

A.3 Hazardous waste from households in UB city and e-waste

A.4 Survey on WEEE

A.4.1 Outline of the Survey

a. Background

WEEE is the abbreviation of Waste Electrical and Electronic Equipment (sometimes referred as electronic waste, e-waste and e-scrap) and the term describes loosely discarded, surplus, obsolete and broken electrical or electronic devices. The processing of WEEEs in developing countries causes serious health and pollution problems as these contain some heavy metals and contaminants such as lead, cadmium, beryllium and brominated flame retardants.

Even in developed countries recycling and disposal of WEEE involves significant risk to workers and communities and great care must be taken to avoid unsafe exposure in recycling operations and leaching of material such as heavy metals from landfills and incinerator ashes.

Under these circumstances, the JET investigated the current conditions of WEEEs being recycled and disposed in UBC from Jan to Feb 2010 in order for the MUB to develop its policy for WEEE.

The report of the survey conducted for the purpose is compiled as below.

b. Objectives

The main objectives of this survey are (1) to understand the current way of discharge, recycle and disposal of WEEEs in UBC and (2) to identify the amount and the flow of WEEEs.

c. Target WEEEs and the Scope of the Survey

Although 5 types of EEEs (*TV set, refrigerator, washing machine, PC and mobile phone*) were initially selected as target EEEs, the mobile phone was deselected through consultation with EPWMD staffs since its imported quantities had not been clear making the waste flow impossible to identify.

The core approaches of this survey are (1) to consider EEEs that have finished their lifetime period as “WEEE”, (2) to consider the imported amounts of the EEEs as total amounts of the WEEEs and (3) to calculate the amounts of WEEEs treated at each stage of waste flow based on the total amounts of the WEEEs.

Therefore, the term “WEEE”, for this survey, does not include any other e-wastes (such as discharged non-functional spare parts) resulted from maintenances of EEEs, lifetime of which have not been completed.

d. Applied Methodology

d.1 Data Collection

In order to collect data, the JET conducted qualitative and quantitative surveys in cooperation with the EPWMD. The outline of each survey is as follows:

d.1.1 Qualitative Survey (Interviews)

The purpose of this survey was to identify the ways, in which how target WEEEs are collected, recycled and disposed in UBC, and the stages of the WEEE flow. The JET interviewed 5 business entities and 15 individuals who participate in WEEE recycling. The types of the interviewees were repair shops, refrigerator recycling, individual repairmen, waste pickers, collection workers and metal purchasers.

d.1.2 Quantitative Survey (Questionnaires)

Following the commencement of the survey, the JET found difficulty in collecting data that had been essential for identification of the WEEE flow due to cautiousness attitudes of the respondents against the survey. Therefore, the JET consulted with the EPWMD on methods of data collection and the EPWMD was decided to distribute questionnaires through district offices on behalf of the JET. As a result, district offices were requested by the EPWMD to collect necessary data from recyclers operating in their respective districts using the questionnaires prepared by the JET.

The main purpose of the questionnaire survey was to identify recyclable and non-recyclable parts by each target WEEEs, amounts of parts recycled by the respondents, shares of recyclables in the total amount of the treated WEEEs and recycling methods for each type of target WEEEs.

d.2 Principles for Data Processing

The main principles applied to the data analysis are the following:

1. Amounts of WEEEs are calculated by weights; namely, the WEEEs are basically measured in *kg* or *ton*;
2. The total amount of each type of WEEE equals to the imported amount of the relative type of EEEs that finished duration of its lifetime cycle in 2009;
3. The duration of lifetime cycle of each target EEEs are considered as same as those in Japan since identification of the lifetime cycle for each EEE in Mongolia has been difficult due to the impossibility in verification of production dates using serial

numbers of EEEs; and

4. The amounts of WEEEs to be treated at each stage of the WEEE flow that represent the whole condition in the city are calculated from the relative shares (percents) identified during the data analysis of questionnaire survey.

A.4.2 Current Condition of WEEE Recycling System in UBC

According to the interviews, the methods of WEEE recycling in UBC are almost similar for all types of target WEEEs.

WEEE recycling system in UBC can be described as follows.

a. Recyclables and Non-recyclables

According to the interview surveys, the most common recyclables and non-recyclables of each WEEE are identified as follows:

Table A-4: The Most Common Recyclables and Non-recyclables

| | TV sets | Refrigerator | Washing machine | PC |
|-------------------------|---------------|--------------|-----------------|------------------------|
| <i>Recyclables:</i> | PCB | Compressor | Compressor | Main board items |
| | Choke coil | Iron cases | Iron cases | Some functional parts |
| | Wires | Wires | Wires | Power supply unit |
| | | | | Processor case |
| | | | | Wires |
| <i>Non-recyclables:</i> | CRT | Rubber items | Plastic items | CRT monitor |
| | Plastic cases | Glass | | Optical drives |
| | | Plastic | | Floppy drive |
| | | | | Plastics & mixed items |

The majority of the most common recyclables are metal-containing parts. Generally, metal containing parts are recycled regardless of their functionality as non-functional ones can be sold as metal after segregation. Among the non-metal or mixed small parts, any of the functional ones can be used in maintenance as spare parts; however, whether to be used depends on the needs of maintenance. Although the rest of the non-metal or mixed parts are usually disposed, main boards of PCs are kept by repair shops for further possible uses.

Some of the parts mentioned above are reflected in the following photos:

PCB (TV)

CRT with a Choke coil (TV)

Case (TV)

Compressor (Refrigerator)

Motors (Washing machine)

Power Supply Unit (=PSU; PC)

b. WEEE Recycling Processes

The majority of WEEEs generated in UBC are re-used since most of second hand EEEs purchased by recyclers are resold and repaired/resold back to residents.

Only those that cannot be repaired are dismantled and some of their parts are recycled. There are 2 main patterns of recycling: using some of functional parts as spare parts for maintenance and segregating metals from metal containing parts.

Although majority of parts used for maintenance are recycled by repair shops themselves (who dismantled the EEEs), smaller amount of them are sold to other repair shops.

All the metals (copper, iron, aluminum and alloys) segregated from WEEE parts, except iron cases of refrigerators, are exported to China. As iron cases of refrigerators are used as raw material for chimneys of ger stoves, most refrigerator cases are purchased by ger stove producers.

Segregation is conducted by all the recyclers. Although repair shops segregate some metals, they pay attention only on parts containing more metals such as choke coil of TV sets, compressors/motors or cases of refrigerators and washing machines. As for other parts discharged by repair shops, waste pickers and collection workers segregate metals. As metal purchasers offer low prices for non-segregated metals, most recyclers do segregate by themselves before selling metals to metal purchasers.

The rest have been discharged at the final disposal site and buried during landfill operations.

c. WEEE Recyclers

The WEEE recyclers in UBC are repair shops or individual repairmen, collection workers, waste pickers and metal purchasers.

c.1 Repair shops & individual repairmen

The repair shops and the repairmen play the main role in WEEE recycling since they purchase old and broken EEEs (WEEEs) from consumers, repair most of the purchased EEEs, resell them to residents and dismantle other EEEs that are impossible to repair. However, maintenance units of big electronics traders such as Nomin and MCS do not purchase second hand EEEs from consumers. Therefore, participation by these big organizations in WEEE recycling is limited to only usage of small amount of functional parts removed from broken EEEs as spare parts for their maintenance activities. Therefore, the repair shops playing the important roles are usually small and medium in size consisting of 1 to 3 persons; especially in TV and PC recycling, repair shops are usually operated by individual repairmen not by companies.

Some of bigger repair shops deal with several types of home appliances; however, the number of these shops seems to be relatively few.

A refrigerator recycler at Narantuul zakh who repairs and resells old refrigerators.

A TV repair shop located in the central UB.

c.2 Collection workers and waste pickers

The useless parts of dismantled WEEEs are discharged by repair shops to nearby temporary discharge points or directly to collection trucks if there are bell collections. Waste pickers working in the city and collection workers pick metal containing parts among the discharged items to segregate metals before transporting them to the landfill site. After the arrival to the landfill site, the remained metal-containing parts are further picked by waste pickers working at the landfill site. The residues are left at the site and buried.

c.3 Metal purchasers

All the metals segregated from WEEEs or their parts are purchased by metal purchasers operating in the city and at the final disposal sites. Purchasable metals are copper, aluminum, iron, alloy and mixed ones. All the metals purchased by metal purchasers are exported to China.

d. The WEEE Recycling Cycle and WEEE Flow

Based on the above, the whole cycle of WEEE recycling can be described as follows: (1) purchase of WEEEs, (2) Re-use of WEEEs (reselling and repairing/reselling), (3) Recycling as spare parts (both using and selling functional parts as spare parts) (4) Primary segregation (by repair shops), (5) Secondary segregation (by collection workers and waste pickers), (6) Export of metals and (7) Disposal and landfill.

Consequently, the WEEE flow chart identified for UBC is described as shown in the Figure A-2.

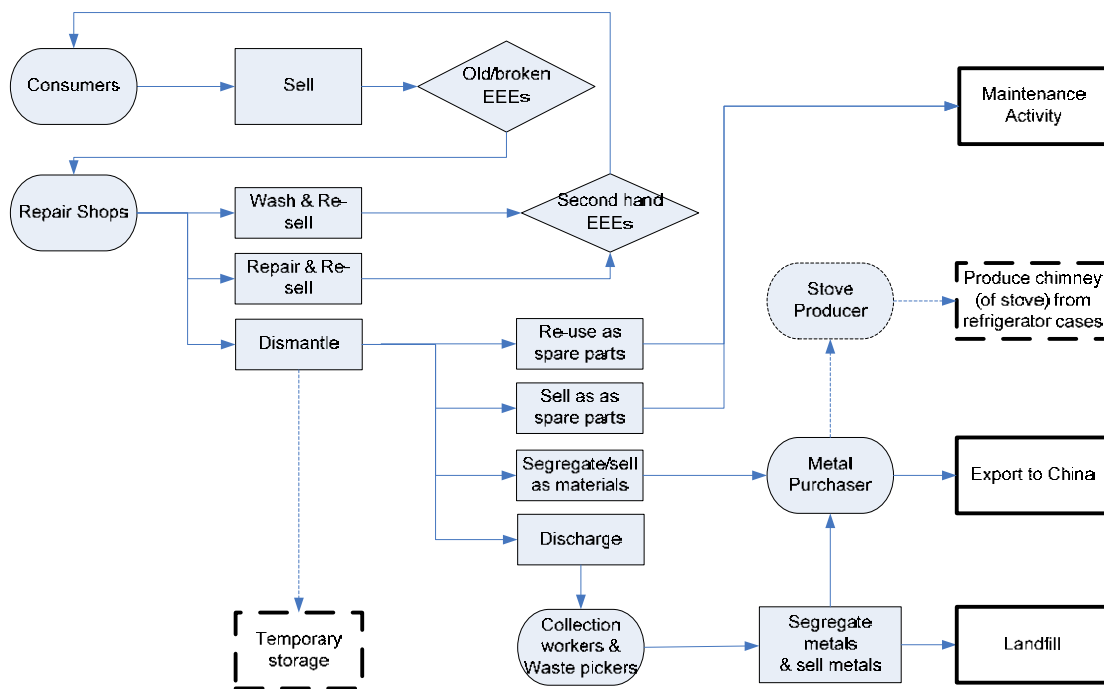

Figure A-2: The WEE Flow in UBC

A.4.3 The Annual Amount of WEEE by Types of EEEs

The annual imported amounts of the target EEEs and the durations of their lifetime cycles are essential for identification of the total amount of the WEEEs. Therefore, the relative data used for the calculation is identified through the following processes based on the principles mentioned in 1.4.2: JET applied the lifetime periods of target EEEs known in Japan to this analysis and identified the necessary years of imports. The result is presented in the table below:

Table A-5: Average Lifetime Period for Each Type of the Target EEEs

| | Items | TV set | Refrigerator | Washing machine | PC** |
|---|---|--------|--------------|-----------------|------|
| 1 | Lifetime period of EEEs (years)* | 12 | 12 | 11 | 7 |
| 2 | The year of necessary data for identification of WEEE amounts | 1997 | 1997 | 1998 | 2002 |

* Source (for EEEs except PC): Interview survey conducted by METI covering 4,700 households in 1997

** Source (for Desktop PC): Interview survey conducted by Kokusai Kogyo (Thailand) Co., Ltd in 2003

As shown in the table, the amounts of EEEs imported in 1997 for TV sets and refrigerator, 1998 for washing machine and 2002 for PC will be considered as the annual amounts of WEEEs generated in UBC for the year 2009.

Therefore, the JET surveyed two data sources for the series of imported amounts of target EEEs: the database of the General Customs Office of Mongolia (GCO) and the UN Commodity Trade Statistics Database. The data obtained from the two sources are as shown in the table below:

Table A-6: Imported Amounts of EEEs Obtained from 2 Data Sources and the Figures

| Years | Imported Amounts | | | | | | | | | | |
|-------|------------------|------------------|----------------|----------------|----------------|-------------------|-----------------|---------|----------------|----------------|----------------|
| | TV set | | | Refrigerator | | | Washing machine | | | Desktop PC | |
| | UN* | Customs Office** | Adapted Figure | UN | Customs office | Adapted Figure*** | UN | Customs | Adapted Figure | Customs office | Adapted Figure |
| 1997 | 18,467 | | 18,467 | 963 | | 4,032 | 3,899 | | | | |
| 1998 | 16,549 | | | 4,032 | | | 3,748 | | 3,748 | | |
| 1999 | 17,997 | | | 3,576 | | | 5,136 | | | | |
| 2000 | 25,173 | | | 5,460 | | | 5,799 | | | | |
| 2001 | 22,460 | 22,430 | | 4,736 | 4,736 | | 8,262 | 8,262 | | 43,892 | |
| 2002 | N.A. | 33,971 | | N.A. | 4,438 | | N.A. | 11,888 | | 60,589 | 60,589 |
| 2003 | 780,693 | 36,692 | | 323,174 | 6,100 | | 444,167 | 14,354 | | 64,631 | |
| 2004 | 49,402 | 48,862 | | 10,037 | 10,037 | | N.A. | 23,439 | | 75,558 | |
| 2005 | 41,140 | 41,074 | | 5,198 | 5,198 | | N.A. | 23,101 | | 114,009 | |
| 2006 | 43,422 | 43,419 | | 1,151 | 1,151 | | N.A. | 31,493 | | 224,695 | |
| 2007 | | | | 32,375 | 32,476 | | N.A. | 41,507 | | 89,652 | |
| 2008 | | | | N.A. | 35,182 | | N.A. | 58,250 | | 105,714 | |

Adapted as the Amounts of WEEEs

*Source: UN Commodity Trade Statistics Database, <http://comtrade.un.org/db/default.aspx> , accessed on 26 Feb 2010

**Source: Statistical Analysis Department, General Customs Office, Jan 2010

*** As the figure for 1997 indicated in UN database is seemed as odd, the imported amount in 1997 for refrigerator has been assumed as same as that in 1998.

As the data before 2001 does not exist in the database of the GCO, the relative data was not obtained from the office. However, there were not much differences between the two sets of data obtained from the sources (except those of UN database for the year 2003 shaded in the table) when comparing the figures available in both databases (those of the years of 2001

to 2008). As for the UN data for 2003, they are considered as an input mistake; and therefore, have not been considered during the comparison.

As a result, the JET had concluded that the data obtained from the UN database can be used for further analysis and adapted the figures from this source (shown in the “Adapted Figures” columns of the table) for annual amounts of WEEEs. As for the refrigerator, the data in 1997 is obviously odd in comparison to those of other years; and therefore, the JET assumed that the number of refrigerators imported in 1997 did not differ from that in 1998.

A.4.4 Calculation Factors for Amounts of WEEEs Treated at Each Stages of the WEEE Flow

The JET conducted questionnaire surveys in cooperation with the EPWMD and the district offices in order to calculate the amounts WEEEs treated by respondents at each stage of WEEE flow and identify their shares in the total amount of the treated WEEEs. As the shares have to be used as calculation factors for estimation of overall Flow of WEEEs generated in UBC, the main attention has been paid to this analysis.

The results of the analysis are compiled below.

a. Samples of Analysis

18 questionnaires were distributed to each district office by EPWMD, in addition to those distributed by the JET; the district offices collected the data from recyclers located in their districts based on the questionnaires. Since repair shops/repairmen play the main role in the WEEE recycling, the survey targeted only repair shops.

The questionnaire contained the information related to treated amounts of WEEEs by the respondents (purchased, re-used and dismantled amounts), recycled and non-recycled parts and recycling methods (See also Annex-1: Questionnaire).

The following table shows the numbers of distributed, collected and analyzed questionnaires for the survey.

Table A-7: Questionnaires

| Distributed Org. | Target areas | Number of Questionnaires | | |
|------------------|-----------------|--------------------------|----------|-------------------|
| | | Distributed | Returned | Used for Analysis |
| JET | Narantuul | 4 | 4 | 4 |
| | Khar khorin | 5 | 5 | 5 |
| | Subtotal | 9 | 9 | 9 |
| EPWMD | BZD | 18 | 18 | 11 |
| | ChD | 18 | 5 | 4 |
| | SBD | 18 | 18 | 11 |
| | BGD | 18 | 7 | 5 |

| | | | | |
|--|-----------------|------------|-----------|-----------|
| | KhUD | 18 | 13 | 10 |
| | SKhD | 18 | 15 | 8 |
| | Subtotal | 108 | 76 | 49 |
| | TOTAL | 117 | 85 | 58 |

As presented in the table, 1-4 among the total returned questionnaires were excluded from the samples due to the lacks of data necessary for the analysis.

As some respondents deal with several types of EEEs, the total size of the samples analyzed are 84 cases by the 58 respondents. The samples by each target EEEs are 27 for TV set, 16 for refrigerator, 12 for washing machine, 11 for PC and 18 for mobile phone.

b. Data Analysis

b.1 Assumptions Used for Analysis

The major assumptions used for this analysis are the following:

1. Printed circuit boards (PCB) of TV sets are considered as it consists of 6 types of items and each item occupies 1/6 in total weight of that PCB.
2. Based on the interview survey, the number of Cathode ray tubes (CRT) recycled by a respondent who indicated CRTs as “recycled” has been considered as 20% of CRTs of all the TVs dismantled by him or her. Likely, the recycle rate for plastic cases of TVs has been considered as 10%.
3. All CRT monitors of treated PCs are considered as 14 inch’s monitors that weigh around 10 kg. In addition to this, the average weight of keyboards is considered as 0.5 kg.
4. Same parts of all EEEs dismantled by same respondent are treated in same manners. For example, when a respondent replied that s/he used capacitors of TV as spare parts, all the capacitors taken from all her/his dismantled TVs are considered as re-used as spare parts.
5. The average weights of target EEEs are considered as same as those in other countries, namely, Thailand; and therefore, the figures related to weights of EEEs and their parts are taken from the results of dismantling survey conducted in Thailand by Kokusai Kogyo (Thailand) Co., Ltd in 2004. The average unit weights of EEEs and their parts are shown in the table below:

Table A-8: Average Unit Weights Used in the Analysis (Unit: kg)

| TV set | | Refrigerator | | Washing machine | | PC | |
|---------------|--------|--------------|--------|-----------------|--------|-------------------|--------|
| Parts | Weight | Parts | Weight | Parts | Weight | Parts | Weight |
| PCB | 1.65 | Compressor | 8.96 | Iron scrap | 23.12 | Iron scrap | 3.46 |
| Plastic case | 2.06 | Case | 10 | Plastics | 6.42 | Power Supply Unit | 0.80 |
| CRT glass | 10.16 | Radiator | 8.74 | Glass | 0.83 | Plastics | 0.59 |
| Copper | 0.26 | Rubber hose | 0.03 | Aluminum | 0.77 | Mother board | 1.16 |
| Electric wire | 0.51 | Plastic | 7.16 | Copper | 0.55 | Hard disk* | 0.46 |
| Other scraps | 2.81 | Glass | 0.16 | Rubber gasket | 0.51 | Optical drive* | 0.44 |

| | | | | | | | |
|--------------------|--------------|--------------------|--------------|--------------------|--------------|--------------------|--------------|
| | | Aluminum (fridge) | 1.22 | Electric wire | 0.31 | Monitor | 10.00 |
| | | Electric wire | 0.2 | Concrete | 11.92 | Keyboard | 0.50 |
| | | Rubber gasket | 0.62 | Particle board | 1.05 | | |
| | | Styrofoam | 3.28 | | | | |
| Unit weight | 17.45 | Unit weight | 40.37 | Unit weight | 45.48 | Unit weight | 17.41 |

b.2 The Results of the Analysis

Based on the assumptions mentioned in the 4.2.1, the JET calculated the amounts of WEEEs treated by the respondents at each stage of WEEE flows and the shares of these amounts in the respective totals of WEEEs (See also the Annex 2: The Data Analysis of Questionnaire Survey). The results are presented in the table below:

| # | Basic parameters | Measure unit | TV | | Refrigerator | | Washing machine | | PC | | |
|---|-----------------------------|---------------------------------|----------------|--------------------|----------------|--------------------|-----------------|--------------------|---------------|--------------------|-------|
| | | | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | |
| 1 | Average unit weight of EEEs | kg | 17.45 | | 40.37 | | 45.48 | | 17.41 | | |
| 2 | Total amount of WEEEs | unit | 181 | | 111 | | 40 | | 28 | | |
| | | kg | 3158.45 | 100.0% | 4481.07 | 100.0% | 1819.20 | 100.0% | 487.48 | 100.0% | |
| | Re-use Amount: | | | | | | | | | | |
| 3 | 1 Resell amount | unit | 40 | | 39 | | 2 | | 0 | | |
| | | kg | 698.00 | 22.1% | 1574.43 | 35.1% | 90.96 | 5.0% | 0.00 | 0.0% | |
| | 2 Repair & resell amount | unit | 81 | | 50 | | 27 | | 8 | | |
| | | kg | 1413.45 | 44.8% | 2018.50 | 45.0% | 1227.96 | 67.5% | 139.28 | 28.6% | |
| | Sub total | unit | 121 | | 89 | | 29 | | 8 | | |
| | | kg | 2111.45 | 66.9% | 3592.93 | 80.2% | 1318.92 | 72.5% | 139.28 | 28.6% | |
| | Dismantling Amount | unit | 60 | | 22 | | 11 | | 20 | | |
| | | kg | 1047.00 | 33.1% | 888.14 | 19.8% | 500.28 | 27.5% | 348.20 | 71.4% | |
| 4 | Recycle Amount by repair | | | | | | | | | | |
| | 1 | 1 Re-use as spare parts | kg | 140.22 | 4.4% | 92.1 | 2.1% | 125.81 | 6.9% | 28.39 | 5.8% |
| | | 2 Sell as spare parts | kg | 12.91 | 0.4% | 34.82 | 0.8% | 0.00 | 0.0% | 8.11 | 1.7% |
| | | 3 Segregate & sell as materials | kg | 11.24 | 0.4% | 375.2 | 8.4% | 151.08 | 8.3% | 35.93 | 7.4% |
| | | Sub total | kg | 164.37 | 5.2% | 502.12 | 11.2% | 276.89 | 15.2% | 72.43 | 14.9% |
| | 2 Temporarily stored spare | kg | 0.00 | 0.0% | 0.00 | 0.0% | 0.00 | 0.0% | 5.80 | 1.2% | |
| | Discharge Amount | | | | | | | | | | |
| 3 | 1 Discharged recyclables | kg | 33.12 | 1.0% | 30.08 | 0.7% | 25.06 | 1.4% | 72.49 | 14.9% | |
| | 2 Landfill amount | kg | 849.52 | 26.9% | 355.94 | 7.9% | 198.33 | 10.9% | 197.49 | 40.5% | |
| | Sub total | kg | 882.64 | 27.9% | 386.02 | 8.6% | 223.39 | 12.3% | 269.98 | 55.4% | |

Table A-9: The Results of the Data Analysis

c. Calculation Factors for Estimation of the Entire WEEE Flows

Based on the results of the analysis, the calculation factors are picked and compiled into the Table below. These factors will be further used for estimation of the entire WEEE Flows of UBC.

Table A-10: Calculation Factors for WEEE Flows (Unit: %)

| # | WEEEs at Recycling Stage | TV | Refrige- rator | Washing machine | PC |
|---|--|---------------|-------------------|--------------------|---------------|
| 1 | Total amount of WEEEs | 100.0% | 100.0% | 100.0% | 100.0% |
| | <u>Re-used Amount:</u> | | | | |
| 2 | Resell amount | 22.1% | 35.1% | 5.0% | 0.0% |
| | Repair & resell amount | 44.8% | 45.0% | 67.5% | 28.6% |
| | Total Re-used amount | 66.9% | 80.2% | 72.5% | 28.6% |
| 3 | Amount of Dismantling | 33.1% | 19.8% | 27.5% | 71.4% |
| | <u>Recycled Amount by repair shops:</u> | | | | |
| 4 | Re-use as spare parts | 4.4% | 2.1% | 6.9% | 5.8% |
| | Sell as spare parts | 0.4% | 0.8% | 0.0% | 1.7% |
| | Segregated metals | 0.4% | 8.4% | 8.3% | 7.4% |
| | Total Recycled by Repair Shops | 5.2% | 11.2% | 15.2% | 14.9% |
| 5 | Temporarily Stored Parts | 0.0% | 0.0% | 0.0% | 1.2% |
| 6 | Amount Discharged by Repair Shops | 27.9% | 8.6% | 12.3% | 55.4% |
| 7 | Amount Segregated by WP and CW* | 1.0% | 0.7% | 1.4% | 14.9% |
| 8 | Landfill amount | 26.9% | 7.9% | 10.9% | 40.5% |

*WP-waste pickers; CW-collection workers. Metal containing parts discharged by repair shops. As WPs and CWs pick them up and segregate metals, this category of WEEE has been considered as those "segregated by WP and CW".

A.4.5 Identification of WEEE Flows in Mongolia

a. Key Indicators of WEEE Flows in Mongolia

The annual amounts of WEEEs generated, re-used, recycled and disposed in MONGOLIA are estimated based on the calculation factors identified during analysis presented in 4.3. The Table 1-8 shows the results of the estimation.

Table A-11: Annual Amounts of WEEE

| # | Stages of WEEE Recycling Cycle | Measure unit | TV | | PC | | Refrigerator | | Washing machine | | Total WEEE | |
|---|---|--------------|---------|--------------------|----------|--------------------|--------------|--------------------|-----------------|--------------------|------------|--------------------|
| | | | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total |
| 1 | Average unit weight of EEEs | ton | 0.01745 | | 0.01741 | | 0.04037 | | 0.04548 | | | |
| 2 | Total amount of WEEEs | unit | 18,467 | | 60,589 | | 4,032 | | 3,748 | | | |
| | | ton | 322.25 | 100.0% | 1,054.85 | 100.0% | 162.77 | 100.0% | 170.46 | 100.0% | 1,710.33 | 100.0% |
| | <i>Re-used amount:</i> | | | | | | | | | | | |
| 3 | Resell amount | unit | 4,081 | | 0 | | 1,417 | | 187 | | | |
| | | ton | 71.22 | 22.1% | 0.00 | 0.0% | 57.19 | 35.1% | 8.52 | 5.0% | 136.93 | 8.0% |
| | Repair & resell amount | unit | 8,264 | | 17,311 | | 1,816 | | 2,530 | | | |
| | | ton | 144.21 | 44.8% | 301.39 | 28.6% | 73.32 | 45.0% | 115.06 | 67.5% | 633.98 | 37.1% |
| | Total re-used amount | unit | 12,345 | | 17,311 | | 3,233 | | 2,717 | | | |

b. WEEE Flow in MONGOLIA

The entire flows of WEEE generated in MONGOLIA are shown in the Figure 1-2 while the flows for each type of the target WEEEs are presented in the Figures 1-3 to 1-6:

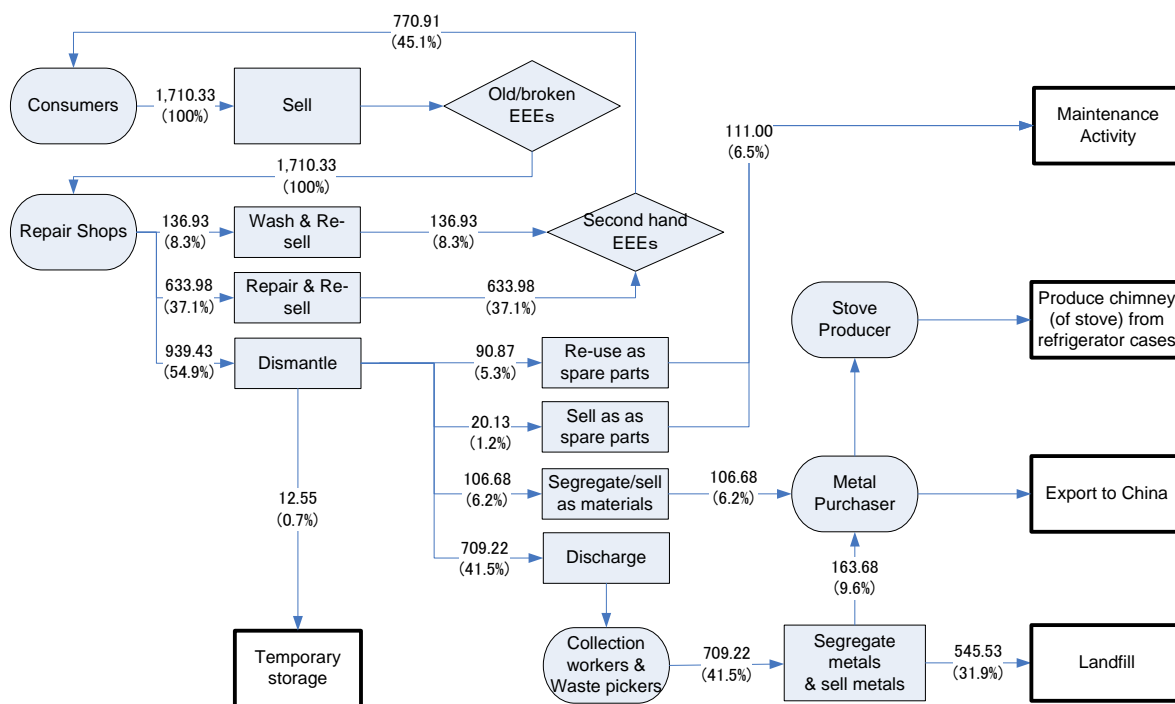

Figure A-3: Overall WEEE Flow in MONGOLIA (Unit: tons)

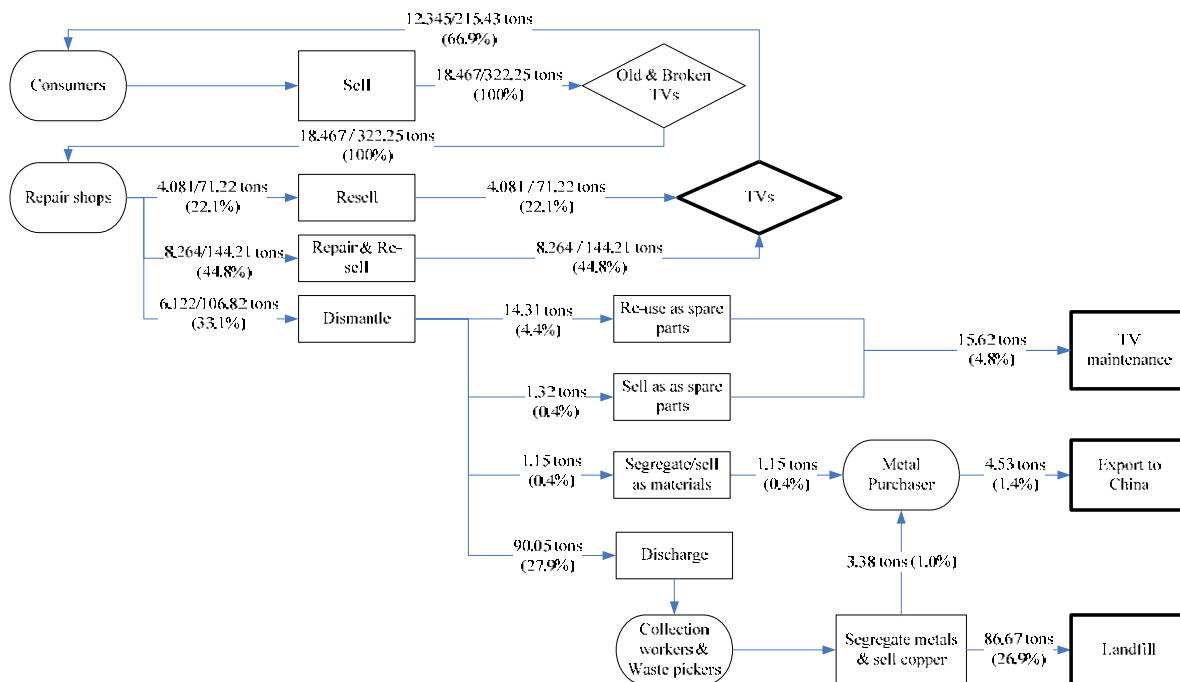

Figure A-4: TV Flows in MONGOLIA

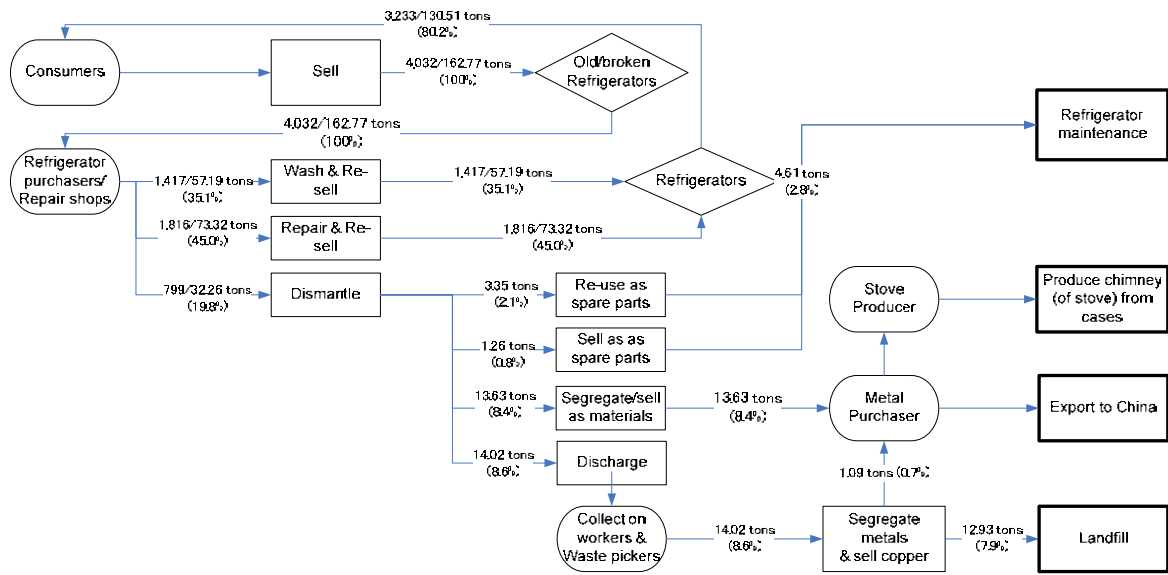

Figure A-5: Refrigerator Flow in MONGOLIA

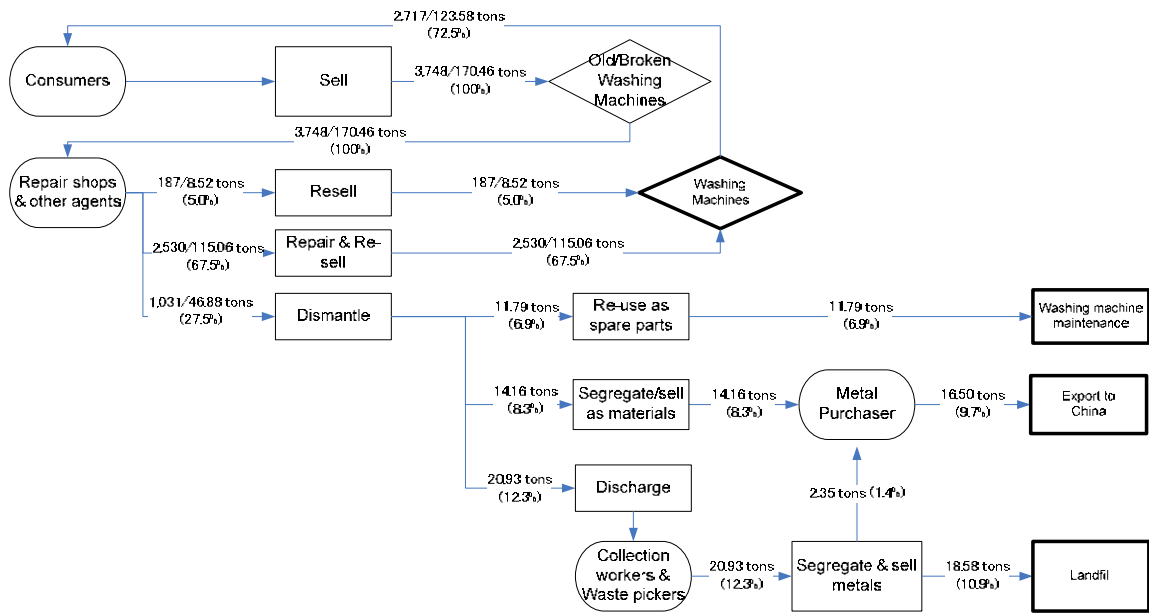

Figure A-6: Washing Machine Flow in Mongolia

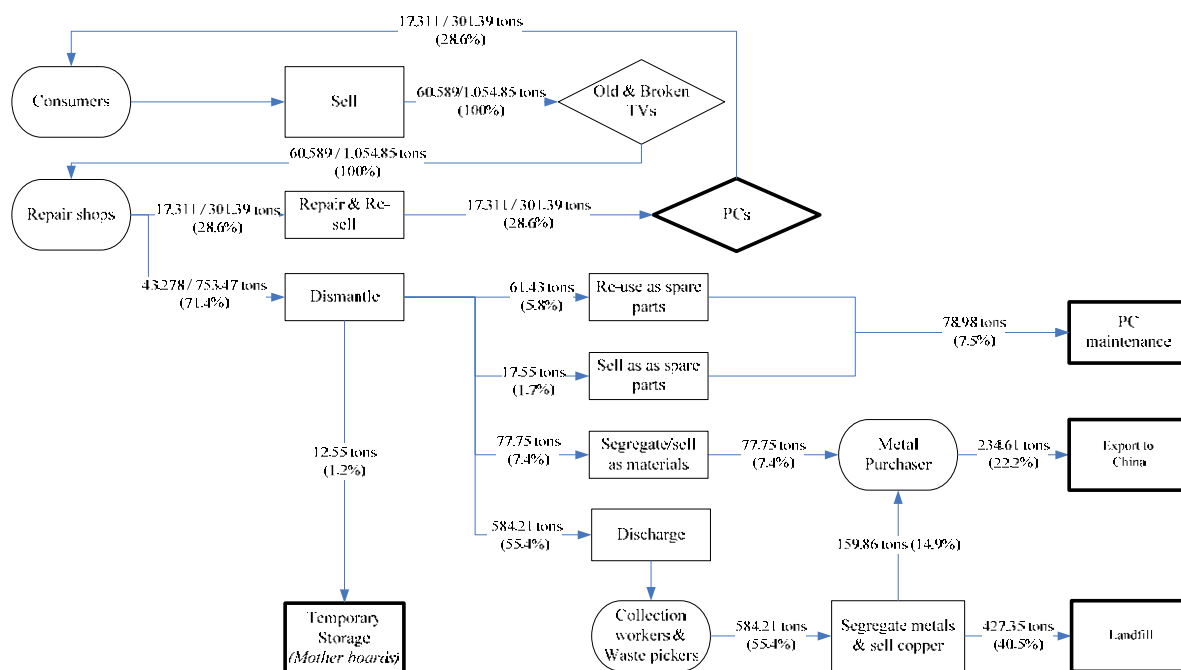

Figure A-7: PC Flows in Mongolia

A.4.6 Findings and Recommendations

a. Major findings

- The main indicators of the WEEE flows in MONGOLIA are summarized in the Table 6-1. According to the table, 45.1% in the total WEEEs is re-used, 23.0% is recycled (including stored spare parts) and 31.9% is disposed. The main descriptions of re-used, recycled and disposed amounts are the following:
- Re-use rate of each type of WEEEs is usually high (ranging from 66.9% to 80.2%) except PC. As for PC, the indicator is only 28.6% since CRT monitors, which occupy the major part in the weights of TV sets, are usually impossible to re-use.
- The most part of the total recycle rate calculated as 23% has been formed by the recycled amount of PC parts. Taking the PC out of account, the overall recycle rate falls to a value less than 10.0% of the total amount of WEEEs. More than half of the recycled parts are sold metals and only the minority (6.5% in the total amount) is used for maintenance as spare parts.
- As mentioned above, the total disposed amount (landfill amount) occupies 31.9% in the total (545.53 tons). As the amount is estimated by weights of the disposed parts, the majority of the total disposed waste has been resulted from disposed CRTs of PCs and TV sets. The main reasons for the conclusion are (1) all the CRTs of PC cannot be sold and around 80% of those of TV sets are disposed; and (2) a CRT weights more than 10 kg occupying the majority in the weights of TV sets and PCs, according to survey results.

Therefore, the sum of disposed amounts of TVs and PCs occupy 94% in the total landfill amount $([86.67+427.35]/545.53)$.

Table A-12: Summary of WEEE Flow Indicators for Mongolia

| # | Stages of WEEE Recycling Cycle | Measure unit | TV | | PC | | Refrigerator | | Washing machine | | Total WEEE | |
|---|---|--------------|--------|--------------------|----------|--------------------|--------------|--------------------|-----------------|--------------------|------------|--------------------|
| | | | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total | Weight | Share in the total |
| 1 | Re-Used Amount | ton | 215.43 | 66.9% | 301.39 | 28.6% | 130.51 | 80.2% | 123.58 | 72.5% | 770.91 | 45.1% |
| 2 | <i>Recycled amount by repair shops:</i> | | | | | | | | | | | |
| | Used for Maintenance | ton | 15.62 | 4.8% | 78.98 | 7.5% | 4.61 | 2.8% | 11.79 | 6.9% | 111.00 | 6.5% |
| | Segregated/sold as materials | ton | 4.53 | 1.4% | 234.61 | 22.2% | 14.72 | 9.0% | 16.50 | 9.7% | 270.36 | 15.8% |
| | Total recycled parts | ton | 20.15 | 6.3% | 313.59 | 29.7% | 19.33 | 11.9% | 28.29 | 16.6% | 381.37 | 22.3% |
| 3 | Temporarily stored spare parts | ton | 0.00 | 0.0% | 12.55 | 1.2% | 0.00 | 0.0% | 0.00 | 0.0% | 12.55 | 0.7% |
| 4 | Landfill amount | ton | 86.67 | 26.9% | 427.35 | 40.5% | 12.93 | 7.9% | 18.58 | 10.9% | 545.53 | 31.9% |
| | Total Amount | ton | 322.25 | 100.0% | 1,054.85 | 100.0% | 162.77 | 100.0% | 170.46 | 100.0% | 1,710.33 | 100.0% |

b. Problems Faced by Recyclers

Among the total respondents of the questionnaire survey, 24 respondents answered the questions related to the difficulties occurring in their businesses. According to the analysis, the most common problems are (1) difficulties in obtaining short-term loans or credit with discounted interest rates (accounts for 37.5% in the total answers), (2) non-existence of buyers and recyclers for most parts removed from the dismantled EEEs (33.3%) and (3) decrease in sales (12.5%).

In other words, the biggest problem is that related to insufficiency of financial assets. Considering the framework of this study, the problem can be interpreted into the impossibility to sell many of the dismantled parts. Actually, the survey results indicate that almost all the materials except metals have just been disposed in UBC.

c. Recommendations

Based on the above-mentioned findings, the JET recommends the MUB to focus on the following directions when formulating policies on WEEEs. These are:

1. As CRTs contain heavy metals such as mercury that cause serious health problems to human beings, the major attention should be paid to their disposal. A separate disposal site where hazardous wastes are disposed in safe manners is required to be constructed in the future in order to prevent the negative impacts on surrounding environment. Until such hazardous waste disposal site is ready, these hazardous wastes should be stored in dry places away from the sun light.
2. There are no manufacturers of the target EEEs in Mongolia; as the result, all of these EEEs are imported from abroad. Therefore, encouraging imports of EEEs that do not contain hazardous substances is needed; however, this may lead to higher prices for

EEEs to be imported in the future in comparison with those for the existing EEEs at the market. For this reason, regulation should be conducted step by step at the same time with building consensus among the public.

3. The re-use and the recycle of WEEEs are conducted mainly by individual recyclers and the main problem that has been faced by them is the difficulty in obtaining financial assets such as loans or credits with discounted interest rates. Based on the condition, it is necessary to promote and develop these individuals as formal recyclers by supporting their status such as accommodating low interest rate loans after achieving a complete control on their activities by registering the recyclers, identifying the amounts and the flows of parts dismantled by them and preventing possible illegal dumping.

A.4.7 Seminar on Hazardous Waste

On 3.Nov.2010, a seminar concerning hazardous waste issue has been conducted to invite MOE, MOH, and each directors of PSD of district government. On this seminar, MOH has presented about current situation of medical hazardous waste and its future planning. MOE has followed it by these of industrial hazardous waste. And then JET has explained about hazardous waste which is generated from households in Japan and Ulaanbaatar City. Finally EPWMD ended the seminar to present current situation and planning about WEEE based on research which we have conducted on 1st year of our project. Materials and details of this seminar are shown below.

a. Agenda

a.1 Background and Objectives

a.1.1 Background

Environmental Pollution and Waste Management Department of Mayor's office of Municipality of Ulaanbaatar is responsible for all kind of environmental pollution and waste management in Ulaanbaatar City.

JICA is implementing the project called "Strengthening the Capacity for SWM in Ulaanbaatar City Mongolia" from September 2009 till August 2012. One of the expected outcomes from the project is to strengthen the capacity of EMPWMD for policy making and planning for solid waste management.

Under such circumstances, Municipality of Ulaanbaatar will organize seminar on hazardous waste in Ulaanbaatar City to discuss current situation and future planning among relevant authorities under assistance of JICA Project Team.

Although hazardous waste is not included as a target waste in JICA technical cooperation project, some of Japanese experience might be contributed to establish an environmental friendly city through environmentally sound SWM system which is the fundamental goal of the Master Plan for SWM in MUB.

a.1.2 Objective

The objectives of the seminar are:

- To share the information among relevant authorities about current situation and future planning on hazardous waste management in UBC
- To introduce Japanese experience on hazardous waste management especially on household waste
- Discussion among Authorities concerned.

a.2 Outline of the Seminar

a.2.1 Date and Venue

Date: November 3rd (Wed), 2010

Place: Ulaanbaatar Hotel 6th Floor, Hall “Urguu”

a.2.2 Participants

Upon consideration of the objective of the seminar, the participants will be invited from the following organizations:

EPWMD

Ministry of Finance

Ministry of Nature Environment and Tourism

Ministry of Health

Ministry of Food, Agriculture and Light Industry

Ministry of Mineral Resources and Energy

National Emergency Management Agency

City Emergency Management Agency

Administration of Land Affairs, Construction, Geodesy and Cartography

City Development Policy Department of Governor’s Office

Capital City’s Inspection Agency

Representatives of district PSD

a.2.3 Seminar Program

The seminar program is shown in the table below.

Chairperson: Director of EPWMD/Project manager

| Topic | Expositor | Time |
|-----------------------------------|-----------|-------------|
| Opening Address by Mongolian Side | MUB | 9:00 - 9:10 |

| | | |
|---|-------------------|---------------|
| 1 Current Situation and Future Planning for medical waste management in Mongolia | MOH | 9:10 - 9:40 |
| 2. Current Situation and Future Planning for hazardous waste management in Mongolia | MONET | 9:40 -10:10 |
| Tea Break | | 10:10 - 10:30 |
| 3. Household Hazardous Waste Management | JICA Expert Team | 10:30 – 11:10 |
| 4. Current Situation and Future Planning for e-Waste in UBC | EPMWD/MUB | 11:10 – 11:30 |
| 5. Question and Comment | Participants | 11:30 – 12:10 |
| 6. Closing Speech | Director of EPWMD | 12:10 – 12:20 |

b. List of Attendants

| # | Organization/Position | Attendants |
|----|---|-----------------------|
| 1 | PSD of SKhD, director | Mr. Baasansuren. O |
| 2 | PSD of SBD, director | Mr. Batdelger. B |
| 3 | PSD of ChD, director | Ms. Bulgan. D |
| 4 | PSD of BGD, director | Amarbayasgalan |
| 5 | PSD of BZD, director | Ganchudur |
| 6 | PSD of KhD, director | Mr. Begz |
| 7 | Agency of Land, construction, geodesy and cartography | Ms. Khangaisaikhan. N |
| 8 | Municipal Specialized Inspection Agency | Ms. Badamkhand |
| 9 | General Emergency Agency | |
| 10 | Governor's Office | Mr. Itgelt |
| 11 | Ministry of Health | Ms. Tsetsegsaikhan |
| 12 | Ministry of Nature, Environment and Tourism | Ms. Jargalsaikhan |
| 13 | Municipal Emergency Department | Ms. Ganchimeg |
| 14 | Element Co., Ltd, director | Mr. Bayarsaikhan |
| 15 | South gobi Co., Ltd, specialist of environment | Ms. Enkhbayasgalan |

c. Presentation Materials

c.1 PROGRAM 1: Current Situation and Future Planning for medical waste management in Mongolia by MOH

2010.11.03

Activities of the Ministry of Health to improve Health Care Waste Management

B. Tsetsegsaikhan (Ph.D.)
Officer of the Public Health Policy Implementation Coordination Department,
Ministry of Health

RISKS FROM HEALTHCARE WASTE

The main risks associated with Healthcare wastes are:

- Physical risks
- Chemical risks
- Microbiological risks
- Radiological risks
- Environmental risks

RISKS From Healthcare Waste

- The WHO has estimated that unsafe waste practices (including unsafe transport practices) caused:
 - 21 million hepatitis B virus (HBV) infections (32% of all new infections);
 - 2 million hepatitis C virus (HCV) infections (40% of all new infections);
 - 260 000 HIV infections (5% of all new infections).

HEALTHCARE WASTE: WHO'S AT RISK?

- People within a Healthcare Facility
- Nurses, physicians and hospital maintenance staff
- Patients
- Visitors
- Workers in support services e.g. laundries, waste handling & transportation

HEALTHCARE WASTE: WHO'S AT RISK? II

- People outside Healthcare Facilities
- Local population
- Waste carrier
- Workers in waste disposal facilities, e.g. landfills or incinerators
- Waste pickers

Health Care Waste Management

- The safe collection, transportation and treatment of all different kind of hazardous Health Care Waste (HCW)
- Tracing and control of these waste streams
- Environmentally correct management & treatment of hazardous HCW:
 - Infectious waste (about 60-70%)
 - Chemical waste (about 20-25%)
 - Pathological waste (about 5-10%)
 - Other hazardous waste (< 5%)
- Final disposal of the treated waste, including generated by-products
- Consideration of environmental aspects
- Consideration of economical aspects

Fig.11 Based on guidelines from WHO

1

Legal aspects of the Health care waste management

Relevant Laws on Health Care Waste Management

1. The Law on Household and Industrial Waste, 2003
2. Environmental protection law, 1995
3. The Law on the Import, export and crossborder transport of hazardous wastes, 2000
4. Law on chemicals, 2006
5. Environment Impact Assessment Law, 1996
6. Hygiene Law,
7. Law on protection and security of radio activity, 2009
8. Law on Air, 2010
9. Law on Air payment, 2010

Relevant Guidelines, policies

National Programme for Waste reducing, 1999 (under revision)

- The document defines the policies, activities, ways to reduce the amount of waste based on the Basel convention principles, law on environment protection

National Programme on "Environmental Health", 2005

- The document defines the policies, activities, ways to establish safe, healthy environment for people

Relevant Guideline, policies

Government Resolution 2001, # 51
The state policy on Public health

Health Services Sector Plan Strategy II
Improve the health care solid waste and disposal of the required steps, 2008-2010

Measures for strengthening crisis management – Government Resolution 0208

Requirements for the Removal and Disposal of Hazardous Waste – Government Decree 1025

Guidelines

Guidelines on Hazardous Waste, 2003 (not signed, implementation and disposal of hazardous waste, MNET, State Strategy Code, 2003, 001, 2003-2007)

Guidelines on waste management, stages of the waste and hazardous materials
2003, 001, 2003-2007 (not signed, 2003, 020, 001)

Regulation on import, export, cross border, transportation, selling of hazardous and radioactive waste
MNET, State Strategy Code, 2004, 010, 001

Guidelines on the final treatment of the waste, radioactive materials
2002, 001, 2002-02-05 (not signed, 2002, 020, 001)

Guidelines on the control, prevention, detection, investigation, identification and treatment of the wastes, hazardous, infectious and dangerous MNET, State Strategy Code - revised

Minister of Health's Orders

Health care waste management strategy, plan of action for 2009 – 2013 (environmentally friendly, non-burning technology)

Minister of Health's Order, September 2009, # 263

Calculation methodology for wastes generated from hospitals (based on number of beds)

Minister of Health's Order, 2010, # 73

2

Activities to improve the HCWM

Research, survey

- Baseline survey to assess the structure and amount of HCW – 2005
- Assessment of the same level hospital's current situation by questionnaire – 2006
- Assessment of the HCWM situation at the national and provincial level – 2008 – 2007

Research, survey

2009 – 2010

- Assessment of the needle stick injury and prevalence of Hepatitis B/C among medical workers
- Baseline survey of the wastes containing viruses at the health sector

Meeting, seminars

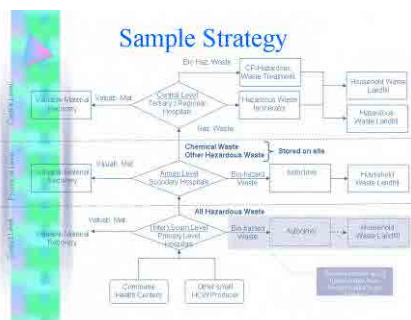

- Improvement of HCWM, WHO Regional International Meeting, Ulaanbaatar, May, 2008
- All level trainings, 2008-2010
- Improvement of HCWM seminar – Darkhan-Uul, Khovd aimag, 2008-2010 on
- Improvement of HCWM seminar – Orkhon, Zavkhan, 2010 on
- India Grand National Open University Distance Training on HCWM for 6 months
- HCWM 3 day training, WHO Consultant, October, 2010

HCW Centralized Treatment Facility

1. UB city CTF
- Niranduin Enger new Disposal Landfill
- Agreement for cooperation and leasing of the equipment with Element Co., Ltd
2. Darkhan-Uul, Orkhon aimag HCW CTF
3. Zavkhan aimag, Erdenet spring pilot project on HCWM at soum level

3

Further activities to improve the HCWM

Further steps

- Revision of the Joint Minors Order on Guidelines on classification, collecting, storage, transportation and disposal of medical wastes
- Typeset of the equipments, their technical specifications for the sound SWM
- Revision of the Calculation methodology (based on the number of excess patients)
- Hazardous waste management service

Further steps

- Develop training materials for all work level health workers, organize training course and seminars
- Organize studies (exam): National Open University, Distance Learning on SWM
- Develop IEC materials on SWM

Further steps

- Plan project to explore option on storage management
- Improvement of CTCs
- Plan project on "Atmospheric treatment facility, Dry-Electrolysis"
- Plan project with automation

Thank you for your attention

Our cooperation is most valuable

c.2 PROGRAM 2: Current Situation and Future Planning for hazardous waste management in Mongolia by MONET

Government measures and its results on elimination and disposal of hazardous waste

Ph.D.L. Jargalsaikhan, Head of Working Group of National Council on Chemical Toxic and Hazardous Substances

Legal Environment

- Law on Environment Protection, 1995
- Law on Household and Industrial Waste, 2003
- Law on Importation, Trans-border Transportation Prohibition and Exportation of Hazardous Waste, 2000
- Law on Chemical Toxic and Hazardous Substances, 1995 (2006)
- Criminal Code, Article 23, 2002
- Law on Air, 1995
- Law on Radiation Protection and Security, 2001
- Law on Air Fee, 2010

Draft Law

- Law on Environment Pollution Payment

Legal Environment

- Basel Convention on Control of Trans-boundary Movements of Hazardous Wastes and their Disposal
 - Ratified by the Parliament of Mongolia on 5 December 1996
 - Joined as a Party to the Convention on 14 May 1997
 - National Focal Point: MONET
- Stockholm Convention on Persistent Organic Pollutants
 - Ratified by the Parliament of Mongolia on 7 November 2003
 - Joined as a Party to the Convention on 20 April 2004
 - First project was implemented, first time inventory for POPs was conducted, and National Program prepared in 2003-2005

Legal Environment

- Waste Reduction Program /1999-2010/, Government Resolution No.50, 1999
 - Revision of the Program is underway, 2010
- National Program on Persistent Organic Pollutants /Government Resolution No.99, 3 May 2006/

Legal Environment

- Regulation on Separation, Collection, Packaging, Temporary Location, Detoxification, Storage and Disposal, Government Resolution No. 135, 2002
- Regulation on waste disposal and special treatment facilities, categories and requirements of disposal sites, and activities of individuals, companies and organizations engaged in waste disposal operations, Ministerial Ordinance No.404, MONET
- Classification and Grading of Hazardous Waste, Ministerial Ordinance No.324/318/336, MONET, MOH and MOES
- Regulation on Certification of Hazardous Waste, Government Resolution No.258, 2006
- Regulation on State Inventory and Reporting of Waste, Ministerial Ordinance No.21, 27 January 2009
- Methodology to Set Waste Standards, Government Regulation No.8, 2007
- Methodology to Set Waste Fees, Government Regulation No.18, 2007

Studies on Waste

- Study on Solid Waste Management Master Plan in Ulaanbaatar, Mongolia 2004-2020, JICA
- Study on Medical Waste in Ulaanbaatar, MOH and WHO, 2005
- Preliminary Inventory of Persistent Organic Pollutants, MONET and UNIDO, 2004-2005
- Report on Results of State Inspection on Activities by Individuals and Companies that Use Chemical Substance, MONET, 2007, 2008
- Preliminary Inventory of Hazardous Waste, MONET, 2004-2005

Results of Preliminary Inventory of Hazardous Waste

| Waste treatment method | Amount of hazardous waste |
|------------------------------|---------------------------|
| 1. Incineration | 7,994 ton/year |
| 2. Reuse | 1,354 ton/year |
| 3. Disposal | 998 ton/year |
| 4. Treatment | 455 ton/year |
| Total hazardous waste | 10,801 ton/year |

Measures

Drafting of methodology to establish human health and environment friendly disposal site and sample design drawings (Geo Ecology Institute, Academy of Sciences)

- Arkhangai
- Dornod
- Zavkhan
- Uvurkhangai
- Tov
- Uvs
- Khovd
- Khovsgul
- Darkhan-Uul

2010
+4

Measures

- Solid Waste Master Plan (WB, NEMO-2 Project)
 - Khovd
 - Zavkhan
- 2010:
 - Other aims

Feasibility Study and Basic Design of Hazardous Waste Disposal Facility

Annual capacity of hazardous waste treatment facility

- Incineration section
 - Incinerate 10,000 ton annually, and manufacture 200-250 kWt electricity power
- Physical and chemical treatment section
 - Physical and chemical treatment of 1,000 ton of waste
- Solidification and reinforcement section
 - 1,480 ton
- Landfill
 - Annual capacity is 3,030 ton. Lifetime is 10-12 years with 40,000m³ capacity
- Medical waste treatment section (disinfection)
 - 1,000 ton
- Waste recycling
 - 1,350 ton
- Storage
 - 8,000 ton
- Laboratory

Proposed locations

- Narangiin Enger
- Morin Davaa
- Buurlin Davaa

Landfill of waste contaminated with chemical pollutants

197,687 ton of sludge accumulated in 230 sites of 370 soums of 9 aimags has been detoxified (stabilization) and landfilled, and 128,444m² area is cleaned

Elimination of poly chloride biphenyl containing waste

- Program on POPs
 - Stop the usage of equipment containing poly chloride biphenyl, and eliminate it by environmentally sound manner by 2020
- 2008-2012 Mongolia Government Action Plan
 - "Strengthening the capacity of reduction and monitoring of equipment waste containing poly chloride biphenyl" within the framework of the objective "to ensure environmental balance"
- "Capacity Building for Environmentally Sound PCBs Management and Disposal", UNIDO, 2009-2012
 - State Inventory of PCBs containing equipment
 - Laboratory
 - Cleaning technology

Current issues

- Legal regulation on hazardous waste is insufficient
 - Laws and regulations are not sufficient
 - Not sufficient and not harmonized with each other
 - Insufficient implementation of laws and regulations (conditions for implementation of laws and regulations have not established yet)
- Appropriate system for hazardous waste management is not established
 - No collection and separation system of hazardous waste
 - No special facilities for elimination, storage and disposal of hazardous waste
- Hazardous waste is accumulated in large amount and stored in not appropriate facilities
 - Expired chemical substances, pesticides and their packages (0.2 ton of arsenic peroxide in former glass factory in Nalsakh District)
 - Waste discharged from factories that use chemicals (waste containing chromium generated from leather factories)
 - Sludge generated from industries and waste water treatment facilities
- Environment degradation due to unregulated disposal of hazardous waste
 - Petroleum products waste, used oil
 - Batteries
 - Electronic parts, printers and their cartridges
 - Ash and filter oil
 - Construction material, paint, lacquer, asbestos
 - Packages of chemical substance and etc.
- Waste incineration facilities do not meet requirements (medical waste incineration stove)

Future measures

- Improve legal environment on hazardous waste
- Improve waste management
- Establish hazardous waste elimination, storage and disposal facility

Thank you for your attention

c.3 PROGRAM 3: Household Hazardous Waste Management by JET

Household Hazardous Waste Management

November 3, 2010
JICA Expert Team for
Strengthen the Capacity for
SWM in Ulaanbaatar City
Mongolia
Susumu SHIMURA

Outline of the Lecture

- A) Household Hazardous Waste (HHW)
- B) HHWM in Japan
- C) HHWM in Ulaanbaatar City

A) Household Hazardous Waste (HHW)

- 1. What is Hazardous Waste (HW)?
- 2. What is Household Hazardous Waste (HHW)?

1. What is Hazardous Waste (HW)? (1)

- Law of Mongolia on Household and Industrial Waste defines hazardous waste (HW) as follows:

“hazardous waste” shall mean waste containing explosive, toxic, flammable, infectious, or actively reactive substances harmful to humans, livestock, animals or plants, and having potentially adverse impacts on progeny of humans, livestock, animals or plants, and disrupting environmental balance;

1. What is HW? (2)

- There is no specific categorization for HW by laws and regulation.
- HW may be categorized by the generation sources as follows:
 - 1. Industrial (Factory) HW
 - 2. Medical HW
 - 3. Household (Municipal) HW
 - 4. Construction HW
 - 5. Agricultural HW

1. What is Household Hazardous Waste (HHW)?(1)

- EPWMD of MUB has drafted “Regulation for Waste Separation” which defines HHW as follows:

– Household hazardous waste is waste that poses substantial or potential threat to public health or the environment which is generated from residential households. Household hazardous waste includes the followings => See next screen

1. What is Household Hazardous Waste (HHW)?(2)

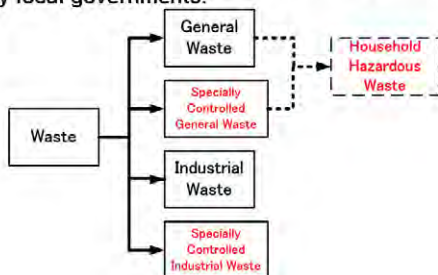

1. Paint and solvent
2. Automotive wastes (Used motor oil, antifreeze, tyre)
3. Pesticides
4. Mercury containing wastes (thermometers, switches, fluorescent lightings)
5. Electronics (PC, TV, cell phones) => WEEE
6. Aerosols (propane cylinders)
7. Caustics (cleaning agent)
8. Refrigerant containing appliances
9. Some special batteries (lithium, nickel cadmium, button cell batteries)
10. Ammunition
11. Radioactive waste (smoke detector)

B) HHWM in Japan

1. Waste Categorization in Japan
2. HHWM in Japan
3. HHWM in Ome City
4. HHWM in USA

1. Waste Categorization in Japan

- There is no specific categorization for HHW by law in Japan.
- HHW is included both categories of general waste and specially controlled general waste and managed by local governments.

2. HHWM in Japan

- Since there is no specific law on HHW except specially controlled general waste, *each local government (LG) manages it by their own regulation.*
- Generally some of HHW are managed by LG and some are subject to the management of dischargers.
- The reasons for the above-management may be:
 1. Discharge amount of HHW is very little. => 0.16% of MSW in Ome City
 2. There are so many kinds of HHW.
 3. Proper disposal of them differs each other.
 4. Proper disposal of HHW needs considerable cost.

3. HHWM in Ome City (1)

- Population: 140,000, Area: 103.3 km²
- General Waste Collection Amount: **A = 44,106 ton/year**
- HHW Collection Amount: **B = 71 ton/year**
- $A/B \times 100 = 0.16 \%$
- **HHW to be collected by the City:** Dry-cell battery, fluorescent lamp, containers for flammables, etc.
- **HHW to be managed by the Discharger:** WEEE, Tyre, Car battery, Solvents, Waste oil, Chemicals, Paint, etc.

3. HHWM in Ome City (2): Location of Two Landfills in Tokyo

3. HHWM in Ome City (3): Offshore Landfill for 23 Wards of Tokyo (1): Bird's Eye View

3. HHWM in Ome City (4): Offshore Landfill for 23 Wards of Tokyo (2)

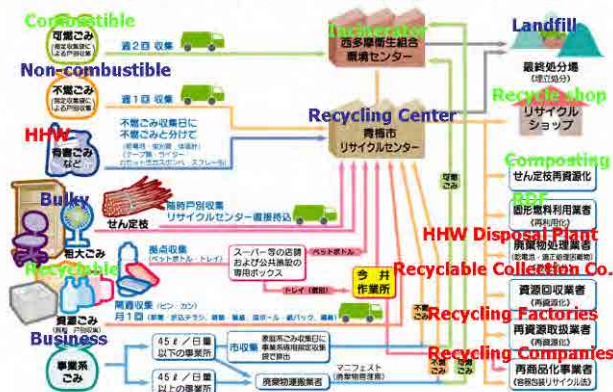

3. HHWM in Ome City (5): Inland Landfill for 26 Municipalities of Tokyo (1)

3. HHWM in Ome City (6): Inland Landfill for 26 Municipalities of Tokyo (2)

3. HHWM in Ome City (7): MSWM

3. HHWM in Ome City (8)

Fluorescent lamp containing mercury crushed and sent to previous mercury mining factory in Hokkaido

Dry-cell battery sent to Hokkaido

jica 3. HHWM in Ome City (9)

Container for Aerosols sent to metal or plastic recycling after gas release

HHW for Shipping

jica 3. HHWM in Ome City (10)

Day for HHW

Instruction for HHW

Waste Calendar for Higashi-Ome Area in Ome City

jica 3. HHWM in USA (1)

- Environmental Protection Agency (EPA) of USA defines HHW in its web-site as follows:
"Leftover household products that contain corrosive, toxic, ignitable, or reactive ingredients are considered to be "HHW." Products, such as paints, cleaners, oils, batteries, and pesticides, that contain potentially hazardous ingredients require special care when you dispose of them. "
- EPA issues several publications on HHW to promote 3R and proper disposal of it.
- HHWM: A Manual for One-day Community Collection Programs provides a useful information for HHWM by local governments.

jica 3. HHWM in USA (2)

- According to the Manual, the average US household generates more than 20 pounds (9 kg) of HHW per year.
- The local government (LG) provides collection sites for HHW.
- The discharger (residents) of HHW shall be requested to store it in its compound and bring it to a collection site. Then discharges it according to the category of HHW.
- Manufactures and distributors of household products, which becomes HHW, shall collect and recycle or treat it.

jica C) HHWM in Ulaanbaatar City (UBC)

1. Hazardous Waste Management Study
2. HHWM in UBC
3. Recommendations

jica 1. Hazardous Waste Management (HWM) Study

- "The Feasibility Study of the Hazardous Waste Management Facility in Mongolia" (HWM Study) was completed in June 2009.
- The HWM Study reported the following HW generation in UBC:
 1. Total HW: 10,801 ton/year
 2. Hazardous medical waste: 284.7 ton/year
 3. HHW: 58.4 ton/year (Note: 0.02 % of all MSW generation amount of 292,000 ton/year in 2010. 0.02 % is in the "Waste Characterization Study, UB Mongolia 2002 by WHO/MOH/city Inspectorate")

2. HHWM in UBC (1)

- HHWM has been not been established in UBC.
- EPWMD of MUB has drafted "Regulation for Waste Separation" which defines HHW.
- Most of HHW, which are not reused or recycled, are collected and disposed of at municipal landfill.
- Generation of HHW other than WEEE may be 0.16 ton/day (58.4 ton/year) by WHO rate of 0.02% to 1.28 ton/day (467.2 ton/year) by Ome City rate of 0.16%.

3. Recommendations (1)

- Proper hazardous waste management (HWM) is the highest prioritized issue.
- However, in terms of risks both quality and quantity of HHW is much less than other kind of HW such as industrial and medical HW.
- The priority of establishment of proper HWM shall be given to industrial and medical HW at this moment.
- The following aspects shall be considered for planning of proper management of HHW:
 1. There are so many kinds of HHW.
 2. Proper disposal of them differs each other.
 3. Proper disposal of HHW needs considerable cost.

**Thank you very much for your
attention!!!
Clean your City!!**

2. HHWM in UBC (2)

- Generation of WEEE in the country is 1,710 ton/year.
- It of UBC may be more than half of the 1,710 ton/year, i.e. 860 ton/year.

3. Recommendations (2)

- The priority of establishment of proper HHWM shall be given to higher risk ones, such as mercury containing waste, pesticides, etc.
- MUB may provide collection and storing sites for HHW. So that people will bring their HHW there.
- If proper treatment and recycling of those HHWM may not be possible, it should be stored until HW disposal facility will be operated.

c.4 PROGRAM 4: Current Situation and Future Planning for e-Waste in UBC by EPMWD/MUB

Program 4: Current Situation and Future Planning of WEEE management in Mongolia

EPWMD of MUB
Ms. Chantsalnurmaa

Agenda

1. Outline of the Survey
2. Current Condition of WEEE management system in UBC
3. Estimation of WEEE amounts in Mongolia
4. WEEE flow in Mongolia
5. Findings from the Survey
6. Future Planning for WEEE management in Mongolia

What is WEEE

- Waste Electrical and Electronic Equipment

1. Outline of the Survey

1. Objectives

- To understand the current way of discharge, recycle and disposal of WEEEs in UBC; and
- To identify the amount and the flow of WEEEs.

2. Scope of the Survey

- Target: TV, refrigerator, PC and washing machine.
- WEEE: EEEs which lifetime is over.

3. Duration

- 2 months (from 18 Jan 2010 to 18 Mar 2010)

Applied Methodology (1)

Data collection:

1. Qualitative Survey (Interview) => Identification of current WEEE recycling system (the ways of discharge, collection and disposal; stages of WEEE flow)=20 respondents
 2. Quantitative Survey (Questionnaire) => Identification of recyclables, amounts of treated WEEEs by recycling methods=58 cases
- #### Principles of data processing:
1. Unit of WEEE amount: weight=kg or ton
 2. Total amount of WEEE=Imported EEE which lifetime was over in 2009
 3. Duration of lifetime: Assume same as those in Japan

Applied Methodology (2)

Procedure to identify WEEE flow:

1. Identification of WEEE Management System (process, way of recycling etc.) =>Description of WEEE Recycling Stages or Processes
2. Identification of calculation factors to be used for estimation of amounts treated at each process of WEEE management
3. Determination of annual WEEE amount in UBC
4. Estimation of WEEE amounts treated at each processes of WEEE management=>(3)x(2)
5. Identification of the WEEE flow.

2. Current Condition of WEEE Management System (1)

1. Recyclables and Non-Recyclables

| | TV sets | Refrigerator | Washing machines | PC |
|-----------------|---------------|--------------|------------------|--|
| Recyclable: | PCB | Compressor | Motor | Main board items |
| | Choke coil | Iron cases | Iron cases | Some functional parts |
| | Wires | Wires | Wires | Power supply unit Processor case Wires |
| Non-recyclable: | CRT | Rubber items | Plastic items | CRT monitor |
| | Plastic cases | Glass | | Optical drives |
| | | Plastic | | Floppy drive Plastics & mixed items |

WEEE Treating Processes

| | Primary Process | Secondary Process | Tertiary Process | Quaternary Process | Final Process |
|---------|-----------------|---------------------|--------------------|--------------------|---------------------|
| Re-use | Resell | | | | Use as EEEs |
| | Repair & Sell | | | | Use for maintenance |
| Recycle | Dismantle | Use as spare parts | | | Export to China |
| | | Sell as spare parts | Use as spare parts | | Export to China |
| | | First segregation | Sell metals | | Export to China |
| | | Discharge | Second segregation | Sell metals | Landfill |

WEEE Recyclers

- Repair shops & Repairmen
- Collection workers & Waste pickers
- Metal purchasers

WEEE Flow in Mongolia

3. Estimation of WEEE flow in Mongolia

1. Samples of Analysis

No. of Cases: TV-27; Refrig.-16; PC-11 & WM-12

| Type of Survey | Target areas | Number of Questionnaires | | |
|----------------|-----------------|--------------------------|-----------|-------------------|
| | | Distributed | Returned | Used for Analysis |
| Interview | Naranbului | 4 | 4 | 4 |
| | Khari khori | 5 | 5 | 5 |
| | Subtotal | 9 | 9 | 9 |
| Questionnaire | BZD | 18 | 18 | 11 |
| | ChD | 18 | 5 | 4 |
| | BSD | 18 | 18 | 11 |
| | BGD | 18 | 7 | 5 |
| | KhUD | 18 | 13 | 10 |
| | SKHD | 18 | 15 | 8 |
| | Subtotal | 108 | 76 | 49 |
| | TOTAL | 117 | 85 | 58 |

Assumptions for estimating WEEE amount

- An item on PCB (TV) occupies 1/6 in its weight based on questionnaire contents.
- Recycle rate of CRT equals to 20% based on interviews.
- The size of CRT monitors (PC) is 14 inches =>10 kg; Keyboard=0.5 kg (based on an experiment)
- Same parts of all EEEs dismantled by the same respondent are treated in same manners.
- Ave.weight of EEEs are assumed as same as those in previous survey in other countries.

Weight of each parts of EEEs per Unit

| Waste | Unit: Kg | | | | |
|--------------------|------------------|--------------------|--------------|--------------------|--------------|
| | Parts | Weight | Parts | Weight | |
| TV set | Compressor | 0.96 | Iron case | 2.3 | |
| Refrigerator | Choke coil | 0.10 | Plastic | 0.52 | |
| Washing machine | Motor | 0.74 | Plastic | 0.59 | |
| PC | CRT glass | 0.26 | Aluminum | 0.77 | |
| | Copper | 0.16 | Copper | 0.50 | |
| | Other scraps | 0.51 | Glass | 0.51 | |
| | Aluminum bridge | 0.22 | Plastic case | 0.31 | |
| | Electronic waste | 0.27 | Keyboard | 0.5 | |
| | Plastic case | 0.62 | Plastic case | 1.05 | |
| | Plastic | 0.28 | | | |
| Unit weight | 17.48 | Unit weight | 49.37 | Unit weight | 45.48 |
| | | Unit weight | 17.41 | | |

WEEE Flows for TV

WEEE Flows for Refrigerator

WEEE Flow for Washing Machines

WEEE Flows for PC

WEEE Flows for Refrigerator

WEEE Flow for Washing Machines

WEEE Flows for PC

Total WEEE Flows in Mongolia:

Findings from the Survey - 1

- 45.1% in the total WEEE is re-used, 23.0% is recycled (including stored spare parts) and 31.9% is disposed.
- Re-use rate of each type of WEEE is usually high (ranging from 66.9% to 80.2%) except PC. As for PC, the indicator is only 28.6% since CRT monitors, which occupy the major part in the weights of PC, are usually impossible to re-use.

Findings from the Survey - 2

- The most part of the total recycle rate calculated as 23% has been formed by the recycled amount of PC parts. Taking the PC out of account, the overall recycle rate falls to a value less than 10.0% of the total amount of WEEE. More than half of the recycled parts are sold metals and only the minority (6.5% in the total amount) is used for maintenance as spare parts.
- As mentioned above, the total disposed amount (landfill amount) occupies 31.9% in the total (545.53 tons). As the amount is estimated by weights of the disposed parts, the majority of the total disposed waste has been resulted from disposed CRTs of PCs and TV sets.

Future Planning for WEEE management -1

- One of characteristics of the waste flow of WEEE in Mongolia is high rate of re-use. There is a lot of repair shops and second hand shops where WEEE are sold by consumers and they are repaired and sold as second hand EEs. These re-use rate will be gradually decreased according to the economic growth. But these habits are important to reduce disposal amount of WEEE and maintain high re-use and recycling rate.
- As CRTs contain heavy metals such as mercury that cause serious health problems to human beings, the major attention should be paid to their disposal. A separate disposal site where hazardous wastes are disposed in safe manners is required to be constructed following the *Feasibility Study of the Hazardous Waste Management Facility in Mongolia* by MONET

Future Planning for WEEE management-2

- There are no manufacturers of the target EEs in Mongolia; as the result, all of these EEs are imported from abroad. Therefore, encouraging imports of EEs that do not contain hazardous substances is needed; however, this may lead to higher prices for EEs to be imported in the future in comparison with those for the existing EEs at the market. For this reason, regulation should be conducted step by step at the same time with building consensus among the public.
- The re-use and the recycle of WEEEs are conducted mainly by individual recyclers and the main problem that has been faced by them is the difficulty in obtaining financial assets such as loans or credits with discounted interest rates. Based on the condition, it is necessary to promote and develop these individuals as formal recyclers by supporting their status such as accommodating low interest rate loans after achieving a complete control on their activities by registering the recyclers, identifying the amounts and the flows of parts dismantled by them and preventing possible illegal dumping.

Thank you for the Attention

d. Content of Discussion

d.1 About Element Company:

Question (By attendant of SKhD PSD):

Whether Element Company possesses a special permission for operating the medical waste treatment facility or not? What kind of management is utilized to separate, collect, transport, incinerate and landfill the medical waste. Does the medical waste is separated at the generation sources or at Element Company?

Is it possible to treat other household hazardous waste such as aerosol, fluorescent lamps and others at the Element Company's waste treatment facilities?

Answer-1 (By Mr. Bayarsaikhan, Director of Element):

The company has started its operations in December 25, 2009. The main operations are to incinerate and disinfect the medical waste. It is considered as a pilot facility run by the Ministry of Health and Ministry of Environment. Since it is first-kind of operation in Mongolia, certainly, there are some errors during the implementation. Thus, we have received the WHO expert recently who had visited our facilities and will write his report and recommendations about the medical waste treatment operations conducted by our company. He noted that, at least, it is good that Mongolia has started such kind of operations that would contribute to the better monitoring system.

As for the separation, the medical institutions are separating anatomic or biological waste only. Others such as sharps, syringes and etc are not separated although, the medical institutions have been enrolled in various capacity development activities such as seminars (7-8) starting from this year.

The requirement of MOH, MONET and CSIA are to reduce the incineration of waste and do more disinfection by autoclave and landfill. In this framework, we are improving our equipment. We have ordered a new autoclave which will arrive about one month time, and we have made 11 mln MNT investment to renovate our incineration stove. So, that the technology would improve.

The company has not got any special permission. It has been operating based on the contract signed between the company and the MOH. The wastes the company transports to the facility are not separated.

Answer-2 (By Mr. Jargalsaikhan, MONET):

The MONET has not involved in selection of Element Company; the company has no EIA conducted, and therefore, we did not grant any special permission to the company.

Answer-3 (By Mr. Tsetsegsaikhan, MOH):

The selection of the operator for the facility was conducted by the MOH. The MOH has equipment rental agreement only with the Element Company. As there are no regulations on licensing contractors who operate such kind of facility (medical waste treatment facility), it has been difficult for us to grant a license to Element. In the future, the legal environment including the licensing should be improved. Currently, Element has been operating under a contract signed between the MOH and the company.

d.2 Hazardous waste to be generated from Tattoo activity:

Comment/Recommendation-1 (By Mr. Batdelger, SBD PSD):

Nowadays, many people have tattoo on their body. Although the waste to be generated from tattoo service is very hazardous, no survey or study has covered this activity and the amount of these wastes has not been identified. I suggest that tattoo service shops should be registered and hazardous wastes from this service should be identified. However, the expression “registration of tattoo services” does not mean licensing.

On the other hand, the WEEE survey presented here should have covered public organizations. Because public organizations are usually the biggest PC users and they have storing a large amount of PC wastes waiting permissions from their supervising organizations on disposal of the PCs.

Comment/Recommendation-2 (By Mr. Ariguun, EPWMD):

Before considering the waste from tattoo, we should identify each household hazardous waste and their impact or risks. Based on the recommendation by the JET to concentrate on the highest-risk wastes, we should decide which waste we pay attention to in order not to spent inefficient costs.

d.3 Recommendations to MONET by ChD PSD:

As for the management of hazardous waste, I want the MONET to take policy measures in advance and not afterwards. We have seen presentations about the polluted environment of Mongolia by mining companies which is going to take impact for quite a long period of time

in the future. Instead, the MONET should take measures that would prevent such kind of environmental pollutions. Also, the MONET raised the issue if funding for the hazardous waste disposal facilities. They say that Mongolia now has no problem with the money and investment (referring to the evening news on TV) from now on. They say Mongolia has embarked into the age of so-called Dutch Disease. So, those funds need to be utilized for such purposes and the Ministry has to ensure the usage of funds to finance above mentioned activities.

(Recorded by Gantumur. B)

1.recording

Basic recording sheet (1)

Items should be recorded

| Activities: | Time | Number of rotation of loading Plate | Apartment No. | D/C | Number of Watch man | Name of organization | Type | Number on map |
|---------------|------|-------------------------------------|---------------|---------------|---------------------|----------------------|---|---------------|
| 1.Preparation | | 0: Less than 1 | | 1.Yes 2.No | | | 0: apartment 1: Institute 2: Schools 3: Factory 4: Shops 5: Barbers 6: Restaurant 7: Hotel 8: Hospital 9: Gasoline 10: Others | |

7

1.recording

Basic recording sheet (2)

Sample format of basic recording sheet

| Address | | Time | | Apartment | | Business | | Type | |
|---------|----|------|----|---------------|----------|----------|----------|--------------|------------|
| From | To | From | To | Apartment No. | Unit No. | Business | Unit No. | 1: Institute | 2: Schools |
| | | | | | | | | | |

1.recording

Basic recording sheet (3)

Sample of sheet filled by hand-writing

9

1.recording

Recording recyclables dealt sheet

| | | |
|-----------------|---|---------------------|
| Date | 17 th march 2010 | |
| Trip no. | 3 rd trip, Total weight 3,064 kg | |
| | price | weight |
| Glass | 1000 tg | * Have to calculate |
| Plastic | 590 tg | 1.80 kg |
| Colored plastic | 230 tg | 1.80 kg |
| bone | 640 tg | 21.30 kg |
| can | 0 tg | 0.00 kg |
| paper | 1890 tg | 27.00 kg |
| iron | 0 tg | 0.00 kg |
| brass | 1440 tg | 0.38 kg |
| alloy | 530 tg | 1.06 kg |
| Total | 6320 tg | 53.34 kg |

The map of target khoroo

It is used to point the collection point on its and to specify the collection route on target area.

12

1.recording

Others needed

Camera
It is used to record the situation graphically in order to get the amount of waste and to show other people its situation.

Measure
It is used to measure the volume of wastes on container and D/C for collection by dump truck and the volume of body of collection vehicles.

12

2. Analyzing

13

2.Analyzing

Products of survey

- Time and motion sheet
- The map of collection route
- The income list of recyclables

14

2 Analyzing

Time and motion sheet (1)

- To input the data recorded to excel format

2 Analyzing

Time and motion sheet (2)

- Calculation method of waste amount on each collection point (1)

Formula

$$A \div B \times C = D$$

- A Number of rotation at the collection point
- B Total Number of rotation on this trip
- C Wastes weighed on weigh bridge of NEDS
- D Wastes amount on the collection point we would like to know

2 Analyzing

Time and motion sheet (3)

- Calculation method of waste amount on each collection point (2)

Example

| No. | Trip No. | Activity | From | time | date | Number of Rotation of Loading Plate | Weight estimated (kg) | Apartment No |
|--------------|----------|------------|------|-------|------|-------------------------------------|-----------------------|--------------|
| 5 | 1 | Collection | 8:51 | 00:12 | 3/31 | 2 | 165.45 | 24 |
| Total | | | | | | 1 | 3,640 | |

$$2 \div 44 \times 3,640 \text{ kg} = 165.45 \text{ kg}$$

2 Analyzing

Time and motion sheet (4)

- Making tables by collection time, waste amount from apartment and business entities or anything we want by using pivot table, excel function

2 Analyzing

Time and motion sheet (5)

- For example, it is possible to make table like this using the result of analysis

| Collection Point | daily (kg/day) | Rate | population | per unit (kg/day-person) |
|------------------|----------------|-------------|--------------|--------------------------|
| 1 | 287 | 12% | 790 | 0.36 |
| 2 | 427 | 17% | 834 | 0.51 |
| Sub Total | 714 | 29% | 1,624 | 0.44 |
| 23 | 181 | 7% | 635 | 0.28 |
| 24 | 206 | 8% | 654 | 0.31 |
| 30 | 193 | 8% | 524 | 0.37 |
| 31 | 208 | 8% | 525 | 0.40 |
| 33 | 82 | 3% | 258 | 0.32 |
| 38a | 182 | 7% | 330 | 0.55 |
| 41.59 | 87 | 4% | 411 | 0.21 |
| Sub Total | 1,734 | 71% | 5,837 | 0.30 |
| Total | 2,448 | 100% | 7,461 | 0.33 |

2 Analyzing

Time and motion sheet (6)

- For example, it is possible to make table like this using the result of analysis

| | 3/31 (wed) | 4/1 (thu) | 4/2 (fri) | 4/3 (sat) | 4/4 (sun) | 4/5 (mon) | 4/6 (tue) |
|----------------------|--------------|-----------|--------------|-----------|-----------|--------------|-----------|
| 1 | | | | 10:11 | | | |
| 2 | | | | | | | 10:30 |
| 33 | | | | 8:55 | | | |
| 23 | 8:27 | | 9:25 | | | 9:34 | |
| 24 | 9:02 | | 9:55 | | | 10:19 | |
| 115,116,29,58 | 9:03 | | 10:08 | | | 10:39 | |
| 30 | 9:36 | Holiday | 10:24 | | Holiday | 11:02 | |
| 31 | 10:01 | | 10:47 | | | 14:14 | 13:51 |
| 37a | 13:49 | | 13:45 | | | 14:44 | |
| 37b,38b,40,57 | 14:05 | | 13:59 | | | 15:08 | |
| 41,41a,59 | 14:52 | | 14:29 | | | 15:35 | |
| D8 | 15:12 | | 14:50 | | | 15:51 | |
| 38a | 15:45 | | 15:28 | | | 15:58 | |

The map of collection route

- It is possible to overwrite collection point and some explanation to the original map which each khoroo has.
- This map, windows meta file allow to us modifying it on power point.

2 Analyzing

The income list of recyclables (1)

- To input the data recorded to excel format

| | 4/15 | 4/16 | 4/17 | 4/19 (1) | 4/19 (2) | 4/21 | Total |

| <p>Reporting 4 Reporting</p> <hr/> <p>□ We have only report of time and motion survey on target areas in Japanese version at this moment so far.</p> <p>We will provide you the report in English or Mongolian version later.</p> | <p>Practice</p> <hr/> <p>□ It is the outline of method for conducting time & motion survey. But practice is very important rather than method and theory.</p> <p>Then, we are going to begin this survey in BZD #1 which is on CMPUA collection service from this Friday, 7th May.</p> <p>Please join us !</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

A.7 Law and Regulation concerning about waste management in Mongolia

| No | Law and Regulation relating to SWM | Category | Year | Status | | | Approval by City Council |
|----|---|------------------|------|---------|--------------------|--------------------------|---|
| | | | | DRAFTED | Comments collected | City Mayor Board Meeting | |
| | Schedule in 2010 | | | | | | 2012年4月11日確認 |
| 1 | Revision of WSF Regulation | WSF | 2010 | ○ | ○ | ○ | Draft version has been created and already submitted to City Mayor Board Meeting. It is planned that it will be reviewed and revised after "Law on Household and Industrial Waste" has been revised. |
| 2 | Revision of Current Fee Tariff | Fee | 2010 | | | | City Mayor directed EPWMD to review tariff of waste collection service fee. Concurrently our project has created "Guideline on Estimation of appropriate waste collection fees". |
| 3 | Provisional Regulation on Chemicals, Toxic and hazardous substances | Hazardous Waste | 2010 | ○ | | | It has not been drafted. |
| 4 | Amendment of Law on Household and Industrial Waste | Law | 2010 | | | | The draft of "Law on Waste" which integrated current 3 laws of "Law on Household and Industrial Waste", "Law on Export and Prohibition of Import and Trans-boundary Transportation of Hazardous Waste" and "Law on Prohibition of Ultra Thin Plastic Bag" has been submitted to congress throughout central government. The law was enacted at May 2012. (* investigated August 2012) |
| 5 | Regulation of Waste Collection and Transportation | Waste Collection | 2010 | △ | | | EPWMD is investigating to draft. |
| 6 | Regulation on Selection, Evaluation and Financing of Waste Collection Organizations | Waste Collection | 2010 | ○ | | | EPWMD planned to draft it as "Law on waste" was enacted. |
| 7 | Regulation on Waste Separation | 3R | 2010 | ○ | ○ | ○ | EPWMD is drafting it. |
| 8 | Law to Impose an Import Tax on Products that can not be reused | Law | 2010 | ○ | | | EPWMD has not been authorized to formulate laws. EPWMD has submitted the draft of "Proposal to Impose an Import Tax on Products that can not be reused" to MONET. MONET has been preparing a draft for "Law on Eco-Tax" based on the draft submitted by EPWMD. |
| 9 | Ordinance, Regulations, instructions and manuals related to the Introduction of 3Rs | 3R | 2010 | | | | Basic policy of the one has been applied to "11. Waste Reduction Program" |
| 10 | Regulation on Activities related to car services and maintenance shops, washing pit, shops that sell oil and lubricant | Business Waste | 2010 | | | | It is not investigated since it is not important for revision of institutions of SWM of M/P |
| 11 | Waste Reduction National Program | 3R | 2010 | | | | MONET has drafted. However currently they did not submit to central government because "Law on Household and Industrial Waste" will be revised. They planned to modify and submit the draft to the authority as the new law was approved. |
| 12 | Guidelines to inspect operation of NEDS of waste management division of CMPUA under Mayor's Office of UBC | Landfill | 2010 | ○ | | | The one has been created in cooperation between JET and EPWMD and we begun the implementation from 20th |
| | Schedule in 2011 | | | | | | |
| 1 | Regulation on Activities related to car services and maintenance shops, washing pit, shops that sell oil and lubricant | Business Waste | 2011 | ○ | | | It is not investigated since it is not important for revision of institutions of SWM of M/P |
| 2 | Regulation on activities of organizations, companies and individuals in the Sukhbaatar Square | Business Waste | 2011 | ○ | | | It is not investigated since it is not important for revision of institutions of SWM of M/P |
| 3 | Regulation on collection, sorting, selling and purchase of secondary raw materials | 3R | 2011 | ○ | | | EPWMD is drafting it. |
| 4 | Amendment of Regulation on Certification of Toxic Chemicals and Hazardous Waste | Law | 2011 | | | | MONET has created the original draft and it was approved by central government 4th Oct 2012. However no action has been taken after that. |
| 5 | Regulation on Collection and Transportation | Waste Collection | 2011 | ○ | | | EPWMD is investigating to draft. |
| 6 | Regulation on Delivery of Construction Waste to Final Disposal Sites | Business Waste | 2011 | ○ | | | EPWMD drafted and it has been submitted to city council throughout city mayor. |
| 7 | Examine the possibilities to increase household waste fee tariff in Baganaur, Bagakhangai, and Nalaikh Districts and amend Resolution No182 | Fee | 2011 | ○ | | | It is not investigated since it is not important for revision of institutions of SWM of M/P |
| 8 | Regulation to collect waste generation fees from Ger area households and to follow for financial operators | Fee | 2011 | ○ | ○ | ○ | This is a regulation that determined authorities collect waste collection service fee from residents together with their electricity bill. The regulation was promulgated 17th Jun 2011 and enacted 1st Jul. |

| B.2.4 | Workshop on Submission of Operation and Maintenance Report for the Grant Aid Equipment | B-22 |

B Activities for Operation and Maintenance of Equipment

B.1 Procurement of Spare Parts

B.1.1 List of Parts Distributors

1. Mitsubishi Fuso Truck and Bus Corporation

Shenzhen Zhanbao Industrial Development Co., LTD.

Mr. Jianlin Huang (Director)

E-mail Address: zb@szzb.cn

Address: Northern Xinyi Autocity, Heng Gang, Long Gang strict, ShenZhen.

Tel: 86-755-89738868, 89738899, 89738833

2. Isuzu Motors

Local Distributor: KHET Company (Official Toyota Distributor)

Responsible person: Mr. Tumurkhuyag, Service Manager (mobile phone: 9911 7164)

Mr. Battugs, Officer for Spare Parts (mobile phone: 9911 9802)

3. ShinMaywa

Contact person in Japan (communicate by English or Japanese)

Mr. Keiji Yamanaka

E-mail Address: yamanaka.k@sb.shinmaywa.co.jp

Fax: +81-45-575-9837

Tel: +81-45-584-1321

Bank account:

The Bank of Tokyo-Mitsubishi UFJ,Ltd. Osaka Main Office

5-6, 3Chome, Fushimimachi, Chuo-Ku, Osaka, Japan

Savings Account No.7224

Swift Code : BOTKJPJT

Account Name : ShinMaywa Industries, Ltd.

4. Komatsu

Local Distributor: KOMIT SERVICE Company (Official Komatsu Distributor)

Responsible person: Mr. Damdinpurev, Service Manager (mobile phone: 9909 1029)

E-mail Address: damdinpurev_komit@komatsu.mn

Ms. Ganchimeg, (Office phone: 341 415)

5. Case

Local Distributor: MSM Company (Official Case Distributor)

Responsible person: Mr. Mark Gabel, General Manager of Automotive Department
(mobile phone: 9909 0744)

Mr.Unurbayar, Officer for Spare Parts (office phone: 7014 8141)

Office phone: 318 138

E-mail Address: mark.gabel@msmco.net

B.1.2 Spare Parts Order Sheet (for Shinmaywa Industries Ltd.)

B.2.2 Seminar on Improvement for Maintenance of Collection Trucks

Seminar on Improvement for Maintenance of Collection Trucks

Koji UZAWA
JICA Expert Team

Kazutoshi MATSUDA
JOCV Senior volunteer

9th December 2010
Central Work Shop of CMPUA

Seminar on Improvement for Maintenance of Collection Trucks

1. Condition of waste collection trucks
2. Engine oil and Gear oil
3. Fuel filter
4. Periodic service
5. Body (Compactor)
6. Body (body and chassis)
7. Cold start (Isuzu and Mitsubishi)
8. Hydraulic operation at cold weather
9. How to change the brake lining
10. Operation & maintenance report

1. Condition of waste collection trucks

| Truck type | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu | Isuzu |

Keep the good condition for Hydraulic system

- Warming up engine running idle and the PTO ON position.
- Do not loading Ger waste and construction waste
- Keep the trucks in side of the warm garage.

e. Improvement of waste collection truck maintenance: presenter Mr. Uzawa (JET consultant)
