
- The framework of Resettlement Plan including compensation and rehabilitation, and Social Action Plan are to be proposed

#### 8. Stakeholders Meetings

In accordance with the JICA's Guidelines on Environmental and Social Consideration, stakeholders meetings are being arranged through the offices of NEA with the assistance of JICA Study Team. Initial Stakeholder Meetings were held in June 2006 which included intensive discussions with the local affected people in Damauli and with the concerned institutional representatives in Kathmandu. The 2<sup>nd</sup> stakeholder meetings will also be held in Damauli and Kathmandu in December 1 and 6

respectively. The objectives of this stakeholder meeting are as follows:

- (i) to explain and disclose information regarding the Study and environmental and social aspects and report on current progress on various Project activities
- (ii) to obtain concerns, opinions, suggestions and feedbacks particularly from the affected local people of the Project Area

The final Stakeholder Meetings are scheduled to be held in April or May 2007 in Damauli and Kathmandu to discuss about the final design, mitigation measures and enhancement programs.

#### Presentation

#### Results of Study on

- Study progress and necessity of the Project
- Optimization of development plan
- Physical and biological environment impact
- Socio-economic and cultural environment impact

#### Necessity of Project

**Results of Power Sector Survey:** 

Storage project is necessary for stable power supply in the country

- Supply power during peak time (around 5:00 p.m. to 10:00 or 11:00 p.m.)
- Especially supply power during dry season, because of decrease river water

#### Conclusion:

# 2. Keys of Project Planning

Technical outcomes through Studies

# Main technical aspects for Upper Seti project

- □ Treatment of Sedimentation
- ☐ Geological conditions of project layouts
- ☐ Role of Upper Seti project as power source
- ☐ Environmental Issue

10

#### **Large amount of Sedimentation**

FSL should be obliged to be higher by large dead capacity of reservoir.

#### Keys of Treatment of sedimentation

- 1. Flushing is essential to maintain role of reservoir against high sedimentation
- 2. Sand drain valve will be installed at dam to maintain long life of reservoir
- 3. Sedimentation volume not flown out of reservoir will be required for reservoir dead storage based upon design standard in Japan

# 

#### Geological conditions of project area

Summary of Geological investigation

15

#### **Outcomes by geological investigation**

- ☐ Geological conditions at dam basis will be suitable to construct dam with about 140m height.
- Excavation work for underground type power house should be difficult at this vicinity area. (Option-II, IIIa)
- Geological conditions of waterway route and power house of Option IIIb seems to be sound, according to site reconnaissance

----

## Role of Upper Seti project as power source

"kW" capacity should be maintained, especially for dry season.

#### Keys for Role of Upper Seti project

- 6 hours peak power should be supplied, according to Power demand forecast.
- Peak power supply for dry season, especially
- Diesel power plant was applied to Alternative thermal plant whose annual idio time is so long, and fuel cost should be raision.
- High effective head should be essential for project layout such as Op III a and b to supply high capacity, even in dry season.

18

#### Diesel power Plant example

19

#### **Environmental Issue**

Only essential matters for project optimization study

20

#### **Keys for Environmental Issues**

- ☐ Cost for compensation and resettlement is estimated for each FSL
- Slope protection work against erosion by water drawdown of reservoir operation in some reservoir area is taken into consideration for environmental cost.

# 4. Study Result at Present

Which layout and development scale should be the most effective for investment at present?

#### Keys of Comparison study of Project Layout

- ☐ Ratie of Benefit and Cost is the Index for comparative study
- Benefit is determined by value of firm capacity and primary energy, and unit value of diesel power plant for kW and kWh.
- ☐ Based on reservoir volume and river discharge, there are 10 candidates for maximum discharge for power enough
- Based on maximum discharge, project layout and FSL, there are 306 project candidates.

Physical Environment Reservoir Area

Land Uses - Forestry & Agricultural - Both Types 🖔

#### Physical Environment Mitigation Measures

- Reduce "footprint of project" on Forestry by relocation of facilities & select reservoir level
- Solve "erosion prone areas" around reservoir --Bhimad Bazaar & Wanten Khola areas
- Air Quality Suppression of dust & masks
- Water Quality Controls on runoff from works areas & sanitation and solid waste management
- Protect land instabilities on roads
- Spoil disposal controls with bunds & ditches
- Funds for vibration & water supply systems

-98% of Total Species made up of

- 30% Sai (Shorea robusta), 23% Saj (Terminalia alta) & 45% of 5 Other Species are the Main Species Affected

# Biological Environment Wildlife Aspects

- · Field Observations & Group Discussions
- · 27 Mammals Recorded
- · 17 Reptiles & Amphibians Recorded
- · 62 Birds Recorded
- · 46 Butterflies & Moths Recorded
- Wildlife Habitat Losses with Project
- Will generate concern among "conservation NGOs
- NEEDS FURTHER CONSIDERATION

Biological Environment Fisheries & Aquatic Life

- 36 Species Recorded 2 Times X 6 Stations
- A few species under the conservation category

# Biological Environment Fisheries & Aquatic Life

#### MAIN IMPACTS ON FISH & AQUATIC LIFE

- · Construction Controls on River Diversion & Spoil Disposal
- Barrier Impacts of Dam Low Down in Catchment
   By Far the Most Serious Biological Impact of USSHEP
- Downstream Impact of Dewatering to Seti &Madi Rivers
- · Daily Regime Changes Downstream to Trisuli River
- · Long Distance Migrants like Mahseer Affected
- · Several Breeding & Maturation Habitats Affected
- · Fish Protection Works Required at All Intakes and Outlets
- · Reservoir of Limited Value to Fish Sediment Flushing

#### Biological Environment Mitigation for Fisheries & Aquatic Life

- FISH HATCHERY RECOMMENDED AS BEST MITIGATION OPTION
- STOCKING OF FINGERLINGS In RESERVOIR AREA & UPSTREAM ZONE
- 7 Species being Produced at Kali Gandaki A Project
- Options of Local Pond Culture to be Considered
- Possible Trial Stocking of Algal Feeding Fish in Reservoir from Begnas Hatchery BUT Issue of Introduction of Exotics Not Yet Discussed
- Cash Compensation is NOT PREFFERED for Fisheries Program Mitigation Planning
- Feasible Species & Location & Costs Needs Inputs by NEA, Consultants & JICA Expertise

#### IEE TRANSMISSION LINE

- Covers 5 VDCs Tanahu District & 1 VDC & 1 Municipality of Chitwan District
- 220 kV Double Circuit Line with 60m ROW
- Length 38.42 km & Tower Span 300 m
- · Land for Towers Total 5.2 ha of which
  - 1.8 ha of Forest Land
  - 3.4 ha of Agricultural Land
- · Land Use on ROW 193.2 ha

#### IEE TRANSMISSION LINE

- · Alternative 1 Assessed & Is Preferred as:
  - Losses of Forests are minimized as 11 km of ROW follows existing 132 kV ROW through Narayani National Protected Forest at Bharatpur Substation End
  - It minimizes number of houses (18) & structures (14) affected - A Total of 32 along ROW
  - 21.6 km of Forested Land Affectd also Wildlife Habitat
  - Erosion & Land Stability of Concern at a Few Towers
- Good location survey & IEE strong basis for NEA- ESSD full EIA to be commissioned

#### Objectives

- Review the general socio-economic and cultural situation of Tanahu district, affected VDCs and communities,
- Study the socio-economic and cultural impact due to the project activities,
- Prepare a framework of environmental management plan, and
- Develop a framework of Resettlement Plan and Social Action Plan

# Proposed Framework of Resettlement Plan

- It is based on the existing legal provisions, the JICA Guideline, and the lessons learned from the similar hydroelectric developmentprojects.
- Land acquisition and involuntary resettlement shall be avoided where feasible or minimized through the incorporation of social consideration into project design options.
- Where population displacement is unavoidable, individuals, households and community losing their assets, livelihood and other resources shall be informed and consulted.

# Proposed Framework of Resettlement Plan

- Affected persons (APs) shall be compensated at replacement rates for all losses and damaged assets.
- APs shall be fully compensated and resettled before their houses and demolished and their land and facilities are required.
- A resettlement plan shall be prepared, consulted with APs and implemented in advance of the implementation of the project.

12

#### Proposed Social Action Plan

- It is designed to mitigate adverse impacts on the communities particularly in affected 7 VDCs and Vyas municipality.
- Social programs will be formulated through consultation with local stakeholders including affected community people at the next stakeholder meeting which is to be scheduled in April –May 2007.
- Proposed social programs may include restoration of affected infrastructure, skill enhancement, agricultural development, women development, rural electrification, community's initiative support and so on.
