ENVIRONMENTAL AND SOCIAL IMPACT ASSESSMENT SURVEY FOR THE PREPARATORY STUDY FOR SECTOR LOAN ON DISASTER RISK MANAGEMENT IN THE REPUBLIC OF THE PHILIPPINES

Magandang araw po sa inyo, ako po ay mula sa Center for Environmental Studies and Management, kasama ng grupo ng Japan International Cooperation Agency at CTI Engineering, International Co., Ltd na gumagawa ng pag-aaral tungkol sa Environmental and Social Impact Assessment Survey for the Preparatory Study for Sector Loan on Disaster Risk Management in the Republic of the Philippines. Nais ko pong malaman ninyo na ang mga impormasyong ibibigay ninyo sa amin sa panayam na ito ay gagamitin po namin sa pag-aaral at ang inyong katauhan gayundin ang inyong mga sagot ay ituturing naming lihim. Sa inyo pong pagsagot, tandaan po nating walang tama o maling sagot, kinakailangan lamang po namin ang inyong matapat na kasagutan.

### ANNEX PIIC\_9-8

COMPARISON BETWEEN CONTENTS OF EIA REPORT FOR CATEGORY "A" PROJECT IN FORMER JBIC GUIDELINE AND IEE REPORT IN PEIAS

COMPARISON BETWEEN CONTENTS OF JBIC GUIDELINE AND LARRIPP

### **Description of Category of JBIC Guideline**

- Category A: i) Projects likely to have significant adverse impacts on the environment and society, ii) Projects with complicated impacts or unprecedented impacts, which are difficult to assess or which have a wide range of impacts or irreversible impacts, iii) Projects are required detailed EIA by related laws and the standards of the recipient governments.
- Category B: Their potential adverse impacts are less than those of Category A projects. Generally they are site-specific; few if any are irreversible; and in most cases normal mitigation measures can be designed readily.
- Category C: They are likely to have minimal or little adverse impacts.
- Category FI: The proposed project is categorized as FI if it satisfies all of following: i) JBIC's funding of the project is provided to a financial intermediary etc. ii) the selection and assessment of the actual sub-projects is substantially undertaken by such an institution only after JBIC's approval of the funding and therefore the sub-projects cannot be specified prior to JBIC's approval of funding (or assessment of the project), iii) those sub-projects are expected to have potential impact on the environment.

### **Proceedings:**

The Stakeholder Meeting formally started at around 1:00 in the afternoon with an invocation led by Ms. Myrna Cosim. This was followed shortly by opening prayer and singing the Philippine National Anthem led by Liza Pamaos. Ms. Cookie F. Libres facilitated the meeting.

Welcome remarks by Ms. Sandie Factura, OIC of the office of the Mayor wherein she mentioned that this project is of a noble cause and is looking forward for a fruitful partnership with the JICA and its Study Team. This was followed by roll call of the delegates by Myrna Cosim, the SB Secretary.

Mr. Ray C. Abejo, Staff of the Mayor gave a speech and welcomed all the attendees from the different affected barangays of Tagoloan on behalf of the Mayor. He also mentioned that he was a JICA Scholar before. Important things he mentioned:

- 1 Tagoloan is a 1<sup>st</sup> class municipality with a population of about 60,000.
- 2. Expressed the need of Tagoloan for loans and study findings as well.
- 3. Tagoloan River Basin is a POVEDEC area
- 4. The Bugna river is dry right now, but with climate change and global warming, hard rains and rundown of water/flood might occur during unexpected times
- 5. He also mentioned about an NGO called "Palaras" which study the Tagoloan River along with culture and practice of tagoloan town
- 6. He expressed the need to study Tagoloan River's Rainfall, River Flow, and River Water Quality

### Briefing by Engr. Grecile Christopher Damo, DPWH PMO-FCSEC

Engr. Chris Damo gave a background of how Tagoloan River was chosen for this particular sector loan along with two (2) other river basins in Visayas and Luzon. He informed the audience that some concerns need to be addressed first before the sector loan will be awarded or approved i.e. all budget is for construction or structural measures only. On previous projects, a large part of the budget goes to ROW and this had decreased the project's efficiency significantly. Therefore, for this sector loan, the budget is allotted for the construction of mitigation structures only, not for ROW, and he asked for the cooperation of respective LGUs regarding relocation, resettlement and maintenance issues and that a resolution between LGU and DPWH be made in a form of MOA.

He stressed that should there be any sign or presence of opposition to the project, JICA will look for other area/project sites.

# Presentation of Mr. Kazuto SUZUKI: The Preparatory Study for Sector Loan on Disaster Risk Management in the Republic of the Philippines

Mr. Kazuto SUZUKI of JICA Preparatory Study Team presented the Study contents and its progress based on the results in the Steering Committee Meeting dated April 28, 2009. Before Mr. SUZUKI, started his presentation he expressed his thanked to various

government and organizations that has extended support to the Study since the very beginning and also to the participants.

Mr. SUZUKI mentioned that the study includes the conduct of Feasibility Study on the Tagoloan River Flood Mitigation Project, which would concentrate into built-up areas, such as Town Proper of Tagoloan.

He continued his presentation about the current status of flood control projects conducted by DPWH during 33 years in the past. He addressed that some projects have induced the lowering benefit and effectiveness against flood resulting from (1) the Delay of Construction due to ROW acquisition procedure problem and Cost Overrun, and (2) Lack of O&M activities for river structures completed by such projects. In this connection, Mr. Suzuki emphasized that the cooperation and initiatives of LGUs in the Project are absolutely imperative for the Project, to wit; (1) due effort for ROW acquisition by the concerned LGUs, (2) harmonized Project implementation between DPWH and LGUs, and (3) development and enhancement of flood management capacity for concerned organizations.

According to Mr. SUZUKI, the study team also gathered some information regarding the existing river alignment and cross sectional shapes, land-use and development in the project site. Aside from this, he also reiterated the status or situation of the river channels, some major cause of flooding in the project site and the basic concept in formulating the mitigation plan including the proposed structural and non-structural measures to be presented in expected succeeding stakeholders' meetings.

With regards to the mitigation that needs to be undertaken, Mr. Suzuki conceived of that the study team would proposed the following: for non-structural measures (1) measures for river channel that includes community-based flood mitigation and restraint of illegal land occupation in the river area; (2) measures for basin that includes land use control and control of disorderly land development; and (3) measures for damage mitigation that includes development and dissemination of flood hazard map, establishment of evacuation and flood fighting & preparedness against flood and unification of related agencies for flood mitigation. And for the structural measures the team identified potential mitigation measures against flood and these are (1) widening of river channel improvement, (2) construction of flood protection dike, and (3) construction of dredging of riverbed.

### **Open Forum**

Open Forum facilitated by Engr. Grecile Christopher Damo and Dr. Lope Villenas

**1. Question:** Concern on the sector loan, he wants to know the obligation of Tagoloan

LGU re: role during application and payment obligation. He is

concerned on the ability of the LGU on the amortization and expressed the burden that maybe they can't afford it. (Mr. Ray C Abejo: from the

Mayor's office)

**Answer:** This project a DPWH and JICA joint project and being the proponent,

DPWH is implementing it. In this case, therefore, the Tagoloan LGU should not be concerned and burdened with loan payment. The objective of this Stakeholders' Meetings are to a) ask support of respective LGUs on ROW problems, if any, a commitment of "no opposition" for the project, as well as their responsibility in the maintenance of river

structures i.e. repairs and abatement, planting grasses, river cleaning, beautification, etc., and b) to inform them of the progress of the FS. (*Mr. Kazuto Suzuki, JICA Study Team and Eng. Grecile Christopher Damo of DPWH*)

**2. Question:** In relocating affected households living near the river banks, will they be relocated? This will pose a problem later on. (*Ms. Avalyn Gahulugan - PIA*)

Answer: This sector loan is only for structural measures. Therefore, it is strongly suggested that a MOA between Tagoloan and DPWH be made to shoulder the cost and burden of relocation and right of way. As of the moment, there's no exact area and project design yet. But as early as now, DPWH is asking for Tagoloan LGU for full support. (Mr. Lope Villanes, JICA Study Team and Eng. Grecile Christopher Damo of DPWH).

**3. Question:** Will the ongoing quarry along the river be allowed to continue their activities or will they be asked to stop? *Ms. Avalyn Gahulugan - PIA*)

Answer: It is recommended to stop the quarry activities but first, it will be discussed with concerned LGU and call attention of DENR about it. Rest assured, the recommendation of these parties will definitely be considered. (Mr. Kazuto Suzuki, JICA Study Team)

**4. Question:** Suggested that if possible, design the top of the dike to be a road going to other/different barangays. (*Kgd. Audie Palaganas*)

**Answer:** Will highly consider the suggestion but this design might widen/extend the easement area. (*Mr. Kazuto Suzuki, JICA Study Team*)

He said that the MGB is on its 2<sup>nd</sup> week of Hazard Assessment Program. He also informed the Study Team of President GMA's order to clear river banks of settlers, this may ease the ROW burden. He also suggested to the Team to consider the Tagoloan River Faultline in designing the structures, that it should be able to withstand these hazards. (*Mr. Osin A. Sinsuat Jr.-DENR-MGB*)

**Question:** Has Tagoloan identified any relocation site within the municipality? (*Mr. Kazuto Suzuki, JICA Study Team*)

**Answer:** Yes, but still have to discuss with cadastral authority about its

boundaries. Ms. Avalyn Gahulugan - PIA)

**5. Question:** Who will shoulder the relocation cost, DPWH or LGU? *Ms. Avalyn* 

Gahulugan - PIA)

Answer: This will depend on the MOA of LGU and DPWH. (Mr. Kazuto Suzuki,

JICA Study Team)

**6. Question:** He is looking forward for the project to materialize and realized that the LGU will play a very important role i.e. the SUPPORT of municipal and

barangay heads in convincing people re: ROW. (Mr. Carmelito A. Lupo: National Defense-X)

**Answer:** The CESM will conduct a social study pertaining to this particular

issue.(Dr. Lope Villanes- Institutional and Organization, O&M

Specialist)

**7. Question:** Informs the JICA Study Team that projects for loan approval highly

considers resettlement issues and how it will be solved or reconciled. He also asked Engr. Damo the difference of this JICA Study and the study of a certain KOREAN DEVELOPMENT FUND. (*Mr. Nestor A*.

Lisondra: NEDA Reg. X representative)

**Answer:** JICA Study is for FS for a Sector Loan, the KDF conducts a study only.

(Eng. Grecile Christopher Damo of DPWH)

**8. Question:** On the Sector Loan's conditionality and approval of the ICC, he

suggested that DPWH should also present the project to the Provincial Development Council (regarding the process and requirement). (*Mr*.

Nestor A. Lisondra: NEDA Reg. X representative)

He asked about the timeframe of the project. (Mr. Ray C Abejo: from

the Mayor's office)

**Answer:** The construction will take about 3-4 years (i.) We are now in the

preparatory and FS stage – 6 mos (ii.) Staff to evaluate sector loan (iii.) After concurrence from JICA, the Japanese Gov't approves the loan (iv.)

Detailed design – 1 year (v.) Bidding accding to PI law (vii.) Construction. (*Mr. Kazuto Suzuki, JICA Study Team*)

Mr. Kazuto Suzuki emphasized the conditionality of the loan such as the responsibilities of Tagoloan LGU in ROW issues and maintenance of the structures.

Mr. Ray Abejo gave a pleading speech to the delegates. He said that right now, the river may look tamed, but there was a time when a big rain in the 60's joined the Tagoloan River and Pugaan River, and there was an enormous flood. It could happen again.

### Wrap up by Eng. Grecile Christopher Damo

He thanked the people's support as well as emphasized that this project will benefit their loved ones and the next generations. As long as LGU and DPWH will join hands, they can have much power. The study team will look at the activities on the river in a basin wise approach. He also said that it would be much better if NIA will be involved, if they have projects, etc.

### Concluding Remarks by Kgd. Audie Palaganas: SB Councilor

"Preparedness and prevention from damage from calamities is better than repair". He thanked JICA and the support of the delegates for a noble and commendable project. He is hoping that not this will not be a DRM endeavor but will be a collective effort of JICA and Tagoloan LGU with its inhabitants to rehabilitate the river.

### Mayor just arrived from Korea, but gave a speech anyway.

He extended his help and support for the project and should the study team need anything to fast track the project, don't hesitate to ask.

### **PROCEEDINGS:**

**Mr. Ray Abejo** brought up the sector loan project that was tasked to mitigate a river for each of the main islands in the Philippines namely Luzon, Visayas ann Mindanao. He reminded everybody how fortunate they are to have Tagoloan River chosen for Mindanao.

**Mr. Kazuto Suzuki** of JICA study team, the project's engineer, who was tasked to explain the project started with his expression of gratitude to people present in the meeting. He then handed out materials such as the minutes and handouts of the previous stakeholders meeting dated June 4 and new handouts containing the flow of his presentation.

He discussed concepts regarding the structure of the project and implementation activities which extend to LGUs were among the main concerns of his presentation. Core areas which are most affected along with the proposed diking system structures were identified. In addition, proposed areas needed to be excavated, relocated, and protected were revealed. Mr. Suzuki continued further with the discussion of implementation and maintenance of the project with relation to LGUs such as barangays and DPWH. Social and environmental issues, mitigation and relocation were also considered. Using satellite images he identified proposed areas for diking and areas which need to be purchased and excavated in the course of the project. Finally, he put emphasis on the importance of a MOA that can give details on the responsibilities of each unit and thus can act as a guide to each entity.

Subsequently, **Engr. Aldwin Camance** came in and introduced himself and Ms. Bethela Del Nero as the environmental experts for this project. He stated the objectives of his presentation which includes, identifying environmental impacts as well as mitigation measures. Social

issues which include issues of right of way, he said were significant since this was the persistent problem in projects with this nature. Mr. Camance also gave a brief environmental characteristic of Tagaloan and shared with the audience his knowledge on dredging and erosion. He capped of his presentation, encouraging the spectators to think about the project and formulate questions.

**Question 1:** What will you do with the dredged materials?

**Answer:** We can utilize them for the building of the dikes. The Excess can still be useful for the municipality's development projects such as reclamation (Suzuki).

**Question 2:** What happens to the fish species in the river?

**Answer:** While excavation is ongoing, fishing shall cease since there will be lesser fish near the construction area due to disruption of habitat as well as siltation and sedimentation of the river. But after construction phase and due to deepening of the river channel, there is a great chance for more fish to come downstream.

**Question 3:** What about people who suddenly show up and construct on areas they know would be affected by the project?

**Answers:** We discourage construction near the river and proposed structures. We also have an inventory of the people in the area.

**Question 4:** It will be better if we are informed of a rough estimate of the percentage Tagoloan LGU can shoulder for their properties affected.

**Answer:** This shall come later and should be discussed with concerned decision makers. For now we just want the people to know of the proposed plan.

Mr. Ray Abejo reminds that the purpose of the meeting is to deliberate the flood control scheme and the concept of design so that the stakeholders can agree and give their approval. Other issues like right of way can come in later.

**Engr. Dolores Hipolito** also urged LGUs to commit first and accept responsibilities before the project is implemented. She added that to do so, LGUs and DPWH must have an agreement.

For the wrap up of the meeting, **Mr. Ray Abejo** mentioned that the idea of sector loan is to protect the area of Sta. Ana suburbs and Poblacion area. The sector loan plans to continue an existing dike project by the DPWH. However, there is no final design yet and specific site as to where the dike would be constructed, therefore, areas that shall be affected were not yet finalized.

With regards to the issue of right of way **Engr. Grecile Christopher Damo** said that they are pushing LGUs to be a counterpart. He also suggested non-structural measures that need to be observed and implemented since flooding can still occur after the diking.

The meeting concluded with a reminder of the activities for the following day.

### **Proceedings:**

Mr. Ray Abejo of Tagoloan LGU opened the third stakeholders meeting in Bisaya followed by introduction of Engr. Aldwin Camance.

Engr. Kazuto Suzuki, the first to present gave the overview of the meeting. He cited topics to be tackled such as social and environmental issues and mitigation plans. He provided a satellite image of Tagoloan and pointed out dike systems of the DPWH. CLUPS that show build up areas and agriculture areas were also displayed. He explained flood inundation areas, flooding analysis, excavation areas along with drainage improvement systems and dike systems that all meet the terms of the study. Mangroves he expressed were areas that need protection as climate change was also considered. Finally, the construction cost would be 1 billion Pesos. An agreement between the LGUs and DPWH was advised.

Engr. Aldwin Camance explained the previous presentation in detail. He urged the audience to ask questions. In his presentation he gave results for the environmental and social surveys conducted. The data showed a total of 54 respondents wherein there is a small number of people who used concrete signifying impermanent structures. This indicated easier relocation and proliferation of informal dwellers. Other indications included uncertainty of their own house and areas. Most respondents agreed on resettlement and some depended on the conditions and wanted to get more information about the project. He also warned against people who suddenly build houses in the hope of being part of the compensation.

Subsequently, Engr. Aldwin Camance presented existing dikes and bridges. He followed this with a computer generated model that predicts flood patterns with and without project. Hence, there is a need to excavate some areas based on this simulation. Another important point Engr. Aldwin Camance brought up was the need to include the effect of climate change in accordance to the project. He also mentioned that there should be about 50 meters coastal control area, as precautionary measure of rising water level due to climate change.

### **Question:**

How will the proposed change in the CLUP affect plans of Industrial Firm or possible locator of Phividec in putting up a dockyard in the proposed conservation area?

### Engr. Kazuto Suzuki:

Recommends that Industrial Firm or possible locator of Phividec will follow the proposed alignment of the dike area.

### **Engr. Grecile Christopher Damo:**

Industrial Firm or possible locator of Phividec have to secure permits and present plans to LGU before constructing anything to conform to standards.

### **Non-Structural Measures:**

The next speaker, Engr. Grecile Christopher Damo, presented on non-structural measures. He also gave a background on sector loan and disclosed the 10 billion pesos allocated for sector loan that can benefit 10 river basins.

Mr. Mercado from PAGASA Cagayan de Oro came next as he described the Community Based Flood Early Warning Systems and explained why they are prone to flooding.

There was a discussion about the community based system and non-structural mitigation methods i.e. watershed management, etc.

### Closing, Requirements and Approval of the Project:

The meeting was closed by Engr. Kazuto Suzuki informing the audience that he will consider all the recommendations of the concerned stakeholders.

Basically, the flood mitigation plan that JICA Study presented for Tagoloan was approved by stakeholders.
