(Source: 2002 to 2006 full year submitted by Japan Meteorological Agency)

2) Wave

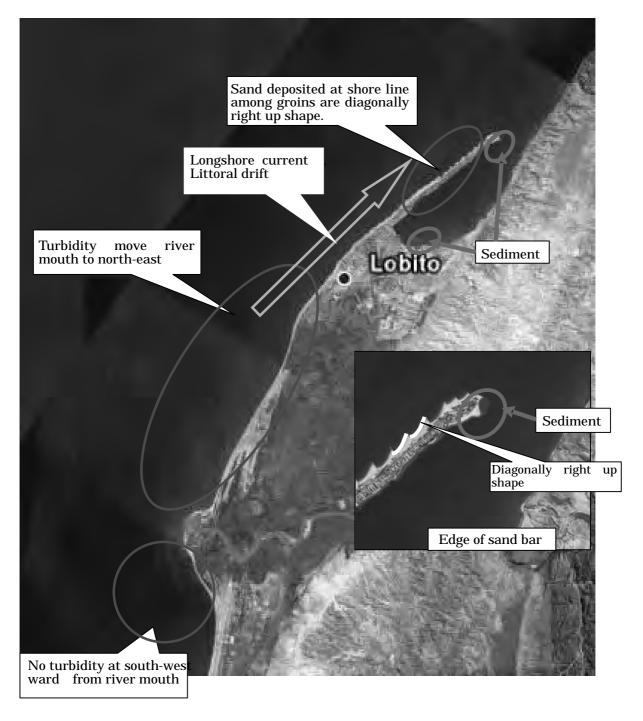

In Angolan coast, it is thought that the wave direction from south is predominant as the south wind is predominant there. It is considered that the influence of wave from east to north is extremely small judging from wind synopsis around the sea area. And, the occurrence of high wave is not considered since cyclone or hurricane is not developed in this sea area. In Port of Lobito, it is thought that port facilities such as quay wall are not affected by an external force by wave and harbor tranquility is completely kept, because the port is located inside of sand bar in length of about 5 km. In Port of Namibe, it is also thought that port facilities such as quay wall are not affected by an external force by wave and the harbor tranquility is kept, because the port is located inside of the peninsula against predominant wave from south to south-southwest.

3) Current and Topographic Change

According to wave condition mentioned above, it is thought that the current direction from south-west to north-east is predominant in Angolan coast.

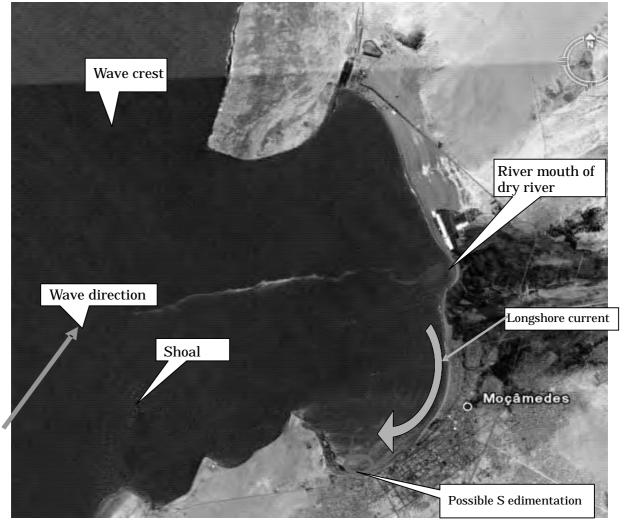

On the other hand, in Port of Lobito, there is a river mouth of the Catumbela River in south-westward from Port of Lobito, and river sediment is moved to Port of Lobito by current toward the north-east. Groins were constructed in order to prevent sand sedimentation at 5 km of sand bar in the part of Lobito Bay. According to aerial photograph shown in Figure A.4, turbidity is observed at coast from river mouth toward sand bar, while the turbidity is not observed at south-westward cost line. And, shore line among groins are going forward to offshore (diagonally right up shape) being more on the edge of sand bar (north-eastward). This situation provides evidence of north-westward current and characteristics of littoral drift as described in the above. Also, it is thought that part of littoral drift is piled up at edge of sand bar (see Figure A.4) and the part flows into the Port of Lobito, and depth at south-eastward sea area of South Quay has a tendency to be shallower.

In Port of Namibe, there is no protective facility such as breakwater, because there is a port facility in the Namibe Bay where tranquility is secured. Therefore, it is not considered any possibility of current change or sudden topographical change by construction of structures. However, circulation current directing to quay wall of the port from coast line at middle of the bay might be generated in association with wave from south to south-west (wave crest line from south south-west to south west is observed as shown in Figure A.5 of air photograph). Discharged sediment possibly flows into the bay caused by flood due to the dry river located at middle of the Namibe Bay. There is a possibility that this sediment will be deposited in front of the quay wall where is tranquility area when river sediment passes directed to coast line with circulation current.

1) Economic Status in Angola

(a) GDP growth

Civil war in Angola which had been continued for approximately 30 years was ended in April 2002. To achieve national reconciliation and rebuilding, political stabilization and economic recovery has been tried since then. Economy in Angola has shown sharp growth since 2002. Although actual GDP growth in Angola during the civil war shown only 3 % which was near to other countries in Africa, it was shown more than 10% due to rehabilitation demand and inflation of prices of natural sources in 2004. Then, it has reached nearly 20% recently.

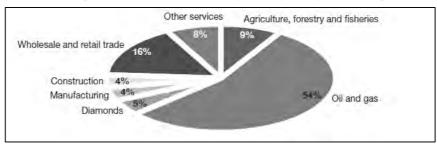

(Source: OECD, African Economic Outlook 2005-2006) (Note: Expectancy Value in 2005, Predicted Values after 2006)

Figure A-1 Real GDP Growth in Angola

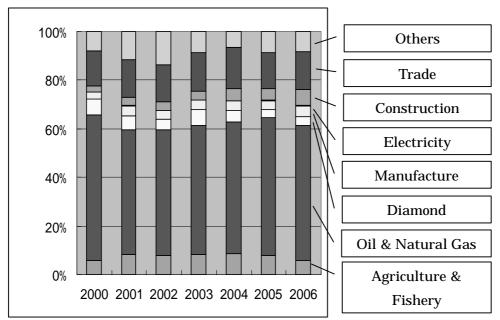

(b) Economic Status of Oil Industry

Major export items in Angola are mining sources since the period of civil war. According to the expectation by the World Bank in 2005, 99 % of exporting goods are oil and diamond which occupy 94% and 5% of them. Especially, oil has been the most important national property. They have been able to produce from the offshore oil fields that have flexible abilities of exporting and production without land infrastructures of transportation. Angola joined OPEC, Organization of Petroleum Exporting Countries, in January 2007. According to SONANGOL, Angola's National Oil Company, oil producing quantity in 2006 was recorded 1.4 million barrel per day. It will be reached 1.9 million barrel per day in 2007 and will keep 2.0 million as target production to 2012. Because 60 % of GDP is depended on the oil production, economy in Angola is growing by its oil production.

(Source: OECD, African Economic Outlook 2005-2006)

Figure A-2 Constituent Ratio of GDP in Angola, 2004

(Source: UNDP)

Figure A-3 Secular Change of Constituent Ratio of GDP in Angola

Concerning the global oil production, developing new oil field is the key issues against the unclear expectation of oil production in existing major oil producing countries located at Middle East where the politics and societies are not stable. Under above mentioned issues, international capitals have invested into oil business in Angola.

Table A-1 Growth of Direct Investment by Foreign Capital (million US Dollar)

Year	1980	1990	2000	2004	2005
Amount	61	1,025	7,977	13,437	13,413

(Source: UNCTAD)

(c) Building Sector

Only 4 % of GDP is caused by building sector in Angola, it has been developed sharply. For example, 2.5 billion Kz in 2000 became 122.7 billion Kz in 2005 and it has reached 224.3 billion Kz in 2006. Such drastic development of the sector is based on increasing of GDP by oil production and facility investment by international capitals. Development of building sector especially in Luanda should be continued according to the country report of Economist Intelligence Unit issued on June, 2007. Meanwhile, such drastic facility investment of building sector leads to the expansion of building material demand in short term, even the material supply capability is very limited. Complicated logistic of material supply causes not only the shortage of building material supply in market but also the inflation of unit price of them.

2) Study of Prospecting Model for Building Cost Inflation

(a) Consistency of Prospecting Model

The model prospects inflation ratio of building material with liner regression method concerning the elements which effect to the project costs. Collectable parameters are installed to the model concerning the status of society and economy. The model in Angola should be concerned following domestic circumstances. Firstly, the effect by oil production to economy is quite

significant. Then, the benefit and investment of oil industry do not moisten to ordinal people life in Angola. Regarding the contents of Human Development Report in 2005 issued by UNDP, HDI, Human Development Index, in Angola is 0.445 that is 166th rank in 177 countries. Also Gini's coefficient is resulted as 0.5 to 0.6 because most (68%) of ordinal people are categorized as poverty group.

(b) Detailed Study of Parameters

(i) Detailed Study of Economic Figures

According to the field survey results, economic figures in Angola are studied by Economic Unit of UNDP. Official statistic of the figures is not published by the Government of Angola, presently. UNDP is beginning the technical assistance to their statistic capability development. Although other international organizations including the World Bank publish some economic figures in their reports, figures by UNDP seem to be most fulfilled. Figures prepared by UNDP do not include monthly and quarterly data, however, provide annual data. The model does not include CPI, Consumer Price Index. Because logical study of macro economy in Angola concerning the CPI is quite difficult due to the serious differences between significant development of oil industry and life level of ordinal people.

(ii) Unit Price of Building Items

There are no official indexes of building items in Angola and UNDP does not collect economic information for them. It is difficult to find them in web site, as well. Unit costs of building items collected by field survey of the Basic Design Study are described in Table A-2. Labor cost is not concerned to the model because changing of labor cost does not effect significantly to the project cost. Actually, machinery construction is adopted for the major concreting works method in this project which does not need a lot of man power in the field.

Table A-2 Unit Prices of Building Items

Month and Year	Cement (US\$/m³)	Aggregate (US\$/ton)	Backhoe (Excavator) (US\$/day for hire)	Truck (US\$/ day for hire)
December, 2000	230	19		
August, 2004	280	30	850	580
August, 2006	330	75	1200	870
February, 2007	350	80	1200	900
August, 2007	380	80	1200	1000

Because these data are only spotted figures in Table A-2, temporal sequence analysis is calculated to determine the alignment of time series to other unit prices. Results of above analysis are listed below. "M" in the following formulas is numbers of months since January 2000.

Cement = $\exp (5.343+0.006M)$, correlation coefficient = 0.957

Aggregate = $\exp (2.599 + 0.020M)$, correlation coefficient = 0.903

Backhoe = $\exp(6.189+0.010M)$, correlation coefficient = 0.855

Truck = $\exp(5.651+0.013M)$, correlation coefficient = 0.905

(Note: "exp" means index function.)

According to above-mentioned formulas, each index calculated from the year of 2000 as 100 is described in Table A-3. Price of commodities in building sector is calculated as weighted averages of cement, aggregate, back hoe and truck. Individual weights of each item are 0.2, 0.6, 0.1 and 0.1 for cement, aggregate, backhoe and truck, respectively. These figures are found out the consist percentage of project cost estimation result in the Basic Design Study.

Price of **Backhoe** Truck Cement Aggregate (Excavator) Commodities (US\$/ day for Year $(US\$/m^3)$ (US\$/ton) (US\$/day for in Building hire) hire) Sector 2000 225 (100) 17 (100) 550 (100.0) 333 (100) 100 2001 242 (107) 22 (127) 620 (113) 389 (117) 121 2002 260 (115) 699 (127) 454 (137) 146 28 (162) 2003 279 (124) 35 (205) 789 (143) 531 (160) 178 2004 218 300 (133) 45 (261) 888 (162) 621 (187) 1001 (182) 2005 322 (143) 57 (332) 726 (218) 268 2006 346 (154) 848 (255) 330 72 (422) 1129 (205)

Table A-3 Price of Commodities in Building Sector

(Note: Indication shown in () is based on the figure in 2000 as 100.)

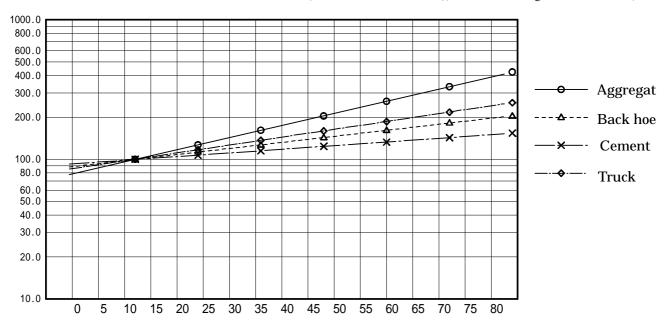

Figure A-4 Prospect of Unit Prices of Building Items

(c) Composition of Prospecting Model

Following hypothesis is concerned as the composition of macro economy in Angola. Firstly, increasing of oil production makes growth of GDP. Secondly, growth of GDP causes investment of new facilities. Finally, investment of new facilities will develop the building sector. Effects of oil production to domestic economy was tried to be explained with the figure of GDP deflator which indicate the movement of prices of commodities in whole economy included oil production,

consumption, facility investment and public investment. CPI, Consumer Price Index, concerns only goods and services purchased by consumers. Meanwhile, GDP deflator concerns not only consumption but also prices of commodities of government and companies. Therefore, GDP deflator is superior to indicate the movement of commodity's prices in whole economy. Composition of prospecting model is described in Figure A-5

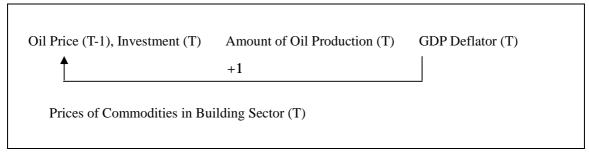

Figure A-5 Composition of Prospecting Model

"T" means time (year). "T-1" means one year before and "T+1" means one year after. "Investment" means sum of public and private investments. Some indexes of parameters utilized for formulation of prospecting model are described in Table A-4.

Year	Oil Price 1 year ago (US Dollar / barrel)	Investment (million US Dollar)	Oil Production (million US Dollar)	GDP Deflator	Prices of Commodities in Building Sector
2000	17.4	1,374.4	6,940.3	91.7	100
2001	27.1	1,411.5	5,793.0	94.6	121
2002	22.7	1,686.8	7,537.7	108.8	146
2003	24.2	2,083.2	8,528.8	112.2	178
2004	28.2	1,918.6	12,621.5	124.8	218
2005	36.9	2,246.7	22,511.5	150.5	268
2006	50.6	7,469.7	30,262.4	179.9	330
2007	56.0	8,166.9	36,230.0	234.2	-

Table A-4 Parameters for Prospecting Model (Statistic Value)

(Source: UNDP, Angola Macroeconomic Framework, June 2007, except prices of commodities in building sector)

(d) Prospecting Model Formula

Temporal sequence analysis with indexes in Table A-4 is calculated to determine the following prospecting formulas. Because each correlation coefficient with modified freedom degree indicates near 1.0, which shows high realities.

- (i) Amount of Oil Production = -9729.029 + 761.9156 x Oil Price (one year ago) + 0.247194
 x Investment
 correlation coefficient with modified freedom degree = 0.8483
- (ii) GDP Deflator = 78.09604 + 0.003353 × Amount of Oil Production correlation coefficient with modified freedom degree = 0.962
- (iii) Prices of Commodities in Building Sector = -4.60960 + 1.245289 x Prices of Commodities in Building Sector (one year ago)+0.006244 x GDP Deflator

correlation coefficient with modified freedom degree = 0.999

(e) Calculation of Inflation in 2008 and 2009

According to above-mentioned formulas, each inflation ratio of prices of commodities in building sector calculated in the year of 2008 and 2009 is described in Table A-5. Investments after 2008 are the same as 2007 and oil prices after 2008 are set as 50 US\$/barrel following the report of "Angola Country Economic Memorandum in October, 2006" issued by the World Bank.

Table A-5 Calculation Results of Inflation of Prices of Commodities in Building Sector (Prospecting)

Year	Oil Price 1 year ago (US Dollar / barrel)	Investment (million US Dollar)	Oil Production (million US Dollar)	GDP Deflator	Prices of Commodities in Building Sector	Inflation Ratio of Prices of Commodities in Building Sector (%)
2000	17.4	1,374.4	3,868	91.1	100.0	
2001	27.1	1,411.5	11,268	115.9	120.6	20.6
2002	22.7	1,686.8	7,983	104.9	146.3	21.3
2003	24.2	2,083.2	9,234	109.0	178.2	21.8
2004	28.2	1,918.6	12,231	119.1	218.1	22.4
2005	36.9	2,246.7	18,941	141.6	267.9	22.8
2006	50.6	7,469.7	30,670	180.9	330.1	23.2
2007	56.0	8,166.9	34,957	195.3	407.6	23.5
2008	50.0	8,166.9	30,386	180.0	504.2	23.7
2009	50.0	8,166.9	30,386	180.0	624.3	23.8

MINISTÉRIO DOS TRANSPORTES

INSTITUTO MARÍTIMO E PORTUÁRIO DE ANGOLA

DECLARAÇÃO

Na qualidade de Director do Instituto Marítimo Portuário de Angola, declaro para os devidos efeitos que a República de Angola através dos organismos competentes do Estado, não fez até a presente data no âmbito da Cooperação Bilateral com outros Estados qualquer solicitação semelhante a elaboração do Estudo para o Programa de Reabilitação Urgente dos Portos da República de Angola, que está a ser desenvolvido pela Agencia Internacional de Cooperação do Japão (JICA) para a reabilitação dos portos de Cabinda, Luanda, Lobito e Namibe.

Por ser verdade e me ter sido solicitado, mandei passar a presente declaração que vai por mim assinada e autenticada com o carimbo a óleo em uso neste Instituto.

Instituto Marítimo e Portuário em Luanda, aos 09 de Março de 2007.

Projecto: Estudo de Desenho Básico para Reabilitação Urgente dos Portos de Angola

Assunto: Pronunciamento sobre Avaliação de Impacte Ambiental

Antes de mais os nossos melhores cumprimentos.

Por esta via e em resposta a vossa s cartas, sendo a ultima de 15 de Maio de 2007, em que solicitais nossas considerações sobre Avaliação de Impacte Ambiental, no âmbito do Projecto para Reabilitação Urgente dos Portos de Angola, cabe-nos fazer o seguinte pronunciamento:

- 1. Com base no instrumento legal que rege a matéria em causa, ou seja ao abrigo do DIÀRIO DA REPUBLICA, sexta feira, 23 de Julho de 2004, 1º Série n 59, tendo em conta o Decreto n. 51 04, considerando o seu artigo 4º e analisando o número 1 e as alíneas d) e j) do número 6 dos anexos do mesmo artigo, pode-se constatar o seguinte:
 - a. Do número 1 do artigo 4º e da alínea d) do número 6 dos anexos do mesmo artigo, depreende-se:

Estão contemplados os portos em geral, mais os terminais de minérios, terminais de petróleo e terminais de produtos químicos, pelo que para o plano de curto prazo, uma vez que estão previstas, segundo propostas do plano de desenvolvimento, construções novas, incluindo aterros e prolongamentos de áreas de actividades portuárias, é obrigatório o estudo de impacte ambiental.

b. Da alínea j) do número 6 dos anexos do artigo 4º entende-se:

Pelo facto de no desenho básico, estarem previstas só intervenções de reparação (reconstrução de obras já existentes), ficam excluídas das exigências da lei em referência, quanto ao estudo de impacte ambiental.

2. Relativamente á avaliação do impacte ambiental apresentado, no âmbito do estudo, não encontram qualquer contrariedade. Para além da analise por nos feita, consideramos

a particularidade de o mesmo ter sido feito com os devidos apoios, dos portos do Lobito e do Namibe, tal como do IMPA e com frequentes trocas de impressões, entre a equipa japonesa responsável pelo estudo do mesmo e as instituições angolanas supracitadas. De momento não dispomos de qualquer outra informação sobre o assunto em questão. Sendo tudo de momento, queiram aceitar os nossos respeitosos cumprimentos. LUANDA, 21 DE MAIO DE 2007 FILOMENO H. C. M. SILV Director Geral do IMPA

OFICIO N.047/GDG/EP/2007

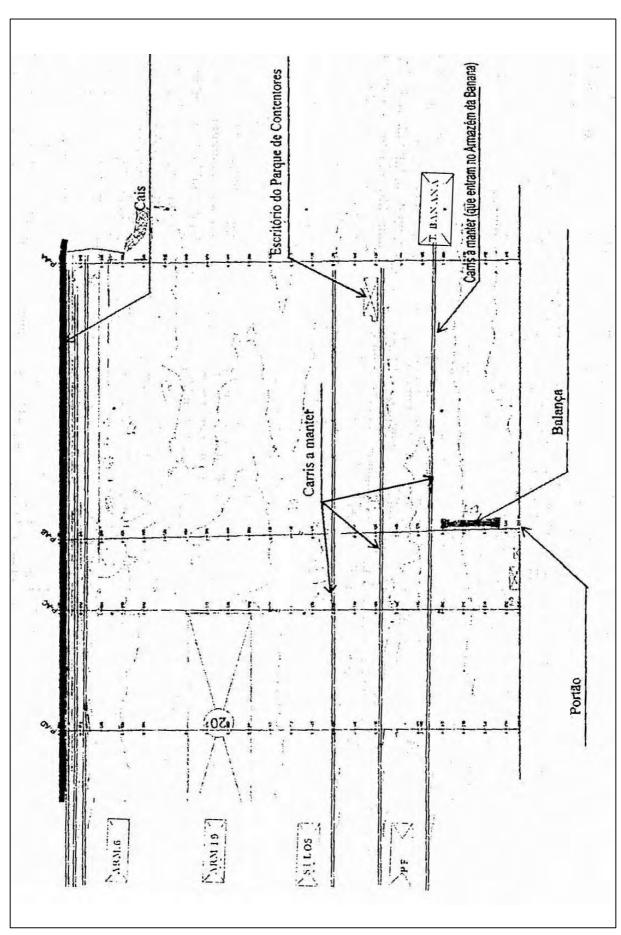

Excias, queiram antes de tudo aceitar as nossas cordiais saudações.

A E.P.L. Está ciente de que o Relatório do Estudo de Desenvolvimento recomendou que o transporte da carga passe gradualmente a ser realizado com camiões.

Porém, após o estudo acima referido, foram feitos novos argumentos sobre a futura gestão/operação do Porto e como resultado, foi constatado que a frequência do manuseio de carga com a utilização das gruas de cais e do transporte por comboios não se reduziria num futuro próximo.

Assim sendo, a E.P.L. solicita a manutenção dos carris de gruas e uma parte dos carris de comboios, quando da intervenção de reparação do cais e do parque, no âmbito do presente Projecto de reabilitação urgente.

Sua referência ASSUNTO: Sua Comunicação

Nossa referência Caixa Postal 16 - LOBITO

OFICIO N.054/GDG/EP/2007

Antes de tudo, as nossas cordiais saudações e votos de óptima saúde.

Servimo-nos do presente pata transmittr à V.Excias que a Empresa Portuária do Lobito compreende que, ao manter os carris, a estrutura de betão conterá os carris de ferro como partes componentes da mesma, o que tornará tais partes estruturalmente mais frágels, facilitando a quebra através da sobrecarga advinda dos camiões e volumes de cargas.

A E.P.L. compreende também que ao manter os carris, a estrutura de betão conterá os carris de ferro como partes componentes da mesma, o que tornará sua manutenção mais dificil do que se fosse sua superficie uniforme de betão, motivo pelo qual envidará todos os esforços para a manutenção da estrutura após a conclusão das obras.

Mesmo cientes dos deméritos estruturais acima expostos, a E.P.L. deseja a manutenção dos carris, tendo em conta os seguintes crescimentos estimativos do volume de carga que acompanhará a reabilitação dos Caminhos de Ferro de Benguela (CFB).

2008 — Crescimento do volume de carga no Porto do Lobito devido à reabilitação do C.F.B — 1.418.018 toneladas referentes ao troço Lobito à Cubal, que corresponde a 6% até a esta área.

2010 - Crescimento do volume de carga no Porto do Lobito devido à reabilitação do C.F.B- 2.160.000 toneladas referentes ao troço Lobito à Luau, que corresponde a 100% das linhas, troços e ramais até a fronteira.

OFICIO N.186/GDG/EP/2007

ASSUNTO:

Antes de tudo, os nossos respeitosos cumprimentos e voros de óptima saúde para vós e família.

Relativamente aos dados em falta, temos a transmitir o sequinte:

- 1- O Porto do Lobito solicita a JICA que a sua reabilitação urgente inclua os carris de comboio que se situam de baixo e ao lado dos carris da linha de guindastes.
- 2- Estes carris sempre serviram de contacto com a triagem onde chegam e saíam os comboios do CFB que trazem vagões para o Porto.
- 3- Actualmente estas linhas são usadas com frequência transportando mercadorias em vagões para os armazéns que se encontram fora do Porto assim como vagões que levam contentores para Benguela.

Como disse no parágrafo anterior, as locomotivas do Porto (5). Levam e trazem as composições (vagões) do/para recinto Portuário até à triagem onde as locomotivas do CFB que não podem entrar no recinto Portuário recebem estas mesmus composições (vagões)e as levam para os armazéns fora do Porto ou Benquela.

4- A relação entre estes carris com os do CFB é histórico. Quando iniciou a construção do CFB, os comboios que apoiaram a mesma sempre partiram do Porto, pois sem o Porto não seria possível a construção do CFB. Desta feita, com a reabilitação do CFB até a

fronteira com a República Democrática do Congo e Zâmbia, a sua utilização será ainda maior.

5- A importância dos carris que se ligam ao CFB é muito grande pois sem eles não é possível retirar determinadas mercadorias do recinto Portuário para as áreas que já referimos.

Sem mais de momento, despedimo-nos com imensas desculpas pelo atraso desta que certamente vos terá provocado transtornos.

Cobito aos 31 de Agosto de 2007.

OFICIO N.0195/GDG/EP/2007

Estimado Sr. Masakiyo Muraoka, Os nossos respeitosos cumprimentos.

Agradecemos antes de tudo o reparo feito. Foi um lapso porque debaixo dos carris não, mas sim debaixo dos guindastes. E assim passamos a correcção.

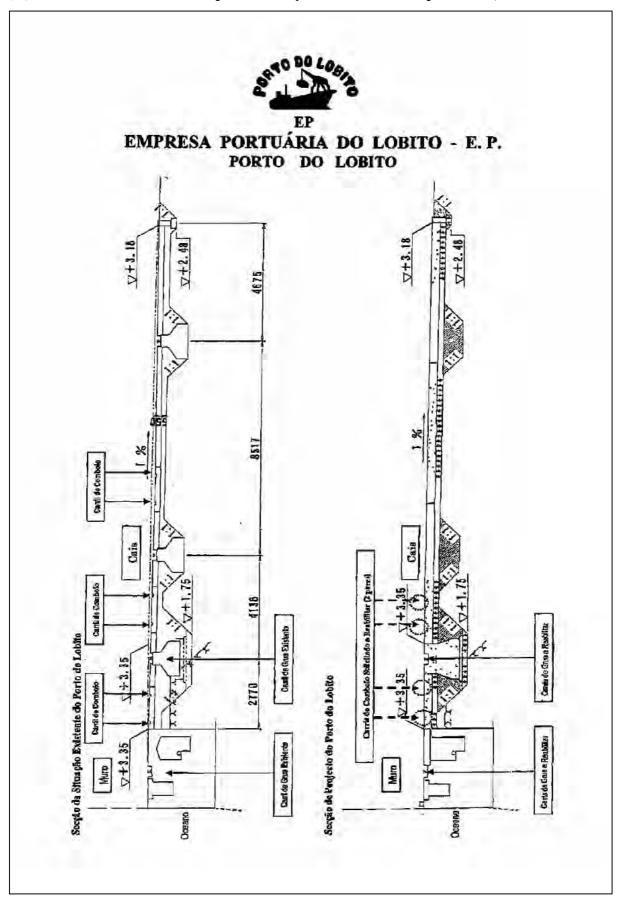

- 1- O Porto do Lobito solicita à JICA que a sua reabilitação urgente inclua os dois pares de carris que se situam respectivamente debaixo dos guindastes sobre o Cais e ao lado das linhas dos mesmos.
- Confirmamos a localização dos carris no mapa.
- a) Mesmo actualmente, os referidos carris são utilizados nos trabalhos de descarga/carga de diversas mercadorias.
 - b) Futuramente, quando for reabilitado o CFB e começarem as exportações e importações dos países vizinhos (RDC, Zâmbia, Zimbabué), a utilização destes carris ligados directamente à linha do CFB e localizados rentes ao cais, torna-se-à o meio mais eficaz para o carregamento das mercadorias.

c) Uma vês reabilitado o CFB, o Porto vai receber diariamente 6 comboios transportando minério e carga geral, o que justifica plenamente a importância destas linhas de comboio que terão uma utilidade grande.

Lobito, aos 10 de Setembro 2007. -

De V.Excia.

Sua referência ASSUNTO: Sua Comunicação

Nossa referência Caixa Postal 16 - LOBITO OFICIO N.0203/GDG/EP/2007

Caríssimo Sr. Masakiyo Muraoka,

Antes de tudo, queria transmitir que a demora da minha resposta deveu-se ao facto de me ter ausentado em Luanda em missão de serviço e só hoje lhe respondo.

Relativamente ao nosso badalado caso dos carris, tenho a transmitir que o segundo par de carris é de facto importante assim como os outros.

Tanto os carris dentro do recinto portuário como os carris do CFB são todos do Estado e a reabilitação do CFB que se estima até 2010 inclui também os 25 km de linha férrea dentro do Porto. Estes dados me foram garantidos pelo Gabinete do Plano do Mintrans a semana passada em Luanda.

Ouanto ao certificado de direito de propriedade do terreno, não temos nada porque é tudo propriedade do Estado conforme parágrafo acima.

Relativamente a manutenção de rotina, fica à cargo do Departamento de Manutenção do Porto do Lobito (DMOC) que tem um Sector de Via e Obras especializado para o efeito. Alias em Angola, o Porto do Lobito é o único que tem comboio a circular dentro do Porto graças a este sector.

Os nossos respeitosos cumprimentos.

Lobito, aos 24 de Setembro de

MURAOKA
TÓQUIO-JAPÂ

Sua referência Sua Comunicação Nossa referência Caixa Postal 16 - LOBITO ASSUNTO: FUNDAMENTOS SOBRE OS CARRIS DE COMBOIO NO RECINTO DO PORTO DO LOBITO

OFICIO N.0203/GDG/EP/2007

As linhas de comboio dentro do recinto portuário (25Km) sempre jogaram um papel importantíssimo no manuseamento das cargas tanto para o interior do país (Huambo, Bié e Moxico) assim como para os países vizinhos (República-Democrática do Congo, Zâmbia e Zimbabué). O movimento de cargas através do CFB foi enfraquecido com a guerra que durou muitos anos, passando a efectuar-se apenas até Benguela cidade e arredores do Porto precisamente aos armazéns.

1- <u>SITUAÇÃO OPERACIONAL CORRENTE DO</u> <u>CAMINHO DE FERRO DE BENGUELA.</u>

Actualmente o CFB opera apenas até 150Km a partir da triagem do Porto do Lobito até Cubal. O transporte de mercadorias efectua-se a menor escala pois a linha não suporta grandes composições até Cubal, limitando-se a transportar cargas simples.

O transporte de carga pesada (contentores e sacarias) efectua-se apenas para os armazéns do Lobito e cidade de Benquela.

Durante o ano de 2006 foram movimentados através do ramal ferroviário do Porto <u>878</u> vagões de carga diversa para os arredores do Lobito e Benguela e durante o primeiro semestre deste ano foram movimentados 261 vagões.

Com a reabilitação do CFB até a fronteira com a RDC, a sua utilização será ainda maior.

2) <u>PROGRESSO DO PROJECTO DE REABILITAÇÃO</u> DO CFB

A reabilitação do CFB até o momento foi feita a menor escala

pelo próprio CFB até Cubal não suportando grandes pesos.

O início da reabilitação como tal está para breve e será levada a cabo por uma empresa Chinesa que até agora já tem estaleiros ao longo da linha. Segundo o Ministério dos Transportes, a reabilitação do CFB inclui os 25Km dentro do recinto portuário pois a actividade do CFB começa exactamente dentro do Porto. A data concreta do início da reabilitação do CFB não se conhece pois está a cargo do Gabinete de Reconstrução Nacional.

3) <u>PLANO OPERACIONALFUTURO DO CAMINHO DE</u> <u>FERRO DE BENGUELA, INCLUINDO DADOS</u> <u>SOBRE AS CONDIÇÕES FINANCEIRAS DO CFB</u>

a reabilitação do caminho de ferro de Benguela cujo inicio está para breve, é uma empreitada sob controlo do Gabinete de Reconstrução Nacional adstrito à Casa Civil da Presidência da República.Os projectos coordenados pelo GRN não são do domínio público tanto mais que até a própria Direcção do CFB não tem cópia deste projecto, Tornando-se dificil para nós o fornecimento de dados a este respeito

4) Relativamente ao plano de reabilitação do posto nº6 do Porto do Lobito danificado pelo Navio Royal Sucess de Nacionalidade Panamenha por volta das 16horas do dia 15 de Junho último, temos a informar que o mesmo ainda não está definido pois o processo encontra-se em tribunal devido as desavenças registadas desde o princípio entre o Porto e o P&I, essencialmente por causa dos valores inferiores que este apresentava ao Porto sem uma avaliação de peritos em construções portuárias, depois de removidos os escombros.

Neste momento o nosso Advogado está a trabalhar para uma adjudicação directa da Empreitada dado o tempo que já se perdeu.

N.B.: Os dados estatísticos relacionados com o CFB vamos tentar envia-los dia 24 pois o Director Geral desta Empresa encontra-se ausente já faz alguns dias atrás.

Com os melhores cumprimentos.

Sua referência Sua Comunicação Nossa referência Caixa Postal 16 - LOBITO ASSUNTO:

OFICIO N.0230/GDG/EP/2007

Antes de tudo, os nossos respeitosos cumprimentos. Exclas, fazendo alusão ao nosso Oficio nº203/G.D.G/EP/2007 de 22 de Outubro corrente nos seus pontos 3 e 4, ternos a transmitir o seguinte:

3- Até a presente data, os dirigentes do CFB com poderes para ceder possíveis planos financeiros relacionados com a reabilitação do CFB, alnda não chegaram. A informação que podemos transmitir é de que uma vez reabilitado o CF3 na totalidade, o Porto poderá receber 6 comboios diários com 30 vagões de 20 toneladas de minério cada e, aproximadamente 2 à 3 comboios diários de carga geral numa primeira fase.

4- Quanto a reabilitação do posto nº6 danificado pelo Navio Royal Success em Junho último, a previsão da duração da empreitada está para 6 a 8 meses e tudo se está a fazer para uma adjudicação rápida da empreitada, de formas a não comprometer o programa da JICA.

Lobito, aos 24 de Outubro de 07.

DECLARAÇÃO

44444

Vimos pela presente declarar ao Senhor MASAKIYO MURAOKA -Engenheiro Civil da ECOH Corporation que é intenção da Empresa Portuária do Namibe manter as linhas férreas das gruas e dos comboios que se encontram próximo do paredão do Cais.

Outrossim, certificamos que deve-se retirar a linha férrea que se encontra próximo do armazém.

GABINETE DE REABILITAÇÃO DO PORTO DO NAMIBE, aos 02 de Março de 2007.

Mr. MASAKIYO MURAOKA
"ECOH CORPORATION"

TOKYO 110-0014, JAPÃO

Estimado Senhor.

Os nossos melhores cumprimentos.

Por este meio, a Autoridade da Empresa Portuária do Namibe/Angola vem mais uma vez reconfirmar a intenção de manter as linhas fêrreas das gruas, bem como a 1.ª e 2.ª linha do comboio que se encontram próximo do paredão do Caís e ao mesmo tempo opina a retirada da linha fêrrea perto dos armazéns.

Fundamenta – se esta opinião o facto de interconexão entre o Porto e o Caminho de Ferro, que se prevê útil num espaço de tempo não determinado do desenvolvimento económico – social do País-

Com Consideração e Estima, Fraternais Saudações.

Mr. Masakiyo MURAOKA "ECOH - Corporation"

JAPAN

Estimado Senhor.

Os nossos melhores cumprimentos.

No quadro da reabilitação urgente da Zona 3 do caís do Porto Comercial do Namibe, e sobre a manutenção dos carris, a Autoridade do Porto tem a expor o seguinte:

- 1. O actual nível de desenvolvimento económico social do País aconselha a manutenção de algumas linhas férreas no Recinto Portuário, sobretudo as linhas ao longo do caís, isto tendo em conta a estrutura inter_modal dos transportes, existente e que se pensa não sofrer mudanças profundas em menos de 10 anos;
- 2. Além dessa real necessidade de manter as linhas férreas no recinto portuário, informa-se também que a sua desactivação obedece a um plano infra – estrutural de nível nacional, ou seja, a ser elaborado e orientado pelo Ministério dos Transportes;
- 3. Por tudo isso e mais razõeo óbviac, a situação aconselha que se mantenha a linha férrea no Recinto Portuário até se verificar

RUA PEDRO BENJE 10 CAIXA POSTAL 49 NAMIBE- REPÚBLICA DE ANGOLA TELEF: 61921/62008

60190/61607

FAX: 50050

transformações mais profundas no sistema inter - modal dos transportes no País.

- 4. Porém, a E.P. compreende que, ao manter os carris, a estrutura de betão conterá os carris de ferro como partes componentes da mesma, o que tornará tais partes estruturalmente mais frágeis, facilitando a quebra da sobrecarga advinda dos camiões e volumes de cargas. A E.P. compreende que, ao manter os carris, a estrutura de betão conterá os carris de ferro como partes componentes da mesma, o que tornará a sua manutenção mais difícil do que se fosse superfície uniforme de betão, motivo pelo qual envidará todos os esforços para a manutenção da estrutura após a conclusão das obras. Mesmo ciente dos deméritos estruturais acima expostos, a E.P. deseja a manutenção dos carris, tendo em conta os seguintes crescimentos estimativos do volume de carga a manusear, acompanhando a reabilitação dos Caminhos de Ferro de Mocamedes (CFM):
 - a) Crescimento do volume de carga no Porto do Namibe devido à reabilitação do CFM: 457.158 toneladas, em 2008 para 502.873 em 2009 (troco Namibe _ Matala, correspondente a 77%).
 - b) Crescimento do volume de carga no Porto do Namibe devido à reabilitação do CFM: 502.873 toneladas, em 2009 para 603.450 toneladas em 2010 (troço Matala _Menongue, correspondente a 100% da linha férrea).
 - c) É de informar também que o Porto do Namibe é terminal do chamado "Corredor do Namibe" ou seja, um sistema inter_modal, com ligação férrea à República da Namibia, pela sua fronteira norte, facto que vai avolumar as cargas nesse Porto.

Com Consideração e Estima, Fraternais Saudações.
