2.1 Request for Information regarding Proposal to Uganda Jinja Airfield dated 06 January 2009, by JICA Study Team

JICA Study Team for

The Feasibility Study on the Construction of A New Nile Bridge at Jinja

Office Address: Ministry of Works Kyambogo Training School Tel: +256-312-113054 Fax: +256-312-266-243

Ref. No. 025/Jan/09/685R5641 06/January/2009

The Permanent Secretary Ministry of Works & Transport P.O. Box 10 Entebbe, Uganda

Dear Sir,

RE: THE PROPOSED 2ND BRIDGE ACROSS RIVER NILE AT JINJA Request for Information regarding Proposal to Upgrade Jinja Airfield

Currently, a team of experts contracted by JICA is in the country collecting data that will serve as input into the feasibility study for the construction of the new Nile Bridge.

Specifically, this time, the study team is interested in obtaining information on the proposed upgrading of the Jinja Airfield.

The purpose of this letter is to request for an introduction to the Civil Aviation Authority who are the custodians of this information.

Mr Kazuya URANO will carry out this assignment.

Yours sincerely,

For Isamu GUNJI

Team Leader JICA Study Team

January 6, 2009

The Managing Director Civil Aviation Authority Entebbe

Dear Sir,

RE: THE PROPOSED 2ND BRIDGE ACROSS R. NILE AT JINJA RE: Information and details regarding proposal to Upgrade Jinja Airfield

As you are aware, The Government of Japan extended to the Government of Uganda a JICA Study team for the Feasibility Study on the Construction of a New Bridge at Jinja.

Civil Aviation Authority has been identified as a custodian of information that is crucial to the successful completion of the feasibility study.

The purpose of this letter therefore, is to introduce to you Mr. Kazuya URANO, a JICA expert who is interested in obtaining information on the upgrading of the Jinja Airfield.

Uganda National Roads Authority who are the technical representatives on this project will furnish you any further details.

A O'Mugisa FOR: PERMANENT SECRETARY

CC Uganda National Roads Authority

2.3 Meeting to Review Effect of the Bridge to Jinja Airfield dated 25 February 2009, by the Ministry of Works and Transport

2.4 Request for A Meeting to Discuss Jinja Airfield dated 03 March 2009, by Civil Aviation Authority

2.5 Interpretation of Aerodrome Surface Limitation for Jinja Airfield dated 05 March 2009, by JICA Study Team

JICA Study Team for The Feasibility Study on the Construction of A New Nile Bridge at Jinja

Office Address: Minintry of Works Kyambogo Training School Tel: +256-312-113054 Pax: +256-312-266-243

Ref. No. 047/Mar/09/685R5641 05/March/2009

Mr. Sam Muneeza Director Safety, Security and Economic Regulation Civil Aviation Authority

Re: The Proposed 2nd Bridge across River Nile at Jinja Interpretation of Aerodrome Surface Limitation for Jinja Airfield

It is to confirm you whether or not the Aerodrome Surface Limitation for Jinja Airfiled as attached in Appendix-1 is correct, which was prepared by JICA Study Team based on the documents in Appendix-2 provided by you on 11 December 2008. It was also given by you verbally that Jinja Airfield is classified as Non-instrument Runway.

During the topographic survey works for the Project, runway surface elevation survey was carried out to obtain the base elevation of Aerodrome Surface Limitation base on Uganda Standard Datum (USD). Elevations of runway surface are 1171.671 at the lowest and 1173.891 at the highest.

It was confirmed by the JICA Study Team that all Bridge Location Alternatives A, B and C are within the Inner Horizontal Surface as shown in Appendix-3. Taking the lowest runway surface elevation of 1171.671 with a room, aviation limitation elevation for the Project Bridge is assumed to be 1216.0 (1171.671 + 45.000 = 1216.671 → 1216.000).

It is to be confirmed by you that Bridge Type A4 with pylon top elevation of 1215.451 is accepted for Aerodrome Surface Limitation, while Bridge Type A5 is not.

Detailed discussion will be made at 10:00AM on 09 March 2009 between Civil Aviation Authority and JICA Study Team. If you have any comments on the above and attached documents, it is kindly requested you to give us prior to the scheduled meeting.

Yours sincerely,

Dr. Masaaki TATSUMI Deputy Team Leader JICA Study Team

Cc: Project Manager - UNRA (Eng. George Bwanga)

4.8 Bearing Capacity based on SPT Values

- qu = 13.1 x Design N-value,
- Cu = qu/2; and
- qall = 5.14 x Cu.

qall is evaluated using a factor of safety of 3

* Terzaghi and Peck published in1967 that the Allowable Bearing Capacity with settlement limited to approximately 25mm for cohesionless soils is read off directly from the Chart.

APPENDIX 5

NATURAL ENVIRONMENTAL STUDY

5.1 Environmental Management Costs

Environmental protection costs are of two types: (i) sub-components of bridge/approach road structures (e.g., drains, vegetation, fence and other relevant facilities), and (ii) technical support and management. Generally, the cost of direct environmental protection measure such as drains and fence construction works is included within the estimation of the direct construction cost. So, here, the cost for the later item is summarized as environmental management costs, and is usually included within the administration cost.

The environmental technical support for the project consists of following five components: (1) hiring environmental personnel, (2) local consultation, (3) training and co-ordination meeting, (4) facilitation, and (5) periodical environmental survey.

From the economical points of view, it is strongly recommended to carry out periodical onsite monitoring such as roadside air quality, noise and water quality survey not by another contracted survey company but by EMs themselves. Besides, those survey instruments manufactured recently are very portable and accurate, so that the feedback of those survey results to environmental monitoring program will be quick.

Mainly, the environmental management cost to be associated with this bridge construction project consists of following two components: i.e., (1) periodical environmental monitoring activities around the study area, and (2) the conservation activities of several endemic fishes (IUCN Endangered). Periodical environmental monitoring activities cover from water quality survey of the River Nile to the roadside noise survey. The annual cost of the proposed environmental monitoring program excluding the cost of the conservation pond, described later, would be of US\$ 116,200.00/year (see Table 3). Entire bridge construction work would take roughly 3.5 years, so it can be assumed that relevant environmental monitoring activities summarized within its environmental program will be and/or must be carried out continuously/or periodically during this period. Thus, the total cost of this environmental monitoring work would be of US\$ 406,700.00.

Table 4 summarizes the cost estimate to be required for the conversion of the ex-old river ponds into the conservation pond for several endemic fish species (IUCN Endangered). Here, it is assumed that the conservation pond can be constructed within five months, provided that the detailed design of the conservation pond is finalized. In addition, relevant monitoring activities such as periodical site inspections will be required for at least five years after the conservation pond construction is completed. The construction and relevant monitoring and follow-up work would cost US\$ 95,850.00. As a total, whole environmental cost to be associated with this bridge construction project would be of US\$ 502,550.00.

Table 3 Cost Estimates of Environmental Program for New Nile Bridge Construction Project

Item	Unit Price [US\$]	Quantity	Amount [US\$]
Hiring Environmental Staff			
Environmental Monitor	48,000.00	1 person/yr	48,000.00
Assistant EM	24,000.00	1 person/yr	24,000.00
Short-Term Consultation Services			
Contractor Crew Briefing on-site		L.S.	1,000.00
Base Technical Support and Assistance			
Periodical water quality survey	1,200.00	12 times	14,400.00
(6 pts x 10 parameters, monthly)			
Periodical groundwater quality survey	800.00	12 times	9,600,00
(4 pts x 10 parameter, monthly)	000100	12 0000	,,
Periodical air quality survey	1,100.00	12 times	13,200.00
(2 pts x 2 parameters, monthly)			
Periodical Roadside noise survey	500.00	12 times	6.000.00
(2 pts x daytime only & monthly)	2.0000		0,000.00
Total			116,200.00

Note: The construction cost of conservation pond is not included in this valuation.

Table 4 Cost Estimate of the Creation of the Conservation Pond

Item	Unit Price [US\$]	Quantity	Amount [US\$]			
Constru	ction Phase		[0.04]			
Construction Worker	70.00/month/perso	5 workers over 4 months	1,400.00			
	n					
Restoration Worker	70.00/month/perso	5 worker over 3 months	1,050.00

Figure 6 Milicia Excelsa (African Teak: Mavule)

5.8 IUCN Red List Category

According to the IUCN Red List Categorization, there are 9 categories, depending on past and current biological status of species of concern (<u>http://www.iucnredlist.org</u>). Figure 7 shows a representation of the relationships between the categories.

Figure 7 Structure of the categories

(Source: http://www.iucnredlist.org/static/categories_criteria_3_1)

More detailed descriptions of each category are attached as follows,

(1) EXTINCT (EX)

A taxon is Extinct when there is no reasonable doubt that the last individual has died. A taxon is presumed extinct when exhaustive surveys in known and/or expected habitat, at appropriate times (diurnal, seasonal, annual), and throughout its historic range have failed to record an individual. Surveys should be over a time frame appropriate to the taxon's life cycle and life form.

(2) EXTINCT IN THE WILD (EW)

A taxon is Extinct in the Wild when it is known only to survive in cultivation, in captivity or as a naturalized population (or populations) well outside the past range. A taxon is presumed Extinct in the wild when exhaustive surveys in known and/or expected habitat, at appropriate times (diurnal, seasonal, annual), and throughout its historic range have failed to record an individual. Surveys should be over a time frame appropriate to the taxon's life cycle and life form.

(3) CRITICALLY ENDANGERED (CR)

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the criteria, defined for Critically Endangered, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

(4) ENDANGERED (EN)

A taxon is endangered when the best available evidence indicates that it meets any of the criteria, defined for Endangered, and it is therefore considered to be facing a very high risk of extinction in the wild.

(5) VULNERABLE (VU)

A taxon is Vulnerable when the best available evidence indicates that it meets any of the criteria, defined for Vulnerable, and it is therefore considered to be facing a high risk of extinction in the wild.

(6) NEAR THREATENED (NT)

A taxon is Near Threatened when it has been evaluated against the criteria but does not qualify for Critically Endangered, Endangered or Vulnerable now, but is close to qualifying for or is likely to qualify for a threatened category in the near future.

(7) LEAST CONCERN (LC)

A taxon is Least Concern when it has been evaluated against the criteria and does not qualify for Critically Endangered, Endangered, Vulnerable or Near Threatened. Widespread and abundant taxa are included in this category.

(8) DATA DEFICIENT (DD)

A taxon is Data Deficient when there is inadequate information to make a direct, or indirect, assessment of its risk of extinction based on its distribution and/or population status. A taxon in this category may be well studied, and its biology well known, but appropriate data on abundance and/or distribution are lacking. Data Deficient is therefore not a category of threat. Listing of taxa in this category indicates that more information is required and acknowledges the possibility that future research will show that threatened classification is appropriate. It is important to make positive use of whatever data are available. In many cases great care should be exercised in choosing between DD and a threatened status. If the range of a taxon is suspected to be relatively circumscribed, and a considerable period of time has elapsed since the last record of the taxon, threatened status may well be justified.

(9) NOT EVALUATED (NE)

A taxon is Not Evaluated when it is has not yet been evaluated against the criteria.

5.9 Spot-necked Otter

Figure 8 Spot-necked Otter

5.10 Baseline Herpetological Inventory

	Scientific Name	English Equivalent
Ord	ler Testudines (tortoise, turtles and terra	pins)
1	Kinixys belliana	Bell's Hinged Tortoise (listed in Appendix II of
		CITES)
2	Pelomedusa subrufa	Helmeted Terrapin
Ord	ler Squamata (lizards and worm lizard)	
3	Hemidactylus brooki	Brook's Gecko
4	Hemidactylus mabouia	Tropical House Gecko
5	Mabuya maculilabris	Speckle-Lipped Skink
6	Mabuya quinquetaeniata	Five-Lined Skink
7	Mabuya Striata	Striped Skink
8	Chamaesaura anguina	Highland Grass Lizard
9	Acanthocercus atricollis	Blue-Headed Tree Agama
10	Agama agama	Red-Headed Rock Agama
11	Chamaeleo gracilis	Slender Chameleon
12	Varanus niloticus	Nile Monitor
Ord	ler Crocodylia (crocodiles)	
13	Crocodylus niloticus	Nile Crocodile
Ord	ler Squamata (snakes)	
14	Typhlops punctatus	Spotted blind Snake
15	Typhlops lineolatus	Lineolate blind Snake
16	Leptotyphlops scutifrons	Peter' Worm Snake
17	Python sebae	Central African Rock Python
18	Lamprophis fuliginosus	Brown House Snake
19	Lycophidion capense	Cape Wolf Snake
20	Lycophidion ornatum	Forest Wolf Snake
21	Mehelya capensis	Cape File Snake
22	Mehelya poensis	Forest File Snake
23	Grayia smythii	Smyth's Water Snake
24	Grayia tholloni	Thollon's Water Snake
25	Philothamnus angolensis	Angolan Green Snake
26	Philothamnus battersbyi	Battersby's Green Snake
27	Philothamnus heterolepidotus	Slender Green Snake

Table 1 Baseline Herpetological Inventory around the Study Site

28	Philothamnus semivariegatus	Spotted Bush Snake
29	Hapsidophrys smaragdina	Emerald Snake
30	Thrasops jacksoni	Jackson's Tree Snake
31	Scaphiophisalbopunctatus	Hook-nosed Snake
32	Boiga blandingii	Blanding's Tree Snake
33	Crotaphopeltis hotamboeia	White-Headed Snake/White-Lip
34	Dispholidus typus	Boomslang
35	Thelotornis kirtlandii	Forest Vine Snake
36	Psammophis mossambicus	Olive Sand Snake/Hissing Sand Snake
37	Natriciteres olivacea	Olive Marsh Snake
38	Dasypeltis atra	Montane Egg-Eater
39	Dasypeltis scabra	Common Egg-Eater
40	Aparallactus lunulatus	Plumbeous Centipede-Eater
41	Polemon christyi	Christy's Snake Eater
42	Atractaspis irregularis	Variable Burrowing Asp
43	Elapsoidea loveridgei	East African Garter Snake
44	Naja haje	Egyptian Cobra
45	Naja melanoleuca	Forest Cobra
46	Naja nigricollis	Black-Necked Spitting Cobra
47	Pseudohaje goldii	Gold's Tree Cobra
48	Dendroaspis jamesoni	Jameson's Mamba
49	Causus rhombeatus	Rhombic Night Adder
50	Causus resimus	Velvety-Green Night Adder
51	Bitis arietans	Puff Adder
52	Bitis gabonica	Gaboon Viper
53	Bitis nasicornis	Rhinoceros Viper
54	Atheris squamiger	Green Bush Viper
Ore	ler Anura (frogs and toads)	
55	Bufo kisoloensis	Kisolo Toad
56	Hemisus guineensis	Guinea Snout-Burrower
57	Afrixalusquadrivittatus	Striped Leaf-Folding Frog
58	Hyperolius cinnamomeoventris	Cinnamon-Bellied Reed Frog
59	Hyperolius kivuensis	Kivu Reed Frog
60	Hyperolius lateralis	Side-Blotched Reed Frog
61	Hyperolius nasutus	Sharp-nosed Reed Frog
62	Kassina senegalensis	Senegal Kassina
63	Rana angolensis	Angolan River Frog
64	Amnirana galamensis	Galam White-Lipped Frog/Golden-Backed Frog
65	Anirana albolabris	Forest White-Lipped Frog
66	Hoplobatrachus occipitalis	Eastern Groove-crowned Bullfrog
67	Phrynobatrachus natalensis	Natal Puddle Frog
68	Ptychadena mascareniensis	Mascarene Rocket Frog

APPENDIX 7

RESETTLEMENT ACTION PLAN

7.1 Minutes of Meeting of NYTIL

REPORT ON THE MEETING AT SOUTHERN RANGE NYANZA-NYTIL.

DATE: July 13, 2009

VENUE: SOUTHERN RANGE NYANZA.

START: 3:45PM.

MEMBERS PRESENT.

- 1. Mr. Sanjay. Nytil.
- 2. Mr. Piyush Chandarana. Nytil.
- 3. Mr. Shingeru Sai.-JICA Study Team.
- 4. Eng. Bwanga George- UNRA- Project Manager.
- 5. Mr. Nelson Omagor- COWI Team Leader.
- 6. Mr. Bernard Ochola- COWI- Sociologist.
- 7. Mr. Paul Muragati-COWI-Land Valuer.
- 8. Mr. Muramira Eugene-COWI- Environmental Economist.
- 9. Mr. Nkutu David Nelson- COWI- Plant Ecologist.
- 10. Ms. Mubeezi Juliet- UNRA Trainee.
- 11. Ms. Philippa Arinaitwe- UNRA Trainee.

Issues Raised:

- Mr. Sanjay explained to members present that the major issues of concern to Southern Range Nyanza were access to the warehouse and factory by trucks since the major access road would be destroyed by the construction of the new bridge, re-location of the administration block, and destruction of the manager's house.
- Eng. Bwanga responded by telling Mr. Sanjay that Southern Range Nyanza as a company need to come up with or provide options/ solutions after which they can start looking at the proposals. He further pointed out that the solutions to these issues should initially come from Southern Range Nyanza.
- Mr. Paul Mungati inquired if the factory had enough land to accommodate the relocation of the administration building and warehouse.
- Response from Mr. Sanjay was that the land is available and enough.
- Mr. Nelson Omagor requested Nytil to show the feasible areas were the administration building and warehouse could be relocated.
- Mr. Sanjay pointed out that the major issue that Nytil wanted to know was the bridge's exact location of the bridge's starting point, so that they can plan for the offloading point for the trucks coming form Mombassa through Jinja. He also wanted to know were the main entrance will be after the bridge is constructed.
- Eng. Bwanga responded to this by saying that details of bridge plan could not be revealed at the moment, but he went ahead to inform that the trucks will use the designed bridge round about to get access to the factory.
- Mr. Sanjay explained to members present that creation of a new entrance for both the administration building and warehouse was necessary. He also inquired about the manager's house that would be affected by the construction of the new bridge.
- Eng. Bwanga responded by telling Mr. Sangay that property outside the road corridor should be consulted by the chief government valuer, for proper clarification on policies concerning this, but property with in the road corridor will be compensated.

- Mr. Sanjay requested if the main access road of the factory could be retained. He pointed out that this road was the heart of the factory as it is the major entry of the factory.
- Mr. Paul Muragati pointed out that the when construction of the new bridge begins, the vibrations from this construction will affect the near by buildings with in the factory.
- Mr. Omagor explained to members present that the Environmental Impact study is looking at the direct and indirect impacts of the project.
- ➢ It was agreed by members present that the road length from the center point to the affected main access road of the factory could be reduced by 6meters from 30-24meters.
- Mr. Nelson Omagor requested for Mr. Sanjay to provide the study with plans for factory's underground utilities and effluent lines.
- Mr. Sai pointed out that we were still doing a feasibility study and necessary amendments will be made were necessary.

7.2 Request letter from Nile Breweries

P.O. Box 762, Jinja, Uganda Tel: +256 +43 121092/3/4 +256 +33 210009 Fax: +256 +43 120425/120759 +256 +33 240292/303

09/07/2009

The Head of JICA Study Team Ministry Of Works Kyambogo, Kampala

RE: NJERU/JINJA NEW CARRIAGE WAY& BRIDGE OVER RIVER NILE.

Following the Environmental Impact Assessment tour with your team, Road & Local Council Authority, together with officials from the Industries affected by the carriage way, Nile Breweries Limited has the following concerns which need to be reviewed by yourselves:

- The New road cuts across Nile Breweries Water treatment plant and reservoir
 which means it will have to be moved from its current position. This can only be
 done by purchasing and installing a new water treatment plant before the old plant
 is dismantled. This is to prevent production loss which would be disastrous to our
 company. It should be noted the water treatment plant our brewery uses is
 imported from Germany and has an approximate delivery time of one year.
- The Employees Canteen and recreational block will need relocation.
- · Employees Change rooms will need relocation.
- 50% of the Finance service block will need relocation. This will affect our
 operations as the Company's main Server is located in the same building. The
 Server is the heart of all the Breweries operations.
- The current Effluent Pipe line and septic drain system (3 off) has to be relocated and will affect our operations majorly.
- The current Water Pump station at the river and intake pipe line to the brewery will need relocation upstream.
- The over head HT Electric lines to the water pump station will need rerouting.
- The Oil interceptor to be relocated.
- · Power line to the plant will need to be rerouted.
- The brewery boundary wall will have to be restored for security reasons.
- · Entry Gate for Commercial Vehicles to be shifted to the western side.
- The storm water drainage to be redone

The above are serious constraints to the continuous operation of the brewery and our business in Uganda. We request you to look at the option of moving the new road further east thereby eliminating the disruption to the brewery and minimizing the compensation costs to the brewery.

Thanking you for your continued cooperation and I look forward to a cost effective solution.

Yours sincerely,

Gavin Van Wijk

Technical Director Nile Breweries Limited

7.3 Memorandum of Meeting with Nile Breweries

Memorandum of the Meeting

Prepared by Mr.SAI (JICA Study Team)

Reference: Feasibility Study on a New Bridge across River Nile at Jinja

Date: 22nd July 2009

Venue and time: Nile Breweries Ltd., 15:30-17:00.

Participants:

- 1. Mr.Anabo Drapi Summy(Chief Engineer of Nile Breweries Ltd.)
- 2. Mr.Eturuket Charles (Site Services Engineer of Nile Breweries Ltd.)
- 3. Mr. George Bwanga (Project Director of UNRA)
- 4. Ms. Pamela (Land Acquisition Specialist of UNRA)
- 5. Mr.Nelson Omagar(Team leader of EIA/RAP team of COWI)
- 6. Mr.Patrick (Project manager of COWI)
- 7. Mr.Mutusera Katusabe(Land surveyor of COWI)
- 8. Mr. Shigeru SAI (Social Environmental Specialist of the JICA Study Team)

Meeting Objectives:

The discussion and field inspection were held to solve serious concerns expressed by Nile Breweries Ltd. in the letter to JICA Study Team (refer to the attached request letter)

Meeting Summary:

- To avoid impact to water treatment plant and reservoir, UNRA decided that the ROW width of the affected section will be decreased by 7m. Therefore the ROW width of the south side will be 23m.
- UNRA mentioned that following affected properties will be subjects to compensation. And Nile Breweries Ltd. agreed with this.
 - 1. Employee canteen and recreational block
 - 2. Effluent pipe line and septic drain system
 - 3. Oil interceptor
 - 4. Brewery boundary wall
 - 5. Entry gate.
- Responses to the concerns expressed by Nile Breweries Ltd. were made by the party consisting of UNRA, COWI and JICA Study team) as follows.
 - 1. The mitigation measures to avoid negative impact (vibration and noise caused by construction activities) to Finance block will be considered in the EIA study. This will include temporary relocation of the facilities. (Mr.Nelson Omagor).
 - 2. The Project Bridge has no piers in the river. So, relocation of water pump station and intake will not be necessary. In addition, mitigation measure to avoid water contamination will be proposed in the EIA study. (Mr.SAI).

- 3. The Power line to the plant (UMEME properties) and over head HT Electric lines (Nile Brewery's property) will be relocated by the project. (UNRA)
- 4. The consideration about the storm water drainage will be made in the detailed design.(Mr.SAI)
- Nile Breweries Ltd. accepted the above explanations eventually.
- Field inspection was conducted to confirm the affected properties after the discussion.
