	<p>Copy of Mail from Mr. Ito, JICA on 2020/4/23 Regarding Chapter 1, we have sometimes modified directly the text, and sometimes put comments. After several times of exchange between us, please be informed of the followings:</p> <p>1) As for the modifications of text with a comment highlighted in light blue, you don't have to examine the contents any more. You are requested only to check the quality of language.</p> <p>2) As for the modifications of text without any comment, same. You are requested only to check the quality of language.</p> <p>3) The modifications of text with a comment highlighted in green are sometimes questions and sometimes requests for advice. So, would you please come up with an appropriate solution?</p>	<p><i>DCI Notes:</i></p> <p><i>We have provided comment where necessary or where requested by NK/JICA.</i></p> <p><i>Our comment is not required by JICA on "blue" shaded items, therefore none is generally provided. This does not mean that we have no comment to make or that we recommend the changes are supportable or correct, which they are often not.</i></p> <p><i>In some instances, we have prepared further notes for NK information so that NK are aware of the further reasons for our concerns.</i></p> <p><i>We have also noticed that some original text may have been changed without any clear identification. Please note that we may not have not made comment on these items. We have also not reviewed the text word-for-word to identify all such changes.</i></p> <p><i>Due to the complicated nature of this document, it is difficult for us to properly edit punctuation, numbering and cross references, which is better achieved on a clean copy. We have tried to do this but assume that we will recheck this again later.</i></p> <p><i>Clause numbering has been reformatted throughout and page numbering adjusted.</i></p> <p><i>We have not issued a clean copy as obviously the notes are important for now but when answers can be provided to the further notes and queries herein, we will be pleased to update and prepare a clean coordinated copy.</i></p> <p><i>Due to clause numbering and heading changes, it will be necessary to update all other cross references in other Chapters where they relate to this Chapter 1, we do this when a clean copy of all is available.</i></p>
<p style="text-align: center;">ACKNOWLEDGEMENTS</p> <p><i>JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:</i></p> <p>1) Japanese Acts, Orders and Ordinances including:</p> <ol style="list-style-type: none"> (1) Industrial Safety and Health Act (2) Order for Enforcement of Industrial Safety and Health Act (3) Ordinance on Industrial Safety and Health (4) Safety Ordinance for Cranes (5) Ordinance on Safety and Health of Work under High Pressure (6) Ordinance on Prevention of Anoxia, etc. (7) Ordinance on Prevention of Hazards Due to Dust (8) Explosives Control Act (9) Order for Enforcement of Explosives Control Act (10) Ordinance on Explosives Control <p>2) OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.</p>	<p style="text-align: center;">ACKNOWLEDGEMENTS</p> <p><i>JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. <p>JICA STANDARD SAFETY SPECIFICATION (JSSS)</p> <p>1. GENERAL REQUIREMENTS</p> <p>1.1 Safety Declaration</p> <p>1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.</p> <p>1.1.2 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.</p> <p>NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance 1.3 and modify the 1.1.2 as follows: 1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Declaration.</p> <p>This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.</p>	<p>JICA STANDARD SAFETY SPECIFICATION (JSSS)</p> <p>1. GENERAL REQUIREMENTS</p> <p>1.1 Safety Declaration</p> <p>1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.</p> <p>1.1.2</p> <p>1.1.3 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.</p> <p>NK: NK inquired JICA whether it is not problem to include the form of Safety Declaration in the User Guide because the SBD does not allow addition.</p> <p>NK5/6YH: JICA did not response to the above inquiry. We will proceed as MD proposed.</p>	<p>JICA STANDARD SAFETY SPECIFICATION (JSSS)</p> <p>1. CHAPTER 1: GENERAL REQUIREMENTS</p> <p>1.1 Safety Declaration</p> <p>1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.</p> <p>1.1.2 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.</p>

I have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: MD 氏は上記のようにSBD の様式の追加は認められていないが、User Guide に含めました。請負者の安全宣言の様式をUser Guide に含めることは、SBD の規定上、問題ないでしょうか？

1.2 General Reference Notes

1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2 The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (6) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer’s Personnel and all other persons that are entitled to be on the **Site**.

NK: There are many descriptions of “other the Site areas (if any) where the Works are being executed” in JSSS. GC defines as I.1.6.7 “Site” means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.(NK のコメントにより、すでに削除済ですが、Q&A は残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

1.2 General Reference Notes

1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2 The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent alternative diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (6) Unless otherwise stated in JSSS or the context is otherwise clear, (JC1) any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer’s Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.(JC2)

JC1: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or
2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works”

NK/6YH: NK would like to select the 1 above for JSSS:

1.2 General Reference Notes

1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2 The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent alternative diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (6) Unless otherwise stated in JSSS or the context is otherwise clear, (JC1) any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer’s Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.(JC2)

NK/6YH: NK would like to ask MD to review and select proper wording for JSSS:

This clause is intended only to ensure that the Employer’s Personnel and any other persons who are entitled to be on the Site are automatically provided with the same health and safety measures that are provided to the Contractor’s Personnel, whenever there is a mention of “Contractor’s Personnel”.

Thereafter there should be no other reference to “Employer’s Personnel and any other persons who are entitled to be on the Site” unless it is for reasons other than the provision of health and safety requirements. I have reviewed other clauses and deleted some, where this is necessary.

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc. This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now it constantly refers to the Site only. This will also be considered for mention in the User Guide.

- (7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.
- (9) Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1 JSSS shall form a part of the Project Safety Specification which in turn forms a part of the Specification as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows:

- (1) JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:
- (a) The Project Safety Specification (including JSSS), and
 - (b) The Technical Specification

1.3.2 The priorities of the document comprising the Specification are as follows:

- (1) Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS,
- (2) The "Project Safety Specification" shall have priority over the

JC2: Safety measures are needed not only in the Site. We would like to have advice of NK/MD. The current draft JSSS says:
 A: the Site (very often) and
 B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)
 Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.
 Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:
 "Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works".
 Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.
 Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.
 How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

- (7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.
- (9) Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1 JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The "Project Safety Specification" shall have priority over the other parts of Specification in respect of health and safety matters. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS. (JC3)

JC3: Better to avoid using "Technical specification" Fig A1.4.1 moved to User Guide.

NK5/6: No comment to JC because JICA want to modify as they commented.

1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary (JC4)

NK: : MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

For the purpose of this reference only it is not necessary to add any additional wording to "Site".

I suggest the clause can then be as now suggested by JICA or even left simply as it was.

- (7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.
- (9) Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1 JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The "Project Safety Specification" shall have priority over the other parts of the Specification in respect of health and safety matters. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS. (JC3)

Suggested editing

1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary (JC4)

NK: : MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

<p>Technical Specification in respect of health and safety matters.</p> <p>NK: Q1: We think it needs to explain/define “Technical Specification” as same as User Guide 1.3.2 (3) The “Technical Specification” shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.</p> <p><i>Yes I agree but the problem again is that “Specification” is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.</i></p> <p><i>I have added the explanation as above but please note that this is a compromise.</i></p> <p>Q2: Is “other parts of” necessary?</p> <p><i>Thank you and no, it isn't, see above. (すでに削除済みです。)</i></p> <p>1.3.3 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.</p> <p><i>I recommend that the following is necessary</i></p> <p><i>The User Guide shall not form a part of the Contract.</i></p> <p>NK: : MD 氏は上の追記を提案していますが、入札図書として出てこないなので不要と考えます。</p> <p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of JSSS as supplemented and modified by the Particular Safety Specification.</p> <p>1.4.4 Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer’s Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.</p> <p>1.4.5 Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.</p> <p>NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?</p> <p><i>It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.</i></p> <p>1.4.6 If there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer’s consent.</p> <p>NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?</p> <p><i>It is intended for use where we have dropped back to the Laws but there are no particular Laws available.</i></p> <p><i>I have no objection if both are deleted.</i></p> <p>NK: 1.4.5 と 1.4.6 を合わせた次のような規定ではいかがかと考えます。</p> <p><i>If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works,</i></p>	<p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of Project Safety Specification.</p> <p>1.4.1. Deleted (JC5)</p> <p>JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.</p> <p>NK5/6: Will modify as commented.</p> <p>1.4.2. Deleted.(JC6)</p> <p>JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.</p> <p>NK5/6: Will delete as commented.</p> <p>1.4.4 If, <u>for the particular part of the Works, the Project Safety Specification does not contain safety requirements and</u> there are no safety regulations contained in the Laws of the Country, the Contractor shall propose suitable <u>safety measures in the Safety Plans</u> for the Engineer’s consent. <u>These may contain proposing application of internationally recognised standard or regulation.</u></p>	<p><i>Notes to NK: the statement that the User Guide does not form a part of the Contract is important and intended to limit risk for JICA.</i></p> <p><i>The deletion is shaded in blue so I must not comment.</i></p> <p><i>The biggest user of JSSS is actually the Contractor, and if it is published at the same time as the User Guide on the same JICA website the contractor will refer to it and this could create future problems.</i></p> <p><i>Future claims from contractors can be predicted on this for example that the Bid documents have not been prepared properly according to the User Guide or that the full information (for example required by User Guide clause 1.3.3) has been not been provided or has been withheld. Whether such claims are insupportable under the contract or not, they must still be defended and this takes time and money usually which JICA pay.</i></p> <p><i>JSSS 1.3.4 was intended to very simply prevent this but it has been deleted and I have been asked not to comment, so what can I do?</i></p> <p><i>After further consideration on this subject and as advised in my last comment of Annex 1, I also suggest that it is better to rename the “User Guide”, for example as the “Guide for Use of Executing Agencies”, it is more correct and may reduce the risk of claim even though it will not solve this problem fully.</i></p> <p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of Project Safety Specification</p> <p>1.4.4 <u>If, for the particular parts of the Works, the Project Safety Specification does not contain safety requirements and</u> there are no safety regulations contained in the Laws of the Country, the Contractor shall propose suitable <u>safety measures in the Safety Plans</u> for the Engineer’s consent. <u>These may contain proposing application of internationally recognised standard or regulation.</u></p> <p><i>consent.</i></p>
--	--	---

<p><i>and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)</i></p> <p>1.4.7 Specified Standards and Regulations:</p> <p>(1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p>	<p>1.4.5 Specified Standards and Regulations(JC7)</p> <p>JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.</p> <p>NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.</p> <p>(1) <u>Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.</u> (JC8)</p> <p>JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5 ?</p> <p>NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.</p> <p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(3) <u>Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</u> (JC9)</p> <p>JC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.</p>	<p>1.4.5 Specified Standards and Regulations(JC7)</p> <p>NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.</p> <p><i>For example, OSHA requirements to which you have referred in JSSS, are actually their regulations not standards.</i></p> <p><i>These regulations are intended for the US and are enforceable only there under their rule of law.</i></p> <p><i>Using OSHA does not mean or imply that you are adopting related US laws or rules for enforcement.</i></p> <p><i>To avoid any legal association, please refer to subclause (4) below and also throughout the other "technical" chapters of JSSS where reference is made to OSHA by using the phrase to the "technical requirements of"</i></p> <p><i>This is very much a compromise but something like this is necessary to support your choice of OSHA as a reference basis.</i></p> <p><i>My own opinion is that OSHA will not form a part of the applicable Laws or the Laws of the Country with which the Contractor is to comply under the Contract (see GC 1.13 and 13.7 respectively), however I recommend that JICA should check this opinion to support their choice of OSHA, HSE etc.</i></p> <p><i>Please advise of any further requirements or if you require any change.</i></p> <p>(1) <u>Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.</u> (JC8)</p> <p>NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.</p> <p><i>There appears to be no problem with transferring the above clause to here but it needs deleting in the Annex to avoid duplication.</i></p> <p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(3) <u>Application of detailed parts of any standards or regulations specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</u> (JC9)</p> <p>JC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As</p>
---	---	---

<p>1.4.8 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.9 Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.</p> <p>1.4.10 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p> <p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.</p> <p>1.4.11 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion, during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.</p> <p>NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)</p> <p>No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all</p>	<p>NK5/6: Will modify as commented.</p> <p>(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.</p> <p>1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(3) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p> <p>(4) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)</p> <p>JC10: We don’t really understand the meaning of this.</p> <p>NK5/6: YH considers this cannot be understood. To MD, please review this sentence..</p> <p>1.4.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion <u>and Defect Notification Period.</u> (JC11)</p> <p>JC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP. With this modification, Particular Safety Specification in User Guide will not be necessary any more.</p> <p>NK5/6: Will modify as commented.</p>	<p>discussed at the last meeting with MD, we believe that this kind of “waiver” should be provided.</p> <p>NK5/6: Will modify as commented.</p> <p>Please refer to editing as shown in red.</p> <p>(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.</p> <p>1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p> <p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)</p> <p>NK5/6: YH considers this cannot be understood. To MD, please review this sentence..</p> <p>Please clarify the meaning your query as I cannot clearly understand.</p> <p>Similar to GC 1.5, the documents in JSSS are basically to be taken as mutually explanatory of one another however the priority of the documents should be stated, in order to resolve any future ambiguity or discrepancy. For this reason, I have suggested that for any interpretation difficulty:</p> <p>between Chapter 1 (which is General) and all other chapters, then Chapter 1 will prevail and apply</p> <p>between Chapters 2 to 6 (which are also general) and all others (Chapters 7 to 10 and future), Chapters 2 to 6 will apply</p> <p>Please advise of any change that you require.</p> <p>1.4.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion <u>and Defects Notification Period.</u> (JC11)</p> <p>NK5/6: Will modify as commented.</p> <p>am a little confused as NK are requested to redraft.</p> <p>Notes for NK:</p> <p>The following information is given for NK use.</p>
---	---	--

<p>responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).</p> <p>The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer's property except as stated in this clause.</p> <p>NK: we agree to leave this as specified.</p> <p>1.4.12 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1 The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018.</p> <p>1.5.2 The Contractor shall state the applicable standard in the Contractor's Safety Plan.</p> <p>1.5.3 The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.</p> <p>NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.</p> <p>I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?</p>	<p>1.4.9 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1 The Contractor shall institute a health and safety management system in accordance with ISO 45001. (JC11a) <u>The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.</u></p> <p>JC11a: OHSAS does not exist any more?? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.</p> <p>NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.</p> <p>1.5.2 Deleted. (JC12) JC12: If delete OHSAS above, delete accordingly.</p> <p>NK5/6: To MD, please review this.</p> <p>1.5.3 <u>Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)</u></p> <p>JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.</p> <p>1.5.4 <u>The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.</u></p> <p>NK5/6: Will modify as commented.</p>	<p>I completely understood the JICA intentions during the earlier discussion in January which is why the above advice (highlighted in green) was given.</p> <p>The Contractor must have already completed the Works before commencement of the DNP and they have already been taken over, occupied and put into use by the Employer.</p> <p>The Contractor of course has a contractual obligation to take care of the health and safety of his employees when they are completing any work which is outstanding or executing any work required to remedy defects during the DNP and it is not necessary to state this in JSSS.</p> <p>However, the Contractor has no obligation to continue to provide the majority of the facilities or services of JSSS during the DNP as the Works are completed, handed over, occupied and used by the Employer and most if not all temporary facilities will already have been removed.</p> <p>To state that "the Contractor shall comply with the requirements of JSSS throughout the DNP" is not correct.</p> <p>The Contractor for example has no obligation to provide ongoing services and facilities during the DNP, meaning no clinic, ambulance, medical facilities, fire-fighting, support to Employer and Engineer, spare PPE, training, scaffolding, contractor's equipment and temporary works general availability etc etc, all of which are "requirements" of JSSS.</p> <p>I am concerned that this will be misunderstood or even abused by some employers and consultants and that because this is so stated the contractor will be requested to provide services and facilities that he is no longer responsible for.</p> <p>If any facilities are particularly required (e.g. clinic, ambulance, medical facilities, fire-fighting, spare PPE, training etc this should be clearly stated in the Particular Safety Specification so that the Contractor is aware and so that it can be included in his bid.</p> <p>The added text is not therefore advisable.</p> <p>1.4.9 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1 The Contractor shall institute a health and safety management system in accordance with ISO 45001. (JC11a) <u>The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.</u></p> <p>NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.</p> <p>1.5.2 <u>Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)</u></p> <p>1.5.3 <u>The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.</u></p> <p>NK, please can you advise me of the text that you want to insert here and I will edit this as necessary.</p>
--	--	--

<p><i>It has no little or no meaning otherwise.</i></p> <p>NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. この考え方で正しいでしょうか？</p> <p>1.6 Checking and Validation of Submissions</p> <p>1.6.1 In accordance with GC 4.9 [<i>Quality Assurance</i>] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor’s responsible personnel, including for example the Contractor’s Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.</p> <p>NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.? <i>Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.</i></p> <p>1.6.2 For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [<i>Care and Supply of Documents</i>] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.</p> <p>NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.</p> <p><i>This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered.</i></p> <p><i>It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: “If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect.”</i></p> <p>NK: 貴機構のご意見はいかがでしょうか？</p> <p>1.7 Contractor’s Safety Plans</p> <p>1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor’s proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:</p> <p>(1) that are stated in JSSS;</p> <p>(2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p>	<p>1.6 Checking and Validation of Submissions</p> <p>1.6.1 In accordance with GC 4.9 [<i>Quality Assurance</i>] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor’s responsible personnel, including for example the Contractor’s Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.</p> <p>JC13a: coordinator?</p> <p>NK5/6: We think so.</p> <p>(JC14)NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.</p> <p><i>This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)</i></p> <p><i>It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: “If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect.”</i></p> <p>JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1). Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of “double checker” to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor. We think we should not excessively stick to the question of “from whom to whom the responsibility may be transferred”.</p> <p>NK5/6: Will modify as commented.</p> <p>1.7 Contractor’s Safety Plans</p> <p>1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor’s proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:</p> <p>(1) that are stated in JSSS;</p> <p>(2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p>	<p>1.6 Checking and Validation of Submissions</p> <p>1.6.1 In accordance with GC 4.9 [<i>Quality Assurance</i>] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor’s responsible personnel, including for example the Contractor’s Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.</p> <p>NK5/6: We think so.</p> <p>NK5/6: Will modify as commented.</p> <p><i>NK, please can you advise me of the text that you want to insert here and I will edit the spelling grammar of this as necessary.</i></p> <p>1.7 Contractor’s Safety Plans</p> <p>1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor’s proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:</p> <p>(1) that are stated in JSSS;</p>
---	--	--

<p>(3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on <u>the Site</u>.</p> <p>1.7.3 The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:</p> <ol style="list-style-type: none"> (1) Bid Stage Safety Plan (Outline Overall Safety Plan). (2) Commencement Stage Safety Plan (Updated Overall Safety Plan) (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works) <p>NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.</p> <p>I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.</p> <p>NK: We understand your meaning.</p> <p>1.7.4 The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level. throughout the Time for Completion of the Works.</p> <p>1.7.5 Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility. and at any time throughout the Time for Completion of the Works.</p> <p>NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?</p> <p>Yes thank you, that is true, but better to delete the phrase rather than add.</p> <p>1.7.6 Bid Stage Safety Plan:</p> <ol style="list-style-type: none"> (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [Content of Bid Stage Safety Plan]. (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated. <p>1.7.7 Commencement Stage Safety Plan</p> <ol style="list-style-type: none"> (1) This shall be submitted within twenty-eight (28) days <u>after</u> the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, 	<p>(3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site. (JC15)</p> <p>JC15: See 1.2.2 (6). NK5/6: No comment.</p> <p>1.7.3 The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:</p> <ol style="list-style-type: none"> (1) Bid Stage Safety Plan (Outline Overall Safety Plan). (2) Commencement Stage Safety Plan (Updated <u>Bid Stage</u> Safety Plan) (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works) <p>1.7.4 The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level.-</p> <p>1.7.5 Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. --	---	--

- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)

Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK Level 6 Diploma level or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

JC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or	University or technical college science course other courses
					in S&H 2 years
					4 years
					Senior high school science course other courses
					in S&H 4 years 6 years
					Others in S&H 7 years
				2. Industrial safety consultants.	
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES Occupational Safety and Health Program. U.S. Army Corps of	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience

- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

No problem with the above, I suggest editing as follows:

Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:

- (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
- (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or
- (c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

		Engineers, EM-385	shall be the CSP.		
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.
4	Singapore	Regulations	1) Representative of the Contractor 2) Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)	
5	India	Regulation	1) Safety Officer 2) Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course	
6	Thailand	Regulation	1) Head Man Level 2) Technique Level 3) High Technique Level 4) Professional Level 5) Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International ~~National~~ Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

<p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country); and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.</p> <p>We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."</p> <p>I have split this clause for clarity</p> <p>I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7.</p> <p>It is also subject to receiving the consent of the Engineer.</p> <p>NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.</p> <p>We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.</p> <p>I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.</p> <p>1.12.3 Supporting Staff</p> <p>NK-1: JICA commented and minutes recorded in January as follows:</p> <p>7.1.1 (5) HSO's duties:</p> <p>JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.</p> <p>No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary</p> <p>Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?</p> <p>Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein.</p> <p>MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.</p> <p>NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:</p> <p>3. Common requirements in JSSS</p> <p>(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の "The HSO shall inspect work area before starting work..." は、 "The Contractor shall ..."へ変更する。</p> <p>HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.</p>	<p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>1.12.3 Supporting Staff</p>	<p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>1.12.3 Supporting Personnel</p> <p>Heading is changed to be consistent with the content.</p>
--	--	---

<p><i>From this idea, the HSO in the sentence "The HSO shall inspect work area before starting work..." shall be replaced with "the Contractor".</i></p> <p><i>Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.</i></p> <p>NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).</p> <p>We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.</p> <p>Based on the above idea, we want to revise some sentences below.</p> <p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.</p> <p><i>I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.</i></p> <p>NK: MD氏は、まだ supporting personnel についての貴機構の意見をまだ十分理解していないように感じておりますが、貴機構のご意見はいかがでしょうか？</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p> <p>(5) The HSO shall be expected to develop internal procedures whereby all supporting personnel, shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.</p>	<p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p> <p>(5) The HSO shall be expected to develop internal procedures whereby all supporting personnel (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO....." But how "and the details of any inspection, for" relates to other part of this sentence???</p> <p>Non-natives would have difficulty to understand.</p>	<p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p> <p>To MD, we would like to review the sentence because of sentence seems too long.</p> <p><i>I suggest the above is edited as follows:</i></p> <p>(5) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:</p> <p>(a) Supporting personnel are made aware of the requirements for any inspection and the details thereof.</p> <p>(b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work</p> <p>(c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.</p>
--	---	---

<p>(6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas of the Site are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p> <p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>NK: JICA added "and Authorities" in the last comment.</p> <p>Now changed as above</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure</p>	<p>NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence 1) the requirements for any inspection 2) the details of any inspection</p> <p>To MD, we would like to review the sentence because of sentence seems too long.</p> <p>(6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>JC22: The working areas are not always a part of the Site</p> <p>NK5/6: No comment to JC because JICA want to modify as they commented.</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p> <p>(c) hat all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p>	<p>Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>(6) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel~ for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p> <p><i>This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), however I suggest that in this case the wording is changed as above to make it non-specific and therefore of wider w=effect</i></p> <p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p>
--	---	--

<p>the Contractor's compliance with the Safety Plan, Instructions and other measures;</p> <p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [<i>Supporting Staff</i>]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p> <p>NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above: (i) <i>Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;</i></p> <p><i>I disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.</i></p> <p>NK: 貴機構のコメントを伝えましたが、MD氏はまだ上記の意見です。貴機構のご意見はいかがでしょうか？</p> <p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p> <p>(m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;</p> <p>(n) Preparing regular internal and external reports on health and safety activities; and</p> <p>(o) Hazard prediction activity.</p>	<p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [<i>Supporting Staff</i>]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p> <p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p> <p>(m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;</p> <p>(n) Preparing regular internal and external reports on health and safety activities; and</p> <p>(o) Hazard prediction activity.</p>	<p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any part of the Works where the Engineer so instructs in accordance with JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [<i>Supporting Staff</i>]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p> <p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p> <p>(m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;</p> <p>(n) Preparing regular internal and external reports on health and safety activities; and</p> <p>(o) Hazard prediction activity.</p>
---	--	--

<p>1.14 Procedure for Resuming the Works</p> <p>1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [<i>HSO - Scope of Duties and Authority</i>] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:</p> <ol style="list-style-type: none"> (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur. (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer. (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer. (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date. <p>To be proactive, the Engineer may give consent at any stage within the above stated time scales.</p> <ol style="list-style-type: none"> (5) The Contractor resumes the Works or part of the Works on the due date. (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer. (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary. <p>1.15 Contractor's Safety Management Activities</p> <p>1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.</p> <p>1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):</p> <p><i>NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action. Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.). Please see above notes, I do not feel that the following is desirable or necessary.</i></p>	<p>1.14 Procedure for Resuming the Works</p> <p>1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [<i>HSO - Scope of Duties and Authority</i>] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:</p> <ol style="list-style-type: none"> (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur. --	--	---

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him. I do not recommend but we try to do it.

(1) Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- ~~(b)~~ Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended

(2) Daily Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- ~~(c)~~ Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ; ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- ~~(d)~~ Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- ~~(e)~~ Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections—~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

No problem deleted already

1.16 Joint Site Safety Inspections

1.16.1 In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.

(1) Overall Safety Management Activities

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM);
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
- (c) Monitoring the implementation of the Safety Plan.

(2) Daily Safety Management of Contractor's Personnel:

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM;
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures;
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ;
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training;
- (e) Instruction and management of all safety measures; and
- (f) Site Safety Inspections

1.16 Joint Site Safety Inspections

1.16.1 In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.

(1) Overall Safety Management Activities

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM);
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and

(2) Are the Safety Plan requirements being met? (3) Is there documented proof of compliance? (4) Is health and safety training effective? (5) Is the Contractor's health and safety management system working effectively? <p>1.17.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.</p> <p>1.17.5 The audit procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.</p>
--	---	---

<p>the audit shall be headed by a senior member of the Contractor's head office health and safety team.</p> <p>1.17.6 If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.</p> <p>1.17.7 The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.</p> <p>1.17.8 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.</p> <p>1.17.9 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.</p> <p>1.17.10 The Audits shall not replace the regular health and safety inspections.</p> <p>NK: We think the above sentence is better to be divided two sentences. This is not quite correct but I have divided anyway</p> <p>1.17.11 The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.</p> <p>1.17.12 The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.</p> <p>NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this. I do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly.</p> <p>NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows;(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement. The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.</p> <p>NK: 機構のご意見はいかがでしょうか。</p> <p>1.17.13 Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.</p> <p>NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled. No comment, to be deleted</p> <p>1.17.14 An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.</p>	<p>1.17.6 The audit shall be headed by a senior member of the Contractor's head office health and safety team.</p> <p>1.17.7 If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.</p> <p>1.17.8 The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.</p> <p>1.17.9 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.</p> <p>1.17.10 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.</p> <p>1.17.11 The Audits shall not replace the regular health and safety inspections.</p> <p>1.17.12 The audits shall be conducted at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.</p> <p>1.17.13 The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor. (JC25)</p> <p>JC25: It is not practical that the auditing team of the headquarters visit the Site within 3 to 7 days after the Engineer's instruction.</p> <p>NK: 1.17.11(1.17.12) will be deleted.</p> <p>1.17.14 An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.</p>	<p>1.17.6 The audit shall be headed by a senior member of the Contractor's head office health and safety team.</p> <p>1.17.7 If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.</p> <p>1.17.8 The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.</p> <p>1.17.9 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.</p> <p>1.17.10 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems. --	---	---

<p>(2) All trainers shall be fluent in the language of the persons to be trained.</p> <p>(3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.</p> <p>1.20.5 Records of education and training</p> <p>The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.</p> <p>1.21 Skill Training</p> <p>1.21.1 The Contractor is reminded of his obligations under GC 6.9 [<i>Contractor's Personnel</i>] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.</p> <p>1.21.2 The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects.</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.</p> <p>This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety</p>	<p>(2) All trainers shall be fluent in the language of the persons to be trained.</p> <p>(3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.</p> <p>1.20.5. Records of education and training</p> <p>The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.</p> <p>1.21 Skill Training</p> <p>1.21.1. The Contractor is reminded of his obligations under GC 6.9 [<i>Contractor's Personnel</i>] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. (JC29)</p> <p>JC29: Not needed to say so in the specification.</p> <p>NK: Will delete as commented.</p> <p><u>1.21.2. The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if the qualified, skilled and experienced Contractor's Personnel required by the Contract is not available in the Country or not available in the numbers or of the standards of for the periods required, the Contractor shall:</u></p> <p><u>(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or</u></p> <p><u>(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.</u></p> <p>(JC30)</p> <p>JC30: May be the case in many projects, but skilled staff may be sometimes locally mobilized.</p> <p>NK5/6: Will modify as commented.</p>	<p>(2) All trainers shall be fluent in the language of the persons to be trained.</p> <p>(3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.</p> <p>1.20.5 Records of education and training</p> <p>The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.</p> <p>1.21 Skill Training</p> <p>(NK 注: 1.21 は変更が複雑であり、以下は整理が不十分です。この後、DFR 用に変更がされています。)</p> <p>1.21.1 The Contractor is reminded of his obligations under GC 6.9 [<i>Contractor's Personnel</i>] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. (JC29)</p> <p><u>1.21.2 The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if the qualified, skilled and experienced Contractor's Personnel required by the Contract is not available in the Country or not available in the numbers or of the standards of for the periods required, the Contractor shall:</u></p> <p><u>(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or</u></p> <p><u>(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.</u></p> <p>(JC30)</p> <p>NK5/6: Will modify as commented.</p> <p><u>Notes for NK</u></p> <p><i>This is already reflected in FIDIC, 6.1 second paragraph. The suggested change actually changes the FIDIC contract requirements by introducing the wording: "to the extent practicable and reasonable". Such a change is not necessary and not recommended.</i></p> <p><i>I had drafted this clause to strengthen the requirements for importing foreign resources, obviously where they are not available locally. The suggested added wording has no contractual meaning and will definitely weaken if not destroy any attempt by the Engineer (or Employer) to impose stronger requirements for importing foreign skilled persons even though the Employer is already paying for it. I note the other deletions, which also tend to weaken requirements.</i></p> <p>This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion <u>and Defect Notification</u></p>
---	---	---

<p>throughout the Time for Completion.</p> <p>Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:.</p>	<p>This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion <u>and Defect Notification Period</u>.(JC31)</p> <p>JC31: The Contractor also has to work during DNP and need skilled staff.</p> <p>NK5/6: Will modify as commented.</p> <p>Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:. (JC32)</p> <p>JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences? I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.</p> <p>NK5/6: To MD, please review the comment and modify the sentences.</p>	<p><u>Period</u>.(JC31)</p> <p>NK5/6: To MD, please review the comment and modify the sentences.</p> <p><i>Your comment requests that training be provided for other workers in addition to operation leaders.</i></p> <p><i>Your original draft required training only for operation leaders and workers engaged in dangerous work.</i></p> <p><i>Your draft documents contained requirements which were very unclear and which had little or actually no connection with the contract.</i></p> <p><i>Dangerous work is covered by 1.20.2</i></p> <p><i>Please refer to my comments on your original draft which I have explained since; I have advised that the Contractor already has a basic obligation to provide appropriately qualified, skilled and experienced personnel under the contract (see GC 6.1 and 6.9) and these contract requirements must not be compromised.</i></p> <p><i>I had explained that it is illogical and contractually incorrect to require the Contractor to provide skilled personnel (where necessary importing skilled foreign personnel) under the Contract, expect the Employer to pay for this via the Contract Price, yet then assign non-compliant workers and other personnel and expect the Employer to pay for further skill training.</i></p> <p><i>If this is required, the extent to which this is to be applied clearly needs to be carefully defined and controlled otherwise it can be argued that having complied with the training requirements he is not responsible for providing any additional capable and skilled persons unless the employer allows and pays for more skill training.</i></p> <p><i>I am reluctant to add further skill training without knowing your precise additional requirements. Can you therefore please describe who shall receive skill training, to what level, with what resources, how to be managed and paid for and how this is to be made compatible with the Contract and I will edit your text as necessary and include this against earlier advice.</i></p> <p><i>On the basis that skill training is only required to develop the skills of local operation leaders (which is still stretching the contract), I suggest editing this subclause as follows:</i></p> <p><u>1.21.21.21.3</u> Further Training of Operation Leaders</p> <ol style="list-style-type: none"> (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled workforce that he considers are suitable to act as future Operation Leaders. (2) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to
---	--	---

<p>(1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.</p> <p>(2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer <u>for his consent</u>.</p> <p>The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p><u>Details of such training shall be submitted with the Bid Stage Safety Plan.</u></p> <p>NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.</p> <p><i>This has been repeatedly discussed and explained. If safety is to improve, this must happen from Bid stage onwards. Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.</i></p> <p>NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."</p> <p>1.21.3 Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.</p> <p>1.21.4 When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries</p> <p>NK: This sentence may be necessary to be reviewed.</p> <p><i>Please review the above. Control is essential otherwise the working trainers will be demobilised too soon. Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.</i></p> <p>NK: 機構のご意見はいかがでしょうか？</p> <p>1.21.5 It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.</p>	<p>(1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.</p> <p>(2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer <u>for his consent</u>.</p> <p>The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p><u>Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.</u></p>	<p>develop their management abilities, skill levels and awareness of international safety and quality standards.</p> <p>(3) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.</p> <p>(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.</p> <p>(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p>(6) <u>Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.</u></p> <p><i>I cannot agree with or recommend the deletion of the clause regarding consent of the Engineer before demobilisation of foreign Operation Leaders, it is written for a purpose. It is sometimes difficult to get a contractor to assign any skilled foreign personnel on JICA projects in remote locations even when they are clearly necessary, for reasons of safety, quality and performance. Even when mobilised for example to comply with this clause, the contractor will have an incentive to demobilise such personnel as soon as he possibly can to optimise his profits rather than consider safety, etc.. I have recommended that some control is vital i.e. review and consent of the Engineer.</i></p> <p><i>Other clauses that have now been deleted were also necessary to add to the flavour of this sensitive clause.</i></p> <p><i>It now has little meaning or effect and basically a unscrupulous contractor will can now argue that the assignment of some foreign operation leaders and trainers for a short period complies with the requirements, his contract obligations are then all satisfied and having demobilised same persons, the employer is responsible for inadequacies beyond that point by not specifying more training.</i></p> <p><i>Please see above; the deletion of the other clause is not recommended. This training clause is an unusual requirement which is not compatible with the contract and it deserves full explanation as there is otherwise a risk that it will be misused in future.</i></p>
--	--	---

<p>1.21.6 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [<i>Contractor's Personnel</i>]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.</p> <p>NK: We think "for his consent" can be replaced with "for information" as written in Issue 6. See above notes, it really should be "consent"</p> <p>1.21.7 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.</p> <p>1.22 Dangerous Work</p> <p>1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.</p> <p>1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.</p> <p>1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [<i>Permit System</i>] that is to be worn conspicuously and be available for validation by the Engineer.</p> <p>I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)</p> <p>1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist trained personnel. ---	--	---

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to “for example” as in the following subclause.~~

- ~~(2) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~
- ~~(3) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~
- ~~(4) Diving Works.~~

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

~~I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.~~

- 1.23.3 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.
- 1.23.4 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.
- 1.23.5 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

~~1.24.1 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor’s Personnel and Employer’s Personnel and all other persons who are entitled to be on the Site.~~

NK-1: JICA commented to modify and add “so specified in the Specification” to 1.20.2 in Issue 6.

NK consider that “as specified in Particular Safety Specification” between “the Works,” and “the Contractor” if we follow JICA’s comment.

NK-2: JICA commented that they want to use “as specified in Particular Safety Specification” more than “unless otherwise specified in Particular Safety Specification” because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA’s request to use “as specified in PSSS”?

- 1) I do not recommend any use or reliance on “as specified in PSSS”. If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.
- 2) “Unless otherwise specified” followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a “failsafe” in JSSS production.
- 3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.

- 1.23.3. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.
- 1.23.4. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.
- 1.23.5. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. (JC40)

JC40: Moved to 1.24.5.

NK5/6: Will modify as commented.

- 1.23.3 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.
- 1.23.4 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.
- 1.23.5 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. (JC40)

NK5/6: Will modify as commented.

No comment

<p>4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.</p> <p>5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.</p> <p>NK-3: JICA want to clarify who “other persons who are entitled to be on the Site” are, and where “other places (if any) are.</p> <p>“other persons who are entitled to be on the Site” is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor’s Personnel and Employer’s Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor’s, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor’s compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.</p> <p>“and any other places as may be specified in the Contract as forming part of the Site” comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.</p> <p>NK: 貴機構のご意見はいかがでしょうか？</p> <p>1.24.2 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.3 Unless otherwise specified in the Particular Safety Specification, medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site.</p> <p>NK: JICA want to clarify where “other places (if any) are.</p> <p>Deleted see above</p> <p>1.24.4 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.5 Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include:</p>	<p>1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.2. (JC41) <u>Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge for the use of the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.</u></p> <p>JC41: Free of charge for everyone” need not to be as default. I don’t believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor! If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.</p> <p>JC42: See comment to 1.2.2 (6).</p> <p>NK5/6: Will modify as commented.</p> <p>NK5/6: YH inquired if the sentence of “the family members of all other persons” is necessary to be deleted.</p> <p>1.24.3. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.4. <u>The Contractor shall provide the following medical and first aid facilities:</u></p> <p>(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.</p>	<p>1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.2 (JC41) <u>Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge for the use of the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.</u></p> <p>NK5/6: Will modify as commented.</p> <p>NK5/6: YH inquired if the sentence of “the family members of all other persons” is necessary to be deleted.</p> <p><i>Yes, this applies only to remote sites as described originally in 1.24.1.</i></p> <p><i>As 1.24.1 is moved then maybe this needs to be moved also or it needs editing, “such medical services” is not then correct</i></p> <p><i>I had originally tried always to use the expression “Unless otherwise specified in the Particular Safety Specification” so what is written in JSSS is a safe default and the risk of error is therefore reduced. This has now been changed here and in 1.36 so reliance is now placed upon the PSS which I had tried to avoid.</i></p> <p>1.24.3 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.4 <u>The Contractor shall provide the following medical and first aid facilities:</u></p>
--	---	--

<p>(1) Medical staff to be assigned at the Site.</p> <p>(2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.</p> <p>(3) Emergency <u>medivac</u> services where necessary.</p> <p>NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.</p> <p>I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?</p> <p>(4) Medical Facilities on the Site together with description of equipment and consumables.</p> <p>(5) Temporary water and power supply to maintain use during mains supply failure.</p> <p>(6) Type of communication facilities and measures for emergency response.</p> <p>(7) Deployment of appropriate first aid appliances, aids, instruments and medicines.</p> <p>(8) First aid training, appointment of first aiders and dissemination of information.</p>	<p>(2) First aid training, appointment of first aiders and dissemination of information.</p> <p>(3) Type of communication facilities and measures for emergency response.</p> <p>(4) Medical Facilities on the Site together with description of equipment and consumables.</p> <p>(5) Temporary water and power supply to maintain use during mains supply failure.</p> <p>(6) <u>Transportation facilities</u> to be provided to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.</p> <p>(6)(7) <u>Additional facilities specified in the Particular Safety Specification, if any.</u></p> <p>JC43: Where the Site is located in a large distance from a sufficiently equipped hospital.</p> <p>NK5/6: Will modify as commented.</p> <p>(7)(8) <u>Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.(JC44)</u></p> <p>JC44: See comment to 1.2.2 (6)</p> <p>NK5/6: Will modify as commented.</p>	<p><u>(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.</u></p> <p><u>(2) First aid training, appointment of first aiders and dissemination of information.</u></p> <p><u>(3) Type of communication facilities and measures for emergency response.</u></p> <p><u>(4) Medical Facilities on the Site together with description of equipment and consumables.</u></p> <p><u>(5) Temporary water and power supply to maintain use during mains supply failure.</u></p> <p><u>(6) Transportation facilities</u> to be provided to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.</p> <p>(3)(7) <u>Additional facilities specified in the Particular Safety Specification, if any.</u></p> <p>NK5/6: Will modify as commented.</p> <p>Your above added clause 1.24.5 is not correct contractually, is not necessary and I do not recommend that it is included, please refer to notes under 1.24.6 below.</p> <p>(4)(8) <u>Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.(JC44)</u></p> <p>NK5/6: Will modify as commented.</p> <p>I do not recommend that your suggested changes are made.</p> <p>Please refer to GC 6.7 [Health and safety] which in terms of Contractor's basic H and S obligations, should apply and prevail. This is why I had carefully worded this clause and stated "to comply with his obligations under the Contract".</p> <p>By changing this to "as specified in the Particular Safety Specification" will change the basic requirements of the Contract and should not be done. Ignoring ambiguity and priorities, whatever is stated in the PSS (unless exactly the same as GC 6.7) will unnecessarily and incorrectly change the contract.</p> <p>Similarly, it is not necessary to define or restrict the services and facilities to be provided as has been attempted in your added 1.24.5 above. I do not recommend that your clause is added meaning that the general requirements of GC 6.7 continue to apply.</p> <p>The added clause 1.24.5 is not correct anyway as for example "ambulance service" which you have deleted is a requirement of the contract anyway.</p> <p>To assist the Contractor with his Bid, I had suggested that the Employer/consultant may wish to assist the Contractor by stating actual site requirements in the PSS but not amending the basic requirements of the contract in the process .</p> <p>On balance I do not see why any real change is necessary to this clause and what is suggested is confusing rather than improving.</p>
---	---	--

<p>1.24.6 Where the Works include the following for example, the Contractor shall train selected Contractor's Personnel to perform rescue operations in a safe manner in the event of any accident:</p> <p>(1) Work on or near existing electrical equipment, cables, wiring, services and systems.</p> <p>(2) Dangerous Work such as Confine Spaces, work at height.</p> <p>NK: We consider describing example as above.</p> <p>Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary</p> <p>(3) Diving Work.</p> <p>(4) Similar special circumstances.</p> <p>1.24.7 All rescue team members in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].</p> <p>1.24.8 Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].</p> <p>NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.</p> <p>Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid].</p> <p>1.25 Measures at the Time Accidents Occur</p> <p>1.25.1 When an accident occurs, the HSO the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:</p> <p>NK: JICA added in the last comment.</p> <p>NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6.</p> <p>I disagree completely and do not recommend this (or any such) change . As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control</p>	<p>1.24.5. <u>The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. Workers so trained (JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.</u></p> <p>JC45: Merged with 1.22.6</p> <p>NK5/6: Will modify as commented.</p> <p>(10) (JC46)</p> <p>JC46: Diving work is also Dangerous Work</p> <p>NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.</p> <p>1.24.6. <u>Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)</u></p> <p>JC47: Move from 1.22.</p> <p>This should be "may" since the nature of Works may vary?</p> <p>NK5/6: To MD, please review this comment.</p> <p>1.24.7. <u>If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC48)</u></p> <p>JC48: Move from 1.22.</p> <p>NK5/6: Will modify as commented.</p> <p>1.24.8. <u>Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].</u></p> <p>1.24.9. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].</p> <p>NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.</p> <p>Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid]. (JC49)</p> <p>JC49: Agree.</p> <p>NK5/6: Will modify as agreed.</p> <p>1.25 Measures at the Time Accidents Occur</p> <p>1.25.1 When an accident occurs, the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:</p> <p>NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6. (JC50)</p> <p>I disagree completely and do not recommend this (or any such) change . As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.</p>	<p>1.24.2. The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. Workers so trained (JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.</p> <p>1.24.3. <u>Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)</u></p> <p>NK5/6: To MD, please review this comment.</p> <p><i>It should be "shall", because where the nature of the Works so dictates, it "shall" be provided not "may" otherwise compliance appears optional, which is not the intention.</i></p> <p>1.24.4. <u>If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC48)</u></p> <p>1.24.5. <u>Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].</u></p> <p>1.24.6. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].</p> <p>NK5/6: Will modify as agreed.</p> <p><i>No comment</i></p> <p>1.25 Measures at the Time Accidents Occur</p> <p>1.25.1 When an accident occurs, the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:</p> <p>NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6. (JC50)</p> <p>NK5/6: Will modify as agreed.</p> <p><i>For the purposes of safety, the HSO must immediately take this action when he is aware of it and this should remain as his duty, not the contractor as you suggest. The interests are different and if immediate action by HSO is not taken, it should be the HSO that is</i></p>
---	--	---

<p>functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.</p> <p>NK: 貴機構のご意見はいかがでしょうか</p> <p>(1) Safely locate and extract casualties.</p> <p>(2) Provide first aid treatment at the Site.</p> <p>(3) Implement Secondary accident prevention activities, including:</p> <p>(a) Preserving the accident site, make safe and prevent anyone interfering or entering;</p> <p>(b) Discontinuing construction work related to or in the vicinity of the accident; and</p> <p>(c) Implementing any further measures instructed by the Engineer.</p> <p>1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.</p> <p>(1) The Contractor shall inform the Engineer and submit details of any accident.</p> <p>(2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.</p> <p>(3) The Accident Report shall include details of the HSO's the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].</p> <p>Please see above notes on this subject. This should remain as the HSO, I disagree and do not recommend this (or any such) change.</p> <p>1.25.3 For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].</p> <p>1.26 Emergency Response Plan</p> <p>1.26.1 <u>To the extent reasonably possible</u>, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and as far as reasonably possible, shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.</p> <p>The Contractor shall the take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.</p> <p>NK-1: Can we delete one of two "reasonably possible" above?</p> <p>Yes, delete as above</p> <p>NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).</p> <p>With the changes to your draft that have now been agreed, I have already modified JSS</p>	<p>JC50: Agree.</p> <p>NK5/6: Will modify as agreed.</p> <p>(1) Safely locate and extract casualties.</p> <p>(2) Provide first aid treatment at the Site.</p> <p>(3) Implement Secondary accident prevention activities, including:</p> <p>(a) Preserving the accident site, make safe and prevent anyone interfering or entering;</p> <p>(b) Discontinuing construction work related to or in the vicinity of the accident; and</p> <p>(c) Implementing any further measures instructed by the Engineer.</p> <p>1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.</p> <p>(1) The Contractor shall inform the Engineer and submit details of any accident.</p> <p>(2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.</p> <p>(3) The Accident Report shall include details of the HSO's the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].</p> <p>1.25.3 For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].</p> <p>1.26 Emergency Response Plan</p> <p>1.26.1 <u>To the extent reasonably possible</u>, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.</p> <p>The Contractor shall the take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, <u>and to avoid</u>, overcome or lessened the effects <u>to a reasonable extent</u>. (JC51)</p> <p>JC51: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering into contract" or not.</p> <p>NK5/6: Will modify as commented.</p>	<p><i>held responsible.</i></p> <p>(1) Safely locate and extract casualties.</p> <p>(2) Provide first aid treatment at the Site.</p> <p>(3) Implement Secondary accident prevention activities, including:</p> <p>(a) Preserving the accident site, make safe and prevent anyone interfering or entering;</p> <p>(b) Discontinuing construction work related to or in the vicinity of the accident; and</p> <p>(c) Implementing any further measures instructed by the Engineer.</p> <p>1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.</p> <p>(1) The Contractor shall inform the Engineer and submit details of any accident.</p> <p>(2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.</p> <p>(3) The Accident Report shall include details of the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].</p> <p>1.25.3 For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].</p> <p>1.26 Emergency Response Plan</p> <p>1.26.1 To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.</p> <p>The Contractor shall take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, <u>and to avoid</u>, overcome or lessened the effects <u>to a reasonable extent</u>. (JC51)</p> <p>NK5/6: Will modify as commented.</p> <p><i>I give no further comment</i></p>
--	---	---

2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it .

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or portal-of tunnelling of sufficient strength, durability and suitability.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it . (JC52)

JC52: Thank you for being non-native friendly. FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage from such flooding, earthquake or volcanic activity.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

- (2) Provision of temporary support to all sides and soffits of excavations or portal-of portal-of (JC54) tunnelling of sufficient strength, durability and suitability.

JC54: Better to add.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage from such flooding, earthquake or volcanic activity.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

NK5/6: Will modify as commented.

No comment

- (2) Provision of temporary support to all sides and soffits of excavations or portal of (JC54) tunnelling of sufficient strength, durability and suitability.

JC54: Better to add.

<p>NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.</p> <p>My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?</p> <p>NK: We accept to leave as it is</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p> <p>This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.</p> <p>NK: We consider that the Contractor may have difficulty to assume what activities can be made. We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.</p> <p>Which underlining? In 1.26.1?</p> <p>Please see 1.26.6 for my assumption of your requirements.</p> <p>Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.</p> <p>Please note:</p> <ol style="list-style-type: none"> 1) The Contractor can only plan for what he can reasonably foresee or anticipate and 2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19. 3) This only leaves simple search and contact activities which has little or no meaning. <p>JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.</p> <p>Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.</p> <p>NK: 1.26.5 はさらに検討すべきかと考えておりますが、とりあえずこのままで提出致します。貴機構のご意見がありましたらご教示願います。</p>	<p>NK5/6: Will modify as commented.</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p> <p>(JC55)NK: We consider that the Contractor may have difficulty to assume what activities can be made. JC55: Better to jump to 1.26.6 without this. NK5/6: Will modify as commented.</p>	<p>NK5/6: Will modify as commented.</p> <p>No comment</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p> <p>NK5/6: Will modify as commented. No further comment</p>
--	--	--

<p>1.26.6 The Emergency Response Plan, shall cover:</p> <ol style="list-style-type: none"> (1) Evacuation plan, showing evacuation routes and assembly points. (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency. 1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.
We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1 Refer to GC 2.3 [Employer's Personnel] and GC 4.6 [Co-operation] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [Safety Procedures] and GC 4.18 [Protection of the Environment].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3 If any other contractors are employed by the Employer or if any legally

1.30 Health and Safety Coordination with Other Contractors

1.30.1 Refer to GC 2.3 [Employer's Personnel] and GC 4.6 [Co-operation] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [Safety Procedures] and GC 4.18 [Protection of the Environment].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3 If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:

1.30 Health and Safety Coordination with Other Contractors

1.30.1 Refer to GC 2.3 [Employer's Personnel] and GC 4.6 [Co-operation] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any relevant authorities legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

I have now given definition to "relevant authorities" and therefore suggest the above correction

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [Safety Procedures] and GC 4.18 [Protection of the Environment].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3 If any other contractors are employed by the Employer or if any relevant authorities legally constituted public authorities responsible to the Employer are ~~is~~ working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;

<p>constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:</p> <p>(1) Frequency of the meetings: as and when considered necessary by Engineer.</p> <p>(2) Unless otherwise agreed, attendees shall include representatives of:</p> <p>(a) The Employer;</p> <p>(b) The Contractor;</p> <p>(c) Other contractors employed by the Employer; and</p> <p>(d) Personnel of any legally constituted public authorities.</p> <p>NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.</p> <p>I don't understand your comment, please advise what change you require (本 Q&A は無視願います。)</p> <p>(3) Agenda should relate to coordination among different contractors including for example:</p> <p>(a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;</p> <p>(b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;</p> <p>(c) Accidents, injuries in the previous period and measures to be taken to prevent any reoccurrence;</p> <p>(d) Status of resolution of previous problems;</p> <p>(e) Items to be coordinated with police, fire department and other related organisations;</p> <p>(f) Compliance and registration requirements under the Laws of the Country;</p> <p>(g) Safety and health awards, media attention and the like; and</p> <p>(h) Other matters.</p> <p>1.30.4 Report on the Health and Safety Coordination Meetings:</p> <p>(1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.</p> <p>(2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.</p> <p>(3) A further copy shall be included in the Engineer's monthly progress report.</p>	<p>(a) The Employer;</p> <p>(b) The Contractor;</p> <p>(c) Other contractors employed by the Employer; and</p> <p>(d) Personnel of any legally constituted public authorities.</p> <p>(3) Agenda should relate to coordination among different contractors including for example:</p> <p>(a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;</p> <p>(b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;</p> <p>(c) Accidents, injuries in the previous period and measures to be taken to prevent any reoccurrence;</p> <p>(d) Status of resolution of previous problems;</p> <p>(e) Items to be coordinated with police, fire department and other related organisations;</p> <p>(f) Compliance and registration requirements under the Laws of the Country;</p> <p>(g) Safety and health awards, media attention and the like; and</p> <p>(h) Other matters.</p> <p>1.30.4 Report on the Health and Safety Coordination Meetings:</p> <p>(1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.</p> <p>(2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.</p> <p>(3) A further copy shall be included in the monthly progress report. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.</p> <p>1.34.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.</p>
--	--	---

<p><i>We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.</i></p> <p>Deleted see above.</p> <p>1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.</p> <p>1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.</p> <p>1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.</p> <p>1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.</p> <p>1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.</p> <p>1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.</p> <p>1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [<i>Safety Reports</i>].</p>	<p>1.34.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.</p> <p>1.34.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.</p> <p>1.34.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.</p> <p>1.34.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.</p> <p>1.34.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.</p> <p>1.34.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [<i>Safety Reports</i>].</p>	<p>1.34.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.</p> <p>1.34.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.</p> <p>1.34.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.</p> <p>1.34.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.</p> <p>1.34.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.</p> <p>1.34.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [<i>Safety Reports</i>].</p>
<p>1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE</p> <p>1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p>	<p>1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE</p> <p>1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p>	<p>1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE</p> <p>1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p>

<p>1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO for his delegated and technically qualified assistant at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system. We want to ask you to modify the 1.35.2 as the above.</p> <p>As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.</p> <p>I do not recommend your suggested change.</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.</p> <p>If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p> <p>1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:</p> <p>(1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.</p> <p>(2) New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in</p>	<p>1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected <u>by the HSO (JC60)</u> at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system. We want to ask you to modify the 1.35.2 as the above.</p> <p>As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.</p> <p>I do not recommend your suggested change. JC60: Agree with MD NK5/6: Will modify as commented.</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. <u>The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.</u></p> <p>If, as a result, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p> <p>1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:</p> <p>(1) New and up to date Personal Protective Equipment (PPE) and <u>other safety equipment</u> <u>(JC61)</u> of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.</p> <p>JC61: Temporary Works is covered in (2). NK5/6: Will modify as commented.</p>	<p>1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>NK5/6: Will modify as commented. No comment</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. <u>The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.</u></p> <p>If, as a result, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p> <p>1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:</p> <p>(1) New and up to date Personal Protective Equipment (PPE) and <u>other safety equipment and Temporary Works</u> (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.</p> <p>(2) New or <u>up to date recent</u> Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary</p>
--	--	--

<p>full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.</p> <p>(3) Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.</p> <p>NK: We considers in actual basis as follows: <i>Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?</i></p> <p>Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.</p> <p>I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.</p> <p><i>Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.</i></p> <p>Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.</p> <p><i>Can we delete "and Temporary Works" in (2)?</i></p> <p>I do not recommend it.</p> <p><i>Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.</i></p> <p>This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.</p> <p><i>We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too. If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.</i></p> <p>If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.</p> <p>If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.</p> <p><i>We propose to delete the 2nd sentence above.</i></p> <p>I do not agree for above reason but respect your wish. Just delete it.</p> <p><i>In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."</i></p> <p><i>JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair</i></p>	<p>(2) New or recent Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.</p> <p>(11) Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.</p> <p>JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?</p> <p>NK5/6: Will modify as commented.</p>	<p>spare parts and consumables, suitable and safe for use on the Works; and</p> <p><i>I suggest that "recent" is changed to "up to date" to be consistent with clause (1), to give it improved meaning (although still not definitive), particularly in view of the omission of the 5 year age limitation (which was definitive).</i></p> <p>that all of the above will be used correctly and for the purpose intended.</p> <p>(3) Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before delivering the Site (JC62) to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.</p> <p><i>This inspection was originally for the purpose of checking that the equipment was new or less than 5-years old.</i></p> <p><i>However, as the age criteria has now been deleted, there is no reason why the Engineer should inspect the equipment and no criteria by which he can determine that the equipment is compliant or otherwise. This being the case, I recommend that this useful safeguard clause should now be deleted also.</i></p> <p><i>Without clear age, criteria I do not recommend that any inspection would be time limited, could not include a full mechanical or operational check and ultimately will result in personal opinion. It may also be compromise later attempts to reject equipment at site when it is then found to be unsafe.</i></p> <p><i>Had the age criteria still been maintained, agency inspection would be a very easy and possibly more efficient alternative.</i></p> <p>JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?</p> <p>NK5/6: Will modify as commented.</p> <p><i>I note that aside from using the word "recent" which now has no real meaning (see above suggested change) the 5-year age limitation has been deleted here (and in the BDS).</i></p> <p><i>This therefore effectively prevents the engineer from clearly and undisputedly rejecting aged and potentially unsafe or non-compliant equipment including equipment, which might be in good condition but is without modern safety features or which is inherently unsafe.</i></p>
---	--	---

or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old. The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

---	--	---

<p>(4) The Engineer is to be consulted on the types of illness for which reports are to be informed.</p> <p>1.37 Design and Management of Temporary Works</p> <p>1.37.1. Unless otherwise specified in the Particular Safety Specification, <u>the Contractor is</u> required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.</p> <p>Changed already</p> <p>1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [<i>Specified Standards and Regulations</i>] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including <u>Class A Falsework</u>.</p> <p>NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975? <i>Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.</i></p> <p>Please also refer to BS 5975, Foreword, page VII, penultimate paragraph:</p> <p><u>The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.</u></p> <p><u>It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded, I have assume therefore that it is necessary to state the need for Class A Falsework.</u></p> <p><u>Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have, I do recommend that it is studied by JICA and NK to ascertain that it is applicable.</u></p> <p><u>Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [Specified Standards and Regulations] to cover this generally.</u></p> <p><u>Previous clause 1.34.6 has already been deleted.</u></p> <p><u>There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ito san's comment.</u></p> <p>1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p> <p>1.37.5. The Contractor shall prepare and implement suitable procedures whereby</p>	<p>1.37 Design and Management of Temporary Works</p> <p>1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with <u>the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975</u>: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)</p> <p>JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.</p> <p>NK5/6: Will modify as commented.</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.7 [<i>Specified Standards and Regulations</i>] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works (JC69).</p> <p>JC69: delete it?</p> <p>NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.</p> <p>1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p>	<p>1.37 Design and Management of Temporary Works</p> <p>1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with <u>the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975</u>: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)</p> <p>NK5/6: Will modify as commented.</p> <p>No comment</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.7 [<i>Specified Standards and Regulations</i>] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works (JC69).</p> <p>NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.</p> <p>No comment</p> <p>1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p>
--	---	---

<p>all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>].</p> <p>JC: JICA commented as follows: <i>Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.</i> <i>"Necessary qualification" can be combined with 1.34.12 or 1.34.13.</i> <i>Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.</i></p> <p>NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW. <i>As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.</i></p> <p>I understand your comment and have no objection to the deletion of 1.37.6</p> <p>1.37.7. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>(1) The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [<i>Contractor's Method Statements</i>]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.</p> <p>(2) The Engineer has no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [<i>Engineer's Duties and Authority</i>]. Sub Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.</p> <p>I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.</p> <p>Most JICA funded projects are large projects and will have a Temporary Works content.</p> <p>I suggest that the following alternative clause should be deleted to make these important requirements very clear.</p>	<p>1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>].</p> <p>1.37.7 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>(1) The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [<i>Contractor's Method Statements</i>]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.</p> <p>(2) The Engineer <u>may</u> review Temporary Works design for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 <u>or any other acceptable standard in accordance with JSSS 1.37.2.</u></p> <p>JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?</p> <p>NK5/6: Will modify as commented.</p>	<p>1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>].</p> <p>1.37.7 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>(1) The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [<i>Contractor's Method Statements</i>]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.</p> <p>(2) The Engineer <u>may</u> review Temporary Works design for those parts which he considers to be of vital importance for safety. --	---	--

<p>If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.</p> <p>The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS.</p> <p>NK: MD氏は上記の理由で次の1.37.8の条項は不要であると考え削除を提案しています。ご検討をお願いします。</p> <p>1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:</p> <ol style="list-style-type: none"> (1) Appointment of appropriately qualified and experienced staff. (2) Preparation of adequate Temporary Works designs. (3) Independent internal or external checking of the Temporary Works Design. (4) Preparation of a Temporary Works register and records (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment. (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to: <ol style="list-style-type: none"> (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling. <p>NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause, we consider HSO will be replaced with Contractor as JICA commented: Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?</p> <p>The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.</p> <p>However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO, I believe that it is a correct requirement which in practice should not be more than a counter signature.</p> <p>1.37.9. In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.</p> <p>NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?</p>	<p>1.37.8 Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:</p> <ol style="list-style-type: none"> (1) Appointment of appropriately qualified and experienced staff. (2) Preparation of adequate Temporary Works designs. (3) Independent internal or external checking of the Temporary Works Design. (4) Preparation of a Temporary Works register and records (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment. (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to: <ol style="list-style-type: none"> (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a suitable sign showing it as complete and safe to use; and <p>1.37.9 In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.</p>	<p>1.37.8 Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:</p> <ol style="list-style-type: none"> (1) Appointment of appropriately qualified and experienced staff. (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to: <ol style="list-style-type: none"> (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a suitable sign showing it as complete and safe to use; and <p>1.37.9 In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.</p>
--	---	---

<p>I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.</p> <p>The following clause can be deleted</p> <p>1.37.10. For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].</p> <p>1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. and shall obtain the consent of the Engineer.</p> <p>NK: We think 1.3.12 is too long sentence to clearly understand requirement.</p> <p>Yes I agree and have reworded this as above.</p> <p>Q-1 Is consent by the Engineer given to specialist staff?</p> <p>This part can be deleted.</p> <p>Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?</p> <p>We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.</p> <p>I have reworded all, please refer to the above</p> <p>1.38 User Training</p> <p>NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below: MM: This section will be left in the next draft and perhaps deleted in the final draft.</p> <p>NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.</p> <p>I recommend that it be included here as a default requirement.</p> <p>NK: 貴機構のご意見はいかがでしょうか？</p> <p>1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.</p> <p>1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.</p> <p>1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:</p> <p>(1) Safe system and Plant use, operation and process control.</p>	<p>1.37.10 For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].</p> <p>1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.12 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.</p> <p>1.38 User Training (Deleted) (JC71)</p> <p>JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.</p> <p>NK5/6: Will delete as commented.</p>	<p>1.37.10 For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].</p> <p>1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.12 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.</p> <p>1.38 (JC71)</p> <p>NK5/6: Will delete as commented.</p> <p>Note for NK: This is safety during construction, it refers to the provision of effective safety training for equipment and systems provided during under ODA construction contracts.</p>
--	--	---

- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
 - ~~(3) Training in use of all hardware and software packages.~~
 - ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
 - ~~(5) Recording and reporting.~~
 - ~~(6) Emergency operation procedure.~~
 - ~~(7) Maintenance management procedures.~~
 - ~~(8) Inventory and store control systems.~~
 - ~~(9) Particular safety procedures, including:~~
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~
- ~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~
- ~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~
- ~~1.38.6. Other requirements for User Training—~~
- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
 - ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~
 - ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
 - ~~(4) The Engineer may choose to send representatives to witness the training.~~
 - ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
 - ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
 - ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~

- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.~~
- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:
MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

NK: 貴機構のご意見はいかがでしょうか？

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy if the further clearance certificate together with any further instructions from the Engineer.

1.39 Unexploded Ordnance (UXO)

- 1.39.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy if the further clearance certificate together with any further instructions from the Engineer.

1.38 Unexploded Ordnance (UXO)

- 1.38.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.38.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.38.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.38.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.38.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy if the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS Annex 1.1: Definitions and Abbreviations	ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS Annex 1.1: Definitions and Abbreviations	ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS Annex 1.1: Definitions and Abbreviations
<p>A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:</p> <ol style="list-style-type: none"> (1) “Executing Agency” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer. (2) “GC” and “PC” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause. (3) “Health and Safety Officer” or “HSO” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [<i>Health and Safety</i>] as construed in accordance with JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>]. (4) “JICA Standard Safety Specification” or “JSSS” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works. (5) “Method Statement” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [<i>Contractor’s General Obligations</i>] and supplemented by JSSS 1.9 [<i>Contractor’s Method Statements</i>]. (6) “Operation Leader” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”. (7) “OSHA” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor. (8) “Particular Safety Specification” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the 	<p>A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:</p> <ol style="list-style-type: none"> (1) “Executing Agency” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer. (8) “Particular Safety Specification” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the

- health and safety requirements for the Project as illustrated in Annex 1.4 [Figures and Illustrations].
- (9) “**Project Safety Specification**” means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification] as illustrated in Annex 1.4 [Figures and Illustrations].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].
- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 0.)

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured ‘diamond’ symbols.

- health and safety requirements for the Project.
- (9) “**Project Safety Specification**” means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].
- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured ‘diamond’ symbols.

- health and safety requirements for the Project.
- (9) “**Project Safety Specification**” means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].
- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

Please refer to my earlier notes repeated above from the previous issue of the draft.

Following my further review and study, I feel that this is an important issue which if not addressed, may create unnecessary future risk for JICA

Please refer to my notes on this subject under Clause 1.3.2 and consider changing the title of the “User Guide” perhaps to “Guide for the Use of Executing Agencies”

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured ‘diamond’ symbols.

<p>classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.</p> <p>(5) “Dangerous Work” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.</p> <p>For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p> <p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as</p>	<p>classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. ---	--	--

I suggest that this will be reworded something like the following, which I will do when I get back to work on the User Guide further.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add "outline (or policy?) of risk assessment" as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) "Safety Plan" means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods,.....

NK5/6: To MD, we would like to ask you to add as commented.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated. (JC72)

NK5/6: To MD, we would like to ask you to add as commented.

See (2) below:

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic company policies on risk assessment and health and safety management,

(compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

Transferred to below:

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site

<p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.</p> <p>(5) Bidder's Safety Management System</p> <p>Refer to JSSS 1.5 [<i>Contractor's Safety Management System</i>]</p> <p>Confirm which scheme the Bidder is accredited under.</p> <p>(6) Temporary Works</p> <p>Refer to JSSS 1.37 [<i>Design and Management of Temporary Works</i>].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.</p> <p>NK: JICA added "outline" in the last comment.</p> <p>OK I have amended</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>NK: We consider that the above sentence is independent clause from (6) above and locate in some place.</p> <p>I have edited as above</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [<i>Contractor's General Obligations</i>], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>NK: May the title be Works?</p> <p>I have edited as above</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [<i>Dangerous Work</i>]</p>	<p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.</p> <p>(5) Bidder's Safety Management System (JC73)</p> <p>Refer to JSSS 1.5 [<i>Contractor's Safety Management System</i>]</p> <p><u>Describe how</u> the Bidder <u>institutes the Safety Management System</u>.</p> <p>JC73: Modified in accordance with modification to JSSS1.5</p> <p>NK5/6: Will modify as commented.</p> <p>(6) Temporary Works</p> <p>Refer to JSSS 1.37 [<i>Design and Management of Temporary Works</i>].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [<i>Contractor's General Obligations</i>], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [<i>Dangerous Work</i>]</p>	<p>safety teams.</p> <p>Transferred from above</p> <p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.</p> <p>(5) Bidder's Safety Management System (JC73)</p> <p>Refer to JSSS 1.5 [<i>Contractor's Safety Management System</i>]</p> <p><u>Describe how</u> the Bidder <u>institutes the Safety Management System</u>.</p> <p>NK5/6: Will modify as commented.</p> <p>No comment</p> <p>(6) Temporary Works</p> <p>Refer to JSSS 1.37 [<i>Design and Management of Temporary Works</i>].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [<i>Contractor's General Obligations</i>], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [<i>Dangerous Work</i>]</p>
--	--	--

<p>A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [<i>Definitions and Abbreviations</i>] and GC 4.1 [<i>Contractor's General Obligations</i>].</p> <p>(11) Permit to Work System</p> <p>Refer to JSSS 1.23 [<i>Permit to Work System</i>]</p> <p>A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.</p> <p>(12) Safety Measures for Contractor's Equipment</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.</p> <p>(13) Proposed Health and Safety Incentive Scheme</p> <p>Refer to JSSS 1.34 [<i>Health and Safety Incentive Schemes</i>]</p> <p>A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.</p> <p>(14) Safety Information Sharing and Communications Policy</p> <p>A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.</p> <p>A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.</p> <p>(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.</p> <p>(16) Site Inspection Plan</p> <p>A description of the methods for Site inspections by the HSO, types of inspection and frequency.</p>	<p>A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [<i>Definitions and Abbreviations</i>] and GC 4.1 [<i>Contractor's General Obligations</i>].</p> <p>(11) Permit to Work System</p> <p>Refer to JSSS 1.23 [<i>Permit to Work System</i>]</p> <p>A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.</p> <p>(12) Safety Measures for Contractor's Equipment</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.</p> <p>(13) Proposed Health and Safety Incentive Scheme</p> <p>Refer to JSSS 1.34 [<i>Health and Safety Incentive Schemes</i>]</p> <p>A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.</p> <p>(14) Safety Information Sharing and Communications Policy</p> <p>A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.</p> <p>A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.</p> <p>(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.</p> <p>(16) Site Inspection Plan</p> <p>A description of the methods for Site inspections by the HSO, types of inspection and frequency.</p>
--	--	--

<p>The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work</p> <p>(17) Site Security</p> <p>A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.</p> <p>The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.</p> <p>(18) Policy for Preventing Traffic Accidents</p> <p>A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.</p> <p>A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.</p> <p>(19) Reporting Procedure for Unsafe Conditions and Behaviour</p> <p>A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.</p> <p>(20) Accident Response Plan</p> <p>(10) Refer to JSSS 1.23.1 [<i>Accident Response Plan</i>]</p> <p>The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.</p> <p>It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.</p> <p>NK: We consider that the above sentence is independent clause from (19) above and locate in some place.</p> <p>Deletion is OK</p> <p>(21) Health Care Plan</p> <p>Refer to JSSS 1.36 [<i>Health Matters</i>]</p> <p>A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.</p> <p>A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.</p>	<p>The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work</p> <p>(17) Site Security</p> <p>A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.</p> <p>The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.</p> <p>(18) Policy for Preventing Traffic Accidents</p> <p>A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.</p> <p>A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.</p> <p>(19) Reporting Procedure for Unsafe Conditions and Behaviour</p> <p>A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.</p> <p>(20) Accident Response Plan</p> <p>Refer to JSSS 1.23.1 [<i>Accident Response Plan</i>]</p> <p>The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.</p> <p>(21) Health Care Plan</p> <p>Refer to JSSS 1.36 [<i>Health Matters</i>]</p> <p>A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.</p>	<p>The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work</p> <p>(17) Site Security</p> <p>A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.</p> <p>The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.</p> <p>(18) Policy for Preventing Traffic Accidents</p> <p>A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.</p> <p>A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.</p> <p>(19) Reporting Procedure for Unsafe Conditions and Behaviour</p> <p>A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.</p> <p>(20) Accident Response Plan</p> <p>(11) Refer to JSSS 1.23.1 [<i>Accident Response Plan</i>]</p> <p>The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.</p> <p>(21) Health Care Plan</p> <p>Refer to JSSS 1.36 [<i>Health Matters</i>]</p> <p>A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.</p>

New or recent Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; <p>I note that 5 years has been deleted. Please refer to my further notes under 1.35</p> <p>and that all of the above will be used correctly and for the purpose</p>

<p>intended.</p> <p>The Bidder further declares that he shall:</p> <ol style="list-style-type: none"> 1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks. 2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability. 3. Fully inform workers about hazards; 4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand. 5. Keep accurate records of work-related injuries and illnesses. 6. Perform tests in the workplace, such as air sampling as required by the Safety Specification. 7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged. 8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned. 9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract. 10. Post injury and illness information and data where workers can see them. 11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately. 12. Not retaliate against workers for using their rights under the Laws of the Country. <p>The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.</p> <p>The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.</p> <p>If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".</p>	<p>intended.</p> <p>The Bidder further declares that he shall:</p> <ol style="list-style-type: none"> 1. コメントの追加【伊藤1】: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or

2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.”

コメントの追加【岡本2】: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of “the Site” in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the “Site” in 1.2.2, for example:

“Unless otherwise stated in JSSS or the context is otherwise clear, “Site” used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works”.

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

<p>Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.</p> <p>Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:</p> <p>"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."</p> <p>Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.</p> <p>Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward. How do you think?</p> <p>NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:</p> <p>(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.</p> <p>(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.</p> <p>Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.</p>	<p>(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.</p> <p>(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Contract, apply equally and are used in JSSS.</p> <p>Unless specified otherwise or instructed by the Engineer, the issue of JSSS to be used for the Contract shall be that applicable at the Base Date.</p>	<p>(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.</p> <p>(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Contract, apply equally and are used in JSSS.</p> <p>Unless specified otherwise or instructed by the Engineer, the issue of JSSS to be used for the Contract shall be that applicable at the Base Date.</p> <p>(NK注:下記の Project Safety Specification は、User Guide への JICA コメントに従い Project を DFR 版では削除しております。)</p>
<p>1.3 Incorporation of JSSS into the Contract</p> <p>1.3.1 JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The "Project Safety Specification" shall have priority over the other parts of Specification in respect of health and safety matters. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: (Figures and Illustrations), Fig A1.4.1 (Incorporation of JSSS in Bid and Contract Documents) and as follows: (JC3)</p> <p>1.3.2 JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:</p> <p>1.3.3 The Project Safety Specification (including JSSS), and</p> <p>1.3.4 The Technical Specification</p> <p>1.3.5 The priorities of the document comprising the Specification are as follows:</p> <p>1.3.6 Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS.</p> <p>1.3.7.1.3.1 The "Project Safety Specification" shall have priority over the Technical Specification in respect of health and safety matters.</p> <p>NK: Q1: We think it needs to explain/define "Technical Specification" as same as User Guide 1.3.2 (3) The "Technical Specification" shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.</p>	<p>1.3 Incorporation of JSSS into the Contract</p> <p>1.3.1 JSSS shall form a part of the Project Safety Specification which, in turn forms a part of the Specification. The Project Safety Specification shall have priority over the other parts of the Specification in respect of health and safety matters. Within the Project Safety Specification, the Particular Safety Specification shall have priority over JSSS.</p> <p>1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.</p>	<p>1.3 Incorporation of JSSS into the Contract</p> <p>1.3.1 JSSS shall form a part of the Project Safety Specification which, in turn forms a part of the Specification. The Project Safety Specification shall have priority over the other parts of the Specification in respect of health and safety matters. Within the Project Safety Specification, the Particular Safety Specification shall have priority over JSSS.</p> <p>1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.</p>

- コメントの追加 [SS71]: May "that" be replaced "the"?
- コメントの追加 [MJD72R71]: No change necessary it is correct structure and wording
- コメントの追加 [SS73]: I cannot understand the meaning of "that". May "that" be deleted?
- コメントの追加 [MJD74R73]: It is OK but I have added, that, which is applicable
- コメントの追加 [SS75]: JICA commented to delete "Project" in User Guide". Please kindly delete "Project".
- コメントの追加 [MJD76R75]: Thank you, adjusted already
- コメントの追加 [岡本3]:
- Better to avoid using "Technical specification"
- Fig A1.4.1 moved to User Guide
- コメントの追加 [SS77]: JICA commented to delete "Project" in User Guide". Please kindly delete "Project".
- コメントの追加 [MJD78R77]: Thank you, adjusted already

<p><i>Yes I agree but the problem again is that "Specification" is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.</i></p> <p><i>I have added the explanation as above but please note that this is a compromise.</i></p> <p>Q2: Is "other parts of" necessary? <i>Thank you and no, it isn't. see above. (Already deleted.)</i></p> <p>IC3: Better to avoid using "Technical specification" <i>Fig A.1.4.1 moved to User Guide</i></p> <p>NK5/6: No comment to JC because JICA want to modify as they commented.</p> <p>1.3.8 1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.</p> <p><i>I recommend that the following is necessary (JC4)</i></p> <p><i>The User Guide shall not form a part of the Contract.</i></p>	<p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of the Project Safety Specification.</p>	<p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of the Project Safety Specification.</p>
<p>NK: MD proposed the addition above. NK considers it is not necessary. IC4: Not necessary. NK5/6: Deleted as commented.</p> <p>1.4 Compliance with JSSS and Other Regulations</p> <p>1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.</p> <p>1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.</p> <p>1.4.3 The Contractor shall comply fully with the requirements of JSSS Projectas supplemented and modified by the Particular Safety Specification.</p> <p>1.4.4 Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract. (JC5)</p>	<p>1.4.4 If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.</p> <p>1.4.5 Specified Standards</p>	<p>1.4.4 If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.</p> <p>1.4.5 Specified Standards</p>
<p>IC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.</p> <p>NK5/6: Will modify as commented.</p> <p>1.4.5 Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply. (JC6)</p> <p>NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?</p> <p><i>It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.</i></p> <p>IC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.</p> <p>NK5/6: Will delete as commented.</p>		
<p>1.4.6 If, for the particular part of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.</p> <p>NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?</p>	<p>(1) Unless otherwise instructed by the Engineer, a reference to any standard (hereinafter deemed to include specified safety</p>	<p>(1) Unless otherwise instructed by the Engineer, a reference to any standard (hereinafter deemed to include specified safety</p>

コメントの追加 [伊藤4]: Not necessary

コメントの追加 [岡本5]: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

コメントの追加 [岡本6]: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

<p>It is intended for use where we have dropped back to the Laws but there are no particular Laws available.</p> <p>have no objection if both are deleted.</p> <p>NK: NK propose to combine 1.4.5 and 1.4.6 below.</p> <p>If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)</p> <p>There is no JICA comment to the above.</p> <p>1.4.1. Specified Standards and Regulations (JC7)</p> <p>JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.</p> <p>NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.</p> <p>(1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date. (JC8)</p>	<p>regulations or codes) shall mean a reference to the latest issued edition of that standard as at the Base Date of the Contract.</p> <p>(2) Any standard specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard specified.</p> <p>(3) Application of detailed parts of any standards specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</p>	<p>regulations or codes) shall mean a reference to the latest issued edition of that standard as at the Base Date of the Contract.</p> <p>(2) Any standard specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard specified.</p> <p>(3) Application of detailed parts of any standards specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</p>
<p>JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5</p> <p>NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.</p> <p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(3) Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request. (JC9)</p>	<p>(4) Where JSSS refers to the standards of other countries, such reference is only to the technical requirements contained in such standards and not to any related laws or legal enforceability of any of those other countries.</p> <p>1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".</p> <p>1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p> <p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.</p>	<p>(4) Where JSSS refers to the standards of other countries, such reference is only to the technical requirements contained in such standards and not to any related laws or legal enforceability of any of those other countries.</p> <p>1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".</p> <p>1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. コメントの追加 [岡本10]: We don't really understand the meaning of this. ?????

コメントの追加 [伊藤11]: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

コメントの追加 [伊藤12]: OHSAS does not exist any more??

Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

コメントの追加 [伊藤13]: If delete OHSAS above, delete accordingly.

<p>1.5.3 NK5/6: To MD, please review this.</p> <p>1.5.41.5.3 The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)</p> <p>JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.</p> <p>NK5/6: Will modify as commented.</p> <p>1.5.51.5.4 The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent. -</p> <p>NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.</p> <p>I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?</p> <p>It has no little or no meaning otherwise.</p> <p>NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct?この考え方で正しいでしょうか?</p> <p>1.6 Checking and Validation of Submissions</p> <p>1.6.1 In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.</p> <p>NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?</p> <p>Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.</p> <p>JC13a: coordinator.</p> <p>NK5/6: We think so.</p> <p>① For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible. (JC14)</p> <p>NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.</p> <p>This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If</p>	<p>Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.</p> <p>1.7 Contractor's Safety Plans</p> <p>1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:</p> <ol style="list-style-type: none"> (1) That are stated in JSSS. (2) That comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract. コメントの追加【伊藤16】: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).
Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.
We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

コメントの追加【SS79】: May "Bid or" be deleted?
コメントの追加【MJD80R79】: Please do not change it, this has meaning. It means that whatever plan is included in the Bid may be change later if it found to be wrong

コメントの追加【伊藤17】: See 1.2.2 (6)

<p>the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility, and at any time throughout the Time for Completion of the Works.</p> <p>NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?</p> <p>Yes thank you, that is true, but better to delete the phrase rather than add.</p> <p>1.7.6 Bid Stage Safety Plan:</p> <p>(1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [Content of Bid Stage Safety Plan].</p> <p>(2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.</p> <p>1.7.7 Commencement Stage Safety Plan</p> <p>(1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,</p> <p>(2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>(3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.</p> <p>NK: Is it not necessary to specify to review Commencement Stage SP?</p> <p>Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?</p> <p>Just comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. コメントの追加 [岡本21]: The sentence is not complete???

- and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
 - (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
 - (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
 - (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
 - (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that ~~International Diploma~~ issued by the National Examination Board in Occupational Safety and Health (NEBOSH) ~~in UK Level 6 Diploma level~~ or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

JC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience	
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or other courses	University or technical college	in S&H 2 years
					science course	4 years
					other courses	
				Senior high school	in S&H 4 years	
				science course	6 years	
				other courses		
				Others	in S&H 7 years	
				2. Industrial safety consultants.

6	Thailand	Regulation	1)Head Man Level 2)Technique Level 3)High Technique Level 4)Professional Level 5)Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam. or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manager shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management and whom the Contractor considers is qualified and able to perform the duties subject to receiving the consent of the Engineer.

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management and whom the Contractor considers is qualified and able to perform the duties subject to receiving the consent of the Engineer.

1.12.3 Supporting Personnel

1.12.3 Supporting Personnel

<p>Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.</p> <p>NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.</p> <p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country; and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>NK: We consider NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot find such person. Large contractors and European contractors may find them.</p> <p>We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."</p> <p>I have split this clause for clarity.</p> <p>I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.2).</p> <p>It is also subject to receiving the consent of the Engineer.</p> <p>NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.</p> <p>We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.</p> <p>I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.</p> <p>1.12.3 Supporting Staff</p> <p>NK-1: JICA commented and minutes recorded in January as follows:</p> <p>7.1.1 (5) HSO's duties:</p> <p>JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.</p> <p>No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary.</p> <p>Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?</p> <p>Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein.</p> <p>MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.</p>	<p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p>	<p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p>

E24_B2_20200630_FDR 経緯書_1_GeneralRequirementSS-6.docx

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の "The HSO shall inspect work area before starting work..." は、 "The Contractor shall ..."へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence "The HSO shall inspect work area before starting work..." shall be replaced with "the Contractor".

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the word will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it on.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:
 - (a) Supporting personnel are made aware of the requirements for any inspection and the details thereof;
 - (b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work; and
 - (c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.

Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.

- (6) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4 Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:
 - (d) Supporting personnel are made aware of the requirements for any inspection and the details thereof;
 - (e) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work; and
 - (f) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.

Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.

- (6) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4 Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and

コメントの追加【伊藤23】: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO..."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

<p>HSO to sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO ... But how "and the details of any inspection, for" relates to other part of this sentence??" Non-notities would have difficulty to understand.</p> <p>NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence. (次のように分解できるのだと思います。それほど違和感はありませんが。)</p> <p>1) the requirements for any inspection 2) the details of any inspection</p> <p>To MD, we would like to review the sentence because of sentence seems too long.</p> <p>(6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas of the Site (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>JC22: The working areas are not always a part of the Site NK5/6: No comment to JC because JICA want to modify as they commented.</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p> <p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>NK: JICA added "and Authorities" in the last comment. Now changed as above</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p>	<p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p> <p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any part of the Works where the Engineer so instructs in accordance with JSSS 1.11 [Safety Compliance Instructions from the Engineer];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [Supporting Staff]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p>	<p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p> <p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any part of the Works where the Engineer so instructs in accordance with JSSS 1.11 [Safety Compliance Instructions from the Engineer];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [Supporting Staff]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p>
--	---	---

コメントの追加【伊藤24】: The working areas are not always a part of the Site

<p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p> <p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [<i>Supporting Staff</i>]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p> <p>NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:</p> <p><i>(i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;</i></p> <p><i>disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.</i></p> <p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p>	<p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p> <p>(m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;</p> <p>(n) Preparing regular internal and external reports on health and safety activities; and</p> <p>(o) Hazard prediction activity.</p> <p>1.14 Procedure for Resuming the Works</p> <p>1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [<i>HSO - Scope of Duties and Authority</i>] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:</p> <p>(1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.</p> <p>(2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.</p> <p>(3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.</p> <p>(4) If the Engineer gives no such notice of non-compliance for the original proposal within seven (7) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving three (3) days' notice in writing of the resumption date.</p> <p>To be proactive, the Engineer may give consent at any stage within the above stated time scales.</p> <p>(5) The Contractor resumes the Works or part of the Works on the due date.</p>	<p>(j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;</p> <p>(k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;</p> <p>(l) Planning and implementation of various training and education implementation plans;</p> <p>(m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;</p> <p>(n) Preparing regular internal and external reports on health and safety activities; and</p> <p>(o) Hazard prediction activity.</p> <p>1.14 Procedure for Resuming the Works</p> <p>1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [<i>HSO - Scope of Duties and Authority</i>] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:</p> <p>(1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.</p> <p>(2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.</p> <p>(3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. コメントの追加【伊藤31】: May be the case in many project, but skilled staff may be sometimes locally mobilized.

コメントの追加【伊藤32】: The Contractor also has to work during DNP and need skilled staff.

コメントの追加【伊藤33】: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences? I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details-Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

⊕ ~~Subject to receiving the consent of the Engineer, the Contractor may demobilise his Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

⊕ ~~When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise his Contractor's Personnel from other countries.~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer **for his consent**.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

~~1.21.21.3~~ Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

future to their working colleagues and compatriots.

(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his **information**.

(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

(6) Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by **special** trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6 The Contractor shall train and equip teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24 [Accident Response Plan].

future to their working colleagues and compatriots.

(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his **information**.

(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

(6) **Outline of such training shall be submitted with the Bid Stage Safety Plan.** Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled ~~or inexperienced~~ foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by **special** trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6 The Contractor shall train and equip teams of selected workers at the Site **for emergency rescue operation in accordance with JSSS 1.24 [Accident Response Plan]**.

<p>1.22.11 For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [Prohibition of Entry – Dangerous Work].</p> <p>1.22.12 Hazardous Substances.</p> <p>(1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists Subcontractor(s) (JC37) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.</p> <p>JC37: not necessarily Subcontractors NK5/6: Will modify as commented.</p> <p>(2) The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their submit detailed Safety Plans and Method Statements with respect to the removal and disposal of the Hazardous Substances shall also be submitted (JC38) to the Engineer in accordance with JSSS 1.7 [Contractor's Safety Plans] and JSSS 1.9 [Contractor's Method Statements].</p> <p>JC38: modified accordingly NK5/6: Will modify as commented.</p>	<p>1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.2 Unless otherwise specified in the Particular Safety Specification, medical, first aid and related services and facilities at the Site for accidental injuries shall be made available free of charge for the use of the Contractor's Personnel, the Employer's Personnel-all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such medical services and facilities shall also be made available free of charge for the family members of the aforementioned personnel/persons.</p>	<p>1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.2 Medical first aid and related services and facilities at the Site for accidental injuries shall be made available free of charge. If so specified in the Particular Safety Specification, such medical services and facilities shall also be made available free of charge for the family members of the aforementioned personnel/persons.</p>
<p>1.23 Permit to Work System</p> <p>1.23.1 The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.</p> <p>1.23.2 The system shall be designed to control safety for Dangerous Work all types of high-risk work likely to be encountered, including for example: (JC39)</p> <p>JC39: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work. NK5/6: Will modify as commented.</p> <p>1.23.3 Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.</p> <p>There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to "for example" as in the following sub-clause.</p> <p>(a) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.</p> <p>(b) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.</p> <p>(c) Diving Works.</p>	<p>1.24.3 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.4 The Contractor shall provide the following medical and first aid facilities:</p> <p>(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.</p> <p>(2) First aid training, appointment of first aiders and dissemination of information.</p> <p>(3) Type of communication facilities and measures for emergency response.</p> <p>(4) Medical Facilities on the Site together with description of equipment and consumables.</p> <p>(5) Temporary water and power supply to maintain use during mains supply failure.</p> <p>(6) Transportation facilities to be provided to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.</p> <p>(7) Additional facilities specified in the Particular Safety Specification, if any.</p>	<p>1.24.3 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.4 The Contractor shall provide the following medical and first aid facilities:</p> <p>(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.</p> <p>(2) First aid training, appointment of first aiders and dissemination of information.</p> <p>(3) Type of communication facilities and measures for emergency response.</p> <p>(4) Medical Facilities on the Site together with description of equipment and consumables.</p> <p>(5) Temporary water and power supply to maintain use during mains supply failure.</p> <p>(6) Transportation facilities to be provided to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.</p> <p>(7) Additional facilities specified in the Particular Safety Specification, if any.</p>
<p>NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.</p> <p>I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.</p> <p>1.23.4 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.</p>	<p>1.24.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical services and facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as</p>	<p>1.24.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical services and facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional</p>

コメントの追加 [伊藤38]: not necessarily Subcontractors

コメントの追加 [伊藤39]: modified accordingly

コメントの追加 [伊藤40]: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

<p>1.23.5 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.</p> <p>1.23.6 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.</p> <p>1.24 Accident Response Plan</p> <p>1.24.1 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC40)</p> <p>JC40: Moved to 1.24.5. NK5/6: Will modify as commented.</p> <p>NK-1: JICA commented to modify and add "so specified in the Specification" to 1.20.2 in Issue 6. <i>NK consider that "as specified in Particular Safety Specification" between "the Works," and "the Contractor" if we follow JICA's comment.</i></p> <p>NK-2: JICA commented that they want to use "as specified in Particular Safety Specification" more than "unless otherwise specified in Particular Safety Specification" because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS) <i>Can you specify as JICA's request to use "as specified in PSSS"</i></p> <p>1) I do not recommend any use or reliance on "as specified in PSSS". If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.</p> <p>2) "Unless otherwise specified" followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a "failsafe" in JSSS production.</p> <p>3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.</p> <p>4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.</p> <p>5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.</p> <p>NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are. other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the</p>	<p>specified in the Particular Safety Specification and as are necessary to fully protect all relevant personnel.</p> <p>1.24.6 The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. Workers so trained are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.</p> <p>1.24.7 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.</p> <p>1.24.8 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.</p> <p>1.24.9 Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].</p> <p>1.24.10 Adequate first aid equipment and supplies shall in any case be readily available at the Site and as referred to in JSSS 2.9 [PPE and First Aid].</p> <p>1.25 Measures at the Time Accidents Occur</p> <p>1.25.1 When an accident occurs, the HSO shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:</p> <p>(1) Safely locate and extract casualties. (2) Provide first aid treatment at the Site. (3) Implement Secondary accident prevention activities, including:</p>	<p>services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all relevant personnel.</p> <p>1.24.6 The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. コメントの追加【伊藤53】: See 1.2.2 (6)

コメントの追加【伊藤54】: Better to add

~~of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract. (JC55)~~

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.6
Please see 1.26.6 for my assumption of your requirements.
Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.
Please note:

1. The Contractor can only plan for what he can reasonably foresee, anticipate and
2. It is necessary to state this so that no confusion is introduced with PFDIC GC 19.
3. This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.2.

JC55: Better to jump to 1.26.6 without this.
NK5/6: Will modify as commented.

1.26.6 The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

- (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (b) Monthly or weekly schedule of important health and safety matters;
- (c) Accidents, fatalities, injuries in the previous month and measures to be taken to prevent any reoccurrence;
- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1 On larger Projects with multiple contract packages and contractors and unless otherwise stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3 The Chairman of the Safety Committee shall be the Employer.

1.29.4 The Employer shall hold Project Safety Committee meetings, periodically as requested by the Employer.

- (b) Monthly or weekly schedule of important health and safety matters;
- (c) Accidents, fatalities, injuries in the previous month and measures to be taken to prevent any reoccurrence;
- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1 On larger Projects with multiple contract packages and contractors and unless otherwise stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3 The Chairman of the Safety Committee shall be the Employer.

1.29.4 The Employer shall hold Project Safety Committee meetings, periodically as requested by the Employer.

コメントの追加 [岡本55]: Better to jump to 1.26.6 without this.

<p>The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:</p> <ol style="list-style-type: none"> (1) Employer's Personnel at the Site and also at their respective head office where different. (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like. (3) Contractor's Personnel at the Site and also at the head office where different. (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different. <p>1.26.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.</p> <p>Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. コメントの追加【伊藤60】: Agree with MD

コメントの追加【岡本61】: Temporary Works is covered in (2)

<p>with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.</p> <p>JC61: Temporary Works is covered in (2). NK5/6: Will modify as commented.</p> <p>(2) New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.</p> <p>Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.</p> <p>NK: We considers in actual basis as follows:</p> <p>Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?</p> <p>Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft. I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.</p> <p>Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.</p> <p>Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.</p> <p>Can we delete "and Temporary Works" in (2)?</p> <p>do not recommend it.</p> <p>Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.</p> <p>This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.</p> <p>We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.</p> <p>If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.</p> <p>If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.</p> <p>If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.</p> <p>We propose to delete the 2nd sentence above.</p> <p>do not agree for above reason but respect your wish. Just delete it.</p>	<p>Temporary Works Procedures and the Permissible Stress Design of Falsework.</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.1 [Specified Standards and Regulations] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works.</p> <p>1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p> <p>1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p>	<p>respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.1 [Specified Standards and Regulations] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works.</p> <p>1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p> <p>1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p>

コメントの追加 [SS93]: JICA requested to add the phrase in red in their last comments and MD has no comment.

Please add them as commented.

コメントの追加 [MJD94R93]: Please do not change, this is explained in my email

コメントの追加 [伊藤62]: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

<p>In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."</p> <p>JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."</p> <p>There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.</p> <p>Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.</p> <p>The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?</p> <p>JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.</p> <p>Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.</p> <p>JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant.</p> <p>NK5/6: Will modify as commented.</p> <p>1.36 Health Matters</p> <p>1.36.1 The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.</p> <p>1.36.2 Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons. (JC63)</p> <p>JC63: Same comment as 1.24</p> <p>NK5/6: Will modify as commented.</p> <p>1.36.1.36.3 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC64)</p> <p>JC64: See 1.2.2 (6).</p> <p>NK5/6: Will modify as commented.</p>	<p>1.37.6 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.</p> <p>The Engineer may review Temporary Works design for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2.</p>	<p>1.37.6 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. コメントの追加【伊藤65】: Better to add ???

コメントの追加【伊藤66】: Is this health care service?

コメントの追加【伊藤67】: See 1.2.2 (6)

<p>JC67: See 1.2.2 (6). NK5/6: Will modify as commented. 1.36.51.36.7 Report of Serious Illness</p> <p>(1) The Contractor shall inform the Engineer and submit details of any serious illness.</p> <p>NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?</p> <p>It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared. Please see (4) following, the above can be omitted if required.</p> <p>(2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.</p> <p>(3) The report shall include details of the HSO's recommended counter-measures.</p> <p>NK: Is "HSO" replaced with Contractor as same as (2) above? No. I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.</p> <p>(4) The Engineer is to be consulted on the types of illness for which reports are to be informed.</p> <p>1.37 Design and Management of Temporary Works</p> <p>1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework (JC68).</p>	<p>Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.</p> <p>1.38 Unexploded Ordnance (UXO)</p>	<p>Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.</p> <p>1.38 Unexploded Ordnance (UXO)</p>
<p>Changed already. JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2. NK5/6: Will modify as commented.</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.1 [Specified Standards and Regulations] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework (JC69).</p> <p>NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?</p> <p>Section 1, General Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004"</p> <p>Please also refer to BS 5975, Foreword, page VII, penultimate paragraph. The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.</p> <p>It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded. I have assume therefore that it is necessary to state the need for Class A Falsework. Please be aware that I have not reviewed or studied the BS in detail so please do not assume</p>	<p>1.38.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.</p> <p>1.38.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.</p> <p>1.38.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.</p> <p>1.38.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.</p>	<p>1.38.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.</p> <p>1.38.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.</p> <p>1.38.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.</p> <p>1.38.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.</p>

コメントの追加 [岡本68]: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

<p>that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.</p> <p>Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.1 [Specified Standards and Regulations] to cover this generally.</p> <p>Previous clause 1.34.6 has already been deleted.</p> <p>There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per the san's comment.</p> <p>JC69: delete it?</p> <p>NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.</p> <p>1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.</p> <p>1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.</p> <p>1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [Health and Safety Officer at the Site (HSO)].</p> <p>JC: JICA commented as follows:</p> <p><i>Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.</i></p> <p><i>"Necessary qualification" can be combined with 1.34.12 or 1.34.13.</i></p> <p><i>Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.</i></p> <p>NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.</p> <p><i>As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.</i></p> <p>understand your comment and have no objection to the deletion of 1.37.6</p> <p>1.37.7 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.</p> <p>The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. If the Engineer chooses to review</p>	<p>1.38.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy if the further clearance certificate together with any further instructions from the Engineer.</p>	<p>1.38.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy if the further clearance certificate together with any further instructions from the Engineer.</p>
--	--	--

<p>same, this shall not be construed as a check or validation of the Contractor's design or methods.</p> <p>The Engineer may have no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub-clause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.</p> <p>I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.</p> <p>Most JICA funded projects are large projects and will have a Temporary Works content. I suggest that the following alternative clause should be deleted to make these important requirements very clear:</p> <p>If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.</p> <p>The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS. (JC70).</p> <p>NK:MD 氏は上記の理由で次の 1.37.8 の条項は不要であると考え削除を提案しています。ご検討をお願いします。</p> <p>JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?</p> <p>NK5/6: Will modify as commented.</p> <p>1.37.8 Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:</p> <ol style="list-style-type: none"> (1) Appointment of appropriately qualified and experienced staff. (2) Preparation of adequate Temporary Works designs. (3) Independent internal or external checking of the Temporary Works Design. (4) Preparation of a Temporary Works register and records (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment. (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to: <ol style="list-style-type: none"> (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and

コメントの追加【伊藤69】: Understand.
 But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

<p>issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.</p> <p>NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause, we consider HSO will be replaced with Contractor as JICA commented: Should it be HSO? When BS5975 applies. TWCTWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?</p> <p>The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.</p> <p>However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO. I believe that it is a correct requirement which in practice should not be more than a counter signature.</p> <p>1.37.9 In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.</p> <p>NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?</p> <p>I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.</p> <p>The following clause can be deleted.</p> <p>1.37.10 For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].</p> <p>1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.12 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. and shall obtain the consent of the Engineer.</p> <p>NK: We think 1.3.12 is too long sentence to clearly understand requirement. Yes I agree and have reworded this as above.</p> <p>Q-1 Is consent by the Engineer given to specialist staff?</p> <p>This part can be deleted.</p> <p>Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?</p> <p>We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.</p> <p>I have reworded all, please refer to the above.</p> <p>1.38 User Training User Training (JC71) JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important. NK5/6: Will delete as commented.</p> <p>1.39 Unexploded Ordinance (UXO) NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:</p>		
--	--	--

コメントの追加 [岡本70]: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

- 1.40—MM: This section will be left in the next draft and perhaps deleted in the final draft.
- 1.41—NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.
- ~~1.42— I recommend that it be included here as a default requirement.~~
- 1.43— Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.
- 1.44— The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.
- 1.45— User Training shall vary according to the scope of the Works however it shall generally cover the following:
- 1.46— Safe system and Plant use, operation and process control.
- 1.47— System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements
- 1.48— Training in use of all hardware and software packages.
- 1.49— Laboratory control (sampling and analysis) including operation of laboratory equipment.
- 1.50— Recording and reporting.
- 1.51— Emergency operation procedure.
- 1.52— Maintenance management procedures.
- 1.53— Inventory and store control systems.
- 1.54— Particular safety procedures, including:
- 1.55— Safe working procedure;
- 1.56— Housekeeping of the facilities;
- 1.57— Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
- 1.58— Safety measures for the Works and all items of Plant.
- 1.59— Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.
- 1.60— The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.61— Other requirements for User Training—
- 1.62— The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.

E24_B2_20200630_FDR 経緯書_1_GeneralRequirementSS-6.docx

- ~~1.63—User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~
- ~~1.64—The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~1.65—The Engineer may choose to send representatives to witness the training.~~
- ~~1.66—The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~1.67—Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~1.68—The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.~~
- ~~1.69—Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~1.70—The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~1.71—Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~1.72—The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~1.73—Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~1.74—The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~1.75—The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~1.76—Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~1.77—The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise~~

E24_B2_20200630_FDR 経緯書_1_GeneralRequirementSS-6.docx

~~provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.~~

~~1.78 Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~

~~1.79 Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~1.80 The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.81-1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3(d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

~~1.81-1.39.1~~ If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.

~~1.81-1.39.2~~ Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.

~~1.81-1.39.3~~ Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.

~~1.81-1.39.4~~ Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear

<p>the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.</p> <p><u>1-81-51.39.5</u> Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.</p>		
<p>ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS</p> <p>Annex 1.1: Definitions and Abbreviations</p> <p>A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:</p> <ol style="list-style-type: none"> (1) "Executing Agency" means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer. (2) "GC" and "PC" followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause. (3) "Health and Safety Officer" or "HSO" means the Contractor's health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [<i>Health and Safety</i>] as construed in accordance with JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>]. (4) "JICA Standard Safety Specification" or "JSSS" means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works. (5) "Method Statement" means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [<i>Contractor's General Obligations</i>] and supplemented by JSSS 1.9 [<i>Contractor's Method Statements</i>]. (6) "Operation Leader" (also known variously as a "Ganger", "Leading Hand", "Foreman" (working and non-working), "Team Leader", "Superintendent", "Supervisor" and the like) means a member of the Contractor's workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor's safety regulations and who can also be referred to within the OSHA definition as a "Competent Person". (7) "OSHA" means the technical requirements of "OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulations (29 CFR) and published by 	<p>ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS</p> <p>Annex 1.1: Definitions and Abbreviations</p> <p>A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:</p> <ol style="list-style-type: none"> (1) "Executing Agency" means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer. (2) "GC" and "PC" followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause. (3) "Health and Safety Officer" or "HSO" means the Contractor's health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [<i>Health and Safety</i>] as construed in accordance with JSSS 1.12 [<i>Health and Safety Officer at the Site (HSO)</i>]. (4) "JICA Standard Safety Specification" or "JSSS" means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works. (5) "Method Statement" means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [<i>Contractor's General Obligations</i>] and supplemented by JSSS 1.9 [<i>Contractor's Method Statements</i>]. (6) "Operation Leader" (also known variously as a "Ganger", "Leading Hand", "Foreman" (working and non-working), "Team Leader", "Superintendent", "Supervisor" and the like) means a member of the Contractor's workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor's safety regulations and who can also be referred to within the OSHA definition as a "Competent Person". (7) "OSHA" means the technical requirements of "OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.

the Occupational Safety and Health Administration, U.S. Department of Labor.

(8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~

(9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification] ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~

(10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.

(11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].

(12) **“Safety”** shall also mean “occupational health and safety” and “health and safety”.

(13) **“User Guide”** means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS? I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 0.1).

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

(1) **“Accident Response”** means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].

(2) **“Confined Spaces”** means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.

(3) **“Cofferdam”** means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.

(4) **“Dangerous Goods”** means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive

the Occupational Safety and Health Administration, U.S. Department of Labor.

(8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project.

(9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification].

(10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.

(11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].

(12) **“Safety”** shall also mean “occupational health and safety” and “health and safety”.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

(1) **“Accident Response”** means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].

(2) **“Confined Spaces”** means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.

(3) **“Cofferdam”** means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.

(4) **“Dangerous Goods”** means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.

(5) **“Dangerous Work”** means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.

(8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project.

(9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification].

(10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.

(11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [Contractor’s General Obligations] as supplemented by JSSS 1.7 [Contractor’s Safety Plans].

(12) **“Safety”** shall also mean “occupational health and safety” and “health and safety”.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

(1) **“Accident Response”** means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [Accident Response Plan].

(2) **“Confined Spaces”** means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.

(3) **“Cofferdam”** means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.

(4) **“Dangerous Goods”** means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.

(5) **“Dangerous Work”** means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is

- コメントの追加 [SS97]: May the Project be replaced with Works*
- コメントの追加 [MJD98R97]: Yes it can be, I have changed already
- コメントの追加 [SS99]: “Project” will be deleted as JICA commented to User Guide.
- コメントの追加 [MJD100R99]: Yes done already

<p>materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.</p> <p>(5) “Dangerous Work” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.</p> <p>For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p> <p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:</p>	<p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.</p> <p>For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p> <p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts.</p> <p>(15) “Hoisting Operation” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.</p> <p>For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [<i>Hoisting and Rigging</i>].</p> <p>(16) “Operational Area” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.</p> <p>(17) “Personal Fall Arrest System” or “PFAS” means a fall protection system that is designed to arrest a worker in a fall from a working level.</p>	<p>especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.</p> <p>For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent コメントの追加 [岡本96]:
Modified in accordance with modification to JSSS1.5

<p>Refer to JSSS 1.37 [Design and Management of Temporary Works].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.</p> <p>NK: JICA added "outline" in the last comment. DK I have amended</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>NK: We consider that the above sentence is independent clause from (6) above and locate in some place. have edited as above</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [Contractor's General Obligations], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>NK: May the title be Works? have edited as above</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [Dangerous Work]</p> <p>A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [Definitions and Abbreviations] and GC 4.1 [Contractor's General Obligations].</p> <p>(11) Permit to Work System</p> <p>Refer to JSSS 1.23 [Permit to Work System]</p> <p>A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.</p> <p>(12) Safety Measures for Contractor's Equipment</p> <p>Refer to JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE]</p> <p>A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.</p> <p>(13) Proposed Health and Safety Incentive Scheme</p>	<p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.).</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [Contractor's General Obligations], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [Dangerous Work]</p> <p>A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [Definitions and Abbreviations] and GC 4.1 [Contractor's General Obligations].</p> <p>(11) Permit to Work System</p> <p>Refer to JSSS 1.23 [Permit to Work System]</p> <p>A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.</p> <p>(12) Safety Measures for Contractor's Equipment</p> <p>Refer to JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE]</p> <p>A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.</p> <p>(13) Proposed Health and Safety Incentive Scheme</p> <p>Refer to JSSS 1.34 [Health and Safety Incentive Schemes]</p> <p>A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.</p> <p>(14) Safety Information Sharing and Communications Policy</p>	<p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.).</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [Contractor's General Obligations], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p> <p>A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.</p> <p>(10) Safety Plan for Dangerous Work.</p> <p>Refer to JSSS 1.22 [Dangerous Work]</p> <p>A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [Definitions and Abbreviations] and GC 4.1 [Contractor's General Obligations].</p> <p>(11) Permit to Work System</p> <p>Refer to JSSS 1.23 [Permit to Work System]</p> <p>A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.</p> <p>(12) Safety Measures for Contractor's Equipment</p> <p>Refer to JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE]</p> <p>A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.</p> <p>(13) Proposed Health and Safety Incentive Scheme</p> <p>Refer to JSSS 1.34 [Health and Safety Incentive Schemes]</p> <p>A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.</p> <p>(14) Safety Information Sharing and Communications Policy</p>
--	---	---

<p>Refer to JSSS 1.34 [<i>Health and Safety Incentive Schemes</i>]</p> <p>A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.</p> <p>(14) Safety Information Sharing and Communications Policy</p> <p>A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.</p> <p>A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.</p> <p>(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.</p> <p>(16) Site Inspection Plan</p> <p>A description of the methods for Site inspections by the HSO, types of inspection and frequency.</p> <p>The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work</p> <p>(17) Site Security</p> <p>A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.</p> <p>The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.</p> <p>(18) Policy for Preventing Traffic Accidents</p> <p>A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.</p> <p>A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.</p> <p>(19) Reporting Procedure for Unsafe Conditions and Behaviour</p> <p>A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with</p>	<p>A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.</p> <p>A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.</p> <p>(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)</p> <p>Refer to JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>]</p> <p>A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.</p> <p>(16) Site Inspection Plan</p> <p>A description of the methods for Site inspections by the HSO, types of inspection and frequency.</p> <p>The description shall also include the methods for reporting, recording and utilising results and コメントの追加【伊藤101】: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

<p>The Bidder declares that he will mobilise for use upon the Works:</p> <ol style="list-style-type: none"> 1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and 2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old); all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; <p>NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.</p> <p>Please refer to my recommendations and notes in 1.35 and advise me of your requirements.</p> <p>and that all of the above will be used correctly and for the purpose intended.</p> <p>The Bidder further declares that he shall:</p> <ol style="list-style-type: none"> 1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks. 2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability. 3. Fully inform workers about hazards; 4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand. 5. Keep accurate records of work-related injuries and illnesses. 6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification. 7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged. 8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned. 9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract. 10. Post injury and illness information and data where workers can see them. 11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately. 12. Not retaliate against workers for using their rights under the Laws of the Country. 	<p>The Bidder declares that he will mobilise for use upon the Works:</p> <ol style="list-style-type: none"> 1. Safety measures are needed not only in the Site

We would like to have advice of NK/MID. The current draft JSSS says

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat *"the Site and other places (if any) where the Contractor intends to execute the Works"* every time. But this is too long, so a bit awkward.

How do you think?

検討経緯書

2 General Safety Measures

<p>2. 安全措置一般</p> <p>2.2 工事現場周辺の危害防止</p> <p>2.2.1 工事区域の立入防止施設</p> <p>2.2.2 道路占用時の措置</p> <p>2.2.3 看板・標識の整備</p> <p>2.2.4 工事現場出入口付近での交通事故防止</p> <p>2.2.5 地域住民とのコミュニケーション</p>	<p>2 General Safety Measures</p> <p>2.2 Security of the Site</p> <p>2.2.1 Preventing Unauthorized Entry to the Site</p> <p>2.2.2 Working in Public Road and Highways</p> <p>2.2.3 Temporary Road Signs</p> <p>2.2.4 Traffic Accident Prevention at Site Entrance</p> <p>2.2.5 Community Relations</p>	<p>2 General Safety Measures</p> <p>2.2 Prevention of Danger of Third Parties around Construction Site</p> <p>2.2.1 Preventing Entry of Third Parties into Construction Area</p> <p>2.2.2 Measures for Road Occupation</p> <p>2.2.3 Temporary Road Signs</p> <p>2.2.4 Traffic Accident Prevention at Site Entrance</p> <p>2.2.5 Community Relations</p>
<p>2 安全措置一般</p> <p>2.2 工事現場周辺の危害防止</p> <p>請負者は、工事現場周辺における第三者への危害防止のために、下記の措置を講じなければならない。</p>	<p>2 General Safety Measures</p> <p>2.2 Security of the Site</p> <p><i>NK is this Section really necessary? Parts are usually covered and in more detail in the Specifications for particular projects with other associated conditions. Also, each project will have different requirements e.g. for fencing and barriers which require different specification and drawings. Some projects also may be inside existing fences etc. or have different security arrangements.</i></p> <p><i>This will tend to confuse.</i></p> <p><i>Also, the Section covers widely differing subjects, that would normally be treated separately.</i></p> <p><i>The subjects in the main are also dealt with by basic obligations of the Contract Conditions and some conflict is likely.</i></p> <p><i>It has been described as "Prevention of Danger around Construction Site" that is not explicit. We are not sure of a greatly better description at this time so have labelled it Miscellaneous Requirements but this is not satisfactory.</i></p> <p><i>MD- The purpose of this section is to stipulate the importance of securing safety of the third parties around the Site. The title of 2.2 may have been inappropriate. So, we would like to change it to "Prevention of Danger of Third Parties around the Site" to make the purpose clearer.</i></p>	<p>2 General Safety Measures</p> <p>2.2 Prevention of Danger around Construction Site</p> <p>In order to prevent the danger to the third parties around the construction site, the Contractor shall take the following measures.</p>
<p>2.2.1 工事区域の立入防止施設</p> <p>請負者は第三者立入禁止の場所、工事現場の周囲及び危険箇所に、柵・仮囲い等の立入り防止施設を設置することにより、請負者の要員及び第三者に対して工事区域を明確にするため、以下の措置を取らなければならない。</p> <p>(1) 立入防止施設は、損傷・腐食等のない材料のものとし、第三者(特に子供)が容易に侵入できないような構造とすること。</p> <p>(2) 立入防止施設、工事看板、照明器具等の保守管理を行うこと。</p> <p>(3) 立入防止施設に設けた出入口は、施錠できるようにすること。</p>	<p>2.2.1 Preventing Unauthorized Entry to the Site</p> <p>(1) Further to the requirements of GC4.2 and unless otherwise stated in the Contract the Contractor shall:</p> <p><i>MD- GC4.2 is "Performance Security" in the FIDIC that I have?</i></p> <p>(a) Enclose the perimeter of the Site and all office areas, working areas and facilities within the Site with secure temporary fencing of materials and design to be approved by the Engineer;</p>	<p>2.2.1 Entry Prevention Facility of Third Parties' into Construction Area</p> <p>For clarifying the construction area to the Contractor's Personnel and the third parties by installing entry prevention facilities with fences and temporary enclosures at places such as entry prohibited areas to the third parties, perimeter of the site and hazardous areas, the Contractor shall:</p> <p>(1) Use materials free from damage or corrosion for entry prevention facilities and construct them so that third parties (especially children) cannot enter easily,</p>

JSSS in Japanese (Prov. Final Draft R1 2019/9/4)	JSSS reviewed and Edited by MD (2019/8/13) Red: MD's memo to NK, Blue: NK's Memo to MD	JSSS in English revised by NK based on Pro. Final Draft for MD's Editing (2019/09/08) Blue: Changed from MD's Editing
<p>(4) 道路に近接して掘削等により開口している箇所がある場合には、蓋をするか防護柵を設置して転落防止措置を講じること。</p> <p>(5) 柵・仮囲いの高さ、長さ及び仕様は、本仕様書 Annex X の規定に従うこと。</p>	<p>(b) Maintain all such fencing in good condition, throughout the Time for Completion, remove on Completion and reinstate all affected areas;</p> <p>(c) Provide secure entry points with barriers and provide 24/7 (MD- What is this?) security personnel to monitor and control all authorised personnel and to keep all unauthorised persons off the Site and from restricted or hazardous areas within the Site.</p> <p><i>NK- add any further requirements for site security guards etc.</i></p> <p>(2) All temporary fencing and entry points shall be constructed with <u>new materials</u>, of sturdy construction fit for purpose, free from damage or corrosion and adequate to prevent access, accidents or injuries to unauthorised persons (especially children);</p> <p><i>MD-It is not necessary to restrict to brand-new.</i></p> <p>(3) Provide and maintain secure entry points, erect construction signs and hoardings and install lighting equipment;</p> <p><i>NK- Describe required perimeter and internal lighting, generators, power supply payment etc. but note this is not a standard requirement.</i></p> <p>(4) Provide guardhouse with security guard, counterweighted or automated boom barrier and lockable gates;</p> <p><i>MD- The requirement that we are intending with this provision is only "the gate must be lockable". It is too much to require guardhouse or automated boom barrier etc.</i></p> <p>(5) Provide ID system to permit authorized entry and prohibit unauthorized entry;</p> <p><i>NK- Develop specification of required ID system but note that this may not be a standard requirement</i></p> <p><i>MD- We don't think it necessary to introduce ID system so far considering the situation of those countries concerned.</i></p> <p>(6) Provide covers, such as steel plate or enclose with secure fencing to prevent falls into <u>any excavations/holes in access roads or other roads</u> for which the Contractor is responsible;</p> <p><i>NK- Is the correct place for this requirement?</i></p> <p><i>MD- The places that required to secure safety (of the third parties) in this clause is limited to pits or excavated holes in the vicinity of the road.</i></p> <p>(7) Make any temporary enclosure using wire mesh where visibility for vehicles is necessary; and</p> <p>(8) Temporary fences and enclosures shall be of the following specifications:</p>	<p>(2) Maintain entry prevention facilities and construction signs, lighting equipment, etc.,</p> <p>(3) Make the entrance of the entry preventing facilities lockable,</p> <p>(4) Take fall prevention measures for pits or holes created by the Works in the vicinity of the road by covering or providing a protective fence, and</p> <p>(5) The height, length, and specifications of the fence and/or temporary enclosure shall conform to the provisions of Annex XX of this Specification.</p>

JSSS in Japanese (Prov. Final Draft R1 2019/9/4)	JSSS reviewed and Edited by MD (2019/8/13) Red: MD's memo to NK, Blue: NK's Memo to MD	JSSS in English revised by NK based on Pro. Final Draft for MD's Editing (2019/09/08) Blue: Changed from MD's Editing
	<p>(a) The height of temporary fences shall be 1.2m or more (<i>NK not usually sufficient for Site perimeter fence?</i>), and the posts shall not be easily moved or broken;</p> <p><i>NK- Concrete posts, barbed wire, etc.? NK- Please review for adequacy.</i></p>  <p><i>MD- An example of the temporary fence is shown at right. It is for preventing the third parties to enter certain prohibit area, not all Site area.</i></p> <p>(b) The height of movable fences and barriers shall be 0.8 m to 1.0 m, and the length shall be 1.0 m to 1.5 m; and</p> <p><i>NK- Where are the moveable fences and for what purpose? What does length refer to?</i></p> <p><i>MD- An example of the movable fence is shown at right.</i></p>  <p>(c) The height of temporary enclosures shall be 1.8m or more, and posts, horizontal members and braces of sufficient strength and durability shall be installed.</p> <p><i>NK- What and where are temporary enclosures?</i></p>  <p><i>MD- An example of the temporary enclosure is shown at right.</i></p> <p><i>We decided to delete detail specifications of the temporary fence and enclosure from this clause, instead to specify to fill out the form prepared in Annex as stated in (5).</i></p> <p><u>MD- Please, check and correct English of 2.2.1 at the right column.</u></p> <p><u>Your suggestion on this clause seems to be a little off the line from what we are intending.</u></p> <p><u>The English translation is a literal translation, so please try to understand what we intend as it is. (We will discuss this further when you come to Japan.)</u></p>	
<p>2.2.2 道路占用時の措置</p> <p>請負者は、工事のために道路を占用する場合には、発注者による関係当局との事前調整結果に基づき、当該道路での安全で円滑な交通を確保するため、次の措置を講じなければならない。</p> <p>(1) 道路占用に先立ち、道路占用計画を作成し関係当局から必要な許可をとること。</p> <p>(2) 道路の交通止め、もしくは通行制限が必要な場合には、実施前に関係当局の承認と必要な許可を得ること。</p> <p>(3) 道路占用の全期間を通じて、道路での安全で円滑な交通を、妨げないように配慮すること。</p>	<p>2.2.2 Working in Public Roads and Highways</p> <p><i>NK- Should the following be included here as it is an entirely separate subject that can involve complex legal responsibilities and obligations for the employer (which are frequently abused). What is the connection with Safety??</i></p> <p><i>Needs to be considered together with GC 4.13, 4.14, 4.15</i></p> <p>When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, then prior to commencement of any such work the Contractor shall hold prior coordination with the relevant authorities through the Employer, in order to ensure safe and smooth traffic flow on the road and the Contractor shall:</p> <p><i>MNK- How can the Contractor do this at Bid stage for example when he has no such</i></p>	<p>2.2.2 Measures for Road Occupation</p> <p>When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work, based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:</p> <p>(1) Prepare a road usage plan and submit it to the relevant authorities, and obtain necessary permits, prior to road use;</p> <p>(2) Obtain the approval of the relevant authorities and obtain the necessary permits before any road closure, diversion or other traffic restrictions are applied;</p>

JSSS in Japanese (Prov. Final Draft R1 2019/9/4)	JSSS reviewed and Edited by MD (2019/8/13) Red: MD's memo to NK, Blue: NK's Memo to MD	JSSS in English revised by NK based on Pro. Final Draft for MD's Editing (2019/09/08) Blue: Changed from MD's Editing
<p>(4) 看板、標識、バリケードその他立入防止施設は、使用が許可されたものを設置し、これら設備の点検、保守及び撤去を行うこと。</p> <p>(5) 夜間照明、保安灯等は、常に点検を行い、保守管理を行うこと。</p>	<p><i>authority?</i></p> <p><i>This assumes that the employer has organised all before Bidding or it is with specialist contractors and has little to do with safety.</i></p> <p><i>It is also not a standard requirement, circumstances and obligations will differ for each project.</i></p> <p><i>MD- While the construction work proceeds, there would be some cases that require road occupation for the certain work which was not possible to predict at Bid stage. Of course, road occupation works that can be predicted in the preparation of Bidding document, it is responsibility of the Employer to obtain coordination of relevant authorities prior to Bid.</i></p> <ol style="list-style-type: none"> (1) Prepare a road usage plan and submit it to the relevant authorities, and obtain necessary permits, prior to road use; (2) Obtain the approval of the relevant authorities and obtain the necessary permits before any road closure, diversion or other traffic restrictions are applied; (3) Take necessary measures to limit any restrictions to safe and smooth traffic flow on the road during the entire road usage period; <p><i>NK- In general the work will not be approved if the contractor does not do this.</i></p> <p><i>MD- Understood. However, obtaining permission in due process does not necessary mean that the Contractor will take every measure to secure safe and smooth traffic.</i></p> <ol style="list-style-type: none"> (4) Install signboards, signs, barricades and other protective facilities which are permitted for use by the Country's traffic rules and regulations and install, inspect, maintain and remove these facilities as and when necessary; (5) Use direction and diversion signs, generators and transformers, warning lights, illumination for pedestrians, temporary signals, signalling devices or traffic flaggers for traffic control that meet the requirements of the Country's traffic rules and regulations and always inspect and maintain night lighting, security lights, guide lights and the like. <p><i>NK- The above has little to do with General Safety and should be a separate subject, particular for each project.</i></p> <p><i>MD- As mentioned at the beginning, the purpose of this clause is to secure safety of the third parties around the Site. Safety of road traffic, pedestrian and neighboring inhabitant is, needless to say, very important for any kind of project.</i></p>	<ol style="list-style-type: none"> (3) Take necessary measures to limit any restrictions to safe and smooth traffic flow on the road during the entire road usage period; (4) Install signboards, signs, barricades and other protective facilities which are permitted for use by the Country's traffic rules and regulations and inspect, maintain and remove these facilities as and when necessary; (5) Always inspect and maintain night lighting, security lights and the like
<p>2.2.3 看板・標識の整備</p> <p>請負者は、工事現場周辺に必要な情報を明示するために次の措置を講じなければならない。</p>	<p>2.2.3 Temporary Road Signs</p> <p>For disseminating necessary information on roads adjacent to and in the Site, the Contractor shall:</p>	<p>2.2.3 Temporary Road Signs</p> <p>For disseminating necessary information on roads adjacent to the Site, the Contractor shall:</p>

2 安全措置一般 2.5 墜落防止 2.5.1 一般事項 (1) 請負者は、墜落の危険がある作業を行う場合は、必要な墜落防止措置について、関連の作業計画書及び安全衛生詳細計画書に記載し、エンジニアのレビューを受けなければならない。 (2) 請負者は、墜落防止に関する当該国の法律及び本仕様書のいずれにも規定が無い事項は、米国 OSHA 規則 Part 1926 Safety and Health Regulations for Construction, Subpart M Fall Protection を参照して、必要と判断する措置を講じなければならない。 (3) 本節は通路、足場・作業床、作業床端・開口部からの墜落防止、また掘削、ロープ高所作業における墜落防止に関する事項を規定し、物体の飛来、落下による災害防止のための規定は本仕様書 2.6[飛来落下の防止措置]、昇降設備・足場等の設備の材料、構造、設置・解体時の留意事項、点検等に関する規定は本仕様書 5.4[足場等]及び本仕様書 5.5[通路・昇降設備・栈橋]にて規定する。	2 General Safety Measures 2.5 Fall Prevention 2.5.1 General Items (1) The Contractor shall, in the case when works at risk for the falling are carried out, list necessary measures for preventing falls in the relevant Particular Method Statement and the Particular Health and Safety Plan, and take a review by the Engineer. (2) For any matters not provided in the laws of the recipient country and in any part of this Specification, the Contractor shall take necessary measures for fall prevention subject to “Subpart M – Fall Protection” of “Part 1926 - Safety and Health Regulations for Construction” in the OSHA Standard. (3) Provisions of measures for fall prevention from passages, scaffolding, working floors, the edge of working floors and openings, and for fall prevention at excavation works and rope aerial works are stipulated in this section. Provisions for preventing falls from flying and falling are stipulated in 2.6 [Preventing Measures for Flying and Falling], and provisions of materials, structures, points to consider in installation and dismantlement, and checkup in relation to raising and lowering equipment and scaffoldings are stipulated in 5.4 [Scaffoldings etc.] and 5.5 [Passages, Lifting Equipment and Piers].	
2.5.2 通路からの墜落防止措置 (1) 安全な通路の設置 請負者は、作業場に通ずる場所及び作業場内には、作業員が使用するための安全な通路を設け、かつ、これを常時有効に保持しなければならない。また、主要な通路には、これを保持するため、通路の表示を行なわ	2.5.2 Measures for Preventing Falls from Passages (1) Installation of safe passages The Contractor shall provide safe passages leading to working spaces and inside of them with safe passages for workers, and maintain them effectively at all times. And, the Contractor shall display signs indicating

2.5 墜落防止	2.5 Fall Prevention	
2.5.1 一般事項	2.5.1 General Items	
(1) 請負者は、墜落の危険がある作業を行う場合は、必要な墜落防止措置について、関連の作業計画書及び安全衛生詳細計画書に記載し、エンジニアのレビューを受けなければならない。	(1) The Contractor shall, in the case when works at risk for the falling are carried out, list necessary measures for preventing falls in the relevant Particular Method Statement and the Particular Health and Safety Plan, and take a review by the Engineer.	
(2) 請負者は、墜落防止に関する当該国の法律及び本仕様書のいずれにも規定が無い事項は、米国 OSHA 規則 Part 1926 Safety and Health Regulations for Construction, Subpart M Fall Protection を参照して、必要と判断する措置を講じなければならない。	(2) For any matters not provided in the laws of the recipient country and in any part of this Specification, the Contractor shall take necessary measures for fall prevention subject to “Subpart M – Fall Protection” of “Part 1926 - Safety and Health Regulations for Construction” in the OSHA Standard.	
(3) 本節は通路、足場・作業床、作業床端・開口部からの墜落防止、また掘削、ロープ高所作業における墜落防止に関する事項を規定し、物体の飛来、落下による災害防止のための規定は本仕様書 2.6[飛来落下の防止措置]、昇降設備・足場等の設備の材料、構造、設置・解体時の留意事項、点検等に関する規定は本仕様書 5.4[足場等]及び本仕様書 5.5[通路・昇降設備・栈橋]にて規定する。	(3) Provisions of measures for fall prevention from passages, scaffolding, working floors, the edge of working floors and openings, and for fall prevention at excavation works and rope aerial works are stipulated in this section. Provisions for preventing falls from flying and falling are stipulated in 2.6 [Preventing Measures for Flying and Falling], and provisions of materials, structures, points to consider in installation and dismantlement, and checkup in relation to raising and lowering equipment and scaffoldings are stipulated in 5.4 [Scaffoldings etc.] and 5.5 [Passages, Lifting Equipment and Piers].	
2.5.2 通路からの墜落防止措置	2.5.2 Measures for Preventing Falls from Passages	
(1) 安全な通路の設置 請負者は、作業場に通ずる場所及び作業場内には、作業員が使用するための安全な通路を設け、かつ、これを常時有効に保持しなければならない。また、主要な通路には、これを保持するため、通路の表示を行なわ	第十章 通路、足場等 Chapter X Passage, Scaffolding, etc. 第一節 通路等 (第五百四十条—第五百五十八条) Section 1 Passage, etc. (Articles 540 to 558)	

Spec. in Japanese (4th/Final Draft in Japanese) 和文(第4案/最終案)	Specification in English (1 st Draft)	Specification in English (2 nd Draft) reviewed/edited by Mr. Durrant
<p>なければならない。</p> <p>(2) 架設通路 請負者は、架設通路の墜落の危険のある箇所には、次に掲げる設備(丈夫な構造の設備であって、たわみが生ずるおそれがなく、かつ、著しい損傷、変形又は腐食がないものに限る)又はこれらと同等以上の機能を有する墜落防止設備を設置しなければならない。</p> <p>(a) 高さ 85cm 以上の手すり (b) 高さ 35cm 以上 50cm 以下の中棧</p> <p>(3) 作業の必要上、臨時に墜落防止設備を取り外す場合の措置 請負者は、次の措置を講じなければならない。</p> <p>(a) 墜落制止用器具を安全に取り付けるための設備等を設け、かつ、作業員に墜落制止用器具を使用させる措置又はこれと同等以上の効果を有する措置を講ずること。 (b) 前項の措置を講ずる箇所には、関係作業員以外の作業員を立ち入らせないこと。 (c) 取り外す必要がなくなった後は、直ちにこれらの設備を原状に復すること。</p>	<p>(1) Installation of safe passages The Contractor shall provide safe passages leading to working spaces and inside of them with safe passages for workers, and maintain them effectively at all times. And, the Contractor shall display signs indicating they are passages in order to maintain their effectiveness.</p> <p>(2) Temporary Passages The Contractor shall provide the following equipment (only materials to be of sound structure, without the possibility of deflection, without significant damage, corrosion, etc.) or fall preventing equipment with the same or higher functions to them at places where are liable to cause falling dangers from temporary passages. (a) Handrails at the height of 85cm or higher (b) Midrails at the height of 35 – 50 cm</p> <p>(3) Measures in the case fall preventing equipment is temporarily removed according to the needs of the work The Contractor shall take the following measures: (a) Provide facilities to fix personal fall arrest system safely and have the workers use them, or take measures with the same or higher functions to use the personal fall arrest system, (b) Not to allow workers other than those concerned to enter the place where is liable to happen fall accidents, and (c) Restore these facilities to their original condition immediately after the necessity of removal is terminated.</p>	
<p>2.5.3 足場・作業床からの墜落防止措置</p> <p>(1) 請負者は、高さが 2m 以上の箇所(作業床の端、開口部等を除く。)で作業を行なう場合において墜落により作業員に危険を及ぼすおそれのあるときは、足場を組み立てる等の方法により作業床を設置しなければならない。</p> <p>(2) 請負者は、作業床を設けることが困難なときは、墜落による作業員の危険を防止するため、次の措置を講じなければならない。</p> <p>(a) 作業員に墜落制止用器具を使用させること。 (b) 墜落制止用器具を安全に取り付けるための設備を設けること。 (c) 墜落制止用器具及びその取付け設備等の異常の有無について、随時点検を行うこと。</p> <p>(3) 請負者は、作業員に墜落の危険を及ぼすおそれのある箇所には、次の足場に応じて、それぞれ次に掲げる設備(丈夫な構造の設備であり、たわみが生ずるおそれがなく、かつ、著しい損傷、変形又は腐食がないものに限る。)又はこれらと同等以上の機能を有する墜落防止設備を設置しなければならない。</p> <p>(a) わく組足場(妻面に係る部分を除く。)</p>	<p>2.5.3 Measures for Preventing Falls from the End of Working Floors and Openings (タイトルが一つずれているようです) 第一節 通路等 (第五百四十条—第五百五十八条) Section 1 Passage, etc. (Articles 540 to 558)</p> <p>(1) The Contractor shall provide a working floor by installation of scaffolding or by other methods in the case where carrying out an operation at a place having a height of 2 m or more (excluding the end of a working floor, an opening, etc.) and when it is liable to endanger workers due to a fall.</p> <p>(2) The Contractor shall take the following measures to prevent workers from dangers due to fall when it is difficult to provide a working floor. (a) Have workers use personal fall arrest systems, (b) Provide facilities to fix personal fall arrest system safely, and (c) Carry out extra inspections to identify abnormalities in personal fall arrest systems and their facilities to be fixed.</p> <p>(3) The Contractor shall install facilities, depending on the scaffoldings listed</p>

2 General Safety Measures 2.5 Fall Prevention 2.5.1 General Items (1) The Contractor shall, in the case when works at risk for the falling are carried out, list necessary measures for preventing falls in the relevant Particular Method Statement and the Particular Health and Safety Plan, and take a review by the Engineer. (2) For any matters not provided in the laws of the recipient country and in any part of this Specification, the Contractor shall take necessary measures for fall prevention subject to “Subpart M – Fall Protection” of “Part 1926 - Safety and Health Regulations for Construction” in the OSHA Standard. (3) Provisions of measures for fall prevention from passages, scaffolding, working floors, the edge of working floors and openings, and for fall prevention at excavation works and rope aerial works are stipulated in this section. Provisions for preventing falls from flying and falling are stipulated in 2.6 [Preventing Measures for Flying and Falling], and provisions of materials, structures, points to consider in installation and dismantlement, and checkup in relation to raising and lowering equipment and scaffoldings are stipulated in 5.4 [Scaffoldings etc.] and 5.5 [Passages, Lifting Equipment and Piers].	NKFI: Mr. MD pointed out on June 12 th , delete this entire clause, all can be covered by Chapter 1 General. NKFI: After discussion with Mr. Sakoda on this, decided to delete clause (1) & (3).	2 General Safety Measures 2.5 Fall Prevention 2.5.1 General Items (1) For any matters not provided in the laws of the recipient country and in any part of this Specification, the Contractor shall take necessary measures for fall prevention subject to “Subpart M – Fall Protection” of “Part 1926 - Safety and Health Regulations for Construction” in the OSHA Standard.

<p>2.5.2 Measures for Preventing Falls from Passages</p> <p>(1) Installation of safe passages The Contractor shall provide safe passages leading to working spaces and inside of them with safe passages for workers, and maintain them effectively at all times. And, the Contractor shall display signs indicating they are passages in order to maintain their effectiveness. 【Article 540】</p> <p>(2) Temporary Passages The Contractor shall provide the following equipment (only materials to be of sound structure, without the possibility of deflection, without significant damage, corrosion, etc.) or fall preventing equipment with the same or higher functions to them at places where are liable to cause falling dangers from temporary passages. (a) Handrails at the height of 85cm or higher (b) Midrails at the height of 35 – 50 cm 【Article 522(1)-4】</p> <p>(3) Measures in the case fall preventing equipment is temporarily removed according to the needs of the work The Contractor shall take the following measures: (a) Provide facilities to fix personal fall arrest system safely and have the workers use them, or take measures with the same or higher functions to use the personal fall arrest system, (b) Not to allow workers other than those concerned to enter the place where is liable to happen fall accidents, and (c) Restore these facilities to their original condition immediately after the necessity of removal is terminated. 【Article 552(2) and 552(3)】 ※Article 552 has a revised version in Jap.</p>	<p>NKFI: Mr. MD pointed out there seems to be no prescription for fall prevention in 2.5.2 when assuming there is a deep excavation area along passages.</p> <p>NKFI: Isn't it considered that 2.5.2(2) is a corresponding prescription?</p>	<p>2.5.2 Measures for Preventing Falls from Passages</p> <p>(1) Installation of safe passages The Contractor shall provide safe passages leading to working spaces and inside of them with safe passages for workers, and maintain them effectively at all times. 	<p>NKFI: For drafting 2.5.10, quoted with reference to article 521, 524, 526 and 529 on OISH, only.</p> <p>Other than OISH, we've checked "Health & Safety in the roof work" and "Working on roofs", HSE, UK. In those documents, lots of referable description were found. But, caught many of those description as "Recommendations", not "Prescriptions". Thus, selected Japanese OISH's articles.</p> <p>NKFI: Consequently, the prescription contents on 2.5.10 and 2.5.3 Measures for Preventing Falls from Scaffoldings and Temporary Working Platforms turned out that it is similar. Thus, as a possible edit on this, it is proposed to integrate 2.5.10 into 2.5.3 or to change the title to "Measures for Preventing Falls from Scaffoldings, Temporary Working Platforms, Roof Top on 2.5.3.</p> <p>In addition, for Roof Top Work, Min. of Health, Labor and Welfare of Japan places Article 521, 524, 526, and 529 on OISH as related laws for fall prevention from roof top work.</p> <p>NKSS: The safety measures for the Roof top work is not specified in detail in OISH comparing to OSHA and SHE. The (4) may not be applied to the Roof top work.</p>	<p>2.5.10 Roof Top Work</p> <p>(1) Installation equipment of fall arrest systems</p> <p>(a) The Contractor shall, when carrying out the work at a place having a height of 2 m or more, and having labors use fall arrest systems, etc., have the said labors provide facilities, etc., to fix fall arrest systems, etc., safely.</p> <p>(b) The Contractor shall, when having labors use fall arrest systems, etc., inspect fall arrest systems, etc., and facilities, etc., for their fixing, for any abnormalities as needed.</p> <p style="text-align: right;">【Article 521】</p> <p>(2) Prevention of Dangers on a Roof Made of Slate, etc.</p> <p>The Contractor shall, in the case of carrying out a work on a roof made of such material as slate and excelsior, and when it is liable to endanger labors due to collapsed roof, provide foot boards having a width of 30 cm or wider or take other measures to eliminate the danger to labors due to a collapsed roof.</p> <p style="text-align: right;">【Article 524】</p> <p>(3) Installation, etc., of Facilities for Ascending and Descending</p> <p>The Contractor shall, when carrying out a work at a place having a height or a depth exceeding 1.5 m, provide facilities that enable the labor engaging in the said work to go up and down safely. However, this shall not apply when providing facilities to ascend or descend safely is extremely difficult due to the nature of the work.</p> <p style="text-align: right;">【Article 526(1)】</p> <p>(4) Work of Erection, Dismantling or Alteration of a Building, etc.</p> <p>The Contractor shall, in the case where carrying out a work of erection, dismantling or alteration of buildings, etc., (excluding work requiring the appointment of an operations chief), and when it is liable to endanger labors due to a fall, take the following measures:</p> <p>(a) To appoint a person to supervise the work, and have the said person supervise the operation directly.</p> <p>(b) To make labors engaged in the said work know in advance the method and procedure of the work.</p> <p style="text-align: right;">【Article 529】</p>

Specification in Japanese (Provisional Final Version R0)	English Translation (Provisional Final Version R0)	Comment / Revised by M. D
<p>2 安全措置一般</p> <p>2.6 飛来落下の防止措置 請負者は、作業のため物体が飛来又は落下(以下、「飛来落下」という。)することにより、工事関係者又は第三者に危険が及ぶことを防止するために、以下の措置を講じなければならない。</p> <p>2.6.1 物体の落下による危険防止のための措置</p> <p>(1) 請負者は、作業場所における物体の落下による危険を防止する次の措置を講じなければならない。</p> <p>(a) 作業により物体が落下することで、下部にいる請負者の要員に危険が及ぶおそれのある作業場所の端及び開口部にメッシュシート (Debris net) 又は高さ 10cm 以上の幅木を設置すること。</p> <p>(b) 作業の性質上メッシュシート若しくは幅木を設けることが著しく困難な場合又は臨時にメッシュシート若しくは幅木を取り外す場合は、立入禁止区域を設定すること。</p> <p>(c) 構造物の出入口と外部足場が交差する場所の出入口上部には物体の落下防止の防護棚を設置すること、併せて出入口には安全な通路を指定すること。</p> <p>(d) 物体の落下防止のためのメッシュシートの使用及び管理は次であること。</p> <p>(i) メッシュシートは、網目の寸法 12mm 以下又は想定される落下物の落下防止に応じた網目の寸法で、落下物による破損が生じない強度を有する、物体の落下防止を目的とするものを使用すること。</p> <p>(ii) メッシュシートに網目の乱れ、破損があるものは使用しないこと。</p> <p>(iii) 作業の都合上、メッシュシートを取りはずしたときは当該作業終了後すみやかに復元すること。</p> <p>(iv) メッシュシートは、少なくとも毎週 1 回は点検し、破損等があった場合には直ちに補修すること。</p> <p>(v) メッシュシート上に、落下物があるときは、作業前に落下物を除去すること。</p> <p>(2) 請負者は、作業場所が道路又は民家等に近接していて、物体の落下による危険が第三者に及ぶおそれがある場合は、次の措置を講じなければならない。</p>	<p>2. General Safety Measures</p> <p>2.6 Preventing Measures for Flying and Falling Objects The Contactor shall take measures for preventing danger to the Contractor's personnel at a workplace or the third parties due to the object flying or falling from the height by the work.</p> <p>2.6.1 Measures to Prevent Danger from Falling Objects</p> <p>(1) For preventing danger due to falling objects at the work place, the Contractor shall:</p> <p>(a) Install a mesh sheet (debris net) or a baseboard with a height of 10 cm or more at the edge and opening of the work area that may cause danger to the Contractor's Personnel underneath by the object falling during the work.</p> <p>(b) Establish a prohibited entry area if it is extremely difficult to provide a mesh sheet or baseboard due to the nature of the work, or if the mesh sheet or baseboard is to be removed temporarily.</p> <p>(c) Install a protective shelf for preventing objects from falling above the entrance / exit of the structure where the entrance / exit crosses the external scaffolding, and in addition, establish a safe passage for the entrance / exit.</p> <p>(d) Use and control of mesh sheets to prevent objects from falling shall be as follows;</p> <p>(i) The mesh sheet shall have a mesh size of 12 mm or less or a mesh size corresponding to the expected falling objects, and has the strength to prevent damage caused by falling objects.</p> <p>(ii) Mesh sheets that have mesh irregularities or breakage shall not be used.</p> <p>(iii) If a mesh sheet is removed temporarily due to the convenience of the work, it must be restored immediately after the work is completed.</p> <p>(iv) Mesh sheets shall be inspected at least once a week and repaired immediately if any damage is found.</p> <p>(v) If there is a fallen object on the mesh sheet, it must be removed before the work starts.</p>	

Specification in Japanese (Provisional Final Version R0)	English Translation (Provisional Final Version R0)	Comment / Revised by M. D
<p>(a) 上記(a)から(c)と同様の措置を講ずること。</p> <p>(b) 現場に近接する歩道には防護柵又は仮設屋根を設置すること。</p> <p>(c) 一時的に上記の措置が取れないときは、安全な通路又は迂回路を設置するとともに誘導員を配置し、通行車両及び歩行者の安全を確保すること。</p>	<p>(2) When the work place is close to a road or a private house and where there is a risk that falling objects may cause danger to the third parties, the Contractor shall:</p> <p>(a) Take the same measures as (a) to (c) above.</p> <p>(b) Install protective shelves or temporary roofs on the sidewalk close to the site</p> <p>(c) Install a safe passage or detour, if the above measures cannot be taken temporarily, and place a flagman to ensure the safety of passing vehicles and pedestrians.</p>	
<p>2.6.2 作業による飛来物による危険防止のための措置</p> <p>(1) 請負者は、飛来による危険が予想されるコンクリートの破砕作業、グラインダー等を使用する研削作業においては、次の飛来防止措置を講じなければならない。</p> <p>(a) 飛来物が発生する場所を必要に応じ覆うなどの飛来防止措置を講ずること。</p> <p>(b) 研削作業の手順、工具の破断に伴う危険防止等の措置については、本仕様書 4.1[建設機械作業の一般的留意事項]の規定に従うこと。</p> <p>(c) 保護帽、保護メガネ等の飛来物による危険防止の保護具を使用させること。</p> <p>(2) 強風時には、本仕様書 2.7.6[強風及び暴風に対する措置]に従い、資材等の飛散防止の措置をとること。</p>	<p>2.6.2 Measures to Prevent Danger from Flying Objects during Work</p> <p>(1) For works such as concrete crushing work and grinder operation that are anticipated dangers due to flying objects, the Contractor shall:</p> <p>(a) Take preventive measures such as covering the place where flying objects occur as necessary</p> <p>(b) Follow the provisions of 4.1 of this Specification [General Notes on Construction Equipment Work] for grinding work procedures and preventing danger due to tool breakage etc. and,</p> <p>(c) Have the workers use protective equipment such as protective caps and protective glasses to prevent danger from flying objects.</p> <p>(2) In strong winds, the Contractor shall take measures to prevent flying of materials, etc. according to 2.7.6 [Measures against Strong Wind and Storm] in this Specification.</p>	
<p>2.6.3 物体投下による危険防止のための措置</p> <p>請負者は、高所からの物体投下による請負者の要員への危険を防止するために、次の措置を行わなくてはならない。</p> <p>(1) 高さ3m以上の高所からの物体の投下を行わないこと。</p> <p>(2) やむを得ず高さ3m以上の高所から物体を投下する場合には、シュートを設置すること。また、立入禁止区域の設定、又は監視員の配置を行うこと。</p> <p>(3) シュートは、周囲に投下物が飛散しない構造とすること。</p> <p>(4) シュート先端と地上との間隔は投下物が飛散しないように、シュートの長さ、勾配を考慮した設備とすること。</p>	<p>2.6.3 Measures to Prevent Danger from Dropping Objects Work</p> <p>In order to prevent danger to the Contractor's Personnel from dropping objects from high places, the Contractor shall:</p> <p>(1) Prohibit to drop objects from a height of 3m or more.</p> <p>(2) Install a chute, if it is unavoidable to drop an object from a height of 3m or more, and establish a prohibited entry area or assign a spotter.</p> <p>(3) Use a chute that is structured so that the dropped objects will not scatter in the surrounding area.</p> <p>(4) Adjust the distance between the chute tip and the ground by devising the chute length and gradient so that the thrown object will not scatter.</p>	

Specification in Japanese (Provisional Final Version R0)	English Translation (Provisional Final Version R0)	Comment / Revised by M. D
<p>2.6.4 高所の作業場所の材料等の集積による危険防止のための措置</p> <p>請負者は、足場の上等の高所の作業場所において、材料、器具、工具等(以下、「材料等」という。)を集積する場合は、物体の落下による危険防止のために、次の措置を行わなくてはならない。</p> <p>(1) 足場、鉄骨等の物体の落下しやすい高所には物を集積しないこと。</p> <p>(2) 作業床端、開口部等の1m以内には、材料等を集積しないこと。</p> <p>(3) 高所作業場所に材料等を仮置きする場合は、材料等をロープ掛けやシート掛け等により、風、振動等による落下を防止すること。</p> <p>(4) 飛散しやすい物を仮置きする場合にはロープ等で緊結するか、箱、袋に収納すること。</p>	<p>2.6.4 Measures to Prevent Danger by Accumulated Materials, etc. at High Work Places</p> <p>When materials, instruments, tools, etc. (hereinafter referred to as “materials” in this section) are accumulated at a high work place on the scaffolding etc., in order to prevent danger from falling objects, the Contractor shall:</p> <p>(1) Prohibit from accumulating materials at high places such as scaffolding and steel frames where objects are likely to fall.</p> <p>(2) Prohibit from accumulating materials within 1m of work floor edge, opening, etc.</p> <p>(3) Prevent temporarily placed materials in a high work place from falling due to wind, vibration, etc. by means of fixing them with ropes or sheets.</p> <p>(4) When temporarily placing items that are likely to scatter, tie them together with a rope or store them in a box or bag.</p>	
<p>2.6.5 上下作業時の落下物による危険防止のための措置</p> <p>請負者は、原則として上下作業は行ってはならない。但し、やむを得ず実施する場合は以下の措置を講じなければならない。</p> <p>(1) 事前に上下作業の責任者間で作業の場所、内容、時間等をよく調整し、安全確保を図ること。</p> <p>(2) 2.6.1[物体の落下による危険防止のための措置] および 2.6.4[高所の作業場所の材料等の集積による危険防止のための措置]に規定する措置に加えて、工具、材料等を落下させないように、作業者につり網、つり袋等を使用させる等の安全確保を講ずること。</p> <p>(3) 危険防止措置の実施が困難な場合には、監視員を適宜配置すること。</p>	<p>2.6.5 Measures to Prevent Danger from Falling Objects When Working Above and Underneath Other Workers</p> <p>As a general rule, the Contractors shall not allow his personnel to work above and underneath other workers. However, if it is unavoidable, the Contractor shall:</p> <p>(1) Ensure safety by carefully coordinating the location, content, time, etc. of the work between the persons in charge of the work beforehand.</p> <p>(2) In addition to the measures stipulated in 2.6.1 [Measures to Prevent Danger from Falling Objects] and 2.6.4[Measures to Prevent Danger by Accumulated Materials, etc. at High Work Places], take measures to prevent materials from falling by instructing his personnel to use hanging nets and/or hanging bags.</p> <p>(3) Assign a spotter as appropriate when it is difficult to take measures for preventing danger.</p>

2.7 Measures against Adverse Weather and Earthquakes (English R0)

2019.9.5 JICA PFD-J
2019.9.9 NK R0

JSSS in Japanese (Provisional Final Draft JR0 9/5)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>2. 安全措置一般</p> <p>2.7 悪天候及び地震時の対策</p> <p>2.7.1 悪天候及び地震時の緊急事態対応計画</p> <p>請負者は、本仕様書 1.10[緊急事態対応計画及び緊急通報体制]の規定に従い、本節 2.7.4(1)に規定する強風、暴風、大雨、大雪、雷、地震を対象にした緊急事態対応計画を、作成しなければならない。</p> <p>大雨により土石流、異常出水、斜面崩壊、落石等が予見される現場においては、緊急事態対応計画に、それらへの対応を記載しなければならない。</p>	<p>2. General Safety Measures</p> <p>2.7 Measures against Adverse Weather and Earthquakes</p> <p>2.7.1 Emergency Response Plan for Adverse Weather and Earthquakes</p> <p>The Contractor shall create the emergency response plan for strong winds, storms, heavy rains, heavy snowfalls, lightning and earthquakes defined in 2.7.4 (1) for preparing the emergency response plan and emergency notification system specified in 1.10 of JSSS.</p> <p>In a site where debris flow, abnormal runoff, slope collapse and rock fall by heavy rain are predicted, the Contractor shall include actions against the occurrence in the emergency response plan.</p>	
<p>2.7.2 悪天候及び地震に備えた準備と点検</p> <p>請負者は、悪天候及び地震に備え、次の準備を行わなくてはならない。</p> <p>(1) 気象及び地震情報を常時テレビ、ラジオ、インターネット等で入手すること。</p> <p>(2) 電話、無線機、トランシーバー、拡声器、サイレン等、緊急時の連絡設備を常備すること。かかる連絡設備は、緊急時に使用できるよう常に点検整備しておくこと。</p> <p>(3) 停電に対応できるように非常電源設備を設置し、定期的に点検整備をしておくこと。</p> <p>(4) 悪天候及び地震時の退避場所や避難ルートについて計画し、請負者の要員に周知しておくこと。</p> <p>(5) 悪天候、地震及び津波に関する情報の伝達、及び請負者の要員のとるべき行動に関し、本仕様書 1.10 (3)に規定する訓練を行うこと。</p>	<p>2.7.2 Gathering Weather and Earthquake Information and Response</p> <p>The Contractor shall prepare for the followings in case of adverse weather and earthquakes:</p> <p>(1) Always obtain weather and earthquake information on TV, radio, internet, etc.</p> <p>(2) Always have emergency contact facilities ready such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such communication facilities shall be inspected and maintained at all times so that it can be used in an emergency.</p> <p>(3) Install emergency power supply equipment to deal with power outages and perform regular maintenance.</p> <p>(4) Plan for evacuation routes and sites in case of adverse weather and earthquakes, and disseminate them to the Contractor's Personnel.</p> <p>(5) Conduct training as provide in 1.10 (3) regarding the communication of information on adverse weather, earthquakes and tsunamis, and actions to be taken by the Contractor Personnel.</p>	
<p>2.7.3 気象及び地震情報の収集と対応</p> <p>請負者は、気象及び地震情報の収集と気象の変化及び地震の発生に対応するため、次の措置を講じなければならない。</p> <p>(1) 本仕様書 2.7.4 (1)(a)から(d)に示す強風、暴風、大雨、大雪、もしくはそれに準ずる天候(以下、「悪天候」という。)が予想されるときは、継続的に降雨量や風速等の悪天候に係わる気象情報を確認すること。</p> <p>(2) 気象及び地震情報に基づき、必要に応じて本仕様書 2.7.4 から 2.7.9 に記載の対応をとること。また、本仕様書 1.10 (2)に規定する緊急連絡表で指定された関係者に通知すること。</p>	<p>2.7.3 Collect Information about Weather and Earthquake and Response</p> <p>For collecting weather and earthquake information and responding to changes in weather condition and occurrence of earthquakes, the Contractor shall:</p> <p>(1) Check continuously the weather information regarding rainfall and wind speed etc. when adverse weather is anticipated such as strong winds, storms, heavy rains, heavy snowfalls or similar weather (hereinafter referred to as "adverse weather") as provide in 2.7.4 (a) to (d).</p> <p>(2) Take the measures specified 2.7.4-2.7.9 as necessary based on weather and earthquake information. In addition, notify the relevant parties specified in the emergency contact list prescribed in 1.10 (2).</p>	

JSSS in Japanese (Provisional Final Draft JR0 9/5)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>2.7.4 作業の中止と再開</p> <p>請負者は、悪天候及び地震により事故が発生することを防ぐために、次の措置を講じなければならない。</p> <p>(1) 当該国の法律に定めがない限り、悪天候及び地震による作業の中止の基準は次を目安として定めること。</p> <p>(a) 強風： 10 分間の平均風速が毎秒 10 メートル以上の風</p> <p>(b) 暴風： 瞬間風速が毎秒 30 メートルを超える風</p> <p>(c) 大雨： 1 回の降雨量が 50 ミリメートル以上の雨</p> <p>(d) 大雪： 1 回の降雪量が 25 センチメートル以上の雪</p> <p>(e) 地震： メルカリ震度階VI以上の地震</p> <p>(2) 天気予報等であらかじめ上記基準を超える悪天候が予想される場合は、緊急事態対応計画に従い、作業中止を含めた対応策の準備を行っておくこと。</p> <p>(3) 悪天候のときは 2m 以上の高所作業を中止すると共に、その旨エンジニアに通知すること。</p> <p>(4) 降雨、降雪及び霧発生時の視界不良により、作業に危険を及ぼす可能性がある場合は、当該作業を中止すると共に、その旨エンジニアに通知すること。</p> <p>(5) 悪天候又は地震発生後に作業を再開する前には、構造物(仮設を含む)に危険がないかを点検すること。危険箇所が発見された場合には、すみやかに危険箇所に立入禁止措置を講じ、その旨をエンジニアに通知すること。</p> <p>(6) 悪天候又は地震発生後に作業を再開する前には、建設機械に危険がないかを点検すること。危険が発見された場合には、必要な修理を施した上で使用すること。</p>	<p>2.7.4 Discontinuation and Resumption of Work</p> <p>In order to prevent accidents due to adverse weather and earthquake, the Contractor shall:</p> <p>(1) Determine the criteria for discontinuation of works due to adverse weather and earthquake referring to the followings as a guide unless otherwise specified in the Law of the Country.</p> <p>(a) Strong wind: ten minutes average wind speed is 10 meters per second or more</p> <p>(b) Storm: instantaneous wind speed exceeds 30 meters per second</p> <p>(c) Heavy rain: rain of 50 mm or more per rainfall</p> <p>(d) Heavy snowfall: snowfall of 25 cm or more per snowfall</p> <p>(e) Earthquake: an earthquake of Mercalli seismic scale VI or higher</p> <p>(2) Prepare for measures to cope with adverse weather including discontinuation of work according to the emergency response plan if a weather exceeding the above criteria is predicted by weather forecast etc.</p> <p>(3) Stop work at heights of 2 m or more in adverse weather and inform it to the Engineer accordingly.</p> <p>(4) Stop the work if there is a possibility that work may be dangerous due to poor visibility during rain, snow or fog, and inform it to the Engineer accordingly.</p> <p>(5) Inspect the structures (including temporary structures) for danger before resuming work after adverse weather or earthquake. If any dangerous spot is found, promptly take no-entry measures and inform it to the Engineer accordingly.</p> <p>(6) Inspect the construction equipment for danger before resuming work after adverse weather or earthquake. If any danger is found, use it after making the necessary repairs.</p>	
<p>2.7.5 大雨に対する措置</p> <p>請負者は、作業現場及び周辺では、2.7.4(1)に規定する大雨に対し、次の措置を講じなければならない。</p> <p>(1) 次のような箇所は、下記(2)から(4)の対策及び立入禁止の措置を講ずること。</p> <p>(a) 土砂崩れ、がけ崩れ、地すべりの発生のおそれがある箇所及び土石流の到達のおそれがある箇所</p> <p>(b) 資機材の流出、土砂の流出のおそれがある箇所</p> <p>(c) 河川の氾濫等により浸水のおそれがある箇所</p> <p>(2) 流出のおそれのある資機材等は、安全な場所へ移動する等流出防止の措置を講ずること。</p> <p>(3) 大型機械の設置してある場所で、機械等の冠水又は流出、地盤のゆるみに</p>	<p>2.7.5 Measures for Heavy Rain</p> <p>For heavy rainfall prescribed in 2.7.4 (1) at the Site and in the surrounding area, the Contractor shall:</p> <p>(1) Take measures for non-entry and setting signs as necessary at the following places:</p> <p>(a) Places where landslides and slope collapse are anticipated and where there is a risk of debris flow reaches</p> <p>(b) Places where there is a risk of outflow of material and equipment and soil runoff</p> <p>(c) Places where there is a risk of damage due to flooding of a river</p>	

JSSS in Japanese (Provisional Final Draft JR0 9/5)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>よる転倒のおそれがある場合は、適切な場所への退避又は転倒防止措置を講じること。</p> <p>(4) 冠水又は流出のおそれがある仮設物は、撤去するか、水裏から仮設物内に水を呼び込み内外水位差による倒壊を防ぐか、補強するなどの措置を講じること。</p>	<p>(2) Take measures such as moving materials and equipment to a safe place for preventing them from being washed away.</p> <p>(3) Take measures such as evacuation of large equipment to a proper place if there is a risk of submersion or outflow of them and overturning of the equipment due to loosening of the ground.</p> <p>(4) If there is a risk of submersion or outflow, protect temporary facilities by means such as moving them to a safe place or reinforcing the facilities, or drawing water from behind the temporary structures to prevent collapsing due to water level difference between inside and outside.</p>	
<p>2.7.6 強風及び暴風に対する措置</p> <p>請負者は、作業現場及び周辺では、2.7.4(1)で規定する強風又は暴風に対し、次の措置を講じなければならない。</p> <p>(1) クレーン、杭打機等のような風圧を大きく受ける大型建設機械には、転倒、逸走防止の措置を講じること</p> <p>(2) 大型建設機械は、高圧電線の大きな振れによる接触が発生しないように、電線類から十分な距離をとって退避させておくこと。</p> <p>(3) 足場に対して、次の対策を行うこと。</p> <p>(a) 風荷重が大きくなるメッシュシート等の撤去又はたたむこと</p> <p>(b) 足場等の滑動防止、壁つなぎの補強等</p> <p>(c) 建築物より突出している足場等の控え索や控え材等での補強</p> <p>(d) 足場上にある資材等の固縛又は地上への移動</p> <p>(4) 高所作業での作業を中断すること。また、物の飛散が予想されるときは、飛散防止措置を施すこと。</p>	<p>2.7.6 Measures for Strong Wind and Storm</p> <p>For strong wind and storm prescribed in 2.7.4 (1) at the Site and in its surrounding area, the Contractor shall:</p> <p>(1) Take measures to prevent overturns and run-off of large equipment such as cranes and pile drivers.</p> <p>(2) Evacuate large equipment to a location at a sufficient distance from the overhead high voltage lines to prevent contact due to large swings of the wires.</p> <p>(3) Take the following measures for scaffoldings and work platforms.</p> <p>(a) Removal or furl of mesh sheets that increases wind load</p> <p>(b) Prevention of scaffolding from sliding and reinforcement of wall connectors.</p> <p>(c) Reinforcement of scaffoldings projecting from building by supporting rope or bracing</p> <p>(d) Fixation of materials on the scaffoldings or moving to the ground</p> <p>(4) Discontinue work at a high place. In addition, take measures to prevent scattering of materials etc. when scattering is anticipated.</p>	
<p>2.7.7 雪に対する措置</p> <p>請負者は、積雪のある作業現場及び周辺では、積雪に対し次の措置を講じなければならない。</p> <p>(1) 道路、水路等には幅員を示すためのポール、赤旗の設置等の転落防止措置を講じること。</p> <p>(2) 現場内の道路、工事用棧橋、階段、スロープ、通路、作業足場等の除雪等の作業員の転倒防止措置を講じること。</p> <p>(3) 付着した雪の除去など標識、掲示板等を見やすくすること。</p> <p>(4) 足場や構台上に積雪あるいは着氷がある場合は、雪や氷の除去作業以外の作業を禁止すること。</p>	<p>2.7.7 Measures for Heavy Snow</p> <p>For heavy snow prescribed in 2.7.4 (1) at the Site and its surrounding area, the Contractor shall:</p> <p>(1) Take fall prevention measures such as setting of poles, red flags to show the width of roads and waterways.</p> <p>(2) Take fall prevention measures for workers such as snow removal on roads, construction platforms, stairs, slopes, passages, scaffoldings etc.</p> <p>(3) Remove adhering snow on signs, notice boards, etc. to make them easy to see.</p> <p>(4) Prohibit works on the scaffoldings or platforms if snow or ice exists except its removal work.</p>	
<p>2.7.8 雷に対する措置</p>	<p>2.7.8 Measures for Lightning</p>	

JSSS in Japanese (Provisional Final Draft JR0 9/5)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>請負者は、雷発生時の作業に関して、次の措置を講じなければならない。</p> <p>(1) 雷検知器、ラジオ受信機等により雷雲の発生や接近の情報を入手した時は、必要に応じて2.7.3(2)で規定の設備を用いて作業員に速やかに周知すること。</p> <p>(1) 雷光もしくは雷鳴が観測されたときは、直ちに作業を中止し、作業員を雷に対し安全な場所に避難させること。</p> <p>(2) 雷光と雷鳴の間隔が長くなるまで作業を再開しないこと。</p> <p>(3) 雷発生時の警報(作業中止、退避等)、連絡方法を定め、作業中止又は退避の場所等に関する措置を適切な所に看板等で示しておくこと。</p>	<p>Regarding works when lightning occurs, the Contractor shall:</p> <p>(1) When information regarding occurrence and approach of thunderclouds is obtained by lightning detector or radio etc., transmit it to the site workers immediately by stipulated facilities in accordance with 2.7.2 (2).</p> <p>(2) Stop all outdoor works immediately when lightning is observed, and make all workers evacuate to safe places.</p> <p>(3) Not resume work until the interval between lightning and crack of thunder increases.</p> <p>(4) Establish warnings (stopping work, evacuation, etc.) and communication methods in the event of a lightning occurs, and indicate measures related to work stoppage or evacuation locations on appropriate places with signs.</p>	
<p>2.7.9 地震及び津波に対する措置</p> <p>請負者は、地震発生後、津波に対して関係当局が警報を出した場合、又は津波発生が予見される場合は、決められた避難場所へ作業員を避難させなければならない。</p>	<p>2.7.9 Measures for Earthquake and Tsunami</p> <p>The Contractor shall evacuate workers to the predetermined safe place when the related authorities issue warning for occurrence of tsunamis or prediction of tsunami after the earthquake is expected.</p>	

JICA standard Safety Specification Preparation Study
2.8 Fire Prevention (English R0)

2019.9.9 JICA PFD-J
2019.9.9 NK R0

JSSS in Japanese (Provisional Final Draft JR0 9/9)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>2 安全措置一般 2.8 火災予防 2.8.1 一般</p> <p>請負者は工事現場における火災予防については、当該国の法律に従い、法律に加え本仕様書を含む契約で別途の要求がある場合には、これに従わなければならない。</p>	<p>2. General Safety Measures 2.8 Fire Prevention 2.8.1 General</p> <p>The Contractor shall comply with the Laws of the Country regarding the fire prevention at the Site. In addition to the Law, in the case of separate requirement in the Contract including this Specification, the Contractor shall comply with it.</p>	
<p>2.8.2 消防体制の確立</p> <p>請負者は、請負者の事務所、仮設建物、仮設備、寄宿舎、仮設工事の構造物及び工事中の本設工事の構造物等(以下、本節においては「事務所等」という。)に関し、次の消防体制を確立しなければならない。</p> <p>(1) 事務所等の消防計画を、本仕様書 1.10[緊急事態対応計画及び緊急通報体制]の緊急事態対応計画の一部として作成し、エンジニアに提出すること。同消防計画は本仕様書 2.8.3 から 2.8.6 に規定の事項を含んだものとする。</p> <p>(2) 消防および火災発生時の避難に係る責任者を指名すること</p> <p>(3) 消防訓練計画を作成し、消防計画に含めること。訓練を実施した場合はその記録を保管すること。</p>	<p>2.8.2 Establishment of Firefighting System</p> <p>The Contractor shall establish the following firefighting system for the Contractor's offices, temporary buildings, temporary facilities, dormitory, temporary construction structure, and permanent structures under construction (hereinafter referred to as “offices” in this section).</p> <p>(1) Prepare a fire fighting plan for the offices as a part of the emergency response plan in 1.10 [Emergency Response Plan and Emergency Call System] of this Specification and submit it to the Engineer. The firefighting plan shall include the items stipulated in 2.8.3 to 2.8.6 of this Specification.</p> <p>(2) Designate a person responsible for firefighting and also evacuation in the event of a fire.</p> <p>(3) Prepare a fire fighting training plan and include it in the fire fighting plan. The record of the training shall be kept accordingly.</p>	
<p>2.8.3 防火及び消火のための措置</p> <p>請負者は、事務所等の防火及び消火のために、以下の措置を講じなければならない。</p> <p>(1) 現場内では、指定場所以外での喫煙を禁止し、喫煙場所には水を入れたバケツを設置するなど防火を徹底すること。</p> <p>(2) 消火栓、消火器等の設備は、初期消火に充分なものとする。</p> <p>(3) 火気を取扱う場所には、普通火災用、油火災用、電気火災用等の用途に応じた消火器等消火設備を備えること。消火器は定期的に点検し、有効期間を過ぎたものは交換すること。</p> <p>(4) 火災発生時には消防隊が円滑に活動を行うための誘導・支援を行うこと。</p>	<p>2.8.3 Measures of Fire Prevention and Fire Fighting</p> <p>For fire prevention and firefighting of offices, The Contractor shall:</p> <p>(1) Prohibit smoking anywhere in the Site other than designated areas, and implement fire prevention measures thoroughly by placing buckets with water in smoking areas etc.</p> <p>(2) Locate fire hydrants and fire extinguishers sufficient for initial firefighting.</p> <p>(3) Locate fire extinguishing equipment including fire extinguishers in places where fire is handled corresponding on the purpose of use, such as for ordinary fires, oil fires, electric fires etc. Fire extinguishers shall be regularly inspected and replaced after the expiration date.</p> <p>(4) In the event of a fire, provide guidance and support for the fire brigade to perform smoothly.</p>	
<p>2.8.4 避難のための措置</p> <p>請負者は、火災時の避難を容易にするために、次の措置を講じなければならない。</p> <p>(1) 必要に応じ避難経路図を作成し、見やすい場所に掲示すること。</p>	<p>2.8.4 Measures for Evacuation</p> <p>For facilitating evacuation in the event of a fire, The Contractor shall:</p> <p>(1) Create an evacuation route map if necessary and post it in easy-to-see places.</p> <p>(2) Display the evacuation route as necessary at the work places.</p>	

JSSS in Japanese (Provisional Final Draft JR0 9/9)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>(2) 現場においては必要に応じ避難経路を標示すること。</p> <p>(3) 2階以上の建物で収容人員が30人以上の場合、または立坑及び地下工事の場合には複数の避難経路を設置すること。</p> <p>(4) 火災発生時に避難が必要な現場内の要員に、火災発生の事実を周知できる連絡方法を定めておくこと。</p>	<p>(3) Install multiple evacuation routes for a building with 2 or more floors and a capacity of 30 people or more, or in the case of shafts and underground work.</p> <p>(4) Establish a communication method to inform the personnel at the Site who need to evacuate in the event of a fire</p>	
<p>2.8.5 可燃物の管理</p> <p>請負者は、火災発生の危険性が高いガソリン、アセトン、トルエン等の有機溶剤、灯油、軽油、重油、クレオソート油、ギヤー油、シリンダー油等の潤滑油等の可燃物(以下、本款においては「可燃物」という。)の貯蔵及び管理については、当該国の法律に従わなければならない。また、次の措置を講じなくてはならない。</p> <p>(5) 危険物を貯蔵又は取扱う場合には、責任者を指名し、エンジニアに通知すること。</p> <p>(6) 上記責任者は、可燃物の取り扱いについて十分な経験と能力を確認できる者とする。また、当該国の法律で関連の資格が要求される場合は、当該資格を有する者でなければならない。</p> <p>(7) 可燃物は直射日光を避け、通風換気の良いところに貯蔵し、貯蔵場所には、立入禁止の措置を講じ、かつ火気使用禁止の標示をすること。</p> <p>(8) 可燃物の取扱方法を定め、エンジニアに通知するとともに請負者の要員への周知徹底を図ること。</p>	<p>2.8.5 Management of Combustible Materials</p> <p>The Contractor shall comply with the Laws of the Country for usage and storage of combustible materials such as gasoline, kerosene, light oil, heavy oil, creosote oil, gear oil, cylinder oil, and other lubricating oils and organic solvents such as acetone, toluene etc. (hereinafter referred to as “combustible materials” in this subsection).</p> <p>In addition, the Contractor shall:</p> <p>(1) Appoint the person responsible for storing or handling combustible materials and notify the name to the Engineer.</p> <p>(2) Appoint a person who can be confirmed as having sufficient experience and ability in handling combustible materials. In addition, if the Law of the Country requires, the person shall have the relevant qualification.</p> <p>(3) Store combustible materials in a well-ventilated place away from direct sunlight, take measures to prohibit entering and display for prohibition of using fire.</p> <p>(4) Determine handling methods of combustible materials, and notify it to the Engineer, and ensure full awareness of the methods to the Contractor’s Personnel.</p>	
<p>2.8.6 溶接・溶断による火災の予防</p> <p>溶接、溶断作業による火災の予防に関しては、本仕様書 7.9[電気溶接・ガス切断作業]の規定に従うこと</p>	<p>2.8.6 Fire Prevention Measures in Welding and Gas Cutting</p> <p>The Contractor shall comply with the JSSS 7.9 [Welding and Gas Cutting Works] for the fire prevention measures in welding and gas cutting works.</p>

(2) Standards

The Contractor shall comply with EH40/2005 Workplace Exposure Limits, (third edition published 2018), issued by HSE. Table 1 shall apply and the Short Term and Long-Term Exposure limits shall not be exceeded.

Table 2.1.1: List of Approved Workplace Exposure Limits (WELs)

Types of Dust/Gas	Long-term Exposure Limit (8 hr TWA Reference Period)	Short-term Exposure Limit (15 minute TWA Reference Period)	Notes
Carbon Dioxide	9150 mg/m3 5000 ppm	27400 mg/m3 15000 ppm	
Carbon Monoxide	23 mg/m3 20 ppm	117 mg/m3 100 ppm	BMGV
	35 mg/m3 30 ppm	232 mg/m3 200 ppm	Mining Only
Chlorine	-	1.50 mg/m3 0.50 ppm	Water treatment
Chlorine dioxide	0.28 mg/m3 0.10 ppm	0.84 mg/m3 0.30 ppm	Water treatment
Hydrogen Sulphide	7 mg/m3 7 ppm	14 mg/m3 14 ppm	Waste Water treatment
Nitrogen Dioxide	0.96 mg/m3 0.50 ppm	1.91 mg/m3 1.00 ppm	Does not apply to underground mining and tunnelling industries until 21/8/23
Nitrogen Monoxide	30 mg/m3 25 ppm	30 mg/m3 1.00 ppm	Limit applicable to underground mining & tunnelling industries ONLY until 21/8/23
Portland Cement: Respirable Inhalable	4 mg/m3 10 mg/m3		
Silica: Respirable Crystalline	0.1 mg/m3	1.5 mg/m3	

(Note: The entire HSE table shall apply, items and values above are extracted samples only)

(b) 4 mg/m3 (8-hour TWA) of respirable dust.

~~Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.~~

(2) Standards

~~The Contractor shall comply with EH40/2005 Workplace Exposure Limits, (third edition published 2018), issued by HSE. Table 1 shall apply and the Short Term and Long-Term Exposure limits shall not be exceeded.~~

JC: 「HSE に準拠する。具体的に必要となる項目については Annex * * にあるとおり。」といった趣旨を記載して、本文中からは以下の Table 2.1.1 を削除する。Annex は空欄として発注者が実際に必要な項目を書き込めるようなフォーマットを入れておく

This paragraph will be revised to that like “The Contractor shall comply with HSE. The items to be applied are shown in Annex.” The Table 2.1.1 will be deleted from 2.1.1. In Annex, blank table will be attached for the Employer to fill actually required items.

MM: 2.1.1 (2) Standard Table 2.1.1

The Table with detail will be deleted.

The User Guide will require the table to be inserted with the particular monitoring items specified by the Executing Agency/Consultant in the Particular Safety Specification.

NK: The paragraph will be modified as follows (for MD’s review and editing.)

The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications.

Table 2.1.1: List of Approved Workplace Exposure Limits (WELs)

Types of Dust/Gas	Long-term Exposure Limit (8 hr TWA Reference Period)	Short-term Exposure Limit (15 minute TWA Reference Period)	Notes
Carbon Dioxide	9150 mg/m3 5000 ppm	27400 mg/m3 15000 ppm	
Carbon Monoxide	23 mg/m3 20 ppm	117 mg/m3 100 ppm	BMGV
	35 mg/m3 30 ppm	232 mg/m3 200 ppm	Mining Only
Chlorine	-	1.50 mg/m3 0.50 ppm	Water treatment
Chlorine dioxide	0.28 mg/m3 0.10 ppm	0.84 mg/m3 0.30 ppm	Water treatment
Hydrogen Sulphide	7 mg/m3 7 ppm	14 mg/m3 14 ppm	Waste Water treatment
Nitrogen Dioxide	0.96 mg/m3 0.50 ppm	1.91 mg/m3 1.00 ppm	Does not apply to underground mining

(b) 4 mg/m3 (8-hour TWA) of respirable dust.

(TWA means Time weighted average.)

~~Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.~~

(2) Standards of Workplace Exposure Limits (WELs)

The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications.

			and-tunnelling-industries-until-21/8/23
Nitrogen-Monoxide	30 mg/m ³ 25 ppm	30 mg/m ³ 1.00 ppm	Limit-applicable-to-underground-mining-&-tunnelling-industries-ONLY-until-21/8/23
Portland-Cement-Respirable-Inhalable	4 mg/m ³ 10 mg/m ³		
Silica-Respirable-Crystalline	0.1 mg/m ³	1.5 mg/m ³	

(Note: The entire HSE table shall apply, items and values above are extracted samples only)

JC: 表の記述に関するコメントがあり。

NK: 表が削除されたので、コメント対応を行わない。

JC: 全ての危険部の分析は無理。情報提供と対象基準の明示は、発注者の役割では？

It impossible to analyse all dangerous items. Is it the role of the Employer to provide information and specify items and limits?

NK: Table 2.1.1 will be deleted. The User Guide will show the Table in which the monitoring items will be specified by the Employer in the Particular Safety Specification.

(3) Asbestos

JC: OSHA、HSE とも重視しているのでアスベストが入るのは至極当然。(HSE が重視) この上の結晶性シリカがこれ。

It is extremely natural to specify asbestos as both OSHA and HSE give special attention to them (HSE does.)

The above crystalline silica is this (incomplete sentence).

MM: 2.1.1(3)(b) Asbestos Will be reviewed for reference in the User Guide.

- (a) For the information of Project participants, asbestos causes many construction fatalities every year. Participants should be aware that it is commonly found in older buildings frequently in ceiling and floor cavities, insulation, sprayed coatings, floor tiles and composites, asbestos-cement sheets and roofing felt;

JC: This shall be deleted as it is explanation (annotation).

NK: This (3)(a) above will be shifted to User Guide.

NK: (a) and (b) will be modified as right

- (b) If after Site survey and investigation (if

(3) Asbestos

- (a) For the information of Project participants, asbestos causes many construction fatalities every year. Participants should be aware that it is commonly found in older buildings frequently in ceiling and floor cavities, insulation, sprayed coatings, floor tiles and composites, asbestos-cement sheets and roofing felt;

- (b) If after Site survey and investigation (if necessary) there is a possibility that asbestos may be encountered in the Works, this shall be stated in the Bidding Documents in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and the required remedial measures shall be taken; and

- (c) The Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working

(3) Asbestos

- (a) When required in the Contract, the Contractor shall take measures for asbestos in accordance with the Particular Safety Specification.

- (b) When existence of asbestos is found in the Works, the Contractor shall report to the Engineer and take measures in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and

- (c) If so required in the Contract or by an instruction by the Engineer, the Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.

<p>2.1.2 換気の悪い場所における必要な措置</p> <p>請負者は、自然換気が不十分な場所では、内燃機関を有する機械を使用してはならない。ただし、やむを得ず内燃機関を使用するときは、当該内燃機関の排気ガスによる健康障害を防止するため、十分な換気を行わな</p>	<p>with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.</p> <p>(4) Other Hazardous Substances The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention (a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and (b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE (a) If it is not possible to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and (b) For details of PPE refer to JSSS 2.9 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p>	<p>necessary) there is a possibility that asbestos may be encountered in the Works, this shall be stated in the Bidding Documents in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and the required remedial measures shall be taken; and</p> <p>(c) The Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.</p> <p>JC: Put "If so required in the contract or by an Instruction by the Engineer," at the beginning of (c). NK: Done as commented.</p> <p>(4) Other Hazardous Substances The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention (a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and (b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE (c) If it is not possible to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and</p> <p>JC: 「経済的に合理的な手段では不可能」といった定義が必要か reasonably impossible Definition is necessary such as "impossible in financial and reasonable method (reasonably impossible)". NK: (a) is modified as right. If it is not reasonably practicable to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and:</p> <p>(d) For details of PPE refer to JSSS 2.9 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p> <p>JC: 酸素濃度の記載が抜けているので入れるようにしてください。日本語版の酸素濃度に関する記載の範囲で追記願います。 There is missing of concentration limit values of oxygen, so they shall be added as mentioned in Japanese draft JSSS.</p>	<p>(4) Other Hazardous Substances The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention (a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and (b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE (a) If it is not reasonably practicable to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and (b) For details of PPE refer to JSSS 2.9.1 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p>
--	--	--	---

<p>ければならない。→E2.1.2(4)に規定済み</p>	<ol style="list-style-type: none"> (1) The Contractor shall inspect and carry out tests to ensure that all working areas have adequate and healthy natural ventilation. (2) If any areas do not have adequate and healthy natural ventilation, the Contractor shall adopt measures required by HSE and otherwise provide suitable and efficient mechanical ventilation systems with fans, ducting and all associated devices and services to improve the working environment to acceptable safe levels. (3) If this is not completely possible then PPE (breathing apparatus) shall be used in accordance with the requirements of JSSS 2.9 [Personal Protective Equipment (PPE)]. (4) The Contractor shall generally prohibit the use of internal combustion engines in internal areas. When the use of such engines is unavoidable, the Contractor shall provide exhaust systems which safely and efficiently collect, contain and expel exhaust gases to external areas and prevent any emission of exhaust gases in internal areas and provide additional adequate ventilation. 	<p>MM: 2.1.2 Poor ventilation Concentration Limit value for oxygen and other gases will be inserted from the draft.</p> <p>NK: The values of HSE and Japanese JSSS are different. To make consistent of source of values for dust and oxygen, etc. (19%) will be specified in 2.1.6 (5).(1) is modified as below.</p> <ol style="list-style-type: none"> (1) The Contractor shall inspect and carry out tests to ensure that all working areas have adequate and healthy natural ventilation. (2) If any areas do not have adequate and healthy natural ventilation, the Contractor shall adopt measures required by HSE and otherwise provide suitable and efficient mechanical ventilation systems with fans, ducting and all associated devices and services to improve the working environment to acceptable safe levels. <p>JC: Delete “adopt measures required by HSE and otherwise.”</p> <p>NK: Deleted as JICA commented.</p> <ol style="list-style-type: none"> (3) If this is not completely possible then PPE (breathing apparatus) shall be used in accordance with the requirements of JSSS 2.9 [Personal Protective Equipment (PPE)]. (4) The Contractor shall generally prohibit the use of internal combustion engines in internal areas. When the use of such engines is unavoidable, the Contractor shall provide exhaust systems which safely and efficiently collect, contain and expel exhaust gases to external areas and prevent any emission of exhaust gases in internal areas and provide additional adequate ventilation. <p>JC: (4)は閉鎖空間で内燃機関を使う場合を想定しているので、この記述は矛盾しているのではないかと。書くのであれば、一旦廃棄したガスが再流入しないための措置ではないでしょうか。</p> <p>Does this sentence contradict because (4) is specified for assuming internal combustion engines in confined space? If specify, is measures for re-inflowed exhaust air once expelled.</p> <p>NK: Deleted “and prevent any emission of exhaust gases in internal areas”</p> <p>NK: There is an opinion to reinstate the following items provided in the Japanese version as they specify concrete safety measures necessary for the Contractor to take for works in a confined space.</p> <p>(5) The Contractor shall take the following measures to ensure the safety of workers when working in confined spaces.</p> <p>(a) Prohibit entry of any of the Contractor's Personnel and any other personnel who are not carrying and displaying an official permit issued to them by the HSO,</p> <p>(b) Set a spotter outside the workspace to constantly monitor the safety of personnel in the confined space. In</p>	<ol style="list-style-type: none"> (1) The Contractor shall inspect and carry out tests to ensure that all working areas have adequate and healthy natural ventilation. (2) If any areas do not have adequate and healthy natural ventilation, the Contractor shall provide suitable and efficient mechanical ventilation systems with fans, ducting and all associated devices and services to improve the working environment to acceptable safe levels. (3) If this is not completely possible then PPE (breathing apparatus) shall be used in accordance with the requirements of JSSS 2.9 [Personal Protective Equipment (PPE)]. (4) The Contractor shall generally prohibit the use of internal combustion engines in internal areas. When the use of such engines is unavoidable, the Contractor shall provide exhaust systems which safely and efficiently collect, contain and expel exhaust gases to external areas and provide additional adequate ventilation.

2.1.3 強烈な騒音を発生する場所等での必要な措置

請負者は、90dB 以上の騒音(強烈な騒音という)を発生する作業場所においては、請負者の要員の騒音障害防止のため次の措置を講じなければならない。→E2.1.3(2)に規定済み

- (1) OSHA Subpart D – Occupational Health and Environmental Controls § 1926.52 Occupational noise exposureの規定に従い、作業場所での騒音の程度と騒音の暴露時間に対応して請負者の要員に、本仕様書 2.10.5(3)(d)[防音保護具]に規定の保護具を使用させること。→E2.1.3(1)(2)に規定済み
- (2) 当該作業場所では耳栓その他の騒音障害防止用の保護具を使用しなければならない旨を、請負者の要員が容易に認知できる見やすい場所に掲示すること。→E2.1.3(2)(c)に規定済み

2.1.4 閉鎖空間における安全措置

各種ビット、タンク、水槽、マンホール、ダクト、PC 箱桁、下水道等の狭い作業空間あるいは小さい出入口のみを有する閉鎖空間(以下本節では「閉鎖空間」という。)における作業において、請負者は請負者の要員の酸素欠乏や有毒ガス等に対する安全確保のために、下記の措置を講じなければならない。→E2.1.4 に規定済み

- (1) 酸素濃度、硫化水素濃度、その他必要な作業環境項目について測定を行うこと。作業環境測定は作業前に毎日実施すること。→E2.1.4(1)に規定済み

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls

addition, a liaison shall be appointed among the personnel working in the workspace and a method for communicating with external spotter shall be established,
(c) Establish an emergency rescue system and create a rescue operation procedure. Prepare respiratory protective equipment such as a respirator for rescue operations,
(d) If an emergency occurs and rescue is required, prohibit any personnel to engage in rescue activities other than those instructed to do so in order to prevent secondary accident,
(e) Conduct education and training on the safety measures to all Contractor’s Personnel that are required to work in confined spaces

Although, in JSSS 2.1.4 Confined Spaces (3) Work Environment and (4) Hazardous Substances, JSSS 1.19 Dangerous Works and 2.3 Prohibition of entry – Dangerous Work are referred, however they are quite abstract as for the confined space works to avoid accident.

NK: considers if there is special clause for confined spaces, they should be specified. This Chapter 2 is general requirement, therefore not reinstated here.

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2 of the OSHA Standard referred to above, if at all possible;

JC: Table D-2—Permissible Noise Exposures 読み手の立場を考慮上記のとおりタイトルまで記載するようにお願いします。 Table D-2—Permissible Noise Exposures Please kindly specify title of Table as above considering easy understanding of readers.

MM: 2.1.3 Noise Table D-2 of the OSHA Standard will be included.

NK: The title and the Table are added.

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D – Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2, Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115

--	--	--	---

- (3) Instruct Spotters to maintain visual contact at all times with the driver while the vehicle is reversing.
- (4) Instruct drivers to stop reversing immediately if they lose sight of the Spotter.
- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

- (1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.
- (2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.
- (3) The Contractor shall inform and remind all Contractor's Personnel of the established standardised signal system as follows:
 - (a) By training all Contractor's Personnel including those designated as Spotters at the time they first enter the Site of the signals;
 - (b) By re-confirming with the Contractor's Personnel, the established standardised signal system in the TBM before the start of the work each day; and
 - (c) By posting signboards on Site where required showing the standard signals and sticking a smaller-sized version directly on the concerned Contractor's Equipment.

2.4.6. Qualification of Personnel

The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately

non-native に分かるように修正願います。

JICA: Its (baking up) meaning is not clear. Reversing is mentioned in (3). Change? Please revise it for non-native to be able to understand.

NK: (2) states about "hand signals", whereas (3) emphasises the importance of "eye contact" when reversing vehicles. To change "backing up" to "reversing".

- (3) Instruct Spotters to maintain visual contact at all times with the driver while the vehicle is reversing.
- (4) Instruct drivers to stop reversing immediately if they lose sight of the Spotter.
- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

	<p>2.5.5. Handrails</p> <p>(1) Handrails shall be minimum 85 cm high, complete with top-rails and mid-rails designed to withstand 70 kg. of horizontal force, top-rails to withstand 90 kg. of horizontal force, sufficient uprights to sustain these forces.</p> <p>(2) Mid-rails shall be placed at a height of 35 – 50 cm.</p> <p>(3) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without corrosion, deformity or damage of any kind.</p> <p>(4) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:</p> <p>(a) Displaying appropriate warning signs;</p> <p>(b) Assigning a Spotter to direct non-essential Contractor's Personnel away;</p>	<p>NK explained ... 2.5 Fall Prevention, ... The editing process has <u>adding missing items</u>, to catch as many potential requirements as possible (such as <u>safety nets for example</u>), ...</p> <p>(c) Status of access leading to work areas and any anchorages; and,</p> <p>(d) The presence or absence of protrusions where there is a risk of cutting or chafing of working line or lifeline or other fall prevention systems and their position and condition.</p> <p>2.5.5. Handrails</p> <p>JC: 墜落の危険がある場所には手すりを付ける、という記述をまず入れてください。Please specify at first "handrails shall be provided at places where there is risk of fall".</p> <p>NK: To insert the sentence as follows: The Contractor shall provide handrails at places where there is risk of fall.</p> <p>JICA: Please specify (1) height of handrail, (2) force. May we know the source of force.</p> <p>NK: To modify (1) for height, (2) for force. The source of force is OSHA subpart L 1926.451 (g) Fall Protection (4) (ix). (ix) Mid-rails, screens, mesh, intermediate vertical members, solid panels, and equivalent structural members of a guardrail system shall be capable of withstanding, without failure, a force applied in any downward or horizontal direction at any point along the mid-rail or other member of at least 75 pounds (333 n) for guardrail systems with a minimum 100 pound top-rail capacity, and at least <u>150 pounds (666 n=約 68kg for guardrail systems with a minimum 200 pound (約 90kg) top-rail capacity.</u></p> <p>(1) Handrails shall be minimum 85 cm high, complete with top-rails and mid-rails designed to withstand 70 kg. of horizontal force, top-rails to withstand 90 kg. of horizontal force, sufficient uprights to sustain these forces.</p> <p>JC: (1)を高さ、(2)を荷重に関する規定に揃えてください。荷重に関する出典はなんでしょう？</p> <p>(2) Mid-rails shall be placed at a height of 35 – 50 cm.</p> <p>(3) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without corrosion, deformity or damage of any kind.</p> <p>(4) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:</p> <p>(a) Displaying appropriate warning signs;</p> <p>(b) Assigning a Spotter to direct non-essential Contractor's Personnel away;</p>	<p>(c) Status of access leading to work areas and any anchorages; and,</p> <p>(d) The presence or absence of protrusions where there is a risk of cutting or chafing of working line or lifeline or other fall prevention systems and their position and condition.</p> <p>2.5.5 Handrails</p> <p>The Contractor shall provide handrails at places where there is risk of fall.</p> <p>(1) Handrails shall be complete with top-rails of minimum 85 cm high and mid-rails placed at a height of 35 - 50 cm.</p> <p>(2) The top-rail shall be designed to withstand 90 kg. of horizontal force and mid-rails 70 kg. of horizontal force, sufficient uprights to sustain these forces.</p> <p>(3) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without corrosion, deformity or damage of any kind.</p> <p>(4) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:</p> <p>(a) Displaying appropriate warning signs;</p> <p>(b) Assigning a Spotter to direct non-essential Contractor's Personnel away;</p>
--	--	--	---

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways
 The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.
 The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways
 JC: 定義上の違いは？ safe routes の単なる言い換えか？
 What is difference of these in definition? Are these only paraphrases of safe routes?
 NK: The definition is as follows following OSHA.
 § 1926.851 Stairs, passageways, and ladders.
 (a) Only those stairways, passageways, and ladders, designated as means of access to the structure of a building, shall be used.
 § 1926.450 Scope, application and definitions applicable to this subpart.
Walkway means a portion of a scaffold platform used only for access and not as a work level.
 NK: NK will ask MD if it is proper to use walkways in scaffolds and passageways in the Site in general, footpath outside the Site as mentioned in 2.6.2(12).
 The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.
 The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways

The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.
 The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

<p>2.5.4 作業床端、開口部からの墜落防止措置</p> <p>請負者は、高さが 2m 以上の作業床端、開口部からの墜落防止のために次の措置を講じなければならない。 →E2.5.9(1)に規定済み</p> <p>(1) 作業床の端、開口部等には、必要な強度を持つ囲い、手すり、覆い等(以下「囲い等」という)を設置すること。→E2.5.9(2)(3)に規定済み</p> <p>(2) 囲い等を設けることが著しく困難なとき又は作業の必要上臨時に囲い等を取りはずすときは作業員に墜落制止用器具を使用させること。→E2.5.9(4)に規定済み</p> <p>(3) 床上の開口部の覆い上には、原則として材料等を置かないこととし、その旨を表示すること。→記述なし。→(NKの方針: 下記(4)(5)も含めて解釈により他項目との重複の可能性はあるが、具体的な留意点として加えるべきと考える。</p> <p>(4) 囲い等をやむを得ず取りはずして作業をする場合には、当該場所への関係作業員以外の立入禁止措置(標識の設置、作業員への周知)及び監視員の配置を行うこと。また、取りはずした囲い等は、作業終了後直ちに復旧すること。→記述なし。(上記(3)参照)</p> <p>(5) 作業床の端、開口部等の囲い等の点検を作業開始前に必ず行い、不具合のある施設の使用禁止措置を行うと同時に修理や復旧の措置を迅速に行うこと。→記述なし。(上記(3)参照)</p>	<p>At any point where there may be a risk of Contractor's Personnel falling from temporary passageways, the Contractor shall provide handrails as specified in JSSS 2.5.5 [Handrails].</p> <p>Alternatively, the Contractor shall provide alternative fall prevention equipment with the same or better functionality.</p> <p>2.5.8. 場合、請負者は同等の規格以上であることを証明する資料を、エンジニアへ提出し、同意を得なければならない。→2.9.2以降の各款に規定済み。

- (d) 請負者は、作業員に保護具を無償で提供し、作業現場に携帯させ、必要時には必ず使用させなければならない。→無償で提供規定なし。追記する。
- (e) 請負者は、作業員に保護具を作業開始前に点検させなければならない。→規定なし。追記する。
- (f) 請負者は、保護具の維持管理・衛生に責任を持ち、異常を認めた場合には補修又は取り替えなければならない。→1.32.2に規定済み。

理由：英文案では本節の一般事項として次のように規定している。

2.9.1 PERSONAL PRTECTIVE EQUIPMENT (PPE)

2.9.1 General

Further to the requirements of JSSS 1.32 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment (PPE)] the Contractor shall comply with the additional requirements of this Section.

NK - The following (as deleted) is generally covered by JSSS 1.32 and is therefore deleted to avoid duplication

MD案では上記のように1.32の内容と重複するとして削除しているが、その内容は包括的で具体的にPPEに言及している部分は少ない。→(NKの方針：各PPEを規定していることからMD案通りとする。)

(3) 保護具の目的と規格

保護具の目的と適用する規格は以下である。

(a) 保護帽

保護帽は、物体の飛来落下と衝突、墜落・転倒時における頭部への衝撃の低減又は感電から作業員の頭部の保護を目的とする。

保護帽は、次の規格の要求事項に見合う物を使用しなければならない。→E2.9.2で規定済み

保護帽の適用規格

	規格番号	規格名
1	JIS T8131	産業用ヘルメット/ Industrial safety helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial safety helmets

(c) 安全靴

安全靴は、物体の落下や挟まれによる作業員の足の怪我の低減、鋭利物の踏み抜きの防止、感電防止又は靴の滑りによる転倒を防止

(c) Work Clothing;

- (4) The following additional PPE shall be provided whenever required by the working environment:
 - (a) Eye and Face Protection;
 - (b) Ear Protection
 - (c) Respiratory Protection
 - (d) Safety Belts
 - (e) Gloves
- (5) First-aid Kits and First-Aid Equipment must always be provided.
- (6) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

2.9.2. Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

2.9.3. Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact

~~(c) Work Clothing;~~

JC: デフォルトにはしない。This shouldn't be a "default".

MM: 2.9.9 Work Clothing The 2.9.9 will be left after modification to provide work clothing depending upon the type of works.

NK: moved to (4)(c) as right.

- (4) The following additional PPE shall be provided whenever required by the working environment:
 - (a) Eye and Face Protection;
 - (b) Ear Protection
 - (c) Respiratory Protection
 - ~~(d) Safety Belts~~
 - (e) Gloves
- (5) First-aid Kits and First-Aid Equipment must always be provided.
- (6) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

NK: Modified as right to cover Safety Belts and harness.

2.9.2. Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

2.9.3. Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact

- (i) Head Protection;
- (ii) Protective Footwear; and
- ~~(iii) Work Clothing~~

- (d) The following additional PPE shall be provided whenever required by the working environment:
 - (i) Eye and Face Protection;
 - (ii) Ear Protection
 - (iii) Respiratory Protection
 - ~~(iv) PPE for PFRS and PFAS (Safety Belts, Full body harnesses, and others)~~
 - (v) Gloves
 - ~~(vi) Work Clothing~~
- (e) First-aid Kits and First-Aid Equipment must always be provided.
- (f) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets

3	BS EN 397	Industrial Safety Helmets

(3) Protective Footwear

Protective footwear shall protect against foot injury

することを目的とする。

安全靴は、下の規格の要求事項に見合う物を使用しなければならない。→E2.9.3 で規定済み

安全靴の適用規格

	規格番号	規格名
1	JIS T8101	安全靴/Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20349	Personal protective equipment. Footwear protecting against risks in foundries and welding. Requirements and test methods for protection against risks in welding and allied processes

injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically conductive or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20349	Personal protective equipment. Footwear protecting against risks in foundries and welding. Requirements and test methods for protection against risks in welding and allied processes

injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically conductive or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

JC: 防爆性の導電靴・導電靴の話をするのなら、日本だと、JIS T 8103 静電気帯電防止靴がある。だけど、

日本と欧米で電力の接地システムの仕組みが違うため、静電靴の規格が違う。IEC 規格では抵抗の値に下限がないが、日本では下限を生じないと、接地システムの違いから感電の危険が生じる。ので、使えない。が、欧米規格はあるはずだけど、断熱・耐熱は特殊用途なので日本では基準無し

JIS T 8103 specifies explosion-proof conductive shoes or conductive shoes. However, because of difference in power grounding system in Japan and in Europe and America, the standard for static electricity free shoes is also different.

In the IEC standard, there is no lower limit of resistance value. On the other hand, it cannot be used in Japan due to the difference of the grounding system which may induce the danger of electric shock.

There should be European and American standard, however.

There is no standard in Japan for insulation and heat resistance shoes because they are for special purposes.

NK: ASTM F2413 covers the Static electricity. According the Laws of the Country, standards shall be selected for footwear.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20349	Personal protective equipment. Footwear protecting against risks in foundries and welding. Requirements and test methods for protection against risks in welding and allied processes

JC: 上のコメントのとおり JIS T8103 について確認願います。 Please confirm about JIS T 8103 as stated the comment above.

NK: JIS T 8103 is for Anti electrostatic footwear. It is in Japanese and not ye translated to English. The anti electrostatic is covered by the following ASTM and BS:

ASTM F2413:
4.1.1 Impact resistance
4.1.2 Compression resistance

due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically insulating or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

Measurement of effective sound pressure levels for level-dependent sound-restoration earmuffs

2.9.6. Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection shall fit properly and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

2.9.6. Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection shall fit properly and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

JC: for user ?

NK: referring to Respiratory Protection Handbook:

https://books.google.co.jp/books?id=hxCtLEjWOKMC&pg=PA91&lpg=PA91&dq=Respiratory+protection+shall+fit+properly&source=bl&ots=h25b4T2SA&sig=ACfu3U1pB810_wnsSRBR_Zk2Qd3NXp3Lg&hl=ja&sa=X&ved=2ahUKFwin26qb7fjnAhUjvslsBHRMbdDdcQ6AEwDnoEC_AoQAQ#v=onepage&q=Respiratory%20protection%20shall%20fit%20properly&f=false

Added "equipment (RPE) and "to worker's face" as right.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

JC: 重要。このほかの項目でも何か留意事項ないか？ Important. Are there any matters to be considered other than this?

NK: The specification above is made referring to the following HSE:

- 1) Personal protective equipment (PPE) at work, A brief guide, <https://www.hse.gov.uk/pubns/indg174.pdf>
- 2) Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013). <https://www.hse.gov.uk/pubns/priced/hsg53.pdf>

Addition for maintenance and reference is added as right.

Ear protector shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors
3	BS EN ISO 4869-1 BS EN ISO 4869-2 BS EN ISO 4869-3 BS EN ISO 4869-4	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn Acoustics. Hearing protectors. Measurement of insertion loss of ear-muff type protectors using an acoustic test fixture Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

(6) Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection equipment (RPE) shall fit properly to worker's face and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing them or any other part, check with the manufacturer's guidance and ensure the correct replacement part is used.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer's instructions.

2.9.7. Safety Harnesses and Belts

JC: PFAS に限定せず、PFRS を採用するにしても、belt 前提のタイトルはまずい(Safety Harnesses and Belts) いまさらだけど、BS は細かく分かれていて、これは本当にハーネスだけなのでベルトは入っていないはず、かつ、他のコネクタとかはまた別

BS EN 354 PPE - Lanyards

BS EN 358 PPE - Work positioning systems

BS EN 362 PPE - Connectors *みたいな感じ*

ご参考

<https://www.safety-height.co.uk/products-services/performance-standards/>

ベルトは保持装置にあるんじゃないかと

Even if using PFRS without limiting to PFAS, the title assuming use of belt is not appropriate. (Safety Harnesses and Belts.)

BS is specifying these in various items. This should be about harnesses only not including belts and other connectors are separately specified.

BS EN 354 PPE - Lanyards

BS EN 358 PPE - Work positioning systems

BS EN 362 PPE - Connectors

Belt may be specified in holding devises.

NK: Modified as right.

Safety belts shall prevent the risk of workers falling from a height or sliding down slopes.

For further requirement on PPE for fall prevention, refer to **ISSS 2.5.13 [PPE for Fall Prevention]**.

Safety belts shall ensure a level of performance that is equal to or greater than the following standards.

In addition to the requirements above, the Contractor shall select, use and maintain RPE referring to Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013).

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.5: Table of PPE for Respiratory Protection

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator

NK: Added as right.

2.9.11. First-Aid Equipment - AED

be provided at the Site to show the location of the first aid kit(s).

(2) First-Aid Kit

Each following first-aid kit should contain at least the following items, specifications and quantities listed in ANSI Z308.1-2015 according to the work:

- (a) Adhesive Bandage
- (b) Adhesive Tape
- (c) Antibiotic Application
- (d) Antiseptic
- (e) Breathing Barrier
- (f) Burn Dressing (gel soaked)
- (g) Burn Treatment
- (h) Cold Pack
- (i) Eye Covering, with means of attachment
- (j) Eye/Skin Wash
- (k) First Aid Guide
- (l) Hand Sanitizer
- (m) Medical Exam Gloves
- (n) Roller Bandage
- (o) Scissors
- (p) Splint
- (q) Sterile pad
- (r) Tourniquet
- (s) Trauma pad
- (t) Triangular Bandage

To prevent disease transmission when giving first-aid, first-aid kits shall contain PPE such as disposable gloves, Cardiopulmonary Resuscitation (CPR) breathing barriers, eye protection and like supplies.

2.9.11. First-Aid Equipment - AED

Unless otherwise stated in the bidding Documents and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for AED

Triangular bandage	1	2	40 x 40 x 56 in.	101 x 101 x 142 cm

上記 OSHA の引用は正確にはこれの前々版の 1998 版

ANSI Z308.1-1998 – Minimum Requirements for Workplace First Aid Kits Basic kit – minimum contents	
Item	Minimum quantity
Absorbent compress, 32 sq. in. (81.3 sq. cm.) with no side smaller than 4 in. (10 cm.)	1
Adhesive bandages, 1 in. x 3 in. (2.5 cm. x 7.5 cm.)	16
Adhesive tape, 5 yd. (457.2 cm.) total	1
Antiseptic, 0.5g (0.14 fl. oz.) applications	10
Burn treatment, 0.5g (0.14 fl. oz.) applications	6
Medical exam gloves	2 pair
Sterile pads, 3 in. x 3 in. (7.5 x 7.5 cm.)	4
Triangular bandage, 40 in. x 40 in. x 56 in. (101 cm. x 101 cm. x 142 cm.)	1

Optional contents	
Optional items and sizes should be added to the basic contents listed above to augment a first aid kit, based on the specific hazards existing in a particular work environment. Optional items addressed in ANSI Z308.1-1998 (listed below) must meet the minimum requirements of Section 5.3 of that standard. Items not addressed by the ANSI standard must comply with standards or regulations, where applicable, established by the U.S. Food and Drug Administration (FDA), the current edition of the U.S. Pharmacopoeia/National Formulary (USP/NF) or other standards-writing body.	
Bandage compress – 2 in. x 2 in.	4
3 in. x 3 in.	2
4 in. x 4 in.	1
Eye covering with means of attachment	1
Eye wash – 1 fl. oz. (30 ml)	1
Cold pack – 4 in. x 5 in.	1
Roller bandage – 2 in. (5 cm)	2
4 in. (10 cm)	1

Note: A CPR barrier is also recommended, but not required.

(2) Standards

The Contractor shall comply with EH40/2005 Workplace Exposure Limits, (third edition published 2018), issued by HSE. Table 1 shall apply and the Short Term and Long-Term Exposure limits shall not be exceeded.

Table 2.1.1: List of Approved Workplace Exposure Limits (WELs)

Types of Dust/Gas	Long-term Exposure Limit (8 hr TWA Reference Period)	Short-term Exposure Limit (15 minute TWA Reference Period)	Notes
Carbon Dioxide	9150 mg/m3 5000 ppm	27400 mg/m3 15000 ppm	
Carbon Monoxide	23 mg/m3 20 ppm	117 mg/m3 100 ppm	BMGV
	35 mg/m3 30 ppm	232 mg/m3 200 ppm	Mining Only
Chlorine	-	1.50 mg/m3 0.50 ppm	Water treatment
Chlorine dioxide	0.28 mg/m3 0.10 ppm	0.84 mg/m3 0.30 ppm	Water treatment
Hydrogen Sulphide	7 mg/m3 7 ppm	14 mg/m3 14 ppm	Waste Water treatment
Nitrogen Dioxide	0.96 mg/m3 0.50 ppm	1.91 mg/m3 1.00 ppm	Does not apply to underground mining and tunnelling industries until 21/8/23
Nitrogen Monoxide	30 mg/m3 25 ppm	30 mg/m3 1.00 ppm	Limit applicable to underground mining & tunnelling industries ONLY until 21/8/23
Portland Cement: Respirable Inhalable	4 mg/m3 10 mg/m3		
Silica: Respirable Crystalline	0.1 mg/m3	1.5 mg/m3	

(Note: The entire HSE table shall apply, items and values above are extracted samples only)

(b) 4 mg/m3 (8-hour TWA) of respirable dust.

~~Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.~~

(2) Standards

~~The Contractor shall comply with EH40/2005 Workplace Exposure Limits, (third edition published 2018), issued by HSE. Table 1 shall apply and the Short Term and Long-Term Exposure limits shall not be exceeded.~~

JC: 「HSE に準拠する。具体的に必要となる項目については Annex * * にあるとおり。」といった趣旨を記載して、本文中からは以下の Table 2.1.1 を削除する。Annex は空欄として発注者が実際に必要な項目を書き込めるようなフォーマットを入れておく

This paragraph will be revised to that like “The Contractor shall comply with HSE. The items to be applied are shown in Annex.” The Table 2.1.1 will be deleted from 2.1.1. In Annex, blank table will be attached for the Employer to fill actually required items.

MM: 2.1.1 (2) Standard Table 2.1.1

The Table with detail will be deleted.

The User Guide will require the table to be inserted with the particular monitoring items specified by the Executing Agency/Consultant in the Particular Safety Specification.

NK: The paragraph will be modified as follows (for MD’s review and editing.)

The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications.

Table 2.1.1: List of Approved Workplace Exposure Limits (WELs)

Types of Dust/Gas	Long-term Exposure Limit (8 hr TWA Reference Period)	Short-term Exposure Limit (15 minute TWA Reference Period)	Notes
Carbon Dioxide	9150 mg/m3 5000 ppm	27400 mg/m3 15000 ppm	
Carbon Monoxide	23 mg/m3 20 ppm	117 mg/m3 100 ppm	BMGV
	35 mg/m3 30 ppm	232 mg/m3 200 ppm	Mining Only
Chlorine	-	1.50 mg/m3 0.50 ppm	Water treatment
Chlorine dioxide	0.28 mg/m3 0.10 ppm	0.84 mg/m3 0.30 ppm	Water treatment
Hydrogen Sulphide	7 mg/m3 7 ppm	14 mg/m3 14 ppm	Waste Water treatment
Nitrogen Dioxide	0.96 mg/m3 0.50 ppm	1.91 mg/m3 1.00 ppm	Does not apply to underground mining

(b) 4 mg/m3 (8-hour TWA) of respirable dust.

(TWA means Time weighted average.)

~~Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.~~

(2) Standards of Workplace Exposure Limits (WELs)

The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications.

			and-tunnelling-industries-until-21/8/23
Nitrogen-Monoxide	30 mg/m ³ 25 ppm	30 mg/m ³ 1.00 ppm	Limit-applicable-to-underground-mining-&-tunnelling-industries-ONLY-until-21/8/23
Portland-Cement-Respirable-Inhalable	4 mg/m ³ 10 mg/m ³		
Silica-Respirable-Crystalline	0.1 mg/m ³	1.5 mg/m ³	

(Note: The entire HSE table shall apply, items and values above are extracted samples only)

JC: 表の記述に関するコメントがあり。

NK: 表が削除されたので、コメント対応を行わない。

JC: 全ての危険部の分析は無理。情報提供と対象基準の明示は、発注者の役割では？

It impossible to analyse all dangerous items. Is it the role of the Employer to provide information and specify items and limits?

NK: Table 2.1.1 will be deleted. The User Guide will show the Table in which the monitoring items will be specified by the Employer in the Particular Safety Specification.

(3) Asbestos

JC: OSHA、HSE とも重視しているのでアスベストが入るのは至極当然。(HSE が重視) この上の結晶性シリカがこれ。

It is extremely natural to specify asbestos as both OSHA and HSE give special attention to them (HSE does.)

The above crystalline silica is this (incomplete sentence).

MM: 2.1.1(3)(b) Asbestos Will be reviewed for reference in the User Guide.

- (a) For the information of Project participants, asbestos causes many construction fatalities every year. Participants should be aware that it is commonly found in older buildings frequently in ceiling and floor cavities, insulation, sprayed coatings, floor tiles and composites, asbestos-cement sheets and roofing felt;

JC: This shall be deleted as it is explanation (annotation).

NK: This (3)(a) above will be shifted to User Guide.

NK: (a) and (b) will be modified as right

- (b) If after Site survey and investigation (if

(3) Asbestos

- (a) For the information of Project participants, asbestos causes many construction fatalities every year. Participants should be aware that it is commonly found in older buildings frequently in ceiling and floor cavities, insulation, sprayed coatings, floor tiles and composites, asbestos-cement sheets and roofing felt;

- (b) If after Site survey and investigation (if necessary) there is a possibility that asbestos may be encountered in the Works, this shall be stated in the Bidding Documents in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and the required remedial measures shall be taken; and

- (c) The Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working

(3) Asbestos

- (a) When required in the Contract, the Contractor shall take measures for asbestos in accordance with the Particular Safety Specification.

- (b) When existence of asbestos is found in the Works, the Contractor shall report to the Engineer and take measures in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and

- (c) If so required in the Contract or by an instruction by the Engineer, the Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.

<p>2.1.2 換気の悪い場所における必要な措置</p> <p>請負者は、自然換気が不十分な場所では、内燃機関を有する機械を使用してはならない。ただし、やむを得ず内燃機関を使用するときは、当該内燃機関の排気ガスによる健康障害を防止するため、十分な換気を行わな</p>	<p>with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.</p> <p>(4) Other Hazardous Substances</p> <p>The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention</p> <p>(a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and</p> <p>(b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE</p> <p>(a) If it is not possible to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and</p> <p>(b) For details of PPE refer to JSSS 2.9 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p>	<p>necessary) there is a possibility that asbestos may be encountered in the Works, this shall be stated in the Bidding Documents in accordance with the requirements of JSSS 1.19 [Hazardous Substances], and the required remedial measures shall be taken; and</p> <p>(c) The Contractor shall comply with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.</p> <p>JC: Put "If so required in the contract or by an Instruction by the Engineer," at the beginning of (c).</p> <p>NK: Done as commented.</p> <p>(4) Other Hazardous Substances</p> <p>The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention</p> <p>(a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and</p> <p>(b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE</p> <p>(c) If it is not possible to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and</p> <p>JC: 「経済的に合理的な手段では不可能」といった定義が必要か reasonably impossible</p> <p>Definition is necessary such as "impossible in financial and reasonable method (reasonably impossible)".</p> <p>NK: (a) is modified as right. If it is not reasonably practicable to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and:</p> <p>(d) For details of PPE refer to JSSS 2.9 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p> <p>JC: 酸素濃度の記載が抜けているので入れるようにしてください。日本語版の酸素濃度に関する記載の範囲で追記願います。 There is missing of concentration limit values of oxygen, so they shall be added as mentioned in Japanese draft JSSS.</p>	<p>(4) Other Hazardous Substances</p> <p>The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site or used in the Works.</p> <p>(5) Prevention</p> <p>(a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and</p> <p>(b) The Contractor shall provide all necessary Contractor's Equipment and Temporary Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.</p> <p>(6) PPE</p> <p>(a) If it is not reasonably practicable to reduce dust to acceptable levels, PPE shall be provided for all Contractor's Personnel; and</p> <p>(b) For details of PPE refer to JSSS 2.9.1 [Personal Protective Equipment (PPE)].</p> <p>2.1.2 Poor Ventilation</p>

2.1.3 強烈な騒音を発生する場所等での必要な措置

請負者は、90dB 以上の騒音(強烈な騒音という)を発生する作業場所においては、請負者の要員の騒音障害防止のため次の措置を講じなければならない。→E2.1.3(2)に規定済み

- (1) OSHA Subpart D – Occupational Health and Environmental Controls § 1926.52 Occupational noise exposureの規定に従い、作業場所での騒音の程度と騒音の暴露時間に対応して請負者の要員に、本仕様書 2.10.5(3)(d)[防音保護具]に規定の保護具を使用させること。→E2.1.3(1)(2)に規定済み
- (2) 当該作業場所では耳栓その他の騒音障害防止用の保護具を使用しなければならない旨を、請負者の要員が容易に認知できる見やすい場所に掲示すること。→E2.1.3(2)(c)に規定済み

2.1.4 閉鎖空間における安全措置

各種ビット、タンク、水槽、マンホール、ダクト、PC 箱桁、下水道等の狭い作業空間あるいは小さい出入口のみを有する閉鎖空間(以下本節では「閉鎖空間」という。)における作業において、請負者は請負者の要員の酸素欠乏や有毒ガス等に対する安全確保のために、下記の措置を講じなければならない。→E2.1.4 に規定済み

- (1) 酸素濃度、硫化水素濃度、その他必要な作業環境項目について測定を行うこと。作業環境測定は作業前に毎日実施すること。→E2.1.4(1)に規定済み

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls

addition, a liaison shall be appointed among the personnel working in the workspace and a method for communicating with external spotter shall be established, (c) Establish an emergency rescue system and create a rescue operation procedure. Prepare respiratory protective equipment such as a respirator for rescue operations, (d) If an emergency occurs and rescue is required, prohibit any personnel to engage in rescue activities other than those instructed to do so in order to prevent secondary accident, (e) Conduct education and training on the safety measures to all Contractor’s Personnel that are required to work in confined spaces

Although, in JSSS 2.1.4 Confined Spaces (3) Work Environment and (4) Hazardous Substances, JSSS 1.19 Dangerous Works and 2.3 Prohibition of entry – Dangerous Work are referred, however they are quite abstract as for the confined space works to avoid accident.

NK: considers if there is special clause for confined spaces, they should be specified. This Chapter 2 is general requirement, therefore not reinstated here.

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2 of the OSHA Standard referred to above, if at all possible;

JC: Table D-2—Permissible Noise Exposures 読み手の立場を考慮上記のとおりタイトルまで記載するようにお願いします。 Table D-2—Permissible Noise Exposures Please kindly specify title of Table as above considering easy understanding of readers.

MM: 2.1.3 Noise Table D-2 of the OSHA Standard will be included.

NK: The title and the Table are added.

2.1.3 Noise

- (1) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D – Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2, Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115

<p>み</p> <p>(2) 上記(1)の作業環境測定の結果、2.1.6 (2)に規定の制限値に抵触する場合は、換気による作業環境を改善し、これを維持すること。→E2.1.4(3)に規定済み</p> <p>(3) 作業空間内には、入場許可を与えた要員以外は立ち入らせないこと。→規定なし。(下記参照)</p> <p>(4) 作業空間外に監視員を配置し、作業空間内の要員の安全を常時監視させること。また、作業空間内で作業する要員の中から連絡係を任命し、外部の監視員との交信方法を整備すること。→規定なし。(下記参照)</p> <p>(5) 緊急時の救出体制を確立し、救出活動の手順を作成すること。救出活動に用いられる空気呼吸器等の呼吸用保護具を常備しておくこと。異常が発生し救出が必要な場合は、救出の際の二次災害を防ぐため、指示された者以外は救出活動に従事させないこと。→規定なし。(下記参照)</p> <p>(6) 当該閉鎖空間において作業を行う場合に必要な安全措置について、当該作業員に教育訓練を行うこと。→規定なし。(下記参照)</p> <p>(7) 当該作業にかかる作業計画書・安全衛生詳細計画書に、上記(1)から(6)の内容を含めること。 →規定なし。→(3)～(7)の規定がない理由：英語版 2.1.4(4)(5)で JSSS 1.19 [Dangerous Work]及び JSSS 2.3 [Prohibition of Entry - Dangerous Work]を参照させているためであるが、1.19 の内容は閉鎖空間等に対するの具体性ではないため、(3)～(7)の規定を復活させる案もある。→(NKの方針:英文変更時に検討する。)</p>	<p>to within the levels of Table D-2 of the OSHA Standard referred to above, if at all possible;</p> <p>(b) If such controls are not possible of if they fail to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS 2.9.52.9.5 [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;</p> <p>(c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and</p> <p>(d) In all cases where the sound levels exceed the values shown in Table D-2, a Continuing Effective Hearing Conservation Program shall be implemented and maintained by the Contractor.</p>	<p>(b) If such controls are not possible of if they fail to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS 2.9.5 [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;</p> <p>JC: 英語的に正しいの？ or OSHA 原文 If such controls fail to reduce sound levels within the levels of the table,の違い？ Is this correct in English? --	--	---	---

- (3) Instruct Spotters to maintain visual contact at all times with the driver while the vehicle is reversing.
- (4) Instruct drivers to stop reversing immediately if they lose sight of the Spotter.
- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

- (1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.
- (2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.
- (3) The Contractor shall inform and remind all Contractor's Personnel of the established standardised signal system as follows:
 - (a) By training all Contractor's Personnel including those designated as Spotters at the time they first enter the Site of the signals;
 - (b) By re-confirming with the Contractor's Personnel, the established standardised signal system in the TBM before the start of the work each day; and
 - (c) By posting signboards on Site where required showing the standard signals and sticking a smaller-sized version directly on the concerned Contractor's Equipment.

2.4.6. Qualification of Personnel

The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately

non-native に分かるように修正願います。

JICA: Its (baking up) meaning is not clear. Reversing is mentioned in (3). Change? Please revise it for non-native to be able to understand.

NK: (2) states about "hand signals", whereas (3) emphasises the importance of "eye contact" when reversing vehicles. To change "backing up" to "reversing".

- (3) Instruct Spotters to maintain visual contact at all times with the driver while the vehicle is reversing.
- (4) Instruct drivers to stop reversing immediately if they lose sight of the Spotter.
- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

- (1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.
- (2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.
- (3) The Contractor shall inform and remind all Contractor's Personnel of the established standardised signal system as follows:
 - (a) By training all Contractor's Personnel including those designated as Spotters at the time they first enter the Site of the signals;
 - (b) By re-confirming with the Contractor's Personnel, the established standardised signal system in the TBM before the start of the work each day; and
 - (c) By posting signboards on Site where required showing the standard signals and sticking a smaller-sized version directly on the concerned Contractor's Equipment.

2.4.6. Qualification of Personnel

The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately trained and supervised to perform their duties.

- (3) Instruct Spotters to maintain visual contact at all times with the driver while the vehicle is reversing.
- (4) Instruct drivers to stop reversing immediately if they lose sight of the Spotter.
- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

- (1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.
- (2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.
- (3) The Contractor shall inform and remind all Contractor's Personnel of the established standardised signal system as follows:
 - (a) By training all Contractor's Personnel including those designated as Spotters at the time they first enter the Site of the signals;
 - (b) By re-confirming with the Contractor's Personnel, the established standardised signal system in the TBM before the start of the work each day; and
 - (c) By posting signboards on Site where required showing the standard signals and sticking a smaller-sized version directly on the concerned Contractor's Equipment.

2.4.6. Qualification of Personnel

The Contractor shall ensure that all Spotters possess

	<p>trained and supervised to perform their duties.</p> <p>2.4.7. Radios</p> <p>The Contractor shall provide and maintain any necessary equipment such as hand-held radios to ensure effective and safe communications and train all personnel in their use.</p> <p>2.4.8. PPE</p> <p>The Contractor shall ensure that all spotters, flagmen and signalmen are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>	<p>2.4.7. Radios Communication tools</p> <p>The Contractor shall shall provide and maintain any necessary equipment such as hand-held radios to ensure effective and safe communications and train all personnel in their use.</p> <p>JC: ここは必要に応じてという記載が正しいのでは？ Isn't it proper to mention "when necessary"?</p> <p>NK: Agreed. Added.</p> <p>JC: walky-talky はいらないでしょうか。 JICA: Isn't walky-talky necessary?</p> <p>NK: Walky-talky is more common recently and almost same as hand-held radios. Thus, "walkie-talkies" is added to "hand-held radios".</p> <p>JC: 不明瞭。明確に記載願います。 Please clearly mention this (all personnel).</p> <p>NK: In order to specify, add "assigned to Spotters".</p> <p>The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, walkie-talkies to ensure effective and safe communications and train all personnel assigned to Spotters in their use.</p> <p>2.4.8. PPE</p> <p>The Contractor shall ensure that all spotters, flagmen and signalmen Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p> <p>JC: Spotters だけの記載や、このように 3 種類の記載など、複数のパターンがあるようですので、統一願います。</p> <p>Please specify unified terms as there is different usage of "only" Spotters", and "all spotters, flagmen and signalmen".</p> <p>NK: As defined in 2.4.1 that Spotters include both Spotters and Flagman, Spotters will be consistently used.</p>	<p>sufficient experience and ability and are adequately trained and supervised to perform their duties.</p> <p>2.4.7. Radios Communication tools</p> <p>The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, walkie-talkies to ensure effective and safe communications and train all personnel assigned to Spotters in their use.</p> <p>2.4.8. PPE</p> <p>The Contractor shall ensure Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>

Handrails</p> <p>JC: 墜落の危険がある場所には手すりを付ける、という記述をまず入れてください。Please specify at first "handrails shall be provided at places where there is risk of fall".</p> <p>NK: To insert the sentence as follows: The Contractor shall provide handrails at places where there is risk of fall.</p> <p>JICA: Please specify (1) height of handrail, (2) force. May we know the source of force.</p> <p>NK: To modify (1) for height, (2) for force. The source of force is OSHA subpart L 1926.451 (g) Fall Protection (4) (ix). (ix) Mid-rails, screens, mesh, intermediate vertical members, solid panels, and equivalent structural members of a guardrail system shall be capable of withstanding, without failure, a force applied in any downward or horizontal direction at any point along the mid-rail or other member of at least 75 pounds (333 n) for guardrail systems with a minimum 100 pound top-rail capacity, and at least <u>150 pounds (666 n=約 68kg for guardrail systems with a minimum 200 pound (約 90kg) top-rail capacity.</u></p> <p>(1) Handrails shall be minimum 85 cm high, complete with top-rails and mid-rails designed to withstand 70 kg. of horizontal force, top-rails to withstand 90 kg. of horizontal force, sufficient uprights to sustain these forces.</p> <p>JC: (1)を高さ、(2)を荷重に関する規定に揃えてください。荷重に関する出典はなんでしょうか？</p> <p>(2) Mid-rails shall be placed at a height of 35 – 50 cm.</p> <p>(3) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without corrosion, deformity or damage of any kind.</p> <p>(4) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:</p> <p>(a) Displaying appropriate warning signs;</p> <p>(b) Assigning a Spotter to direct non-essential Contractor's Personnel away;</p>	<p>(c) Status of access leading to work areas and any anchorages; and,</p> <p>(d) The presence or absence of protrusions where there is a risk of cutting or chafing of working line or lifeline or other fall prevention systems and their position and condition.</p> <p>2.5.5 Handrails</p> <p>The Contractor shall provide handrails at places where there is risk of fall.</p> <p>(1) Handrails shall be complete with top-rails of minimum 85 cm high and mid-rails placed at a height of 35 - 50 cm.</p> <p>(2) The top-rail shall be designed to withstand 90 kg. of horizontal force and mid-rails 70 kg. of horizontal force, sufficient uprights to sustain these forces.</p> <p>(3) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without corrosion, deformity or damage of any kind.</p> <p>(4) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:</p> <p>(a) Displaying appropriate warning signs;</p> <p>(b) Assigning a Spotter to direct non-essential Contractor's Personnel away;</p>
--	--	---	---

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways
 The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.
 The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways
 JC: 定義上の違いは？ safe routes の単なる言い換えか？
 What is difference of these in definition? Are these only paraphrases of safe routes?
 NK: The definition is as follows following OSHA.
 § 1926.851 Stairs, passageways, and ladders.
 (a) Only those stairways, passageways, and ladders, designated as means of access to the structure of a building, shall be used.
 § 1926.450 Scope, application and definitions applicable to this subpart.
Walkway means a portion of a scaffold platform used only for access and not as a work level.
 NK: NK will ask MD if it is proper to use walkways in scaffolds and passageways in the Site in general, footpath outside the Site as mentioned in 2.6.2(12).
 The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.
 The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

- (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets.
- (d) Prohibiting entry to the working area of any non-authorised Contractor's Personnel
- (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Walkways and Passageways

- (1) Installation of walkways and passageways

The Contractor shall provide safe routes leading to, within and around working areas that ensure safety of passage for Contractor's Personnel and these shall be effectively maintained at all times.

The Contractor shall display signs clearly indicating the use, extent and directions so that the Contractor's Personnel will adhere to these routes and other activities will be prevented from accessing these routes.

- (2) Handrails

<p>2.5.4 作業床端、開口部からの墜落防止措置</p> <p>請負者は、高さが 2m 以上の作業床端、開口部からの墜落防止のために次の措置を講じなければならない。 →E2.5.9(1)に規定済み</p> <p>(1) 作業床の端、開口部等には、必要な強度を持つ囲い、手すり、覆い等(以下「囲い等」という)を設置すること。→E2.5.9(2)(3)に規定済み</p> <p>(2) 囲い等を設けることが著しく困難なとき又は作業の必要上臨時に囲い等を取りはずすときは作業員に墜落制止用器具を使用させること。→E2.5.9(4)に規定済み</p> <p>(3) 床上の開口部の覆い上には、原則として材料等を置かないこととし、その旨を表示すること。→記述なし。→(NKの方針: 下記(4)(5)も含めて解釈により他項目との重複の可能性はあるが、具体的な留意点として加えるべきと考える。</p> <p>(4) 囲い等をやむを得ず取りはずして作業をする場合には、当該場所への関係作業員以外の立入禁止措置(標識の設置、作業員への周知)及び監視員の配置を行うこと。また、取りはずした囲い等は、作業終了後直ちに復旧すること。→記述なし。(上記(3)参照)</p> <p>(5) 作業床の端、開口部等の囲い等の点検を作業開始前に必ず行い、不具合のある施設の使用禁止措置を行うと同時に修理や復旧の措置を迅速に行うこと。→記述なし。(上記(3)参照)</p>	<p>At any point where there may be a risk of Contractor's Personnel falling from temporary passageways, the Contractor shall provide handrails as specified in JSSS 2.5.5 [Handrails].</p> <p>Alternatively, the Contractor shall provide alternative fall prevention equipment with the same or better functionality.</p> <p>2.5.8. --	--	---	---

When working on, accessing or crossing, floor or roof areas (including uncompleted areas under construction), or fragile roofs such as those covered with slates, tiles or other non-loadbearing coverings or where there is any risk of breaking and or falling through such areas, the Contractor shall provide continuous bearing boards for workers to walk on, with a minimum width of 60 cm or sufficiently wider to provide safe transit and where necessary to spread the bearing load on the surface and avoid penetration. The boards shall be fixed together and secured to the underlying surface by tying with ropes or clips to prevent any movement.

Unless otherwise approved by the HSO, handrails shall be provided to both sides.

If the underlying surface or roofing is too fragile for such measures and access is required, the Contractor shall provide an independent scaffolding boarded walkway with handrails both sides, which does not bear upon the existing roof but that is supported independently by a scaffolding structure.

(4) Demolition or Alteration of Buildings and Structures

When carrying out demolition or alteration of buildings or structures and where there is a risk of fall for Contractor's Personnel, the Contractor shall take the following measures:

- (a) Appoint an Operation Leader to be engaged on the work;
- (b) Safely supervise the work; and
- (c) Inform and train Contractor's Personnel engaged in the said work so that they are aware in advance of the work methods and procedures.

2.5.16. Safety Nets

- (1) The Contractor shall provide safety nets when workplaces are more than 7.50m above the lower ground or water surface and where the use of another type of fall prevention system is impractical or has been removed.
- (2) Operations shall not be undertaken until the net is in place and has been inspected and tested.
- (3) Nets shall extend 2.50m beyond the edge of the work surface where Contractor's Personnel may be at risk and shall be installed

When working on, accessing or crossing, floor or roof areas (including uncompleted areas under construction), or fragile roofs such as those covered with slates, tiles or other non-loadbearing coverings or where there is any risk of breaking and or falling through such areas, the Contractor shall provide continuous bearing boards for workers to walk on, with a minimum width of 60 cm or sufficiently wider to provide safe transit and where necessary to spread the bearing load on the surface and avoid penetration. The boards shall be fixed together and secured to the underlying surface by tying with ropes or clips to prevent any movement.

Unless otherwise approved by the HSO, handrails shall be provided to both sides.

If the underlying surface or roofing is too fragile for such measures and access is required, the Contractor shall provide an independent scaffolding boarded walkway with handrails both sides, which does not bear upon the existing roof but that is supported independently by a scaffolding structure.

(4) Demolition or Alteration of Buildings and Structures

When carrying out demolition or alteration of buildings or structures and where there is a risk of fall for Contractor's Personnel, the Contractor shall take the following measures:

- (a) Appoint an Operation Leader to be engaged on the work;
- (b) Safely supervise the work; and
- (c) Inform and train Contractor's Personnel engaged in the said work so that they are aware in advance of the work methods and procedures.

2.5.15. Safety Nets

- (1) The Contractor shall provide safety nets when workplaces are more than 7.50m above the lower ground or water surface and where the use of another type of fall prevention system is impractical or has been removed.
- (2) Operations shall not be undertaken until the net is in place and has been inspected and tested.
- (3) Nets shall extend 2.5m beyond the edge of the work surface where Contractor's Personnel may be at risk and shall be installed as close

When working on, accessing or crossing, floor or roof areas (including uncompleted areas under construction), or fragile roofs such as those covered with slates, tiles or other non-loadbearing coverings or where there is any risk of breaking and or falling through such areas, the Contractor shall provide continuous bearing boards for workers to walk on, with a minimum width of 60 cm or sufficiently wider to provide safe transit and where necessary to spread the bearing load on the surface and avoid penetration. The boards shall be fixed together and secured to the underlying surface by tying with ropes or clips to prevent any movement.

Unless otherwise approved by the HSO, handrails shall be provided to both sides.

If the underlying surface or roofing is too fragile for such measures and access is required, the Contractor shall provide an independent scaffolding boarded walkway with handrails both sides, which does not bear upon the existing roof but that is supported independently by a scaffolding structure.

(4) Demolition or Alteration of Buildings and Structures

When carrying out demolition or alteration of buildings or structures and where there is a risk of fall for Contractor's Personnel, the Contractor shall take the following measures:

- (a) Appoint an Operation Leader to be engaged on the work;
- (b) Safely supervise the work; and
- (c) Inform and train Contractor's Personnel engaged in the said work so that they are aware in advance of the work methods and procedures.

2.5.15. Safety Nets

- (1) The Contractor shall provide safety nets when workplaces are more than 7.50m above the lower ground or water surface and where the use of another type of fall prevention system is impractical or has been removed.
- (2) Operations shall not be undertaken until the net is in place and has been inspected and tested.
- (3) Nets shall extend 2.5m beyond the edge of the work surface where Contractor's Personnel may be at risk and shall be installed as close

	<p>as close under the working surface as practical but in no case more than 7.50m below such work surface.</p> <p>(4) Nets shall be hung with sufficient clearance to prevent user's contact with the surfaces or structures below. ---	--	--	---

2.7.3 気象及び地震情報の収集と対応

請負者は、気象及び地震情報の収集と気象の変化及び地震の発生に対応するため、次の措置を講じなければならない。

(9) 本仕様書 2.7.4 (1)(a)から(d)に示す強風、暴風、大雨、大雪、もしくはそれに準ずる天候(以下、「悪天候」という。)が予想されるときは、継続的に降雨量や風速等の悪天候に係わる気象情報を確認すること。

(10) 気象及び地震情報に基づき、必要に応じて本仕様書 2.7.4 から 2.7.9 に記載の対応をとること。また、本仕様書 1.10 (2)に規定する緊急連絡表で指定された関係者に通知すること。

→上記 2.7.1～2.7.3 規定なし。→理由:MD 氏説明は次です。

Why is bad weather an emergency? The contractor has an obligation to be aware and allow for ALL weather conditions except “exceptionally adverse conditions and also for Force Majeure (including earthquakes, typhoons hurricanes, etc.). A safety specification should not interfere with the careful balance of FIDIC by introducing “Emergency Response” in this manner. This is not “emergency” in general it is precautions against bad weather which is foreseeable and normal.

Please refer to added JSSS 1.23 and the definition of Landslide etc. I suggest that this Section 2.7 is now not really necessary except perhaps for the items left in this edited section.

Contact, communications, training etc. are already in 1.2.9. (後略) 以上のように、Force Majeure との関係あるいは他節の項目との重複により削除されている。→(NK の方針: このまま規定なしとする。)

2.7.4 作業の中止と再開

請負者は、悪天候及び地震により事故が発生することを防ぐために、次の措置を講じなければならない。

(11) 当該国の法律に定めがない限り、悪天候及び地震による作業の中止の基準は次を目安として定めること。→以下(a)～(e)規定なし。理由: I am really

not sure of the practical or legal application of the following criteria which will vary around the world in terms of regular or exceptional adverse conditions and which may also affect the legal/contractual interpretation of extension of time and force majeure.

(中略) In whose opinion for example is say 9.99 m/sec OK? What if this causes damage on the site? It can provide a basis and criteria for claim as this is effectively saying that the Contractor has no obligation to protect for lower conditions. (中略)

The criteria of what is normal or exceptional will vary according to the country and the contractor should in any event price and plan for any such measures that can be anticipated in the country.→

(NK の方針: このまま規定なしとする。)

(a) 強風: 10 分間の平均風速が毎秒 10 メートル以上の風

(d) 暴風: 瞬間風速が毎秒 30 メートルを超える風

(c) Inspect the Works and all Goods intended to be incorporated in the Works or used thereon (including any temporary structures) for damage and risk of causing any danger before resuming work. If any damage or risk is found, the Contractor shall immediately take necessary action to prohibit entry in accordance with JSSS 2.3 [Prohibition of Entry – Dangerous Work], inform the Engineer accordingly and request his instructions; and

(d) Inspect Goods for damage and risk of any danger before resuming work. If any damage and risk is found, use Contractor’s Equipment and Temporary Works only after making the necessary repairs.

to possibility of electrical shock, slippery conditions or poor visibility and the like during rain, snow or fog, and inform the Engineer accordingly;

(c) Inspect the Works and all Goods intended to be incorporated in the Works or used thereon (including any temporary structures) for damage and risk of causing any danger before resuming work. If any damage or risk is found, the Contractor shall immediately take necessary action to prohibit entry in accordance with JSSS 2.3 [Prohibition of Entry – Dangerous Work], inform the Engineer accordingly and request his instructions; and

(d) Inspect Goods for damage and risk of any danger before resuming work. If any damage and risk is found, use Contractor’s Equipment and Temporary Works only after making the necessary repairs.

such work may be dangerous due to possibility of electrical shock, slippery conditions or poor visibility and the like during rain, snow or fog, and inform the Engineer accordingly;

(f) Inspect the Works and all Goods intended to be incorporated in the Works or used thereon (including any temporary structures) for damage and risk of causing any danger before resuming work. If any damage or risk is found, the Contractor shall immediately take necessary action to prohibit entry in accordance with JSSS 2.3 [Prohibition of Entry – Dangerous Work], inform the Engineer accordingly and request his instructions; and

(g) Inspect Goods for damage and risk of any danger before resuming work. If any damage and risk is found, use Contractor’s Equipment and Temporary Works only after making the necessary repairs.

<p>(e) 大雨: 1回の降雨量が50ミリメートル以上の雨</p> <p>(f) 大雪: 1回の降雪量が25センチメートル以上の雪</p> <p>(g) 地震: メルカリ震度階VI以上の地震</p> <p>(12) 天気予報等であらかじめ上記基準を超える悪天候が予想される場合は、緊急事態対応計画に従い、作業中止を含めた対応策の準備を行っておくこと。→規定なし。→理由不明。請負者が当然行うことであるから記述する必要はないと考えられる。→(NKの方針: このまま規定なしとする。)</p> <p>(13) 悪天候のときは 2m 以上の高所作業を中止すると共に、その旨エンジニアに通知すること。→E2.7.2(a)に記述済み</p> <p>(14) 降雨、降雪及び霧発生時の視界不良により、作業に危険を及ぼす可能性がある場合は、当該作業を中止すると共に、その旨エンジニアに通知すること。→E2.7.2(b)に記述済み</p> <p>(15) 悪天候又は地震発生後に作業を再開する前には、構造物(仮設を含む)に危険がないかを点検すること。危険箇所が発見された場合には、すみやかに危険箇所に立入禁止措置を講じ、その旨をエンジニアに通知すること。→E2.7.2(c)に記述済み</p> <p>(16) 悪天候又は地震発生後に作業を再開する前には、建設機械に危険がないかを点検すること。危険が発見された場合には、必要な修理を施した上で使用すること。→E2.7.2(d)に記述済み</p> <p>2.7.5 大雨に対する措置</p> <p>請負者は、作業現場及び周辺では、2.7.4(1)に規定する大雨に対し、次の措置を講じなければならない。→E2.7.3に記述済み</p> <p>(17) 次のような箇所は、下記(2)から(4)の対策及び立入禁止の措置を講ずること。→E2.7.3(1)に記述済み</p> <p>(b) 土砂崩れ、がけ崩れ、地すべりの発生のおそれがある箇所及び土石流の到達のおそれがある箇所→E2.7.3(1)(a)に記述済み</p> <p>(h) 資機材の流出、土砂の流出のおそれがある箇所→E2.7.3(1)(b)に記述済み</p> <p>(i) 河川の氾濫等により浸水のおそれがある箇所→E2.7.3(1)(c)に記述済み</p> <p>(18) 流出のおそれのある資機材等は、安全な場所に移動する等流出防止の措置を講じること。→E2.7.3(2)に記述済み</p> <p>(19) 大型機械の設置してある場所で、機械等の冠水又は流出、地盤のゆるみによる転倒のおそれがある場合は、適切な場所への退避又は転倒防止措置を講じること。→E2.7.3(2)に記述済み</p> <p>(20) 冠水又は流出のおそれがある仮設物は、撤去するか、水裏から仮設物内に水を呼び込み内外水位差による倒壊を防ぐか、補強するなどの措置を講じること。→E2.7.3(3)に記述済み</p>	<p>2.7.3. Measures for Heavy Rain</p> <p>For heavy rainfall at the Site and the surrounding area, the Contractor shall:</p> <p>(1) Take measures to prohibit entry in accordance</p>	<p>2.7.3. Measures for Heavy Rain</p> <p>JC: 日本語版では暴風、大雨等、各現象に応じて作業中止基準が数値ともに定められていましたが、それが消えている理由を教えてください。</p> <p>There are criteria with figures for discontinuing works due to strong wind, heavy rain, etc. in the Japanese draft. Please explain the reason for eliminating those criteria.</p> <p>MM: 2.7.3 to 2.7.7 Criterion for work stoppage</p> <p>NK explained that foreseeable weather and earthquake conditions vary according to each different country which is why FIDIC do not list any criteria. Criteria for stopping works in JSSS is not recommended even as an indication.</p> <p>The Contractor shall determine their criteria for stopping work based on the climactic data at the Bidding stage and stop when the HSO feels that it is not safe to continue according to conditions at the time. The Engineer may also instruct the Contractor to stop if he feels that it is unsafe.</p> <p>NK recommend leaving as it is</p> <p>NK: 2.7.3 is left as it is.</p> <p>For heavy rainfall at the Site and the surrounding area, the Contractor shall:</p> <p>(1) Take measures to prohibit entry in accordance</p>	<p>2.7.3. Measures for Heavy Rain</p> <p>For heavy rainfall at the Site and the surrounding area, the Contractor shall:</p>

場合、請負者は同等の規格以上であることを証明する資料を、エンジニアへ提出し、同意を得なければならない。→2.9.2以降の各款に規定済み。

- (d) 請負者は、作業員に保護具を無償で提供し、作業現場に携帯させ、必要時には必ず使用させなければならない。→無償で提供規定なし。追記する。
- (e) 請負者は、作業員に保護具を作業開始前に点検させなければならない。→規定なし。追記する。
- (f) 請負者は、保護具の維持管理・衛生に責任を持ち、異常を認めた場合には補修又は取り替えなければならない。→1.32.2に規定済み。

理由：英文案では本節の一般事項として次のように規定している。

2.9.1 PERSONAL PRTECTIVE EQUIPMENT (PPE)

2.9.1 General

Further to the requirements of JSSS 1.32 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment (PPE)] the Contractor shall comply with the additional requirements of this Section.

NK - The following (as deleted) is generally covered by JSSS 1.32 and is therefore deleted to avoid duplication

MD案では上記のように1.32の内容と重複するとして削除しているが、その内容は包括的で具体的にPPEに言及している部分は少ない。→(NKの方針：各PPEを規定していることからMD案通りとする。)

(3) 保護具の目的と規格

保護具の目的と適用する規格は以下である。

(a) 保護帽

保護帽は、物体の飛来落下と衝突、墜落・転倒時における頭部への衝撃の低減又は感電から作業員の頭部の保護を目的とする。

保護帽は、次の規格の要求事項に見合う物を使用しなければならない。→E2.9.2で規定済み

保護帽の適用規格

	規格番号	規格名
1	JIS T8131	産業用ヘルメット/ Industrial safety helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial safety helmets

(c) 安全靴

安全靴は、物体の落下や挟まれによる作業員の足の怪我の低減、鋭利物の踏み抜きの防止、感電防止又は靴の滑りによる転倒を防止

(c) Work Clothing;

- (4) The following additional PPE shall be provided whenever required by the working environment:
 - (a) Eye and Face Protection;
 - (b) Ear Protection
 - (c) Respiratory Protection
 - (d) Safety Belts
 - (e) Gloves
- (5) First-aid Kits and First-Aid Equipment must always be provided.
- (6) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

2.9.2. Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

2.9.3. Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact

~~(c) Work Clothing;~~

JC: デフォルトにはしない。This shouldn't be a "default".

MM: 2.9.9 Work Clothing The 2.9.9 will be left after modification to provide work clothing depending upon the type of works.

NK: moved to (4)(c) as right.

- (4) The following additional PPE shall be provided whenever required by the working environment:
 - (a) Eye and Face Protection;
 - (b) Ear Protection
 - (c) Respiratory Protection
 - ~~(d) Safety Belts~~
 - (e) Gloves

NK: Modified as right to cover Safety Belts and harness.

- (5) First-aid Kits and First-Aid Equipment must always be provided.
- (6) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

2.9.2. Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

2.9.3. Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact

- (i) Head Protection;
- (ii) Protective Footwear; and
- ~~(iii) Work Clothing~~

- (d) The following additional PPE shall be provided whenever required by the working environment:
 - (i) Eye and Face Protection;
 - (ii) Ear Protection
 - (iii) Respiratory Protection
 - ~~(iv) PPE for PFRS and PFAS (Safety Belts, Full body harnesses, and others)~~
 - (v) Gloves
 - ~~(vi) Work Clothing~~
- (e) First-aid Kits and First-Aid Equipment must always be provided.
- (f) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

3	BS EN ISO 20349	Personal protective equipment. Footwear protecting against risks in foundries and welding. Requirements and test methods for protection against risks in welding and allied processes

injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically conductive or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

JC: 防爆性の導電靴・導電靴の話をするのなら、日本だと、JIS T 8103 静電気帯電防止靴がある。だけど、

日本と欧米で電力の接地システムの仕組みが違うため、静電靴の規格が違う。IEC 規格では抵抗の値に下限がないが、日本では下限を生じないと、接地システムの違いから感電の危険が生じる。ので、使えない。が、欧米規格はあるはずだけど、断熱・耐熱は特殊用途なので日本では基準無し

JIS T 8103 specifies explosion-proof conductive shoes or conductive shoes. However, because of difference in power grounding system in Japan and in Europe and America, the standard for static electricity free shoes is also different.

In the IEC standard, there is no lower limit of resistance value. On the other hand, it cannot be used in Japan due to the difference of the grounding system which may induce the danger of electric shock.

There should be European and American standard, however.

There is no standard in Japan for insulation and heat resistance shoes because they are for special purposes.

NK: ASTM F2413 covers the Static electricity. According the Laws of the Country, standards shall be selected for footwear.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear

Measurement of insertion loss of ear-muff type protectors using an acoustic test fixture Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration earmuffs

2.9.6. Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection shall fit properly and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors

2.9.6. Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection shall fit properly and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

JC: for user ?

NK: referring to Respiratory Protection Handbook:
https://books.google.co.jp/books?id=hxCtLEjWOKMC&pg=PA91&lpg=PA91&dq=Respiratory+protection+shall+fit+properly&source=bl&ots=h25b4T2SA&sig=ACfu3U1pB810_wnsSRBR_Zk2Qd3NXp3Lg&hl=ja&sa=X&ved=2ahUKFwin26qb7fjnAhUjvslsBHRMbdDcQ6AEwDnoEC_AoQAQ#v=onepage&q=Respiratory%20protection%20shall%20fit%20properly&f=false
 Added "equipment (RPE) and "to worker's face" as right.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

JC: 重要。このほかの項目でも何か留意事項ないか？ Important. Are there any matters to be considered other than this?

NK: The specification above is made referring to the following HSE:
 1) Personal protective equipment (PPE) at work, A brief guide, <https://www.hse.gov.uk/pubns/indg174.pdf>
 2) Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013). <https://www.hse.gov.uk/pubns/priced/hsg53.pdf>
 Addition for maintenance and reference is added as right.

Ear protector shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors
3	BS EN ISO 4869-1 BS EN ISO 4869-2 BS EN ISO 4869-3 BS EN ISO 4869-4	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn Acoustics. Hearing protectors. Measurement of insertion loss of ear-muff type protectors using an acoustic test fixture Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

(6) Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection equipment (RPE) shall fit properly to worker's face and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing them or any other part, check with the manufacturer's guidance and ensure the correct replacement part is used.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer's instructions.

2.9.7. Safety Harnesses and Belts

IC: PFAS に限定せず、PFRS を採用するにしても、belt 前提のタイトルはまずい(Safety Harnesses and Belts) いまさらだけど、BS は細かく分かれていて、これは本当にハーネスだけなのでベルトは入っていないはず、かつ、他のコネクタとかはまた別

BS EN 354 PPE - Lanyards

BS EN 358 PPE - Work positioning systems

BS EN 362 PPE - Connectors *みたいな感じ*

ご参考

<https://www.safety-height.co.uk/products-services/performance-standards/>

ベルトは保持装置にあるんじゃないかと

Even if using PFRS without limiting to PFAS, the title assuming use of belt is not appropriate. (Safety Harnesses and Belts.)

BS is specifying these in various items. This should be about harnesses only not including belts and other connectors are separately specified.

BS EN 354 PPE - Lanyards

BS EN 358 PPE - Work positioning systems

BS EN 362 PPE - Connectors

Belt may be specified in holding devises.

NK: Modified as right.

Safety belts shall prevent the risk of workers falling from a height or sliding down slopes.

For further requirement on PPE for fall prevention, refer to **ISSS 2.5.13 [PPE for Fall Prevention]**.

Safety belts shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.6: Applicable Standards for Safety Belts

In addition to the requirements above, the Contractor shall select, use and maintain RPE referring to Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013).

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.5: Table of PPE for Respiratory Protection

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator
2	BS EN 149: 2001+A1: 2009 BS EN 14593-1: 2018	Respiratory protective devices. Filtering half masks to protect against particles. Respiratory protective devices. Compressed air line breathing devices with demand valve. Devices with a full-face mask.
3	ANSI Z88.2-2015	Practices for Respiratory Protection

(7) Safety Harnesses and Belts

Safety-belts PPE for PFRS shall prevent the risk of workers falling from a height or sliding down slopes. PPE for PFAS shall arrest a worker in a fall from a height or sliding down slopes.

3	BS EN 361	Personal protective equipment against falls from a height. Full body harnesses

JC: これはハーネスの規定なので restraint の記載がないのは、安全ベルトが BS のどこに規定されているのか確認のうえ、追記願います。BS EN 358 あたりを確認ください。

This is a standard for harnesses; thus, it probably does not stipulate about "restraint". Please add safety belts after confirming which part of BS stipulates safety belt. It is advisable to check BS EN 358.

NK: The following is added as commented.

BS EN 358:2018 Personal protective equipment for work positioning and prevention of falls from a height. Belts and lanyards for work positioning or restraint

2.9.8. Gloves

Gloves shall protect workers' hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers' hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8112 JIS T 8113 JIS T 8114	Gloves of insulating material used for electrical working Protective Leather Gloves for Welders Vibration isolation gloves

2.9.11. First-Aid Equipment - AED

Unless otherwise stated in the bidding Documents and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for AED

	Standard	Title of Standard
1	IEC STANDARD 60601-2-4	Medical electrical equipment, Part 2-4: Particular requirements for the safety of cardiac defibrillators

Unless otherwise stated in the ~~bidding Documents~~ and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

	<p>JC: e-mail from Mr. Ito on 2020/3/10</p> <p>1. 標記の件、下記の通りコメントします。特に PFAS や PFRS の理解に混乱が見られるように思えます。</p> <p>We hereunder comment regarding Chapter 2 as follows. Specially there seems confusion between PFAS and PFAS.</p> <p>2. なお、全体が提出された際に、今回コメントしていない部分にコメントする可能性があることは、先ほどお送りしたメールにある通りです。</p> <p>As we mentioned in the last e-mail, please keep in mind that there is a possibility to make our comments to items which are not commented this time.</p> <p>3. 2.1.1 (2) :こちらのコメントの仕方も悪かったですが、記載通りだと HSE に掲載されている全てのガス・粉じん等に対する規制を遵守しなければならない、という意味にも取られかねないので修正しています。</p> <p>2.2.1 (2): Though it seems our comments may be not properly expressed, the last description in NK draft R2 may be understood as the Contractor shall comply with values of all dusts, gases, etc. in the table of HSE. It is not JICA’s intention, therefore revision is made as shown here.</p> <p>4. 2.2.2:Secure Working Area Perimeter とこちらからお願いしたものが Secure Site Perimeter となっておりますが、Working Area に戻しています。御社の説明に「Secure Working Area Perimeter is specified in JSSS 2.3」という記述がありますが、2.3 には Dangerous Work に関連することに限定した記述となっており、一般的な記述ではありません。</p> <p>2.2.2: JC requested to change to 2.2.2:Secure Working Area Perimeter but NK draft is still Secure Site Perimeter therefore JC changed again to Working Area. NK explanation is that Secure Working Area Perimeter is specified in JSSS 2.3. The 2.3 specifies regarding only Dangerous Work but not general requirements.</p> <p>5. 2.2.3(1) (e)(f):削除しています。理由は既に前回付してある JICA コメント通りです。(d)の記述は夜間等の non-working hours にも適用されるはずです。</p> <p>2.2.3(1) (e)(f): JC deleted. The reason is as commented. The requirements of (d) apply to the non-working hours including night time.</p> <p>6. 2.5.1(2): 御社の説明の意図に沿った内容にするならば、for use of personnel who engage in.....とした方が良いと思われ、そのように修正しています。但し、</p>	

	<p>この条項が本当にこの場所に置いておくことがふさわしいか否かは再検討願います。</p> <p>2.5.1(2): JC considers it is better to revise it to “for use of personnel who engage in...” to specify the same content as the intention in NK’s explanation. Please reconsider where is proper location to specify this clause.</p> <p>7. 2.5.11(1)(a)にある Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; という部分は修正が必要だと考えます。親綱に結び付けるのは PFRS ではなく、身体保持器具なのではないでしょうか？添付の図を参照してください。</p> <p>2.5.11(1)(a): JC considers that it needs to correct “Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached”. The good to connect to working lines is not the PFRS but positioning device. Please refer to the attached figure.</p> <p>8. 2.5.11(2)(e): 記述がおかしいように思えます(「ハーネスをハーネスにつける?」)。修正を検討して下さい。ロープ高所作業におけるハーネス(添付の図は古いので胴ベルトですが)は親綱につけるのではないのでしょうか？</p> <p>2.5.13(1)(b)にある PPE for という言葉は不要です。むしろここでは PPP(E)としての PFRS を論じています。</p> <p>2.5.11(2)(e): The description is strange “harness is attached to harness”. Please consider correcting it. In rope work, harness should be connected with working lines. “PPE for” is not necessary in 2.5.13(1)(b). Here, PFRS is discussed as PPE.</p> <p>9. 2.5.13(1)(a) に opening という言葉を加えています(2.5.9(1)の記述(端、開口部からの墜落防止の措置を取らなければならない、とするもの)の趣旨に合致すると思います。</p> <p>2.5.13(1)(a): “opening” is added to meet the requirement that fall prevention measures shall be taken at the edge and opening specified in 2.5.9(1).</p> <p>10. 2.6.4(2): in addition よりも In such a case の方がふさわしいと思われ、その旨修正しています。</p> <p>2.6.4(2): It is revised because JC considers “In such a case” is more suitable than “in addition”.</p> <p>11. 2.7.1(2): 悪天候に関する記述ですが、「foreseeable で EOT 等につながるものではない」と言い切ることは不適当です。修正しています。</p> <p>2.7.1(2): It is inappropriate to affirm “they shall not be construed as constituting a cause of delay giving any entitlement to extension of time under GC”. Revision is made.</p> <p>12. 2.9.1(6): 付け加えられた「Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer’s instructions.」という文章は PPE の全体にかかるものではないでしょうか。2.9.1(1)に移すべきではないでしょうか</p> <p>2.9.1(6): The added phrase “Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer’s instructions.” seems to cover whole PPE. Therefore, they should be moved to 2.9.1(1).</p>	
--	--	--

	<p>13. 2.6.1(1)(d)及び2.9.2(9):PPE から作業服に関する記述を削除しています。いろいろと議論はあったところですが、やはり「コントラクターが支給する」ということをデフォルトにするのはやりすぎのように思います。</p> <p>2.6.1(1)(d) and 2.9.2(9): The requirements regarding working clothes are deleted. Though there is various discussion, it is excessive to specify as default for the Contractor to provide workers working clothes.</p> <p>14. またこれは総則の定義にもさかのぼる全般の話なのですが、デフォルトで使用することを想定している harness が普通名詞で、一般には使用が制限される方向にある胴ベルトが Safety Belt として大文字の定義語になっているのが少し気になります。但し、これは全体を整理する中で再検討すればよいと思います。</p> <p>The term of harness which is specified to be used for PPE as default is not defined as “Harness”, on the other hand that of “safety belt” which is specified as limited use is defined as “Safety Belt” in Chapter 1. These terms seem a little strange. Definitions of terms will be discussed when reviewing whole contents of JSSS.</p>	
<p>2 GENERAL SAFETY MEASURES</p> <p>2.1 WORK ENVIRONMENT</p> <p>Contractor’s Personnel shall be provided with a safe and healthy occupational environment. The Contractor shall implement all necessary measures to ensure this, taking particular care to avoid the creation of and/or any contact with Hazardous Substances, intense noise, heat, cold or similar and potentially harmful conditions or to provide protection against such conditions.</p> <p>2.1.1 Hazardous Substances</p> <p>(1) Definitions</p> <p>Refer to the definition of Hazardous Substances in JSSS Annex 1.1 [Definitions and Abbreviations]. For the purposes of this definition, note that Hazardous Substances shall include dust of any kind when present at a concentration in air equal to or greater than:</p> <p>(a) 10 mg/m3 (8-hour TWA) of inhalable dust; or</p> <p>(b) 4 mg/m3 (8-hour TWA) of respirable dust.</p> <p><i>(TWA means Time weighted average.)</i></p> <p>Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.</p> <p>(2) Standards of Workplace Exposure Limits (WELs)</p> <p>The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications.</p>	<p>2 GENERAL SAFETY MEASURES</p> <p>2.1 WORK ENVIRONMENT</p> <p>Contractor’s Personnel shall be provided with a safe and healthy occupational environment. ---	--	--

2.1.3 Noise

(5) Standards

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D - Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

(6) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2: **Permissible Noise Exposures** of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115
2	100		

- (b) If such controls are not possible ~~of if they fail~~ to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor’s Personnel as specified in JSSS エラー! 参照元が見つかりません。 [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;

- (c) Post warning signs at the work area to make all Contractor’s Personnel aware that ear protection must be worn; and

- (d) In all cases where the sound levels exceed the values shown in Table D-2, a continuing effective hearing conservation program **specified in (3) below shall be implemented.**

(7) Hearing Conservation Program

- (a) **The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor’s Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time-weighted average.**

- (b) **The Contractor must monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure**

2.1.3 Noise

(5) Standards

By reference to **JSSS 1.4 [JSSS - Laws and Reference Standards]**, for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D - Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

(6) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2: **Permissible Noise Exposures** of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2: **Permissible Noise Exposures** of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115
2	100		

- (b) If such controls are not possible to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor’s Personnel as specified in JSSS エラー! 参照元が見つかりません。 [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;

- (c) Post warning signs at the work area to make all Contractor’s Personnel aware that ear protection must be worn; and

- (d) In all cases where the sound levels exceed the values shown in Table D-2, a continuing effective hearing conservation program specified in (3) below shall be implemented.

(7) Hearing Conservation Program

- (e) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor’s Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time-weighted average.

- (f) The Contractor must monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure

measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.4 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.19 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:

- (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, trade effluent and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work.
- (2) Safely isolate the supply and flow of any chemical or other potentially harmful materials and gases in the Site during the period of any work and safely reconnect or continue the same after the work is finished.
- (3) Improve and maintain the work environment for example by mechanical ventilation and filtration if the result of the work environment measurement in (1) above violates the limits imposed by this JSSS Chapter 2 [General Safety Measures].
- (4) For further information on prohibition of entry to areas where Dangerous Work is being performed refer to JSSS 2.3 [Prohibition of Entry - Dangerous Work].

2.1.5 High and Low Temperatures and Humidity

- (1) To avoid health hazards due to excessively hot, cold or humid working environments, the Contractor shall improve the environmental working conditions for all Contractor's Personnel by:
 - (a) Providing temporary covers and shade to protect workers from rain, hail, snow, sunlight and reflection from the surrounding wall and ground;
 - (b) Providing protection from any heat or cold source and provide adequate ventilation, heating or air conditioning for indoor working;
 - (c) Where permitted by the Engineer under the hot climate carrying out work during the night when temperatures and humidity are lower;
 - (d) Providing drinking water and supplement that allow salt replenishment at work place;
 - (e) Providing a rest station with heating, air conditioning or shade near the work place, or providing other facilities equipped with accommodation that allow personnel who fall ill to lie down and recover;
 - (f) Allowing work breaks and reducing excessive and continuous

measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.4 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.19 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:

- (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, trade effluent and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work.
- (2) Safely isolate the supply and flow of any chemical or other potentially harmful materials and gases in the Site during the period of any work and safely reconnect or continue the same after the work is finished.
- (3) Improve and maintain the work environment for example by mechanical ventilation and filtration if the result of the work environment measurement in (1) above violates the limits imposed by this JSSS Chapter 2 [General Safety Measures].
- (4) For further information on prohibition of entry to areas where Dangerous Work is being performed refer to JSSS 2.3 [Prohibition of Entry - Dangerous Work].

2.1.5 High and Low Temperatures and Humidity

- (1) To avoid health hazards due to excessively hot, cold or humid working environments, the Contractor shall improve the environmental working conditions for all Contractor's Personnel by:
 - (a) Providing temporary covers and shade to protect workers from rain, hail, snow, sunlight and reflection from the surrounding wall and ground;
 - (b) Providing protection from any heat or cold source and provide adequate ventilation, heating or air conditioning for indoor working;
 - (c) Where permitted by the Engineer under the hot climate carrying out work during the night when temperatures and humidity are lower;
 - (d) Providing drinking water and supplement that allow salt replenishment at work place;
 - (e) Providing a rest station with heating, air conditioning or shade near the work place, or providing other facilities equipped with accommodation that allow personnel who fall ill to lie down and recover;

measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.4 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.19 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:

- (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, trade effluent and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work.
- (2) Safely isolate the supply and flow of any chemical or other potentially harmful materials and gases in the Site during the period of any work and safely reconnect or continue the same after the work is finished.
- (3) Improve and maintain the work environment for example by mechanical ventilation and filtration if the result of the work environment measurement in (1) above violates the limits imposed by this JSSS Chapter 2 [General Safety Measures].
- (4) For further information on prohibition of entry to areas where Dangerous Work is being performed refer to JSSS 2.3 [Prohibition of Entry - Dangerous Work].

2.1.5 High and Low Temperatures and Humidity

- (1) To avoid health hazards due to excessively hot, cold or humid working environments, the Contractor shall improve the environmental working conditions for all Contractor's Personnel by:
 - (a) Providing temporary covers and shade to protect workers from rain, hail, snow, sunlight and reflection from the surrounding wall and ground;
 - (b) Providing protection from any heat or cold source and provide adequate ventilation, heating or air conditioning for indoor working;
 - (c) Where permitted by the Engineer under the hot climate carrying out work during the night when temperatures and humidity are lower;
 - (d) Providing drinking water and supplement that allow salt replenishment at work place;
 - (e) Providing a rest station with heating, air conditioning or shade near the work place, or providing other facilities equipped with accommodation that allow personnel who fall ill to lie down and recover;

<p>working times; and</p> <p>(g) Allowing an initial acclimatisation period for Contractor's Personnel to become used to the heat or cold.</p> <p>(2) The Contractor shall ensure that workers wear moisture-permeable and loose-fitting clothing in hot climates and suitably warm, insulated and waterproof clothes in cool or cold climates.</p> <p>(3) If any undesirable conditions are detected, the Contractor shall take appropriate measures to correct the situation, allowing Contractor's Personnel to rest or temporarily stop the work until the conditions improve.</p> <p>(4) The Contractor shall ensure that all Contractor's Personnel are properly dressed in suitable insulated cold weather clothing and fully equipped to work safely in low temperatures.</p> <p>(5) The Contractor shall monitor the health of Contractor's Personnel before and during the work and allowing Contractor's Personnel to take a rest and/or rehydrate and shall act if any abnormalities are observed.</p> <p>2.1.6 Monitoring and Records</p> <p>(1) The Contractor shall monitor the working environment and prepare regular daily, weekly and monthly records of dust, noise, air and water quality, inadequate natural ventilation, rainfall, snowfall, temperatures, humidity, wind speed and direction regularly throughout the Time for Completion of the Works.</p> <p>(2) The procedure for preparation and submission of such records shall be as stated in JSSS 1.29 [<i>Safety Reports</i>].</p> <p>(3) The Contractor's monitoring and recording shall also cover:</p> <p>(a) The pre-existent conditions for all periods of Dangerous Work;</p> <p>(b) Dust at work places where excessive dust and waste material such as dirt, rocks, minerals, metals, carbon, cement, etc. is generated;</p> <p>(c) Noise levels at work places that generate intense noise;</p> <p>(d) Ventilation volume, temperature and concentration of carbon dioxide, carbon monoxide, oxygen, hydrogen sulphide, other toxic or dangerous gases at work places including tunnels and deep pits and Confined Spaces; and</p> <p>(e) Illuminance at work place and passageways.</p> <p>(4) The above monitoring shall be conducted separately from the environmental monitoring that may be required by the Laws of the Country and any environmental monitoring that may be separately specified in the Contract.</p> <p>(5) For the following measurement items, if the following limits are violated, the Contractor shall take the measures prescribed in JSSS 1.1. <p>2.5 FALL PREVENTION</p> <p>2.5.1. General</p> <p>(1) By reference to JSSS 1.4 [<i>JSSS - Laws and Reference Standards</i>], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with those the technical requirements for fall prevention as specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(d) Requirements relating to fall protection for employees workers working on scaffolds shall comply with in Subpart L - Scaffolds;</p> <p>(e) Requirements relating to fall protection for employees’ workers working on cranes and derricks shall comply with in Subpart CC - Cranes and Derricks in Construction;</p> <p>(f) Fall protection requirements for employees workers performing steel erection work (except for towers and tanks) shall comply with in Subpart R - Steel Erection;</p> <p>(g) Requirements relating to fall protection for employees workers working on certain types of equipment used in tunnelling operations shall comply with in Subpart S - Underground Construction, Caissons, Cofferdams and Compressed Air;</p> <p>(h) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers shall comply with in §1926.105 Safety nets;</p> <p>(i) Requirements relating to fall protection for employees workers working from aerial lifts or on poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment shall comply with in Subpart V - Electric Power Transmission and Distribution; and</p> <p>(j) Requirements relating to fall protection for employees workers working on stairways and ladders are provided in Subpart X - Stairways and Ladders.</p>	<p>2.5 FALL PREVENTION</p> <p>2.5.1.General</p> <p>(1) By reference to JSSS 1.4 [<i>JSSS - Laws and Reference Standards</i>], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with those the technical requirements for fall prevention as specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for employees workers working on scaffolds shall comply with in Subpart L - Scaffolds;</p> <p>(b) Requirements relating to fall protection for employees’ workers working on cranes and derricks shall comply with in Subpart CC - Cranes and Derricks in Construction;</p> <p>(c) Fall protection requirements for employees workers performing steel erection work (except for towers and tanks) shall comply with in Subpart R - Steel Erection;</p> <p>(d) Requirements relating to fall protection for employees workers working on certain types of equipment used in tunnelling operations shall comply with in Subpart S - Underground Construction, Caissons, Cofferdams and Compressed Air;</p> <p>(e) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers shall comply with in §1926.105 Safety nets;</p> <p>(f) Requirements relating to fall protection for employees workers working from aerial lifts or on poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment shall comply with in Subpart V - Electric Power Transmission and Distribution; and</p> <p>(g) Requirements relating to fall protection for employees workers working on stairways and ladders are provided in Subpart X - Stairways and Ladders.</p>	<p>2.5 FALL PREVENTION</p> <p>2.5.1.General</p> <p>(1) By reference to JSSS 1.4 [<i>JSSS - Laws and Reference Standards</i>], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with those the technical requirements for fall prevention as specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for employees workers working on scaffolds shall comply with in Subpart L - Scaffolds;</p> <p>(b) Requirements relating to fall protection for employees’ workers working on cranes and derricks shall comply with in Subpart CC - Cranes and Derricks in Construction;</p> <p>(c) Fall protection requirements for employees workers performing steel erection work (except for towers and tanks) shall comply with in Subpart R - Steel Erection;</p> <p>(d) Requirements relating to fall protection for employees workers working on certain types of equipment used in tunnelling operations shall comply with in Subpart S - Underground Construction, Caissons, Cofferdams and Compressed Air;</p> <p>(e) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers shall comply with in §1926.105 Safety nets;</p> <p>(f) Requirements relating to fall protection for employees workers working from aerial lifts or on poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment shall comply with in Subpart V - Electric Power Transmission and Distribution; and</p> <p>(g) Requirements relating to fall protection for employees workers working on stairways and ladders are provided in Subpart X - Stairways and Ladders.</p>

<p>(2) The Contractor shall develop safety procedures for personnel who are engaged in inspection, investigation, or assessment to confirm the workplace conditions for the safety of workers prior to the actual start of construction work or to confirm the site condition for the safety of workers after all construction work has been completed.</p> <p>(3) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.</p> <p>(4) The Contractor must pay special attention to whether a restraint system (PFRS) or arrest (PFAS) system is required, noting the defined terms in Chapter 1 General for each of these systems.</p> <p>(5) As a general rule, the Contractor shall take “fall restraint” measures wherever practicable rather than “fall arrest” measures.</p> <p>(6) JSSS Section 2.5 [Fall Prevention] shall be read in conjunction with respective other parts of JSSS</p> <p>2.5.2. Height Thresholds The threshold for fall protection in construction work is 2m. The Contractor must provide fall protection for all personnel, removing all fall hazards whenever any personnel are working 2 m or more above a lower level.</p> <p>2.5.3. Facilities for Ascending and Descending When carrying out work at heights of 2 m or more, the Contractor shall provide facilities that enable the Contractor’s Personnel to safely access and descend from such work levels.</p> <p>2.5.4. Risk Assessments</p> <p>(1) Where there is any risk of fall for any part of the Works at the Site, the Contractor shall conduct a pre-assessment of the various types of fall protection systems to be used and the selected alternatives shall be shown in the Safety Plan.</p>	<p>(2) For use of personnel who are engaged in inspection, investigation, or assessment. The Contractor shall develop safety procedures for personnel who are engaged in inspection, investigation, or assessment to confirm the workplace conditions for the safety of workers prior to the actual start of construction work or to confirm the site condition for the safety of workers after all construction work has been completed.</p> <p>JC: これは墜落に限らない一般的な事項です。これはむしろ総則に入れるべき事項ではないでしょうか。(又は総則に既に類似の表現があるなら削除)</p> <p>This is general requirement not only for fall prevention. It may be included in Chapter 1. (if already specified in Chapter 1, it shall be deleted.)</p> <p>JC6: 2.5.1(2): 御社の説明の意図に沿った内容にするならば、for use of personnel who engage in.....とした方が良いと思われ、そのように修正しています。但し、この条項が本当にこの場所に置いておくことがふさわしいか否かは再検討願います。 2.5.1(2): JC considers it is better to revise it to “for use of personnel who engage in...” to specify the same content as the intention in NK’s explanation. Please reconsider where is proper location to specify this clause.</p> <p>(3) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.</p> <p>(4) The Contractor must pay special attention to whether a restraint system (PFRS) or arrest (PFAS) system is required, noting the defined terms in Chapter 1 General for each of these systems.</p> <p>JC: 不要ではないでしょうか？ 削除をご検討ください。 Is (4) necessary? Please consider deleting (4). NK: Deleted.</p> <p>(5) As a general rule, the Contractor shall take “fall restraint” measures wherever practicable rather than “fall arrest” measures.</p> <p>(6) JSSS Section 2.5 [Fall Prevention] shall be read in conjunction with respective other parts of JSSS</p> <p>2.5.2. Height Thresholds The threshold for fall protection in construction work is 2m. The Contractor must provide fall protection for all personnel, removing all fall hazards whenever any personnel are working 2 m or more above a lower level.</p> <p>2.5.3. Facilities for Ascending and Descending When carrying out work at heights of 2 m or more, the Contractor shall provide facilities that enable the Contractor’s Personnel to safely access and descend from such work levels.</p> <p>2.5.4. Measures for Preventing Falls during Excavation Work</p> <p>The Contractor shall take all necessary measures to prevent falls during excavation work including for example:</p> <p>(1) Providing fall prevention systems including temporary handrails or barriers, PFRS, PFAS or rope access.</p>
---	---	---

- (2) Taking appropriate measures to ensure that earth slopes do not collapse due to the fixing of any fall prevention system or to any contact of the ropes with the slope surfaces.
- (3) Providing safe measures to allow Contractor's Personnel to escape from or move around any excavated slope. If it is not possible to take such measures due to the nature of the work, the Contractor shall install main ropes and have Contractor's Personnel use PFRS or PFAS. In such case, the main ropes shall be anchored securely to prevent them becoming loose or detached.
- (4) Installing handrails where the slope shoulder is used as a passageway.
- (5) Installing safe crossings over trench excavations at a maximum of 30m intervals and prohibiting all Contractor's Personnel from crossing on the shoring system.
- (6) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in trench excavations that are 1.2 m or more in depth so as to require no more than 7.5 m of lateral travel for Contractor's Personnel.
- (7) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in deep excavations with/without shoring system and prohibiting all Contractor's Personnel from crossing on the shoring system.

2.5.11. Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
 - (a) Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and

- (2) Taking appropriate measures to ensure that earth slopes do not collapse due to the fixing of any fall prevention system or to any contact of the ropes with the slope surfaces.
- (3) Providing safe measures to allow Contractor's Personnel to escape from or move around any excavated slope. If it is not possible to take such measures due to the nature of the work, the Contractor shall install main ropes and have Contractor's Personnel use PFRS or PFAS. In such case, the main ropes shall be anchored securely to prevent them becoming loose or detached.
- (4) Installing handrails where the slope shoulder is used as a passageway.
- (5) Installing safe crossings over trench excavations at a maximum of 30m intervals and prohibiting all Contractor's Personnel from crossing on the shoring system.
- (6) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in trench excavations that are 1.2 m or more in depth so as to require no more than 7.5 m of lateral travel for Contractor's Personnel.
- (7) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in deep excavations with/without shoring system and prohibiting all Contractor's Personnel from crossing on the shoring system.

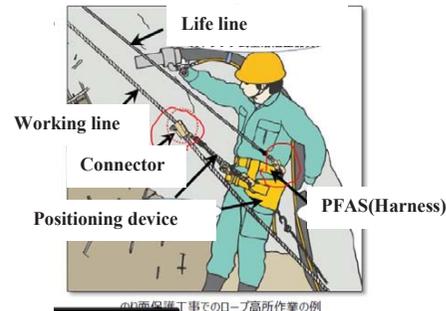

2.5.11. Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
 - (a) Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and

JC: 要修文. Required to revise (a).

JC7: 2.5.11(1)(a)にある Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; という部分は修正が必要だと考えます。親綱に結び付けるのは PFRS ではなく、身体保持器具なのではないでしょうか？添付の図を参照してください。

2.5.11(1)(a): JC considers that it needs to correct "Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached". The good to connect to working lines is not the PFRS but positioning device. Please refer to the attached figure.

NK: revised.

- (2) Taking appropriate measures to ensure that earth slopes do not collapse due to the fixing of any fall prevention system or to any contact of the ropes with the slope surfaces.
- (3) Providing safe measures to allow Contractor's Personnel to escape from or move around any excavated slope. If it is not possible to take such measures due to the nature of the work, the Contractor shall install main ropes and have Contractor's Personnel use PFRS or PFAS. In such case, the main ropes shall be anchored securely to prevent them becoming loose or detached.
- (4) Installing handrails where the slope shoulder is used as a passageway.
- (5) Installing safe crossings over trench excavations at a maximum of 30m intervals and prohibiting all Contractor's Personnel from crossing on the shoring system.
- (6) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in trench excavations that are 1.2 m or more in depth so as to require no more than 7.5 m of lateral travel for Contractor's Personnel.
- (7) Providing means of access and egress for example a stairway, ladder, ramp or other safe means in deep excavations with/without shoring system and prohibiting all Contractor's Personnel from crossing on the shoring system.

2.5.11. Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
 - (a) Installing lifeline to which the PFAS is attached and working line to which the positioning device is attached; and

<p>(b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.</p> <p>(2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:</p> <p>(a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;</p> <p>(b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;</p> <p>(c) Measures have been taken to prevent cutting or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) The working line is anchored to two or more independent strong supports; and</p> <p>(e) The PFAS is securely attached to the harness and the connecting devices are compatible with the working line and lifeline used.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor's Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor's Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures including providing Contractor's Personnel PPE to prevent any danger to Contractor's Personnel from falling objects.</p>	<p>(b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.</p> <p>(2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:</p> <p>(a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;</p> <p>(b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;</p> <p>(c) Measures have been taken to prevent cutting or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) The working line is anchored to two or more independent strong supports; and</p> <p>(e) The PFAS is securely attached to the harness and the connecting devices are compatible with the working line and lifeline used.</p> <p>JC: この記述はおかしくないでしょうか。2.5.13(2)(d)には The PFAS shall be the full harness type and shall comprise...という記述があり、これでは「ハーネスにハーネスを取り付ける」という意味になりませんか？</p> <p>日本語の原文は「接続器具を用いて確実に取り付けること。なお接続器具は使用する親綱に適合したものを使用すること」であり、忠実な翻訳になっていません。</p> <p>JC9: 2.5.11(2)(e): 記述がおかしいように思えます(「ハーネスをハーネスにつける?」)。修正を検討して下さい。ロープ高所作業におけるハーネス(添付の図は古いので胴ベルトですが)は親綱につけるのではないのでしょうか? 2.5.13(1)(b)にある PPE for という言葉は不要です。むしろここでは PPP(E)としての PFRS を論じています。</p> <p>2.5.11(2)(e): The description is strange "harness is attached to harness". Please consider correcting it. In rope work, harness should be connected with working lines. "PPE for" is not necessary in 2.5.13(1)(b). Here, PFRS is discussed as PPE.</p> <p>JC Revised as commented.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor's Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor's Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures including providing Contractor's Personnel PPE to prevent any danger to Contractor's Personnel from falling objects.</p>	<p>(b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.</p> <p>(2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:</p> <p>(a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;</p> <p>(b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;</p> <p>(c) Measures have been taken to prevent cutting or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) The working line is anchored to two or more independent strong supports; and</p> <p>(e) The positioning device shall be securely connected to the working line with connectors and the connecting devices shall be compatible with the working line used.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor's Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor's Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures including providing Contractor's Personnel PPE to prevent any danger to Contractor's Personnel from falling objects.</p>
--	--	--

<p>(5) The Contractor shall appoint an Operation Leader who shall work with the rope work team at all time throughout their assignment and direct the work based on the Safety Plan and perform the following duties:</p> <ul style="list-style-type: none"> (a) Inform all Contractor’s Personnel of the content of the Method Statement and Safety Plan before commencement of the work; (b) Check all equipment to be used on the day prior to commencement of the work, and repair, maintain or replace any equipment immediately if any defect is identified; (c) Permit the Contractor’s Personnel to commence work only after the measures have been taken to provide all working lines, lifelines, PFRS, PFAS and PPE; and (d) Ensure Contractor’s Personnel use PFRS, PFAS correctly, and, have them fix the PFAS to the life lines- <p>2.5.12. Further Measures for Contractor’s Personnel</p> <p>The Contractor shall take all necessary further measures to prevent falls during the Works including for example taking the following measures before any work commences:</p> <ul style="list-style-type: none"> (1) Conduct safety induction and education courses regarding fall risks for all Contractor’s Personnel who shall work on locations and operations where there is a risk of falling. (2) Prohibit the unauthorized removal of any fall prevention equipment and educate Contractor’s Personnel on the dangers of this action. (3) Educate Contractor’s Personnel on the proper storage and management of all safety equipment, including for example PPE, PFRS and PFAS. (4) Stop the work if there is a risk of bad weather such as strong wind, heavy rain, or snow. <p>2.5.13. Personal Protective Equipment for Fall Prevention</p> <p>The Contractor shall comply with the following requirements when Contractor’s Personnel are subject to fall risks:</p> <p>(1) The Contractor shall provide PFRS as follows:</p> <ul style="list-style-type: none"> (a) PFRS shall be the same as PFAS specified below but designed to restrict the movement of workers and prevent them from reaching the edge of any working area and therefore eliminating the risk of a fall. 	<p>(5) The Contractor shall appoint an Operation Leader who shall work with the rope work team at all time throughout their assignment and direct the work based on the Safety Plan and perform the following duties:</p> <ul style="list-style-type: none"> (a) Inform all Contractor’s Personnel of the content of the Method Statement and Safety Plan before commencement of the work; (b) Check all equipment to be used on the day prior to commencement of the work, and repair, maintain or replace any equipment immediately if any defect is identified; (c) Permit the Contractor’s Personnel to commence work only after the measures have been taken to provide all working lines, lifelines, PFRS, PFAS and PPE; and (d) Ensure Contractor’s Personnel use PFRS, PFAS correctly, and, have them fix the PFAS to the life lines- <p>2.5.12. Further Measures for Contractor’s Personnel</p> <p>The Contractor shall take all necessary further measures to prevent falls during the Works including for example taking the following measures before any work commences:</p> <ul style="list-style-type: none"> (1) Conduct safety induction and education courses regarding fall risks for all Contractor’s Personnel who shall work on locations and operations where there is a risk of falling. (2) Prohibit the unauthorized removal of any fall prevention equipment and educate Contractor’s Personnel on the dangers of this action. (3) Educate Contractor’s Personnel on the proper storage and management of all safety equipment, including for example PPE, PFRS and PFAS. (4) Stop the work if there is a risk of bad weather such as strong wind, heavy rain, or snow. <p>2.5.13. Measures for Earthquake and Tsunami</p> <p>To the extent that time and forewarning is available, the Contractor shall evacuate workers to the predetermined safe place in the event or earthquakes and tsunamis when the relevant public authority issue a warning for the occurrence or prediction of earthquakes or tsunamis.</p> <p>2.7.8. Inspection of TW after Adverse Weather and Earthquake</p> <p>Following the occurrence of any adverse weather, after any earthquake and before re-commencing any work, the Contractor shall:</p> <p>(1) Perform a visual inspection as specified in JSSS 7.1.3 [Inspection and Monitoring]</p> <p>(2) Check all measured values of any instruments to ensure the safety of TW. When abnormality is found in instruments, recalibrate and or replace them as necessary.</p>
--	--	--

<p>(3) If any damage or fault is found in the TW, immediately carry repair, replacement and reinforcement works as necessary.</p> <p>(4) Keep the Engineer informed of inspection and monitoring results of TW.</p>	<p>(3) If any damage or fault is found in the TW, immediately carry repair, replacement and reinforcement works as necessary.</p> <p>(4) Keep the Engineer informed of inspection and monitoring results of TW.</p>	<p>(3) If any damage or fault is found in the TW, immediately carry repair, replacement and reinforcement works as necessary.</p> <p>(4) Keep the Engineer informed of inspection and monitoring results of TW.</p>
<p>2.8 FIRE PREVENTION</p> <p>2.8.1. General</p> <p>The Contractor shall provide the fire preventive measures described in this Section.</p> <p>2.8.2. Temporary Facilities - Firefighting System</p> <p>The Contractor shall establish a fire-fighting system for the Contractor's offices, site offices and accommodation for the Employer and Engineer (if required in the Contract) , temporary buildings, temporary facilities, dormitory, temporary construction structures, the Permanent Works whilst under construction and the like (hereinafter collectively referred to as "temporary facilities" in this Section).</p> <p>For this purpose, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Prepare a firefighting plan for the temporary facilities covering all requirements of this Section and include this as a part of the Safety Plan. (2) Designate a person responsible for fire-fighting and also evacuation in the event of a fire. (3) Prepare a firefighting training plan as a part of the firefighting plan. (4) Carry out all training and keep records of such training in accordance with JSSS 1.17.5 [Records of Education and Training]. <p>2.8.3. Measures of Fire Prevention and Firefighting</p> <p>For fire prevention and firefighting in the temporary facilities, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Prohibit smoking anywhere on the Site other than designated smoking areas, and implement effective fire prevention measures by placing buckets filled with water or sand in smoking areas. (2) Provide fire extinguishers and if necessary fire hydrants with temporary water supply. (3) Different types of fire extinguishers shall be provided according to the area and purpose of use, such as for ordinary fires, oil fires, electric fires and the like. (4) Fire extinguishers shall be regularly inspected, refilled, serviced and certified as such by a qualified and independent safety company approved by the Engineer. (5) Train Contractor's Personnel and ensure that they respond in the event of a fire, in advance of attendance by the public firefighting service (if this is available) otherwise provide the services required by JSSS 1.22 [Fire Prevention]. <p>2.8.4. Measures for Evacuation</p> <p>In the event of a fire, the Contractor shall facilitate evacuation by:</p>	<p>2.8 FIRE PREVENTION</p> <p>2.8.1. General</p> <p>The Contractor shall provide the fire preventive measures described in this Section.</p> <p>2.8.2. Temporary Facilities - Firefighting System</p> <p>The Contractor shall establish a fire-fighting system for the Contractor's offices, site offices and accommodation for the Employer and Engineer (if required in the Contract) , temporary buildings, temporary facilities, dormitory, temporary construction structures, the Permanent Works whilst under construction and the like (hereinafter collectively referred to as "temporary facilities" in this Section).</p> <p>For this purpose, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Prepare a firefighting plan for the temporary facilities covering all requirements of this Section and include this as a part of the Safety Plan. (2) Designate a person responsible for fire-fighting and also evacuation in the event of a fire. (3) Prepare a firefighting training plan as a part of the firefighting plan. (4) Carry out all training and keep records of such training in accordance with JSSS 1.17.5 [Records of Education and Training]. <p>2.8.3. Measures of Fire Prevention and Firefighting</p> <p>For fire prevention and firefighting in the temporary facilities, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Prohibit smoking anywhere on the Site other than designated smoking areas, and implement effective fire prevention measures by placing buckets filled with water or sand in smoking areas. Though there is various discussion, it is excessive to specify as default for the Contractor to provide workers working clothes.</p> <p>NK : 作業服に替えて、OSHA で規定している次の PPE を規定し、その中に作業服に代えて body protection を規定することを提案します。</p>	<p>2.9 PERSONAL PROTECTIVE EQUIPMENT AND FIRST AID KIT</p> <p>2.9.1. Personal Protective Equipment (PPE)</p> <p>(1) General</p> <p>(a) Further to the requirements of JSSS 1.33 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment] the Contractor shall provide all necessary and required PPE free of any charge to all Contractor's Personnel, ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;</p> <p>(b) PPE shall comply with the additional requirements of this Section.</p> <p>(c) The Contractor shall ensure as a minimum and mandatory requirement, that all Contractor's Personnel are provided with the following PPE and the Contractor shall make sure that all Contractor's Personnel wear or use such PPE as appropriate whenever they are on the Site:</p> <p>(i) Head Protection;</p> <p>(ii) Protective Footwear; and</p> <p>(d) The following additional PPE shall be provided whenever required by the working environment:</p> <p>(i) Eye and Face Protection;</p> <p>(ii) Ear Protection</p> <p>(iii) Respiratory Protection</p> <p>(iv) PPE for PFRS and PFAS (Safety Belts, Full body harnesses, and others)</p> <p>(v) Gloves</p> <p>(vi) Body Protection</p>

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(3) Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, **electrically insulating** or thermally insulating, appropriate footwear shall be selected for the risks identified.

NK propose to specify body protection for working clothing referring to the following OSHA guide and reference clause:

OSHA defines Personal Protective Equipment is equipment worn to minimize exposure to a variety of hazards. Examples of personal protective equipment generally fall into the following categories:

- Eye and Face Protection.
- Head Protection.
- Leg and Foot Protection.
- Hand and Arm Protection.
- Hearing Protection.
- Body Protection.
- Respirators.

§ 1926.57 Ventilation. (f) Abrasive blasting (2) Dust hazards from abrasive blasting. (v) Operators shall be equipped with heavy canvas or leather gloves and aprons or equivalent protection to protect them from the impact of abrasives. Safety shoes shall be worn to protect against foot injury where heavy pieces of work are handled.

(c) ~~First-aid Kits and First Aid Equipment must always be provided.~~

(f) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

NK: Following the comment to (6) Respiratory Protection, the maintenance of PPE is additionally specified in (e).

NK: (e) First-aid Kits is moved to 2.9.2 (1) because 2.9.1 is for PPE.

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(3) Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, **electrically insulating** or thermally insulating, appropriate footwear shall be selected for the risks identified.

(e) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

(f) Maintenance of all PPE shall be made, except for disposable (single use) PPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month or as specified in the Safety Plan or in accordance with the manufacturer's instructions. However, if the PPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months or as specified in the Safety Plan or in accordance with the manufacturer's instructions.

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(3) Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically insulating or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20346 BS EN ISO 20349	Personal protective equipment - Protective footwear Personal protective equipment. Footwear protecting against risks in foundries and welding

(4) Eye and Face Protection

Eye and face protection shall protect workers' eyes and face from harmful materials (for example dust, chemicals, liquid splash, flying objects, molten metal, chemicals, gas and steam, extreme light, flashes and hazardous rays, dirt and debris etc.

Eye and face protection can include safety spectacles, goggles, face masks, face shields, visors and the like. Selected protection shall have the right combination of /impact/dust/splash/molten metal eye and face protection for the task and shall be selected for the risks identified.

Eye and face protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.3: Applicable Standards for Eye and Face Protection

	Standard	Title of Standard
1	JIS T 8141 JIS T 8142	Personal eye protectors for optical radiations Personal face protectors for welding
2	ANSI Z87.1	American National Standard for Occupational and Educational Personal Eye and Face Protection Devices
3	BS EN 166 BS EN ISO 4007	Personal eye protection. Specifications Personal protective equipment. Eye and face protection. Vocabulary

(5) Ear Protection

Ear protection shall protect workers' hearing against injury from continuous, loud or Intense Noise by providing soundproofing.

The Contractor shall ensure that workers are still able to receive and immediately react to oral instructions and danger warnings when wearing ear protection.

Ear protector shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20346 BS EN ISO 20349	Personal protective equipment - Protective footwear Personal protective equipment. Footwear protecting against risks in foundries and welding

(4) Eye and Face Protection

Eye and face protection shall protect workers' eyes and face from harmful materials (for example dust, chemicals, liquid splash, flying objects, molten metal, chemicals, gas and steam, extreme light, flashes and hazardous rays, dirt and debris etc.

Eye and face protection can include safety spectacles, goggles, face masks, face shields, visors and the like. Selected protection shall have the right combination of /impact/dust/splash/molten metal eye and face protection for the task and shall be selected for the risks identified.

Eye and face protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.3: Applicable Standards for Eye and Face Protection

	Standard	Title of Standard

(5) Ear Protection

Ear protection shall protect workers' hearing against injury from continuous, loud or Intense Noise by providing soundproofing.

The Contractor shall ensure that workers are still able to receive and immediately react to oral instructions and danger warnings when wearing ear protection.

Ear protector shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors

3	BS EN ISO 4869-1	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation
	BS EN ISO 4869-2	Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn
	BS EN ISO 4869-3	Acoustics. Hearing protectors. Measurement of insertion loss of ear-muff type protectors using an acoustic test fixture
	BS EN ISO 4869-4	Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

3	BS EN ISO 4869-1	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation
	BS EN ISO 4869-2	Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn
	BS EN ISO 4869-3	Acoustics. Hearing protectors. Measurement of insertion loss of ear-muff type protectors using an acoustic test fixture
	BS EN ISO 4869-4	Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

3	BS EN ISO 4869-1	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation
	BS EN ISO 4869-2	Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn

	BS EN ISO 4869-4	Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs

(6) Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection equipment (RPE) shall fit properly to worker's face and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing them or any other part, check with the manufacturer's guidance and ensure the correct replacement part is used.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer's instructions.

In addition to the requirements above, the Contractor shall select, use and maintain RPE referring to Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013).

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.5: Table of PPE for Respiratory Protection

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator
2	↔ BS EN 149: 2001+A1: 2009	↔ Respiratory protective devices. Filtering half masks to protect against

(6) Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection equipment (RPE) shall fit properly to worker's face and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing them or any other part, check with the manufacturer's guidance and ensure the correct replacement part is used.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer's instructions.

JC15: 2.9.1(6) 上の文章は PPE の全体にかかるものではないでしょうか。2.9.1(1)に移すべきではないでしょうか。
2.9.1(6): The above seems to cover whole PPE. Therefore, they should be moved to 2.9.1(1).

NK: moved to 2.9.1 (1) (f) as general requirement and the above is modified as right.

In addition to the requirements above, the Contractor shall select, use and maintain RPE referring to Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013).

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.5: Table of PPE for Respiratory Protection

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator
2	↔ BS EN 149: 2001+A1: 2009	↔ Respiratory protective devices. Filtering half masks to protect against

(6) Respiratory Protection

Respiratory protection shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Respiratory protection equipment (RPE) shall fit properly to worker's face and be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing them or any other part, check with the manufacturer's guidance and ensure the correct replacement part is used.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

In addition to JSSS 2.9.1 (1) (f), maintenance for emergency escape-type RPE should be examined and tested in accordance with the manufacturer's instructions.

In addition to the requirements above, the Contractor shall select, use and maintain RPE referring to Respiratory protective equipment at work, practical guide, HSG53 (Fourth edition, published 2013).

Respiratory protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.5: Table of PPE for Respiratory Protection

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator
2	↔ BS EN 149: 2001+A1: 2009	↔ Respiratory protective devices. Filtering half masks to protect against particles.

	2) BS EN 14593-1: 2018	particles. 2) Respiratory protective devices. Compressed air line breathing devices with demand valve. Devices with a full-face mask.
3	ANSI Z88.2-2015	Practices for Respiratory Protection

(7) Safety Harnesses and Belts

Safety belts PPE for PFRS shall prevent the risk of workers falling from a height or sliding down slopes. PPE for PFAS shall arrest a worker in a fall from a height or sliding down slopes.

For further requirement on PPE for fall prevention, PFRS and PFAS refer to JSSS エラー! 参照元が見つかりません。 [Personal Protective Equipment for Fall Prevention].

PPE for PFRS and PFAS Safety belts shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.6: Applicable Standards for Safety Belts PPE for PFRS and PFAS

	Standard	Title of Standard
1	JIS T8165	Personal fall-arrest systems
2	ANSI Z359.0 to Z359.16	ANSI/ASSE Z359 Fall Protection and Arrest Standards Package
3	BS EN_361 BS EN 358	Personal protective equipment against falls from a height. Full body harnesses Personal protective equipment for work positioning and prevention of falls from a height. Belts and lanyards for work positioning or restraint

(8) Gloves

Gloves shall protect workers' hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers' hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	2) BS EN 14593-1: 2018	particles. 2) Respiratory protective devices. Compressed air line breathing devices with demand valve. Devices with a full-face mask.
3	ANSI Z88.2-2015	Practices for Respiratory Protection

(7) Safety Harnesses and Belts

Safety belts PPE for PFRS shall prevent the risk of workers falling from a height or sliding down slopes. PPE for PFAS shall arrest a worker in a fall from a height or sliding down slopes.

For further requirement on PPE for fall prevention, PFRS and PFAS refer to JSSS エラー! 参照元が見つかりません。 [Personal Protective Equipment for Fall Prevention].

PPE for PFRS and PFAS Safety belts shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.6: Applicable Standards for Safety Belts PPE for PFRS and PFAS

	Standard	Title of Standard
1	JIS T8165	Personal fall-arrest systems
2	ANSI Z359.0 to Z359.16	ANSI/ASSE Z359 Fall Protection and Arrest Standards Package
3	BS EN_361 BS EN 358	Personal protective equipment against falls from a height. Full body harnesses Personal protective equipment for work positioning and prevention of falls from a height. Belts and lanyards for work positioning or restraint

JC14: またこれは総則の定義にもさかのぼる全般の話なのですが、デフォルトで使用することを想定している harness が普通名詞で、一般には使用が制限される方向にある胴ベルトが Safety Belt として大文字の定義語になっているのが少し気になります。但し、これは全体を整理する中で再検討すればよいと思います。

The term of harness which is specified to be used for PPE as default is not defined as "Harness", on the other hand that of "safety belt" which is specified as limited use is defined as "Safety Belt" in Chapter 1. These terms seem a little strange. Definitions of terms will be discussed when reviewing whole contents of JSSS.

NK: Chapter 1 (issue 7) has included "Harness". The definition of terms will be discussed after all JSSS is completed.

(8) Gloves

Gloves shall protect workers' hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers' hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

	2) BS EN 14593-1: 2018	2) Respiratory protective devices. Compressed air line breathing devices with demand valve. Devices with a full-face mask.
3	ANSI Z88.2-2015	Practices for Respiratory Protection

(7) Safety Harnesses and Belts

Safety belts PPE for PFRS shall prevent the risk of workers falling from a height or sliding down slopes. PPE for PFAS shall arrest a worker in a fall from a height or sliding down slopes.

For further requirement on PPE for fall prevention, PFRS and PFAS refer to JSSS エラー! 参照元が見つかりません。 [Personal Protective Equipment for Fall Prevention].

PPE for PFRS and PFAS Safety belts shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.6: Applicable Standards for Safety Belts PPE for PFRS and PFAS

	Standard	Title of Standard

3	BS EN 60903 BS EN 12477	Live working. Gloves of insulating material Protective gloves for welders

(9) Work Clothing

Contractor's Personnel ~~All personnel~~ shall be supplied with and shall wear suitable protective work clothing required by the working environment appropriate for their work tasks. ~~In general, all personnel shall be provided with overalls.~~

~~Further~~ risks such as from chemical or metal splash, spray from pressure leaks or spray guns, contaminated dust, impact or penetration, entanglement of own clothing, heat, cold, etc. shall be considered and avoided through the provision where necessary of special protective clothing. This may include for example flame-retardant, anti-static, chain mail, chemically impermeable, and high-visibility clothing and the like.

Work clothing shall be selected and provided for the risks to be identified.

Work clothing shall be kept reasonably clean and shall be replaced when worn out or damaged.

(9) Work Clothing

Contractor's Personnel All personnel shall be supplied with and shall wear suitable protective work clothing required by the working environment appropriate for their work tasks. In general, all personnel shall be provided with overalls.

Further risks such as from chemical or metal splash, spray from pressure leaks or spray guns, contaminated dust, impact or penetration, entanglement of own clothing, heat, cold, etc. shall be considered and avoided through the provision where necessary of special protective clothing. This may include for example flame retardant, anti static, chain mail, chemically impermeable, and high visibility clothing and the like.

Work clothing shall be selected and provided for the risks to be identified.

Work clothing shall be kept reasonably clean and shall be replaced when worn out or damaged.

JC13: same comments to 2.9.1 (1) (d) and deleted (9).

NK as proposed in 2.9.1 (1) (d) and replaced the above (9) Work Clothing with (9) Body Protection as right.

(9) Body Protection

Body protection shall protect workers' body against injury from cuts, radiation, extreme temperatures, hot splashes, impacts from tools, machinery and materials, hazardous chemicals, etc..

PPE that provides body protection are for example laboratory coats, coveralls, vests, jackets, aprons, full body suits.

Appropriate PPE for body protection shall be selected based on the hazard assessment and tasks associated.

2.9.2. First-aid Kits

(1) General

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA, 1910 Subpart K Medical and First Aid" of "Part 1910 - Occupational Safety and Health Standards" and as follows.

The Contractor shall ensure that trained personal and adequate first-aid equipment and supplies shall be readily available at the Site. First-aid kits shall be stored at selected locations on the Site where they are most likely to be needed; they must be accessible with the minimum of delay.

All persons working at the site need to be aware of their purpose and location. Adequate signage shall be provided at the Site to show the location of the first aid kit(s).

2.9.2. First-aid Kits

(1) General

NK: 2.9.1(1)(e) First-aid Kits is moved to 2.9.2(1) because 2.9.1 is for PPE.

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA, 1910 Subpart K Medical and First Aid" of "Part 1910 - Occupational Safety and Health Standards" and as follows.

The Contractor shall ensure that trained personal and adequate first-aid equipment and supplies shall be readily available at the Site. First-aid kits shall be stored at selected locations on the Site where they are most likely to be needed; they must be accessible with the minimum of delay.

2.9.2. First-aid Kits

(1) General

The Contractor shall always provide First-aid Kits and First-Aid Equipment at the Site.

By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA, 1910 Subpart K Medical and First Aid" of "Part 1910 - Occupational Safety and Health Standards" and as follows.

The Contractor shall ensure that trained personal and adequate first-aid equipment and supplies shall be readily available at the Site. First-aid kits shall be stored at selected locations on the Site where they are most likely to be needed; they must be accessible with the minimum of delay.

All persons working at the site need to be aware of their purpose and location. Adequate signage shall be provided at the Site to show the location of the first aid kit(s).

(2) First-Aid Kit

Each first-aid kit should contain at least the following items, specifications and quantities listed in ANSI Z308.1-2015 according to the work:

- (a) Adhesive Bandage
- (b) Adhesive Tape
- (c) Antibiotic Application
- (d) Antiseptic
- (e) Breathing Barrier
- (f) Burn Dressing (gel soaked)
- (g) Burn Treatment
- (h) Cold Pack
- (i) Eye Covering, with means of attachment
- (j) Eye/Skin Wash
- (k) First Aid Guide
- (l) Hand Sanitizer
- (m) Medical Exam Gloves
- (n) Roller Bandage
- (o) Scissors
- (p) Splint
- (q) Sterile pad
- (r) Tourniquet
- (s) Trauma pad
- (t) Triangular Bandage

To prevent disease transmission when giving first-aid, first-aid kits shall contain PPE such as disposable gloves, Cardiopulmonary Resuscitation (CPR) breathing barriers, eye protection and like supplies.

(3) Automated External Defibrillator (AED)

Unless otherwise stated in the ~~bidding Documents~~ Contract and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for AED

	Standard	Title of Standard
1	BS EN 60601-2-4:2011+A1:2019	Medical electrical equipment. Particular requirements for the basic safety and essential performance of cardiac defibrillators

All persons working at the site need to be aware of their purpose and location. Adequate signage shall be provided at the Site to show the location of the first aid kit(s).

(2) First-Aid Kit

Each first-aid kit should contain at least the following items, specifications and quantities listed in ANSI Z308.1-2015 according to the work:

- (a) Adhesive Bandage
- (b) Adhesive Tape
- (c) Antibiotic Application
- (d) Antiseptic
- (e) Breathing Barrier
- (f) Burn Dressing (gel soaked)
- (g) Burn Treatment
- (h) Cold Pack
- (i) Eye Covering, with means of attachment
- (j) Eye/Skin Wash
- (k) First Aid Guide
- (l) Hand Sanitizer
- (m) Medical Exam Gloves
- (n) Roller Bandage
- (o) Scissors
- (p) Splint
- (q) Sterile pad
- (r) Tourniquet
- (s) Trauma pad
- (t) Triangular Bandage

To prevent disease transmission when giving first-aid, first-aid kits shall contain PPE such as disposable gloves, Cardiopulmonary Resuscitation (CPR) breathing barriers, eye protection and like supplies.

(3) Automated External Defibrillator (AED)

Unless otherwise stated in the ~~bidding Documents~~ Contract and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for AED

	Standard	Title of Standard
1	BS EN 60601-2-4:2011+A1:2019	Medical electrical equipment. Particular requirements for the basic safety and essential performance of cardiac defibrillators

(2) First-Aid Kit

Each first-aid kit should contain at least the following items, specifications and quantities listed in ANSI Z308.1-2015 according to the work:

- (a) Adhesive Bandage
- (b) Adhesive Tape
- (c) Antibiotic Application
- (d) Antiseptic
- (e) Breathing Barrier
- (f) Burn Dressing (gel soaked)
- (g) Burn Treatment
- (h) Cold Pack
- (i) Eye Covering, with means of attachment
- (j) Eye/Skin Wash
- (k) First Aid Guide
- (l) Hand Sanitizer
- (m) Medical Exam Gloves
- (n) Roller Bandage
- (o) Scissors
- (p) Splint
- (q) Sterile pad
- (r) Tourniquet
- (s) Trauma pad
- (t) Triangular Bandage

To prevent disease transmission when giving first-aid, first-aid kits shall contain PPE such as disposable gloves, Cardiopulmonary Resuscitation (CPR) breathing barriers, eye protection and like supplies.

(3) Automated External Defibrillator (AED)

Unless otherwise stated in the ~~bidding Documents~~ Contract and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site.

The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay.

All personnel at the site need to be aware of the purpose and location and the Contractor shall train a sufficient number of personnel in its use.

Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use.

AED shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for AED

	Standard	Title of Standard
1	BS EN 60601-2-4:2011+A1:2019	Medical electrical equipment. Particular requirements for the basic safety and essential performance of cardiac defibrillators

<p>JC: e-mail from Mr. Ito on 2020/3/10</p> <p>1. 標記の件、下記の通りコメントします。特に PFAS や PFRS の理解に混乱が見られるように思えます。</p> <p>We hereunder comment regarding Chapter 2 as follows. Specially there seems confusion between PFAS and PFRS.</p> <p>2. なお、全体が提出された際に、今回コメントしていない部分にコメントする可能性があることは、先ほどお送りしたメールにある通りです。</p> <p>As we mentioned in the last e-mail, please keep in mind that there is a possibility to make our comments to items which are not commented this time.</p> <p>3. 2.1.1 (2) :こちらのコメントの仕方も悪かったですが、記載通りだと HSE に掲載されている全てのガス・粉じん等に対する規制を遵守しなければならない、という意味にも取られかねないので修正しています。</p> <p>2.2.1 (2): Though it seems our comments may be not properly expressed, the last description in NK draft R2 may be understood as the Contractor shall comply with values</p>			

<p>of all dusts, gases, etc. in the table of HSE. It is not JICA's intention, therefore revision is made as shown here.</p> <p>4. 2.2.2: Secure Working Area Perimeter とこちらからお願いしたものが Secure Site Perimeter となっておりますが、Working Area に戻しています。御社の説明に「Secure Working Area Perimeter is specified in JSSS 2.3」という記述がありますが、2.3 には Dangerous Work に関連することに限定した記述となっており、一般的な記述ではありません。</p> <p>2.2.2: JC requested to change to 2.2.2: Secure Working Area Perimeter but NK draft is still Secure Site Perimeter therefore JC changed again to Working Area. NK explanation is that Secure Working Area Perimeter is specified in JSSS 2.3. The 2.3 specifies regarding only Dangerous Work but not general requirements.</p> <p>5. 2.2.3(1) (e)(f): 削除しています。理由は既に前回付してある JICA コメント通りです。(d)の記述は夜間等の non-working hours にも適用されるはずです。</p> <p>2.2.3(1) (e)(f): JC deleted. The reason is as commented. The requirements of (d) apply to the non-working hours including night time.</p> <p>6. 2.5.1(2): 御社の説明の意図に沿った内容にするならば、for use of personnel who engage in....とした方が良いと思われ、そのように修正しています。但し、この条項が本当にこの場所に置いておくことがふさわしいか否かは再検討願います。</p> <p>2.5.1(2): JC considers it is better to revise it to “for use of personnel who engage in...” to specify the same content as the intention in NK's explanation. Please reconsider where is proper location to specify this clause.</p> <p>7. 2.5.11(1)(a)にある Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; という部分は修正が必要だと考えます。親綱に結び付けるのは PFRS ではなく、身体保持器具なのではないでしょうか？添付の図を参照してください。</p> <p>2.5.11(1)(a): JC considers that it needs to correct “Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached”. The good to connect to working lines is not the PFRS but positioning device. Please refer to the attached figure.</p> <p>8. 2.5.11(2)(e): 記述がおかしいように思えます(「ハーネスをハーネスにつける?」)。修正を検討して下さい。ロープ高所作業におけるハーネス(添付の図は古いので胴ベルトですが)は親綱につけるのではないのでしょうか？</p> <p>2.5.13(1)(b)にある PPE for という言葉は不要です。むしろここでは PPP(E)としての PFRS を論じています。</p> <p>2.5.11(2)(e): The description is strange “harness is attached to harness”. Please consider correcting it. In rope work, harness should be connected with working lines. “PPE for” is not necessary in 2.5.13(1)(b). Here, PFRS is discussed as PPE.</p> <p>9. 2.5.13(1)(a) に opening という言葉を加えています</p>			
--	--	--	--

<p>(2.5.9(1)の記述(端、開口部からの墜落防止の措置を取らなければならない、とするもの)の趣旨に合致すると思います。</p> <p>2.5.13(1)(a): “opening” is added to meet the requirement that fall prevention measures shall be taken at the edge and opening specified in 2.5.9(1).</p> <p>10. 2.6.4(2): in addition よりも In such a case の方がふさわしいと思われ、その旨修正しています。</p> <p>2.6.4(2): It is revised because JC considers “In such a case” is more suitable than “in addition”.</p> <p>11. 2.7.1(2): 悪天候に関する記述ですが、「foreseeable で EOT 等につながるものではない」と言い切ることは不適當です。修正しています。</p> <p>2.7.1(2): It is inappropriate to affirm “they shall not be construed as constituting a cause of delay giving any entitlement to extension of time under GC”. Revision is made.</p> <p>12. 2.9.1(6): 付け加えられた「Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer’s instructions.」という文章は PPE の全体にかかるものではないでしょうか。2.9.1(1)に移すべきではないでしょうか</p> <p>2.9.1(6): The added phrase “Maintenance is a requirement for all RPE, except for disposable (single use) RPE, and should be carried out by properly trained personnel. Thorough maintenance, examination and tests should be carried out at least once a month. However, if the RPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months. Emergency escape-type RPE should be examined and tested in accordance with the manufacturer’s instructions.” seems to cover whole PPE. Therefore, they should be moved to 2.9.1(1).</p> <p>13. 2.6.1(1)(d)及び 2.9.2(9): PPE から作業服に関する記述を削除しています。いろいろと議論はあったところですが、やはり「コントラクターが支給する」ということをデフォルトにするのはやりすぎのように思います。</p> <p>2.6.1(1)(d) and 2.9.2(9): The requirements regarding working clothes are deleted. Though there is various discussion, it is excessive to specify as default for the Contractor to provide workers working clothes.</p> <p>14. またこれは総則の定義にもさかのぼる全般の話なのですが、デフォルトで使用することを想定している harness が普通名詞で、一般には使用が制限される方向にある胴ベルトが Safety Belt として大文字の定義語になっているのが少し気になります。但し、これは全体を整理する中で再検討すればよいと思います。</p>			
---	--	--	--

<p>The term of harness which is specified to be used for PPE as default is not defined as “Harness”, on the other hand that of “safety belt” which is specified as limited use is defined as “Safety Belt” in Chapter 1. These terms seem a little strange. Definitions of terms will be discussed when reviewing whole contents of JSSS.</p>			
<p>2 GENERAL SAFETY MEASURES</p> <p>WORK ENVIRONMENT</p> <p>Contractor’s Personnel shall be provided with a safe and healthy occupational environment. The Contractor shall implement all necessary measures to ensure this, taking particular care to avoid the creation of and/or any contact with Hazardous Substances, intense noise, heat, cold or similar and potentially harmful conditions or to provide protection against such conditions.</p> <p>2.1.1 Hazardous Substances</p> <p>(1) Definitions</p> <p>Refer to the definition of Hazardous Substances in JSSS Annex 1.1 [<i>Definitions and Abbreviations</i>]. For the purposes of this definition, note that Hazardous Substances shall include dust of any kind when present at a concentration in air equal to or greater than:</p> <p>(a) 10 mg/m3 (8-hour TWA) of inhalable dust; or</p> <p>(b) 4 mg/m3 (8-hour TWA) of respirable dust. (TWA means Time weighted average.)</p> <p>Some dusts have been assigned specific WELs as referred to in Table 2.1.1 below.</p> <p>(2) Standards of Workplace Exposure Limits (WELs)</p> <p>The Contractor shall comply with EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1. The Contractor shall monitor the dusts specified in the Particular Safety Specifications and take necessary measures so that the short term and long-term exposure limits will not be exceeded.</p> <p>JC: ここで、ガイダンスとして HSE の表を参照するようにしてくだ</p>	<p>2 GENERAL SAFETY MEASURES</p> <p>2.1 WORK ENVIRONMENT</p> <p>Contractor’s Personnel shall be provided with a safe and healthy occupational environment. <p>2.1.3 Noise</p>	<p>2.1.3 Noise</p>		<p>2.1.4 Noise</p>

(1) Standards

By reference to **JSSS 1.4 [JSSS - Laws and Reference Standards]**, for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D - Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

(2) Preventive Measures

To prevent noise damage to Contractor's Personnel, which may occur when noise levels exceed 90 dB (referred to as "intense noise" in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2. Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115
2	100		

(1) Standards

By reference to **JSSS 1.4 [JSSS - Laws and Reference Standards]**, for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA Subpart D - Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

(2) Preventive Measures

To prevent noise damage to Contractor's Personnel, which may occur when noise levels exceed 90 dB (referred to as "intense noise" in JSSS), the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table D-2: Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table D-2: Permissible Noise Exposures

2	100		

2.1.4. Noise

See above note on changing the following heading, it is included as a standard in many locations.

(1) Compliance Standards

Changed in 2.1.4 therefor for consistency to be changed everywhere;

NK: We adopted MD's proposed title..

- (a) By reference to **JSSS 1.4 [Compliance with JSSS and Other Regulations]**, for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for noise exposure and control complying with the technical requirements specified in OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (b) The Contractor shall provide equipment such as, sound level meters, noise dosimeters, or octave band analysers to determine what sound levels exist and whether they are within the levels in Table D-2 or not.

(2) Preventive Measures

Please note that OSHA also specify that ear protection is required at 85 dB 8 hours TWA. Do you require me to edit the following paragraph? Please advise.

NK: No change of the limit of 90 dB because this is discussed when we prepared Japanese version.

To prevent noise damage to Contractor's Personnel, which may occur when noise levels exceed 90 dB (referred to as "intense noise" in JSSS), or if for any reason sound levels cannot be determined as above the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110

(1) Compliance Standard

- (a) By reference to JSSS 1.4 [Compliance with JSSS and Other Regulations], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for noise exposure and control complying with the technical requirements specified in OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- (b) The Contractor shall provide equipment such as, sound level meters, noise dosimeters, or octave band analysers to determine what sound levels exist and whether they are within the levels in Table D-2 or not.

(2) Preventive Measures

To prevent noise damage to Contractor's Personnel, which may occur when noise levels exceed 90 dB (referred to as "intense noise" in JSSS), or if for any reason sound levels cannot be determined as above the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible;

Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105
4	95	½	110
3	97	¼ or less	115
2	100		

(b) If such controls are not possible to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS (7) [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;

(c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and

(d) In all cases where the sound levels exceed the values shown in Table D-2, a continuing effective hearing conservation program specified in (3) below shall be implemented.

(3) Hearing Conservation Program

(a) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor's Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time-weighted average.

(b) The Contractor must monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.4 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.19 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the

(b) If such controls are not possible to reduce sound levels within the levels of Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS (7) [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;

(c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and

(d) In all cases where the sound levels exceed the values shown in Table D-2, a continuing effective hearing conservation program specified in (3) below shall be implemented.

(3) Hearing Conservation Program

(a) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor's Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time-weighted average.

(b) The Contractor must monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.4 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.19 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the

3	97	¼ or less	115
2	100		

(b) If such controls are not possible or if they fail to reduce sound levels within the levels of OSHA Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS 2.9.1 (7) [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard.

Your alteration of my English is not correct and it changes the meaning. Please clarify for now why it is changed, I have left it as it was

NK: MD's original was as follows:

(b) If such controls are not possible of if they fail to reduce sound levels within the levels...

OSHA state as follows:

If such controls fail to reduce sound levels within the levels of the table

JICA questioned if your sentence is correct. Your sentence has a typo of "of" which shall be "or".

We adopt your sentence used "or" above.

(c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and

(d) In all cases where the sound levels exceed the values shown OSHA Table D-2, a Continuing Effective Hearing Conservation Program specified in (3) below shall be implemented.

(3) Hearing Conservation Program

(a) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor's Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time TWA.

(b) The Contractor shall monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.5 Further Requirements for Dangerous Work

(b) If such controls are not possible or if they fail to reduce sound levels within the levels of OSHA Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS 2.9.1 (7) [Ear Protection] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard.

(c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and

(d) In all cases where the sound levels exceed the values shown OSHA Table D-2, a Continuing Effective Hearing Conservation Program specified in (3) below shall be implemented.

(3) Hearing Conservation Program

(a) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor's Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time TWA.

(b) The Contractor shall monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.5 Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.22 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the

<p>presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:</p> <ol style="list-style-type: none"> (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, <u>trade effluent</u> and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work. (2) Safely isolate the supply and flow of any chemical or other potentially harmful materials and gases in the Site during the period of any work and safely reconnect or continue the same after the work is finished. (3) Improve and maintain the work environment for example by mechanical ventilation and filtration if the result of the work environment measurement in (1) above violates the limits imposed by this JSSS Chapter 2 [<i>General Safety Measures</i>]. (4) For further information on prohibition of entry to areas where Dangerous Work is being performed refer to JSSS 2.3 [<i>Prohibition of Entry - Dangerous Work</i>]. 	<p>presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:</p> <ol style="list-style-type: none"> (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, trade effluent and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work. ---	---	---	---

		(b) Combustible gas and vapor concentration: in excess of 10% of the lower limit of flammability	(b) Combustible gas and vapor concentration: in excess of 10% of the lower limit of flammability
RISK CONTROL AROUND THE SITE	2.2 RISK CONTROL AROUND THE SITE	2.2 RISK CONTROL AROUND THE SITE	2.2 RISK CONTROL AROUND THE SITE
2.2.1 General	2.2.1 General	2.2.1 General	2.2.1 General
<p>(1) The Contractor is reminded of his obligations under GC 4.8 [<i>Safety Procedures</i>] and GC 4.22 [<i>Security of the Site</i>] to keep any unauthorised persons off the Site, and without prejudice to such obligations the Contractor shall take all necessary further measures under this Section to prevent any such unauthorised persons (including third parties, neighbours and particularly children) who may for example be living or working around the boundary of the Site or adjacent thereto, from entering the Site.</p> <p>(2) The Contractor shall inform the Engineer and request that the Employer takes necessary action including removal of any third parties and/or neighbours who may establish themselves outside the Site along and for example against the Site boundary during the Time for Completion of the Works for the potential purpose of accessing the Site.</p> <p>(3) In addition to taking necessary action to keep any unauthorised persons off the Site the Contractor shall fully inform the local police force and if necessary, request their assistance to remove any trespassers from the Site.</p> <p>(4) Such measures shall include (but are not restricted to) the following requirements of this Section.</p>	<p>(1) The Contractor is reminded of his obligations under GC 4.8 [<i>Safety Procedures</i>] and GC 4.22 [<i>Security of the Site</i>] to keep any unauthorised persons off the Site, and without prejudice to such obligations the Contractor shall take all necessary further measures under this Section to prevent any such unauthorised persons (including third parties, neighbours and particularly children) who may for example be living or working around the boundary of the Site or adjacent thereto, from entering the Site.</p> <p>(2) The Contractor shall inform the Engineer and request that the Employer takes necessary action including removal of any third parties and/or neighbours who may establish themselves outside the Site along and for example against the Site boundary during the Time for Completion of the Works for the potential purpose of accessing the Site.</p> <p>(3) In addition to taking necessary action to keep any unauthorised persons off the Site the Contractor shall fully inform the local police force and if necessary, request their assistance to remove any trespassers from the Site.</p> <p>(4) Such measures shall include (but are not restricted to) the following requirements of this Section.</p>	<p>(1) The Contractor is reminded of his obligations under GC 4.8 [<i>Safety Procedures</i>] and GC 4.22 [<i>Security of the Site</i>] to keep any unauthorised persons off the Site, and without prejudice to such obligations the Contractor shall take all necessary further measures under this Section to prevent any such unauthorised persons (including third parties, neighbours and particularly children) who may for example be living or working around the boundary of the Site or adjacent thereto, from entering the Site.</p> <p>(2) The Contractor shall inform the Engineer and request that the Employer takes necessary action including removal of any third parties and/or neighbours who may establish themselves outside the Site along and for example against the Site boundary during the Time for Completion of the Works for the potential purpose of accessing the Site.</p> <p>(3) In addition to taking necessary action to keep any unauthorised persons off the Site the Contractor shall fully inform the local police force and if necessary, request their assistance to remove any trespassers from the Site.</p> <p>(4) Such measures shall include (but are not restricted to) the following requirements of this Section.</p> <p><i>I suggest adding the following, it is not a requirement of the Contract:</i></p> <p>NK: GC:6.16 Alcoholic Liquor or Drugs stipulated as follows, however it does not specify not allow workers as mentioned in (5), so (5) is added as we know these at the site. The Contractor shall not, otherwise than in accordance with the Laws of the Country, import, sell, give, barter or otherwise dispose of any alcoholic liquor or drugs, or permit or allow importation, sale, gift, barter or disposal thereto by Contractor's Personnel.</p> <p>(5) The Contractor shall also prevent access to the Site by any persons, including Contractor's and Employer's Personnel and any others who are under the influence of drink or drugs and also to prevent alcohol and drugs being brought onto the Site.</p>	<p>(1) The Contractor is reminded of his obligations under GC 4.8 [<i>Safety Procedures</i>] and GC 4.22 [<i>Security of the Site</i>] to keep any unauthorised persons off the Site, and without prejudice to such obligations the Contractor shall take all necessary further measures under this Section to prevent any such unauthorised persons (including third parties, neighbours and particularly children) who may for example be living or working around the boundary of the Site or adjacent thereto, from entering the Site.</p> <p>(2) The Contractor shall inform the Engineer and request that the Employer takes necessary action including removal of any third parties and/or neighbours who may establish themselves outside the Site along and for example against the Site boundary during the Time for Completion of the Works for the potential purpose of accessing the Site.</p> <p>(3) In addition to taking necessary action to keep any unauthorised persons off the Site the Contractor shall fully inform the local police force and if necessary, request their assistance to remove any trespassers from the Site.</p> <p>(4) Such measures shall include (but are not restricted to) the following requirements of this Section.</p> <p>(5) The Contractor shall also prevent access to the Site by any persons, including Contractor's and Employer's Personnel and any others who are under the influence of drink or drugs and also to prevent alcohol and drugs being brought onto the Site.</p>
2.2.2 Secure Site Working Area Perimeter	2.2.2 Secure Working Area Perimeter	2.2.2 Secure Site Perimeter	2.2.2 Secure Working Area Perimeter
		<i>It is suggested that the following heading should be changed to "Secure Working Area Perimeter". This is not really</i>	

<p>The Contractor shall secure the perimeter of the <u>working area</u>Site to prevent access to the Site by unauthorised persons as specified below unless otherwise stated in the Particular Safety Specification.</p> <p>JC: 2.2.2: Secure Working Area Perimeter とこちらからお願いしたものが Secure Site Perimeter となっていますが、Working Area に戻しています。御社の説明に「Secure Working Area Perimeter is specified in JSSS 2.3」という記述がありますが、2.3 には Dangerous Work に関連すること限定した記述となっており、一般的な記述ではありません。</p> <p>2.2.2: JC requested to change to 2.2.2: Secure Working Area Perimeter but NK draft is still Secure Site Perimeter therefore JC changed again to Working Area. NK explanation is that Secure Working Area Perimeter is specified in JSSS 2.3. The 2.3 specifies regarding only Dangerous Work but not general requirements.</p> <p>JSSS 2.3 specifies as follows: 2.3.2. Demarcation and Requirements (1) The Contractor shall clearly demarcate all areas where Dangerous Work is being carried out by the use of appropriate fencing, barriers, signage and lighting and shall control access to such areas with the full-time assignment of a Spotter.</p> <p>NK: Referring to the last JC comments, NK revises as commented. NK considers JC wants to specify fencing in practical way taking into the perimeter of the long rail way projects.</p> <p>JC: 以下同様に必要な部分を修正 Please revise other part as same.</p>	<p>The Contractor shall secure the perimeter of the <u>working area</u> to prevent access to the <u>working area</u> by unauthorised persons as specified below unless otherwise stated in the Particular Safety Specification.</p>	<p>correct. The Contractor has an obligation to secure the perimeter of the Site in accordance with 2.2.1 above and also to secure the boundary of any dangerous work within the Site which is covered by JSSS 2.3.</p> <p>I have also made frequent mention of this for example in 8.2.1 (1) and elsewhere.</p> <p>The Contractor has no obligation to provide a temporary barrier around any other part of the Works while they are in progress.</p> <p>The content of the following clause applies to Site perimeter fencing as referred to in 2.2.2 and not dangerous work area fencing or barriers and if changed it will be misleading.</p> <p>I have not changed, please review.</p> <p>I have tried to consistently change reference to the contract and the like to “Unless otherwise specified in the Particular Safety Specification.”</p> <p>NK: Because JICA want to specify practical way to avoid accident of unauthorized person in the working area where for example there is local people allowed passing in the Site. We follow JICA requests and replace the Site with the working area. (1) (b) “throughout the Time for Completion” is replaced “throughout the works at the working area, until when such fencing is no longer needed,”</p> <p>(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p>	<p>(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p>
---	---	--	---

NK: revises as commented.

(1) Fencing

- (a) Enclose the perimeter of the ~~Site~~ working area with secure fencing;
- (b) Maintain all such fencing in good condition, throughout the Time for Completion, remove at the time of taking over of the Works and reinstate all affected areas;
- (c) Provide secure entry points with lockable gates or barrier; and
- (d) Provide and maintain signs clearly advising/warning against entry.

- (2) ~~Site Working area~~ perimeter fencing shall be temporary, constructed of new and durable materials and fit for the purpose intended and maintained throughout the Time for Completion.
- (3) Full details of ~~Site-working are~~ perimeter fencing including scope, dimensions and specifications shall be referred to ~~the Particular Safety Specification.~~

2.2.3 Measures for Road Occupation

- (1) When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work and based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:
 - (a) Prepare a road usage plan and submit it to the engineer and the relevant authorities, and obtain necessary permits, prior to road use;
 - (b) Obtain the approval and necessary permits of the relevant authorities before any road closure, diversion or other traffic restrictions are applied;

(1) Fencing

- (a) Enclose the perimeter of the working area with secure fencing;
- (b) Maintain all such fencing in good condition, throughout the Time for Completion, remove at the time of taking over of the Works and reinstate all affected areas;
- (c) Provide secure entry points with lockable gates or barrier; and
- (d) Provide and maintain signs clearly advising/warning against entry.

- (2) Working area perimeter fencing shall be temporary, constructed of new and durable materials and fit for the purpose intended and maintained throughout the Time for Completion.
- (3) Full details of working area perimeter fencing including scope, dimensions and specifications shall be referred to the Particular Safety Specification.

2.2.3 Measures for Road Occupation

- (1) When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work and based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:
 - (a) Prepare a road usage plan and submit it to the engineer and the relevant authorities, and obtain necessary permits, prior to road use;
 - (b) Obtain the approval and necessary permits of the relevant authorities before any road closure, diversion or other traffic restrictions are applied;

- (a) Enclose the perimeter of the ~~Site~~ working area with secure fencing to prevent access to the Site by unauthorised persons;
- (b) Maintain all such fencing in good condition, throughout the Time for Completion, ~~remove at the time of taking over the Works~~ throughout the works at the working area, until when such fencing is no longer needed, and reinstate all affected areas;
- (c) Provide secure entry points with lockable gates or barrier; and
- (d) Provide and maintain signs clearly advising/warning against entry.

I suggest the following is added in clarification of GC 4.8 " watching.."

NK: We added.

- (e) Provide watchmen and lighting where, when and to the extent necessary to apprehend and evict any unauthorised persons (particularly children) from the Site who may have breached the ~~Site Perimeter Fencing.~~ working area perimeter fencing.

- (2) Unless otherwise specified in the Particular Safety Specification, ~~Site-working area~~ perimeter fencing shall be temporary, constructed of new and durable materials and fit for the purpose intended and maintained throughout the Time for Completion ~~work.~~

- (3) Full details of ~~Site-working area~~ perimeter fencing including scope, dimensions and specifications shall be given in the ~~Particular Safety Specification.~~ Method Statement.

- (4) The Contractor shall provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations outside the ~~Site-working area~~ perimeter.

2.2.3 Measures for Road Occupation

- (1) When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work and based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:
 - (a) Prepare a road usage plan and submit it to the relevant authorities, and obtain necessary permits, prior to road use;
 - (b) Obtain the approval and necessary permits of the relevant authorities before any road closure, diversion or other traffic restrictions

- (a) Enclose the perimeter of the working area with secure fencing to prevent access to the Site by unauthorised persons;
- (b) Maintain all such fencing in good condition, throughout the works at the working area, until when such fencing is no longer needed, and reinstate all affected areas;
- (c) Provide secure entry points with lockable gates or barrier; and
- (d) Provide and maintain signs clearly advising/warning against entry.

- (c) Provide watchmen and lighting where, when and to the extent necessary to apprehend and evict any unauthorised persons (particularly children) from the Site who may have breached the working area perimeter fencing.

- (2) Unless otherwise specified in the Particular Safety Specification, working area perimeter fencing shall be temporary, constructed of new and durable materials and fit for the purpose intended and maintained throughout the work.

- (3) Full details of working area perimeter fencing including scope, dimensions and specifications shall be given in the Method Statement.

- (4) The Contractor shall provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations outside the working area perimeter.

2.2.3 Measures for Road Occupation

- (1) When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work and based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:
 - (a) Prepare a road usage plan and submit it to the relevant authorities, and obtain necessary permits, prior to road use;
 - (b) Obtain the approval and necessary permits of the relevant authorities before any road

<p>(c) Take necessary measures to ensure safe and smooth traffic flow on the road during the entire road usage period;</p> <p>(d) Provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations;</p> <p>(e) Remove Contractor's Equipment during non-working periods (e.g. night time and weekends), store safely away from the works, provide temporary covers or barriers, lighting and warning signs, leave the Site in an orderly and safe condition and regularly maintain and inspect to remove any risk of accident;</p> <p>In case the relevant authority approves the Contractor to store Contractor's Equipment safely during non-working periods (e.g. night time and weekends), provide temporary barriers, lighting and warning signs, keep the Site in an orderly and safe condition and regularly maintain and inspect to remove any risk of accident; and</p> <p>JC: 2.2.3(1) (e)(f): 削除しています。理由は既に前回付してある JICA コメント通りです。(d)の記述は夜間等の non-working hours にも適用されるはずです。</p> <p>2.2.3(1) (e)(f): JC deleted. The reason is as commented. The requirements of (d) apply to the non-working hours including night time.</p> <p>NK: deleted as commented.</p> <p>(2) Unless otherwise instructed by the Engineer, the Contractor shall provide a Spotter (refer to JSSS 2.4 [Spotters and Flagmen]) full time upon the Works (including all non-working periods) so that the Contractor's Personnel and the general public including road users, pedestrians and all others are effectively informed, controlled and protected against accident.</p> <p>2.2.4 Temporary Road Signs</p> <p>(1) For disseminating necessary information on roads adjacent to the Site, the Contractor shall:</p> <p>(a) Provide standard road signs in the same colours and format as those used by the road authorities in the Country such as construction signs, direction, speed restriction, detour and roadwork signs;</p>	<p>(c) Take necessary measures to ensure safe and smooth traffic flow on the road during the entire road usage period;</p> <p>(d) Provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations;</p> <p>(2) Unless otherwise instructed by the Engineer, the Contractor shall provide a Spotter (refer to JSSS 2.4 [Spotters and Flagmen]) full time upon the Works (including all non-working periods) so that the Contractor's Personnel and the general public including road users, pedestrians and all others are effectively informed, controlled and protected against accident.</p> <p>2.2.4 Temporary Road Signs</p> <p>(1) For disseminating necessary information on roads adjacent to the Site, the Contractor shall:</p> <p>(a) Provide standard road signs in the same colours and format as those used by the road authorities in the Country such as construction signs, direction, speed</p>	<p>are applied;</p> <p>(c) Take necessary measures to limit any restrictions to ensure safe and smooth traffic flow on the road during the entire road usage period;</p> <p>NK: The original phrase is proper than the above. Modified as above.</p> <p>Suggest the following are necessary also:</p> <p>NK: We adopted MD's proposal (d) to (g), but (h) is not because deleted by JICA on 2020/03/06. However, (d) to (g) are specified in 2.2.2 above, so only stipulate to take measures in 2.2.2.</p> <p>(d) Provide temporary fencing or barriers around all working areas;</p> <p>(c) Provide and maintain signs clearly advising/warning against entry.</p> <p>(f) Provide watchmen and lighting where, when and to the extent necessary to apprehend and evict any unauthorised persons (particularly children) from the Site who may have breached the Site Perimeter Fencing.</p> <p>(g) Provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations;</p> <p>(h) Unless otherwise permitted by the relevant authority, remove Contractor's Equipment during non-working periods (e.g. night time and weekends) and store safely away from the Works, provide temporary covers or barriers, lighting and warning signs, leave the working area in an orderly and safe condition and regularly maintain and inspect to remove any risk of accident;</p> <p>(2) Unless otherwise instructed by the Engineer, the Contractor shall provide a Spotter (refer to JSSS 2.4 [Spotters and Flagmen]) full time upon the Works (including all non-working periods) so that the Contractor's Personnel and the general public including road users, pedestrians and all others are effectively informed, controlled and protected against accident.</p> <p>2.2.4 Temporary Road Signs</p> <p>(1) For disseminating necessary information on roads adjacent to the Site, the Contractor shall:</p> <p>(a) Provide standard road signs in the same colours and format as those used by the relevant authorities in the Country such as construction signs, direction, speed restriction, detour and roadwork signs;</p>	<p>closure, diversion or other traffic restrictions are applied;</p> <p>(c) Take necessary measures to ensure safe and smooth traffic flow on the road during the entire road usage period;</p> <p>(d) Take safety measures specified in JSSS 2.2.2 [Secure Working Area Perimeter]</p> <p>(2) Unless otherwise instructed by the Engineer, the Contractor shall provide a Spotter (refer to JSSS 2.4 [Spotters and Flagmen]) full time upon the Works (including all non-working periods) so that the Contractor's Personnel and the general public including road users, pedestrians and all others are effectively informed, controlled and protected against accident.</p> <p>2.2.4 Temporary Road Signs</p> <p>(1) For disseminating necessary information on roads adjacent to the Site, the Contractor shall:</p> <p>(a) Provide standard road signs in the same colours and format as those used by the relevant authorities in the Country such as construction signs, direction, speed</p>

and</p> <p>(c) By posting signboards on Site where required showing the standardised signals and placing a smaller-sized sticker version directly on the concerned Contractor's Equipment.</p> <p>2.4.6 Qualification of Personnel</p> <p>The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately trained and supervised to perform their duties.</p> <p>2.4.7 Communication Tools</p> <p>Please note that hand-held radios and walkie-talkies are actually the same and it appears strange to use both expressions for the same thing. The term "walkie-talkies" is originally a slang expression.</p> <p>Is it and walkie-talkies or just added??</p> <p>Who decides "when necessary".</p>	<p>times with the driver during vehicle manoeuvring.</p> <p>(4) Instruct drivers to stop manoeuvring immediately if they lose sight of the Spotter.</p> <p>(5) Not give Spotters additional duties while they are already acting as Spotters.</p> <p>(6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.</p> <p>(7) Provide Spotters with high-visibility clothing, especially during night operations.</p> <p>2.4.5 Signals</p> <p>(1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.</p> <p>(2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.</p> <p>(3) The Contractor shall inform and remind all Contractor's Personnel including those designated as Spotters, of the established standardised signal system as follows:</p> <p>(a) By training all personnel when they first start work at the Site;</p> <p>(b) By re-confirming with the all personnel in the TBM before the start of work each day; and</p> <p>(c) By posting signboards on Site where required showing the standardised signals and placing a smaller-sized sticker version directly on the concerned Contractor's Equipment.</p> <p>2.4.6 Qualification of Personnel</p> <p>The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately trained and supervised to perform their duties.</p> <p>2.4.7 Communication Tools</p>
---	---	---	---

<p>The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, walkie-talkies to ensure effective and safe communications and train all personnel assigned to Spotters in their use.</p> <p>2.4.8 PPE</p> <p>The Contractor shall ensure Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>	<p>The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, walkie-talkies to ensure effective and safe communications and train all personnel assigned to Spotters in their use.</p> <p>2.4.8 PPE</p> <p>The Contractor shall ensure Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>	<p>NK: "walkie-talkies" are deleted. Not all of Spotters use radios, so when necessary is left as it is. HSO shall decide when/where necessary. Training how to use radios is necessary to all Spotters.</p> <p>(1) The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, to ensure effective and safe communications and train all Spotters in their use.</p> <p>Suggest the following may also be helpful:</p> <p>NK: The following is detail requirement, so we can leave the Contractor to plan how to do and not add (2).</p> <p>(2) Radios shall have removable rechargeable batteries, that can be charged outside the radio and a spare battery shall be provided for each radio. Charging stations shall be provided at suitable locations so that the spare radio batteries can be charged when not in the radio.</p> <p>2.4.8 PPE</p> <p>The Contractor shall ensure that all Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>	<p>The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, to ensure effective and safe communications and train all Spotters in their use.</p> <p>2.4.8 PPE</p> <p>The Contractor shall ensure that all Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.</p>
<p>2.5 FALL PREVENTION</p> <p>2.5.1 General</p>	<p>2.5 FALL PREVENTION</p> <p>2.5.1 General</p>	<p>2.5 FALL PREVENTION</p> <p>2.5.1 General</p> <p><i>(Please refer also to the earlier notes under 2.1.2 Asbestos and also 2.6 Falling Objects etc.)</i></p> <p><i>The following paragraph is designed to raise safety awareness to some contractors who are responsible (not the Employer) and who may not be so familiar with this. The suggestion that this be moved to the User Guide is not understood or logical as this is of no meaning to the Employer for whom the User Guide is designed and intended. Please clarify</i></p> <p>NK: We agree that one of purpose of JSSS is to raise safety awareness as mentioned above. However, SS considers as follows: If we adopt to provide awareness sentences in JSSS, we shall provide such sentences not only for fall prevention, asbestos, falling objects but also other all works and activities because fatal and injury accidents have occurred in all kinds of works and activities, .e.g. traffic accident. Therefore, we will not describe (1) in JSSS. Safety awareness can be made by specifying requirements in detail and concrete measures to be taken by the Contractor. The User Guide is for the Employer and consultants how to prepare Particular Safety Specification.</p>	<p>2.5 FALL PREVENTION</p> <p>2.5.1 General Items</p>

<p>(1) By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with those the technical requirements for fall prevention as specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for employees workers working on scaffolds shall comply with in Subpart L - Scaffolds;</p> <p>(b) Requirements relating to fall protection for employees workers working on cranes and derricks shall comply with in Subpart CC - Cranes and Derricks in Construction;</p> <p>(c) Fall protection requirements for employees workers performing steel erection work (except for towers and tanks) shall comply with in Subpart R - Steel Erection;</p> <p>(d) Requirements relating to fall protection for employees workers working on certain types of equipment used in tunnelling operations shall comply with in Subpart S - Underground Construction, Caissons, Cofferdams and Compressed Air;</p> <p>(e) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers shall comply with in §1926.105 Safety nets;</p> <p>(f) Requirements relating to fall protection for employees workers working from aerial lifts or on poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment shall comply with in Subpart V - Electric Power Transmission and</p>	<p>(1) By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with those the technical requirements for fall prevention as specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for workers working on scaffolds in Subpart L - Scaffolds;</p> <p>(b) Requirements relating to fall protection for workers working on cranes and derricks in Subpart CC - Cranes and Derricks in Construction;</p> <p>(c) Fall protection requirements for workers performing steel erection work (except for towers and tanks) in Subpart R - Steel Erection;</p> <p>(d) Requirements relating to fall protection for workers working on certain types of equipment used in tunneling operations in Subpart S - Underground Construction, Caissons, Cofferdams and Compressed Air;</p> <p>(e) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers in §1926.105 Safety nets;</p> <p>(f) Requirements relating to fall protection for workers working from aerial lifts or on poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment in Subpart V - Electric Power Transmission and Distribution; and</p> <p>(g) Requirements relating to fall protection for</p>	<p>I want to propose the safety awareness should be made in safety guidance separately from JSSS. Therefore, (1) below is deleted.</p> <p>(1) Falls are the leading cause of accidents in the construction industry, accounting for more than 40% of all construction fatalities in Japan and it is emphasised therefore that particular consideration be given by the Contractor and appropriate measures selected and used to avoid this risk.</p> <p>The following is a standard description that I have used consistently in numerous locations throughout the various Chapters and Sections of JSSS, as it is changed by JICA here I have adjusted this everywhere.</p> <p>NK: We agreed to MD's proposed sentences.</p> <p>(2) By reference to JSSS 1.4 [Compliance with JSSS and Other Regulations], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with the technical requirements specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for workers on scaffolds in Subpart L.</p> <p>(b) Requirements relating to fall protection for workers on cranes and derricks in Subpart CC.</p> <p>(c) Fall protection requirements for workers performing steel erection work (except for towers and tanks) in Subpart R.</p> <p>(d) Requirements relating to fall protection for workers on certain types of equipment used in tunnelling operations, underground construction, caissons, cofferdams and compressed air in Subpart S.</p> <p>(e) Requirements relating to fall protection for workers engaged on the erection of tanks and communication and broadcast towers in Subpart E §1926.105 (Safety Nets).</p> <p>(f) Requirements relating to fall protection for employees working from workers on aerial lifts or poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment in Subpart V, Electric Power Transmission and Distribution; and</p> <p>(g) Requirements relating to fall protection for employees working on stairways and ladders</p>	<p>(1) By reference to JSSS 1.4 [Compliance with JSSS and Other Regulations], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with the technical requirements specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:</p> <p>(a) Requirements relating to fall protection for workers on scaffolds in Subpart L.</p> <p>(b) Requirements relating to fall protection for workers on cranes and derricks in Subpart CC.</p> <p>(c) Fall protection requirements for workers performing steel erection work (except for towers and tanks) in Subpart R.</p> <p>(d) Requirements relating to fall protection for workers on certain types of equipment used in tunnelling operations, underground construction, caissons, cofferdams and compressed air in Subpart S.</p> <p>(e) Requirements relating to fall protection for workers engaged on the erection of tanks and communication and broadcast towers in Subpart E §1926.105 (Safety Nets).</p> <p>(f) Requirements relating to fall protection for workers on aerial lifts or poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment in Subpart V, Electric Power Transmission and Distribution; and</p> <p>(g) Requirements relating to fall protection for employees working on stairways and ladders are provided in Subpart X, Stairways and Ladders.</p>
--	--	---	--

<p>Distribution; and</p> <p>(g) Requirements relating to fall protection for employees workers working on stairways and ladders are provided in Subpart X - Stairways and Ladders.</p> <p>(2) For use of personnel who are engaged in inspection, investigation, or assessment. The Contractor shall develop safety procedures for personnel who are engaged in inspection, investigation, or assessment to confirm the workplace conditions for the safety of workers prior to the actual start of construction work or to confirm the site condition for the safety of workers after all construction work has been completed.</p> <p>JC: これは墜落に限らない一般的な事項です。これはむしろ総則に入れるべき事項ではないでしょうか。(又は総則に既に類似の表現があるなら削除)</p> <p>This is general requirement not only for fall prevention. It may be included in Chapter 1. (if already specified in Chapter 1, it shall be deleted.)</p> <p>JC6: 2.5.1(2): 御社の説明の意図に沿った内容にするならば、for use of personnel who engage in.....とした方が良いと思われ、そのように修正しています。但し、この条項が本当にこの場所に置いておくことがふさわしいか否かは再検討願います。</p> <p>2.5.1(2): JC considers it is better to revise it to “for use of personnel who engage in...” to specify the same content as the intention in NK’s explanation. Please reconsider where is proper location to specify this clause.</p> <p>(3) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.</p> <p>(4) The Contractor must pay special attention to whether a restraint system (PFRS) or arrest (PFAS) system is required, noting the defined terms in Chapter 1 General for each of these systems.</p> <p>JC: 不要ではないでしょうか？ 削除をご検討ください。Is (4) necessary? Please consider deleting (4).</p> <p>NK: Deleted.</p> <p>(5) As a general rule, the Contractor shall take “fall restraint” measures wherever practicable rather than “fall arrest” measures.</p> <p>(6) JSSS Section 2.5 [Fall Prevention] shall be read in conjunction with respective other parts of JSSS</p> <p>2.5.2 Height Thresholds</p>	<p>workers working on stairways and ladders in Subpart X - Stairways and Ladders.</p> <p>(2) For use of personnel who are engaged in inspection, investigation, or assessment, the Contractor shall develop safety procedures to confirm the workplace conditions for the safety of workers prior to the actual start of construction work or to confirm the site condition for the safety of workers after all construction work has been completed.</p> <p>To MD: Please consider the JC comment about the location of (2), may be in Chapter 1.</p> <p>(3) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.</p> <p>(4) As a general rule, the Contractor shall take “fall restraint” measures wherever practicable rather than “fall arrest” measures.</p> <p>(5) JSSS Section 2.5 [Fall Prevention] shall be read in conjunction with respective other parts of JSSS</p> <p>2.5.2 Height Thresholds</p> <p>The threshold for fall protection in construction work</p>	<p>are provided in Subpart X, Stairways and Ladders.</p> <p><i>The following has been edited as shown and transferred to Chapter 1, 1.22.4.</i></p> <p>NK: Confirmed the above.</p> <p>(3) The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.</p> <p>(4) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.</p> <p>(5) The Contractor must shall pay special attention to whether a restraint system (PFRS) or arrest (PFAS) system is required.</p> <p>NK: (5) is deleted because (6) covers (5). (6) below is modified below.</p> <p>(6) As a general rule, the Contractor shall take “fall restraint system (PFRS)” measures wherever practicable rather than “fall arrest system (PFAS)” measures.</p> <p>(7) JSSS エラー! 参照元が見つかりません。 [Fall Prevention] shall be read in conjunction with other respective parts of JSSS.</p>	<p>(2) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. 2.5.11 Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
- (a) Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and

JC: 要修文. Required to revise (a).

JC7: 2.5.11(1)(a)にある Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; という部分は修正が必要だと考えます。親綱に結び付けるのは PFRS ではなく、身体保持器具なのではないでしょうか？添付の図を参照してください。

2.5.11(1)(a): JC considers that it needs to correct "Installing lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached". The good to connect to working lines is not the PFRS but positioning device. Please refer to the attached figure.

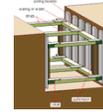

NK: revised.

- (b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.
- (2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:
- (a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;
- (b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;
- (c) Measures have been taken to prevent cutting or chafing, such as providing covers, where

2.5.11 Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
- (a) Installing lifeline to which the PFAS is attached and working line to which the positioning device is attached; and

- (b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.
- (2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:
- (a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;
- (b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;
- (c) Measures have been taken to prevent cutting

2.5.11 Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:

- (a) Installing a lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and

NK: Annex 1.1.2 (18) defines as below. The above is accepted.

"Personal Fall Restraint System" or "PFRS" (also referred to as a "Positioning Device System") means a fall protection system that is designed to restrict the movement of workers,

- (b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.
- (2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:
- (a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;
- (b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;
- (c) Measures have been taken to prevent cutting

2.5.11 Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
- (a) Installing a lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and

- (b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.
- (2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:
- (a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;
- (b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;
- (c) Measures have been taken to prevent cutting

<p>there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) The working line is anchored to two or more independent strong supports; and</p> <p>(e) The PFAS is securely attached to the harness and the connecting devices are compatible with the working line and lifeline used.</p> <p>JC: この記述はおかしいでしょうか。2.5.13(2)(d)には The PFAS shall be the full harness type and shall comprise...という記述があり、これでは「ハーネスにハーネスを取り付ける」という意味になりませんか？</p> <p>日本語の原文は「接続器具を用いて確実に取り付けること。なお接続器具は使用する親綱に適合したものを使用すること」であり、忠実な翻訳になっていません。</p> <p>JC9: 2.5.11(2)(e): 記述がおかしいように思えます(「ハーネスをハーネスにつける?」)。修正を検討して下さい。ロープ高所作業におけるハーネス(添付の図は古いので胴ベルトですが)は親綱につけるのではないのでしょうか？</p> <p>2.5.13(1)(b)にある PPE for という言葉は不要です。むしろここでは PPP(E)としての PFRS を論じています。</p> <p>2.5.11(2)(e): The description is strange “harness is attached to harness”. Please consider correcting it. In rope work, harness should be connected with working lines. “PPE for” is not necessary in 2.5.13(1)(b). Here, PFRS is discussed as PPE.</p> <p>NK: Revised as commented.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor’s Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor’s Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures including providing Contractor’s Personnel PPE to prevent any danger to Contractor’s Personnel from falling objects.</p> <p>(5) The Contractor shall appoint an Operation Leader who shall work with the rope work team at all time throughout their assignment and</p>	<p>or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) The working line is anchored to two or more independent strong supports; and</p> <p>(e) The positioning device shall be securely connected to the working line with connectors and the connecting devices shall be compatible with the working line used.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor’s Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor’s Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures including providing Contractor’s Personnel PPE to prevent any danger to Contractor’s Personnel from falling objects.</p> <p>(5) The Contractor shall appoint an Operation Leader who shall work with the rope work team at all time throughout their assignment and</p>	<p>cannot be detached;</p> <p>(b) The working line and lifeline are of sufficient length to allow the Contractor’s Personnel to move up and down safely;</p> <p>(c) Measures have been taken to prevent cutting or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) That the working line is anchored to two or more independent strong supports; and</p> <p>(e) The positioning device shall be securely connected to the working line with connectors and the connecting devices shall be compatible with the working line used.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor’s Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor’s Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures to prevent the risk of accident to any personnel</p>	<p>or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;</p> <p>(d) That the working line is anchored to two or more independent strong supports; and</p> <p>(e) The positioning device shall be securely connected to the working line with connectors and the connecting devices shall be compatible with the working line used.</p> <p>(3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor’s Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:</p> <p>(a) Location of each anchorage used to secure the working line and lifeline;</p> <p>(b) Types and strengths of the working line and lifeline to be used;</p> <p>(c) Lengths of the working line and lifeline to be used;</p> <p>(d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and</p> <p>(e) Measures to prevent Contractor’s Personnel engaged in securing the working line and lifeline to the anchorages from falling.</p> <p>(4) The Contractor shall also provide measures to prevent the risk of accident to any personnel from Falling Objects; by using covered passageways and PPE</p> <p>(5) The Contractor shall appoint an Operation Leader who shall work with the rope work team at all times throughout their assignment and</p>

---	--	--	--

Safety Plan or in accordance with the manufacturer's instructions. However, if the PPE is used only occasionally, an examination and test should be carried out before use and, in any event, the interval should not exceed three months or as specified in the Safety Plan or in accordance with the manufacturer's instructions.

approved by the Engineer:

- (a) Frequently used PPE shall be inspected, tested and maintained at least once a month; and
- (b) Occasionally used PPE shall be inspected before every use and tested and maintained at least once every three months.

The HSO shall conduct routine inspections and maintenance checks on any PPE, First aid kits and AED in the Site who shall Safety AEDs within the Site. Inspections are on: ~~the checks~~

NK: We modified to separate requirement to PPE and first aid kit and AED.

- (a) Inventory and reorder supplies;
- (b) Follow up with the manufacturer on maintenance issues; and
- (c) Schedule training and retraining.

(3) PPE Signage Requirements

- (a) The Contractor shall display signage at specific places at the Site where the wearing of PPE is mandatory;
 - (b) Such signage shall include for example:
 - (i) "Head Protection Must be Worn"
 - (ii) "Eye* Protection Must be Worn"
- (* face, ear or other)

(4) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(5) Protective Footwear

approved by the Engineer:

- (a) Frequently used PPE shall be inspected, tested and maintained at least once a month; and
- (b) Occasionally used PPE shall be inspected before every use and tested and maintained at least once every three months.

The HSO shall conduct routine inspections and maintenance on any PPE in the Site. Inspections are on:

- (a) Inventory and reorder supplies;
- (b) Follow up with the manufacturer on maintenance issues; and
- (c) Schedule training and retraining.

(3) PPE Signage Requirements

- (a) The Contractor shall display signage at specific places at the Site where the wearing of PPE is mandatory;
 - (b) Such signage shall include for example:
 - (i) "Head Protection Must be Worn"
 - (ii) "Eye* Protection Must be Worn"
- (* face, ear or other)

(4) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(5) Protective Footwear

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(2) Head Protection

Head protection shall protect workers' heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against from electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(3) Protective Footwear

(3) **Protective Footwear**

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, **electrically insulating** or thermally insulating, appropriate footwear shall be selected for the risks identified.

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
	JIS T8101	Protective footwear
1	JIS T8101	Protective footwear

3	BS EN ISO 20346	Personal protective equipment - Protective footwear
	BS EN ISO 20349	Personal protective equipment. Footwear protecting against risks in foundries and welding

(4) **Eye and Face Protection**

Eye and face protection shall protect workers' eyes and face from harmful materials (for example dust, chemicals, liquid splash, flying objects, molten metal, chemicals, gas and steam, extreme light, flashes and hazardous rays, dirt and debris etc.

Eye and face protection can include safety spectacles, goggles, face masks, face shields, visors and the like. Selected protection shall have the right combination of /impact/dust/splash/molten metal eye and face protection for the task and shall be selected for the risks identified.

Eye and face protection shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.3: Applicable Standards for Eye and Face Protection

	Standard	Title of Standard

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers' from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, **electrically insulating** or thermally insulating, appropriate footwear shall be selected for the risks identified.

(5) Ear Protection

Ear protection shall protect workers' hearing against injury from continuous, loud or Intense Noise by providing soundproofing.

The Contractor shall ensure that workers are still able to receive and immediately react to oral instructions and danger warnings when wearing ear protection.

Ear protector shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.4: Applicable Standards for Ear Protection

Standard	Title of Standard

検討すればよいと思います。

The term of harness which is specified to be used for PPE as default is not defined as “Harness”, on the other hand that of “safety belt” which is specified as limited use is defined as “Safety Belt” in Chapter 1. These terms seem a little strange. Definitions of terms will be discussed when reviewing whole contents of JSSS.

NK: Chapter 1 (issue 7) has included “Harness”. The definition of terms will be discussed after all JSSS is completed.

(8) Gloves

Gloves shall protect workers’ hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers’ hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8112 JIS T 8113 JIS T 8114	Gloves of insulating material used for electrical working (Japanese only) Protective Leather Gloves for Welders Vibration isolation gloves
2	ASTM D120 ANSI S2.73	Standard Specification for Rubber Insulating Gloves Mechanical vibration and shock - Hand-arm vibration - Measurement and evaluation of the vibration transmissibility of gloves at the palm of the hand (a nationally adopted international standard) (too long)
3	BS EN 60903 BS EN 12477	Live working. Gloves of insulating material Protective gloves for welders

~~**(9) Work Clothing**~~

~~Contractor’s Personnel All personnel shall be supplied with and shall wear suitable protective work clothing required by the working environment appropriate for their work tasks. In general, all personnel shall be provided with overalls.~~

~~Further risks such as from chemical or metal splash, spray from pressure leaks or spray guns, contaminated dust, impact or penetration, entanglement of own clothing, heat, cold, etc. shall be considered and avoided through the provision where necessary of special protective clothing. This may include for example flame retardant, anti static,~~

(8) Gloves

Gloves shall protect workers’ hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers’ hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8113 JIS T 8114	Protective Leather Gloves for Welders Vibration isolation gloves
2	ASTM D120 ANSI S2.73	Standard Specification for Rubber Insulating Gloves Mechanical vibration and shock - Hand-arm vibration
3	BS EN 60903 BS EN 12477	Live working. Gloves of insulating material Protective gloves for welders

(9) Body Protection

Body protection shall protect workers’ body against injury from cuts, radiation, extreme temperatures, hot splashes, impacts from tools, machinery and materials, hazardous chemicals, etc.

PPE that provides body protection are for example laboratory coats, coveralls, vests, jackets, aprons, full body suits.

Appropriate PPE for body protection shall be selected based on the hazard assessment and tasks associated.

(10)Gloves

Gloves shall protect workers’ hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers’ hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8113 JIS T 8114	Protective Leather Gloves for Welders Vibration isolation gloves
2	ASTM D120 ANSI S2.73	Standard Specification for Rubber Insulating Gloves Mechanical vibration and shock - Hand-arm vibration
3	BS EN 60903 BS EN 12477	Live working. Gloves of insulating material Protective gloves for welders

(11)Body Protection

Contractor’s Personnel shall be supplied with and shall wear suitable body protection appropriate for the working environment.

Risks such as from chemical or metal splash, spray from pressure leaks or spray guns, contaminated dust, impact or penetration, entanglement of own clothing, hot and extremely cold work; and the like shall be considered and avoided through the provision where necessary of special protective clothing. This may include for example flame-retardant, anti-static, chain mail, chemically impermeable, and high-visibility clothing and the like.

(10)Gloves

Gloves shall protect workers’ hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers’ hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards.

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8113 JIS T 8114	Protective Leather Gloves for Welders Vibration isolation gloves

2.1 WORK ENVIRONMENT

Contractor's Personnel shall be provided with a safe and healthy occupational environment. The Contractor shall implement all necessary measures to ensure this, taking particular care to avoid the creation of and/or any contact with Hazardous Substances, intense noise, heat, cold or similar and potentially harmful conditions or to provide protection against such conditions.

2.1.1. Hazardous Substances

(1) Definitions

Refer to the definition of Hazardous Substances in JSSS Annex 1.1 [*Definitions and Abbreviations*]. For the purposes of this definition, note that Hazardous Substances shall include dust of any kind when present at a concentration in air equal to or greater than:

- (a) 10 mg/m³ (8-hour TWA) of inhalable dust; or
- (b) 4 mg/m³ (8-hour TWA) of respirable dust.

2.1.2. Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for work environment complying with the technical requirements specified in EH40/2005 Workplace Exposure Limits, (third edition published 2018), issued by HSE.

(2) The Contractor shall monitor all substances and ensure that the Short Term and Long-Term exposure limits in HSE Table 1 are not exceeded.

(3) Asbestos

(a) The Contractor shall be aware that asbestos causes occupational fatalities. It is commonly found in older buildings frequently in ceiling and floor cavities, insulation, sprayed coatings, floor tiles and composites, asbestos-cement sheets and roofing felt;

(b) If the scope of Works requires removal of any of the above materials then the Contractor shall check for asbestos content, then remove and dispose of such materials in compliance with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; and

(c) If the Particular Safety Specification specifies that asbestos may exist at the Site and that the Contractor is responsible for the removal and disposal or if it is discovered during the execution of the Work and the Contractor is instructed by the Engineer to remove it, then the Contractor shall take measures in accordance with the requirements of JSSS 1.22 [*Dangerous Work*]; and comply with L143 Approved Code of Practice and guidance, for Managing and Working with Asbestos (second edition published 2013), issued by HSE; for the controlled safe removal and disposal of asbestos.

(4) Other Hazardous Substances

The Contractor shall comply with relevant HSE regulations with regard to health and environmental management and control of any other Hazardous Substances either existing on the Site, used in or encountered on the Works.

(5) Prevention

(a) The Contractor shall prevent dust emission, by keeping the source moist and covering dust creating areas and materials with suitable dust-proof sheeting; and

(b) The Contractor shall provide all necessary Contractor's Equipment and Temporary

Works to achieve this including water-bowsers, spraying equipment, extract ventilation and filtration equipment.

- (6) PPE
 - (a) If, in the opinion of the HSO, it is not reasonably practicable to reduce dust to acceptable levels, PPE shall be provided for all Contractor’s Personnel; and
 - (b) For details of PPE refer to JSSS 2.9.1 [PPE].

2.1.3. Poor Ventilation

- (1) The Contractor shall inspect and carry out tests to ensure that all working areas have adequate and healthy natural ventilation.
- (2) If any areas do not have adequate and healthy natural ventilation, the Contractor shall provide suitable and efficient mechanical ventilation systems with fans, ducting and all associated devices and services to improve the working environment to acceptable safe levels.
- (3) If this is not completely possible then PPE (breathing apparatus) shall be used in accordance with the requirements of JSSS 2.9.1 (8) [Respiratory Protection Equipment (RPE)].
- (4) The Contractor shall generally prohibit the use of internal combustion engines in internal areas. When the use of such engines is unavoidable, the Contractor shall provide exhaust systems which safely and efficiently collect, contain and expel exhaust gases to external areas and provide additional adequate ventilation.

2.1.4. Noise

- (1) Compliance Standards
 - (a) By reference to JSSS 1.4 [Compliance with JSSS and Other Regulations], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for noise exposure and control complying with the technical requirements specified in OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure; and
 - (b) The Contractor shall provide equipment such as, sound level meters, noise dosimeters, or octave band analysers to determine what sound levels exist and whether they are within the levels in Table D-2 or not.
- (2) Preventive Measures

To prevent noise damage to Contractor’s Personnel, which may occur when noise levels exceed 90 dB (referred to as “intense noise” in JSSS), or if for any reason sound levels cannot be determined as above the Contractor shall:

- (a) Reduce sound levels through feasible administrative or engineering controls to within the levels of Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures of the OSHA Standard referred to above, if at all possible:

Table 2.1.1: OSHA Table D-2: Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response	Duration per day, hours	Sound level dBA slow response
8	90	1½	102
6	92	1	105

4	95	$\frac{1}{2}$	110
3	97	$\frac{1}{4}$ or less	115
2	100		

- (b) If such controls are not possible or if they fail to reduce sound levels within the levels of OSHA Table D-2, provide PPE for all Contractor's Personnel as specified in JSSS 2.9.1 (7) [*Ear Protection*] in consideration of the noise level and length of noise exposure at the work area in accordance with the provisions of the OSHA Standard;
- (c) Post warning signs at the work area to make all Contractor's Personnel aware that ear protection must be worn; and
- (d) In all cases where the sound levels exceed the values shown OSHA Table D-2, a Continuing Effective Hearing Conservation Program specified in (3) below shall be implemented.

(3) Hearing Conservation Program

- (a) The Contractor shall implement a hearing protection and conservation program whereby noise exposure levels are monitored in order to accurately identify any Contractor's Personnel that are exposed to noise at or above 90 dB averaged over 8 working hours, or an 8-hour time TWA; and
- (b) The Contractor shall monitor all workers whose noise exposure is equivalent to or greater than a noise exposure received in eight (8) hours where the noise level is constantly 90 dB. The exposure measurement must include all continuous, intermittent, and impulsive noise within an 80 dB to 130 dB range and must be taken during a typical work situation. The Contractor shall choose the monitoring method that best suits each individual situation.

2.1.5. Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.22 [*Dangerous Work*] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE, the Contractor shall establish systems and procedures to ensure the safety of all Contractor's Personnel engaged upon or supervising or managing such Dangerous Work, and for this purpose the Contractor shall:

- (1) Measure the concentration of oxygen, hydrogen sulphide, carbon dioxide, carbon monoxide, chlorine, chlorine dioxide, trade effluent and any other potentially harmful materials, gases and chemicals, or other work environment items before starting any work.
- (2) Safely isolate the supply and flow of any trade effluent, chemical or other potentially harmful and materials, gases and chemicals during the period of any work and safely reconnect or continue same after the work is finished.
- (3) Improve and maintain the work environment for example by mechanical ventilation and filtration if the result of the work environment measurement in (1) above violates the limits imposed by this JSSS Chapter 2 [*General Safety Measures*].
- (4) For further information on the removal and disposal of Hazardous Substances refer to JSSS 1.22 [*Dangerous Work*].
- (5) For further information on prohibition of entry to areas where Dangerous Work is being performed refer to JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

2.1.6. High and Low Temperatures and Humidity

- (1) To avoid health hazards due to excessively hot, cold or humid working environments, the Contractor shall improve the environmental working conditions for all Contractor's Personnel by:
 - (a) Providing temporary covers and shade to protect workers from rain, hail, snow, sunlight and reflection from the surrounding wall and ground;
 - (b) Providing protection from any heat or cold source and provide adequate ventilation, heating or air conditioning for indoor working;
 - (c) Where permitted by the Engineer **in hot climates**, carrying out work during the night when temperatures and humidity are lower;
 - (d) Providing drinking water and supplement that allow salt replenishment at **the** work place;
 - (e) Providing a rest station with heating, air conditioning or shade near the work place, or providing other facilities equipped with accommodation that allow personnel who fall ill to lie down and recover;
 - (f) Allowing work breaks and reducing excessive and continuous working times; and
 - (g) Allowing an initial acclimatisation period for Contractor's Personnel to become used to the heat or cold.
- (2) The Contractor shall ensure that workers wear moisture-permeable and loose-fitting clothing in hot climates and suitably warm, insulated and waterproof clothes in cool or cold climates.
- (3) If any undesirable conditions are detected, the Contractor shall take appropriate measures to correct the situation, allowing Contractor's Personnel to rest or temporarily stop the work until the conditions improve.
- (4) The Contractor shall ensure that all Contractor's Personnel are properly dressed in suitable insulated cold weather clothing to work safely in low temperatures.
- (5) The Contractor shall monitor the health of Contractor's Personnel before and during the work and allowing Contractor's Personnel to take a rest and/or rehydrate and shall act if any abnormalities are observed.

2.1.7. Monitoring and Records

- (1) The Contractor shall monitor the working environment and prepare regular daily, weekly and monthly records of dust, noise, air and water quality, inadequate natural ventilation, rainfall, snowfall, temperatures, humidity, wind speed and direction regularly throughout the Time for Completion of the Works.
- (2) The procedure for preparation and submission of such records shall be as stated in JSSS **1.32** [*Safety Reports*].
- (3) The Contractor's monitoring and recording shall also cover:
 - (a) The pre-existent conditions for all periods of Dangerous Work;
 - (b) Dust at work places where excessive dust and waste material such as dirt, rocks, minerals, metals, carbon, cement, etc. is generated;
 - (c) Noise levels at work places that generate intense noise;
 - (d) Ventilation volume, temperature and concentration of carbon dioxide, carbon monoxide, oxygen, hydrogen sulphide, other toxic or dangerous gases at work places including tunnels and deep pits and Confined Spaces; and
 - (e) Illuminance at work place, walkways and passageways.**

- (4) The above monitoring shall be conducted separately from the environmental monitoring that may be required by the Laws of the Country and any environmental monitoring that may be separately specified in the Contract.
- (5) For the following measurement items, if the following limits are violated, the Contractor shall take the measures prescribed in JSSS 1.22 [*Dangerous Work*], JSSS 2.1.5 [*Further Requirements for Dangerous Work*] and JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].
 - (a) Values of limits of measurement items:
 - (i) Oxygen concentration less than 19.0% and more than 23.5%;
 - (ii) Hydrogen sulphide concentration more than 10 ppm (short-term exposure limit) or 5 ppm (long term exposure limit);
 - (iii) Carbon dioxide concentration more than 15,000 ppm (short-term exposure limit) or 5,000 ppm (long term exposure limit); and
 - (iv) Values of limits for other substances given in EH40/2005 Workplace Exposure Limits (third edition published 2018), issued by HSE, Table 1.
 - (b) Combustible gas and vapor concentration: in excess of 10% of the lower limit of flammability.
- (6) The Contractor shall also monitor any vibration, settlement and other adverse effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as “other properties”) to ensure that no damage or weakening is caused to such other properties.
- (7) Monitoring shall be accomplished by the Contractor through regular inspection, measurement, ~~and~~ survey, ~~and~~ instrument monitoring and recording as determined by the nature and scope of the Works ~~or as~~ as the Contractor shall take additional monitoring measures if so required by the Particular Safety Specification.
- (8) Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:
 - (a) ~~Excavation Earth Works (including Blasting Works);~~
 - (b) Foundation Piling Works;
 - (c) Ground improvement;
 - (d) Temporary dewatering in underground;
 - (e) Temporary Works such as major items of Earthwork Support, Cofferdams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;
 - (f) Other parts of the Works required to evidence the Contractor’s compliance with the Contract; and
 - (g) Other parts of the Works ~~which may be~~ specified in the Particular Safety Specification.
- (9) The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:
 - (a) The Contractor’s proposed ~~maximum~~ monitoring criteria for vibration, settlement and all other potential effects of the Works, which by the Contractor’s own calculations will ensure that no damage or weakening is caused to other properties;

- (b) The types, locations and numbers of monitoring instruments and other equipment;
- (c) The measurement frequency and recording methods; and
- (d) The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.

(10) The Contractor shall:

- (a) Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the Temporary Works;
- (b) Provide qualified staff to perform the monitoring;
- (c) Maintain and calibrate the monitoring instruments and equipment as necessary throughout the execution of the Works;
- (d) Perform survey and monitoring on a regular basis throughout the execution of the Works;
- (e) Confirm the occurrence and extent of any adverse effect impact of the Works execution by means of regular inspections of all other properties;
- (f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;
- (g) Evaluate the measurement results and modify the monitoring criteria as necessary; and
- (h) Submit an evaluation report if necessary with any changes to the Safety Plan for Works to the Engineer before proceeding with the Works.

(11) Requirements for instrumentation systems shall be as follows:

- (a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;
- (b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of works are provided;
- (c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;
- (d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of all Temporary the Works; and
- (e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [Engineer's Safety Representative], JSSS 1.11 [Safety Compliance Instructions from the Engineer] and JSSS 1.16 [Joint Site Safety Inspections].

(12) Management based on Monitoring and Inspection

(a) Management by Visual Inspection:

If and when the Contractor finds any irregularity abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the Contractor and necessary actions shall be taken. ~~as follows:~~

The Contractor shall provide the following three critical limits in its design of the Temporary Works, and shall take an appropriate action when any critical limit is being reached through the monitoring:

(i) Primary ~~control value:~~ ~~limis:~~

~~When this value is reached,~~ When a value of measurement is reached to this limit, the Contractor shall increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.

The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.

(ii) Secondary ~~control value:~~ ~~limis:~~

~~When this value is reached and unless otherwise instructed by the Engineer,~~ When a value of measurement is reached to this limit, the Contractor shall stop the relevant part of the Works and implement the countermeasures.

(iii) Control limit ~~value:~~

~~When this value is reached,~~ When a value of measurement is reached to this limit, the Contractor shall immediately stop the relevant part of the Works, advise all affected persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.

(13) Contract Compliance

Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.

The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.

2.2 RISK CONTROL AROUND THE SITE

2.2.1. General

- (1) The Contractor is reminded of his obligations under GC 4.8 [*Safety Procedures*] and GC 4.22 [*Security of the Site*] to keep any unauthorised persons off the Site, and without prejudice to such obligations the Contractor shall take all necessary further measures under this Section to prevent any such unauthorised persons (including third parties, neighbours and particularly children) who may for example be living or working around the boundary of the Site or adjacent thereto, from entering the Site.
- (2) The Contractor shall inform the Engineer and request that the Employer takes necessary action including removal of any third parties and/or neighbours who may establish themselves outside the Site along and for example against the Site boundary during the Time for Completion of the Works for the potential purpose of accessing the Site.
- (3) In addition to taking necessary action to keep any unauthorised persons off the Site the Contractor shall fully inform the local police force and if necessary request their assistance to remove any trespassers from the Site.
- (4) Such measures shall include (but are not restricted to) the following requirements of this Section.
- (5) The Contractor shall also prevent access to the Site by any persons, including Contractor's and Employer's Personnel and any others who are under the influence of drink or drugs and also to prevent alcohol and drugs being brought onto the Site.

2.2.2. Secure Working Area Perimeter

- (1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall:
 - (a) Enclose the perimeter of all working areas with secure fencing to prevent access to the Site by unauthorised persons;
 - (b) Maintain all such fencing in good condition, until such fencing is no longer needed and reinstate all affected areas;
 - (c) Provide secure entry points with lockable gates or barrier; and
 - (d) Provide and maintain signs clearly advising/warning against entry.
 - (e) Provide watchmen and lighting where, when and to the extent necessary to apprehend and evict any unauthorised persons (particularly children) from the working area, where such persons have breached the Site Perimeter and working area perimeter fencing.
- (2) Unless otherwise specified in the Particular Safety Specification, working area perimeter fencing shall be temporary, constructed of new and durable materials and fit for the purpose intended.
- (3) Full details of working area perimeter fencing including scope, dimensions and specifications shall be given in the Method Statement.
- (4) The Contractor shall provide fall prevention measures such as temporary covers or barriers, with lighting and warning signs for any excavations outside the working area perimeter.

2.2.3. Measures for Road Occupation

- (1) When the Contractor carries out work on, in or under a public road, or uses it for access to the Site, prior to commencement of any such work and based on the prior coordination with the relevant authorities by the Employer, in order to ensure safe and smooth traffic flow on the road, the Contractor shall:
 - (a) Prepare a road usage plan and submit it to the relevant authorities, and obtain

- necessary permits, prior to road use;
- (b) Obtain the approval **and necessary permits of** the relevant authorities before any road closure, diversion or other traffic restrictions are applied;
- (c) Take necessary measures to **ensure** safe and smooth traffic flow on the road during the entire road usage period; and
- (d) Take safety measures specified in JSSS 2.2.2 [Secure Working Area Perimeter].**

- (2) Unless otherwise instructed by the Engineer, the Contractor shall provide a Spotter (refer to **JSSS 2.4 [Spotters, Flagmen and the like]** full time upon the Works (including all non-working periods) so that the Contractor's Personnel and the general public including road users, pedestrians and all others are effectively informed, controlled and protected against accident.

2.2.4. Temporary Road Signs

- (1) For disseminating necessary information on roads adjacent to the Site, the Contractor shall:
 - (a) Provide standard road signs in the same colours and format as those used by the relevant authorities in the Country such as construction signs, direction, speed restriction, detour and roadwork signs;
 - (b) Signs shall be set in suitable places so as to give due warning, information and guidance to road-users and pedestrians alike; and
 - (c) Signs shall be fit for purpose, fixed firmly so as not to break, fall or otherwise be damaged due to vibration, wind or other natural causes.
- (2) Maintain the various signs regularly, including repairing, painting and cleaning. **Ensure that all** are clearly visible, well-lit or made of reflective materials so that they can be seen clearly from a distance at night.

2.2.5. Traffic Accident Prevention at Site Entrance

- (1) In order to prevent traffic accidents occurring at or near the Site entrance, the Contractor shall:
 - (a) Provide warning signs adjacent to the Site entrance to inform drivers on the public road that the Site entrance exists and to inform of the possible emergence of construction traffic/equipment;
 - (b) Provide temporary traffic signals or Spotters for safe control of traffic (including construction traffic) and Contractor's Equipment, Contractor's Personnel and the general public including road users, pedestrians and all others to protect against accident;
 - (c) Provide designated areas for anyone entering the Site to board or be discharged from public and private transport;**
 - (d) Provide pedestrian crossings, manned or with traffic signals; and**
 - (e) Prevent vehicles entering or exiting the Site carrying persons in the back of trucks, pick-ups or the like.**
- (2) Priority shall be given to pedestrians and passing vehicles at the entrance.

2.2.6. Community Relations

- (1) In order to maintain communications and improve safety for the local community near to the Site, the Contractor shall:
 - (a) Cooperate with the Employer and assist in dissemination of comprehensive information about the Project to the nearby **community;** and

- (b) **If so required by the Particular Safety Specification,** Conduct traffic safety and awareness activities for the local community.
- (2) The Contractor shall ensure that all Contractor's Personnel are informed of the safety rules and any precautions regarding the safe passage of construction vehicles/equipment especially when children are arriving at or leaving from school.
- (3) The Contractor shall report immediately to the Engineer if the local community raises any complaints or issues any requests to the Contractor.

2.3 PROHIBITION OF ENTRY – DANGEROUS WORK

2.3.1. General

- (1) The Contractor shall prohibit unauthorised personnel from entering areas where Dangerous Work is being undertaken
- (2) For general requirements of Dangerous work refer to JSSS 1.22 [Dangerous Work].
- (3) “Unauthorised personnel” in this context shall mean Contractor's Personnel, Employer's Personnel and any other persons who have not been properly trained or who are not properly equipped with PPE (including rescue equipment) and who are not carrying and displaying an official permit issued to them by the HSO, for that specific work place in accordance with JSSS 1.23 [Permit to Work System].
- (4) Workers assigned to Dangerous Work shall be subject to the Permit to Work System described in JSSS 1.23 [Permit to Work System].

2.3.2. Demarcation and Requirements

- (1) The Contractor shall clearly demarcate all areas where Dangerous Work is being carried out by the use of appropriate fencing, barriers, signage and lighting and shall control access to such areas with the full-time assignment of a Spotter.
- (2) The Spotter shall be established outside the working area, and shall prevent the entry of unauthorised personnel and shall constantly communicate with and monitor the safety of assigned workers. The Spotter shall be equipped with radio or other efficient means of communication to act as a liaison with other relevant Contractor's Personnel.
- (3) No-one, no matter their position of authority, should be allowed to enter, if not so authorised to do so and the Contractor shall ensure that Spotters do not face any adverse repercussions because of a refusal to allow access.

2.3.3. Examples of Dangerous Work

For clarity “Dangerous Work” shall also include:

- (1) The detection, safe removal and disposal of Unexploded Ordnance as referred to in JSSS 1.38 [Unexploded Ordnance (UXO)].
- (2) The delivery, storage and/or use of harmful, dangerous or explosive materials, chemicals, gases or the like to be used in the Works or for use in or which are the product of the manufacturing or treatment process of the finished Works or in Operational Areas.
- (3) Welding work, hot cutting work or demolition work.
- (4) Work in areas where Contractor's Personnel are already performing work that may become more hazardous if anyone other than authorised personnel enter, for example scaffolding erection, use and dismantling, and areas where Contractor's Equipment is operating and the HSO considers there to be a risk of any accident.
- (5) Work in areas where very hot or cold objects are being handled and/or the working area itself is extremely hot or cold.
- (6) Work in areas where there is potential exposure to harmful radiation or ultrasound.
- (7) Work in areas where the concentration of gases, dust and any other dangerous or harmful materials exceed the limits specified in JSSS 2.1 [Work Environment].
- (8) Work in areas where Permanent Works or Temporary Works have not been performed completely or properly and/or which are therefore unsound, unstable or unsafe.
- (9) Work in areas under, within or adjacent to existing buildings, roads, bridges or other structures which are unstable and/or unsafe and which pose risks to safety unless additional support and strengthening measures are implemented.

- (10) Work or work areas which may have been damaged and otherwise rendered dangerous by adverse climatic, natural or seismic conditions.

2.4 SPOTTERS, FLAGMEN AND THE LIKE

2.4.1. Definitions

In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of “Spotter” or “Flagman” in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.

2.4.2. Duties

Duties include for example:

- (1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.
- (2) Giving appropriate guidance and signals during operation of Contractor’s Equipment to prevent the equipment tipping, overturning or falling.
- (3) Giving appropriate guidance and signals to prevent Contractor’s Personnel from being struck or pinned by Contractor’s Equipment.
- (4) Assisting drivers of vehicles including trucks and operators of other Contractor’s Equipment in positioning their vehicles particularly when manoeuvring.
- (5) Directing operators and drivers to prevent Contractor’s Personnel, Contractor’s Equipment, Goods in transit, transport and the like from coming into contact with Overhead Services as defined in JSSS Chapter 3 [Existing Underground, Concealed and Overhead Services] when working within close proximity and preventing same from encroaching upon minimum allowable distance from Overhead Services.
- (6) Controlling pedestrian and vehicular traffic, Contractor’s Personnel and Contractor’s Equipment on roads and footpaths on or adjacent to the Site, adjacent to buildings, Operational Areas, places with poor visibility, slopes and vertical drops, places where there is risk of falling or landslide and places where excavation and transporting equipment perform excavation works close to workers.
- (7) Monitoring working locations and conditions and preventing Contractor’s Personnel, Employer’s Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed, from entering areas where Dangerous Work is being carried out or where there is any risk of potential injury and accident.
- (8) Any other similar duties and assistance.

2.4.3. Placement

- (1) The Contractor shall provide Spotters as appropriate to the Site situation and the work methods employed.
- (2) The Contractor shall ensure that the Spotters are informed about the Site conditions and accident prevention.

2.4.4. Safety

The Contractor shall:

- (1) Ensure the safety of Spotters when directing vehicles or Contractor’s Equipment.
- (2) Ensure that Spotters and drivers agree on hand signals before assisting with vehicle manoeuvring.
- (3) Instruct Spotters to maintain visual contact at all times with the driver during vehicle manoeuvring.
- (4) Instruct drivers to stop manoeuvring immediately if they lose sight of the Spotter.

- (5) Not give Spotters additional duties while they are already acting as Spotters.
- (6) Instruct Spotters not to use personal mobile phones, personal headphones, or other items which could pose a distraction during spotting activities.
- (7) Provide Spotters with high-visibility clothing, especially during night operations.

2.4.5. Signals

- (1) To avoid the risk of injury to the Contractor's Personnel when operating Contractor's Equipment, the Contractor shall establish a standardised signal system and appoint a Spotter to give necessary signals to the Contractor's Personnel.
- (2) The Contractor shall ensure that all Contractor's Personnel understand and comply with the signals.
- (3) The Contractor shall inform and remind all Contractor's Personnel including those designated as Spotters, of the established standardised signal system as follows:
 - (a) By training all personnel when they first start work at the Site;
 - (b) By re-confirming with the all personnel in the TBM before the start of work each day; and
 - (c) By posting signboards on Site where required showing the standardised signals and placing a smaller-sized sticker version directly on the concerned Contractor's Equipment.

2.4.6. Qualification of Personnel

The Contractor shall ensure that all Spotters possess sufficient experience and ability and are adequately trained and supervised to perform their duties.

2.4.7. Communication Tools

The Contractor shall, when necessary, provide and maintain any necessary equipment such as hand-held radios, to ensure effective and safe communications and train all Spotters in their use.

2.4.8. PPE

The Contractor shall ensure that all Spotters are provided with PPE including hats, whistles, high visibility jackets, flags, illuminated batons, etc. to safely and adequately perform their duties.

2.5 FALL PREVENTION

2.5.1. General Items

- (1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for fall prevention complying with the technical requirements specified in OSHA, Subpart E Personal Protective and Life Saving Equipment, and Subpart M – Fall Protection of “Part 1926 - Safety and Health Regulations for Construction” and as follows:
 - (a) Requirements relating to fall protection for workers on scaffolds in Subpart L;
 - (b) Requirements relating to fall protection for workers on cranes and derricks in Subpart CC;
 - (c) Fall protection requirements for workers performing steel erection work (except for towers and tanks) in Subpart R;
 - (d) Requirements relating to fall protection for workers on certain types of equipment used in tunnelling operations, underground construction, caissons, cofferdams and compressed air in Subpart S;
 - (e) Requirements relating to fall protection for workers engaged on the erection of tanks and communication and broadcast towers in Subpart E §1926.105 (Safety Nets);
 - (f) Requirements relating to fall protection for workers on aerial lifts or poles, towers, or similar structures while engaged in the construction of electric transmission or distribution lines or equipment in Subpart V, Electric Power Transmission and Distribution; and
 - (g) Requirements relating to fall protection for employees working on stairways and ladders are provided in Subpart X, Stairways and Ladders.
- (2) This Section provides fall prevention solutions for a typical range of example circumstances but this is not intended to be restrictive in extent. The Contractor shall provide fall prevention solutions wherever demanded by the nature of the particular part of the Works.
- (3) As a general rule, the Contractor shall take fall restraint system (PFRS) measures wherever practicable rather than fall arrest system (PFAS) measures.
- (4) JSSS 2.5 [*Fall Prevention*] shall be read in conjunction with other respective parts of JSSS.

2.5.2. Height Thresholds

The threshold for fall protection in construction work is 2 m.

The Contractor shall provide fall protection for all personnel, removing all fall hazards whenever any personnel are working 2 m or more above a lower level.

2.5.3. Facilities for Ascending and Descending

When carrying out work at heights of 2 m or more, the Contractor shall provide facilities that enable the Contractor’s Personnel to safely ascend and descend from such work levels.

2.5.4. Risk Assessments

- (1) Where there is any risk of fall for any part of the Works at the Site, the Contractor shall conduct a pre-assessment of the various types of fall protection systems to be used and the selected alternatives shall be shown in the Safety Plan.

- (1) In advance of the commencement of any parts of the Works, the Contractor shall carry out such further risk assessment as necessary, including checking the following and recording the results:
 - (a) Work areas and the conditions of adjacent areas;
 - (b) Position, condition and surroundings at each anchorage for separately securing working line, lifeline or nets;
 - (c) Status of access leading to work areas and any anchorages; and,
 - (d) The presence or absence of protrusions where there is a risk of cutting or chafing of working line or lifeline or other fall prevention systems and their position and condition.

2.5.5. Handrails

- (1) The Contractor shall provide handrails at places where there is risk of fall.
- (2) Handrails shall be complete with top-rails, minimum 85 cm high and mid-rails at a height of 35 - 50 cm.
- (3) Top-rails shall be designed to withstand 90 kg. of horizontal force and mid-rails 70 kg. of horizontal force and sufficient uprights shall be provided to sustain these forces.
- (4) Handrails shall be fit for purpose, of rigid and sound condition, securely fixed, without excessive corrosion, deformity or damage of any kind.
- (5) If handrails are temporarily removed for example to permit work to be carried out, the Contractor shall provide alternative safety measures including for example:
 - (a) Displaying appropriate warning signs;
 - (b) Assigning a Spotter to direct non-essential Contractor's Personnel away;
 - (c) Providing alternative fall prevention systems to Contractor's Personnel in that area including for example PFRS or PFAS or safety nets;
 - (d) Prohibiting entry to the working area of any unauthorised Contractor's Personnel; and
 - (e) Handrails shall be restored immediately after the necessity for removal has ended.

2.5.6. Toeboards

- (1) Toeboards shall be provided to all handrails to prevent risk of Falling Objects.
- (2) Toeboards shall be minimum 10cm high from top edge to the level of the working platform, runway or ramp.
- (3) Where material, is piled to such height that a 10cm toeboard does not provide protection, panelling from floor to mid-rail, or to top-rail shall be provided.

2.5.7. Temporary Access Around the Site

(1) Walkways and Passageways

For the purposes of interpretation:

“Walkways” mean pedestrian footpaths at ground level or ramped for the use of Contractor's Personnel.

“Passageways” are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.

(2) Safe Routes

The Contractor shall provide walkways and passageways leading to, within and around the Site and any working areas within the Site.

These shall be designed and constructed to ensure the safe passage of Contractor's Personnel and shall be provided with temporary lighting and effectively maintained at all times.

The Contractor shall display signs clearly indicating the location, intended use and any restrictions and extent with directions so that the Contractor's Personnel can adhere to the routes.

Other construction activities will be prevented from obstructing these routes.

(3) Handrails

At any point where there may be a risk of Contractor's Personnel falling from temporary walkways and passageways, the Contractor shall provide handrails as specified in JSSS 2.5.5 [Handrails].

Alternatively, the Contractor shall provide fall prevention equipment with the same or better functionality.

2.5.8. Preventing Falls by Providing Temporary Working Platforms

(1) The Contractor shall provide a temporary working platform where Contractor's Personnel are carrying out any operation at a height 2 m or more above the base and where there is any risk that Contractor's Personnel may fall.

(2) Temporary Working Platforms shall be constructed from steel tubular scaffolding, system scaffolding or other safe and secure types.

(3) Temporary working platforms shall always have handrails.

(4) If handrails are ever temporarily removed for construction purposes, the Contractor shall take the measures described in JSSS 2.5.5 [Handrails]

2.5.9. Preventing Falls from the Ends and Openings of Working Platforms

(1) The Contractor shall take measures to prevent any falls from ends, edges and around any openings in working platforms.

(2) The Contractor shall provide handrails to all ends, edges and openings.

(3) Alternatively, the Contractor may place covers over any openings, each of sound construction and designed with a bearing capacity of at least twice any likely superimposed load, including any materials, Plant or Contractor's Personnel.

(4) If for any reason it is not possible to provide handrails around working areas, or to provide covers or when covers are temporarily removed for construction purposes, the Contractor shall take the measures described in JSSS 2.5.5 [Handrails]

2.5.10. Measures for Preventing Falls during Excavation Work

The Contractor shall take all necessary measures to prevent falls during excavation work including for example:

(1) Providing fall prevention systems including temporary handrails or barriers, PFRS, PFAS or rope access.

(2) Taking appropriate measures to ensure that earth slopes do not collapse due to the fixing of any fall prevention system or to any contact of the ropes with the slope surfaces.

(3) Providing safe measures to allow Contractor's Personnel to escape from or move around any excavated slope. If it is not possible to take such measures due to the nature of the work, the Contractor shall install main ropes and have Contractor's Personnel use PFRS

or PFAS. In such case, the main ropes shall be anchored securely to prevent them becoming loose or detached.

- (4) Installing handrails where the slope shoulder is used as a walkway or passageway.
- (5) Installing safe crossings over trench excavations at a maximum of 30m intervals and prohibiting all Contractor's Personnel from crossing on the shoring system.
- (6) Providing safe means of access and egress using stairways, ladders, ramps and the like to all excavations such as trench, basement, footing excavations, which are 1.2 m or more in depth, generally requiring no more than 7.5m of lateral travel for Contractor's Personnel.
- (7) Prohibit all Contractor's Personnel from crossing on struts of Earthwork-Support.

2.5.11. Measures for Preventing Falls during Rope Access Work

- (1) The Contractor shall take all necessary measures to prevent falls during rope access work including for example:
 - (a) Installing a lifeline to which the PFAS is attached in addition to the working line to which the PFRS is attached; and
 - (b) Ensuring that the working line, lifeline and harness have sufficient strength and that they have not suffered any damage, abrasion, deformation or corrosion and that the Contractor's Personnel are trained in the use and that they use them properly.
- (2) In relation with the working line, lifeline and harness, the Contractor shall ensure that:
 - (a) The working line and lifeline are securely anchored to independent rigid supports vertically above the work location and cannot be detached;
 - (b) The working line and lifeline are of sufficient length to allow the Contractor's Personnel to move up and down safely;
 - (c) Measures have been taken to prevent cutting or chafing, such as providing covers, where there is a risk that the working line or lifeline may be cut or chafed due to protrusions;
 - (d) That the working line is anchored to two or more independent strong supports; and
 - (e) The positioning device shall be securely connected to the working line with connectors and the connecting devices shall be compatible with the working line used.
- (3) The Contractor shall provide the following particular information in the Safety Plan and shall ensure that all Contractor's Personnel engaged in rope work are fully qualified and informed when doing so, including advising them of:
 - (a) Location of each anchorage used to secure the working line and lifeline;
 - (b) Types and strengths of the working line and lifeline to be used;
 - (c) Lengths of the working line and lifeline to be used;
 - (d) Protrusions where the ropes may be cut or chafed and measures to prevent this; and
 - (e) Measures to prevent Contractor's Personnel engaged in securing the working line and lifeline to the anchorages from falling.
- (4) The Contractor shall also provide measures to prevent the risk of accident to any personnel from Falling Objects; by using covered passageways and PPE.
- (5) The Contractor shall appoint an Operation Leader who shall work with the rope work

team at all times throughout their assignment and direct the work based on the Safety Plan and perform the following duties:

- (a) Inform all Contractor's Personnel of the content of the Method Statement and Safety Plan before commencement of the work;
- (b) Check all equipment to be used on the day prior to commencement of the work, and repair, maintain or replace any equipment immediately if any defect is identified;
- (c) Permit the Contractor's Personnel to commence work only after the measures have been taken to provide all working lines, lifelines, PFRS, PFAS and PPE; and
- (d) Ensure Contractor's Personnel use PFRS, FAS correctly, and, have them fix the PFAS to the life lines.

2.5.12. Further Measures for Contractor's Personnel

The Contractor shall take all necessary further measures to prevent falls during the Works including, for example, taking the following measures before any work commences:

- (1) Conduct safety induction and education courses regarding fall risks for all Contractor's Personnel who shall work on locations and operations where there is a risk of falling.
- (2) Prohibit the unauthorised removal of any fall prevention equipment and educate Contractor's Personnel on the dangers of this action.
- (3) Educate Contractor's Personnel on the proper storage and management of all safety equipment, including for example PFRS, PFAS and PPE.
- (4) Stop the work if there is a risk of bad weather such as strong wind, heavy rain, or snow.

2.5.13. PPE for Fall Prevention

The Contractor shall comply with the following requirements when Contractor's Personnel are subject to fall risks:

(1) The Contractor shall provide PFRS as follows:

- (a) PFRS shall be the same as PFAS specified below but designed to restrict the movement of workers and prevent them from reaching the edge of or any openings in the working area and therefore eliminating the risk of a fall; and
- (b) PPE for PFRS shall comprise of either a Safety Belt or Safety Harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and other devices.

(2) The Contractor shall provide PFAS as follows:

- (a) The PFAS shall be the full harness type and shall comprise of a body harness, connectors, lanyard, deceleration device, lifeline, anchorage, or suitable combination of these;
- (b) The use of a Safety Belt for PFAS is prohibited except where there is any risk of the Contractor's Personnel hitting the lower surface when the full harness type is used and the total fall clearance distance calculated as below, is less than the distance between the point at which a worker would be anchored and any lower level;

The total fall clearance distance for PFAS with a shock-absorbing lanyard is calculated as the total of free fall distance, deceleration distance, D-ring shift, back D-ring height, and safety factor. (Refer to OSHA Technical Manual General Information, Section V: Chapter 4 Fall Protection in Construction, III. Measurements for Assessing Fall Hazards and Controls, A. Total Fall Clearance Distance for PFAS.)

- (c) PFAS shall withstand the total force exerted on the system by the Contractor's Personnel falling, including the weight of the system itself; and
 - (d) For shock absorbers, an appropriate specification and type shall be selected according to the free fall distance calculated from the Contractor's Personnel's working position (height of anchor point, length of lanyard, etc.).
- (3) The PFRS and PFAS shall bear the name of the manufacturer and the date of manufacture and shall be easily visible.
- (4) Inspection of any safety equipment
- Before starting work using PFRS or PFAS, the systems and anchorages to which the systems are to be attached shall be inspected and defective, damaged, worn-out or missing parts or components shall be replaced.

2.5.14. Portable Ladders and Stepladders

For further requirements, refer to JSSS 6.4 [*Walkways, Ladders and Stepladders*]

2.5.15. Work on Roofs and Other Areas

- (1) Where Contractor's Personnel are carrying out work on roof at a height of 2 m or more, PFRS or PFAS shall be used with secure and safe anchorages.
- (2) The Contractor shall, ensure that PFRS or PFAS are inspected before each use and declared safe for use with no defective, damaged, worn-out or missing parts or components.
- (3) Prevention of Fall Risks on Floors, Fragile Roofs and Other Surfaces

When working on, accessing or crossing, floor or roof areas (including uncompleted areas under construction), or fragile roofs such as those covered with slates, tiles or other non-loadbearing coverings or where there is any risk of breaking and or falling through such areas, the Contractor shall provide continuous bearing boards for workers to walk on, with a minimum width of 60 cm or sufficiently wider to provide safe transit and where necessary to spread the bearing load on the surface and avoid penetration. The boards shall be fixed together and secured to the underlying surface by tying with ropes or clips to prevent any movement.

Unless otherwise approved by the HSO, handrails shall be provided to one or both sides.

If the underlying surface or roofing is too fragile for such measures and access is required, the Contractor shall provide an independent scaffolding boarded walkway with handrails both sides, which does not bear upon the existing roof but that is supported independently by a scaffolding structure.

- (4) Demolition or Alteration of Buildings and Structures

When carrying out demolition or alteration of buildings or structures and where there is a risk of Contractor's Personnel falling, the Contractor shall take the following measures:

- (a) Appoint an Operation Leader to be engaged on the work;
- (b) Safely supervise the work; and
- (c) Inform and train Contractor's Personnel engaged in the said work so that they are aware in advance of the work methods and procedures.

2.5.16. Safety Nets

- (1) The Contractor shall provide safety nets when workplaces are more than 7.50m above the lower ground level or water surface level and where the use of another type of fall prevention system is impractical or has been removed.

- (2) Operations shall not be undertaken until the net is in place and has been inspected and tested.
- (3) Nets shall extend 2.5m beyond the edge of the work surface where Contractor's Personnel may be at risk and shall be installed as close under the working surface as practical but in no case more than 7.50m below such work surface.
- (4) Nets shall be hung with sufficient clearance to prevent user's contact with the surfaces or structures below. Such clearances shall be determined by impact load testing.
- (5) The mesh size of nets shall not exceed 15 cm by 15 cm. All new nets shall bear a label of proof test from the manufacturer that they can withstand 23,700 Nm minimum impact resistance. Edge ropes shall provide a minimum breaking strength of 2,270kg.
- (6) Forged steel safety hooks or shackles shall be used to fasten the net to its supports.

2.6 FALLING OBJECTS

2.6.1. General

The Contactor shall take all necessary measures to avoid danger and prevent damage and injury to Contractor's Personnel, Employer's Personnel and any other persons including third parties that are on or adjacent to or in the vicinity of the Site whether connected with the Works or otherwise, and who may be at risk from Falling Objects.

In general, this shall be accomplished by:

- (1) Providing secure temporary barriers to prevent or capture Falling Objects, designed by the Contractor to be of sufficient strength to capture all Falling Objects without perforating and where necessary shall be of an aesthetic design to be approved by the Engineer.
- (2) Providing a safe means of raising and lowering Goods, tools, waste and debris.
- (3) Providing an exclusion zone with temporary barriers and all other necessary measures to prevent persons and traffic from entering areas where Falling Objects could be a risk, including providing pedestrian and traffic diversions.

Exclusion zone shall also be provided where protective mesh sheets or toeboard are not installed or where they are temporarily removed due to the nature of the work

- (4) Using PPE.
- (5) Providing coloured warning tape, barriers and signage warning of "DANGER FALLING OBJECTS" in addition to all other preventive measures.

2.6.2. General Preventive Measures

- (1) All horizontal boarded areas of scaffolding shall be provided with substantial and continuous toeboards to all edges in accordance with JSSS 2.5.6 [Toeboards].
- (2) Mesh sheet (debris net) shall be provided under and around all edges to cover all openings of scaffolding horizontal boarded areas.
- (3) Continuous and secure debris nets shall be provided to vertical sides of all scaffolding or openings of external walls where there is no scaffolding.
- (4) Safe passageways with secure roof and walls shall be provided over entrances and exits.
- (5) Protective canopies, safety fans or projecting shelves shall be provided to the edge of all roofs and to all vertical faces wherever there is a risk particularly over entrance and exits, working areas, walkways, passageways, footpaths and roads, including those on areas beyond the Site boundary.
- (6) Protective roofs shall be provided wherever there is a risk over working areas, passageways, footpaths and roads.
- (7) All protective structures including roofs, canopies, safety fans, projecting shelves over walkways and passageways shall be fit for the purpose intended and provide a secure protective barrier capable of supporting Falling Objects and of sufficient size and dimensions to give full coverage and protection.
- (8) Personnel must be prevented from entering any areas below scaffolding where there is a risk of Falling Objects through the provision of barriers and signage.
- (9) If any protection is temporarily removed then a Spotter shall be assigned to prevent personnel entering the hazard area.
- (10) A Spotter shall also be assigned to direct traffic and pedestrians where diversions are necessary.
- (11) Use and control of mesh sheets to prevent objects from falling shall be as follows;

- (a) Sheet shall have a mesh size of 12 mm or less or a mesh size corresponding to the size of expected Falling Objects;
 - (b) Sheet shall comply with BS 7955, composed of polyester material, reinforced as necessary to withstand the impact load of Falling Objects;
 - (c) Sheets that are damaged or which contain any irregularity shall not be used;
 - (d) If sheet is removed temporarily to suit the work operation, measures must be applied to avoid any risk of accident whilst it is removed and it must be restored immediately after the work operation is completed;
 - (e) Mesh sheets shall be inspected at least once a week and replaced immediately if any damage is found; and
 - (f) If there are any Falling Objects on the mesh sheet, these shall be removed before any work starts. The occurrence shall be reported to and investigated by the HSO to prevent any reoccurrence.
- (12) When the work place is close to public or private areas, roads, footpaths, buildings or houses and the like along or outside the Site boundary and where there is any risk that Falling Objects could endanger the safety of traffic and third parties in such areas, and in addition to the above preventive measures, the Contractor shall take all responsibility, make all necessary arrangements with such third parties and/or all relevant authorities, insure, serve all notices, pay all charges and provide all necessary protective facilities and services including:
- (a) Provision of mesh screens, safety fans, projecting shelves, temporary roofs over walkways, passageways or the like to protect such public or private areas, roads, footpaths, buildings or houses and all property, traffic, pedestrians and other persons thereon; and
 - (b) Safe and efficient diversion of all traffic and persons (in addition to the above or if the above measures cannot be taken) by providing all temporary barriers, signals, lighting and signs and placing a Spotter to direct traffic and pedestrians.

2.6.3. Falling Tools and Equipment

- (1) The Contractor shall take appropriate measures to avoid the risk of injury or damage arising from dropped or falling tools including for example the following:
- (a) Securing tools and materials;
 - (b) Use tool holsters, pouches, lanyards, etc.;
 - (c) Use debris nets, catch platforms or canopies to catch or deflect falling tools; and
 - (d) Use tethered tools, either with built-in connection points placed by the manufacturer or retrofitted connection points and connect tools to a lanyard. Tools can either be connected to a worker through a tool belt, harness or wristband, or anchored to a fixed structure.

2.6.4. Preventive Measures against Dust and Windblown Debris

- (1) For work where there is a risk of ejected or windblown dust and debris, (for example from stone crushing, concrete batching, cutting and grinding operations and the like), the Contractor shall:
- (a) Enclose areas where such operations are taking place and provide protective screens or covers on storage areas;
 - (b) Comply with the provisions of JSSS 4.2.2 [Defects and Repair During Operation] for small tools including equipment condition, use of covers and safety guards and procedures for preventing danger due to tool breakage etc.; and

- (c) Ensure that workers use appropriate PPE such as head, face and eye protection to prevent accident or injury.

(2) In strong winds and storms, the Contractor shall take measures to prevent wind-borne materials, etc. according to JSSS 2.7.3 [Measures for Strong Wind and Storms].

2.6.5. Preventive Measures against Dropping Objects

(1) The Contractor shall prohibit Contractor's Personnel from throwing or dropping objects (e.g. Scaffolding clips), generally and in no event from heights of 3m or above.

(2) The Contractor shall use a crane to bring objects down from heights of 3m or above. Alternatively, the Contractor may provide enclosed chutes to bring down objects and in addition, shall prohibit entry to the chute area or assign a Spotter.

(3) Chutes shall be designed to prevent objects being scattered over the surrounding area.

2.6.6. Prevention of Accumulation of Goods at Height

(1) The Contractor shall prohibit the accumulation and storage of Goods at high levels particularly on scaffolding and in locations where such Goods are at any risk of falling due to the effect of wind, vibration, water or gradient.

(2) Goods shall generally not be stored or allowed to accumulate within 1m of platform or work floor edges and openings or the like.

(3) When temporarily stored at height, Goods shall be restrained by ropes or sheets to prevent them from falling or slipping.

(4) Goods that are likely to scatter or spread, shall be suitably constrained by tying, boxing or bagging.

2.6.5 Working Above or Below Others

(1) As a general and prevailing rule, the Contractor shall prohibit his workers from working concurrently above or below other workers. To achieve this the Contractor shall carefully coordinate the work location, content, timing of the work operations between his assigned workers.

(2) In exceptional circumstances where this is unavoidable due to the nature of the work, the Contractor shall increase the supervision and the safety procedures described in this Section to ensure that the risk from Falling Objects is avoided. Workers shall be given further training, provided with PPE and additional working equipment (e.g. slings for tools, safety nets and/or hanging bags) in order to provide additional protection and a Spotter shall be assigned while such overhead operations are being carried out.

2.6.6 Loose Rock, Boulders and the Like

(1) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to Contractor's Personnel or Contractor's Equipment working below, unless otherwise instructed by the Engineer, the Contractor shall carefully remove such items and if necessary:

(a) Propose further safety measures to the Engineer;

(b) Consult with the Engineer and obtain the Engineer's Instructions for the required further measures to be taken, such as installation of temporary protective barriers; and

(c) Prohibiting Contractor's Personnel from entering the working areas until the above items have been removed or the further measures have been taken.

2.7 ADVERSE WEATHER REQUIREMENTS

2.7.1. Preventive Measures

- (1) Whenever adverse climatic conditions render it too dangerous to continue, the Contractor shall stop affected work at the Site, take preventive measures to ensure the safety of all Contractor's Personnel engaged on that work and inform the Engineer accordingly.
- (2) **Before**, during or after adverse climatic conditions, the Contractor shall:
 - (a) Stop work at heights if there is any danger of falling;
 - (b) Stop work if there is a possibility of that such work may be dangerous due to possibility of electrical shock, slippery conditions or poor visibility and the like during rain, snow or fog, and inform the Engineer accordingly;
 - (c) Inspect the Works and all Goods intended to be incorporated in the Works or used thereon (including any temporary structures) for damage and risk of causing any danger before resuming work. If any damage or risk is found, the Contractor shall immediately take necessary action to prohibit entry in accordance with JSSS 2.3 [*Prohibition of Entry – Dangerous Work*], inform the Engineer accordingly and request his instructions; and
 - (d) Inspect Goods for damage and risk of any danger before resuming work. If any damage and risk is found, use Contractor's Equipment and Temporary Works only after making the necessary repairs **or replacement**.

2.7.2. Measures for Heavy Rain

For heavy rainfall at the Site and the surrounding area, the Contractor shall:

- (1) Take measures to prohibit entry in accordance with JSSS 2.3 [*Prohibition of Entry – Dangerous Work*] at the following locations:
 - (a) Places where landslides could be anticipated;
 - (b) Places where there is a risk of flow of material and equipment and soil runoff; and
 - (c) Places where there is a risk of damage due to flash floods, lake or river flooding.
- (2) Take measures such as evacuation of Contractor's Personnel and Goods to a safe place for preventing them from being submerged, washed away or overturning due to loosening of the ground.
- (3) Take measures to protect temporary facilities from damage arising out of flooding or landslide, such as initially constructing them in safe locations, moving them to a safe place, reinforcing the ground and the facilities, diverting or drawing water from behind the facilities to prevent collapse.

2.7.3. Measures for Strong Wind and Storms

For strong wind and storms at the Site and the surrounding area, the Contractor shall:

- (1) Take measures to prevent capsizing, **overturn** or movement of Contractor's Equipment particularly high equipment such as cranes, pile drivers, **pile drilling rigs and the like**.
Where possible, lower the boom of high equipment and tie to a secure anchor with steel cable to ensure stability and prevent any risk of overturning.
- (2) Always store and/or if necessary evacuate Goods to a sufficient distance away from overhead power and communication lines to prevent damage and injury.
- (3) Take the following measures for scaffolding and working platforms.
 - (a) Remove or furl mesh sheets to reduce wind load;
 - (b) Prevent scaffolding from collapsing or sliding **by dismantling scaffolding or**

- adding or reinforcing wall connectors;
 - (c) **Dismantle or** reinforce scaffolding projecting from buildings by supporting ropes, cables or additional struts and bracing; and
 - (d) Securing Goods on scaffolding, or lowering them to ground level.
- (4) Discontinue work at **a** elevated places.
- (5) Take measures to prevent scattering of Goods, waste and debris.

2.7.4. Measures for Heavy Snow and Ice

For heavy snow or ice at the Site and the surrounding area, the Contractor shall:

- (1) Take fall prevention measures in snow such as setting of poles or red flags to demarcate roads, footpaths and waterways.
- (2) Take fall prevention measures for workers in icy conditions or snow, **by ice or** snow removal on roads, platforms, stairs, ramps, slopes, passages, scaffolding, canopies, safety fans, projecting shelves and the like.
- (3) Remove snow from roofs, canopies and signs, notice boards.
- (4) Prohibit works on scaffolding, working platforms or staging if snow or ice is present except **after** its careful removal.

2.7.5. Measures for Lightning

Where there is any risk that lightning may affect work on or near tall objects, or near explosives or conductive materials, the Contractor shall take the following safety measures:

- (1) The Contractor shall follow the recommendations of OSHA **as described in their Fact Sheet [refer to <https://www.osha.gov/Publications/OSHA3863.pdf>] and** when thunder is heard, or when information is obtained by lightning detector or radio, the Contractor shall ensure that all Contractor's Personnel engaged on outdoor work, immediately cease work and move to a safe shelter namely a substantial building with electricity or plumbing or an enclosed, metal-topped vehicle with windows closed (but not excavators, cranes, tracked or similar types of Contractor's Equipment).
- (2) Contractor's Personnel shall remain in the safe shelter for at least 30 minutes after the last sound of thunder is heard.

2.7.6. Measures for Earthquake and Tsunami

To the extent that time is **available and forewarning is given**, the Contractor shall evacuate workers to **the designated meeting place** in the event of earthquakes or tsunamis when the relevant authority issues a warning for the occurrence or prediction of earthquakes or tsunamis.

2.7.7. Inspection of Temporary Works after Adverse Weather and Earthquake

Following the occurrence of any adverse weather or after any earthquake and before re-commencing any work, the Contractor shall:

- (1) **Perform a visual inspection.**
- (2) **Check all measured values of any instruments to ensure the safety of Temporary Works.**
- (3) **When abnormality is found in instruments, recalibrate or replace them.**
- (4) **If any damage or fault is found in the TW, immediately carry out repair, replacement and/or reinforcement works, as necessary.**
- (5) **Keep the Engineer informed of inspection and monitoring results.**

2.8 FIRE PREVENTION

2.8.1. Fire Prevention and Firefighting Facilities

Unless otherwise specified in the Particular Safety Specification, the Contractor shall take measures and provide facilities for fire prevention and fire-fighting and shall ensure that such measures are readily available and at all times at the Site and at any offices and accommodation for Contractor's and Employer's Personnel.

(1) Fire Response Plan:

The Contractor shall:

- (a) Prepare a Fire Response Plan detailing the proposed fire prevention and fire-fighting measures and facilities and include this as a part of the Safety Plan;
- (b) Designate a person (or persons) responsible for fire prevention, fire-fighting and also for evacuation in the event of a fire;
- (c) Prepare a firefighting training plan as a part of the fire prevention and fire-fighting plan; and
- (d) Carry out all training and keep records of such training in accordance with JSSS 1.20.5 [*Records of Education and Training*].

(2) Fire Response Measures and Facilities:

The Contractor shall:

- (a) Provide fire hoses, hose-reels, fire hydrants and similar equipment, where considered necessary by the HSO;
- (b) Ensure that an adequate temporary water supply is available as and when required;
- (c) Provide fire extinguishers and fire blankets according to the area and purpose of use, such as for ordinary fires, oil fires, electric fires and the like;

Fire extinguishers shall be regularly inspected, refilled, serviced and certified as such by a qualified and independent safety company approved by the Engineer; and
- (d) Prohibit smoking anywhere on the Site other than designated smoking areas, and implement effective fire prevention measures by placing buckets filled with water or sand in smoking and other dangerous areas.

2.8.2. Train Contractors Personnel and ensure that a team or teams is available to respond in the event of a fire and in advance or in place of attendance by any public firefighting service.

2.8.3. Measures for Evacuation

In the event of a fire, the Contractor shall facilitate evacuation by:

- (1) Creating an evacuation route map if necessary and post this in easy-to-see places.
- (2) Display the evacuation routes as necessary at all work places.
- (3) Install multiple evacuation routes and staircases for buildings with 2 or more floors and a capacity of 30 people or more, or in the shafts and for underground work.
- (4) Establish a communication method to inform the Contractor's Personnel, Employer's Personnel and any other persons that are on the Site so that they are aware of danger and that they must evacuate due to a fire.

2.8.4. Management of Flammable and Combustible Materials

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS and

unless otherwise approved by the Engineer, the Contractor shall take necessary measures for fire prevention complying with the technical requirements specified in OSHA Subpart F, Fire Protection and Prevention 1926. 152 for the usage and storage of flammable and combustible materials or 1926. 153 Liquefied petroleum gas (LPG) or other relevant OSHA standards for other flammable or combustible materials and gases, including for example: gasoline, kerosene, light oil, heavy oil, creosote oil, gear oil, cylinder oil, and other lubricating oils and organic solvents such as acetone, toluene, LPG and other gases including oxygen, acetylene etc. (hereinafter collectively referred to as “flammable and combustible materials” in this Section).

In addition, the Contractor shall:

- (1) Appoint a person who is appropriately qualified, skilled and experienced in handling flammable and combustible materials, to be responsible for the storage and handling flammable and combustible materials and notify the name of such person to the Engineer.
- (2) Store flammable and combustible materials in a purpose-built building or compound, fit for the intended purpose, well ventilated and secure, and protecting the stored materials from direct sunlight and extreme heat.
- (3) Take measures to prohibit entry to unauthorised personnel and display signage prohibiting the use of flame.
- (4) Determine handling methods of flammable and combustible materials, which shall be notified to the Engineer, and ensure Contractor's Personnel are fully aware of the methods.
- (5) Provide fire prevention and firefighting facilities appropriate to the stored flammable and combustible materials.

2.8.5. Fire Prevention Measures for Electric and Gas Welding and Gas Cutting

The Contractor shall refer to and comply with JSSS 6.8 [*Electric and Gas Welding and Cutting*] for the fire prevention requirements for electric and gas welding and cutting works.

2.9 PPE AND FIRST AID

2.9.1. PPE

(1) General

- (a) Further to the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE] the Contractor shall provide all necessary and required PPE free of any charge, to all Contractor's Personnel, ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;
- (b) PPE shall comply with the additional requirements of this Section;
- (c) The Contractor shall ensure as a minimum and mandatory requirement, that all Contractor's Personnel are provided with the following PPE and the Contractor shall make sure that all Contractor's Personnel wear or use such PPE as appropriate whenever they are on the Site:
 - (i) Head Protection; and
 - (ii) Protective Footwear.
- (d) The following additional PPE shall be provided whenever required by the working environment:
 - (i) Eye and Face Protection;
 - (ii) Ear Protection;
 - (iii) Respiratory Protection;
 - (iv) PPE for PFRS and PFAS (Safety Harnesses, Safety Belts and the like);
 - (v) Gloves; and
 - (vi) Body Protection.
- (e) The particular requirements for PPE are not repeated in each Section of JSSS but appropriate PPE must always be provided by the Contractor.

(2) Additional Inspection, Testing and Maintenance

Further to the requirements of JSSS 1.35.1 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE] and unless otherwise required by the manufacturer or approved by the Engineer:

- (a) Frequently used PPE shall be inspected, tested and maintained at least once a month; and
- (b) Occasionally used PPE shall be inspected before every use and tested and maintained at least once every three months.

The HSO shall also conduct regular checks to ascertain any requirements for the following:

- (a) Inventory and reorder supplies;
- (b) Follow up with the manufacturer on maintenance issues; and
- (c) Schedule training and retraining.

(3) PPE Signage Requirements

- (a) The Contractor shall display signage at specific places at the Site where the wearing of PPE is mandatory;
- (b) Such signage shall include for example:

“Head Protection Must be Worn”

“Eye* Protection Must be Worn”

(* face, ear or other)

(4) Head Protection

Head protection shall protect workers’ heads and necks against injury from falling or flying objects, risk of head bumping, hair getting tangled in machinery, chemical drips or splash, climate or temperature, reduce the impact from tripping or falling and protect against electric shocks.

Head protection shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.1: Applicable Standards for Head Protection

	Standard	Title of Standard
1	JIS T8131	Industrial Safety Helmets
2	ANSI Z89.1	Industrial Head Protection
3	BS EN 397	Industrial Safety Helmets

(5) Protective Footwear

Protective footwear shall protect against foot injury due to crushing by superimposed loads, impact injuries from dropped or Falling Objects, foot injuries from treading on sharp penetrating objects, injuries from electric shock and also shall increase adhesion preventing workers’ from slipping and falling.

Protective Footwear shall have a variety of sole patterns and materials to help prevent slips in different conditions, including oil or chemical-resistant soles. It can also be anti-static, electrically insulating or thermally insulating, appropriate footwear shall be selected for the risks identified

Protective footwear shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.2: Applicable Standards for Protective Footwear

	Standard	Title of Standard
1	JIS T8101	Protective footwear
2	ASTM F2413	Standard Specification for Performance Requirements for Protective (Safety) Toe Cap Footwear
3	BS EN ISO 20346 BS EN ISO 20349	Personal protective equipment - Protective footwear Personal protective equipment. Footwear protecting against risks in foundries and welding

(6) Eye and Face Protection

Eye and face protection shall protect workers' eyes and face from harmful materials (for example dust, chemicals, liquid splash, flying objects, molten metal, chemicals, gas and steam, extreme light, flashes and hazardous rays, dirt and debris, etc.

Eye and face protection can include safety spectacles, goggles, face masks, face shields, visors and the like. Selected protection shall have the right combination of /impact/dust/splash/molten metal eye and face protection for the task and shall be selected for the risks identified.

Eye and face protection shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.3: Applicable Standards for Eye and Face Protection

	Standard	Title of Standard
1	JIS T 8141 JIS T 8142	Personal eye protectors for optical radiations Personal face protectors for welding
2	ANSI Z87.1	American National Standard for Occupational and Educational Personal Eye and Face Protection Devices
3	BS EN 166 BS EN ISO 4007	Personal eye protection. Specifications Personal protective equipment. Eye and face protection. Vocabulary

(7) Ear Protection

Ear protection shall protect workers' hearing against injury from continuous, loud or Intense Noise by providing soundproofing.

The Contractor shall ensure that workers are still able to receive and immediately react to oral instructions and danger warnings when wearing ear protection.

Ear **protection** shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.4: Applicable Standards for Ear Protection

	Standard	Title of Standard
1	JIS T 8161	Ear protectors
2	ANSI/ASA S12.6	Methods for Measuring the Real-Ear Attenuation of Hearing Protectors
3	BS EN ISO 4869-1 BS EN ISO 4869-2 BS EN ISO 4869-3	Acoustics. Hearing protectors. Subjective method for the measurement of sound attenuation Acoustics. Hearing protectors. Estimation of effective A-weighted sound pressure levels when hearing protectors are worn Acoustics. Hearing protectors. Measurement of insertion loss of ear-muff type protectors

	BS EN ISO 4869-4	<p>using an acoustic test fixture</p> <p>Acoustics. Hearing protectors. Measurement of effective sound pressure levels for level-dependent sound-restoration ear muffs</p>
--	------------------	--

(8) Respiratory Protection Equipment (RPE)

RPE shall protect workers' airways, lungs and related bodily systems against damage and injury from Harmful Substances or from oxygen-deficient atmospheres when other controls are either not possible or insufficient on their own.

Selection and use of RPE shall be in accordance with HSE publication HSG53 (Fourth edition, published 2013), (<https://www.hse.gov.uk/pubns/priced/hsg53.pdf>), RPE must be both adequate and suitable, whereby:

(a) Adequate: – Is right for the hazard and reduces exposure to the level required to protect the wearer's health; and

(b) Suitable – Is right for the wearer, task and environment, such that the wearer can work freely and without additional risks due to the RPE.

RPE shall fit properly and filters shall be of the correct type as each filter is effective for only a limited range of substances. Filters have only a limited life and shall be changed regularly to maintain performance.

When replacing parts such as filters, use only manufacturers original parts, ensure that the correct type is selected and fit in accordance with the manufacturer's instructions.

Where there is a shortage of oxygen or any danger of losing consciousness due to exposure to high levels of harmful fumes, the Contractor shall only use breathing apparatus, never a filtering cartridge.

RPE shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.5: Applicable Standards for RPE

	Standard	Title of Standard
1	JIS T 8151 JIS T 8157	Particulate respirator Powered air purifying respirator
2	BS EN 149: 2001+A1: 2009 BS EN 14593-1: 2018	Respiratory protective devices. Filtering half masks to protect against particles. Respiratory protective devices. Compressed air line breathing devices with demand valve. Devices with a full-face mask.
3	ANSI Z88.2-2015	Practices for Respiratory Protection

(9) Safety Harnesses and Safety Belts

PPE for PFRS shall prevent the risk of workers falling from a height or sliding down slopes.

PPE for PFAS shall arrest a worker in a fall from a height or sliding down slopes.

For further requirements on PPE for PFRS and PFAS, refer to JSSS 2.5.13 [PPE for Fall Prevention].

PPE for PFRS and PFAS shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.6: Applicable Standards for PPE for PFRS and PFAS

	Standard	Title of Standard
1	JIS T8165	Personal fall-arrest systems
2	ANSI Z359.0 to Z359.16	ANSI/ASSE Z359 Fall Protection and Arrest Standards Package
3	BS EN 361	Personal protective equipment against falls from a height. Full body harnesses

(10) Gloves

Gloves shall protect workers' hands from electric shocks, sparks during welding and fusing work, molten metal, heated metal, etc., and shall reduce the vibrations transmitted to workers' hands by tools, machines, etc.

Gloves shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.7: Applicable Standards for Gloves

	Standard	Title of Standard
1	JIS T 8113 JIS T 8114	Protective Leather Gloves for Welders Vibration isolation gloves
2	ASTM D120 ANSI S2.73	Standard Specification for Rubber Insulating Gloves Mechanical vibration and shock - Hand-arm vibration
3	BS EN 60903 BS EN 12477	Live working. Gloves of insulating material Protective gloves for welders

(11) Body Protection

Contractor's Personnel shall be supplied with and shall wear suitable body protection appropriate for the working environment.

Risks such as from chemical or metal splash, spray from pressure leaks or spray guns, contaminated dust, impact or penetration, entanglement of own clothing, hot and extremely cold work; and the like shall be considered and avoided through the provision where necessary of special protective clothing. This may include for example flame-retardant, anti-static, chain mail, chemically impermeable, and high-visibility clothing and the like.

Body Protection shall be selected and provided for the risks to be identified.

Body Protection shall be kept reasonably clean and shall be replaced when worn out or damaged.

2.9.2. First-Aid

(1) General

The Contractor shall ensure that trained personal and adequate first-aid equipment and supplies shall be readily available at the Site. First-aid kits shall be stored at selected locations on the Site where they are most likely to be needed; they must be accessible with the minimum of delay.

(2) Training

A representative number of Contractor's Personnel selected by the HSO shall be trained in first aid (including cardiopulmonary resuscitation) to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(3) First Aid Kits

(a) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for first aid complying with the technical requirements specified in OSHA, 1910 Subpart K Medical and First Aid of Part 1910 - Occupational Safety and Health Standards".

(b) First Aid kits shall comply with ANSI Z308.1 and unless otherwise specified in the Particular Safety Specification, Class A first aid kits shall be provided at the working area(s) on Site and one Class B safety kit shall be provide at the sick bay.

(c) All persons working at the site need to be aware of their purpose and location. Adequate signage shall be provided at the Site to show the location of the first aid kit(s).

(d) Each first-aid kit shall contain the specified items and quantities listed in ANSI Z308 as follows:

- (i) Adhesive Bandage;
- (i) Adhesive Tape;
- (ii) Antibiotic Application;
- (iii) Antiseptic;
- (iv) Breathing Barrier;
- (v) Burn Dressing (gel soaked);
- (vi) Burn Treatment;
- (vii) Cold Pack;
- (viii) Eye Covering, with means of attachment;
- (ix) Eye/Skin Wash;
- (x) First Aid Guide;
- (xi) Hand Sanitizer;
- (xii) Medical Exam Gloves;
- (xiii) Roller Bandage;
- (xiv) Scissors;
- (xv) Splint;
- (xvi) Sterile pad;

- (xvii) Tourniquet;
 - (xviii) Trauma pad; and
 - (xix) Triangular Bandage.
- (e) Each first-aid kit shall contain any additional items and quantities that may be necessary according to the requirements and location of the Works.
- (f) The Contractor shall ensure that the following additional items are provided with each first aid kit:
- (i) A list of emergency phone numbers;
 - (ii) Flashlight and extra batteries; and
 - (iii) Bottled drinking water.
- (g) To prevent disease transmission when giving first-aid, first-aid kits shall contain PPE such as disposable gloves, CPR breathing barriers, eye protection and like supplies.
- (h) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and unless otherwise required by the manufacturer or approved by the Engineer, first aid kits shall be inspected tested and maintained at least once a month.

The HSO shall also conduct regular checks to ascertain any requirements for the following:

- (i) Inventory and reorder supplies;
- (ii) Follow up with the manufacturer on maintenance issues; and
- (iii) Schedule training and retraining.

(4) Automated External Defibrillator – AED

- (a) Unless otherwise specified in the Particular Safety Specification, and amongst any other first-aid equipment to be provided by the Contractor, the Contractor shall provide at least one AED at the Site;
- (b) The AED shall be stored at a selected location on the Site where it is most likely to be needed and it must be accessible with the minimum of delay;
- (c) All personnel at the site shall be kept informed of the purpose and location and the Contractor shall train a sufficient number of personnel in its use;
- (d) Adequate signage shall be provided at the Site to show the location of the AED together with instructions for its use;
- (e) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and unless otherwise required by the manufacturer or approved by the Engineer, AED's shall be inspected and maintained at least once per month as follows:
 - (i) Visually inspect looking for dirt, damage, or contamination;
 - (ii) Inspect electrodes ensuring that they are unexpired and in their original, sealed packages, two sets shall be provided;
 - (iii) Test primary battery;
 - (iv) Make sure a backup battery is stored with the AED and test backup battery; and
 - (v) Keep the AED charged and check it is maintaining a charge.

The HSO shall also conduct regular checks to ascertain any requirements for the following:

- (i) Inventory and reorder supplies;
- (ii) Follow up with the manufacturer on maintenance issues; and
- (iii) Schedule training and retraining.

(f) The AED shall ensure a level of performance that is equal to or greater than the following standards:

Table 2.9.7: Applicable Standards for AED

	Standard	Title of Standard
1	BS EN 60601-2-4:2011+A1:2019	Medical electrical equipment, Part 2-4: Particular requirements for the safety of cardiac defibrillators

検討経緯書

3 Existing Underground, Concealed and Overhead Services

JSSS in Japanese (Provisional Final Draft JR0 9/10)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>3 地下埋設物・架空線等上空施設一般</p> <p>3.1 地下埋設物一般</p> <p>当該工事が既存の地下埋設物の保全、切り回し、撤去等を必要とする場合、又は地下埋設物へ影響を与える可能性のある場合、発注者及びエンジニアは地下埋設物の管理者からかかる工事実施に関する合意を取得するものとする。</p> <p>請負者はかかる合意の下、実際の施工にあたり同管理者と協議し、必要な許可・合意を取得しなければならない。その際、発注者及びエンジニアは協議、許可・合意の取得に必要な協力を行うものとする。</p> <p>請負者は地下埋設物の試掘、保全、切り回し、撤去等にかかる仕様、手続きに関して、本契約で別に定めるところがあれば、これに従わなければならない。</p>	<p>3. Underground Installations and Overhead Lines</p> <p>3.1 Underground Installations</p> <p>When the work concerned requires protecting, relocating and removal of existing underground installations, or there is a possibility of affecting underground installations, the Employer and the Engineer shall obtain agreement from the administrator of the installations regarding the work to be done.</p> <p>The Contractor shall, under such agreement, consult with the administrator and obtain the necessary permit and agreement prior to the start of the work.</p> <p>At that time, the Employer and the Engineer shall cooperate with the Contractor as necessary for consultation and obtaining permission / agreement.</p> <p>The Contractor shall comply with the specification and procedure related to the exploratory excavation, protecting, relocating and removal of existing underground installations specified in the Contract, if any.</p>	
<p>3.1.1 事前準備と作業計画</p> <p>(1) 地下埋設物の存在、埋設位置について契約において確認できる場合、請負者は施工に先立ち、次の事前準備を行わなければならない。</p> <p>(a) 当該の地下埋設物にかかる試掘、保全、切り回し、撤去にかかる措置、工程を記載した作業計画書を作成し、エンジニアへ提出すること。</p> <p>(b) 上記作業計画書に基づき、作業の実施に先立ち埋設物管理者と協議し、合意を取り付けること。</p> <p>(c) 試掘の実施後、試掘結果(埋設物種類、位置、深さ、規格、構造など)に基づき、必要に応じて作業計画書を見直し、エンジニアへ再提出するとともに、埋設物管理者との協議を行い、許可を得ること。</p> <p>(2) 地下埋設物の存在、埋設位置について契約において確認ができないがその存在が想定される場合、請負者は施工に先立ち、次の事前確認と準備を行わなければならない。</p> <p>(a) 想定される地下埋設物の試掘のための概略の提案書を作成し、エンジニアへ提出すること。</p> <p>(b) 上記(a)に記載の提案に関するエンジニアからの指示に基づき、想定される地下埋設物の種類、試掘箇所、試掘方法、試掘数量、試掘の留意事項を示した作業計画書を作成し、エンジニアに提出した上で試掘を実施すること。</p> <p>(c) 上記作業計画書に基づき、試掘作業の実施に先立つ埋設物管理者の許可の取り付けを行うこと。</p>	<p>3.1.1 Preparation and Work Planning</p> <p>(1) When the existence and location of underground installations can be confirmed in the Contract, the Contractor shall make the following preparation prior to his construction work.</p> <p>(a) Prepare particular Method Statement describing the measures for protecting, relocating and removal of the underground installations, and submit it to the Engineer.</p> <p>(b) Prior to the implementation of the work, consult with the administrator of the installation and obtain agreement based on the above particular Method Statement.</p> <p>(c) After conducting exploratory excavation, based on the exploratory results of type, location, depth, standards, structure, etc. of the underground installation, review and revise the particular Method Statement as necessary and resubmit it to the Engineer.</p> <p>(2) When the existence and location of underground installations cannot be confirmed in the Contract, however, such existence is predicted, the Contractor shall perform the following confirmation and preparation prior to the commencement of the construction work.</p> <p>(a) Prepare brief proposal for exploratory excavation of the assumed underground installations and submit it to the Engineer.</p> <p>(b) Based on the instructions from the Engineer regarding the proposal described in (a) above, create particular Method Statement showing the type and location of assumed underground installation, method, quantity and specifications of exploratory excavation, then implement the exploratory excavation after obtaining the approval of the Engineer.</p> <p>(c) Consult with the administrator of the underground installations with the Method Statement prior to the exploratory excavation and obtain agreement to the work.</p> <p>(d) After conducting the exploratory excavation, review the Method Statement based on the exploratory excavation results regarding type of underground installation, location, depth,</p>	

JSSS in Japanese (Provisional Final Draft JR0 9/10)	JSSS in English R0 (Provisional Final Draft 9/9) translated by NK	Comment / Revised by M D
<p>(d) 試掘の実施後、試掘結果(埋設物の種類、位置、深さ、規格、構造など)に基づき作業計画書を必要に応じて見直し、エンジニアへ再提出するとともに、埋設物管理者との協議を行うこと。</p> <p>(3) 請負者は、機械による試掘で地下埋設物へ被害をもたらさないことが確実である場合以外は、人力により試掘を行わなければならないことを前提に、作業の計画を立てなければならない。</p>	<p>standard, structure, etc., resubmit it to the Engineer, and discuss with the administrator of the underground installation.</p> <p>(3) The Contractor shall make the Method Statement based on the execution of exploratory excavation by hand other than the case that it can be conformed the excavation with machines will not damage the installations.</p>	
<p>3.1.2 現場管理</p> <p>請負者は、埋設物が存在する場所で施工するときは、次の措置を講じなければならない。また本仕様書 2.2 [工事現場周辺の危害防止]に基づき、道路交通及び歩行者の安全を確保する措置を講じなければならない。</p> <p>(1) 作業計画書に従い作業を行い、埋設物の破損による感電事故、水道・下水・ガスの噴出等の事故を防止すること。また、そのために必要な埋設物の移設、補強、防護を作業計画書に従い実施すること。</p> <p>(e) 掘削断面内に移設できない埋設物がある場合は、試掘段階から本体工事の埋戻し・路面復旧の段階までの間、埋設物を防護・維持管理し、管理者から点検の指示がある場合にはそれに従うこと。</p> <p>(f) 埋設物に近接して掘削を行う場合には、周囲の地盤のゆるみ、沈下等に十分注意するとともに、埋設物の補強、移設等の埋設物の保安を行うこと。</p> <p>(g) 埋設物の周辺の掘削、埋設物の移設、補強、防護の作業については、埋設物の管理者の指示又は立会いの下で行うこと。</p> <p>(h) 可燃性物質の輸送管(ガス導管)等の埋設物の付近において、溶接機、切断機等火気を伴う機械器具を使用しないこと。</p> <p>(i) 埋設充電電路の周辺で掘削作業を行う場合で感電のおそれがあるときは、保護具の着用、絶縁工具の使用等の必要な措置を講じること。</p> <p>(j) 埋設物の周辺で掘削の作業を行う場合において、掘削機械及び積込機械の使用による埋設物の損壊により作業者に危険を及ぼすおそれのあるときは、これらの機械を使用してはならない。</p>	<p>3.1.2 Site Management</p> <p>The Contractor shall take the following measures when the work shall be executed at a place where underground installations exist.</p> <p>In addition, the Contractor shall take measures to ensure the safety of road traffic and pedestrians complying with JSSS 2.2 [Preventing Hazards Around Construction Sites].</p> <p>(1) Implement works in accordance with the particular Method Statement to prevent accident such as electric shock, blowout of water, sewage or gas with the damage of underground installations by providing necessary protection, reinforcement and relocation of the underground installations.</p> <p>(2) When there are underground installations that cannot be relocated within the excavation section, protect and maintain the installations from the exploratory excavation stage to the backfilling and road surface restoration stage of the permanent work, and follow the instructions regarding checking by the administrator of the underground installations.</p> <p>(3) When excavating close to underground installations, pay special attention not to loosen and make subsidence of the surrounding ground, and secure the installations by reinforcing and relocating.</p> <p>(4) Perform excavation near the underground installations, and its relocation and protection work under the direction or presence of the administrator of the installations.</p> <p>(5) Prohibit to use equipment with fire such as welding machines and gas cutting machines, in the vicinity of underground installations of pipelines (gas conduits) for combustible substances.</p> <p>(6) When there is risk of electric shock in excavating work near the charged circuit, make sure that the Contractor's personnel wear PPE to prevent electric shock and use insulated equipment as necessary.</p> <p>(7) Not excavate with machines of excavator and loader in the ground surrounding installations when there is risk to the workers by the damage to the underground installations by the machines.</p>

JSSS in Japanese (Provisional Final Draft JR0 9/10)	JSSS in English R0 (Provisional Final Draft 9/13) translated by NK	Comment / Revised by MD
<p>(d) 二次感電被害防止のため、絶縁用保護具・救出方法についての教育を受けたもの以外には、感電状況にある者の救出をさせてはならない。</p> <p>(e) 法感電による心肺停止の被災者には、直ちに心肺蘇生や自動体外式除細動器(AED)の使用等の一次救命処置を施すこと。</p>	<p>(c) If the operator of the construction equipment in contact with or in close proximity to the overhead line does not get an electric shock, the operator shall immediately move the equipment away from the overhead line. If it is not possible to move the equipment away, have the operator wait in the cabin until the overhead line is de-energized.</p> <p>(d) To prevent secondary electric shock accident, only those who have received education on protective equipment for insulation and rescue methods shall be allowed to rescue the victims who are in an electric shock situation.</p> <p>(e) Immediately perform primary lifesaving measures such as cardiopulmonary resuscitation or use of Automatic External Defibrillator (AED) for victims of cardiopulmonary arrest due to an electric shock.</p>	

JICA Standard Safety Specification Preparation Study
3 UNDERGROUND AND CONCEALED SERVICES (English R2 for Issue 3)

2019.9.10 Japanese Final
2020.1.31 NK Draft Eng. R1
2019.12.4 NK Issue 2
2020.2.25 NK Draft Eng. R2

JSSS in Japanese (2019/9/10)	JSSS in English Issue 2 (2019/12/4)	JICA Comments (2019/12/19) JC: JICA Comments in blue letters on sentence underlined NK: NK actions	JSSS in English R2 for Issue 3 (2020/2/25) Sentences marked yellow color are added or modified ones from the last version.
	<p><i>NKMD: there is still a risk of hitting existing services which are concealed in walls particularly <u>in renovation projects</u>. This is not covered by the draft of JSSS at present and therefore I have changed the description of this section to include concealed services also. The same principles apply and this is a significant cause of accident.</i></p>	<p>JC: Renovation project is seldom done by ODA. Minutes of meeting of 2020/1/17 to 27: (MM1/17)</p> <ol style="list-style-type: none"> 3.1 Existing Underground and Concealed Services → NK explained there are renovation projects in ODA such as airport, sewage projects where pipes, cables, etc. are owned by the Employer. Also, the draft of JSSS in Japanese does not cover the safety requirements for the existing concealed Services. This will be left as it is for now. 3.1.1 (3) to (6) “Bidding Document” → These (3) to (6) will be described in User Guide. 3.1.3 (14) to (15) “marker tiles”, “as built drawings” (JICA commented to delete.) → NK explained these requirements are for future safety and recommend that they are left as they are. Chapter 3 → NK will modify Chapter 3 taking into consideration the JICA comments and requested JICA to review next draft of Chapter 3. JICA agreed. 	
<p>3 地下埋設物・架空線等上空施設一般</p> <p>3.1 地下埋設物一般</p> <p>当該工事が既存の地下埋設物の保全、切り回し、撤去等を必要とする場合、又は地下埋設物へ影響を与える可能性のある場合、発注者及びエンジニアは地下埋設物の管理者からかかる工事実施に関する合意を取得するものとする。</p> <p>請負者はかかる合意の下、実際の施工にあたり同管理者と協議し、必要な許可・合意を取得しなければならない。その際、発注者及びエンジニアは協議、許可・合意の取得に必要な協力を行うものとする。</p> <p>請負者は地下埋設物の試掘、保全、切り回し、撤去等にかかる仕様、手続きに関して、本契約で別に定めるところがあれば、これに従わなければならない。→E3.1.1 (5)ほか規定済み(但し、英文では埋設物の所有者別に対応を分けているので内容、表現は違う部分が多い。)</p> <p>3.1.1 事前準備と作業計画</p> <p>(1) 地下埋設物の存在、埋設位置について契約において確認できる場合、請負者は施工に先立ち、次の事前準備を行わなければならない。→E3.1.2 (1)</p>	<p>3.1. UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1. Generally</p> <ol style="list-style-type: none"> This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground <u>or Concealed Services</u>”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing. If the Contractor is required to perform any work in connection with the Underground or Concealed Services, full details of such work shall be given by the Employer in the Bidding Documents (Technical Specification and Drawings). If any Underground or Concealed Services are the property of the Employer, this shall be stated clearly and the route, size, purpose of each shall be described and shown. If services are to remain live and functional throughout the Time for Completion of the Works or if 	<p>3.1. UNDERGROUND AND CONCEALED SERVICES</p> <p>JC: Deleted. MM1/17: 3 This will be left as it is for now. NK: The concealed services will be left as it is as they are expected in the ODA projects.</p> <p>3.1.1. General</p> <ol style="list-style-type: none"> This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing. If applicable, the Contractor is required to perform the work in connection with the Underground or Concealed Services, in accordance with the full details of such work specified in the Contract (Technical Specification and Drawings). <p>JC: (2) is modified because it is guidance the Employer. NK: JICA’s draft is modified as (2) in right.</p>	<p>3.1. UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1.General</p> <ol style="list-style-type: none"> This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing. The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter. In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third party (called as “the owner of Underground or Concealed Services”), the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.

<p>に規定済み(英文は埋設物の存在が分かっていることを前提としている。)</p> <p>(a) 当該の地下埋設物にかかる試掘、保全、切り回し、撤去にかかる措置、工程を記載した作業計画書を作成し、エンジニアへ提出すること。→E3.1.2 (1)(a)に規定済み(英文ではエンジニアへの提出は規定していない。)</p> <p>(b) 上記作業計画書に基づき、作業の実施に先立ち埋設物管理者と協議し、合意を取り付けること。→E3.1.2 (1)(b)に規定済み</p> <p>(c) 試掘の実施後、試掘結果(埋設物種類、位置、深さ、規格、構造など)に基づき、必要に応じて作業計画書を見直し、エンジニアへ再提出するとともに、埋設物管理者との協議を行い、許可を得ること。→E3.1.2 (1)(e)に規定済み(英文では赤字部分は規定していない。)</p> <p>(d) 地下埋設物の存在、埋設位置について契約において確認ができないがその存在が想定される場合、請負者は施工に先立ち、次の事前確認と準備を行わなければならない。→規定なし(埋設物の存在が確認できない場合については規定していない。)(2)(a)~(d)→英文に追加すべきと考える。)</p> <p>(e) 想定される地下埋設物の試掘のための概略の提案書を作成し、エンジニアへ提出すること。→規定なし</p> <p>(f) 上記(a)に記述の提案に関するエンジニアからの指示に基づき、想定される地下埋設物の種類、試掘箇所、試掘方法、試掘数量、試掘の留意事項を示した作業計画書を作成し、エンジニアに提出した上で試掘を実施すること。→E3.1.2 (1)(e)に規定済み</p> <p>(g) 上記作業計画書に基づき、試掘作業の実施に先立つ埋設物管理者の許可の取り付けを行うこと。→規定なし</p> <p>(h) 試掘の実施後、試掘結果(埋設物の種類、位置、深さ、規格、構造など)に基づき作業計画書を必要に応じて見直し、エンジニアへ再提出するとともに、埋設物管理者との協議を行うこと。→規定なし</p> <p>(2) 請負者は、機械による試掘で地下埋設物へ被害をもたらさないことが確実である場合以外は、人力により試掘を行わなければならないことを前提に、作業の計画を立てなければならない。→人力掘削については E3.1.2 (1)(e)で触れている。</p>	<p>they are to be removed and if so by whom shall also be described.</p> <p>(4) If any of these Underground or Concealed Services are the property of a legally constituted public authority or a third party, this shall be stated clearly and the owner, route, size, purpose of each shall be described and shown. ---	---	---	---

3.1.2 現場管理

請負者は、埋設物が存在する場所で施工するときは、次の措置を講じなければならない。また本仕様書 2.2 [工事現場周辺の危害防止]に基づき、道路交通及び歩行者の安全を確保する措置を講じなければならない。→E3.1.2 (5)に規定済み(工事中の交通安全確保に関して。)

- (1) 作業計画書に従い作業を行い、埋設物の破損による感電事故、水道・下水・ガスの噴出等の事故を防止すること。また、そのために必要な埋設物の移設、補強、防護を作業計画書に従い実施すること。→E3.1.3 (1)に規定済み(事故防止に関しては、3.1.3の複数項目に異なる角度からの留意点を挙げている。)
- (2) 掘削断面内に移設できない埋設物がある場合は、試験段階から本体工事の埋戻し・路面復旧の段階までの間、埋設物を防護・維持管理し、管理者から点検の指示がある場合にはそれに従うこと。→E3.1.3 (1)
- (3) 埋設物に近接して掘削を行う場合には、周囲の地盤のゆるみ、沈下等に十分注意するとともに、埋設物の補強、移設等の埋設物の保安を行うこと。→E3.1.3 (4)に規定済み
- (4) 埋設物の周辺の掘削、埋設物の移設、補強、防護の作業については、埋設物の管理者の指示又は立会いの下で行うこと。→E3.1.2 (1)(e)に規定済み
- (5) 可燃性物質の輸送管(ガス導管)等の埋設物の付近において、溶接機、切断機等火気を伴う機械器具を使用しないこと。→E3.1.3 (9)に規定済み
- (6) 埋設充電電路の周辺で掘削作業を行う場合で感電のおそれがあるときは、保護具の着用、絶縁工具の使用等の必要な措置を講じること。→E3.1.3 (10)及び 3.1.4 (1)-(6)(作業員への指示事項として)に規定済み
- (7) 埋設物の周辺で掘削の作業を行う場合において、掘削機械及び積込機械の使用による埋設物の損壊により作業者に危険を及ぼすおそれのあるときは、これらの機械を使用してはならない。→E3.1.3 (11)に規定済み

3.1.2. Preparation and Work Planning

- (1) Where Underground or Concealed Services are the property of a legally constituted public authority or a third party and the Contractor is required under the Contract to perform work thereon or to locate and protect same, the Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like, all as specified in the Bidding Documents:
 - (a) Prepare a detailed Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner's representative of the public authority or third party, emergency call list and communication system;
 - (b) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner's representative of the public authority or third party, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of the required works, requirements and procedures of the owner;
 - (c) Obtain particular information from the owner's representative on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and
 - (d) Provide and use cable avoidance tools (CATs) and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.
 - (e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner's representative of the public authority or third party and the

3.1.2. Preparation and Work Planning

JC: 試掘の概念がない? There seems that "trial excavation" is not considered in this section?

NK: It is mentioned in 3.1.2 (1) (e). There is a sentence of "Conduct careful exploratory hand excavation ~"

JC: ユーティリティの所有者に着目するのではなく、日本語のように埋設が明らかかな場合とそうではない場合に分けたい。

It is not proper to pay attention to the owner of the service. It is better and desirable to mention in two cases that when the existence of the service is obvious and when it is not obvious as mentioned in Japanese version.

NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft.

Item (2) is added for response to the JICA comments to specify two cases.

NK: Submittal of Method Statement is not specified here because it is specified to submit when requested by the Engineer in Chapter 1 (which will be transferred from PC to JSSS).

- (1) Where Underground or ~~Concealed~~ Services are the property of a legally constituted public authority or a third party and the Contractor is required under the Contract to perform work thereon or to locate and protect same, the Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like, all as specified in the Bidding Documents:
 - (a) Prepare a detailed Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner's representative of the public authority or third party, emergency call list and communication system;
 - (b) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner's representative of the public authority or third party, give notice of work commencement, obtain further details of the location, content and condition of the Underground or ~~Concealed~~ Services, of the required works, requirements and procedures of the owner;
 - (c) Obtain particular information from the owner's representative on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and

3.1.2. Preparation and Work Planning

The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:

- (1) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;
- (2) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third:
 - (a) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, ~~of for~~ the required works, requirements and procedures of the owner of Underground or Concealed Services;
 - (b) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and
 - (c) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.
 - (d) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.
 - (e) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand

	<p>Engineer.</p> <p>(2) Where Underground or Concealed Services are the property of the Employer, the Contractor shall make relevant preparations as in JSSS 3.1.2 above and perform the work in connection with the Underground or Concealed Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>(3) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the particular work.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [<i>Risk Control Around the Site</i>].</p>	<p>(d) Provide and <u>use cable avoidance tools such as Cable Locator (CATs)</u> and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>JC: 鉄管ケーブル探知器 メタルと電気ケーブルは見つけられるが、塩ビ水道管は？ The Cable Locator can find metals and electrical cables. PVC waterpipes?</p> <p>そもそも途上国で電気線は埋まってないので標準にはならないかと→最近では埋まっている場合もある。 The electrical cables are not buried in general in developing countries. Thus, using Cable Locator cannot be a standard? → Recently, it becoming common to bury cables in those countries.</p> <p>NK: "when applicable" is added in (c.)</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner's representative of the public authority or third party and the Engineer.</p> <p>(2) Where Underground or Concealed Services are the property of the Employer, the Contractor shall make relevant preparations as in JSSS 3.1.2 above and perform the work in connection with the Underground or Concealed Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>(3) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the particular work.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [<i>Risk Control Around the Site</i>].</p>	<p>excavation.</p> <p>(3) In the case of Underground or Concealed Services which existence are predicted at the Site by the Contractor, but not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of Underground or Concealed Services and location of assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation.</p> <p>(c) (Accompanied by a representative of the Employer and Engineer) consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(d) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p>(4) Where Underground or Concealed Services are the property of the Employer, the Contractor shall make relevant preparations as in JSSS 3.1.2 (2) and (3) and perform the work in connection with the Underground or Concealed Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>(5) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the work.</p> <p>(6) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [<i>Risk Control Around the Site</i>].</p>
--	--	---	---

	<p>3.1.3. Requirements and Precautions</p> <p>Unless otherwise specified in the Bidding Documents, or instructed by the Engineer, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Protect and secure all Underground or Concealed Services throughout the Time for Completion of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces. (2) Take care when using power tools to break through paved surfaces above Underground or Concealed Services. (3) Take care to expose, support and protect any drains, other services (new or existing) which follow or cross the route of Underground or Concealed Services. <ol style="list-style-type: none"> (4) Support sides of all excavations, paying special attention not to loosen, weaken or cause subsidence of the surrounding ground. (5) Keep excavations free from water and snow and protect exposed Underground or Concealed Services against excessive heat or cold. (6) Adequately backfill in layers and compact to specified density to avoid all settlement. (7) Restore surface paving with material and methods specified, flush with surrounding surface and replace all surface markings and signage. 	<p>3.1.3. Requirements and Precautions</p> <p>JC: 安全以外のものが入りすぎている。どこまで入れるかは要検討。 This section contains too many items other than safety. It should be discussed how much to be mentioned in this section.</p> <p>NK: Items (4) (5) (6) (8) (14) (15) (16) are deleted.</p> <p>Unless otherwise specified in the Contract, or instructed by the Engineer, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces. (2) <u>Take care not to damage</u> the Underground Services when using power tools to break through paved surfaces above Underground or Concealed Services. <p>JC: 何に注意するのかわからない。 It is not clear what to “take care” from this sentence.</p> <p>NK: When using equipment such as an asphalt cutting machine, it is likely to damage the Underground Services. For example, “such as asphalt cutting machine” is added to clarify.</p> <ol style="list-style-type: none"> (3) Take care to expose, support <u>and protect any drains</u>, other services (new or existing) which follow or cross the route of Underground or Concealed Services. <p>JC: どういう意味でしょうか What does this mean?</p> <p>NK: The drains are drainage pipes. These drains shall be included in Underground or Concealed Services. Therefore (3) will be deleted.</p> <ol style="list-style-type: none"> (4) Support sides of all excavations, paying special attention not to loosen, weaken or cause subsidence of the surrounding ground. (5) Keep excavations free from water and snow and protect exposed Underground or Concealed Services against excessive heat or cold. (6) Adequately backfill in layers and compact to specified density to avoid any all settlement. (7) Restore surface paving with material and methods specified, <u>flush with surrounding surface</u> and replace all surface markings and signage. <p>JC: (7) What does this mean?</p> <p>NK: It means not leaving difference in level with surrounding pavement.</p> <p>JC: (8) It is better not to extend the scope of the JSSS to the operation stage.</p> <p>NK: (8) is specified test to be made at the end of the work related</p>	<p>3.1.3. Requirements and Precautions</p> <p>Unless otherwise specified in the Contract, or instructed by the Engineer, the Contractor shall:</p> <ol style="list-style-type: none"> (1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces. --	--	--	--

- (8) Adequately test all Underground or Concealed Services after completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.
- (9) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.
- (10) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (11) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.
- (12) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.
- (13) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.
- (14) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.
- (15) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.
- (16) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.

with the Underground or Concealed Services. Therefore, it will be revised by adding "at the time of completion".

- (8) Adequately test all Underground or Concealed Services after completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.
- (9) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.
- (10) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (11) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.
- (12) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.
- (13) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.

JC: Ditto (better not to extend the scope of the JSSS to the operation stage.)

MM1/17: 3.1.3 (14) to (15) "marker tiles", "as built drawings" (JICA commented to delete.) → NK explained these requirements are for future safety and recommend that they are left as they are.

NK: Items (14) to (16) are left as they are as minuted.

- (14) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.
- (15) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.
- (16) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the

- (4) Adequately test all Underground or Concealed Services **at the time of** completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.
- (5) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.
- (6) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (7) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.
- (8) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.
- (10) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.
- (11) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.
- (12) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.

3.1.4. Information to Contractor's Personnel

	<p>3.1.4. Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <ol style="list-style-type: none"> (1) Location of live cables and equipment. (2) Risk of electric shock from live cables or equipment. (3) Separation distances from live cables and equipment. (4) Work procedure, (5) Preventive measures against electric shock, (6) PPE to be used. (7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.1.5 and JSSS 3.1.6. (8) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan]. (9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services. <p>3.1.5 Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.20 [Accident Response Plan].</p> <p><i>NK these requirements are good and I have edited them accordingly. Because in principle they apply to all electrical works, I have moved them to Chapter 1, 1.20 as general prevailing requirements. I have also added equipment in JSSS 2.9 PPE.</i></p>	<p>Engineer and to the authority and/or third party as appropriate.</p> <p>3.1.4. Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <ol style="list-style-type: none"> (1) Location of live cables and equipment. (2) Risk of electric shock from live cables or equipment. (3) Separation distances from live cables and equipment. (4) Work procedure, (5) Preventive measures against electric shock, (6) PPE to be used. (7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.1.5 and JSSS 3.1.6. (8) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan]. (9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services. <p>3.1.5. Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.21 [Accident Response Plan].</p> <p>NK: JSSS 1.21 [Accident Response Plan] Issue 7 specified about the electric shock accident as follows:</p> <p>Where the scope of work includes any work to electrical equipment, cables, wiring, services and systems the Contractor shall train a team of his workers to act as a rescue team in the event of any electrical accident. All rescue team members in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED. The following measures shall be taken in the event of an electric shock accident.</p> <ol style="list-style-type: none"> (1) Prohibit workers from touching the chassis or body of any Contractor's Equipment or materials that have been electrified by any live circuit and keep all Contractor's Personnel well away from such equipment, materials and the working area. (2) When the operator of the Contractor's Equipment which is in contact with or in close proximity to the live circuit does not get an electrical shock, the operator shall immediately move the equipment away. (3) When it is not possible to move the Contractor's Equipment away, the operator shall remain in the cabin until the affected live circuits are de-energised. (4) Prevent secondary electric shock accident by permitting 	<p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <ol style="list-style-type: none"> (1) Location of live cables and equipment. 電路の電圧	離隔距離
特別高圧 (7000V 以上)	2m ただし、60,000 以上は 1m 又はその端数を増すごとに 2m
高圧 (600V 以上 7000V 以下)	1.2m
低圧 (600V 以下)	1m

- of any Overhead Services conveying flammable, combustible or explosive liquids or gases.
- (4) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
 - (5) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.
 - (6) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
 - (7) Provide insulating protective pipe to the Overhead Services.
 - (8) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit entry outside these ranges.
 - (9) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
 - (10) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
 - (11) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

NK: Such works will be made by the owner or the Employer unless otherwise specified in the Contract. The sentence is modified as right to ensure the safety of the Services before the Contractor commence his works.

~~(3) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Overhead Services conveying flammable, combustible or explosive liquids or gases.~~

JC: Is such situation possible with overhead services?

NK: There is possibility that fire occurs when the Contractor work with welding, etc. below the Overhead Services and fire transmitted to the Services. Fire prevention is specified in 1.22 Fire Prevention, so (3) will be deleted.

- (4) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (5) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.
- (6) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (7) Provide insulating protective pipe to the Overhead Services.
- (8) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit entry outside these ranges.
- (9) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (10) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (11) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

JICA: What does this ("entry outside" in (8) mean?

NK: The expression is modified as "prohibit entering these ranges".

- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

- (3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (4) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.
- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (6) Provide insulating protective pipe to the Overhead Services.
- (7) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit entry outside entering these ranges.
- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [*Spotters, Flagmen and the Like*] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

- (8) 請負者は、架空線の充電電路の近くでの作業の開始前には、当該作業の作業員及び監視員に次を周知徹底すること。→E3.2.4 に規定済み

2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

(8) Prepare as-built drawings of Overhead Services after completion of the associated work showing accurate positions, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.

JC: (8) It is better not to extend the scope of the JSSS to the operation stage.

NK: (8) is for safety in future. Overhead Services are different from Underground Services as they can be identified directly. Therefore, (8) is deleted

3.2.4. Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following:

- (1) Location of live cables and equipment.
- (2) Risk of electric shock from live cables or equipment.
- (3) Separation distances from live cables and equipment.
- (4) Work procedure.
- (5) Preventive measures against electric shock.
- (6) PPE to be used.
- (7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5 and JSSS 3.2.6.
- (8) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response

3.2.4. Information to Contractor's Personnel

JC: 3.1.4 に全く同じでは? This seems to be exactly same as 3.1.4?

NK: Modified as right.

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following:

- (1) Location of live cables and equipment.
- (2) Risk of electric shock from live cables or equipment.
- (3) Separation distances from live cables and equipment.
- (4) Work procedure.
- (5) Preventive measures against electric shock.
- (6) PPE to be used.

the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following **in addition to JSSS 3.1.4 (1) to (6):**

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5.
- (2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].
- (3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.

<p>(5) 感電事故発生時には次の対応を行うこと。→規定なし(以下を英文に追加すべきと考える。)</p> <p>(a) 充電電路の管理者に直ちに報告すること。</p> <p>(b) 充電電路により感電した建設機械の車体や吊り荷には作業員を絶対に触らせないようにし、また、当該建設機械から作業員を遠ざけること。</p> <p>(c) 充電電路により感電した建設機械の運転手が感電していない場合、運転手に直ちに建設機械を充電電路から遠ざけさせること。遠ざけさせることができない場合は、充電電路が通電停止になるまで運転手を機体内に待機させること。</p> <p>(d) 二次感電被害防止のため、絶縁用保護具・救出方法についての教育を受けたもの以外には、感電状況にある者の救出をさせてはならない。</p> <p>(e) 法感電による心肺停止の被災者には、直ちに心肺蘇生や自動体外式除細動器(AED)の使用等の一次救命処置を施すこと。</p>	<p><i>Plan</i>].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.</p> <p>3.2.5. Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.20 [<i>Accident Response Plan</i>].</p>	<p>(7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5 and JSSS 3.2.6.</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.20 [<i>Accident Response Plan</i>].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.</p> <p>3.2.5. Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.20 [<i>Accident Response Plan</i>].</p> <p>NK: JSSS 1.20 [<i>Accident Response Plan</i>] Issue 7 specified about the electric shock accident as shown in 3.1.5 as same as Japanese (5)</p>	<p>3.2.5. 	<p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>3章の Utility に関する 4 段表ですが、以下の点において、こちらからの要求事項を十分に満たしているものとは判断しかねます。</p> <p>① 4 段表の右から 2 段目の経緯に残っている通り、当方の願いは「ユーティリティの所有者別」で検討をすすめるのではなく、「ユーティリティが埋まっていることが分かっている場合とわかっていない場合」に分けて記述してください、というものです。</p> <p>「NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.」というような検討経緯がついていますが、結果としてこちらの要求する形に直っていません。(下記②も参照)</p> <p>② 例えば 3.1.2 の(2)と(3)が論理的な対比をなしていません。(2)は第三者がオーナーの場合、(3)は「ユーティリティが埋まっていることが分からない場合」です。そして(4)で一転再び発注者がオーナーの場合となっており、論理的に素直に流れていきません。</p> <p>英文がすでに Owner が誰かに着目した分類で記述されているので、その趣旨を殺さないように心がけながら修文してみました。これで今一度ご確認ください。</p> <p>今回は修正すべき事項が多いため、一番右の列だけ抜き出して、コメントを付けています。</p> <p>また、先般打ちあわせ通り、数か月後にまとまった形になったところで、全体を鳥瞰する形で内容確認をさせて頂きたいと考えているので、その際は今回コメントの対象としなかった部分についても、コメントする可能性がある点を含みおいてください。</p> <p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>We cannot judge that our requests are fully reflected in the last draft R2 regarding the following points:</p> <p>① Our requests are not to improve the description for different owners of underground</p>	

	<p>utilities but to specifies for two cases of utilities which existence is known and not known.</p> <p>NK responded to our comments as “NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.”. However, as thee results, these do not meet our requests.</p> <p>② For example, (2) and (3) in 3.1.2 are not logically contrast. (2) is for the case of the utility which owner is a third party. (3) is for the case of underground utility which existing is not known. Then (4) is for the case of utility which owner is the Employer. These do not logically flow.</p> <p>We modified the draft paying attention not to change the original intention as the original was prepared on the basis of different owners. Please review them.</p> <p>As there are many revisions required, the draft R2 are copied to other sheets and added our comments on them.</p> <p>Please keep in your mind, we are planning to review (bird's eye view) whole document of JSSS which will be submitted us after several months as discussed last time and there is a possibility we will give more comments to items to which we have not commented this time.</p>	
<p>3.1. UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1.General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third party (called as “the owner of Underground or Concealed Services”), the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>(4) In accordance with the legally binding agreement between the Employer and the owner of Underground or Concealed Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission of the owner of Underground or Concealed Services to execute the work according to the requirements of the Contract and the instruction of the Engineer.</p>	<p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third party (called as “the owner of Underground or Concealed Services”), the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>JC: 単に third party でよいと思います。 JC think it is better to simply “third part”.</p> <p>JC: この後、owner が発注者であろうが、第三者であろうが owner という言葉で理解できるように記述するために削除します。 After this, the sentence is deleted to specify owner is any of the Employer and third party.</p> <p>NK: modified as commented.</p> <p>(4) In accordance with the legally binding agreement between the Employer and the owner of Underground or Concealed Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission of the owner of Underground or Concealed Services to execute the work according to following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p>JC: コントラクターにとっては結果が大事(障害なく着工できることが大事)であり、発</p>	<p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”) which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>(4) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p>

<p>3.1.2. Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>(2) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third;</p>	<p>注者と Utility オーナーとの関係が legally binding か否かは関係ありません。</p> <p>For the Contractor, it is important that they can commence the Works without any obstacle. It is not matter whether the relation between the Employer and the owner of utility is bounded legally or not.</p> <p>JC: 全体として、発注者・エンジニアの支援の下、3. 1.2 の準備作業を行い、オーナーからの工事許可を得る、という流れになります。</p> <p>The flow of activity of the Contractor is 1) preparation work mentioned in 3.1.2 with assistance of the Employer and the Engineer, and 2) obtaining permission of works from the owner.</p> <p>NK: modified as commented.</p> <p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the Contractor shall take the necessary procedure for the work in accordance with the Contract. the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>JC: (4)と(5)が論理的な対比になっていません。(4)はオーナーによる permission を論じているのに対し、(5)は「契約に従って行うこと」になっています。「オーナーによる permission を取得すること」に着目した対比であるべきです。発注者がオーナーである場合、当然かかる permission は所与のものであるべきものです。</p> <p>(4) and (5) are not logically contrast. (4) is described permission of the owner, however (5) is “in accordance with the Contract”. (5) shall be specified focusing “to get permission of the owner” as contrast of (4). In case that the owner is the Employer, the permission shall be already given.</p> <p>NK: modified as commented.</p> <p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system; In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(2) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>JC: 以下、owner という言葉が出てきますが、これは発注者であろうが、第三者であろうが区別する必要はないと思います。</p> <p>JC considers it is not necessary to distinguish the Employer or the third party as the owner after this.</p> <p>NK: modified as commented.</p>	<p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>(b) The Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain</p>
---	---	--

<p>(a) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of for the required works, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>(b) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(c) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(d) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(e) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(3) In the case of Underground or Concealed Services which existence are predicted at the Site by the Contractor, but not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of</p>	<p>(b) (Accompanied by a representative of the Employer and Engineers) the Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of for the required works, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>JC: 3.1.1で発注者の reasonable assistance に言及しているので不要。またこれを消すことで、ownerが発注者であろうが、第三者であろうが、意味が通じる文章になります。</p> <p>It is not necessary as 3.1.1 has described “reasonable assistance”. By deleting this sentence, (b) becomes to specify for both owners (the Employer and the third party).</p> <p>JC: これはいらぬような気がします。「工事を”するために必要な地下埋設物」というように読めるような気がするからです。ここで論じているのは、保護をかけるような必要がある地下埋設物</p> <p>“of the required works” seems not necessary because JC think it may be read as “Underground Services required for the Works”. (b) specifies about Underground Services to be protected.</p> <p>NK: modified as commented.</p> <p>(c) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(d) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(2) In the case of Underground or Concealed Services which existence are predicted at the Site by the Contractor, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>JC: このスペックは入札書類に含まれる文書なので、ここに「コントラクターによって予見される」というのは不適切です。</p> <p>As the JSSS is included in bid documents, it is not proper to mention “existence is predicted at the Site by the Contractor”.</p> <p>NK: modified as commented.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal,</p>	<p>further details of the location, content and condition of the Underground or Concealed Services, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>(c) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(d) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(2) In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of</p>

<p>3.2. OVERHEAD SERVICES</p> <p>3.2.1. General</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of the Overhead Services which are the property of a legally constituted public authority or a third party (called as “the owner of Overhead Services”), the Contractor shall take the procedure for the works mentioned in (4) below.</p> <p>(4) In accordance with the legally binding agreement between the Employer and the owner of Overhead Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works according to the requirements of the Contract and the instructions of the Engineer.</p> <p>3.2.2. Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Overhead Services or the Employer, emergency call list and communication system;</p> <p>(2) In the case of Overhead Services which are the property of the owner of Overhead</p> <p>(a) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Overhead Services, give notice of work commencement, obtain further details of the location, content and condition of the</p>	<p>3.2. OVERHEAD SERVICES</p> <p>3.2.1. General</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of the Overhead Services which are the property of a legally constituted public authority or a third party (called as “the owner of Overhead Services”), the Contractor shall take the procedure for the works mentioned in (4) below.</p> <p>(4) In accordance with the legally binding agreement between the Employer and the owner of Overhead Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works according to following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.</p> <p>JC: (3)~(5)については地下埋設と同様になるように修正。 (3) to (4) are modified and (5) is added to be similar to 3.1.1. NK: modified as commented.</p> <p>3.2.2. Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Overhead Services or the Employer, emergency call list and communication system;</p> <p>(2) In the case of Overhead Services which are the property of the owner of Overhead</p> <p>(a) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Overhead Services, give notice of work commencement, obtain further details of the location, content and condition of the Overhead Services for the required works, requirements and</p>	<p>3.2 OVERHEAD SERVICES</p> <p>3.2.1 General</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of the Overhead Services which are the property of a third party, the Contractor shall take the procedure for the works mentioned in (4) below.</p> <p>(4) In accordance with the agreement between the Employer and the owner of Overhead Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.</p> <p>(5) In the case of Overhead Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.2.2.</p> <p>3.2.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Overhead Services or the Employer, emergency call list and communication system;</p> <p>(2) Wherever necessary, the Contractor shall:</p> <p>(a) Consult with the owner of Overhead Services, give notice of work commencement, obtain further details of the location, content and condition of the Overhead Services, requirements and procedures of the owner of Overhead Services;</p>

<p>Overhead Services for the required works, requirements and procedures of the owner of Overhead Services;</p> <p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>(3) Where Overhead Services are the property of the Employer, the Contractor shall make necessary preparations as in 3.2.2 (2) and perform the work in connection with the Overhead Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract Bidding Documents, or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately After the test of Overhead Services after at the completion of any diversion, replacement or alteration work by the owner of Overhead Services or the Employer, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(4) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.</p>	<p>procedures of the owner of Overhead Services;</p> <p>JC: これはいろいろな気がします。「工事をするために必要な電源」というように読めるような気がするからです。ここで論じているのは、保護をかけるような必要がある電線</p> <p>“for the required works” seems not necessary because JC think it may be read as “Overhead Services required for the Works”. (b) specifies about Overhead Services to be protected.</p> <p>NK: deleted as commented.</p> <p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>(3) Where Overhead Services are the property of the Employer, the Contractor shall make necessary preparations as in 3.2.2 (2) and perform the work in connection with the Overhead Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>JC: as commented, not necessary to separately specify (3) for the Employer's property. NK: deleted.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract Bidding Documents, or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately After the test of Overhead Services after at the completion of any diversion, replacement or alteration work by the owner of Overhead Services or the Employer, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution. Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.</p> <p>JC: modified. NK: modified as commented.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(4) Be aware of and avoid all mitigate risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.</p> <p>JC: avoid all risk は不可能。ここだけでなく、他の章でも出てきている可能性があると思われるので以後注意して下さい。 It is impossible to avoid all risk. Please pay attention to this, which may be specified in other clauses. NK: modified as commented.</p> <p>(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.</p>	<p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(4) Be aware of and mitigate risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.</p> <p>To MD, please review this comment and if same revision is necessary in the above (3).</p>
---	--	---

- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (6) Provide insulating protective pipe to the Overhead Services.
- (7) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit **entry outside entering these ranges**.

- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following **in addition to JSSS 3.1.4 (1) to (6)**:

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5.
- (2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].

- (6) Provide insulating protective pipe to the Overhead Services.
- (7) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit **entry outside entering these ranges**.

JC: このようにした方が、(7)と(8)のつながりが良いと思います。すなわち、(7)では safe zone の設定、(8)ではその safe zone に侵入させないように機械を使用する、という流れになります。
This revised description is smooth connection between (7) and (8) as (7) specifies to create safe zone and (8) does to operate machinery without entering in the safe zone.
NK: modified as commented.

- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following **in addition to JSSS 3.1.4 (1) to (6)**:

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5.

JC: 3.2.5 に飛んで、3.2.5 では再び 1.21 に飛んでいますが、従来までの検討では Accident Response Plan の原案は特別チームを編成せよ、といった内容に鑑み、大ナタを振るっているはずですが、1.21 がどのような内容になるのかが確認できない現状ではコメントできません。全体が提出された際に改めて検討します。

(1) specifies to refer to 3.2.5 and 3.2.5 does 1.2.1. In the last review, Accident Response Plan is requested to be drastically modified as last draft specified to establish special team. Because the content of revised 1.21 cannot be confirmed,

- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (6) Provide insulating protective pipe to the Overhead Services.
- (7) Create **safe zones** free from danger arising from use of Contractor's Equipment by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers.

To MD: Is this "safe zones" to be replaced with "dangerous zones" in (7) and (8) because (8) specifies to prevent Equipment entering the safety zone?

- (8) Prevent Contractor's Equipment, wire ropes or chains from **entering the safe zones** and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following **in addition to JSSS 3.1.4 (1) to (6)**:

- (1) Accident training and response measures to an electric shock accident in accordance **with JSSS 3.2.5**.

<p>(3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.</p> <p>3.2.5. Electrical Safety Training and Accident Measures Refer to JSSS 1.21 [Accident Response Plan].</p>	<p>JICA cannot comment now. After all JSSS is submitted, JICA will review this again.</p> <p>NK: It leaves as it is tentatively.</p> <p>(2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].</p> <p>(3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.</p> <p>JC: May we know why this specifies “other”?</p> <p>NK: ask to MD about this.</p> <p>3.2.5. Electrical Safety Training and Accident Measures Refer to JSSS 1.21 [Accident Response Plan].</p> <p>JC: 上記 3.2.4 に対するコメント参照. Please refer to the comment to above (1).</p> <p>NK: It leaves as it is tentatively.</p>	<p>(2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].</p> <p>(3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.</p> <p>MD: Please add or modify (3) to make clear “other”</p> <p>3.2.5 Electrical Safety Training and Accident Measures Refer to JSSS 1.21 [Accident Response Plan].</p>

<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”) which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>(4) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p><i>I have added the following as in any event it should apply; compliance with such procedures is usually mandatory and non-compliance will impact upon safety:</i></p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p> <p><i>Reference now included in the User Guide:</i></p> <p>(3) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(4) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p>

as well as the requirements of the Contract and the instruction of the Engineer.

- (5) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.

As commented before and explained in January, why is all of this text relating to property ownership, permissions and contact with utility companies necessary, when it has nothing to do with safety and it is not always correct?

Very often (if not usually) for JICA funded drainage and sewage treatment improvement projects, the executing agency is also the owner and operator of the underground and overhead utility services. In such cases the Employer and relevant authority are often one and the same and in this common case, the contact arrangements, requirements for permissions etc. stipulated in the JICA draft, do not apply.

Sometimes also for example specialist local subcontractors who are already registered with the utility authority or company are required to be used. Actual arrangements can be very different.

It is unusual and potentially risky to assume that the JICA specified arrangements apply as a common basis on all projects when they don't and I recommend that all is omitted.

I am aware that sometimes the employer may require the contractor to make improper arrangements and but this is not the norm and also sometimes also the contractor does not perform correctly. However, I understood that JSSS is a safety specification, not a contract procedural manual and I suggest that it should not be used for this latter purpose.

The following paragraph for example, is contractually and practically incorrect, the contractor has no obligation to get permission to execute the works, why should he?? If this is stated there is a strong likelihood that it will negatively affect the quality of the Bid Documents. Also, if the authority doesn't give such permission or delays in giving it, or changes the scope or working methods and timing the consequences are greatly confused. The other aspects of this clause are not relevant to safety and JSSS and have no real meaning.

The scope and requirements for all work should be investigated and clarified beforehand by the executing agency and consultant and properly specified by the Employer in the Bidding documents before requesting Bids.

- (5) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.

If JSSS includes (unnecessary) requirements for permissions and contact with Utility Companies as above then it also requires to state where such requirements are not necessary i.e. where the services are owned by the employer, which was why I changed the earlier draft so it was more balanced.

However, if the former isn't required then neither is the latter.

With the benefit of more time to consider this and as also suggested by Ito san in our meeting in January to explore ways to simplify this Chapter, I strongly recommend that this Chapter should be changed:

1) To concentrate on safety matters only.

2) To delete any ownership, permissions, contact arrangements and

<p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>(b) The Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>(c) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(d) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(2) In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation,</p>	<p>3) To include clear requirements for the Employer to carry out proper pre-bid studies and prepare precise bid documentation and that this shall be included in the User Guide.</p> <p>I have edited this Chapter and will edit the User Guide on this basis.</p> <p>(6) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>(1) Where Underground or Concealed Services are the property of a relevant authority or a third party and the Contractor is required under the Contract to perform work thereon or to locate and protect same, Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for locating, protecting, diverting, removing, replacing or the like of any Underground or Concealed Services:</p> <p>The following added paragraph in your draft is an unnecessary duplication of the above:</p> <p>(2) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(a) Prepare a detailed Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon;</p> <p>(b) Prepare an emergency call list and communication procedure;</p> <p>(c) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner's representative of the relevant authority or third party, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of the required works, requirements and procedures of the owner;</p> <p>(d) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident;</p> <p>(e) Provide and use cable avoidance tools or cable locators, trace the position and routes on ground surfaces, walls and floors of all Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area;</p> <p>Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work; and in accordance with the Contract and the instructions of the owner's representative of the relevant authority or third party and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the</p>	<p>3.1.2 Preparation and Work Planning</p> <p>(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for locating, protecting, diverting, removing, replacing or the like of any Underground or Concealed Services:</p> <p>(a) Prepare a detailed Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon;</p> <p>(b) Prepare an emergency call list and communication procedure;</p> <p>(c) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident;</p> <p>(d) Provide and use cable avoidance tools or cable locators, trace the position and routes on ground surfaces, walls and floors of all Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area;</p> <p>Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work; and</p> <p>(e) The Method Statement shall be revised based on the information obtained from the above locating and exploratory work</p> <p>(2) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the excavation.</p> <p>(3) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p>
--	--	---

<p>(g) Consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(h) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p>(3) Machine excavation shall not be allowed when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the work.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Contract, or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground.</p> <p>(3) Restore surface paving with material and methods specified, paying attention not leaving difference in level with surrounding pavement and replace all surface markings and signage.</p>	<p>information obtained from the above locating and exploratory work</p> <p><i>The following is not connected with safety and I do not recommend that it is included, none of this is related to safety matters which are not covered by the above. It will create misunderstanding and potential conflict, for example - what is the meaning of "existence is predicted but no detail given"? What is a "proposal" in a contract sense, "Variation"? Why such engineer's input?</i></p> <p>(3) In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of Underground or Concealed Services and location of assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation.</p> <p>(c) Consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(d) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p><i>Why is the following changed? No machine excavation should start until locations and routes are explored and indicated as above and then precautions should be taken due to the accuracy of the equipment and survey. It needs a criterium to be stated.</i></p> <p>(4) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the excavation.</p> <p>(5) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling, compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground or Concealed Services.</p> <p><i>"Drains" is a correct and collective construction term for all types of surface water, waste or foul pipe drains that will be encountered frequently when</i></p>	<p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling, compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground or Concealed Services.</p> <p>(3) Take care to expose, support and protect any drains, other services (new or existing) which follow or cross the route of Underground or Concealed Services.</p> <p>(4) Reinstating surface paving with material and methods specified, paying attention not leave any difference in level with surrounding</p>
--	---	---

<p>(4) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(5) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(6) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(7) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(8) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p> <p>(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [<i>Spotters, Flagmen and the Like</i>] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.</p> <p>(10) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.</p> <p>(11) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.</p> <p>(12) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.</p> <p>3.1.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <ol style="list-style-type: none"> (1) Location of live cables and equipment. (2) Risk of electric shock from live cables or equipment. (3) Separation distances from live cables and equipment. (4) Work procedure, (5) Preventive measures against electric shock, 	<p><i>excavating for other services. These drains will require such treatment if and when they are found and I do not recommend that it be deleted.</i></p> <p>(3) Take care to expose, support and protect any drains, other services (new or existing) which follow or cross the route of Underground or Concealed Services.</p> <p>(4) Reinstate surface paving with material and methods specified, paying attention not leave any difference in level with surrounding pavement and replace all surface markings and signage.</p> <p>(5) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(6) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(7) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(8) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(9) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p> <p>(10) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [<i>Spotters, Flagmen and the Like</i>] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.</p> <p>(11) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.</p> <p>(12) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.</p> <p>(13) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer. and to the relevant authority and/or third party as appropriate.</p> <p>3.1.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <ol style="list-style-type: none"> (1) Location of live cables and equipment. (6) PPE to be used.
--	---	---

<p>(6) PPE to be used.</p> <p>(7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.1.5.</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services.</p>	<p>(4) Work procedure.</p> <p>(5) Preventive measures against electric shock.</p> <p>(6) PPE to be used.</p> <p>(7) Electric shock accident in accordance with JSSS 3.1.5 エラー! 参照元が見つかりません。 [Electric Shock Treatment].</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan] and JSSS 1.25.2 [Measures at the Time Accidents Occur].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services.</p>	<p>(7) Electric shock accident in accordance with JSSS 3.1.5 エラー! 参照元が見つかりません。 [Electric Shock Treatment].</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan] and JSSS 1.25.2 [Measures at the Time Accidents Occur].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services.</p>
<p>3.1.5 Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.21 [Accident Response Plan].</p>	<p>After further consideration, I feel that the following clause should be included here as this impact with existing services is likely to be needed here. I have therefore transferred here from Chapter 4:</p> <p>3.1.5 Electrical Shock Treatment</p> <p>The following measures shall be taken in the event of an electric shock accident.</p> <p>(1) Prohibit workers from touching the chassis or body of any Contractor's Equipment or materials that have become electrified by any live circuit and keep all Contractor's Personnel well away from such equipment, materials and the working area.</p> <p>(2) When the unit of Contractor's Equipment which is in contact with or in close proximity to a live circuit does not get an electrical shock, the operator shall immediately move the equipment to an adjacent safe location.</p> <p>(3) When it is not possible to move the Contractor's Equipment away, the operator shall remain in the cabin until the affected live circuits are de-energised.</p> <p>(4) Prevent secondary electric shock accident by permitting only those who have received training in electrical rescue to rescue the casualties of an electric shock accident.</p> <p>(5) Immediately perform primary lifesaving measures such as CPR, if necessary use an Automated External Defibrillator (AED) and call for emergency medical support.</p> <p>Report to the Engineer in accordance with JSSS 1.25.2 [Measures at the Time Accidents Occur] and where applicable to the representative of the relevant authority.</p>	<p>3.1.5 Electrical Shock Treatment</p> <p>The following measures shall be taken in the event of an electric shock accident.</p> <p>(1) Prohibit workers from touching the chassis or body of any Contractor's Equipment or materials that have become electrified by any live circuit and keep all Contractor's Personnel well away from such equipment, materials and the working area.</p> <p>(2) When the unit of Contractor's Equipment which is in contact with or in close proximity to a live circuit does not get an electrical shock, the operator shall immediately move the equipment to an adjacent safe location.</p> <p>(3) When it is not possible to move the Contractor's Equipment away, the operator shall remain in the cabin until the affected live circuits are de-energised.</p> <p>(4) Prevent secondary electric shock accident by permitting only those who have received training in electrical rescue to rescue the casualties of an electric shock accident.</p> <p>(5) Immediately perform primary lifesaving measures such as CPR, if necessary use an Automated External Defibrillator (AED) and call for emergency medical support.</p> <p>(6) Report to the Engineer in accordance with JSSS 1.25.2 [Measures at the Time Accidents Occur] and where applicable to the representative of the relevant authority.</p>
<p>3.2 OVERHEAD SERVICES</p> <p>3.2.1 General</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as "Overhead Services"), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of the Overhead Services which are the property of a third party, the Contractor shall take the procedure for the works mentioned in (4) below.</p>	<p>OVERHEAD SERVICES</p> <p>3.2.1. Generally</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as "Overhead Services"), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>Please refer to above notes, I suggest the addition of the following:</p>	<p>3.2 OVERHEAD SERVICES</p> <p>3.2.1 Generally</p> <p>(1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as "Overhead Services"), and which may require preserving, protecting, diverting, removing, relocating, replacing.</p> <p>(2) If Overhead Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the relevant authority.</p>

<p>(4) In accordance with the agreement between the Employer and the owner of Overhead Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.</p> <p>(5) In the case of Overhead Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.2.2.</p> <p>3.2.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Overhead Services or the Employer, emergency call list and communication system;</p> <p>(2) Wherever necessary, the Contractor shall:</p> <p>(a) Consult with the owner of Overhead Services, give notice of work commencement, obtain further details of the location, content and condition of the Overhead Services, requirements and procedures of the owner of Overhead Services;</p> <p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.</p>	<p>(2) If Overhead Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the relevant authority.</p> <p><i>Please refer to above notes, I suggest the following is deleted:</i></p> <p>(3) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(4) In the case of the Overhead Services which are the property of a third party, the Contractor shall take the procedure for the works mentioned in (4) below.</p> <p>(5) In accordance with the agreement between the Employer and the owner of Overhead Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.</p> <p>(6) In the case of Overhead Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.2.2.</p> <p>3.2.2. Preparation and Work Planning</p> <p>(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for protecting, diverting, removing, replacing or the like of any Overhead Services:</p> <p>(a) Prepare a detailed Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon;</p> <p>(b) Prepare an emergency call list and communication procedure; and</p> <p>(c) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Overhead Services in case of an accident.</p> <p>(2) Where Overhead Services are the property of the Employer, the Contractor shall make necessary preparations as in 3.2.2. above and perform the work in connection with the Overhead Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>3.2.3. Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p>	<p>3.2.2 Preparation and Work Planning</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for protecting, diverting, removing, replacing or the like of any Overhead Services:</p> <p>(1) Prepare a detailed Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon;</p> <p>(2) Prepare an emergency call list and communication procedure; and</p> <p>(3) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Overhead Services in case of an accident.</p> <p>3.2.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or</p>
--	---	--

(3) Be aware of and **avoid all risk** of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.

(4) Be aware of and **mitigate risk** of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.

To MD, please review this comment and if same revision is necessary in the above (3).

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

(6) Provide insulating protective pipe to the Overhead Services.

(7) Create **safe zones** free from danger arising from use of Contractor's Equipment by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers.

To MD: Is this "safe zones" to be replaced with "dangerous zones" in (7) and (8) because (8) specifies to prevent Equipment entering the safety zone?

(8) Prevent Contractor's Equipment, wire ropes or chains from **entering the safe zones** and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

(1) Protect and secure all Overhead Services throughout the **execution of the Works**.

(2) Adequately test all Underground or Concealed Services **at the time of** completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.

(3) Be aware of and avoid all risk of electric shock when working near any cables or wires, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.

Suggest that "remove all risk" (which is contractually correct) is clearer and more preferable to "mitigate risk". This needs to be absolute and clear, "mitigate" is neither:

(4) Be aware of and **avoid all risk** of subsidence or collapse of support structures of Overhead Services due to **excavations** being too close.

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

Pipe and casings are different, I suggest both are correct

(6) Provide insulating protective pipe or casings to the Overhead Services.

(7) Create safe zones free from danger arising from the use Contractor's Equipment by demarcating the route and turning ranges and providing adequate signage and barriers.

(8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk of close proximity or contact with Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the **relevant authority**:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage	1m

pollution.

(3) Be aware of and avoid all risk of electric shock when working near any cables or wires, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.

(4) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations being too close.

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

(6) Provide insulating protective pipe or casings to the Overhead Services.

(7) Create safe zones free from danger arising from the use Contractor's Equipment by demarcating the route and turning ranges and providing adequate signage and barriers.

(8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk of close proximity or contact with Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the relevant authority:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage (Less than 600V)	1m

(11) Prepare as-built drawings of Overhead Services after completion of the associated work showing accurate positions, sizes, routes and details and submit to the Engineer.

<p>3.2.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following in addition to JSSS 3.1.4 (1) to (6):</p> <ol style="list-style-type: none"> (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5. (2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan]. (3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services. <p>MD: Please add or modify (3) to make clear "other"</p> <p>3.2.5 Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.21 [Accident Response Plan].</p>	<p>(Less than 600V)</p> <p>Why delete? A record is necessary whether specified elsewhere or not.</p> <p>(11) Prepare as-built drawings of Overhead Services after completion of the associated work showing accurate positions, sizes, routes and details and submit to the Engineer.</p> <p>3.2.4. Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the items listed JSSS 3.1.4 (1) to (6) plus the following:</p> <ol style="list-style-type: none"> (1) Accident training and response measures to an electric shock accident in accordance with JSSS 4.1.8 [Electric Shock Treatment] (2) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan]. (3) Appropriate procedures in the case of accidents arising from contact with or damage to any Overhead Services. <p>3.2.5. Electrical Shock Treatment</p> <p>The Contractor shall take the measures prescribed in JSSS 3.1.5 [Electrical Shock Treatment].</p>	<p>3.2.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the items listed JSSS 3.1.4 (1) to (6) plus the following:</p> <ol style="list-style-type: none"> (1) Accident training and response measures to an electric shock accident in accordance with JSSS 4.1.8 [Electric Shock Treatment] (2) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan]. (3) Appropriate procedures in the case of accidents arising from contact with or damage to any Overhead Services. <p>3.2.5 Electrical Shock Treatment</p> <p>The Contractor shall take the measures prescribed in JSSS 3.1.5 [Electrical Shock Treatment].</p>

<p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>3章の Utility に関する4段表ですが、以下の点において、こちらからの要求事項を十分に満たしているものとは判断しかねます。</p> <p>① 4段表の右から2段目の経緯に残っている通り、当方のお願いは「ユーティリティの所有者別」で検討をすすめるのではなく、「ユーティリティが埋まっていることが分かっている場合とわかっていない場合」に分けて記述してください、というものです。</p> <p>「NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.」というような検討経緯がついていますが、結果としてこちらの要求する形に直っていません。(下記②も参照)</p> <p>② 例えば 3.1.2 の(2)と(3)が論理的な対比をなしていません。(2)は第三者がオーナーの場合、(3)は「ユーティリティが埋まっていることが分からない場合」です。そして(4)で一転再び発注者がオーナーの場合となっており、論理的に素直に流れていきません。</p> <p>英文がすでに Owner が誰かに着目した分類で記述されているので、その趣旨を殺さないように心がけながら修正してみました。これで今一度ご確認ください。</p> <p>今回は修正すべき事項が多いため、一番右の列だけ抜き出して、コメントを付しています。</p> <p>また、先般打ちあわせ通り、数か月後にまとまった形になったところで、全体を鳥瞰する形での内容確認をさせて頂きたいと考えているので、その際は今回コメントの対象としなかった部分についても、コメントする可能性がある点を含みおいてください。</p>			

<p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>We cannot judge that our requests are fully reflected in the last draft R2 regarding the following points:</p> <p>① Our requests are not to improve the description for different owners of underground utilities but to specifies for two cases of utilities which existence is known and not known.</p> <p>NK responded to our comments as “NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.”. However, as thee results, these do not meet our requests.</p> <p>② For example, (2) and (3) in 3.1.2 are not logically contrast. (2) is for the case of the utility which owner is a third party. (3) is for the case of underground utility which existing is not known. Then (4) is for the case of utility which owner is the Employer. These do not logically flow.</p> <p>We modified the draft paying attention not to change the original intention as the original was prepared on the basis of different owners. Please review them.</p> <p>As there are many revisions required, the draft R2 are copied to other sheets and added our comments on them.</p> <p>Please keep in your mind, we are planning to review (bird's eye view) whole document of JSSS which will be submitted us after several months as discussed last time and there is a possibility we will give more comments to items to which we have not commented this time.</p>			
<p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third party (called as “the owner of Underground or Concealed Services”), the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>JC: 単に third party でよいと思います。 JC think it is better to simply “third part”.</p> <p>JC: この後、owner が発注者であろうが、第三者であろうが</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”) which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>(4) In accordance with the agreement between the Employer and the owner of Underground or</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p><i>I have added the following as in any event it should apply; compliance with such procedures is usually mandatory and non-compliance will impact upon safety:</i></p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p> <p><i>Reference now included in the User Guide;</i></p> <p>(3) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p>

<p>ownerという言葉で理解できるように記述するために削除します。 After this, the sentence is deleted to specify owner is any of the Employer and third party.</p> <p>NK: modified as commented.</p> <p>(4) In accordance with the legally binding agreement between the Employer and the owner of Underground or Concealed Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission of the owner of Underground or Concealed Services to execute the work according to following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p>JC: コントラクターにとっては結果が大事(障害なく着工できることが大事)であり、発注者と Utility オーナーとの関係が legally binding か否かは関係ありません。</p> <p>For the Contractor, it is important that they can commence the Works without any obstacle. It is not matter whether the relation between the Employer and the owner of utility is bounded legally or not.</p> <p>JC: 全体として、発注者・エンジニアの支援の下、3. 1.2 の準備作業を行い、オーナーからの工事許可を得る、という流れになります。</p> <p>The flow of activity of the Contractor is 1) preparation work mentioned in 3.1.2 with assistance of the Employer and the Engineer, and 2) obtaining permission of works from the owner.</p> <p>NK: modified as commented.</p> <p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the Contractor shall take the necessary procedure for the work in accordance with the Contract. the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>JC: (4)と(5)が論理的な対比になっていません。(4)はオーナーによる permission を論じているのに対し、(5)は「契約に従って行うこと」になっています。「オーナーによる permission を取得すること」に着目した対比であるべきです。発注者がオーナーである場合、当然かかる permission は所与のものであるべきものです。</p> <p>(4) and (5) are not logically contrast. (4) is described permission of the owner, however (5) is “in accordance with the Contract”. (5) shall be specified focusing “to get</p>	<p>Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p>	<p>Specification and take measures specified in this Chapter.</p> <p>(4) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p><i>As commented before and explained in January, why is all of this text relating to property ownership, permissions and contact with utility companies necessary, when it has nothing to do with safety and it is not always correct?</i></p> <p><i>Very often (if not usually) for JICA funded drainage and sewage treatment improvement projects, the executing agency is also the owner and operator of the underground and overhead utility services. In such cases the Employer and relevant authority are often one and the same and in this common case, the contact arrangements, requirements for permissions etc. stipulated in the JICA draft, do not apply.</i></p> <p><i>Sometimes also for example specialist local subcontractors who are already registered with the utility authority or company are required to be used. Actual arrangements can be very different.</i></p> <p><i>It is unusual and potentially risky to assume that the JICA specified arrangements apply as a common basis on all projects when they don't and I recommend that all is omitted.</i></p> <p><i>I am aware that sometimes the employer may require the contractor to make improper arrangements and but this is not the norm and also sometimes also the contractor does not perform correctly. However, I understood that JSSS is a safety specification, not a contract procedural manual and I suggest that it should not be used for this latter purpose.</i></p> <p><i>The following paragraph for example, is contractually and practically incorrect, the contractor has no obligation to get permission to execute the works, why should he?? If this is stated there is a strong likelihood that it will negatively affect the quality of the Bid Documents. Also, if the authority doesn't give such permission or delays in giving it, or changes the scope or working methods and timing the consequences are greatly confused. The other aspects of this clause are not relevant to safety and JSSS and have no real meaning.</i></p> <p><i>The scope and requirements for all work should be investigated and clarified beforehand by the executing agency and consultant and properly specified by the Employer in the Bidding documents before requesting Bids.</i></p> <p>(5) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and</p>	
--	--	---	--

<p>permission of the owner” as contrast of (4). In case that the owner is the Employer, the permission shall be already given.</p> <p>NK: modified as commented.</p> <p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(6) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system; In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(2) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>JC: 以下、ownerという言葉が出てきますが、これは発注者であろうが、第三者であろうが区別する必要はないと思います。</p> <p>JC considers it is not necessary to distinguish the Employer or the third party as the owner after this.</p> <p>NK: modified as commented.</p> <p>(b) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of for the required works, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>JC: 3.1.1 で発注者の reasonable assistance に言及しているので不要。またこれを消すことで、owner が発注者であろうが、第三者であろうが、意味が通じる文章になります。</p>	<p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(n) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>(o) The Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>(p) Obtain particular information from the owner of Underground or Concealed Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p>	<p>Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p><i>If JSSS includes (unnecessary) requirements for permissions and contact with Utility Companies as above then it also requires to state where such requirements are not necessary i.e. where the services are owned by the employer, which was why I changed the earlier draft so it was more balanced.</i></p> <p><i>However, if the former isn't required then neither is the latter.</i></p> <p><i>With the benefit of more time to consider this and as also suggested by Ito san in our meeting in January to explore ways to simplify this Chapter, I strongly recommend that this Chapter should be changed:</i></p> <p>1) <i>To concentrate on safety matters only.</i></p> <p>2) <i>To delete any ownership, permissions, contact arrangements and</i></p> <p>3) <i>To include clear requirements for the Employer to carry out proper pre-bid studies and prepare precise bid documentation and that this shall be included in the User Guide.</i></p> <p><i>I have edited this Chapter and will edit the User Guide on this basis.</i></p> <p>(6) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>(1) Where Underground or Concealed Services are the property of a relevant authority or a third party and the Contractor is required under the Contract to perform work thereon or to locate and protect same. 3.2. OVERHEAD SERVICES

3.2.1. General

- (31) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.
- (32) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.
- (33) In the case of the Overhead Services which are the property of a ~~legally constituted public authority or a third party (called as “the owner of Overhead Services”)~~, the Contractor shall take the procedure for the works mentioned in (4) below.
- (34) In accordance with the ~~legally binding~~ agreement between the Employer and the owner of Overhead Services ~~obtained by the Employer~~ regarding the actual scope of work to be carried out, ~~permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures)~~, the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works ~~according to following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.~~

3.2 OVERHEAD SERVICES

3.2.1 General

- (10) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.
- (11) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.
- (12) In the case of the Overhead Services which are the property of a third party, the Contractor shall take the procedure for the works mentioned in (4) below.
- (13) In accordance with the agreement between the Employer and the owner of Overhead Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Overhead Services to obtain a permission of the owner of Overhead Services to execute the works following the preparations described in JSSS 3.2.2 as well as the requirements of the Contract and the instructions of the Engineer.
- (14) In the case of Overhead Services which are the property of the Employer, the permission

- (2) When the unit of Contractor’s Equipment which is in contact with or in close proximity to a live circuit does not get an electrical shock, the operator shall immediately move the equipment to a adjacent safe location.
- (3) When it is not possible to move the Contractor’s Equipment away, the operator shall remain in the cabin until the affected live circuits are de-energised.
- (4) Prevent secondary electric shock accident by permitting only those who have received training in electrical rescue to rescue the casualties of an electric shock accident.
- (5) Immediately perform primary lifesaving measures such as CPR, if necessary use an Automated External Defibrillator (AED) and call for emergency medical support.

Report to the Engineer in accordance with JSSS 1.25.2 [Measures at the Time Accidents Occur] and where applicable to the representative of the relevant authority

3.2 OVERHEAD SERVICES

3.2.1. Generally

- (1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.

Please refer to above notes, I suggest the addition of the following:

- (2) If Overhead Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the relevant authority.

Please refer to above notes, I suggest the following is deleted:

- (3) The Contractor shall perform the works in connection with the Overhead Services as specified in the Particular Safety Specification and take measures specified in this Chapter.
- (4) In the case of the Overhead Services which are the property of a third party, the Contractor shall take the procedure for the works mentioned in (4) below.
- (5) In accordance with the agreement between the Employer and the owner of Overhead Services

3.2 OVERHEAD SERVICES

3.2.1 Generally

- (1) This Section applies where there are exposed or overhead power or communication cables, wires, ducts, pipes and the like within the Site (hereinafter collectively referred to as “Overhead Services”), and which may require preserving, protecting, diverting, removing, relocating, replacing.
- (2) If Overhead Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the relevant authority.

<p>(3) to (4) are modified and (5) is added to be similar to 3.1.1. NK: modified as commented.</p> <p>3.2.2. Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(35) Prepare a Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Overhead Services or the Employer, emergency call list and communication system;</p> <p>(36) In the case of Overhead Services which are the property of the owner of Overhead</p> <p>(k) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Overhead Services, give notice of work commencement, obtain further details of the location, content and condition of the Overhead Services for the required works, requirements and procedures of the owner of Overhead Services;</p> <p>JC: これはいらないような気がします。「工事をするために必要な電源」というように読めるような気がするからです。ここで論じているのは、保護をかけるような必要がある電線</p> <p>“for the required works” seems not necessary because JC think it may be read as “Overhead Services required for the Works”. ---	--	---	---

3.2.3 Requirements and Precautions for Charged Lines

Unless otherwise specified in the Contract **Bidding Documents**, or instructed by the Engineer, the Contractor shall:

- (38) Protect and secure all Overhead Services throughout the execution of the Works.
- (39) Adequately After the test of Overhead Services after at the completion of any diversion, replacement or alteration work by the owner of Overhead Services or the Employer, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution. Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.

JC: modified.
NK: modified as commented.

- (40) Be aware of and **avoid all risk** of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (41) Be aware of and **avoid all** mitigate risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.

JC: avoid all risk は不可能。ここだけでなく、他の章でも出てきている可能性があると思われるので以後注意して下さい。

It is impossible to avoid all risk. Please pay attention to this, which may be specified in other clauses.

NK: modified as commented.

- (42) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (43) Provide insulating protective pipe to the Overhead Services.
- (44) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit entry outside entering these ranges.

JC: このようにした方が、(7)と(8)のつながりが良いと思います。すなわち、(7)では safe zone の設定、(8)ではその safe zone に侵入させないように機械を使用する、という流れになります。

This revised description is smooth connection between (7) and (8) as (7) specifies to create safe zone and (8) does to operate machinery without entering in the safe zone.

NK: modified as commented.

- (45) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the

- (3) Be aware of and **avoid all risk** of electric shock when working near any cables or wires to ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.
- (4) Be aware of and **mitigate risk** of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.

To MD, please review this comment and if same revision is necessary in the above (3).

- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (6) Provide insulating protective pipe to the Overhead Services.
- (7) Create **safe zones** free from danger arising from use of Contractor's Equipment by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers.

To MD: Is this "safe zones" to be replaced with "dangerous zones" in (7) and (8) because (8) specifies to prevent Equipment entering the safety zone?

- (8) Prevent Contractor's Equipment, wire ropes or chains from **entering the safe zones** and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.

- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
2	High Voltage (600V up to 7000V)	1.2m
3	Low Voltage	1m

ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.

- (3) Be aware of and avoid all risk of electric shock when working near any cables or wires, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.

Suggest that "remove all risk" (which is contractually correct) is clearer and more preferable to "mitigate risk". This needs to be absolute and clear, "mitigate" is neither:

- (4) Be aware of and **avoid all risk** of subsidence or collapse of support structures of Overhead Services due to **excavations** being too close.
- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

Pipe and casings are different, I suggest both are correct

- (6) Provide insulating protective pipe or casings to the Overhead Services.
- (7) Create safe zones free from danger arising from the use Contractor's Equipment by demarcating the route and turning ranges and providing adequate signage and barriers.
- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk of close proximity or contact with Overhead Services, Contractor's Personnel or the Works.

- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the **relevant authority**:

Table 3.2.1: Safe Separation Distances

Circuit Voltage	Separation Distance
Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
High Voltage (600V up to 7000V)	1.2m
Low Voltage	1m

Services due to excavations being too close.

- (5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.
- (6) Provide insulating protective pipe or casings to the Overhead Services.
- (7) Create safe zones free from danger arising from the use Contractor's Equipment by demarcating the route and turning ranges and providing adequate signage and barriers.
- (8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.
- (9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk of close proximity or contact with Overhead Services, Contractor's Personnel or the Works.
- (10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the relevant authority:

Table 3.2.1: Safe Separation Distances

Circuit Voltage	Separation Distance
Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V increase and fraction from 60,000V)
High Voltage (600V up to 7000V)	1.2m
Low Voltage (less than 600V)	1m

- (11) Prepare as-built drawings of Overhead Services after completion of the associated work showing accurate positions, sizes, routes and details and submit to the Engineer.

<p>moving range of crane jibs and other high equipment.</p> <p>(46) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.</p> <p>(47) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:</p>	<p>(Less than 600V)</p>	<p>High Voltage</p>	<p>2 (600V up to 7000V)</p>	<p>1.2m</p>	<p>3.2.4 Information to Contractor's Personnel</p>

<p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>3章の Utility に関する4段表ですが、以下の点において、こちらからの要求事項を十分に満たしているものとは判断しかねます。</p> <p>① 4段表の右から2段目の経緯に残っている通り、当方のお願いは「ユーティリティの所有者別」で検討をすすめるのではなく、「ユーティリティが埋まっていることが分かっている場合とわかっていない場合」に分けて記述してください、というものです。</p> <p>「NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.」というような検討経緯がついていますが、結果としてこちらの要求する形に直っていません。(下記②も参照)</p> <p>② 例えば 3.1.2 の(2)と(3)が論理的な対比をなしていません。(2)は第三者がオーナーの場合、(3)は「ユーティリティが埋まっていることが分からない場合」です。そして(4)で一転再び発注者がオーナーの場合となっており、論理的に素直に流れていきません。</p> <p>英文がすでに Owner が誰かに着目した分類で記述されているので、その趣旨を殺さないように心がけながら修正してみました。これで今一度ご確認ください。</p> <p>今回は修正すべき事項が多いため、一番右の列だけ抜き出して、コメントを付しています。</p> <p>また、先般打ちあわせ通り、数か月後にまとまった形になったところで、全体を鳥瞰する形での内容確認をさせて頂きたいと考えているので、その際は今回コメントの対象としなかった部分についても、コメントする可能性がある点を含みおいてください。</p>			

<p>JC: e-mail from Mr. Ito on 2020/3/6</p> <p>We cannot judge that our requests are fully reflected in the last draft R2 regarding the following points:</p> <p>① Our requests are not to improve the description for different owners of underground utilities but to specifies for two cases of utilities which existence is known and not known.</p> <p>NK responded to our comments as “NK: As shown in 3.1.2 (2) (a) ~ (d) of this section in yellow are added as provide in Japanese draft. Item (2) is added for response to the JICA comments to specify two cases.”. However, as thee results, these do not meet our requests.</p> <p>② For example, (2) and (3) in 3.1.2 are not logically contrast. (2) is for the case of the utility which owner is a third party. (3) is for the case of underground utility which existing is not known. Then (4) is for the case of utility which owner is the Employer. These do not logically flow.</p> <p>We modified the draft paying attention not to change the original intention as the original was prepared on the basis of different owners. Please review them.</p> <p>As there are many revisions required, the draft R2 are copied to other sheets and added our comments on them.</p> <p>Please keep in your mind, we are planning to review (bird's eye view) whole document of JSSS which will be submitted us after several months as discussed last time and there is a possibility we will give more comments to items to which we have not commented this time.</p>			
<p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), and which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 General</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”) which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p><i>I have added the following as in any event it should apply; compliance with such procedures is usually mandatory and non-compliance will impact upon safety:</i></p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p> <p><i>Reference now included in the User Guide;</i></p> <p>NK: Original (2) is replaced with new (2). There is difference between as specified in PSS and unless otherwise stated in PSS.</p>	<p>3 UNDERGROUND, CONCEALED AND OVERHEAD SERVICES</p> <p>3.1 UNDERGROUND AND CONCEALED SERVICES</p> <p>3.1.1 Generally</p> <p>(1) This Section applies where there are existing underground or concealed pipes, cables, wires, ducts and the like within the Site (hereinafter collectively referred to as “Underground or Concealed Services”), which may require locating, preserving, avoiding and protecting, diverting, removing, relocating, replacing.</p> <p>(2) If Underground or Concealed Services are the property of a relevant authority and unless otherwise stated in the Particular Safety Specification, the Contractor shall comply with the official regulations and procedures of the authority.</p>

<p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third party (called as “the owner of Underground or Concealed Services”), the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p>JC: 単に third party でよいと思います。 JC think it is better to simply “third part”.</p> <p>JC: この後、owner が発注者であろうが、第三者であろうが owner という言葉で理解できるように記述するために削除します。 After this, the sentence is deleted to specify owner is any of the Employer and third party.</p> <p>NK: modified as commented.</p>	<p>(2) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(3) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p>	<p>(3) The Contractor shall perform the work in connection with the Underground or Concealed Services as specified in the Particular Safety Specification and take measures specified in this Chapter.</p> <p>(4) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p> <p><i>As commented before and explained in January, why is all of this text relating to <u>property ownership, permissions and contact with utility companies necessary, when it has nothing to do with safety and it is not always correct?</u></i></p> <p><i>Very often (if not usually) for JICA funded drainage and sewage treatment improvement projects, the executing agency is also the owner and operator of the underground and overhead utility services. In such cases the Employer and relevant authority are often one and the same and in this common case, the contact arrangements, requirements for permissions etc. stipulated in the JICA draft, do not apply.</i></p> <p><i>Sometimes also for example specialist local subcontractors who are already registered with the utility authority or company are required to be used. Actual arrangements can be very different.</i></p> <p><i>It is unusual and potentially risky to assume that the JICA specified arrangements apply as a common basis on all projects when they don't and I recommend that all is omitted.</i></p> <p><i>I am aware that sometimes the employer may require the contractor to make improper arrangements and but this is not the norm and also sometimes also the contractor does not perform correctly. However, I understood that JSSS is a safety specification, not a contract procedural manual and I suggest that it should not be used for this latter purpose.</i></p> <p><i>The following paragraph for example, is contractually and practically incorrect, the contractor has no obligation to get permission to execute the works, why should he?? If this is stated there is a strong likelihood that it will negatively affect the quality of the Bid Documents. Also, if the authority doesn't give such permission or delays in giving it, or changes the scope or working methods and timing the consequences and greatly confused. The other aspects of this clause are not relevant to safety and JSSS and have no real meaning.</i></p> <p><i>The scope and requirements for all work should be investigated and clarified beforehand by the executing agency and consultant and properly specified by the Employer in the Bidding documents before requesting Bids.</i></p> <p>NK: There are two cases regarding Underground or Concealed Services in ODA projects, Case 1: the owner and the Employer are same such as drainage and sewage treatment improvement projects mentioned</p>	<p>(3) In the case of Underground or Concealed Services which are the property of a third party, the Contractor shall take the procedure of obtaining permission for the work mentioned in (4) below.</p>
--	--	---	---

<p>(4) In accordance with the legally binding agreement between the Employer and the owner of Underground or Concealed Services obtained by the Employer regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission of the owner of Underground or Concealed Services to execute the work according to following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p>JC: コントラクターにとっては結果が大事(障害なく着工できることが大事)であり、発注者と Utility オーナーとの関係が legally binding か否かは関係ありません。</p> <p>For the Contractor, it is important that they can commence the Works without any obstacle. It is not matter whether the relation between the Employer and the owner of utility is bounded legally or not.</p> <p>JC: 全体として、発注者・エンジニアの支援の下、3. 1.2 の準備作業を行い、オーナーからの工事許可を得る、という流れになります。</p> <p>The flow of activity of the Contractor is 1) preparation</p>	<p>(4) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p>	<p>above, and Case 2: they are different such as road improvement projects on road where swedge, gas, water, etc. pipe lines, electricity cables.</p> <p>JICA wants:</p> <p>1) to specify for both cases because many claims for time extension and cost by the Contractors have been occurred due to the insufficient preparation by the executing agency/Employer before Bids such as no/insufficient information of the services and insufficient coordination between the owner/operator and the Contractor.</p> <p>2) to specify the Employer shall get permission of the Works from the owner/operator of the services and all information of the services such as locations, dimensions, etc., then provide the information and required works to the Contractor in Bid document.</p> <p>3) to specify the Employer/the Engineer to coordinate between the owner/operator and the Services in the Works.</p> <p><u>JICA knows about that their requirement is exceeding the safety requirement as we have advised, however they want to specify in this Chapter.</u></p> <p><u>NK will prepare as JICA wants, JICA will review this Chapter in the review of all JSSS in the DFR.</u></p> <p>(5) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p> <p><u>If JSSS includes (unnecessary) requirements for permissions and contact with Utility Companies as above then it also requires to state where such requirements are not necessary i.e. where the services are owned by the employer, which was why I changed the earlier draft so it was more balanced.</u></p> <p><u>However, if the former isn't required then neither is the latter.</u></p> <p><u>With the benefit of more time to consider this and as also suggested by Ito san in our meeting in January to explore ways to simplify this Chapter, I strongly recommend that this Chapter should be changed:</u></p> <p><u>1) To concentrate on safety matters only.</u></p>	<p>(4) In accordance with the agreement between the Employer and the owner of Underground or Concealed Services regarding the actual scope of work to be carried out, permission for its execution and details of the procedures and requirements (including responsibility for insurance and safety procedures), the Contractor (with reasonable assistance of the Employer and Engineer) may consult with the owner of Underground or Concealed Services to obtain a permission to execute the work following the preparations described in JSSS 3.1.2 as well as the requirements of the Contract and the instruction of the Engineer.</p>
---	---	--	---

<p>work mentioned in 3.1.2 with assistance of the Employer and the Engineer, and 2) obtaining permission of works from the owner.</p> <p>NK: modified as commented.</p> <p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the Contractor shall take the necessary procedure for the work in accordance with the Contract. the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>JC: (4)と(5)が論理的な対比になっていません。(4)はオーナーによる permission を論じているのに対し、(5)は「契約に従って行うこと」になっています。「オーナーによる permission を取得することに着目した対比であるべきです。発注者がオーナーである場合、当然かかる permission は所与のものであるべきものです。</p> <p>(4) and (5) are not logically contrast. (4) is described permission of the owner, however (5) is “in accordance with the Contract”. (5) shall be specified focusing “to get permission of the owner” as contrast of (4). In case that the owner is the Employer, the permission shall be already given.</p> <p>NK: modified as commented.</p> <p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance</p>	<p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>The Contractor shall make the following preparations prior to commencing the related work for locating, protecting, diverting, removing, replacing or the like as specified in the Contract:</p> <p>(1) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the</p>	<p>2) To delete any ownership, permissions, contact arrangements and</p> <p>3) To include clear requirements for the Employer to carry out proper pre-bid studies and prepare precise bid documentation and that this shall be included in the User Guide.</p> <p>I have edited this Chapter and will edit the User Guide on this basis.</p> <p>NK: After the meeting in January, JICA gave comments and modified in March. NK want to submit this Chapter as JICA comments and request them to review this in the DFR.</p> <p>(6) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>(1) Where Underground or Concealed Services are the property of a relevant authority or a third party and the Contractor is required under the Contract to perform work thereon or to locate and protect same, Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for locating, protecting, diverting, removing, replacing or the like of any Underground or Concealed Services:</p> <p>The following added paragraph in your draft is an unnecessary duplication of the above:</p> <p>NK: Agreed.</p> <p>(2) In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the</p>	<p>(5) In the case of Underground or Concealed Services which are the property of the Employer, the permission mentioned in (4) above shall be deemed to have been provided by the Employer subject to the preparations described in JSSS 3.1.2.</p> <p>3.1.2 Preparation and Work Planning</p> <p>(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall make the following preparations prior to commencing any work for locating, protecting, diverting, removing, replacing or the like of any Underground or Concealed Services:</p>
--	--	---	--

<p>by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system; In case the details of Underground or Concealed Services (position, depth, route and specifications for relocation/protection, etc.), the Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(2) In the case of Underground or Concealed Services which are the property of a legally constituted public authority or a third:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>JC: 以下、ownerという言葉が出てきますが、これは発注者であろうが、第三者であろうが区別する必要はないと思います。</p> <p>JC considers it is not necessary to distinguish the Employer or the third party as the owner after this.</p> <p>NK: modified as commented.</p> <p>(b) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of for the required works, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>JC: 3.1.1 で発注者の reasonable assistance に言及しているので不要。またこれを消すことで、owner が発注者であろうが、第三者であろうが、意味が通じる文章になります。</p> <p>It is not necessary as 3.1.1 has described “reasonable assistance”. By deleting this sentence, (b) becomes to specify for both owners (the Employer and the third party).</p> <p>JC: これはいらぬような気がします。「工事をするために必要な地下埋設物」というように読めるような気がするからです。ここで論じているのは、保護をかけるような必要がある地下埋設物</p> <p>“of the required works” seems not necessary because JC think it may be read as “Underground Services required for the Works”. (b) specifies about Underground Services to be protected.</p> <p>NK: modified as commented.</p> <p>(c) Obtain particular information from the owner of Underground or Concealed</p>	<p>Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(a) Prepare a Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon, necessity of attendance by the owner of Underground or Concealed Services or the Employer, emergency call list and communication system;</p> <p>(b) The Contractor may consult with the owner of Underground or Concealed Services, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, requirements and procedures of the owner of Underground or Concealed Services;</p> <p>(c) Obtain particular information from the owner of Underground or Concealed</p>	<p>Contractor shall carry out the following preparatory work prior to the commencement of the work:</p> <p>(a) Prepare a detailed Method Statement describing the measures for carrying out the required preparatory work and ensuring the safety of all persons engaged thereon;</p> <p>(b) Prepare an emergency call list and communication procedure;</p> <p>(c) (Accompanied by a representative of the Employer and Engineer) the Contractor may consult with the owner's representative of the relevant authority or third party, give notice of work commencement, obtain further details of the location, content and condition of the Underground or Concealed Services, of the required works, requirements and procedures of the owner;</p> <p>(d) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-</p>	<p>(a) Prepare a detailed Method Statement describing the measures for carrying out the required work and ensuring the safety of all persons engaged thereon;</p> <p>(b) Prepare an emergency call list and communication procedure;</p> <p>(c) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-</p>
--	---	--	---

<p>Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(d) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(2) In the case of Underground or Concealed Services which existence are predicted at the Site by the Contractor, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>JC: このスペックは入札書類に含まれる文書なので、ここに「コントラクターによって予見される」というのは不適切です。 As the JSSS is included in bid documents, it is not proper to mention "existence is predicted at the Site by the Contractor".</p> <p>NK: modified as commented.</p>	<p>Services on procedures for emergency de-energisation of the Underground or Concealed Services in case of an accident; and</p> <p>(d) Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed and proceed to expose and protect same or prepare for the required work in accordance with the Contract and the instructions of the owner of Underground or Concealed Services and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the owner of Underground or Concealed Services and the exploratory hand excavation.</p> <p>(2) In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p>	<p>energisation of the Underground or Concealed Services in case of an accident;</p> <p>(e) Provide and use cable avoidance tools or cable locators, trace the position and routes on ground surfaces, walls and floors of all Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.</p> <p>Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work; and, in accordance with the Contract and the instructions of the owner's representative of the relevant authority or third party and the Engineer.</p> <p>(f) The Method Statement shall be revised based on the information obtained from the above locating and exploratory work</p> <p><i>The following is not connected with safety and I do not recommend that it is included, none of this is related to safety matters which are not covered by the above. It will create misunderstanding and potential conflict, for example - what is the meaning of "existence is predicted but no detail given"? What is a "proposal" in a contract sense. "Variation"? Why such engineer's input?</i></p> <p>NK: The original (2) is Variation procedure. JICA want to specify this to avoid risk of accident due to the Concealed Services which are not shown in the Contract, however the Contractor predict it during the Works. The procedures are to detail, so NK propose as below:</p> <p>In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall inform the Engineer of the existence for the Engineer's instruction to the Contractor.</p> <p>(3) In case Underground or Concealed Services of which existence are predicted at the Site, but details are not shown in the Contract, the Contractor shall take the following procedure and preparation prior to the commencement of the work.</p> <p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of Underground or Concealed Services and</p>	<p>energisation of the Underground or Concealed Services in case of an accident;</p> <p>(d) Provide and use cable avoidance tools or cable locators, trace the position and routes on ground surfaces, walls and floors of all Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area;</p> <p>(e) Conduct careful exploratory hand excavation to locate the exact position, depth and route of the Underground or Concealed Services and proceed to expose and protect same or prepare for the required work; and</p> <p>(f) The Method Statement shall be revised based on the information obtained from the above locating and exploratory work.</p> <p>(2) In case Underground or Concealed Services of which existence are predicted at the Site, but not shown in the Contract, the Contractor shall inform the Engineer of the existence for the Engineer's instruction to the Contractor.</p>
---	--	---	--

<p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services and submit it to the Engineer.</p> <p>(b) Following the instruction by the Engineer regarding the proposal, create Method Statement showing the type, the owner of Underground or Concealed Services and location of assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation,</p> <p>(c) (Accompanied by a representative of the Employer and Engineer) consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(d) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p>(3) Where Underground or Concealed Services are the property of the Employer, the Contractor shall make relevant preparations as in JSSS 0 (2) and (3) and perform the work in connection with the Underground or Concealed Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>JC: as commented, not necessary to separately specify (3) for the Employer's property.. JC: deleted.</p> <p>(3) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the work.</p> <p>JC: 今までも議論があったと思いますが、一律2メートルの範囲で禁止というのはやりすぎです。 It is excessive to specify not to be allowed within 2m for all cases as already discussed</p> <p>NK: modified as commented.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Contract, or instructed by the Engineer, the Contractor shall:</p>	<p>(a) Prepare a brief proposal for exploratory excavation of the assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation,</p> <p>(b) Consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(c) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p>(3) Machine excavation shall not be allowed when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the work.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Contract, or</p>	<p>location of assumed Underground or Concealed Services, method, quantity and specifications of exploratory excavation.</p> <p>(c) Consult with the owner of Underground or Concealed Services about the Method Statement for the exploratory excavation and obtain agreement to the exploratory excavation.</p> <p>(d) Implement the exploratory excavation and submit the Engineer the results of exploratory excavation for further instruction by the Engineer.</p> <p>Why is the following changed? No machine excavation should start until locations and routes are explored and indicated as above and then precautions should be taken due to the accuracy of the equipment and survey. It needs a criterium to be stated.</p> <p>NK: The original (3) is modified by deleting the phrase of 2m deep to specify all machine excavation shall not be allowed.</p> <p>(4) Machine excavation shall not be allowed within 2m of the marked route of Underground or Concealed Services or otherwise when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the excavation.</p> <p>(5) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety</p>	<p>(3) Machine excavation shall not be allowed when there is any risk that Underground or Concealed Services may exist in the location or vicinity of the excavation.</p> <p>(4) The Contractor shall take all measures necessary to ensure the protection and safety of road traffic, pedestrians, Contractor's Personnel and any other persons affected by or potentially affected by the Works as required by the Contract and also by JSSS including JSSS 2.2 [Risk Control Around the Site].</p> <p>3.1.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety</p>
--	---	--	--

<p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground.</p> <p>(3) Restore surface paving with material and methods specified, paying attention not leaving difference in level with surrounding pavement and replace all surface markings and signage.</p> <p>(4) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(5) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(6) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(7) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(8) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p> <p>(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and</p>	<p>instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling and compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground.</p> <p>(3) Restore surface paving with material and methods specified, paying attention not leaving difference in level with surrounding pavement and replace all surface markings and signage.</p> <p>(4) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(5) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(6) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(7) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(8) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p>	<p>Specification, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling, compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground or Concealed Services.</p> <p><i>"Drains" is a correct and collective construction term for all types of surface water, waste or foul pipe drains that will be encountered frequently when excavating for other services. These drains will require such treatment if and when they are found and I do not recommend that it be deleted.</i></p> <p>NK: Added as recommended.</p> <p>(3) Take care to expose, support and protect any drains, other services (new or existing) which follow or cross the route of Underground or Concealed Services.</p> <p>(4) Reinstatement surface paving with material and methods specified, paying attention not leave any difference in level with surrounding pavement and replace all surface markings and signage.</p> <p>(5) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(6) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(7) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(8) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(9) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p>	<p>Specification, the Contractor shall:</p> <p>(1) Protect and secure all Underground or Concealed Services throughout the execution of the Works and avoid all damage to such services and adjacent areas, particularly when backfilling, compacting and reinstating surfaces.</p> <p>(2) Take care not to damage the Underground Services or Concealed Services when using power tools for example asphalt cutting machine to break through paved surfaces above Underground or Concealed Services.</p> <p>(3) Take care to expose, support and protect any drains, other services (new or existing) which follow or cross the route of Underground or Concealed Services.</p> <p>(4) Reinstatement surface paving with material and methods specified, paying attention not leave any difference in level with surrounding pavement and replace all surface markings and signage.</p> <p>(5) Adequately test all Underground or Concealed Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(6) Implement strict safety and fire prevention measures throughout the work including prohibiting the use of equipment that can create any damage or fire hazard (such as welding, cutting and electrical equipment) in the vicinity of any Underground or Concealed Services conveying flammable, combustible or explosive liquids or gases.</p> <p>(7) Be aware of and avoid all risk of electric shock when excavating for or near any cables, wires or cable ducts, ensure the safety of all Contractor's Personnel and ensure the provision and use of PPE.</p> <p>(8) Be aware of and avoid all risk of subsidence or collapse of excavations due to Contractor's Equipment, vehicles, other equipment or other activities being too close to any excavation.</p> <p>(9) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Underground or Concealed Services is taking place.</p>
---	---	---	--

<p><i>the Like</i>] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.</p> <p>(10) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.</p> <p>(11) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.</p> <p>(12) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.</p> <p>3.1.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <p>(1) Location of live cables and equipment.</p> <p>(2) Risk of electric shock from live cables or equipment.</p> <p>(3) Separation distances from live cables and equipment.</p> <p>(4) Work procedure,</p> <p>(5) Preventive measures against electric shock,</p> <p>(6) PPE to be used.</p> <p>(7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.1.5.</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.20 [<i>Accident Response Plan</i>].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services.</p> <p>3.1.5 Electrical Safety Training and Accident Measures</p> <p>Refer to JSSS 1.21 [<i>Accident Response Plan</i>].</p>	<p>(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [<i>Spotters, Flagmen and the Like</i>] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.</p> <p>(10) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.</p> <p>(11) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.</p> <p>(12) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer and to the authority and/or third party as appropriate.</p> <p>3.1.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <p>(1) Location of live cables and equipment.</p> <p>(2) Risk of electric shock from live cables or equipment.</p> <p>(3) Separation distances from live cables and equipment.</p> <p>(4) Work procedure,</p> <p>(5) Preventive measures against electric shock,</p> <p>(6) PPE to be used.</p> <p>(7) Accident training and response measures to an electric shock accident in accordance with JSSS 3.1.5.</p> <p>(8) Response in the event of an accident in accordance with JSSS 1.20 [<i>Accident Response Plan</i>].</p> <p>(9) Appropriate procedures in the case of accidents arising from contact with or damage to other Underground or Concealed Services.</p>	<p>(10) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [<i>Spotters, Flagmen and the Like</i>] when work in progress poses any risk to the Underground or Concealed Services, Contractor's Personnel or the Works.</p> <p>(11) Provide electrical cable marker tiles over all buried wires, cables and cable ducts to warn and protect against the risk of future mechanical damage to same.</p> <p>(12) Provide permanent markers or signage at the surface to warn of the presence, route and any danger of any Underground or Concealed Services.</p> <p>(13) Prepare as-built drawing of Underground or Concealed Services after completion of the associated work showing accurate positions, depth, sizes, routes and details and submit to the Engineer. and to the relevant authority and/or third party as appropriate.</p> <p>3.1.4 Information to Contractor's Personnel</p> <p>Prior to the start of work to or in the vicinity of Underground or Concealed Services, the Contractor shall instruct relevant Contractor's Personnel of the following:</p> <p>(1) Location of live cables and equipment.</p> <p>(2) Risk of electric shock from live cables or equipment.</p> <p>(3) Separation distances from live cables and equipment.</p> <p>(4) Work procedure,</p> <p>(5) Preventive measures against electric shock,</p> <p>(6) PPE to be used.</p> <p>(7) Electric shock accident in accordance with JSSS 3.1.5 エラー! --	---	--	--

<p>じているのは、保護をかけるような必要がある電線</p> <p>“for the required works” seems not necessary because JC think it may be read as “Overhead Services required for the Works”. (b) specifies about Overhead Services to be protected.</p> <p>NK: deleted as commented.</p> <p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>(3) Where Overhead Services are the property of the Employer, the Contractor shall make necessary preparations as in 3.2.2 (2) and perform the work in connection with the Overhead Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>JC: as commented, not necessary to separately specify (3) for the Employer’s property.</p> <p>NK: deleted.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract Bidding Documents, or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately After the test of Overhead Services after at the completion of any diversion, replacement or alteration work by the owner of Overhead Services or the Employer, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution. Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.</p> <p>JC: modified.</p> <p>NK: modified as commented.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor’s Personnel and ensure the provision and use of PPE.</p> <p>(4) Be aware of and avoid all mitigate risk of subsidence or collapse of support structures of</p>	<p>(b) Obtain particular information from the owner of Overhead Services on procedures for emergency de-energisation of the Overhead Services in case of an accident; and</p> <p>(c) Protect the Overhead Services in accordance with the Contract and the instructions of the owner of Overhead Services and the Engineer.</p> <p>3.2.3 Requirements and Precautions for Charged Lines</p> <p>Unless otherwise specified in the Contract or instructed by the Engineer, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to mitigate future risk of injury, leakage or pollution.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires to ensure the safety of all Contractor’s Personnel and ensure the provision and use of PPE.</p>	<p>(c) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Overhead Services in case of an accident.</p> <p>(2) Where Overhead Services are the property of the Employer, the Contractor shall make necessary preparations as in 3.2.2. above and perform the work in connection with the Overhead Services as specified in the Contract and in accordance with the instructions of the Engineer.</p> <p>3.2.3. Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires, ensure the safety of all Contractor’s Personnel and ensure the provision and use of PPE.</p> <p>Suggest that “remove all risk” (which is contractually correct) is clearer and more preferable to “mitigate risk”. This needs to be absolute and clear, “mitigate” is neither.</p>	<p>(c) Obtain particular information from the Employer or relevant authority on the procedures for emergency de-energisation of the Overhead Services in case of an accident.</p> <p>3.2.3 Requirements and Precautions</p> <p>Unless otherwise specified in the Particular Safety Specification, the Contractor shall:</p> <p>(1) Protect and secure all Overhead Services throughout the execution of the Works.</p> <p>(2) Adequately test all Overhead Services at the time of completion of any diversion, replacement or alteration work, to ensure the safety and integrity and to avoid any future risk of injury, leakage or pollution.</p> <p>(3) Be aware of and avoid all risk of electric shock when working near any cables or wires, ensure the safety of all Contractor’s Personnel and ensure the provision and use of PPE.</p>
--	---	--	---

Overhead Services due to excavations or other being too close.

JC: avoid all risk は不可能。ここだけでなく、他の章でも出てきている可能性があると思われるので以後注意して下さい。

It is impossible to avoid all risk. Please pay attention to this, which may be specified in other clauses.

NK: modified as commented.

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

(6) Provide insulating protective pipe to the Overhead Services.

(7) Create safe zones by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers and prohibit entry outside entering these ranges.

JC: このようにした方が、(7)と(8)のつながりが良いと思います。すなわち、(7)では safe zone の設定、(8)ではその safe zone に侵入させないように機械を使用する、という流れになります。This revised description is smooth connection between (7) and (8) as (7) specifies to create safe zone and (8) does to operate machinery without entering in the safe zone.

NK: modified as commented.

(8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
1	Extra-high Voltage (7000V and above)	2m (20cm to be added for every 10,000V)

(4) Be aware of and mitigate risk of subsidence or collapse of support structures of Overhead Services due to excavations or other being too close.

To MD, please review this comment and if same revision is necessary in the above (3).

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

(6) Provide insulating protective pipe to the Overhead Services.

(7) Create safe zones free from danger arising from use of Contractor's Equipment by demarcating the route and turning ranges of Contractor's Equipment with adequate signage and barriers.

To MD: Is this "safe zones" to be replaced with "dangerous zones" in (7) and (8) because (8) specifies to prevent Equipment entering the safety zone?

(8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk to the Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the public authority or third party that owns the Overhead Services:

Table 3.2.1: Safe Separation Distances

	Circuit Voltage	Separation Distance
--	-----------------	---------------------

(4) Be aware of and avoid all risk of subsidence or collapse of support structures of Overhead Services due to excavations being too close.

(5) Provide adequate temporary barriers, signage, markings and lighting to all areas where work on or adjacent to Overhead Services is taking place.

Pipe and casings are different, I suggest both are correct

(6) Provide insulating protective pipe or casings to the Overhead Services.

(7) Create safe zones free from danger arising from the use Contractor's Equipment by demarcating the route and turning ranges and providing adequate signage and barriers.

(8) Prevent Contractor's Equipment, wire ropes or chains from entering the safe zones and limit the moving range of crane jibs and other high equipment.

(9) Assign a full time Spotter in accordance with the requirements of JSSS 2.4 [Spotters, Flagmen and the Like] when work in progress poses any risk of close proximity or contact with Overhead Services, Contractor's Personnel or the Works.

(10) Maintain a safe separation distance between any charged electrical circuit and Contractor's Personnel, Contractor's Equipment, Scaffolding and any other Temporary Works, wire rope, tools and materials. The separation distance shall be the maximum relevant value shown in the following Table 3.2.1, any values that may be prescribed by the Laws and regulations of the Country or any values that may be prescribed by the regulations of the relevant authority:

Table 3.2.1: Safe Separation Distances

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following in addition to JSSS 3.1.4 (1) to (6):

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5.

JC: 3.2.5 に飛んで、3.2.5 では再び 1.21 に飛んでいます、従来までの検討では Accident Response Plan の原案は特別チームを編成せよ、といった内容に鑑み、大ナタを振るっているはず。1.21 がどのような内容になるのかが確認できない現状ではコメントできません。全体が提出された際に改めて検討します。

(1) specifies to refer to 3.2.5 and 3.2.5 does 1.2.1. In the last review, Accident Response Plan is requested to be drastically modified as last draft specified to establish special team. Because the content of revised 1.21 cannot be confirmed, JICA cannot comment now. After all JSSS is submitted, JICA will review this again.

NK: It leaves as it is tentatively.

- (2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].
- (3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.

JC: May we know why this specifies "other"?

NK: ask to MD about this.

3.2.5. Electrical Safety Training and Accident Measures

Refer to JSSS 1.21 [Accident Response Plan].

JC: 上記 3.2.4 に対するコメント参照。Please refer to the

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the following in addition to JSSS 3.1.4 (1) to (6):

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 3.2.5.

- (2) Response in the event of an accident in accordance with JSSS 1.20 [Accident Response Plan].
- (3) Appropriate procedures in the case of accidents arising from contact with or damage to other Overhead Services.

MD: Please add or modify (3) to make clear "other".

3.2.5 Electrical Safety Training and Accident Measures

Why delete? A record is necessary whether specified elsewhere or not.

NK: Provision of As-built drawings was deleted in the JICA comments of 12/16 to Issue 2 that "better not to extend the scope of the JSSS to the operation stage". NK propose the As-built drawing for Underground services but not for Overhead Services. Therefore (11) is deleted.

(11) Prepare as-built drawings of Overhead Services after completion of the associated work showing accurate positions, sizes, routes and details and submit to the Engineer.

3.2.4. Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the items listed JSSS 3.1.4 (1) to (6) plus the following:

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 4.1.8 [Electric Shock Treatment]

NK: 4.1.8 is not specified now in Chapter 4.

To MD, Can you review this (1).

- (2) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan].
- (3) Appropriate procedures in the case of accidents arising from contact with or damage to any Overhead Services.

3.2.4 Information to Contractor's Personnel

Prior to the start of work to or in the vicinity of Overhead Services, the Contractor shall instruct relevant Contractor's Personnel of the items listed JSSS 3.1.4 (1) to (6) plus the following:

- (1) Accident training and response measures to an electric shock accident in accordance with JSSS 4.1.8 [Electric Shock Treatment]. (not available)

- (2) Response in the event of an accident in accordance with JSSS 1.24 [Accident Response Plan].
- (3) Appropriate procedures in the case of accidents arising from contact with or damage to any Overhead Services.

3.2.5 Electrical Shock Treatment

<p>comment to above (1). NK: It leaves as it is tentatively.</p>	<p>Refer to JSSS 1.21 [<i>Accident Response Plan</i>].</p>	<p>3.2.5. Electrical Shock Treatment The Contractor shall take the measures prescribed in JSSS 3.1.5 [<i>Electrical Shock Treatment</i>].</p>	<p>The Contractor shall take the measures prescribed in JSSS 3.1.5 [<i>Electrical Shock Treatment</i>].</p>
