ANNEX-3-1 04 Raape Dss Baseline

Officer on Duty (OOD)

Bundesministerium
für Bildung
und Forschung

- Disaster management decision maker
 - monitor and assess the situation
 - initiate and supervise the situation awareness process
 - decide autonomously or with support from the EWMS when and how to trigger what actions (e.g. issue a warning)
 - with regard to tsunami threats within the area of responsibility
- Not included:
 - in-depth evaluation and analysis of incoming sensor information (this is covered by the sensor system expert roles)
- But:
 - OOD is free to visualize incoming sensor information if the OOD assumes this to be helpful to improve situation awareness
 - (e.g. sea level diagrams)

ANNEX-3-1 04 Raape Dss Baseline

Forecast Segments

Bundesministerium für Bildung und Forschung

```

graph TD
    A[Simulation System Results  
ETA  
Wave Height  
Accuracy] --> B[for each forecast segment and  
sensor location:  
generate tsunami forecast (ETA,  
Waveheight...)]
    B --> C[aggregate ETA & wave heights  
for each warning segment]
    C --> D[map information to warning  
levels and warning products]
    D --> E[calculate remaining time  
budget]
    E --> F[propose decision]
    F --> G{Decide}
    G --> H[Initiate dissemination]
            
```

- A **Forecast Segment** is a well-defined segment of the shoreline which is treated as homogeneous unit by the EWMS with respect to the **Tsunami forecast process**.
- Each Forecast Segment contains **Forecast Points** where parameters are calculated
 - Estimated Time of Arrival (ETA)
 - Estimated Wave Height (EWH)
 - ...
- A **Forecast Segment** is considered to have more or less **homogeneous** properties regarding tsunami arrival patterns, vulnerability structures, etc., but should also consider administrative boundaries.
- Once defined, Forecast Segments are considered static but might be modified, split up or aggregated to different administrative *Warning Segments* (see next slide).

levels and warning products]
    D --> E[calculate remaining time  
budget]
    E --> F[propose decision]
    F --> G{Decide}
    G --> H[Initiate dissemination]
            
```

- A **Warning Segment** is a well-defined segment of the shoreline which is treated as homogeneous unit by the EWMS with respect to the **Tsunami warning process**.
- A **Warning Segment** is defined according to administrative boundaries.
- A **Warning Segment** is used as smallest warnable unit for which tsunami threat information is aggregated and to which crisis products may be addressed.

ANNEX-3-1 04 Raape Dss Baseline

Administrative Level of Warning Segments

Bundesministerium
für Bildung
und Forschung

How should Warning Segments be defined?

Proposal: considered on administrative levels

- Propinsi (Province) 14
- Kabupaten (County / Regency) approx. 90
- Kecamatan (Subdistrict) approx. 500

Deutsches Zentrum
für Luft- und Raumfahrt e.V.
in der Helmholtz-Gemeinschaft

Japanese German Coordination Meeting on IOTEWS 12th-13th March 2007

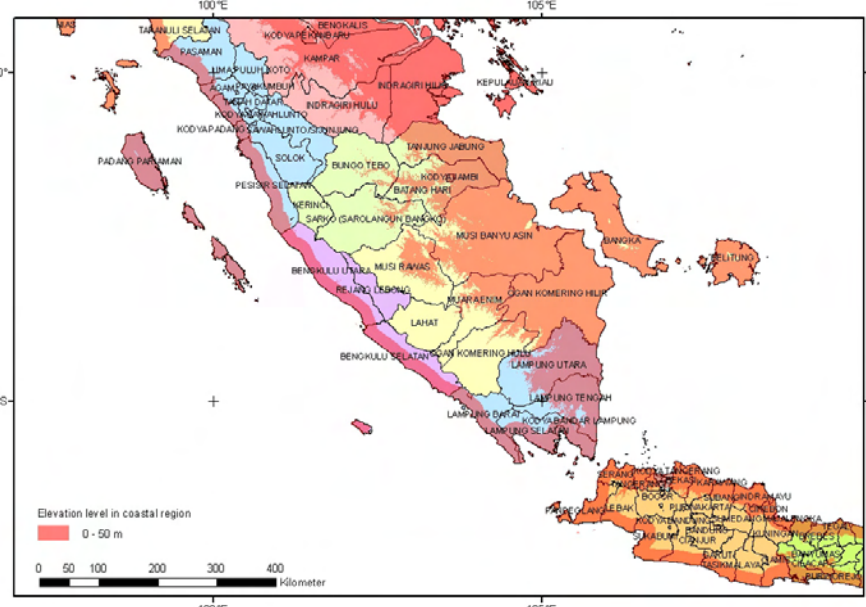

9

Warning Segments on Kabupaten Level

Bundesministerium
für Bildung
und Forschung

Elevation level in coastal region

- 0 - 50 m
- 50 - 100 m
- 100 - 200 m
- 200 - 300 m
- 300 - 400 m
- 400 - 500 m
- 500 - 1000 m
- 1000 - 2000 m
- 2000 - 5000 m
- 5000 - 10000 m
- 10000 - 20000 m

für Luft- und Raumfahrt e.V.
in der Helmholtz-Gemeinschaft

Japanese German Coordination Meeting on IOTEWS

12th-13th March 2007

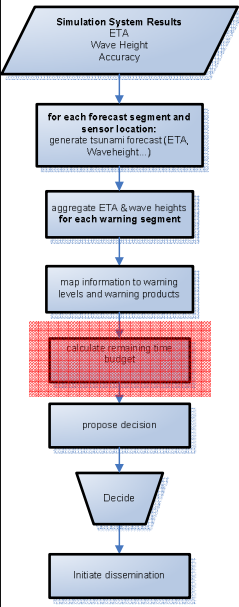

13

Additional Decision Support Information

Bundesministerium
für Bildung
und Forschung

```

graph TD
    A[Simulation System Results  
ETA  
Wave Height  
Accuracy] --> B[for each forecast segment and  
sensor location:  
generate tsunami forecast(ETA,  
Waveheight...)]
    B --> C[aggregate ETA & wave heights  
for each warning segment]
    C --> D[map information to warning  
levels and warning products]
    D --> E[calculate remaining time  
budget]
    E --> F[propose decision]
    F --> G[Decide]
    G --> H[Initiate dissemination]
    
```

- Calculate remaining time budget
- Supports the decision if there is time to wait for next sensor events before the 5-minute-deadline
- This step may include other calculations that may support the decision maker

Deutsches Zentrum
für Luft- und Raumfahrt e.V.
in der Helmholtz-Gemeinschaft

Japanese German Coordination Meeting on IOTEWS

12th-13th March 2007

14

ANNEX-3-1 04 Raape Dss Baseline

Generate Decision Proposals

Bundesministerium
für Bildung
und Forschung

```

graph TD
    A[Simulation System Results  
ETA  
Wave Height  
Accuracy] --> B[for each forecast segment and  
sensor location:  
generate tsunami forecast(ETA,  
Waveheight...)]
    B --> C[aggregate ETA & wave heights  
for each warning segment]
    C --> D[map information to warning  
levels and warning products]
    D --> E[calculate remaining time  
budget]
    E --> F[propose decision]
    F --> G[Decide]
    G --> H[Initiate dissemination]
    
```

- The EWMS DSS will generate decision proposals to the Officer on Duty (OOD)
- Decisions may include
 - Activation/deactivation of sensors
 - The dissemination of specific warning products to specific warning segments
 - All at once, step-by-step, ... (not decided yet)
 - The proposal to wait for next sensor events that will help to improve situational awareness (in case of sufficient time budget)
 - ...

für Luft- und Raumfahrt e.V.
in der Helmholtz-Gemeinschaft

Japanese German Coordination Meeting on IOTEWS

12th-13th March 2007

15

Officer on Duty decides

Bundesministerium
für Bildung
und Forschung

```

graph TD
    A[Simulation System Results  
ETA  
Wave Height  
Accuracy] --> B[for each forecast segment and  
sensor location:  
generate tsunami forecast(ETA,  
Waveheight...)]
    B --> C[aggregate ETA & wave heights  
for each warning segment]
    C --> D[map information to warning  
levels and warning products]
    D --> E[calculate remaining time  
budget]
    E --> F[propose decision]
    F --> G[Decide]
    G --> H[Initiate dissemination]
    
```

- The decision proposals generated by the DSS are presented appropriately to the OOD
- The OOD decides on what to do

Deutsches Zentrum
für Luft- und Raumfahrt e.V.
in der Helmholtz-Gemeinschaft

Japanese German Coordination Meeting on IOTEWS

12th-13th March 2007

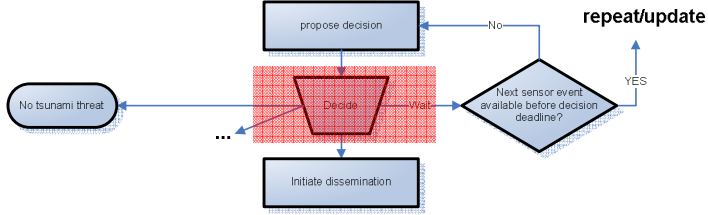

16

ANNEX-3-1 04 Raape Dss Baseline

Decide

- The OOD decides mainly
 - To initiate (or update) the warning process
 - To de-escalate (no tsunami threat)
 - To wait for next sensor events
- The DSS will support the OOD
 - to stay within available time budgets (remainder of upcoming decision deadlines)
 - In activation/deactivation of sensors
 - the dissemination of specific warning products to specific warning segments
 - ...

in der Helmholtz-Gemeinschaft

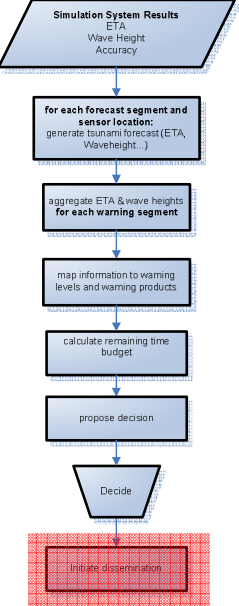

Japanese German Coordination Meeting on IOTEWS 12th-13th March 2007

23

Open Standards for Spatial Data

Bundesministerium für Bildung und Forschung

- State-of-the-art: Open Geospatial Consortium (OGC)
- “Static” Services
 - Web Map Service – request map (i.e. image)
 - Web Coverage Service – request binary gridded or aggregated data
 - Web Feature Service – request feature data
 - ...
- Sensor Web Enablement Framework
 - Schemas
 - SensorML – models and schema for describing sensor characteristics (geolocation, response)
 - Observation & Measurement – models and schema for encoding sensor observations
 - Services
 - Sensor Observation Service – access sensor information (SensorML) and sensor observations (O&M)
 - Sensor Planning Service – task sensors or sensor systems
 - Web Alert Service – asynchronous notification of sensor events (tasks, observation of phenomena)
 - Sensor Registries – discovery of sensors and sensor data
