1. Waste Stream

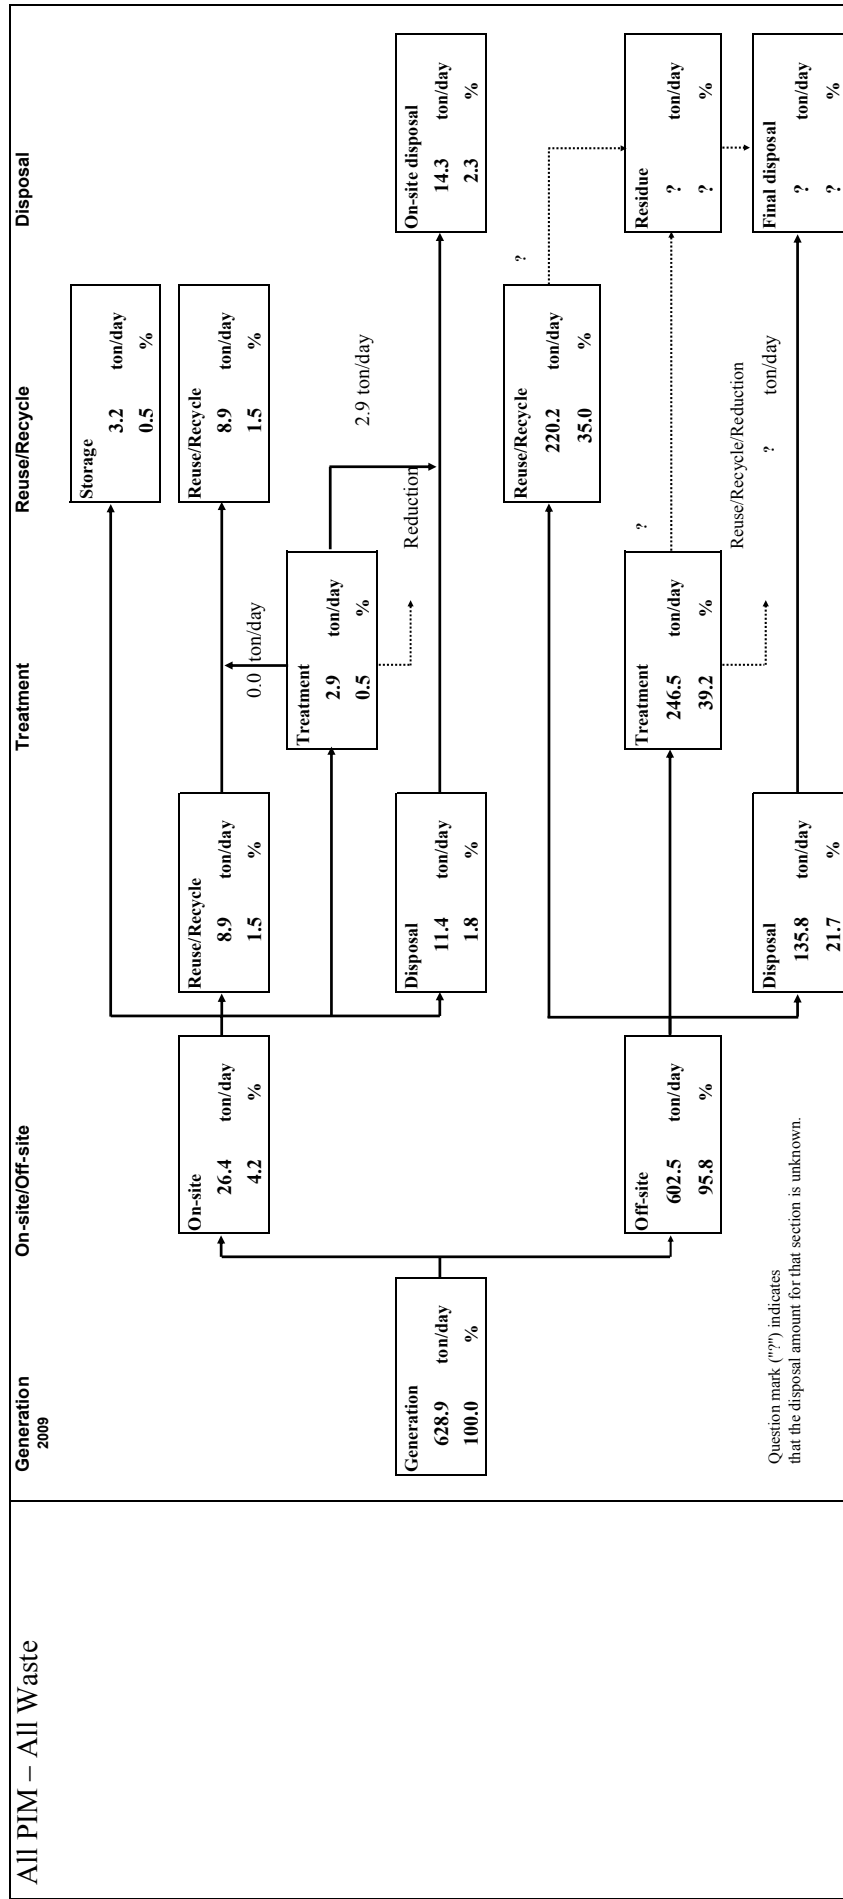

1 Waste stream

- 1.1 : Simplified Waste stream (2009)
- 1.2 : Simplified Waste stream (2015)
- 1.3 : Detailed Waste stream (2009)
- 1.4 : Detailed Waste stream (2015)

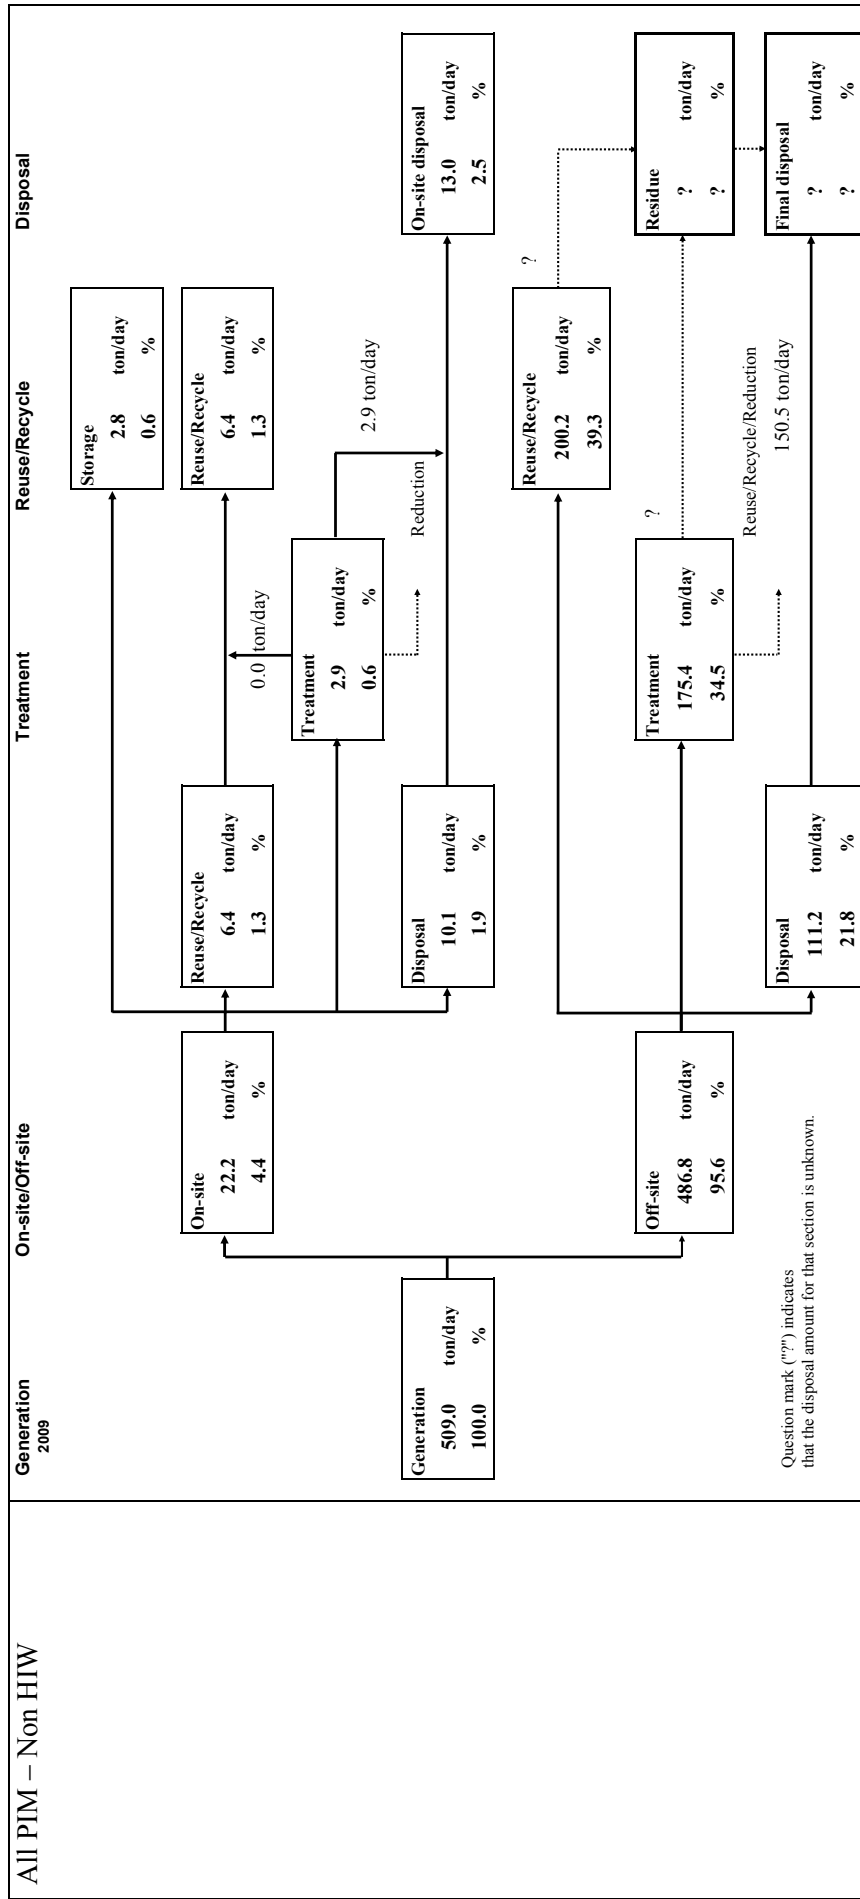

Remark: Question mark (“?”) indicates that the disposal amount for that section is unknown.

1.1 Simplified Waste stream (2009)

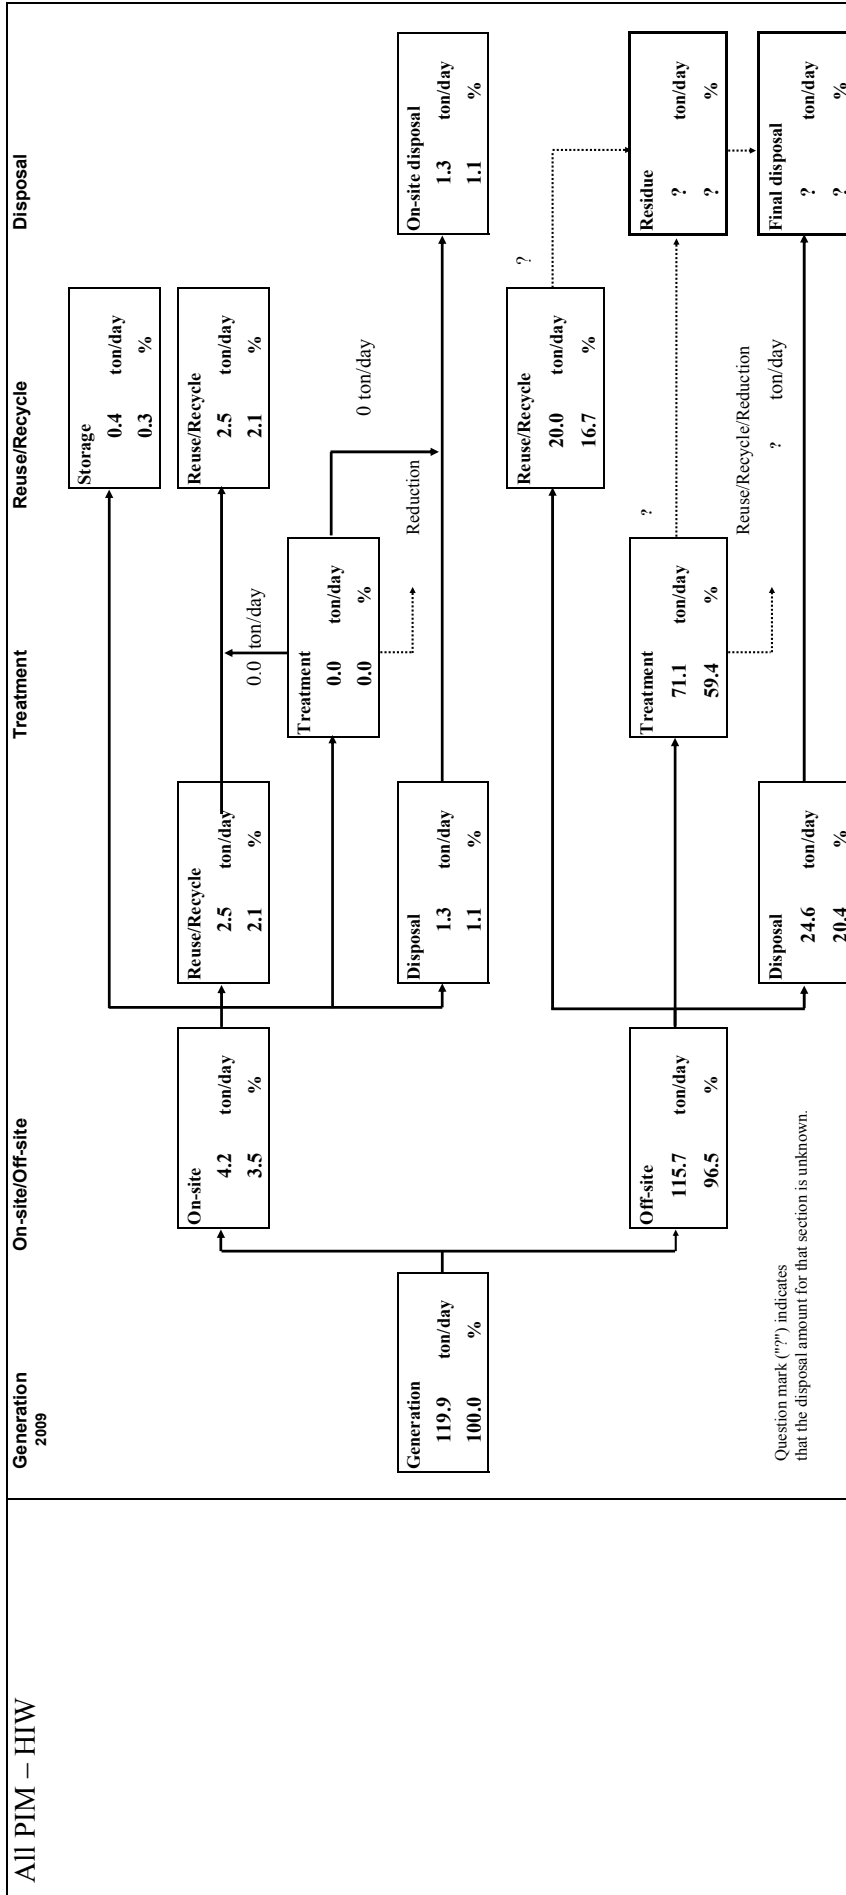

a. Industrial Wastes (IW) generated from PIM (2009)

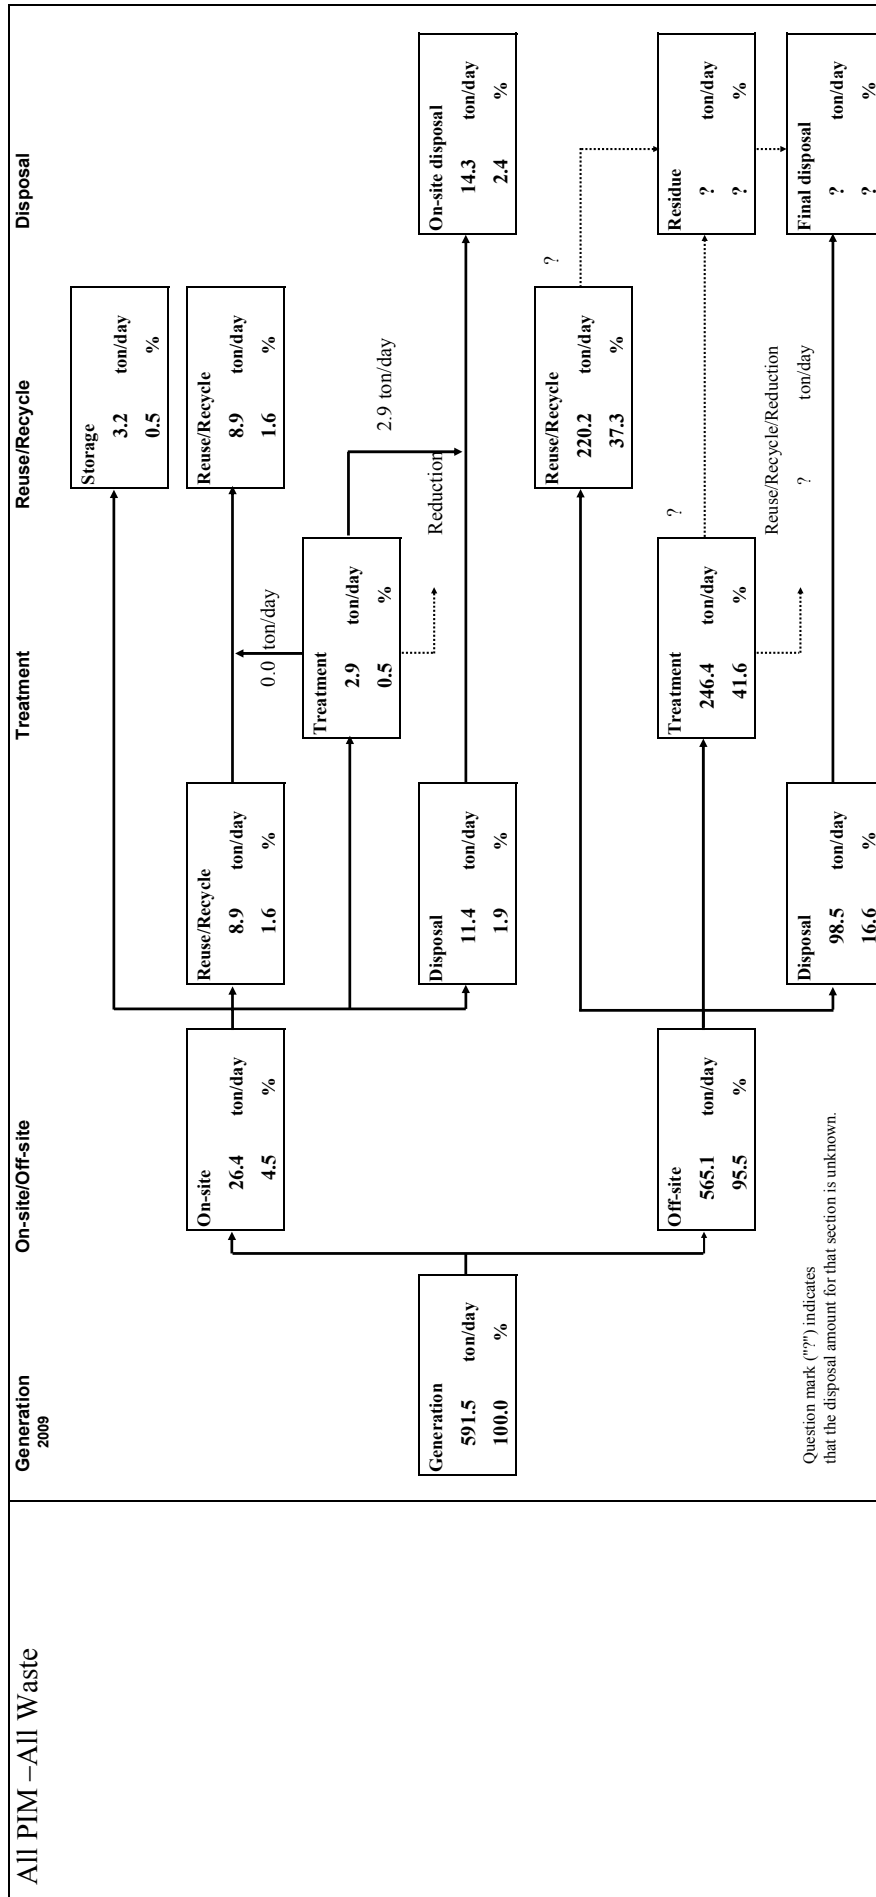

All PIM – Non HIW

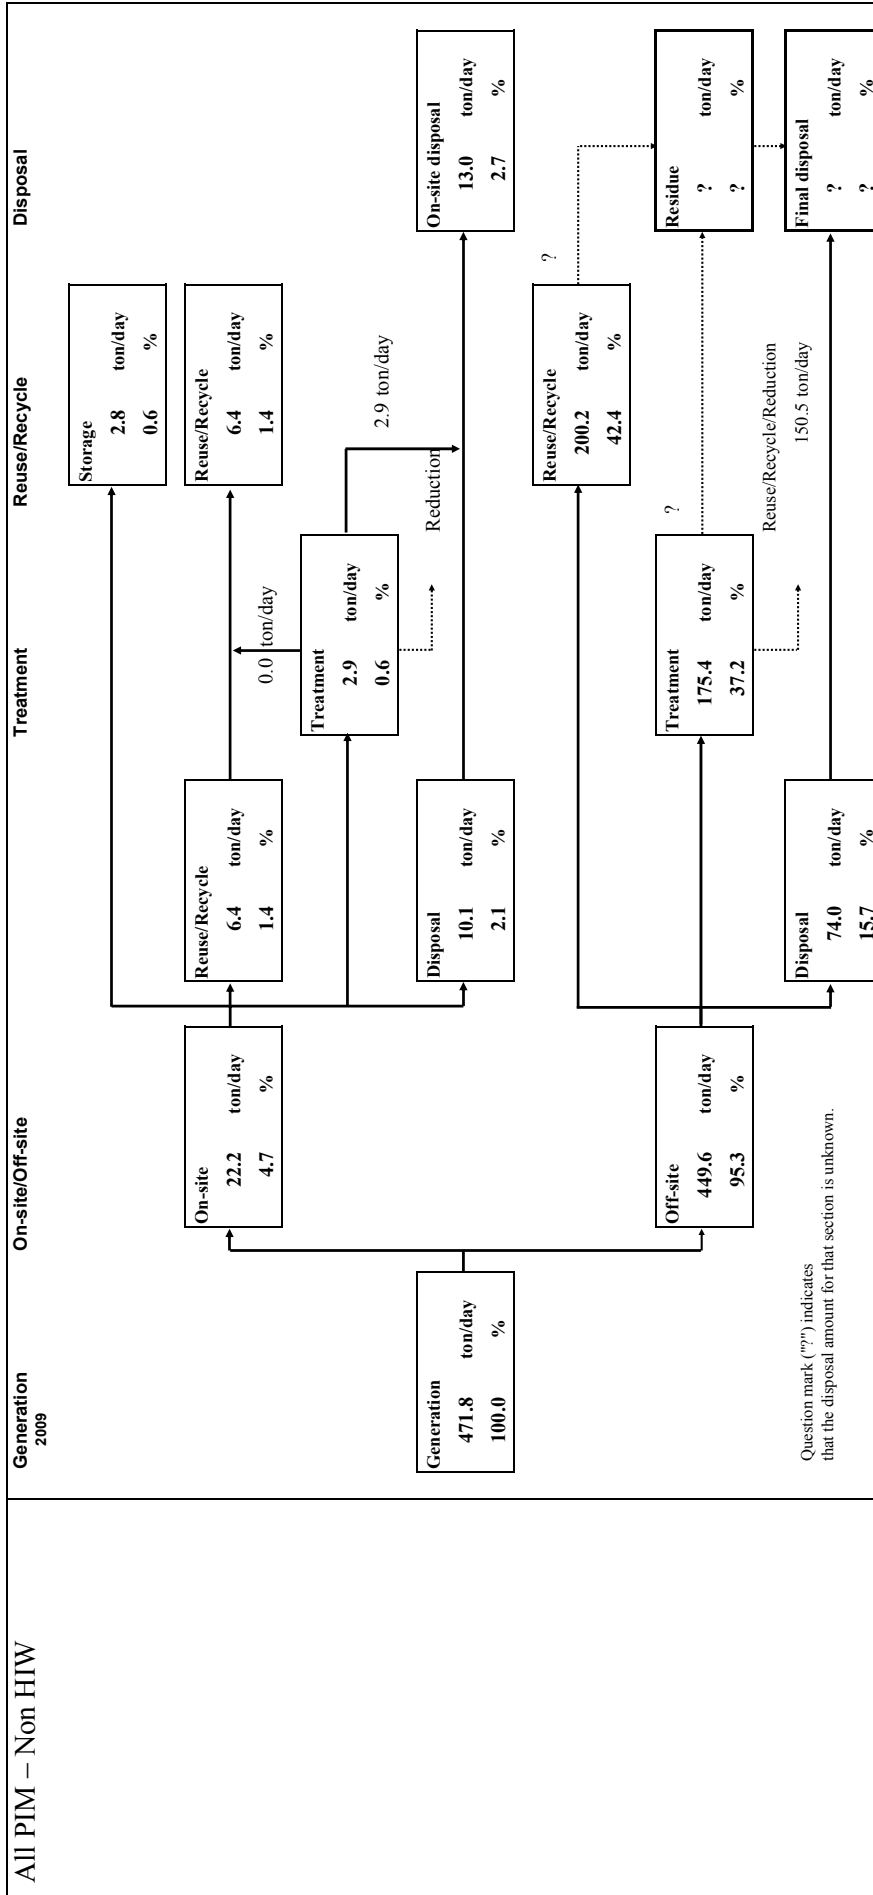

All PIM – HIW

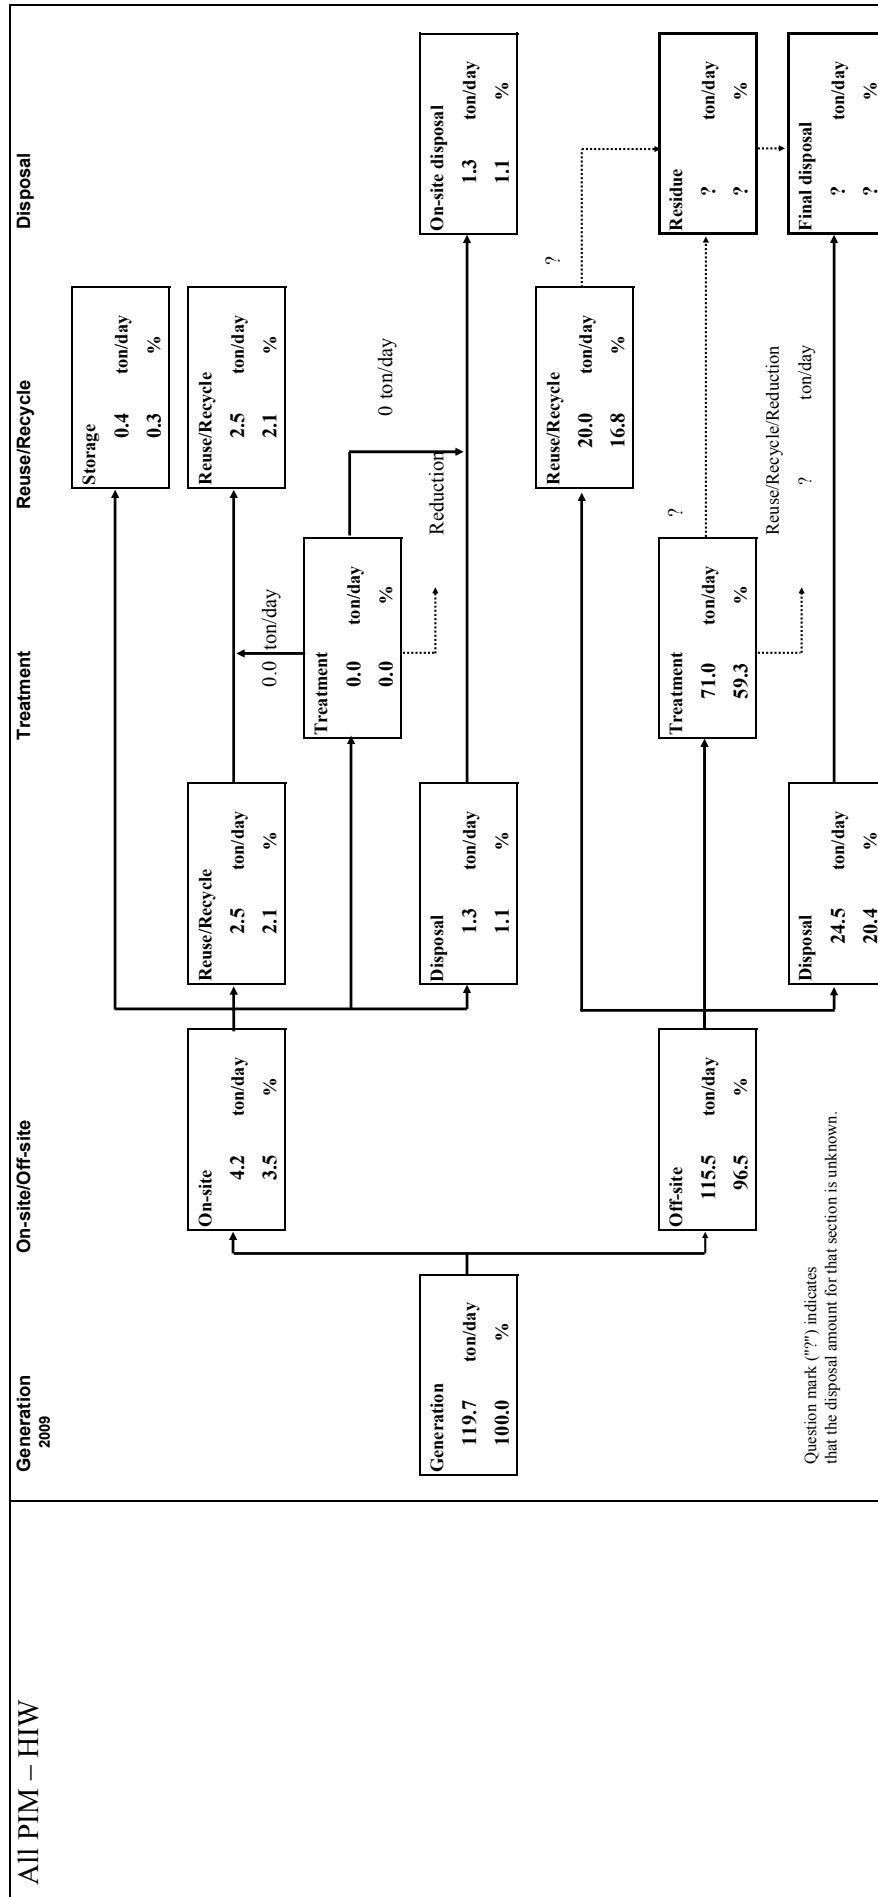

b. General IW generated from PIM (2009)

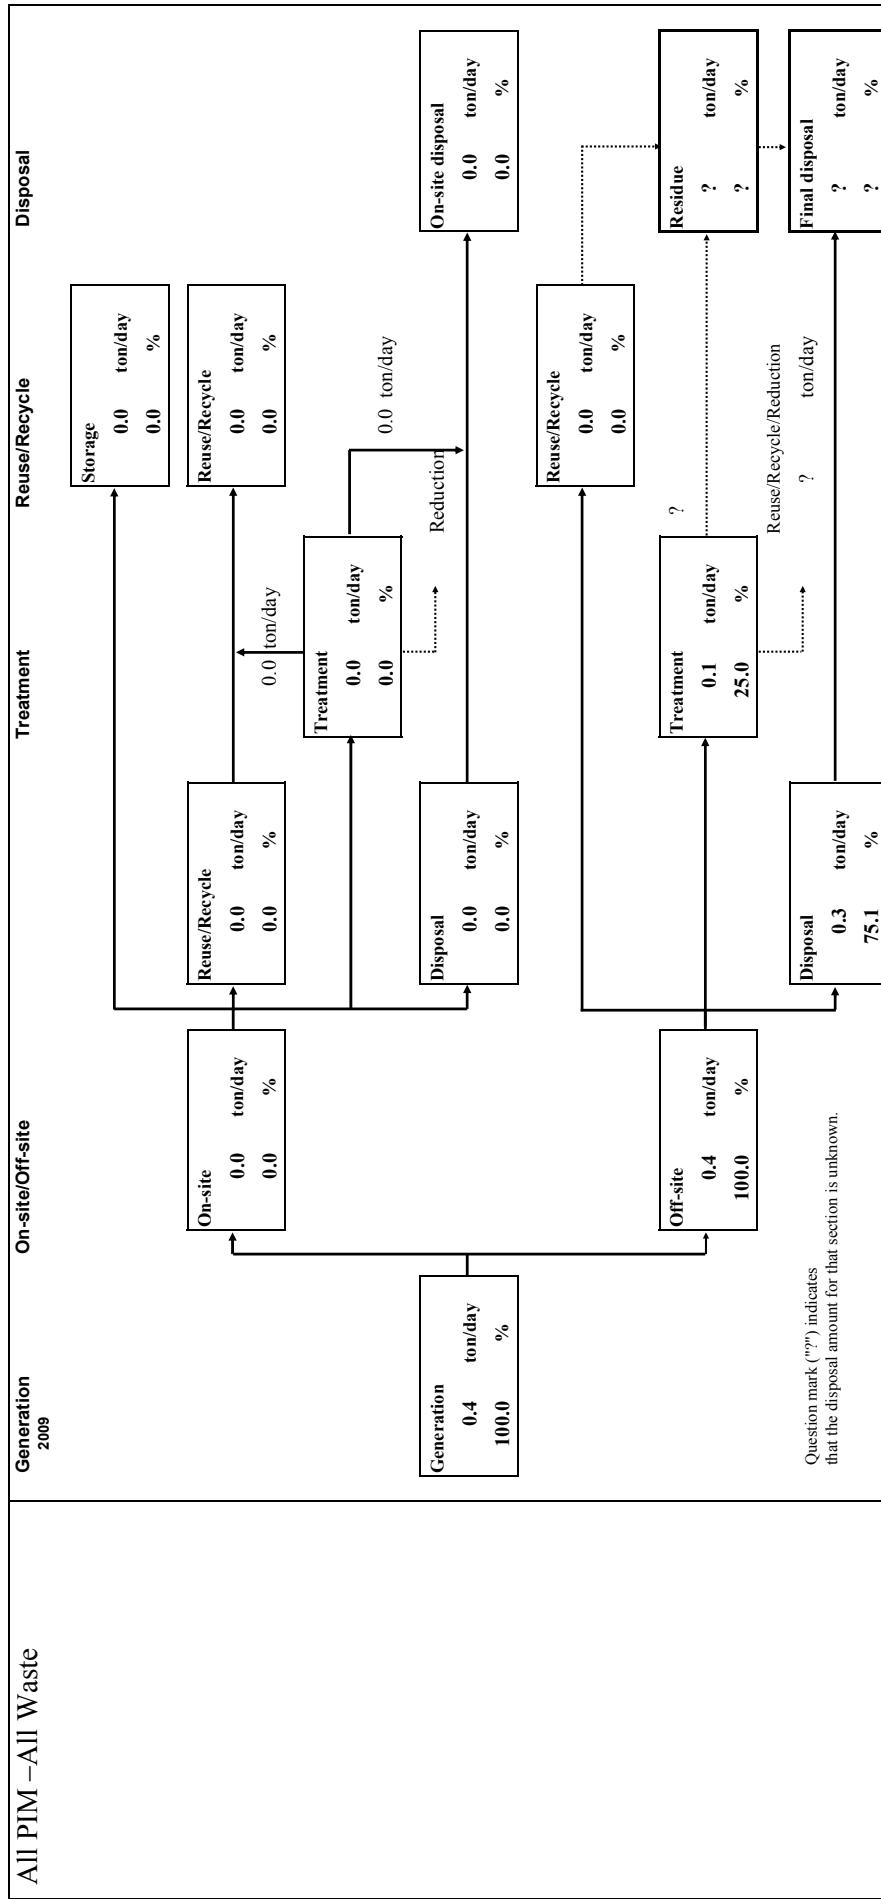

All PIM – Non HIW

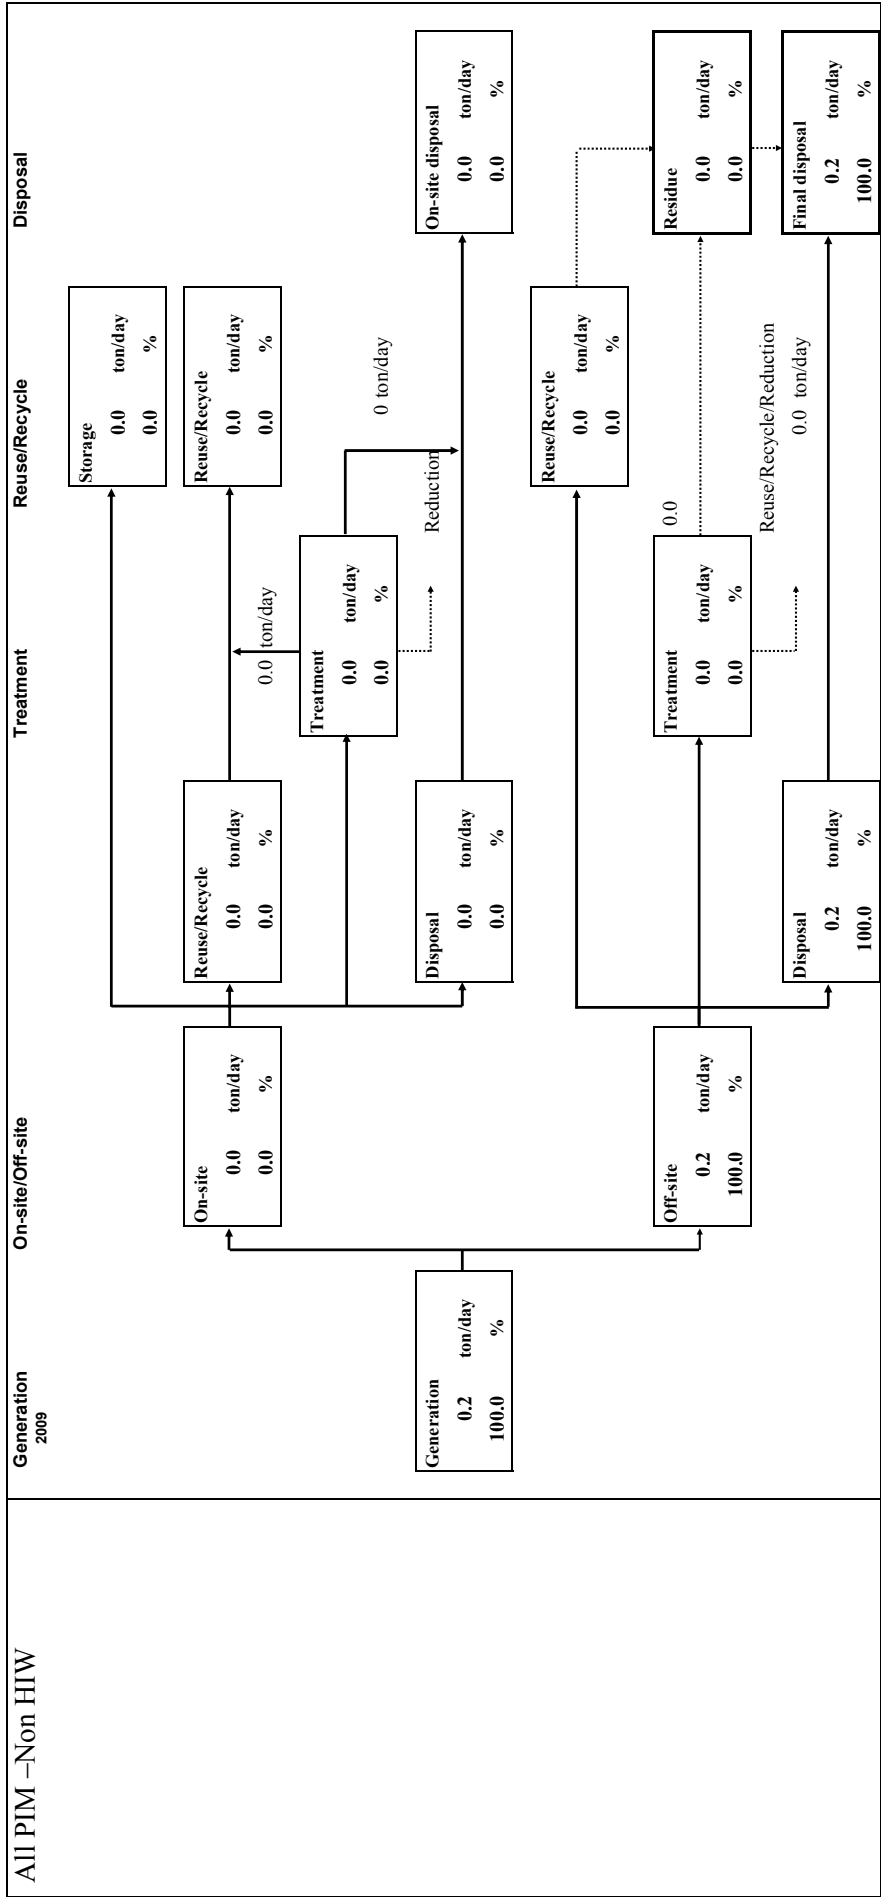

All PIM – HIW

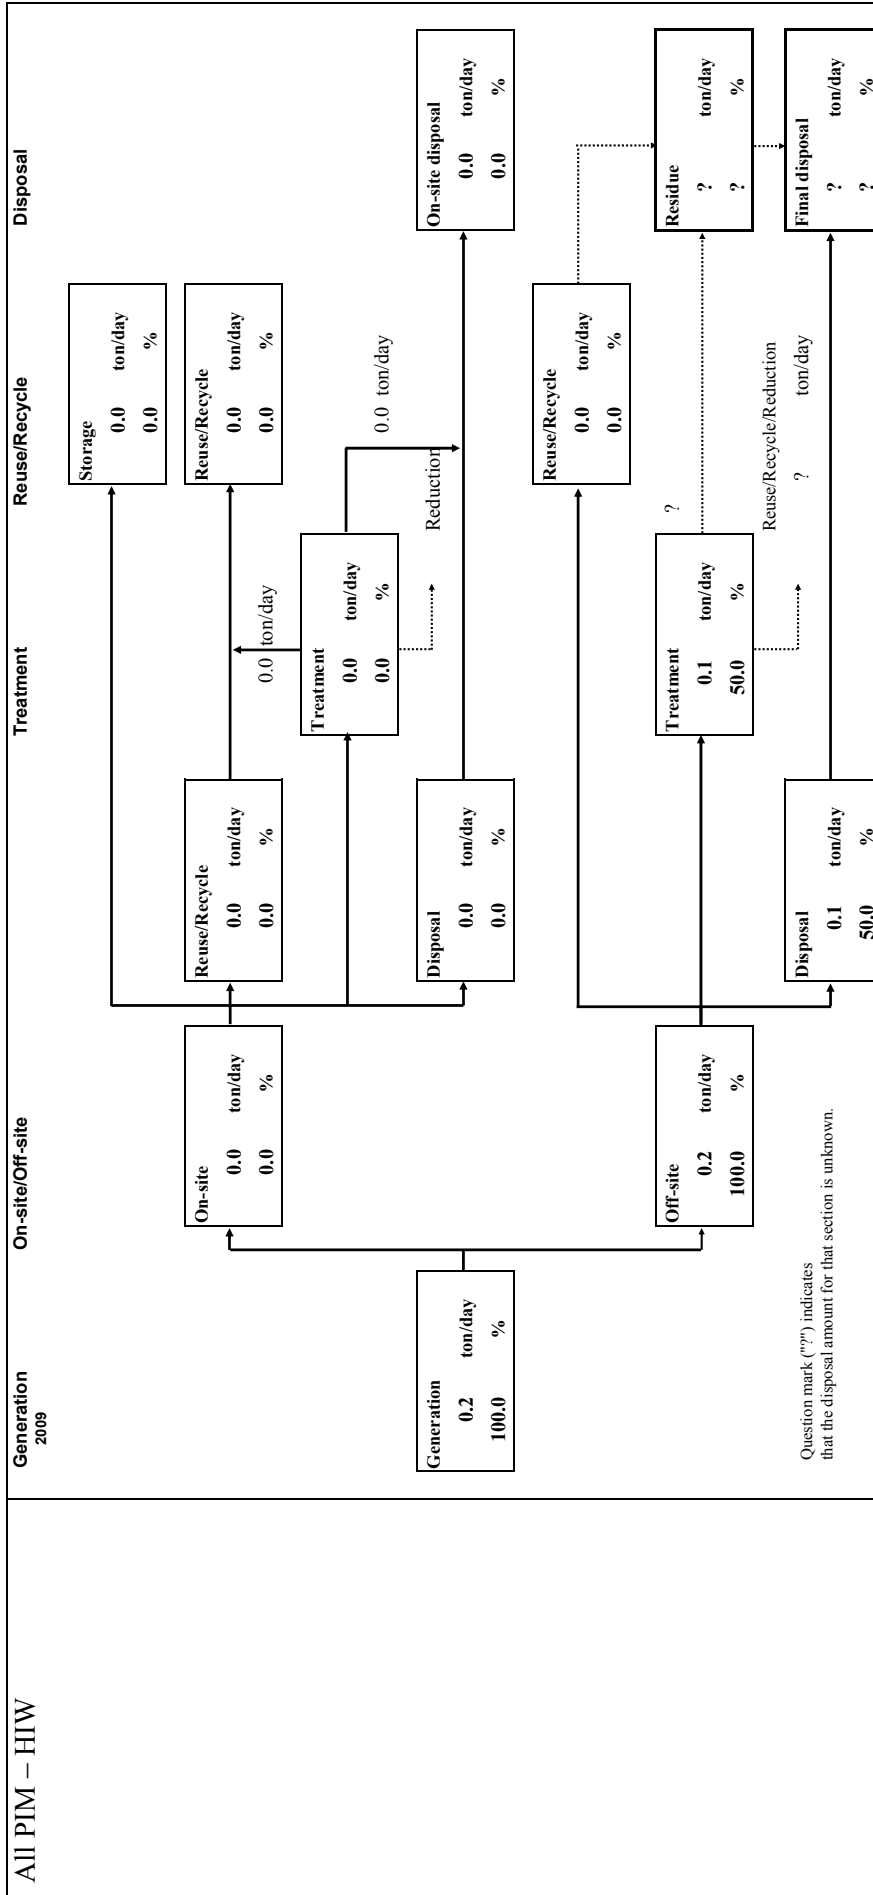

c. Health-care Waste

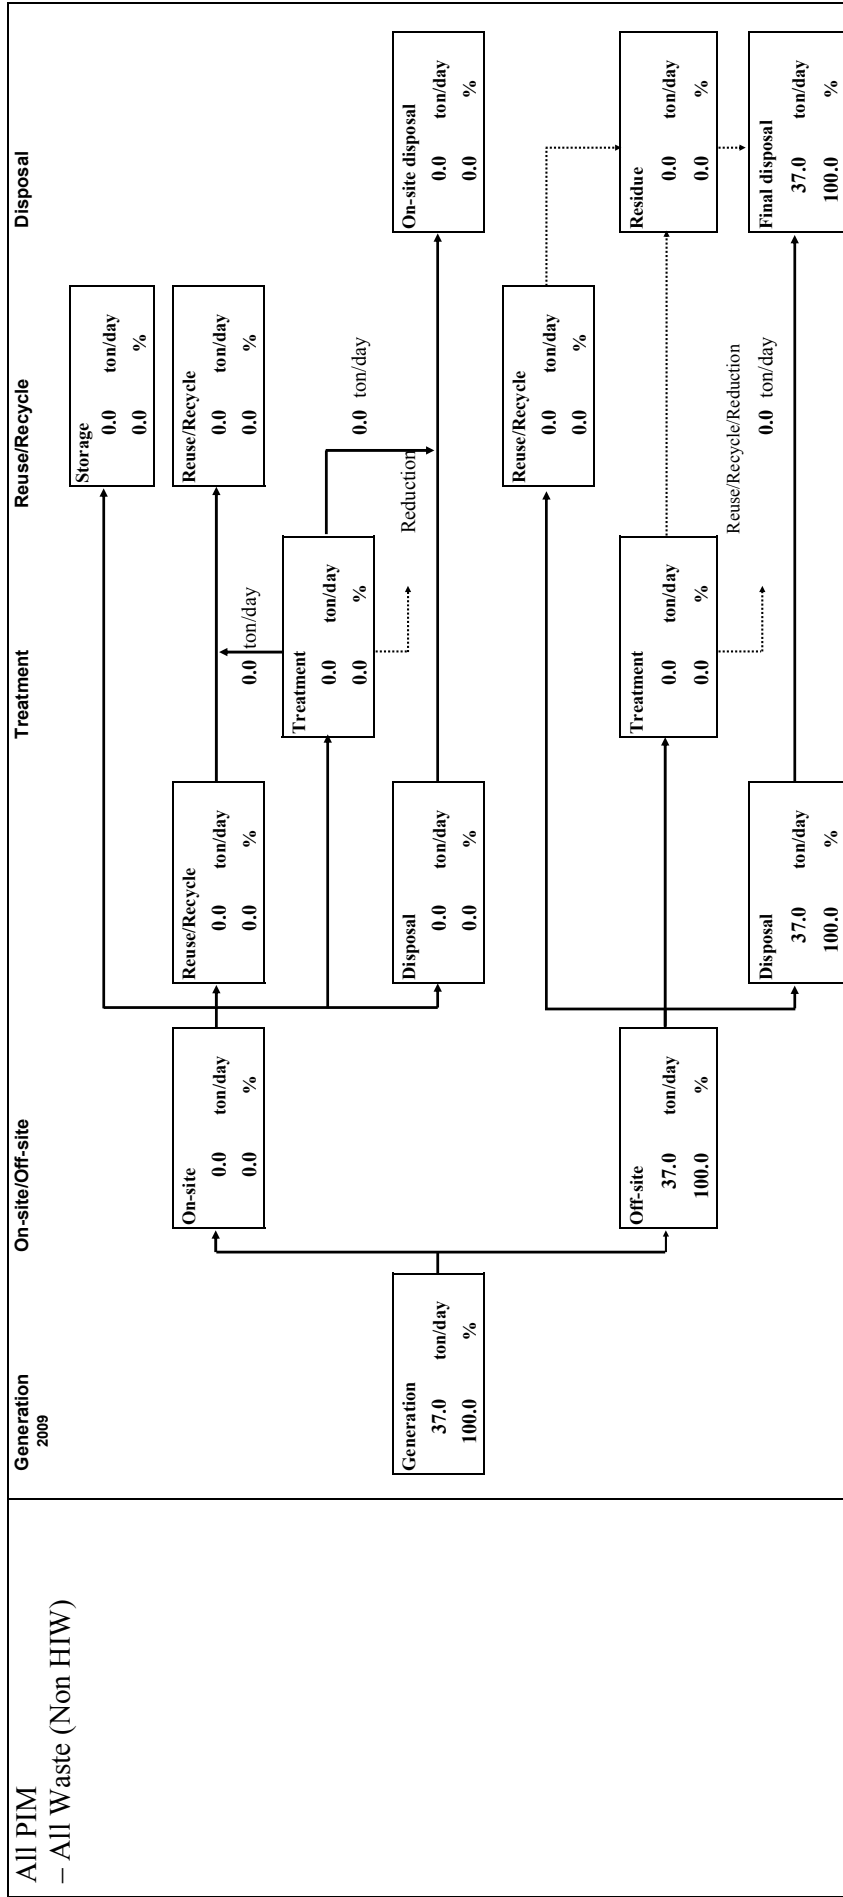

All PIM –Non HIW

All PIM – HIW

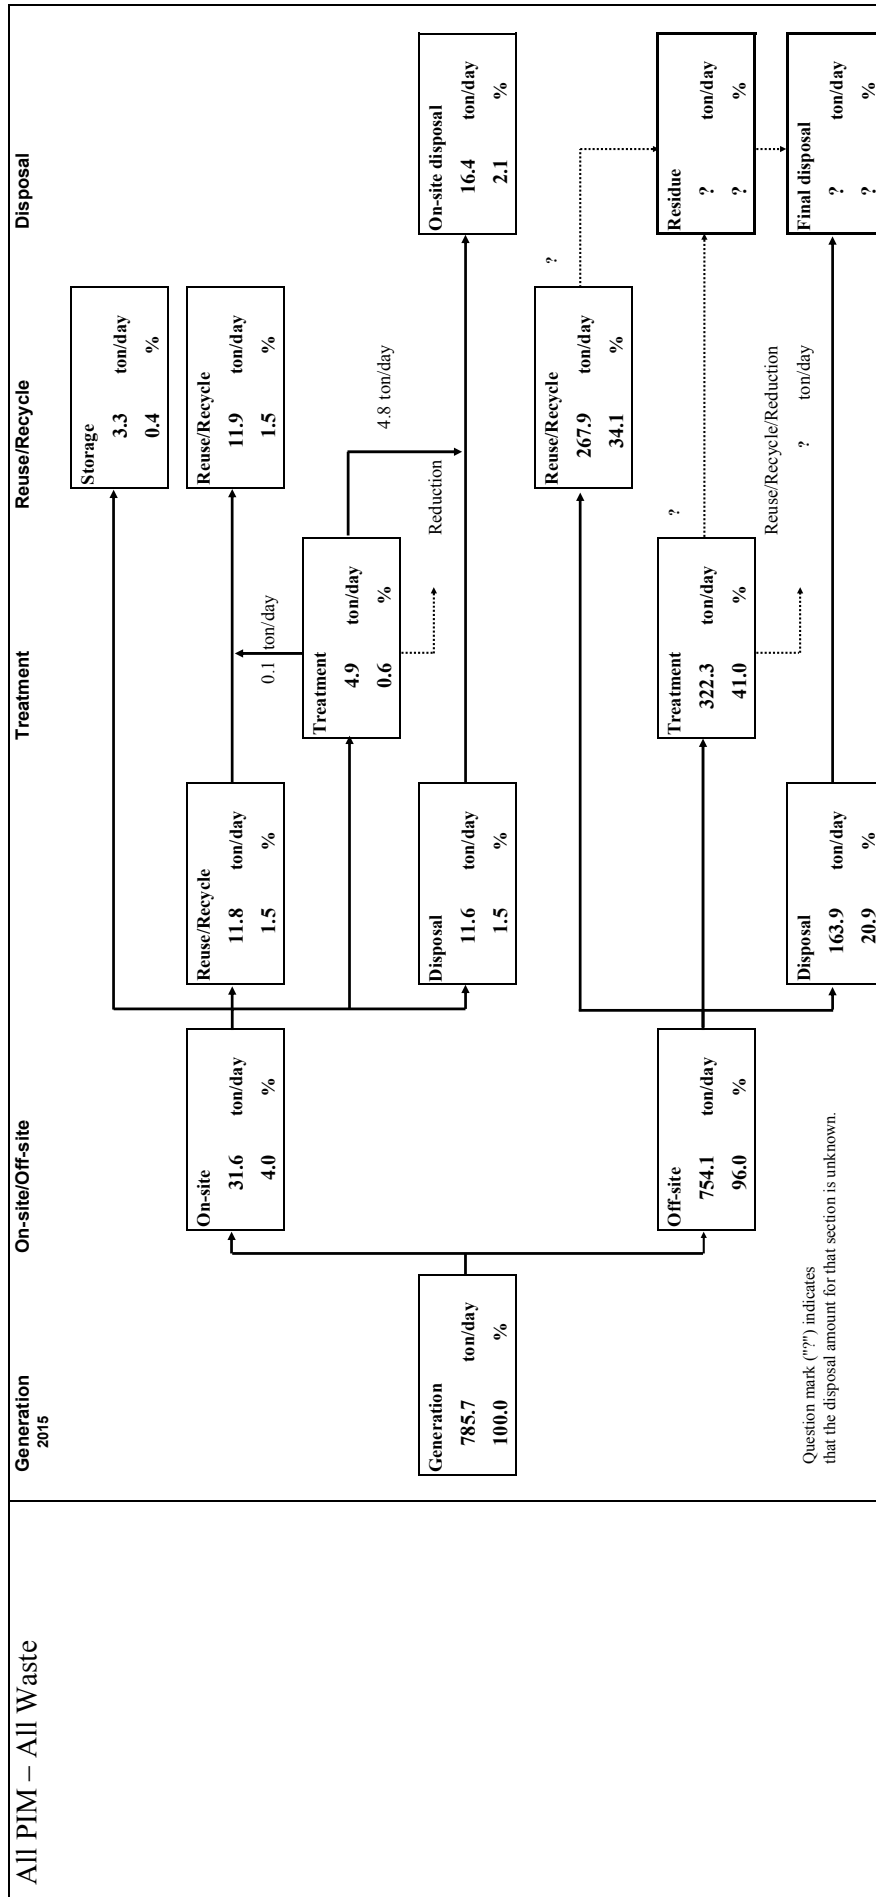

d. Construction Waste

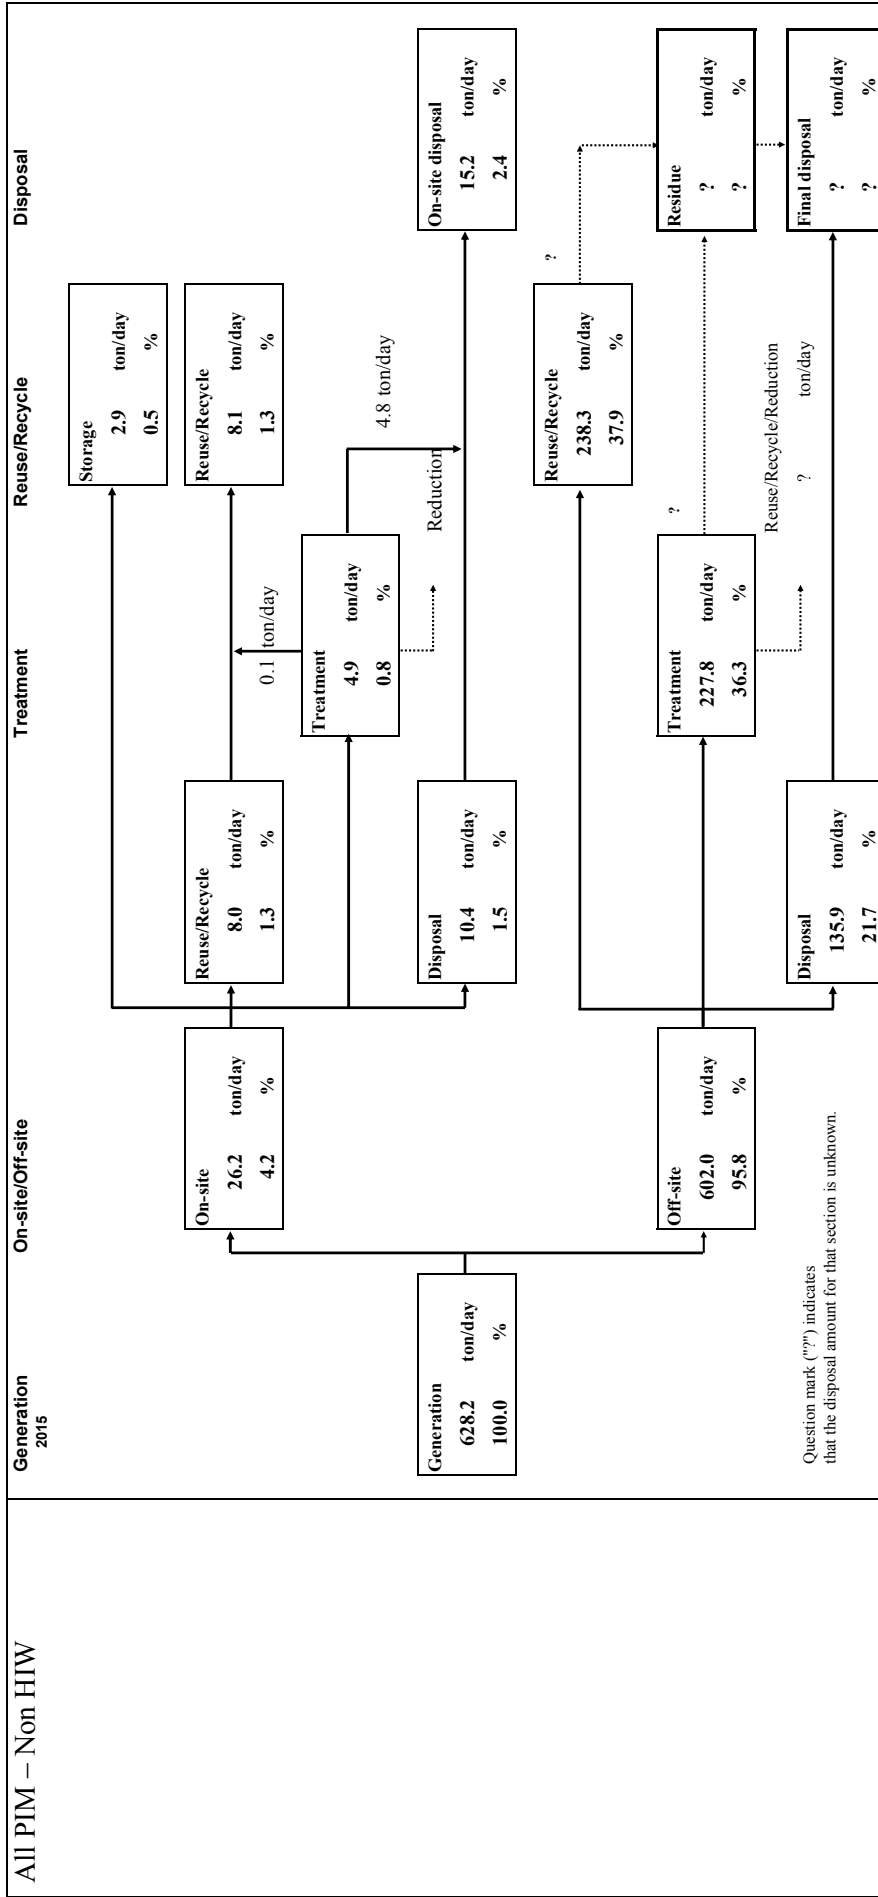

1.2 Simplified Waste stream (2015)

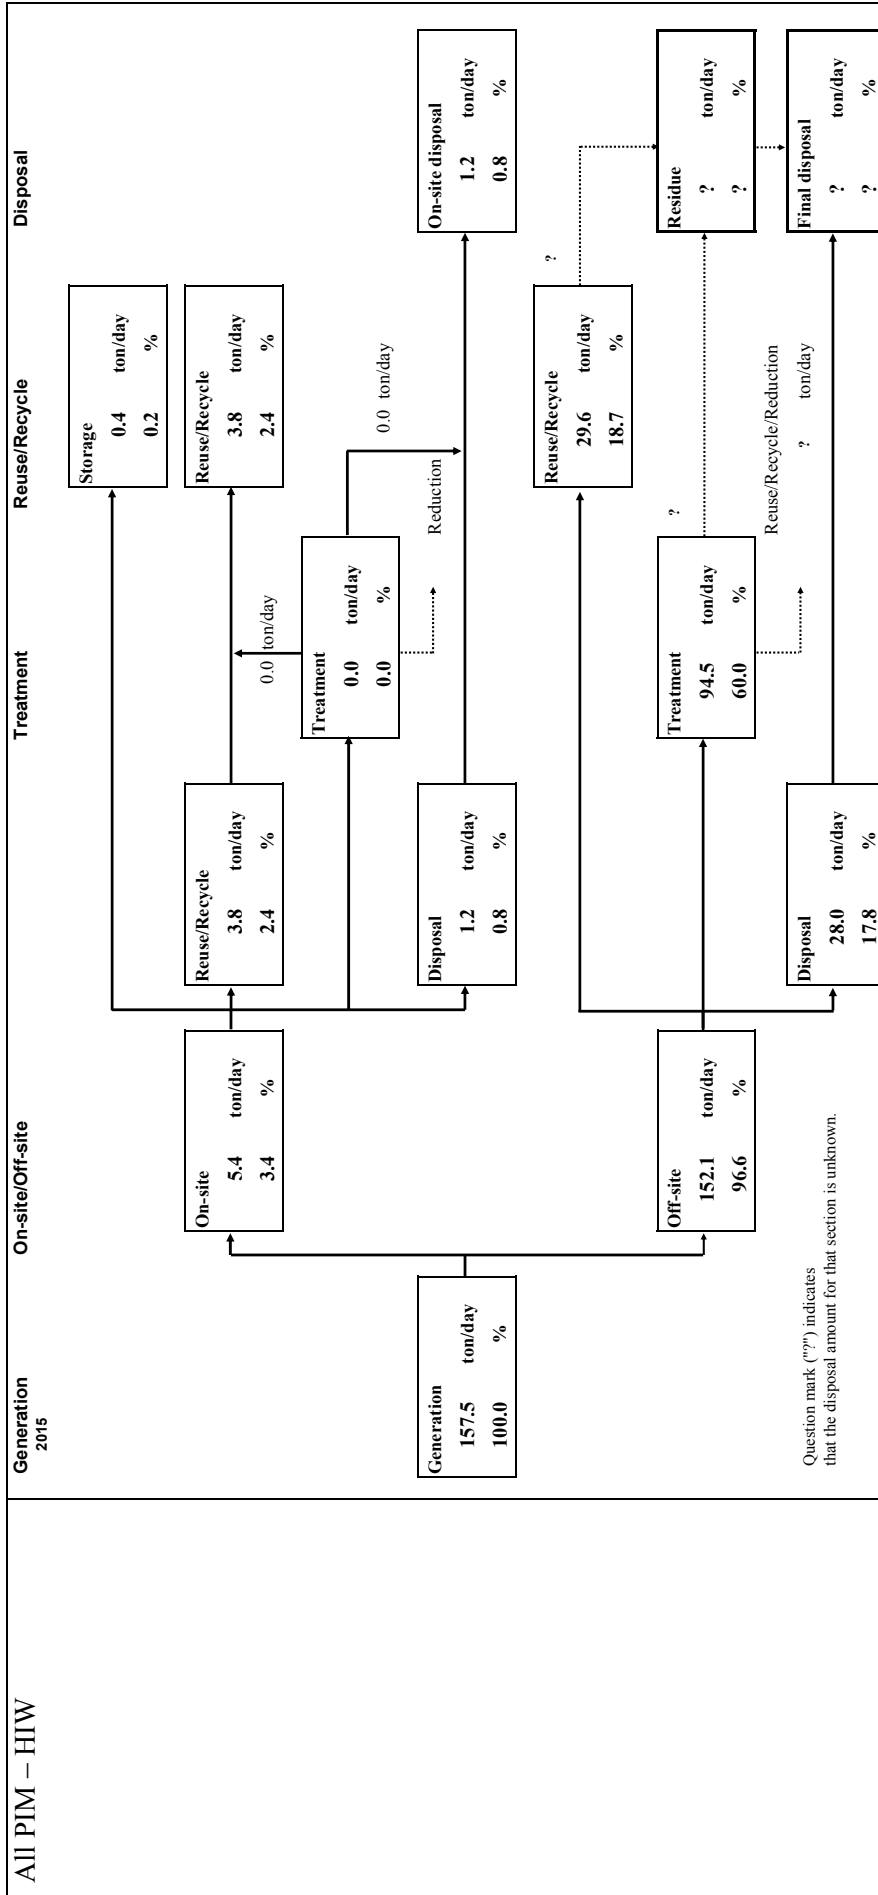

e. All waste (GIW + Health-care waste + Construction waste)

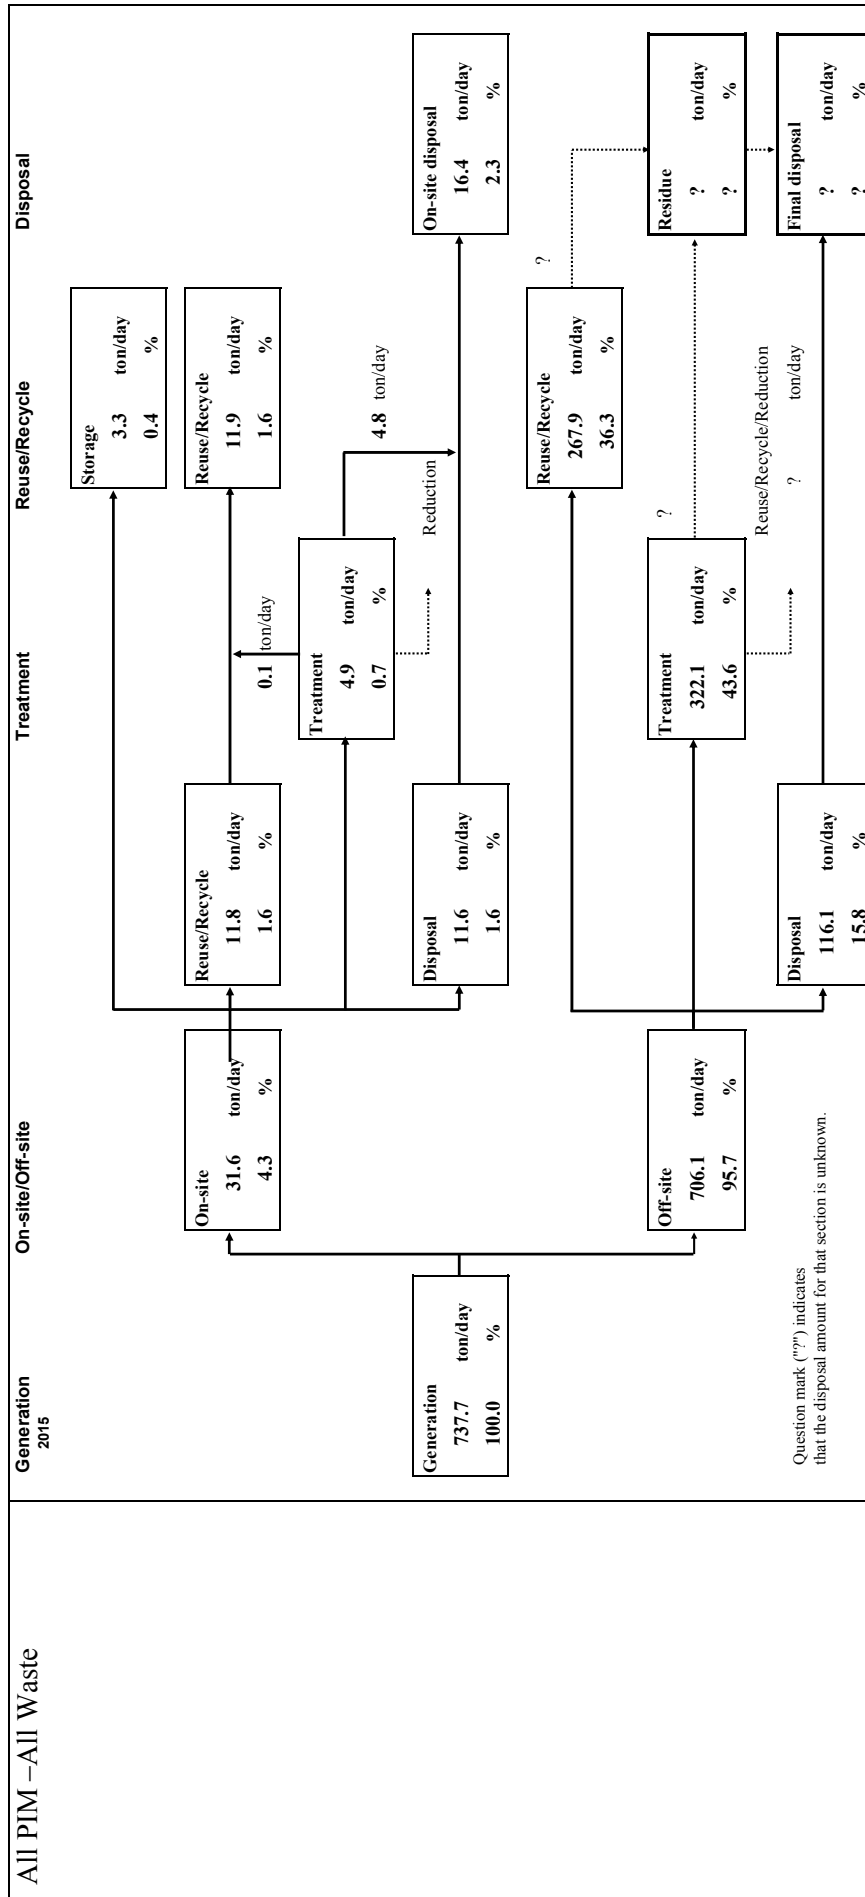

All PIM – Non HIW

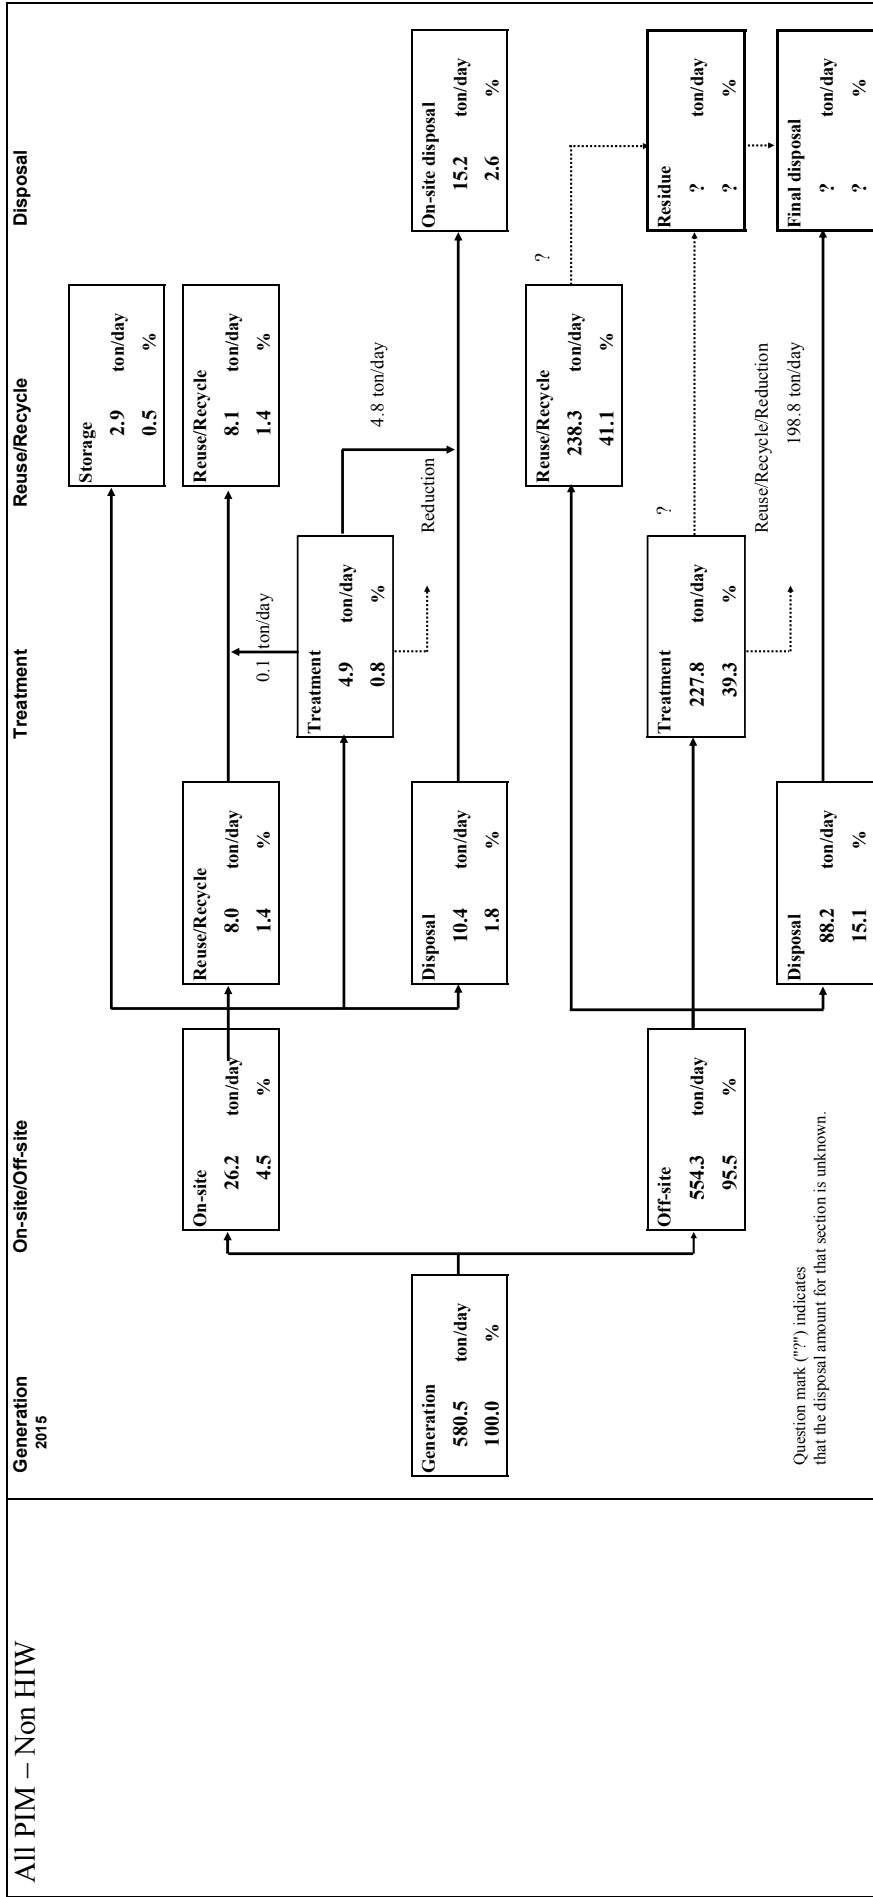

All PIM – HIW

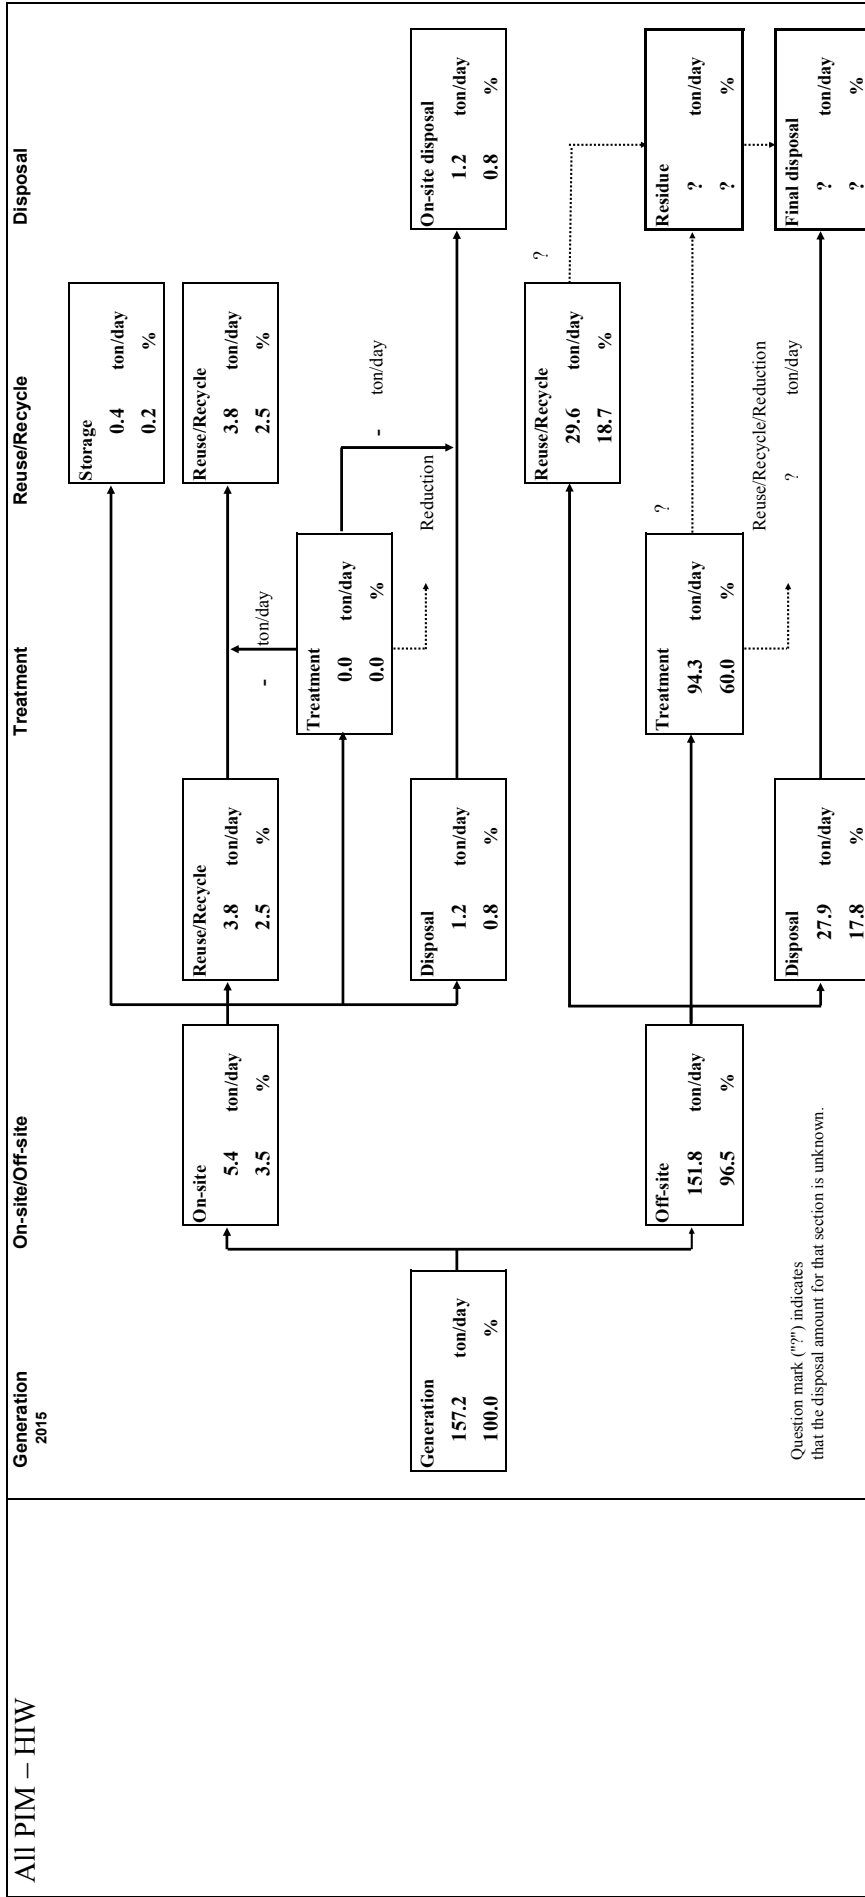

f. General IW generated from PIM (2015)

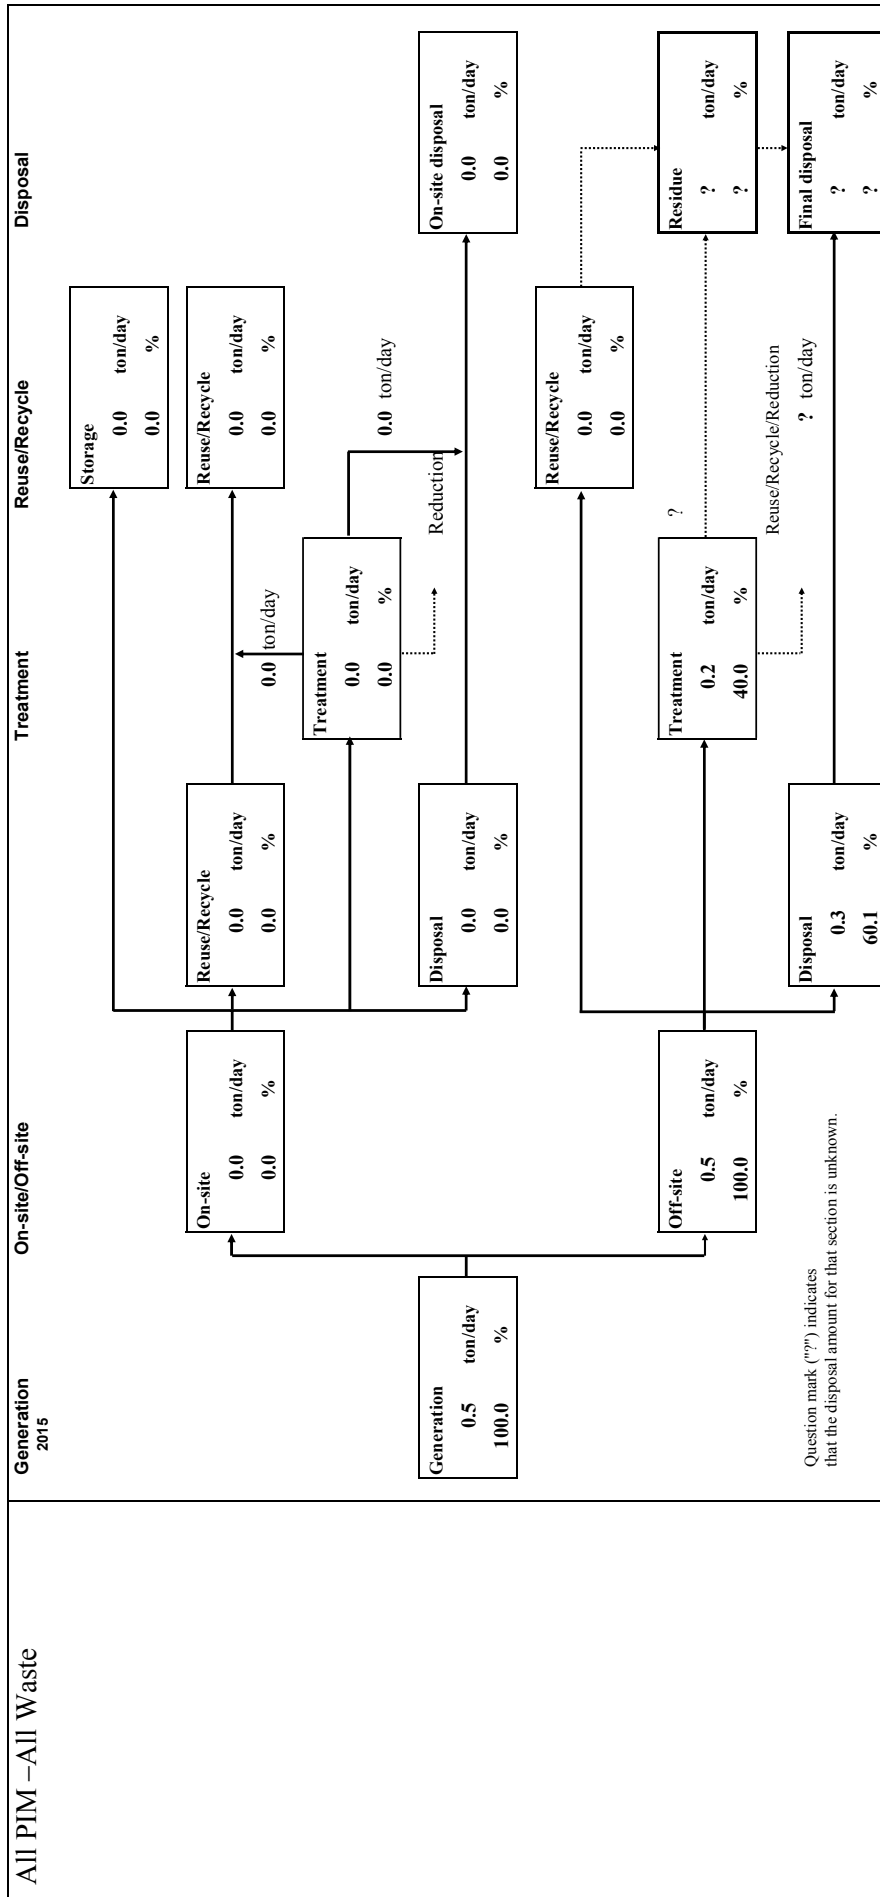

All PIM – Non HIW

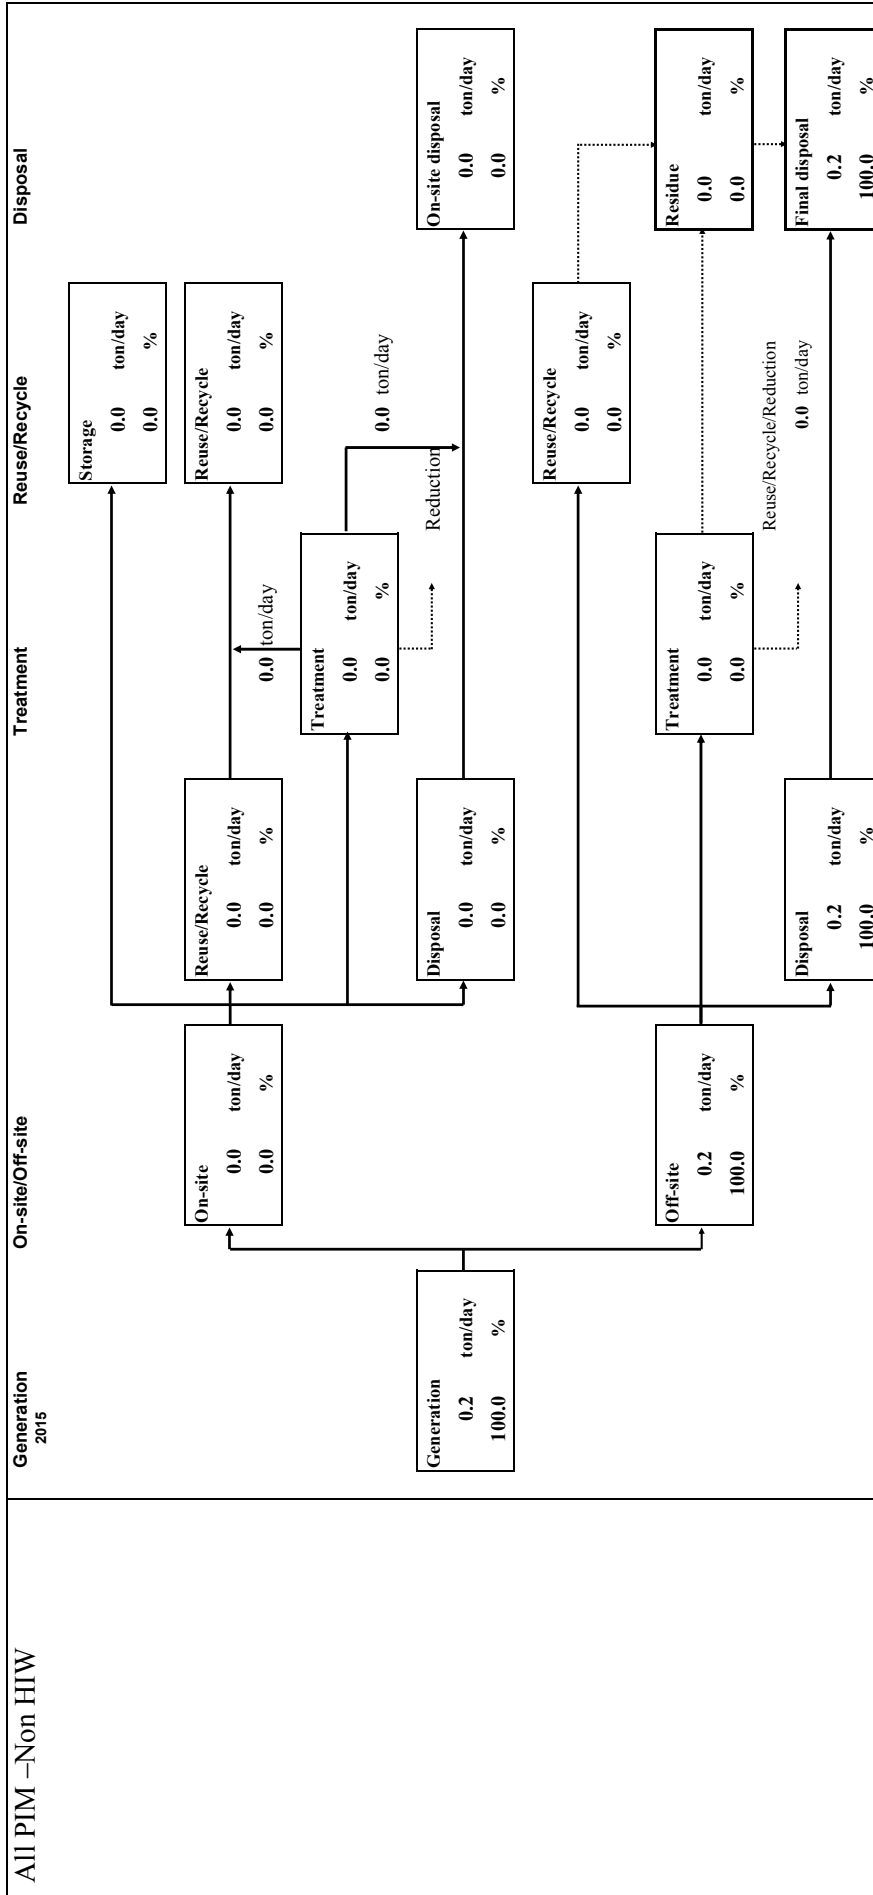

All PIM – HIW

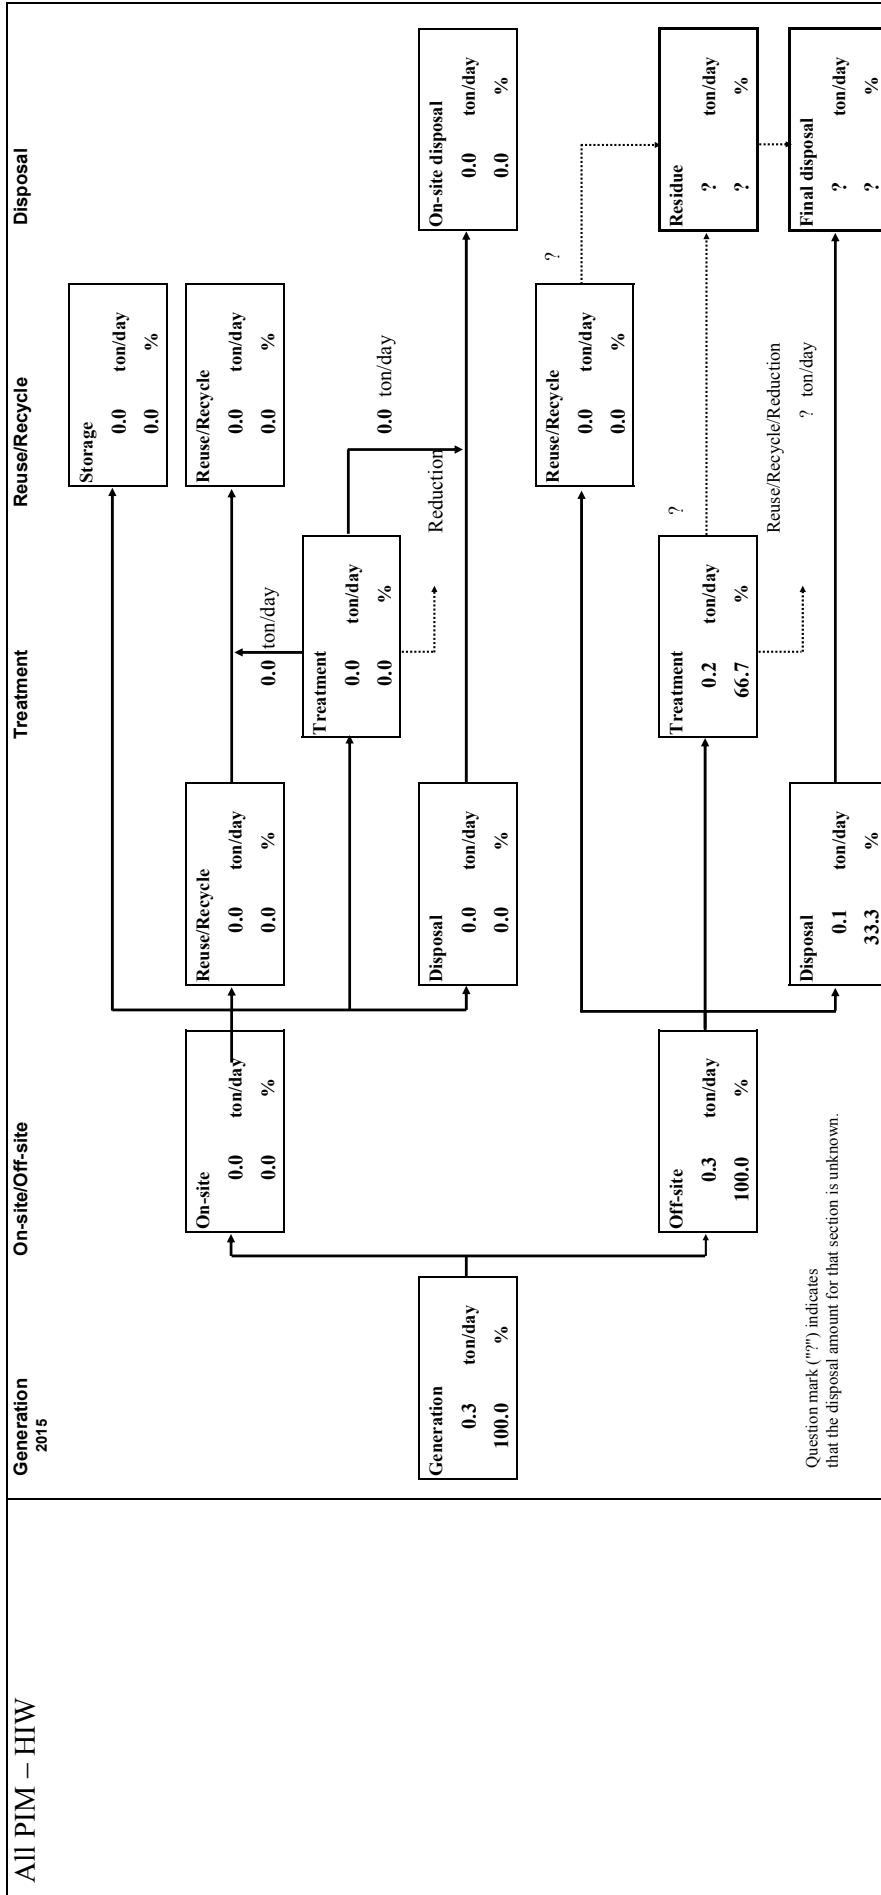

g. Health-care Waste

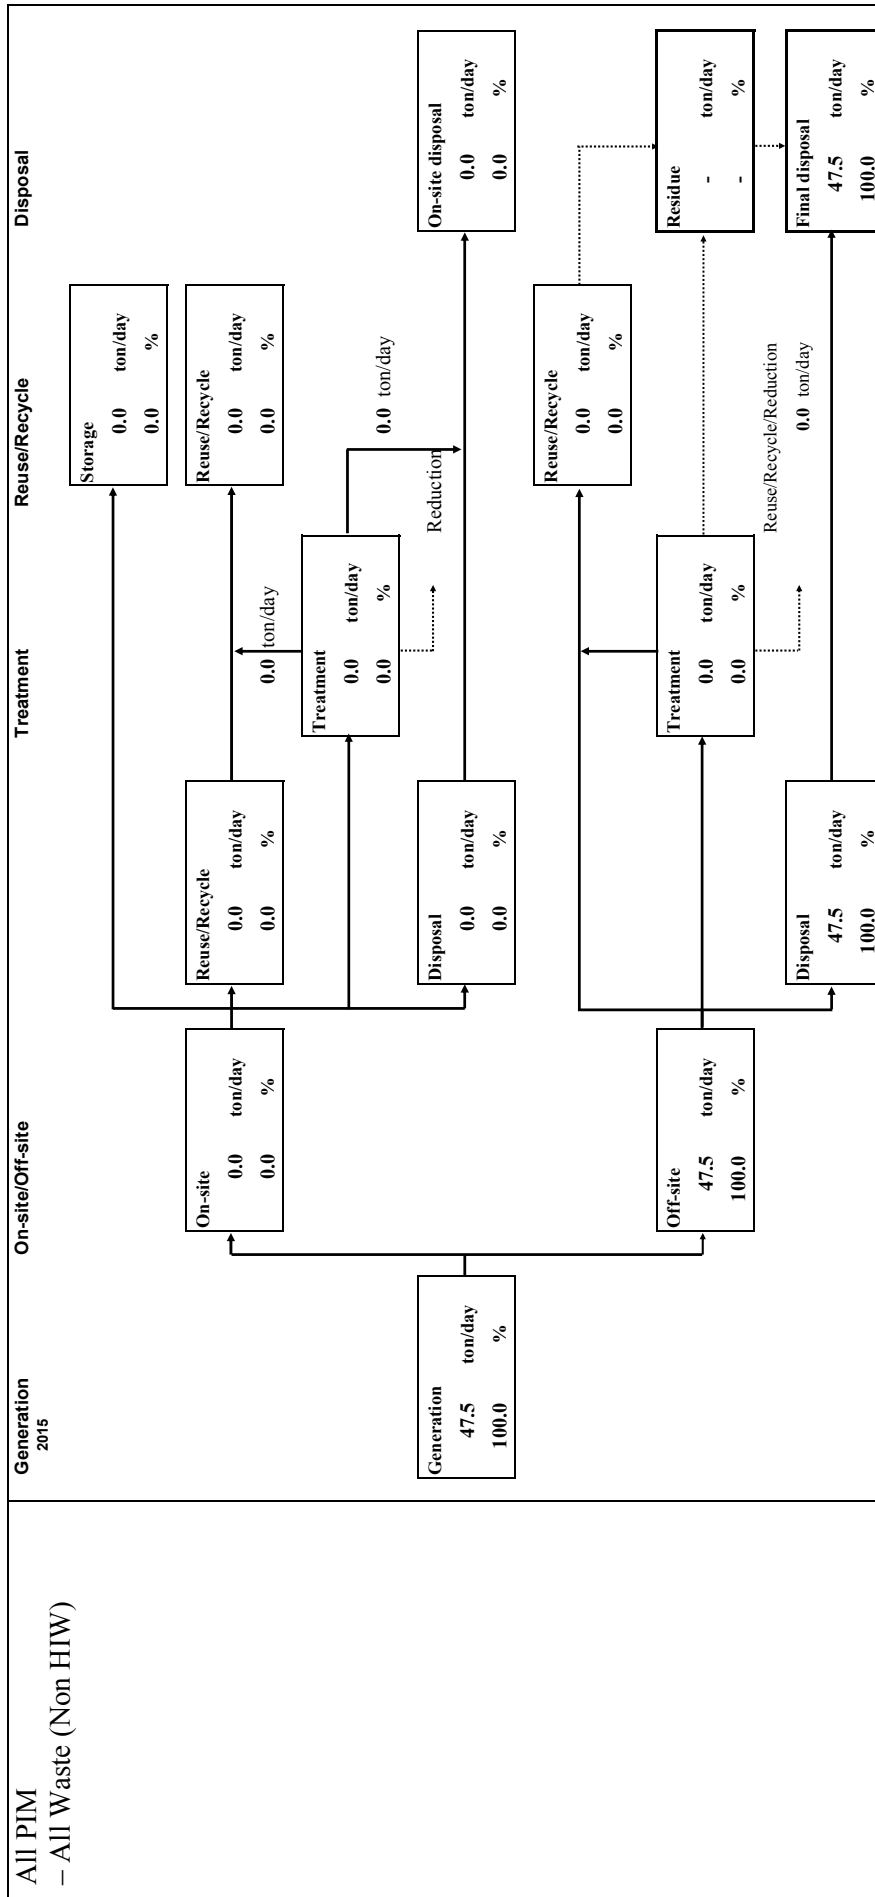

All PIM – Non HIW

All PIM – HIW

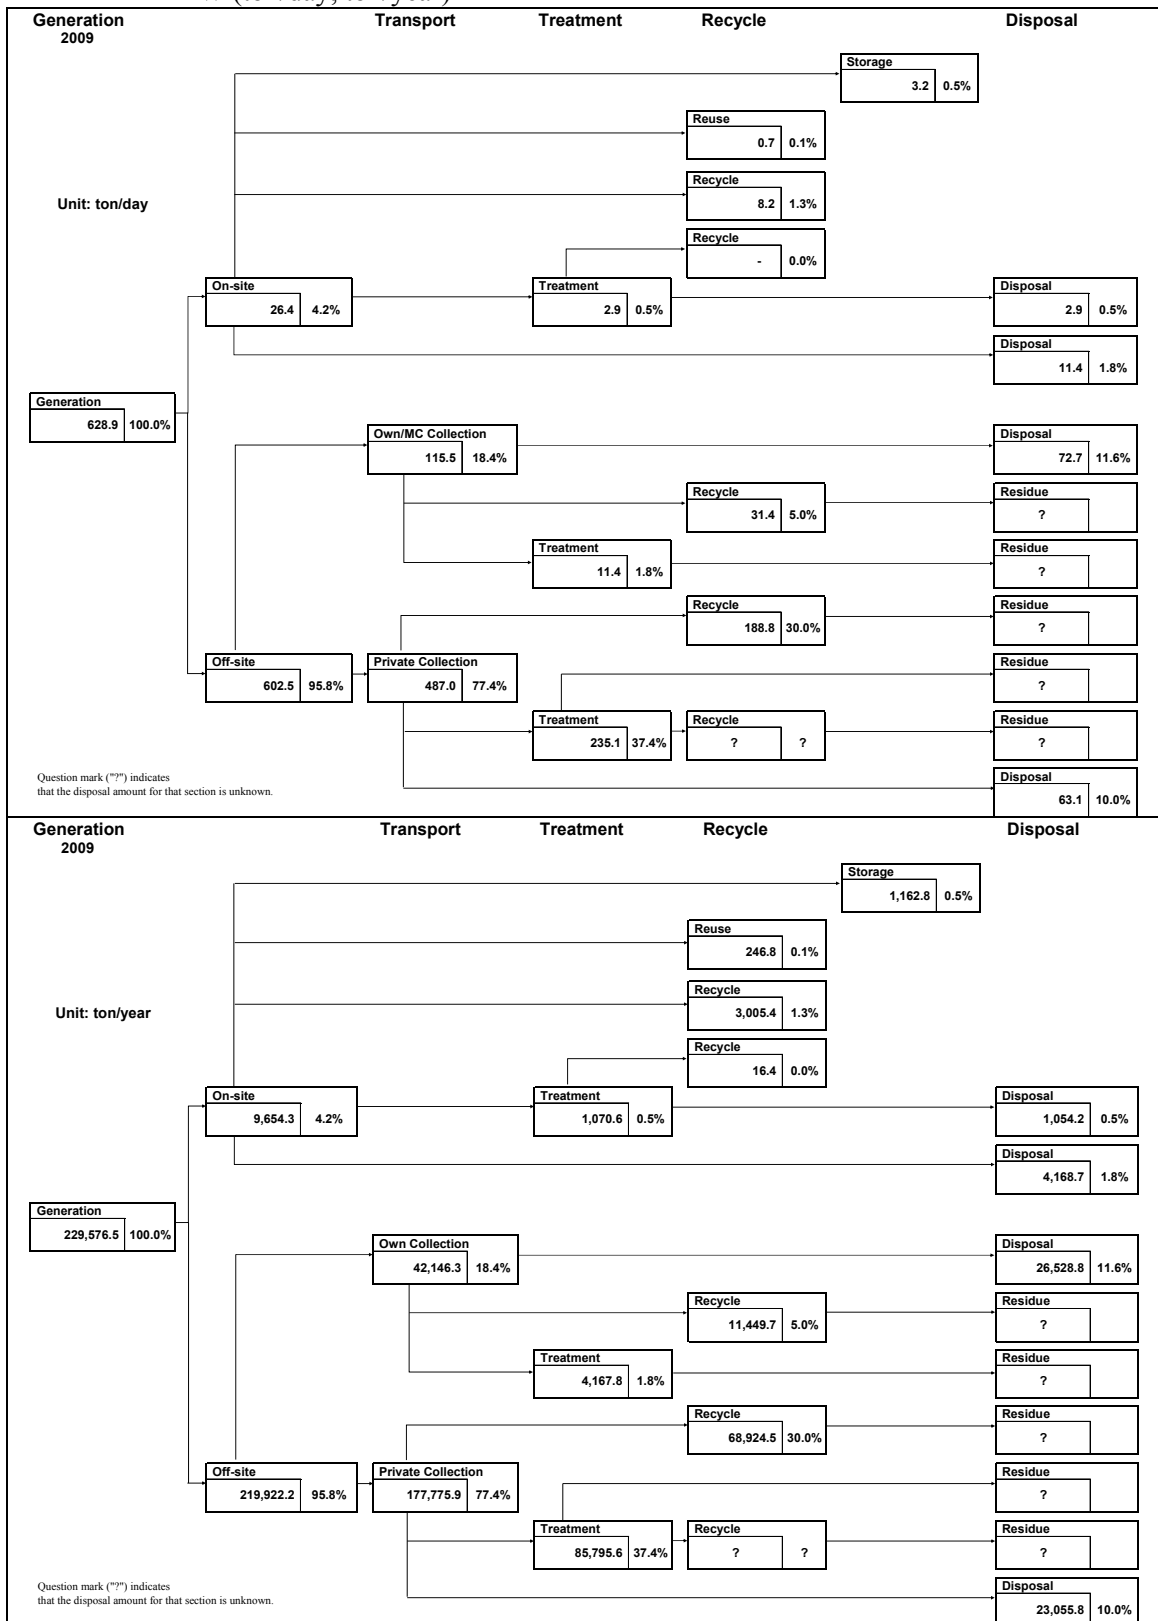

h. Construction Waste

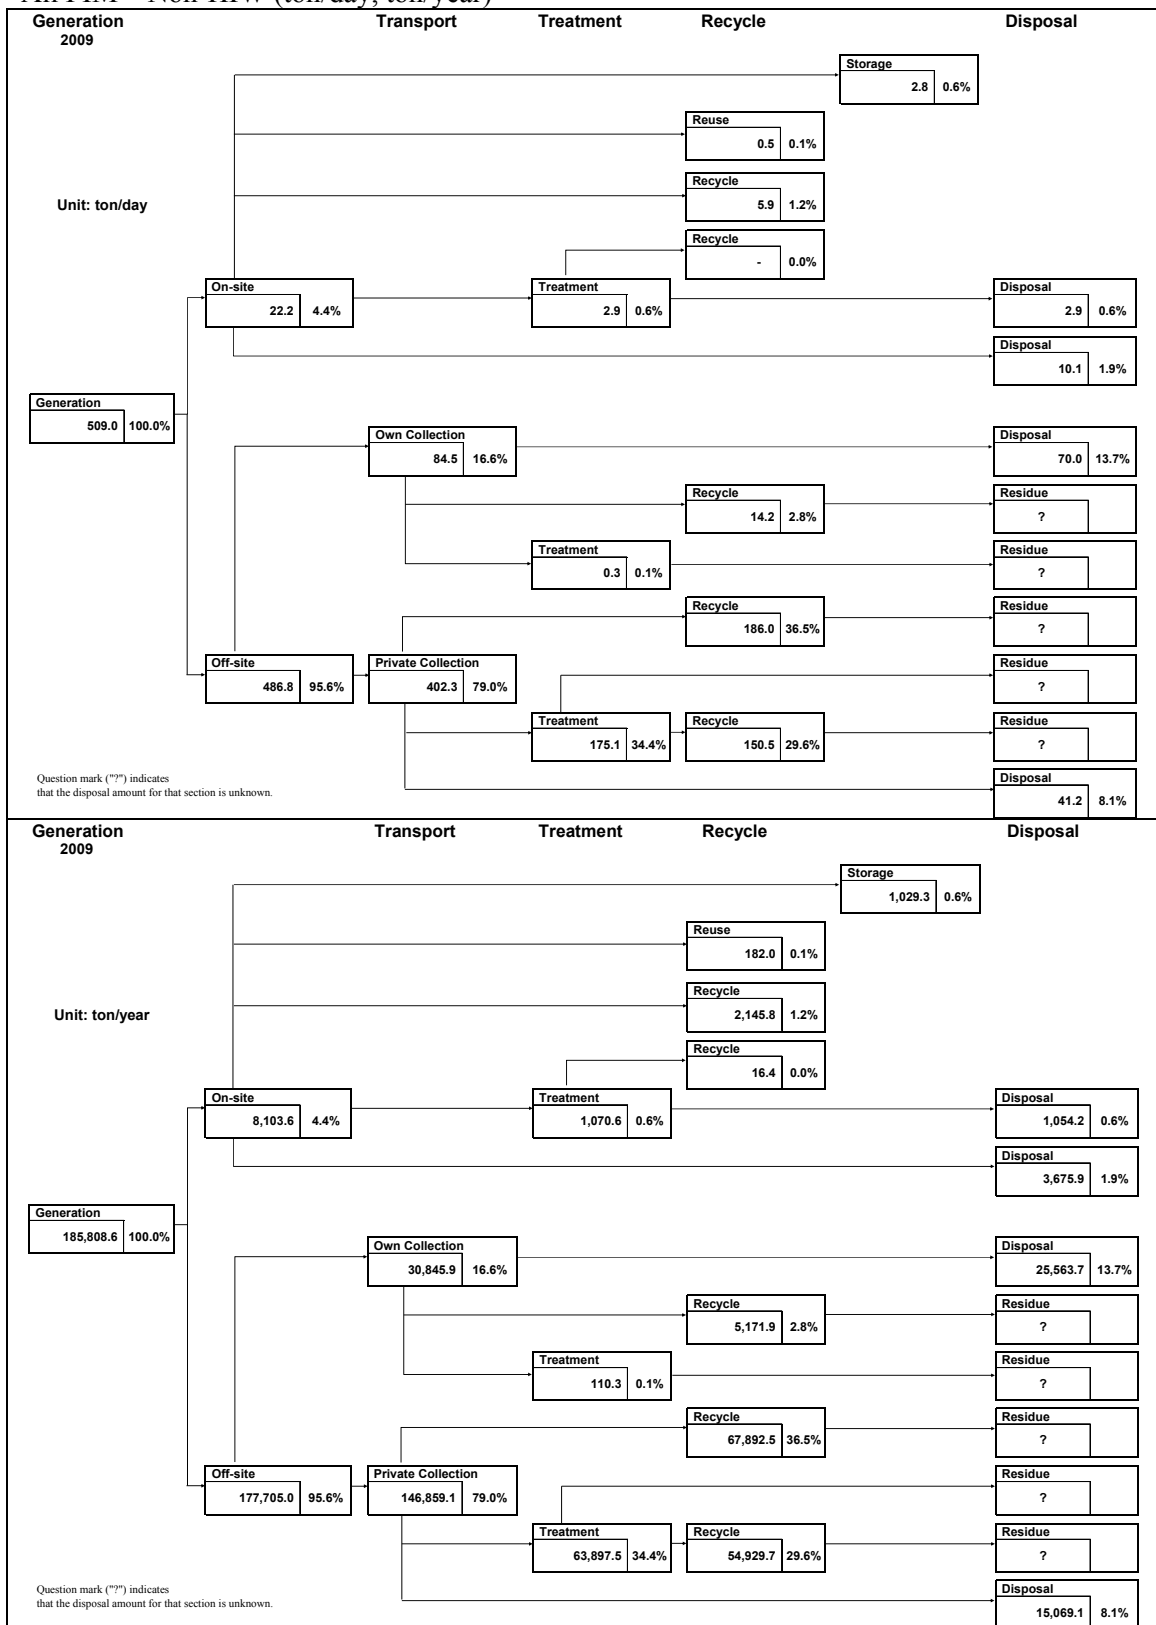

1.3 Detailed Waste stream (2009)

a. Industrial Waste (GIW + Health-care waste + Construction waste)

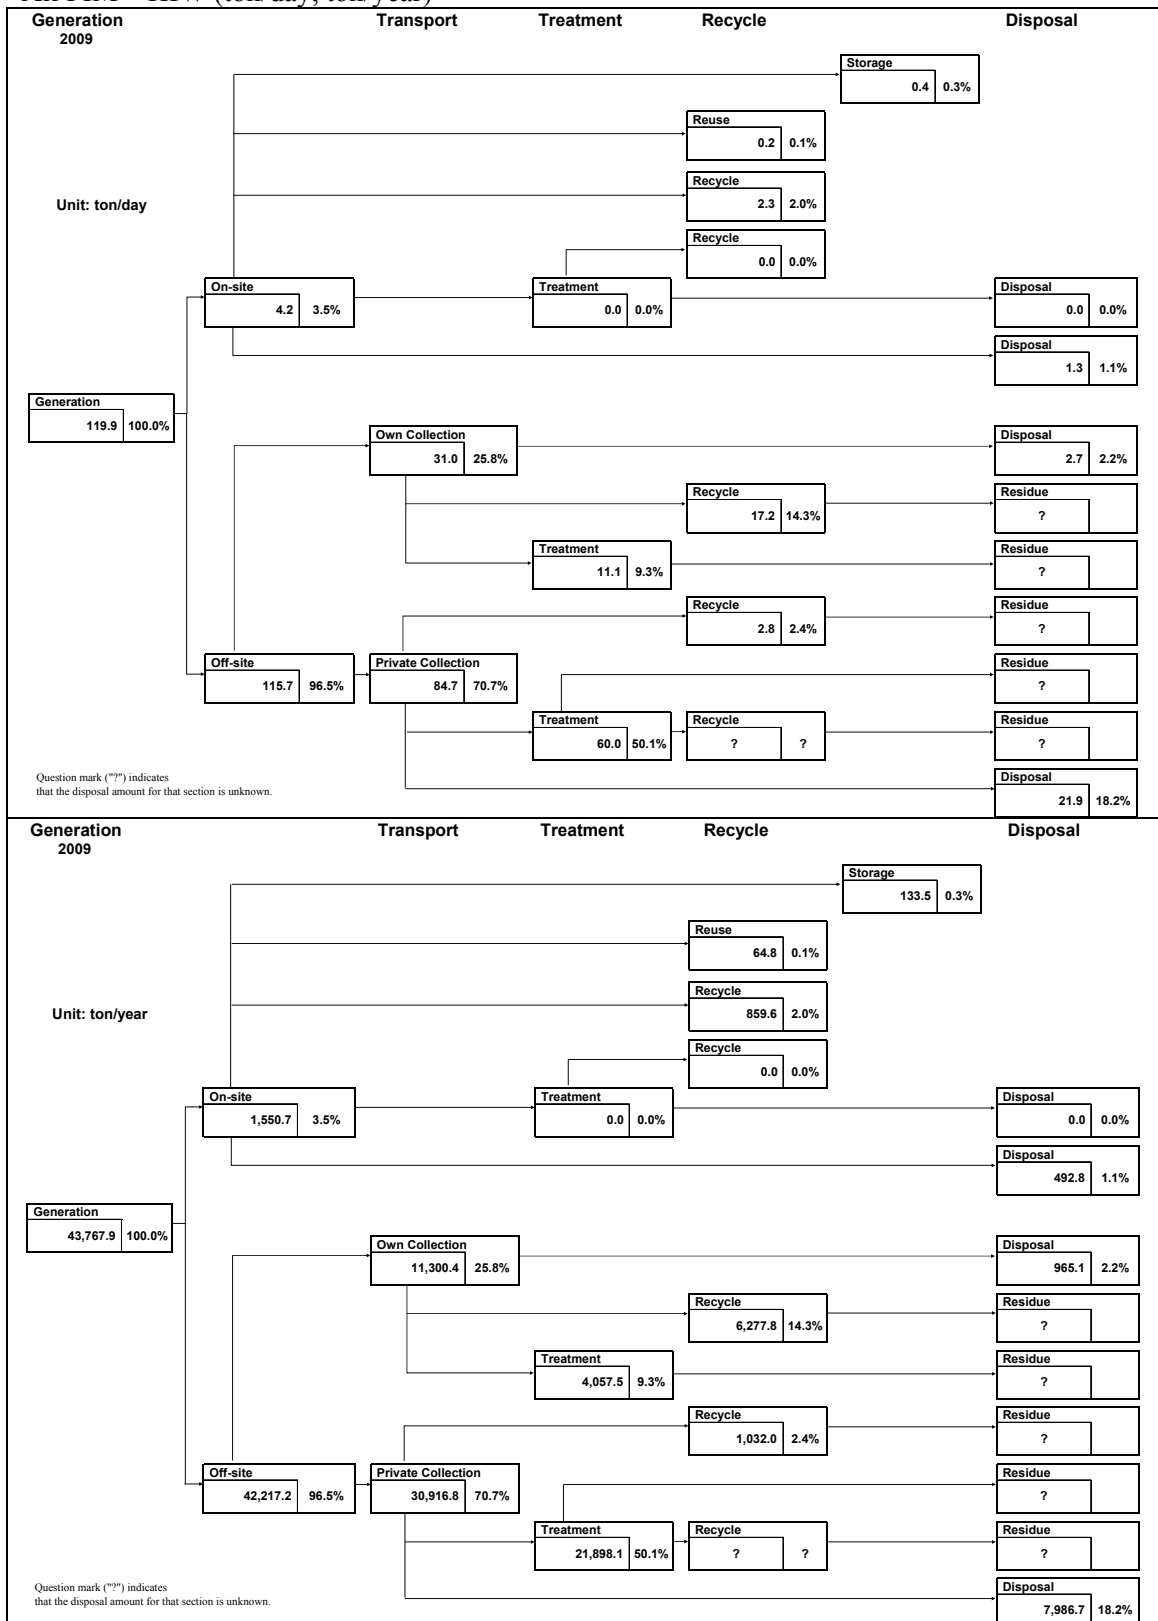

All PIM - All IW (ton/day, ton/year)

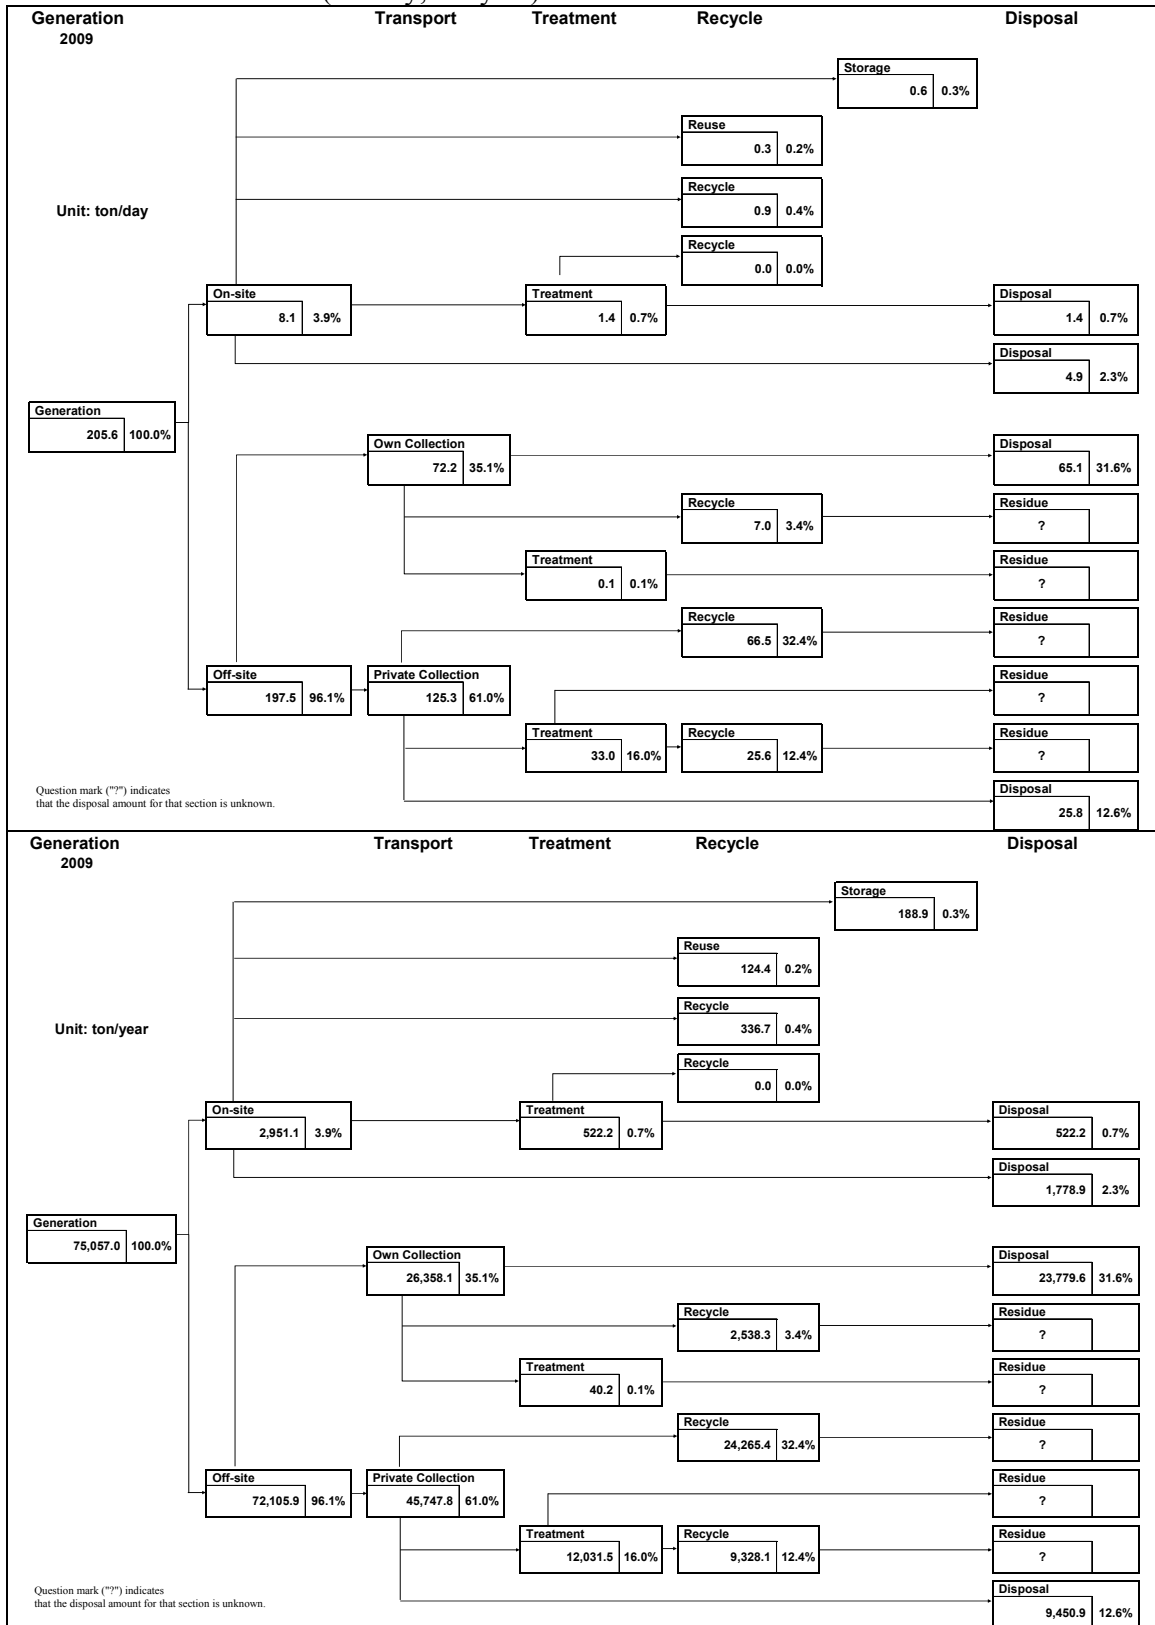

All PIM – Non-HIW (ton/day, ton/year)

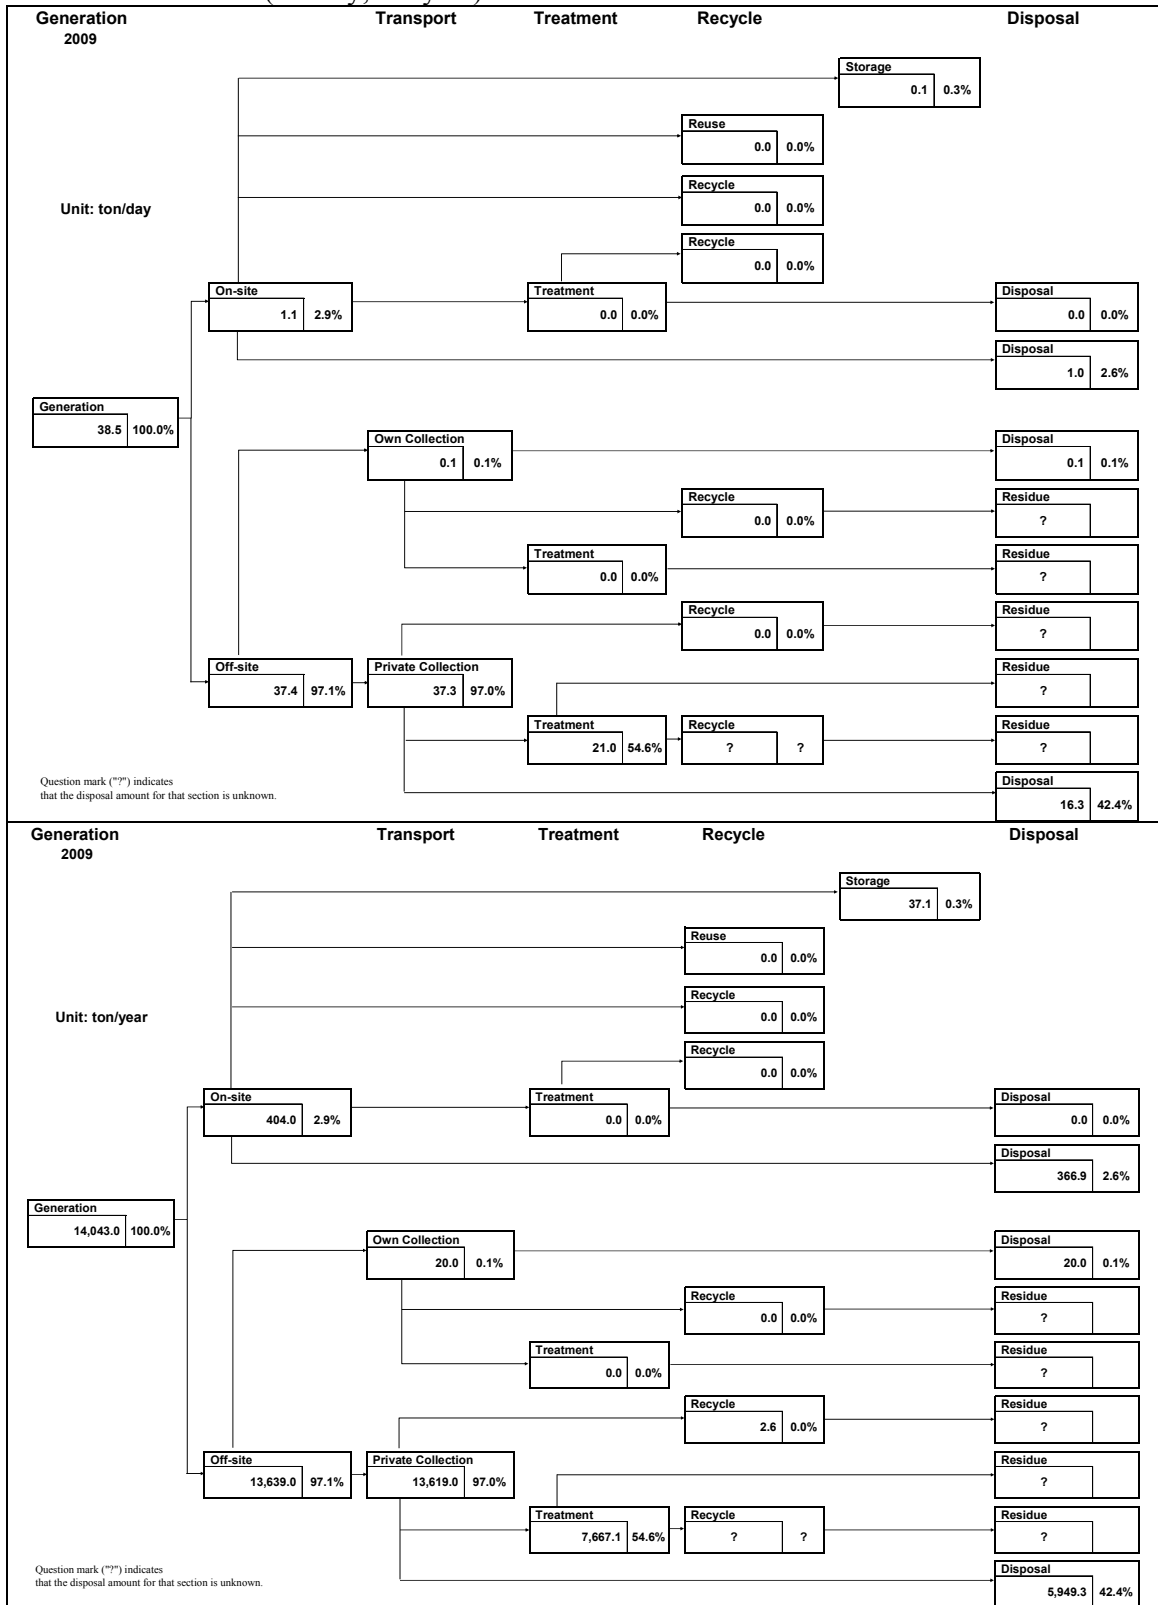

All PIM – HIW (ton/day, ton/year)

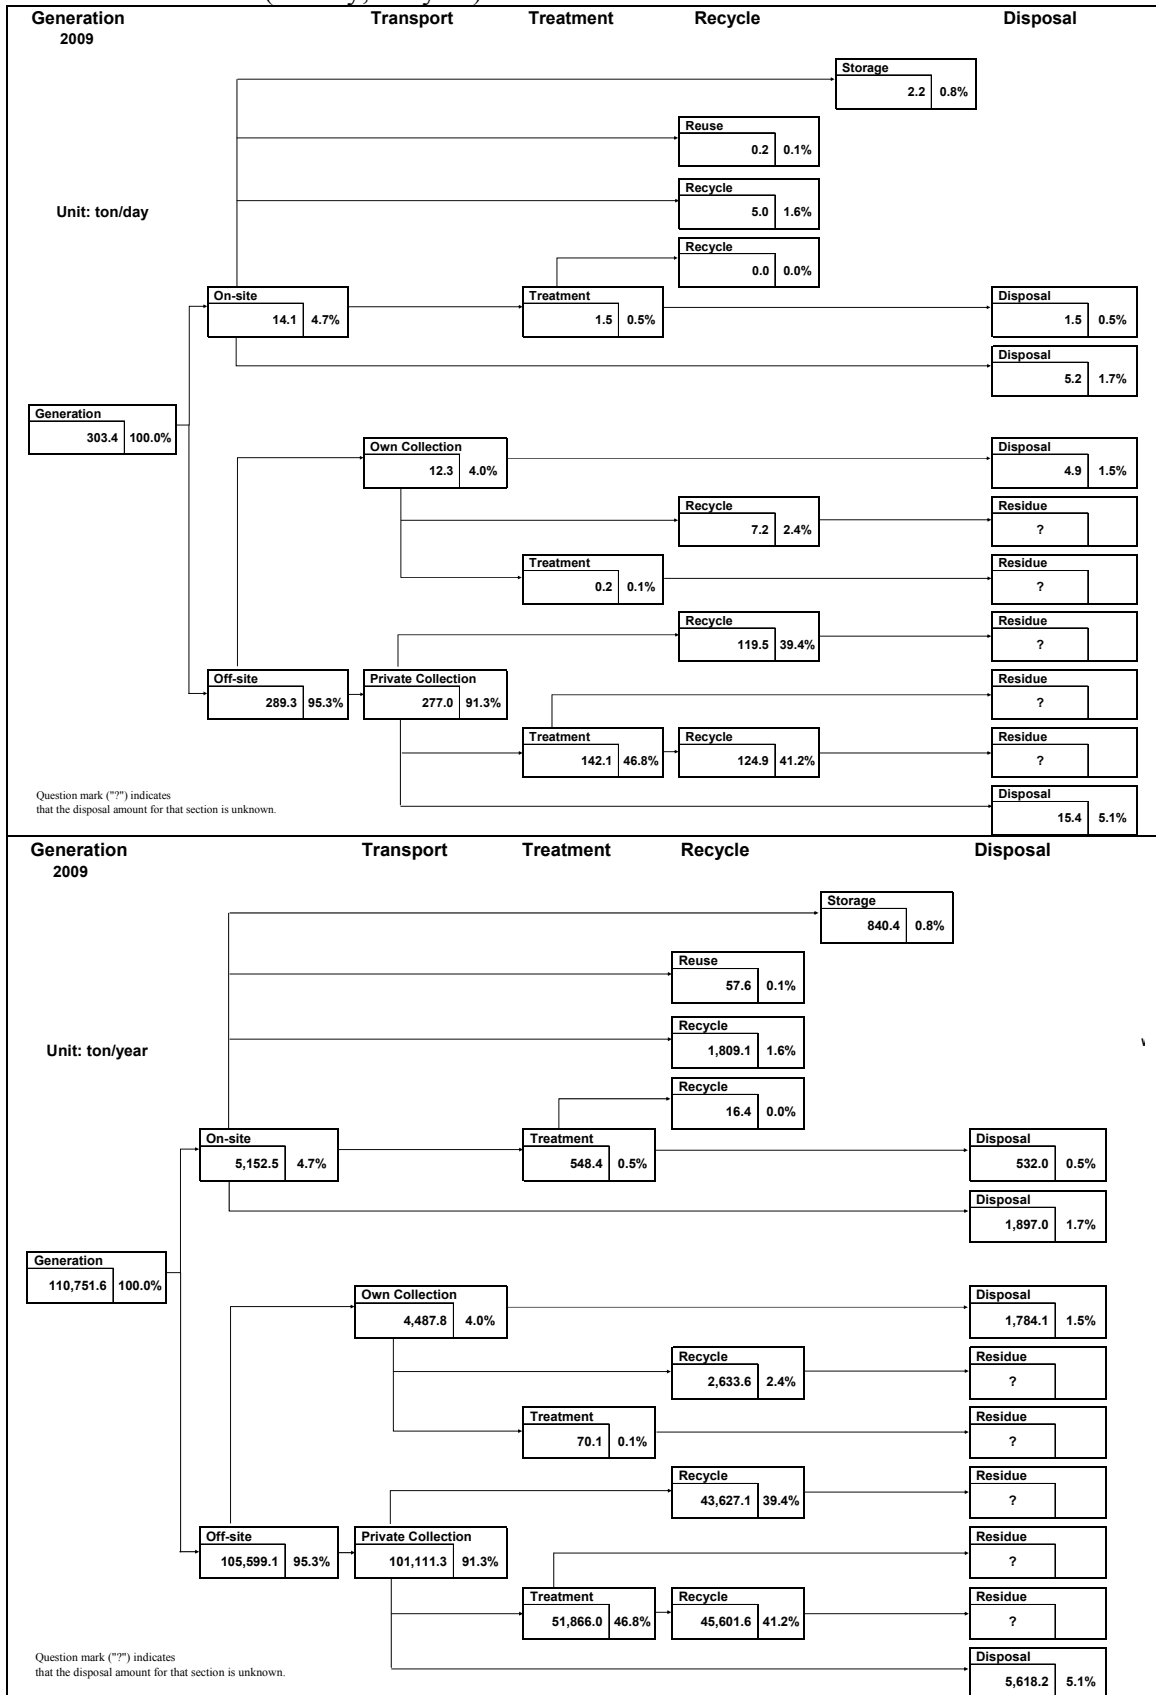

Non Process – Non HIW (ton/day, ton/year)

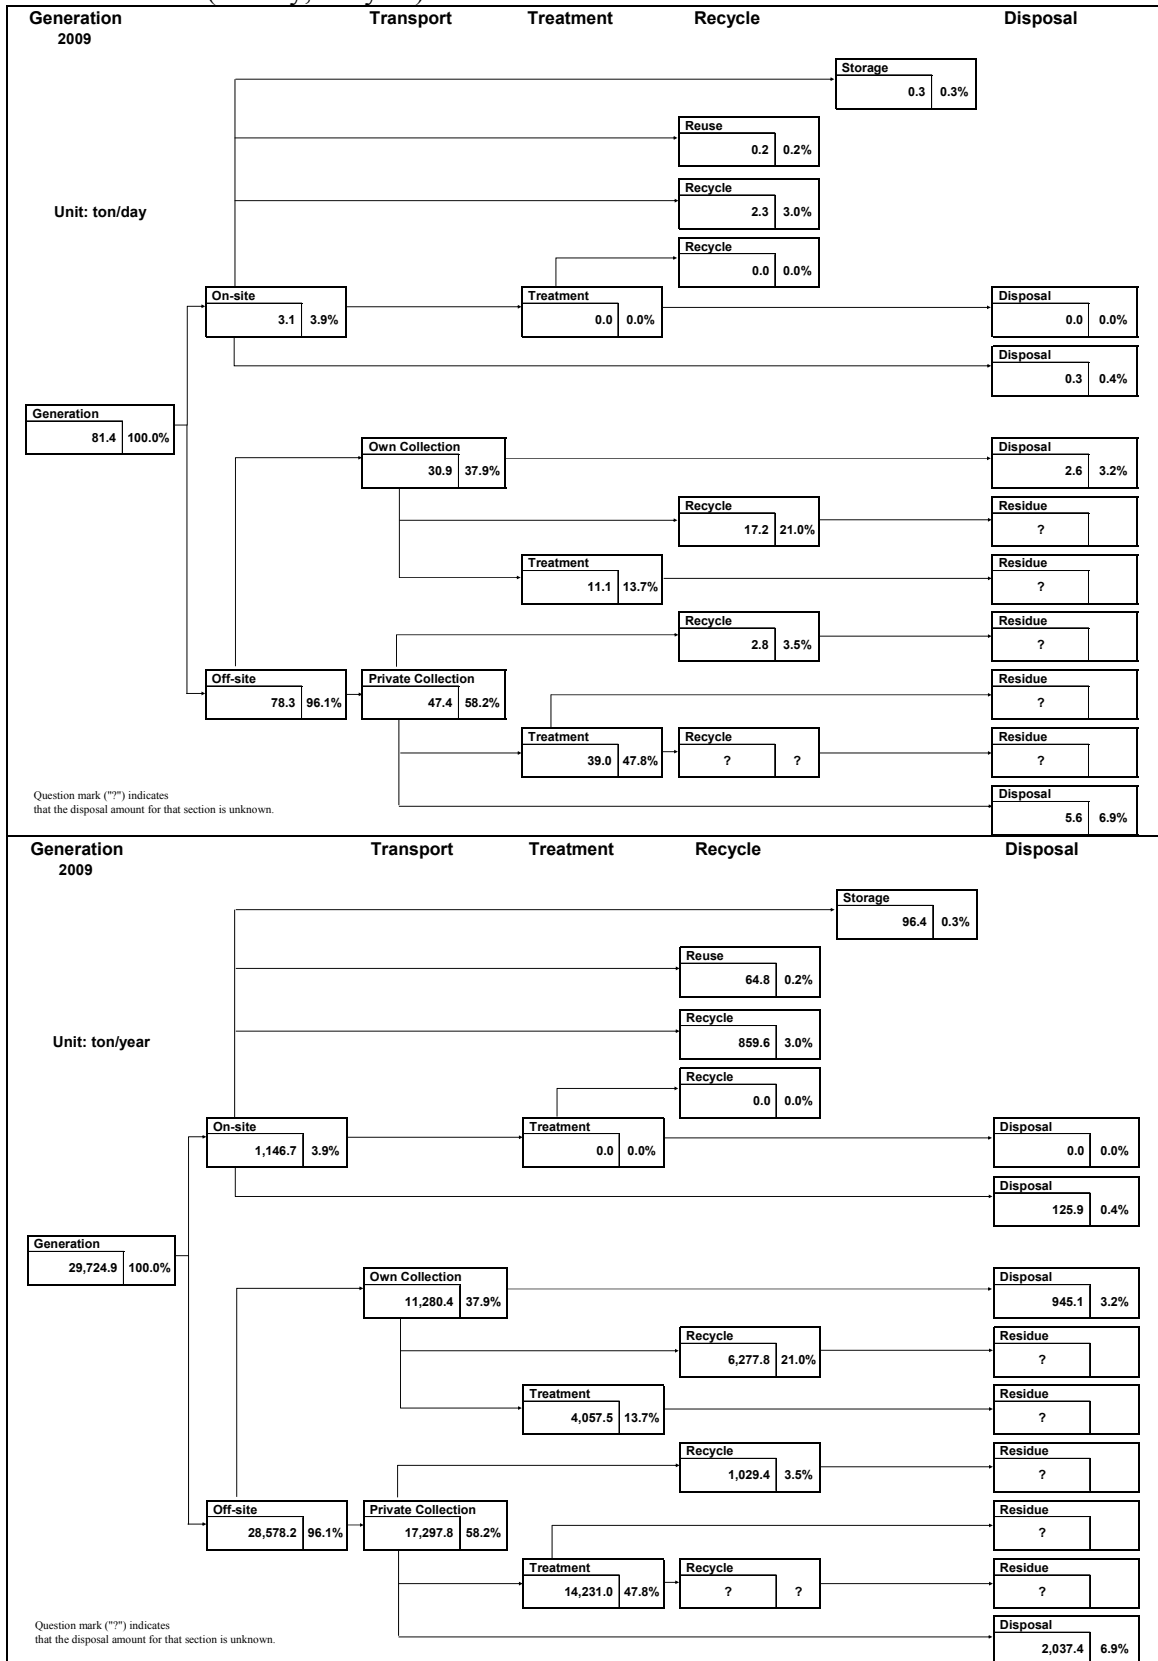

Non Process – HIW (ton/day, ton/year)

Process – Non HIW (ton/day, ton/year)

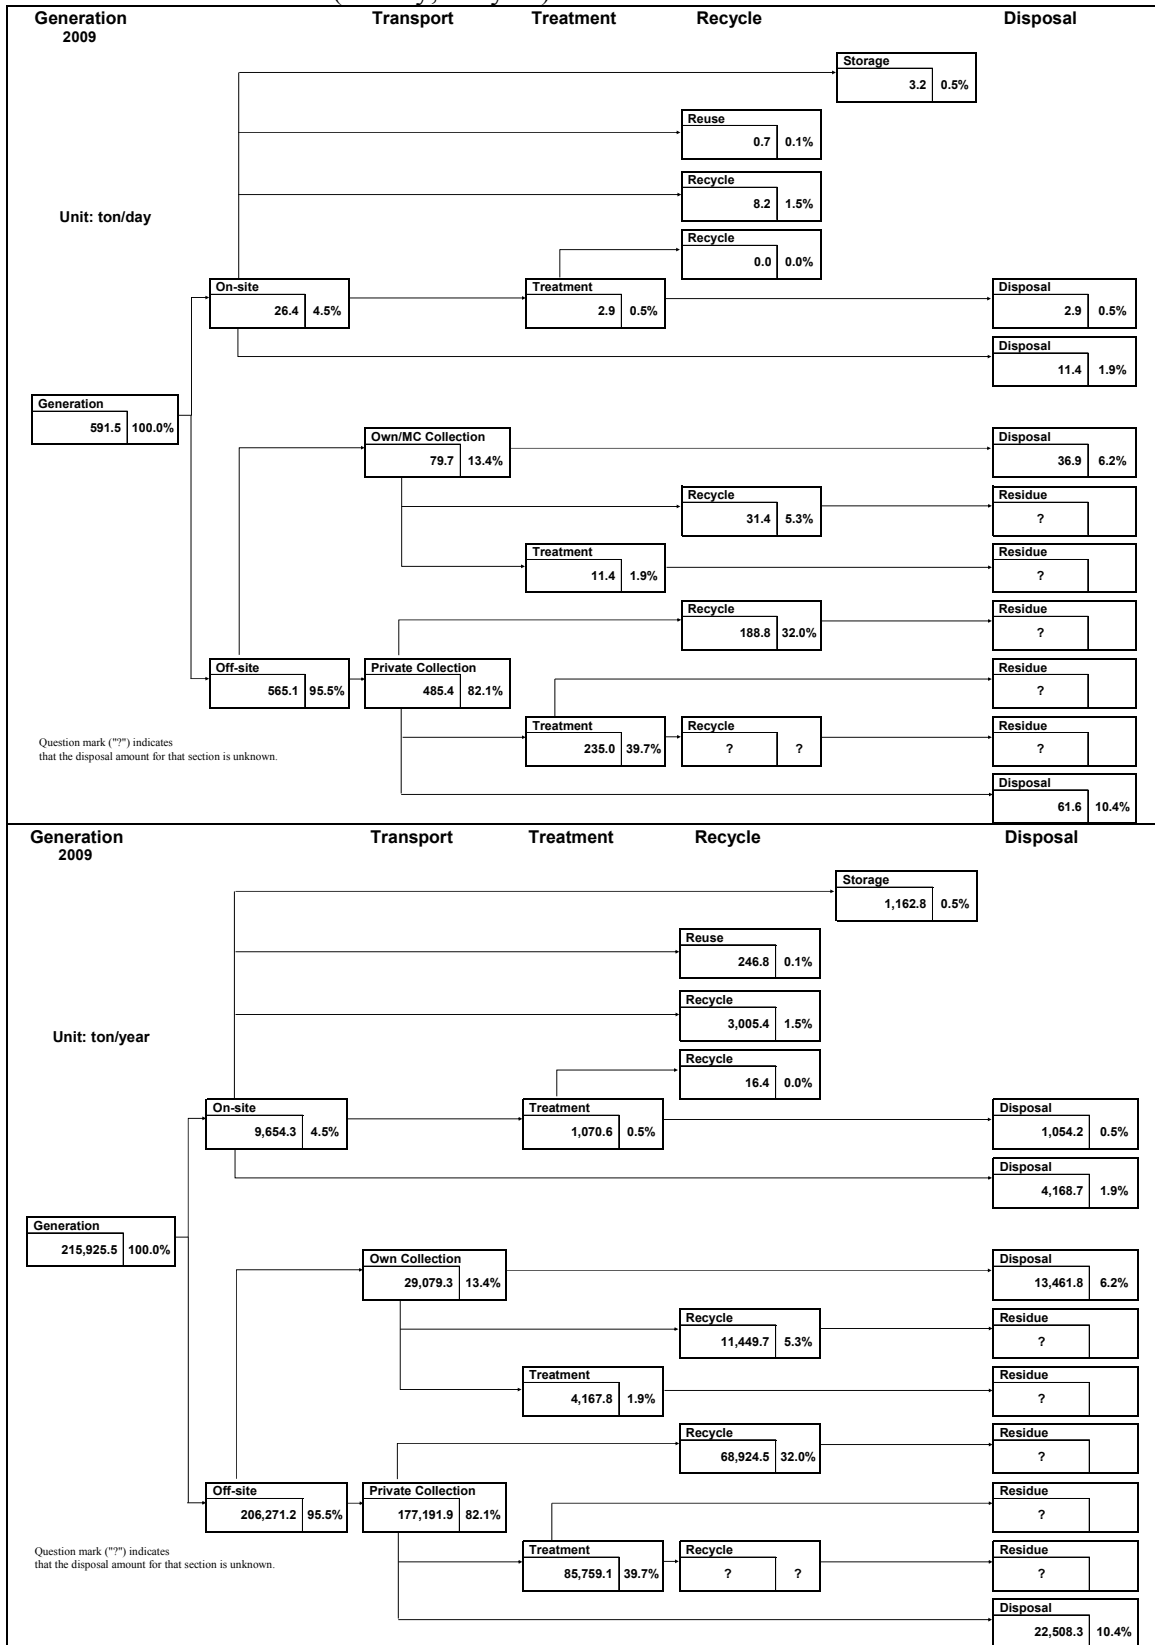

Process – HIW (ton/day, ton/year)

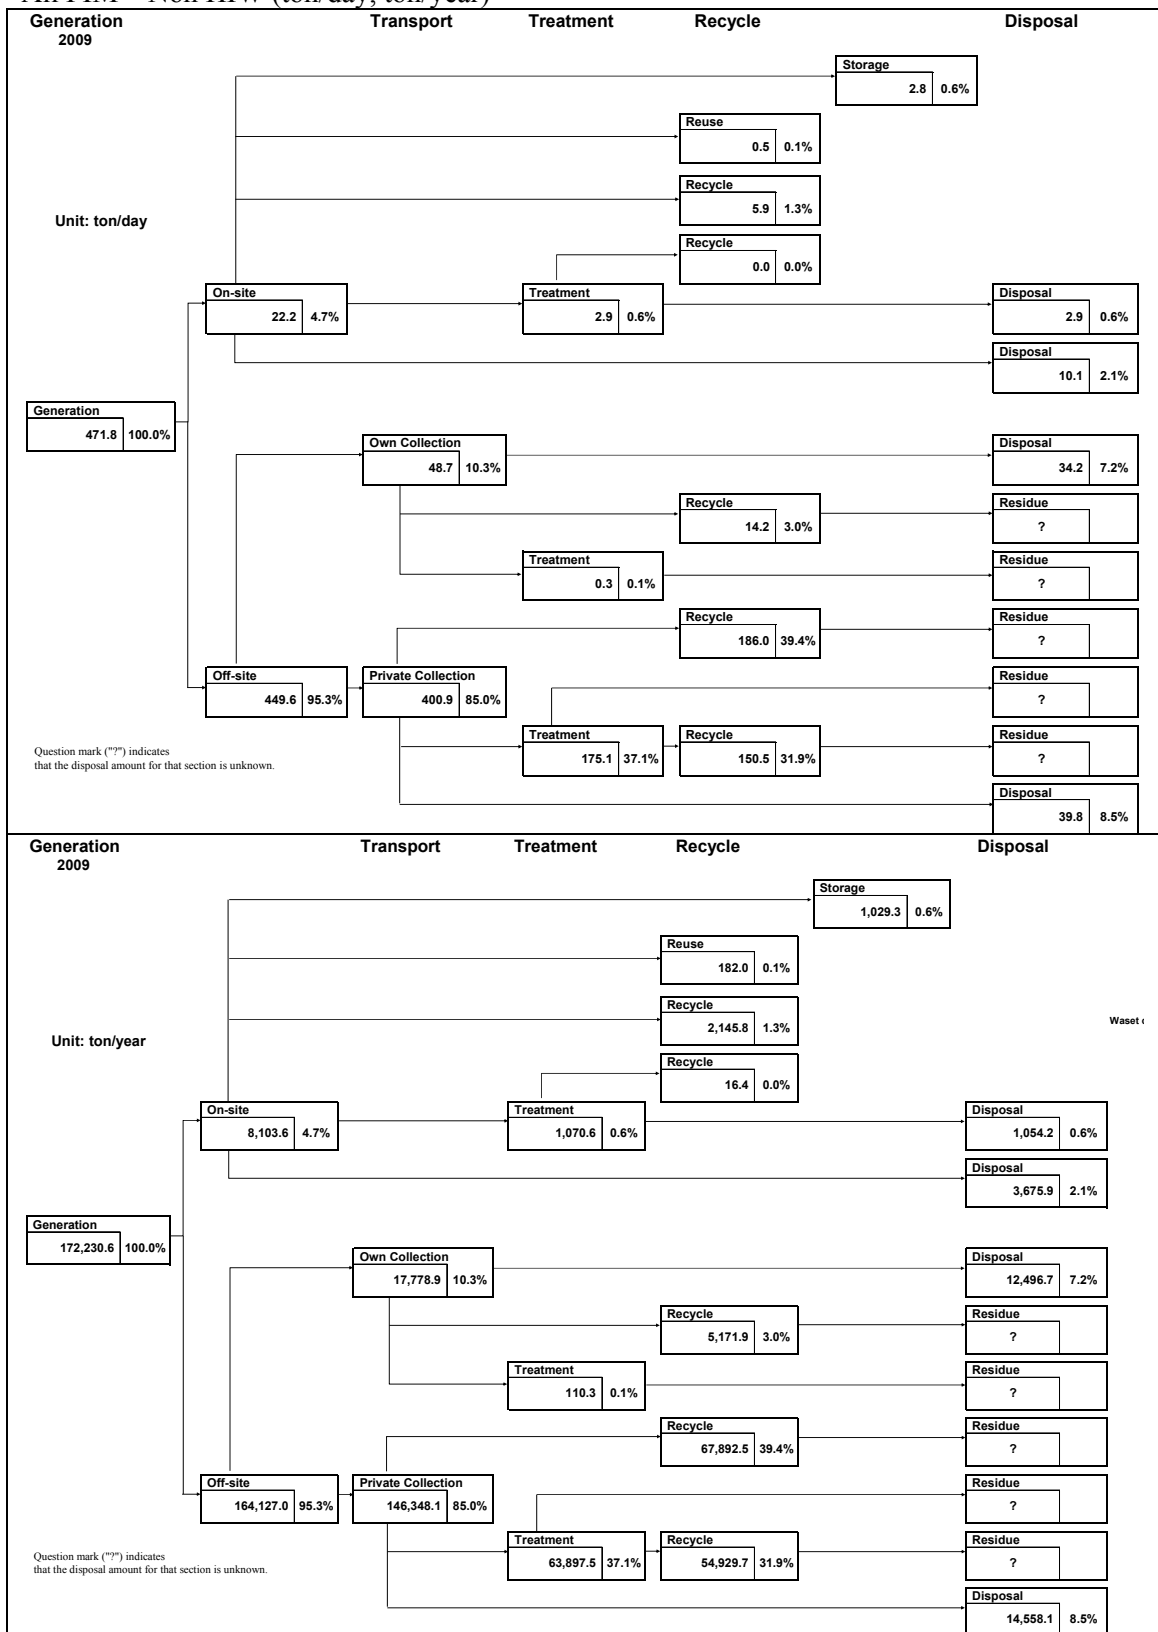

b. General IW

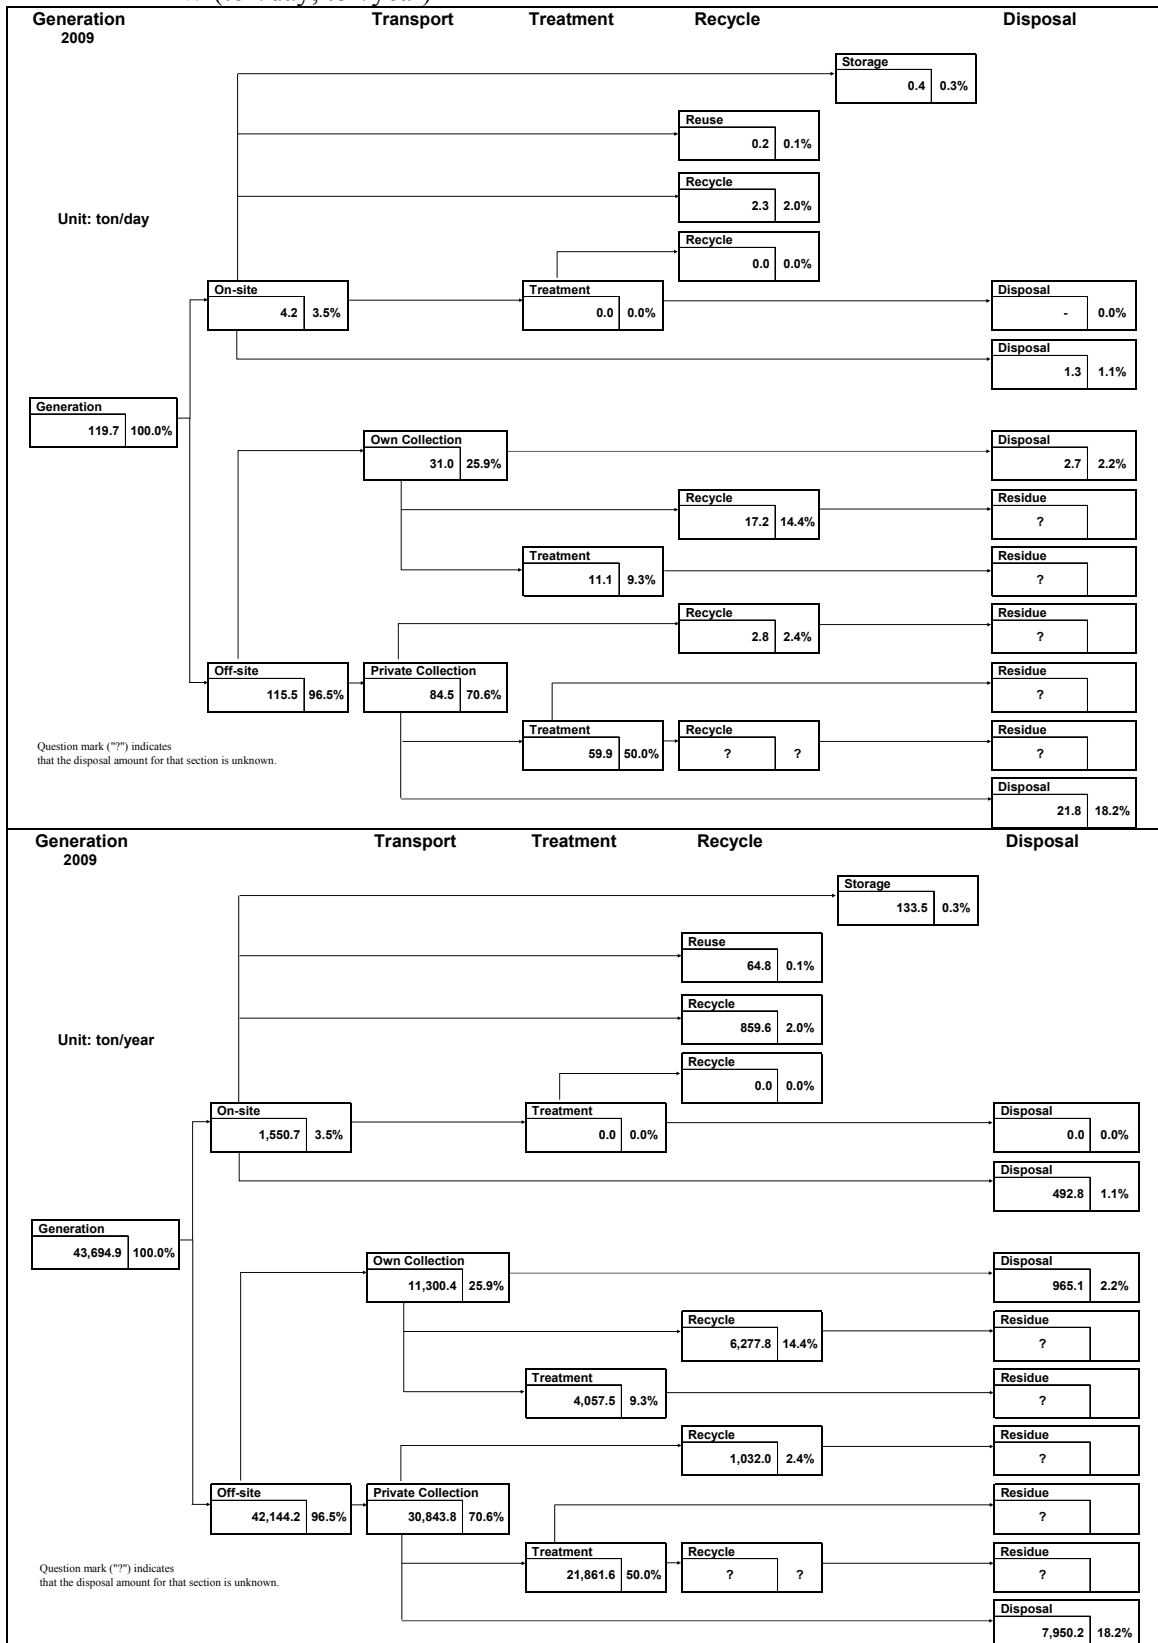

All PIM - All General IW (ton/day, ton/year)

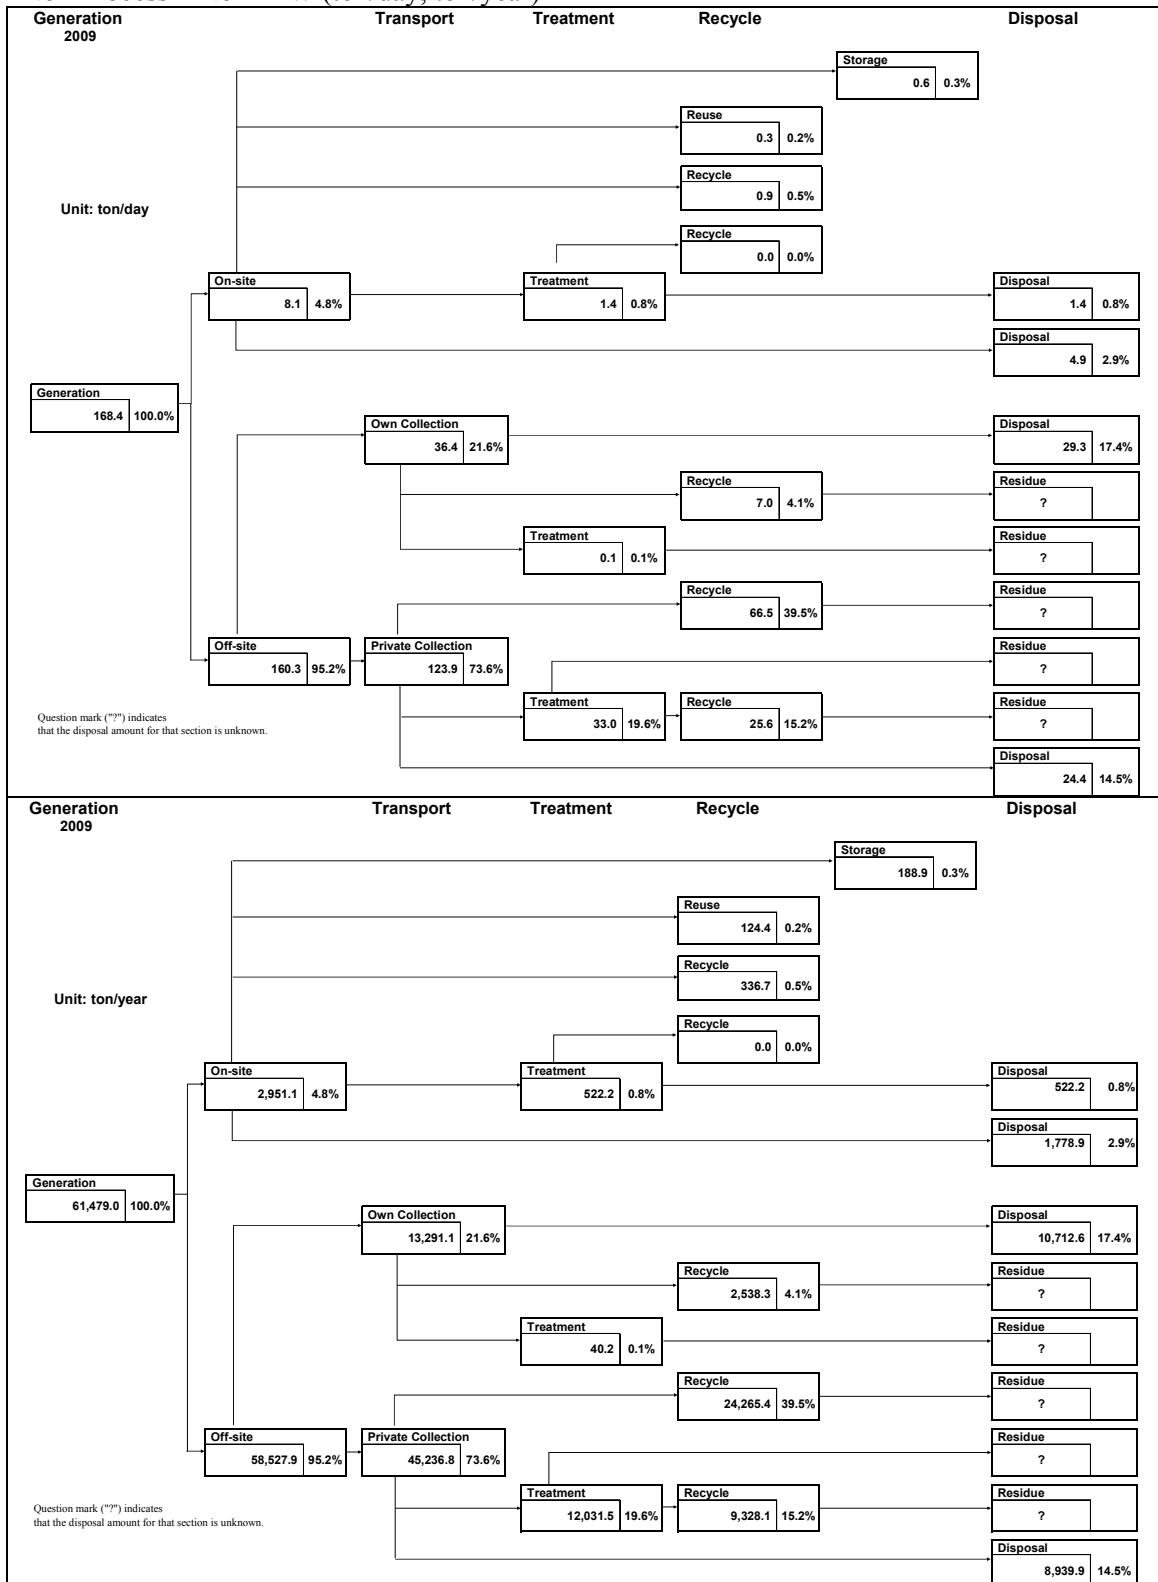

All PIM – Non HIW (ton/day, ton/year)

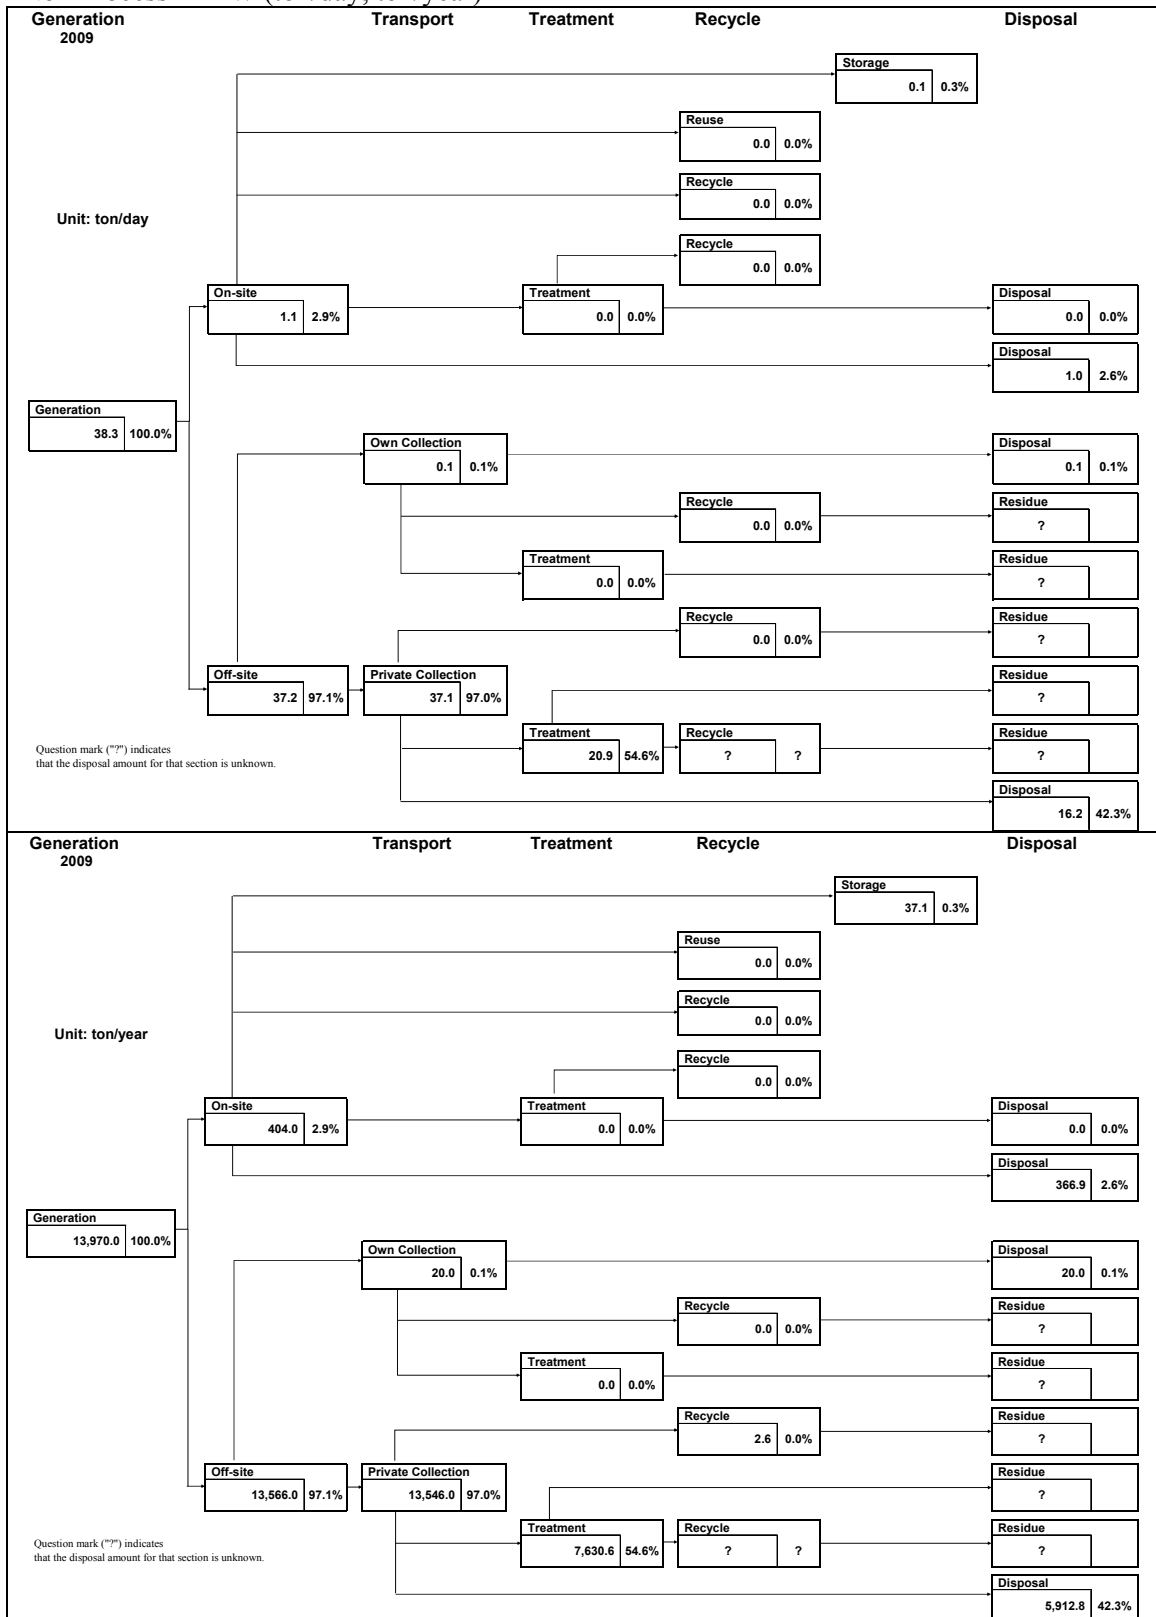

All PIM – HIW (ton/day, ton/year)

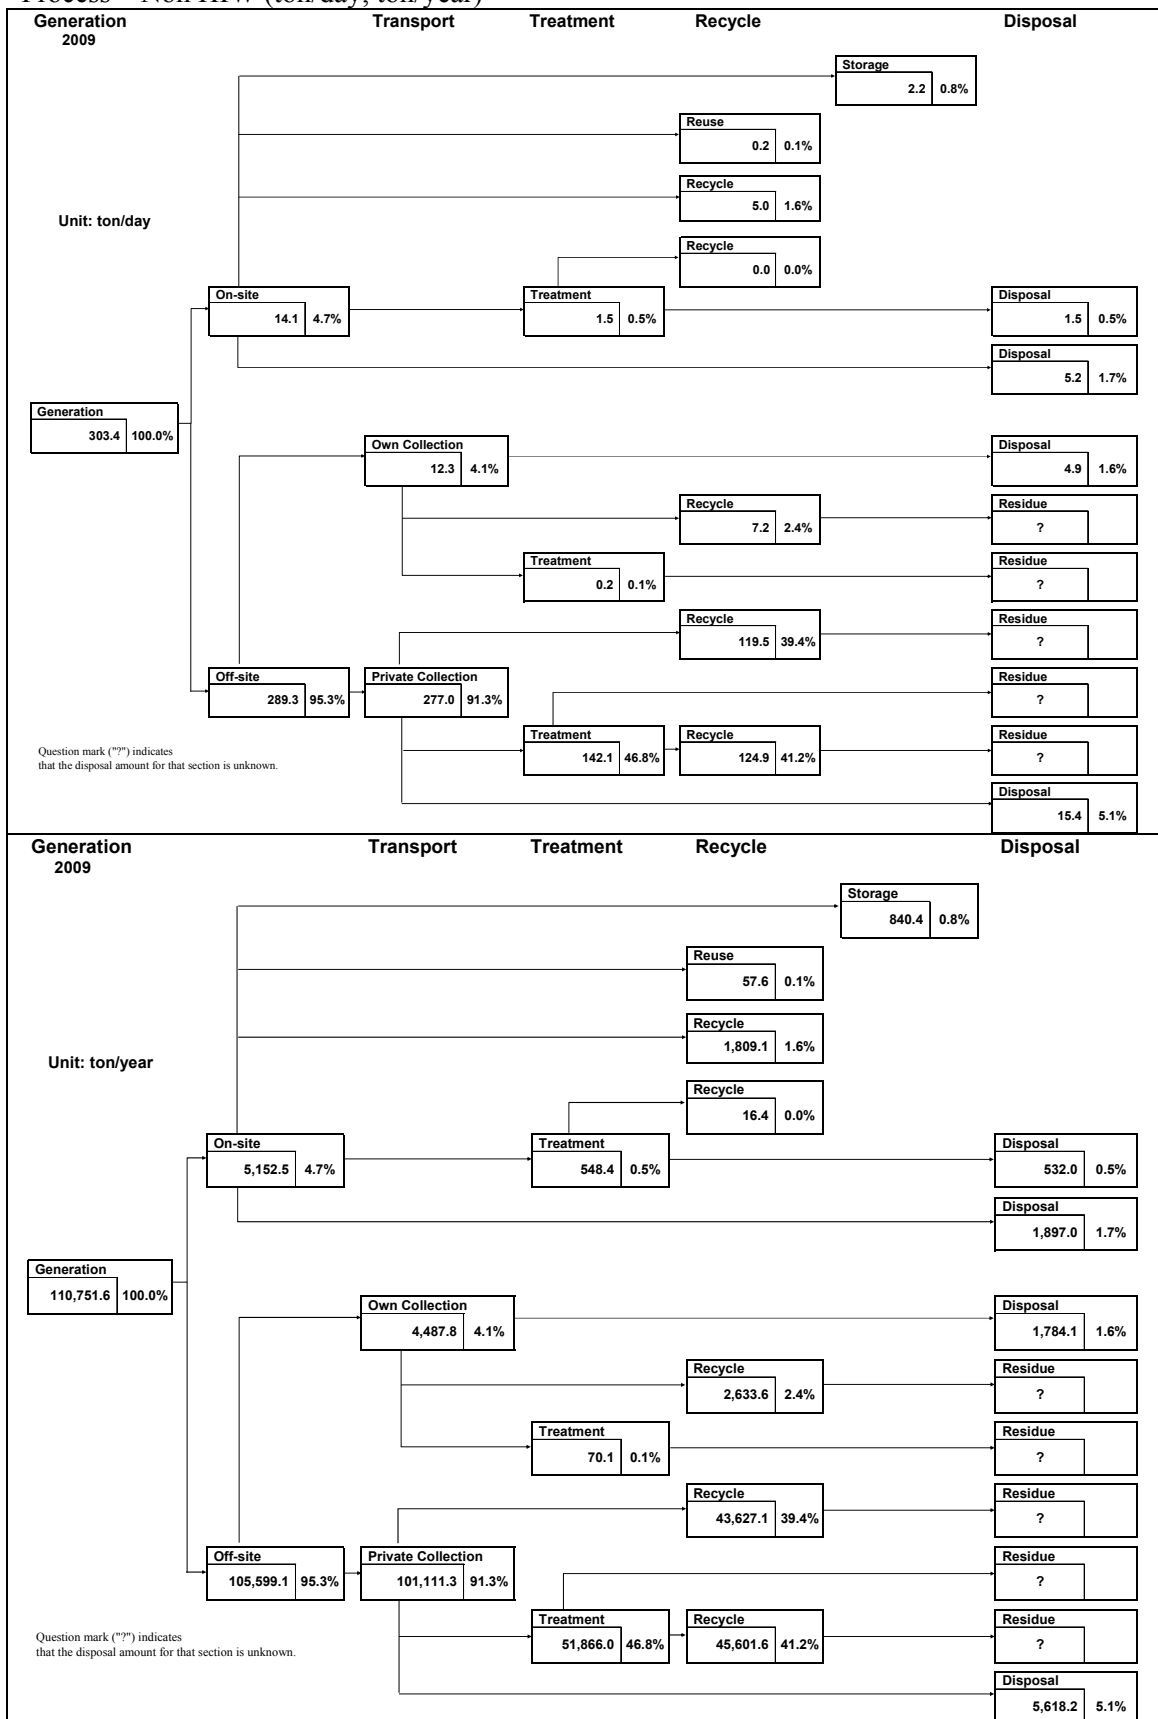

Non Process – Non HIW (ton/day, ton/year)

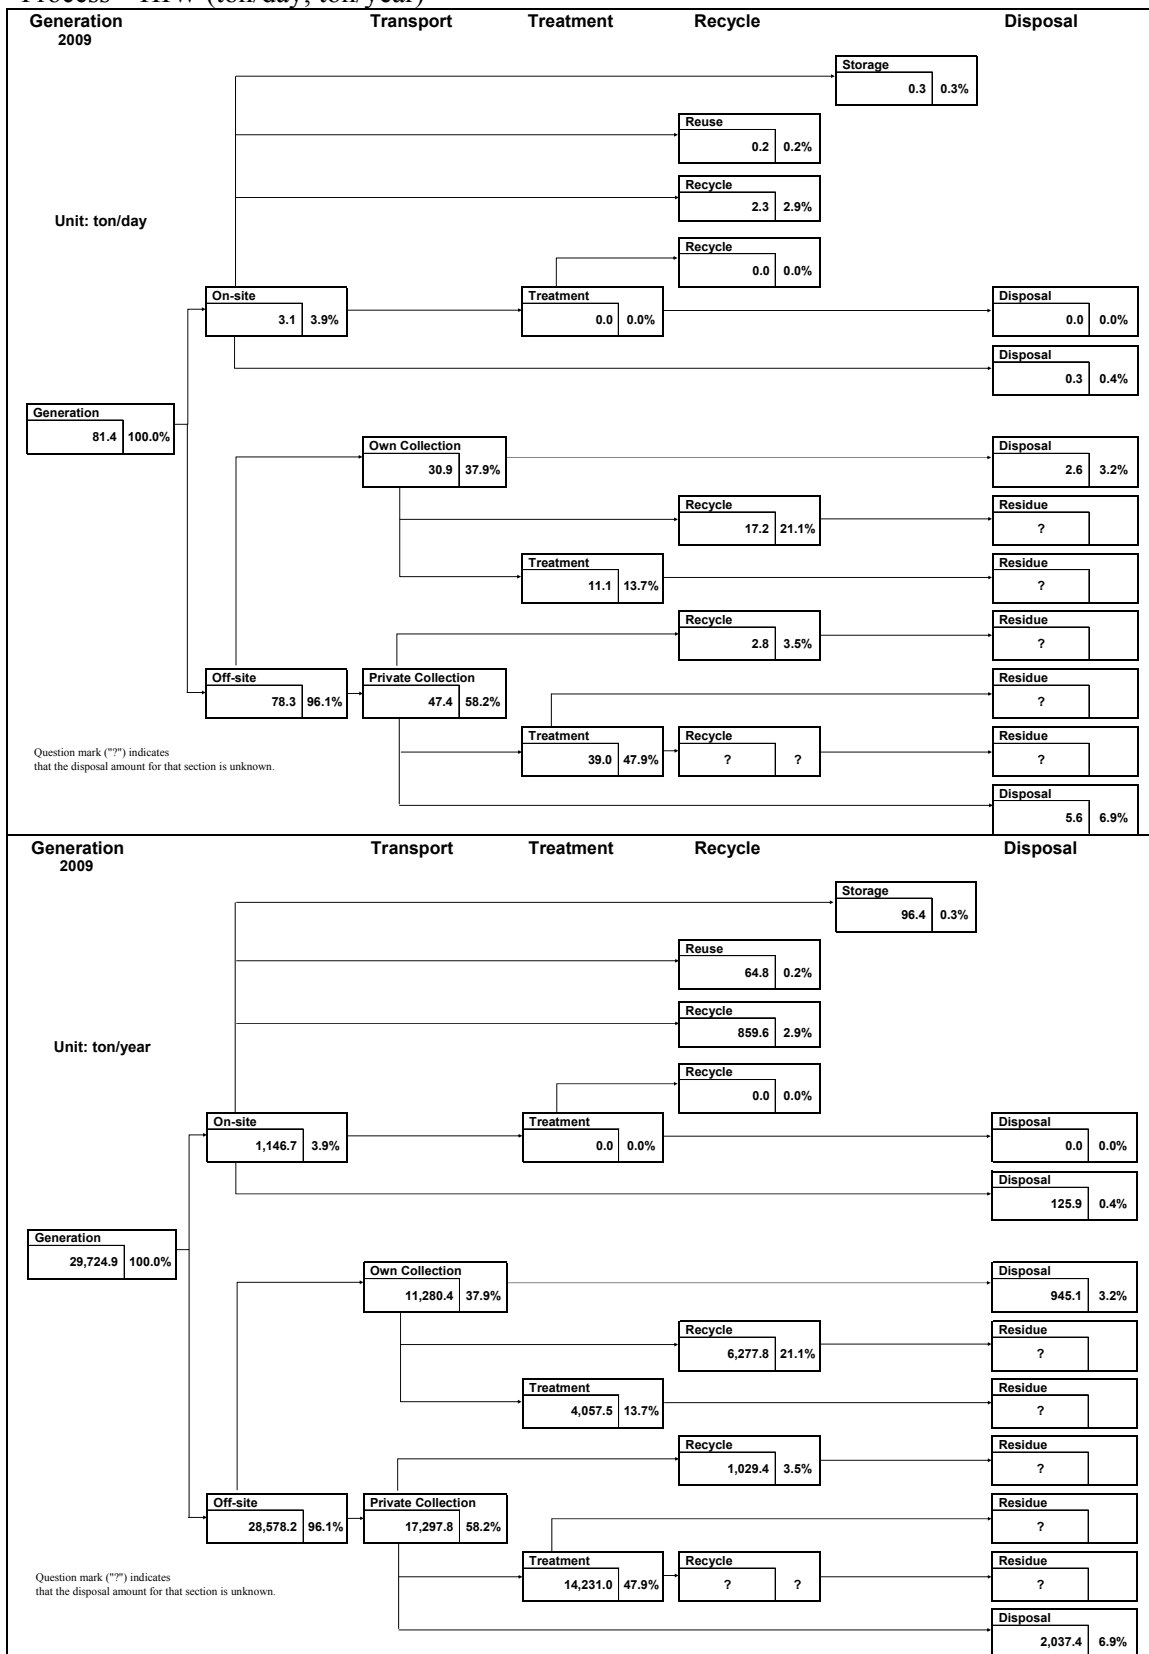

Non Process – HIW (ton/day, ton/year)

Process – Non HIW (ton/day, ton/year)

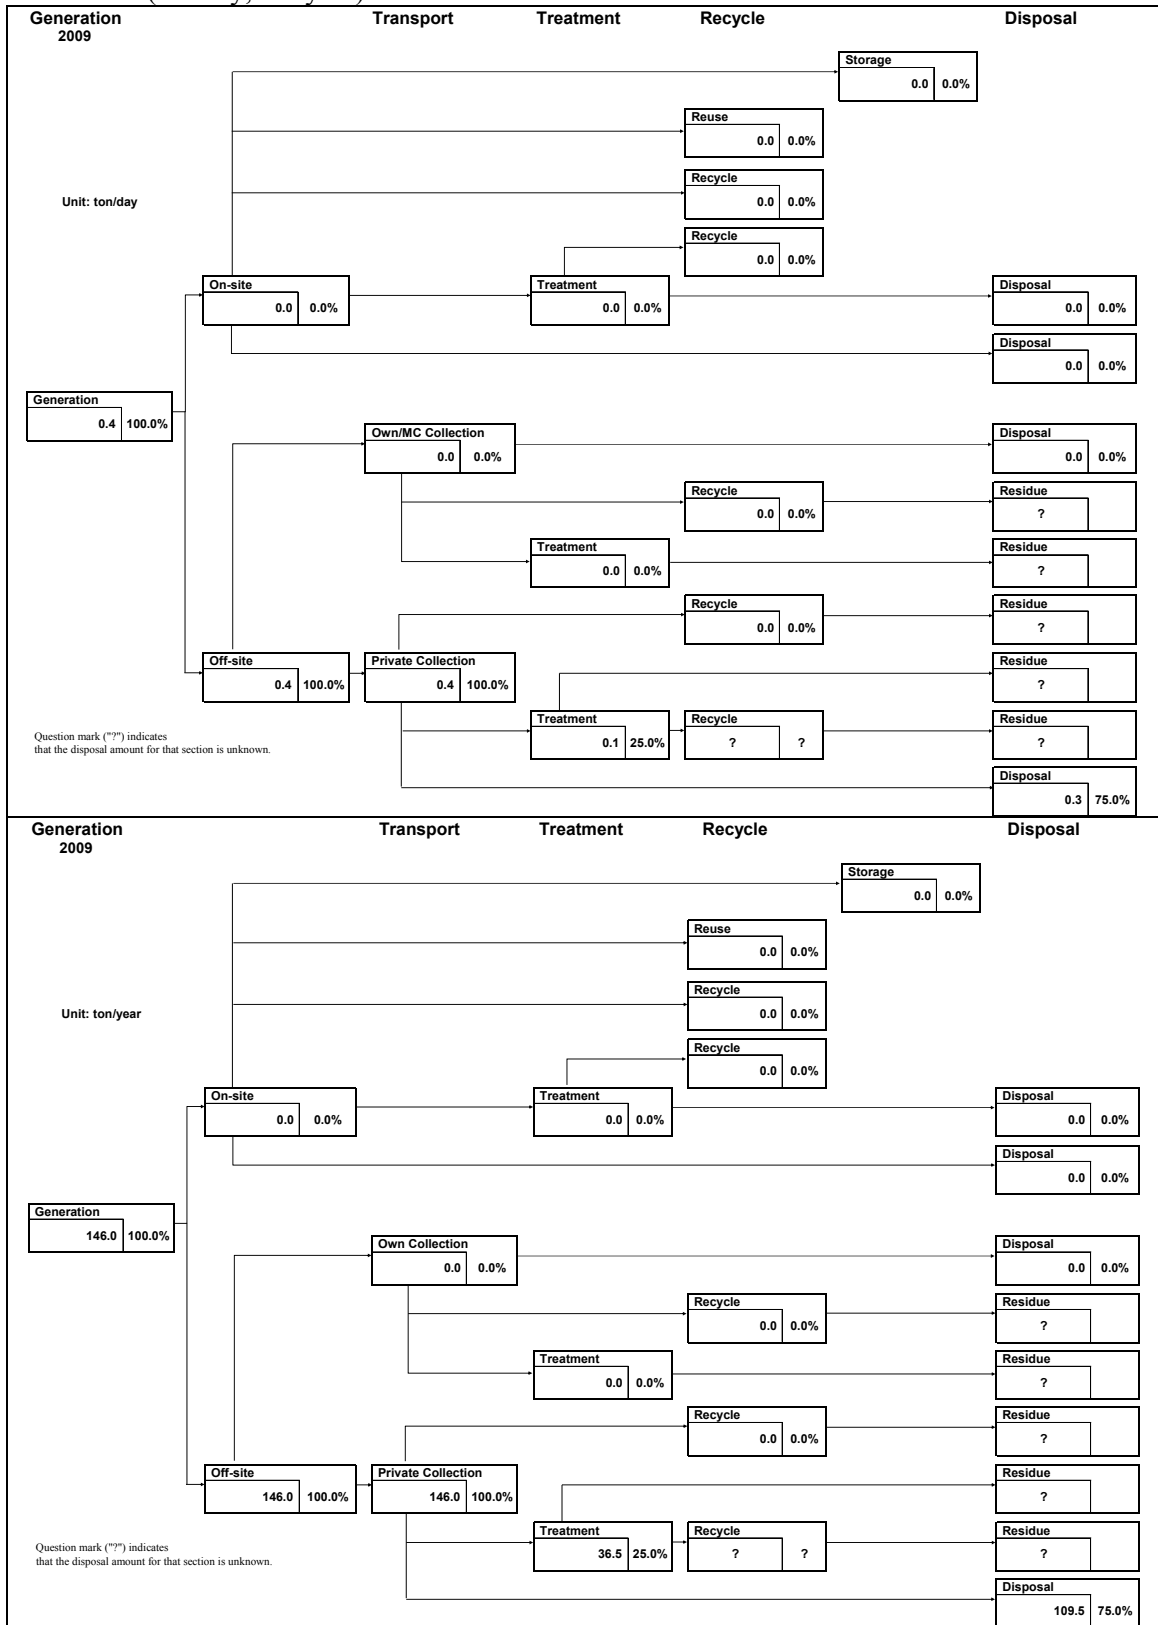

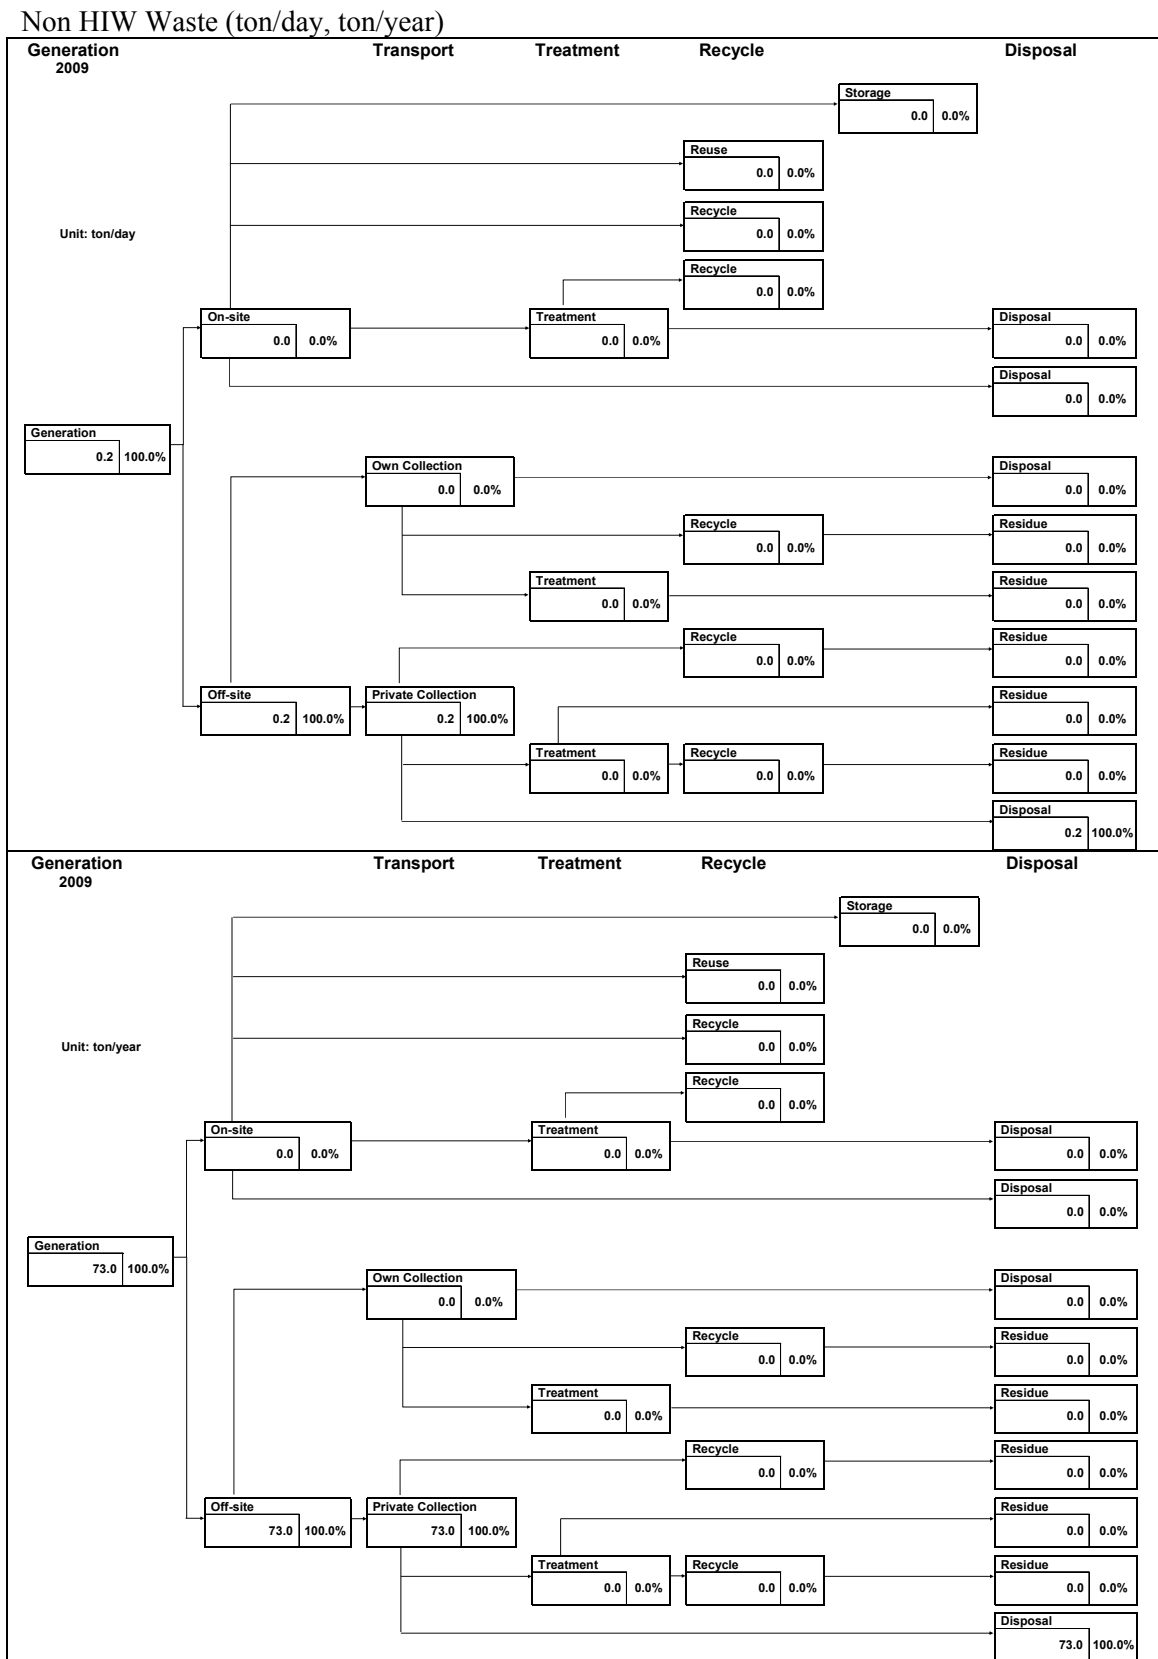

Process – HIW (ton/day, ton/year)

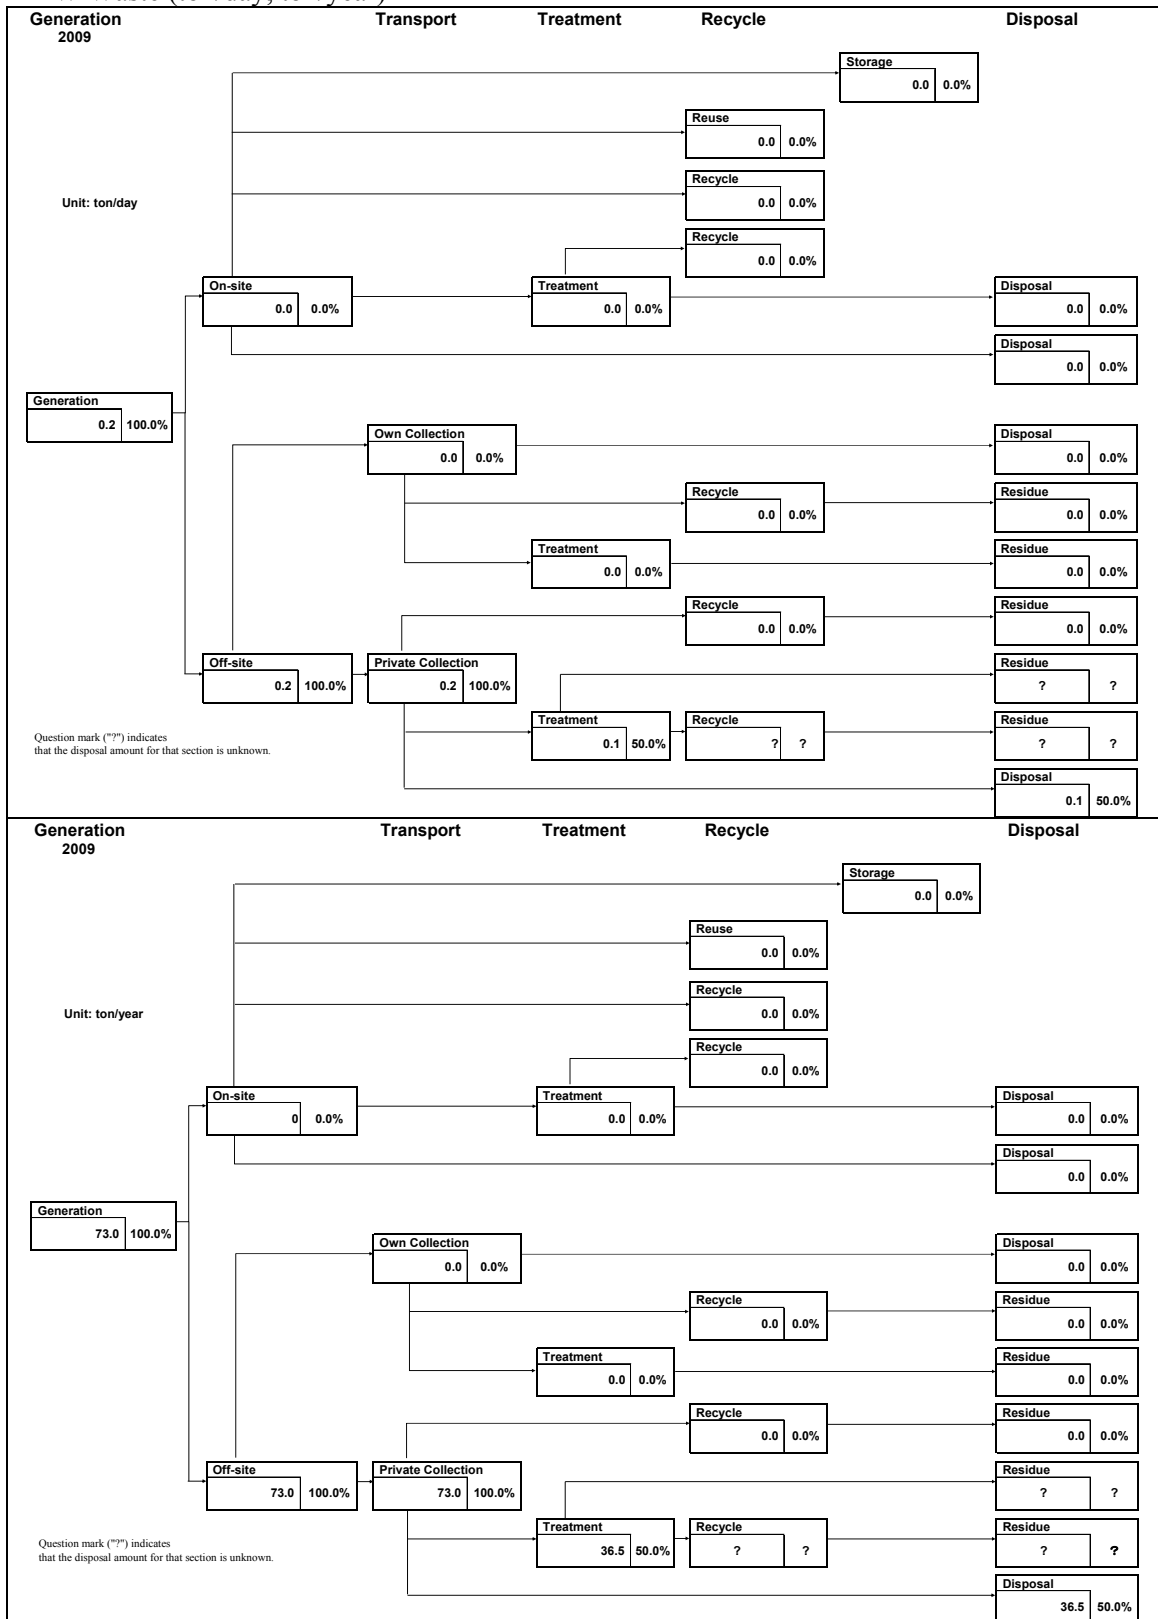

c. Health-care Waste

All Waste (ton/day, ton/year)

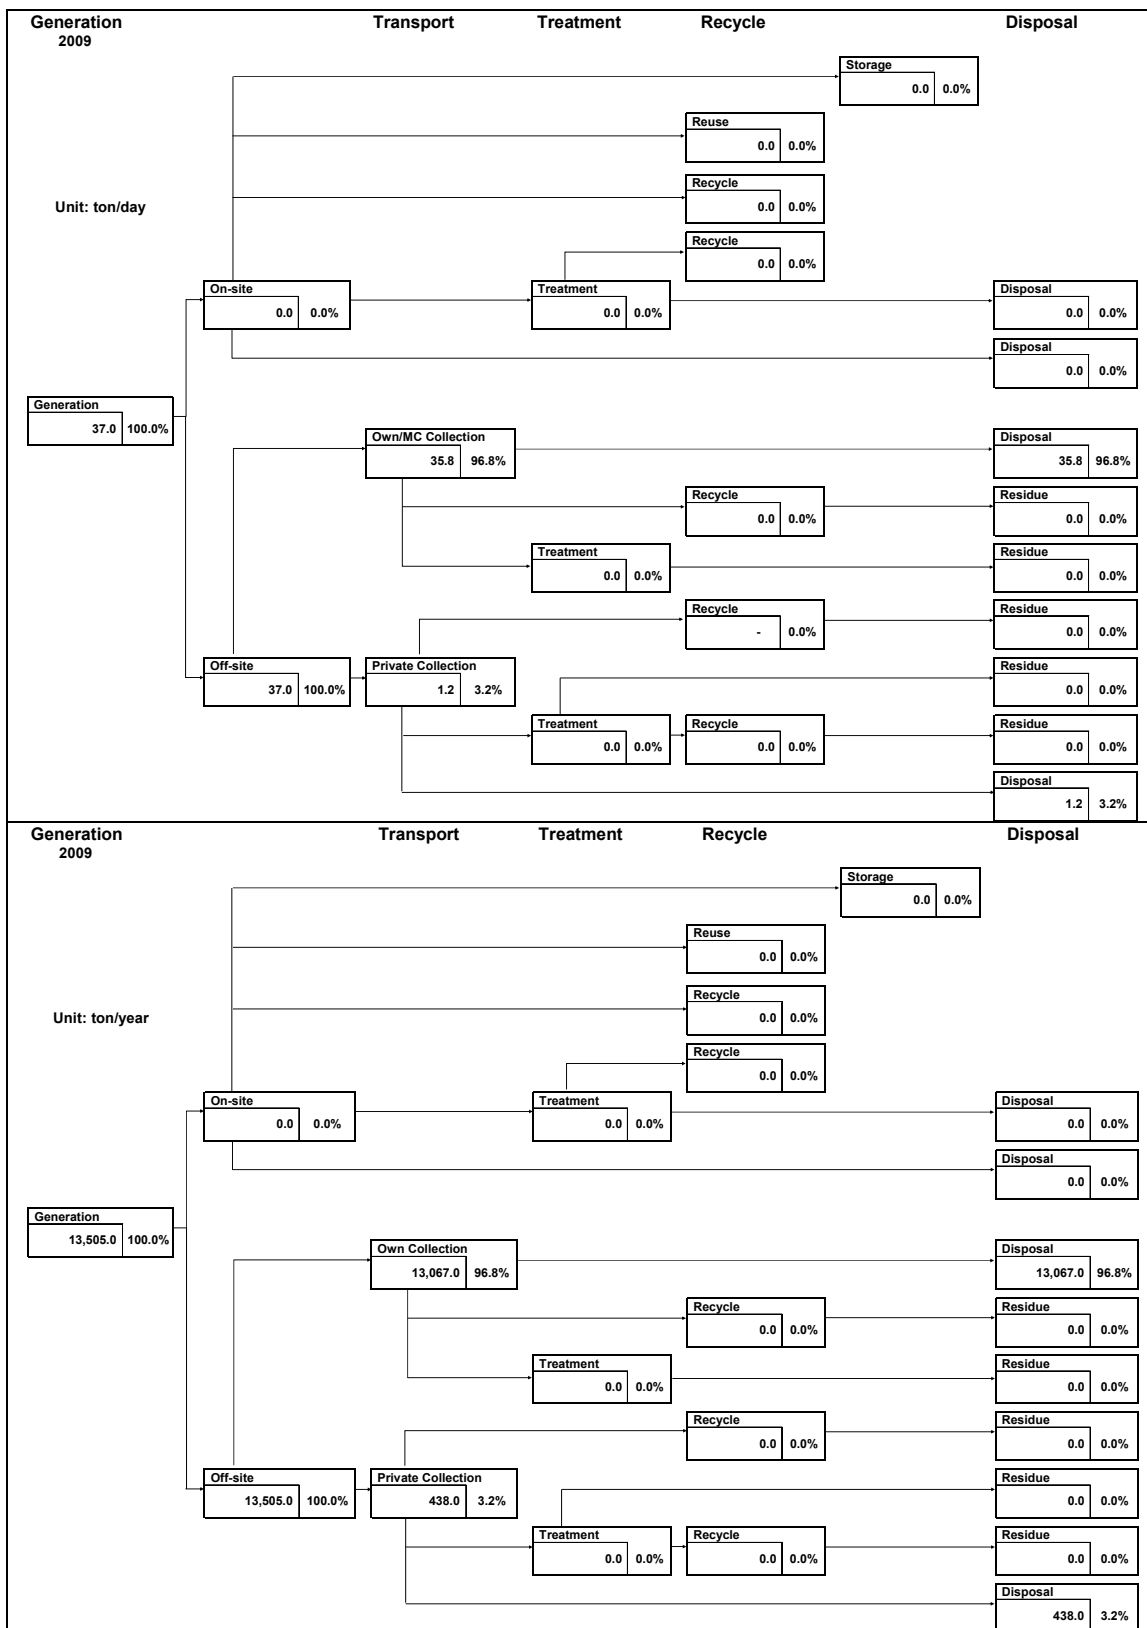

HIW Waste (ton/day, ton/year)

d. Construction Waste

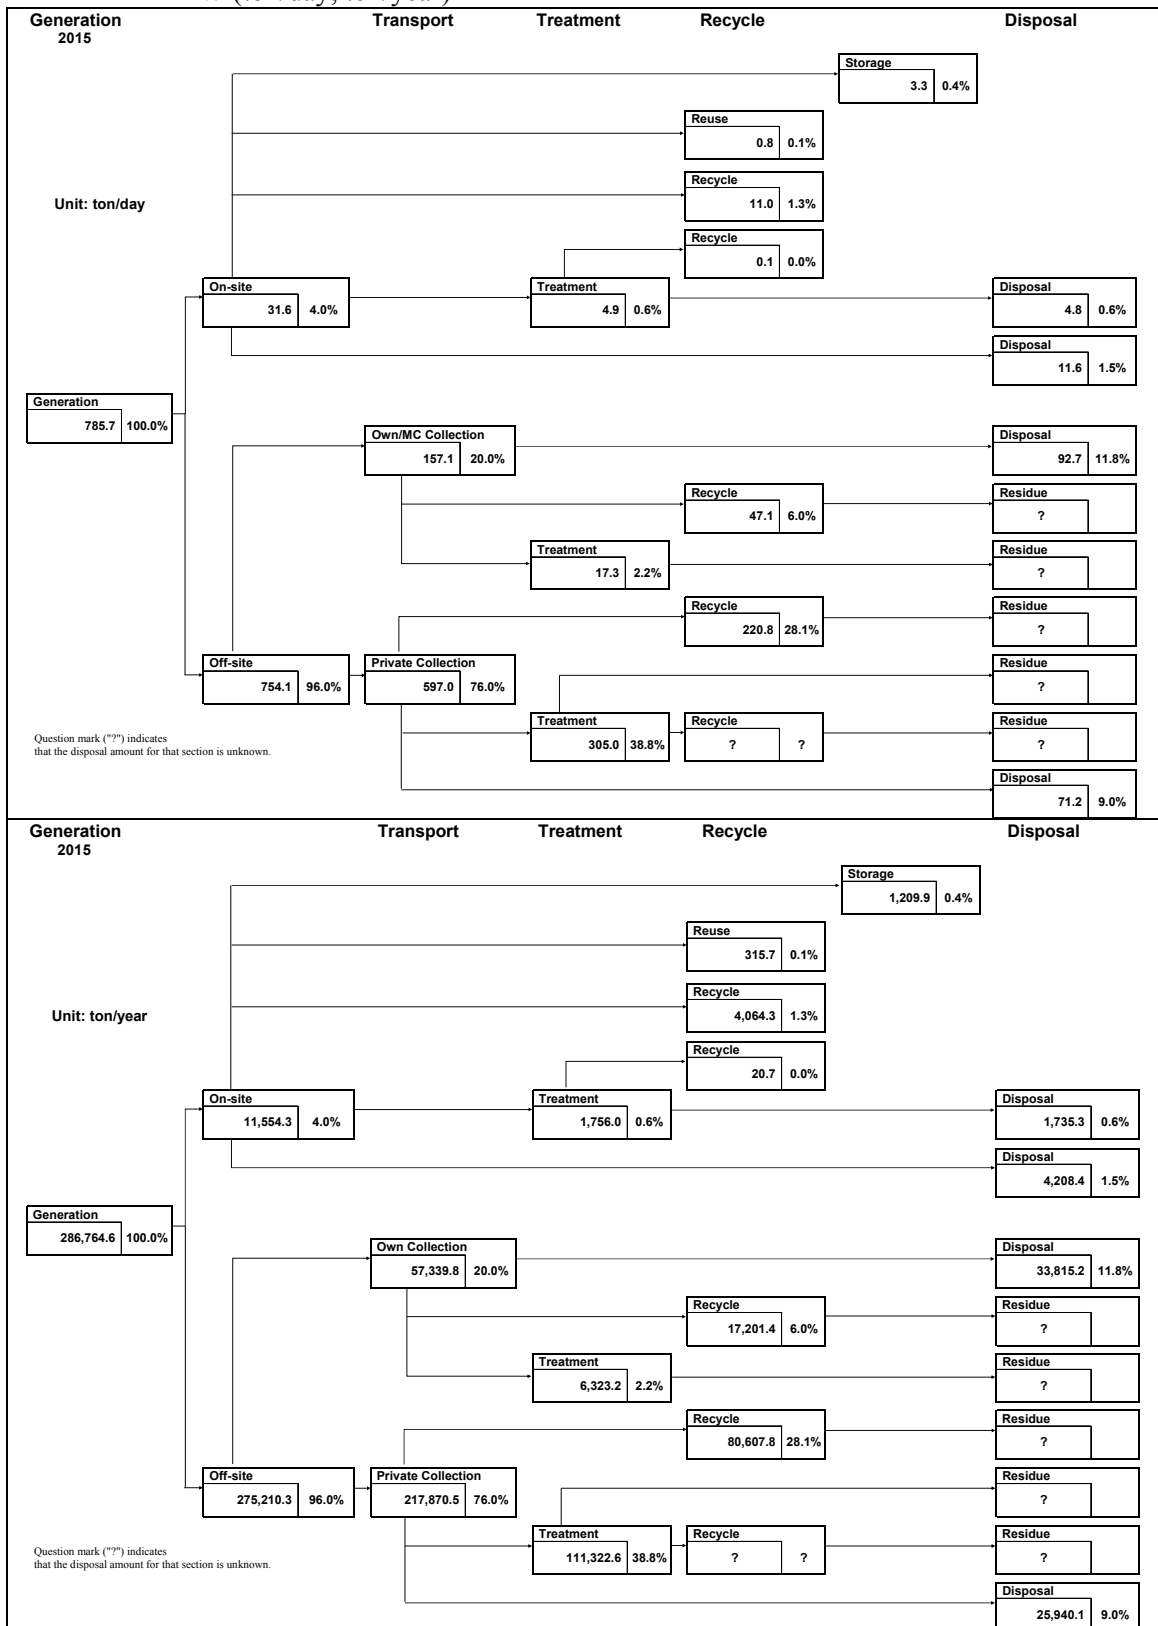

Non HIW (ton/day, ton/year)

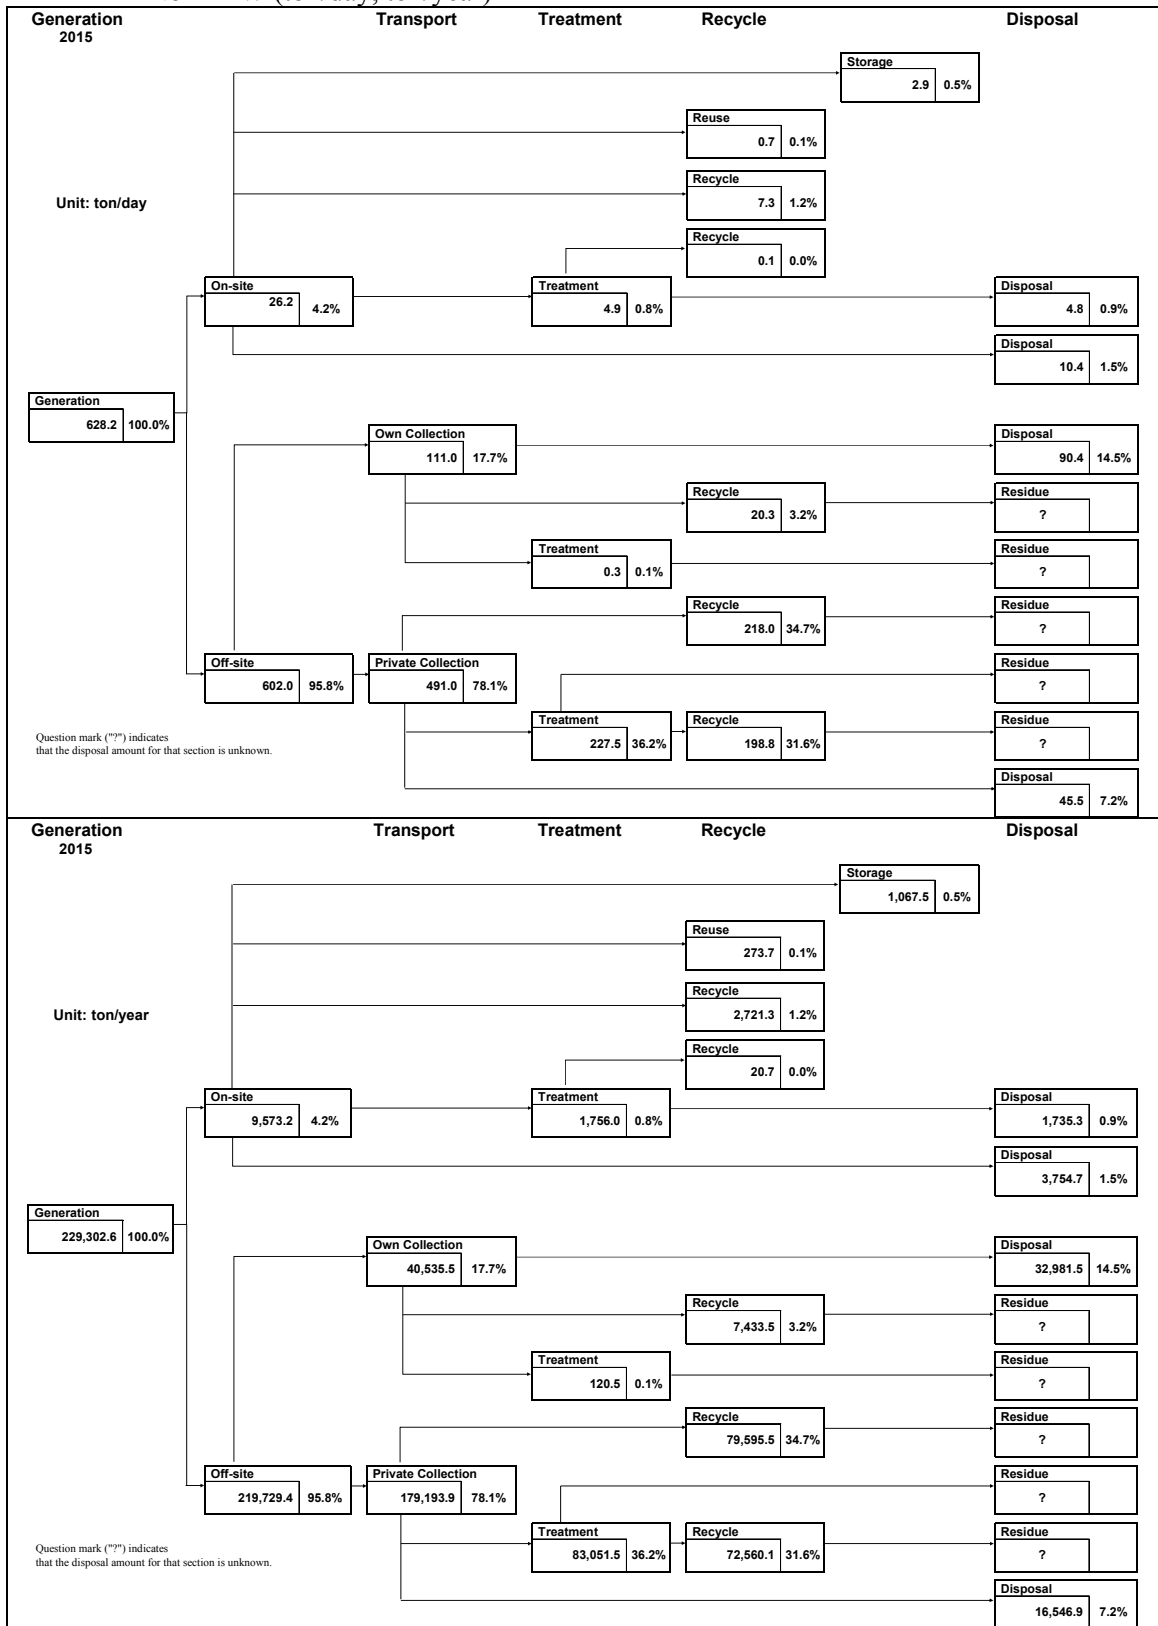

1.4 Detailed Waste stream (2015)

a. Industrial waste (GIW + Health-care waste + Construction waste)

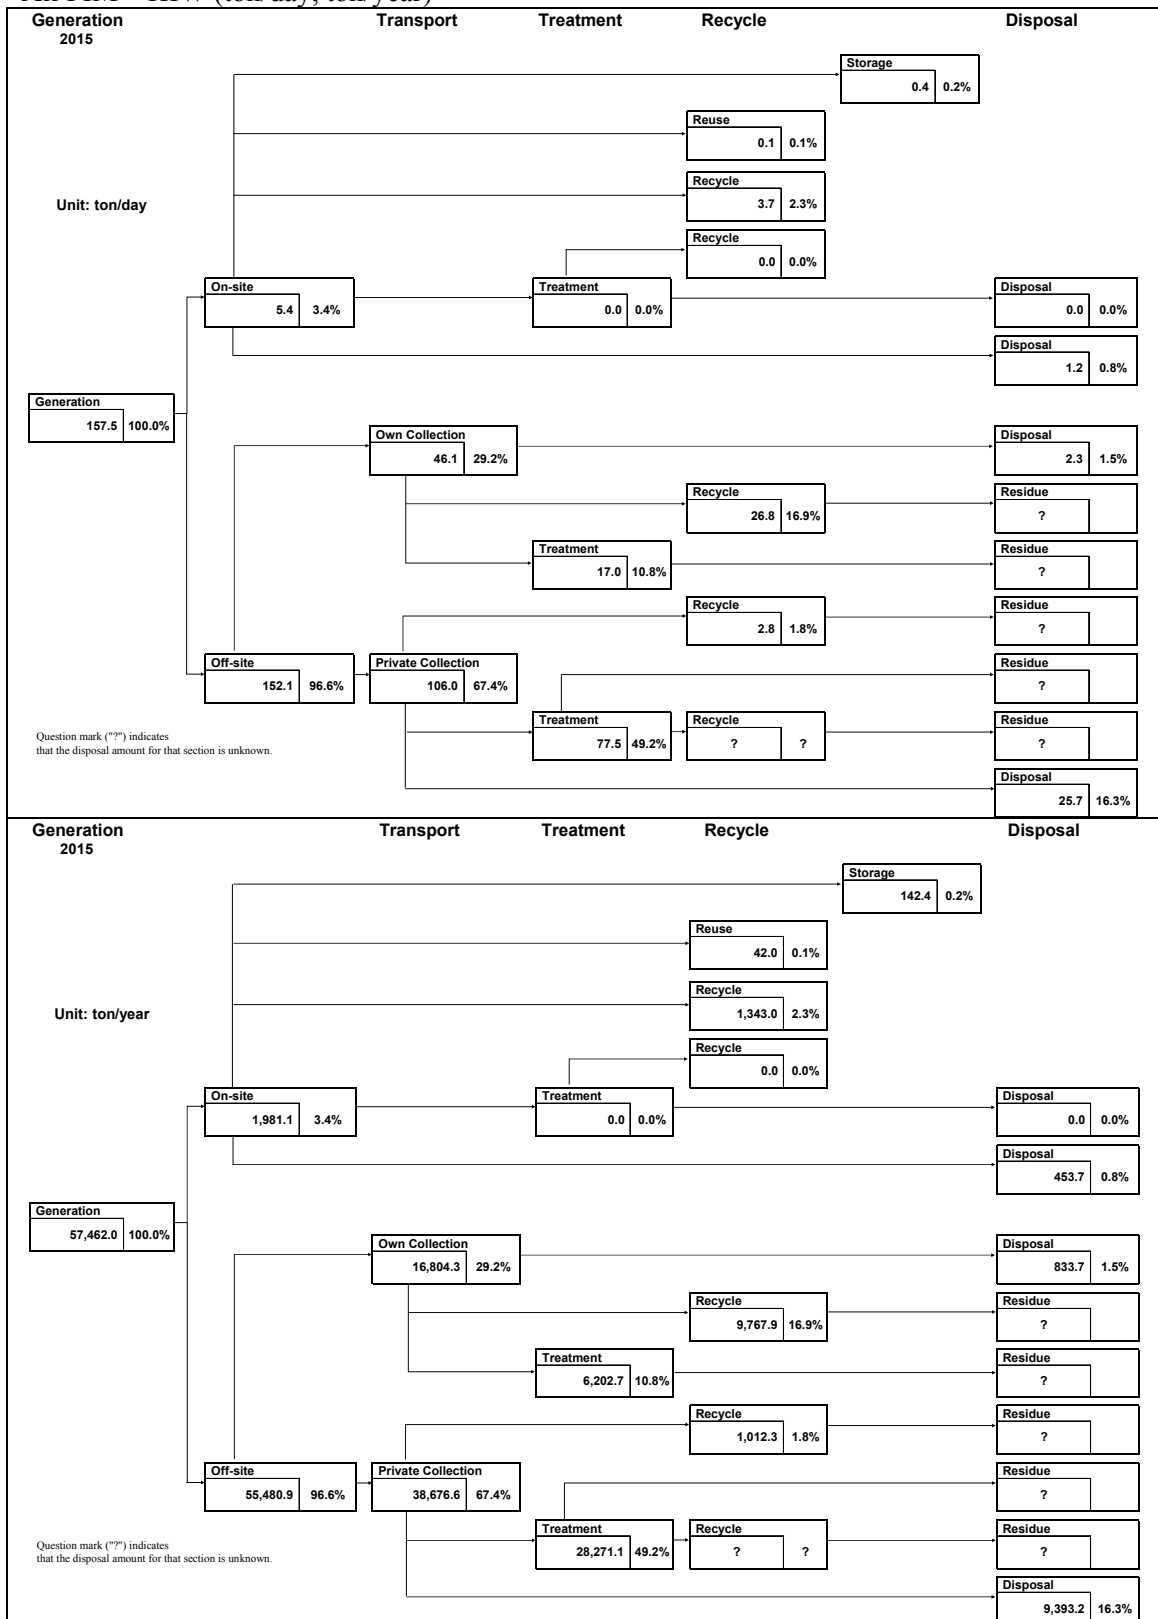

All PIM - All IW (ton/day, ton/year)

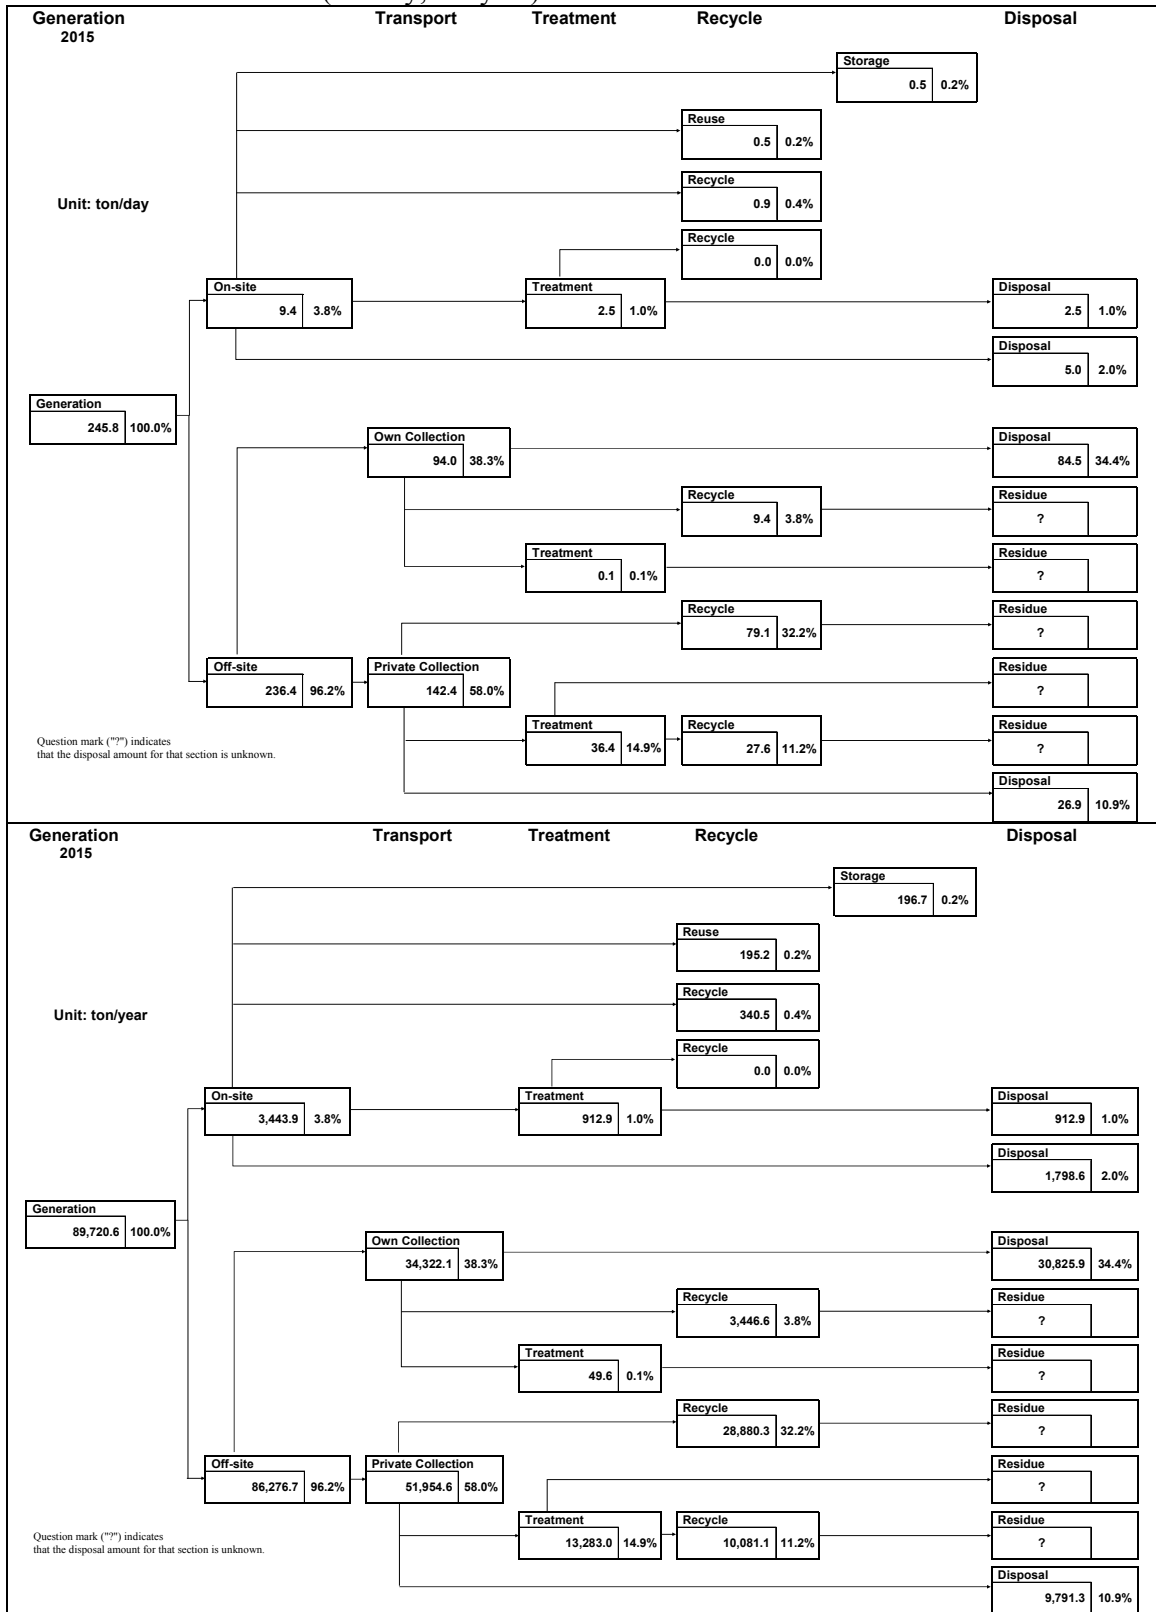

All PIM – Non-HIW (ton/day, ton/year)

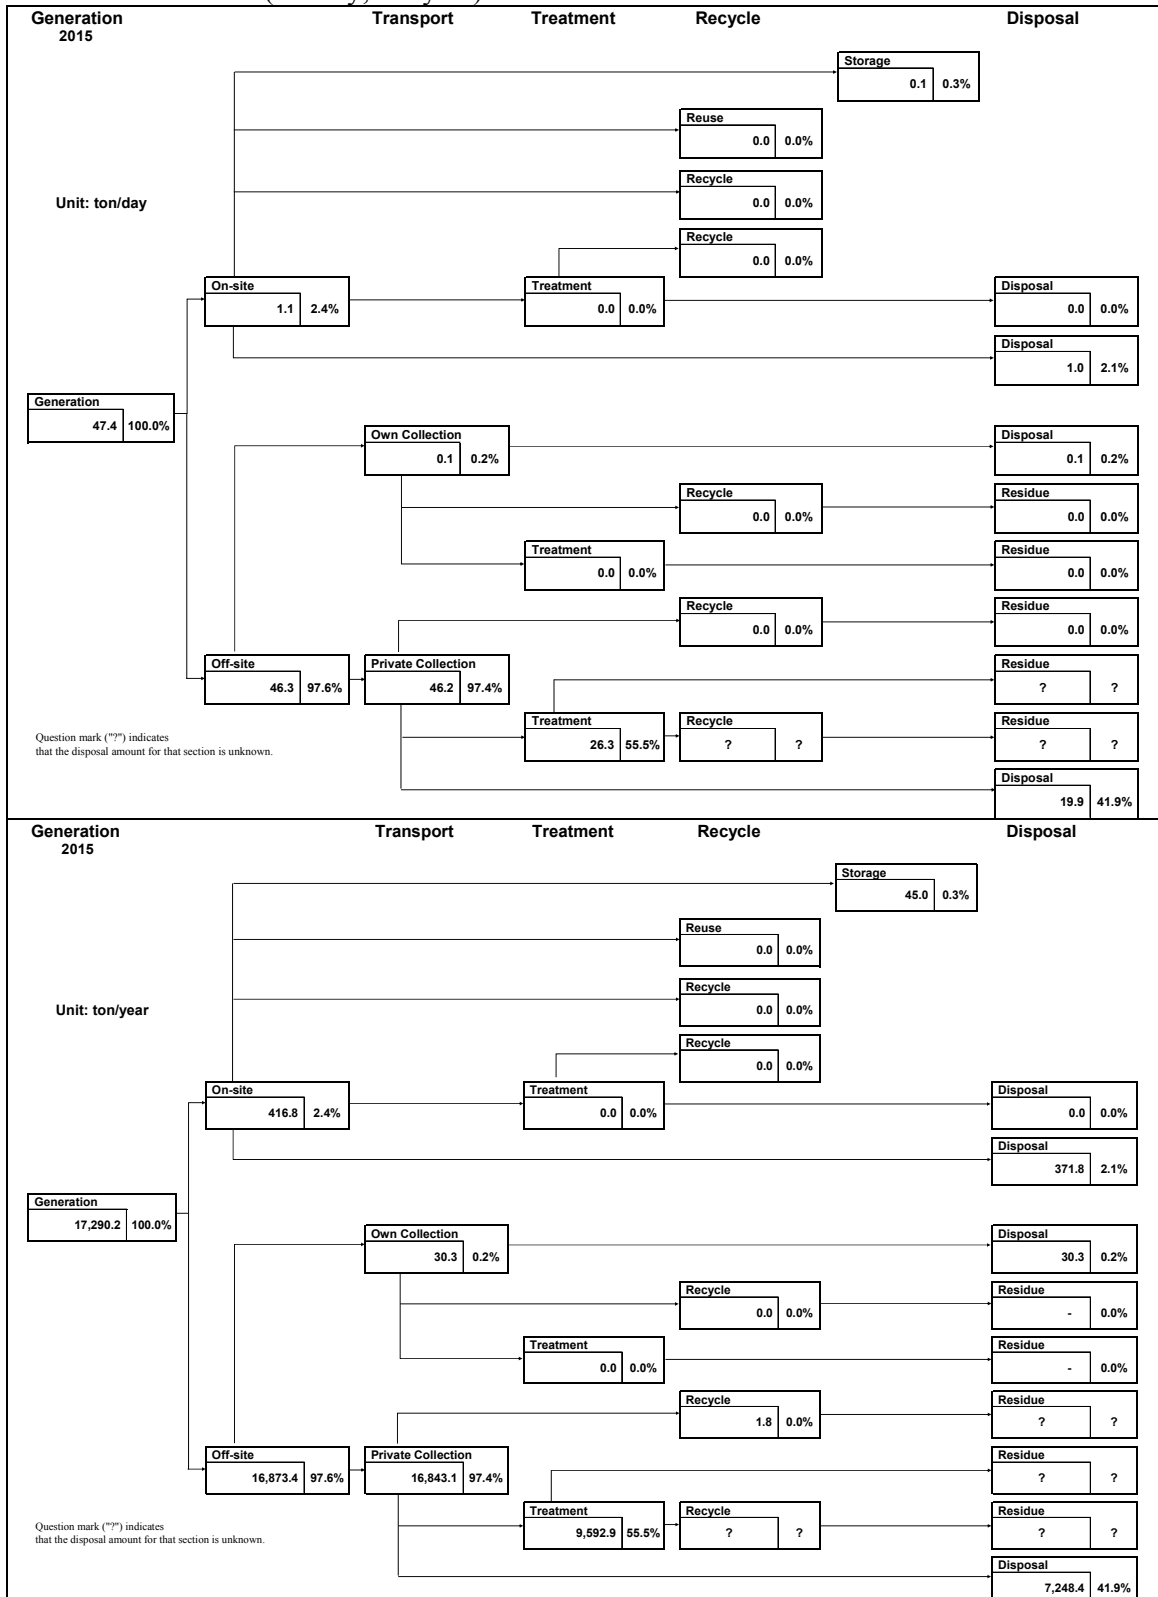

All PIM – HIW (ton/day, ton/year)

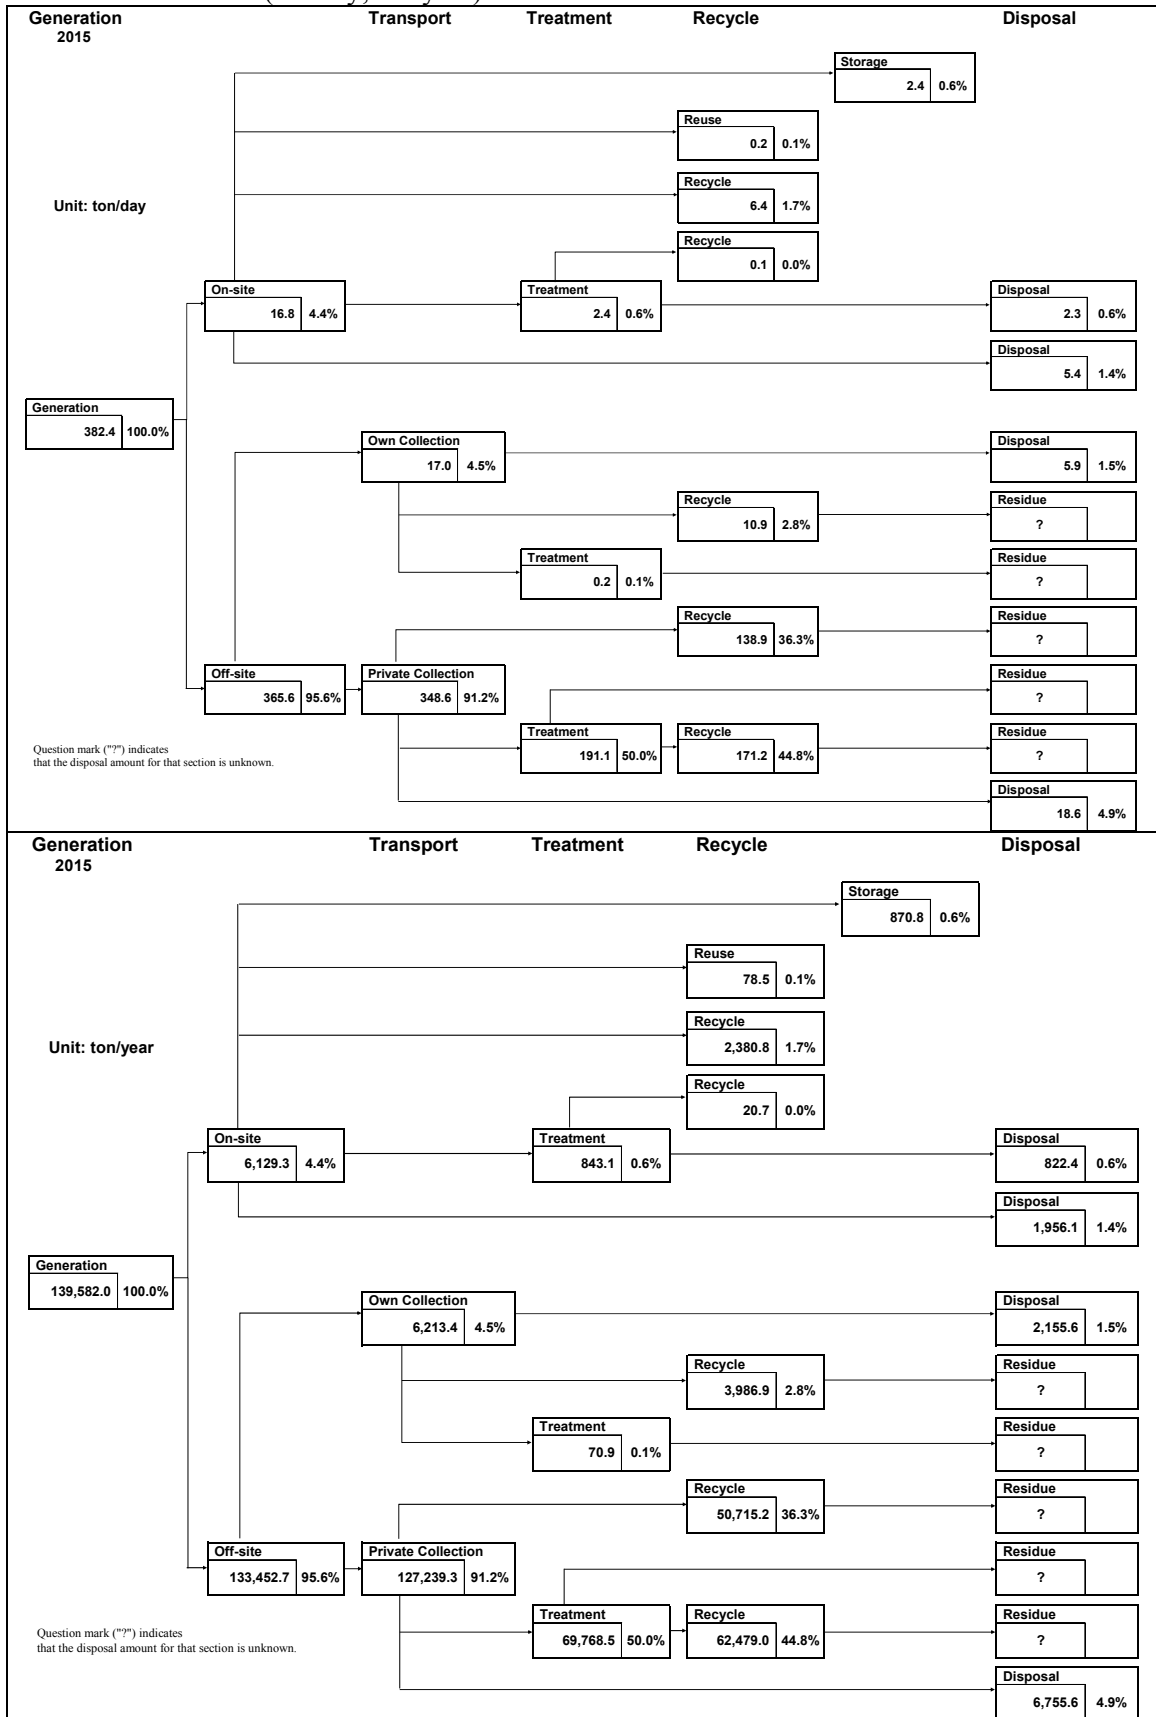

Non Process – Non HIW (ton/day, ton/year)

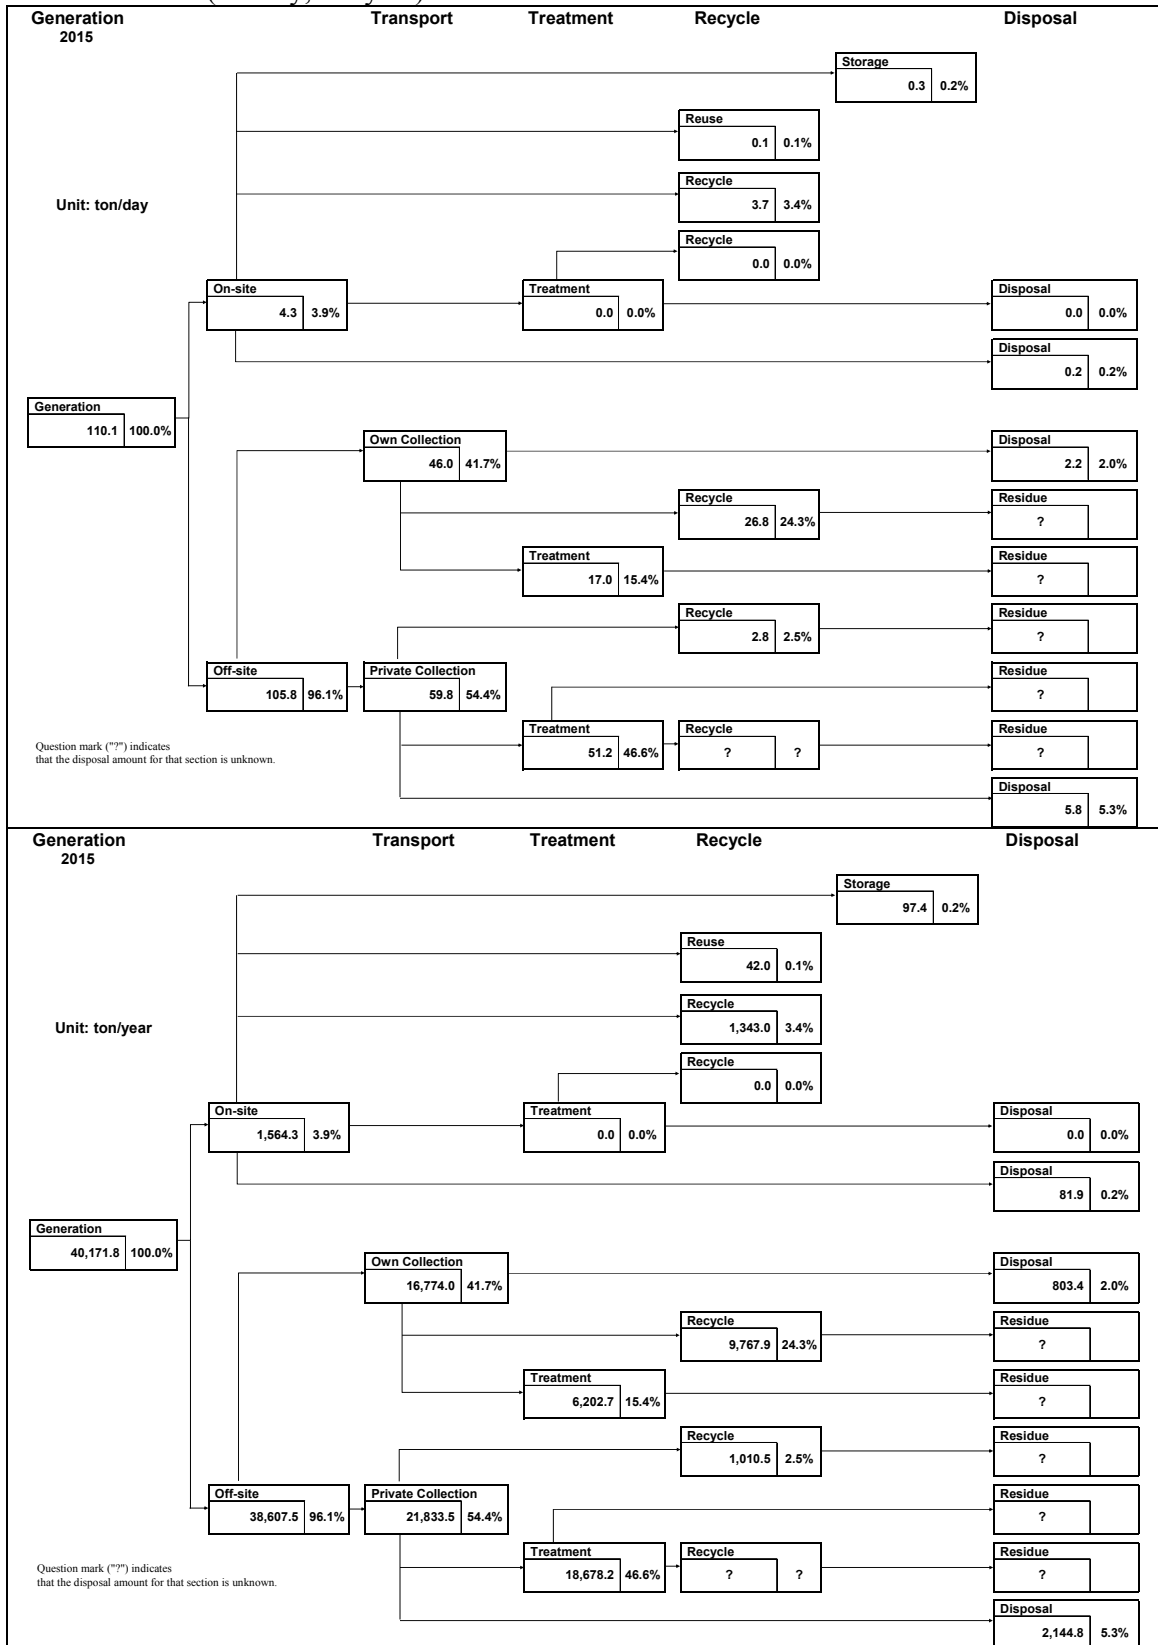

Non Process – HIW (ton/day, ton/year)

Process – Non HIW (ton/day, ton/year)

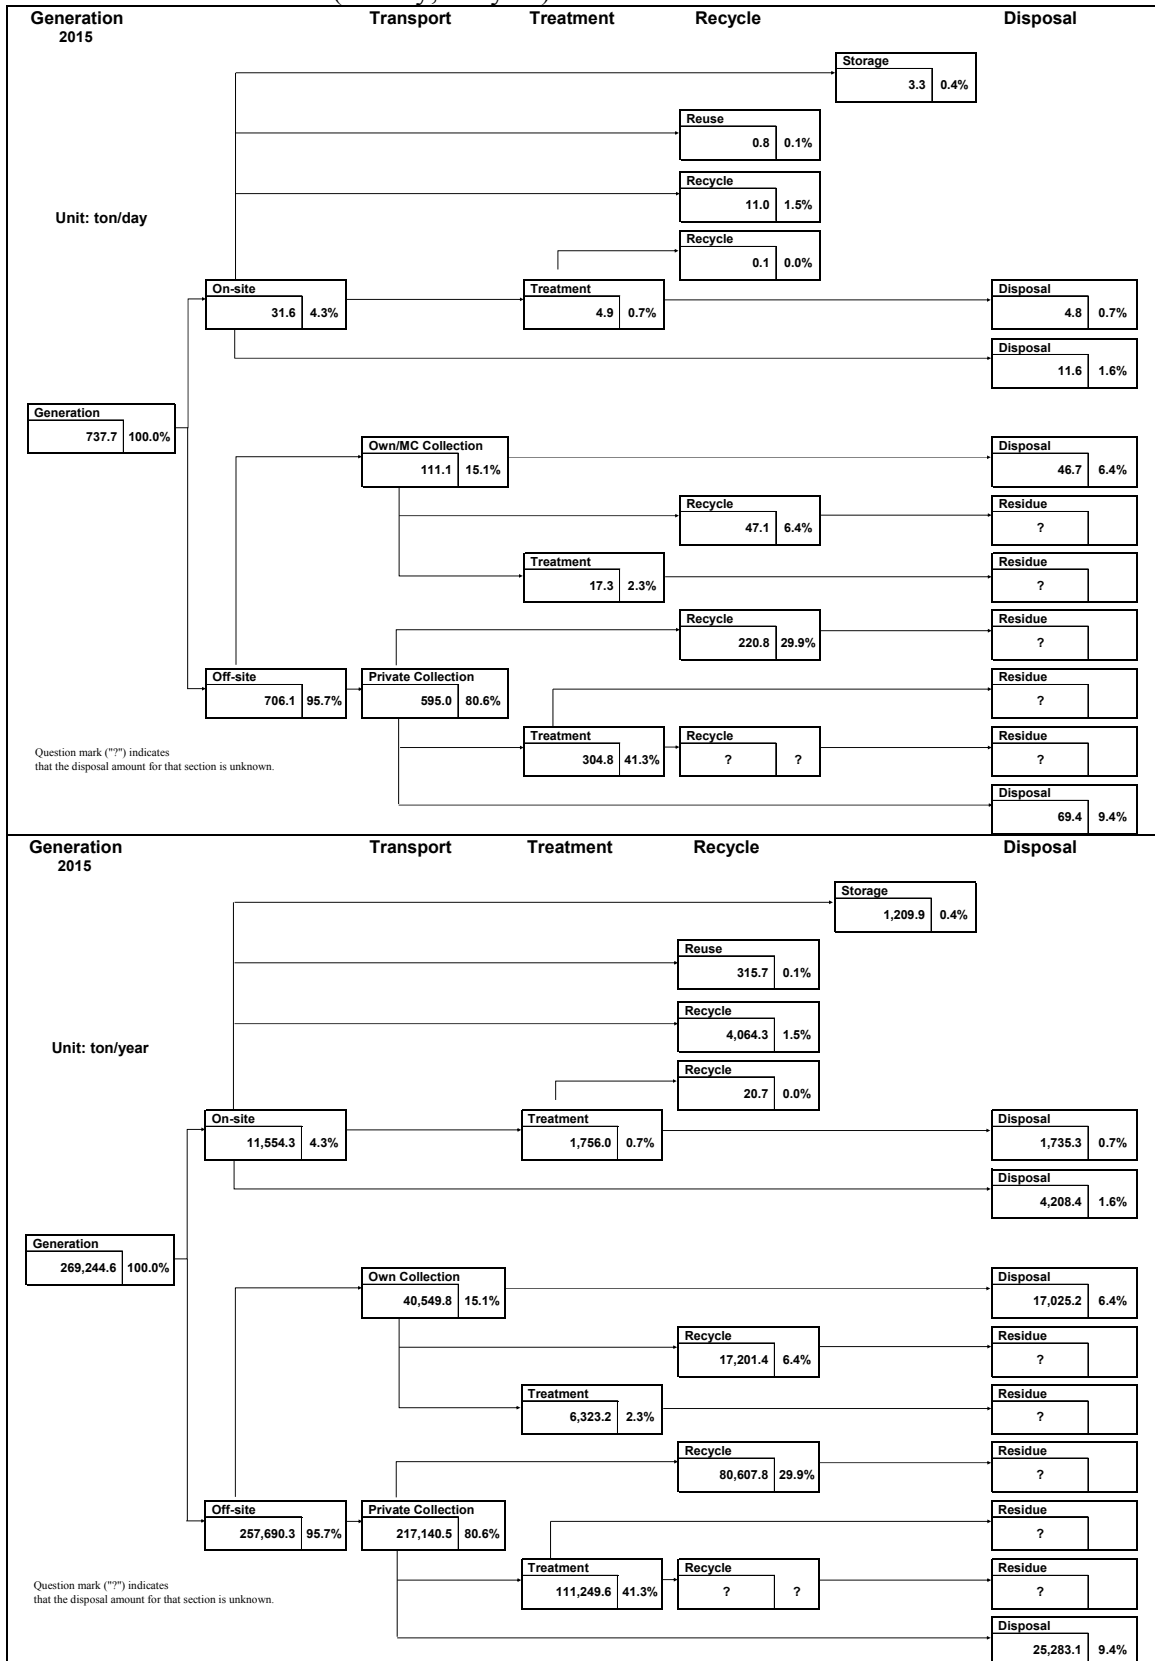

Process – HIW (ton/day, ton/year)

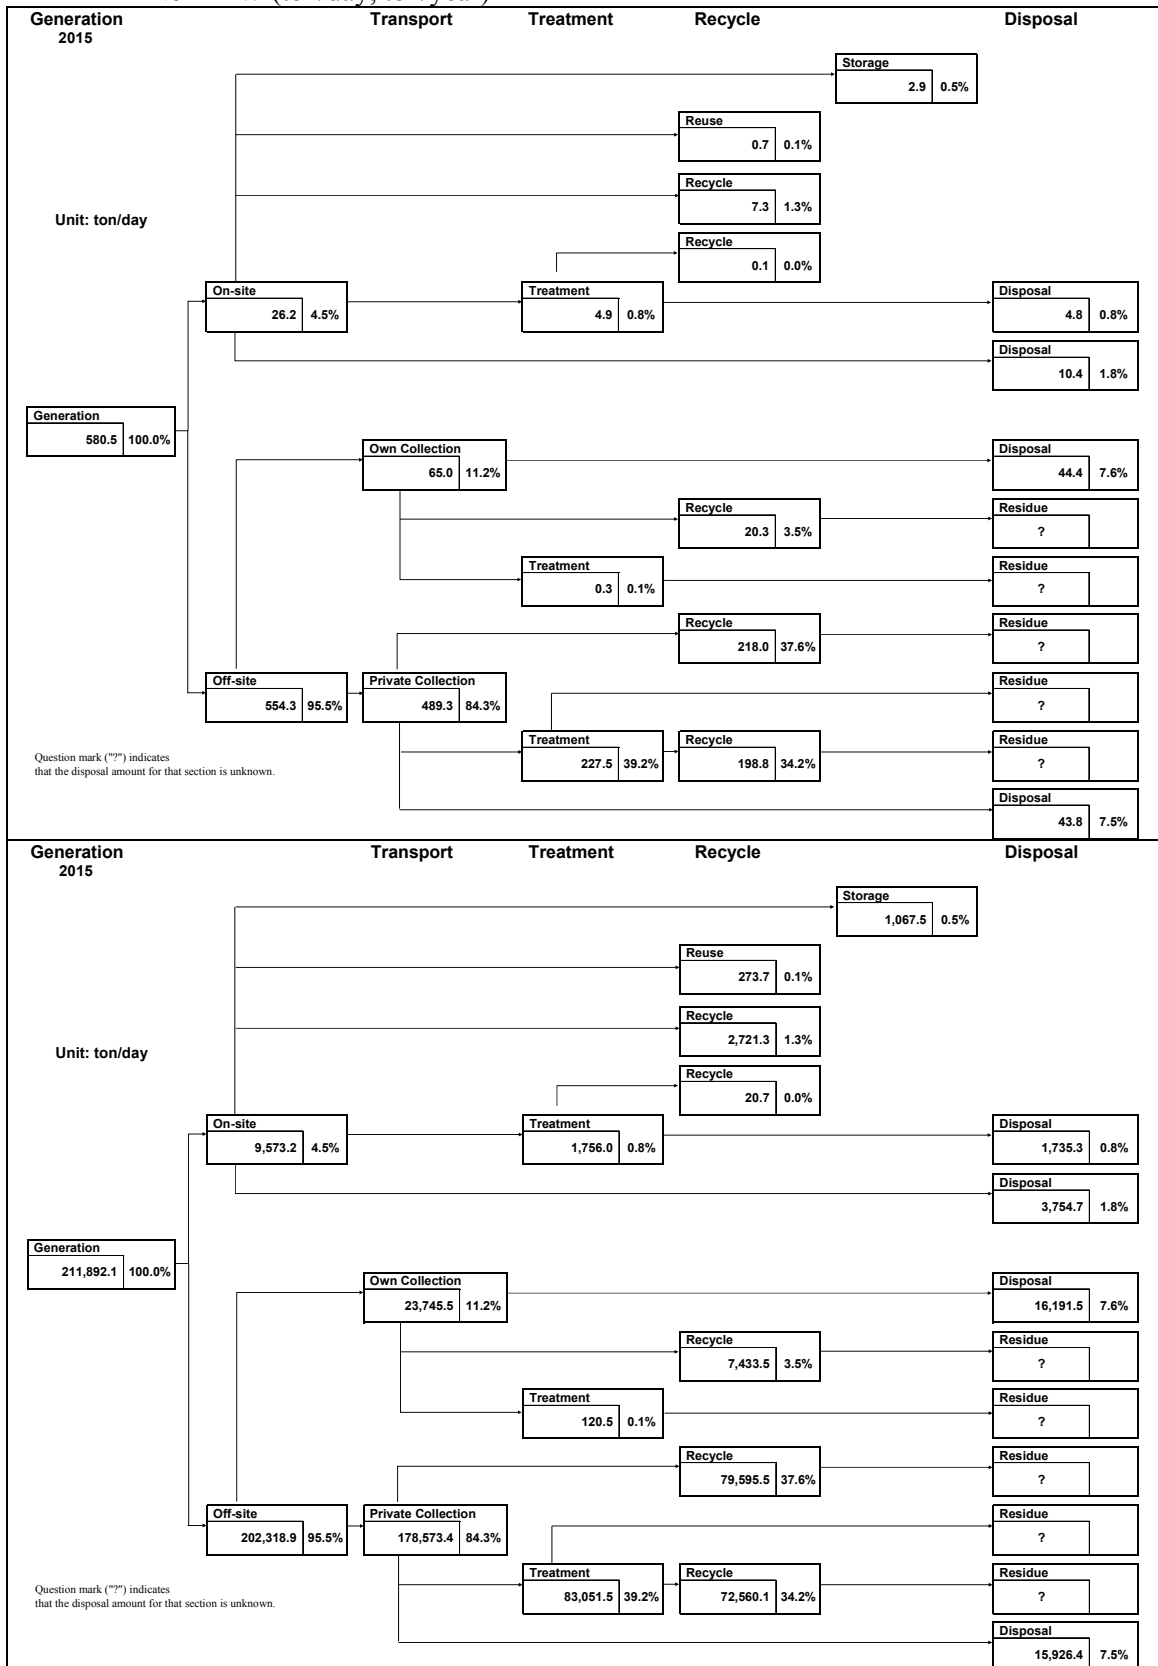

b. General IW

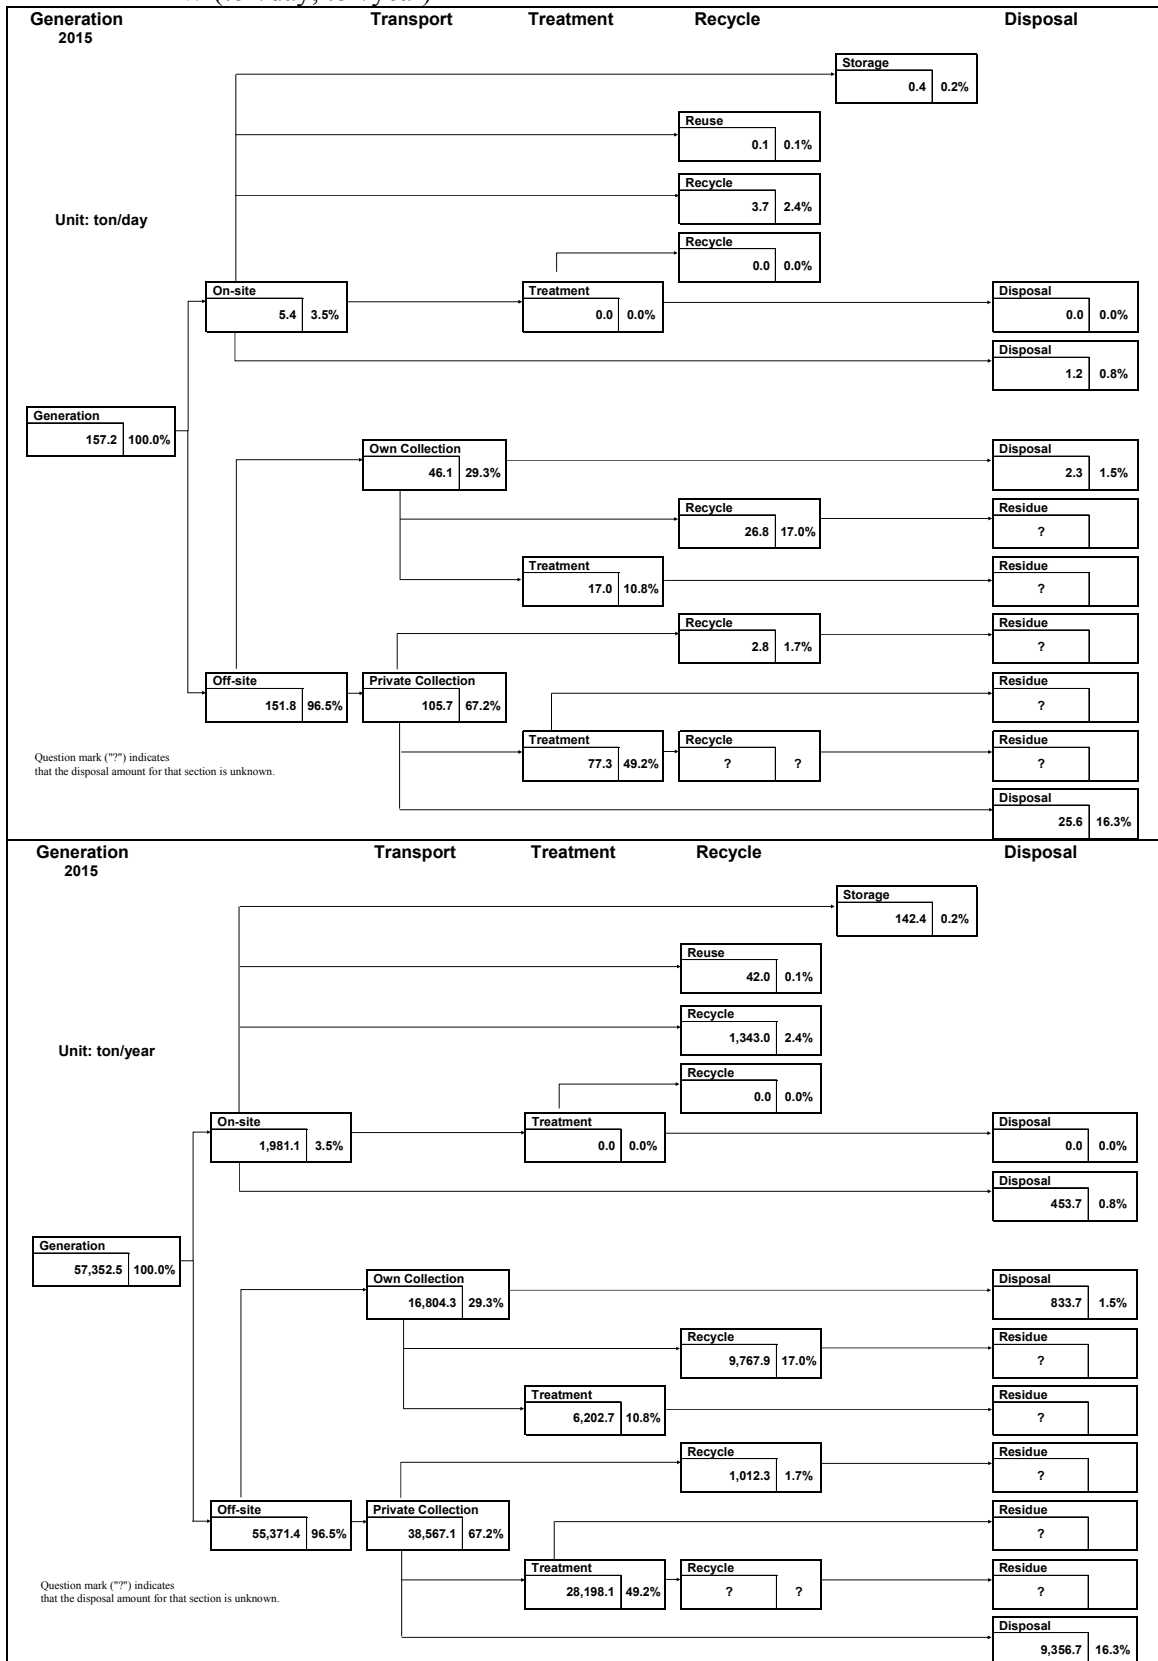

All PIM - All General IW (ton/day, ton/year)

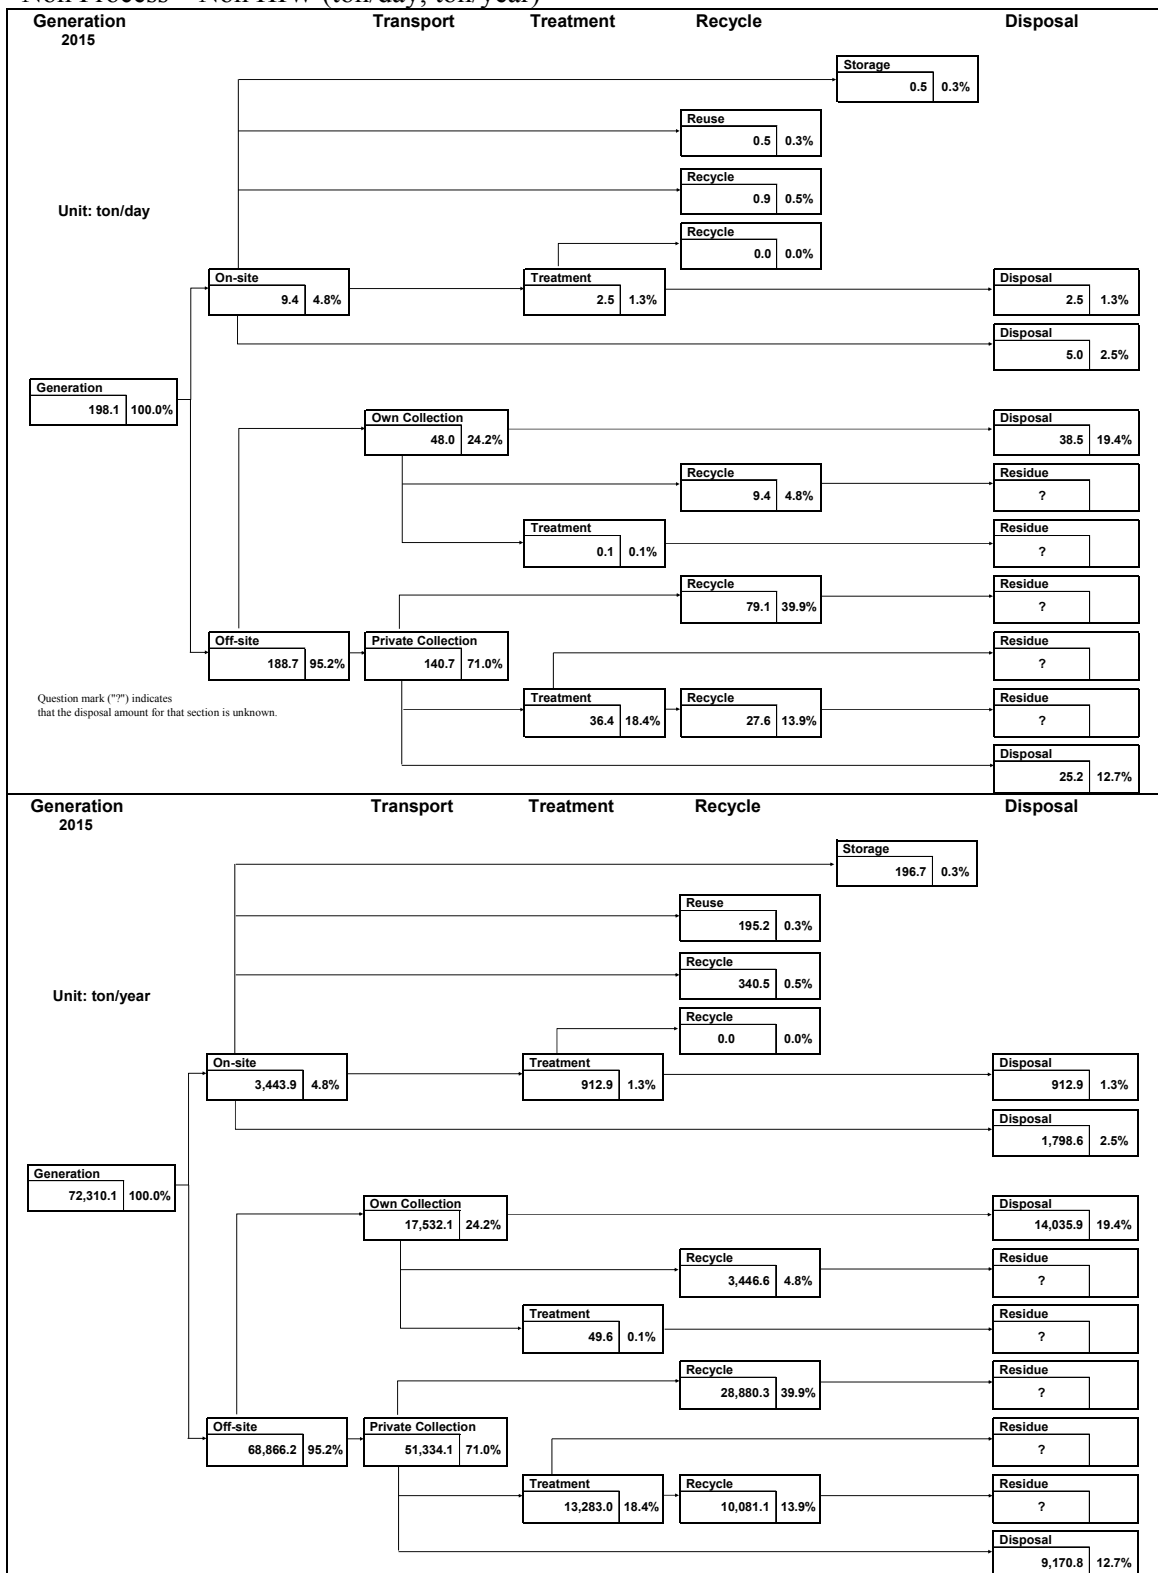

All PIM – Non HIW (ton/day, ton/year)

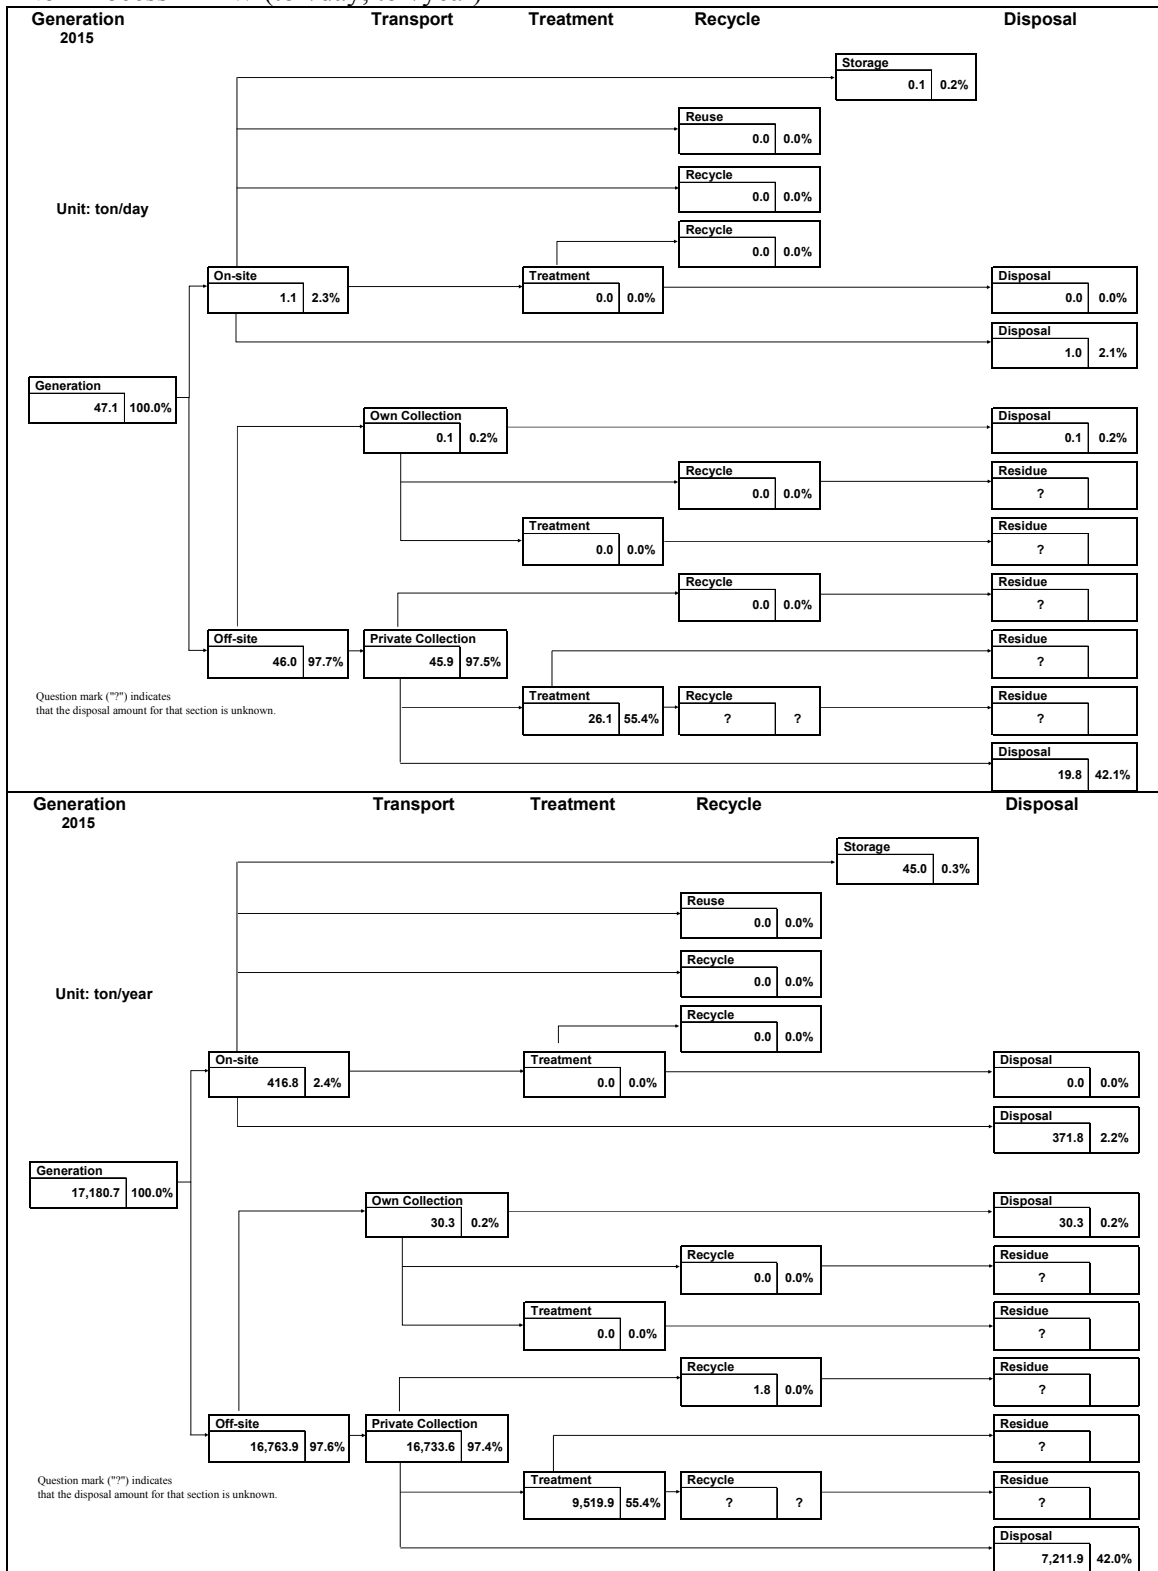

All PIM – HIW (ton/day, ton/year)

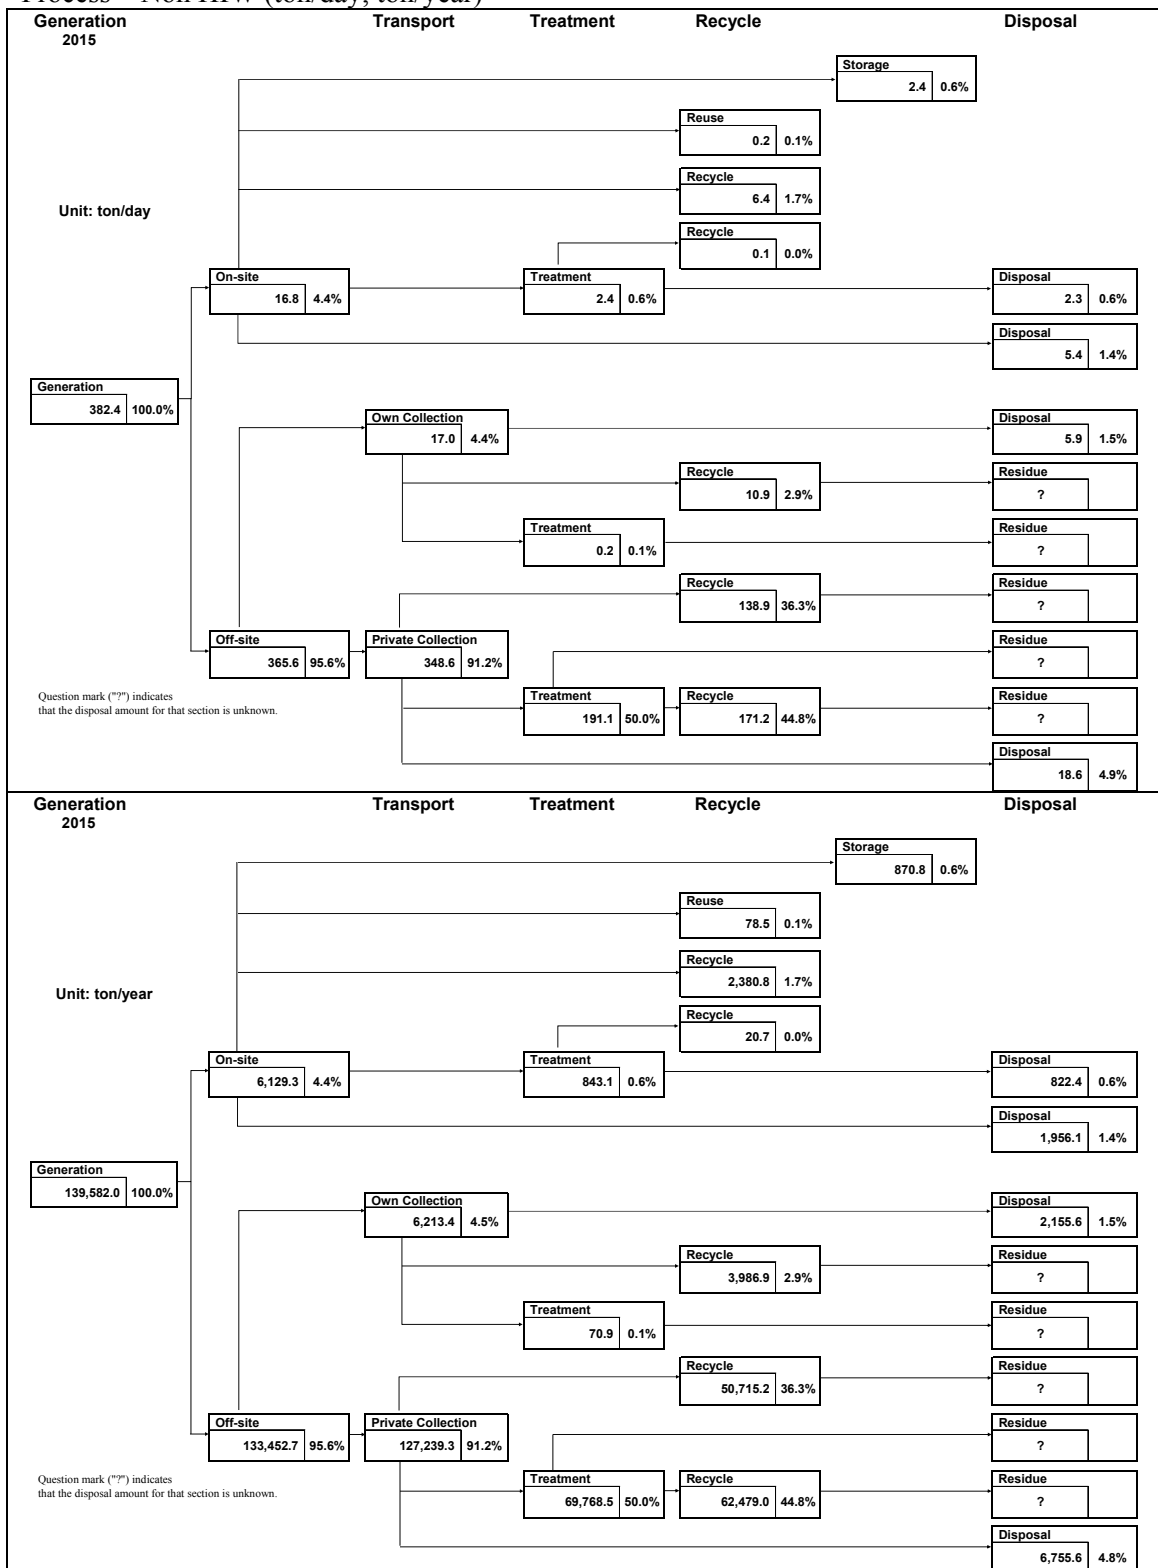

Non Process – Non HIW (ton/day, ton/year)

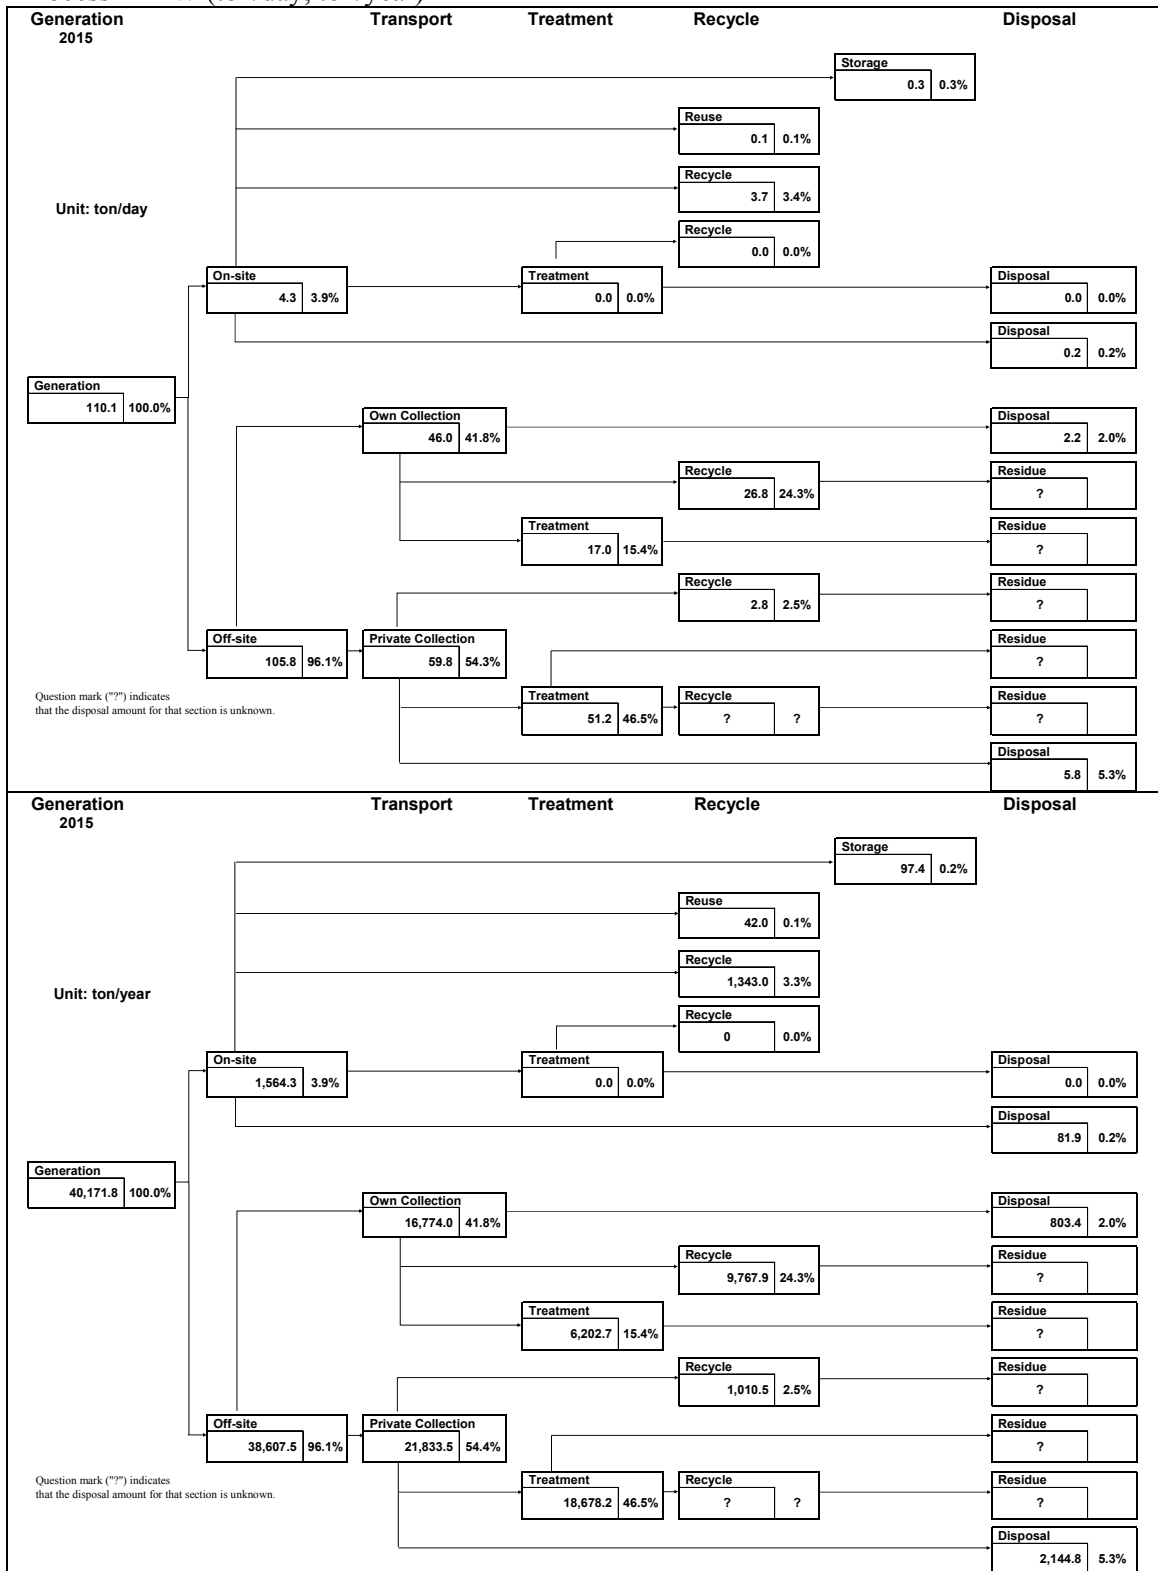

Non Process – HIW (ton/day, ton/year)

Process – Non HIW (ton/day, ton/year)

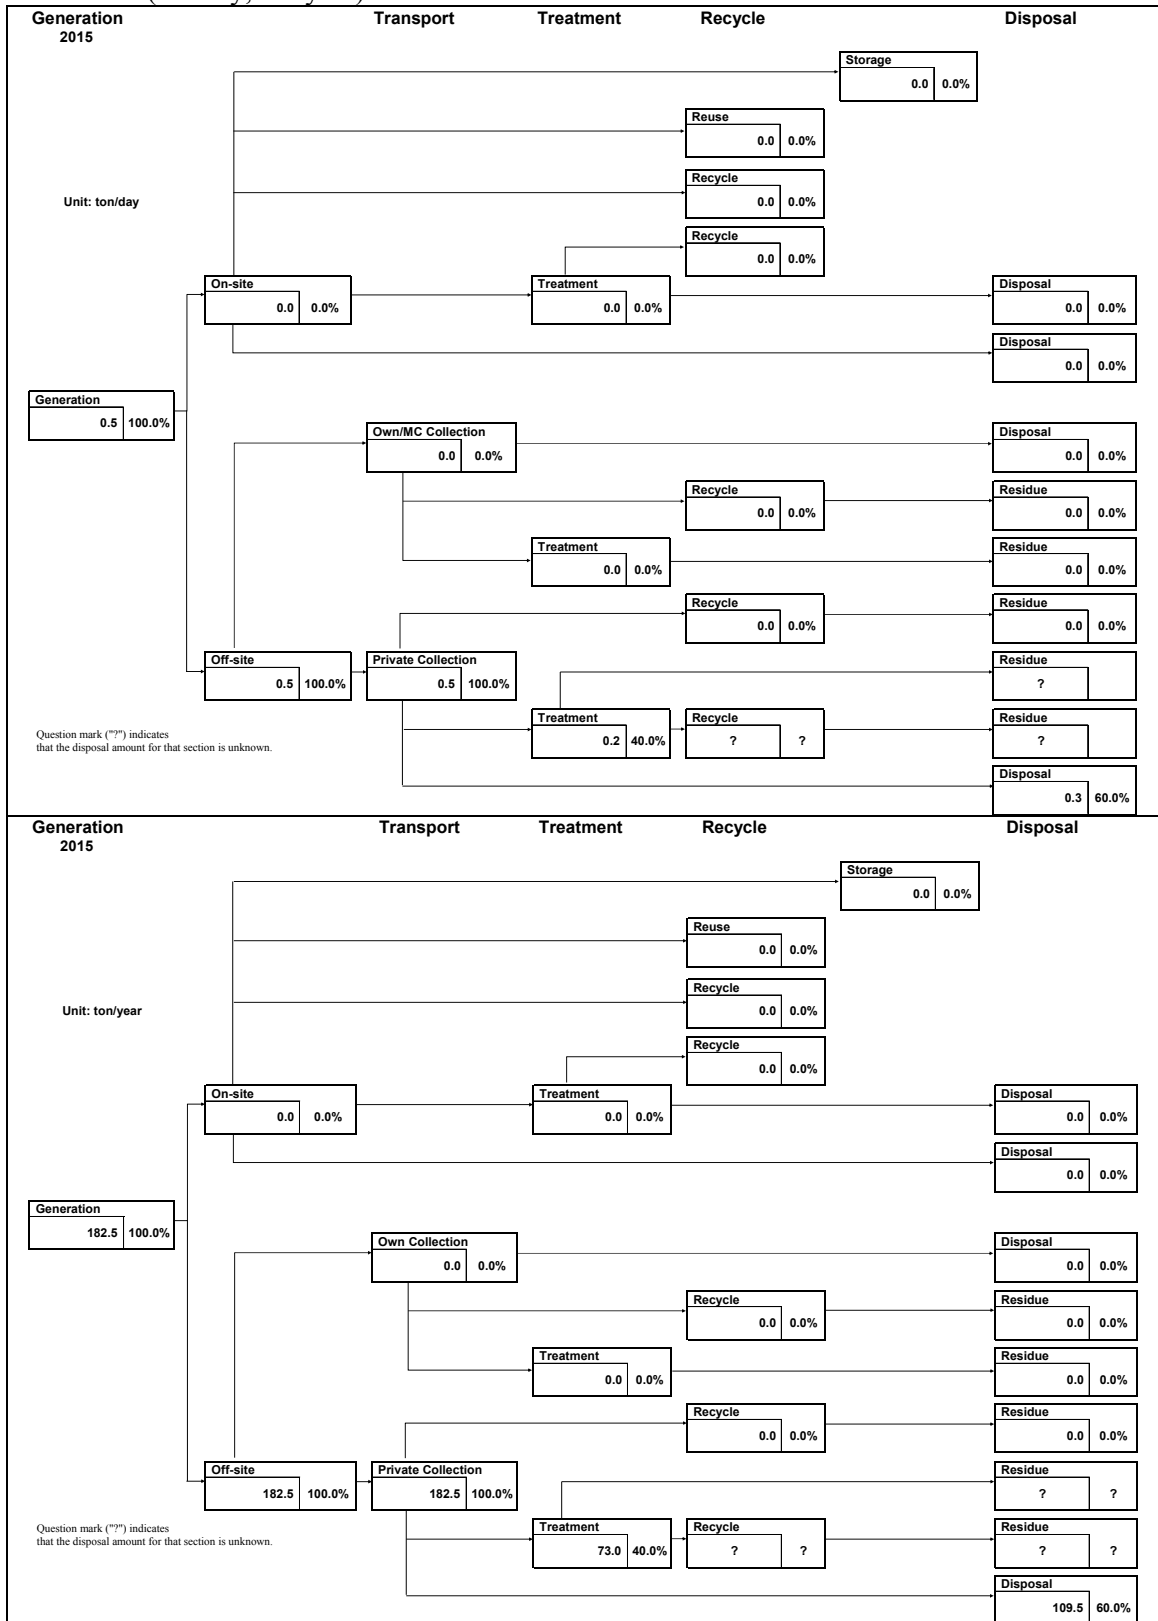

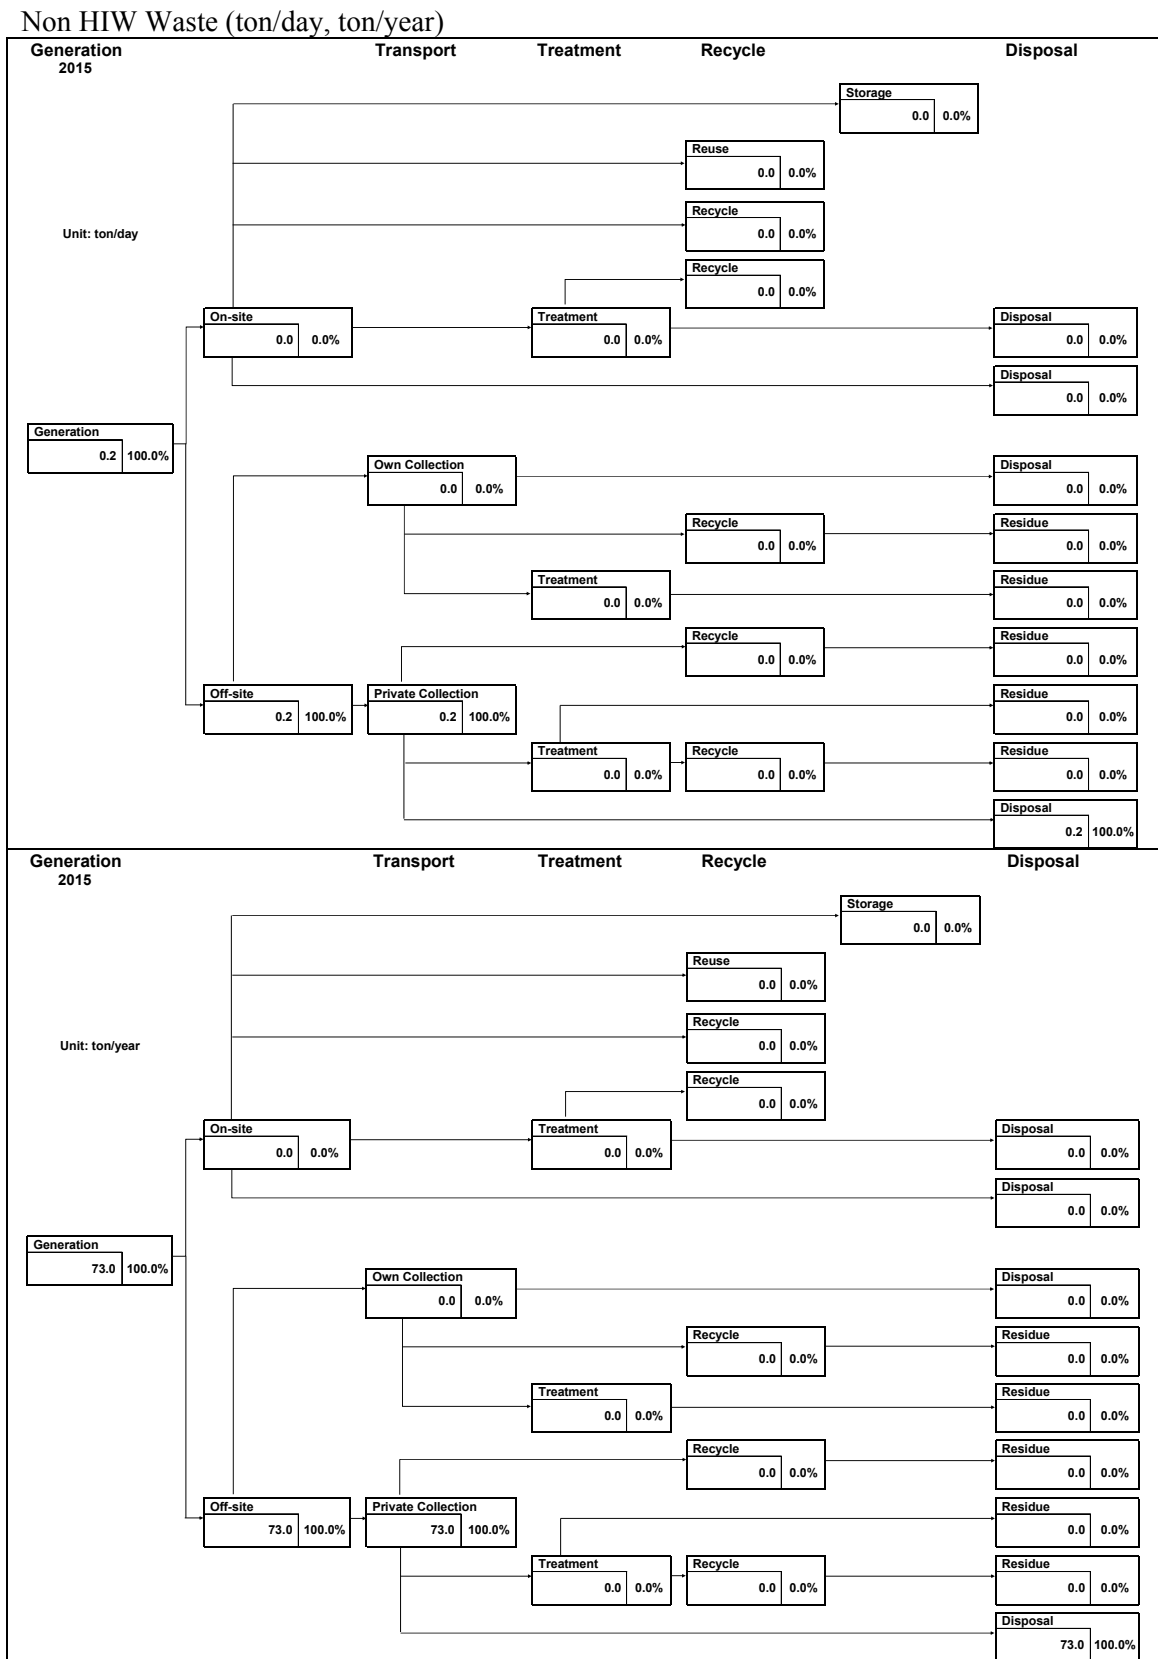

Process – HIW (ton/day, ton/year)

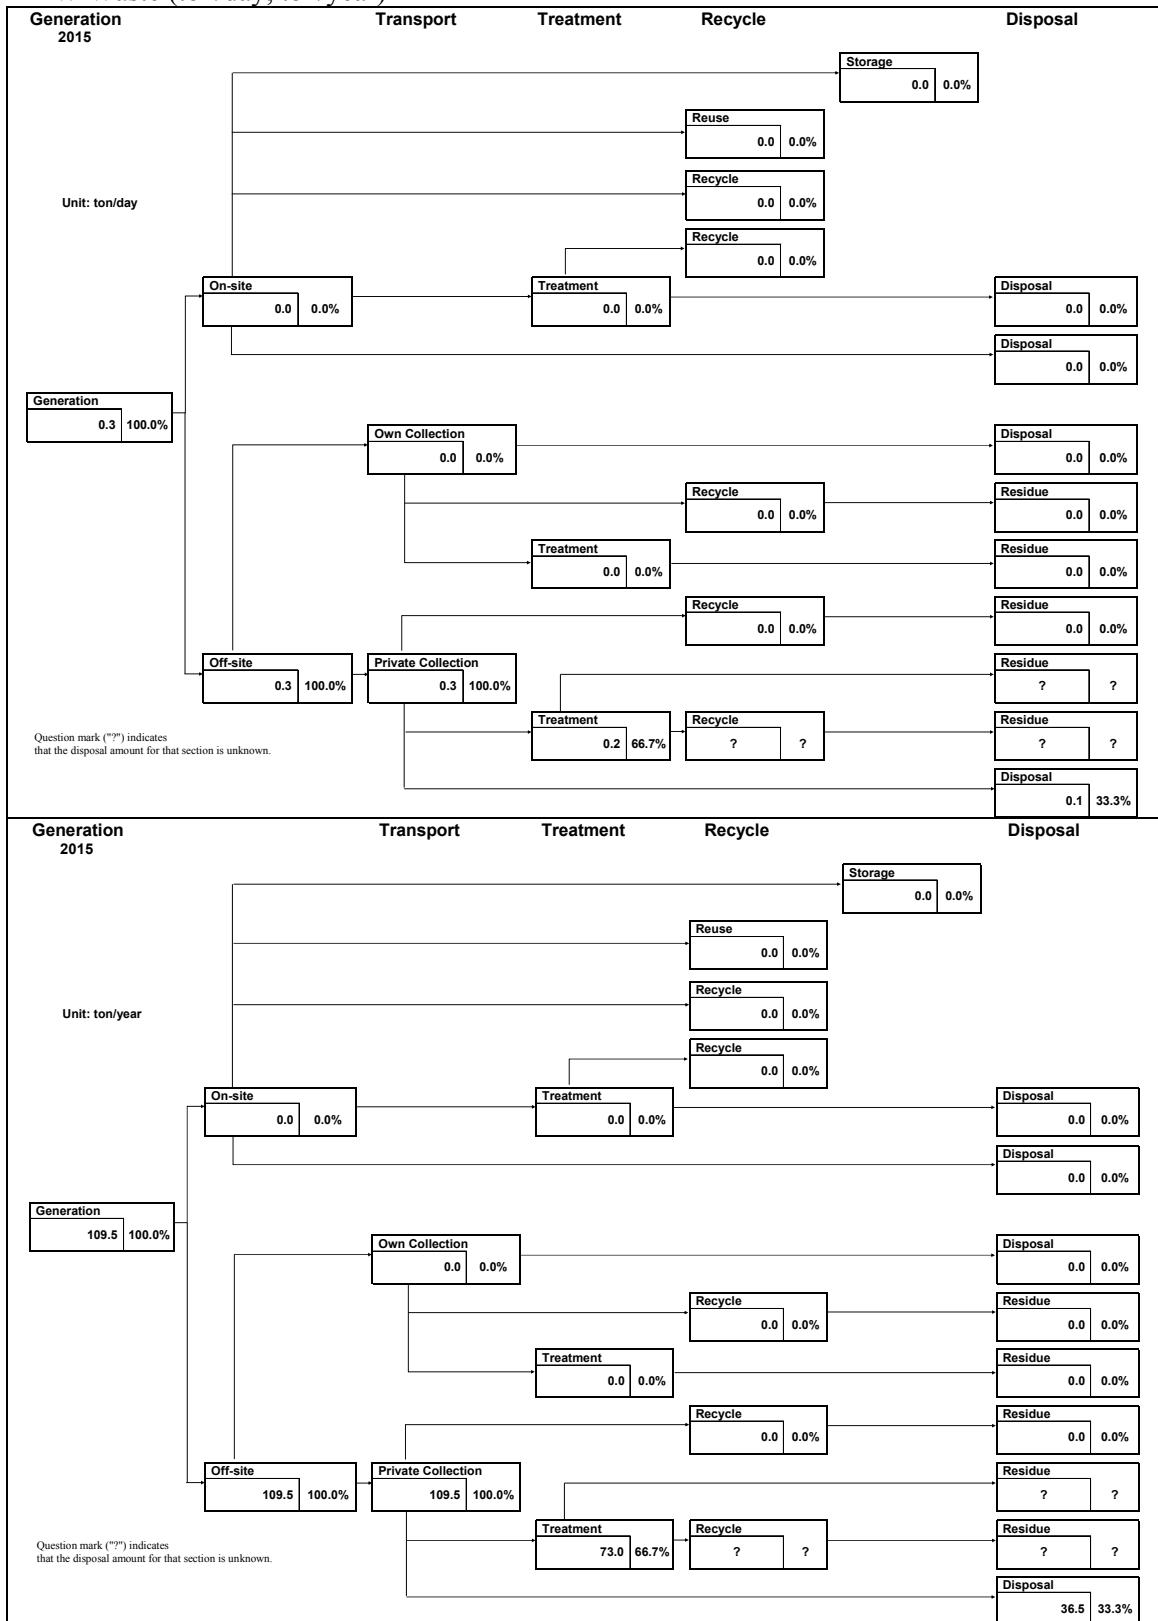

c. Health-care Waste

All Waste (ton/day, ton/year)

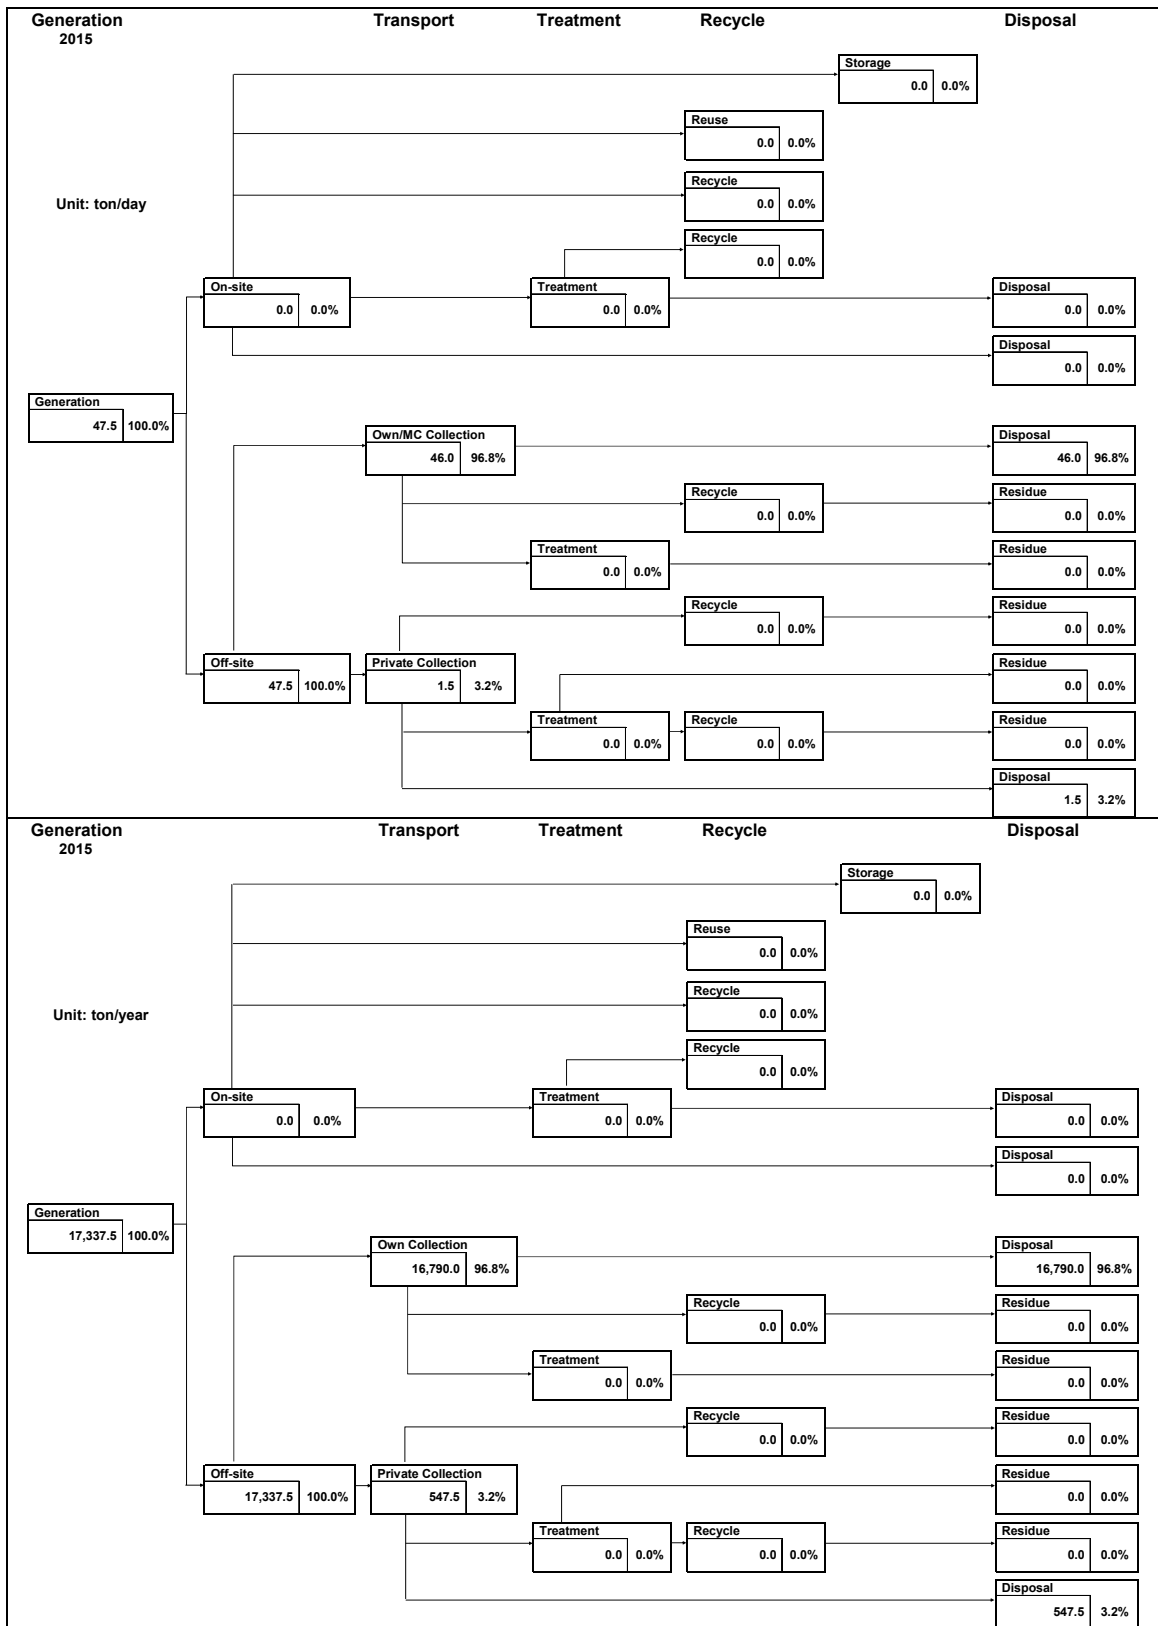

HIW Waste (ton/day, ton/year)

d. Construction Waste

Non HIW (ton/day, ton/year)

2. Workshops and Seminar

2 Workshops and Seminar

2.1 First Workshop

2.1.1 Program

Program for 1st Workshop: September 9, 2009

Workshop of the Study by JICA and SUFRAMA
Workshop One: Opinion Gathering

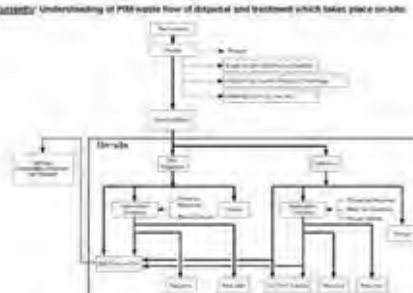

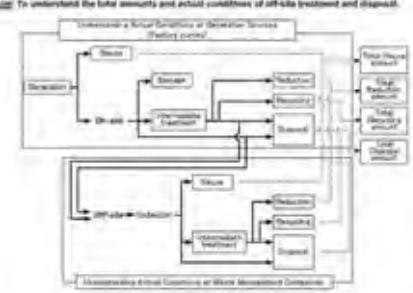

The first workshop invites the study steering committee and technical support committee members to meet with other government institutions, waste dischargers, waste management companies, environmental NGOs, local consultants and others to discuss and gather opinions on (1) the current conditions of industrial waste management and (2) a policy for improvement.

| Venue | Date | Time | Objective |
|--------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| SUFRAMA Auditorium | September 11, 2009 | 8am-5.30pm | Opinion Gathering |
| Session | Time | Title | Speaker |
| | 08:00 - 08:30 | Registration | |
| | 08:30 - 08:45 | Opening Address | Dra. Flávia Grasso - Superintendente da SUFRAMA Sr. Masayuki Eguchi - Representante Senior da JICA Brazil Office |
| | 08:45 - 08:55 | Workshop objectives | Sr. Susumu Shimura (JICA) |
| | 08:55 - 09:00 | Workshop general overview | Sra. Luciana (SUFRAMA) |
| 1 | 09:00 - 09:20 | On-site: Current Conditions and Issues | Sr. Alexandre Kadota - FIEAM/CIEAM/CCNB |
| 2 | 09:20 - 9:40 | Off-site: Current Conditions and Issues | Sr. Antônio Ademir Strooki - IPAM |
| 3 | 9:40 - 10:00 | PROSAMIN Study Report | Sra. Jane Crespo - PROSAMIN |
| 4 | 10:00 - 10:20 | Domestic & Health Waste Management | Sr. João Bosco Ladinou de Andrade, PhD. UFAM |
| | 10:20 - 11:00 | Question and Answer Session | Each Speaker |
| | 11:00 - 13:00 | Lunch | |
| | 13:00 - 15:00 | Workshop Groups: • On-site waste management: current conditions and issues • Off-site waste management: current conditions and issues • Improvement of policy for industrial waste management • Optional participant-suggested topic | |
| | 15:00 - 15:30 | Break | |
| | 15:30 - 16:30 | Group presentations (≤15 min ea.) | Group Representatives |
| 5 | 16:30 - 17:00 | Summary | Sr. Emami (SUFRAMA) |
| | 17:00 - 17:30 | Closing remarks | SUFRAMA |

- During the morning sessions, participants are asked to prepare any questions or suggestions which will be addressed during a question and answer session before lunch, or during the afternoon small group discussions. Please deposit questions in a collection box, which will be made available.
- The summary (session 5) at the end of the day will be prepared based on the group presentations in the afternoon.

2.1.2 Presentation Materials

Handout for 1st Workshop: September 11, 2009

| <p>The Study for the Development of an Integrated Solution related to Industrial Waste Management in the Industrial Pole of Manaus</p> <p>Japan International Cooperation Agency Kokusai Kogyo Co., Ltd & EX Corporation</p> <p>Workshop of the Study by JICA and SUPRAMA SUPRAMA Auditorium September 11, 2009, 9:00-17:30</p> <p>Workshop One: Consensus Building</p> <p>Principles of the first workshop for the Study for the Development of an Integrated Solution related to the industrial waste management in Manaus including PMM. This activity is part of the Consensus Agreement signed among Manaus Free Trade Zone Superintendence (SUPRAMA), the Brazilian Cooperation Agency of the Foreign Affairs Ministry (ABC) and the Japanese International Cooperation Agency (JICA) and it counts on the participation of the Amazon State Initiative Enterprises (SIEM), the Amazon State Industry Cluster (CEIAM) and the Japanese-Brazilian Community Councils of the State of Amazonas and of the support of governmental institutions related to the environmental issue. The Study will be formalizing a Master Plan containing proposals for solutions for the reuse and destination of wastes to be implemented from 2011 to 2017.</p> <p>This is the first in a series of workshops and it aims at providing the results of the first stage of the project, which comprised the survey of data carried out by the team of consultants hired by JICA together with the companies of the local industrial parks and completed in reports. The participants will be able to discuss several aspects of the report and give their opinions, which will then be taken into account for the formulation of the Master Plan.</p> <p>Background of the Study</p> <p>Manaus Free Trade Zone (MFTZ) is an economic development model implemented by the Brazilian government to attract a sustainable economic boom in the Amazon Basin. At the heart of the MFTZ is the Manaus Industrial Pole (MIP), one of the most modern industrial parks of Latin America. The MIP system encompasses 30 industrial and commercial industries working in a variety of sectors (e.g. electronics, chemicals, pharmaceuticals and automobiles) and is indirectly responsible for creating approximately 200,000 jobs and directly employing 170,000 people.</p> <p>Nevertheless, healthy development also requires a careful look at any environmental impact. Improving MIP waste management improved the reputation and Japanese cooperation agencies (ABC) and JICA and the Superintendence of the Manaus Free Trade Zone (SUPRAMA) in sign a technical cooperation agreement to evaluate the current conditions of how industrial wastes are handled and managed in the MIP. The study was established to start, and began in February 2009. The Japanese government is providing around \$2 million USD to support the study over an 18-month period and SUPRAMA is providing the study team with logistical support. JICA selected consultants from Kokusai Kogyo Co., Ltd. and EX Corporation to carry out the study and is also working with SIEM, CEIAM and the Japanese-Brazilian Councils of Commerce and Industry of Amazonas.</p> <p>Aim: The PMM indicators are required, according to the Memorandum of Understanding of Amazon State PMM, Ministry of the Industrial Waste Inventory (MIMINWA) LITHAMAMA Resolution 114.</p> | <p>The Study for the Development of an Integrated Solution related to Industrial Waste Management in the Industrial Pole of Manaus</p> <p>Japan International Cooperation Agency Kokusai Kogyo Co., Ltd & EX Corporation</p> <p>A third part of the waste they generate is transferred to companies in Manaus through by Amazon State environmental organizations for collection, transportation and final disposal services. Also, some hazardous wastes are treated in other state if local companies do not have the adequate capabilities.</p> <p>The present a number of issues to be explored:</p> <ul style="list-style-type: none"> • Main PMM Assessment need for understanding lack understanding of proper industrial waste management and do not submit a waste inventory • Without a sufficient waste inventory database or analysis, the composition and quantity of industrial waste coming out of the PMM remains unclear • Lack of an adequate system and facilities capacity to control the disposal of industrial wastes. <p>Overall Objectives and End Goals of the Study</p> <p>The Study for the Development of an Integrated Solution related to the Industrial Waste Management in Manaus Industrial Pole proposes two main objectives. These are:</p> <ul style="list-style-type: none"> • To compile a report of waste having essential common conditions of industrial waste management in the MFTZ PMM and the surrounding area • To formulate a 5-year waste plan (2011-2015) for reduction of waste management in PMM along with guidelines for the improvement of industrial waste management in PMM. <p>Also, by achieving these objectives, the following end goals are sought:</p> <ul style="list-style-type: none"> • To have established appropriate industrial waste disposal and the concept of W (Reduce, Reuse, Recycle) based on the master plan for industrial waste management in the target study area • With the establishment of appropriate industrial waste disposal and the W (Reduce), to have reduced illegal dumping of industrial wastes and minimized environmental impact. <p>In order to grasp the actual conditions of industrial wastes disposed, the next basic and essential step is creating a chart which clearly demonstrates the flow of waste. The key is to divide the waste flow into two large categories: (I) generation sources, which we call "In-site", and (II) waste disposal flow, generation sources, which we call "Off-site".</p> <p>As demonstrated in the figures on the following page, the necessary survey used to grasp this is "what, to whom and how much" a factory has discharged, but does not reveal the process of off-site disposal. This is why it is necessary to grasp the conditions of waste management and clarify the waste flow at generation sources and after the off-site flows, while also grasping the actual conditions of waste management companies to get a clear picture of the entire off-site flow. The JICA study team has begun this process by conducting a number of field surveys to clarify the waste flow.</p> |
| <p>The Study for the Development of an Integrated Solution related to Industrial Waste Management in the Industrial Pole of Manaus</p> <p>Japan International Cooperation Agency Kokusai Kogyo Co., Ltd & EX Corporation</p> <p>Objective: Understanding of PMM waste flow of disposed and treated wastes takes place on-site.</p>  <p>Aim: To understand the total amounts and actual conditions of off-site treatment and disposal.</p>  | <p>The Study for the Development of an Integrated Solution related to Industrial Waste Management in the Industrial Pole of Manaus</p> <p>Japan International Cooperation Agency Kokusai Kogyo Co., Ltd & EX Corporation</p> <p>Development of the Master Plan for Industrial Waste Management in PMM</p> <p>The study's preliminary investigations and their findings have discussed progress and issues on a regular basis. However, a series of workshops and a seminar will be held to offer an opportunity for more in-depth discussions to take place to make an understanding and hear the opinions of a wide range of stakeholders. Through these activities, the study members hope to gain the cooperation and understanding that society is formulating the plan. It presents discussion of information and include environmental considerations in the plan.</p>  |

Health waste management (3): Waste Flow with Waste from General Hospital</h3> <p>The flowchart illustrates the waste management process. It starts with the 'Total amount of Health waste' (513.9 kg/day, 100.0%). This is divided into 'Class A & B' (228.6 kg/day, 44.5%) and 'Class C (Common waste)' (285.3 kg/day, 55.5%). Class A & B waste goes to 'Incineration' (120.9 kg/day, 23.5%) and 'Unknown' (79.9 kg/day, 15.6%). Class C waste goes to 'Recycling (Paper, Cardboard)' (23.9 kg/day, 4.7%) and 'Disposal' (261.2 kg/day, 50.8%). The 'Disposal' from Class C is further broken down into 'Disposal' (278 kg/day, 5.4%) and 'Disposal' (289.0 kg/day, 56.2%).</p> <p style="text-align: right;">8</p> |

| 44 | Mixed construction waste | 184.66 | 29.92 | 80.9 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Total | | 228.18 | 36.97 | 100.0 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>3. Construction waste management (4): Construction Waste Flow in PIM/MFZ</p> <p>Recycling rate is very low.</p> | <p>3. Construction waste management (5): Issues (1)</p> <ol style="list-style-type: none"> 1. Results: 60% of construction work got a construction license. 2. Results: 50% of construction work made a construction waste management plan according to CONAMA Resolution 307. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

3. Construction waste management (6): Issues (2)

3. Results: Recycling rate is very little only 0.1% because over 80% of mixed wastes are discharged and disposed of at Manaus City Landfill. Almost all (96.9%) of the waste were disposed of at Manaus City Landfill.

Mixed waste = 80 %

Manaus city landfill = 96.9 %

17

3. Construction waste management (7): Issues (3)

4. 22.9% (11 items of 48 in total) use a manifest for discharge of the waste.

Yes = 22.9 %

18

4. Radioactive waste survey (1)

- 8 institutions of 14 ones in MFZ, which use radioactive materials and have a license of CNEN, were surveyed.
- No radioactive waste are generated.

| Purpose of use (Type) | Number of target |
|------------------------------------------------------------------|------------------|
| Nuclear measurers - control of nuclear measuring processes in DI | 5 |
| Analytical Techniques in DI | 2 |
| Nuclear medicine outside DI | 1 |
| Total | 8 |

19

4. Radioactive waste survey (2): Radioactive materials management in PIM (1)

- All 7 factories in DI surveyed have license of the use of radioactive materials.
- The purpose of the use is to control production process and control of the products.
- Details are as follows:

| Specify | Answer |
|-------------------------------------------------|--------|
| Filling level inspection/ measurement | 4 |
| Measurement of the PVC sailcloth in the process | 1 |
| Products dimension control | 1 |
| Verification of the solder | 1 |

20

4. Radioactive waste survey (3): Radioactive materials management in PIM (2)

- Radioactive materials management of 7 factories in DI is well established.
- Those are used in the controlled area.
- Storage of radiation sources is as follows:

| Storage of Radiation Sources | Answer | % |
|-----------------------------------------------------------------------------------------|----------|--------------|
| It is stored inside of the controlled area with special container. | 2 | 28.6 |
| It is stored inside of the controlled area and installed inside of the X-ray equipment. | 3 | 42.8 |
| It is installed in a level measurement device | 1 | 14.3 |
| It is installed in a device within the controlled area | 1 | 14.3 |
| Total | 7 | 100.0 |

21

5. IWM (1): Category of 134 Factories Surveyed

134 factories surveyed shares 30.5% in Total number of those operation in PIM/MFZ.

Sample Population = 134

| Factory code | District Industrial | | | Outside | | | Total number of factory (A) | Surveyed number of factory | |
|--------------|---------------------|--------|-----------|-------------------|--------|-----------|-----------------------------|----------------------------|------|
| | Number of Factory | | Sub-total | Number of Factory | | Sub-total | | Number (B) | % |
| | Part 1 | Part 2 | | Part 1 | Part 2 | | | | |
| F01 | 3 | | 3 | 12 | | 12 | 15 | 2 | 13.3 |
| F02 | | | | | | | | | |
| F03 | 6 | | 6 | 3 | 7 | 10 | 16 | 4 | 25.0 |
| F04 | 64 | 1 | 65 | 51 | 5 | 56 | 121 | 45 | 37.2 |
| F05 | 2 | | 2 | | | | 2 | | |
| F06 | 19 | | 19 | 9 | | 9 | 28 | 9 | 32.1 |
| F07 | 23 | 2 | 25 | 19 | 3 | 22 | 47 | 16 | 34.0 |
| F08 | | 1 | 1 | 2 | 3 | 5 | 6 | 1 | 16.7 |
| F09 | 1 | | 1 | 3 | 1 | 4 | 5 | 2 | 40.0 |
| F10 | 7 | | 7 | 6 | | 6 | 13 | 7 | 53.8 |
| F11 | 2 | | 2 | 1 | | 1 | 3 | | |
| F12 | | | | 4 | 9 | 13 | 13 | 2 | 15.4 |
| F13 | 13 | 2 | 15 | 15 | 4 | 19 | 34 | 7 | 20.6 |
| F14 | 31 | 2 | 33 | 35 | 7 | 42 | 75 | 22 | 29.3 |
| F15 | | | | 1 | | 1 | 1 | | |
| F16 | | | | 2 | | 2 | 2 | | |
| F17 | 15 | | 15 | 16 | 2 | 18 | 33 | 14 | 42.4 |
| F18 | 1 | 1 | 2 | 2 | 3 | 5 | 6 | | |
| F19 | 7 | | 7 | 5 | 8 | 13 | 20 | 3 | 15.0 |
| Total | 193 | 9 | 202 | 188 | 52 | 238 | 440 | 134 | 30.5 |

5. IWM (2): Feature of 134 factories surveyed (1)

- 67.5% (83/123 Fac.) is established after 1991.
- Average compound (121 Fac.) and building (116 Fac.) areas are 51,000m² and 12,200 m² respectively.
- Total number of employees is 34,395 persons (125 factories) and Average number of employees is 276 persons.

After 1991 = 67.5 %

23

5. IWM (3): Feature of 134 factories surveyed (2)

- Installation rates of industrial and domestic wastewater treatment facilities are 26.6% and 54.3% respectively.
- Rate of installation of storage space of dangerous substances on the ground is 60.6% (77/127 Fac.) + underground 19.6% (21/107 Fac.)

Domestic = 54.3 %

Underground = 19.6 %

24

**5. IWM (4): Feature of 134 factories surveyed (3):
Rate of Pollution Control Facilities**

| Pollution control facilities | % |
|------------------------------|-------|
| a. Boiler | 124 % |
| b. Incinerator | 23 % |
| c. Dust collector | 125 % |
| d. Air Control facilities | 135 % |
| e. Plating process | 24 % |
| f. Powder painting process | 93 % |
| g. Water painting process | 143 % |
| h. Metal coating process | 78 % |

5. IWM (5): Feature of 134 factories surveyed (4)

6. Waste Inventory (WI)

- All factories in PIM shall submit WI.
- 26.9% (35/130 Fac.) replied no need to submit its WI.
- 11.6% (11/95 Fac.) replied "need to submit its WI" do not submit WI
- In total 35.4% (46/130 Fac.) do not submit WI.

No Obligation = 26.9 %

No Submit WI = 35.4 %

26

5. IWM (6): Feature of 134 factories surveyed (5)

- 7. Separate Discharge of Non-Production and Production Process Waste => Yes: 87.7% (114/130 Fac.), No: 12.3% (16/130 Fac.)**

Separate = 87.7 %

- 8. Separate Discharge of Non-HIW and HIW => Yes (100% + Partly): 91.3% (116/127 Fac.), No: 8.7% (11/127 Fac.)**

Separate = 91.3 %

27

5. IWM (7): Feature of 134 factories surveyed (6)

| Base : population = 11 | % |
|----------------------------------------------------------------------------------|--------|
| 1. We don't know the difference between Non-HIW and HIW. | 0.0 % |
| 2. The volume of waste is too small to separate. | 81.8 % |
| 3. The production process makes it difficult to separate Non-HIW and HIW. | 27.3 % |
| 4. The collection service does not require to separate Non-HIW and HIW. | 18.2 % |
| 5. It is troublesome and waste of time to separate Non-HIW and HIW. | 9.1 % |
| 6. It seems unnecessary to separate Non-HIW and HIW. | 0.0 % |
| 7. It is difficult to separate Non-HIW and HIW. | 0.0 % |
| 8. Even though Non-HIW and HIW are separated, there are no ways to utilize them. | 9.1 % |

5. IWM (8): Feature of 134 factories surveyed (7)

- 9. Health service in the factory => Yes: 40.6% (52/128 Fac.) <= Yes: 37.1% (124/334 Fac.) by Medical institution survey**
- 10. Generation of radioactive wastes => No: 100% (126 Fac.) <= No: 100% (8 Fac.) by radioactive waste survey**

Number of Survey = 37.1 %

29

5. IWM (9): Future Management of IW (1)

- 1. Generation of IW => No change: 28.0% (35/125 Fac.), Increase: 36.8% (46/125 Fac.), Decrease: 22.4% (28/125 Fac.).**

30

5. IWM (10): Future Management of IW (2)

- 2. 3Rs plan for IW => No: 67.2% (84/125 Fac.), Yes: 32.8% (41/125 Fac.)**

No = 67.2 %

- 3. Improvement plan for IWM in the factory => No: 78.9% (97/123 Fac.), Yes: 21.1% (26/123 Fac.)**

No = 78.9 %

31

5. IWM (11): Waste Exchange (WE) (1)

- 1. Knowledge of WE => Yes: 70.9% (90/127 Fac.), No: 29.1% (37/127 Fac.)**
- 2. Interest of WE => Yes (Very much + Eventually): 71.5% (90/126 Fac.), No: 28.5% (36/126 Fac.)**

Yes = 70.9 %

Yes = 71.5 %

32

5. IWM (12): Waste Exchange (WE) (2)

3. **Involvement of WE at present => Yes: 35.7% (45/126 Fac.), No: 57.2% (72/126 Fac.), No answer: 7.1% (9/126 Fac.)**

33

5. IWM (13): Financial Matters and Evaluation of Current IW System (1)

- Payment to transportation company => 188,400 R\$/year (Average of 44 Fac.)**
- Expenditure of on-site (in the factory) IWM => 138,500 R\$/year (Average of 17 Fac.)**

34

5. IWM (14): Financial Matters and Evaluation of Current IW System (2)

3. **Current IW System => No Problems: 29.3% (36/123 Fac.), Some Problems: 70.7% (87/123 Fac.)**

35

5. IWM (15): Financial Matters and Evaluation of Current IW System (2)

| Issue | Percentage |
|--------------------------------------------------------------------------------------------------------|------------|
| 1. We do not know the difference between hazardous and non-hazardous industrial waste. | 0.0% |
| 2. We do not segregate hazardous from non-hazardous industrial waste. | 5.7% |
| 3. There are no or only limited services available for industrial waste treatment. | 33.3% |
| 4. High cost of industrial waste treatment. | 55.2% |
| 5. Reuse and recycling of industrial waste is non-existent or limited. | 41.4% |
| 6. There are no reliable and licensed companies offering treatment and/or disposed service, in Manaus. | 31.0% |

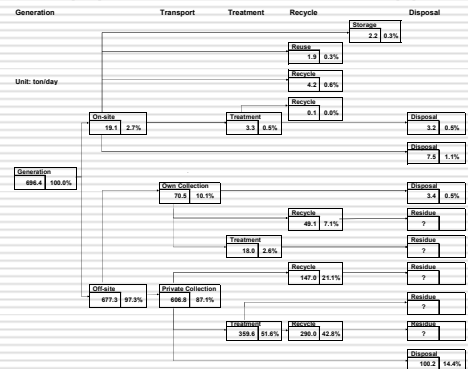

36

5. IWM (16): Industrial Waste Generation Amount in PIM (440 Factories)

- Health and construction waste and wastewater are excluded.
- IW generation amount: **696.4 ton/day**
- 1. **Non-HIW: 557.0 ton/day**
- 1.1 Non-process: 192.4 ton/day
- 1.2 Process: 364.6 ton/day
- 2. **HIW: 139.4 ton/day**
- 2.1 Non-process: 21.0 ton/day
- 2.2 Process: 118.4 ton/day

37

5. IWM (17): All Industrial Waste Flow in PIM (1)

5. IWM (18): All Industrial Waste Flow in PIM (2)

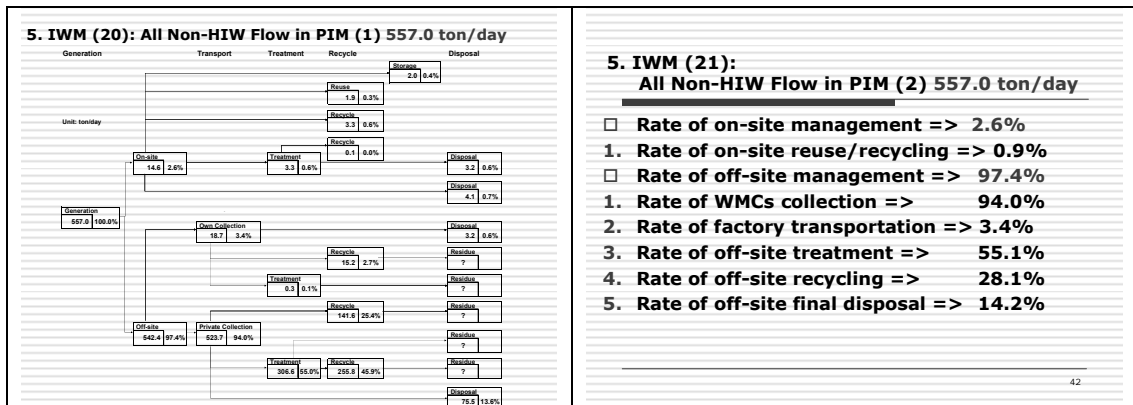

- Rate of on-site management waste is very low. => 2.7% (19.1ton/day of 696.4)
- Rate of on-site reuse/recycling is low. => 0.9% (6.1ton/day of 696.4)
- Most of IW are collected by WMCs. => 87.1% (606.8ton/day of 696.4)
- 10.1% (70.5ton/day of 696.4) of IW transported by factories by themselves.
- Only 14.9% (103.6ton/day of 696.4) of IW are disposed of at landfill.
- Majority of IW go to Treatment (54.2%: 377.6ton/day), followed by Recycle (28.2%: 196.1ton/day).

39

5. IWM (19): All Industrial Waste Flow in PIM (3)

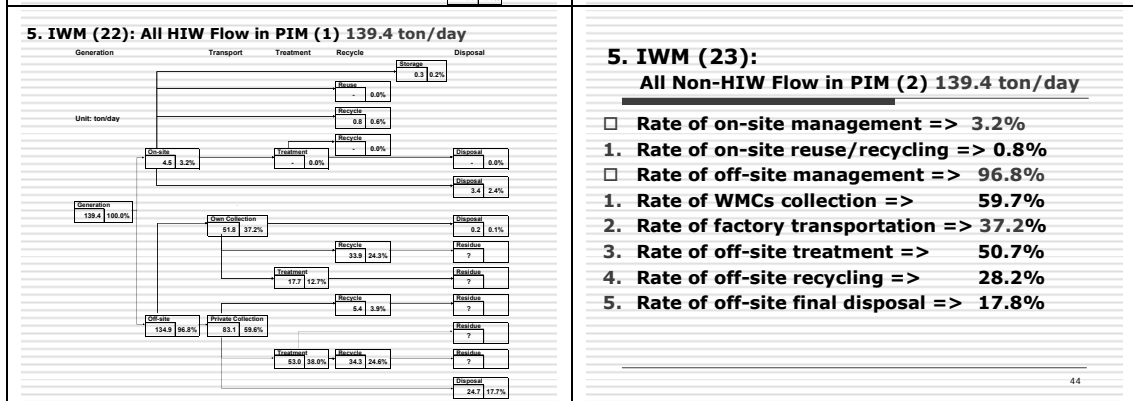

- Residues amount from Treatment & Recycle (573.7ton/day in total) is not informed by factories.
- It might be disposed of at landfills.
- It will be checked by WMCs survey results.

40

**5. IWM (21):
All Non-HIW Flow in PIM (2) 557.0 ton/day**

- Rate of on-site management => 2.6%
- 1. Rate of on-site reuse/recycling => 0.9%
- Rate of off-site management => 97.4%
- 1. Rate of WMCs collection => 94.0%
- 2. Rate of factory transportation => 3.4%
- 3. Rate of off-site treatment => 55.1%
- 4. Rate of off-site recycling => 28.1%
- 5. Rate of off-site final disposal => 14.2%

**5. IWM (23):
All Non-HIW Flow in PIM (2) 139.4 ton/day**

- Rate of on-site management => 3.2%
- 1. Rate of on-site reuse/recycling => 0.8%
- Rate of off-site management => 96.8%
- 1. Rate of WMCs collection => 59.7%
- 2. Rate of factory transportation => 37.2%
- 3. Rate of off-site treatment => 50.7%
- 4. Rate of off-site recycling => 28.2%
- 5. Rate of off-site final disposal => 17.8%

Thank you very much for
your attention

Presentation 2 for 1st Workshop (11 Sept., 2009): Offsite Waste Management

Session 2

Current Conditions and Issues on Off-site Industrial Waste Management(IWM)

September 11th, 2009
Antonio Ademir Stroski
Instituto de Proteção Ambiental do Amazonas (IPAAM)
For the Study for the Development of an Integrated Solution Related to Industrial Waste Management in the Industrial Pole of Manaus

1

Agenda

1. Waste management company survey
 - 1.1 Content of the survey
 - 1.2 Results of the survey
 - 1.3 Type of WM business and amount of wastes
2. Issues of off-site industrial waste management
 - 2.1 Summary of issues

2

1.2 Results of the Survey Common Question(3)

- 19% (16/84 Res.) have air emission control equipments.
- However only 53% (8/15 Res.) conduct monitoring of the exhaust gas from of air emission control equipments.
- Only 3%(2/80 Res.) install odor control devices.
- 30% (25/80 Res.) have spill prevention control measures.
- 18% (15/85 Res.) answered that they already have ISO 9000 series certificates.
- 12% (10/85 Res.) answered that they already have ISO 14000 series certificates.

11

1.2 Results of the Survey Common Question(4)

Air emission control equipment

Total: 83

Emission monitoring

Total: 15

ISO 9000 Series

Total: 85

ISO 14000 Series

Total: 85

12

1.2 Results of the Survey Common Question(5)

- 89% (72/85 Res.) have employee training in terms of waste management. (safety management, handling of wastes etc)
- 44% (36/82 Res.) always analyze characteristics of in-coming wastes.
- 19% (8/43 Res.) have laboratory in the company.

13

1.3 Type of WM Business and amount of wastes(1)

WMS classification informed by 85 WMCs in the survey

| Company with some kind of license | Collection & Transportation | Treatment | Final Disposal | Reuse/Recycle/Recover | Total |
|-----------------------------------|-----------------------------|-----------|----------------|-----------------------|------------|
| Company with license | 38 | 8 | 9 | 38 | 93 |
| Company without license | 7 | 0 | 0 | 18 | 25 |
| Total | 45 | 8 | 9 | 56 | 118 |

ton/day

| | With some kind of license | Without license | Total |
|-----------------------------|------------------------------|-----------------|-----------------------------------|
| Collection & Transportation | HW 96, NH 3,230, Total 3,326 | 0, 6, Total 6 | 96, 3,236, Total 3,332 |
| Treatment | HW 42, NH 266, Total 308 | 0, 0, Total 0 | 42, 266, Total 308 |
| Final Disposal | HW 8, NH 2,250, Total 2,258 | 0, 0, Total 0 | 8, 2,250, Total 2,258 |
| Reuse/Recycle/Recover | HW 11, NH 138, Total 149 | 0, 2, Total 2 | 11, 138, Total 149; 0, 2, Total 2 |

Amount of wastes dealt with WMCs according to classification informed by 85 WMCs in the survey

14

1.3 Type of WM Business and amount of wastes(2)

WM business classification checked by environmental license *1

| WM Classification checked by EL | Collection & Transportation | Treatment | Final Disposal | Reuse/Recycle/Recover | Unclear | Total |
|---------------------------------|-----------------------------|-----------|----------------|-----------------------|---------|-------|
| | 75 | 7 | 0 | 28 | 10 | 68 |

Amount of wastes above classification

| | With environmental license | Without environmental license = unclear | Total |
|-----------------------------|------------------------------|-----------------------------------------|--------------------------------------------|
| Collection & Transportation | HW 51, NH 2,886, Total 2,937 | 43, 350, Total 393 | 51, 2,886, Total 2,937; 43, 350, Total 393 |
| Treatment | HW 42, NH 266, Total 308 | 0, 0, Total 0 | 42, 266, Total 308 |
| Final Disposal | HW 8, NH 2,250, Total 2,258 | 0, 0, Total 0 | 8, 2,250, Total 2,258 |
| Reuse/Recycle/Recover | HW 11, NH 138, Total 149 | 0, 3, Total 3 | 11, 138, Total 149; 0, 3, Total 3 |

*1: Environmental licenses from original IPAAM list(35) & new WMCs(27) were checked by the study team
*2: Unclear means that they are not able to classify to the four categories by their environmental licenses(EL).
*3: This classification means following companies.
-WMCs without EL and unclear
-WMCs report that they have some kind of ELs, however they actually don't have correct ELs in accordance with their report of WM business

15

1.3 Type of WM Business and amount of wastes(3)

- WMC database should be based on WM business classification checked by environmental license.
- Following analysis is also based on the waste flow of WM business classification checked by environmental license.
- WMCs include two large collection & transportation companies of municipal wastes, therefore amount wastes in the table contain municipal wastes.
- Total collected waste is 3,332 ton/day. However 395(12%) ton/day is collected by WMCs without EL and unclear.
- Especially 45 ton/day of hazardous waste which is 47% of total hazardous wastes is collected by WMCs without EL and unclear.
- Finally all wastes, which is 2,258 ton/day, is disposed by WMCs without EL and unclear.

16

1.3 Type of WM Business and amount of wastes(4)

- There is no final disposal landfill of industrial wastes and municipal wastes that has environmental license.
- A large part of collected hazardous wastes is unaccounted for.
- Regarding recyclable wastes like paper, plastics and metals, large three collection & transportation companies collect large part of the wastes
- Type of wastes recycled in the surveyed area is limited.
e.g. foundry sand, aluminum casting wastes, waste lubricant oil, waste paint sludge, waste paper, ink cartridge, wooden pallet, waste plastics etc

17

2. Issues of off-site industrial waste management

18

2.1 Summary of issues (1)

- 1) From the WMCs Survey
 - a. Current environmental license registration(ELR)
 - ✘ It is difficult to identify all licensed WMCs from the ELR system.
 - ✘ Classification of waste management activities in the license is dispersed in several codes.(See next slide)
 - ✘ There are some WMCs which report that they have ELs, but actually they don't have correct ELs in accordance with their reported WM business.
 - ✘ Current environmental license registration system needs several matters to be improved.

19

2.1 Summary of issues (2)

| Code | Activity | Code | Activity |
|------|----------------------------------------------|------|----------------------------------------------|
| 22** | 2217 Incineration | 26** | 2601 Road transportation of hazardous cargo |
| | 2218 Co-processing of wastes | | 2615 Transportation of solid IW |
| | 2214 Package manufacturing | 30** | 3001 Treatment of solid IW without chemicals |
| 24** | 2407 Collection & treatment of IW | | 3002 Treatment of liquid IW |
| | 2410 Collection & transportation of inert SW | | 3003 Treatment solid IW using chemicals |
| | 2411 Collection & commercialization of SW | | 3004 Treatment of pallet |
| | 2413 Distribution & supply of water | | 3005 Recycle of waste paper & cardboard |

SW:Solid waste, IW:Industrial waste, HIW; Hazardous industrial waste

20

2.1 Summary of issues (3)

- b. Type of WM Business and amount of wastes
 - ✘ Approximately 12% of non-hazardous wastes and 47 % of hazardous wastes is collected by WMCs without EL and unclear.
 - ✘ Finally all wastes is disposed by WMCs without EL and unclear.
 - ✘ There is no final disposal landfill of industrial wastes and municipal wastes that has environmental license.
 - ✘ Type of wastes recycled in the surveyed area is limited.

21

2.1 Summary of issues (4)

- c. Legal enforcement and other environmental matters
 - ✘ 64% (51/80 Res.) answered that inspection and monitoring system of industrial waste is insufficient
 - ✘ All WMCs do not have manifest for tracking of wastes. 35% (29/84 Res.) introduced the manifest system.
 - ✘ 87% (72/83 Res.) answered that dumping of wastes without license is a big problem.
 - ✘ 89% (74/83 Res.) answered that environmental consciousness of waste management in the society is low.

22

2.1 Summary of issues (5)

- d. Business environment
 - ✘ 91% (67/74 Res.) answered that information system of wastes of generators is necessary.
 - ✘ 92% (68/74 Res.) answered that education and guidance of waste management is necessary.
 - ✘ 80% (59/74 Res.) answered that electricity price is high. It is a reason of high operation cost.

23

2.1 Resumo das questões (6)

- 2) From discussion with related organization, visits of WMCs and other reports
 - a. Legal enforcement and environmental matters
 - ✘ Manifest is not obligation prescribed law and regulation
 - ✘ Number of staff or engineer that have enough knowledge and experience of waste management is limited.

24

2.1 Summary of issues (7)

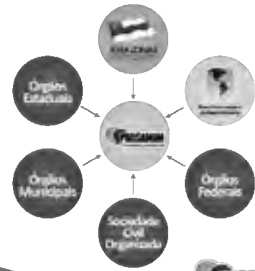

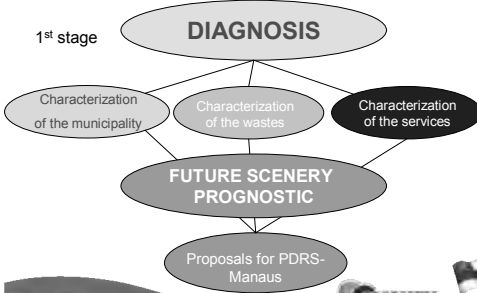

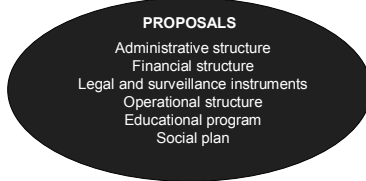

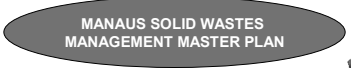

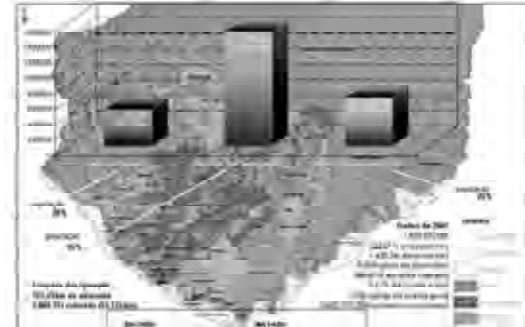

- b. Equipment and technology
 - ✘ Companies with appropriate equipment and technology is limited
 - e.g. There is no final disposal site of industrial wastes and municipal wastes that have environmental license.
There is almost no final recycling companies of ferrous and non-ferrous metals except aluminum wastes.
- c. Flow of wastes
 - ✘ Flow of hazardous wastes regarding treatment and final disposal is not clear.
In case, segregation between non-hazardous wastes and hazardous waste is sufficient, a part of hazardous wastes is disposed in the municipal waste disposal landfill.

25

Thank you very much for your attention!

26

Which should also comprehend the Solid Health Wastes, but not as a useless thing. In that context, the reduction, reuse and recycling are imposed as rational alternatives for a management capable of contribute to our best life quality. It is necessary the industries of PIM are consolidated and acknowledged as a solid wastes management model in national level, based on transparent and environmentally balanced activities which may overcome the standards of the sector and may make part of the integral development, specially in the region. It is necessary the local state and municipal governments, SUFRAMA and the industries may guarantee, in the institutional and economic sectors, the planning, organization and the maximization of the results of the actions in the extent of the solid wastes in general and the health wastes specifically, aiming for the improvement of the quality and efficiency in providing the population with the services in general. |

2.1.3 Outcomes

Question and Answer Session for 1st Workshop: September 11, 2009

Questions:

1. Professor, presentation focused mainly on the health wastes, even showing very efficient ideas comparing to the second one. How do you think the treatment of industrial wastes will be in PIM, the State and the Municipality, once those wastes many times end up becoming domestic waste?
2. What should be done to solve the problem of lack of control and on-site destination?
3. What about the education and the accomplishment of the selective collection? How could the current situation be changed? Especially because it was clearly shown to be worse for the construction wastes?
4. Your presentation shows evidence of the lack of expert and reliable companies to carry out the treatment/recycling of wastes. So, how can that be solved? What is the forecast for that?
5. Which Non-HIW surveyed can be used by the cooperative enterprises (or others) for the production of new products?
6. **For Stroski (IPAAM).** Why is it so difficult to get the list of the approved companies in IPAAM?
7. **For Stroski (IPAAM).** How are the final destination companies monitored?
8. It has been noticed the population lacks further clarifications and availability of means so the collection of the domestic wastes may be correctly carried out and consequently educate them for a future selective collection, otherwise we will have to do just as we did with Igarapé do 40 (quarenta), where the waterway is dumped with waste, so a governmental plan to educate, instruct or provide means so the population may initiate such activity, thus avoiding decreasing the possibility the calamities of the rain seasons, as well as generating income for the poorest families, besides reducing the expenses of the municipality on domestic waste collection. Are their plans in that sense? If so, when would they be brought into practice?
9. As for the initiatives towards environmental education actions and programs, the Science and Technology Secretariat of the State of Amazonas and through the Amazonas State Federal University – UFAM and UEA are willing to contribute with partnerships which may provide the foundations for such programs?
10. The final off-site disposal of hazardous industrial wastes (landfill) is, according to an operation adjustment agreement between the City Hall and the Public Ministry, forbidden. So what is the legal framework like? Is the final disposal of such wastes correct or not?
11. As for the percentage of pollution control plants, characteristics of the 134 (a hundred thirty four) surveyed factories, is it highly important to have a chemist in the facilities as demanded by Law n. 2,800, from 06/18/1956, as the technician in charge of the area in the company?

12. In case I segregate wastes in my house, how will the collection be done by the municipality? Once today, a small part of the population does such segregation, but during the collection the wastes end up being mixed due to the lack of a more adequate structure to facilitate the segregation of the wastes in the landfill.

13. What were the criteria for the selection of the local consultants to survey the initial data of the study

14. It is known the health wastes should undergo a previous treatment before their final disposal in order to avoid they get in touch with vectors and possible human contact. In that sense, is the final disposal in a specific gutter in the landfill considered as legal?

15. Although your presentation aims for presenting information it also emphasizes the lack of a better monitoring of the wastes collection and destination companies by IPAAM, how could that be solved in short or medium-term?

16. What is wastes exchange?

17. Your presentation was based on statements, but without mentioning any actions, so it left doubts and/or lacked clarifications, which I mention below:

In the general extent there is a clear demonstration of the lack of habit for the destination/routine/transport, once the manifest is not mandatory, although it should be, so what to do? How to do it? And how long would the companies have to comply with it?

Suggestions:

- Treatment / final destination of hazardous wastes – Juvino S.R. Júnior
- Disposal / destination of hazardous wastes, such as glasses, glass and plastics in general – Juvino S.R. Júnior
- Transportation of hazardous wastes
- The participation of the Local Accounting Council would be really important to deal with the issues concerning the Environmental Accounting and the Social Balance.

Answers to the Questions for 1st Workshop: September 11, 2009

Gracilene Belota: Now let's go on to the last part with questions of the audience, and I would like the count on the comprehension of the audience because some questions do not have to do with the scope of the study. But not that their opinions are not interesting, so I would like those to be here for the afternoon session because we will need your opinion so we may accomplish all we have to. So I will start reading the questions and once more I pledge the afternoon groups to provide further clarifications about them. The first question is for SUFRAMA.

1st Question: What were the criteria for the selection of the local consultants to survey the initial data of the study?

Gracilene Belota: The criteria was aleatory, we picked the companies with projects approved by SUFRAMA by sector, which is the objective of the study. I would like to make it very clear we have the involvement of all stakeholders in the environmental aspects, but the Study

aims for Manaus Industrial Pole. As the Study foreseen the categories of wastes to be studied, we provided the consultants with the list of the companies comprehended by the Study so they selected the ones they believed to be important, taking into account the size, the number of employees, and a series of other criteria adopted by them, such as the productive process, so they focused on their own methodology, SUFRAMA, IPAAM and the other organization which are assisting the consultants were not involved in that process. After selecting the companies they wrote the questionnaires, which were then delivered to the local consultants Who carried out the survey. So it is very important people join the group discussions in the afternoon so the incomplete data may be completed, because maybe the questionnaire was to blame for the us not to get all the information we expected.

2nd Question: Although your presentation aims for presenting information it also emphasizes the lack of a better monitoring of the wastes collection and destination companies by IPAAM, how could that be solved in short or medium-term?

Stroski: the monitoring system of IPAAM is not efficient and that is a fact, what we have done internally in IPAAM, which is a concern of the current administration, is that in that sense we have even ran into covenants and partnerships with Prosamim in order to be prepared to better carry out those monitoring activities, and all we long for is to stimulate the environmental legality of all companies so they may become more competitive, and for that we are already developing our computer system so we may do the annual wastes inventory, and we are also defining the wastes manifest tracking procedure as part of the licensing procedures management of the industries set in Manaus Industrial Pole. We also have the monitoring procedure which takes place every time a license is renewed, so the problems do exist but we have been trying to correct them.

3rd Question: What is wastes exchange?

Kadota: The concept brought by JICA to Manaus is you would access a website in which you would inform you have a certain amount of a certain material you want to negotiate. So anyone interested in that material would have direct and clear information about business opportunities in buying and selling wastes, and anyone interested in your waste would get in touch with you and make an offer. On the other hand, the companies which treat wastes would be there making their services available for PIM: what type of services they have and the advantages of hiring them. The companies interested in environmental services would use the website to check and get those data, what would facilitate the proposals for tenders so they could solve their waste issues and improve their management, so it would in fact work a wastes Exchange because you would be there in a single site where both supply and demand would be informed.

4th Question: It is known the health wastes should undergo a previous treatment before their final disposal in order to avoid they get in touch with vectors and possible human contact. In that sense, is the final disposal in a specific gutter in the landfill considered as legal?

Professor Ladislau: In the current scenery, the way the health wastes have been managed and taking into account the type of final disposal we still have, i.e., the municipal landfill. So the way the health waste generation sources operate and send their wastes to the final destination area requires a fast solution because there may be problems, but if we consider the scenery of the generator accepting what the legislation states, once in their health wastes management plan they already know which wastes they will generate and what they will do

to them, we would have nothing to worry about if next those wastes are sent to a landfill in fact, what the city actually has never had.

5th Question: In case I segregate wastes at home house, how will the collection be done in Manaus? And today, few people make that separation, but when the wastes are collected they ended up being mixed due to the lack of a more appropriate structure, facilitating the separation of the wastes in the landfills.

Answer by Jane Crespo: the separation should be done in the whole master plan, because in the end, one of its proposals is the selective collection, how it can be done and structured, what is necessary for that to happen indeed, however, taking advantage of our brilliant secretary being here, I think he can provide us with further information on that.

Secretary Paulo César Cavaletti: Good morning, I am the Secretary of SEMULSP, my name is Cavalleti, the intention of the study is to provide us with information about the wastes management either than pointing out who is right or wrong, after all, there is no way we can separate domestic wastes from industrial wastes in Manaus. We have the Industrial District with a geographic area and we have Manaus Industrial Pole with industries scattered all over, and the industries we have here are clean ones, we have no chimneys, and I think we pay a very high price for the industrial wastes: people say we will have kids who will be born with no heads, no brains and many other stuff, and we have to abandon the idea that we do not have a landfill, and I would like to disagree about Professor Ladislau, although I have been your student, but I emphasize that we do have a landfill, we have been working for over four years on that, we sealed the old landfill and now the disposal is done on an area covered with sheets of PAD, with lagoons, we have a complete monitoring work of the superficial and underground waters, and Manaus has today a rare and efficient final disposal process in the landfill, after all a landfill is nothing but a legal dump site, if legalization is an issue of course. And we will hold a meeting at the Environment Jurisdiction to define the actions to be taken in Manaus and the State of Amazonas by IBAMA, IPAAM and SEMMA about the extremely competent monitoring of the Public Ministry. On that note I dare to say Manaus has one of the five best wastes treatment of the largest cities of Brazil, and that is a fact about the issue of the collection and separation, the City Hall is not supposed to do that, the population should worry about that, make the generator conscious about that, no matter if its is an industry or a citizen in his house, we all generate wastes. What the municipal government is doing is making collection points available, and we started by the people living in PROSAMIM target area: all the wastes removed are sent to an association of waste pickers who used to work in the landfill. Unfortunately, as Manaus is far from the great consuming centers and the local industries have limitations to receive or use such material due to the economic conditions, the price paid for such material is always dropping, so not many people are picking wastes as their main income activity. Take the cardboard and the aluminum as examples: we have all the production chain in the State of Amazonas, we have two voluntary deliver points called PEVES, which were implemented by the Public Ministry and the Environment Jurisdiction: one of them is in the suburb of Dom Pedro and the other one in São Francisco, behind SEFAZ. So getting involved in recycling activities we should first learn how to reduce the quantity of wastes we generate by reusing them for example. And if you need any further clarifications we have a phone number for the population in SEMULSP, the number is 3214-8115. We have selective collection incentive programs, if you live in a vertical or horizontal condominium, get in touch with us and we will help you

implement those actions, we need the help of the population because the government cannot do anything alone, so we will have a better and more beautiful city.

Professor Ladislau: Mr. Secretary I do remember you from the environmental engineering course, but about the issue of the controlled landfill, I would like to say once for all that I do not agree about what you said but I respect your right to say whatever you want and I am at your entire disposal as a citizen, technician and public worker to help clarify why our landfill is or is not a landfill indeed, this is the contribution the city needs in a very respectful way, I am at your entire disposal to tell you the reasons why we do not have a landfill

6th Question: As for the percentage of pollution control plants, characteristics of the 134 surveyed factories, it is fundamentally important to hire a chemist as demanded by Law n. 2.800, from 18/06/1956, to be the technician in charge of the companies?

Answer Kadota: I agree, but the objective of the survey did not focus on the issue of the professionals, if they are duly registered in the associations or not. All the survey did was verify what kind and quantity of equipment there were, so I agree with you that the same way there must be a chemist in charge, there must also be someone in charge of the safety, an engineer, etc. All companies know their obligations and we are not questioning the companies about that, the intention of the survey was to check the environmental controls, if they had the equipment they claimed to have.

Gracilene: As a representative of Suframa I would like to make an observation: the target of the study is Manaus Industrial Pole as one of the goals the Public Ministry set for Suframa, although it is not being done for that alone.

7th Question: The off-site final disposal of hazardous industrial wastes (landfill) is, according to a behavior adjustment agreement signed between the Municipality and the Public Ministry, forbidden. So, how is the legality of this process? Is the final disposal of such wastes correct or not?

Answer Stroski: The Public Ministry is right, by the way, both IPAAM and the Public Ministry have established very useful procedures in the industrial sector and in the inland municipalities: the industrial landfill for Class 1 wastes and a constructive model of the Brazilian rules which are more restrictive for its construction, operation and monitoring. So the destination of hazardous wastes towards the municipal landfill is in full agreement with the intervention or prohibition of the Public. There is also an initiative of the municipality trying to restrict much more, so it is difficult to monitor the Class 1 wastes and keep the its complete control when entering the landfill. So the Public Ministry is right in not allowing the disposal if there is not a properly built landfill, as well as licensed by IPAAM.

8th Question: As for the initiatives of environmental education actions and programs, the Amazonas State Science and Technology Secretariat through the Amazonas State University, are willing to contribute to the partnerships intended for those programs.

Answer Jane Crespo: Such contribution is really welcome. Prosamim is a program formed by partners, so the more partners we have the best. And we also work with some people from

several sorts of know-how and the higher their knowledge the best for the program to be better consolidated. UEA is one of our partners, there are many master and doctor degree students writing their essays with us and we provide them with all information needed, so we are at the entire disposal of the whole academia, not only UEA, we also have UFAM, INPA and private universities. Prosamim is promoting Water Contamination Control Plan for Igarapé do 40, which is today the drainage system of several companies from the Industrial District. The company which won the tender is starting to develop the diagnosis work. Igarapé do 40 is our main intervention axle, so this Water Contamination Control Plan for Igarapé do 40 immediately involves the major objective. The peculiarity is the industrial contamination, so this one of the responsibilities and the major interface of Prosamim towards JICA's study.

Dr Ronaldo. We have been involved in those discussions from the very beginning within our entities, in CIEAM and the Chamber for over ten years discussing exactly a solution for Manaus Industrial Pole, and once none of our chairmen are here I would like to emphasize that is not because they do not care: Mr. Antonio Silva is abroad, Mr. Mauricio is injured and the people from the chamber are travelling, but we are here, Mr. Kadota is the representative all those entities. I would like to comment on the issue raised by Mr. Stroski that we as class entities and many of the companies in the audience are our members, we have been from the very beginning been looking forward to a solution for the problem, which is a problem of the city, the Industrial District and a problem which we as citizens long for solving. So it is important the companies may answer in a very clear way, otherwise the solutions will not be satisfactory either, that must be stated in a very transparent way and we assure we only got into such issue because we know that will be dealt institutionally.

Gracilene: Ronaldo, you do not have to worry about that because we know how important the entities are, the Industrial Pole has a huge environmental responsibility, because of the technological issue we have to be ahead of the future, so we must optimize these issues. When that demand came from the industries to Suframa, we embraced it immediately, although monitoring may not be our main activity we have the obligation to care for this pole even in order to preserve and have some coherence with our speech that the state of Amazonas is 92% preserved, in that sense this study will be one more tool without any contestation for the preservation of the State of Amazonas due to the establishment of Manaus Industrial Pole and its industries, which although being clean, need to know about the technologies, train, give a proper destination to their industrial wastes. So I can assure you by the end of this study that will be made available to all organizations working in the study and which hold the competence to be carrying out activities in such sector.

Group 1, On-Site Management, Discussion Summary for 1st Workshop: 11 Sept., 2009

GROUP 1 – ON-SITE MANAGEMENT: CURRENT CONDITIONS AND ISSUES

- Classification of health wastes: the used legislation is not up-to-date;
- ABNT 12.808 was enforced only for 03 months (it does not fulfill the national legislation), the study team followed a regulation which was not up-to-date;

- Currently the resolution N. 358/2005 of CONAMA, and Resolution 306/2004 of ANVISA, which deal with OFF-SITE and ON-SITE health wastes, respectively (available in the respective websites);
- Clarifications about the concept of wastes exchange in the focus to be developed for the study;
- Information on the difficulties related to the destination of cardboard scraps due to the respective excess for the local market;
- Request of information about the use of cardboard scraps in brick factories ovens;
- The brick factories have an adequate infrastructure to burn cardboard, as for the ash and the smoke, it is still being studied;
- Clarification about the obligation to fulfill the issues contained in the forms sent to the companies;
- There is no legal obligation, nevertheless, it was highlighted the social obligation as for the fulfillment of the issues;
- Some inputs are not recyclable, such as waxed paper, reason why they go to the municipal landfill;
- Statement of the representative of the Environment Ministry about the need, after the final remarks of the study, of pointing out the several extents of the government for the necessity to incentive/subsidize projects which aim for investments in recycling companies, taking into account the high cost of such activity;
- It was also added the economic unfeasibility in the recycling of glass, unless it is subsidized;
- So the study may translate the actual scenery, it is necessary the surveyed companies may make the requested information available;
- Such observation was raised due to the difficulties in obtaining data about the quantity of wastes generated by;
- Foundry companies recycle the waste of the burned sand and reuse in the process;
- The segregation of the oil and the soot after the process with the reuse of the oil;
- Suggestion for the generation company to reuse the wastes, just like the foundry company;
- The use of oil-water separator decreases the emission of wastes, once the oil is reused;
- Energetic reuse by means of burning wastes, according to prior studies, is not environmentally feasible, as informed by the representative of the Environment Ministry;
- Hazardous wastes – besides the small surveyed amount, it will also be taken into account for the study of JICA;

- The Environment Ministry developed hazardous wastes studies for 03 States based on the State inventory of industrial wastes;
- Questions if there are consulting companies in Manaus to provide guidelines on wastes treatment;
- The companies should use their own personnel to look for improvements in their environmental performance. They should think not only of the efficiency increase of the production processes, but also of the environmental quality improvement;
- The companies may check with the class entities (FIEAM, CIEAM, CCINB) in their environment coordination to exchange information and benchmarking.

Group 2, Off-site Management, Discussion Summary for 1st Workshop, Sept. 11, 2009

Group 2 - Off-site Management: Current Conditions and Issues

General Topics:

- Incineration should be the last stage of the wastes.
- The State Treasury Department should attend to these discussions.
- Almost 50% of the recycling cost is due to the expenses on electricity, which is why many companies have illegal electrical wiring.
- It is very hard to implement a multinational company. Rechargeable batteries are still a huge problem and we should create rules and conditions so their recycling could be feasible.
- There is not much about wastes treatment; the whole cycle has to be developed. The example of Italy was mentioned, where the generator is responsible for the wastes and the companies get together by means of consortiums to recycle the wastes.
- There is much information available in the internet about loans and investments for small businessmen. The strengthening of conglomerates can be seen in the website of APEX, such as the case of the Brazilian Association of Incentives.

Local Market:

- Drop in cardboard price, about R\$ 30 per ton;
- Banks, governments and industries should be responsible for the recycling cost, which cannot be avoided to happen. In Manaus we can see that willingness, IBAM should not only help the city hall, but also the companies and gather the responsible parties with feasible proposals and suggestions.
- In Manaus we have experienced the bankruptcy and joint-venture of waste management companies, thus causing insecurity in the generators which seek for reliable companies. The suggestion is IPAAM should gather management companies, environmental organizations and people in general to form partnerships, exchange information, ideas and suggestions.
- IPAAM should be a better representative of the State of Amazonas in the issues of the Brazilian Foundry Committee. That is a chance the state has to show what it has been doing, once the MFZ model and IPAAM are very well in terms of legislation, and that should be stated in national extent.
- Just like there are departments in SUFRAMA for the incentives, there should be incentives for management companies, because the bureaucracy ends up disheartening the opening of new companies.
- It is necessary to seek for new companies which may treat the wastes generated in PIM.
- The PIM does not have a large generation of wastes comparing to other Industrial Poles.
- Today, five IPAAM licenses are needed so a company may operate. It should be only one.
- Lack of professionals and companies with the necessary skills to carry out the correct destination of the wastes.

- Companies of PIM have generated wastes which are not being treated and are disposed in the municipal landfill. It is necessary to dispose the wastes in a correct way and have a stricter monitoring of IPAAM.
- The system used today does not fulfill the needs and IPAAM was questioned on IPAAM if as an institute it could solve such issue. New companies have been opened and it is essential they should be licensed and monitored by IPAAM, because that would have the reliability of an environmental organization. The prices charged by the waste management companies are high so an adequate final destination may be accomplished.
- The companies have no one to complain about their problems and needs related to the environment.
- IPAAM started demanding a manifest from the companies informing the destination of their wastes, but there is no defined model, Resolution 313 of CONAMA should be followed. There is a lack of follow up by IPAAM from the generation to the treatment of the wastes. There are companies which have the license of IPAAM but have no conditions to be in operation.
- There is no traceable manifest.
- It is important to create a wastes exchange.
- The regulation, infrastructure, incentives and the transport should be improved.

Final destination /incineration:

- The costs are very high, sometimes even impossible. People want to make a profit out of the wastes, but they hold no technical nor environmental knowledge. Either well-structured reliable companies are hired (high costs) or governmental support is needed (Public-Private Partnership), where reliable companies would keep the operations running. The public service still has too many bad habits, we should seek for something more efficient in order to fulfill our needs.

Construction wastes:

- There was a huge growth of the construction companies and few wastes are being recycled.
- It is necessary to restart working the awareness of the people and companies which receive and recycle those wastes to put them back to the market, once they are a great business opportunity for management companies;
- It is necessary a further professional qualification, there are way too many amateurs in that area, we must bring highly expert companies.
- If the study shows there is a higher demand for the construction waste management companies, the companies will demand new investments.
- Recycling Center:
 - Objective: Market monitoring by means of notices informing on legislations and updating, working as a class entity. It should provide constant support and have a website as a means of communication among the management companies. The objective of the center would be to protect the recyclers, it would be an independent organization, and FIESP, which defends the interest of the industries in the State of São Paulo was mentioned as an example.
 - Creation of a group with the recycling companies;
 - Define how a service provider could join that group and how it will be managed.
 - Verify what the governmental participation will be, mainly as for the taxes and energy costs.
 - Count on the support of IBAM, CONAMA, SUFRAMA, IPAAM and experts.
- Monitoring and database:
 - The monitoring should still be improved, aiming for stimulating the licensing of the companies.
 - The data base to be shared between JICA and SUFRAMA will help with the surveillance and monitoring.
 - The stability of the market happens through information; it is a very dynamic market.

- We should construct a data base in which information may be constantly input.
- PROSAMIM and IPAAM joint-venture:
- Research vehicle.
- Environmental Education:
- Every productive activity generates wastes, for that we need to develop an environmental education, such as campaigns.
- The environmental actions should start at home, such as the awareness and the segregation of the domestic waste, education. The domestic recyclables may be mixed with the industrial ones, for the recycling companies do not accept materials in small quantities.
- The waste picker may change his paradigm and become an environmental agent, provided he undergoes some training and education for such.

Group 3, IWM Improvement Policies, Discussion Summary for 1st Workshop, Sept. 11, 2009

Group 3: Industrial Wastes Management Improvement Policies

Debate topics suggestions:

- Creation of the Wastes Inventory Data Base by Suframa
- Joint-work with IPAAM
- Resources necessary for the implementation of the Data Base
- Need of improvement in the operation licenses issuance system for the waste management companies
- Advantages of the Data Base for the factories of PIM
- Economic support for the waste management companies
- Partnerships with other environmental entities
- Suggestions for the Data Base

Advantages of the Data Base:

- Demand for information concerning the waste management requested by the Federal Government to the Municipal Government (SEMSA) – health waste, water and soil quality (WATS) – due to the computerization (own data base).
- The solid wastes Data Base will be under the responsibility of SUFRAMA, IPAAM and FIEAM/CIEAM/CCNB, and will focus in the industries of PIM, whose Access may be extended to several areas in the municipal, state and federal extents.
- The Data Base may be constructed by SUFRAMA, due to its better infrastructure.
- Wastes disposal from the accounting viewpoint: mensuration of the social balance (in relation to donations and/or undoing) and development of the environmental accounting (indexes: gases emission control, wastewater quality monitoring).
- Optimization of the business resources by means of reduction, reuse and recycling; decreasing of expenses on soil and water decontamination; information speed: capability of agglutinating more people towards an environmental awareness.
- Selection of the waste management companies: the Data Base should contain information to enable the service providers in the market.
- State Law n. 2826/2003 (modified by Law 3426/2009): modification of criteria for the concession of fiscal incentives related to optimization efforts of the solid wastes

management by the industries which hold ISO 9000 and 14000 Certifications (the ICMS charged by the State).

- Those incentives are exclusive for the industries which have an economic project presented to SEPLAN, and its consequent implementation.
- Suggestion of a tender for the exploration of industrial wastes management (in the sense of leveling such service provision, which holds public interest – registration updating).
- About the validity of an imposing instrument for the supply of periodically updated information, concerning the generation and management of wastes, to be input in the Data Base: possibly, the regular input of information will be demanded from the factories, for the means of maintenance of the Registration in SUFRAMA and the enjoyment of the tax incentives (to be defined); or a covenant will be signed between SUFRAMA and IPAAM in the sense of granting SUFRAMA with the monitoring power.
- There should also be some reinforcement for requesting the registration updating.
- The factories may be granted with a deadline to fulfill such demand from the implementation of the Master Plan on, in 2011.
- At first the inputs in the Data Base will depend on the information provided by monitoring organizations. Afterwards, they should come straight from the companies.
- Need to create a financial mechanism (percentage meant for R&D, for example) in order to afford for the wastes management improvements existing in PIM today.
- So, many suggestions depend on political good-will and even on modifications of the pertinent legislation.

2.2 Second Workshop

2.2.1 Program

Program for 2nd Workshop: November 27, 2009

2nd Workshop: Framework of IWM Master Plan

The second workshop invites the study steering committee and technical support committee members to meet with other government institutions, waste dischargers, waste management companies, environmental NGOs, local consultants and others to discuss and gather opinions on the framework for the Master Plan based on results from the first stage of the project, discussion between the JICA Study Team and Brazilian counterparts, as well as feedback from participants in the first workshop.
