

Purification Methods and Engineering Consultants

 **NAKANIHON ENGINEERING CONSULTANTS**

2012.9.26

NAKANIHON

Engineering Consultants co.,Ltd

HEAD OFFICE

**1-8-6 NISHIKI,NAKAKU,
NAGOYA,JAPAN
460-0003**

TEL:(81)-052-232-6032

FAX:(81)-052-221-7827

HP:WWW.NAKANIHON.CO.JP

What is NAKANIHON?

- Engineering consultant company
- Head office in Nagoya city
- Number of employee : 310
- Office : 35

What do we do?

NAKANIHON Engineering Consultant's Engineering Department

Environment & Water Works Dept.

- Environmental Investigation and assessment
- Water Works

River & Sewerage Works Dept.

- River
- Sewerage Works

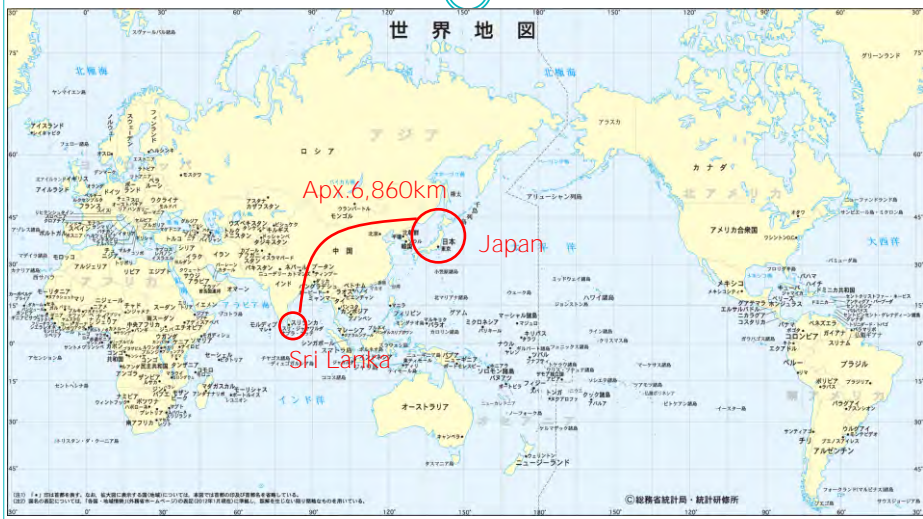

Transportation & Urban Design Dept.

- Road
- Railways
- Bridge

Purification Methods

Where is Japan

What is hot in Japan Water Works?

History of water work

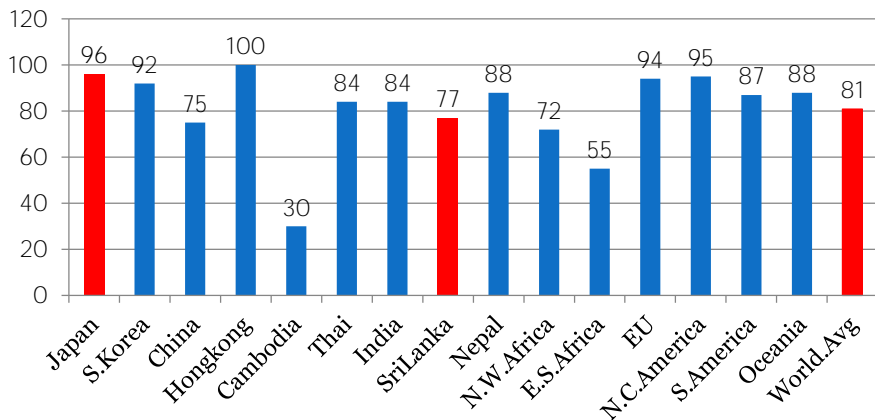

Water Work in Japan

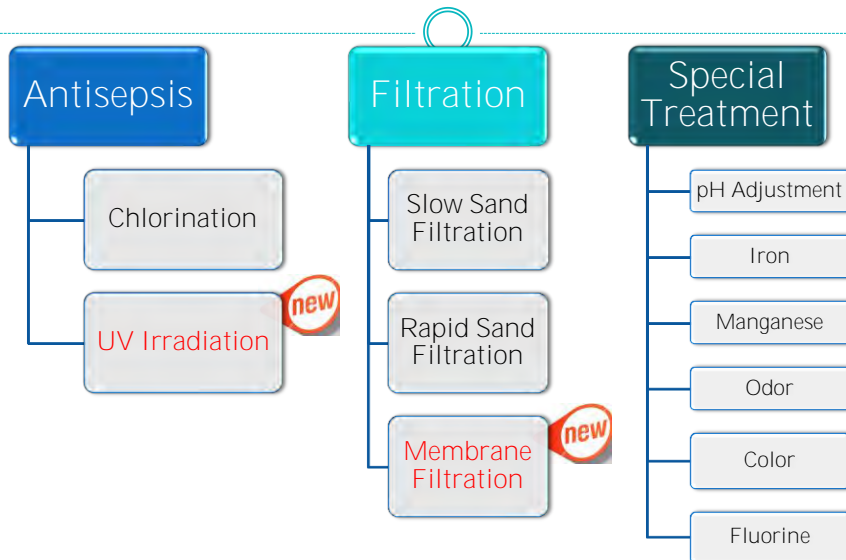

Tap Water Coverage Ratio in the World

Coverage Ratio (WHO 2006)

But only Tap Water in 11-13 countries are drinkable (WHO Standard)

Purification Method

Slow Sand Filtration

- Turbidity < 10 deg.
- Velocity = 4 – 5 m/day
- No Chemical
- O&M : easy

Photo: Slow Sand Filter

Rapid Sand Filtration

- Turbidity < 10 deg.
- Velocity = 120–150 m/day
- Use Chemical
- O&M: difficult

Photo: Rapid Sand Filter

Membrane Filtration

- Turbidity : any level
- No Chemical
- O&M: easy

Photo: Membrane Units

Engineering Consultants

Role of Engineering Consultants in Water Works

PLANING

Ideal work for next Generation

Master Plan
Vision etc.

DESIGNING

Smart, Economic, Strong,
Easy to use

Water work facility
Pipe Network etc.

MANAGEMENT

Understand everything
about your own asset

Pipe Network System(Simple Map)
Community Wireless System

Intake Facility (290,000m³/d)

Intake Facility (34,900m³/d)

Purification Facility (500m³/d)

Purification Facility (3,590m³/d)

Purification Facility (296,000m³/d)

Rapid Sand Filtration

Purification Facility (100m³/d)

Membrane Filtration

Purification Facility (100m³/d)

Membrane Filtration

Transmission Facility (24,000m³/d)

Distribution Facility

PC tank : 4,000m³

Distribution Facility

PC tank : 15,000m³

PC tank : 10,000m³

Distribution Facility

PC tank :1,500m³

Management System(Simple Map)

Community Wireless System

1 Most leakages are caused in service pipes

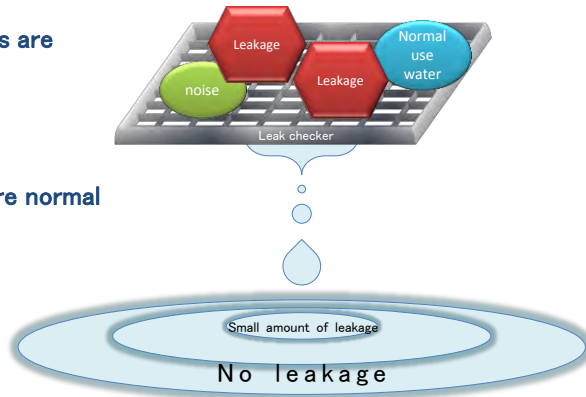

- **95% of leakages** were taken place between snap tap and water meter

2 Screening Method for Detection

● Service pipes with leakage are screened by detector and the leak checker

- Only 6% of service pipes are surveyed by experts
- 94% of service pipes are normal

3 Leakage detection instrument (Leak Checker)

■ Features

- Light and small
- Great reduction of detection time
- Applicable to non metal pipes (e.g.PVC etc.)
- It is possible to go to work, reading meter and detection of leakage of the same time
- Data storage by wireless data transmission

■ Specifications

TS Leak checker	
Type No.	SV1108A
Components	Built-in-sensor
Weight	330g or so (Battery included)
Battery	A A 1.5V × 2 (Hours operation : 2 weeks)
Capacity	2,000 data
Data transmission (Wire less)	① Bluetooth V1.2 ② Infrared rays IrDA
Measurement time	Minimum 2 second
High pass filter	[HPF] L150Hz/H300Hz

■ Handling

Turn on start button after that put Leak checker on water meter
 Measuring is repeated automatically when data over out at setting point (Repeat times with in 12)

Electron sound and LED inform as start and off

• Measuring results are indicated on display
 • Data take down included memory

4 Principle of leak checker

- Utilize a characteristics of continued noise of leak and temporary noise

$$\text{Time Integration Rate } F = \frac{\sum_{i=1}^n t_i}{T} \times 100 (\%)$$

Mechanism

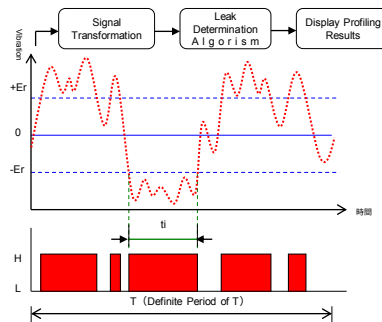

Water leak → Leak noise → Vibration through the pipe → catch the vibration by this instrument → calculate and analyze

Time Integration Rate

Rate of signals within specified time

Criterion

Judged by time integration rate

5 Captured Range

- Possible range to catch leak noise is 20m on average
- It is possible to catch leak on the distribution pipe around densely populated area

6 How to use Leak Checker ?

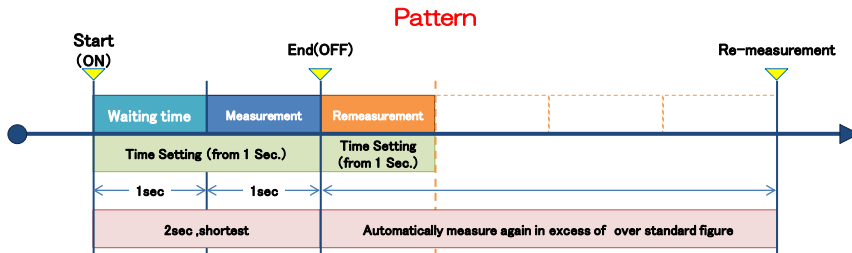

● Push the button and it judges instantly

Install the measurement condition from PC to LC

Put LC directly on water meter and push the button

7 Inspection Result

Before inspection result

number	name	address	year	month	day	time	minute	second	date by integrated
00000001			2009	12	1	9	1	25	7
00000002			2009	12	1	9	3	30	10
00000003			2009	12	1	9	5	37	5
00000004			2009	12	1	9	8	43	34

00000009			2010	2	1	9	17	52	7
00000010			2010	2	1	9	19	26	10
00000011			2010	2	1	9	22	43	43
00000012			2010	2	1	9	22	55	33
00000013			2010	2	1	9	23	28	0
00000014			2010	2	1	9	23	34	1
00000015			2010	2	1	9	26	51	1
00000016			2010	2	1	9	26	57	0
00000017			2010	2	1	9	27	6	0
00000018			2010	2	1	9	27	9	1
00000019			2010	2	1	9	28	4	4
00000020			2010	2	1	9	28	10	1

On the case of keeping earlier data, it is possible to compare the last time data and new data. The number spot is where new data came up and can be judged as questionable place of leaking

8 Result of survey (A city in Japan)

- 6% of questionable places of leakage are selected by screening method
- 80% of leaking spots, 90% of leakage staunch were detected by second survey of questionable places

Number of screening 16,094			
Questionable places (Integrated % 99~60%)		Number of no leakage pipes (Integrated % 59~0%)	
988 (6%)		15,106	
Noise	Leakage spots 122	Normally service pipes	
889	99	23	15,083
	Leakage staunch 32.4 (m ³ /h)		
	29.8	2.6	

9 Improve of leakage (Bangkok Thailand)

TESCO CO.,LTD has carried out the target of pilot project in official requisition

Objection of this project

Reduce non revenue water rate of Phayathai area and to collect survey data to increase improving non-revenue water rate throughout Bangkok city

Term May 23 ~ July 14 , 2011

Client Metropolitan Waterworks Authority Thailand

Outline of Phayathai Branch

Item	Area	Unit	Volume
Annual distribution total		m ³	122,000,000
Annual revenue water		m ³	87,452,000
Annual non revenue water		%	28.32
Extension of service pipe		km	1,126
Service area		km ²	55.4
Number of customer		Number	84,506

Survey using leak checker

Water Leak on a Steel Pipe 100mm

Second Survey (Pinpoint)

Improvement of non revenue water rate in Phayathai area

Result of survey

Distance of survey(km)	10.4
Leakage place(number)	21
Leakage stanchd (m ³ /hr)	22.2
Number of leakage places(No./km)	2.019
Leakage staunch(m ³ /hr/km)	2.135

Cause of pipe accident

Pipe crack	10
Tee pipe crack	1
Joint crack	1
Pipe joint	3
Collar joint	1
Gimbal joint	1
Fire hydrant packing	2
Valve packing	1
Damaged perforation	1
Total	21

Non revenue water rate

28.3% (May 11)  7.1% (July 14)

10 Advantages of screening method

1. *Efficient work*

- Reading of meter and check of the leakage are possible at the same time
- It is not necessary to move for survey
- Data result are recorded instantly

2. *Early detection*

- Shorten survey interval
- Reduce the recurrence of leakage
- Reduce accidents by leakage

3. *Saving expense*

- Much more can be surveyed with the same expenses
- Reduce compensation cost for accidents by leakage

名古屋の水はおいしい!

**木の温もりに触れながら、森林再生にも貢献する。
地域育ちのスギ・ヒノキを使った積み木 "sodatsumi"。**

そだつみ? "sodatsumi"は、名古屋大学「都市の木質化プロジェクト」が企画した、地域産のスギ・ヒノキを活用した積み木です。都市に育む子どもたちに木の温もりを伝え、木を使える心が"育つ笑"となることを願うとともに、地域産の木材を活用し、売り上げ利益の一部を寄付ののために活かす"森を育てる積み木"とする思いから生まれました。

木が並ってきた、
ありのままの姿を大切にしています。
sodatsumiは、美しや旅行、さらけなど、中
身の活動や遊びの場で大活躍しています。積み木や
箱など、様々な用途に活用されています。子ども
たちの心への影響や愛情を育みます。

シンプルな形状が、
子どもたちの創造性を磨かします。
sodatsumiは、シンプルな積み木ですが、その中
身の活動や遊びの場で大活躍しています。積み木や
箱など、様々な用途に活用されています。子ども
たちの心への影響や愛情を育みます。

売り上げの一部を寄付し、
地域再生に役立てます。
sodatsumiは、産地を支援する活動(フェアトレード)
で取り組む、社会貢献活動の一環として、地域産の
木材を活用し、売り上げ利益の一部を寄付ののために使
用しています。

サイズ(1×9×15cm) 84ピース 5,250円(税込)
