安全スペック英文案検討経緯書

1 General Requirements

JICA 安全標準スペック作成にかかる本格調査
 スペックの和文・英文作成・校閲用

2019.1.31 調査団宍戸作成

2019.2.1 迫田推敲

スペック名: 第1章 総則

和文(案)	英文(案)
目 次	Table of Contents
安全宣言 2	Safety Declaration 2
1. 総則 2	1 General Rule 2
1.1. 総則 2	1.1 General Rule 2
1.1.1. 用語と定義 2	1.1.1 Terminology and Definition 2
1.1.2. 目的 2	1.1.2 Purpose 2
1.1.3. 適用範囲 2	1.1.3 Scope of Application 2
1.2. 本スペックに適用する法律・基準 2	1.2 Laws and Criteria Applicable to the Specification 2
1.2.1. 本スペックに適用する法律 2	1.2.1 Laws Applicable to the Specification 2
1.2.2. 適用基準 3	1.2.2 Criteria Applicable to the Specification 2
1.3. 施工計画 3	1.3 Construction Planning 3
1.3.1. 施工計画書 3	1.3.1 Method Statement 3
1.3.2. 工事内容、施工条件等の把握及び事前調査 3	1.3.2 Understanding Construction Details and Conditions, etc. and Conducting Preliminary Survey 3
1.3.3. 施工計画の作成 3	1.3.3 Preparing Method Statement 3
1.3.4. 施工計画の変更等 4	1.3.4 Change of Method Statement 4
1.3.5. 作業計画書の作成 4	1.3.5 Preparing Method Statement for Each Work 4
1.4. 安全衛生計画書 4	1.4 Health and Safety Plan 4
1.4.1. 安全衛生管理計画書の提出 4	1.4.1 Submission of Health and Safety Management Plan 4
1.4.2. エンジニアによる計画書のレビュー 5	1.4.2 Review of the Plan by the Engineer 5
1.4.3. 安全衛生全体計画書 5	1.4.3 Health and Safety Management Plan 5
1.4.4. リスク分析 6	1.4.4 Risk Analysis 6
1.4.5. 安全衛生計画書 6	1.4.5 Health and Safety Plan for Each Work 6
1.5. 安全衛生管理体制 7	1.5 Health and Safety Management System 7
1.5.1. 安全衛生管理体制 7	1.5.1 Health and Safety Management System 7
1.5.2. 安全衛生管理要員の任命 7	1.5.2 Appointment of Health and Safety Management Personnel 7
1.5.3. 安全管理要員の要件、責務、権限 8	1.5.3 Responsibilities Authority and Requirements of Health and Safety Management Personnel 8
1.6. 安全衛生管理のための会議体 9	1.6 Conference Body for Health and Safety Management 9
1.6.1. 安全管理措置の周知徹底のための会議体 9	1.6.1 Conference Body for Full Dissemination of Safety Management Measures 9
1.6.2. エンジニア主催の月例安全会議 10	1.6.2 Monthly Safety Conference Organized by the Engineer 10
1.6.3. エンジニア主催の安全衛生調整会議 10	1.6.3 Safety Coordination Conference Organized by the Engineer 10
1.7. 労働者の適正配置 10	1.7 Proper Placement of Workers 10
1.8. 安全管理活動 10	1.8 Safety Management Activities 10
1.9. 安全衛生教育訓練 11	1.9 Health and Safety Education / Training 11
1.10. 緊急事態対応計画及び緊急通報体制 14	1.10 Emergency Response Plan and Emergency Reporting System 14
1.11. 救急救護施設と医療要員 15	1.11 Emergency Relief Facilities and Medical Personnel 15
1.12. 災害防止のための工事の中断 15	1.12 Suspension of Construction for Accident / Disaster Prevention 16
1.13. 事故発生時の措置 15	1.13 Measures to Be Taken in the Event of Accident 16
1.13.1. 被災者の救護、2次災害の防止 15	1.13.1 Relief of Victims, Prevention of Secondary Accident 16
1.13.2. 事故発生、原因調査結果、再発防止策の報告 16	1.13.2 Report on Accident Occurrence, Cause Investigation Result, Recurrence Prevention Measure 16
1.13.3. 工事の再開手続き 16	1.13.3 Construction Resumption Procedure 17
1.14. 安全要求事項に対する重大な不遵守に対するエンジニアの指示 16	1.14 Engineer's Instructions for Serious Noncompliance with Safety Requirements 17

和文(案)		英文(案)
1.15. 安全衛生月報16 1.16. 個人用保護具16		1.15 Health and Safety Monthly Report 1.16 Personal Protective Equipment..... 17
安全宣言 発注者は、全ての工事関係者の労働災害ゼロを目指し、エンジニア・請負者、ステークホルダーと共に、工事遂行においてあらゆる安全衛生対策を実施することを宣言する。 本安全スペックは、発注者が最低限実施すべき安全対策の具体的な安全要求事項を規定している。発注者は請負者が本スペックの要求事項を遵守し、労働災害ゼロを達成することを強く期待している。		Safety Declaration The Employer hereby declares, in collaboration with the Engineer, the Contractor and other stakeholders, to execute all measures possible for the supreme target of eliminating any occupational accident in the Works. This Safety Specification stipulates the concrete health and safety requirements for the minimum measures which the Contractor shall take as his obligation. The Employer strongly expects the Contractor to conform the requirements of the Specification and to achieve “Zero Accident” in the Works.
1. 総則 1.1. 総則 1.1.1. 用語と定義 本仕様書で使用する用語の定義は以下である。 (1) 工事: 契約条件書 GC1.1.5.8 で定義されている工事 (Works) と同義である。 (2) 工事現場: 契約条件書 GC1.1.6.7 で定義されている現場と同義である。(GC1.1.6.7「現場」とは、本設工事が実施され、保管・作業場所を含み、プラント及び資材が搬入される場所並びに契約において現場を形成する箇所として明示されるその他の場所をいう。) (3) 工事関係者: 発注者の要員、請負者の要員、工事現場に入場を許可された者をいう。 (4) 関係省庁: 工事に係る省庁、行政機関、警察署や消防署等をいう。 (5) 安全衛生責任者: (Health and Safety Officer) は、GC1.1.2.5 で定義されている請負者の代理人のことをいう。 (6) 安全衛生管理者: 契約条件書 GC6.7 に規定の事故防止責任者 (accident prevention officer) と同義である。 (7) 法律: 契約条件書 GC1.1.6.5 で定義されている法律と同義である。 (8) OSHA 基準: 米国労働省 労働安全衛生庁が規定する安全衛生に関する基準をいう。		1 General Provision 1.1 General Provision 1.1.1 Terminology and Definition In this Safety Specification (hereinafter referred to as “the Specification”), the following words and expressions shall have the meanings stated. (1) “Works” means the permanent works and the temporary works as defined in the GC 1.1.5.8. (2) “Site” means the places where the Works are to be executed as defined in the GC 1.1.6.7 (GC 1.1.6.7: “Site” means the places where the Permanent Works are to be executed, including storage and working areas, and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.) (3) “Work-related Persons” mean the Employer’s personnel, the Engineer’s personnel, the Contractor’s Personnel and any person who is admitted entering the Site. (4) “Related Legal Entities” mean the work-related government agencies, the administrative bodies, the police station, the fire department and other entities of similar nature. (5) “Health and Safety Officer” means the Contractor’s Representative defined in the GC 1.1.2.5. (6) “Health and Safety Supervisor” means Accident Prevention Officer stipulated in the GC 6.7. (7) “Laws” means Laws stipulated in GC 1.1.6.5. (8) “OSHA Standards” means the Standards specified by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A
1.1.2. 目的 本仕様書は契約に基づき請負者が実施する全ての工事に関係する工事現場内、工事現場周辺、公道での工事関係者、及び工事により影響を受ける住民等の安全と健康の維持と事故防止のために、請負者が実施すべき安全対策の要求事項を規定する。		1.1.2 Purpose The Specification stipulates requirements for safety measures to be carried out by the Contractor under the Contract for the purpose of preventing accidents and maintaining safety and health of all work-related persons, whether on or off the Site, or on the public road, and of neighboring residents who may be affected by the Work as well.
1.1.3. 適用範囲 本仕様書は契約に基づき請負者が実施する全ての工事に適用する。		1.1.3 Scope of Application The Specification applies to all Works undertaken by the Contractor under the Contract.
1.2. 本スペックに適用する法律・基準 1.2.1. 本スペックに適用する法律 請負者は工事の実施に当り労働安全衛生に関係する当該国の法律、及び工事に関係する国の法律を遵守しなくてはならない。ただし、本仕様書及び特記仕様書の要求事項の規定が法律より厳しい規定の場合、請負者は本仕様書及び特記仕様書の規定を適用しなくてはならない。		1.2 Laws and Criteria Applicable to the Specification 1.2.1 Laws Applicable to the Specification The Contractor shall, in execution of the Works, abide the laws on occupational health and safety and construction works of the country concerned. However, the Contractor shall apply provisions of the Specification and the Special Specification if they are stricter than those by the laws.

和文(案)	英文(案)
<p>1.2.2. 適用基準</p> <p>本仕様書が規定する適用基準の変更は原則として認められない。請負者が本仕様書で規定した基準の適用に関する提案を行う場合は、契約条件書 GC13.1 Right to Vary に従い、エンジニアのレビューと指示を受けるために提案書を提出しなくてはならない。</p>	<p>1.2.2 Criteria Applicable to the Specification</p> <p>The criteria stipulated in the Specification shall not allowed to change in principle. The Contractor shall, for proposing in respect of the application of the criteria stipulated in the Specification, submit a proposal to the Engineer for his review and instruction in accordance with the GC 13.1 “Right to Vary”.</p>
<p>1.3. 施工計画</p> <p>1.3.1. 施工計画書</p> <p>請負者は次の計画書を工事開始前もしくは作業開始前に作成しなくてはならない。</p> <p>(1) 施工計画書 (Method Statement)</p> <p>(2) 作業計画書(工種ごとの施工計画書)(Method Statement for Each Work)</p> <p>請負者は、本契約のスペックの別の場所に施工計画書と作業計画書に関する規定がある場合はその規定及び以下の規定を網羅して作成する。なお規程の優先順位は別の場所の規定を優先する。別の場所に規定がない場合は本スペックを遵守しこれらを作成する。</p>	<p>1.3 Construction Planning</p> <p>1.3.1 Method Statement</p> <p>The Contractor shall make the following construction plans prior to the commencement of the Works and each work which is a part of the Works;</p> <p>(1) Method Statement</p> <p>(2) Method Statement for Each Work</p> <p>If there are provisions concerning above Method Statements in another place of any Specifications of the Contract, the Contractor covers the provisions and the following provisions in making the Method Statements. The provisions of other places are prioritized. If there is no provision in another place, the Contractor shall comply with the Specification and create those Method Statements.</p>
<p>1.3.2. 工事内容、施工条件等の把握及び事前調査</p> <p>請負者は施工計画を作成するにあたっては、あらかじめ図面(GC1.1.1.6 に規定の Drawings)に明示された事項に対する事前調査を行い、安全確保のための施工条件等を把握しておかなければならない。</p> <p>また、施工計画の作成に先立ち、地形、地質、気象、海象等の自然特性、工事用地、支障物件、交通、周辺環境、施設管理等の立地条件について適切な調査を実施しなければならない。</p>	<p>1.3.2 Understanding Construction Details and Conditions, etc. and Conducting Preliminary Survey</p> <p>Prior to making the Method Statement, the Contractor shall conduct preliminary site survey against matters shown in the Drawings (GC 1.1.1.6 “Drawings) and shall understand the construction conditions etc. necessary for ensuring safety.</p> <p>Before preparing the Method Statement, it is necessary for the Contractor to conduct appropriate investigation on the site conditions such as topography, geology, weather, sea and other natural characteristics, site of construction, obstacle, traffic, surrounding environment, facility management etc.</p>
<p>1.3.3. 施工計画の作成</p> <p>請負者は施工計画の作成にあたって次の項目を実施しなければならない。</p> <p>(1) 施工計画は、施工条件等を十分に把握したうえで、工程、資機材、労務等の一般的事項のほか、工事の難易度を評価する項目(工事数量、地形地質、構造規模、適用工法、工期、工程、材料、用地等)を考慮し、工事の安全施工が確保されるように総合的な視点で作成する。</p> <p>また施工計画は、設計図書及び事前調査結果に基づいて検討し、施工方法、工程、安全対策、環境対策等必要な事項について立案する。</p> <p>(2) 関係機関等との協議・調整が必要となるような工事では、その協議・調整内容をよく把握し、特に工事の安全確保に留意すること。この場合、当該事項に係わる内容は、一般的に工程計画の立案に際して制約条件となるので、よく把握する。</p> <p>特に都市内工事にあっては、第三者災害防止上の安全確保に十分留意する。</p> <p>(3) 現場における組織編成及び業務分担、指揮命令系統が明確なものであり、また、災害等非常時の連絡システムも明記する。</p> <p>(4) 作業員は、必要人員を確保するとともに、技術・技能のある人員を確保する。やむを得ず不足が生じる時は、施工計画、工程、施工体制、施工機械等について、対応策を検討する。</p> <p>(5) 使用機械設備の計画・選定にあたっては、施工条件、機械の能力及び適応性、現場状況、安全面、環境面等総合的な視点で検討する。</p> <p>(6) 工事による作業場所及びその周辺への振動、騒音、水質汚濁、粉じん等を考慮した環境対策を講じる。</p>	<p>1.3.3 Preparing Method Statement</p> <p>The Contractor shall carry out the following items in preparing the Method Statement;</p> <p>(1) The Method Statement shall be made from the comprehensive point of view in order to ensure safe construction work understanding the construction conditions and taking account of the items (construction quantity, geographical geology, structure scale, applied construction method, construction schedule, process, material, land, etc.) that evaluate the degree of difficulty of construction, in addition to the general items such as schedule material, equipment and labor etc.</p> <p>In addition, the Method Statement shall be examined based on drawings, specifications and preliminary survey results and shall be planned with respect to the necessary items such as construction method, schedule, safety measures and environmental measures etc.</p> <p>(2) Attention shall be paid to ensure safety in Works that require consultation and coordination with relevant organizations etc. with understanding the contents of the consultation and coordination. In this case, the contents shall be fully understood because they will generally be constraint conditions for planning schedule. Particularly in the case of urban construction work, special attentions shall be paid to ensure safety to prevent third party accidents.</p> <p>(3) The Method Statement shall explicit the site organization, task assignment and chain of command, and the emergency contact network as well.</p> <p>(4) The necessary number of workers and workers with technical skills shall be secured. When unavoidable shortage of workers occurs, proper countermeasures shall be considered for the construction plan, schedule, construction organization and equipment etc.</p>

和文(案)		英文(案)																								
<p>(7) 工程は、準備作業から工事終了まで全工期にわたって安全作業を十分考慮するとともに、気象・海象条件等を十分考慮して作成する。</p>		<p>(5) In planning and selecting the equipment to be used, the decision shall be made from a comprehensive viewpoint such as construction conditions, machine capability and adaptability, site situation, safety aspect, environmental aspect, etc.</p> <p>(6) Environmental measures shall be taken considering vibration, noise, water pollution, dust and the like to the work place and its surroundings due to the Work.</p> <p>(7) The construction schedule shall be prepared with due consideration of weather and oceanic conditions etc. while fully considering safety work throughout the whole construction period from preparation work to completion of construction.</p>																								
<p>1.3.4. 施工計画の変更等</p> <p>施工時においては、請負者は当初の施工計画に従って忠実に実施しなければならない。ただし、事前検討の条件と実際の施工条件との相違又は、新たに生じた状況等により当初の施工計画書に記載した内容に変更が生じるときは、全体状況を十分勘案してすみやかに計画書を変更し、エンジニアに提出しその承認を得なければならない。</p>		<p>1.3.4 Change of Method Statement</p> <p>The Contractor shall carry out construction works faithfully according to the initial method statement.</p> <p>However, if any change in the content described in the initial method statement occurred due to the difference between the conditions of preliminary examination and actual construction conditions, or newly occurred circumstances, the Contractor shall modify the method statement immediately paying close attention to the overall situation and shall submit it to the Engineer and obtain his approval.</p>																								
<p>1.3.5. 作業計画書の作成</p> <p>請負者は、新たな工種・工区等に着手するに先立って、当該工事に対する作業計画書を作成しエンジニアの承認を得なければならない。作業計画書は、施工条件等を十分に把握したうえで、工程、資機材、労務等の一般的事項のほか、工事に存在するリスクを分析し、工事の安全施工が確保されるように総合的な視点で作成しなければならない。</p> <p>また、作業計画は、設計図書及び事前調査結果に基づいて検討し、作業方法、工程、安全対策、環境対策等必要な事項について立案しなければならない。</p>		<p>1.3.5 Preparing Method Statement for Each Work</p> <p>The Contractor shall, prior to starting a new kind of construction / work section etc., prepare a Method Statement for Each Work and obtain approval from the Engineer.</p> <p>The Method Statement for Each Work shall be prepared comprehensively so as to ensure safety of the construction work in addition to taking account of general matters such as schedule, equipment, labor, etc., understanding the construction conditions fully and analyzing the risks existing in each work.</p> <p>In addition, the method statement for each work shall be drawn up with necessary matters such as work method, schedule, safety measures, environmental measures, etc., examining the drawings and the preliminary survey result.</p>																								
<p>1.4. 安全衛生計画書</p> <p>1.4.1. 安全衛生管理計画書の提出</p> <p>請負者は次の計画書を作成し、エンジニアのレビューのために下記の期限までに提出しなくてはならない。</p> <table border="1" data-bbox="170 954 1039 1337"> <thead> <tr> <th></th> <th>計画書</th> <th>請負者の提出期限</th> <th>エンジニアの回答期限</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>安全衛生管理全体計画書(Health and Safety Management Plan)</td> <td>1) 契約条件書 GC8.1 で規定の工事開始日から 28 日以内に提出する。 2) 現場状況の変化に応じ随時見直しを行った時、速やかに提出する。 3) 契約条件書 GC 4.1 によるエンジニアの要請があった時、速やかに提出するものとする。</td> <td>受領後 14 日以内</td> </tr> <tr> <td>2</td> <td>安全衛生計画書 (Health and Safety Plan for each work)</td> <td>1) 各工種の工事の開始前 2) 現場状況の変化に応じ随時見直しを行った時 3) 契約条件書 GC 4.1 によるエンジニアの要請があった時、速やかに提出するものとする。</td> <td>受領後 14 日以内</td> </tr> </tbody> </table> <p>安全衛生全体計画書は工事契約後比較的短期間での提出が求められるが、本計画書は請負者の安全方針を明確にすることが目的であることを鑑み、いたずらに細部にわたって計画する必要はない。</p>		計画書	請負者の提出期限	エンジニアの回答期限	1	安全衛生管理全体計画書(Health and Safety Management Plan)	1) 契約条件書 GC8.1 で規定の工事開始日から 28 日以内に提出する。 2) 現場状況の変化に応じ随時見直しを行った時、速やかに提出する。 3) 契約条件書 GC 4.1 によるエンジニアの要請があった時、速やかに提出するものとする。	受領後 14 日以内	2	安全衛生計画書 (Health and Safety Plan for each work)	1) 各工種の工事の開始前 2) 現場状況の変化に応じ随時見直しを行った時 3) 契約条件書 GC 4.1 によるエンジニアの要請があった時、速やかに提出するものとする。	受領後 14 日以内		<p>1.4 Health and Safety Plan</p> <p>1.4.1 Submission of Health and Safety Management Plan</p> <p>The Contractor shall prepare the following plans and submit to the Engineer for his review by the specified deadline.</p> <table border="1" data-bbox="1207 954 2119 1404"> <thead> <tr> <th></th> <th>Health and Safety Plan</th> <th>Submission Deadline by the Contractor</th> <th>Response Deadline by the Engineer</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Health and Safety Management Plan</td> <td>1) The plan shall be submitted within 28 days from the commencement date stipulated in GC 8.1. 2) The plan shall be submitted immediately when reviewed in accordance with change of the site conditions. 3) The plan shall be submitted immediately when the Engineer requires as stipulated in GC 4.1.</td> <td>Within 14 days after receipt.</td> </tr> <tr> <td>2</td> <td>Health and Safety Plan for each work</td> <td>1) The plan shall be submitted prior to start of each work. 2) The plan shall be submitted when reviewing at any time according to changes in the site situation. 3) The plan shall be submitted immediately when the Engineer requires as stipulated in GC 4.1.</td> <td>Within 14 days after receipt.</td> </tr> </tbody> </table> <p>Although the Health and Safety Management Plan is required to be submitted in a relatively short period after the Contract, in</p>		Health and Safety Plan	Submission Deadline by the Contractor	Response Deadline by the Engineer	1	Health and Safety Management Plan	1) The plan shall be submitted within 28 days from the commencement date stipulated in GC 8.1. 2) The plan shall be submitted immediately when reviewed in accordance with change of the site conditions. 3) The plan shall be submitted immediately when the Engineer requires as stipulated in GC 4.1. 	permitted to enter the site.	

1.10 緊急事態対応計画及び緊急通報体制

請負者は、工事期間中に起きる自然災害、火災等の緊急事態に迅速かつ適切に対応するために、緊急事態対応計画を安全衛生計画書(又は必要に応じて安全衛生詳細計画書)の一部として作成し、工事関係者への周知徹底の上、緊急事態対応計画に基づく訓練を行わなくてはならない。また緊急通報体制を整備しなければならない。なお、工事中の事故発生時の対応は本仕様書 1.12 に従わなければならない。

(1) 緊急事態対応計画

緊急事態対応計画に関し次の措置を行わなくてはならない。

(a) 次の事項を記載すること。

(i) 想定される緊急事態の種類

(ii) 緊急通報体制

(iii) 緊急事態対応具体策

(b) 現場の状況の変化に応じた迅速な変更・改訂を行うこと。

(c) 安全衛生計画書の一部としてエンジニアに提出し、変更改定毎にエンジニアに提出すること。

(2) 緊急通報体制

緊急時においても相互確認可能な通報体制を構築しなければならない。また、緊急連絡表を作成し、事務所、現場等の見やすい場所に掲示すること。緊急連絡表の中で通報責任者、関係連絡先、担当者を定め、それぞれの電話番号を記入しなければならない。緊急連絡表には関係連絡先として必ず以下を含み、緊急事態の種類に応じてどの範囲まで連絡対象とするかを緊急事態対応具体策の中で規定しなければならない。

(a) 発注者及びエンジニア

(b) 関係省庁:行政機関、警察署や消防署等の関係省庁

(c) 請負者関係者:本社、現場、下請け、資材供給者等

(d) 当該事業の他の請負者

(3) 緊急事態対応訓練

緊急事態対応計画に基づき、緊急事態対応訓練を次のように行わなくてはならない。

(a) 別途規定のない限り半年毎に行うこと。

(b) 訓練計画を作成し、エンジニアに提出すること。

(c) 訓練結果に基づき、緊急事態対応計画の改善を行うこと。

(4) 緊急時の対応

請負者は施工中に緊急事態が発生したときには、上記(2)で示す緊急連絡表に基づき必要な情報共有を行ない、その上で作業の中断、作業員の退避を含む状況に即した適切な措置を講じなくてはならない。

1.10 Emergency Response Plan and Emergency Call System

The Contractor shall prepare an emergency response plan as a part of the Health and Safety Plan (or the Particular Health and Safety Plans as necessary) in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

In addition, the Contractor shall disseminate the emergency response plan thoroughly to persons related with the Work and carry out training based on the plan. The Contractor shall also establish an emergency call system.

In the event of an accident during construction, 1.12 of this Specification shall be followed.

(1) Emergency response plan

For the emergency response plan, the Contractor shall:

(a) include the following items:

(i) expected types of emergency situation

(ii) emergency call system

(iii) specific measures for emergency response

(b) make quick changes and revisions in response to changes in the site situation

(c) submit to the Engineer as part of the Health and Safety Plan, and resubmit at every change and revision

(2) Emergency call system

The Contractor shall establish a communication system that can be mutually confirmed even in an emergency.

In addition, the Contractor shall make an emergency contact list and post it in an easy-to-see place such as the site office or the field. The emergency contact list shall include name of the person responsible for reporting, relevant contact points, persons in charge with their respective telephone numbers

The Contractor shall include the following relevant contact points in the emergency contact list and define in the concrete emergency response measures the extent to which contact is to be made in accordance with the type of emergency.

(a) the Employer and the Engineer

(b) the relevant authorities and agencies: administrative agencies, police stations and fire stations etc.

(c) the Contractor related individuals / corporation: head office, site, subcontractors, material suppliers etc.

(d) other contractors of the Work

(3) Emergency response training

The Contractor shall conduct emergency response training based on the

	<p>emergency response plan as follows:</p> <ul style="list-style-type: none">(a) implementing every six months unless otherwise specified(b) creating a training plan and submit it to the Engineer(c) improving the emergency response plan based on training results <p>(4) Emergency response</p> <p>When an emergency occurs during construction, the Contractor shall share the necessary information based on the emergency contact list in (2) above, and take appropriate measures including work discontinuation and evacuation of workers in accordance with the situation.</p>

- Annex 2 Dangerous or Harmful Work
- Annex 3 Subjects of Special Education for Dangerous or Harmful Work
- Annex 4 Works Requiring to Appoint Operation Leader
- Annex 5 Subjects of Skill Training Course

General Application Notes:

1. JICA desire to significantly improve health and safety on all projects covered by the JICA international aid and assistance programmes through the implementation of improved safety measures, aiming to achieve a zero accident rate across all projects.
2. JICA have therefore prepared this standard safety specification containing detailed reference specifications, standards and procedures, and they require this to be used by and complied with by all project proponents (employers and their consultants, all bidders/contractors) on a comprehensive and consistent basis. All parties involved in relevant projects shall apply these safety practices under the slogan of “Safety First”.
3. This JICA Standard Safety Specification has been published on-line in the JICA website and it shall become effective and be incorporated by project employers and their consultants into the Bidding and Contract Documents for particular projects as and when the Loan Agreement (LA) for such particular projects has been executed and where such agreement specifically contain express mutual agreement between donor and recipient governments to adopt this JICA Standard Safety Specification as a basis for Health and Safety Management on that project.
4. The JICA Standard Safety Specification is available on the JICA’s web site shown below:
http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/oda_op_info/guide/tender/index.html
A copy of the JICA Standard Safety Specification is not attached to Bidding or Contract Documents.
5. Unless otherwise agreed by JICA and the executing agency of particular on-going JICA funded projects and also between the Employer and Contractor on those projects, this JICA Standard Safety Specification shall not be applied to such projects
6. In order that this JICA Standard Safety Specification can become an integral part of the Bidding and Contract Documents for particular projects and so that the requirements can therefore be implemented immediately after publication of this document on the JICA website, the particular instructions for alteration of the Bidding and Contract documents by (project employers and consultants) are contained within this document in Chapter 1, General, Sub-Clause ____ following. After making such modification to documents for particular projects, the JICA Standard Safety Document shall be read and construed as a part of the Bidding and therefore Contract Documents for that project.
7. It is the ultimate intention of JICA to formally update the separate “Standard Bidding Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety Specification.
8. The JICA Standard Safety Specification prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.
9. These General Notes are to be read and construed as an integral part of the JICA Standard Safety Specification.

コメントの追加 [J1]: JICA’s L/A usually doesn’t mention such technical documents. The concrete way to introduce JSSS into actual JICA’s funding operations is under consideration.

コメントの追加 [J2]: Would you please elaborate on this?

コメントの追加 [J3]: ditto

コメントの追加 [J4]: We consider that this note is addressed to the Employers, Contractors and Consultants, but in particular to the Employers who are issuers of the bidding documents (isn’t it?). Then, we find better to say “when the Employer seeks for higher safety level.”

Internal Notes for further consideration or action:

In relation to on-going projects, can JICA please confirm if it is the intention to apply the

JSSS is necessary to newly apply. If it is to be contemplated, please note that it may possibly involve additional cost and time. Also note that issue of new or revised JSSS could not automatically be applied under GC13.7, Adjustments for Changes in Legislation, it would probably require the issue of a Variation under GC13.1.

コメントの追加 [J5]: Our stance on the on-going projects is not to push when difficult to do so. We may reasonably invite the Employers to consider to apply JSSS if the bidding documents are not yet drafted, for example.

NK:

Employers Safety Declaration is not necessary as the content is now covered by General Notes, 1. and 2. above. A Bidder's Safety Declaration has been prepared (see last page)

I have not at this stage edited and coordinated all of the definitions but this is necessary and some additional Contract definitions will be required.

I have lined up some wording in the same manner as GC.

Please check and confirm if formatting is acceptable

1 General

1.1 General

1.1 Definitions

1.1.1 In this JICA Standard Safety Specification the following words and expressions shall have the meanings stated.

NK The following still requires coordination and editing by me later. I have lined up some wording to follow GC but more is required.

- (1) **“Persons related with the Work”** means the Employer’s personnel, the Contractor’s personnel and persons authorized to enter the construction site
- (2) **“Health and Safety Officer”** means the health and safety officer (to be appointed under Sub-Clause 6. 7 [Health and Safety]);
- (3) **“Worker”** means Workers of the main contractor and subcontractors, synonymous with labour used in GC6.7 of the General Conditions
- (4) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources which the Contractor proposes to adopt for the execution of the Works or any part of the Works
- (5) **“Particular Method Statement”** means a document that describes in detail the construction method, schedule, quality, safety, etc. of each work type or work performed by the Contractor
- (6) **“Operation Leader”** means a worker who is certified as capable of directing safely the works specified in Annex 4 finishing the skill training course specified in 1.9 (1)(c) of this Specification.

Other definitions require to be added, such as:

- (7) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website, issue number __ dated ____.
JICA please confirm the above is acceptable or advise alternative
- (8) **“Safety Plan”** means a document that shows the details of the safety arrangements, methods and resources which the Contractor proposes to adopt for health and safety throughout the execution of the Works or any part of the Works.
Safety Plan shall also means the “health and safety plan” and “safety plan” referred to as such in JSSS and the remaining documents contained in the Contract.

Additional MD to consider and include further additions

コメントの追加 [J6]: If your intention is to introduce this wording in the Conditions of Contract too (instead of “accident prevention officer”), we are reluctant to do so. We have already decided to continue to use FIDIC MDB for the time being. Then, we would like to keep the wording and structure of FIDIC MDB wherever possible. The definition given in the current draft of JSSS (Health and Safety Officer is synonym of accident prevention officer) is preferred.

Definition and use of “Safety Plans” to consider further

- 1.1.2 JSSS will become a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction For Building and Engineering Works Designed By The Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions and where applicable the Particular Conditions, shall apply to this Safety Specification.
- 1.1.3 JSSS has been drafted essentially to apply to JICA Loan Projects and the Conditions of Contract as noted in the previous Clause.
- 1.1.4 JSSS shall also apply to all projects under different forms of contract including those under Contractor design contract and contract forms under the JICA Grant Aid programme. When so used, suitable modification will be required to the definitions and text of JSSS document and the bidding documents for those projects to ensure compatibility and consistency with the relevant contract requirements for the project, reflecting the same intentions, standards and procedures for improving safety.

Delete 1.1.2 “Purpose”, as this is now covered by the General Notes

1.2 Alterations to the Bidding Documents and Conditions of Contract to Include JSSS as a part of the respective Contracts

[Note that this Clause applies to executing agencies, employers and their consultants for information in the preparation of Bidding and Contract Documents]

- 1.2.1 Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

“Prepare and include full details here of the Bid Stage Safety Plan according to the detailed requirements stated in JSSS Sub-Clause 1.3.3 Bid Stage Safety Plan, clearly listing and describing and reflecting all items listed in this Clause.

NK and JICA please confirm if the Bidders Declaration is required, I assume that it is and have prepared a suggested rough draft (refer to the last page). If required then suitable editing and additional detail is required.

- 1.2.2 Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1. Evaluation, 1.1 Evaluation of Technical Bids.

In the paragraph stating *[Evaluation of the Bidder’s Technical Proposal will include an assessment of the Bidder’s technical capacity to mobilize key equipment and personnel for the contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.]*

Insert “and Safety Plan” in the third line after the words, “work methods”.

Insert the following additional sentence at the end of the above paragraph “*Evaluation of the safety plan shall take account of the Health & Safety Officer in 1.1.2 Personnel and of safety equipment from the Safety Plan in 1.1.3 Equipment.*” after the words “in Section VI, Works Requirements.”

コメントの追加 [J7]: Let’s talk on this more. we are afraid that the degree of “fullness” is differently understood between us.

1.2.3 Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete positions 2 and 3 as stated and insert as follows:

- 2 **Health and Safety Officer**
- 3 *Other personnel to be inserted as appropriate*

コメントの追加 [J8]: Please see above.

1.2.4 Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

To include the Contract reference and procedures for review of Method Statements and Safety Plans, which is not presently included in FIDIC

Sub-Clause 4.1 Contractor's General Obligations	Delete that part of the fifth paragraph of this Sub-Clause which states: “ The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works. ” and in this place insert: <ul style="list-style-type: none">(a) The Contractor shall, whenever required by the Engineer, and in any event at least 21 days before commencing relevant parts of the Works submit Method Statements and Safety Plans which the Contractor proposes to adopt for the execution of the Works or the relevant parts of the Works.(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice to the Contractor stating the extent to which the Method Statement and /or safety Plan does not comply with the Contract. Within 14 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no such notice within 21 days of the date of receipt of the Method Statement and/or Safety Plan the Engineer shall be deemed to have given his consent and Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to his other obligations under the Contract.(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 7 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice within 14 days of the date of receipt of the
--	---

コメントの追加 [J9]: These things are mostly included in the JSSS, and we don't believe necessary to state them in the Conditions of Contract.

	<p>resubmission the Engineer shall be deemed to have given his consent and Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.”</p>
--	---

1.2.4 Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

(To render the JSSS as a part of the Contract and to include the wider requirements for safety now prescribed by FIDIC second edition:

<p>Sub-Clause 4.8 Contractor's Health and Safety Obligations</p>	<p>Delete this Sub-Clause completely and replace with the following:</p> <p>“The Contractor shall:</p> <ul style="list-style-type: none"> (a) comply with all applicable health and safety regulations and Laws; (b) comply with all applicable health and safety obligations specified in the Contract including the those contained in JSSS which as an entire document is to be read and construed as an integral part of the Particular Conditions of Contract by virtue of this amendment; (c) comply with all directions issue by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6.7 [Health and Safety]; (d) take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed; (e) keep the Site, Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons; (f) provide fencing, lighting, safe access, guarding and watching of: <ul style="list-style-type: none"> (i) the Works, until the Works are taken over under Clause 10 [Employer's Taking Over]; and (ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification
---	---

コメントの追加 [J10]: Worth considering, although, as mentioned before, we would like to keep the contents of FIDIC MDB as long as possible.

	<p style="text-align: center;">Period; and</p> <p>(g) provide any Temporary Works (including roadways, footways, guards and fences) which may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within 21 days of the Commencement Date and before commencing any construction on the Site, the Contractor shall submit to the Engineer for information a Safety Plan (based upon the Bid Stage Safety Plan) specifically prepared for the Works, the Site and other places (if any) where the Contractor intends to execute the Works. This Safety Plan shall be in addition to any other similar document required under applicable health and safety regulations and Laws.</p> <p>The Safety Plan shall set out or refer to all the health and safety requirements:</p> <p>(i) stated in JSSS and the Specification;</p> <p>(ii) that comply with the Contractor's health and safety obligations under the Contract; and</p> <p>(iii) that are necessary to effect and maintain a healthy and safe working environment for all persons entitled to be on the Site and other places (if any) where the Works are being executed.</p> <p>This Safety Plan shall be revised as necessary by the Contractor's Health and Safety officer, or at the reasonable request of the Engineer. Each revision of the Safety Plan shall be submitted promptly to the Engineer.</p> <p>In addition to the reporting requirement of sub paragraph (g) of Sub Clause 4.21 [Progress Reports] the Contractor shall submit to the Engineer details of any accident as soon as practicable after its occurrence and , in the case of an accident causing serious injury or death, shall inform the Engineer immediately.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of persons and any damage to any property.”</p>
--	--

1.2.4 Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

(To change the accident prevention officer at the Site to the Health and Safety Officer and define this):

Sub-Clause 6.7	In the second paragraph, delete the words “accident
-----------------------	---

Health and Safety	prevention officer at the Site” and insert “Health and Safety Officer”
--------------------------	--

コメントの追加 [J11]: Please see above.

Consider also:

Stop working instructions

Others

コメントの追加 [J12]: Would you please elaborate on this?
Is this an action by the Engineer or HSO?

Where the Standard Safety Specification refers to the standards and regulations of other countries, such reference is to the technical requirements only of such standards and regulations and not the related laws and legal enforceability of any of those other countries.

1.1.3 Scope of Application

Not yet revised

**This is a Sample Bidding Form which IF REQUIRED
can be attached as a additional Annex to Chapter 1 General**

Form BSD

BIDDERS SAFETY DECLARATION

The Japan International Cooperation Agency (JICA) require that high safety standards be pursued on all JICA aided projects with the intention of attaining a zero accident rate.

The Bidder hereby declares his complete understanding and acceptance of the JICA aim to achieve a zero accident rate on the proposed Works and accepting the obligations placed upon him by the Conditions of Contract he hereby confirms that he will remain responsible for ensuring that the Site is set up and maintained as a safe workplace for the Employer's Personnel and the Contractor's Personnel and any other persons entitled to be thereon that may be affected by operations thereby and that the Contractor is aware and accepts to follow all of the relevant health and safety laws and regulations of the Country and the requirements of this Standard Safety Specification, whichever provide the highest safety standard (NK to be further considered ---- in the opinion of the Engineer .

Irrespective of any Laws and the enforcement or otherwise of same within the Country, the Bidder hereby declares that he has given full, careful and independent consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works of all necessary Contractor's Equipment, Personal Protective Equipment, Temporary Works and other safety resources to improve the actual safety standards on the Works to a higher level than likely to be encountered in the Country. The Bidder further declares that all Works shall be carried out under the control of qualified expert foreign safety management and supervision. The Bidder further declares that where not available in the Country, he will import the latest internationally acceptable new safety equipment, Personal Protective Equipment, Temporary Works and most up to date and appropriate Contractor's Equipment that would be used internationally (for example would be used in Japan) such as traditional steel scaffolding or steel system scaffolding etc. and/or mechanical equipment (such as cherry pickers, hydraulic platforms, elevators, conveyors, etc.) and that same will be used for the purpose intended. The Contractor also declares that the Safety Equipment, Personal Protective Equipment, Temporary Works and Contractor's Equipment shall be fit for purpose and any which may be deemed to be inappropriate, old, unsafe or inefficient will not be brought upon the Site and will otherwise not be used for the wrong purpose or will be removed from the Site if so mobilised without the Engineer's knowledge, following the Engineer's instructions at the expense of the Contractor.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on Personal Protective Equipment to eliminate or reduce risks.

The Bidder further declares that he (and his subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability,
2. Fully inform workers about hazards,
3. Provide health and safety training to all workers in a language and vocabulary they can understand.
4. Keep accurate records of work-related injuries and illnesses.

コメントの追加 [J13]: We have the impression that this declaration is addressed to JICA. But, in our sense, it should be addressed to the Employer.

コメントの追加 [J14]: More diplomatically correct, please.

コメントの追加 [J15]: Do we need this word?

コメントの追加 [J16]: Should we say "New", here?

コメントの追加 [J17]: ditto

5. Perform tests in the workplace, such as air sampling as required by JICA standards.
6. Provide required new personal protective equipment at no cost to workers and ensure that this is used properly and kept in good condition,
7. Provide eyesight and hearing exams or other medical tests required by JICA standards.
8. Post injury and illness data where workers can see them.
9. Notify the Engineer and Employer and other statutory authorities within 8 hours of a workplace fatality or within 24 hours of any work-related accident
10. Not retaliate against workers for using their rights under prevailing law of these JICA Health and Safety Requirements, to report a work-related accident, injury or illness.

コメントの追加 [J18]: JSSS?

コメントの追加 [J19]: JSSS ?

コメントの追加 [J20]: We think something is wrong here. Let's talk on this more.

These requirements and this declaration shall apply fully to all of the Bidder's subcontractors, suppliers and specialists for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Contractor's Health & Safety Officer at Site, named below and also included in "part xxxx Key Personnel", shall be assigned from the Commencement Date full time upon the Site of the Works and shall not be replaced or substituted at any time except with the express approval in writing of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the signed Contract with the Employer, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

**JICA STANDARD SAFETY
SPECIFICATION FOR PROJECT
IMPLEMENTATION UNDER
JAPANESE GOVERNMENT ODA**

UPDATED DRAFT

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 1
Revision: 0
Date: 20/07/2019

NK please note that the following is a basic suggestion that requires your further study and legal review with appropriate revision/correction.

The disclaimer is based in part on the FIDIC Documents

ACKNOWLEDGEMENTS

JICA have made reference to other available published documentation during the preparation of this document and parts of such other documentation have been used in the preparation hereof. JICA expresses its appreciation for the use of all such other publications including:

- 1) *Japan Ordinance on Industrial Safety and Health (NK please list further acts and ordinances in detail)*
- 2) *OSHA Standard Part 1926 Safety and Health Regulations for Construction, published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.*
- 3) *Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.*
- 4) *ICE - temporary works design? And others (scaffolding?)*
- 5) ~~4) Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs Conseils (FIDIC).~~ *NK I think it better if this is not included. I have used FIDIC second edition for reference (GC4.8) but have not used it extensively.*

(NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of project teams engaged under the Japanese ODA programme. JICA intends that this document should represent a comprehensive guide for health and safety management on its construction projects, however JICA, (together with its consultants and other assistants engaged in the preparation hereof) will not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, fitness for purpose in general or in particular locations and non-infringement. This document is intended to provide general reference and shall not be relied upon in a specific legal situation or issue.

PART C: REQUIRED AMENDMENTS TO THE “JICA STANDARD BIDDING DOCUMENTS” 37	

C1.	Specifying Safety Requirements in Bidding Documents for Relevant Projects:	37
C2.	Specifying the required detail of Safety Plans in Bidding Documents:	39
C3.	Clarifying the Bid Evaluation requirements by including evaluation of Safety Plan:	41
C4.	Ensuring that reference in Bidding Documents is to “Health and Safety Officer”, not the “accident prevention officer” and also adding Temporary Works Designer:.....	42
C5.	Including Bidders Safety Declaration (BSD) in the Bid and Contract:.....	42
C6.	Defining procedures for submission and review of Method Statements and Safety Plans, not presently included in FIDIC:	45
C7.	Including JSSS as a part of the Contract with some further safety requirements:	46
C8.	Modifying the safety reporting requirements of GC4.21:	47
C9.	Changing the accident prevention officer to the Health and Safety Officer:	47
C10.	Including JSSS and the Bidder’s Declaration in the order of Priority of the Documents and ensure that it prevails over the Specification:.....	47
C11.	Including JSSS and the Bidder’s Declaration in the listing of documents included in the Contract Agreement:	48

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL

PART A: PREAMBLE NOTES

A1. Purpose and Objective:

JICA require that all parties engaged upon their ODA projects shall endeavour to establish and maintain a culture and environment where health and safety achievement is of the highest priority for all involved parties. The common goal shall be to achieve a zero accident rate, adopting the slogan of “Safety First”.

To assist with this objective, JICA have prepared and published this JICA Standard Safety Specification (hereinafter referred to as “JSSS”), which they hope will be adopted for future selected projects, by agreement with the executing agencies and their consultants on such projects.

A2. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by project employers and their consultants into the Bidding Documents (and therefore Contract) for particular projects on the date that the Loan Agreement (LA) for that project has been executed and where the parties to such LA have formally agreed to adopt JSSS as the technical basis for Health and Safety management on that project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective projects but a copy of JSSS shall be available on the JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

A3. Incorporation of JSSS into Contracts

JICA require that the Employer, Engineer and Contractor will each print a hard copy of JSSS for their own reference and use and that all of these entities shall fully inform their personnel, subcontractor’s, sub-consultants, other all parties who are associated with the particular project of the existence, content and purpose of JSSS and the objectives thereof.

Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any project and reference to JSSS on the website will be sufficient to deem incorporation of JSSS into the Contract for that project.

Unless otherwise agreed by JICA and the executing agency of currently on-going JICA funded projects and between the Employer and Contractor(s) on those projects, this JICA Standard Safety Specification shall not be applied to such projects.

Further updates and revisions to JSSS unless otherwise agreed with the Employer will be applied from the date that same are published

In order that this JICA Standard Safety Specification can become an integral part of the Bidding Documents for particular projects and so that the requirements can therefore be implemented immediately after online publication of this document, the particular instructions for alteration of the Bidding Documents by project employers and consultants are contained within this document in Part C of this Chapter 1: General. After making such modification to Bidding Documents for particular projects, the JICA Standard Safety Document shall be read and construed as a part of the Bid and therefore the Contract for that project.

It is the ultimate intention of JICA to formally update the separate “Standard Bidding Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety Specification.

A4. General Requirements

JSSS shall not alter or limit a contracting party's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of Contracts.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Contractors shall ensure that all health and safety hazards and risks are properly identified, assessed, controlled and evaluated prior to commencement of any work. Only applicably competent persons may perform the specified activities. Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly JSSS shall not limit or restrict the Contractor to the scope contained herein.

JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or detailed requirements then the related technical regulations of the Occupational Safety and Health Administration, (published by the United States Department of Labor and hereinafter referred to as OSHA) shall apply.

If any ambiguity or discrepancy is found in JSSS, the Engineer shall issue any necessary clarification or instruction.

The JICA Standard Safety Specification prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.

All Parts (A, B and C) of this Chapter 1: General, are to be read and construed collectively as integral parts of JSSS and they therefore constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL

PART B: TECHNICAL REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero Accident” in the execution of the Works taking full responsibility for the health and safety management of the Works, adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration has been prepared and is included in Part C of this Chapter 1: General.

1.2 Definitions and Abbreviations

1.2.1 In this JICA Standard Safety Specification the following words and expressions shall have the definitions stated.

- (1) **“Health and Safety Officer”** or **“HSO”** means the Contractor's health and safety officer at Site to be appointed by the Contractor in accordance with PC6. 7 [*Health and Safety*] and named by the Bidder in his Bid.
- (2) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor's General Obligations*].
- (3) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified in part or in whole by the Bidding Documents for the Project.
- (4) **“Safety Plan”** means a document that contains the risk assessments and shows the details of the safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety throughout the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor's General Obligations*].
“Safety Plan” shall also mean the “occupational health and safety plan”, “health and safety plan” and “safety plan” all described as such in JSSS and other documents contained in the Contract. *This is not necessary if references are consistent*
- (5) The phrase “health and safety” shall be construed as covering “occupational health and safety”.
- (6) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the agreement with and utilising the funds provided by the Bank under the terms mutually agreed for that purpose.
- (7) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (8) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..

- (9) Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “On-site supervision”, “Field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor’s Representative” and reference to the “safety and health manager of the contractor” and the like shall be collectively construed as reference to the Contractor’s “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed according to the terms for such similar documents required by the Contract.
- (10) If any ambiguity or discrepancy is found in the OSHA documents, the Engineer shall issue any necessary clarification or instruction.
- (11) Any reference to “Contractor” within this document shall also be deemed to include “all Subcontractors”, for whom the Contractor shall remain fully responsible.
- (12) JSSS shall form a part of the Contract for the Project and therefore the definitions contained in the Conditions of Contract for Construction For Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally to JSSS.
- (13) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (14) “**Formwork**” means temporary containment structures for in-situ concrete and its immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.

1.2.2 In this JICA Standard Safety Specification the following abbreviations shall have the meanings stated.

JIS	Japanese Industrial Standards
ANSI	American National Standards Institute
BS	British Standard
BSEN	British Standard European Norm)
ISO	International Organization for Standardization
ASTM	American Society for Testing and Materials

1.3 Scope of Application

1.3.1. JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant Conditions of Contract for Construction For Building and Engineering Works Designed By The Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions.

JSSS shall also apply to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme.

When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the project, reflecting the same intentions, standards and procedures for improving safety.

1.4 Laws and Reference StandardsThe Contractor shall comply with the Laws of the Country, including all health and safety standards.

1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the technical requirements of JSSS shall apply and these shall prevail over the technical requirements of Laws of the Country without altering or limiting the Contractor's legal duties and obligations under such Laws.

Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.

1.4.3 In any event, if the Contractor ascertains that any part of JSSS is of a lesser standard to any of the particular Laws of the Country, then the Contractor shall inform the Engineer and shall then comply with the particular Laws of the Country (including any occupational health and safety standards).

1.4.4 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.

1.4.5 Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used shall be that applicable at the Base Date.

1.4.6 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.5 Contractor's Safety Certification

NK please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Part C where I have made this optional

1.5.1. Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

1.5.2. An original or authorised true copy of the current certification shall be submitted with the Bid (refer to Chapter 1: General, Part C, item C.2. (5)) and shall subsequently be included with the Contract.

1.5.3. The Contractor shall submit original or authorised true copies of all current updates to the Engineer when due.

1.6 Safety Plan

1.6.1 The Contractor shall be required to submit an overall Safety Plan at two stages:

- (1) Safety Plan at Bid Stage
- (2) Safety Plan at Commencement Stage

In addition the Contractor shall provide such further overall or updated or particular Safety Plans as may be necessary due to current circumstances or conditions at the Site or as required by the Engineer in accordance with PC4.1 [*Contractor's General Obligations*]

1.6.2 Safety Plan at Bid Stage: for requirements refer to JSSS Chapter 1: General, Part C: Required Amendments to The "JICA Standard Bidding Documents".

1.6.3 Safety Plan at Commencement Stage:

NK – this is revised to incorporate some of the requirements of FIDIC second edition clause 4.8

“Particular Safety Plans” are not necessary and have no meaning when the following is considered in conjunction with revised clause 4.8 (see Part C, item C.6 and C.7)

Consider if this should be “plan” or “manual” at commencement?

- (1) Within 28 days of the Commencement Date and not less than 21 days before commencing any work at the Site, the Contractor shall submit to the Engineer for information a Safety Plan showing the Contractor’s proposed safety management polices, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works, in the comprehensive detail required by the Bidding Documents and Annex 1 to this Chapter 1: General, Part B. This shall be based upon the Safety Plan submitted at Bid Stage developed as necessary to provide the full information required.

This Safety Plan shall be in addition to any other similar document required under applicable health and safety Laws of the Country.

- (2) The Safety Plan shall set out or refer to all the health and safety requirements:
 - (a) That are stated in JSSS;
 - (b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
 - (c) that are necessary to effect and maintain a healthy and safe working environment for all persons entitled to be on the Site and other places (if any) where the Works are being executed.
- (3) Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with PC4.1 [Contractor’s General Obligations]
- (4) The Safety Plan (or parts of it) shall be revised or supplemented where considered necessary by the Health and Safety Officer, or at the reasonable request of the Engineer. Each revision of the Safety Plan shall be submitted promptly to the Engineer in any event not less than 21 days before commencing any parts of the Works at the Site, such that the Engineer is made aware in writing of at least the following information for each part of the Work:
 - (a) Work outline and work procedure
 - (b) Safety management system and responsibility and authority of personnel
 - (c) Risk assessment
 - (d) Safety measures
 - (e) Personal Protective Equipment (PPE) for the Contractor’s personnel
 - (f) Safety education and training of the Contractor’s personnel and Tool Box Meeting (TBM)
 - (g) Teaching materials used in education, training and pre-operation TBM before work
 - (h) Method of information sharing and communication among the Contractor’s personnel
 - (i) Implementation and monitoring of measures for health and safety management
 - (j) Emergency response
 - (k) First aid response

- 1.6.4 If items other than the above are necessary due to the nature of work, the contents of this Specification shall be supplemented by referring to the provisions of the work concerned.
- 1.6.5 The Contractor shall also consider the opinions of the Contractor's Personnel in preparing all Safety Plans.
- 1.6.6 In performing risk assessments the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on Personal Protective Equipment.
- 1.6.7 The Contractor shall ensure that all of the Contractor's Personnel and Employer's Personnel are fully informed of all hazards and risks on the Site.

Included elsewhere?: Clear signage shall be exhibited to warn all such personnel and any others that are likely to be on the Site whether legitimately or otherwise of all potential hazards and risks.

- 1.6.8 The procedural flow of risk assessment shall be as follows.
- (1) Identifying
 - (2) Evaluating
 - (3) Determining measures for avoidance or reduction
 - (4) To avoid further risks by or during the execution of the Works

1.7 Contractor's Health and Safety Management Staff

1.7.1 Health and Safety Officer

- (1) If the Contractor's Health and Safety Officer at the Site (HSO) has been named in the Bid or Contract, the Contractor shall assign that named HSO upon the Works and prior to the Commencement Date.
- (2) If the HSO has not been named in the Bid or Contract, the Contractor shall, prior to the Commencement Date, submit to the Engineer for consent, the name and particulars of the person the Contractor proposes to appoint as HSO. If consent is withheld or subsequently revoked in terms of GC6.9 [*Contractor's Personnel*], or if the appointed person fails to act as HSO, the Contractor shall similarly submit the name and particulars of another suitable person for such appointment.
- (3) The HSO shall be an employee of the Contractor and not of a subcontractor or consultant and unless otherwise stated in the Contract shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with PC6.7 [*Health and Safety*]
- (4) Prior to the Commencement Date and in advance of the appointment of the HSO at Site, the Contractor's senior head office health and safety officer HSO may be assigned in this capacity until the HSO is appointed as above.
- (5) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (6) The HSO shall possess any qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (7) The HSO shall be fluent in the language for communications defined in GC1.4 [*Law and Language*] and the also language of the Country.
- (8) Where there is no legal requirement under the Laws of the Country for qualification, the Contractor's HSO, shall have appropriate academic and health and safety qualification, work experience in construction (minimum 10 years) and in health and safety and management (minimum 10 years, can be concurrent with construction experience) and

whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.

- (9) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (10) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (11) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable of ensuring that:
 - (a) all working areas of the Site are inspected on a regular basis (every working day and at least twice per shift) to detect if any unsafe practices or conditions exist.
 - (b) if such unsafe actions, practices or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to suspend that part of the Works until such action has been taken.

Such inspections attended by the HSO, may also include the attendance of the safety representative of the Engineer.

1.8 Health and Safety Officer – Scope of Duties

1.8.1 The HSO shall devote his/her full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.8.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Works.
 - (a) Preparation of Safety Plans, implementation, evaluation and improvement thereof.
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's personnel and Employer's Personnel.
 - (c) Provision of activity records in progress reports.
 - (d) Detection through constant inspection and implementation of corrective measures for any unsafe conditions at the Site and unsafe behaviour or practices of the Contractor's Personnel and Employer's Personnel.
 - (e) Consultation on safety management with the Employer and the Engineer.
 - (f) Issuing instructions for suspension of the Works or parts thereof in case of accident or the like.
 - (g) Responding to accidents, creating and implementing measures to prevent recurrence.
 - (h) Reporting and consulting with the Employer's Personnel including when an accident occurs or an accident situation is likely.
 - (i) Appointment of health and safety inspectors and assistants.
- (2) Instructing the Contractor's Personnel and Employer's Personnel to take improvement measures for maintaining health and safety and preventing accidents.
- (3) Checking the health status of the Contractor's Personnel.

- (4) Planning and implementation of various training and education implementation plans.
- (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including lost time records and near miss cases.
- (6) Preparing regular internal and external reports on health and safety activities.
- (7) Hazard prediction activity (Kiken Yochi: KY).

Does this have international meaning?

1.9 Contractor's Health and Safety Committee

(NK I Suggest that "Safety Committee" has better international meaning than "Safety Council"??)

- 1.9.1 The Contractor shall create an internal Safety Committee for the purpose of effective health and safety management.
- 1.9.2 Members of the Contractor's Safety Committee shall include:
 - (1) Contractor's Representative
 - (2) Contractor's Health and Safety Officer at Site
 - (3) Health and safety support staff
 - (4) Medical and first aid staff
 - (5) Contractor's Senior site staff
 - (6) Contractor's head office safety manager (as necessary)
 - (7) Subcontractors representatives, health and safety personnel, site staff
 - (8) Representative of Contractor's workers on Site.
 - (9) (If necessary) Representatives of the relevant government authorities and agencies
 - (10) Other necessary personnel
- 1.9.3 The Chairman of the Safety Committee shall be the Contractor's Health and Safety Officer at Site.
- 1.9.4 The Contractor shall hold a regular Safety Committee Meeting for the purpose of sharing information regarding health and safety management among the Contractor's Personnel.
 - (1) Frequency of the meeting: At least once a month
 - (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO.
 - (ii) Issues raised by the representative of Contractor's workers on Site
 - (iii) Issues raised by subcontractors
 - (iv) Issues raised by others
 - (e) Feedback on the regular safety, coordination and other meetings with the Engineer.
 - (f) Safety instructions received from the Engineer.
 - (g) Items to be coordinated with police, fire department and other related organisations

- (h) Compliance and registration matters under the Laws of the Country.
- (i) Safety and health awards, media attention and the like.
- (j) Other matters.

1.9.5 Report on the Safety Committee Meeting

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.10 Engineer's Regular Safety Meeting

1.10.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent.

- (1) Frequency of the meeting: Once a month
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of Contractor's workers on Site
 - (iv) Issues raised by subcontractors
 - (v) Issues raised by others
 - (e) Status of resolution of previous problems
 - (f) Items to be coordinated with police, fire department and other related organisations
 - (g) Compliance and registration matters under the Laws of the Country.
 - (h) Safety and health awards, media attention and the like.
 - (i) Other matters.

1.10.2 Report on the Engineer's Regular Safety Meeting

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven days after the meeting.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to JICA.

NK - I suggest that this direct report will be necessary and useful, as it will provide JICA with the direct information they will need for statistical monitoring information and also early and official warning on potential and major issues.

If it is included in JSSS as this suggests, then the Employer will be deemed to have agreed to its use and cannot object later to such direct reporting.

Suggest also that the following might be helpful, I have made this optional in Part C

1.11 Project Safety Committee

- 1.11.1 On larger projects with multiple contractors, if required by the Bidding Documents for that Project, the Employer or Engineer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire project team.
- 1.11.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:
- (1) The Employer
 - (2) The Engineer(s)
 - (3) The Contractor's Representative(s)
 - (4) Health and Safety Officers of all members
- 1.11.3 The Chairman of the Safety Committee shall be the Employer.
- 1.11.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.
- 1.11.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting

1.12 Health and Safety Coordination with Other Contractors

- 1.12.1 Refer to GC2.3 and GC4.6 regarding the respective obligations and requirements for the Contractor regarding cooperation with:
- (1) the Employer's Personnel,
 - (2) any other contractors employed by the Employer, and
 - (3) the personnel of any legally constituted public authorities,
- ... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC4.8 [*Safety Procedures*] and GC4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

NK suggest the following 2 paragraphs be added from HSE:

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements and risk assessments) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

- 1.12.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of the such works and the location, timing and other conditions for such work.
- 1.12.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings.
- (1) Frequency of the meeting: Once a month
 - (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Status of resolution of previous problems
 - (e) Items to be coordinated with police, fire department and other related organisations
 - (f) Compliance and registration matters under the Laws of the Country.
 - (g) Safety and health awards, media attention and the like.
 - (h) Other matters.
- 1.12.4 Report on the Health and Safety Coordination Meetings.
- (1) The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
 - (2) A copy of this report shall be submitted to the Engineer and Employer within seven days after the meeting.
 - (3) A further copy shall be included in the Contractor's monthly progress report.

1.13 Contractor's Health and Safety Management Activities

1.13.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.13.2 Health and safety management activities shall include (but are not limited to):

- (1) Overall Management Activities
 - (a) Tasks of the Health and Safety Officer as described above
 - (b) Arranging, chairing, attending meetings as described above.
 - (c) Arranging, chairing, attending pre-work meetings, pre-start meetings, schedule meetings
 - (d) Monitoring the implementation of the Safety Plan
- (2) Management of Contractor's Personnel
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of 5S Activities (Seiri: sorting, Seiton: tidying, Seiso: cleaning, Seiketu: cleanliness, Shituke: discipline)

Does this have meaning internationally ?

- (c) Instruction and management of hazard prediction activity (Kiken Yochi: KY)

Ditto

- (d) Instruction and management of safety education and training
(e) Instruction and management of various safety measures

1.14 Monitoring

1.14.1 The Contractor shall develop and implement systems to ensure that compliance with the Safety Plan is monitored efficiently and transparently at all times, for which purpose the Contractor shall

- (1) Create checklists for monitoring
- (2) Carry out regular and irregular monitoring of implementation status
- (3) Monitor failed, unsafe or non-compliant conditions
- (4) Create files and safe storage systems for the monitoring records
- (5) Copy all relevant information to the Engineer as requested by the Engineer.

1.15 Joint Site Safety Inspections

1.15.1 In addition to the Contractor's own daily Site Safety Inspections described above, the Contractor shall also conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend

1.15.2 Frequency of Joint Site Safety Inspections shall be at least once a week

1.15.3 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.16 Engineer's Safety Representative

(NK what is the future intention? Will a safety engineer be appointed in future on all projects or will the Engineer act in this capacity?)

This requires a more detailed procedure, the following is an outline suggestion only This requires further coordination and development with other sections (e.g. scaffolding) so that joint safety and certification and "safe for use" procedures can be implemented if required) without affecting the Contractor's overriding responsibility.

Please refer to Part C where I have made further reference.

1.16.1 On large projects, the Engineer shall appoint an assistant under GC3.2 to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with the Contractor's Safety Plan. By written notice served under GC3.2, the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

- (1) Instructions requiring the Contractor's compliance with the Safety Plan
- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions
- (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.

- 1.16.2 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.
- 1.16.3 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC3.3.
- 1.16.4 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.
- 1.16.5 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to Chapter 1: General, Part C), it is to be assumed that the Engineer shall act in this capacity.

Communications may require more thought and definition. Who is to issue and receive? Can be direct HSO and ESR

1.17 Safety Statistics

- 1.17.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.
- 1.17.2 Actual statistics shall include the following:
- (1) Accident: description, casualties, location, time, type and cause
 - (2) Near-miss: description, casualties, location, time, type and cause
 - (3) Lost-time: lost hours of casualties, duration of discontinuation
 - (4) Remedial measures taken
 - (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate
 - (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them
 - (7) Record of report to the labour standards office
 - (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event
 - (9) Others
- 1.17.3 All data shall be in a format and content to meet with the approval of the Engineer.
- 1.17.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the safety representative of the Engineer for validation and mutual agreement.
- 1.17.5 The data shall subsequently be compiled and Monthly progress report.

1.18 Safety Reports

- 1.18.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:
- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement
 - (2) Joint Site Safety Inspections
 - (3) Weekly Safety Report: summary of safety matters of the week,
 - (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report can be submitted as an

attachment to the Contractor's monthly progress report.

1.19 Health and Safety Records

1.19.1. The Contractor shall keep the following records related to health and safety:

- (1) Records of accidents and near misses, occupational accidents
- (2) Records of all meetings for safety and health management
- (3) Record of monitoring of safety and health management activities
- (4) Record of health and safety education and training for the Contractor's personnel
- (5) Records of health management for the Contractor's personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

1.20 Proper Placement of Contractor's Personnel

1.20.1 Further to compliance with GC6.9, the Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

The HSO shall countersign all such records to indicate his/her confirmation of the suitability of each member of the Contractor's Personnel prior to their placement.

These records shall be available for the Engineer's inspection at any time.

1.20.2 Suitability of Contractor's Personnel and their work assignment shall be assessed in consideration of:

- (1) Work content and work environment
- (2) Work experience and ability etc.
- (3) Health condition, and health condition before daily work starts
- (4) Allocation of an achievable and safe work volume.
- (5) Allocation to workers under 18 in accordance with GC6.21

1.21 Placement and ID of Personnel for Works Requiring a License

1.21.1 If for any of the operations at Site, the Laws of the Country require operating, supervising or any other personnel to have a licence, particular qualification, registration or certification the Contractor shall ascertain that all such personnel possess and maintain such documentation.

1.21.2 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for his personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, qualification and skills.

1.21.3 The Contractor shall implement an identification (ID) pass system whereby all personnel on Site carry an ID pass with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any worker is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by removing the offending person from the Site immediately and appointing a suitable replacement.

1.22 Health and Safety Education and Training

- 1.22.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.
- 1.22.2 The Contractor shall include in the Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit full details of such education and training to the Engineer for his information before the start of such education and training.
- 1.22.3 Education and training shall be provided free-of-charge to the trainees, conducted during normal working hours, trainees shall be paid and the Contractor shall bear all necessary expenses.
- 1.22.4 For general education and training of new entrants upon the Site and those who are scheduled to change work type, skill or location, the following subjects shall be included:
- (1) Chain of command and communication methods for the work
 - (2) Hazard or danger of machinery, equipment, raw materials, etc., and methods of dealing with such hazards or danger
 - (3) Performance and handling methods of safety devices, personal protective equipment (practical on-Site training)
 - (4) Hazardous substance control devices (practical on-Site training)
 - (5) Work procedures generally
 - (6) Inspection before start of the work
 - (7) Maintaining a orderly, tidy and clean Site
 - (8) Emergency measures and evacuation at the time of accident etc.
 - (9) Health and safety rules
 - (10) Causes and prevention of diseases that may occur in relation to the work concerned
 - (11) Other matters necessary for health or safety related to the works concerned
- 1.22.5 For education and training of Contractor's Personnel who are planned to be assigned to dangerous or harmful work (for example as listed in Annex 2), such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the special education and training with reference to Annex 3.

Special education for the work concerned may be omitted in full or in part for any personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education

- 1.22.6 For education and training of Contractor's Personnel who are to be appointed as operation leaders as co-workers with each team of workers engaged upon such work at the Site (for example as listed in Annex 4 and 5), such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the skill-training course with reference to Annex 5.

Special education for the work concerned may be omitted in full or in part for any personnel

who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education

1.22.7 Education and training personnel

Education and training lecturers can be Contractor's Personnel who are experienced, academically qualified and (if legally required) registered as a teacher or lecturer under the Laws of the Country, fluent in the language of the Country or external lecturers similarly qualified and registered.

In case of absence of availability of such suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary qualification, ability and experience, subject to the receiving the advance consent of the Engineer.

1.22.8 Records of education and training

The Contractor shall create and store records of trainees, showing full details of training subjects and their capability, achievements etc., and permit the Engineer to inspect these as and when required by the Engineer.

1.22.9 Explanation of health and safety rules to persons other than the Contractor's Personnel

The Contractor shall provide general health and safety education courses to the Employer's Personnel and to any other persons who are permitted to enter the site.

1.23 Emergency Response and Relief

1.23.1 The Contractor shall prepare an emergency response plan as a part of the Health and Safety Plan in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

NK please note:

Natural disasters include typhoons, earthquakes etc. which are actually GC19 Force Majeure situations for which, the contractor is not responsible and he has no obligation to give any such automatic "response".

What is the actual required extent of the Contractor's "response"? What manpower and equipment is he to provide? How can this be predicted and estimated?

What about the Employer's and Engineer's own plans and what about the availability of the rescue services etc. in the Country?

These arrangements appear to be onerous upon the Contractor.

Can we please discuss and consider this further to understand the purpose and intention.

We have edited the following to make it readable but do not agree with the content.

In addition, the Contractor shall fully inform the Employer's Personnel, Contractor's Personnel and all other persons entitled to be upon the Site, of the detail of the Emergency Response Plan. The Contractor shall also establish an emergency call system and carry out training based on the Emergency Response Plan.

The Emergency Response Plan, shall: include the following items:

- (1) Expected types of emergency situation
- (2) Describe the emergency call system
- (3) Explain the specific measures for emergency response

- (4) Include measures for quickly establishing affected persons and locations, define assembly points and the like
- (5) Permit fast changes and revisions to be made in response to changes in the Site situation
- (6) Be submitted to the Engineer as part of the Safety Plan, and be updated as necessary throughout the Time for Completion of the Works.

1.23.2 The Contractor shall establish an Emergency Call communication system that will require confirmation from all contact persons even in the event of an emergency. This shall include the creation of an emergency contact list, which shall be posted in a visible location such as the Contractor's Site office as informed to all personnel.

The emergency contact list shall include name of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel
- (2) Relevant government authorities and agencies: administrative agencies, police stations and fire stations etc.
- (3) Contractor's Personnel at the Site, particular individuals positions, head office etc., subcontractors, material suppliers and the like.
- (4) Other contractors engaged upon the Site or the Works

1.23.3 The Contractor shall conduct emergency response training based on the Emergency Response Plan which shall include:

- (1) Implementing a training programme at least every six months
- (2) Improving the emergency response plan based on training results
- (3) Providing details of the emergency response

The Contractor shall provide training for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be upon the Site.

Details of the training shall be included in the Emergency Response Plan and Safety Plan.

1.23.4 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc. all as circumstances reasonably permit and as instructed by the Engineer.

1.23.5 The Contractor shall take measures such as the placement and installation of the following accident relief facilities and equipment, medical personnel, ambulances, etc.

NK See above queries, the Contractor usually has no such obligations for force majeure events, so if this is required it must be fully specified and paid for. Usually only the use of existing site facilities is allowable technically in accordance with the Engineer's Instructions (and payment by Employer).

We assume that the following "Emergency Relief Plan" actually means a plan for dealing with common accidents on the Site. This heading is a little misleading, I suggest change to something like "Accident Relief Plan" so there can be no confusion with "Emergency Response Plan"

What about health issues? The document is largely silent on this yet statistically this is the biggest problem

1.23.6 The Contractor shall prepare an Accident Relief Plan in consideration of the nature and timing of the Works and the location(s) of the Site and taking account at least of the minimum facilities and measures to be provided in accordance with the Specification for the Contract (refer also to Chapter 1: General, Part C) and including:

- (1) Availability of medical personnel who can provide first aid and additional medical assistance
- (2) Availability of vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site.
- (3) Establishment of first aid room, clinic or like facilities on Site with equipment and consumables
- (4) Arrangement of communication facilities and measures for emergency response
- (5) Deployment of first aid appliances, aids, instruments and medicines and kits in accordance with the scale and characteristics of the Work.
- (6) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that Chapter 1: General, Part C, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

1.24 Measures at the Time of Accident Occurrence

1.24.1. When an accident occurs, the Contractor shall immediately discontinue the work task and implement the following measures as necessary.

- (1) Safely locate, extract casualty and provide first aid and other accident relief activities
- (2) Secondary disaster prevention activities

NK what does this mean? Why "disaster"

- (3) Preserve the accident site, make safe and prevent anyone interfering or entering
- (4) Discontinue construction work related to or in the vicinity of the accident

NK This is a repeat of the above?

- (5) Implement measures instructed by the Engineer

What about automatic response by Contractor?

1.24.2. Report of Accident Occurrence, Cause Investigation Result and Recurrence Prevention Measures

The Contractor shall report the occurrence of an accident as follows in accordance with the Accident Relief Plan.

NK - The Emergency Response Plan is for natural disasters, it does not seem to apply here for normal accidents? The following is not yet edited

- (1) First report of the accident: Report to the Engineer by phone or other means as soon as possible.
- (2) First report of the accident situation: Report the accident-related information to the Engineer on the form designated by the Engineer as soon as possible.

NK - Can we please attach an accident report form now? As an appendix, please let me have a draft and I will include

- (3) Having investigated and established the cause, report on cause investigation of accident, situation on the site etc.: Report to the Engineer timely at any time.

NK - No time limit?

- (4) Report on measures to prevent recurrence: Report on cause investigation and preventive measures to the Engineer within one week after the accident or within a period agreed with by the Engineer.

1.24.3. Resumption Procedure of Construction Work

The procedures for resuming construction work at the Site after the occurrence of an accident are as follows.

- (1) Contractor examines and formulates measures to prevent reoccurrence and submits it to the Engineer.
- (2) The Engineer reviews the preventive measures.
- (3) The Contractor applies for resumption of work to the Engineer after making concrete preparations for implementation of the preventive measures.
- (4) The Contractor resumes the construction work with the consent of the Engineer.
- (5) The Contractor verifies the effectiveness of his preventive measures and informs the Engineer.
- (6) As necessary, the Contractor implements risk assessment and changes work plan.

1.25 Temporary Works

The following are draft notes, this is probably to be transferred and dealt with later in Chapter 7.1 but some reference may be necessary here.

Please leave this here for now and we will coordinate this (and other parts) later. There is cross reference to his clause in Part C.

- 1.25.1 The Contractor shall provide details at Bid stage (not calculations necessarily at this stage?) of all Temporary Works (TW) designs including Falsework for significant structures as listed in the Bidding Documents (refer to Chapter 1: General, Part C) and including for example:

- (1) Falsework equal to or higher than 3.5 m
- (2) Overhead passage equal to or higher than 10m (bridge?)
- (3) Scaffolds ("scaffolding"?) equal to or higher than 10m can engineer check scaffolding design?)
- (4) Other TW specified in the Contract or instructed by the Engineer

NK can we please discuss the above to clarify these and further requirements after which we will re-word this

What about other items such as TW for major bridge structures, tunnels, coffer dams, temporary dams, etc. ??

- 1.25.2 Unless otherwise stated in the Bidding Documents, Bidders/Contractors are required to comply with BS5975 or other equal and internationally accepted standard as approved by the Engineer in respect of the design and management of TW.

- 1.25.3 Contractors are required to engage an independent TW Designer(s) (TWD) to meet with the consent of the Engineer and who shall remain under the Contractor's responsibility and management. This person/entity shall be listed and described by the Bidder in the Bidding Documents.

- 1.25.4 The Engineer shall consciously endeavour to remove or reduce risks in the Permanent Works through his own design (for example by changing high level in-situ concrete structures to precast structures, simplifying applied ceiling and high level wall finishes and the like).

- 1.25.5 The Engineer shall cooperate and work with the Contractor's TW designer(s) and where possible shall provide important information on the permanent works design etc.
- 1.25.6 The Contractor shall submit TW method statements, (including designs and calculations) when requested by the Engineer under the Contract.
- 1.25.7 The review does not normally include the check of the design calculations of the Temporary Works. The Engineer has no obligation under the Contract to review TW design however he should do so for TW considered by him to be of vital importance for safety. The Engineer's response (if any) shall be in accordance with the Contract.

In accordance with GC3.1(c), any response from the Engineer shall be construed as provided in good faith and without prejudice to the Contractor's overriding responsibility for the TW.

- 1.25.8 The Contractor shall demonstrate by description in the Safety Plan that he has effective arrangements in place for controlling risks arising from the use of TW, by ensuring the following:

- (1) Appointment of a Temporary Works Co-ordinator (TWC) CONSIDER
- (2) Preparation of an adequate TW design brief.
- (3) Completion and maintenance of a TW register
- (4) Production of a TW design by an independent and specialist TWD (including a design risk assessment and a TWD method statement where appropriate).
- (5) Independent checking of the Temporary Works Design.
- (6) Issue of a TW design/design check certificate, if appropriate.
- (7) Pre-erection inspection of the TW materials and components.
- (8) Control and supervision of the TW erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
- (9) Check that the TW have been erected in accordance with the design and issue a formal "permit to load" where necessary.
- (10) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the TW and issue a formal "permit to dismantle" where necessary.

The procedure shall include measures to ensure that the design function, the role of TW designer and the supervision at Site for TW erection, maintenance and removal are all carried out by competent and experienced individuals.

1.26 Temporary Works Designer (TWD)

MD needs to consider and coordinate further

- 1.26.1 If the TWD has been named in the Bid or Contract, the Contractor shall assign that named TWD at the appropriate time.
- 1.26.2 If the TWD has not been named in the Bid or Contract, the Contractor shall, prior to the Commencement Date, submit to the Engineer for consent, the name and particulars of the person or entity that the Contractor proposes to appoint as TWD. If consent is withheld or subsequently revoked in terms of GC6.9 [Contractor's Personnel], or if the appointed person fails to act as TWD, the Contractor shall similarly submit the name and particulars of another suitable person or entity for such appointment.

- 1.26.3 The Contractor shall not revoke the appointment of the TWD or appoint a replacement without the prior consent of the Engineer.
- 1.26.4 The TWD shall possess any qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- 1.26.5 Where there is no legal requirement under the Laws of the Country for qualification, the Contractor's TWD shall have appropriate academic and Temporary Works design qualification, work experience in construction (minimum 10 years) and in Temporary Works Design and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.

ANNEXES TO PART B: TECHNICAL REQUIREMENTS

ANNEX 1: ITEMS TO BE DESCRIBED IN THE SAFETY PLAN

NK please note that text generally has been changed from Original so that this is coordinated with other changes basically to make it work better. Further MD coordination is required

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Site Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, **unless superseded by JSSS. If superseded by JSSS** then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

*NK see query in Chapter 1 (item 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item **CI**.*

The following clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, **Clause 1.25.8** are fulfilled.

~~(7) Safety Measures for Contractor's Equipment and Temporary Works~~

Requires changing due to the above added clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and**

~~Temporary Works~~ together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

- (8) Health and Safety Information Sharing and Communications Policy
A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.
A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.
- (9) Plans for Health and Safety Education and Training
An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering new-entrant education.
- (10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)
A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.
- (11) Health and Safety Rules
A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site. If a specific work area, condition or environment requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.
- (12) Site Safety Inspection Plan
A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.
- (13) Site Security
A description of the proposed Site security methods explaining how, access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.
- (14) Policy for Preventing Traffic Accidents
A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.
- (15) Prevention of Construction Accidents at Site
A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures).
- (16) Emergency Response Plan
A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as a major accident or disaster occurrence, work discontinuation,

notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) **Accident Relief Plan**

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) **Facilities for Maintaining the Occupational Health Environment**

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) **Work Discontinuation Criteria**

A description of the proposed criteria for discontinuation of work and person responsible for issuing instructions for such discontinuation for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) **Monitoring and Review of Health and Safety Management Activities**

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings and **5S activities**

(21) **Legal Remedies and Requirements after Occupational Accidents**

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

ANNEX 2: DANGEROUS OR HARMFUL OPERATIONS

NK: I have concerns about whether the information in the following annexes is of any value in an international context, I think not. In a domestic Japanese sense these requirements are of course very important as they are integrated with many other Japanese laws and regulations. However when abbreviated extracts only are included it does not have great meaning, there appears to be much missing which may not be covered by the fall-back (OSHA).

Also skill training is included for operation leaders but no such skill training or checking is included for other skilled persons is this correct?

Please consider all very carefully.

I am inclined to suggest that a simple basic requirement such as GC6.9 is sufficient, perhaps adding some reference to training and making the contractor responsible for all is probably better than going into so much detail for only a part.

The following is a list of example work types classified as “Dangerous or Harmful Operations”

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of such operations include (but are not restricted to) the following:

(as provided for by the Ordinance of the Ministry of Health, Labour and Welfare).

NK I requested a complete list at our last meeting however, according to the above Ordinance there are many more operations and requirements in addition to this list and also as this effectively applies only in Japan; is there a real need for this?

- (1) Crane operation and mobile crane operation
- (2) Welding and cutting of metal using arc welder *what about gas welders and cutting machines?*
- (3) Forklift operation
- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: *3t or more*) *why 3t or more? Why not all?*
- (5) Vehicle-type construction equipment operation (for foundation work: *3t or more*) *why 3t or more? Why not all? what about track type?*
- (6) Roller operation *what type?*
- (7) Operations that use organic solvents *what about other harmful substances and explosives for example?*
- (8) Sling work *meaning hoisting and rigging work*
- (9) Rope height work *cradles and hoists?*
- (10) Work to be performed using a full harness type of fall prevention device where the height is 2 meters or more and it is difficult to provide for the work floor *meaning of difficult? Too expensive? Is this coordinated with other chapters*

What about small tools (drills and angle grinders) all electrical works, gas pipe works etc etc? and related academic educational achievements?

ANNEX 3: SUBJECTS OF SPECIAL EDUCATION FOR DANGEROUS OR HARMFUL OPERATIONS

When Contractor's Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of special training for the above listed sample operations include (but are not restricted to) the following:

- (1) Special education for crane operation and mobile crane operation:

Subject	Scope
1 Knowledge of mobile and other cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane and other cranes	Force (composition, decomposition, balance and moment), centre of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane and other crane operation Signs for mobile crane and other crane operation

- (2) Welding and cutting of metal performed using arc welder

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention
4 Practical skill	Handling of equipment for arc welding work

- (3) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift.	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling

2 Knowledge of equipment structure and handling methods for cargo handling	Structure and handling method of hydraulic equipment (including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, centre of gravity and stability of objects, speed and acceleration, load, stress, material strength
4 Practical skill	Operation of traveling, operation of cargo handling

- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3 t or more)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

- (5) Vehicle-type construction equipment operation (for foundation work: 3 t or more)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance

4 Practical skill	Operation of traveling, operation of equipment for work
-------------------	---

(6) Roller operation

Subject	Scope
1 Knowledge of roller	Types and applications of rollers, structure and handling method of Power transmission devices of rollers, working devices, steering devices, brakes, electrical devices, alarm devices and auxiliary devices, method of inspection and maintenance
2 Knowledge of general matters required for roller operation	Mechanics necessary for operation, construction method by roller
3 Practical skill	Roller operation method

(7) Operations that use organic solvents

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapour and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical check-up and follow-up measures
4 Accident case	Accident cases and prevention measures

(8) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes, other cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), centre of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation method), method of signalling

4 Practical skill	Signs for operation, work with a sling for a crane
-------------------	--

(9) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(10) Work to be performed using a full harness type of fall prevention equipment where the height is 2 meters or more and it is difficult to provide for the work floor

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment (limited to full harness type, the same shall apply hereinafter)	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

ANNEX 4: WORK REQUIRING THE APPOINTMENT OF AN OPERATION LEADER

The following is a list of example work types that require the appointment and assignment of an operation leader as a co-worker to each team of workers engaged upon such work at the Site.

Such operation leaders shall be given special health and safety training appropriate to the operations concerned.

Examples of operations shall include (but are not restricted to) the following:

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Excavation work for quarrying
- (5) Formwork, falsework, supports and shoring assembly/dismantling work
- (6) Scaffolding assembly/dismantling work
- (7) Steel frame fabrication and erection work on buildings and structures
- (8) Steel bridge fabrication and erection work
- (9) Wooden, masonry and other building work
- (10) Demolition work of concrete or masonry structures
- (11) Reinforced concrete construction work
- (12) Organic solvent work and other hazardous substances or materials

ANNEX 5: SUBJECTS OF SKILL TRAINING COURSE

Examples of special training for the operations leaders shall include (but are not restricted to) the following:

What about skilled persons other than operation leaders?

(1) Operation leader for Earth excavation and shoring work

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(2) Operation leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases and toxic gases, measures for preventing hazards
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(3) Operation leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, instruments and tools, measures for preventing hazards, clothing and protective equipment

3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence
---	--

(4) Operation leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling methods for rock excavation, etc.	Types of rock, method of excavation for extraction of rock, treatment of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(5) Operation leader for formwork, falsework, supports and shoring assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(6) Operation leader for scaffolding assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types of scaffolds, materials, structures and assembly drawings, methods of scaffold assembly, disassembly and change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment

3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence
---	--

(7) Operation leader for steel frame fabrication and erection work on buildings and structures

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(8) Operation leader for steel bridge fabrication and erection work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(9) Operation leader for wooden, masonry and other building work

Subject	Scope
1 Knowledge about constructing structural members of buildings, installing floors, roofs, etc.	Construction methods of main structural parts such as frame, floor structures, walls, construction methods of roof and outer wall foundation, joints, order of construction, reinforcement method for frame

2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(10) Operation leader for demolition work of concrete or masonry structures

Subject	Scope
1 Knowledge about structural members including concrete masonry and reinforcement etc.	Types, structures, construction method of concrete and masonry work, types of method of construction, method of work, work plan, coordination with m & e services etc
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(11) Operation leader for reinforced concrete construction work

Subject	Scope
1 Knowledge of work method	Types of materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(13) Operation leader for organic solvent work and other hazardous substances or materials

Subject	Scope
1 Knowledge of health hazards and their preventive measures.	Pathology, symptoms, prevention methods and first-aid measures of health problems caused by such materials

2 Knowledge for improving the work environment	Properties of organic solvents, and other hazardous substances or materials management of equipment and other facilities related to production and handling of such materials, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of such materials
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL

PART C: REQUIRED AMENDMENTS TO THE “JICA STANDARD BIDDING DOCUMENTS”

[This Part C applies to executing agencies, employers and their consultants for use in the preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA require that the amendments described below, shall be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1.

The Bidding Documents for particular projects where JSSS has become effective as described in the above “Part A: Preamble Notes”, shall be amended in accordance with the following instructions:

C1. Specifying Safety Requirements in Bidding Documents for Relevant Projects:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5

Add the following additional text on page WR-5 to follow on from the existing text.

JSSS contains comprehensive reference to the health and safety requirements for Projects and includes detailed requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects that are to use JSSS to ensure that there is no duplication of the JSSS requirements in the Technical Specification for such Projects. Unnecessary and duplicated reference must be avoided.

It should be recognised that JSSS contains standard safety requirements that shall apply and prevail generally to relevant Projects and consequently it will be necessary to specify particular requirements applicable to individual Projects. Such particular requirements shall be carefully drafted and included in the Technical Specification of relevant Projects.

Technical Specifications shall therefore contain clear and precise descriptions covering such particular requirements including for example appropriate clauses for the following:

JSSS Chapter 1 Reference	Item
1.5 Contractor’s Safety Certification	State if the Bidder/ Contractor is required to be formally accredited under OHSAS 18001 and if so require submission of a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or equivalent from an internationally recognised and approved organisation
1.11 Project Safety Committee	State if a Project Safety Committee is to be established for the Project and add any further requirements.
1.12.2 Employer’s other contractors (see also GC2.3)	Describe and if possible identify or describe the scope of any other contractors to be employed by the Employer on the Site and specify working areas and timing as far as possible.
1.16 Engineer’s Safety Representative	State if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or if the Engineer will act in this capacity.

<p>1.23.6 Accident Relief Plan</p>	<p>Describe the minimum measures and facilities to be provided in consideration of the nature and timing of the Works and the location(s) of the Site, including:</p> <ol style="list-style-type: none"> (1) Medical personnel to provide first aid and additional medical assistance (2) Vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site. (3) First aid room, clinic or like facilities on Site and specify equipment and consumables (4) Communication facilities and measures for emergency response (5) First aid appliances, aids, instruments and medicines. (6) First aid training, appointment of first aiders and dissemination of information. (7) Include others as appropriate
<p>1.25 Temporary Works (If requirements are applicable on the Project)</p>	<p>Temporary Works (TW) designs are required for the following significant structures:</p> <ol style="list-style-type: none"> (1) Falsework equal to or higher than 3.5 m (2) Overhead passage equal to or higher than 10m <i>(bridge?)</i> (3) Scaffolds <i>(“scaffolding”?)</i> equal to or higher than 10m <i>can Engineer check scaffolding design?</i> (4) Other TW specified in the Contract or instructed by the Engineer <p><i>NK please refer to queries on this subject in 1.25</i></p> <p>Bidders/Contractors are required to comply with BS5975, yes or no?</p> <p>Is a Temporary Works Designer required? What other Temporary Works staff are required to be assigned?</p> <p>Is independent checking of the Temporary Works Design required? Is the Issue of a TW design/design check certificate required?</p>
<p>Others to add - MD</p>	

JICA stress the importance of the Employer putting in place a sound working environment for the Contractor, including for example reasonable Time(s) for Completion, reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. These provisions shall be clearly described in the Bidding Documents.

C2. Specifying the required detail of Safety Plans in Bidding Documents:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms
Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Prepare the Health and Safety Plan including details of all items listed below:

It is understood that the Bid Stage Safety Plan will be developed by the Contractor in more detail in the Safety Plan issued at Commencement Stage and at later stages but it is important that at Bid stage sufficient information is provided so that the following can be understood and evaluated.

Irrespective of what the Bidder may include in his plans and of any subsequent acceptance, approval or consent to the same, the detailed requirements of JSSS will continue to apply and prevail unless otherwise specifically agreed later in writing by the Engineer.

NK For Bidding purposes, the following is a copy of Annex 1, please coordinate as necessary if changes are made to Annex 1 and make the same changes here

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Site Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in Chapter 1 (item 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item C1.

The following clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

The Contractor shall describe the implementation policy of risk assessment.

(6) Temporary Works

NK this requires to be added, as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works to ensure that the requirements of JSSS Chapter 1: Temporary Works, **Clause 1.25.8** are fulfilled.

(7) Safety Measures for Contractor's Equipment ~~and Temporary Works~~

Requires changing due to the above added clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and Temporary Works together with all spare parts including inspections prior to shipment**, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering new-entrant education.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site. If a specific work area, condition or environment requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing the locations and frequencies. The description shall also include the methods for reporting, recording and utilising results.

(13) Site Security

A description of the proposed Site security methods explaining how, access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc.,

security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures).

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as a major accident or disaster occurrence, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation of work and person responsible for issuing instructions for such discontinuation for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings and **5S activities**

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

C3. Clarifying the Bid Evaluation requirements by including evaluation of Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilize key equipment and personnel for the contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.]

Insert “and Safety Plan” in the third line after the words, “work methods”.

Insert the following additional sentence at the end of the above paragraph “Evaluation of the safety plan shall take account of the Health & Safety Officer and the Temporary Works Designer in 1.1.2 Personnel and of safety equipment from the Safety Plan in 1.1.3 Equipment.” after the words “in Section VI, Works Requirements.”

C4. Ensuring that reference in Bidding Documents is to “Health and Safety Officer”, not the “accident prevention officer” and also adding Temporary Works Designer:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete positions 2 and 3 as stated and insert as follows:

- 2 Health and Safety Officer at the Site
- 3 Temporary Works Designer (*if this is a specified requirement or proposed by the Bidder - refer to JSSS, Chapter 1: General, Part C, Item C1*)
- 4 Other personnel to be inserted as appropriate.

C5. Including Bidders Safety Declaration (BSD) in the Bid and Contract:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include the attached “Form BSD - Bidders Safety Declaration” in the Bidding Documents after the existing Form-ACK, as new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer prefers that the Bidder has already appointed the Health and Safety Officer at the Site prior to Bid submission however if for any reason this appointment has not been made at Bid stage, this form can be signed by the Contractor’s Head Office Senior Health and Safety Manager

Form BSD:

Bidders Safety Declaration

I, *[insert name and position of authorized signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans, hereby certify on behalf of the Bidder and myself that all information provided in the Bid submitted by the Bidder for *[insert Loan No and name of the Project]*

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Form-BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

I further declare on behalf of the Bidder, that if selected to undertake services in connection with the Contract, we will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer’s Personnel and the Contractor’s Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of any Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor’s Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder further declares that all Works shall be carried out under the control of our qualified and expert health and safety management and where not available in the Country, we will import for sole use upon the Works:

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for purpose and all to meet with the approval of the Engineer.
2. New or recent Contractor’s Equipment (not more than 5 years old unless otherwise pre-inspected and approved by the Engineer) all fit for purpose, in full working order, safe, clean, non-polluting, complete with all necessary spare parts and consumables and suitable for use on the Works, and

... that all of the above will be used for the purpose intended.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.

The Bidder further declares that he (and his subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability,
2. Fully inform workers about hazards,
3. Provide health and safety training to all Contractor’s Personnel and Employer’s Personnel **in** a language and vocabulary they can understand.
4. Keep accurate records of work-related injuries and illnesses.
5. Perform tests in the workplace, such as air sampling as required **by JSSS**.

Is this covered?

6. Provide required new personal protective equipment at no cost to workers and ensure that this

- is used properly and kept in good condition,
7. Provide eyesight and hearing exams or other medical tests **required by JSSS.**
Ditto?
 8. Post injury and illness data where workers can see them.
 9. Notify the Engineer and Employer and other statutory authorities within 8 hours of a workplace fatality or within 24 hours of any work-related accident, injury or illness.
 10. Not retaliate against workers for using their rights under the Law of the Country.

The requirements and this declaration shall apply fully to all of the Bidder's subcontractors, suppliers and specialists for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Contractor's Health & Safety Officer at Site, named below and also included in Bidding Forms, Form PER -1: Proposed Personnel, unless otherwise stated in the Bidding Documents, shall be assigned from the Commencement Date, full time upon the Site of the Works and shall not be replaced or substituted at any time except with the express approval in writing of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

C6. Defining procedures for submission and review of Method Statements and Safety Plans, not presently included in FIDIC:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 4.1 Contractor's General Obligations	<p><i>Delete that part of the fifth paragraph of this Sub-Clause which states:</i></p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p><i>and in this place insert:</i></p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information within seven (7) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within 14 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no such notice within 21 days of the date of receipt of the Method Statement and/or Safety Plan, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 7 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within 14 days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p>
--	--

C7. Including JSSS as a part of the Contract with some further safety requirements:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.8 Contractor’s Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this contract clause amendment; (c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6. 7 [<i>Health and Safety</i>] as amended by PC6.7; (d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed; (e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons; (f) Provide fencing, lighting, safe access, guarding and watching of: <ul style="list-style-type: none"> (i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and (ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and (g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property. <p>In addition to the reporting requirement of sub paragraph (g) of Sub Clause 4.21 [Progress Reports] the Contractor shall submit to the Engineer details of any accident as soon as practicable after its occurrence and, in the case of an accident causing serious injury or death, shall inform the Engineer immediately.</p>
---	---

	The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of persons and any damage to any property.
--	---

C8. Modifying the safety reporting requirements of GC4.21:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 4.21 Progress Reports	In addition to the safety reporting requirements of sub paragraph (g) of Sub Clause 4.21 [<i>Progress Reports</i>] the Contractor shall submit to the Engineer details of any accident as soon as practicable after its occurrence and, in the case of an accident causing serious injury or death, shall inform the Engineer immediately. The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.
---	---

C9. Changing the accident prevention officer to the Health and Safety Officer:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 6.7 Health and Safety	In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site ”
---	---

C10. Including JSSS and the Bidder’s Declaration in the order of Priority of the Documents and ensure that it prevails over the Specification:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 1.5 Priority of Documents	Delete sub-items (a) to (i) and insert the following sub-items (a) to (j): (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder’s Declaration, (h) the Specification, (i) the Drawings, and (j) the Schedules and any other documents forming part of the Contract.
---	---

Included to avoid the discrepancy that exists with the Contract Agreement where this is also

referred to (see below).

C11. Including JSSS and the Bidder's Declaration in the listing of documents included in the Contract Agreement:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions. Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid ; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions ; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	---

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Technical Bid ; (iii) the Letter of Price Bid (iv) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (v) the Particular Conditions ; (vi) the General Conditions; (vii) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (viii) the Specification (ix) the Drawings; (x) the completed Schedules; and (xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	--

MD is also reworking the document and also revising all punctuation.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK

Issue: 2

Revision: 0

Date: 25/07/2019

NK please note that the following is a basic suggestion that requires your further study and legal review with appropriate revision/correction.

NK: JICA shall make legal review because it is not included in our Services .

This is a matter between NK and JICA, I assume that NK will confirm this with JICA
The disclaimer is based in part on the FIDIC Documents

ACKNOWLEDGEMENTS

JICA have made reference to other relevant publications in the preparation of this document and parts of such other documentation may have been used in the preparation hereof. JICA gives source credit and expresses its appreciation for the use of all such other publications including:

- 1) Japanese Ordinance on Industrial Safety and Health

Japanese Act, Order and Ordinance listed below

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure (*)

Ordinance on Prevention of Anoxia, etc. (*)

Ordinance on Prevention of Hazards Due to Dust(*)

Explosives Control Act (**)

Order for Enforcement of Explosives Control Act (**)

Ordinance on Explosives Control(**)

(*)Translated but old, (**)No English translation, Others are available but not completely updated

- 2) "OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.
- 4) ICE - temporary works design? And others (scaffolding?)

NK: we don't refer to ICE. We refer to BS (Code of Practice such as BS 5975.)

- 5) ~~4) Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC); NK I think it better if this is not included. I have used FIDIC second edition for reference (GC4.8) but have not used it extensively.~~

NK: FIDIC is not necessary as JICA's SBD includes FIDIC MD.

(NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

NK: we will do later.

Can we please discuss later.

Including FIDIC use also

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of project teams engaged under the Japanese ODA programme in order to encourage a higher standard of JICA intends that this document should represent a guide for health and safety management on its construction projects. JICA, (together with its consultants and other assistants engaged in the preparation hereof) will not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose in general or in particular locations and non-infringement. This document is intended to provide general reference and shall not be relied upon in a specific legal situation or issue.

JICA STANDARD SAFETY SPECIFICATION (JSSS)

OVERALL DOCUMENT INDEX

NK: All numbering to check

If numbers are not used, explain why (e.g. Future issue etc.)

What about health issues? Statistically this is the biggest problem but there is really no mention

NK: Do you mean if the health issues are asbestos, dusts including silica and lead, chemicals, sunlight, diesel engine exhaust emissions, frequent loud noise, frequent or excessive use of vibrating tools, frequent or excessive manual handling of loads, stress and fatigue.

Yes in answer to your question and also health issues at Site in terms of what shall be provided as a guide and also:

Contractor should provide (or ensure) eyesight and hearing exams that do have a significant effect on safety and other mobility and medical tests that are reasonable, all to be stated in JSSS.

We should not rely on local Laws but should stipulate health requirements to make sure that the contractor complies with this.

This will also require the Contractor to assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

We specify in 2.1 about dusts, noise and temperature. We do not specify about asbestos because the Laws of the country may have specified already and ODA projects may not handle asbestos except renovation works.

We surely cannot rely on local laws that in general JSSS is aiming to improve.

Renovation works occur frequently

Do you have any suggestion about health issues?

See above.

This also requires research of other standards but what about medical facilities on Site, medical tests and also treatment of endemic diseases in certain countries. AIDS is covered in FIDIC (although not so necessary now perhaps) but what about others? Malaria nets, dengue patrols (Singapore style) etc etc..

Also state criteria for provision of facilities at Site for example say related to the distance from Site to the nearest hospital. If say more than one hour provide a doctor(s) full time plus medical support plus nurses and reasonably equipped ambulance with driver.

Plus also same doctor and nurses may be able to provide a local JICA clinic?

All of the above requires coordination with GC6.8 but more clarity will be helpful as the present clause is frequently not applied properly.

Can we discuss further please, noting that this should really come from NK.

What do the Japanese regs. require?

The documents need to be comprehensive and helpful.

JSSS will be prepared at 2 stages. The 1st stage JSSS will cover the following table for basic and essential safety requirement and the 2nd stage will do for safety in sectors of road, river, tunnel, railway, etc.

Please can we discuss later, I am not sure if or how your ideas for later issues will work.

Chapter	Section	Clause
Employer's declaration		-
1. General Requirements <i>This JSSS mentions General.</i>		
2.General Safety Measures	2.1	Working site environment
	2.2	Risk control around the site
	2.3	Prevention of outsiders entering <i>This is usually termed Site Security and is governed by GC4.22</i> <i>NK: Please read 2.3 and give a suitable title.</i>
	2.4	Watching man and Signal man
	2.5	Fall prevention
	2.6	Falling objection
	2.7	Measures against extraordinary weather
	2.8	Fire prevention
	2.9	Nil <i>NK: We may use 2.9 for PPE.</i>
	2.10	Safety site management
		2.10.1 Information to Workers
		2.10.2 Appointment of Operation Leader
		2.10.3 Duty of the Operation Leader <i>NK: We may specify 2.10.2&3 in Chapter 1.</i>
		2.10.4 Life saving equipment for Works on Water <i>NK: We may specify this in xxx.</i>
		2.10.5 PPE <i>NK: We may specify PPE in 2.9.</i>
3. Underground objects and Overhead power lines	3.1	Underground objects
	3.2	Overhead power lines
4 Construction Equipment	4.1	General requirement
	4.2	Operation
	4.3	Transportation
	4.4 to 4.5?	<i>4.4&4.5 will not used but 4.6 will be 4.5.</i>
	4.6 4.5	Rental equipment
5. Transportation	5.1	General
	5.2	Truck
	5.3	Conveyors
6. Lifting and Sling Works		-
	6.1 General	
	6.2 Lifting works	6.2.1 Mobile cranes
		6.2.2 Other Cranes

	6.3-???	6.3-6- Lifting and Slings
7. Temporary Works	7.1	General
	7.2	Earth retaining and support earthworks??
	7.3	Coffering
	7.4	Scaffolding
	7.5	Walkway
	7.6	Work stages
	7.7	Temporary equipment
	7.8	Power facilities
	7.9	Welding works
8. Earth Works	8.1	General
	8.2	Manpower excavation
	8.3	Machine excavation
	8.4	Embankment
	8.5	Blasting
9. Foundation works	9.1	General
Why separate? Covered by 8 and 10 surely unless only Piling NK: Earth works and piling works are different, so they are separated.	9.2	Precast piling — in situ??, bored??
	9.3	Machine excavation foundation In-situ piling
	9.4	Open caisson and deep well foundation Earthworks?
		Basements and waterproofing
10. Concrete Works	10.1	Reinforcement Reinforcing bars works
	10.2	Formwork
	10.3	Concrete works in-situ/precast/prestressed??- Not yet determined by JICA to include precast/prestressed
11. River Works Diving works (Title will be reconsidered later.)	11.1	Diving works NK: Most dangerous works only will be specified.
		Coffer dams?? The 1 st stage JSSS will not specify other than diving works.

Above to coordinate later

C9. Changing the accident prevention officer to the Health and Safety Officer:	59
C10. Including JSSS and the Bidder’s Declaration in the order of Priority of the Documents and ensure that it prevails over the Specification:.....	59
C11. Including JSSS and the Bidder’s Declaration in the listing of documents included in the Contract Agreement:	59

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL

PART A: PREAMBLE NOTES

A1. Purpose and Objective:

JICA require that all parties engaged upon their ODA projects shall endeavour to establish and maintain a culture and environment where health and safety achievement is of the highest priority for all involved parties. The common goal shall be to achieve a zero accident rate, adopting the slogan of “Safety First”.

To assist with this objective, JICA have prepared and published this JICA Standard Safety Specification (hereinafter referred to as “JSSS”), which they hope will be adopted for future selected projects, by agreement with the executing agencies ~~and their consultants~~ on such projects.

NK: I think the executing agencies only agree to adopt JSSS with JICA, so consultants may be deleted?

Agreed and deleted

A2. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by project employers and their consultants into the Bidding Documents (and therefore Contract) for particular projects on the date that the Loan Agreement (LA) for that project has been executed and where the parties to such LA have formally agreed to adopt JSSS as the technical basis for Health and Safety management on that project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective projects but a copy of JSSS shall be available on the JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

A3. Incorporation of JSSS into Contracts

JICA require that the Employer, Engineer and Contractor will each print a hard copy of JSSS for their own reference and use and that all of these entities shall fully inform their personnel, subcontractor’s, sub-consultants, other all parties who are associated with the particular project of the existence, content and purpose of JSSS and the objectives thereof.

Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any project and reference to JSSS on the website will be sufficient to deem incorporation of JSSS into the Contract for that project.

Unless otherwise agreed by JICA and the executing agency of currently on-going JICA funded projects and between the Employer and Contractor(s) on those projects, this JICA Standard Safety Specification shall not be applied to such projects.

Further updates and revisions to JSSS unless otherwise agreed with the Employer will be applied from the date that same are published

NK: I think it is not clear for me. Is this subject to variation? Can you describe this in other way?

I have already edited this before your comment. This requires further discussion but any new JSSS editions, which change requirements, IF they are to apply to ongoing projects will in principal constitute a variation to that Project.

In order that this JICA Standard Safety Specification can become an integral part of the Bidding Documents for particular projects and so that the requirements can therefore be implemented immediately after online publication of this document, the particular

instructions for alteration of the Bidding Documents by project employers and consultants are contained within this document in Part C of this Chapter 1: General. After making such modification to Bidding Documents for particular projects, the JICA Standard Safety Document shall be read and construed as a part of the Bid and therefore the Contract for that project.

It is the ultimate intention of JICA to formally update the separate “Standard Bidding Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety Specification.

A4. General Requirements

JSSS shall not alter or limit a contracting party’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of Contracts.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Contractors shall ensure that all health and safety hazards and risks are properly identified, assessed, controlled and evaluated prior to commencement of any work. Only applicably competent persons may perform the specified activities. Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly JSSS shall not limit or restrict the Contractor to the scope contained herein.

~~JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or detailed requirements then the related technical regulations of the Occupational Safety and Health Administration, (published by the United States Department of Labor and hereinafter referred to as OSHA) shall apply.~~

~~If any ambiguity or discrepancy is found in JSSS, the Engineer shall issue any necessary clarification or instruction.~~

~~The JICA Standard Safety Specification prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.~~

~~Above is transferred to Part B, Clause 1.4~~

All Parts (A, B and C) of this Chapter 1: General, are to be read and construed collectively as integral parts of JSSS and therefore constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL

PART B: TECHNICAL REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero Accident” in the execution of the Works taking full responsibility for the health and safety management of the Works, adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration has been prepared and is included in Part C of this Chapter 1: General.

1.2 Definitions and Abbreviations

NK: There are so many words are used in the technical parts in the JSSS such as Construction Equipment, Electrician, 5S, KY.

JICA and NK consider to make Annex Definitions as shown in the Manual of Army Corps of Engineers below instead of Definitions and Abbreviations in Chapter 1.

DEPARTMENT OF THE ARMY EM 385-1-1, U.S. Army Corps of Engineers

Manual No. 385-1-1 30 November 2014 SAFETY AND HEALTH REQUIREMENTS

https://www.publications.usace.army.mil/Portals/76/Publications/EngineerManuals/EM_385-1-1.pdf

pp 844 APPENDIX Q Definitions

This appendix defines the following terms for the purposes of this manual.

Abrasive blasting: the forcible application of an abrasive to a surface by pneumatic pressure, hydraulic pressure, or centrifugal force.

Accident Prevention Plan (APP): a document that outlines occupational safety and health policy, responsibilities, and program requirements.

Can we consider if Definitions and Abbreviations will be in ANNEX or APPENDIX of JSSS?

At this stage, I suggest that “Contractual definitions” that relate mainly to Chapter 1 General Requirements, should stay in the main text, the same as FIDIC as they are to be read and construed with that Chapter of the Document.

“Technical definitions” relating to terms used in other sections, perhaps can be an annex/appendix for convenience as can abbreviations and acronyms.

As OSHA is used as basic reference and as it has its own definitions why not use that? I am not confident about using a different source e.g. US Army although probably not as it will require editing even to fit with OSHA but please leave this with me. It depends what you have used and stated already in Section 2 onwards, which in the main we have not yet seen. Whichever is chosen will require considerable editing and coordination to

ensure that it is correct and that it fits in with all other documents, including Chapter 1, Conditions of Contract, usual Bidding Documents and English language, expressions, construction vocabulary etc. which are used extensively by JICA and FIDIC already. It may be easier to compile our own.

1.2.1 In this JICA Standard Safety Specification the following words and expressions shall have the definitions stated:

- (1) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at Site to be appointed by the Contractor in accordance with PC6. 7 [*Health and Safety*] and named by the Bidder in his Bid.
- (2) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor’s General Obligations*].
- (3) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified in part or in whole by the Bidding Documents for the Project.
- (4) “**Safety Plan**” means a document that contains the risk assessments and shows the details of the safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety throughout the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor’s General Obligations*].

“**Safety Plan**” shall also mean the “occupational health and safety plan”, “health and safety plan” and “safety plan” all described as such in JSSS and other documents contained in the Contract. *This is not necessary if references are consistent*

NK: According to the above, “Safety Plan” shall be used through JSSS, and “The Health and Safety Plan” and “The Particular Health and Safety Plan” shall not be used any more, which was not our shared understanding among JICA and NK.

Correct but references in the present draft documents are not consistent and therefore will tend to confuse. We recommend that simple use is better i.e. “Safety Plan” with a definition as above which makes it all encompassing. Simple is better to control throughout the text of the document.

Our understanding is as follows:

Bid stage: Method Statement and Health and Safety Plan

JICA Standard Bidding Documents refers to this simply as “Safety Plan” (Section IV. Bidding Forms BF-33. Why change it?

As an aside from a general contractual obligation there is little or nothing written on the subject of “health” so why add the unnecessary wording?

Work Commencement stage: Updated Method Statement and Health and Safety Plan from the Bid Stage

See later text where we have allowed for the further detail at Contract Stage. It should be complete and comprehensive at this stage, why not? I understood that we are trying to promote improvement rather than accepting that the system cannot change.

FIDIC second edition requires this why should we assume differently?

I also feel there is misunderstanding of method statements and safety plans, these are different and not necessarily connected. The fact that more information might be required on one does not mean it is required on both.

Furthermore this information is within the Contractor’s domain and if submitted it is for information only. This is frequently abused by consultants who believe (incorrectly) that

they have a right to instruct the contractor (via submission, review and rejection) how to perform the Works and how to manage safety.

A project safety plan should cover all risks in all parts of the Works including for example Confined Spaces, hazardous areas etc. etc. and it should not require update before separate parts actually start on Site. It might do which is why the I have made ot clear in the contract that the Engineer can request. However I feel that it is a wrong and even dangerous principle for an engineer to continue requesting submissions when there is actually no known purpose.

What will the Engineer do with all of this information noting that:

- 1. It is the contractor's obligation anyway*
- 2. It is submitted basically for information only*
- 3. If however there are "errors or defects" in any document then please note the requirements of GC 1.8 that may well alter legal responsibilities.*

Working stage: Particular Method Statement and Particular Health and Safety Plan for each work or section.

See above notes

Method Statement and Health and Safety Plan shall propose in general and principle as much as possible in Bid stage.

Disagree, it must be as detailed ass possible and more so than it usually is now.

Particular Method Statement and Particular Health and Safety Plan shall propose in detail for actual works based on the Method Statement and Health and Safety Plan.

Disagree -please see above notes. I have included the facility for particular safety plans but am not at all comfortable with this.

Is there any good way to express our above understanding?

I cannot explain better in writing, can we discuss later.

- (5) The phrase "health and safety" shall be construed as covering "occupational health and safety".
- (6) "**Project**" means the particular Works and services to be implemented by the Borrower and described in the agreement with and utilising the funds provided by the Bank under the terms mutually agreed for that purpose.
- (7) "**GC**" and "**PC**" followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (8) "**OSHA**" means the technical requirements of "OSHA Standard Part 1926 Safety and Health Regulations for Construction", published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.

The following (9) and (10) are related with definitions, however I think it seems better to mention in different clause.

Correct and I am considering this now

- (9) Unless otherwise evident from the text, reference in OSHA to "team leader", "on-site supervisor", "On-site supervision", "Field superintendent", "work chief" and the like shall be collectively construed as reference to "the Contractor's Representative" and reference to the "safety and health manager of the contractor" and the like shall be collectively construed as reference to the Contractor's "Health and Safety Officer". "The construction plan and safety and health plan", shall be construed according to the

terms for such similar documents required by the Contract.

- (10) If any ambiguity or discrepancy is found in the OSHA documents, the Engineer shall issue any necessary clarification or instruction.

NK: the JSSS is not prepared based on OSHA. We mention about OSHA as follows in technical parts of JSSS:

We agreed with JICA that we specify specific part/section,/clause of OSHA, not all of OSHA because if we refer to all OSHA, we are not necessary to specify requirements in JSSS. The JSSS shall refer to OSHA as 1) for reference, 2) in accordance with, and 3) can be applied.

Ex.

- 1) For requirements not provided in the Laws of the Country and in the JSSS, the Contractor shall take necessary measures for fall prevention referring to the following: (Our draft in English states subject to which is a little different from Japanese.)*

OSHA Subpart M – Fall Protection

- 2) The Contractor shall take safety measures in accordance with requirements specified in the following OSHA regulations other than mentioned in this Chapter:*

OSHA Subpart D—Occupational Health and Environmental Controls §1926.52 Occupational noise exposure.

- 3) Notwithstanding the above, it is possible to have workers use protective equipment in accordance with the following*

OSHA Subpart M Fall Protection, §1926.502 Fall protection systems criteria and practices, (d) Personal fall arrest systems.

NK: I wonder (10) may be “If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, ...”

Please can we discuss. I have written so much to explain this already, it is clear that there is a basic lack on mutual understanding.

Such specific reference to OSHA has not been made, Subpart M for example does not cover all missing items. Fall Protection Nets for example can be Japanese codes not subpart M,

***From what little we have seen so far**, there is so much missing from JSSS that some sort of “catch-all” is required otherwise it appears incomplete, this is why I have advised already to add further items and make it as comprehensive as possible. There is time.*

- (11) Any reference to “Contractor” within this document shall also be deemed to include “all Subcontractors”, for whom the Contractor shall remain fully responsible.

NK: Can the above (11) be covered by the following GC?

GC 1.1.8 4.4 Subcontractors: The Contractor shall be responsible for the acts or defaults of any Subcontractor, his agents or employees, as if they were the acts or defaults of the Contractor.

Not really, the meaning and intention is different, this refers to the coverage of JSSS not the responsibility of the Contractor.

- (12) JSSS shall form a part of the Contract for the Project and therefore the definitions contained in the Conditions of Contract for Construction For Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally to

JSSS.

NK: The contents of this section seem to be confused in terms of randomly placing definition items and abbreviated items. Criteria of selecting terms is hard to understand. Can we define all of Falsework, Formwork, Fall restraint system and Personal fall arrest system and others defined now in each technical chapter in Annex?

To some extent yes but I am aware of this and it will be suitably arranged in future maybe all or partially as an Annex. However in the present draft, I am preparing and compiling definitions (and related aspects) as I come across them or feel that there is a need before they are overlooked. It is my method of preparing or evolving the document.

- (13) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (14) “**Formwork**” means temporary containment structures for in-situ concrete and its immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.

Requires further research:

(15) “**Fall restraint system**” means a fall protection system that prevents the user from falling any distance. The system shall comprise of either a body belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard and may also include a lifeline and other devices.

(16) “**Personal fall arrest system**” means a system used to arrest a user in a fall from a working level. The personal fall arrest system comprise an anchorage, connectors, a body harness and may also include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a body belt for fall arrest systems is prohibited.

1.2.2 In this JICA Standard Safety Specification the following abbreviations shall have the meanings stated:

JIS	Japanese Industrial Standards.
ANSI	American National Standards Institute.
BS	British Standard.
BSEN	British Standard European Norm.
ISO	International Organization for Standardisation.
ASTM	American Society for Testing and Materials.

1.3 Scope of Application

1.3.1. JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant Conditions of Contract for Construction For Building and Engineering Works Designed By The Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions.

NK: The CC has been mentioned in 1.2.1(12). May we refer to the 1.2.1 (12)?

Not really the purpose is different however I will look at this further.

JSSS shall also apply to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme.

When so used, suitable modification shall be required to the definitions and text of JSSS and

the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the project, reflecting the same intentions, standards and procedures for improving safety.

1.4 Laws and Reference StandardsThe Contractor shall comply with the Laws of the Country, including all health and safety standards.

1.9.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the technical requirements of JSSS shall apply and these shall prevail over the technical requirements of Laws of the Country without altering or limiting the Contractor's legal duties and obligations under such Laws.

NK: In case the requirements of Laws of the Country is higher standards than JSSS, the Laws shall be adopted.

Yes please refer to 1.9.7 below

1.9.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.

1.9.4 JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or detailed requirements then the related technical regulations of the Occupational Safety and Health Administration, (published by the United States Department of Labor and hereinafter referred to as OSHA) shall apply.

NK: As we mentioned in 1.2.1 (10), we agreed with JICA that we specify specific part/section,/clause of OSHA, not all of OSHA because if we refer to all OSHA, we are not necessary to specify requirements in JSSS as we can state all technical parts of OSHA shall be applied.

What about safety nets for example in fall protection, is this to be OSHA or can it be Japanese regs.?

So far we agreed with JICA that the JSSS shall refer to OSHA as 1) for reference, 2) in accordance with, and 3) can be applied.

We are better to discuss again this clause 1.4.4 with JICA from the view points of legal basis as you explained in you last visit.

Is the following understanding correct?

In case that the serious accident at the site occurred though the Contractor followed the JSSS, there is a possibility that the Contractor claims the Employer /JICA damage compensation by the accident with the reason that the JSSS neither cover all safety requirements nor have legal basis.

Japanese law and regulations are not all translated in English and updating of English version is not made day to day. Therefore, Japanese Reg. cannot become legal basis. OSHA will become legal basis and easy to refer to..

When OSHA is specified as mentioned in 1.4.4, I wonder bidders may not estimate properly because they are not familiar to detail requirement of OSHA, then they will allow extra safety cost.

I also afraid that at the site the Employer/Engineer can enforce requirements of OSHA to the Contractor. The Contractor may always make minor breach of Contract.

Can you explain again to persuade JICA to contain this clause 1.4.4.

Please can we discuss further

1.9.5 If any ambiguity or discrepancy is found in JSSS, the Engineer shall issue any necessary

clarification or instruction.

1.9.6 The JICA Standard Safety Specification prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.

1.9.7 In any event, if the Contractor ascertains that any part of JSSS is of a lesser standard to any of the particular Laws of the Country, then the Contractor shall inform the Engineer and shall then comply with the particular Laws of the Country (including any occupational health and safety standards).

1.9.8 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.

1.9.9 Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used shall be that applicable at the Base Date.

1.9.10 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.5 Contractor's Safety Certification

NK please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Part C where I have made this optional

NK: This is ideal, however it restrict bidders depending on scale of Works. We will discuss with JICA. I am not confident Japanese and local contractors can bid with the certification.

It is intended as a target and if JICA and contractors are serious about improving safety they should aim to obtain this, many already have.

However I have suggested that this is optional and I recognise that it may not perhaps be suitable for some projects – please refer to Part C Item C1 and also the phrase below - Unless otherwise expressly stated in the Bidding Documents

1.5.1. Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

1.5.2. An original or authorised true copy of the current certification shall be submitted with the Bid (refer to Chapter 1: General, Part C, item C.2. (5)) and shall subsequently be included with the Contract.

1.5.3. The Contractor shall submit original or authorised true copies of all current updates to the Engineer when due.

1.6 Safety Plan

1.6.1 The Contractor shall be required to submit an overall Safety Plan at two stages:

- (1) Safety Plan at Bid Stage.
- (2) Safety Plan at Commencement Stage.

In addition the Contractor shall provide such further overall or updated or particular Safety Plans as may be necessary due to current circumstances or conditions at the Site or as required by the Engineer in accordance with PC4.1 [Contractor's General Obligations]

1.6.2 Safety Plan at Bid Stage: for requirements refer to JSSS Chapter 1: General, Part C: Required Amendments to The "JICA Standard Bidding Documents".

1.6.3 Safety Plan at Commencement Stage:

NK – this is revised to incorporate some of the requirements of FIDIC second edition clause 4.8

“Particular Safety Plans” are not necessary and have no meaning when the following is considered in conjunction with revised clause 4.8 (see Part C, item C.6 and C.7)

NK: We would like to specify Particular Safety Plans for each work or section which describe actual safety measures at the site because we cannot expect the Safety Plans at Bid Stage and Commencement Stages describes in detail.

I suggest that we should encourage and expect this, not to anticipate a continuing failure to comply.

We want the submission of Particular Safety Plan is the Contractor’s obligation but not depending on the Engineer’s request.

This is of course NK prerogative but I do need to raise this as I do not recommend this approach. Why are we not accepting the accepted international legal approach to this as recognised by FIDIC? What is so different about our projects and what are we to do with the information so obtained?? Please see earlier notes also.

Consider if this should be “plan” or “manual” at commencement?

NK: We are better to use plan and not to mix the FIDIC second edition because JICA uses FIDIC MD 2010 now.

OK

- (1) Within 28 days of the Commencement Date and not less than 21 days before commencing any work at the Site, the Contractor shall submit to the Engineer for information a Safety Plan showing the Contractor’s proposed safety management polices, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works, in the comprehensive detail required by the Bidding Documents and Annex 1 to this Chapter 1: General, Part B. This shall be based upon the Safety Plan submitted at Bid Stage developed as necessary to provide the full information required.

This Safety Plan shall be in addition to any other similar document required under applicable health and safety Laws of the Country.

NK: We think this clauses shall be put in the PC 4.8.

OK, this is separated because I wanted to avoid copying and also this is where it is in the NK draft.

- (2) The Safety Plan shall set out or refer to all the health and safety requirements:
 - (a) That are stated in JSSS;
 - (b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
 - (c) that are necessary to effect and maintain a healthy and safe working environment for all persons entitled to be on the Site and other places (if any) where the Works are being executed.
- (3) Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with PC4.1 [Contractor’s General Obligations]

- (4) The Safety Plan (or parts of it) shall be revised or supplemented where considered necessary by the Health and Safety Officer, or at the reasonable request of the Engineer. Each revision of the Safety Plan shall be submitted promptly to the Engineer in any event not less than 21 days before commencing any parts of the Works at the Site, such that the Engineer is made aware in writing of at least the following information for each part of the Work:
- (a) Work outline and work procedure.
 - (b) Safety management system and responsibility and authority of Contractor's Personnel.
 - (c) Risk assessment.
 - (d) Safety measures.
 - (e) Personal Protective Equipment (PPE) for the Contractor's Personnel.
 - (f) Safety education and training of the Contractor's Personnel and Tool Box Meeting (TBM).
 - (g) Teaching materials used in education, training and pre-operation TBM before work.
 - (h) Method of information sharing and communication among the Contractor's Personnel.
 - (i) Implementation and monitoring of measures for health and safety management.
 - (j) Emergency response.
 - (k) First aid response.

1.6.4 If items other than the above are necessary due to the nature of work, the contents of this **Specification** shall be supplemented by referring to the provisions of the work concerned.

NK: Is this Specification to be read Safety Plan?

It is not clear. Please note this is taken directly from the NK draft.

Please clarify

1.6.5 The Contractor shall also consider the opinions of the Contractor's Personnel in preparing all Safety Plans.

1.6.6 In performing risk assessments the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on Personal Protective Equipment.

1.6.7 The Contractor shall ensure that all of the Contractor's Personnel and Employer's Personnel are fully informed of all hazards and risks on the Site.

Included elsewhere?: *Clear signage shall be exhibited to warn all such personnel and any others that are likely to be on the Site whether legitimately or otherwise of all potential hazards and risks.*

NK: 2.3 Measures of Non-entry and other Section of JSSS mentions no-entry.

OK

1.6.8 The procedural flow of risk assessment shall be as follows:

- (1) Identifying.
- (2) Evaluating .
- (3) Determining measures for avoidance or reduction.

.. to avoid further risks by or during the execution of the Works

NK: 1.6.8 may be made together with 1.6.6.

Our draft include the following:

The procedure of risk assessment is as follows.

(a) Identifying hazards

(b) Evaluating risks

(c) Determining measures of risk reduction

Priorities for considering and implementing risk reduction measures shall be in the following order and as far as is practicable measures of the higher priority shall be taken.

(a) Removal of hazards such as eliminating dangerous works

(b) Changing to a safer construction meathod, and alternating to low risk processes, operations, materials or equipment

(c) Engineering measures

(d) Management measures

(e) Use of protective equipment

OK

1.7 Contractor's Health and Safety Management Staff

1.7.1 Requirements for the Contractor's Health and Safety Officer (HSO):

- (1) If the HSO has been named in the Bid or Contract, the Contractor shall assign that named HSO upon the Works and prior to the Commencement Date.
- (2) If the HSO has not been named in the Bid or Contract, the Contractor shall, prior to the Commencement Date, submit to the Engineer for consent, the name and particulars of the person the Contractor proposes to appoint as the HSO. If consent is withheld or subsequently revoked in terms of GC6.9 [*Contractor's Personnel*], or if the appointed person fails to act as HSO, the Contractor shall similarly submit the name and particulars of another suitable person for such appointment.
- (3) The HSO shall be an employee of the Contractor and not of a subcontractor or consultant and unless otherwise stated in the Contract shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with PC6.7 [*Health and Safety*].
- (4) Prior to the Commencement Date and in advance of the appointment of the HSO at Site, the Contractor's senior head office health and safety officer HSO may be assigned in this capacity until the HSO is appointed as above.
- (5) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (6) The HSO shall possess any qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (7) The HSO shall be fluent in the language for communications defined in GC1.4 [*Law and Language*] and also the language of the Country.

NK: (7) Language request of HSO is too much. He/she can get translator for English and/or local language.

OK I will revise according to your instruction,

NK please give an opinion on the following suggested qualification:

NK: The following request “minimum 10 years in construction business and minimum 10 years of experience in safety and management”. It is not likely or quite a rare case.

This part may be such as “minimum 10 years in construction and minimum, say, 5 years in safety management.

OK I will revise according to your instruction,

- (8) Where there is no legal requirement under the Laws of the Country for qualification, the Contractor's HSO, shall have appropriate academic and health and safety qualification, work experience in construction (minimum 10 years) and in health and safety management (minimum 10 years, can be concurrent with construction experience) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (9) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (10) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (11) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable of ensuring that:
 - (a) All working areas of the Site are inspected on a regular basis (every working day and at least twice per shift) to detect if any unsafe practices or conditions exist.

NK: at least twice per shift is too many. (At least once is practical)

OK I will revise according to your instruction,

- (b) If such unsafe actions, practices or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to suspend that part of the Works until such action has been taken.

Such inspections attended by the HSO, may also include the attendance of the safety representative of the Engineer.

1.8 Health and Safety Officer – Scope of Duties

1.8.1 The HSO shall devote his/her full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.8.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the

following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation and improvement thereof.
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel and Employer's Personnel.
 - (c) Provision of activity records in progress reports.
 - (d) Detection through constant inspection and implementation of corrective measures for any unsafe conditions at the Site and unsafe behaviour or practices of the Contractor's Personnel and Employer's Personnel.
 - (e) Consultation on safety management with the Employer and the Engineer.
 - (f) Issuing instructions for suspension of the Works or parts thereof in case of accident or the like.
 - (g) Responding to accidents, creating and implementing measures to prevent recurrence.
 - (h) Reporting and consulting with the Employer's Personnel including when an accident occurs or an accident situation is likely.
 - (i) Appointment of health and safety inspectors and assistants.
- (2) Instructing the Contractor's Personnel and Employer's Personnel to take improvement measures for maintaining health and safety and preventing accidents.
- (3) Checking the health status of the Contractor's Personnel.
- (4) Planning and implementation of various training and education implementation plans.
- (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including lost time records and near-miss cases.
- (6) Preparing regular internal and external reports on health and safety activities.
- (7) Hazard prediction activity (Kiken Yochi: KY).

Does this have international meaning?

NK: Can we say like hazard prediction training in TBM such as Kiken Yochi(KYT) adopted in Japan (K: kiken (hazard), Y: yochi (prediction), T: (training))?
JICA wants to introduce KYT as an example of Japanese Safety Culture.

Yse - I will revise according to your instruction,

1.9 Contractor's Health and Safety Committee

(NK I Suggest that "Safety Committee" has better international meaning than "Safety Council"??)

NK: We think Committee is suitable.

OK

1.9.11 The Contractor shall create an internal Safety Committee for the purpose of effective health and safety management.

1.9.12 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) Contractor's Health and Safety Officer at Site.

- (3) Medical and first aid staff.
- (4) Contractor's Senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Other necessary personnel.

1.9.13 The Chairman of the Safety Committee shall be the Contractor's Health and Safety Officer at Site.

1.9.14 The Contractor shall hold a regular Safety Committee Meeting for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meeting: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters.
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO.
 - (ii) Issues raised by the representative of Contractor's workers on Site.
 - (iii) Issues raised by subcontractors.
 - (iv) Issues raised by others.
 - (e) Feedback on the regular safety, coordination and other meetings with the Engineer.
 - (f) Safety instructions received from the Engineer.
 - (g) Items to be coordinated with police, fire department and other related organisations.
 - (h) Compliance and registration matters under the Laws of the Country.
 - (i) Safety and health awards, media attention and the like.
 - (j) Other matters.

1.9.15 Report on the Safety Committee Meeting

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.10 Engineer's Regular Safety Meeting

1.10.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they

represent:

- (1) Frequency of the meeting: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of Contractor's workers on Site.
 - (iv) Issues raised by subcontractors.
 - (v) Issues raised by others.
 - (e) Status of resolution of previous problems.
 - (f) Items to be coordinated with police, fire department and other related organisations.
 - (g) Compliance and registration matters under the Laws of the Country.
 - (h) Safety and health awards, media attention and the like.
 - (i) Other matters.

1.10.2 Report on the Engineer's Regular Safety Meeting:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven days after the meeting.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to JICA.

NK - I suggest that this direct report will be necessary and useful, as it will provide JICA with the direct information they will need for statistical monitoring information and also early and official warning on potential and major issues.

If it is included in JSSS as this suggests, then the Employer will be deemed to have agreed to its use and cannot object later to such direct reporting.

NK: The above is good suggestion. We can ask JICA. The submission will be JICA office at the Country.

Suggest also that the following might be helpful; I have made this optional in Part C.

NK: We think 1.12 only may be sufficient to coordinate on Safety in the Project. JICA may not want many committee.

This is only suggested for larger projects (e.g. MRT projects) with many packages and contractors where a common and standard approach is essential. I assume that JSSS must cover all common types of project:

1.11 Project Safety Committee

1.11.1 On larger projects with multiple contractors, if required by the Bidding Documents

for that Project, the Employer or Engineer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire project team.

1.11.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.11.3 The Chairman of the Safety Committee shall be the Employer.

1.11.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.11.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.12 Health and Safety Coordination with Other Contractors

1.12.1 Refer to GC2.3 and GC4.6 regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

... who may be employed in the execution on or near the Site of any work not included in the Contract.

NK: Is this a part of (2)?

No, it is all, please refer to GC4.6.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC4.8 [*Safety Procedures*] and GC4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

NK suggest the following 2 paragraphs be added from HSE:

NK: Agree.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements and risk assessments) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.12.2 The **Bidding Documents shall clearly describe** any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's

Personnel will be working together with a clear description of the such works and the location, timing and other conditions for such work.

NK: Bidding Documents state such employment by the Employer. Therefore, 1.12.2 can be deleted. It is always difficult to clearly inform the timing. We feel JSSS may not state "The Bidding Documents shall clearly describe..."

I have specifically worded this way as I understand that JSSS is not only for Contractors, it must also be for Executing Agencies (Employer's and their consultants) who are preparing the Bidding Documents.

The Bidder/Contractor must be made aware as early as possible

1.12.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meeting: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities.
 - (c) Accidents, injuries and measures to prevent any recurrence.
 - (d) Status of resolution of previous problems.
 - (e) Items to be coordinated with police, fire department and other related organisations.
 - (f) Compliance and registration matters under the Laws of the Country.
 - (g) Safety and health awards, media attention and the like.
 - (h) Other matters.

1.12.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) ~~A copy of this report shall be submitted to Employer, the Contractor and contractors~~ within seven days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

NK: The report shall be prepared by the Engineer because this meetings are organized by the Engineer.

Already corrected

1.13 Contractor's Health and Safety Management Activities

1.13.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.13.2 Health and safety management activities shall include (but are not limited to):

- (1) Overall Management Activities:
 - (a) Tasks of the Health and Safety Officer as described above.
 - (b) Arranging, chairing, attending meetings as described above.

- (c) ~~Arranging, chairing~~—attending ~~pre-work~~ meetings, ~~pre-start~~ meetings, schedule meetings.
TBM also?
- (d) Monitoring the implementation of the Safety Plan.
- (2) Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of 5S Activities (Seiri: sorting, Seiton: tidying, Seiso: cleaning, Seiketu: cleanliness, Shituke: discipline).
Does this have meaning internationally ?
NK: Can we say like site clearing and training activities such as S Activities (Seiri: sorting, Seiton: tidying, Seiso: cleaning, Seiketu: cleanliness, Shituke: discipline), to introduce KYT as an example of Japanese Safety Culture.
 - (c) Instruction and management of hazard prediction activity (Kiken Yochi: KY).
Ditto
NK: As mentioned above, can we say like hazard prediction training in TBM such as Kiken Yochi(KYT) adopted in Japan (K: kiken (hazard), Y: yochi (prediction), T: (training))? JICA wants to introduce KYT as an example of Japanese Safety Culture.
Of course yes to the above
 - (d) Instruction and management of safety education and training.
 - (e) Instruction and management of various safety measures.

1.14 Monitoring

- 1.14.1 The Contractor shall develop and implement systems to ensure that compliance with the Safety Plan is monitored efficiently and transparently at all times, for which purpose the Contractor shall:
- (1) Create checklists for monitoring.
 - (2) Carry out regular and irregular monitoring of implementation status.
 - (3) Monitor failed, unsafe or non-compliant conditions.
 - (4) Create files and safe storage systems for the monitoring records.
 - (5) Copy all relevant information to the Engineer as requested by the Engineer.

1.15 Joint Site Safety Inspections

- 1.15.1 In addition to the Contractor's own daily Site Safety Inspections described above, the Contractor shall also conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.
- 1.15.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.15.3 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.16 Engineer's Safety Representative

(NK what is the future intention? Will a safety engineer be appointed in future on all projects or will the Engineer act in this capacity?)

This requires a more detailed procedure, the following is an outline suggestion only This requires further coordination and development with other sections (e.g. scaffolding) so that joint safety and certification and "safe for use" procedures can be implemented if required) without affecting the Contractor's overriding responsibility.

NK: I have no idea of this procedures. I think the Engineer to check the Contractor's safety management and measures if they follow the Contract. JICA may want the Engineer to do joint safety and certification and "safe for use" procedures.

If TOR of the consultancy services include the such procedures, safety experts shall be assigned with his/her MM.

Without commitment of such input, I cannot agree to these procedures.

Please refer to Part C where I have made further reference.

I understood that JICA wanted the Engineer to somehow play a more proactive role so would like to discuss this with you to ascertain the future intentions

- 1.16.1 *On large projects*, the Engineer shall appoint an assistant under GC3.2 to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with the Contractor's Safety Plan. By written notice served under GC3.2, the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

NK: The ESR may be assigned as Full-time or concurrent safety supervisor. The Employer always hesitate to assign foreign safety expert because of cost. For enforcing JSSS, it needs experienced and competent safety engineer.

Can we please discuss further so I can understand what you want to do.

- (1) Instructions requiring the Contractor's compliance with the Safety Plan.
- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near-misses or unhealthy or unsafe conditions.
- (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.

1.16.2 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.

1.16.3 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC3.3.

1.16.4 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on

progress and shall report in writing when the corrective action is completed.

- 1.16.5 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to Chapter 1: General, Part C), it is to be assumed that the Engineer shall act in this capacity.

Communications may require more thought and definition. Who is to issue and receive? Can be direct HSO and ESR.

NK: All correspondence shall be made between the Contractor and the Engineer, not HSO and ESR as usual.

There may be a requirement for direct (urgent) communication on some safety issues.

1.17 Safety Statistics

1.17.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.17.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of report to the labour standards office.

NK: The labour standards office (which is Japanese office may be changed to the concerned office such as labour office?)

Understood

- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.17.3 All data shall be in a format and content to meet with the approval of the Engineer.

1.17.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the safety representative of the Engineer for validation and mutual agreement.

NK: It shall be the Engineer's Safety Representative as same as 1.16.

OK will change but it was intended that this daily data would be submitted direct for instant checking and validation by assistants in a close working relationship then the final version submitted as below.

1.17.5 The data shall subsequently be compiled and included in the Monthly progress report.

1.18 Safety Reports

1.18.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report can be submitted as an attachment to the Contractor's monthly progress report.

1.19 Health and Safety Records

1.19.1. The Contractor shall keep the following records related to health and safety:

- (1) Records of accidents and near-misses, occupational accidents.
- (2) Records of all meetings for safety and health management.
- (3) Record of monitoring of safety and health management activities.
- (4) Record of health and safety education and training for the Contractor's Personnel.
- (5) Records of health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

1.20 Proper Placement of Contractor's Personnel

1.20.1 Further to compliance with GC6.9, the Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

The HSO shall countersign all such records to indicate his/her confirmation of the suitability of each member of the Contractor's Personnel prior to their placement.

These records shall be available for the Engineer's inspection at any time.

1.20.2 Suitability of Contractor's Personnel and their work assignment shall be assessed in consideration of:

- (1) Work content and work environment.
- (2) Work experience and ability etc..
- (3) Health condition, and health condition before daily work starts.
- (4) Allocation of an achievable and safe work volume.
- (5) Allocation to workers under 18 in accordance with GC6.21.

NK: I could not review all items of 1.17 to 1.19 today, I will check later.

No problem

1.21 Placement and ID of Personnel for Works Requiring a License

1.21.1 If for any of the operations at Site, the Laws of the Country require operating, supervising or any other personnel to have a licence, particular qualification, registration or certification the Contractor shall ascertain that all such personnel possess and maintain such documentation.

1.21.2 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for his personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, qualification and skills.

1.21.3 The Contractor shall implement an identification (ID) pass system whereby all

personnel on Site carry an ID pass with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any worker is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by removing the offending person from the Site immediately and appointing a suitable replacement.

1.22 Health and Safety Education and Training

1.22.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.22.2 The Contractor shall include in the Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit full details of such education and training to the Engineer for his information before the start of such education and training.

1.22.3 Education and training shall be provided free-of-charge to the trainees, conducted during normal working hours, trainees shall be paid and the Contractor shall bear all necessary expenses.

1.22.4 **Safety induction** For general education and training of new entrants upon the Site and those who are scheduled to change work type, skill or location, the following subjects shall be included:

- (1) Chain of command and communication methods for the work.
- (2) Hazard or danger of machinery, equipment, raw materials, etc., and methods of dealing with such hazards or danger.
- (3) Performance and handling methods of safety devices, personal protective equipment (practical on-Site training).
- (4) Hazardous substance control devices (practical on-Site training).
- (5) Work procedures generally.
- (6) Inspection before start of the work.
- (7) Maintaining a orderly, tidy and clean Site.
- (8) Emergency measures and evacuation at the time of accident etc..
- (9) Health and safety rules.
- (10) Causes and prevention of diseases that may occur in relation to the work concerned.
- (11) Other matters necessary for health or safety related to the works concerned.

1.22.5 For education and training of Contractor's Personnel who are planned to be assigned to dangerous or harmful work (for example as listed in Annex 2), such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

NK: Dangerous and harmful works here can be limited to those in Annex 2, not such dangerous works with hand tools.

The intention of this clause is to clarify works that needs special knowledge and skill, which are specified in Japan.

Can we please discuss further as whilst I understand that there are specified training requirements in Japan these are different outside Japan.

Please also refer to our comments on Annex 2

The Contractor shall determine the educational subjects and teaching hours for the special education and training with reference to Annex 3.

Special education for the work concerned may be omitted in full or in part for any personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education

1.22.6 For education and training of Contractor's Personnel who are to be appointed as operation leaders as co-workers with each team of workers engaged upon such work at the Site (for example as listed in Annex 4 and 5), such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the skill-training course with reference to Annex 5.

Special education for the work concerned may be omitted in full or in part for any personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education.

1.22.7 Education and training personnel

Education and training lecturers can be Contractor's Personnel who are experienced, academically qualified and (if legally required) registered as a teacher or lecturer under the Laws of the Country, fluent in the language of the Country or external lecturers similarly qualified and registered.

In case of absence of availability of such suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary qualification, ability and experience, subject to the receiving the advance consent of the Engineer.

1.22.8 Records of education and training

The Contractor shall create and store records of trainees, showing full details of training subjects and their capability, achievements etc., and permit the Engineer to inspect these as and when required by the Engineer.

1.22.9 Explanation of health and safety rules to persons other than the Contractor's Personnel

The Contractor shall provide general health and safety education courses to the Employer's Personnel and to any other persons who are permitted to enter the site.

1.23 Emergency Response Plan

1.23.1 The Contractor shall prepare an Emergency Response Plan as a part of the Health and Safety Plan in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

NK please note:

Natural disasters include typhoons, earthquakes etc. which are actually GC19 Force Majeure situations for which, the contractor is not responsible and he has no obligation to give any

such automatic “response”.

What is the actual required extent of the Contractor’s “response”? What manpower and equipment is he to provide? How can this be predicted and estimated?

What about the Employer’s and Engineer’s own plans and what about the availability of the rescue services etc. in the Country?

These arrangements appear to be onerous upon the Contractor.

Can we please discuss and consider this further to understand the purpose and intention.

We have edited the following to make it readable but do not agree with the content.

NK: We specified for the natural disasters which is not GC19 Force Majeure situations. We expect the Contractor to prepare the natural disaster which may be occurred by the weather or earthquake of magnitude between bad weather and earthquake, and Force Majeure situations. The bad weather and earthquake are specified in JSSS 2.7 Measures against Adverse Weather and Earthquakes, which I want to send it in English you soon.

I will wait to receive your document on this subject so I can understand your intentions.

In addition, the Contractor shall fully inform the Employer’s Personnel, Contractor’s Personnel and all other persons entitled to be upon the Site, of the detail of the Emergency Response Plan. The Contractor shall also establish an emergency call system and carry out training based on the Emergency Response Plan.

The Emergency Response Plan, shall: include the following items:

- (1) Expected types of emergency situation.
- (2) Describe the emergency call system.
- (3) Explain the specific measures for emergency response.
- (4) Include measures for quickly establishing affected persons and locations, define assembly points and the like.
- (5) Permit fast changes and revisions to be made in response to changes in the Site situation.
- (6) Be submitted to the Engineer as part of the Safety Plan, and be updated as necessary throughout the Time for Completion of the Works.

1.23.2 The Contractor shall establish an Emergency Call communication system that will require confirmation from all contact persons even in the event of an emergency. This shall include the creation of an emergency contact list, which shall be posted it in a visible location such as the Contractor’s Site office as informed to all personnel.

The emergency contact list shall include name of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer’s Personnel.
- (2) Relevant government authorities and agencies: administrative agencies, police stations and fire stations etc..
- (3) Contractor’s Personnel at the Site, particular individuals positions, head office etc., subcontractors, material suppliers and the like.

(4) Other contractors engaged upon the Site or the Works

1.23.3 The Contractor shall conduct emergency response training based on the Emergency Response Plan which shall include:

- (1) Implementing a training programme at least every six months.
- (2) Improving the emergency response plan based on training results.
- (3) Providing details of the emergency response.

The Contractor shall provide training for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be upon the Site.

Details of the training shall be included in the Emergency Response Plan and Safety Plan.

1.23.4 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc. all as circumstances reasonably permit and as instructed by the Engineer.

1.23.5 The Contractor shall take measures such as the placement and installation of the following accident relief facilities and equipment, medical personnel, ambulances, etc.

NK See above queries, the Contractor usually has no such obligations for force majeure events, so if this is required it must be fully specified and paid for. Usually only the use of existing site facilities is allowable technically in accordance with the Engineer's Instructions (and payment by Employer).

We assume that the following "Emergency Relief Plan" actually means a plan for dealing with common accidents on the Site. This heading is a little misleading, I suggest change to something like "Accident Relief Plan" so there can be no confusion with "Emergency Response Plan"

NK: As I explain above, the Contractor shall prepare the plan for predictable weather, earthquake and others from the Contractor's experience.

This may complicate interpretation contractually where force majeure has accepted definition. In most countries earthquakes are not so common and extreme weather likewise.

What about health issues? The document is largely silent on this yet statistically this is the biggest problem.

NK: May I know what kind health issues you commented. We specify health issues such as dust, noise, heat are specified in JSSS 2.1 Working site environment.

See earlier notes.

1.24 Accident Relief Plan

1.24.1. The Contractor shall prepare an Accident Relief Plan in consideration of the nature and timing of the Works and the location(s) of the Site and taking account at least of the minimum facilities and measures to be provided in accordance with the Specification for the Contract (refer also to Chapter 1: General, Part C) and including:

- (1) Availability of medical personnel who can provide first aid and additional medical assistance.
- (2) Availability of vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site.
- (3) Establishment of first aid room, clinic or like facilities on Site with equipment and consumables.
- (4) Arrangement of communication facilities and measures for emergency response.
- (5) Deployment of first aid appliances, aids, instruments and medicines and kits in

accordance with the scale and characteristics of the Work.

- (6) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that Chapter 1: General, Part C, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

1.25 Measures at the Time of Accident Occurrence

1.25.1. When an accident occurs, the Contractor shall immediately discontinue the work task and implement the following measures as necessary:

- (1) Safely locate, extract casualty and provide first aid and other accident relief activities
- (2) Secondary disaster prevention activities.

NK what does this mean? Why "disaster"

NK: "Disaster" is not correct, to be changed to "accident".

OK

- (3) Preserve the accident site, make safe and prevent anyone interfering or entering.
- (4) Discontinue construction work related to or in the vicinity of the accident.

NK This is a repeat of the above?

The work in which the accident occurred must be discontinued. (this is mentioned above.)

However, there are cases that other works which are related to or in the vicinity of the accident must be also stopped.

In this sense, this clause is not a repetition.

OK

- (5) Implement measures instructed by the Engineer.

What about automatic response by Contractor?

NK: The Contractor will automatically react according to (1) ~ (4).

May we know what else he shall respond.

OK but what is the Engineer likely to further instruct?

1.25.2. Report of accident occurrence, cause, investigation result and recurrence prevention measures.

The Contractor shall report the occurrence of an accident as follows in accordance with the Accident Relief Plan:

NK - The Emergency Response Plan is for natural disasters, it does not seem to apply here for normal accidents? The following is not yet edited

NK: The above comment is right. It is not appropriate to follow the Emergency Response Plan which is for natural disaster and fire.

Please delete "in accordance with the Accident Relief Plan:".

Please let me consider

- (1) First report of the accident: Report to the Engineer by phone or other means as soon as possible.
- (2) First report of the accident situation: Report the accident-related information to the Engineer on the form designated by the Engineer as soon as possible.

NK - Can we please attach an accident report form now? As an appendix, please let me have a draft and I will include

NK: I think not now.

OK but I thought we had one and it may be useful

- (3) Having investigated and established the cause, report on cause investigation of accident, situation on the site etc.: Report to the Engineer timely at any time.

NK - No time limit?

BK: Time necessary to research the accident cause would be different case by case of accident. Therefore, this is the reason to use the phrase "timely at any time".

However, it would be better to set the limit such as "not later than xx, but if it takes longer than the limit to finalize the report, the Contractor shall submit an interim report.

Yes, we will edit

- (4) Report on measures to prevent recurrence: Report on cause investigation and preventive measures to the Engineer within one week after the accident or within a period agreed with by the Engineer.

1.25.3. Resumption Procedure of Construction Work

The procedures for resuming construction work at the Site after the occurrence of an accident are as follows:

- (1) Contractor examines and formulates measures to prevent reoccurrence and submits it to the Engineer.
- (2) The Engineer reviews the preventive measures.
- (3) The Contractor applies for resumption of work to the Engineer after making concrete preparations for implementation of the preventive measures.
- (4) The Contractor resumes the construction Works with the consent of the Engineer.
- (5) The Contractor verifies the effectiveness of his preventive measures and informs the Engineer.
- (6) As necessary, the Contractor implements risk assessment and changes work plan.

1.26 Temporary Works

The following are draft notes, this is probably to be transferred and dealt with later in Chapter 7.1 but some reference may be necessary here.

Please leave this here for now and we will coordinate this (and other parts) later. There is cross reference to this clause in Part C.

NK: I will send you 7.1 as soon as possible JICA gave us their draft of JSSS.

- 1.26.1. The Contractor shall provide details at Bid stage (not calculations necessarily at this stage?) of all Temporary Works (TW) designs including Falsework for significant structures as listed in the Bidding Documents (refer to Chapter 1: General, Part C) and including for example:

- (1) Falsework equal to or higher than 3.5 m.
- (2) Overhead passage equal to or higher than 10m (bridge?)
- (3) Scaffolds ("scaffolding"?) equal to or higher than 10m can engineer check scaffolding design?.)

What is the Engineer required or intending to do with such information?

NK: The Engineer can review design document by the Engineer's design expert if he is assigned. If not, the Engineer shall review the design procedure and designs with his experience of TW.

This could be dangerous, reliance needs to be placed upon the contractor's specialists not the engineer. The check should be to ascertain that the Contractor has engaged and used such specialists. The Engineer does not (and should not) represent himself as an expert on temporary works (falseworks) design.

Also if calculations and methods are submitted at Bid stage it could be construed that they have been checked and accepted by the Engineer and if future failure occurs responsibility may be affected or if future change is made by engineer, variation may be claimed.

Please let me study the future document when we receive it and I will then discuss further.

(4) Other TW specified in the Contract or instructed by the Engineer.

NK can we please discuss the above to clarify these and further requirements after which we will re-word this

What about other items such as TW for major bridge structures, tunnels, coffer dams, temporary dams, etc. ??

NK: TW for others will be specified in JSSS be prepared in 2nd stage,

No need to specify separate procedures just list them here? Please can we discuss

1.26.2. Unless otherwise stated in the Bidding Documents, Bidders/Contractors are required to comply with BS5975 or other equal and internationally accepted standard as approved by the Engineer in respect of the design and management of TW.

NK: JICA does not want to refer to all parts of BS5975 as I send you JICA draft 7.1.

Why not?

We usually accept standards and apply them in total, it is unusual only to adopt only a part. Please note that my suggestion that compliance is optional anyway. Suggested on larger projects where complicated temporary structures will be necessary and cannot be avoided by the Engineer by alternative design.

1.26.3. Contractors are required to engage an independent TW Designer(s) (TWD) to meet with the consent of the Engineer and who shall remain under the Contractor's responsibility and management. This person/entity shall be listed and described by the Bidder in the Bidding Documents.

NK: Please refer to the JICA draft 7.1 which are not specified TWD, TWC, TW Coordinator and TWs, who are specified in general wording.

I will await the draft

1.26.4. Where so required by the Bidding Documents, Bidders/Contractors shall also coordinate TW, check TW designs and supervise TW effectively by engaging specialist staff including:

(1) TW Design checker(s).

(2) TW Coordinator(s).

(3) TW Supervisor(s).

- 1.26.5. The Engineer (**consultant during design stage**) shall consciously endeavour to remove or reduce risks in the Permanent Works through his own design (for example by changing high level in-situ concrete structures to precast structures, simplifying applied ceiling and high level wall finishes and the like).
- 1.26.6. The Engineer shall cooperate and work with the Contractor's TW designer(s) and where possible shall provide important information on the permanent works design etc.
- 1.26.7. The Contractor shall submit TW method statements, (including designs and calculations) when requested by the Engineer under the Contract.
- 1.26.8. The review does not normally include the check of the design calculations of the Temporary Works. The Engineer has no obligation under the Contract to review TW design however he should do so for TW considered by him to be of vital importance for safety. The Engineer's response (if any) shall be in accordance with the Contract. In accordance with GC3.1(c), any response from the Engineer shall be construed as provided in good faith and without prejudice to the Contractor's overriding responsibility for the TW.
- 1.26.9. The Contractor shall demonstrate by description in the Safety Plan that he has effective arrangements in place for controlling risks arising from the use of TW, by ensuring the following:
- (1) **Appointment of a Temporary Works Co-ordinator (TWC).** **CONSIDER**
- (2) Preparation of an adequate TW design brief.
- (3) Completion and maintenance of a TW register.
- (4) Production of a TW design by an independent and specialist TWD (including a design risk assessment and a TWD method statement where appropriate).
- (5) Independent checking of the Temporary Works Design.
- (6) Issue of a TW design/design check certificate, if appropriate.
- (7) Pre-erection inspection of the TW materials and components.
- (8) Control and supervision of the TW erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
- (a) Check that the TW have been erected in accordance with the design and issue a formal "permit to load" where necessary.
- (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the TW and issue a formal "permit to dismantle" where necessary.
- The procedure shall include measures to ensure that the design function, the role of TW designer and the supervision at Site for TW erection, maintenance and removal are all carried out by competent and experienced individuals.

1.27 Temporary Works Designer (TWD)

MD needs to consider and coordinate further

- 1.27.1. If the TWD has been named in the Bid or Contract, the Contractor shall assign that named TWD at the appropriate time.
- 1.27.2. If the TWD has not been named in the Bid or Contract, the Contractor shall, prior to the Commencement Date, submit to the Engineer for consent, the name and particulars of the person or entity that the Contractor proposes to appoint as TWD. If consent is withheld or subsequently revoked in terms of GC6.9 [Contractor's Personnel], or if the appointed person fails to act as TWD, the Contractor shall similarly submit the name and particulars of another suitable person or entity for such appointment.

- 1.27.3. The Contractor shall not revoke the appointment of the TWD or appoint a replacement without the prior consent of the Engineer.
- 1.27.4. The TWD shall possess any qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- 1.27.5. Where there is no legal requirement under the Laws of the Country for qualification, the Contractor's TWD shall have appropriate academic and Temporary Works design qualification, work experience in construction (minimum 10 years) and in Temporary Works Design and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.

ANNEXES TO PART B: TECHNICAL REQUIREMENTS

ANNEX 1: ITEMS TO BE DESCRIBED IN THE SAFETY PLAN

NK please note that text generally has been changed from Original so that this is coordinated with other changes basically to make it work better. Further MD coordination is required.

NK : I have no time to read these now. I will discuss these later.

OK

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in Chapter 1 (item 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item CI.

The following clauses have also been added to JSSS Chapter 1.

NK: We understand it, however let's consider this with JICA.

OK

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, **Clause 1.26.9** are fulfilled.

~~(7)~~ Safety Measures for Contractor's Equipment and Temporary Works

Requires changing due to the above added clause

A description of the procedures for inspecting and maintaining Contractor's Equipment and Temporary Works together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering new-entrant education.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site. If a specific work area, condition or environment requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

(13) Site Security

A description of the proposed Site security methods explaining how, access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures).

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as a major accident or disaster occurrence, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation of work and person responsible for issuing instructions for such discontinuation for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings and 5S activities

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

ANNEX 2: DANGEROUS OR HARMFUL OPERATIONS

NK: I have concerns about whether the information in the following annexes is of any value in an international context, I think not. In a domestic Japanese sense these requirements are of course very important as they are integrated with many other Japanese laws and regulations. However when abbreviated extracts only are included it does not have great meaning, there appears to be much missing which may not be covered by the fall-back (OSHA).

Also skill training is included for operation leaders but no such skill training or checking is included for other skilled persons is this correct?

Please consider all very carefully.

I am inclined to suggest that a simple basic requirement such as GC6.9 is sufficient, perhaps adding some reference to training and making the contractor responsible for all is probably better than going into so much detail for only a part.

NK: we will reconsider and discuss with JICA about Annex 2.

Ok

The following is a list of example work types classified as “Dangerous or Harmful Operations”

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of such operations include (but are not restricted to) the following:

(as provided for by the Ordinance of the Ministry of Health, Labour and Welfare).

NK I requested a complete list at our last meeting however, according to the above Ordinance there are many more operations and requirements in addition to this list and also as this effectively applies only in Japan; is there a real need for this?

- (1) Crane operation and mobile crane operation
- (2) Welding and cutting of metal using arc welder *what about gas welders and cutting machines?*
- (3) Forklift operation
- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: ~~3t or more~~) *why 3t or more? Why not all?*
- (5) Vehicle-type construction equipment operation (for foundation work: ~~3t or more~~) *why 3t or more? Why not all? what about track type?*
- (6) Roller operation *what type?*
- (7) Operations that use organic solvents *what about other harmful substances and explosives for example?*
- (8) Sling work *meaning hoisting and rigging work*
- (9) Rope height work *cradles and hoists?*
- (10) Work to be performed using a full harness type of fall ~~protection prevention~~ device where the height is 2 meters or more and it is difficult to provide for the work floor *meaning of difficult? Too expensive? Is this coordinated with other chapters not possible*

What about small tools (drills and angle grinders) all electrical works, gas pipe works etc etc? and related academic educational achievements?

ANNEX 3: SUBJECTS OF SPECIAL EDUCATION FOR DANGEROUS OR HARMFUL OPERATIONS

When Contractor's Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of special training for the above listed sample operations include (but are not restricted to) the following:

- (1) Special education for crane operation and mobile crane operation:

Subject	Scope
1 Knowledge of mobile and other cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane and other cranes	Force (composition, decomposition, balance and moment), centre of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane and other crane operation Signs for mobile crane and other crane operation

- (2) Welding and cutting of metal performed using arc welder

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention
4 Practical skill	Handling of equipment for arc welding work

- (3) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift.	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling
2 Knowledge of equipment	Structure and handling method of hydraulic equipment

structure and handling methods for cargo handling	(including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, centre of gravity and stability of objects, speed and acceleration, load, stress, material strength
4 Practical skill	Operation of traveling, operation of cargo handling

- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3 t or more)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

- (5) Vehicle-type construction equipment operation (for foundation work: 3 t or more)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance

4 Practical skill	Operation of traveling, operation of equipment for work
-------------------	---

(6) Roller operation

Subject	Scope
1 Knowledge of roller	Types and applications of rollers, structure and handling method of Power transmission devices of rollers, working devices, steering devices, brakes, electrical devices, alarm devices and auxiliary devices, method of inspection and maintenance
2 Knowledge of general matters required for roller operation	Mechanics necessary for operation, construction method by roller
3 Practical skill	Roller operation method

(7) Operations that use organic solvents

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapour and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical check-up and follow-up measures
4 Accident case	Accident cases and prevention measures

(8) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes, other cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), centre of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation method), method of signalling

4 Practical skill	Signs for operation, work with a sling for a crane
-------------------	--

(9) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(10) Work to be performed using a full harness type of fall prevention equipment where the height is 2 meters or more and it is difficult to provide for the work floor

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment (limited to full harness type, the same shall apply hereinafter)	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

ANNEX 4: WORK REQUIRING THE APPOINTMENT OF AN OPERATION LEADER

The following is a list of example work types that require the appointment and assignment of an operation leader as a co-worker to each team of workers engaged upon such work at the Site.

Such operation leaders shall be given special health and safety training appropriate to the operations concerned.

Examples of operations shall include (but are not restricted to) the following:

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Excavation work for quarrying
- (5) Formwork, falsework, supports and shoring assembly/dismantling work
- (6) Scaffolding assembly/dismantling work
- (7) Steel frame fabrication and erection work on buildings and structures
- (8) Steel bridge fabrication and erection work
- (9) Wooden, masonry and other building work
- (10) Demolition work of concrete or masonry structures
- (11) Reinforced concrete construction work
- (12) Organic solvent work and other hazardous substances or materials

ANNEX 5: SUBJECTS OF SKILL TRAINING COURSE

Examples of special training for the operations leaders shall include (but are not restricted to) the following:

What about skilled persons other than operation leaders?

NK: Operation leaders are most important worker to prevent accidents, therefore training is necessary by the Government/Training agencies or the Contractor.

Other skilled persons shall be trained or employed by the Contractor.

But if international standards differ which they do what is to apply? A ganger, charge hand or foreman for example can qualify through experience in some countries, so what training is to apply?

(1) Operation leader for Earth excavation and shoring work

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(2) Operation leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases and toxic gases, measures for preventing hazards
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(3) Operation leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of

	assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, instruments and tools, measures for preventing hazards, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(4) Operation leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling methods for rock excavation, etc.	Types of rock, method of excavation for extraction of rock, treatment of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(5) Operation leader for formwork, falsework, supports and shoring assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(6) Operation leader for scaffolding assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types of scaffolds, materials, structures and assembly drawings, methods of scaffold assembly, disassembly and change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction	Handling of construction equipment and machinery,

equipment, machines, instruments, work environment, etc.	equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(7) Operation leader for steel frame fabrication and erection work on buildings and structures

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(8) Operation leader for steel bridge fabrication and erection work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(9) Operation leader for wooden, masonry and other building work

Subject	Scope
1 Knowledge about constructing structural	Construction methods of main structural parts such as frame, floor structures, walls, construction methods of roof

members of buildings, installing floors, roofs, etc.	and outer wall foundation, joints, order of construction, reinforcement method for frame
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(10) Operation leader for demolition work of concrete or masonry structures

Subject	Scope
1 Knowledge about structural members including concrete masonry and reinforcement etc.	Types, structures, construction method of concrete and masonry work, types of method of construction, method of work, work plan, coordination with m & e services etc
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(11) Operation leader for reinforced concrete construction work

Subject	Scope
1 Knowledge of work method	Types of materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(13) Operation leader for organic solvent work and other hazardous substances or materials

Subject	Scope
1 Knowledge of health hazards and their preventive	Pathology, symptoms, prevention methods and first-aid measures of health problems caused by such materials

measures.	
2 Knowledge for improving the work environment	Properties of organic solvents, and other hazardous substances or materials management of equipment and other facilities related to production and handling of such materials, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of such materials
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL

PART C: REQUIRED AMENDMENTS TO THE “JICA STANDARD BIDDING DOCUMENTS”

[This Part C applies to executing agencies, employers and their consultants for use in the preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA require that the amendments described below, shall be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1.

The Bidding Documents for particular projects where JSSS has become effective as described in the above “Part A: Preamble Notes”, shall be amended in accordance with the following instructions:

C1. Specifying **Particular** Safety Requirements in Bidding Documents for Relevant Projects:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5

Add the following additional text on page WR-5 to follow on from the existing text.

NK: Addition here, JICA Standard Safety Specification (hereinafter referred to as “JSSS”)

Don't understand comment

JSSS contains comprehensive reference to the health and safety requirements for Projects and includes detailed requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects that are to use JSSS to ensure that there is no duplication of the JSSS requirements in the Technical Specification for such Projects. Unnecessary and duplicated reference **must** be avoided.

It should be recognised that JSSS contains standard safety requirements that shall apply and prevail generally to relevant Projects and consequently it will be necessary to specify particular requirements applicable to individual Projects. Such particular requirements shall be carefully drafted and included in the **Technical Specification** of relevant Projects.

Technical Specifications shall therefore contain clear and precise descriptions covering such particular requirements including for example appropriate clauses for the following:

NK: The above Technical Specifications may be changed to Particular Safety Specification because the Items below are all related with JSSS?

Don't understand comment.

As “Specification” is used so much and Technical Specification is used by JICA I have used it here to make it very clear which is to apply

JSSS Chapter 1 Reference	Item
1.5 Contractor’s Safety Certification	State if the Bidder/ Contractor is required to be formally accredited under OHSAS 18001 and if so require submission of a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or equivalent

	from an internationally recognised and approved organisation
1.11 Project Safety Committee	State if a Project Safety Committee is to be established for the Project and add any further requirements.
1.12.2 Employer's other contractors (see also GC2.3)	Describe and if possible identify or describe the scope of any other contractors to be employed by the Employer on the Site and specify working areas and timing as far as possible.
1.16 Engineer's Safety Representative	State if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or if the Engineer will act in this capacity.
1.243.6 Accident Relief Plan	Describe the minimum measures and facilities to be provided in consideration of the nature and timing of the Works and the location(s) of the Site, including: <ul style="list-style-type: none"> (1) Medical personnel to provide first aid and additional medical assistance (2) Vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site. (3) First aid room, clinic or like facilities on Site and specify equipment and consumables (4) Communication facilities and measures for emergency response (5) First aid appliances, aids, instruments and medicines. (6) First aid training, appointment of first aiders and dissemination of information. (7) Include others as appropriate
1.26 Temporary Works (If requirements are applicable on the Project. If not required the Bidding Documents should clearly state this, noting that this can always be proposed by the Contractor)	<p>Temporary Works (TW) designs are required to be submitted with the Bid and updated during the Contract for the following significant structures:</p> <ul style="list-style-type: none"> (1) Falsework equal to or higher than 3.5 m. (2) Overhead passage equal to or higher than 10m (bridge?). (3) Scaffolds ("scaffolding"?) equal to or higher than 10m can Engineer check scaffolding design?. (4) Other TW specified in the Contract or instructed by the Engineer. <p><i>NK please refer to queries on this subject in 1.26</i></p> <p><i>NK: These are under reconsideration with JICA.</i></p> <p>Bidders/Contractors are required to comply with BS5975, yes or no?</p> <p><i>NK: We will discuss this and followings with JICA.</i></p> <p>State if any of the following are required to be assigned in</p>

	<p>relation to the Temporary Works:</p> <p>(1) Temporary Works Designer.</p> <p>(2) TW Design checker(s).</p> <p>(3) TW Coordinator(s).</p> <p>(4) TW Supervisor(s) .</p> <p>State if any other Temporary Works staff are required to be assigned?</p>
	<p>Is independent checking of the Temporary Works Design required?</p> <p>Is the Issue of a TW design/design check certificate required?</p>
<p>Others to add - MD</p>	

JICA stress the importance of the Employer putting in place a sound working environment for the Contractor, including for example reasonable Time(s) for Completion, reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. These provisions shall be clearly described in the Bidding Documents.

NK: This sentence will be reviewed by JICA. We think these are well understood by the Employer.

Yes but this sentence was an earlier request by JICA which is why I have inserted it.

I think it is necessary as although NK may be clear on this other consultants are not.

C2. Specifying the required detail of Safety Plans in Bidding Documents:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Prepare the Health and Safety Plan including details of all items listed below:

It is understood that the Bid Stage Safety Plan will be developed by the Contractor in more detail in the Safety Plan issued at Commencement Stage and at later stages but it is important that at Bid stage sufficient information is provided so that the following can be understood and evaluated.

Irrespective of what the Bidder may include in his plans and of any subsequent acceptance, approval or consent to the same, the detailed requirements of JSSS will continue to apply and prevail unless otherwise specifically agreed later in writing by the Engineer.

NK For Bidding purposes, the following is a copy of Annex 1, please coordinate as necessary if changes are made to Annex 1 and make the same changes here.

NK: We will do.

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in Chapter 1 (item 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item C1.

The following clauses have also been added to JSSS Chapter 1.

NK: We have replied in Chapter 1.

Needs to be finalised

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

The Contractor shall describe the implementation policy of risk assessment.

(6) Temporary Works

NK this requires to be added, as it is an essential part of the Safety Plan

NK: We are discussing this in Chapter 7 TW.

Needs to be finalised

Description of the arrangements for controlling risks arising from the use of Temporary Works to ensure that the requirements of JSSS Chapter 1: Temporary Works, **Clause 1.26.9** are fulfilled.

(7) Safety Measures for Contractor's Equipment ~~and Temporary Works~~

Requires changing due to the above added clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and Temporary Works** together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering new-entrant education.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site. If a specific work area, condition or environment requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing the locations and frequencies. The description shall also include the methods for reporting, recording and utilising results.

(13) Site Security

A description of the proposed Site security methods explaining how, access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures).

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as a major accident or disaster occurrence, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation of work and person responsible for issuing instructions for such discontinuation for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings and 5S activities

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

C3. Clarifying the Bid Evaluation requirements by including evaluation of Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilize key equipment and personnel for the contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.]

Insert "and Safety Plan" in the third line after the words, "work methods".

Insert the following additional sentence at the end of the above paragraph "Evaluation of the safety plan shall take account of the Health & Safety Officer and the Temporary Works Designer in 1.1.2 Personnel and of safety equipment from the Safety Plan in 1.1.3 Equipment." after the words "in Section VI, Works Requirements."

C4. Ensuring that reference in Bidding Documents is to "Health and Safety Officer", not the "accident prevention officer" and also adding Temporary Works Designer:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete positions 2 and 3 as stated and insert as follows:

- 2 Health and Safety Officer at the Site
- 3 Temporary Works Designer (if this is a specified requirement or proposed by the Bidder - refer to JSSS, Chapter 1: General, Part C, Item C1)
- 4 Other personnel to be inserted as appropriate.

C5. Including Bidders Safety Declaration (BSD) in the Bid and Contract:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include the attached “Form BSD - Bidders Safety Declaration” in the Bidding Documents after the existing Form-ACK, as new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer prefers that the Bidder has already appointed the Health and Safety Officer at the Site prior to Bid submission however if for any reason this appointment has not been made at Bid stage, this form can be signed by the Contractor’s Head Office Senior Health and Safety Manager.

Form BSD: Bidders Safety Declaration

I, [insert name and position of authorized signatory], being duly authorized by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans, hereby certify on behalf of the Bidder and myself that all information provided in the Bid submitted by the Bidder for [insert Loan No and name of the Project]

NK: We think the above sentence may be unnecessary.

Correct it is not

I, [insert name and position of authorised signatory], being duly authorized by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Form-BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

I further declare on behalf of the Bidder, that if selected to undertake **services (?) Works** in connection with the Contract, we will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer’s Personnel and the Contractor’s Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of any Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor’s Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder further declares that all Works shall be carried out under the control of our qualified and expert health and safety management and where not available in the Country, we will import for sole use upon the Works:

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for purpose and all to meet with the approval of the Engineer.
2. New or recent Contractor’s Equipment (not more than 5 years old unless otherwise pre-inspected and approved by the Engineer) all fit for purpose, in full working order, safe, clean, non-polluting, complete with all necessary spare parts and consumables and suitable for use on the Works, and

... that all of the above will be used for the purpose intended.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.

The Bidder further declares that he (and his subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability,
2. Fully inform workers about hazards,
3. Provide health and safety training to all Contractor’s Personnel and Employer’s Personnel **in** a language and vocabulary they can understand.
4. Keep accurate records of work-related injuries and illnesses.

5. Perform tests in the workplace, such as air sampling as required **by JSSS**.

Is this covered?

NK: In 2.1.5, measurement of dust, ventilation volume, temperature, carbon dioxide, oxygen concentration and hydrogen sulfide are specified.

6. Provide required new personal protective equipment at no cost to workers and ensure that this is used properly and kept in good condition,

7. Provide eyesight and hearing exams or other medical tests **required by JSSS**.

Ditto?

NK: Not specified. The Contractor shall medical check in accordance with the Law of the Country.

We should not rely on local Laws but should stipulate this under health requirements to make sure that the contractor checks this.

See earlier notes on this subject

This will be changed so that it also requires contractors to assign only workers who, in consideration of health, physical condition and age are suited to the operations.

8. Post injury and illness data where workers can see them.
9. Notify the Engineer and Employer and other statutory authorities within 8 hours of a workplace fatality or within 24 hours of any work-related accident, injury or illness.
10. Not retaliate against workers for using their rights under the Law of the Country.

The requirements and this declaration shall apply fully to all of the Bidder's subcontractors, suppliers and specialists for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Contractor's Health & Safety Officer at Site, named below and also included in Bidding Forms, Form PER -1: Proposed Personnel, unless otherwise stated in the Bidding Documents, shall be assigned from the Commencement Date, full time upon the Site of the Works and shall not be replaced or substituted at any time except with the express approval in writing of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

necessary here, too.*

POA for HSO

C6. Defining procedures for submission and review of Method Statements and Safety Plans, not presently included in FIDIC:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.1 Contractor's General Obligations</p>	<p><i>Delete that part of the fifth paragraph of this Sub-Clause which states:</i></p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p><i>and in this place insert:</i></p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information within seven (7) days of the date of the request.</p> <p><i>NK: 7 days seems too short comparing the 14 days mentioned in (b).</i></p> <p><i>The contractor should already have prepared this information in his plan so it is not considered to be extensive.</i></p> <p><i>As commented in 1.6.3, we would like to specify Particular Safety Plans for each work or section which describe actual safety measures at the site because we cannot expect the Safety Plans at Bid Stage and Commencement Stages describes in detail.</i></p> <p><i>We want the submission of Particular Safety Plan is the Contractor's obligation but not depending on the Engineer's request.</i></p> <p><i>Why different to FIDIC?</i></p> <p><i>Please refer to earlier notes and can we discuss</i></p> <p><i>The submission of Specific Safety Plan for not minor works but major/essential works shall be specified.</i></p> <p><i>Meaning?</i></p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within 14 days after receiving this notice the</p>
---	---

	<p>Contractor shall rectify such non-compliance. If the Engineer gives no such notice within 21 days of the date of receipt of the Method Statement and/or Safety Plan, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 7 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within 14 days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p>
--	---

C7. Including JSSS as a part of the Contract with some further safety requirements:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.8 Contractor’s Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this contract clause amendment; (c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6.7 [<i>Health and Safety</i>] as amended by PC6.7; <p>NK: <i>The above (c) may not be necessary.</i></p> <p><i>Yes I believe it is and I think that it is already covered by FIDIC second edition</i></p>
---	--

	<p>(d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed;</p> <p>(e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons;</p> <p>(f) Provide fencing, lighting, safe access, guarding and watching of:</p> <p style="padding-left: 20px;">(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and</p> <p style="padding-left: 20px;">(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and</p> <p>(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>In addition to the reporting requirement of sub paragraph (g) of Sub Clause 4.21 [Progress Reports] the Contractor shall submit to the Engineer details of any accident as soon as practicable after its occurrence and, in the case of an accident causing serious injury or death, shall inform the Engineer immediately.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of persons and any damage to any property.</p>
--	--

C8. Modifying the safety reporting requirements of GC4.21:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.21 Progress Reports</p>	<p>In addition to the safety reporting requirements of sub paragraph (g) of Sub Clause 4.21 [<i>Progress Reports</i>] the Contractor shall submit to the Engineer details of any accident as soon as practicable after its occurrence and, in the case of an accident causing serious injury or death, shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p>
--	--

C9. Changing the accident prevention officer to the Health and Safety Officer:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 6.7 Health and Safety	In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site ”
---	---

C10. Including JSSS and the Bidder’s Declaration in the order of Priority of the Documents and ensure that it prevails over the Specification:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 1.5 Priority of Documents	<p>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder’s Declaration, (h) the Specification, (i) the Drawings, and (j) the Schedules and any other documents forming part of the Contract.
---	---

Included to avoid the discrepancy that exists with the Contract Agreement where this is also referred to (see below).

C11. Including JSSS and the Bidder’s Declaration in the listing of documents included in the Contract Agreement:

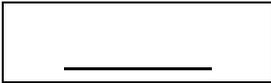

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions. Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder’s Declaration;
---	---

	<ul style="list-style-type: none"> (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
--	--

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Technical Bid; (iii) the Letter of Price Bid; (iv) the addenda Nos [<i>insert addenda numbers, if any</i>] (if any); (v) the Particular Conditions; (vi) the General Conditions; (vii) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (viii) the Specification; (ix) the Drawings; (x) the completed Schedules; and (xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK

Issue: 3

Revision:

Date: 01/09/2019

NK please note that the following is a basic suggestion that requires your further study and legal review with appropriate revision/correction. The disclaimer is based in part on the FIDIC Documents

ACKNOWLEDGEMENTS

JICA have made reference to other publications during the preparation of this document and parts of such other publications may have been used in the preparation hereof. JICA acknowledges and gives credit to relevant sources and expresses its gratitude to such other sources and publications which include:

- 1) Japanese Acts, Orders and Ordinances including:

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure ()*

Ordinance on Prevention of Anoxia, etc. ()*

Ordinance on Prevention of Hazards Due to Dust ()*

*Explosives Control Act (**)*

*Order for Enforcement of Explosives Control Act (**)*

*Ordinance on Explosives Control (**)*

()Translated but old, (**)No English translation, Others are available but not completely updated*

- 2) "OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.

~~4) ICE temporary works design? And others (scaffolding?)~~

NK: we don't refer to ICE. We refer to BS (Code of Practice such as BS 5975.)

- 5) Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

DCI - I think it better if this is included as FIDIC second edition has been used (copied) in Part C for GC4.8.

DCI: NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

NK: we will do later.

DCI: Can we please discuss later; has the exact text of the above documents been used as this is this Acknowledgement? In English versions?

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, (together with its consultants and other assistants engaged in the preparation hereof) will not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference.

JICA STANDARD SAFETY SPECIFICATION (JSSS)

OVERALL DOCUMENT INDEX

DCI: Please note that all numbering is to be checked and all descriptions to be coordinated and changed in future.

If numbers are not used, explain why (e.g. Future issue etc.)

Chapter	Section	Clause
Employer's declaration		-
1. General Requirements	Part A	Preamble Notes
	Part B	JICA Requirements
	Part C	Required Amendments to "JICA Standard Bidding Documents"
2. General Safety Measures	2.1	Work Environment
	2.2	Protection of Third Parties from Danger around the site
	2.3	Dangerous and Hazardous Areas
	2.4	Spotters and Flagmen
	2.5	Fall Prevention/Protection
	2.6	Falling objection
	2.7	Measures against extraordinary weather
	2.8	Fire prevention
	2.9	Nil Maybe PPE
	2.10	Safety site management
		2.10.1 Information to Workers
		2.10.2 Appointment of Operation Leader Maybe transfer to Chapter 1
		2.10.3 Duty of the Operation Leader Ditto
		2.10.4 Life saving equipment for Works on Water
		2.10.5 PPE Maybe transfer to 2.9
3. Underground objects and Overhead power lines	3.1	Underground objects
	3.2	Overhead power lines
4 Construction Equipment	4.1	General requirement
	4.2	Operation
	4.3	Transportation
	4.4 to 4.5?	4.4&4.5 will not used but 4.6 will be 4.5. (If so what is 4.4??)
	4.5	Rental equipment
5. Transportation	5.1	General
	5.2	Truck
	5.3	Conveyors
6. Lifting and Sling Works		-

	6.1 General	
	6.2 Lifting works	6.2.1 Mobile cranes
		6.2.2 Other Cranes
	6.3	6.3.1. Lifting and Slings
7. Temporary Works	7.1	General
	7.2	Earth retaining and support earthworks??
	7.3	Coffering
	7.4	Scaffolding
	7.5	Walkway
	7.6	Work stages
	7.7	Temporary equipment
	7.8	Power facilities
	7.9	Welding works
8. Earth Works	8.1	General
	8.2	Manpower excavation
	8.3	Machine excavation
	8.4	Embankment
	8.5	Blasting
9. Foundation works	9.1	General
Why separate? Covered by 8 and 10 surely unless only Piling NK: Earth works and piling works are different, so they are separated. MD Review later	9.2	Precast piling — in situ??, bored??
	9.3	Machine excavation foundation In-situ piling
	9.4	Open caisson and deep well foundation Earthworks?
		Basements and waterproofing
10. Concrete Works	10.1	Reinforcement Reinforcing bars works
	10.2	Formwork
	10.3	Concrete works in-situ/precast/prestressed?? Not yet determined by JICA to include precast/prestressed
11. River Works Diving works (Title will be reconsidered later.)	11.1	Diving works NK: Most dangerous works only will be specified.
		Coffer dams?? The 1 st stage JSSS will not specify other than diving works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART A: PREAMBLE NOTES

A1. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture and environment where health and safety is of the highest priority. The common goal shall be to achieve a zero accident rate, adopting the slogan of “Safety First”.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”), which they aim to be adopted for future selected Projects by the Executing Agency and their consultants for such Projects.

A2. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the Loan Agreement (LA) for that Project has been executed and where the parties to such LA have formally agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on the JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

A3. Incorporation of JSSS into Contracts

JICA require that the Employer, Engineer and Contractor will each print a hard copy of JSSS for their own reference and use and that all of these entities shall fully inform their personnel, Subcontractor’s, sub-consultants, other all parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any Project and reference to JSSS on the website will be sufficient to deem incorporation of JSSS into the Contract for that Project.

Unless otherwise agreed by JICA and the executing agency of currently on-going JICA funded Projects and between the Employer and Contractor(s) on those Projects, this JICA Standard Safety Specification shall not be applied to such Projects.

Further updates and revisions to JSSS unless otherwise agreed with the Employer will be applied to new Projects from the date that such updates and revisions are published on line.

Such further updates and revisions shall not be applied to on-going JICA funded Projects unless otherwise instructed by the Engineer through the issue of an appropriate Variation under GC13.1.

Variation effect to be considered

In order that JSSS shall become an integral part of the Bidding Documents for particular Projects and so that the requirements can therefore be implemented immediately after online publication of this document, the particular instructions for alteration of the Bidding Documents by Project employers and consultants are contained within this document in Part C of this Chapter 1: General Requirements. After making such modification to Bidding Documents for particular Projects, JSSS the JICA Standard Safety Document shall be read and construed as a part of the Bid and therefore the Contract for that Project.

It is the ultimate intention of JICA to formally update the separate “Standard Bidding

Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety Specification.

A4. Compliance and General Obligations

JSSS shall not ~~alter or~~ limit a contracting party’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of Contracts.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Contractors shall ensure that all health and safety hazards and risks are properly identified, assessed, controlled and evaluated prior to commencement of any work. Only ~~suitably qualified, fit and applicable~~ ~~competent~~ persons may perform the ~~construction~~ ~~specified~~ activities.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly JSSS shall not limit ~~or restrict~~ the Contractor to the scope contained herein.

All Parts (A, B and C) of this Chapter 1: General Requirements are to be read and construed collectively as integral parts of JSSS and therefore constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART B: JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero Accident” in the execution of the Works taking full responsibility for the health and safety management of the Works, adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration has been prepared and is included in Part C of this Chapter 1: General Requirements.

1.2 Definitions, Abbreviations and Standards

1.2.1 The following words and expressions in JSSS relating to the Conditions of Contract and the content of this Chapter 1 shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor's health and safety officer at Site to be appointed by the Contractor in accordance with PC6. 7 [*Health and Safety*] and named by the Bidder in his Bid.
- (4) **“JSSS”** or **“JICA Standard Safety Specification”** means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified in part or in whole by the Bidding Documents for the Project.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor's General Obligations*].
- (6) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “On-site supervision”, “Field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor's Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor's “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed according to the

terms for such similar documents required by the Contract.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

(7) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.

(8) “**Safety Plan**” means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works throughout the execution of the Works or any Section or part of the Works, as referred to in PC4.1 [*Contractor’s General Obligations*].

“**Safety Plan**” shall also mean the “occupational health and safety plan”, “health and safety plan” and “safety plan” all described as such in JSSS and other documents contained in the Contract. *This may not be necessary if references are consistent.* The phrase “health and safety” shall be construed as covering “occupational health and safety”.

1.2.2 The following technical words and terms in JSSS shall have the definitions stated:

DCI: This is subject to further development and might ultimately be transferred to a separate Annex

(1) “**Confined Spaces**” shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.

(2) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.

(3) “**Formwork**” means temporary containment structures for in-situ concrete and its immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.

(4) “**Hazardous Areas**” means areas defined in Section 2.3 as such.

(5) “**Operation Leader**” (also known as a “Ganger”, “Leading Hand”, “Foreman” or “Working Foreman” and the like) means a member of the Contractor’s workforce who through experience, internal training and testing is deemed by the Contractor to be qualified to work with and lead the worker’s teams, to direct them in the performance of their assigned duties and ensure their compliance with the Contractor’s safety regulations.

who is certified as capable of directing safely the works specified in Annex 4 finishing the skill training course specified in 1.9 (1)(c) of this Specification

(6) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.

(7) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge

of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.

DCI: Above PFRS is recommended but so far not included in JSSS

- (8) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.

DCI: there is much more to add to this list so it is complete and the order of above and new items will be rearranged in alphabetical order. I will add to this successively as we receive and edit later sections and draft appropriate definitions.

1.2.3 The following Sub-Clauses relate generally to the above definitions and to those already contained in the Contract:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “all Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Unless otherwise evident from the text, any reference to the Contractor’s responsibilities for “Safety” in this documents shall also be construed as reference to “Health and Safety”.
- (4) Any reference in JSSS requiring the provision by the Contractor of safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of such safety measures for Employer’s Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (5) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction For Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.2.4 The following abbreviations of technical terms shall have the meanings stated:

DCI: This is subject to further development and may ultimately be transferred to a separate Annex

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings

1.2.5 The following abbreviations of standards, codes and the like shall have the meanings stated:

DCI: This is subject to further development and may ultimately be transferred to a separate Annex

ANSI	American National Standards Institute.
ASTM	American Society for Testing and Materials.
BS	British Standard.
BSEN	British Standard European Norm.

- ISO International Organization for Standardisation.
JIS Japanese Industrial Standards.

1.3 Application to Grant Aid and other Projects

1.3.1. JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to in 1.2.3 (4) above.

1.3.2. JSSS shall also apply to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 Laws and Reference Standards The Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the technical requirements of JSSS shall apply as a minimum and these shall prevail over the technical requirements of Laws of the Country without altering or limiting the Contractor's legal duties and obligations under such Laws.

1.4.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.

1.4.4 JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or no detailed requirements then the related technical regulations of OSHA shall apply.

~~1.4.5 If any ambiguity or discrepancy is found in JSSS, the Engineer shall issue any necessary clarification or instruction.~~

1.4.6 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.

1.4.7 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws are superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.

1.4.8 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.

~~1.4.9 Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used shall be that applicable at the Base Date.~~

1.4.10 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.5 Contractor's Safety Certification

DCI: *NK: Please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Part C where I have made this optional*

- 1.5.1. Unless otherwise expressly stated in the Bidding Documents (refer to Chapter 1: General Requirements, Part C, Clause C2. (5)), the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the implementation stage).
- 1.5.2. If accreditation is required by the Bidding Documents an original or authorised true copy of the current certification shall be submitted with the Bid and this shall subsequently be included with the Contract.
- 1.5.3. The Contractor shall submit original or authorised true copies of all current updates to the Engineer when due.

1.6 Safety Plans

- 1.6.1 The Contractor shall be required to submit the an overall Safety Plan at two stages:
- (1) Safety Plan at Bid Stage.
 - (2) Safety Plan at Commencement Stage.

In addition the Contractor shall provide such further overall or updated or particular Safety Plans as may be necessary due to current circumstances or conditions at the Site or as requested by the Engineer in accordance with GC 4/1 [Contractor's General Obligations], as amended by this Chapter 1: General Requirements, Part C, Clause C6.

- 1.6.2 For details of the Safety Plan at Bid Stage, refer to JSSS Chapter 1: General Requirements, Part C, Clause C2 Detail of Safety Plans in Bidding Documents.
- 1.6.3 For details of the Safety Plan at Commencement Stage, refer to JSSS Chapter 1: General Requirements, Part C, Clause C7 PC4.8.

NK: We think this clause shall be put in the PC 4.8.

MD – I have moved this to the PC clause but please be aware of copyright.

1.6.4 Particular Safety Plans

DCI: I recommend that automatic submission of "Particular Safety Plans" is not necessary and has no meaning when the following is considered in conjunction with revised Sub-Clause 4.8 (see Part C, Clause C.7)

- (1) The Safety Plan (or parts of it) shall be revised or supplemented where considered necessary by the HSO or when required by at the reasonable request of the Engineer in accordance with GC 4.1 [Contractor's General Obligations], as amended by this Chapter 1: General Requirements, Part C, Clause C6. Each such revision or update of the Safety Plan for particular parts of the Works as above or may be required by the Engineer and hereinafter referred to as a Particular Safety Plan, shall be submitted promptly to the Engineer in any event not less than 21 days before commencing those parts of the Works for which the Engineer has requested a safety plan, such that the Engineer is made aware in writing of at least the following information for all each parts of the Work:
 - (a) Work outline, work procedure and order of carrying out the work.
 - (b) Number of Contractor's Personnel
 - (c) Safety management system and responsibility and authority of Contractor's Personnel.

- (d) Risk assessment.
- (e) Safety measures.
- (f) PPE for the Contractor's Personnel.
- (g) Safety education and training of the Contractor's Personnel and TBM.
- (h) Teaching materials used in education, training and pre-operation TBM before work.
- (i) Method of information sharing and communication among the Contractor's Personnel.
- (j) Implementation and monitoring of measures for health and safety management.
- (k) Emergency response.
- (l) Accident relief.

~~1.6.5 If items other than the above are necessary due to the nature of work, these items shall be included. contents of this Specification shall be supplemented by referring to the provisions of the work concerned.~~

DCI: Above is already "at least" so suggest this can be deleted but is there another meaning I do not understand

1.6.6 The Contractor shall also consider the opinions of the Contractor's Personnel in preparing all Safety Plans or updated Safety Plans.

DCI: Not the main plan it is too early, updates yes

1.6.7 In performing risk assessments the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.6.8 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.

1.6.9 The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.
- (3) Determining measures of risk reduction.

1.6.10 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous works.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Design/Engineering measures.
- (4) Management measures.
- (5) Use of PPE.

DCI: NK Please clarify and discuss (3) and (4) within the context of engineer's design.

1.7 Contractor's Health and Safety Management Staff

DCI: Health staff?

1.7.1 Requirements for the HSO:

- (1) JICA require the Bidder to name the HSO in the Bid (and thence Contract) and the Contractor shall assign that named HSO upon the Works, prior to the Commencement Date.
- (2) If the HSO has not been named in the Bid or Contract, the Contractor shall, prior to the Commencement Date, submit to the Engineer for consent, the name and particulars of the person the Contractor proposes to appoint as the HSO.
- (3) If the appointed person fails to act as HSO and is removed from the Site of the Works under the of GC6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of another suitable replacement person to the Engineer for his consent.
- (4) The HSO shall be an employee of the Contractor and not of a Subcontractor or consultant and unless otherwise stated in the Contract shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with PC6.7 [*Health and Safety*].

DCI: MD to consider coordination of the above and following with Form BSD

- ~~Prior to the Commencement Date and in advance of the appointment of the HSO at Site, the Contractor's senior head office health and safety officer HSO may be assigned in this capacity until the HSO is appointed as above.~~
- (5) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
 - (6) The HSO shall possess ~~an appropriate~~ qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
 - (7) The HSO shall be fluent in the language for communications stated in the Contract as defined in GC1.4 [*Law and Language*]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.
 - (8) Where there is no legal requirement under the Laws of the Country for qualification, the HSO, shall have appropriate academic and health and safety qualification, work experience in construction (minimum 10 years) and in health and safety management (~~minimum 5 years~~ which can be concurrent with construction experience) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
 - (9) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
 - (10) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
 - (11) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable of ensuring that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices or conditions exist.

- (b) If such unsafe actions, practices or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then **to temporarily stop all construction activity on** ~~suspend~~ that part of the Works until such action has been taken.

Such inspections attended by the HSO, may also include the attendance of the safety representative of the Engineer.

1.8 Health and Safety Officer – Scope of Duties

1.8.1 The HSO shall devote his/her full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.8.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

(1) Health and Safety Management Work:

(a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof.

(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel ~~and Employer's Personnel~~.

(c) Provision of **activity records** in progress reports.

DCI: NK please clarify the meaning of the above?

(d) Constant inspection and implementation of corrective measures for any unsafe conditions at the Site and any unsafe behaviour or practices of the Contractor's Personnel ~~and Employer's Personnel~~.

(e) Consultation on safety management with the Employer's Personnel, ~~and the Engineer~~.

(f) Temporarily stop all construction activity on any parts of the Works in case of accident or the like and informing the Engineer.

(g) Responding to accidents, creating and implementing measures to prevent reoccurrence.

(h) Reporting and consulting with the Engineer including when an accident occurs or a hazardous situation is likely.

(i) Appointment of health and safety inspectors and assistants **after obtaining the consent of the Engineer**.

(2) Instructing the Contractor's Personnel ~~and Employer's Personnel~~ to take improvement measures for maintaining health and safety and preventing accidents.

(3) Checking the health status of the Contractor's Personnel.

(4) Planning and implementation of various training and education implementation plans.

(5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including **fatalities**, lost time records and near-miss cases.

(6) Preparing regular internal and external reports on health and safety activities.

(7) Hazard prediction activity

DCI: NK for Kiken Yochi: see later clause 1.13.

1.9 Contractor's Health and Safety Committee

1.9.1 The Contractor shall create an internal Safety Committee for the purpose of effective health and safety management.

1.9.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.9.3 The HSO shall be the chairman of the Safety Committee.

1.9.4 The Contractor shall hold a regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters.
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO.
 - (ii) Issues raised by the representative of Contractor's Personnel. workers on Site.
 - (iii) Issues raised by Subcontractors.
 - (iv) Issues raised by others.
 - (e) Feedback on the regular safety, coordination and other meetings with the Engineer.
 - (f) Safety instructions received from the Engineer.
 - (g) Items to be coordinated with police, fire department and other related organisations.
 - (h) Compliance and registration matters under the Laws of the Country.
 - (i) Safety and health awards, media attention and the like.
 - (j) Other matters.

1.9.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.10 Engineer's Regular Safety Meetings

1.10.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of Contractor's Personnel workers on Site.
 - (iv) Issues raised by Subcontractors.
 - (v) Issues raised by others.
 - (e) Status of resolution of previous problems.
 - (f) Items to be coordinated with police, fire department and other related organisations.
 - (g) Compliance and registration matters under the Laws of the Country.
 - (h) Safety and health awards, media attention and the like.
 - (i) Other matters.

1.10.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to JICA.

DCI: Please note above suggestion

1.11 Project Safety Committee

1.11.1 On larger Projects with multiple contract packages and contractors, if stated in the Bidding Documents for those Projects, the Employer or Engineer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.11.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.

- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.11.3 The Chairman of the Safety Committee shall be the Employer.

1.11.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.11.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.12 Health and Safety Coordination with Other Contractors

1.12.1 Refer to GC2.3 and GC4.6 regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC4.8 [*Safety Procedures*] and GC4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.12.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of the such works and the location, timing and other conditions for such works.

1.12.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the

works of any legally constituted public authorities.

- (c) Accidents, injuries and measures to prevent any reoccurrence.
- (d) Status of resolution of previous problems.
- (e) Items to be coordinated with police, fire department and other related organisations.
- (f) Compliance and registration matters under the Laws of the Country.
- (g) Safety and health awards, media attention and the like.
- (h) Other matters.

1.12.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.13 Contractor's Health and Safety Management Activities

1.13.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.13.2 Health and safety management activities shall include (but are not limited to):

- (1) Overall Management Activities:
 - (a) Tasks of the Health and Safety Officer as described above.
 - (b) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM.
 - (c) Attending pre-work meetings, pre-start meetings, schedule meetings.
 - (d) Monitoring the implementation of the Safety Plan.
- (2) Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.

(b) Instruction and management of traditional Japanese cleanliness safety campaign known in Japan as 5S ACTIVITIES where:

Seiri = sorting

Seiton = tidying

Seiso = cleaning

Seiketu = cleanliness

Shituke = discipline

(c) KIKEN YOCHI TRAINING (KYT) for hazard prediction training usually in TBM, where:

K = kiken (hazard)

Y = yochi (prediction)

T = training

- (d) Instruction and management of safety education and training.
- (e) Instruction and management of various safety measures.

1.14 Monitoring

1.14.1 The Contractor shall develop and implement systems to ensure that compliance with the Safety Plan is monitored efficiently and transparently at all times, for which purpose the Contractor shall:

- (1) Create checklists for monitoring.
- (2) Carry out regular and irregular inspections. monitoring of implementation status
- (3) Monitor failed, unsafe or non-compliant conditions.
- (4) Create files and safe storage systems for the monitoring records.
- (5) Copy all relevant information to the Engineer as requested by the Engineer.

1.15 Joint Site Safety Inspections

1.15.1 In addition to the Contractor's own daily Site Safety Inspections described above, the Contractor shall also conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.

1.15.2 Frequency of Joint Site Safety Inspections shall be at least once a week.

1.15.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.

1.15.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.16 Engineer's Safety Representative

DCI: (NK what is the future intention? Will a safety engineer be appointed in future on all Projects or will the Engineer act in this capacity? This may require revision of the Guidelines for the Employment of Consultants under Japanese ODA Loans.

This requires further discussion with JICA.

It may require a more detailed procedure, the following is an outline suggestion only This requires further coordination and development with other sections (e.g. scaffolding) so that joint safety and certification and "safe for use" procedures can be implemented if required) without affecting the Contractor's overriding responsibility.

Please refer to Part C where I have made further reference.

I understood that JICA wanted the Engineer to somehow play a more proactive role so would like to discuss this with you to ascertain the future intentions.

1.16.1 On large Projects, the Engineer may appoint an assistant under GC3.2 to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with the each contractor's Safety Plan.

1.16.2 By written notice served under GC3.2, the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

- (1) Instructions requiring the Contractor's compliance with the Safety Plan.

- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
 - (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.
- 1.16.3 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.
- 1.16.4 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC3.3.
- 1.16.5 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.
- 1.16.6 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to JSSS Chapter 1: General Requirements, Part C), it is to be assumed that the Engineer shall act in this capacity.

DCI: Communications require more thought and definition. Who is to issue and receive? Can be direct HSO and ESR?

NK: The ESR may be assigned as Full-time or concurrent safety supervisor. The Employer always hesitate to assign foreign safety expert because of cost. For enforcing JSSS, it needs experienced and competent safety engineer.

DCI: Can we please discuss further so I can understand what you want to do.

NK: All correspondence shall be made between the Contractor and the Engineer, not HSO and ESR as usual.

DCI: There may be a requirement for direct (urgent) communication on some safety issues.

1.17 Safety Statistics

- 1.17.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.
- 1.17.2 Actual statistics shall include the following:
- (1) Accident: description, casualties, location, time, type and cause.
 - (2) Near-miss: description, casualties, location, time, type and cause.
 - (3) Lost-time: lost hours of casualties, duration of discontinuation.
 - (4) Remedial measures taken.
 - (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
 - (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
 - (7) Record of reports as may be required by government authorities, labour standards office.
 - (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
 - (9) Others.

- 1.17.3 All data shall be in a format and content to be approved by the Engineer.
- 1.17.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the safety representative of the Engineer for validation and mutual agreement.
- 1.17.5 The data shall subsequently be compiled and included in the Monthly progress report.

1.18 Safety Reports

- 1.18.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:
- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
 - (2) Joint Site Safety Inspections.
 - (3) Weekly Safety Report: summary of safety matters of the week.
 - (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report can be submitted as an attachment to the Contractor's monthly progress report.

1.19 Health and Safety Records

1.19.1. The Contractor shall keep the health and safety records for the following:

- (1) Accidents, fatalities, near-misses, occupational accidents.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

1.17.6 All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.20 Proper Placement of Contractor's Personnel

1.20.1 Further to compliance with GC6.9, the Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

The HSO shall countersign all such records to indicate his/her confirmation of the suitability of each member of the Contractor's Personnel prior to their placement.

These records shall be made available for inspection by the Engineer.

1.20.2 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor in consideration of:

- (1) Work content and work environment.
- (2) Work experience, qualification and capability.
- (3) Health condition upon commencement of employment.
- (4) Health condition on a regular basis before daily work starts.
- (5) Allocation of an achievable and safe work volume.
- (6) Allocation to workers under 18 in accordance with GC6.21.

1.21 Placement and ID of Personnel for Works Requiring a License

- 1.21.1 If for any of the operations at Site, the Laws of the Country require operating, supervising or any other Contractor's Personnel to have a licence, particular qualification, registration or certification the Contractor shall ascertain that all such Contractor's Personnel possess and maintain such documentation.
- 1.21.2 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, qualification and skills.
- 1.21.3 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry an ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.22 Health and Safety Education and Training

- 1.22.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.
- 1.22.2 The Contractor shall include in the Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit full details of such education and training to the Engineer for his information before the start of such education and training.
- 1.22.3 Education and training shall be provided free-of-charge to the trainees, conducted during normal working hours, trainees shall be paid and the Contractor shall bear all necessary expenses.
- 1.22.4 Safety induction: For general education and training of new entrants upon the Site and those who are scheduled to change work type, skill or location, the following subjects shall be included:
- (1) Chain of command and means of communication methods for the work.
 - (2) Hazards or dangers due to the use of machinery, equipment, raw materials, etc., and methods of dealing with such hazards or dangers.
 - (3) Performance and handling methods of safety devices and personal protective equipment PPE with practical on-Site demonstration.
 - (4) Hazardous substance control devices with practical on-Site demonstration.

DCI: - to be coordinated later

- (5) Working procedures generally.
- (6) Inspection before starting any work.
- (7) Maintaining an orderly, tidy and clean Site.
- (8) Emergency measures and evacuation at the time of accidents, etc.
- (9) Health and safety rules.
- (10) Causes and prevention of diseases that may occur in relation to the work concerned.
- (11) Other matters necessary for health or safety related to the work concerned.

1.22.5 For education and training of Contractor's Personnel who are planned to be assigned to dangerous or harmful work (for example as listed in Annex 2), such Contractor's Personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such Contractor's Personnel are to be engaged.

NK: Dangerous and harmful works here can be limited to those in Annex 2, not such dangerous works with hand tools.

The intention of this clause is to clarify works that needs special knowledge and skill, which are specified in Japan.

DCI: Can we please discuss further as whilst I understand that there are specified training requirements in Japan these are different outside Japan.

Please also refer to our comments on Annex 2

The Contractor shall determine the educational subjects and teaching hours for the special education and training with reference to Annex 3.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education.

1.22.6 For education and training of Contractor's Personnel who are to be appointed as Operation Leaders as co-workers (NK requires discussion – Chargehand, trades foreman, gänge etc) with each team of workers engaged upon such work at the Site (for example as listed in Annex 4 and 5), such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the skill-training course with reference to Annex 5.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of items of the special education.

DCI: NK – This requires further clarification and discussion

1.22.7 Education and training personnel

Educators and trainers lecturers can be Contractor's Personnel who are experienced, academically qualified and (if legally required) registered as teacher or lecturer educators and trainers under the Laws of the Country, fluent in the language of the Country or external educators and trainers similarly qualified, registered and fluent.

In case of absence of availability of such suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary qualification, ability and experience, subject to the receiving the advance consent of the Engineer.

1.22.8 Records of education and training

The Contractor shall create and store records of trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for inspection by the Engineer.

1.22.9 Explanation of health and safety rules to persons other than the Contractor's Personnel

The Contractor shall provide general health and safety education courses to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed

1.23 Emergency Response Plan

1.23.1 The Contractor shall prepare an Emergency Response Plan as a part of the Health and Safety Plan in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

DCI: *NK please note:*

Natural disasters include typhoons, earthquakes etc. which are actually GC19 Force Majeure situations for which, the contractor is not responsible and he has no obligation to give any such automatic "response".

What is the actual required extent of the Contractor's "response"? What manpower and equipment is he to provide? How can this be predicted and estimated?

What about the Employer's and Engineer's own plans and what about the availability of the rescue services etc. in the Country?

These arrangements appear to be onerous upon the Contractor and of not properly worded may cause difficulty with interpretation of force majeure.

Can we please discuss and consider this further to understand the purpose and intention.

We have edited the following to make it readable but do not agree with the content.

NK: *We specified for the natural disasters which is not GC19 Force Majeure situations. We expect the Contractor to prepare the natural disaster which may be occurred by the weather or earthquake of magnitude between bad weather and earthquake, and Force Majeure situations. The bad weather and earthquake are specified in JSSS 2.7 Measures against Adverse Weather and Earthquakes, which I want to send it in English you soon.*

DCI: *I will wait to receive your document on this subject so I can understand your intentions.*

In addition, the Contractor shall fully inform the Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, of the detail of the Emergency Response Plan. The Contractor shall also establish an emergency call system and carry out training based on the Emergency Response Plan.

The Emergency Response Plan, shall include the following items:

- (1) Expected types of emergency situation.
- (2) Description of the emergency call system.
- (3) Explanation of the specific measures for emergency response.
- (4) ~~Include Measures for quickly establishing locations of affected Contractor's Personnel, defining assembly points and the like.~~
- (5) Provisions for immediate changes and revisions to be made in response to changes in the Site situation

The Emergency Response Plan shall be submitted to the Engineer as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.23.2 The Contractor shall establish an emergency call communication system that will require confirmation from all contact official departments, organisations and persons even in the event of an emergency. This shall include the creation of an emergency contact list, which shall be posted in a visible location such as the Contractor's Site office to inform all Contractor's Personnel.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel
- (2) Relevant government authorities and agencies: administrative agencies, police stations and fire stations etc.
- (3) Contractor's Personnel at the Site, particular individual's positions, head office etc., subcontractors, material suppliers and the like.
- (4) Other contractors engaged upon the Site or the Works

1.23.3 The Contractor shall conduct emergency response training based on the Emergency Response Plan which shall include:

- (1) Implementing a training programme at least every six months
- (2) Improving the emergency response plan based on training results
- (3) Providing details of the emergency response

The Contractor shall provide training for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed

Details of the training shall be included in the Emergency Response Plan and Safety Plan.

1.23.4 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.23.5 The Contractor shall take measures such as the placement and installation of the following accident relief facilities and equipment, medical personnel, ambulances, etc.

DCI: NK please see above queries, the Contractor usually has no such obligations for force majeure events, so if this is required it must be fully specified and paid for. Usually only the use of existing site facilities is allowable technically in accordance with the Engineer's Instructions (and payment by Employer).

NK: As I explain above, the Contractor shall prepare the plan for predictable weather, earthquake and others from the Contractor's experience.

DCI: This may complicate interpretation contractually where force majeure has accepted definition. In most countries earthquakes are not so common and extreme weather likewise.

Please can we discuss

DCI: We assume that the following described in the draft as "Emergency Relief Plan" actually means a plan for dealing with common accidents on the Site. This heading is a little misleading, I suggest change to something like "Accident Relief Plan" so there can be no confusion with "Emergency Response Plan"

1.24 Accident Relief Plan

1.24.1. The Contractor shall prepare an Accident Relief Plan in consideration of the nature and timing of the Works and the location(s) of the Site and taking account at least of the minimum facilities and measures to be provided in accordance with the Specification for the Contract (refer also to JSSS Chapter 1: General Requirements, Part C) and including:

DCI - To be coordinated with Part C and Health

- (1) Availability of medical personnel who can provide first aid and additional medical assistance.
- (2) Availability of vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site.
- (3) Establishment of first aid room, clinic or like facilities on Site with equipment and consumables.
- (4) Arrangement of communication facilities and measures for emergency response.
- (5) Deployment of appropriate first aid appliances, aids, instruments and medicines and kits in accordance with the scale and characteristics of the Work.
- (6) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that JSSS Chapter 1: General Requirements, Part C, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

1.25 Measures at the Time of Accidents Occurrence

1.25.1. When an accident occurs, the Contractor shall immediately discontinue the work task and implement the following measures as necessary.

- (1) Safely locate and extract casualties and provide first aid and other accident relief measures
- (2) Secondary accident prevention activities
- (3) Preserve the accident site, make safe and prevent anyone interfering or entering
- (4) Discontinue construction work related to or in the vicinity of the accident
- (5) Implement any further measures instructed by the Engineer

1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with PC4.8 [Contractor's Health and Safety Obligations]

DCI: NK, can we please attach an accident report form now? As an appendix, please let me have a draft and I will include

- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence.

1.25.3 Procedures for Resumption of the Works

Unless otherwise instructed by the Engineer, the procedure for resuming the Works after the occurrence of an accident or illness shall be as follows.

- (1) Contractor examines and formulates measures to prevent any reoccurrence and submits a description of such measures to the Engineer.
- (2) The Engineer may review the preventive measures.
- (3) The Contractor informs the Engineer with no less than two working days notice that he will resume the Works when he is ready to implement the preventive measures and restart such Works.
- (4) The Contractor resumes the Works.
- (5) The Contractor verifies the effectiveness of his preventive measures and informs the Engineer.
- (6) The Contractor implements risk assessment and revises the Safety Plan and Method Statements as necessary.

DCI: NK, please review and discuss the above carefully

1.26 Health Issues

DCI: What about health issues? The document is largely silent on this yet statistically this is the biggest problem

NK: May I know what kind of health issues you commented. We specify health issues such as dust, noise, heat are specified in JSSS 2.1 Working site environment.

NK: Do you mean if the health issues are asbestos, dusts including silica and lead, chemicals, sunlight, diesel engine exhaust emissions, frequent loud noise, frequent or excessive use of vibrating tools, frequent or excessive manual handling of loads, stress and fatigue.

DCI: Yes in part answer to your question and also health issues at Site in terms of what shall be provided as a guide and also:

Contractor should provide (or ensure) eyesight and hearing exams that do not have a significant effect on safety and other mobility and medical tests that are reasonable, all to be stated in JSSS.

We should not rely on local Laws but should stipulate health requirements to make sure that the contractor complies with this.

This will also require the Contractor to assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

NK: We specify in 2.1 about dusts, noise and temperature. We do not specify about asbestos because the Laws of the country may have specified already and ODA projects may not handle asbestos except renovation works.

DCI: We surely cannot rely on local laws that in general JSSS is aiming to improve.

Renovation works occur frequently

NK: Do you have any suggestion about health issues?

DCI: See above.

This also requires research of other standards but what about medical facilities on Site, medical tests and also treatment of endemic diseases in certain countries. AIDS is covered in FIDIC (although not so necessary now perhaps) but what about others? Malaria nets, dengue patrols (Singapore style) etc. etc..

Also state criteria for provision of facilities at Site for example say related to the distance from Site to the nearest hospital. If say more than one hour provide a doctor(s) full time plus medical support plus nurses and reasonably equipped ambulance with driver.

Plus also same doctor and nurses may be able to provide a local JICA clinic?

All of the above requires coordination with GC6.8 but more clarity will be helpful as the present clause is frequently not applied properly.

Can we discuss further please, noting that this should really come from NK.

What do the Japanese regs. require?

The documents need to be comprehensive and helpful.

NK: *JSSS will be prepared at 2 stages. The 1st stage JSSS will cover the following table for basic and essential safety requirement and the 2nd stage will do for safety in sectors of road, river, tunnel, railway, etc.*

DCI: *Please can we discuss later, I am not sure if or how your ideas for later issues will work.*

1.27 Temporary Works

DCI: *The following are draft notes which in the main will probably be transferred and dealt with later in JSSS Chapter 7.1 but some reference may be necessary here.*

Please leave this here for now and we will coordinate this (and other parts) later. There is cross-reference to this clause in Part C.

NK: *I will send you 7.1 as soon as possible JICA gave us their draft of JSSS.*

DCI: *Please note that I have not changed any part of the following paragraph (except as highlighted in green) as I am waiting receipt of your further draft.*

The Contractor shall provide details at Bid stage (not calculations necessarily at this stage?) of all Temporary Works (TW) designs including Falsework for significant structures as listed in the Bidding Documents (refer to JSSS Chapter 1: General Requirements, Part C) and including for example:

- (1) Falsework equal to or higher than 3.5 m.
- (2) Overhead passage equal to or higher than 10m (bridge?)
- (3) Scaffolds (“scaffolding”?) equal to or higher than 10m can engineer check scaffolding design?.)
- (4) Other TW specified in the Contract or instructed by the Engineer.

DCI: *NK can we please discuss the above to clarify these and further requirements after which we will delete or re-word this*

What about other items such as TW for major bridge structures, tunnels, coffer dams, temporary dams, etc. ??

What is the Engineer required or intending to do with such information?

NK: *The Engineer can review design document by the Engineer’s design expert if he is assigned. If not, the Engineer shall review the design procedure and designs with his experience of TW.*

DCI: *We suggest that this could be dangerous as reliance needs to be placed upon the Contractor’s specialists not the Engineer. The check (if any) should be to ascertain that the Contractor has engaged and used such specialists. The Engineer does not (and should not) represent himself as an expert on temporary works (Falsework) design.*

Also if calculations and methods are submitted at Bid stage it could well be construed that they have been checked and accepted by the Engineer (otherwise why request them?) and if future failure occurs responsibility may be affected. Similarly if a future change say for compliance is instructed by engineer, variation may be claimed and responsibility may well also be compromised

Please let me study the future document when we receive it and I will then discuss further.

DCI: I recommend consideration of something like the following, which is still very much a draft idea for now. Please note my further suggestion that it is made optional in Part C for use on particular (not all) projects.

I still need to study this BS further.

Please also refer to separate definitions of Falsework, Formwork and other terms above.

1.26.1. Unless otherwise stated in the Bidding Documents, Bidders are required to comply with the guidance and recommendations contained in BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

1.26.2. The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions, which are:

- (1) Designed to support excessively heavy loads.
- (2) Of excessive height or unusual shape.
- (3) Of difficult access, or
- (4) With unusual structural solution.

1.26.3. Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for management of Temporary Works including the design of Falsework (including Class A Falsework).

1.26.4. It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent.

1.26.5. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.26.6. Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:

- (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
- (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework). and who shall remain under the Contractor's responsibility and management.
- (3) Temporary Works Supervisors (TWS): responsible for the construction, safe use, maintenance, dismantling and removal of all Temporary Work in accordance with the design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:
 - (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works and ready to accept loading.
 - (b) Confirmation that the Permanent Works have attained adequate strength to allow

dismantling of the Temporary Works.

1.26.7. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer

1.26.8. The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or be subsequently consented to by the Engineer.

1.26.9. Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS Sub-Clause 1.7.

1.26.10. The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the Permanent Works as far as possible through the design process for example by changing high level in-situ concrete structures to precast or prefabricated structures, simplifying structures and applied finishes, services and the like.

1.26.11. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The following clause requires particular and careful consideration and internal discussion.

1.26.12. The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may requested by the Engineer under the Contract for his review.

The Engineer's review shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC3.1(c) and issued without prejudice to the Contractor's overriding responsibility for the adequacy of the Temporary Works.

1.26.13. Where the Bidding Documents do not require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the provision, use, management, dismantling and removal of Temporary Works including for example by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
 - (c) Check that the Temporary Works have been erected in accordance with the design

and issue by the HSO of a formal “permit to load”.

- (d) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal “permit to dismantle” where necessary.

1.26.14. The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.27.2 Whether there is or is not any legal requirement under the Laws of the Country for qualification, all of the Contractor’s Temporary Works staff and any specialist Temporary Works Subcontractors shall have appropriate academic and Temporary Works coordination, design or supervision qualification as appropriate, work experience in construction and in Temporary Works Design and whom the Contractor considers are qualified to perform the duties.

ANNEXES TO PART B: JICA REQUIREMENTS

Annex B.1: Items to be described in the Safety Plan

DCI: NK please note that text generally has been changed from original so that this is coordinated with other changes basically to make it work better.

Further MD coordination with Part C is required

Coordination is also required in future for all other Technical Sections 2 onwards (e.g. health) where further requirements may make revision here necessary.

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in JSSS Chapter 1 (Sub-Clause 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under Clause C1.

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, Sub-Clause 1.27 are fulfilled.

(7) Safety Measures for Contractor's Equipment and Temporary Works

Requires changing due to the above added Sub-Clause

A description of the procedures for inspecting and maintaining Contractor's Equipment and Temporary Works together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.

If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

Also attaching warning notices and labelling hazardous equipment, structures and the like?

(13) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation by HSO of work and person responsible for issuing instructions for such discontinuation—for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS Sub-Clause 1.13)

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex B.2: Dangerous or Harmful Operations

DCI: I have concerns about whether the information in the following annexes is of any value in an international context, I think not. In a domestic Japanese sense these requirements are of course very important as they are integrated with many other Japanese laws and regulations. However when abbreviated extracts only are included it does not have great meaning and there appears to be much missing which may not be covered by the fall-back (OSHA).

Please consider all very carefully.

I am inclined to suggest that a simple basic requirement such as GC6.9 is sufficient, perhaps adding some reference to training and making the contractor responsible for all is probably better than going into so much detail for only a part.

NK: we will reconsider and discuss with JICA about Annex 2.

The following is a list of example work types classified/defined as “Dangerous or Harmful Operations”

DCI: Is this Annex intended to be a definition?

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of such operations include (but are not restricted to) the following:

(as provided for by the Ordinance of the Ministry of Health, Labour and Welfare).

DCI: I requested a complete list at our last meeting however, according to the above Ordinance there are many more operations and requirements in addition to this list and also as this effectively applies only in Japan; is therefore a real need for this?

- (1) Crane operation and mobile crane operation
- (2) Welding and cutting of metal using arc welder what about gas welders and cutting machines?
- (3) Forklift operation
- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3t or more) why 3t or more? Why not all?

DCI: Vehicle-type? What does it mean exactly? Does it mean wheeled? If so how about tracked equipment? What is the difference between (4) and (5)?

- (5) Vehicle-type construction equipment operation (for foundation work: 3t or more)

DCI: why 3t or more? Why not all? what about track type?

- (6) Roller operation what type?
- (7) Operations that use organic solvents

DCI: what about other harmful substances and explosives for example?

- (8) Sling work
- DCI:** meaning hoisting and rigging work

- (9) Rope access work
- DCI:** cradles and hoists?

- (10) Work to be performed using a full harness type of fall protection device where the height is 2 meters or more and it is difficult to provide for the work floor

DCI: meaning of difficult? Too expensive? Is this coordinated with other chapters?

What about small tools (drills and angle grinders) all electrical works, gas pipe works etc. etc.?

Ditto related academic educational achievements?

And Confined spaces?

NK: we will reconsider and discuss with JICA about Annex 2.

Annex B.3: Subjects of Special Education for Dangerous or Harmful Operations

DCI: Please note that this still needs English edit and correction, some commented on below, but problem exists throughout.

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

DCI: Is this “health and safety training” or “skill training”?

It appears to be operator skill training? Is this the purpose?

Can this apply internationally?

Examples of special training for the above listed sample operations include (but are not restricted to) the following:

(1) Special education for crane operation and mobile crane operation:

DCI: Surely this is common to all crane operations why particularise one type? Or training should be specific for the types of crane being operated on Site.

Subject	Scope
1 Knowledge of mobile and other cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane and other cranes	Force (composition, decomposition, balance and moment), centre of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane and other crane operation Signs for mobile crane and other crane operation

DCI: What is the extent of “practical skill training” and others above, is it testing to ascertain of skills exist?

(2) Welding and cutting of metal performed using arc welder

DCI: Gas welding also?

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention

4 Practical skill	Handling of equipment for arc welding work
-------------------	--

(3) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift. <i>What is the meaning of this?</i>	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling
2 Knowledge of equipment structure and handling methods for cargo handling <i>What is the meaning of this?</i>	Structure and handling method of hydraulic equipment (including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, centre of gravity and stability of objects, speed and acceleration, load, stress, material strength <i>This appears to be excessive for the average fork lift driver?</i>
4 Practical skill	Operation of traveling, operation of cargo handling

(4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3 t or more)

Meaning see before also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(5) Vehicle-type construction equipment operation (for foundation work: 3 t or more)

Less than 3t also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(6) Roller operation

Subject	Scope
1 Knowledge of roller	Types and applications of rollers, structure and handling method of Power transmission devices of rollers, working devices, steering devices, brakes, electrical devices, alarm devices and auxiliary devices, method of inspection and maintenance
2 Knowledge of general matters required for roller operation	Mechanics necessary for operation, construction method by roller
3 Practical skill	Roller operation method

(7) Operations that use organic solvents

Include here within equipment and only solvents, no other chemicals or hazardous substances?

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapour and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective

	equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical check-up and follow-up measures
4 Accident case	Accident cases and prevention measures

(8) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes, other cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), centre of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation method), method of signalling
4 Practical skill	Signs for operation, work with a sling for a crane

(9) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(10) Work to be performed using a full harness type of fall prevention equipment where the height is 2 meters or more and it is difficult to provide for the work floor

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full

(limited to full harness type, the same shall apply hereinafter)	harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

Annex B.4: Work Requiring the Assignment of an Operation Leader

The following is a list of example work types that require the appointment and assignment of an **Operation Leader** to each team of workers engaged upon such work at the Site.

There are many more

Such Operation Leaders shall be given special health and safety training appropriate to the operations concerned.

Examples of operations shall include (but are not restricted to) the following:

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Excavation work for quarrying
- (5) Formwork, Falsework, supports and shoring assembly/dismantling work
- (6) Scaffolding assembly/dismantling work
- (7) Steel frame fabrication and erection work on buildings and structures
- (8) Steel bridge fabrication and erection work
- (9) Wooden, masonry and other building work
- (10) Demolition work of concrete, masonry or steel structures
- (11) Reinforced concrete construction work
- (12) Organic solvent work and other hazardous substances or materials
- (13) Work in hazardous areas
- (14) Work in Confined Spaces

Annex B.5: Subjects of Skill Training Course for Operation Leaders

DCI: Skill training is included for operation leaders but no such skill training or checking is included for other skilled persons is this correct?

Is this “training” or checking to ascertain that operation leaders have the skills?

If “Operation Leaders” (see out earlier assumed definition based on JICA scop) include foremen, gangers, charge hands and the like in other countries, and if they are already qualified and paid as foremen, gangers, charge hands and the like, do they need to be re-trained and re-qualified as follows?

These appear to be very detailed training requirements.

This Annex requires significant coordination with Annex B.4, with addition and editing before it can be finalised but is it necessary? Any changes in Annex B.4 need to be added here.

Add work in hazardous areas and work in Confined Spaces

Examples of special training for the operations leaders shall include (but are not restricted to) the following:

(1) Operation Leader for Earth excavation and shoring work

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(2) Operation Leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases and toxic gases, measures for preventing hazards
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(3) Operation Leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, instruments and tools, measures for preventing hazards, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(4) Operation Leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling methods for rock excavation, etc.	Types of rock, method of excavation for extraction of rock, treatment of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(5) Operation Leader for formwork, Falsework, supports and shoring assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(6) Operation Leader for scaffolding assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types of scaffolds, materials, structures and assembly drawings, methods of scaffold assembly, disassembly and

	change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(7) Operation Leader for steel frame fabrication and erection work on buildings and structures

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(8) Operation Leader for steel bridge fabrication and erection work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(9) Operation Leader for wooden, masonry and other building work

Subject	Scope
1 Knowledge about constructing structural members of buildings, installing floors, roofs, etc.	Construction methods of main structural parts such as frame, floor structures, walls, construction methods of roof and outer wall foundation, joints, order of construction, reinforcement method for frame
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(10) Operation Leader for demolition work of concrete or masonry structures

Subject	Scope
1 Knowledge about structural members including concrete masonry and reinforcement etc.	Types, structures, construction method of concrete and masonry work, types of method of construction, method of work, work plan, coordination with m & e services etc
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(11) Operation Leader for reinforced concrete construction work

Subject	Scope
1 Knowledge of work method	Types of materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(15) Operation Leader for organic solvent work and other hazardous substances or materials

Subject	Scope
1 Knowledge of health hazards and their preventive measures.	Pathology, symptoms, prevention methods, first-aid measures and health problems caused by such materials
2 Knowledge for improving the work environment	Properties of organic solvents, and other hazardous substances or materials, management of equipment and other facilities related to production and handling of such materials, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of such materials
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence <i>Meaning?</i>

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL REQUIREMENTS

PART C: REQUIRED AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

[This Part C applies to Executing Agencies (employers and their consultants) for use in the preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described will be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

The Bidding Documents for particular Projects where JSSS has become effective (as described in the above “Part A: Preamble Notes”), shall be drafted to take account of such amendments in advance of the publication of the updated JSBD, in accordance with the following instructions.

BIDDING PROCEDURES:

C1. Particular Safety Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the Employer putting in place a sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply generally on their ODA Projects and consequently it is necessary to specify particular safety requirements for specific Projects. Such particular safety requirements shall be carefully and precisely drafted and included in the Technical Specifications of such Projects, covering for example the following²:

JSSS Chapter 1 Reference	Item
1.5 Contractor’s Safety Certification	State if the Bidder/ Contractor is required to be formally accredited under OHSAS 18001 and if so require submission of a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or equivalent from an internationally

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later checklist

	recognised and approved organisation
1.7 Contractor's Health and Safety Management Staff	<p><i>(On small Projects)</i> State if the HSO is NOT required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, contractors must assign full-time dedicated HSO and if applicable other support personnel.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p>
1.11 Project Safety Committee	<i>(On large Projects)</i> State if a Project Safety Committee is to be established for the Project and add any further requirements.
1.12.2 Employer's other contractors (see also GC2.3)	Describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name together with any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify working locations, access and timing as far as possible.
1.16 Engineer's Safety Representative	<i>(On large Projects)</i> State if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.
1.24.6 Accident Relief Plan	<p><i>MD to Coordinate in future with 1.24, 1.25 Health and with other Sections</i></p> <p>Describe the minimum measures and facilities to be provided in consideration of the location(s) of the Site and the location, nature and timing of the Works, including:</p> <ol style="list-style-type: none"> (1) Medical personnel to provide first aid and additional medical assistance, at least certified as having successfully completed a first aid course by a recognised provider, such as the Red Cross and also including doctors and nurses where required by the (2) Suitably equipped ambulances or other approved vehicles, with drivers and attendants that are properly trained to transport casualties to medical personnel staff and facilities on Site or to medical staff and facilities including hospitals off the Site. (3) First aid room, clinic or like facilities on Site and specify equipment and consumables (4) Communication facilities and measures for emergency response (5) First aid appliances, aids, instruments and medicines.

	<p>(6) First aid training, appointment of first aiders and dissemination of information.</p> <p>(7) Include others as appropriate</p>
1.26 Health Issues	<p><i>requires further development, addition and coordination by MD</i></p> <p><i>Awaiting NK documents to ascertain scope.</i></p>
<p>1.27 Compliance or otherwise with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework</p>	<p><i>DCI - I suggest that non-compliance should be the exception rather than the norm.</i></p> <p>If it is necessary for the Bidder to comply with BS5975: 2019 on the Works, the Executing Agency shall ensure that the Bidding Documents clearly state this. For this purpose reference shall be made to the basic criteria described in JSSS Sub-Clause 1.27.</p> <p>If the Bidder is NOT required to comply with BS5975: 2019 on the Works, the Bidding Documents shall clearly state this, and separate written justification shall be provided by the Executing Agency to JICA.</p> <p><i>NK please refer to queries on this subject in 1.27</i></p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall confirm that the following Temporary Works coordination, design and supervision staff are required:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>If compliance is required TWC and TWD, Bidding Documents should require them to be named in the Bid.</p> <p>JICA note that this (and more) can always be proposed by the Bidder whether included as a specified requirement or otherwise.</p> <p>If the Bidders are not required to comply with BS5975: 2019, the Bidding Documents shall state that the Bidder is to comply in any event with the requirements of Sub-Clause 1.26.13 and 1.26.4 and submit full details in the Safety Plan.</p>
<p><i>The following all requires further development, addition and coordination by MD:</i></p>	
<p>Temporary Perimeter Fencing:</p>	<p>Simple fencing to complicated security depends upon Project and location and nature of works.</p> <p>Improvement Projects (e.g. airports, roads and railways) may not need this as existing or maybe new permanent</p>

	<p>fencing can be used.</p> <p>Gates barriers and other treatment at Site entrances e.g. simple gate or barrier through to complicated type including communications, lighting and temporary power</p> <p>Security at entrance and around the site (minimal, extensive or in some cases on existing facilities) already provided by employer</p> <p>Fencing within the site around hazardous areas or around operating plant areas.</p>
<p>Temporary Accommodation and Facilities</p>	<p>Should list the required facilities in a range such as none for urban Projects, to full accommodation for rural Projects where no suitable accommodation.</p> <p>Health and sanitation requirements</p> <p>Leisure facilities</p> <p>Temporary Transportation Requirements</p> <p>Nothing for urban Projects, to full provision, e.g, buses and drivers etc for rural Projects where nothing safe is available.</p> <p>Canteen Facilities</p> <p>Sanitation Facilities</p> <p>etc etc</p>
<p>Others to add - MD</p> <p>Here or Check-list Annex to consider. Probably the latter</p>	

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this Part

To be coordinated by MD with the later checklist

C2. Required Detail of Safety Plans in Bid:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Prepare the Health and Safety Plan including details of all items listed below:

It is understood that the Bid Stage Safety Plan will be developed by the Contractor in more detail in the Safety Plan issued at Commencement Stage and at later stages but it is important that at Bid stage sufficient information is provided so that the following can be understood and evaluated.

Irrespective of what the Bidder may include in his plans and of any subsequent acceptance, approval or consent to the same, the detailed requirements of JSSS will continue to apply and prevail unless otherwise specifically agreed later in writing by the Engineer.

NK For Bidding purposes, the following is a copy of Annex 1, please coordinate as necessary if changes are made to Annex 1 and make the same changes here

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant Clause or Sub-Clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in JSSS Chapter 1 (Sub-Clause 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item CI.

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, Sub-Clause 1.27 are fulfilled.

~~(7)~~ Safety Measures for Contractor's Equipment and Temporary Works

Requires changing due to the above added Sub-Clause

A description of the procedures for inspecting and maintaining Contractor's Equipment and Temporary Works together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is

- maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.
- (8) Health and Safety Information Sharing and Communications Policy
- A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.
- A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving workers feedback and opinions regarding health and safety.
- (9) Plans for Health and Safety Education and Training
- An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.
- (10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)
- A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.
- (11) Health and Safety Rules
- A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.
- If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.
- (12) Site Safety Inspection Plan
- A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.
- Also attaching warning notices and labelling hazardous equipment, structures and the like?
- (13) Site Security
- A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.
- (14) Policy for Preventing Traffic Accidents
- A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.
- (15) Prevention of Construction Accidents at Site
- A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.
- (16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) **Accident Relief Plan**

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) **Facilities for Maintaining the Occupational Health Environment**

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) **Work Discontinuation Criteria**

A description of the proposed criteria for discontinuation by HSO of work and person responsible for issuing instructions for such discontinuation—for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) **Monitoring and Review of Health and Safety Management Activities**

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS Sub-Clause 1.13)

(21) **Legal Remedies and Requirements after Occupational Accidents**

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

C3. Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilize key equipment and personnel for the Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] insert "and Safety Plan" in the third line after the words, "work methods".

Insert the following additional paragraph after the above paragraph:

"Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to JSSS Chapter 1: General Requirements, Part C, Clause C1) of any principal Temporary Works coordination, design and supervision staff, under item in 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in 1.1.3 Equipment."

C4. Health and Safety Officer and (if applicable) Temporary Works staff:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete position 2 as stated and insert as follows:

2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

(if any of the following are a specified requirement of the Bidding Documents by reference to JSSS Chapter 1: General Requirements, Part C, Clause C1):

3. Temporary Works Coordinator

4. Temporary Works Designer

5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

C5. Bidders Safety Declaration (Form BSD):

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include ~~the attached~~ “Form BSD - Bidders Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer requires the Bidder to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign Form BSD in addition to the Bidder’s Official Representative.

Please refer to Annex C.2 to this Part C for a copy of Form BSD

PARTICULAR CONDITIONS OF CONTRACT:

C6. Submission and Review of Method Statements and Safety Plans:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 4.1 Contractor’s General Obligations	<p>Delete that part of the fifth paragraph of this Sub-Clause which states:</p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p>and in this place insert:</p> <p>(a) The Contractor shall, whenever requested by the Engineer, submit Method Statements and Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information</p>
--	--

	<p>within fourteen (14) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within 14 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no such notice within 21 days of the date of receipt of the Method Statement and/or Safety Plan, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 7 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within 14 days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p> <p><i>DCI: NK can we discuss the requirement for Particular Safety Plans as necessary.</i></p>
--	--

C7. JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.8 Contractor’s Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <p>(a) Comply with all applicable health and safety Laws of the Country, all standards and regulations,</p> <p>(b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an</p>
---	---

	<p>integral part of the Contract by virtue of this Contract Sub-Clause amendment;</p> <p>(c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6.7 [<i>Health and Safety</i>] as amended by PC6.7;</p> <p>(d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed;</p> <p>(e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons;</p> <p>(f) Provide fencing, lighting, safe access, guarding and watching of:</p> <p>(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and</p> <p>(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and</p> <p>(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within 28 days of the Commencement Date and not less than 28 days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works, in the comprehensive detail required by the Bidding Documents.</p> <p>This shall be based upon the Safety Plan submitted at Bid Stage developed as necessary to provide the full information required.</p> <p>This Safety Plan shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>The Safety Plan shall set out or refer to all the health and safety requirements:</p> <p>(a) that are stated in JSSS;</p>
--	---

	<p>(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p> <p>(c) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.</p> <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with PC4.1 [<i>Contractor's General Obligations</i>].</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [<i>Progress Reports</i>] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p>
--	--

C8. Change “accident prevention officer” to “Health and Safety Officer”:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 6.7 Health and Safety	In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site ”
---	---

C9. Revised Order of Priority of Documents

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 1.5 Priority of Documents	<p>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B,
---	--

	<p>(f) these General Conditions,</p> <p>(g) the JICA Standard Safety Specification (JSSS) and the signed Bidder's Declaration,</p> <p>(h) the Specification,</p> <p>(i) the Drawings, and</p> <p>(j) the Schedules and any other documents forming part of the Contract.</p>
--	--

Included to avoid the discrepancy that exists with the Contract Agreement where this is also referred to (see below).

C10. Listing of Documents to be included in the Contract Agreement:

Part 3 - Conditions of Contract and Contract Forms, Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	---

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Technical Bid; (iii) the Letter of Price Bid; (iv) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (v) the Particular Conditions; (vi) the General Conditions; (vii) the JICA Standard Safety Specification (JSSS)
---	--

	<p>and signed Bidder's Declaration;</p> <p>(viii) the Specification;</p> <p>(ix) the Drawings;</p> <p>(x) the completed Schedules; and</p> <p>(xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.</p>
--	--

ANNEXES TO PART C: AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

Annex C.1: Checklist of Particular Safety Requirement in Technical Specifications

MD to develop this listing basically to create a simple yes/no check that required safety items have been addressed in the preparation of the Bidding Documents.

The list will be prepared after the later specification sections have been received from NK and have been reviewed by MD.

It is suggested that this listing be completed by the Executing Agency and submitted by them as a separate simple listing at the same time as the draft Bidding Documents are submitted for the concurrence of JICA.

Annex C.2: Form BSD – Bidders Safety Declaration

Form BSD:

Bidders Safety Declaration

I, [insert name and position of authorised signatory], being duly authorized by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Form-BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

I further declare on behalf of the Bidder, that if selected to undertake the Works in connection with the Contract, we will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer’s Personnel and the Contractor’s Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of any Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor’s Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder further declares that all Works shall be carried out under the control of our qualified and expert health and safety management and where not available in the Country, we will import for sole use upon the Works:

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for purpose and all to meet with the approval of the Engineer in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged?.
2. New or recent Contractor’s Equipment (not more than 5 years old unless otherwise pre-inspected and approved by the Engineer) all fit for purpose, in full working order, safe, clean, non-polluting, complete with all necessary spare parts and consumables and suitable for use on the Works, and

... that all of the above will be used for the purpose intended.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.

The Bidder further declares that he (and any of his Subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability,
2. Fully inform workers about hazards,
3. Provide health and safety training to all Contractor’s Personnel and Employer’s Personnel in a language and vocabulary they can understand.
4. Keep accurate records of work-related injuries and illnesses.
5. Perform tests in the workplace, such as air sampling as required by JSSS.
6. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
7. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

8. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS.
9. Post injury and illness information and data where workers can see them.
10. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
11. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidders Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Forms, Form PER -1: Proposed Personnel, unless otherwise stated in the Bidding Documents, shall be assigned from the Commencement Date, full time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the Contract, at and from which time all references to “Bidder” shall be construed as references to “Contractor”.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 3
Revision:
Date: 01/09/2019

NK please note that the following is a basic suggestion that requires your further study and legal review with appropriate revision/correction. The disclaimer is based in part on the FIDIC Documents

ACKNOWLEDGEMENTS

JICA have made reference to other publications during the preparation of this document and parts of such other publications may have been used in the preparation hereof. JICA acknowledges and gives credit to relevant sources and expresses its gratitude to such other sources and publications which include:

1) *Japanese Acts, Orders and Ordinances including:*

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure

Ordinance on Prevention of Anoxia, etc.

Ordinance on Prevention of Hazards Due to Dust

Explosives Control Act

Order for Enforcement of Explosives Control Act

Ordinance on Explosives Control

2) *“OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..*

3) *Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.*

4) *Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)*

DCI - I think it better if this is included as FIDIC second edition has been used (copied) in Part C for GC4.8.

DCI: NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

NK: we will do later.

DCI: Can we please discuss later; has the exact text of the above documents been used as this is this Acknowledgement? In English versions?

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, (together with its consultants and other assistants engaged in the preparation hereof) will not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference.

JICA STANDARD SAFETY SPECIFICATION (JSSS)

OVERALL DOCUMENT INDEX

DCI: Please note that all numbering is to be checked and all descriptions to be coordinated and changed in future.

If numbers are not used, explain why (e.g. Future issue etc.)

Chapter	Section	Description
Employer's declaration		-
1. General Requirements	Part A	Preamble Notes
	Part B	JICA Requirements
	Part C	Required Amendments to “JICA Standard Bidding Documents”
2.General Safety Measures	2.1	Work Environment
	2.2	Protection of Third Parties from Danger around the site
	2.3	Dangerous and Hazardous Areas
	2.4	Spotters and Flagmen
	2.5	Fall Prevention/Protection
	2.6	Falling objection
	2.7	Measures against extraordinary weather
	2.8	Fire prevention
	2.9	Nil Maybe PPE
	2.10	Safety site management
		2.10.1 Information to Workers
		2.10.2 Appointment of Operation Leader Maybe transfer to Chapter 1
		2.10.3 Duty of the Operation Leader Ditto
		2.10.4 Life saving equipment for Works on Water
		2.10.5 PPE Maybe transfer to 2.9
3. Underground objects and Overhead power lines	3.1	Underground objects
	3.2	Overhead power lines
4 Construction Equipment	4.1	General requirement
	4.2	Operation
	4.3	Transportation
	4.4 to 4.5?	4.4&4.5 will not used but 4.6 will be 4.5. (If so what is 4.4??)
	4.5	Rental equipment
5. Transportation	5.1	General
	5.2	Truck
	5.3	Conveyors
6. Lifting and Sling Works		-

	6.1 General	
	6.2 Lifting works	6.2.1 Mobile cranes
		6.2.2 Other Cranes
	6.3	6.3 1. Lifting and Slings
7. Temporary Works	7.1	General
	7.2	Earth retaining and support earthworks??
	7.3	Coffering
	7.4	Scaffolding
	7.5	Walkway
	7.6	Work stages
	7.7	Temporary equipment
	7.8	Power facilities
	7.9	Welding works
8. Earth Works	8.1	General
	8.2	Manpower excavation
	8.3	Machine excavation
	8.4	Embankment
	8.5	Blasting
9. Foundation works	9.1	General
Why separate? Covered by 8 and 10 surely unless only Piling NK: Earth works and piling works are different, so they are separated. MD Review later	9.2	Precast piling — in situ??, bored??
	9.3	Machine excavation foundation In-situ piling
	9.4	Open caisson and deep well foundation Earthworks?
		Basements and waterproofing
10. Concrete Works	10.1	Reinforcement Reinforcing bars works
	10.2	Formwork
	10.3	Concrete works in-situ/ precast/prestressed?? - Not yet determined by JICA to include precast/prestressed
11. River Works Diving works (Title will be reconsidered later.)	11.1	Diving works NK: Most dangerous works only will be specified.
		Coffer dams?? The 1 st stage JSSS will not specify other than diving works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART A: PREAMBLE NOTES

A1. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture and environment where health and safety is of the highest priority. The common goal shall be to achieve a zero accident rate, adopting the slogan of “Safety First”.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”), which they aim to be adopted for future selected Projects by the Executing Agency for such Projects.

A2. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the Loan Agreement (LA) for that Project has been executed and where the parties to such LA have formally agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on the JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

A3. Incorporation of JSSS into Contracts

JICA require that the Employer, Engineer and Contractor will each print a hard copy of JSSS for their own reference and use and that all of these entities shall fully inform their personnel, Subcontractor’s, sub-consultants, other all parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any Project and reference to JSSS on the website will be sufficient to deem incorporation of JSSS into the Contract for that Project.

Unless otherwise agreed by JICA and the executing agency of currently on-going JICA funded Projects and between the Employer and Contractor(s) on those Projects, this JICA Standard Safety Specification shall not be applied to such Projects.

Further updates and revisions to JSSS unless otherwise agreed with the Employer will be applied to new Projects from the date that such updates and revisions are published on line.

Such further updates and revisions shall not be applied to on-going JICA funded Projects unless otherwise instructed by the Engineer through the issue of an appropriate Variation under GC13.1.

In order that JSSS shall become an integral part of the Bidding Documents for particular Projects and so that the requirements can therefore be implemented immediately after online publication of this document, the particular instructions for alteration of the Bidding Documents by Project employers and consultants are contained within this document in Part C of this Chapter 1: General Requirements. After making such modification to Bidding Documents for particular Projects, JSSS shall be read and construed as a part of the Bid and therefore the Contract for that Project.

It is the ultimate intention of JICA to formally update the separate “Standard Bidding Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety

Specification.

A4. Compliance and General Obligations

JSSS shall not limit a contracting party's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of Contracts.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Contractors shall ensure that all health and safety hazards and risks are properly identified, assessed, controlled and evaluated prior to commencement of any work. Only suitably qualified, fit and competent persons may perform the construction activities.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly JSSS shall not limit the Contractor to the scope contained herein.

All Parts (A, B and C) of this Chapter 1: General Requirements are to be read and construed collectively as integral parts of JSSS and therefore constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART B: JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero Accident” in the execution of the Works taking full responsibility for the health and safety management of the Works, adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration has been prepared and is included in Part C of this Chapter 1: General Requirements.

1.2 Definitions, Abbreviations and Standards

1.2.1 The following words and expressions in JSSS relating to the Conditions of Contract and the content of this Chapter 1 shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor's health and safety officer at Site to be appointed by the Contractor in accordance with PC6. 7 [*Health and Safety*] and named by the Bidder in his Bid.
- (4) **“JSSS”** or **“JICA Standard Safety Specification”** means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified by the Bidding Documents for the Project.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in PC4.1 [*Contractor's General Obligations*].
- (6) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “On-site supervision”, “Field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor's Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor's “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed according to the

terms for such similar documents required by the Contract.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

- (7) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (8) “**Safety Plan**” means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in PC4.1 [*Contractor’s General Obligations*].

“**Safety Plan**” shall also mean “occupational health and safety plan”, “health and safety plan” and “safety plan” all described as such in JSSS and other documents contained in the Contract. ***This may not be necessary if references are consistent.*** The phrase “health and safety” shall be construed as covering “occupational health and safety”.

1.2.2 The following technical words and terms in JSSS shall have the definitions stated:

DCI: This is subject to further development and might ultimately be transferred to a separate Annex

- (1) “**Confined Spaces**” shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (2) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (3) “**Formwork**” means temporary containment structures for in-situ concrete and its immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (4) “**Hazardous Areas**” means areas defined in Section 2.3 as such.
- (5) “**Operation Leader**” (also known as a “Ganger”, “Leading Hand”, “Foreman” or “Working Foreman” and the like) means a member of the Contractor’s workforce who through experience, internal training and testing is deemed by the Contractor to be qualified to work with and lead the worker’s teams, to direct them in the performance of their assigned duties and ensure their compliance with the Contractor’s safety regulations.
- (6) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.
- (7) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and

other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.

DCI: *Above PFRS is recommended but so far not included in JSSS*

- (8) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.

DCI: *there is much more to add to this list so it is complete and the order of above and new items will be rearranged in alphabetical order. I will add to this successively as we receive and edit later sections and draft appropriate definitions.*

1.2.3 The following Sub-Clauses relate generally to the above definitions and to those already contained in the Contract:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “all Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Unless otherwise evident from the text, any reference to the Contractor’s responsibilities for “Safety” in this documents shall also be construed as reference to “Health and Safety”.
- (4) Any reference in JSSS requiring the provision by the Contractor of safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of such safety measures for Employer’s Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (5) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction For Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.2.4 The following abbreviations of technical terms shall have the meanings stated:

DCI: *This is subject to further development and may ultimately be transferred to a separate Annex*

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings

1.2.5 The following abbreviations of standards, codes and the like shall have the meanings stated:

DCI: *This is subject to further development and may ultimately be transferred to a separate Annex*

ANSI	American National Standards Institute.
ASTM	American Society for Testing and Materials.
BS	British Standard.
BSEN	British Standard European Norm.
ISO	International Organization for Standardisation.
JIS	Japanese Industrial Standards.

1.3 Application to Grant Aid and other Projects

- 1.3.1. JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to in 1.2.3 (4) above.
- 1.3.2. JSSS shall also apply to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 Laws and Reference Standards

The Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

- 1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the requirements of JSSS shall apply as a minimum and these shall prevail over the technical requirements of Laws of the Country without limiting the Contractor's legal duties and obligations under such Laws.
- 1.4.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.
- 1.4.4 JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or no detailed requirements then the related technical regulations of OSHA shall apply.
- 1.4.5 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.
- 1.4.6 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws are superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.
- 1.4.7 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.
- 1.4.8 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.5 Contractor's Safety Certification

DCI: *NK: Please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Part C where I have made this optional*

- 1.5.1. Unless otherwise expressly stated in the Bidding Documents (refer to Chapter 1: General Requirements, Part C, Clause C2. (5)), the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the implementation stage).
- 1.5.2. If accreditation is required by the Bidding Documents, an original or authorised true copy of the current certification shall be submitted with the Bid and this shall subsequently be included with the Contract.

1.5.3. The Contractor shall submit original or authorised true copies of all current updates to the Engineer when due.

1.6 Safety Plans

1.6.1 The Contractor shall be required to submit the Safety Plan at two stages:

- (1) Safety Plan at Bid Stage.
- (2) Safety Plan at Commencement Stage.

In addition the Contractor shall provide such further updated or particular Safety Plans as may be necessary due to current circumstances or conditions at the Site or as requested by the Engineer in accordance with GC 4/1 [*Contractor's General Obligations*], as amended by this Chapter 1: General Requirements, Part C, Clause C6.

1.6.2 For details of the Safety Plan at Bid Stage, refer to JSSS Chapter 1: General Requirements, Part C, Clause C2 Detail of Safety Plans in Bidding Documents.

1.6.3 For details of the Safety Plan at Commencement Stage, refer to JSSS Chapter 1: General Requirements, Part C, Clause C7 PC4.8.

1.6.4 Particular Safety Plans

DCI: *I recommend that automatic submission of "Particular Safety Plans" is not necessary and has no meaning when the following is considered in conjunction with revised Sub-Clause 4.8 (see Part C, Clause C.7)*

- (1) The Safety Plan (or parts of it) shall be revised or supplemented where considered necessary by the HSO or when required by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*], as amended by this Chapter 1: General Requirements, Part C, Clause C6. Each such revision or update of the Safety Plan hereinafter referred to as a Particular Safety Plan, shall be submitted promptly to the Engineer in any event not less than 21 days before commencing those parts of the Works, such that the Engineer is made aware in writing of at least the following information for all parts of the Work:
 - (a) Work outline, work procedure and order of carrying out the work.
 - (b) Number of Contractor's Personnel
 - (c) Safety management system and responsibility and authority of Contractor's Personnel.
 - (d) Risk assessment.
 - (e) Safety measures.
 - (f) PPE for the Contractor's Personnel.
 - (g) Safety education and training of the Contractor's Personnel and TBM.
 - (h) Teaching materials used in education, training and pre-operation TBM before work.
 - (i) Method of information sharing and communication among the Contractor's Personnel.
 - (j) Implementation and monitoring of measures for health and safety management.
 - (k) Emergency response.
 - (l) Accident relief.

1.6.5 The Contractor shall also consider the opinions of the Contractor's Personnel in preparing all Safety Plans or updated Safety Plans.

DCI: *Not the main plan it is too early, updates yes*

1.6.6 In performing risk assessments the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.6.7 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.

1.6.8 The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.
- (3) Determining measures of risk reduction.

1.6.9 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous works.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Design/Engineering measures.
- (4) Management measures.
- (5) Use of PPE.

DCI: *NK Please clarify and discuss (3) and (4) within the context of engineer's design.*

1.7 Contractor's Health and Safety Management Staff

DCI: *Health staff?*

1.7.1 Requirements for the HSO:

- (1) JICA require the Bidder to name the HSO in the Bid (and thence Contract) and the Contractor shall assign that named HSO upon the Works, prior to the Commencement Date.
- (2) If the appointed person fails to act as HSO and is removed from the Site of the Works under the of GC6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of another suitable replacement person to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor and not of a Subcontractor or consultant and unless otherwise stated in the Contract shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with PC6.7 [*Health and Safety*].

DCI: *MD to consider coordination of the above and following with Form BSD*

- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall be fluent in the language for communications stated in the Contract as

defined in GC1.4 [*Law and Language*]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.

- (7) Where there is no legal requirement under the Laws of the Country for qualification, the HSO, shall have appropriate academic and health and safety qualification, work experience in construction (minimum 10 years) and in health and safety management (minimum 5 years which can be concurrent with construction experience) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (8) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (9) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (10) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable of ensuring that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices or conditions exist.
 - (b) If such unsafe actions, practices or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to temporarily stop all construction activity on that part of the Works until such action has been taken.

Such inspections attended by the HSO, may also include the attendance of the safety representative of the Engineer.

1.8 Health and Safety Officer – Scope of Duties

1.8.1 The HSO shall devote his/her full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.8.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof.
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel.
 - (c) Provision of activity records in progress reports.

DCI: NK please clarify the meaning of the above?

- (d) Constant inspection and implementation of corrective measures for any unsafe conditions at the Site and any unsafe behaviour or practices of the Contractor's Personnel.
- (e) Consultation on safety management with the Employer's Personnel.

- (f) Temporarily stop all construction activity on any parts of the Works in case of accident or the like and informing the Engineer.
 - (g) Responding to accidents, creating and implementing measures to prevent reoccurrence.
 - (h) Reporting and consulting with the Engineer including when an accident occurs or a hazardous situation is likely.
 - (i) Appointment of health and safety inspectors and assistants after obtaining the consent of the Engineer.
- (2) Instructing the Contractor's Personnel ~~and Employer's Personnel~~ to take improvement measures for maintaining health and safety and preventing accidents.
 - (3) Checking the health status of the Contractor's Personnel.
 - (4) Planning and implementation of various training and education implementation plans.
 - (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases.
 - (6) Preparing regular internal and external reports on health and safety activities.
 - (7) Hazard prediction activity

DCI: NK for Kiken Yochi: see later clause 1.13.

1.9 Contractor's Health and Safety Committee

1.9.1 The Contractor shall create an internal Safety Committee for the purpose of effective health and safety management.

1.9.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.9.3 The HSO shall be the chairman of the Safety Committee.

1.9.4 The Contractor shall hold a regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters.
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence.
 - (d) Hazards, safety and health problems resulting from:

- (i) Site inspections by HSO.
- (ii) Issues raised by the representative of Contractor's Personnel.
- (iii) Issues raised by Subcontractors.
- (iv) Issues raised by others.
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer.
- (f) Safety instructions received from the Engineer.
- (g) Items to be coordinated with police, fire department and other related organisations.
- (h) Compliance and registration matters under the Laws of the Country.
- (i) Safety and health awards, media attention and the like.
- (j) Other matters.

1.9.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.10 Engineer's Regular Safety Meetings

1.10.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Monthly or weekly schedule of important health and safety matters
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence.
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of the Contractor's Personnel.
 - (iv) Issues raised by Subcontractors.
 - (v) Issues raised by others.
 - (e) Status of resolution of previous problems.
 - (f) Items to be coordinated with police, fire department and other related organisations.
 - (g) Compliance and registration matters under the Laws of the Country.
 - (h) Safety and health awards, media attention and the like.

- (i) Other matters.

1.10.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to JICA.

DCI: *Please note above suggestion*

1.11 Project Safety Committee

1.11.1 On larger Projects with multiple contract packages and contractors, if stated in the Bidding Documents for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.11.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.11.3 The Chairman of the Safety Committee shall be the Employer.

1.11.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.11.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.12 Health and Safety Coordination with Other Contractors

1.12.1 Refer to GC2.3 and GC4.6 regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC4.8 [*Safety Procedures*] and GC4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them

to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.12.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.12.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement.
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities.
 - (c) Accidents, injuries and measures to prevent any reoccurrence.
 - (d) Status of resolution of previous problems.
 - (e) Items to be coordinated with police, fire department and other related organisations.
 - (f) Compliance and registration matters under the Laws of the Country.
 - (g) Safety and health awards, media attention and the like.
 - (h) Other matters.

1.12.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.13 Contractor's Health and Safety Management Activities

1.13.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.13.2 Health and safety management activities shall include (but are not limited to):

- (1) Overall Management Activities:
 - (a) Tasks of the Health and Safety Officer as described above.
 - (b) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM.
 - (c) Attending pre-work meetings, pre-start meetings, schedule meetings.
 - (d) Monitoring the implementation of the Safety Plan.

- (2) Management of Contractor's Personnel:
- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of traditional Japanese cleanliness safety campaign known in Japan as **5S ACTIVITIES** where:
 - Seiri = sorting
 - Seiton = tidying
 - Seiso = cleaning
 - Seiketu = cleanliness
 - Shituke = discipline
 - (c) **KIKEN YOCHI TRAINING (KYT)** for hazard prediction training usually in TBM, where:
 - K = kiken (hazard)
 - Y = yochi (prediction)
 - T = training
 - (d) Instruction and management of safety education and training.
 - (e) Instruction and management of various safety measures.

1.14 Monitoring

1.14.1 The Contractor shall develop and implement systems to ensure that compliance with the Safety Plan is monitored efficiently and transparently at all times, for which purpose the Contractor shall:

- (1) Create checklists for monitoring.
- (2) Carry out regular and irregular inspections.
- (3) Monitor failed, unsafe or non-compliant conditions.
- (4) Create files and safe storage systems for the monitoring records.
- (5) Copy all relevant information to the Engineer as requested by the Engineer.

1.15 Joint Site Safety Inspections

1.15.1 In addition to the Contractor's own daily Site Safety Inspections described above, the Contractor shall also conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.

1.15.2 Frequency of Joint Site Safety Inspections shall be at least once a week.

1.15.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.

1.15.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.16 Engineer's Safety Representative

DCI: (NK what is the future intention? Will a safety engineer be appointed in future on all Projects or will the Engineer act in this capacity? This may require revision of the Guidelines for the

Employment of Consultants under Japanese ODA Loans.

This requires further discussion with JICA.

It may require a more detailed procedure, the following is an outline suggestion only This requires further coordination and development with other sections (e.g. scaffolding) so that joint safety and certification and “safe for use” procedures can be implemented if required) without affecting the Contractor’s overriding responsibility.

Please refer to Part C where I have made further reference.

I understood that JICA wanted the Engineer to somehow play a more proactive role so would like to discuss this with you to ascertain the future intentions.

- 1.16.1 On large Projects, the Engineer may appoint an assistant under GC3.2 to be known as the Engineer’s Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer’s organisation on Site and for monitoring the Contractor’s compliance with the each contractor’s Safety Plan.
- 1.16.2 By written notice served under GC3.2, the Engineer shall delegate authority to the Engineer’s Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:
- (1) Instructions requiring the Contractor’s compliance with the Safety Plan.
 - (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
 - (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.
- 1.16.3 The Engineer’s Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.
- 1.16.4 The Engineer’s Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC3.3.
- 1.16.5 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer’s Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.
- 1.16.6 If the Bidding Documents state that the appointment of a full-time or part-time Engineer’s Safety Representative is not required (refer to JSSS Chapter 1: General Requirements, Part C), it is to be assumed that the Engineer shall act in this capacity.

DCI: Communications require more thought and definition. Who is to issue and receive? Can be direct HSO and ESR?

NK: The ESR may be assigned as Full-time or concurrent safety supervisor. The Employer always hesitate to assign foreign safety expert because of cost. For enforcing JSSS, it needs experienced and competent safety engineer.

DCI: Can we please discuss further so I can understand what you want to do.

NK: All correspondence shall be made between the Contractor and the Engineer, not HSO and ESR as usual.

DCI: There may be a requirement for direct (urgent) communication on some safety issues.

1.17 Safety Statistics

1.17.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.17.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.17.3 All data shall be in a format and content format and content to be approved by the Engineer.

1.17.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.17.5 The data shall subsequently be compiled and included in the Monthly progress report.

1.18 Safety Reports

1.18.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report can be submitted as an attachment to the Contractor's monthly progress report.

1.19 Health and Safety Records

1.19.1. The Contractor shall keep the health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

1.17.6 All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.20 Proper Placement of Contractor's Personnel

1.20.1 Further to compliance with GC6.9, the Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

The HSO shall countersign all such records to indicate his/her confirmation of the suitability of each member of the Contractor's Personnel prior to their placement.

These records shall be made available for inspection by the Engineer.

1.20.2 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor in consideration of:

- (1) Work content and work environment.
- (2) Work experience, qualification and capability.
- (3) Health condition upon commencement of employment.
- (4) Health condition on a regular basis before daily work starts.
- (5) Allocation of an achievable and safe work volume.
- (6) Allocation to workers under 18 in accordance with GC6.21.

1.21 Placement and ID of Personnel for Works Requiring a License

1.21.1 If for any of the operations at Site, the Laws of the Country require operating, supervising or any other Contractor's Personnel to have a licence, particular qualification, registration or certification the Contractor shall ascertain that all such Contractor's Personnel possess and maintain such documentation.

1.21.2 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, qualification and skills.

1.21.3 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.22 Health and Safety Education and Training

1.22.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.22.2 The Contractor shall include in the Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit full details of such education and training to the Engineer for his information before the start of such education and training.

1.22.3 Education and training shall be provided free-of-charge to the trainees, conducted during normal working hours, trainees shall be paid and the Contractor shall bear all necessary expenses.

1.22.4 Safety induction: For general education and training of new entrants upon the Site and those who are scheduled to change work type, skill or location, the following subjects shall be included:

- (1) Chain of command and means of communication for the work.
- (2) Hazards or dangers due to the use of machinery, equipment, raw materials, etc., and methods of dealing with such hazards or dangers.
- (3) Performance and handling methods of safety devices and PPE with practical on-Site demonstration.
- (4) Hazardous substance control devices with practical on-Site demonstration.

DCI: - to be coordinated later

- (5) Working procedures generally.
- (6) Inspection before starting any work.
- (7) Maintaining an orderly, tidy and clean Site.
- (8) Emergency measures and evacuation at the time of accidents, etc.
- (9) Health and safety rules.
- (10) Causes and prevention of diseases that may occur in relation to the work concerned.
- (11) Other matters necessary for health or safety related to the work concerned.

1.22.5 For education and training of Contractor's Personnel who are planned to be assigned to dangerous or harmful work (for example as listed in Annex 2), such Contractor's Personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such Contractor's Personnel are to be engaged.

NK: Dangerous and harmful works here can be limited to those in Annex 2, not such dangerous works with hand tools.

The intention of this clause is to clarify works that needs special knowledge and skill, which are specified in Japan.

DCI: Can we please discuss further as whilst I understand that there are specified training requirements in Japan these are different outside Japan.

Please also refer to our comments on Annex 2

The Contractor shall determine the educational subjects and teaching hours for the special education and training *with reference to Annex 3*.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of the special education.

1.22.6 For education and training of Contractor's Personnel who are to be appointed as Operation Leaders *(for example as listed in Annex 4 and 5)*, such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the skill-

training course with reference to Annex 5.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of the special education.

DCI: *NK – This requires further clarification and discussion*

1.22.7 Education and training personnel

Educators and trainers can be Contractor's Personnel who are experienced, academically qualified and (if legally required) registered as educators and trainers under the Laws of the Country, fluent in the language of the Country or external educators and trainers similarly qualified, registered and fluent.

In case of absence of availability of such suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary qualification, ability and experience, subject to receiving the advance consent of the Engineer.

1.22.8 Records of education and training

The Contractor shall create and store records of trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.22.9 Explanation of health and safety rules to persons other than the Contractor's Personnel

The Contractor shall provide general health and safety education courses to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed

1.23 Emergency Response Plan

1.23.1 The Contractor shall prepare an Emergency Response Plan as a part of the Health and Safety Plan in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

DCI: *NK please note:*

Natural disasters include typhoons, earthquakes etc. which are actually GC19 Force Majeure situations for which, the contractor is not responsible and he has no obligation to give any such automatic "response".

What is the actual required extent of the Contractor's "response"? What manpower and equipment is he to provide? How can this be predicted and estimated?

What about the Employer's and Engineer's own plans and what about the availability of the rescue services etc. in the Country?

These arrangements appear to be onerous upon the Contractor and of not properly worded may cause difficulty with interpretation of force majeure.

Can we please discuss and consider this further to understand the purpose and intention.

We have edited the following to make it readable but do not agree with the content.

NK: *We specified for the natural disasters which is not GC19 Force Majeure situations. We expect the Contractor to prepare the natural disaster which may be occurred by the weather or earthquake of magnitude between bad weather and earthquake, and Force Majeure situations. The bad weather and earthquake are specified in JSSS 2.7 Measures against Adverse Weather and Earthquakes, which I want to send it in English you soon.*

DCI: *I will wait to receive your document on this subject so I can understand your intentions.*

In addition, the Contractor shall fully inform the Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, of the detail of the Emergency Response Plan. The Contractor shall also establish an emergency call system and carry out training based on the Emergency Response Plan.

The Emergency Response Plan, shall include the following items:

- (1) Expected types of emergency situation.
- (2) Description of the emergency call system.
- (3) Explanation of the specific measures for emergency response.
- (4) Measures for quickly establishing locations of affected Contractor's Personnel, defining assembly points and the like.
- (5) Provisions for immediate changes and revisions to be made in response to changes in the Site situation

The Emergency Response Plan shall be submitted to the Engineer as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.23.2 The Contractor shall establish an emergency call communication system that will require confirmation from all contact official departments, organisations and persons ~~even~~ in the event of an emergency. This shall include the creation of an emergency contact list, which shall be posted it in a visible location such as the Contractor's Site office to inform all Contractor's Personnel.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel.
- (2) Relevant government authorities and agencies: administrative agencies, police stations and fire stations etc.
- (3) Contractor's Personnel at the Site.
- (4) Other contractors engaged upon the Site or the Works

1.23.3 The Contractor shall conduct emergency response training based on the Emergency Response Plan which shall include:

- (1) Implementing a training programme at least every six months
- (2) Improving the emergency response plan based on training results
- (3) Providing details of the emergency response

The Contractor shall provide training for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed

Details of the training shall be included in the Emergency Response Plan and Safety Plan.

1.23.4 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.23.5 The Contractor shall take measures such as the placement and installation of the following accident relief facilities and equipment, medical personnel, ambulances, etc.

DCI: NK please see above queries, the Contractor usually has no such obligations for force majeure events, so if this is required it must be fully specified and paid for. Usually only the use of existing site facilities is allowable technically in accordance with the Engineer's Instructions (and payment by Employer).

NK: As I explain above, the Contractor shall prepare the plan for predictable weather, earthquake and others from the Contractor's experience.

DCI: This may complicate interpretation contractually where force majeure has accepted definition. In most countries earthquakes are not so common and extreme weather likewise.

Please can we discuss

DCI: We assume that the following described in the draft as "Emergency Relief Plan" actually means a plan for dealing with common accidents on the Site. This heading is a little misleading, I suggest change to something like "Accident Relief Plan" so there can be no confusion with "Emergency Response Plan"

1.24 Accident Relief Plan

1.24.1. The Contractor shall prepare an Accident Relief Plan in consideration of the nature and timing of the Works and the location(s) of the Site and taking account at least of the minimum facilities and measures to be provided in accordance with the Specification for the Contract (refer also to JSSS Chapter 1: General Requirements, Part C) and including:

DCI - To be coordinated with Part C and Health

- (1) Availability of medical personnel who can provide first aid and additional medical assistance.
- (2) Availability of vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site.
- (3) Establishment of first aid room, clinic or like facilities on Site with equipment and consumables.
- (4) Arrangement of communication facilities and measures for emergency response.
- (5) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (6) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that JSSS Chapter 1: General Requirements, Part C, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, the Contractor shall immediately discontinue the work task and implement the following measures as necessary.

- (1) Safely locate and extract casualties and provide first aid and other accident relief measures
- (2) Secondary accident prevention activities
- (3) Preserve the accident site, make safe and prevent anyone interfering or entering

- (4) Discontinue construction work related to or in the vicinity of the accident
- (5) Implement any further measures instructed by the Engineer

1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with PC4.8 [*Contractor's Health and Safety Obligations*]

DCI: NK, can we please attach an accident report form now? As an appendix, please let me have a draft and I will include

- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence.

1.25.3 Procedures for Resumption of the Works

Unless otherwise instructed by the Engineer, the procedure for resuming the Works after the occurrence of an accident or illness shall be as follows.

- (1) Contractor examines and formulates measures to prevent any reoccurrence and submits a description of such measures to the Engineer.
- (2) The Engineer may review the preventive measures.
- (3) The Contractor informs the Engineer with no less than two working days notice that he will resume the Works when he is ready to implement the preventive measures and restart such Works.
- (4) The Contractor resumes the Works.
- (5) The Contractor verifies the effectiveness of his preventive measures and informs the Engineer.
- (6) The Contractor implements risk assessment and revises the Safety Plan and Method Statements as necessary.

DCI: NK, please review and discuss the above carefully

1.26 Health Issues

DCI: What about health issues? The document is largely silent on this yet statistically this is the biggest problem

NK: May I know what kind health issues you commented. We specify health issues such as dust, noise, heat are specified in JSSS 2.1 Working site environment.

NK: Do you mean if the health issues are asbestos, dusts including silica and lead, chemicals, sunlight, diesel engine exhaust emissions, frequent loud noise, frequent or excessive use of vibrating tools, frequent or excessive manual handling of loads, stress and fatigue.

DCI: Yes in part answer to your question and also health issues at Site in terms of what shall be provided as a guide and also:

Contractor should provide (or ensure) eyesight and hearing exams that do have a significant effect on safety and other mobility and medical tests that are reasonable, all to be stated in JSSS.

We should not rely on local Laws but should stipulate health requirements to make sure that the contractor complies with this.

This will also require the Contractor to assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

NK: *We specify in 2.1 about dusts, noise and temperature. We do not specify about asbestos because the Laws of the country may have specified already and ODA projects may not handle asbestos except renovation works.*

DCI: *We surely cannot rely on local laws that in general JSSS is aiming to improve.
Renovation works occur frequently*

NK: *Do you have any suggestion about health issues?*

DCI: *See above.*

This also requires research of other standards but what about medical facilities on Site, medical tests and also treatment of endemic diseases in certain countries. AIDS is covered in FIDIC (although not so necessary now perhaps) but what about others? Malaria nets, dengue patrols (Singapore style) etc. etc..

Also state criteria for provision of facilities at Site for example say related to the distance from Site to the nearest hospital. If say more than one hour provide a doctor(s) full time plus medical support plus nurses and reasonably equipped ambulance with driver.

Plus also same doctor and nurses may be able to provide a local JICA clinic?

All of the above requires coordination with GC6.8 but more clarity will be helpful as the present clause is frequently not applied properly.

Can we discuss further please, noting that this should really come from NK.

What do the Japanese regs. require?

The documents need to be comprehensive and helpful.

NK: *JSSS will be prepared at 2 stages. The 1st stage JSSS will cover the following table for basic and essential safety requirement and the 2nd stage will do for safety in sectors of road, river, tunnel, railway, etc.*

DCI: *Please can we discuss later, I am not sure if or how your ideas for later issues will work.*

1.27 Temporary Works

DCI: *The following are draft notes which in the main will probably be transferred and dealt with later in JSSS Chapter 7.1 but some reference may be necessary here.*

Please leave this here for now and we will coordinate this (and other parts) later. There is cross-reference to this clause in Part C.

NK: *I will send you 7.1 as soon as possible JICA gave us their draft of JSSS.*

DCI: *Please note that I have not changed any part of the following paragraph (except as highlighted in green) as I am waiting receipt of your further draft.*

The Contractor shall provide details at Bid stage (not calculations necessarily at this stage?) of all Temporary Works (TW) designs including Falsework for significant structures as listed in the Bidding Documents (refer to JSSS Chapter 1: General Requirements, Part C) and including for example:

- (1) Falsework equal to or higher than 3.5 m.
- (2) Overhead passage equal to or higher than 10m (bridge?)
- (3) Scaffolds ("scaffolding"?) equal to or higher than 10m can engineer check scaffolding design?.
- (4) Other TW specified in the Contract or instructed by the Engineer.

DCI: NK can we please discuss the above to clarify these and further requirements after which we will delete or re-word this

What about other items such as TW for major bridge structures, tunnels, coffer dams, temporary dams, etc. ??

What is the Engineer required or intending to do with such information?

NK: The Engineer can review design document by the Engineer's design expert if he is assigned. If not, the Engineer shall review the design procedure and designs with his experience of TW.

DCI: We suggest that this could be dangerous as reliance needs to be placed upon the Contractor's specialists not the Engineer. The check (if any) should be to ascertain that the Contractor has engaged and used such specialists. The Engineer does not (and should not) represent himself as an expert on temporary works (Falsework) design.

Also if calculations and methods are submitted at Bid stage it could well be construed that they have been checked and accepted by the Engineer (otherwise why request them?) and if future failure occurs responsibility may be affected. Similarly if a future change say for compliance is instructed by engineer, variation may be claimed and responsibility may well also be compromised

Please let me study the future document when we receive it and I will then discuss further.

DCI: I recommend consideration of something like the following, which is still very much a draft idea for now. Please note my further suggestion that it is made optional in Part C for use on particular (not all) projects.

I still need to study this BS further.

Please also refer to separate definitions of Falsework, Formwork and other terms above.

- 1.26.1. Unless otherwise stated in the Bidding Documents, Bidders are required to comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.
- 1.26.2. The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions, which are:
 - (1) Designed to support excessively heavy loads.
 - (2) Of excessive height or unusual shape,
 - (3) Of difficult access, or
 - (4) With unusual structural solution.
- 1.26.3. Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for management of Temporary Works including the design of Falsework (including Class A Falsework).
- 1.26.4. It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent .

- 1.26.5. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.26.6. Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:
- (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
 - (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework).
 - (3) Temporary Works Supervisors (TWS): responsible for the construction, safe use, maintenance, dismantling and removal of all Temporary Work in accordance with the design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:
 - (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works and ready to accept loading.
 - (b) Confirmation that the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works.
- 1.26.7. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer
- 1.26.8. The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or be subsequently consented to by the Engineer.
- 1.26.9. Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS Sub-Clause 1.7.
- 1.26.10. The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the Permanent Works as far as possible through the design process for example by changing high level in-situ concrete structures to precast or prefabricated structures, simplifying structures and applied finishes, services and the like.
- 1.26.11. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The following clause requires particular and careful consideration and internal discussion.

- 1.26.12. The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may be requested by the Engineer under the Contract for his review.

The Engineer's review shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC3.1(c) and issued without prejudice to the Contractor's overriding responsibility for the adequacy of the Temporary Works.

1.26.13. Where the Bidding Documents do not require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the provision, use, management, dismantling and removal of Temporary Works including for example by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
 - (c) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a formal "permit to load".
 - (d) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal "permit to dismantle" where necessary.

1.26.14. The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.27.2 Whether there is or is not any legal requirement under the Laws of the Country for qualification, all of the Contractor's Temporary Works staff and any specialist Temporary Works Subcontractors shall have appropriate academic and Temporary Works coordination, design or supervision qualification as appropriate, work experience in construction and in Temporary Works Design and whom the Contractor considers are qualified to perform the duties.

ANNEXES TO PART B: JICA REQUIREMENTS

Annex B.1: Items to be described in the Safety Plan

DCI: NK please note that text generally has been changed from original so that this is coordinated with other changes basically to make it work better.

Further MD coordination with Part C is required

Coordination is also required in future for all other Technical Sections 2 onwards (e.g. health) where further requirements may make revision here necessary.

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel persons involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in JSSS Chapter 1 (Sub-Clause 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under Clause CI.

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, Sub-Clause 1.27 are fulfilled.

(7) Safety Measures for Contractor's Equipment

A description of the procedures for inspecting and maintaining Contractor's Equipment together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.

If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

Also attaching warning notices and labelling hazardous equipment, structures and the like?

(13) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas

within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation by HSO of work or example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS Sub-Clause 1.13)

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex B.2: Dangerous or Harmful Operations

DCI: *I have concerns about whether the information in the following annexes is of any value in an international context, I think not. In a domestic Japanese sense these requirements are of course very important as they are integrated with many other Japanese laws and regulations. However when abbreviated extracts only are included it does not have great meaning and there appears to be much missing which may not be covered by the fall-back (OSHA).*

Please consider all very carefully.

I am inclined to suggest that a simple basic requirement such as GC6.9 is sufficient, perhaps adding some reference to training and making the contractor responsible for all is probably better than going into so much detail for only a part.

NK: *we will reconsider and discuss with JICA about Annex 2.*

The following is a list of example work types classified/defined as “Dangerous or Harmful Operations”

DCI: *Is this Annex intended to be a definition?*

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of such operations include (but are not restricted to) the following:

(as provided for by the Ordinance of the Ministry of Health, Labour and Welfare).

DCI: *I requested a complete list at our last meeting however, according to the above Ordinance there are many more operations and requirements in addition to this list and also as this effectively applies only in Japan; is therefore a real need for this?*

- (1) Crane operation and mobile crane operation
- (2) Welding and cutting of metal using arc welder *what about gas welders and cutting machines?*
- (3) Forklift operation
- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: ~~3t or more~~) *why 3t or more? Why not all?*

DCI: *Vehicle-type? What does it mean exactly? Does it mean wheeled? If so how about tracked equipment? What is the difference between (4) and (5)?*

- (5) Vehicle-type construction equipment operation (for foundation work: ~~3t or more~~)

DCI: *why 3t or more? Why not all? what about track type?*

- (6) Roller operation *what type?*
- (7) Operations that use organic solvents

DCI: *what about other harmful substances and explosives for example?*

- (8) Sling work
- DCI:** *meaning hoisting and rigging work*

- (9) Rope access work
- DCI:** *cradles and hoists?*

- (10) Work to be performed using a full harness type of fall protection device where the height is 2 meters or more and it is difficult to provide for the work floor

DCI: *meaning of difficult? Too expensive? Is this coordinated with other chapters?*

What about small tools (drills and angle grinders) all electrical works, gas pipe works etc. etc.?

Ditto related academic educational achievements?

And Confined spaces?

NK: we will reconsider and discuss with JICA about Annex 2.

Annex B.3: Subjects of Special Education for Dangerous or Harmful Operations

DCI: Please note that this still needs English edit and correction, some commented on below, but problem exists throughout.

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

DCI: Is this “health and safety training” or “skill training”?

It appears to be operator skill training? Is this the purpose?

Can this apply internationally?

Examples of special training for the above listed sample operations include (but are not restricted to) the following:

(1) Special education for crane operation and mobile crane operation:

DCI: Surely this is common to all crane operations why particularise one type? Or training should be specific for the types of crane being operated on Site.

Subject	Scope
1 Knowledge of mobile and other cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane and other cranes	Force (composition, decomposition, balance and moment), centre of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane and other crane operation Signs for mobile crane and other crane operation

DCI: What is the extent of “practical skill training” and others above, is it testing to ascertain of skills exist?

(2) Welding and cutting of metal performed using arc welder

DCI: Gas welding also?

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention

4 Practical skill	Handling of equipment for arc welding work
-------------------	--

(3) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift. <i>What is the meaning of this?</i>	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling
2 Knowledge of equipment structure and handling methods for cargo handling <i>What is the meaning of this?</i>	Structure and handling method of hydraulic equipment (including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, centre of gravity and stability of objects, speed and acceleration, load, stress, material strength <i>This appears to be excessive for the average fork lift driver?</i>
4 Practical skill	Operation of traveling, operation of cargo handling

(4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3 t or more)

Meaning see before also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(5) Vehicle-type construction equipment operation (for foundation work: 3 t or more)

Less than 3t also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(6) Roller operation

Subject	Scope
1 Knowledge of roller	Types and applications of rollers, structure and handling method of Power transmission devices of rollers, working devices, steering devices, brakes, electrical devices, alarm devices and auxiliary devices, method of inspection and maintenance
2 Knowledge of general matters required for roller operation	Mechanics necessary for operation, construction method by roller
3 Practical skill	Roller operation method

(7) Operations that use organic solvents

Include here within equipment and only solvents, no other chemicals or hazardous substances?

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapour and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective

	equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical check-up and follow-up measures
4 Accident case	Accident cases and prevention measures

(8) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes, other cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), centre of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation method), method of signalling
4 Practical skill	Signs for operation, work with a sling for a crane

(9) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(10) Work to be performed using a full harness type of fall prevention equipment where the height is 2 meters or more and it is difficult to provide for the work floor

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full

(limited to full harness type, the same shall apply hereinafter)	harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

Annex B.4: Work Requiring the Assignment of an Operation Leader

The following is a list of example work types that require the appointment and assignment of an Operation Leader to each team of workers engaged upon such work at the Site.

There are many more

Such Operation Leaders shall be given special health and safety training appropriate to the operations concerned.

Examples of operations shall include (but are not restricted to) the following:

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Excavation work for quarrying
- (5) Formwork, Falsework, supports and shoring assembly/dismantling work
- (6) Scaffolding assembly/dismantling work
- (7) Steel frame fabrication and erection work on buildings and structures
- (8) Steel bridge fabrication and erection work
- (9) Wooden, masonry and other building work
- (10) Demolition work of concrete, masonry or steel structures
- (11) Reinforced concrete construction work
- (12) Organic solvent work and other hazardous substances or materials
- (13) Work in hazardous areas
- (14) Work in Confined Spaces

Annex B.5: Subjects of Skill Training Course for Operation Leaders

DCI: Skill training is included for operation leaders but no such skill training or checking is included for other skilled persons is this correct?

Is this “training” or checking to ascertain that operation leaders have the skills?

If “Operation Leaders” (see out earlier assumed definition based on JICA scop) include foremen, gangers, charge hands and the like in other countries, and if they are already qualified and paid as foremen, gangers, charge hands and the like, do they need to be re-trained and re-qualified as follows?

These appear to be very detailed training requirements.

This Annex requires significant coordination with Annex B.4, with addition and editing before it can be finalised but is it necessary? Any changes in Annex B.4 need to be added here.

Add work in hazardous areas and work in Confined Spaces

Examples of special training for the operations leaders shall include (but are not restricted to) the following:

- (1) Operation Leader for Earth excavation and shoring work

Not edited:

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

- (2) Operation Leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases and toxic gases, measures for preventing hazards
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(3) Operation Leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, instruments and tools, measures for preventing hazards, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(4) Operation Leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling methods for rock excavation, etc.	Types of rock, method of excavation for extraction of rock, treatment of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(5) Operation Leader for formwork, Falsework, supports and shoring assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(6) Operation Leader for scaffolding assembly/dismantling work

Subject	Scope
1 Knowledge of work	Types of scaffolds, materials, structures and assembly

method	drawings, methods of scaffold assembly, disassembly and change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(7) Operation Leader for steel frame fabrication and erection work on buildings and structures

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(8) Operation Leader for steel bridge fabrication and erection work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(9) Operation Leader for wooden, masonry and other building work

Subject	Scope
1 Knowledge about constructing structural members of buildings, installing floors, roofs, etc.	Construction methods of main structural parts such as frame, floor structures, walls, construction methods of roof and outer wall foundation, joints, order of construction, reinforcement method for frame
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(10) Operation Leader for demolition work of concrete or masonry structures

Subject	Scope
1 Knowledge about structural members including concrete masonry and reinforcement etc.	Types, structures, construction method of concrete and masonry work, types of method of construction, method of work, work plan, coordination with m & e services etc
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(11) Operation Leader for reinforced concrete construction work

Subject	Scope
1 Knowledge of work method	Types of materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(15) Operation Leader for organic solvent work and other hazardous substances or materials

Subject	Scope
1 Knowledge of health hazards and their preventive measures.	Pathology, symptoms, prevention methods, first-aid measures and health problems caused by such materials
2 Knowledge for improving the work environment	Properties of organic solvents, and other hazardous substances or materials, management of equipment and other facilities related to production and handling of such materials, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of such materials
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence <i>Meaning?</i>

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL REQUIREMENTS

PART C: REQUIRED AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

[This Part C applies to Executing Agencies (employers and their consultants) for use in the preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described will be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

The Bidding Documents for particular Projects where JSSS has become effective (as described in the above “Part A: Preamble Notes”), shall be drafted to take account of such amendments in advance of the publication of the updated JSBD, in accordance with the following instructions.

BIDDING PROCEDURES:

C1. Particular Safety Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the Employer putting in place a sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply generally on their ODA Projects and consequently it is necessary to specify particular safety requirements for specific Projects. Such particular safety requirements shall be carefully and precisely drafted and included in the Technical Specifications of such Projects, covering for example the following²:

JSSS Chapter 1 Reference	Item
1.5 Contractor’s Safety Certification	State if the Bidder/ Contractor is required to be formally accredited under OHSAS 18001 and if so require submission of a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or equivalent from an internationally

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later checklist

	recognised and approved organisation
1.7 Contractor's Health and Safety Management Staff	<p><i>(On small Projects)</i> State if the HSO is <u>NOT</u> required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, contractors must assign full-time dedicated HSO and if applicable other support personnel.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p>
1.11 Project Safety Committee	<i>(On large Projects)</i> State if a Project Safety Committee is to be established for the Project and add any further requirements.
1.12.2 Employer's other contractors (see also GC2.3)	Describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name together with any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify working locations, access and timing as far as possible.
1.16 Engineer's Safety Representative	<i>(On large Projects)</i> State if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.
1.24.6 Accident Relief Plan	<p><i>MD to Coordinate in future with 1.24, 1.25 Health and with other Sections</i></p> <p>Describe the minimum measures and facilities to be provided in consideration of the location(s) of the Site and the location, nature and timing of the Works, including:</p> <ol style="list-style-type: none"> (1) Medical personnel to provide first aid and additional medical assistance, at least certified as having successfully completed a first aid course by a recognised provider, such as the Red Cross and also including docyotrs and nusres where sp requiured by the (2) Suitably equipped ambulances or other approved vehicles, with drivers and attendants that are properly trained to transport casualties to medical personnel staff and facilities on Site or to medical staff and facilities including hospitals off the Site. (3) First aid room, clinic or like facilities on Site and specify equipment and consumables (4) Communication facilities and measures for emergency response (5) First aid appliances, aids, instruments and medicines.

	<p>(6) First aid training, appointment of first aiders and dissemination of information.</p> <p>(7) Include others as appropriate</p>
1.26 Health Issues	<p><i>requires further development, addition and coordination by MD</i></p> <p><i>Awaiting NK documents to ascertain scope.</i></p>
1.27 Compliance or otherwise with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework	<p><i>DCI - I suggest that non-compliance should be the exception rather than the norm.</i></p> <p>If it is necessary for the Bidder to comply with BS5975: 2019 on the Works, the Executing Agency shall ensure that the Bidding Documents clearly state this. For this purpose reference shall be made to the basic criteria described in JSSS Sub-Clause 1.27.</p> <p>If the Bidder is NOT required to comply with BS5975: 2019 on the Works, the Bidding Documents shall clearly state this, and separate written justification shall be provided by the Executing Agency to JICA.</p> <p><i>NK please refer to queries on this subject in 1.27</i></p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall confirm that the following Temporary Works coordination, design and supervision staff are required:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>If compliance is required TWC and TWD, Bidding Documents should require them to be named in the Bid.</p> <p>JICA note that this (and more) can always be proposed by the Bidder, whether included as a specified requirement or otherwise.</p> <p>If the Bidder is not required to comply with BS5975: 2019, the Bidding Documents shall state that the Bidder is to comply in any event with the requirements of Sub-Clause 1.26.13 and 1.26.4 and submit full details in the Safety Plan.</p>
<p><i>The following all requires further development, addition and coordination by MD:</i></p>	
<p>Temporary Perimeter Fencing:</p>	<p>Simple fencing to complicated security depends upon Project and location and nature of works.</p> <p>Improvement Projects (e.g. airports, roads and railways) may not need this as existing or maybe new permanent</p>

	<p>fencing can be used.</p> <p>Gates barriers and other treatment at Site entrances e.g. simple gate or barrier through to complicated type including communications, lighting and temporary power</p> <p>Security at entrance and around the site (minimal, extensive or in some cases on existing facilities) already provided by employer.</p> <p>Fencing within the site around hazardous areas or around operating plant areas.</p>
<u>Temporary Accommodation and Facilities</u>	<p>Should list the required facilities in a range such as none for urban Projects, to full accommodation for rural Projects where no suitable accommodation.</p> <p>Health and sanitation requirements</p> <p>Leisure facilities</p> <p><u>Temporary Transportation Requirements</u></p> <p>Nothing for urban Projects, to full provision, e.g, buses and drivers etc for rural Projects where nothing safe is available.</p> <p><u>Canteen Facilities</u></p> <p><u>Sanitation Facilities</u></p> <p>etc etc</p>
<u>Others to add - MD</u>	

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this Part

To be coordinated by MD with the later checklist

C2. Required Detail of Safety Plans in Bid:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Prepare the Safety Plan including details of all items listed below:

It is understood that the Bid Stage Safety Plan will be developed by the Contractor in more detail in the Safety Plan issued at Commencement Stage and at later stages but it is important that at Bid stage sufficient information is provided so that the following can be understood and evaluated.

Irrespective of what the Bidder may include in his plans and of any subsequent acceptance, approval or consent to the same, the detailed requirements of JSSS will continue to apply and prevail unless otherwise specifically agreed later in writing by the Engineer.

NK For Bidding purposes, the following is a copy of Annex 1, please coordinate as necessary if changes are made to Annex 1 and make the same changes here

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Contractor's Corporate Policy on Health and Safety Management

A description of the Contractor's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Contractor's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Contractor's Personnel

A description of the health and safety management organisation at Site headed by the Contractor's Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant Clause or Sub-Clause number of JSSS shall be inserted.

(5) Contractor's Safety Certification and Implementation Policy

NK see query in JSSS Chapter 1 (Sub-Clause 1.5) and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under item C1.

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS Chapter 1: Temporary Works, Sub-Clause 1.27 are fulfilled.

(7) Safety Measures for Contractor's Equipment and Temporary Works

Requires changing due to the above added Sub-Clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and Temporary Works** together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.

If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

Also attaching warning notices and labelling hazardous equipment, structures and the like?

(13) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work

discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

A description of the proposed criteria for discontinuation by HSO of work for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS Sub-Clause 1.13)

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

C3. Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilize key equipment and personnel for the Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] insert "and Safety Plan" in the third line after the words, "work methods".

Insert the following additional paragraph after the above paragraph:

"Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to JSSS Chapter 1: General Requirements, Part C, Clause C1) of any principal Temporary Works coordination, design and supervision staff, under item in 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in 1.1.3 Equipment."

C4. Health and Safety Officer and (if applicable) Temporary Works staff:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete position 2 as stated and insert as follows:

2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

(if any of the following are a specified requirement of the Bidding Documents by reference to JSSS Chapter 1: General Requirements, Part C, Clause C1):

3. Temporary Works Coordinator

4. Temporary Works Designer

5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

C5. Bidders Safety Declaration (Form BSD):

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include “Form BSD - Bidders Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer requires the Bidder to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign Form BSD in addition to the Bidder's Official Representative.

Please refer to Annex C.2 to this Part C for a copy of Form BSD

PARTICULAR CONDITIONS OF CONTRACT:

C6. Submission and Review of Method Statements and Safety Plans:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 4.1 Contractor's General Obligations	<p>Delete that part of the fifth paragraph of this Sub-Clause which states:</p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p>and in this place insert:</p> <p>(a) The Contractor shall, whenever requested by the Engineer, submit Method Statements and Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice to the Contractor stating the extent to which the Method</p>
--	--

	<p>Statement and /or Safety Plan does not comply with the Contract. Within 14 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no such notice within 21 days of the date of receipt of the Method Statement and/or Safety Plan, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 7 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within 14 days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p> <p><i>DCI: NK can we discuss the requirement for Particular Safety Plans as necessary.</i></p>
--	--

C7. JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.8 Contractor’s Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this Contract Sub-Clause amendment; (c) Comply with all directions issued by the Contractor's Health and Safety Officer
---	--

	<p>(appointed under Sub-Clause 6.7 [<i>Health and Safety</i>] as amended by PC6.7;</p> <p>(d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed;</p> <p>(e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons;</p> <p>(f) Provide fencing, lighting, safe access, guarding and watching of:</p> <p>(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and</p> <p>(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and</p> <p>(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within 28 days of the Commencement Date and not less than 28 days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works, in the comprehensive detail required by the Bidding Documents.</p> <p>This shall be based upon the Safety Plan submitted at Bid Stage developed as necessary to provide the full information required.</p> <p>This Safety Plan shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>The Safety Plan shall set out or refer to all the health and safety requirements:</p> <p>(a) that are stated in JSSS;</p> <p>(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p> <p>(c) that are necessary to effect and maintain a</p>
--	---

	<p>healthy and safe working environment for all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.</p> <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with PC4.1 [<i>Contractor’s General Obligations</i>].</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [<i>Progress Reports</i>] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p>
--	---

C8. Change “accident prevention officer” to “Health and Safety Officer”:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 6.7 Health and Safety	In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site ”
---	---

C9. Revised Order of Priority of Documents

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 1.5 Priority of Documents	<p>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder’s Declaration,
---	---

	<ul style="list-style-type: none"> (h) the Specification, (i) the Drawings, and (j) the Schedules and any other documents forming part of the Contract.

ANNEXES TO PART C: AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

Annex C.1: Checklist of Particular Safety Requirement in Technical Specifications

MD to develop this listing basically to create a simple yes/no check that required safety items have been addressed in the preparation of the Bidding Documents.

The list will be prepared after the later specification sections have been received from NK and have been reviewed by MD.

It is suggested that this listing be completed by the Executing Agency and submitted by them as a separate simple listing at the same time as the draft Bidding Documents are submitted for the concurrence of JICA.

Annex C.2: Form BSD – Bidders Safety Declaration

Form BSD:
Bidders Safety Declaration

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Form-BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

I further declare on behalf of the Bidder, that if selected to undertake the Works in connection with the Contract, we will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer’s Personnel and the Contractor’s Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of any Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor’s Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder further declares that all Works shall be carried out under the control of our qualified and expert health and safety management and where not available in the Country, we will import for sole use upon the Works:

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for purpose and all to meet with the approval of the Engineer in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged?.
2. New or recent Contractor’s Equipment (not more than 5 years old unless otherwise pre-inspected and approved by the Engineer) all fit for purpose, in full working order, safe, clean, non-polluting, complete with all necessary spare parts and consumables and suitable for use on the Works, and

... that all of the above will be used for the purpose intended.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.

The Bidder further declares that he (and any of his Subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability,
2. Fully inform workers about hazards,
3. Provide health and safety training to all Contractor’s Personnel and Employer’s Personnel in a language and vocabulary they can understand.
4. Keep accurate records of work-related injuries and illnesses.
5. Perform tests in the workplace, such as air sampling as required by JSSS.
6. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
7. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

8. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS.
9. Post injury and illness information and data where workers can see them.
10. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
11. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidders Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Forms, Form PER -1: Proposed Personnel, unless otherwise stated in the Bidding Documents, shall be assigned from the Commencement Date, full time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 4
Revision:
Date: 10/09/2019

NK please note that the following is a basic suggestion that requires your further study and legal review with appropriate revision/correction. The disclaimer is based in part on the FIDIC Documents

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications may have been used in the preparation hereof. JICA acknowledges and gives credit to these relevant sources and expresses its gratitude to such other sources and publications which include:

- 1) *Japanese Acts, Orders and Ordinances including:*

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure

Ordinance on Prevention of Anoxia, etc.

Ordinance on Prevention of Hazards Due to Dust

Explosives Control Act

Order for Enforcement of Explosives Control Act

Ordinance on Explosives Control

- 2) *“OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..*
- 3) *Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.*
- 4) *Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)*

DCI - I think it better if this is included as FIDIC second edition has been used (copied) in Part C for GC 4.8.

DCI: NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

NK: we will do later.

DCI: Can we please discuss later; has the exact text of the above documents been used as this is this Acknowledgement? In English versions?

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, (together with its consultants and other assistants engaged in the preparation hereof) will not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART A: PREAMBLE NOTES

A1. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture and environment where health and safety is of the highest priority. The common goal shall be to achieve a zero-accident rate, adopting the slogan of “Safety First”.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”), which they aim to be adopted for future selected Projects by the Executing Agency for such Projects.

A2. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the Loan Agreement (LA) for that Project has been executed and where the parties to such LA have formally agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on the JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

A3. Incorporation of JSSS into Contracts

JICA require that the Employer, Engineer and Contractor will each print a hard copy of JSSS for their own reference and use and that all of these entities shall fully inform their personnel, Subcontractor’s, sub-consultants, other all parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any Project and reference to JSSS on the website will be sufficient to deem incorporation of JSSS into the Contract for that Project.

Unless otherwise agreed by JICA and the executing agency of currently on-going JICA funded Projects and between the Employer and Contractor(s) on those Projects, this JICA Standard Safety Specification shall not be applied to such Projects.

Further updates and revisions to JSSS unless otherwise agreed with the Employer will be applied to new Projects from the date that such updates and revisions are published on line.

Such further updates and revisions shall not be applied to on-going JICA funded Projects unless otherwise instructed by the Engineer through the issue of an appropriate Variation under GC 13.1 [*Right to Vary*].

In order that JSSS shall become an integral part of the Bidding Documents for particular Projects and so that the requirements can therefore be implemented immediately after online publication of this document, the particular instructions for alteration of the Bidding Documents by Project employers and consultants are contained within this document in Part C of this Chapter 1: General Requirements. After making such modification to Bidding Documents for particular Projects, JSSS shall be read and construed as a part of the Bid and therefore the Contract for that Project.

It is the ultimate intention of JICA to formally update the separate “Standard Bidding Documents under Japanese ODA Loans” by incorporating the same instructions however in the meantime relevant changes shall be made in accordance with this Standard Safety

Specification.

A4. Compliance and General Obligations

JSSS shall not limit a contracting party's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of Contracts.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Contractors shall ensure that all health and safety hazards and risks are properly identified, assessed, controlled and evaluated prior to commencement of any work. Only suitably qualified, fit and competent persons may perform the construction activities.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly, JSSS shall not limit the Contractor to the scope contained herein.

All Parts (A, B and C) of this Chapter 1: General Requirements are to be read and construed collectively as integral parts of JSSS and therefore constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PART B: JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero-Accident” in the execution of the Works taking full responsibility for the health and safety management of the Works, adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration has been prepared and is included in Part C of this Chapter 1: General Requirements.

1.2 Definitions, Abbreviations and Standards

1.2.1 The following words and expressions in JSSS relating to the Conditions of Contract and the content of this Chapter 1 shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor's health and safety officer at the Site to be appointed by the Contractor in accordance with PC 6.7 [*Health and Safety*] and named by the Bidder in his Bid.
- (4) **“JSSS”** or **“JICA Standard Safety Specification”** means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified by the Bidding Documents for the Project.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in PC 4.1 [*Contractor's General Obligations*].
- (6) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “On-site supervision”, “Field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor's Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor's “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed according to the

terms for such similar documents required by the Contract.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

- (7) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (8) “**Safety Plan**” means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in PC 4.1 [*Contractor’s General Obligations*].

“**Safety Plan**” shall also mean “occupational health and safety plan”, “health and safety plan” and “safety plan” all described as such in JSSS and other documents contained in the Contract. ***This may not be necessary if references are consistent.*** The phrase “health and safety” shall be construed as covering “occupational health and safety”.

1.2.2 The following technical words and terms in JSSS shall have the definitions stated:

DCI: This is subject to further development and might ultimately be transferred to a separate Annex

- (1) “**Confined Spaces**” shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (2) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (3) “**Formwork**” means temporary containment structures for in-situ concrete and its immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (4) “**Hazardous Areas**” means areas defined in Section 2.3 as such.
- (5) “**Operation Leader**” (also known as a “Ganger”, “Leading Hand”, “Foreman” or “Working Foreman” and the like) means a member of the Contractor’s workforce who through experience, internal training and testing is deemed by the Contractor to be qualified to work with and lead the worker’s teams, to direct them in the performance of their assigned duties and ensure their compliance with the Contractor’s safety regulations.
- (6) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.
- (7) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and

other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.

DCI: *Above PFRS is recommended but so far not included in JSSS*

- (8) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.

DCI: *there is much more to add to this list so it is complete and the order of above and new items will be rearranged in alphabetical order. I will add to this successively as we receive and edit later sections and draft appropriate definitions.*

1.2.3 The following Sub-Clauses relate generally to the above definitions and to those already contained in the Contract:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “all Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Unless otherwise evident from the text, any reference to the Contractor’s responsibilities for “Safety” in this document shall also be construed as reference to “Health and Safety”.
- (4) Any reference in JSSS requiring the provision by the Contractor of safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of such safety measures for Employer’s Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (5) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.2.4 The following abbreviations of technical terms shall have the meanings stated:

DCI: *This is subject to further development and may ultimately be transferred to a separate Annex*

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings

1.2.5 The following abbreviations of standards, codes and the like shall have the meanings stated:

DCI: *This is subject to further development and may ultimately be transferred to a separate Annex*

ANSI	American National Standards Institute.
ASTM	American Society for Testing and Materials.
BS	British Standard.
BSEN	British Standard European Norm.
ISO	International Organization for Standardisation.
JIS	Japanese Industrial Standards.

1.3 Application to Grant Aid and other Projects

- 1.3.1. JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to **JSSS 1.2.3 (5)**.
- 1.3.2. JSSS shall also apply to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 Laws and Reference Standards

The Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

- 1.4.1 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the requirements of JSSS shall apply as a minimum and these shall prevail over the technical requirements of Laws of the Country without limiting the Contractor's legal duties and obligations under such Laws.
- 1.4.2 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.
- 1.4.3 JSSS is an abbreviated document and therefore as a general rule, where JSSS contains insufficient or no technical regulations or no detailed requirements then the related technical regulations of OSHA shall apply.
- 1.4.4 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.
- 1.4.5 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws **is** superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.
- 1.4.6 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.
- 1.4.7 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.5 Contractor's Safety Certification

DCI: *NK: Please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Part C where I have made this optional*

- 1.5.1. Unless otherwise expressly stated in the Bidding Documents (refer to JSSS **C2. (5)**), the Contractor shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the **Project** implementation stage).

- 1.5.2. If accreditation is required by the Bidding Documents, an original or authorised true copy of the current certification shall be submitted with the Bid and this shall subsequently be included with the Contract.
- 1.5.3. The Contractor shall submit original or authorised true copies of all current updates to the Engineer when due.

1.6 Safety Plans

- 1.6.1 The Contractor shall be required to submit the Safety Plan at two stages:

- (1) With the Bid submission.
- (2) 28 days before Commencement

In addition, the Contractor may be required to provide particular Safety Plans as may be necessary due to current circumstances or conditions at the Site or as requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*], as amended by JSSS C6.

- 1.6.2 For details of the Safety Plan at Bid stage, refer to JSSS C2 [*Detail of Safety Plans in Bidding Documents*]

- 1.6.3 For details of the Safety Plan at commencement stage, refer to JSSS C7 and PC 4.8. [*Contractor's Health and Safety Obligations*]

- 1.6.4 Particular Safety Plans

DCI: *I recommend that automatic submission of "Particular Safety Plans" is confusing and not necessary and has no meaning when the following is considered in conjunction with revised Sub-Clause 4.8 (see Part C, Clause C.7)*

- (1) The Safety Plan (or parts of it) shall be revised or supplemented where considered necessary by the HSO or when required by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*], as amended by JSSS C6. Each such revision or update of the Safety Plan hereinafter referred to as a Particular Safety Plan, shall be submitted promptly to the Engineer in any event not less than 21 days before commencing those parts of the Works, such that the Engineer is made aware in writing of at least the following information for all parts of the Work:
 - (a) Work outline, work procedure and order of carrying out the work;
 - (b) Number of Contractor's Personnel;
 - (c) Safety management system and responsibility and authority of Contractor's Personnel;
 - (d) Risk assessment;
 - (e) Safety measures;
 - (f) PPE for the Contractor's Personnel;
 - (g) Safety education and training of the Contractor's Personnel and TBM;
 - (h) Teaching materials used in education, training and pre-operation TBM before work;
 - (i) Method of information sharing and communication among the Contractor's Personnel;
 - (j) Implementation and monitoring of measures for health and safety management;
 - (k) Emergency response; and
 - (l) Accident relief.

1.6.5 The Contractor shall also consider the opinions of the Contractor's Personnel in preparing all Safety Plans or updated Safety Plans.

DCI: *Not the main plan it is too early, updates yes*

1.6.6 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.6.7 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.

1.6.8 The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.
- (3) Determining measures of risk reduction.

1.6.9 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous works.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Design/Engineering measures.
- (4) Management measures.
- (5) Use of PPE.

DCI: *NK Please clarify and discuss (3) and (4) within the context of engineer's design.*

1.7 Contractor's Health and Safety Officer at the Site and Other Safety Staff

DCI: *Health staff?*

1.7.1 Requirements for the HSO:

- (1) JICA require **Bidders** to name the HSO in the Bid (and thence Contract) and the Contractor shall assign that named HSO upon the Works, prior to the Commencement Date.
- (2) If the appointed person fails to act as HSO and is removed from the Site of the Works under the of GC 6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of **a another**-suitable replacement person to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor and not of a Subcontractor or consultant and unless otherwise stated in the Contract shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with PC 6.7 [*Health and Safety*].

DCI: *MD to consider coordination of the above and following with Form BSD*

- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall be fluent in the language for communications stated in the Contract as

defined in GC 1.4 [*Law and Language*]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.

- (7) Where there is no legal requirement under the Laws of the Country for qualification, the HSO, shall have appropriate academic and health and safety qualification, work experience in construction (minimum 10 years) and in health and safety management (minimum 5 years which can be concurrent with construction experience) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (8) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (9) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (10) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable of ensuring that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices or conditions exist; and
 - (b) If such unsafe actions, practices or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to temporarily stop all construction activity on that part of the Works until such action has been taken.

Such inspections attended by the HSO, may also include the attendance of the safety representative of the Engineer.

1.8 HSO – Scope of Duties

1.8.1 The HSO shall devote his/her full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.8.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Provision of activity records in progress reports;

DCI: NK please clarify the meaning of the above?

(d) Regular inspection of the Works at the Site to ensure the Contractor's compliance with the Safety Plan;

(e) Temporarily stopping any parts of the Works following any accident or where the HSO discovers any unsafe conditions, unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan

- (f) Temporarily stopping or suspending the any parts of the Works where the Engineer so instructs in accordance with JSSS 1.16;
 - (g) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (h) Preparing proposal, reporting and consulting with the Engineer including when an accident occurs or any risk or hazardous situation is likely;
 - (i) Appointment of health and safety inspectors and assistants after obtaining the consent of the Engineer; and
 - (j) Consultation on safety management with the Employer's Personnel.
- (2) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents.
 - (3) Checking the health status of the Contractor's Personnel.
 - (4) Planning and implementation of various training and education implementation plans.
 - (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases.
 - (6) Preparing regular internal and external reports on health and safety activities.
 - (7) Hazard prediction activity

DCI: NK for Kiken Yochi; see later clause 1.13.

1.9 Contractor's Health and Safety Committee

1.9.1 The Contractor shall create an internal Safety Committee for the purpose of effective health and safety management.

1.9.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.9.3 The HSO shall be the chairman of the Safety Committee.

1.9.4 The Contractor shall hold a regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;

- (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO;
 - (ii) Issues raised by the representative of Contractor's Personnel;
 - (iii) Issues raised by Subcontractors; and
 - (iv) Issues raised by others.
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration requirements under the Laws of the Country;
- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

1.9.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within 7 days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.10 Engineer's Regular Safety Meetings

1.10.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer;
 - (ii) Site inspections by HSO;
 - (iii) Issues raised by the representative of the Contractor's Personnel;
 - (iv) Issues raised by Subcontractors;
 - (v) Issues raised by others;
 - (e) Status of resolution of previous problems;
 - (f) Items to be coordinated with police, fire department and other related organisations;
 - (g) Compliance and registration requirements under the Laws of the Country;

- (h) Safety and health awards, media attention and the like; and
- (i) Other matters.

1.10.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within 7 days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to JICA.

DCI: Please note above suggestion

1.11 Project Safety Committee

1.11.1 On larger Projects with multiple contract packages and contractors, if stated in the Bidding Documents for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.11.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.11.3 The Chairman of the Safety Committee shall be the Employer.

1.11.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.11.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.12 Health and Safety Coordination with Other Contractors

1.12.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The

Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.12.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.12.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries and measures to prevent any reoccurrence;
 - (d) Status of resolution of previous problems;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like; and
 - (h) Other matters.

1.12.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within 7 days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.13 Contractor's Health and Safety Management Activities

1.13.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.13.2 Health and safety management activities shall include (but are not limited to):

- (1) Overall Management Activities:
 - (a) Tasks of the Health and Safety Officer as described above;
 - (b) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM;
 - (c) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (d) Monitoring the implementation of the Safety Plan.

- (2) Management of Contractor's Personnel:
- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of traditional Japanese cleanliness safety campaign known in Japan as **5S ACTIVITIES** where:
 - Seiri** = sorting
 - Seiton** = tidying
 - Seiso** = cleaning
 - Seiketu** = cleanliness
 - Shituke** = discipline
 - (c) **KIKEN YOCHI TRAINING (KYT)** for hazard prediction training usually in TBM, where:
 - K** = kiken (hazard)
 - Y** = yochi (prediction)
 - T** = training
 - (d) Instruction and management of safety education and training.
 - (e) Instruction and management of various safety measures.

1.14 Monitoring

1.14.1 The Contractor shall develop and implement systems to ensure that compliance with the Safety Plan is monitored efficiently and transparently at all times, for which purpose the Contractor shall:

- (1) Create checklists for monitoring.
- (2) Carry out regular and irregular inspections.
- (3) Monitor failed, unsafe or non-compliant conditions.
- (4) Create files and safe storage systems for the monitoring records.
- (5) Copy all relevant information to the Engineer as requested by the Engineer.

1.15 Joint Site Safety Inspections

1.15.1 In addition to the Contractor's own daily Site Safety Inspections described above, the Contractor shall also conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.

1.15.2 Frequency of Joint Site Safety Inspections shall be at least once a week.

1.15.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.

1.15.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within 7 days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.16 Safety Compliance Instructions of the Engineer

1.16.1. Without affecting or diminishing the Contractor's responsibility under PC 4.1 [*Contractor's General Obligations*] to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer will observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any work in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary preventive measures to comply with the Contract.

If any operations or work are considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such work under GC 8.8 [*Suspension of Work*] until the Contractor has taken preventive measures to ensure that no further risk exists.

If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or the part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and preventive measures have been formulated and proposed to the Engineer and implemented at the Site, to ensure that no such accident can reoccur.

1.16.2. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.17 Procedures for Resumption of the Works

If the HSO has suspended any work in accordance with JSSS 1.8 or if the Engineer has issued an instruction under JSSS 1.16 and unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part thereof, shall be as follows.

- (1) The Contractor shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and cannot reoccur.
- (2) The Contractor shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within 7 days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within 14 days of the date of receipt or for the resubmitted proposal within 7 days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving 7 days' notice in writing of the resumption date.
- (5) The Contractor resumes the Works on the resumption date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

DCI: NK, please review and discuss the above carefully

1.18 Engineer's Safety Representative

DCI: (NK what is the future intention? Will a safety engineer be appointed in future on all Projects or will the Engineer act in this capacity? This may require revision of the Guidelines for the Employment of Consultants under Japanese ODA Loans.

This requires further discussion with JICA.

It may require a more detailed procedure; the following is an outline suggestion only This requires further coordination and development with other sections (e.g. scaffolding) so that joint safety and certification and “safe for use” procedures can be implemented if required) without affecting the Contractor’s overriding responsibility.

Please refer to Part C where I have made further reference.

I understood that JICA wanted the Engineer to somehow play a more proactive role so would like to discuss this with you to ascertain the future intentions.

- 1.18.1. On large Projects, the Engineer may appoint an assistant under GC 3.2 [*Delegation by the Engineer*] to be known as the Engineer’s Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer’s organisation on Site and for monitoring the Contractor’s compliance with each contractor’s Safety Plan.
- 1.18.2. By written notice served under GC 3.2 [*Delegation by the Engineer*], the Engineer shall delegate authority to the Engineer’s Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:
 - (1) Instructions requiring the Contractor’s compliance with the Safety Plan.
 - (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
 - (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.
- 1.18.3. The Engineer’s Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.
- 1.18.4. The Engineer’s Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC 3.3 [*Instructions of the Engineer*].
- 1.18.5. The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer’s Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.
- 1.18.6. If the Bidding Documents state that the appointment of a full-time or part-time Engineer’s Safety Representative is not required (refer to **JSSS C1**), it is to be assumed that the Engineer shall act in this capacity.

DCI: *Communications require more thought and definition. Who is to issue and receive? Can be direct HSO and ESR?*

NK: *The ESR may be assigned as Full-time or concurrent safety supervisor. The Employer always hesitate to assign foreign safety expert because of cost. For enforcing JSSS, it needs experienced and competent safety engineer.*

DCI: *Can we please discuss further so I can understand what you want to do.*

NK: *All correspondence shall be made between the Contractor and the Engineer, not HSO and ESR as usual.*

DCI: *There may be a requirement for direct (urgent) communication on some safety issues.*

1.19 Safety Statistics

1.19.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.19.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.19.3. All data shall be in a format and content format and content to be approved by the Engineer.

1.19.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.19.5. The data shall subsequently be compiled and included in the Monthly progress report.

1.20 Safety Reports

1.20.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report can be submitted as an attachment to the Contractor's monthly progress report.

1.21 Health and Safety Records

1.21.1. The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

1.21.2. All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.22 Proper Placement of Contractor's Personnel

1.22.1. Further to compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

The HSO shall countersign all such records to indicate his/her confirmation of the suitability of each member of the Contractor's Personnel prior to their placement.

These records shall be made available for inspection by the Engineer.

1.22.2. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor in consideration of:

- (1) Work content and work environment.
- (2) Work experience, qualification and capability.
- (3) Health condition upon commencement of employment.
- (4) Health condition on a regular basis before daily work starts.
- (5) Allocation of an achievable and safe work volume.
- (6) Allocation to workers under 18 in accordance with GC 6.21 [*Child Labour*].

1.23 Placement and ID of Personnel for Works Requiring a License

1.23.1. If for any of the operations at Site, the Laws of the Country require operating, supervising or any other Contractor's Personnel to have a licence, particular qualification, registration or certification the Contractor shall ascertain that all such Contractor's Personnel possess and maintain such documentation.

1.23.2. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, qualification and skills.

1.23.3. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.24 Health and Safety Education and Training

1.24.1. The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.24.2. The Contractor shall include in the Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit full details of such education and training to the Engineer for his information before the start of such education and training.

1.24.3. Education and training shall be provided free-of-charge to the trainees, conducted during normal working hours, trainees shall be paid and the Contractor shall bear all necessary expenses.

1.24.4. Safety induction: For general education and training of new entrants upon the Site and those who are scheduled to change work type, skill or location, the following subjects shall be included:

- (1) Chain of command and means of communication for the work.
- (2) Hazards or dangers due to the use of machinery, equipment, raw materials, etc., and methods of dealing with such hazards or dangers.
- (3) Performance and handling methods of safety devices and PPE with practical on-Site demonstration.
- (4) Hazardous substance control devices with practical on-Site demonstration.

DCI: - to be coordinated later

- (5) Working procedures generally.
- (6) Inspection before starting any work.
- (7) Maintaining an orderly, tidy and clean Site.
- (8) Emergency measures and evacuation at the time of accidents, etc.
- (9) Health and safety rules.
- (10) Causes and prevention of diseases that may occur in relation to the work concerned.
- (11) Other matters necessary for health or safety related to the work concerned.

1.24.5. For education and training of Contractor's Personnel who are planned to be assigned to dangerous or harmful work (for example as listed in Annex 2), such Contractor's Personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such Contractor's Personnel are to be engaged.

NK: Dangerous and harmful works here can be limited to those in Annex 2, not such dangerous works with hand tools.

The intention of this clause is to clarify works that needs special knowledge and skill, which are specified in Japan.

DCI: Can we please discuss further as whilst I understand that there are specified training requirements in Japan these are different outside Japan.

Please also refer to our comments on Annex 2

The Contractor shall determine the educational subjects and teaching hours for the special education and training *with reference to Annex 3*.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of the special education.

1.24.6. For education and training of Contractor's Personnel who are to be appointed as Operation Leaders *(for example as listed in Annex 4 and 5)*, such personnel shall be given the same general education and training as above plus further special education and training pursuant to the work in which such personnel are to be engaged.

The Contractor shall determine the educational subjects and teaching hours for the skill-

training course with reference to Annex 5.

Special education for the work concerned may be omitted in full or in part for any Contractor's Personnel who the Contractor has ascertained, holds valid qualification issued by an acknowledged public organisation of the Country and who has finished comprehensive training by the public organisation of the Country or acceptable training in another country and whom the Contractor ascertains as having equivalent and sufficient knowledge and skills for all or part of the special education.

DCI: *NK – This requires further clarification and discussion*

1.24.7. Education and training personnel

Educators and trainers can be Contractor's Personnel who are experienced, academically qualified and (if legally required) registered as educators and trainers under the Laws of the Country, fluent in the language of the Country or external educators and trainers similarly qualified, registered and fluent.

In case of absence of availability of such suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary qualification, ability and experience, subject to receiving the advance consent of the Engineer.

1.24.8. Records of education and training

The Contractor shall create and store records of trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.24.9. Explanation of health and safety rules to persons other than the Contractor's Personnel

The Contractor shall provide general health and safety education courses to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed

1.25 Emergency Response Plan

1.25.1. The Contractor shall prepare an Emergency Response Plan as a part of the Health and Safety Plan in order to promptly and appropriately respond to natural disasters, fires, and other emergencies that may occur during construction.

DCI: *NK please note:*

Natural disasters include typhoons, earthquakes etc. which are actually GC 19 Force Majeure situations for which, the contractor is not responsible and he has no obligation to give any such automatic "response".

What is the actual required extent of the Contractor's "response"? What manpower and equipment is he to provide? How can this be predicted and estimated?

What about the Employer's and Engineer's own plans and what about the availability of the rescue services etc. in the Country?

These arrangements appear to be onerous upon the Contractor and of not properly worded may cause difficulty with interpretation of force majeure.

Can we please discuss and consider this further to understand the purpose and intention.

We have edited the following to make it readable but do not agree with the content.

NK: *We specified for the natural disasters which is not GC 19 Force Majeure situations. We expect the Contractor to prepare the natural disaster which may be occurred by the weather or earthquake of magnitude between bad weather and earthquake, and Force Majeure situations. The bad weather and earthquake are specified in JSSS 2.7 Measures against Adverse Weather and Earthquakes, which I want to send it in English you soon.*

DCI: *I will wait to receive your document on this subject so I can understand your intentions.*

In addition, the Contractor shall fully inform the Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, of the detail of the Emergency Response Plan. The Contractor shall also establish an emergency call system and carry out training based on the Emergency Response Plan.

The Emergency Response Plan, shall include the following items:

- (1) Expected types of emergency situation.
- (2) Description of the emergency call system.
- (3) Explanation of the specific measures for emergency response.
- (4) Measures for quickly establishing locations of affected Contractor's Personnel, defining assembly points and the like.
- (5) Provisions for immediate changes and revisions to be made in response to changes in the Site situation

The Emergency Response Plan shall be submitted to the Engineer as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.25.2. The Contractor shall establish an emergency call communication system that will require confirmation from all contact official departments, organisations and persons in the event of an emergency. This shall include the creation of an emergency contact list, which shall be posted it in a visible location such as the Contractor's Site office to inform all Contractor's Personnel.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel.
- (2) Relevant government authorities and agencies: administrative agencies, police stations and fire stations etc.
- (3) Contractor's Personnel at the Site.
- (4) Other contractors engaged upon the Site or the Works

1.25.3. The Contractor shall conduct emergency response training based on the Emergency Response Plan which shall include:

- (1) Implementing a training programme at least every six months
- (2) Improving the emergency response plan based on training results
- (3) Providing details of the emergency response

The Contractor shall provide training for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed

Details of the training shall be included in the Emergency Response Plan and Safety Plan.

- 1.25.4. If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.
- 1.25.5. The Contractor shall take measures such as the placement and installation of the following accident relief facilities and equipment, medical personnel, ambulances, etc.

DCI: NK please see above queries, the Contractor usually has no such obligations for force majeure events, so if this is required it must be fully specified and paid for. Usually only the use of existing site facilities is allowable technically in accordance with the Engineer's Instructions (and payment by Employer).

NK: As I explain above, the Contractor shall prepare the plan for predictable weather, earthquake and others from the Contractor's experience.

DCI: This may complicate interpretation contractually where force majeure has accepted definition. In most countries, earthquakes are not so common and extreme weather likewise. Please can we discuss

DCI: We assume that the following described in the draft as "Emergency Relief Plan" actually means a plan for dealing with common accidents on the Site. This heading is a little misleading, I suggest change to something like "Accident Relief Plan" so there can be no confusion with "Emergency Response Plan"

1.26 Accident Relief Plan

- 1.26.1. The Contractor shall prepare an Accident Relief Plan in consideration of the nature and timing of the Works and the location(s) of the Site and taking account at least of the minimum facilities and measures to be provided in accordance with the Specification for the Contract (refer also to JSSS C1) and including:

DCI - To be coordinated with Part C and Health

- (1) Availability of medical personnel who can provide first aid and additional medical assistance.
- (2) Availability of vehicles and drivers that can properly transport casualties to clinics on Site or hospitals off the Site.
- (3) Establishment of first aid room, clinic or like facilities on Site with equipment and consumables.
- (4) Arrangement of communication facilities and measures for emergency response.
- (5) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (6) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that JSSS C1 lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

1.27 Measures at the Time Accidents Occur

- 1.27.1. When an accident occurs, the Contractor shall immediately discontinue the work task and implement the following measures as necessary.
- (1) Safely locate and extract casualties and provide first aid and other accident relief measures
 - (2) Secondary accident prevention activities
 - (3) Preserve the accident site, make safe and prevent anyone interfering or entering

- (4) Discontinue construction work related to or in the vicinity of the accident
- (5) Implement any further measures instructed by the Engineer

1.27.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with PC 4.8 [*Contractor's Health and Safety Obligations*].

DCI: NK, can we please attach an accident report form now? As an appendix, please let me have a draft and I will include

- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence.

For resumption of work procedures, refer to JSSS 1.17

1.28 Health Issues

DCI: What about health issues? The document is largely silent on this yet statistically this is the biggest problem

NK: May I know what kind health issues you commented. We specify health issues such as dust, noise, heat are specified in JSSS 2.1 Working site environment.

NK: Do you mean if the health issues are asbestos, dusts including silica and lead, chemicals, sunlight, diesel engine exhaust emissions, frequent loud noise, frequent or excessive use of vibrating tools, frequent or excessive manual handling of loads, stress and fatigue.

DCI: Yes in part answer to your question and also health issues at Site in terms of what shall be provided as a guide and also:

Contractor should provide (or ensure) eyesight and hearing exams that do have a significant effect on safety and other mobility and medical tests that are reasonable, all to be stated in JSSS.

We should not rely on local Laws but should stipulate health requirements to make sure that the contractor complies with this.

This will also require the Contractor to assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

NK: We specify in 2.1 about dusts, noise and temperature. We do not specify about asbestos because the Laws of the country may have specified already and ODA projects may not handle asbestos except renovation works.

DCI: We surely cannot rely on local laws that in general JSSS is aiming to improve.

Renovation works occur frequently

NK: Do you have any suggestion about health issues?

DCI: See above.

This also requires research of other standards but what about medical facilities on Site, medical tests and also treatment of endemic diseases in certain countries. AIDS is covered in FIDIC (although not so necessary now perhaps) but what about others? Malaria nets, dengue patrols (Singapore style) etc. etc..

Also state criteria for provision of facilities at Site for example say related to the distance

from Site to the nearest hospital. If say more than one hour provide a doctor(s) full time plus medical support plus nurses and reasonably equipped ambulance with driver.

Plus also same doctor and nurses may be able to provide a local JICA clinic?

All of the above requires coordination with GC 6.8 but more clarity will be helpful as the present clause is frequently not applied properly.

Can we discuss further please, noting that this should really come from NK.

What do the Japanese regs. require?

The documents need to be comprehensive and helpful.

NK: JSSS will be prepared at 2 stages. The 1st stage JSSS will cover the following table for basic and essential safety requirement and the 2nd stage will do for safety in sectors of road, river, tunnel, railway, etc.

DCI: Please can we discuss later, I am not sure if or how your ideas for later issues will work.

1.29 Temporary Works

DCI: The following are draft notes which in the main will probably be transferred and dealt with later in JSSS Chapter 7.1 but some reference may be necessary here.

Please leave this here for now and we will coordinate this (and other parts) later. There is cross-reference to this clause in Part C.

NK: I will send you 7.1 as soon as possible JICA gave us their draft of JSSS.

DCI: Please note that I have not changed any part of the following paragraph (except as highlighted in green) as I am waiting receipt of your further draft.

The Contractor shall provide details at Bid stage (not calculations necessarily at this stage?) of all Temporary Works (TW) designs including Falsework for significant structures as listed in the Bidding Documents (refer to JSSS C1) and including for example:

- (1) Falsework equal to or higher than 3.5 m.
- (2) Overhead passage equal to or higher than 10m (bridge?)
- (3) Scaffolds ("scaffolding"?) equal to or higher than 10m can engineer check scaffolding design?.
- (4) Other TW specified in the Contract or instructed by the Engineer.

DCI: NK can we please discuss the above to clarify these and further requirements after which we will delete or re-word this

What about other items such as TW for major bridge structures, tunnels, coffer dams, temporary dams, etc. ??

What is the Engineer required or intending to do with such information?

NK: The Engineer can review design document by the Engineer's design expert if he is assigned. If not, the Engineer shall review the design procedure and designs with his experience of TW.

DCI: We suggest that this could be dangerous as reliance needs to be placed upon the Contractor's specialists not the Engineer. The check (if any) should be to ascertain that the Contractor has engaged and used such specialists. The Engineer does not (and should not) represent himself as an expert on temporary works (Falsework) design.

Also if calculations and methods are submitted at Bid stage it could well be construed that they have been checked and accepted by the Engineer (otherwise why request them?) and if future failure occurs responsibility may be affected. Similarly if a future change say for compliance is instructed by engineer, variation may be claimed and responsibility may well also be compromised

Please let me study the future document when we receive it and I will then discuss further.

DCI: I recommend consideration of something like the following, which is still very much a draft idea for now. Please note my further suggestion that it is made optional in Part C for use on particular (not all) projects.

I still need to study this BS further.

Please also refer to separate definitions of Falsework, Formwork and other terms above.

- 1.29.1. Unless otherwise stated in the Bidding Documents, Bidders are required to comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.
- 1.29.2. The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions, which are:
 - (1) Designed to support excessively heavy loads.
 - (2) Of excessive height or unusual shape,
 - (3) Of difficult access, or
 - (4) With unusual structural solution.
- 1.29.3. Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for management of Temporary Works including the design of Falsework (including Class A Falsework).
- 1.29.4. It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent.
- 1.29.5. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.29.6. Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:
 - (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
 - (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework).
 - (3) Temporary Works Supervisors (TWS): responsible for the construction, safe use, maintenance, dismantling and removal of all Temporary Work in accordance with the design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:
 - (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works and ready to accept loading; and

- (b) Confirmation that the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works.

1.29.7. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer

1.29.8. The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or be subsequently consented to by the Engineer.

1.29.9. Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS 1.7.

1.29.10. The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the Permanent Works as far as possible through the design process for example by changing high level in-situ concrete structures to precast or prefabricated structures, simplifying structures and applied finishes, services and the like.

1.29.11. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The following clause requires particular and careful consideration and internal discussion.

1.29.12. The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may requested by the Engineer under the Contract for his review.

The Engineer's review shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1(c) and issued without prejudice to the Contractor's overriding responsibility for the adequacy of the Temporary Works.

1.29.13. Where the Bidding Documents do not require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the provision, use, management, dismantling and removal of Temporary Works including for example by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:

- (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a formal “permit to load”; and
- (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal “permit to dismantle” where necessary.

1.29.14. The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.29.15. Whether there is or is not any legal requirement under the Laws of the Country for qualification, all of the Contractor’s Temporary Works staff and any specialist Temporary Works Subcontractors shall have appropriate academic and Temporary Works coordination, design or supervision qualification as appropriate, work experience in construction and in Temporary Works Design and whom the Contractor considers are qualified to perform the duties.

ANNEXES TO PART B: JICA REQUIREMENTS

Annex B.1: Items to be described in the Safety Plan

DCI: *NK please note that text generally has been changed from original so that this is coordinated with other changes basically to make it work better.*

Further MD coordination with Part C is required where this is largely repeated

Coordination is also required in future for all other Technical Sections 2 onwards (e.g. health) where further requirements may make revision here necessary.

(1) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant Clause or Sub-Clause number of JSSS shall be inserted.

(5) Bidder's Safety Certification and Implementation Policy

NK see query in JSSS 1.5 and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under JSSS Cl.

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, Bidder's shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(6) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of JSSS 1.29 are fulfilled.

~~(7) Safety Measures for Contractor's Equipment and Temporary Works~~

Requires changing due to the above added Sub-Clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and Temporary Works together with all spare parts including inspections prior to shipment**, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(8) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(9) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.

(10) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(11) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.

If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(12) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

Also attaching warning notices and labelling hazardous equipment, structures and the like?

(13) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(14) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(15) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(16) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(17) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(18) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(19) Work Discontinuation Criteria

DCI - Needs later coordination with other sections:

A description of the proposed criteria for discontinuation by HSO of work for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(20) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS 1.13)

(21) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex B.2: Dangerous or Harmful Operations

DCI: *I have concerns about whether the information in the following annexes is of any value in an international context, I think not. In a domestic Japanese sense these requirements are of course very important as they are integrated with many other Japanese laws and regulations. However when abbreviated extracts only are included it does not have great meaning and there appears to be much missing which may not be covered by the fall-back (OSHA).*

Please consider all very carefully.

I am inclined to suggest that a simple basic requirement such as GC 6.9 is sufficient, perhaps adding some reference to training and making the contractor responsible for all is probably better than going into so much detail for only a part.

NK: *we will reconsider and discuss with JICA about Annex 2.*

The following is a list of **sample** work types **classified/defined** as “Dangerous or Harmful Operations”

DCI: *Is this Annex intended to be a definition?*

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

Examples of such operations include (but are not restricted to) the following:

(as provided for by the Ordinance of the Ministry of Health, Labour and Welfare).

DCI: *I requested a complete list at our last meeting however, according to the above Ordinance there are many more operations and requirements in addition to this list and also as this effectively applies only in Japan; is therefore a real need for this?*

- (1) Crane operation and mobile crane operation
- (2) Welding and cutting of metal using arc welder *what about gas welders and cutting machines?*
- (3) Forklift operation
- (4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: ~~3t or more~~) *why 3t or more? Why not all?*

DCI: *Vehicle-type? What does it mean exactly? Does it mean wheeled? If so how about tracked equipment? What is the difference between (4) and (5)?*

- (5) Vehicle-type construction equipment operation (for foundation work: ~~3t or more~~)

DCI: *why 3t or more? Why not all? what about track type?*

- (6) Roller operation *what type?*
- (7) Operations that use organic solvents

DCI: *what about other harmful substances and explosives for example?*

- (8) Sling work

DCI: *meaning hoisting and rigging work*

- (9) Rope access work

DCI: *cradles and hoists?*

- (10) Work to be performed using a full harness type of fall protection device where the height is 2 meters or more and it is difficult to provide for the work floor

DCI: *meaning of difficult? Too expensive? Is this coordinated with other chapters?*

What about small tools (drills and angle grinders) all electrical works, gas pipe works etc. etc.?

Ditto related academic educational achievements?

And Confined spaces?

NK: we will reconsider and discuss with JICA about Annex 2.

Annex B.3: Subjects of Special Education for Dangerous or Harmful Operations

DCI: Please note that this still needs English edit and correction, some commented on below, but problem exists throughout.

When Contractor’s Personnel are engaged in the following or other potentially dangerous or harmful operations such personnel shall be given special health and safety training appropriate to the operations concerned.

DCI: Is this “health and safety training” or “skill training”?

It appears to be operator skill training? Is this the purpose?

Can this apply internationally?

Examples of special training for the above listed sample operations include (but are not restricted to) the following:

- (1) Special education for crane operation and mobile crane operation:

DCI: Surely this is common to all crane operations why particularise one type? Or training should be specific for the types of crane being operated on Site.

Subject	Scope
1 Knowledge of mobile and other cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane and other cranes	Force (composition, decomposition, balance and moment), centre of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane and other crane operation Signs for mobile crane and other crane operation

DCI: What is the extent of “practical skill training” and others above, is it testing to ascertain of skills exist?

- (2) Welding and cutting of metal performed using arc welder

DCI: Gas welding also?

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention

4 Practical skill	Handling of equipment for arc welding work
-------------------	--

(3) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift. <i>What is the meaning of this?</i>	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling
2 Knowledge of equipment structure and handling methods for cargo handling <i>What is the meaning of this?</i>	Structure and handling method of hydraulic equipment (including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, centre of gravity and stability of objects, speed and acceleration, load, stress, material strength <i>This appears to be excessive for the average fork lift driver?</i>
4 Practical skill	Operation of traveling, operation of cargo handling

(4) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging: 3 t or more)

Meaning see before also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(5) Vehicle-type construction equipment operation (for foundation work: 3 t or more)

Less than 3t also?

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(6) Roller operation

Subject	Scope
1 Knowledge of roller	Types and applications of rollers, structure and handling method of Power transmission devices of rollers, working devices, steering devices, brakes, electrical devices, alarm devices and auxiliary devices, method of inspection and maintenance
2 Knowledge of general matters required for roller operation	Mechanics necessary for operation, construction method by roller
3 Practical skill	Roller operation method

(7) Operations that use organic solvents

Include here within equipment and only solvents, no other chemicals or hazardous substances?

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapour and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective

	equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical check-up and follow-up measures
4 Accident case	Accident cases and prevention measures

(8) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes, other cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), centre of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation method), method of signalling
4 Practical skill	Signs for operation, work with a sling for a crane

(9) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(10) Work to be performed using a full harness type of fall prevention equipment where the height is 2 meters or more and it is difficult to provide for the work floor

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full

(limited to full harness type, the same shall apply hereinafter)	harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

Annex B.4: Work Requiring the Assignment of an Operation Leader

The following is a list of example work types that require the appointment and assignment of an Operation Leader to each team of workers engaged upon such work at the Site.

There are many more

Such Operation Leaders shall be given special health and safety training appropriate to the operations concerned.

Examples of operations shall include (but are not restricted to) the following:

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Excavation work for quarrying
- (5) Formwork, Falsework, supports and shoring assembly/dismantling work
- (6) Scaffolding assembly/dismantling work
- (7) Steel frame fabrication and erection work on buildings and structures
- (8) Steel bridge fabrication and erection work
- (9) Wooden, masonry and other building work
- (10) Demolition work of concrete, masonry or steel structures
- (11) Reinforced concrete construction work
- (12) Organic solvent work and other hazardous substances or materials
- (13) Work in hazardous areas
- (14) Work in Confined Spaces

Annex B.5: Subjects of Skill Training Course for Operation Leaders

DCI: Skill training is included for operation leaders but no such skill training or checking is included for other skilled persons is this correct?

Is this “training” or checking to ascertain that operation leaders have the skills?

If “Operation Leaders” (see out earlier assumed definition based on JICA scop) include foremen, gangers, charge hands and the like in other countries, and if they are already qualified and paid as foremen, gangers, charge hands and the like, do they need to be re-trained and re-qualified as follows?

These appear to be very detailed training requirements.

This Annex requires significant coordination with Annex B.4, with addition and editing before it can be finalised but is it necessary? Any changes in Annex B.4 need to be added here.

Add work in hazardous areas and work in Confined Spaces

Examples of special training for the operations leaders shall include (but are not restricted to) the following:

- (1) Operation Leader for Earth excavation and shoring work

Not edited:

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

- (2) Operation Leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases and toxic gases, measures for preventing hazards
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(3) Operation Leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, instruments and tools, measures for preventing hazards, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(4) Operation Leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling methods for rock excavation, etc.	Types of rock, method of excavation for extraction of rock, treatment of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, harmful gases, measures for preventing hazards, collapse prediction, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(5) Operation Leader for formwork, Falsework, supports and shoring assembly/dismantling work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(6) Operation Leader for scaffolding assembly/dismantling work

Subject	Scope
1 Knowledge of work	Types of scaffolds, materials, structures and assembly

method	drawings, methods of scaffold assembly, disassembly and change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, measures for preventing danger, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(7) Operation Leader for steel frame fabrication and erection work on buildings and structures

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(8) Operation Leader for steel bridge fabrication and erection work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(9) Operation Leader for wooden, masonry and other building work

Subject	Scope
1 Knowledge about constructing structural members of buildings, installing floors, roofs, etc.	Construction methods of main structural parts such as frame, floor structures, walls, construction methods of roof and outer wall foundation, joints, order of construction, reinforcement method for frame
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(10) Operation Leader for demolition work of concrete or masonry structures

Subject	Scope
1 Knowledge about structural members including concrete masonry and reinforcement etc.	Types, structures, construction method of concrete and masonry work, types of method of construction, method of work, work plan, coordination with m & e services etc
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
3 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(11) Operation Leader for reinforced concrete construction work

Subject	Scope
1 Knowledge of work method	Types of materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity
3 Knowledge about work environment	Equipment for fall prevention, measures to prevent hazards from falling objects, methods of work in adverse weather, clothing and protective equipment
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence

(15) Operation Leader for organic solvent work and other hazardous substances or materials

Subject	Scope
1 Knowledge of health hazards and their preventive measures.	Pathology, symptoms, prevention methods, first-aid measures and health problems caused by such materials
2 Knowledge for improving the work environment	Properties of organic solvents, and other hazardous substances or materials, management of equipment and other facilities related to production and handling of such materials, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of such materials
4 Knowledge about education for workers	Methods of education and guidance for workers, work standards, measures at the time of disaster occurrence <i>Meaning?</i>

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL REQUIREMENTS

PART C: REQUIRED AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

[This Part C applies to Executing Agencies (employers and their consultants) for use in the preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described will be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

The Bidding Documents for particular Projects where JSSS has become effective (as described in the above “Part A: Preamble Notes”), shall be drafted to take account of such amendments in advance of the publication of the updated JSBD, in accordance with the following instructions.

BIDDING PROCEDURES:

C1. Particular Safety Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the Employer putting in place a sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply generally on their ODA Projects and consequently it is necessary to specify particular safety requirements for specific Projects. Such particular safety requirements shall be carefully and precisely drafted and included in the Technical Specifications of such Projects, covering for example the following²:

JSSS Chapter 1 Reference	Item
1.5 Contractor’s Safety Certification	State if Bidders are required to be formally accredited under OHSAS 18001 and if so require submission of a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or equivalent from an internationally recognised and approved

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later checklist

	organisation
1.7 Contractor's Health and Safety Officer at the Site and Other Safety Staff	<p>(On small Projects) State if the HSO is <u>NOT</u> required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, contractors must assign full-time dedicated HSO and if applicable other support personnel.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p>
1.11 Project Safety Committee	<p>(On large Projects) State if a Project Safety Committee is to be established for the Project and add any further requirements.</p>
1.12.2 Employer's other contractors (see also GC 2.3)	<p>Describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name together with any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify working locations, access and timing as far as possible.</p>
1.18 Engineer's Safety Representative	<p>(On large Projects) State if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.</p>
1.26 Accident Relief Plan	<p>MD to Coordinate in future with 1.26, 1.28 Health and with other Sections</p> <p>Describe the minimum measures and facilities to be provided in consideration of the location(s) of the Site and the location, nature and timing of the Works, including:</p> <ol style="list-style-type: none"> (1) Medical personnel to provide first aid and additional medical assistance, at least certified as having successfully completed a first aid course by a recognised provider, such as the Red Cross and also including doctors and nurses where so required. (2) Suitably equipped ambulances or other approved vehicles, with drivers and attendants that are properly trained to transport casualties to medical personnel staff and facilities on Site or to medical staff and facilities including hospitals off the Site. (3) First aid room, clinic or like facilities on Site and specify equipment and consumables (4) Communication facilities and measures for emergency response (5) First aid appliances, aids, instruments and medicines. (6) First aid training, appointment of first aiders and

	<p>dissemination of information.</p> <p>(7) Include others as appropriate</p>
1.28 Health Issues	<p><i>requires further development, addition and coordination by MD</i></p> <p><i>Awaiting NK documents to ascertain scope.</i></p>
1.29 Compliance or otherwise with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework	<p><i>DCI - I suggest that non-compliance should be the exception rather than the norm.</i></p> <p>If it is necessary for Bidders to comply with BS5975: 2019 on the Works, the Executing Agency shall ensure that the Bidding Documents clearly state this. For this purpose, reference shall be made to the basic criteria described in JSSS 1.29.</p> <p>If Bidders are NOT required to comply with BS5975: 2019 on the Works, the Bidding Documents shall clearly state this, and separate written justification shall be provided by the Executing Agency to JICA.</p> <p><i>NK please refer to queries on this subject in 1.297</i></p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall confirm that the following Temporary Works coordination, design and supervision staff are required:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>If compliance is required TWC and TWD, Bidding Documents should require them to be named in the Bid.</p> <p>JICA note that this (and more) can always be proposed by Bidders, whether included as a specified requirement or otherwise.</p> <p>If Bidders are NOT required to comply with BS5975: 2019, the Bidding Documents shall state that Bidders are to comply in any event with the requirements of JSSS 1.29.13 and 1.29.14 and submit full details in the Safety Plan.</p>
<p><i>The following all requires further development, addition and coordination by MD:</i></p>	
<p><u>Temporary Perimeter Fencing:</u></p>	<p>Simple fencing to complicated security depends upon Project and location and nature of works.</p> <p>Improvement Projects (e.g. airports, roads and railways) may not need this as existing or maybe new permanent fencing can be used.</p> <p>Gates barriers and other treatment at Site entrances e.g.</p>

	<p>simple gate or barrier through to complicated type including communications, lighting and temporary power</p> <p>Security at entrance and around the site (minimal, extensive or in some cases on existing facilities) already provided by employer.</p> <p>Fencing within the site around hazardous areas or around operating plant areas.</p>
<u>Temporary Accommodation and Facilities</u>	<p>Should list the required facilities in a range such as none for urban Projects, to full accommodation for rural Projects where no suitable accommodation.</p> <p>Health and sanitation requirements</p> <p>Leisure facilities</p> <p><u>Temporary Transportation Requirements</u></p> <p>Nothing for urban Projects, to full provision, e.g, buses and drivers etc for rural Projects where nothing safe is available.</p> <p><u>Canteen Facilities</u></p> <p><u>Sanitation Facilities</u></p> <p>etc etc</p>
Others to add - MD	

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this Part

To be coordinated by MD with the later checklist

C2. Required Detail of Bid Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Prepare the **Bid Safety Plan** including details of all items listed below:

It is understood that the **Bid Safety Plan** will be developed by the Contractor in more detail in the Commencement Safety Plan issued at commencement stage and at later stages but it is important that the Bid Safety Plan contains comprehensive and clear information so that the Bidders response to the requirements of the following paragraphs is evident and can be evaluated.

Irrespective of what **Bidders may include in their** plans and of any subsequent acceptance, approval or consent to the same, the detailed requirements of JSSS will continue to apply and prevail unless otherwise specifically agreed later in writing by the Engineer.

NK For Bidding purposes, the following is a copy of Annex 1, please coordinate as necessary if changes are made to Annex 1 and make the same changes here

(22) Description of the Works

A description of the Works in outline and with overall layout plan to give an understanding of the overall layout and content of the Works showing main construction items and areas, roads, road access locations, working areas, storage areas, temporary offices, laydown areas, warehouses and the like facilities and including a summary of principal work items and significant quantities, etc.

(23) **Bidder's** Corporate Policy on Health and Safety Management

A description of the **Bidder's** corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the **Bidder's** head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(24) Health and Safety Management System, Responsibility and Authority of **Bidder's** Personnel

A description of the health and safety management organisation at Site headed by the **Bidder's** Health and Safety Officer at Site and showing the responsibility and authority of all other Contractor's Personnel involved in health and safety management at the Site.

(25) Health and Safety Laws

A list of Laws (including all standards) of the Country to be complied with for the health and safety management of the Works, unless superseded by JSSS. If superseded by JSSS then the relevant Clause or Sub-Clause number of JSSS shall be inserted.

(26) **Bidder's** Safety Certification and Implementation Policy

*NK see query in JSSS 1.5 and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under **JSSS Cl.***

The following Sub-Clauses have also been added to JSSS Chapter 1.

Unless otherwise expressly stated in the Bidding Documents, **Bidder's** shall be formally accredited under OHSAS 18001 and shall possess a current and valid certification for Occupational Health & Safety under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation.

An authorised true copy of the current certification shall be provided in this part of the Bid and shall subsequently be included with the Contract.

(27) Temporary Works

NK this requires to be added as it is an essential part of the Safety Plan

Description of the arrangements for controlling risks arising from the use of Temporary Works by ensuring that the requirements of **JSSS 1.29** are fulfilled.

~~(28) Safety Measures for Contractor's Equipment and Temporary Works~~

Requires changing due to the above added Sub-Clause

A description of the procedures for inspecting and maintaining Contractor's **Equipment and Temporary Works** together with all spare parts including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(29) Health and Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and

safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(30) Plans for Health and Safety Education and Training

An outline description of the proposed education and training methods and facilities including participants, time, teaching materials, policies for selecting educators and trainers, etc. and covering safety induction.

(31) Deployment of Health and Safety Related Facilities and Personal Protective Equipment (PPE)

A description of the intended policies for the deployment of facilities and equipment to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general Personal Protective Equipment (PPE) and the use of additional PPE for particular working conditions and environments.

(32) Health and Safety Rules

A description of the general health and safety rules (e.g. limitation of smoking area, traveling speed on site, cleanliness and tidiness, etc.) indicating measures for preventing accidents on the site.

If a specific work area, condition or environment (such as operational areas, hazardous areas, Confined Spaces or the like) requires detailed rules, this shall be stated and detail will be developed in later issues of the Safety Plan.

(33) Site Safety Inspection Plan

A description of the methods for on-Site inspections showing locations and frequency. The description shall also include the methods for reporting, recording and utilising results.

Also attaching warning notices and labelling hazardous equipment, structures and the like?

(34) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any other trespassers upon the Site will be prevented. The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(35) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(36) Prevention of Construction Accidents at Site

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(37) Emergency Response Plan

A description of the Emergency Response Plan including the action plan for rescue of casualties in an emergency such as when a major accident or disaster occurs, work discontinuation, notification to emergency contacts (creation of an emergency contact list and contact range and contact methods according to the type of emergency), contact with related parties, etc.

(38) Accident Relief Plan

A description of the Accident Relief Plan including the procedure for first aid at the location and time of any accident and a description of appropriate medical facilities to be provided at the Site, including for example nurse, doctor, ambulance etc. all as stated in the Bidding Documents. The procedure shall also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(39) Facilities for Maintaining the Occupational Health Environment

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

(40) Work Discontinuation Criteria

DCI - Needs later coordination with other sections:

A description of the proposed criteria for discontinuation by HSO of work for example when danger is predicted for work due to strong wind, heavy rain, snow or other factors

(41) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS 1.13)

(42) Legal Remedies and Requirements after Occupational Accidents

A description in brief of the legal requirements and remedies in the case of injuries and death at work and for personnel affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

C3. Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilise key equipment and personnel for the Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] insert "and Safety Plan" in the third line after the words, "work methods".

Insert the following additional paragraph after the above paragraph:

"Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to JSSS C1) of any principal Temporary Works coordination, design and supervision staff, under item in 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in 1.1.3 Equipment."

C4. Health and Safety Officer and (if applicable) Temporary Works staff:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel,

Delete position 2 as stated and insert as follows:

2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

(if any of the following are a specified requirement of the Bidding Documents by reference to JSSS C1):

3. Temporary Works Coordinator
4. Temporary Works Designer
5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

C5. Bidder’s Safety Declaration (Form BSD):

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include “Form BSD – Bidder’s Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer requires all Bidders to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign Form BSD in addition to the Bidder’s Official Representative.

Please refer to Annex C.2 to this Part C for a copy of Form BSD

PARTICULAR CONDITIONS OF CONTRACT:

C6. Submission and Review of Method Statements and Safety Plans:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.1 Contractor’s General Obligations</p>	<p>Delete that part of the fifth paragraph of this Sub-Clause which states:</p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p>and in this place insert:</p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information within 14 days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within 14 days after receiving any such notice the Contractor shall rectify</p>
---	---

	<p>any non-compliance and resubmit to the Engineer.</p> <p>If the Engineer gives no such notice of non-compliance for the original Method Statement and/or Safety Plan within 21 days of the date of receipt or for the resubmitted Method Statement and/or Safety Plan within 14 days of receipt, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to complying with his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within 14 days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within 14 days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p> <p><i>DCI: NK, the above relates to any part of the Works and are effectively "Particular Safety Plans" which actually will not be required so often (or even at all) IF the Safety Plan at Commencement (see PC 4.8) is prepared properly.</i></p> <p><i>Can we please discuss</i></p>
--	--

C7. JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause 4.8 Contractor's Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including
---	---

	<p>those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this Contract Sub-Clause amendment;</p> <p>(c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6.7 [<i>Health and Safety</i>] as amended by PC 6.7;</p> <p>(d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed;</p> <p>(e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons;</p> <p>(f) Provide fencing, lighting, safe access, guarding and watching of:</p> <p>(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and</p> <p>(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and</p> <p>(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within 28 days of the Commencement Date and not less than 28 days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>This shall be based upon the Safety Plan issued at bid stage, further developed as necessary to provide the comprehensive detail required by the HSO, so that the document complies with the Contract.</p> <p>This document shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>This Safety Plan shall set out or refer to all the health</p>
--	---

	<p>and safety requirements:</p> <p>(a) that are stated in JSSS;</p> <p>(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p> <p>(c) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.</p> <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with PC 4.1 [<i>Contractor's General Obligations</i>].</p> <p>The Safety plan shall be revised as necessary by the Contractor or the HSO or at the reasonable request of the Engineer with each revision submitted promptly to the Engineer for his information.</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [<i>Progress Reports</i>] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p> <p>Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.</p>
--	--

C8. Change “accident prevention officer” to “Health and Safety Officer”:

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause 6.7 Health and Safety	In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site”
---	--

C9. Revised Order of Priority of Documents

Part 3 - Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part

B - Specific Provisions.

<p>Sub-Clause 1.5 Priority of Documents</p>	<p>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder's Declaration, (h) the Specification, (i) the Drawings, and (j) the Schedules and any other documents forming part of the Contract.
---	---

Included to avoid the discrepancy that exists with the Contract Agreement where this is also referred to (see below).

C10. Listing of Documents to be included in the Contract Agreement:

Part 3 - Conditions of Contract and Contract Forms, Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	---

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p>	<p>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</p>
--	--

Contract Agreement	<ul style="list-style-type: none">(i) the Letter of Acceptance;(ii) the Letter of Technical Bid;(iii) the Letter of Price Bid;(iv) the addenda Nos [<i>insert addenda numbers, if any</i>] (if any);(v) the Particular Conditions;(vi) the General Conditions;(vii) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration;(viii) the Specification;(ix) the Drawings;(x) the completed Schedules; and(xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---------------------------	---

ANNEXES TO PART C: AMENDMENTS TO “JICA STANDARD BIDDING DOCUMENTS”

Annex C.1: Checklist of Particular Safety Requirement in Technical Specifications

MD to develop this listing basically to create a simple yes/no check that required safety items have been addressed in the preparation of the Bidding Documents.

The list will be prepared after the later specification sections have been received from NK and have been reviewed by MD.

It is suggested that this listing be completed by the Executing Agency and submitted by them as a separate simple listing at the same time as the draft Bidding Documents are submitted for the concurrence of JICA.

Annex C.2: Form BSD – Bidder's Safety Declaration

**Form BSD:
Bidder's Safety Declaration**

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Form-BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

I further declare on behalf of the Bidder, that if selected to undertake the Works in connection with the Contract, we will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer's Personnel and the Contractor's Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of any Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration, fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder further declares that all Works shall be carried out under the control of our qualified and expert health and safety management and where not available in the Country, we will import for sole use upon the Works:

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for purpose and all to meet with the approval of the Engineer in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged;
2. New or recent Contractor's Equipment (not more than 5 years old unless otherwise pre-inspected and approved by the Engineer) all fit for purpose, in full working order, safe, clean, non-polluting, complete with all necessary spare parts and consumables and suitable for use on the Works; and

... that all of the above will be used for the purpose intended.

The Bidder further declares that he shall find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.

The Bidder further declares that he (and any of his Subcontractors) shall:

1. Employ workers with appropriate skill, qualification and capability;
2. Fully inform workers about hazards;
3. Provide health and safety training to all Contractor's Personnel and Employer's Personnel in a language and vocabulary they can understand;
4. Keep accurate records of work-related injuries and illnesses;
5. Perform tests in the workplace, such as air sampling as required by JSSS;
6. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;
7. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned;

8. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS;
9. Post injury and illness information and data where workers can see them;
10. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than 24 hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately; and
11. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Forms, Form PER -1: Proposed Personnel, unless otherwise stated in the Bidding Documents, shall be assigned from the Commencement Date, full time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted we agree that this Declaration together with all other documents comprised in our Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 5
Revision:
Date: 31/10/2019

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources and expresses its gratitude to such other sources and publications which include:

1) *Japanese Acts, Orders and Ordinances including:*

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure

Ordinance on Prevention of Anoxia, etc.

Ordinance on Prevention of Hazards Due to Dust

Explosives Control Act

Order for Enforcement of Explosives Control Act

Ordinance on Explosives Control

2) *“OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..*

3) *Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.*

4) *Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)*

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, together with the Executing Agencies of its ODA Projects shall not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular Projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference or used in any way as a basis of any claim by a contractor against any employer or vice versa under any contract for the execution of any Works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PREAMBLE NOTES

A. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture ensuring human security and the maintenance of human rights as an essential and fundamental feature. The common objective shall be the achievement of a zero-accident rate, adopting the slogan of “Safety First” by creating a working environment where health and safety are of the highest priority.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”) and which JICA aim to be adopted for future selected Projects by the Executing Agencies for such Projects.

JSSS is one component of the JICA overall strategy to successfully achieve “**Quality Infrastructure**” under its assistance and development programmes. JICA are committed to pursuing the highest achievable levels of quality, safety, environmental protection, harmony and efficiency in performance, “**Ensuring Human Security**” whilst ensuring that “**Appropriate Cost Sharing**” is achieved.

B. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the ODA agreement for that Project is executed and where the parties to such ODA Agreement have formally and specifically agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

C. Incorporation of JSSS into Contracts

Where the parties to an ODA Agreement have formally and specifically agreed to adopt JSSS for a new Project, the Bidding Documents shall be amended to state this, in accordance with Annex 1.3 and Bids will be requested on this basis.

The Contract Agreement for the newly awarded Project shall include JSSS as a “further document” within the context of GC 1.1.1 [*The Contract*] and a hard copy of JSSS (current as at the Base Date of the Contract) shall be prepared and included with the documents comprised in the Contract for the Project.

Unless otherwise specifically agreed by JICA and the executing agency, JSSS shall not be applied to any on-going JICA funded Projects as at the date of publication of JSSS.

Where JSSS is already in use on any Project, by further agreement between JICA and the executing agency of any such on-going Project, future issues/revisions of JSSS may be applied after the date that such future issues/revisions are published on line subject to issue by the Engineer of an appropriate Variation under GC 13.1 [*Right to Vary*].

It is requested that the Employer, Engineer and Contractor will each print separate hard copies of the Contract issue of JSSS for their own reference and all of these entities shall fully inform their personnel, Subcontractor’s, sub-consultants and all other parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

It is the intention of JICA to formally update their separate “Standard Bidding Documents under Japanese ODA Loans” with instructions for the amendment of Bidding Documents to incorporate JSSS, however in the meantime relevant changes shall be made in accordance with Annex 1.3.

JSSS shall thereafter become an integral part of the Bidding Documents for particular Projects and requirements can be implemented immediately after the Executing Agency has made the required modification to the Bidding Documents, and thereafter JSSS shall be read and construed as a part of the Bid and therefore the Contract for that Project.

D. Compliance and General Obligations

JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

The Contractor shall ensure that all health and safety hazards and risks are properly identified, evaluated and controlled prior to commencement of any work. Only suitably qualified, fit and competent persons shall manage the health and safety activities.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract and shall not impose or imply any role or responsibility upon the Employer or the Employer’s Personnel for health and safety or management of the Works all of which is to be performed by the Contractor under the Contract for the Project.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly, JSSS shall not limit the Contractor to the scope contained herein.

These Preamble Notes and all Annexes to this Chapter 1: General Requirements shall be read and construed as integral parts of JSSS and therefore shall be deemed to constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero-Accident” in the execution of the Works by taking full responsibility for the health and safety management of the Works and adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration shall be submitted with the Bid, declaring the Bidder's commitments and obligations, in accordance with Annex 1.3.

1.2 Definitions, Abbreviations and Standards

1.2.1 For Definitions, abbreviations and standards contained throughout JSSS, refer to Annex 1.1.

1.2.2 The following further requirements relate generally to the use of the definitions contained in the Contract and in Annex 1.1:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (4) Any reference to academic qualification of Contractor's Personnel within this document and unless otherwise stated, shall mean a currently valid academic qualification demonstrated by a certified true diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (5) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such safety measures for Employer's Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (6) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.3 Application to Grant Aid and other Projects

- 1.3.1 JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to JSSS 1.2 [*Definitions, Abbreviations and Standards*] item (6).
- 1.3.2 JSSS shall apply equally to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 JSSS - Laws and Reference Standards

The Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

- 1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the requirements of JSSS shall apply and prevail where the particular standards of JSSS are considered by the Engineer to be higher than the technical requirements of the Laws of the Country without limiting the Contractor's legal duties and obligations under such Laws.
- 1.4.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.
- 1.4.4 JSSS is an abbreviated document and where specifically stated it requires specific compliance with the specified technical requirements of OSHA. As a general rule, where JSSS contains insufficient or no technical regulations or no detailed technical requirements then the related detailed technical regulations of OSHA as a "catch-all" or at least equivalent shall apply.

"At least equivalent" in this context shall mean the standards of an internationally recognised health and safety organisation or authority of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), as proposed by the Bidder in the Bid Stage Safety Plan.

This shall be evaluated by the Employer and agreed between the Parties prior to execution of the Contract Agreement. If in the opinion of the Employer, the standard proposed by the Bidder is not equivalent to OSHA, HSE or similar, then the Employer will choose to apply OSHA as the "catch-all".

Any subsequent requirements for particular reference standards shall be as proposed by the Contractor and given consent by the Engineer on the same basis.

- 1.4.5 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.
- 1.4.6 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws is superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.
- 1.4.7 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.
- 1.4.8 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

- 1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation, the requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.

1.5 Contractor's Safety Certification

- 1.5.1 Unless otherwise expressly stated in the Bidding Documents (refer to Annex 1.3), the Contractor shall be formally accredited for complying with the Occupational Health and Safety requirements of OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally accredited organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the Project implementation stage). The Contractor shall possess a current and valid certification at all times.
- 1.5.2 If accreditation is required by the Bidding Documents, an original or authorised true copy of the current certification shall be submitted as an attachment to Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form and this shall subsequently be included with the Contract.
- 1.5.3 The Contractor shall submit original or authorised true copies of subsequent annual renewals to the Engineer when same are due.

1.6 Contractor's Safety Plan

- 1.6.1 The Contractor shall be required to submit the Safety Plan principally at two stages:
- (1) With the Bid submission.
 - (2) Within twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, refer to GC 4.1 [*Contractor's General Obligations*], as amended by Annex 1.3.
- 1.6.2 The Safety Plan is intended to provide an accurate and comprehensive indication of what will be provided or performed by the Contractor to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works. The Contractor shall update and revise the Safety Plan at any stage to reflect actual requirements.
- 1.6.3 Submission of any Safety Plan and inclusion in the Bid or Contract or following any submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the Time for Completion of the Works.
- 1.6.4 For details of the Safety Plan at Bid stage, refer to Annex 1.2 [*Detail of Safety Plans in Bidding Documents*].
- 1.6.5 For details of the Safety Plan at commencement stage, refer to Annex 1.3, Clause 1.3.7 and GC 4.8. [*Contractor's Health and Safety Obligations*] as amended by Annex 1.3.
- 1.6.6 Further revision of Safety Plans

The Safety Plan (or parts of it) shall be revised or supplemented to suit changing circumstances or conditions at the Site or where considered necessary by the HSO or when required by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*], as amended by Annex 1.3.

The Safety Plan (if necessary supplemented with later particular safety plans) shall ensure that the Engineer, is made aware in writing of at least the following information for all parts of the Works, in any event not less than twenty-one (21) days before commencing any parts of the Works:

- (1) Work outline, work procedure and order of carrying out the work;
- (2) Number of Contractor's Personnel;

- (3) Safety management system and responsibility and authority of Contractor's Personnel;
 - (4) Risk assessments;
 - (5) Safety measures;
 - (6) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE);
 - (7) Safety education and training of the Contractor's Personnel and TBM;
 - (8) Teaching materials used in education, training and pre-operation TBM before work;
 - (9) Method of information sharing and communication among the Contractor's Personnel;
 - (10) Implementation and monitoring of measures for health and safety management;
 - (11) Reference technical safety standards;
 - (12) Temporary Works;
 - (13) Accident Response Plan;
 - (14) Health Care Plan;
 - (15) Fire Fighting Services; and
 - (16) Emergency Response Plan.
- 1.6.7 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.
- 1.6.8 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.6.9 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.
- 1.6.10 The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction.
- 1.6.11 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous works.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures – enhanced training and skills.
 - (5) Use of PPE.

1.7 Engineer's Safety Representative

- 1.7.1 On larger Projects with multiple contract packages and contractors, and if so stated in the Bidding Documents for those Projects, the Engineer may appoint an assistant under GC 3.2 [*Delegation by the Engineer*] to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with each contractor's Safety Plan.

In such case and by written notice served under GC 3.2 [Delegation by the Engineer], the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

- (1) Instructions requiring the Contractor's compliance with the Safety Plan.
- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
- (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.

1.7.2 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.

1.7.3 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC 3.3 [*Instructions of the Engineer*].

1.7.4 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.

1.7.5 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to Annex 1.3), it is to be assumed that the Engineer's representative at the Site shall act in this capacity.

1.8 Safety Compliance Instructions from the Engineer

1.8.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.

If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has taken corrective and preventive measures to ensure that no further risk exists.

If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated and proposed to the Engineer and implemented at the Site, to ensure that no such accident can reoccur.

1.8.2 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.9 Contractor's Health and Safety Officer at the Site.

1.9.1 Requirements for the HSO:

- (1) The Bidder shall name the HSO in the Bid and thence the same person shall be named in the Contract. The Contractor shall assign the named HSO upon the Site of the Works, on or before the Commencement Date.

- (2) If the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3, or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable replacement person to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor and not of a Subcontractor and unless otherwise stated in the Contract, the HSO shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with GC 6.7 [*Health and Safety*] as amended by Annex 1.3.
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate academic qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall be fluent in the language for communications stated in the Contract as defined in GC 1.4 [*Law and Language*]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.
- (7) Where there is no legal requirement under the Laws of the Country for academic qualification, the HSO, shall have appropriate academic qualification for health and safety, work experience in construction (minimum ten (10) years) and in health and safety management (minimum five (5) years which can be concurrent with construction experience) and two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (8) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (9) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (10) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable to ensure that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices, works or conditions exist; and
 - (b) If such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken.

Any site inspections attended by the HSO, may also include the attendance of the Engineer or his safety representative.

1.10 HSO - Scope of Duties

1.10.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.10.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan;
 - (d) Temporarily stopping or suspending the Works or any part of the Works following any accident or where the HSO discovers any unsafe conditions, unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan;
 - (e) Temporarily stopping or suspending the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.8;
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposal, reporting and consulting with the Engineer including when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of health and safety inspectors and assistants after obtaining the consent of the Engineer; and
 - (i) Consultation on safety management with the Employer's Personnel.
- (2) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents.
- (3) Assistance with selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability.
- (4) Planning and implementation of various training and education implementation plans.
- (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases.
- (6) Preparing regular internal and external reports on health and safety activities.
- (7) Hazard prediction activity.

1.11 Procedure for Resuming the Works

If the Engineer has issued an instruction under JSSS 1.8 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped or suspended the Works or any part of the Works in accordance with JSSS 1.10 [*HSO – Scope of Duties*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and cannot reoccur.
- (2) The Contractor shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.

- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.
- (5) The Contractor resumes the Works or part of the Works on the resumption date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.12 Contractor's Safety Management Activities

1.12.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.12.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

- (1) Overall Safety Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM;
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (c) Monitoring the implementation of the Safety Plan.
- (2) Safety Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:

5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline.

KIKEN YOCHI TRAINING (KYT) for hazard prediction training usually in TBM, where: K = kiken (hazard), Y = yochi (prediction) and T = training.
 - (c) Instruction and management of safety education and training.
 - (d) Instruction and management of all safety measures.
 - (e) Joint Site Safety Inspections

1.13 Joint Site Safety Inspections

1.13.1 In addition to the Contractor's own daily Site Safety Inspections, the Contractor shall conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.

- 1.13.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.13.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.13.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.14 Compliance Monitoring and Auditing

- 1.14.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured and that such compliance is monitored efficiently and transparently at all times, for which purpose the Contractor shall:
- (1) Create checklists for monitoring.
 - (2) Carry out regular and irregular inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions.
 - (4) Create files and safe storage systems for the monitoring records.
 - (5) Copy all relevant information to the Engineer as requested by the Engineer.
- 1.14.2 Safety inspections, are intended to search for risks and hazards, which present a threat to safe working.
- 1.14.3 The Contractor shall also carry out regular health and safety audits, to ascertain of the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.14.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the Works.
- 1.14.5 The audit team shall be headed by the Contractor's Representative and at least two other members of the Contractor's Personnel, preferably including an Operation Leader. The HSO may attend but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.14.6 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.
- 1.14.7 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems; they shall not replace the regular health and safety inspections.
- 1.14.8 The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.
- 1.14.9 The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.

- 1.14.10 A single prearranged annual audit is not recommended as it will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.
- 1.14.11 An audit report shall be prepared by the Contractor's Representative detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.
- 1.14.12 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.15 Proper Placement of Contractor's Personnel

- 1.15.1 To varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided. Only appropriate personnel shall be assigned, suitable and capable for the work tasks for which they are selected in terms of academic qualification, skill, experience and also in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct, workwear, tools and equipment, PPE and Safety equipment etc.
- 1.15.2 Construction labourers and manual workers shall never be assigned on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader of an appropriate grade to ensure that safe working practices are constantly applied.
- 1.15.3 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.15.4 The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.
- 1.15.5 The HSO shall countersign all such records to indicate his confirmation of the suitability of each member of the Contractor's Personnel prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.15.6 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Work experience, academic qualification and capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.15.7 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic qualification, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel comply with such requirements

1.15.8 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic qualification, experience and skills.

1.15.9 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.16 Safety Training Generally

1.16.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.16.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.16.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid and the Contractor shall bear all necessary Cost and expenses.

1.17 Safety Induction Training

1.17.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel upon the Site when they commence work on Site and also when they are scheduled to change work type, skill or location. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting any work.
- (5) Dangerous Works; General rules, locations, precautions and general working requirements. (Refer to separate requirements for special training).
- (6) PPE and other safety devices; use, handling and care.
- (7) Maintaining all areas of the Site in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment.
- (9) Fire Fighting; Actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

- 1.17.2 Practical on-Site demonstrations shall be included in every case and wherever possible.
- 1.17.3 The Contractor shall provide safety induction training to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed at the request of the Employer or Engineer.
- 1.17.4 Training Personnel
- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
 - (2) All trainers shall be fluent in the language of the Country.
 - (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic qualification, ability and experience, subject to receiving the advance consent of the Engineer.
- 1.17.5 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.18 Skill Training

- 1.18.1 The Contractor is reminded of his obligations under GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3) which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.
- 1.18.2 The Employer requires the Contractor where possible to employ local workers, in particular potential counterpart Operation Leaders for each trade and skill group and operation and in the spirit of cooperation, the Contractor is requested to train and to transfer skills to such persons largely through OJT with the assignment of foreign Contractor's Personnel as required by GC 6.9 as amended by Annex 1.3.
- 1.18.3 In addition, and to compliment this OJT, the Employer requires the Contractor to provide classroom-based training courses and to assign qualified instructors to provide basic skill training to develop the ability of local counterpart Operation Leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots. Examples of the scope of this skill training are included in Annex 1.5xxx. The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for information. For further details refer also to Annex 1.3.
- 1.18.4 It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall automatically be locally employed and trained for the purpose, this remains as the Contractor's choice in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel (including foreign personnel if necessary) who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

1.18.5 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3.

1.19 Dangerous Work

1.19.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.19.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training pursuant to the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.19.3 A specially trained Operation Leader shall always be assigned to work full-time with every team of workers engaged upon Dangerous Work.

1.19.4 A Spotter shall also be assigned to stand adjacent to any Dangerous Work areas, ensuring that all is in order and where necessary to raise the alarm if there is any suggestion of difficulty, accident or emergency.

1.19.5 The Contractor shall select, train and equip specialist rescue teams at the Site, who can be called upon immediately in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment.

1.20 Accident Response Plan

1.20.1 The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), in collaboration with local health authorities, to provide the following services and facilities and to make them available at all times at the Site and at any accommodation for Contractor's and Employer's Personnel:

- (1) Medical staff.
- (2) First aid facilities.
- (3) Sick bay.
- (4) Ambulance service.

1.20.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.

1.20.3 Such distant locations shall generally be defined as locations where the transfer time by road from the Site to a hospital with a suitably equipped and medically attended accident and emergency department, exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minutes period. Additional facilities should for example include:

- (1) Enhanced medical staff with qualified doctor(s).
- (2) Enhanced first aid and treatment facilities and staff.
- (3) Enhanced medical equipment, medical supplies, medicines and drugs.
- (4) Additional treatment and recovery rooms.

- (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty.
- 1.20.4 Where the transfer time by road can exceed one (1) hour, emergency air-ambulance facility shall also be considered in addition to the above.
- 1.20.5 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).
- 1.20.6 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue services and treatment using experienced and qualified medical staff and fully equipped facilities at the Site.
- 1.20.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.
- 1.20.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any local community, or third parties or neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.
- 1.20.9 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:
- (1) Medical staff to be assigned at the Site.
 - (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
 - (3) Medical Facilities on the Site together with description of equipment and consumables.
 - (4) Temporary water and power supply to maintain use during mains supply failure.
 - (5) Type of communication facilities and measures for emergency response.
 - (6) Deployment of appropriate first aid appliances, aids, instruments and medicines.
 - (7) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that GC 6.7 [*Health and Safety*] as amended by Annex 1.3, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management and provision expected at the Site.

It is also to be noted that Medical staff and facilities to be assigned at the Site, in addition to treatment for accidents are also required to provide welfare and hygiene requirements and assist with the prevention of epidemics. This shall also be adequately described in the Safety Plan.

1.21 Measures at the Time Accidents Occur

- 1.21.1 When an accident occurs, the Contractor shall immediately discontinue the work task and take all efforts to:
- (1) Safely locate and extract casualties.
 - (2) Provide first aid treatment at the Site.
 - (3) Provide other Accident Response measures
 - (4) Implement Secondary accident prevention activities, including:

- (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
- (b) Discontinuing construction work related to or in the vicinity of the accident; and
- (c) Implementing any further measures instructed by the Engineer.

1.21.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with GC 4.8 [*Contractor's Health and Safety Obligations*] as amended by Annex 1.3.
- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence and shall be in the format indicated in Annex 1.4.

1.21.3 For resumption of work procedures, refer to JSSS 1.11.

1.22 Fire Fighting Services

1.22.1 The Contractor is reminded of his obligations under GC 17.2.7 [*Care of the Works*].

1.22.2 Where the Site of the Works is situated some distance away from urban areas and where there may be a consequent lack of immediate availability of emergency fire and rescue services and facilities, or where such services and/or facilities are lacking in capability or standard of care, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel and Employer's Personnel, to compensate for any such lack of available public services or facilities.

1.22.3 Such distant locations shall generally be defined as locations where the road journey time by fire engine from an equipped and attended public fire station to the Site exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minute period. Such additional facilities may include:

- (1) An equipped fire engine based at the Site with qualified driver and crew on a full time twenty-four (24) hour, seven (7) day per week, stand-by duty.
- (2) Sufficient temporary water and power supply to maintain emergency use.
- (3) Enhanced fire protection equipment and facilities around the Site.

1.22.4 The Contractor shall ensure that persons are kept safely away from any fire and where practicable and safe, to limit the spread of fire.

1.22.5 The Contractor shall select, train and equip specialist emergency fire-fighting teams at the Site, who shall be called upon immediately in the event of any fire, to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated by fire and to provide suitable, specialist and appropriate first aid and medical treatment.

1.22.6 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).

1.22.7 For further information on this topic refer to Section 2.8 [*Fire Prevention*].

1.23 Emergency Response Plan

1.23.1 The Contractor shall take measures to keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure:

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent Landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.23.2 Without prejudice to GC 19 [*Force Majeure*], the Contractor shall take measures to prevent injury, damage and flooding from excessive rainfall and high winds consequent to hurricanes, typhoons, cyclones and tropical depressions directly affecting the Site(s) of the Works, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

Similarly, and where there is a risk of seismic or volcanic activity at the Site, the Contractor shall take measures to prevent Landslides and consequent injury, damage and flooding from such earthquakes and volcanic activity.

Such measures to be implemented (where applicable to the extent that advance notice and warnings permit) shall include:

- (1) Designing (or avoiding the use of) permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially cause Landslides with consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or tunnelling of sufficient strength, durability and suitability.
- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.23.3 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3.

1.23.4 Unless otherwise stated in the Specification for the Project, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This "plan" shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any (remaining) facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. This "plan" does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions given under the Contract.

1.23.5 The Emergency Response Plan, shall cover:

- (1) Evacuation plan.
- (2) Emergency contact system.
- (3) Procedures for assembly and locating assembly points and the like.
- (4) Use of existing and available medical and other related facilities.
- (5) Assisting with search and recovery.

The Emergency Response Plan shall be submitted as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.23.6 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.23.7 If required by the Specification, (refer to Annex 1.3), the Contractor shall set up an emergency search team (or teams) and train and equip same so that they are able to search, locate, extract and transfer any potential casualties to medical treatment facilities at the Site (if available) or otherwise assist as far as possible with removal to other available medical treatment facilities.

1.23.8 If required by the Specification, (refer to Annex 1.3), the Contractor shall conduct emergency response training based on the Emergency Response Plan at least six (6) months and including:

- (1) Training of the search and recovery team.
- (2) Training of the Site medical team to deal with likely trauma.
- (3) Training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.23.9 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.23.10 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit and as instructed by the Engineer.

1.24 Contractor's Safety Committee and Regular Safety Meetings

1.24.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.24.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.24.3 The HSO shall be the chairman of the Safety Committee.

1.24.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO;
 - (ii) Issues raised by the representative of Contractor's Personnel;
 - (iii) Issues raised by Subcontractors; and
 - (iv) Issues raised by others.
 - (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
 - (f) Safety instructions received from the Engineer;
 - (g) Items to be coordinated with police, fire department and other related organisations;
 - (h) Compliance and registration requirements under the Laws of the Country;

- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

1.24.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.25 Engineer's Regular Safety Meetings

1.25.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of the Contractor's Personnel.
 - (iv) Issues raised by Subcontractors.
 - (v) Issues raised by others.
 - (e) Status of resolution of previous problems;
 - (f) Items to be coordinated with police, fire department and other related organisations;
 - (g) Compliance and registration requirements under the Laws of the Country;
 - (h) Safety and health awards, media attention and the like; and
 - (i) Other matters.

1.25.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to the local office of JICA within the Country.

1.26 Project Safety Committee

- 1.26.1 On larger Projects with multiple contract packages and contractors and if so stated in the Bidding Documents for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.
- 1.26.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:
- (1) The Employer.
 - (2) The Engineer(s).
 - (3) The Contractor's Representative(s).
 - (4) Health and Safety Officers of all members.
- 1.26.3 The Chairman of the Safety Committee shall be the Employer.
- 1.26.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.
- 1.26.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.27 Health and Safety Coordination with Other Contractors

- 1.27.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] as amended by Annex 1.3 and GC 4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

- 1.27.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.27.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries and measures to prevent any reoccurrence;
 - (d) Status of resolution of previous problems;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like; and
 - (h) Other matters.

1.27.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.28 Safety Statistics

1.28.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.28.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.28.3 All data shall be in a format and content format and content to be approved by the Engineer.

1.28.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.28.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [*Safety Reports*].

1.29 Safety Reports

1.29.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.30 Health and Safety Records

1.30.1 The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (6) Work environment records and other records required by JSSS Chapter 2 and other parts of JSSS.

1.30.2 All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.30.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [*Safety Reports*].

1.31 Health and Safety Incentive Schemes

1.31.1 The Contractor shall consistently enforce legitimate work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

1.31.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

1.31.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.

- 1.31.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.31.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.31.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.31.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.31.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.29 [*Safety Reports*].

1.32 Safety Equipment, Contractor's Equipment and Temporary Works

- 1.32.1 Contractor's Equipment and Temporary Works to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, PPE, etc.) together with all components, systems, materials and equipment shall be fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.32.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are regularly inspected by him to ensure compliance with the foregoing by qualified Contractor's Personnel or where necessary, by authorised representatives of the manufacturer. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as "safe for use".

If the HSO ascertains at any time that any items are not so certified he shall immediately stop all use of that item, stop all work for which that item and any associated items is being used and suspend all such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

- 1.32.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.32.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to Annex 1.3), the Contractor shall import for sole use upon the Works (where not available in the Country):

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
- (2) New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

1.33 Health Matters

1.33.1 Further to the requirements of JSSS 1.20 [*Accident Response Plan*], the Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), in collaboration with local health authorities to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.33.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, the Contractor shall be responsible for providing additional health care services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.

1.33.3 Additional facilities should for example include:

- (1) Enhanced medical staff with qualified health care staff.
- (2) Enhanced healthcare treatment facilities, equipment, medical supplies (including anti-mosquito nets in malarial prone areas), medicines and drugs.
- (3) Additional treatment and recovery rooms.

1.33.4 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).

1.33.5 Occupational health care shall be provided by the Contractor and shall include for example:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Frequent or excessive manual handling of loads, stress and fatigue.
- (4) Suitability to work checks including eyesight, hearing and physical mobility and capability.

1.33.6 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.

- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational Healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for emergency response.

It is to be noted that GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management expected at the Site.

- 1.33.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.
- 1.33.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any third parties and neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.

1.34 Temporary Works

- 1.34.1 Unless otherwise stated in the Bidding Documents, Bidders are required to comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.
- 1.34.2 The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions all of which may be:
- (1) Designed to support excessively heavy loads.
 - (2) Of excessive height or unusual shape.
 - (3) Of difficult access.
 - (4) With unusual structural or aesthetic solution.
- 1.34.3 Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for the management of Temporary Works in addition to the design of Falsework (including Class A Falsework).
- 1.34.4 It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent.

- 1.34.5 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.34.6 Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:
- (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
 - (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework).
 - (3) Temporary Works Supervisors (TWS): responsible for the erection, safe use, maintenance, dismantling and removal of all Temporary Works in accordance with the design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:
 - (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works are ready to accept loading; and
 - (b) Confirmation that the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works.
- 1.34.7 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.
- 1.34.8 The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or personnel from an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or to be subsequently consented to by the Engineer.
- 1.34.9 Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS 1.9 [*Appointment of HSO*].
- 1.34.10 The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the construction of the Permanent Works as far as possible through finding solutions with less construction difficulty and risk.
- 1.34.11 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may be requested by the Engineer for his review. If the Engineer choose to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975:

2019. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

1.34.12 Where the Bidding Documents do not specifically require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
 - (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a formal "permit to load"; and
 - (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal "permit to dismantle" where necessary.

The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.34.13 Whether there is or is not any legal requirement under the Laws of the Country for academic qualification, all of the Contractor's Temporary Works specialist staff and any specialist Temporary Works Subcontractors shall have appropriate academic qualification for Temporary Works coordination, design or supervision as appropriate, work experience in construction and in Temporary Works design and whom the Contractor ascertains are qualified to perform the duties.

1.35 User Training

1.35.1 Prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.

1.35.2 The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.

1.35.3 User Training shall vary according to the scope of the Works however it shall generally cover the following:

- (1) Safe system and Plant use, operation and process control.
- (2) System and Plant maintenance and repair.
- (3) Training in use of all hardware and software packages.
- (4) Laboratory control (sampling and analysis) including operation laboratory equipment.

- (5) Recording and reporting.
 - (6) Emergency operation procedure.
 - (7) Maintenance management procedures.
 - (8) Inventory and store control systems.
 - (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;
 - (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.
- 1.35.4 Any changes to the above with further particular details of User Training shall be provided in the Technical Specification (refer to Annex 1.3).
- 1.35.5 The Contractor shall also be responsible for training some candidates (as selected by the Employer) to be future trainers, so that when qualified by the Contractor, such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.35.6 The Contractor shall not be responsible for paying expenses or salaries of candidates attending training.
- 1.35.7 User Training shall be on Site in the completed facilities, unless otherwise provided in the Technical Specification (refer to Annex 1.3).
- 1.35.8 The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose.
- 1.35.9 The Engineer may choose to send representatives to witness the training.
- 1.35.10 The number of Employer's staff to be trained shall be provided in the Technical Specification (refer to Annex 1.3).
- 1.35.11 All training shall be conducted in the language for communication or in English with translators provided by the Contractor.
- 1.35.12 The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and approval of the Engineer at least fifty-six (56) days before any training commences.
- 1.35.13 The training manuals and all technical literature shall be prepared in both the language for communications and also the English language.
- 1.35.14 The Contractor shall use visual media as much as possible throughout the training process.
- 1.35.15 Training shall cover both theoretical and practical operation and maintenance procedures on the Works, Plant and systems actually constructed and/or installed.
- 1.35.16 The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom are experienced in each specific aspect of the Plant and systems.

- 1.35.17 Factory User Training shall not be required unless otherwise provided in the Technical Specification (refer to Annex 1.3).
- 1.35.18 The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic and practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
- 1.35.19 The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.
- 1.35.20 Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems.
- 1.35.21 The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Technical Specification (refer to Annex 1.3). Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise provided in the Technical Specification (refer to Annex 1.3), overall training duration shall not be less than fifty-six (56) days.
- 1.35.22 Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
- 1.35.23 Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
- 1.35.24 The Contractor shall issue formal certificates, officially indicating that candidates are formally qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or to train future candidates as applicable.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of Chapter 1 shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6.7 [*Health and Safety*] as amended by Annex 1.3 and named by the Bidder in his Bid..
- (4) “**JSSS**” or “**JICA Standard Safety Specification**” means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified by the Bidding Documents for the Project.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor’s Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor’s “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

- (8) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.

- (9) “**Safety Plan**” means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.

“**Safety**” shall also mean “occupational health and safety” and “health and safety” all described as such in JSSS and other documents contained in the Contract.

A1.1.2. The following technical words and terms in JSSS shall have the definitions stated:

- (1) “**Accident Response**” shall mean the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.20 [*Accident Response Plan*].
- (2) “**Confined Spaces**” shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Dangerous Goods**” shall mean corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (4) “**Dangerous Work**” shall mean Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE.
- (5) “**Emergency Response**” shall mean the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.23 [*Emergency Response Plan*].
- (6) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (7) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (8) “**Hazardous Substances**” shall mean any substance, whether solid, liquid or gas, that may cause harm to health.
- (9) “**Hazardous Areas**” shall mean areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;

- (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation;
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.
- (10) “**Landslide**” means the movement of a mass of earth, rock or debris down a slope under the direct influence of gravity.
- (11) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Employer is continuing the operation and where the Contractor is required to perform Works.
- (12) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.
- (13) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.
- (14) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.
- (15) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.18 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (16) “**Spotter**” or “**Flagman**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, and for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*] A reference to either member in JSSS shall be deemed to include a reference to the other or both.
- (17) “**User Training**” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment

PW	Permanent Works
TBM	Tool Box Meetings
TW	Temporary Works

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ANSI	American National Standards Institute.
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive
ISO	International Organisation for Standardisation.
ILO	International Labor Organization
JIS	Japanese Industrial Standards.
ODA	Overseas Development Assistance
OJT	On Job Training

Annex 1.2: Content of Safety Plan at Bid Stage

A1.2.1. At Bid Stage the Safety Plan shall be provided with brief indicative content as an outline Safety Plan. This must however, cover each of the subjects listed in this Annex, demonstrate that the Bidder understands the requirements and it shall contain clear and sufficient detail to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If any parts are superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Reference "Catch-all" Technical Standards

Refer to JSSS 1.4 [*Laws and Reference Standards*]JSSS - Laws and Reference Standards

Confirm in the Bid Stage Safety Plan whether the standards of OSHA are to apply as the "catch-all" and if not, then the Bidder shall state the name of an equivalent internationally recognised standard for health and safety of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), in the Bid Stage Safety Plan.

(6) Bidder's Safety Certification and Implementation Policy

Refer to JSSS 1.5 [*Contractor's Safety Certification*]

Confirm which scheme the Bidder is accredited under.

Attach a valid original (or an authorised true copy) of the current certification under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation, with Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form.

(7) Temporary Works (TW)

Refer to JSSS 1.34 [*Temporary Works*]

A Safety Plan for TW listing the principal items, describing the content, and specifying the safety measures to be applied to ensure compliance with the requirements.

Include a description of the scope of work for the principal specialist persons to be employed in the management and design of TW and the arrangements for controlling risks arising from the design, erection, maintenance, dismantling and removal of TW.

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works ensuring that the requirements of GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, Sub-Subclauses (a) to (d) and any other requirements of the Contract are fulfilled.

(9) Safety Plan for the Permanent Works (PW)

A description of the general health and safety rules for the PW (e.g. limitation of smoking area, traveling speed on site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.) indicating measures for preventing accidents on the Site.

Particular Safety Plans for the various parts of the Works.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.19 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS 1.2.2 [*Definitions*]

(11) Safety Measures for Contractor's Equipment

Refer to JSSS 1.32 [*Safety Equipment, Contractor's Equipment and Temporary Works*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(12) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.31 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety and to reward for improvement.

(13) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(14) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.32 [*Safety Equipment, Contractor's Equipment and Temporary Works*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(15) Site Inspection Plan

A description of the methods for on-Site inspections by the HSO and frequency. The description shall also include the methods for reporting, recording and utilising results.

(16) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(17) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(18) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(19) Accident Response Plan

Refer to JSSS 1.20 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

(20) Health Care Plan

Refer to JSSS 1.33 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(21) Fire Fighting Services

Refer to JSSS 1.22 [*Fire Fighting Services*]

Details of the fire fighting services to be provided at the Site.

(22) Emergency Response Plan

Refer to JSSS 1.23 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(23) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS 1.12 [*Contractor's Safety Management Activities*])

(24) Safety Induction Training

Refer to JSSS 1.17 [*Safety Induction Training*])

An outline description of the proposed health and safety training plans, describing methods, facilities, participants, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(25) Skill Training

Refer to JSSS 1.18 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers.

(26) User Training

Refer to JSSS 1.35 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex 1.3: Required Amendments to “JICA Standard Bidding Documents”

[This Annex applies to Executing Agencies (Employers and their consultants) for use in their preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described below shall be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

JICA intend to re-issue the JSBD incorporating these amendments in detail at some date in the future however, in order that JSSS can be used without delay on particular Projects, for which such use of JSSS has become effective and where the parties have formally and specifically agreed to adopt JSSS for the Project, (as described in JSSS Chapter 1: Preamble Notes, Clauses B and C), the Bidding Documents for such particular Projects shall be drafted to take account of the following amendments in advance of the re-publication of the re-issued JSBD, in accordance with the following instructions.

Amendments to JSBD Part 1: Bidding Procedures

A1.3.1 Bidders Safety Accreditation:

If a Bidder is required to be accredited in accordance with JSSS 1.5 [*Contractor’s Safety Certification*], make the following changes:

- 1) Part 1 – Bidding Procedures, Section I: Instructions to Bidders:

Change the numbering of existing clause from 4.6 to 4.7 and add the following new clause numbered 4.6:

A Bidder and all members constituting the Bidder, shall have the required certifications and/or accreditations (if any) specified in the BDS.

- 2) Part 1 – Bidding Procedures, Section II: Bid Data Sheet:

Add a new item referenced to ITB 4.6, stating as follows:

Required Accreditations: OHSAS 18001, ISO 45001: 2018 or equivalent from an internationally recognised and approved organisation.

- 3) Part 1 – Bidding Procedures, Section III: Evaluation and Qualification Criteria:

Modify 2.1 Eligibility to include a new item numbered 2.1.4 with the following data:

<i>Factor:</i>	Accreditation
<i>Requirement:</i>	Safety Accreditation required by ITB 4.6 and JSSS/BDS
<i>Compliance Requirement:</i>	Single Entity and JV must meet the requirements.
<i>Documentation: Forms</i>	ELI – 1 and 2, with attachments

- 4) Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form:

Include an additional required attachment at the end of the bottom box of this form as follows:

4. Attached is an original or certified true-copy of

Safety Accreditation required by ITB 4.6 and JSSS/BDS

A1.3.2 Particular Safety Specification Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5.

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the Employer creating a sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply generally on JICA ODA Projects and consequently it will be necessary to specify particular safety requirements for each specific Project. Such particular safety requirements shall be carefully and precisely drafted and included in the relevant parts of the Bidding Documents as noted below for such Projects and covering for example the following²:

JSSS Reference	Particular Requirements to be stated
1.7 Engineer’s Safety Representative	<p><i>(On large Projects with multiple contract packages and contractors)</i> The Bidding Documents shall state if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.</p> <p>If no such requirements are stated in the Bidding Documents, it is to be assumed that the Engineer’s representative at the Site shall act in this capacity.</p>
1.9 Contractor’s Health and Safety Officer at the Site	<p><i>(On small Projects)</i> The Bidding Documents shall state if the HSO is NOT required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, the Contractor must assign a full-time dedicated HSO and if applicable other support personnel as required by JSSS.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p> <p>In addition to stating as above, if there is a requirement for the HSO, in Section IV. Bidding Forms, Bill of Quantities, Bill No.</p>

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later checklist Form JSSS/CPR

JSSS Reference	Particular Requirements to be stated
	<p>1: General Items, change item 106 description to “Provide HSO and staff” with unit rate for provision being shown as “month”.</p> <p>Quantity in months shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p>
1.18 Skill Training	<p>The Bidding Documents shall state whether classroom-based skill training of counterpart Operation Leaders is, or is not required. The Contractor shall be expected in any event to provide OJT via his senior personnel to local counterparts.</p> <p>If it is required, the Bidding Documents shall state how many candidates shall be selected, for which skill groups and for how long.</p> <p>This shall be determined by the scope and nature of the Works but JICA suggest a usual maximum teaching period of three months for each candidate with say ten (10) candidates selected for four (4) skill groups, i.e. forty (40) candidates in total.</p> <p>Classroom lessons will be part-time, at least one (1) weekday and two (2) weekday evenings per week. Candidates shall be paid their full wages and allowances during teaching time.</p> <p>The Contractor shall design syllabi to compliment the candidates’ skill group, their work and position at the Site. In addition to skill training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>The Contractor shall provide classrooms which can also be a part of their office facilities at the Site and provide the use of Training Facilities (herein defined as including furniture, equipment, computers, sample tools and working equipment, other teaching aids and the like). Unless otherwise stated in the Bidding Documents, teachers shall be qualified and experienced foreign Operation Leaders assigned by the Contractor to the Works.</p> <p>In addition to stating as above and if there is a requirement for such classroom-based skill training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of Operation Leaders as teachers: Unit: man-month Quantity: Total estimated man-months</p> <p>Use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>

JSSS Reference	Particular Requirements to be stated
1.20 Accident Response Plan	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 [Health and Safety] as amended by Annex 1.3, due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs. (4) Additional treatment and recovery rooms. (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty. (6) Emergency air-ambulance services. <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p> <p>Quantity in “months” shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.20.8 Community Medical Support	<p>The Employer, by agreement with JICA, may also wish to extend the provision of first aid, medical and health services and facilities at the Site for the use of any local community or third parties or neighbours, not connected with the Works but living directly adjacent to and potentially affected by the Works.</p> <p>If this becomes a requirement, the scope, extent and duration of such services and facilities shall be carefully described in the documents together with the responsibility (if any) and obligations of the Contractor (or Employer) to insure.</p>
1.22 Fire Fighting Services	<p>Without reducing the Contractor’s obligations, the Bidding Documents shall describe the particular scope of fire-fighting arrangement that are to be provided by the Contractor for the</p>

JSSS Reference	Particular Requirements to be stated
	<p>Works.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.23 Emergency Response Plan	<p>In higher risk areas, the Employer may require the Contractor to establish, train and maintain a specialist team at the Site to assist in the event of an emergency as described in JSSS 1.23. The Bidding Documents shall specify the size of the team and shall also specify in detail the equipment to be provided so that the Contractor is made fully aware and is able to assess the extent, risk and cost of the requirements.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p>
1.26 Project Safety Committee	<p><i>(On large Projects with multiple contract packages and contractors)</i> The Bidding Documents shall state if a Project Safety Committee is to be established for the Project and describe any further requirements.</p>
1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer’s Personnel]	<p>(JSSS 1.27.2) The Bidding Documents shall describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name. Also list any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify scope, working locations, access and timing as far as possible.</p>
1.33 Health Matters	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 [Health and Safety] due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs.

JSSS Reference	Particular Requirements to be stated
	<p>(4) Additional treatment and recovery rooms.</p> <p>(5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty.</p> <p>(6) Emergency air-ambulance services.</p> <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity being shown as “month”.</p> <p>Quantity in “months” shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.34 Temporary Works	<p>The Bidding Documents shall state if Bidders shall comply with BS5975: 2019 on the Works, for which purpose, reference shall be made to the basic criteria described in JSSS 1.34.</p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall include a listing and description of the required staff for the coordination, design and supervision of the Temporary.</p> <p>Examples of such staff include:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>The Bidding Documents shall require Bidders to name TWC and TWD in the Bid for which purpose reference is to be made to this Annex 1.3.</p> <p>If Bidders are NOT required to comply with BS5975: 2019, the Bidding Documents shall state that Bidders are to comply in any event with the requirements of JSSS 1.34.12 and submit full details in the Safety Plan.</p> <p>In addition, separate written justification shall be provided by the Executing Agency to JICA.</p>
1.35 User Training	<p>The Bidding Documents shall state whether User Training of Employer’s Personnel is required so that the Works or any part or</p>

JSSS Reference	Particular Requirements to be stated
	<p>Section thereof can be used, operated and maintained safely.</p> <p>If it is required, the Bidding Documents shall modify or add to the requirements of JSSS 1.35 and state the precise requirements including details of required training, numbers of candidates and duration of training.</p> <p>This shall be determined by the scope and nature of the Works and the number of users, management staff, operators, maintenance staff who will be engaged upon the Works.</p> <p>Lessons will be full-time.</p> <p>The Contractor shall design syllabi to compliment the training courses and in addition to user training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>In addition to stating as above and if there is a requirement for such user training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of teachers for user training Unit: man-month Quantity: Total estimated man-months</p> <p>Provision and use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>
Work in Operational Areas	<p>If the Works are to be executed in whole or in part in Operational Areas (as defined in Annex 1.1) this shall be stated and times of operation and conditions with any restrictions on the Contractor's working methods, times and arrangements shall be described in detail.</p> <p>The respective responsibilities for insurance, health and safety management, security, health and welfare facilities, etc., between the Employer and Contractor(s) shall be clearly described so that there is no doubt over what each party is to perform or provide. A copy of the Employer's working procedures, including their health and safety procedures shall be provided to Bidders for their study during the Bidding period.</p>
Temporary Perimeter Fencing:	<p>The Bidding Documents shall describe the required Perimeter fencing the showing the required extent, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p>

JSSS Reference	Particular Requirements to be stated
	<p>Permanent or temporary fencing within the Site shall be described and shown for example around hazardous areas or around operating plant areas.</p> <p>Gates barriers and other treatment at Site entrances shall be described together with any arrangements for communications, lighting and power supply.</p> <p>Requirements for security at the Site entrance and also around the site shall be described and whether this is to be provided by the Contractor or the Employer.</p>
<p>Offices, Accommodation and Related Amenities and Facilities</p>	<p>The Bidding Documents shall describe the required Employer's, Engineer's and Contractor's construction offices, staff accommodation and related amenities and facilities to be provided by the Contractor and describe the responsibility for the maintenance and repair of same. The Bidding Documents show the required scope, design, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p> <p>The Contractor's responsibility for potable water supply, water and power supply, waste water and sewage drainage and treatment shall be clearly described and shown.</p> <p>The extent of provision by the Contractor shall take due account of the nature and location of the Site and the condition of access thereto.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this Annex 1.3.

A1.3.3 Required Detail of Bid Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Copy and paste here the exact same final text of JSSS Annex 1.2 as ultimately agreed.

A1.3.4 Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder's Technical Proposal will include an assessment of the Bidder's technical capacity to mobilise key equipment and personnel for the

Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] *insert “and Safety Plan” in the third line after the words, “work methods”.*

Insert the following additional paragraph after the above paragraph:

“Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to JSSS Annex 1.3) of any principal Temporary Works coordination, design and supervision staff, in item 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in item 1.1.3 Equipment.”

A1.3.5 Health and Safety Officer and (if applicable) Temporary Works staff:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel.

Delete position 2 as stated and insert as follows:

2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

(if any of the following are a specified requirement of the Bidding Documents by reference to JSSS Annex 1.3):

3. Temporary Works Coordinator

4. Temporary Works Designer

5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

A1.3.6 Bidder’s Safety Declaration (Form JSSS/BSD):

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include “Form JSSS/BSD – Bidder’s Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer requires all Bidders to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign Form JSSS/BSD in addition to the Bidder’s Official Representative.

Please refer to end of this JSSS Annex1.3 for a copy of Form JSSS/BSD

Amendments to JSBD Part 3 - Particular Conditions of Contract

The following GC Sub-Clauses are to be modified as stated and as a consequence, future reference to these numbered Sub-Clauses, shall be to PC rather than GC.

A1.3.7 Submission and Review of Method Statements and Safety Plans:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause	GC	4.1	<i>Delete that part of the fifth paragraph of this Sub-</i>
-------------------	-----------	------------	---

Contractor's General Obligations	<p><i>Clause which states:</i></p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p><i>and in this place insert:</i></p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and/or Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.</p> <p>If the Engineer gives no such notice of non-compliance for the original Method Statement and/or Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted Method Statement and/or Safety Plan within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to complying with his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p>
---	---

A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 4.8 Contractor's Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none">(a) Comply with all applicable health and safety Laws of the Country, all standards and regulations,(b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this Contract Sub-Clause amendment;(c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6.7 [<i>Health and Safety</i>] as amended by this JSSS Annex 1.3;(d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed;(e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons;(f) Provide fencing, lighting, safe access, guarding and watching of:<ul style="list-style-type: none">(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property. <p>Within twenty-eight (twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan for the whole of the Works</p>
--	---

	<p>showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>This shall be based upon the Safety Plan issued at bid stage, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan to demonstrate the Contractor's intended compliance with the Contract.</p> <p>This document shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>This Safety Plan shall set out or refer to all the health and safety requirements:</p> <ul style="list-style-type: none">(a) that are stated in JSSS;(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and(c) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed. <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] as amended by Annex 1.3.</p> <p>The Safety plan shall be revised as necessary by the Contractor or the HSO or at the reasonable request of the Engineer and each revision shall be submitted promptly to the Engineer for his information.</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [<i>Progress Reports</i>] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p> <p>Compliance with the Safety Plan and JSSS shall not</p>
--	---

	relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents

[This form is to be prepared by the Executing Agency after completing the preparation of the PQ and Bidding Documents and submitted to JICA local office together with the Draft PQ and Bidding Documents when the concurrence of JICA is being requested for these documents]

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
1.5 Bidder's Safety Accreditation	<i>Required or not.</i>				Default is "Yes",
	<i>Documents fully amended</i>				Default is "Yes".
1.7 Engineer's Safety Representative	<i>Required to be assigned or not.</i>				Default is "No", not required except on large projects.
1.9 Contractor's Health and Safety Officer at the Site	<i>Required to be assigned full-time or not</i>				Default is "Yes", normally required to be full time
1.20 Accident Response Plan	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification" (unless local facilities are readily available)
1.20.8 Community Medical Support	<i>Required or not</i>				Default is "No", unless agreed earlier with JICA
1.22 Fire Fighting Services	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification" (unless local facilities are readily available)
1.23 Emergency Response Plan	<i>Full details of additional rescue facilities provided</i>				Default is "No", unless higher risk area
1.26 Project Safety Committee	<i>Required or not.</i>				Default is "No", not required except on large projects.
1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer's Personnel]	<i>Full details provided by Employer</i>				Default is "Yes". Full detail shall be provided in Technical Specification

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
1.33 Health Matters	<i>Additional facilities required at Site or not</i>				Default is “Yes”, full detail shall be provided in Technical Specification (unless local facilities are readily available)
1.34 Temporary Works	<i>Compliance with BS 5975:2019 required or not</i>				Default is “Yes”.
1.35 User Training	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
Work in Operational Areas	<i>Operational Areas exist on the Site?</i>				No default
	<i>If Operational Areas exist on the Site full detail provided?</i>				If applicable, default is “Yes”.
Temporary Perimeter Fencing:	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
Offices, Accommodation and Related Amenities and Facilities	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
A1.3.3 Required detail of Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.4 Bid Evaluation Requirements for Safety Plan	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.5 Health and Safety Officer and (if applicable)	<i>Bidding Documents amended to</i>				Default is “Yes”.

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
Temporary Works staff	<i>show the full requirements?</i>				
A1.3.6 Bidder's Safety Declaration (Form JSSS/BSD)	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.7 Submission and Review of Method Statements and Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.9 Change "accident prevention officer" to "Health and Safety Officer"	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.10 Revised Order of Priority of Documents	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.11 Raised Awareness of Available Resources on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.12 Assignment of Foreign Personnel on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.13 Listing of Documents to be included in the Contract Agreement	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".

Form JSSS/BSD - Bidder's Safety Declaration

[Refer to earlier Annex 1.3 item 1.3.6: This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumbering existing pages BF-56 and BF-57 appropriately and inserting suitable reference in the Table of Forms on page BF-1]

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture ("JV")]* (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

The Bidder declares, that if selected to undertake the Works in connection with the Contract, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer's Personnel and the Contractor's Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of the Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will import for sole use upon the Works (where not available in the Country):

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, academic qualification, experience and capability;
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel and Employer's Personnel in a language and vocabulary they can understand;
5. Keep accurate records of work-related injuries and illnesses;
6. Perform tests in the workplace, such as air sampling as required by JSSS;
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned;

9. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS;
10. Post injury and illness information and data where workers can see them;
11. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately; and
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Annex 1.5: Subjects of Skill Training Course for Counterpart Operation Leaders

Under FIDIC GC 6.9, “The Contractor’s Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations.”

This is a basic requirement and it is not incumbent upon the Employer to accept otherwise or to pay further for skill training of the Contractor’s Personnel to achieve this standard.

However please refer to JSSS 1.18 [Skill Training] which we have added to provide OJT and also classroom-based skill training for local counterpart Operation Leaders. The idea is that skill knowledge will be passed on by them in future.

We suggest that Skill Training shall be according to the scope of Works in the Project with the emphasis on direct OJT if necessary from foreign Operation Leaders.

This could/should be complimented by some classroom training, testing and even perhaps certifying in some way by the contractor.

However, the syllabus so far prepared is far too complicated and will be difficult to understand and apply.

Please can this be simplified.

Consideration must also be given to payment for this and it is necessary to include a simple payment mechanism in the Bidding Documents for such training otherwise it will not happen.

Please refer to Annex 1.3, where I have included some suggestions.

Annex 1.xxx: Dangerous or Harmful Operations

Recommend that this is not used

Dangerous Work has now been specifically defined (See Annex 1.1 definitions) and in a much wider sense and we recommend that this Annex 1.xxx is now not applicable and not necessary; it has little or no meaning.

Annex 1.xxx: Subjects of Special Education for Dangerous or Harmful Operations

Awaiting further information from NK

This is not recommended; the contractor is responsible for determining what is dangerous or not, not JICA and he is then responsible for whatever methods, education, choice of equipment etc. etc. to make certain that workers are able to work safely in such “dangerous” or “harmful operations”.

It is possible that if JICA state what education is required and if the contractor then chooses to employ an unqualified workforce but educates then as requested by JSSS and there is then an accident, JSSS/JICA could be adjudged in some way responsible.

We understood that this is not the intention of JSSS.

*When Contractor’s Personnel are engaged in any operations including potentially dangerous or harmful operations ALL personnel shall be selected by the contractor as qualified and experienced and given all necessary health, safety **and skill** training by the Contractor appropriate to the operations concerned. There is no advantage on giving examples to a contractor who should already know what is required, is responsible, is being paid for this and has insured for the consequences.*

Annex 1.xxx: Work Requiring the Assignment of an Operation Leader

Please refer to JSSS 1.19 and Annex 1 definition of Operation leaders.

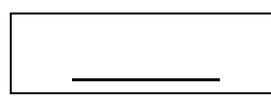

This Annex 1.xxx is not necessary, not recommended and potentiality creates a liability for JICA.

What if it excludes some work and there is an accident?

NO worker should be left to work on his own, ALL should be trained, skilled and guided and properly supervised.

Also, Operation Leaders are not by definition one type of skilled person, there are many different kinds each so qualified according to his skill group and trade.

Changes since last issue

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 5
Revision:
Date: 31/10/2019

Please note that the following two items are basic suggestions that require JICA further study and legal review with appropriate revision/correction. The disclaimer is based in part on the FIDIC Document.

NK are concerned that by proposing the use of JSSS to loan recipient governments, this may create a situation where JICA are seen as experts and that JSSS is perceived in some way as fully comprehensive and “superior”. NK fear that this may thereby create some obligation for JICA, possibly leading to a damage claim situation, where if an accident occurs, JSSS may not include sufficient or appropriate safety rules.

JICA have been advised of this requirement (see meeting 25 minutes) understand this advice and confirm in particular that the disclaimer will be reviewed by their legal officers.

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources and expresses its gratitude to such other sources and publications which include:

1) Japanese Acts, Orders and Ordinances including:

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure

Ordinance on Prevention of Anoxia, etc.

Ordinance on Prevention of Hazards Due to Dust

Explosives Control Act

Order for Enforcement of Explosives Control Act

Ordinance on Explosives Control

2) “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..

3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.

4) Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

DCI – Suggest that this is included as FIDIC second edition has been used (copied) in Annex 1.3 for PC/GC 4.8.

DCI: NK - Please confirm as above and insert further items as necessary to make this list comprehensive)

DCI: Can we please discuss later; has the exact text of the above documents been used as this is Acknowledgement? In English versions?

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, together with the Executing Agencies of its ODA Projects shall not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular Projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference or used in any way as a basis of any claim by a contractor against any employer or vice versa under any contract for the execution of any Works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PREAMBLE NOTES

A. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture ensuring human security and the maintenance of human rights as an essential and fundamental feature. The common objective shall be the achievement of a zero-accident rate, adopting the slogan of “Safety First” by creating a working environment where health and safety are of the highest priority.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”) and which JICA aim to be adopted for future selected Projects by the Executing Agencies for such Projects.

JSSS is one component of the JICA overall strategy to successfully achieve “Quality Infrastructure” under its assistance and development programmes. JICA are committed to pursuing the highest achievable levels of quality, safety, environmental protection, harmony and efficiency in performance, “Ensuring Human Security” whilst ensuring that “Appropriate Cost Sharing” is achieved.

B. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the ODA agreement for that Project is executed and where the parties to such ODA Agreement have formally and specifically agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on JICA’s web site shown below:

[http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____](http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/)

C. Incorporation of JSSS into Contracts

~~Reference to JSSS and incorporation of the required amendments into the Bidding Documents for any Project with reference to JSSS on the website shall be sufficient to deem incorporation of JSSS into the Bidding Documents for that Project.~~

Where the parties to an ODA Agreement have formally and specifically agreed to adopt JSSS for a new Project, the Bidding Documents shall be amended to state this, in accordance with Annex 1.3 and Bids will be requested on this basis.

The Contract Agreement for the newly awarded Project shall include JSSS as a “further document” within the context of GC 1.1.1 [The Contract] and a hard copy of JSSS (current as at the Base Date of the Contract) shall be prepared and included with the documents comprised in the Contract for the Project.

Unless otherwise specifically agreed by JICA and the executing agency, JSSS shall not be applied to any on-going JICA funded Projects as at the date of publication of JSSS.

Where JSSS is already in use on any Project, by further agreement between JICA and the executing agency of any such on-going Project, future issues/revisions of JSSS may be applied after the date that such future issues/revisions are published on line subject to issue by the Engineer of an appropriate Variation under GC 13.1 [Right to Vary].

It is requested that the Employer, Engineer and Contractor will each print separate hard copies of the Contract issue of JSSS for their own reference and all of these entities shall fully

inform their personnel, Subcontractor's, sub-consultants and all other parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

It is the intention of JICA to formally update their separate "Standard Bidding Documents under Japanese ODA Loans" with instructions for the amendment of Bidding Documents to incorporate JSSS, however in the meantime relevant changes shall be made in accordance with Annex 1.3.

JSSS shall thereafter become an integral part of the Bidding Documents for particular Projects and requirements can be implemented immediately after the Executing Agency has made the required modification to the Bidding Documents, and thereafter JSSS shall be read and construed as a part of the Bid and therefore the Contract for that Project.

D. Compliance and General Obligations

JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

The Contractor shall ensure that all health and safety hazards and risks are properly identified, evaluated and controlled prior to commencement of any work. Only suitably qualified, fit and competent persons shall manage the health and safety activities.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract and shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor under the Contract for the Project.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly, JSSS shall not limit the Contractor to the scope contained herein.

These Preamble Notes and all Annexes to this Chapter 1: General Requirements shall be read and construed as integral parts of JSSS and therefore shall be deemed to constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero-Accident” in the execution of the Works by taking full responsibility for the health and safety management of the Works and adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration shall be submitted with the Bid, declaring the Bidder's commitments and obligations, in accordance with Annex 1.3.

1.2 Definitions, Abbreviations and Standards

1.2.1 For Definitions, abbreviations and standards contained throughout JSSS, refer to Annex 1.1.

1.2.2 The following further requirements relate generally to the use of the definitions contained in the Contract and in Annex 1.1:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (4) Any reference to academic qualification of Contractor's Personnel within this document and unless otherwise stated, shall mean a currently valid academic qualification demonstrated by a certified true diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (5) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such safety measures for Employer's Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (6) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.3 Application to Grant Aid and other Projects

1.3.1 JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to **JSSS 1.2 (Definitions, Abbreviations and Standards) item (6)**.

1.3.2 **JSSS shall apply equally** to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 JSSS - Laws and Reference StandardsThe Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the requirements of JSSS shall apply and prevail where the particular standards of JSSS are considered by the Engineer to be higher than the technical requirements of the Laws of the Country without limiting the Contractor's legal duties and obligations under such Laws.

1.4.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.

1.4.4 JSSS is an abbreviated document and where specifically stated it requires specific compliance with the specified technical requirements of OSHA. As a general rule, where JSSS contains insufficient or no technical regulations or no detailed technical requirements then the related detailed technical regulations of OSHA as a "catch-all" or at least equivalent shall apply.

"At least equivalent" in this context shall mean the standards of an internationally recognised health and safety organisation or authority of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), as proposed by the Bidder in the Bid Stage Safety Plan.

This shall be evaluated by the Employer and agreed between the Parties prior to execution of the Contract Agreement. If in the opinion of the Employer, the standard proposed by the Bidder is not equivalent to OSHA, HSE or similar, then the Employer will choose to apply OSHA as the "catch-all".

Any subsequent requirements for particular reference standards shall be as proposed by the Contractor and given consent by the Engineer on the same basis.

1.4.5 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.

1.4.6 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws is superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.

1.4.7 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.

1.4.8 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation, the requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.

1.5 Contractor's Safety Certification

DCI: NK: Please confirm if this certification is required and if so is it to be a Bid Qualification requirement (we do recommend that it is). Refer to Annex 1.3 where this is made this optional

1.5.1 Unless otherwise expressly stated in the Bidding Documents (refer to Annex 1.3), the Contractor shall be formally accredited for complying with the Occupational Health and Safety requirements of OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally accredited organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the Project implementation stage). The Contractor shall possess a current and valid certification at all times.

1.5.2 If accreditation is required by the Bidding Documents, an original or authorised true copy of the current certification shall be submitted as an attachment to Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form and this shall subsequently be included with the Contract.

1.5.3 The Contractor shall submit original or authorised true copies of subsequent annual renewals to the Engineer when same are due.

1.6 Contractor's Safety Plan

1.6.1 The Contractor shall be required to submit the Safety Plan principally at two stages:

(1) With the Bid submission.

(2) Within twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, refer to GC 4.1 [Contractor's General Obligations], as amended by Annex 1.3.

1.6.2 The Safety Plan is intended to provide an accurate and comprehensive indication of what will be provided or performed by the Contractor to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works. The Contractor shall update and revise the Safety Plan at any stage to reflect actual requirements.

1.6.3 Submission of any Safety Plan and inclusion in the Bid or Contract or following any submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the Time for Completion of the Works.

1.6.4 For details of the Safety Plan at Bid stage, refer to Annex 1.2 [Detail of Safety Plans in Bidding Documents].

1.6.5 For details of the Safety Plan at commencement stage, refer to Annex 1.3, Clause 1.3.7 and GC 4.8, [Contractor's Health and Safety Obligations] as amended by Annex 1.3.

1.6.6 Further revision of Safety Plans

DCI: I recommend that automatic submission of "Particular Safety Plans" is confusing and not necessary and has no meaning when the following is considered in conjunction with revised Sub-Clause 4.8 (see Annex 1.3, Sub-Clause 1.3.7)

The Safety Plan (or parts of it) shall be revised or supplemented to suit changing circumstances or conditions at the Site or where considered necessary by the HSO or when required by the Engineer in accordance with GC 4.1 [Contractor's General Obligations], as amended by Annex 1.3.

The Safety Plan (if necessary supplemented with later particular safety plans) shall ensure that the Engineer, is made aware in writing of at least the following information for all parts of the Works, in any event not less than twenty-one (21) days before commencing any parts of the Works:

- (1) Work outline, work procedure and order of carrying out the work;
- (2) Number of Contractor's Personnel;
- (3) Safety management system and responsibility and authority of Contractor's Personnel;
- (4) Risk assessments;
- (5) Safety measures;
- (6) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE);
- (7) Safety education and training of the Contractor's Personnel and TBM;
- (8) Teaching materials used in education, training and pre-operation TBM before work;
- (9) Method of information sharing and communication among the Contractor's Personnel;
- (10) Implementation and monitoring of measures for health and safety management;
- (11) Reference technical safety standards;
- (12) Temporary Works;
- (13) Accident Response Plan;
- (14) Health Care Plan;
- (15) Fire Fighting Services; and
- (16) Emergency Response Plan.

1.6.7 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.6.8 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.6.9 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.

1.6.10 The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.
- (3) Determining measures of risk reduction.

1.6.11 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous works.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Engineering measures.
- (4) Management measures – enhanced training and skills.
- (5) Use of PPE.

1.7 Engineer's Safety Representative

1.7.1 On larger Projects with multiple contract packages and contractors, and if so stated in the Bidding Documents for those Projects, the Engineer may appoint an assistant under GC 3.2 [Delegation by the Engineer] to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with each contractor's Safety Plan.

In such case and by written notice served under GC 3.2 [Delegation by the Engineer], the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

- (1) Instructions requiring the Contractor's compliance with the Safety Plan.
- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
- (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.

1.7.2 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.

1.7.3 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC 3.3 [Instructions of the Engineer].

1.7.4 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.

1.7.5 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to Annex 1.3), it is to be assumed that the Engineer's representative at the Site shall act in this capacity.

1.8 Safety Compliance Instructions from the Engineer

1.8.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [Contractor's General Obligations] as amended by Annex 1.3, to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.

If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [Suspension of Work] until the Contractor has taken corrective and preventive measures to ensure that no further risk exists.

If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [Suspension of Work] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated and proposed to the Engineer and implemented at the Site, to ensure that no such accident can reoccur.

1.8.2 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.9 Contractor's Health and Safety Officer at the Site.

1.9.1 Requirements for the HSO:

- (1) The Bidder shall name the HSO in the Bid and thence the same person shall be named in the Contract. The Contractor shall assign the named HSO upon the Site of the Works on or before the Commencement Date.
- (2) If the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel] as amended by Annex 1.3, or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a another—suitable replacement person to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor and not of a Subcontractor or consultant and unless otherwise stated in the Contract, the HSO shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety] as amended by Annex 1.3.
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate academic qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall be fluent in the language for communications stated in the Contract as defined in GC 1.4 [Law and Language]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.
- (7) Where there is no legal requirement under the Laws of the Country for academic qualification, the HSO shall have appropriate academic qualification for health and safety, work experience in construction (minimum ten (10) years) and in health and safety management (minimum five (5) years which can be concurrent with construction experience) and two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (8) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (9) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (10) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable to ensure that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices, works or conditions exist; and

- (b) If such unsafe practices, **works or** conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to temporarily stop all construction activity on that part of the Works until such **corrective** action has been taken.

Any site inspections attended by the HSO, may also include the **attendance of the Engineer or his safety representative.**

1.10 HSO - Scope of Duties

1.10.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.10.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) **Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan;**
 - (d) **Temporarily stopping or suspending the Works or any part of the Works following any accident or where the HSO discovers any unsafe conditions, unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan;**
 - (e) **Temporarily stopping or suspending the Works or any parts of the Works where the Engineer so instructs in accordance with **JSSS 1.8;****
 - (f) **Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;**
 - (g) **Preparing proposal, reporting and consulting with the Engineer including when an accident occurs or any risk or hazardous situation is likely;**
 - (h) **Appointment of health and safety inspectors and assistants after obtaining the consent of the Engineer; and**
 - (i) **Consultation on safety management with the Employer's Personnel.**
- (2) Instructing the Contractor's **Personnel to take** improvement measures for maintaining health and safety and preventing accidents.
- (3) **Assistance with selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability.**
- (4) Planning and implementation of various training and education implementation plans.
- (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases.
- (6) Preparing regular internal and external reports on health and safety activities.
- (7) Hazard prediction activity.

1.11 Procedure for Resuming the Works

If the Engineer has issued an instruction under JSSS 1.8 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped or suspended the Works or any part of the Works in accordance with JSSS 1.10 [*HSO – Scope of Duties*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and cannot reoccur.
- (2) The Contractor shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.
- (5) The Contractor resumes the Works or part of the Works on the resumption date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.12 Contractor's Safety Management Activities

1.12.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.12.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

- (1) Overall **Safety** Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM;
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (c) Monitoring the implementation of the Safety Plan.
- (2) **Safety** Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:

5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline.

KIKEN YOCHI TRAINING (KYT) for hazard prediction training usually in TBM, where: K = kiken (hazard), Y = yochi (prediction) and T = training.

- (c) Instruction and management of safety education and training.
- (d) Instruction and management of all safety measures.
- (e) Joint Site Safety Inspections

1.13 Joint Site Safety Inspections

- 1.13.1 In addition to the Contractor's own daily Site Safety Inspections, the Contractor shall conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.
- 1.13.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.13.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.13.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer **within seven (7) days** after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.14 Compliance Monitoring and Auditing

- 1.14.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured and that such compliance is monitored efficiently and transparently at all times, for which purpose the Contractor shall:
- (1) Create checklists for monitoring.
 - (2) Carry out regular and irregular inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions.
 - (4) Create files and safe storage systems for the monitoring records.
 - (5) Copy all relevant information to the Engineer as requested by the Engineer.
- 1.14.2 Safety inspections, are intended to search for risks and hazards, which present a threat to safe working.
- 1.14.3 The Contractor shall also carry out regular health and safety audits, to ascertain of the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.14.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the Works.
- 1.14.5 The audit team shall be headed by the Contractor's Representative and at least two other members of the Contractor's Personnel, preferably including an Operation Leader. The HSO may attend but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.14.6 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

1.14.7 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems; they shall not replace the regular health and safety inspections.

1.14.8 The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

1.14.9 The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.

1.14.10 A single prearranged annual audit is not recommended as it will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

1.14.11 An audit report shall be prepared by the Contractor's Representative detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

1.14.12 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.15 Proper Placement of Contractor's Personnel

1.15.1 To varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided. Only appropriate personnel shall be assigned, suitable and capable for the work tasks for which they are selected in terms of academic qualification, skill, experience and also in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct, workwear, tools and equipment, PPE and Safety equipment etc.

1.15.2 Construction labourers and manual workers shall never be assigned on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader of an appropriate grade to ensure that safe working practices are constantly applied.

1.15.3 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.

1.15.4 The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

1.15.5 The HSO shall countersign all such records to indicate his confirmation of the suitability of each member of the Contractor's Personnel prior to their placement. These records shall be made available for inspection by the Engineer.

1.15.6 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:

- (1) Work content and work environment.
- (2) Work experience, academic qualification and capability.
- (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
- (4) Allocation of an achievable and safe work volume and time.

- (5) Allocation to older workers and also to workers under 18 in compliance with GC 6.21 [Child Labour].

1.15.7 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic qualification, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel comply with such requirements

1.15.8 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic qualification, experience and skills.

1.15.9 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.16 Safety Training Generally

1.16.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.16.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.16.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid and the Contractor shall bear all necessary Cost and expenses.

1.17 Safety Induction Training

1.17.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel upon the Site when they commence work on Site and also when they are scheduled to change work type, skill or location. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting any work.
- (5) Dangerous Works; General rules, locations, precautions and general working requirements. (Refer to separate requirements for special training).
- (6) PPE and other safety devices; use, handling and care.
- (7) Maintaining all areas of the Site in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment.
- (9) Fire Fighting; Actions, precautions and control.

- (10) Health and safety rules.
- (11) Causes and prevention of diseases that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.17.2 Practical on-Site demonstrations shall be included in every case and wherever possible.

1.17.3 The Contractor shall provide safety induction training to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed at the request of the Employer or Engineer.

1.17.4 Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the Country.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic qualification, ability and experience, subject to receiving the advance consent of the Engineer.

1.17.5 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.18 Skill Training

1.18.1 The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] as amended by Annex 1.3 which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.

1.18.2 The Employer requires the Contractor where possible to employ local workers, in particular potential counterpart Operation Leaders for each trade and skill group and operation and in the spirit of cooperation, the Contractor is requested to train and to transfer skills to such persons largely through OJT with the assignment of foreign Contractor's Personnel as required by GC 6.9 as amended by Annex 1.3.

In addition, and to compliment this OJT, the Employer requires the Contractor to provide classroom-based training courses and to assign qualified instructors to provide basic skill training to develop the ability of local counterpart Operation Leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots. Examples of the scope of this skill training are included in Annex 1.5xxx. The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for information. For further details refer also to Annex 1.3.

I suggest that the emphasis needs to be on OJT, specific syllabus of classroom training is determined by the scope of the projects therefore finite details of education are not considered necessary, suggest that general examples of requirements will be sufficient and better.

1.18.3 It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall automatically be locally employed and trained for the purpose, this remains as the Contractor's choice in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel (including foreign personnel if necessary) who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

1.18.4 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel] as amended by Annex 1.3.

1.19 Dangerous Work

1.19.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.19.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training pursuant to the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.19.3 A specially trained Operation Leader shall always be assigned to work full-time with every team of workers engaged upon Dangerous Work.

1.19.4 A Spotter shall also be assigned to stand adjacent to any Dangerous Work areas, ensuring that all is in order and where necessary to raise the alarm if there is any suggestion of difficulty, accident or emergency.

1.19.5 The Contractor shall select, train and equip specialist rescue teams at the Site, who can be called upon immediately in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment.

1.20 Accident Response Plan

1.20.1 The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] (as amended by Annex 1.3), in collaboration with local health authorities, to provide the following services and facilities and to make them available at all times at the Site and at any accommodation for Contractor's and Employer's Personnel:

- (1) Medical staff.
- (2) First aid facilities.
- (3) Sick bay.
- (4) Ambulance service.

1.20.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.

1.20.3 Such distant locations shall generally be defined as locations where the transfer time by road from the Site to a hospital with a suitably equipped and medically attended accident and emergency department, exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minutes period. Additional facilities should for example include:

- (1) Enhanced medical staff with qualified doctor(s).
- (2) Enhanced first aid and treatment facilities and staff.
- (3) Enhanced medical equipment, medical supplies, medicines and drugs.
- (4) Additional treatment and recovery rooms.
- (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty.

1.20.4 Where the transfer time by road can exceed one (1) hour, emergency air-ambulance facility shall also be considered in addition to the above.

1.20.5 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).

1.20.6 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue services and treatment using experienced and qualified medical staff and fully equipped facilities at the Site.

1.20.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.

1.20.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any local community, or third parties or neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.

NK/JICA please consider if above is required. See annex 1.3 where I have included optional items for this and Health Matters also and with payment.

1.20.9 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan including descriptions and where necessary details or quantities of:

- (1) Medical staff to be assigned at the Site.
- (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
- (3) Medical Facilities on the Site together with description of equipment and consumables.
- (4) Temporary water and power supply to maintain use during mains supply failure.
- (5) Type of communication facilities and measures for emergency response.
- (6) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (7) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that GC 6.7 [Health and Safety] as amended by Annex 1.3, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management and provision expected at the Site.

It is also to be noted that Medical staff and facilities to be assigned at the Site, in addition to treatment for accidents are also required to provide welfare and hygiene requirements and assist with the prevention of epidemics. This shall also be adequately described in the Safety Plan.

1.21 Measures at the Time Accidents Occur

1.21.1 When an accident occurs, the Contractor shall immediately discontinue the work task and take all efforts to:

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Provide other Accident Response measures
- (4) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.21.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with GC 4.8 [Contractor's Health and Safety Obligations] as amended by Annex 1.3.

DCI: NK, Please refer to Annex 1.4 where I have prepared and included an Accident Report based on your sample.

- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence and shall be in the format indicated in Annex 1.4.

1.21.3 For resumption of work procedures, refer to JSSS 1.11.

1.22 Fire Fighting Services

1.22.1 The Contractor is reminded of his obligations under GC 17.2.7 [Care of the Works].

1.22.2 Where the Site of the Works is situated some distance away from urban areas and where there may be a consequent lack of immediate availability of emergency fire and rescue services and facilities, or where such services and/or facilities are lacking in capability or standard of care, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel and Employer's Personnel, to compensate for any such lack of available public services or facilities.

1.22.3 Such distant locations shall generally be defined as locations where the road journey time by fire engine from an equipped and attended public fire station to the Site exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minute period. Such additional facilities may include:

- (1) An equipped fire engine based at the Site with qualified driver and crew on a full time twenty-four (24) hour, seven (7) day per week, stand-by duty.
- (2) Sufficient temporary water and power supply to maintain emergency use.

(3) Enhanced fire protection equipment and facilities around the Site.

1.22.4 The Contractor shall ensure that persons are kept safely away from any fire and where practicable and safe, to limit the spread of fire.

1.22.5 The Contractor shall select, train and equip specialist emergency fire-fighting teams at the Site, who shall be called upon immediately in the event of any fire, to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated by fire and to provide suitable, specialist and appropriate first aid and medical treatment.

1.22.6 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).

1.22.7 For further information on this topic refer to Section 2.8 [Fire Prevention].

1.23 Emergency Response Plan

1.23.1 The Contractor shall take measures to keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure:

(1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.

(2) The safety and stability of the Works and Goods.

(3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent Landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.23.2 Without prejudice to GC 19 [Force Majeure], the Contractor shall take measures to prevent injury, damage and flooding from excessive rainfall and high winds consequent to hurricanes, typhoons, cyclones and tropical depressions directly affecting the Site(s) of the Works, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

Similarly, and where there is a risk of seismic or volcanic activity at the Site, the Contractor shall take measures to prevent Landslides and consequent injury, damage and flooding from such earthquakes and volcanic activity.

Such measures to be implemented (where applicable to the extent that advance notice and warnings permit) shall include:

(1) Designing (or avoiding the use of) permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially cause Landslides with consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

(2) Provision of temporary support to all sides and soffits of excavations or tunnelling of sufficient strength, durability and suitability.

(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.23.3 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3.

1.23.4 Unless otherwise stated in the Specification for the Project, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This “plan” shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any (remaining) facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. This “plan” does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions given under the Contract.

1.23.5 The Emergency Response Plan, shall cover:

- (1) Evacuation plan.
- (2) Emergency contact system.
- (3) Procedures for assembly and locating assembly points and the like.
- (4) Use of existing and available medical and other related facilities.
- (5) Assisting with search and recovery.

The Emergency Response Plan shall be submitted as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.23.6 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.23.7 If required by the Specification, (refer to Annex 1.3), the Contractor shall set up an emergency search team (or teams) and train and equip same so that they are able to search, locate, extract and transfer any potential casualties to medical treatment facilities at the Site (if available) or otherwise assist as far as possible with removal to other available medical treatment facilities.

1.23.8 If required by the Specification, (refer to Annex 1.3), the Contractor shall conduct emergency response training based on the Emergency Response Plan at least six (6) months and including:

- (1) Training of the search and recovery team.
- (2) Training of the Site medical team to deal with likely trauma.
- (3) Training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.23.9 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.23.10 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit and as instructed by the Engineer.

1.24 Contractor's Safety Committee and Regular Safety Meetings

1.24.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.24.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.24.3 The HSO shall be the chairman of the Safety Committee.

1.24.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:

- (i) Site inspections by HSO;
- (ii) Issues raised by the representative of Contractor's Personnel;
- (iii) Issues raised by Subcontractors; and
- (iv) Issues raised by others.
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration **requirements** under the Laws of the Country;
- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

1.24.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.25 Engineer's Regular Safety Meetings

1.25.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of the Contractor's Personnel.
 - (iv) Issues raised by Subcontractors.
 - (v) Issues raised by others.
 - (e) Status of resolution of previous problems;
 - (f) Items to be coordinated with police, fire department and other related organisations;
 - (g) Compliance and registration **requirements** under the Laws of the Country;
 - (h) Safety and health awards, media attention and the like; and

- (i) Other matters.

1.25.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to the local office of JICA within the Country.

1.26 Project Safety Committee

1.26.1 On larger Projects with multiple contract packages and contractors and if so stated in the Bidding Documents for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.26.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.26.3 The Chairman of the Safety Committee shall be the Employer.

1.26.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.26.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.27 Health and Safety Coordination with Other Contractors

1.27.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] as amended by Annex 1.3 and GC 4.18 [*Protection of the Environment*]

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.27.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.27.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries and measures to prevent any reoccurrence;
 - (d) Status of resolution of previous problems;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like; and
 - (h) Other matters.

1.27.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.28 Safety Statistics

1.28.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.28.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.

- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.28.3 All data shall be in a format and content format and content to be approved by the Engineer.

1.28.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.28.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [Safety Reports].

1.29 Safety Reports

1.29.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [Progress Reports].

1.30 Health and Safety Records

1.30.1 The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (6) Work environment records and other records required by JSSS Chapter 2 and other parts of JSSS.

1.30.2 All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.30.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [Safety Reports].

1.31 Health and Safety Incentive Schemes

- 1.31.1 The Contractor shall consistently enforce legitimate work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.
- 1.31.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.31.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.31.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.31.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.31.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.31.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.31.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.29 [*Safety Reports*].

1.32 Safety Equipment, Contractor's Equipment and Temporary Works

- 1.32.1 Contractor's Equipment and Temporary Works to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, PPE, etc.) together with all components, systems, materials and equipment shall be fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.32.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are regularly inspected by him to ensure compliance with the foregoing by qualified Contractor's Personnel or where necessary, by authorised representatives of the manufacturer. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as "safe for use".

If the HSO ascertains at any time that any items are not so certified he shall immediately stop all use of that item, stop all work for which that item and any associated items is being used and suspend all such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.32.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.32.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to Annex 1.3), the Contractor shall import for sole use upon the Works (where not available in the Country):

(1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and

(2) New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

1.33 Health Matters

1.33.1 Further to the requirements of JSSS 1.20 [*Accident Response Plan*], the Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), in collaboration with local health authorities to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.33.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, the Contractor shall be responsible for providing additional health care services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.

1.33.3 Additional facilities should for example include:

(1) Enhanced medical staff with qualified health care staff.

(2) Enhanced healthcare treatment facilities, equipment, medical supplies (including anti-mosquito nets in malarial prone areas), medicines and drugs.

(3) Additional treatment and recovery rooms.

1.33.4 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).

1.33.5 Occupational health care shall be provided by the Contractor and shall include for example:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [Working Environment]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Frequent or excessive manual handling of loads, stress and fatigue.
- (4) Suitability to work checks including eyesight, hearing and physical mobility and capability.

1.33.6 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational Healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for emergency response.

It is to be noted that GC 6.7 [Health and Safety] (as amended by Annex 1.3), lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management expected at the Site.

1.33.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.

1.33.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any third parties and neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.

NK/JICA please consider if above is required. See Health Matters also

1.34 Temporary Works

1.34.1 Unless otherwise stated in the Bidding Documents, Bidders are required to comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

1.34.2 The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions all of which may be:

- (1) Designed to support excessively heavy loads.
- (2) Of excessive height or unusual shape.

- (3) Of difficult access.
 - (4) With unusual structural or aesthetic solution.
- 1.34.3 Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for the management of Temporary Works in addition to the design of Falsework (including Class A Falsework).
- 1.34.4 It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent.
- 1.34.5 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.34.6 Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:
- (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
 - (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework).
 - (3) Temporary Works Supervisors (TWS): responsible for the erection, safe use, maintenance, dismantling and removal of all Temporary Works in accordance with the design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:
 - (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works and ready to accept loading; and
 - (b) Confirmation that the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works.
- 1.34.7 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.
- 1.34.8 The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or personnel from an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or to be subsequently consented to by the Engineer.
- 1.34.9** Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS 1.9 [Appointment of HSO].
- 1.34.10** The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the construction of the Permanent Works as far as possible through finding solutions with less construction difficulty and risk.

1.34.11 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may be requested by the Engineer for his review. If the Engineer choose to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975: 2019. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

1.34.12 Where the Bidding Documents do not specifically require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
 - (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a formal "permit to load"; and
 - (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal "permit to dismantle" where necessary.

The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.34.13 Whether there is or is not any legal requirement under the Laws of the Country for academic qualification, all of the Contractor's Temporary Works specialist staff and any specialist Temporary Works Subcontractors shall have appropriate academic qualification for Temporary Works coordination, design or supervision as appropriate, work experience in construction and in Temporary Works design and whom the Contractor ascertains are qualified to perform the duties.

1.35 User Training

1.35.1 Prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.

1.35.2 The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.

1.35.3 User Training shall vary according to the scope of the Works however it shall generally cover the following:

- (1) Safe system and Plant use, operation and process control.
- (2) System and Plant maintenance and repair.
- (3) Training in use of all hardware and software packages.
- (4) Laboratory control (sampling and analysis) including operation laboratory equipment.
- (5) Recording and reporting.
- (6) Emergency operation procedure.
- (7) Maintenance management procedures.
- (8) Inventory and store control systems.
- (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;
 - (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.

1.35.4 Any changes to the above with further particular details of User Training shall be provided in the Technical Specification (refer to Annex 1.3).

1.35.5 The Contractor shall also be responsible for training some candidates (as selected by the Employer) to be future trainers, so that when qualified by the Contractor, such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.

1.35.6 The Contractor shall not be responsible for paying expenses or salaries of candidates attending training.

1.35.1 User Training shall be on Site in the completed facilities, unless otherwise provided in the Technical Specification (refer to Annex 1.3).

1.35.7 The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose.

1.35.2 The Engineer may choose to send representatives to witness the training.

1.35.3 The number of Employer's staff to be trained shall be provided in the Technical Specification (refer to Annex 1.3).

- 1.35.4 All training shall be conducted in the language for communication or in English with translators provided by the Contractor.
- 1.35.5 The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and approval of the Engineer at least fifty-six (56) days before any training commences.
- 1.35.6 The training manuals and all technical literature shall be prepared in both the language for communications and also the English language.
- 1.35.7 The Contractor shall use visual media as much as possible throughout the training process.
- 1.35.8 Training shall cover both theoretical and practical operation and maintenance procedures on the Works, Plant and systems actually constructed and/or installed.
- 1.35.9 The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom are experienced in each specific aspect of the Plant and systems.
- 1.35.10 Factory User Training shall not be required unless otherwise provided in the Technical Specification (refer to Annex 1.3).
- 1.35.11 The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic and practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
- 1.35.12 The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.
- 1.35.13 Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems.
- 1.35.14 The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Technical Specification (refer to Annex 1.3). Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise provided in the Technical Specification (refer to Annex 1.3), overall training duration shall not be less than fifty-six (56) days.
- 1.35.15 Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
- 1.35.16 Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
- 1.35.17 The Contractor shall issue formal certificates, officially indicating that candidates are formally qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or to train future candidates as applicable.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of Chapter 1 shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6.7 [*Health and Safety*] as amended by Annex 1.3 and named by the Bidder in his Bid.
- (4) “**JSSS**” or “**JICA Standard Safety Specification**” means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified by the Bidding Documents for the Project.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, external and internal training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor’s Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor’s “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

- (8) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.

- (9) **“Safety Plan”** means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in **GC 4.1 [Contractor’s General Obligations]** as amended by Annex 1.3.

“Safety” shall also mean “occupational health and safety” and “health and safety” all described as such in JSSS and other documents contained in the Contract. ~~The phrase “health and safety” shall be construed as covering “occupational health and safety”.~~

A1.1.2. The following technical words and terms in JSSS shall have the definitions stated:

- (1) **“Accident Response”** shall mean the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in **JSSS 1.20 [Accident Response Plan]**.

- (2) **“Confined Spaces”** shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.

- (3) **“Dangerous Goods”** shall mean corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.

- (4) **“Dangerous Work”** shall mean Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, requiring the application of special skills, safety equipment, safety measures and PPE.

- (5) **“Emergency Response”** shall mean the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in **JSSS 1.23 [Emergency Response Plan]**.

- (6) **“Falsework”** means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.

- (7) **“Formwork”** means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.

- (8) **“Hazardous Substances”** shall mean any substance, whether solid, liquid or gas, that may cause harm to health.

- (9) **“Hazardous Areas”** shall mean areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:

- (a) **Zone 0:** An area in which an explosive gas atmosphere is present continuously or for long periods;

- (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation;
- (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.
- (10) “**Landslide**” means the movement of a mass of earth, rock or debris down a slope under the direct influence of gravity.
- (11) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Employer is continuing the operation and where the Contractor is required to perform Works.
- (12) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.
- (13) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.
- (14) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.
- (15) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.18 [Skill Training]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (16) “**Spotter**” or “**Flagman**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, and for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like]. A reference to either member in JSSS shall be deemed to include a reference to the other or both.
- (17) “**User Training**” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment

PW Permanent Works

TBM Tool Box Meetings

TW Temporary Works

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ANSI American National Standards Institute.

ASTM American Society for Testing and Materials.

BS British Standard.

BS EN British Standard European Norm.

HSE UK Health and Safety Executive

ISO International Organisation for Standardisation.

ILO International Labor Organization

JIS Japanese Industrial Standards.

ODA Overseas Development Assistance

OJT On Job Training

Annex 1.2: Content of Safety Plan at Bid Stage

Further MD coordination with Annex 1.3 may be required where this is repeated

Coordination is also required in future for all other Technical Sections 2 onwards (e.g. health) where further requirements may make revision here necessary.

A1.2.1. At Bid Stage the Safety Plan shall be provided with brief indicative content as an outline Safety Plan. This must however, cover each of the subjects listed in this Annex, demonstrate that the Bidder understands the requirements and it shall contain clear and sufficient detail to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If any parts are superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Reference "Catch-all" Technical Standards

Refer to JSSS 1.4 [Laws and Reference Standards]

Confirm in the Bid Stage Safety Plan whether the standards of OSHA are to apply as the "catch-all" and if not, then the Bidder shall state the name of an equivalent internationally recognised standard for health and safety of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), in the Bid Stage Safety Plan.

(6) Bidder's Safety Certification and Implementation Policy

NK see query in JSSS 1.5 and confirm if this certification is required as a Bid Qualification requirement (we do recommend that it is). It is optional under Annex 1.3. Clause 1.3.1

Refer to JSSS 1.5 [Contractor's Safety Certification]

Confirm which scheme the Bidder is accredited under.

Attach a valid original (or an authorised true copy) of the current certification under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation, with Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form.

(7) Temporary Works (TW)

Refer to JSSS 1.34 [Temporary Works]

A Safety Plan for TW listing the principal items, describing the content, and specifying the safety measures to be applied to ensure compliance with the requirements.

Include a description of the scope of work for the principal specialist persons to be employed in the management and design of TW and the arrangements for controlling risks arising from the design, erection, maintenance, dismantling and removal of TW.

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [Contractor's General Obligations] as amended by Annex 1.3, the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works ensuring that the requirements of GC 4.1 [Contractor's General Obligations] as amended by Annex 1.3, Sub-Subclauses (a) to (d) and any other requirements of the Contract are fulfilled.

(9) Safety Plan for the Permanent Works (PW)

A description of the general health and safety rules for the PW (e.g. limitation of smoking area, traveling speed on site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.) indicating measures for preventing accidents on the Site.

Particular Safety Plans for the various parts of the Works.

(10) Safety Plan for Dangerous Work

Refer to JSSS 1.19 [Dangerous Work]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS 1.2.2 [Definitions]

(11) Safety Measures for Contractor's Equipment

Refer to JSSS 1.32 [Safety Equipment, Contractor's Equipment and Temporary Works]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(12) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.31 [Health and Safety Incentive Schemes]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety and to reward for improvement.

(13) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(14) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to **JSSS 1.32 [Safety Equipment, Contractor's Equipment and Temporary Works]**

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(15) Site Inspection Plan

A description of the methods for on-Site inspections by the HSO and frequency. The description shall also include the methods for reporting, recording and utilising results.

(16) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(17) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(18) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(19) Accident Response Plan

Refer to **JSSS 1.20 [Accident Response Plan]**

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

(20) Health Care Plan

Refer to **JSSS 1.33 [Health Matters]**

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(21) Fire Fighting Services

Refer to **JSSS 1.22 [Fire Fighting Services]**

Details of the fire fighting services to be provided at the Site.

(22) Emergency Response Plan

Refer to JSSS 1.23 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(23) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS 1.12 [*Contractor's Safety Management Activities*])

(24) Safety Induction Training

Refer to JSSS 1.17 [*Safety Induction Training*]

An outline description of the proposed health and safety training plans, describing methods, facilities, participants, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(25) Skill Training

Refer to JSSS 1.18 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers.

(26) User Training

Refer to JSSS 1.35 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex 1.3: Required Amendments to “JICA Standard Bidding Documents”

[This Annex applies to Executing Agencies (Employers and their consultants) for use in their preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described below shall be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

JICA intend to re-issue the JSBD incorporating these amendments in detail at some date in the future however, in order that JSSS can be used without delay on particular Projects, for which such use of JSSS has become effective and where the parties have formally and specifically agreed to adopt JSSS for the Project, (as described in JSSS Chapter 1: Preamble Notes, **Clause B and C**), the Bidding Documents for such particular Projects shall be drafted to take account of the following amendments in advance of the re-publication of the re-issued JSBD, in accordance with the following instructions.

Amendments to JSBD Part 1: Bidding Procedures

A1.3.1 Bidders Safety Accreditation:

If a Bidder is required to be accredited in accordance with JSSS 1.5 [*Contractor’s Safety Certification*], make the following changes:

1) Part 1 – Bidding Procedures, Section I: Instructions to Bidders:

Change the numbering of existing clause from 4.6 to 4.7 and add the following new clause numbered 4.6:

A Bidder and all members constituting the Bidder, shall have the required certifications and/or accreditations (if any) specified in the BDS.

2) Part 1 – Bidding Procedures, Section II: Bid Data Sheet:

Add a new item referenced to ITB 4.6, stating as follows:

Required Accreditations: OHSAS 18001, ISO 45001: 2018 or equivalent from an internationally recognised and approved organisation.

3) Part 1 – Bidding Procedures, Section III: Evaluation and Qualification Criteria:

Modify 2.1 Eligibility to include a new item numbered 2.1.4 with the following data:

Factor: Accreditation

Requirement: Safety Accreditation required by ITB 4.6 and JSSS/BDS

Compliance Requirement: Single Entity and JV must meet the requirements.

Documentation: Forms ELI – 1 and 2, with attachments

4) Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form:

Include an additional required attachment at the end of the bottom box of this form as follows:

4. Attached is an original or certified true-copy of

Safety Accreditation required by ITB 4.6 and JSSS/BDS

A1.3.2 Particular Safety Specification Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5.

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the **Employer creating a** sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply **generally on JICA ODA** Projects and consequently it **will be** necessary to specify particular safety requirements for **each specific Project**. Such particular safety requirements shall be carefully and precisely drafted and included in **the relevant parts of the Bidding Documents as noted below for** such Projects and covering for example the following²:

JSSS Reference	Particular Requirements to be stated
1.7 Engineer’s Safety Representative	<p>(On large Projects with multiple contract packages and contractors) The Bidding Documents shall state if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.</p> <p>If no such requirements are stated in the Bidding Documents, it is to be assumed that the Engineer’s representative at the Site shall act in this capacity.</p>
1.9 Contractor’s Health and Safety Officer at the Site	<p>(On small Projects) The Bidding Documents shall state if the HSO is NOT required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, the Contractor must assign a full-time dedicated HSO and if applicable other support personnel as required by JSSS.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p> <p>In addition to stating as above, if there is a requirement for the HSO, in Section IV. Bidding Forms, Bill of Quantities, Bill No.</p>

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later **checklist Form JSSS/CPR**

JSSS Reference	Particular Requirements to be stated
	<p>1: General Items, change item 106 description to “Provide HSO and staff” with unit rate for provision being shown as “month”.</p> <p>Quantity in months shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p>
<p>1.18 Skill Training</p>	<p>The Bidding Documents shall state whether classroom-based skill training of counterpart Operation Leaders is, or is not required. The Contractor shall be expected in any event to provide OJT via his senior personnel to local counterparts.</p> <p>If it is required, the Bidding Documents shall state how many candidates shall be selected, for which skill groups and for how long.</p> <p>This shall be determined by the scope and nature of the Works but JICA suggest a usual maximum teaching period of three months for each candidate with say ten (10) candidates selected for four (4) skill groups, i.e. forty (40) candidates in total.</p> <p>Classroom lessons will be part-time, at least one (1) weekday and two (2) weekday evenings per week. Candidates shall be paid their full wages and allowances during teaching time.</p> <p>The Contractor shall design syllabi to compliment the candidates’ skill group, their work and position at the Site. In addition to skill training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>The Contractor shall provide classrooms which can also be a part of their office facilities at the Site and provide the use of Training Facilities (herein defined as including furniture, equipment, computers, sample tools and working equipment, other teaching aids and the like). Unless otherwise stated in the Bidding Documents, teachers shall be qualified and experienced foreign Operation Leaders assigned by the Contractor to the Works.</p> <p>In addition to stating as above and if there is a requirement for such classroom-based skill training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of Operation Leaders as teachers:</p> <p>Unit: man-month Quantity: Total estimated man-months</p> <p>Use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>

JSSS Reference	Particular Requirements to be stated
<p>1.20 Accident Response Plan</p>	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 [Health and Safety] as amended by Annex 1.3, due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs. (4) Additional treatment and recovery rooms. (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty. (6) Emergency air-ambulance services. <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p> <p>Quantity in “months” shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
<p>1.20.8 Community Medical Support</p>	<p>The Employer, by agreement with JICA, may also wish to extend the provision of first aid, medical and health services and facilities at the Site for the use of any local community or third parties or neighbours, not connected with the Works but living directly adjacent to and potentially affected by the Works.</p> <p>If this becomes a requirement, the scope, extent and duration of such services and facilities shall be carefully described in the documents together with the responsibility (if any) and obligations of the Contractor (or Employer) to insure.</p>
<p>1.22 Fire Fighting Services</p>	<p>Without reducing the Contractor’s obligations, the Bidding Documents shall describe the particular scope of fire-fighting arrangement that are to be provided by the Contractor for the</p>

JSSS Reference	Particular Requirements to be stated
	<p>Works.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
<p>1.23 Emergency Response Plan</p>	<p>In higher risk areas, the Employer may require the Contractor to establish, train and maintain a specialist team at the Site to assist in the event of an emergency as described in JSSS 1.23. The Bidding Documents shall specify the size of the team and shall also specify in detail the equipment to be provided so that the Contractor is made fully aware and is able to assess the extent, risk and cost of the requirements.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity for provision being shown as “month”.</p>
<p>1.26 Project Safety Committee</p>	<p><i>(On large Projects with multiple contract packages and contractors)</i> The Bidding Documents shall state if a Project Safety Committee is to be established for the Project and describe any further requirements.</p>
<p>1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer’s Personnel]</p>	<p>(JSSS 1.27.2) The Bidding Documents shall describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name. Also list any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify scope, working locations, access and timing as far as possible.</p>
<p>1.33 Health Matters</p>	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 <i>[Health and Safety]</i> due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs.

JSSS Reference	Particular Requirements to be stated
	<p>(4) Additional treatment and recovery rooms.</p> <p>(5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty.</p> <p>(6) Emergency air-ambulance services.</p> <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity being shown as “month”.</p> <p>Quantity in “months” shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
<p>1.34 Temporary Works</p>	<p>The Bidding Documents shall state if Bidders shall comply with BS5975: 2019 on the Works, for which purpose, reference shall be made to the basic criteria described in JSSS 1.34.</p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall include a listing and description of the required staff for the coordination, design and supervision of the Temporary.</p> <p>Examples of such staff include:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>The Bidding Documents shall require Bidders to name TWC and TWD in the Bid for which purpose reference is to be made to this Annex 1.3.</p> <p>If Bidders are NOT required to comply with BS5975: 2019, the Bidding Documents shall state that Bidders are to comply in any event with the requirements of JSSS 1.34.12 and submit full details in the Safety Plan.</p> <p>In addition, separate written justification shall be provided by the Executing Agency to JICA.</p>
<p>1.35 User Training</p>	<p>The Bidding Documents shall state whether User Training of Employer’s Personnel is required so that the Works or any part or</p>

JSSS Reference	Particular Requirements to be stated
	<p>Section thereof can be used, operated and maintained safely.</p> <p>If it is required, the Bidding Documents shall modify or add to the requirements of JSSS 1.35 and state the precise requirements including details of required training, numbers of candidates and duration of training.</p> <p>This shall be determined by the scope and nature of the Works and the number of users, management staff, operators, maintenance staff who will be engaged upon the Works.</p> <p>Lessons will be full-time.</p> <p>The Contractor shall design syllabi to compliment the training courses and in addition to user training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>In addition to stating as above and if there is a requirement for such user training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of teachers for user training Unit: man-month Quantity: Total estimated man-months</p> <p>Provision and use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>
<p>Work in Operational Areas</p>	<p>If the Works are to be executed in whole or in part in Operational Areas (as defined in Annex 1.1) this shall be stated and times of operation and conditions with any restrictions on the Contractor's working methods, times and arrangements shall be described in detail.</p> <p>The respective responsibilities for insurance, health and safety management, security, health and welfare facilities, etc., between the Employer and Contractor(s) shall be clearly described so that there is no doubt over what each party is to perform or provide. A copy of the Employer's working procedures, including their health and safety procedures shall be provided to Bidders for their study during the Bidding period.</p>
<p>Temporary Perimeter Fencing:</p>	<p>The Bidding Documents shall describe the required Perimeter fencing the showing the required extent, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p>

JSSS Reference	Particular Requirements to be stated
	<p>Permanent or temporary fencing within the Site shall be described and shown for example around hazardous areas or around operating plant areas.</p> <p>Gates barriers and other treatment at Site entrances shall be described together with any arrangements for communications, lighting and power supply.</p> <p>Requirements for security at the Site entrance and also around the site shall be described and whether this is to be provided by the Contractor or the Employer.</p>
<p>Offices, Accommodation and Related Amenities and Facilities</p>	<p>The Bidding Documents shall describe the required Employer’s, Engineer’s and Contractor’s construction offices, staff accommodation and related amenities and facilities to be provided by the Contractor and describe the responsibility for the maintenance and repair of same. The Bidding Documents show the required scope, design, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p> <p>The Contractor’s responsibility for potable water supply, water and power supply, waste water and sewage drainage and treatment shall be clearly described and shown.</p> <p>The extent of provision by the Contractor shall take due account of the nature and location of the Site and the condition of access thereto.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this **Annex I.3**

A1.3.3 Required Detail of Bid Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Copy and paste here the exact same final text of JSSS Annex 1.2 as ultimately agreed.

A1.3.4 Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder’s Technical Proposal will include an assessment of the Bidder’s technical capacity to mobilise key equipment and personnel for the

Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] *insert “and Safety Plan” in the third line after the words, “work methods”.*

Insert the following additional paragraph after the above paragraph:

“Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to **JSSS Annex 1.3**) of any principal Temporary Works coordination, design and supervision staff, in item 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in item 1.1.3 Equipment.”

A1.3.5 **Health and Safety Officer and (if applicable) Temporary Works staff:**

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel.

Delete position 2 as stated and insert as follows:

2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

*(if any of the following are a specified requirement of the Bidding Documents by reference to **JSSS Annex 1.3**):*

3. Temporary Works Coordinator

4. Temporary Works Designer

5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

A1.3.6 **Bidder’s Safety Declaration (Form JSSS/BSD):**

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

*Include “**Form JSSS/BSD** – Bidder’s Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.*

*The Employer requires **all Bidders** to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign **Form JSSS/BSD** in addition to the Bidder’s Official Representative.*

*Please refer to end of this JSSS Annex1.3 for a **copy of Form JSSS/BSD***

Amendments to JSBD Part 3 - Particular Conditions of Contract

The following GC Sub-Clauses are to be modified as stated and as a consequence, future reference to these numbered Sub-Clauses, shall be to PC rather than GC.

A1.3.7 **Submission and Review of Method Statements and Safety Plans:**

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause	GC 4.1	<i>Delete that part of the fifth paragraph of this Sub-</i>
-------------------	---------------	---

Contractor's General Obligations	<p><i>Clause which states:</i></p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p><i>and in this place insert:</i></p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and/or Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works or any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.</p> <p>If the Engineer gives no such notice of non-compliance for the original Method Statement and/or Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted Method Statement and/or Safety Plan within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to complying with his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p>
---	---

	<p><i>DCI: NK, the above relates to any part of the Works and are effectively “Particular Safety Plans” which actually will not be required so often (or even at all) IF the Safety Plan at Commencement (see PC 4.8) is prepared properly.</i></p> <p><i>Can we please discuss</i></p>
--	---

A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 4.8 Contractor’s Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this Contract Sub-Clause amendment; (c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6. 7 [<i>Health and Safety</i>] as amended by this JSSS Annex 1.3; (d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed; (e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid danger to these persons; (f) Provide fencing, lighting, safe access, guarding and watching of: <ul style="list-style-type: none"> (i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and (ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and (g) Provide any Temporary Works (including roadways, footways, guards and fences) that
--	--

	<p>may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within twenty-eight (twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>This shall be based upon the Safety Plan issued at bid stage, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan to demonstrate the Contractor's intended compliance with the Contract.</p> <p>This document shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>This Safety Plan shall set out or refer to all the health and safety requirements:</p> <ul style="list-style-type: none">(a) that are stated in JSSS;(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and(c) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed. <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with GC 4.1 [Contractor's General Obligations] as amended by Annex 1.3.</p> <p>The Safety plan shall be revised as necessary by the Contractor or the HSO or at the reasonable request of the Engineer and each revision shall be submitted promptly to the Engineer for his information.</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [Progress Reports] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety</p>
--	--

	<p>recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p> <p>Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.</p>
--	---

A1.3.9 Change “accident prevention officer” to “Health and Safety Officer”:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause GC 6.7 Health and Safety	<i>In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site”</i>
--	---

A1.3.10 Revised Order of Priority of Documents

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause GC 1.5 Priority of Documents	<p><i>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</i></p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder’s Declaration, (h) the Specification, (i) the Drawings, and (j) the Schedules and any other documents forming part of the Contract.
--	--

Included to avoid the discrepancy that exists with the Contract Agreement where this is also referred to (see below).

A1.3.11 Raised Awareness of Available Resources on ODA Projects

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause GC 6.9 Contractor’s	<i>Add the following paragraphs to the end of the existing Sub-Clause:</i>
---	--

Personnel	<p>The Contractor shall be deemed to be aware that in many countries and locations for which Overseas Development Assistance (ODA) is provided, the qualified, skilled and experienced Contractor's Personnel required by this Sub-Clause is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, quality and performance that is demanded for these ODA Projects.</p> <p>The Contractor shall therefore be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries and all of whom shall be appropriately qualified, skilled and experienced to the standards required and sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.</p> <p>This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Contract.</p> <p>Without limiting the Contractor's obligations under the first two above added paragraphs of this Sub-Clause, the Contractor shall also employ counterpart local Contractor's Personnel with whom the Contractor shall implement a policy of mutual cooperation and ensure that this is adopted by all other Contractor's Personnel who shall work closely with and transfer necessary knowledge and skills to the counterpart staff to raise skill levels and awareness of international standards.</p> <p>The Contractor shall provide further skill training including classroom courses for all local personnel to compliment the direct on-job-training.</p> <p>The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p>Details of such training shall be submitted with the Bid Safety Plan.</p> <p>Any such employment, training and academic qualification and employment of local personnel shall not mean that the Contractor can demobilise the imported resources unless the Contractor and Engineer are satisfied that the remaining Contractor's Personnel are able to act fully in accordance with the requirements of the Contract.</p>
------------------	---

A1.3.12 Assignment of Foreign Personnel on ODA Projects

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 6.12 Foreign Personnel</p>	<p><i>Insert the following additional paragraph after the first paragraph of Sub-Clause 6.12:</i></p> <p>Such foreign personnel shall be qualified, skilled and experienced Personnel of Operation Leader status or above.</p> <p>Unless otherwise stated in the Bidding Documents, the Contractor shall not bring into the Country any unqualified, unskilled or inexperienced foreign Contractor's Personnel.</p>
---	---

A1.3.13 Listing of Documents to be included in the Contract Agreement:

Part 3 – Conditions of Contract and Contract Forms, Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p><i>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</i></p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	--

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p><i>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</i></p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Technical Bid; (iii) the Letter of Price Bid; (iv) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any);
---	--

	<ul style="list-style-type: none">(v) the Particular Conditions;(vi) the General Conditions;(vii) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration;(viii) the Specification;(ix) the Drawings;(x) the completed Schedules; and(xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
--	---

Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents

[This form is to be prepared by the Executing Agency after completing the preparation of the PQ and Bidding Documents and submitted to JICA local office together with the Draft PQ and Bidding Documents when the concurrence of JICA is being requested for these documents]

JSSS Reference	Requirement:	Yes ✓	No ✓	If not default, explain why:	Default and Notes
1.5 Bidder's Safety Accreditation	<i>Required or not.</i>				Default is "Yes",
	<i>Documents fully amended</i>				Default is "Yes".
1.7 Engineer's Safety Representative	<i>Required to be assigned or not.</i>				Default is "No", not required except on large projects.
1.9 Contractor's Health and Safety Officer at the Site	<i>Required to be assigned full-time or not</i>				Default is "Yes", normally required to be full time
1.20 Accident Response Plan	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification" (unless local facilities are readily available)
1.20.8 Community Medical Support	<i>Required or not</i>				Default is "No", unless agreed earlier with JICA
1.22 Fire Fighting Services	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification" (unless local facilities are readily available)
1.23 Emergency Response Plan	<i>Full details of additional rescue facilities provided</i>				Default is "No", unless higher risk area
1.26 Project Safety Committee	<i>Required or not.</i>				Default is "No", not required except on large projects.
1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer's Personnel]	<i>Full details provided by Employer</i>				Default is "Yes". Full detail shall be provided in Technical Specification

JSSS Reference	Requirement:	Yes ✓	No ✓	If not default, explain why:	Default and Notes
1.33 Health Matters	<i>Additional facilities required at Site or not</i>				Default is “Yes”, full detail shall be provided in Technical Specification” (unless local facilities are readily available)
1.34 Temporary Works	<i>Compliance with BS 5975:2019 required or not</i>				Default is “Yes”.
1.35 User Training	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
Work in Operational Areas	<i>Operational Areas exist on the Site?</i>				No default
	<i>If Operational Areas exist on the Site full detail provided?</i>				If applicable, default is “Yes”.
Temporary Perimeter Fencing:	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
Offices, Accommodation and Related Amenities and Facilities	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
A1.3.3 Required detail of Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.4 Bid Evaluation Requirements for Safety Plan	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.5 Health and Safety Officer and (if applicable)	<i>Bidding Documents amended to</i>				Default is “Yes”.

JSSS Reference	Requirement:	Yes <input checked="" type="checkbox"/>	No <input checked="" type="checkbox"/>	If not default, explain why:	Default and Notes
Temporary Works staff	<i>show the full requirements?</i>				
A1.3.6 Bidder's Safety Declaration (Form JSSS/BSD)	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.7 Submission and Review of Method Statements and Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.9 Change "accident prevention officer" to "Health and Safety Officer"	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.10 Revised Order of Priority of Documents	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.11 Raised Awareness of Available Resources on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.12 Assignment of Foreign Personnel on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".
A1.3.13 Listing of Documents to be included in the Contract Agreement	<i>Bidding Documents amended to show the full requirements?</i>				Default is "Yes".

Form JSSS/BSD - Bidder's Safety Declaration

[Refer to earlier Annex 1.3 item 1.3.6: This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumbering existing pages BF-56 and BF-57 appropriately and inserting suitable reference in the Table of Forms on page BF-1]

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Form JSSS/BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

The Bidder declares, that if selected to undertake the Works in connection with the Contract, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer's Personnel and the Contractor's Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of the Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will import for sole use upon the Works (where not available in the Country):

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, academic qualification, experience and capability;
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel and Employer's Personnel in a language and vocabulary they can understand;
5. Keep accurate records of work-related injuries and illnesses;
6. Perform tests in the workplace, such as air sampling as required by JSSS;
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned;

9. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS;
10. Post injury and illness information and data where workers can see them;
11. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately; and
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Annex 1.5: Subjects of Skill Training Course for Counterpart Operation Leaders

Under FIDIC GC 6.9, “The Contractor’s Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations.”

This is a basic requirement and it is not incumbent upon the Employer to accept otherwise or to pay further for skill training of the Contractor’s Personnel to achieve this standard.

*However please refer to **JSSS 1.18** [Skill Training] which we have added to provide OJT and also classroom-based skill training for local counterpart Operation Leaders. The idea is that skill knowledge will be passed on by them in future.*

We suggest that Skill Training shall be according to the scope of Works in the Project with the emphasis on direct OJT if necessary from foreign Operation Leaders.

This could/should be complimented by some classroom training, testing and even perhaps certifying in some way by the contractor.

However, the syllabus so far prepared is far too complicated and will be difficult to understand and apply.

Please can this be simplified.

Consideration must also be given to payment for this and it is necessary to include a simple payment mechanism in the Bidding Documents for such training otherwise it will not happen.

Please refer to Annex 1.3, where I have included some suggestions.

Annex 1.xxx: Dangerous or Harmful Operations

Recommend that this is not used

Dangerous Work has now been specifically defined (See Annex 1.1 definitions) and in a much wider sense and we recommend that this Annex 1.xxx is now not applicable and not necessary; it has little or no meaning.

Annex 1.xxx: Subjects of Special Education for Dangerous or Harmful Operations

Awaiting further information from NK

This is not recommended; the contractor is responsible for determining what is dangerous or not, not JICA and he is then responsible for whatever methods, education, choice of equipment etc. etc. to make certain that workers are able to work safely in such “dangerous” or “harmful operations”.

It is possible that if JICA state what education is required and if the contractor then chooses to employ an unqualified workforce but educates then as requested by JSSS and there is then an accident, JSSS/JICA could be adjudged in some way responsible.

We understood that this is not the intention of JSSS.

*When Contractor’s Personnel are engaged in any operations including potentially dangerous or harmful operations ALL personnel shall be selected by the contractor as qualified and experienced and given all necessary health, safety **and skill** training by the Contractor appropriate to the operations concerned. There is no advantage on giving examples to a contractor who should already know what is required, is responsible, is being paid for this and has insured for the consequences.*

Annex 1.xxx: Work Requiring the Assignment of an Operation Leader

Please refer to JSSS 1.19 and Annex 1 definition of Operation leaders.

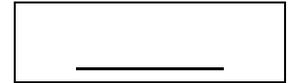

This Annex 1.xxx is not necessary, not recommended and potentiality creates a liability for JICA.

What if it excludes some work and there is an accident?

NO worker should be left to work on his own, ALL should be trained, skilled and guided and properly supervised.

Also, Operation Leaders are not by definition one type of skilled person, there are many different kinds each so qualified according to his skill group and trade.

Changes since previous issue
Coordination

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE GOVERNMENT ODA

***Japan International Cooperation Agency
(JICA)***

_____, 2020

Prepared: DCI for NK
Issue: 6
Revision:
Date: 15/11/2019

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources and expresses its gratitude to such other sources and publications which include:

1) *Japanese Acts, Orders and Ordinances including:*

Industrial Safety and Health Act

Order for Enforcement of Industrial Safety and Health Act

Ordinance on Industrial Safety and Health

Safety Ordinance for Cranes

Ordinance on Safety and Health of Work under High Pressure

Ordinance on Prevention of Anoxia, etc.

Ordinance on Prevention of Hazards Due to Dust

Explosives Control Act

Order for Enforcement of Explosives Control Act

Ordinance on Explosives Control

2) *“OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A..*

3) *Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.*

4) *Conditions of Contract for Construction For Building And Engineering Works Designed By The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)*

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, together with the Executing Agencies of its ODA Projects shall not accept or assume any liability or responsibility for any events or the consequences thereof deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular Projects and non-infringement. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference or used in any way as a basis of any claim by a contractor against any employer or vice versa under any contract for the execution of any Works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

PREAMBLE NOTES

A. Purpose and Objective:

The Japan International Cooperation Agency (hereinafter referred to as “JICA”) require that all parties engaged upon their ODA Projects shall endeavour to establish and maintain a culture ensuring human security and the maintenance of human rights as an essential and fundamental feature. The common objective shall be the achievement of a zero-accident rate, adopting the slogan of “Safety First” by creating a working environment where health and safety are of the highest priority.

To assist with this objective, JICA have prepared and published this Standard Safety Specification (hereinafter referred to as “JSSS”) and which JICA aim to be adopted for future selected Projects by the Executing Agencies for such Projects.

JSSS is one component of the JICA overall strategy to successfully achieve “**Quality Infrastructure**” under its assistance and development programmes. JICA are committed to pursuing the highest achievable levels of quality, safety, environmental protection, harmony and efficiency in performance, “**Ensuring Human Security**” whilst ensuring that “**Appropriate Cost Sharing**” is achieved.

B. Effectiveness

JSSS has been published on-line by JICA and it shall become effective and be incorporated by Project executing agencies in the Bidding Documents (and therefore the Contracts) for particular Projects on the date that the ODA agreement for that Project is executed and where the parties to such ODA Agreement have formally and specifically agreed to adopt JSSS as the technical basis for Health and Safety management on that Project.

It is not intended to include or attach a hard copy of JSSS to Bidding Documents or the Contract for respective Projects but a copy of JSSS shall be available on JICA’s web site shown below:

http://www.jica.go.jp/english/our_work/types_of_assistance/oda_loans/_____

C. Incorporation of JSSS into Contracts

Where the parties to an ODA Agreement have formally and specifically agreed to adopt JSSS for a new Project, the Bidding Documents shall be amended to state this, in accordance with Annex 1.3 and Bids will be requested on this basis.

The Contract Agreement for the newly awarded Project shall include JSSS as a “further document” within the context of GC 1.1.1 [*The Contract*] and a hard copy of JSSS (current as at the Base Date of the Contract) shall be prepared and included with the documents comprised in the Contract for the Project.

Unless otherwise specifically agreed by JICA and the executing agency, JSSS shall not be applied to any on-going JICA funded Projects as at the date of publication of JSSS.

Where JSSS is already in use on any Project, by further agreement between JICA and the executing agency of any such on-going Project, future issues/revisions of JSSS may be applied after the date that such future issues/revisions are published on line subject to issue by the Engineer of an appropriate Variation under GC 13.1 [*Right to Vary*].

It is requested that the Employer, Engineer and Contractor will each print separate hard copies of the Contract issue of JSSS for their own reference and all of these entities shall fully inform their personnel, Subcontractor’s, sub-consultants and all other parties who are associated with the particular Project of the existence, content and purpose of JSSS and the objectives thereof.

It is the intention of JICA to formally update their separate “Standard Bidding Documents under Japanese ODA Loans” with instructions for the amendment of Bidding Documents to incorporate JSSS, however in the meantime relevant changes shall be made in accordance with Annex 1.3.

JSSS shall thereafter become an integral part of the Bidding Documents for particular Projects and requirements can be implemented immediately after the Executing Agency has made the required modification to the Bidding Documents, and thereafter JSSS shall be read and construed as a part of the Bid and therefore the Contract for that Project.

D. Compliance and General Obligations

JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

The Contractor shall ensure that all health and safety hazards and risks are properly identified, evaluated and controlled prior to commencement of any work. Only suitably qualified, fit and competent persons shall manage the health and safety activities.

Compliance with the JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract and shall not impose or imply any role or responsibility upon the Employer or the Employer’s Personnel for health and safety or management of the Works all of which is to be performed by the Contractor under the Contract for the Project.

Where the Laws of the Country so state, the Health and Safety Officer (as defined herein) shall be qualified and legally registered as such in accordance with such Laws.

Similarly, JSSS shall not limit the Contractor to the scope contained herein.

These Preamble Notes and all Annexes to this Chapter 1: General Requirements shall be read and construed as integral parts of JSSS and therefore shall be deemed to constitute integral parts of the Contract for the Project.

JICA STANDARD SAFETY SPECIFICATION (JSSS)

CHAPTER 1: GENERAL REQUIREMENTS

JICA REQUIREMENTS

1.1 Employer's Safety Declaration

By entering into a Contract, the Employer (together with the Engineer acting as his consultant) declares that he shall collaborate in good faith with the Contractor and take all reasonable measures within his authority and under his control to promote the highest achievable health and safety standards in the execution of the Works all in accordance with his contractual and statutory responsibilities and adopting the slogan:

“SAFETY FIRST”

The Contractor shall aim to achieve “Zero-Accident” in the execution of the Works by taking full responsibility for the health and safety management of the Works and adopting JSSS that specifies the minimum safety requirements that the Contractor shall implement.

A Bidder's Safety Declaration shall be submitted with the Bid, declaring the Bidder's commitments and obligations, in accordance with Annex 1.3.

1.2 Definitions, Abbreviations and Standards

1.2.1 For Definitions, abbreviations and standards contained throughout JSSS, refer to Annex 1.1.

1.2.2 The following further requirements relate generally to the use of the definitions contained in the Contract and in Annex 1.1:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (3) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (4) Any reference to academic qualification of Contractor's Personnel within this document and unless otherwise stated, shall mean a currently valid academic qualification demonstrated by a certified true diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (5) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such **health and** safety measures for Employer's Personnel and any other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
- (6) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

1.3 Application to Grant Aid and other Projects

- 1.3.1 JSSS has been drafted to apply to JICA ODA Loan Projects and to the relevant FIDIC harmonised form of Contract for such Projects as referred to JSSS 1.2 [*Definitions, Abbreviations and Standards*] item (6).
- 1.3.2 JSSS shall apply equally to other JICA assisted Projects that have been awarded under different forms of contract including those under Contractor design contracts and contracts under the JICA Grant Aid programme. When so used, suitable modification shall be required to the definitions and text of JSSS and the Bidding Documents for those Projects to ensure compatibility and consistency with the relevant contract requirements for the Project, reflecting the same intentions, standards and procedures for improving health and safety.

1.4 JSSS - Laws and Reference Standards

The Contractor shall comply as a minimum with the Laws of the Country, including all health and safety standards.

- 1.4.2 If the Employer has formally agreed with JICA to adopt JSSS for the Project, then the requirements of JSSS shall apply and prevail where the particular standards of JSSS are considered by the Engineer to be higher than the technical requirements of the Laws of the Country without limiting the Contractor's legal duties and obligations under such Laws.
- 1.4.3 Otherwise where the Laws of the Country (including any health and safety standards) are silent on particular health and safety requirements and where provisions are included in JSSS then JSSS shall apply and prevail.
- 1.4.4 JSSS is an abbreviated document and where specifically stated it requires specific compliance with the specified technical requirements of OSHA. As a general rule, where JSSS contains insufficient or no technical regulations or no detailed technical requirements then the related detailed technical regulations of OSHA as a "catch-all" or at least equivalent shall apply.

"At least equivalent" in this context shall mean the standards of an internationally recognised health and safety organisation or authority of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), as proposed by the Bidder in the Bid Stage Safety Plan.

This shall be evaluated by the Employer and agreed between the Parties prior to execution of the Contract Agreement. If in the opinion of the Employer, the standard proposed by the Bidder is not equivalent to OSHA, HSE or similar, then the Employer will choose to apply OSHA as the "catch-all".

Any subsequent requirements for particular reference standards shall be as proposed by the Contractor and given consent by the Engineer on the same basis.

- 1.4.5 JSSS prescribes minimum requirements and the parties are free to include higher standards when so agreed between Contractor, Employer and Engineer.
- 1.4.6 The Contractor shall be deemed to have studied and familiarised himself with the Laws of the Country and to have ascertained if any part of such Laws is superior to any of the particular requirements of OSHA, in which case such particular Laws shall apply and the Contractor shall inform the Engineer accordingly.
- 1.4.7 The reference standards used in JSSS can be substituted with alternative standards after requesting and obtaining the consent of the Engineer who may give such consent only if in his opinion such alternative standards provide an equivalent or higher standard of health and safety than that required by JSSS.
- 1.4.8 Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

- 1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation, the requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.

1.5 Contractor's Safety Certification

- 1.5.1 Unless otherwise expressly stated in the Bidding Documents (refer to Annex 1.3), the Contractor shall be formally accredited for complying with the Occupational Health and Safety requirements of OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally accredited organisation as determined by the Employer (if to be determined at Bid Evaluation stage) or Engineer (during the Project implementation stage). The Contractor shall possess a current and valid certification at all times.
- 1.5.2 If accreditation is required by the Bidding Documents, an original or authorised true copy of the current certification shall be submitted as an attachment to Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form and this shall subsequently be included with the Contract.
- 1.5.3 The Contractor shall submit original or authorised true copies of subsequent annual renewals to the Engineer when same are due.

1.6 Contractor's Safety Plan

- 1.6.1 The Contractor shall be required to submit the Safety Plan principally at two stages:
- (1) With the Bid submission.
 - (2) Within twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, refer to GC 4.1 [*Contractor's General Obligations*], as amended by Annex 1.3.
- 1.6.2 The Safety Plan is intended to provide an accurate and comprehensive indication of what will be provided or performed by the Contractor to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works. The Contractor shall update and revise the Safety Plan at any stage to reflect actual requirements.
- 1.6.3 Submission of any Safety Plan and inclusion in the Bid or Contract or following any submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the Time for Completion of the Works.
- 1.6.4 For details of the Safety Plan at Bid stage, refer to Annex 1.2 [*Detail of Safety Plans in Bidding Documents*].
- 1.6.5 For details of the Safety Plan at commencement stage, refer to Annex 1.3, Clause 1.3.7 and GC 4.8. [*Contractor's Health and Safety Obligations*] as amended by Annex 1.3.
- 1.6.6 Further revision of Safety Plans

The Safety Plan (or parts of it) shall be revised or supplemented to suit changing circumstances or conditions at the Site or where considered necessary by the HSO or when required by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*], as amended by Annex 1.3.

The Safety Plan (if necessary supplemented with later particular safety plans) shall ensure that the Engineer, is made aware in writing of at least the following information for all parts of the Works, in any event not less than twenty-one (21) days before commencing any parts of the Works:

- (1) Work outline, work procedure and order of carrying out the work;
- (2) Number of Contractor's Personnel;

- (3) Safety management system and responsibility and authority of Contractor's Personnel;
 - (4) Risk assessments;
 - (5) Safety measures;
 - (6) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE);
 - (7) Safety education and training of the Contractor's Personnel and TBM;
 - (8) Teaching materials used in education, training and pre-operation TBM before work;
 - (9) Method of information sharing and communication among the Contractor's Personnel;
 - (10) Implementation and monitoring of measures for health and safety management;
 - (11) Reference technical safety standards;
 - (12) Temporary Works;
 - (13) Accident Response Plan;
 - (14) Health Care Plan;
 - (15) Firefighting Services; and
 - (16) Emergency Response Plan.
- 1.6.7 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.
- 1.6.8 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.6.9 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.
- 1.6.10 The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction.
- 1.6.11 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous works.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures – enhanced training and skills.
 - (5) Use of PPE.

1.7 Engineer's Safety Representative

- 1.7.1 On larger Projects with multiple contract packages and contractors, and if so stated in the Bidding Documents for those Projects, the Engineer may appoint an assistant under GC 3.2 [*Delegation by the Engineer*] to be known as the Engineer's Safety Representative (ESR) and who shall be responsible for health and safety within the Engineer's organisation on Site and for monitoring the Contractor's compliance with each contractor's Safety Plan.

In such case and by written notice served under GC 3.2 [Delegation by the Engineer], the Engineer shall delegate authority to the Engineer's Safety Representative to represent the Engineer in matters of health and safety at Site, to issue written instructions to the Contractor on matters of health and safety and monitor compliance with such instructions which shall include:

- (1) Instructions requiring the Contractor's compliance with the Safety Plan.
- (2) Emergency instructions to Contractor to stop working where the Engineer observes accidents, near misses or unhealthy or unsafe conditions.
- (3) Instructions requiring the Contractor to change the working methods at the Site to improve health and safety.

1.7.2 The Engineer's Safety Representative shall cooperate and work closely with the HSO and will represent the Engineer on Joint Site Safety Inspections and also undertake independent and regular inspections of the Works at the Site.

1.7.3 The Engineer's Safety Representative shall give safety compliance instructions to the Contractor in accordance with his/her delegated authority under GC 3.3 [*Instructions of the Engineer*].

1.7.4 The Contractor shall take corrective action within the time limit prescribed in the instruction, shall keep the Engineer's Safety Representative fully informed on progress and shall report in writing when the corrective action is completed.

1.7.5 If the Bidding Documents state that the appointment of a full-time or part-time Engineer's Safety Representative is not required (refer to Annex 1.3), it is to be assumed that the Engineer's representative at the Site shall act in this capacity.

1.8 Safety Compliance Instructions from the Engineer

1.8.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.

If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has taken corrective and preventive measures to ensure that no further risk exists.

If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated and proposed to the Engineer and implemented at the Site, to ensure that no such accident can reoccur.

1.8.2 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.9 Contractor's Health and Safety Officer at the Site.

1.9.1 Requirements for the HSO:

- (1) The Bidder shall name the HSO in the Bid and thence the same person shall be named in the Contract. The Contractor shall assign the named HSO upon the Site of the Works, on or before the Commencement Date.

- (2) If the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3, or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable replacement person to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor and not of a Subcontractor and unless otherwise stated in the Contract, the HSO shall be assigned full time upon the Works and his/her responsibilities, authority and duties shall be in accordance with GC 6.7 [*Health and Safety*] as amended by Annex 1.3.
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate academic qualification for such position if required by the Laws of the Country and also (if so required) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall be fluent in the language for communications stated in the Contract as defined in GC 1.4 [*Law and Language*]. The HSO shall preferably also be fluent in the ruling language of the Contract (if different) however it is acceptable for the HSO to use a translator for this language only.
- (7) Where there is no legal requirement under the Laws of the Country for academic qualification, the HSO, shall have appropriate academic qualification for health and safety, work experience in construction (minimum ten (10) years) and in health and safety management (minimum five (5) years which can be concurrent with construction experience) and two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country) and whom the Contractor considers is qualified to perform the duties subject to receiving the consent of the Engineer.
- (8) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his/her duties.
- (9) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO including additional managers, assistants and inspectors all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.
- (10) The HSO (where necessary with the assistance of his qualified support staff) shall personally be capable to ensure that:
 - (a) All working areas of the Site are inspected on a regular basis (at least once every working day) to detect if any unsafe practices, works or conditions exist; and
 - (b) If such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken.

Any site inspections attended by the HSO, may also include the attendance of the Engineer or his safety representative.

1.10 HSO - Scope of Duties

1.10.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.10.2 The particular scope of duties of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation of Safety Plans, implementation, evaluation, improvement, revision and submission thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan;
 - (d) Temporarily stopping or suspending the Works or any part of the Works following any accident or where the HSO discovers any unsafe conditions, unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan;
 - (e) Temporarily stopping or suspending the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.8;
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposal, reporting and consulting with the Engineer including when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of health and safety inspectors and assistants after obtaining the consent of the Engineer; and
 - (i) Consultation on safety management with the Employer's Personnel.
- (2) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents.
- (3) Assistance with selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability.
- (4) Planning and implementation of various training and education implementation plans.
- (5) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases.
- (6) Preparing regular internal and external reports on health and safety activities.
- (7) Hazard prediction activity.

1.11 Procedure for Resuming the Works

If the Engineer has issued an instruction under JSSS 1.8 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped or suspended the Works or any part of the Works in accordance with JSSS 1.10 [*HSO – Scope of Duties*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and cannot reoccur.
- (2) The Contractor shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.

- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.
- (5) The Contractor resumes the Works or part of the Works on the resumption date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.12 Contractor's Safety Management Activities

1.12.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.12.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

- (1) Overall Safety Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal contractor meetings including TBM;
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (c) Monitoring the implementation of the Safety Plan.
- (2) Safety Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, toolbox meetings, providing general advice and instruction, specific instructions on individual works, safety confirmations, information to be conveyed etc.
 - (b) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:

5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline.

KIKEN YOCHI TRAINING (KYT) for hazard prediction training usually in TBM, where: K = kiken (hazard), Y = yochi (prediction) and T = training.
 - (c) Instruction and management of safety education and training.
 - (d) Instruction and management of all safety measures.
 - (e) Joint Site Safety Inspections

1.13 Joint Site Safety Inspections

1.13.1 In addition to the Contractor's own daily Site Safety Inspections, the Contractor shall conduct regular Joint Site Safety Inspections with the Engineer or (if appointed) the safety representative of the Engineer. Respective safety staff may also attend.

- 1.13.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.13.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.13.4 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.14 Compliance Monitoring and Auditing

- 1.14.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured and that such compliance is monitored efficiently and transparently at all times, for which purpose the Contractor shall:
- (1) Create checklists for monitoring.
 - (2) Carry out regular and irregular inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions.
 - (4) Create files and safe storage systems for the monitoring records.
 - (5) Copy all relevant information to the Engineer as requested by the Engineer.
- 1.14.2 Safety inspections, are intended to search for risks and hazards, which present a threat to safe working.
- 1.14.3 The Contractor shall also carry out regular health and safety audits, to ascertain of the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.14.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the Works.
- 1.14.5 The audit team shall be headed by the Contractor's Representative and at least two other members of the Contractor's Personnel, preferably including an Operation Leader. The HSO may attend but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.14.6 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.
- 1.14.7 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems; they shall not replace the regular health and safety inspections.
- 1.14.8 The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.
- 1.14.9 The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.

- 1.14.10 A single prearranged annual audit is not recommended as it will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.
- 1.14.11 An audit report shall be prepared by the Contractor's Representative detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.
- 1.14.12 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.15 Proper Placement of Contractor's Personnel

- 1.15.1 To varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided. Only appropriate personnel shall be assigned, suitable and capable for the work tasks for which they are selected in terms of academic qualification, skill, experience and also in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct, workwear, tools and equipment, PPE and Safety equipment etc.
- 1.15.2 Construction labourers and manual workers shall never be assigned on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader of an appropriate grade to ensure that safe working practices are constantly applied.
- 1.15.3 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.15.4 The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.
- 1.15.5 The HSO shall countersign all such records to indicate his confirmation of the suitability of each member of the Contractor's Personnel prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.15.6 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Work experience, academic qualification and capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.15.7 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic qualification, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel comply with such requirements

1.15.8 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic qualification, experience and skills.

1.15.9 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site unless otherwise approved by the Engineer and assigning a suitable replacement.

1.16 Safety Training Generally

1.16.1 The Contractor shall conduct health and safety education and training for all of the Contractor's Personnel.

1.16.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.16.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid and the Contractor shall bear all necessary Cost and expenses.

1.17 Safety Induction Training

1.17.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel upon the Site when they commence work on Site and also when they are scheduled to change work type, skill or location. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting any work.
- (5) Dangerous Works; General rules, locations, precautions and general working requirements. (Refer to separate requirements for special training).
- (6) PPE and other safety devices; use, handling and care.
- (7) Maintaining all areas of the Site in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment.
- (9) Firefighting; Actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

- 1.17.2 Practical on-Site demonstrations shall be included in every case and wherever possible.
- 1.17.3 The Contractor shall provide safety induction training to the Employer's Personnel and to any other persons who are entitled to be on the Site and other places (if any) where the Works are being executed at the request of the Employer or Engineer.
- 1.17.4 Training Personnel
- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
 - (2) All trainers shall be fluent in the language of the Country.
 - (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic qualification, ability and experience, subject to receiving the advance consent of the Engineer.
- 1.17.5 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.18 Skill Training

- 1.18.1 The Contractor is reminded of his obligations under GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3) which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.
- 1.18.2 The Employer requires the Contractor where possible to employ local workers, in particular potential counterpart Operation Leaders for each trade and skill group and operation and in the spirit of cooperation, the Contractor is requested to train and to transfer skills to such persons largely through OJT with the assignment of foreign Contractor's Personnel as required by GC 6.9 as amended by Annex 1.3.
- 1.18.3 In addition, and to compliment this OJT, the Employer requires the Contractor to provide classroom-based training courses and to assign qualified instructors to provide basic skill training to develop the ability of local counterpart Operation Leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots. Examples of the scope of this skill training are included in Annex 1.5xxx. The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for information. For further details refer also to Annex 1.3.
- 1.18.4 It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall automatically be locally employed and trained for the purpose, this remains as the Contractor's choice in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel (including foreign personnel if necessary) who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

1.18.5 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [*Contractor's Personnel*] as amended by Annex 1.3.

1.19 Dangerous Work

1.19.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.19.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training pursuant to the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.19.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official "permit to enter", to be worn conspicuously and be available for validation by the Engineer.

1.19.4 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.19.5 The Contractor shall select, train and equip specialist rescue teams at the Site, who can be called upon immediately in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment.

1.19.6 Rescue equipment shall include respiratory protective equipment for rescue operations, safety extraction belts/harnesses/ropes measures.

1.19.7 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those instructed to do so in order to prevent secondary accident.

1.19.8 The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.

1.19.9 Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

1.19.10 For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

1.19.11 Hazardous Substances.

(1) If there is a possibility that any Hazardous Substances exist at the Site of the Works or in any existing buildings and structures, then unless otherwise stated in the Bidding Documents, this shall be surveyed and investigated by the Employer before bidding. The results of this investigation shall be clearly stated and full information including survey and investigation results with requirements for removal and disposal shall be provided by the Employer in the Bidding Documents. This shall be confirmed by the Employer through inserting suitable reference on Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents, as referred to in JSSS Annex 1.3 Required Amendments to "JICA Standard Bidding Documents".

(2) If the Contractor during the execution of the Works, encounters and is required by the Bidding Documents or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialist Subcontractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

- (3) The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their detailed Method Statements and Safety Plan shall also be submitted to the Engineer in accordance GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3.

1.20 Accident Response Plan

- 1.20.1 The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), in collaboration with local health authorities, to provide the following services and facilities and to make them available at all times at the Site and at any accommodation for Contractor's and Employer's Personnel:
- (1) Medical staff.
 - (2) First aid facilities.
 - (3) Sick bay.
 - (4) Ambulance service.
- 1.20.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.
- 1.20.3 Such distant locations shall generally be defined as locations where the transfer time by road from the Site to a hospital with a suitably equipped and medically attended accident and emergency department, exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minutes period. Additional facilities should for example include:
- (1) Enhanced medical staff with qualified doctor(s).
 - (2) Enhanced first aid and treatment facilities and staff.
 - (3) Enhanced medical equipment, medical supplies, medicines and drugs.
 - (4) Additional treatment and recovery rooms.
 - (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty.

- 1.20.4 Where the transfer time by road can exceed one (1) hour, emergency air-ambulance facility shall also be considered in addition to the above.
- 1.20.5 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3 [Required Amendments to “JICA Standard Bidding Documents”]).
- 1.20.6 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue services and treatment using experienced and qualified medical staff and fully equipped facilities at the Site.
- 1.20.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor’s Personnel, the Employer’s Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.
- 1.20.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any local community, or third parties or neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.
- 1.20.9 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:
- (1) Medical staff to be assigned at the Site.
 - (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
 - (3) Medical Facilities on the Site together with description of equipment and consumables.
 - (4) Temporary water and power supply to maintain use during mains supply failure.
 - (5) Type of communication facilities and measures for emergency response.
 - (6) Deployment of appropriate first aid appliances, aids, instruments and medicines.
 - (7) First aid training, appointment of first aiders and dissemination of information.

It is to be noted that GC 6.7 [Health and Safety] as amended by Annex 1.3, lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management and provision expected at the Site.

It is also to be noted that Medical staff and facilities to be assigned at the Site, in addition to treatment for accidents are also required to provide welfare and hygiene requirements and assist with the prevention of epidemics. This shall also be adequately described in the Safety Plan.

1.21 Measures at the Time Accidents Occur

- 1.21.1 When an accident occurs, the Contractor shall immediately discontinue the work task and take all efforts to:
- (1) Safely locate and extract casualties.
 - (2) Provide first aid treatment at the Site.
 - (3) Provide other Accident Response measures
 - (4) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;

- (b) Discontinuing construction work related to or in the vicinity of the accident; and
- (c) Implementing any further measures instructed by the Engineer.

1.21.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident or illness in accordance with GC 4.8 [*Contractor's Health and Safety Obligations*] as amended by Annex 1.3.
- (2) Having investigated and established the cause of any accident or illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence and shall be in the format indicated in Annex 1.4.

1.21.3 For resumption of work procedures, refer to JSSS 1.11.

1.22 Fire Prevention

1.22.1 The Contractor is reminded of his obligations under GC 17.2.7 [*Care of the Works*].

1.22.2 Where the Site of the Works is situated some distance away from urban areas and where there may be a consequent lack of immediate availability of emergency fire and rescue services and facilities, or where such services and/or facilities are lacking in capability or standard of care, the Contractor shall be responsible for providing additional services and facilities at the Site as are necessary to fully protect all Contractor's Personnel and Employer's Personnel, to compensate for any such lack of available public services or facilities.

1.22.3 Such distant locations shall generally be defined as locations where the road journey time by fire engine from an equipped and attended public fire station to the Site exceeds thirty (30) minutes, then the Contractor shall be responsible for providing such additional services and facilities at the Site to ensure that appropriate action can be taken within a maximum fifteen (15) minute period. Such additional facilities may include:

- (1) An equipped fire engine based at the Site with qualified driver and crew on a full time twenty-four (24) hour, seven (7) day per week, stand-by duty.
- (2) Sufficient temporary water and power supply to maintain emergency use.
- (3) Enhanced fire protection equipment and facilities around the Site.

- 1.22.4 The Contractor shall ensure that persons are kept safely away from any fire and where practicable and safe, to limit the spread of fire.
- 1.22.5 The Contractor shall select, train and equip specialist emergency fire-fighting teams at the Site, who shall be called upon immediately in the event of any fire, to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated by fire and to provide suitable, specialist and appropriate first aid and medical treatment.
- 1.22.6 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).
- 1.22.7 For further information on this topic refer to **JSSS Section 2.8 [Fire Prevention]**.

1.23 Emergency Response Plan

1.23.1 The Contractor shall keep fully himself informed at all times of likely forecasted climatic and seismic conditions (if and to the extent reasonably possible) from TV, radio and internet and as far as reasonably possible, shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other climatic conditions and can be reasonably anticipated. The Contractor shall take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by such climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

1.23.2 The Contractor shall keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure:

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent Landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.23.3 Where there is a risk of earthquake or volcanic activity at the Site, the Contractor shall take measures to prevent damage including damage from Landslides and consequent injury, damage and flooding arising from such earthquake or volcanic activity.

Such measures to be implemented (where applicable to the extent that advance notice and warnings permit) shall include:

- (1) Designing (or avoiding the use of) permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially cause Landslides with consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or tunnelling of sufficient strength, durability and suitability.

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.23.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3.

1.23.5 Unless otherwise stated in the Specification for the Project, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This “plan” shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any (remaining) facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. This “plan” does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions given under the Contract.

1.23.6 The Emergency Response Plan, shall cover:

- (1) Evacuation plan, **showing evacuation routes and assembly points.**
- (2) **Emergency communication and contact facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that it can be utilised in any emergency.**
- (3) Use of existing and available medical and other related facilities.
- (4) Assisting with search and recovery.

The Emergency Response Plan shall be submitted as part of the Safety Plan and be updated as necessary throughout the Time for Completion of the Works.

1.23.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.23.8 If required by the Specification, (refer to Annex 1.3), the Contractor shall set up an emergency search team (or teams) and train and equip same so that they are able to search, locate, extract and transfer any potential casualties to medical treatment facilities at the Site (if available) or otherwise assist as far as possible with removal to other available medical treatment facilities.

1.23.9 If required by the Specification, (refer to Annex 1.3), the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months and including:

- (1) Training of the search and recovery team.
- (2) Training of the Site medical team to deal with likely trauma.
- (3) Training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.23.10 If and when an emergency occurs during the Time for Completion, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.23.11 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit and as instructed by the Engineer.

1.23.12 For further measures and requirements refer to JSSS 2.7 [Emergency Response Plan – Additional Requirements]

1.24 Contractor's Safety Committee and Regular Safety Meetings

1.24.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.24.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel including workers on Site.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.24.3 The HSO shall be the chairman of the Safety Committee.

1.24.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:

- (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (b) Monthly or weekly schedule of important health and safety matters;
- (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
- (d) Hazards, safety and health problems resulting from:
 - (i) Site inspections by HSO;
 - (ii) Issues raised by the representative of Contractor's Personnel;
 - (iii) Issues raised by Subcontractors; and
 - (iv) Issues raised by others.
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration requirements under the Laws of the Country;
- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

1.24.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.25 Engineer's Regular Safety Meetings

1.25.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to make commitments on health and safety matters on behalf of the organisations that they represent:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems resulting from:
 - (i) Inspections by the Engineer and the Employer.
 - (ii) Site inspections by HSO.
 - (iii) Issues raised by the representative of the Contractor's Personnel.
 - (iv) Issues raised by Subcontractors.
 - (v) Issues raised by others.

- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and
- (i) Other matters.

1.25.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer with a further copy provided directly to the local office of JICA within the Country.

1.26 Project Safety Committee

1.26.1 On larger Projects with multiple contract packages and contractors and if so stated in the Bidding Documents for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.26.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.26.3 The Chairman of the Safety Committee shall be the Employer.

1.26.4 The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

1.26.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.27 Health and Safety Coordination with Other Contractors

1.27.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer, and
- (3) the personnel of any legally constituted public authorities,

who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to (1) and (2) above, the Employer shall ensure that such personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] as amended by Annex 1.3 and GC 4.18 [*Protection of the Environment*].

In relation to (3) above the Contractor shall ensure that such personnel are fully informed of the Contractor's Safety Plan and shall liaise and agree with such authorities to ensure that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Contractor is therefore required to contact such other contractors directly and liaise with them to obtain all such other information and incorporate this into the Safety Plan.

When risks arise because of potential interactions between the Contractor and other contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Contractor shall take a positive role in ensuring the general principles of risk prevention and control are applied amongst all contractors involved.

1.27.2 The Bidding Documents shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.27.3 If the above circumstances apply, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries and measures to prevent any reoccurrence;
 - (d) Status of resolution of previous problems;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like; and
 - (h) Other matters.

1.27.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.28 Safety Statistics

1.28.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.28.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes of them.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff, contents, frequency, participant, duration of safety education at site and safety event.
- (9) Others.

1.28.3 All data shall be in a format and content format and content to be approved by the Engineer.

1.28.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.28.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [*Safety Reports*].

1.29 Safety Reports

1.29.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.30 Health and Safety Records

1.30.1 The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.

- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
 - (6) Work environment records and other records required by JSSS Chapter 2 and other parts of JSSS.
- 1.30.2 All records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.
- 1.30.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.29 [*Safety Reports*].

1.31 Health and Safety Incentive Schemes

- 1.31.1 The Contractor shall consistently enforce legitimate work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.
- 1.31.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.31.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.31.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.31.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.31.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.31.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.31.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.29 [*Safety Reports*].

1.32 Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment (PPE)

- 1.32.1 Contractor's Equipment and Temporary Works to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, **safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works)**, shall be fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.32.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are regularly inspected by him to ensure compliance with the foregoing by qualified Contractor's Personnel or where necessary, by authorised representatives of the manufacturer. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as "safe for use".

If the HSO ascertains at any time that any items are not so certified he shall immediately stop all use of that item, stop all work for which that item and any associated items is being used and suspend all such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.32.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.32.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to Annex 1.3), the Contractor shall import for sole use upon the Works (where not available in the Country):

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
- (2) New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

1.33 Health Matters

- 1.33.1 Further to the requirements of JSSS 1.20 [*Accident Response Plan*], the Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), in collaboration with local health authorities to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.
- 1.33.2 Where the Site of the Works is situated some distance away from urban areas and/or where there is a lack of immediate availability of suitable medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, the Contractor shall be responsible for providing additional health care services and facilities at the Site as are necessary to fully protect all Contractor's Personnel, to compensate for any lack of available services or facilities or lack of any local health authorities.
- 1.33.3 Additional facilities should for example include:
- (1) Enhanced medical staff with qualified health care staff.
 - (2) Enhanced healthcare treatment facilities, equipment, medical supplies (including anti-mosquito nets in malarial prone areas), medicines and drugs.
 - (3) Additional treatment and recovery rooms.
- 1.33.4 The Specification for all Projects shall include descriptions of the particular required services and facilities to be provided by the Contractor for this purpose (refer to Annex 1.3).
- 1.33.5 Occupational health care shall be provided by the Contractor and shall include for example:
- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
 - (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
 - (3) Frequent or excessive manual handling of loads, stress and fatigue.
 - (4) Suitability to work checks including eyesight, hearing and physical mobility and capability.
- 1.33.6 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:
- (1) Health care staff to be assigned at the Site.
 - (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
 - (3) Healthcare services to be provided including lectures and education on health matters.
 - (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
 - (5) Occupational Healthcare proposal.
 - (6) Temporary water and power supply to maintain use during mains supply failure.
 - (7) Type of communication facilities and measures for emergency response.

It is to be noted that GC 6.7 [*Health and Safety*] (as amended by Annex 1.3), lists minimum facilities and measures and the Contractor shall provide such additional facilities and measures that are necessary to meet the high standard of health and safety management expected at the Site.

- 1.33.7 Medical and health services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel including their accompanying family members, all other persons (with accompanying family members) who are entitled to be on the Site and other places (if any) where the Works are being executed and at any accommodation for all such persons.
- 1.33.8 Unless otherwise stated in the Specification, first aid, medical and health services and facilities at the Site shall also be made available for the use of any third parties and neighbours not connected with the Works but living directly adjacent to and potentially affected by the Works.

1.34 Temporary Works

- 1.34.1 Unless otherwise stated in the Bidding Documents, Bidders are required to comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.
- 1.34.2 The requirement for specifying compliance with BS5975: 2019 in the Bidding Documents by a Project Executing Agency shall be determined by the extent and nature of the Works, Temporary Works and in particular the extent and nature of Falsework and Formwork design. JICA recognise that the requirement may be greater on larger or more complex Works particularly those with a high content of Formwork and Falsework containing proprietary equipment and/or traditional structural and scaffolding solutions all of which may be:
- (1) Designed to support excessively heavy loads.
 - (2) Of excessive height or unusual shape.
 - (3) Of difficult access.
 - (4) With unusual structural or aesthetic solution.
- 1.34.3 Other alternative internationally accepted standards are also acceptable if approved by the Engineer but only if such standards contain equivalent requirements for the management of Temporary Works in addition to the design of Falsework (including Class A Falsework).
- 1.34.4 It is to be noted that BS5975: 2019 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975:2019 and shall submit such justification to the Engineer for his information and consent.
- 1.34.5 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.34.6 Where the Bidding Documents state that BS BS5975: 2019 is to apply, the Contractor shall appoint at least the following principal specialist staff who will be dedicated to the Temporary Works:
- (1) Temporary Works Coordinator (TWC): responsible for ensuring the preparation and implementation of effective procedures and who shall retain overall responsibility for all Temporary Works on the Site including the Temporary Works of Subcontractors. The Contractor shall not use the TWC or other personnel of Subcontractors to act as his TWC.
 - (2) Temporary Works Designer (TWD): responsible for preparing the design of all Temporary Works (including any Falsework).
 - (3) Temporary Works Supervisors (TWS): responsible for the erection, safe use, maintenance, dismantling and removal of all Temporary Works in accordance with the

design and the requirements of the TWC and TWD and for providing the HSO with the following information to permit further actions:

- (a) Confirmation that the Temporary Works have been erected in accordance with the design and that such Temporary Works are ready to accept loading; and
- (b) Confirmation that the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works.

1.34.7 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed and completed in accordance with BS5975: 2019 and the Contract. All such records shall be in a format and content to be approved by the Engineer and all shall be made available for inspection by the Engineer.

1.34.8 The TWC, TWD and TWS shall be appropriately qualified and experienced and the TWC and TWD shall be named in the Bid and hence the Contract. The TWD can be either Contractor's Personnel or personnel from an appropriately qualified and experienced specialist Subcontractor to be named in the Bid or to be subsequently consented to by the Engineer.

1.34.9 Procedures for the appointment and any replacement of the TWC, TWD or TWS shall be the same as described for the HSO in JSSS 1.9 [*Appointment of HSO*].

1.34.10 The Executing Agency (via their consultant) during the design stage shall consciously endeavour to remove or reduce risks in the construction of the Permanent Works as far as possible through finding solutions with less construction difficulty and risk.

1.34.11 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and where possible shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit method statements for parts of the Temporary Works (including designs and calculations of Falsework) as may be requested by the Engineer for his review. If the Engineer choose to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design however he may choose to do so for those parts which he may consider to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975: 2019. The Engineer shall have no obligation to issue any response or comment, however if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

1.34.12 Where the Bidding Documents do not specifically require the Contractor to comply with BS5975: 2019, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of an adequate Temporary Works design.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records

- (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the temporary works, including procedures to:
 - (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a formal “permit to load”; and
 - (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a formal “permit to dismantle” where necessary.

The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

1.34.13 Whether there is or is not any legal requirement under the Laws of the Country for academic qualification, all of the Contractor’s Temporary Works specialist staff and any specialist Temporary Works Subcontractors shall have appropriate academic qualification for Temporary Works coordination, design or supervision as appropriate, work experience in construction and in Temporary Works design and whom the Contractor ascertains are qualified to perform the duties.

1.35 User Training

1.35.1 Prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer’s Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.

1.35.2 The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.

1.35.3 User Training shall vary according to the scope of the Works however it shall generally cover the following:

- (1) Safe system and Plant use, operation and process control.
- (2) System and Plant maintenance and repair.
- (3) Training in use of all hardware and software packages.
- (4) Laboratory control (sampling and analysis) including operation laboratory equipment.
- (5) Recording and reporting.
- (6) Emergency operation procedure.
- (7) Maintenance management procedures.
- (8) Inventory and store control systems.
- (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;
 - (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.

- 1.35.4 Any changes to the above with further particular details of User Training shall be provided in the Technical Specification (refer to Annex 1.3).
- 1.35.5 The Contractor shall also be responsible for training some candidates (as selected by the Employer) to be future trainers, so that when qualified by the Contractor, such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.35.6 The Contractor shall not be responsible for paying expenses or salaries of candidates attending training.
- 1.35.7 User Training shall be on Site in the completed facilities, unless otherwise provided in the Technical Specification (refer to Annex 1.3).
- 1.35.8 The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose.
- 1.35.9 The Engineer may choose to send representatives to witness the training.
- 1.35.10 The number of Employer's staff to be trained shall be provided in the Technical Specification (refer to Annex 1.3).
- 1.35.11 All training shall be conducted in the language for communication or in English with translators provided by the Contractor.
- 1.35.12 The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and approval of the Engineer at least fifty-six (56) days before any training commences.
- 1.35.13 The training manuals and all technical literature shall be prepared in both the language for communications and also the English language.
- 1.35.14 The Contractor shall use visual media as much as possible throughout the training process.
- 1.35.15 Training shall cover both theoretical and practical operation and maintenance procedures on the Works, Plant and systems actually constructed and/or installed.
- 1.35.16 The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom are experienced in each specific aspect of the Plant and systems.

- 1.35.17 Factory User Training shall not be required unless otherwise provided in the Technical Specification (refer to Annex 1.3).
- 1.35.18 The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic and practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
- 1.35.19 The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.
- 1.35.20 Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems.
- 1.35.21 The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Technical Specification (refer to Annex 1.3). Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise provided in the Technical Specification (refer to Annex 1.3), overall training duration shall not be less than fifty-six (56) days.
- 1.35.22 Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
- 1.35.23 Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
- 1.35.24 The Contractor shall issue formal certificates, officially indicating that candidates are formally qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or to train future candidates as applicable.

1.36 Unexploded Ordnance (UXO)

- 1.36.1. If there is a possibility that any UXO exists at the Site of the Works or in any existing buildings and structures, then unless otherwise stated in the Bidding Documents, this shall be surveyed and investigated by the Employer before bidding. The results of this investigation shall be clearly stated and full information including survey and investigation results with requirements for removal and disposal shall be provided by the Employer in the Bidding Documents. This shall be confirmed by the Employer through inserting suitable reference on Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents, as referred to in JSSS Annex 1.3 Required Amendments to "JICA Standard Bidding Documents".
- 1.36.2. JICA prefer that clearance of UXO shall be undertaken by the Employer as a precedent condition to commencement under GCC 8.1 [*Commencement of Works*], at the cost of the Employer and carried out by specialist government organisations, forces or contractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of UXO, engaged directly by the Employer.
- 1.36.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence at the Site until the receipt of a copy of this certificate.
- 1.36.4. If this method is to be adopted then it shall be clearly stated in the Bidding Documents (refer to JSSS Annex 1.3), and the procedures shall be described.

- 1.36.5. As an exception and only following the prior agreement of JICA, clearance of UXO shall be carried out by the Contractor under the Contract. If this method is to be adopted, the Employer shall give reasons for this to JICA using Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents, as referred to in JSSS Annex 1.3 Required Amendments to “JICA Standard Bidding Documents”.
- 1.36.6. The Bidding Documents shall then require the Contractor to employ suitable specialist Subcontractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of UXO. The specialist Subcontractor shall carry out a detailed survey and investigation and then safely execute any removal and disposal of UXO before commencing any Works at the Site. In addition, the Bidding Documents should require the Contractor to ensure that his own insurance of the Works, covers for this likelihood.
- 1.36.7. Completion of clearance shall be evidenced through the issue by the Contractor’s specialist Subcontractor of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no other work shall commence at the Site until the receipt by the Engineer of a copy of this certificate.
- 1.36.8. Irrespective of the selected method, should the Contractor encounter UXO he shall immediately suspend his operations at Site, clear the area of all Contractor’s Personnel, Employer’s Personnel and all other persons and notify the Engineer and relevant authorities. Work shall resume when the Contractor has received instructions from the Engineer and relevant authorities.
- 1.36.9. The Contractor shall obtain the Engineer’s consent for such specialist Subcontractors and their detailed Method Statements and Safety Plan shall also be submitted to the Engineer in accordance GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of Chapter 1 shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6.7 [*Health and Safety*] as amended by Annex 1.3 and named by the Bidder in his Bid..
- (4) “**JSSS**” or “**JICA Standard Safety Specification**” means the document of this title published officially by JICA on their website, issue number __ dated ____ and as may be modified by the Bidding Documents for the Project.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor, U.S.A.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

Unless otherwise evident from the text, reference in OSHA to “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to “the Contractor’s Representative” and reference to the “safety and health manager of the Contractor” and the like shall be collectively construed as reference to the Contractor’s “Health and Safety Officer”. “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

If any ambiguity or discrepancy is found in the OSHA documents specified in JSSS, or if any difference or discrepancy is found between OSHA documents and JSSS, the Engineer shall issue any necessary clarification or instruction.

- (8) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the agreement with JICA and utilising the funds provided by JICA under the terms mutually agreed for that purpose.

- (9) “**Safety Plan**” means a document that contains the overall risk assessments and shows the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as amended by Annex 1.3.

“**Safety**” shall also mean “occupational health and safety” and “health and safety” all described as such in JSSS and other documents contained in the Contract.

A1.1.2. The following technical words and expressions in JSSS relating to the content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” shall mean the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.20 [*Accident Response Plan*].
- (2) “**Confined Spaces**” shall mean spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Dangerous Goods**” shall mean corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (4) “**Dangerous Work**” shall mean Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (5) “**Emergency Response**” shall mean the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.23 [*Emergency Response Plan*].
- (6) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (7) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (8) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (9) “**Hazardous Substances**” shall mean any substance, whether solid, liquid or gas, that may cause harm to health.
- (10) “**Hazardous Areas**” shall mean areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:

- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation;
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.
- (11) “**Landslide**” means the movement of a mass of earth, rock or debris down a slope under the direct influence of gravity.
- (12) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Employer is continuing the operation and where the Contractor is required to perform Works.
- (13) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level. PPE for PFAS shall comprise of a body harness, an anchorage, connectors and typically shall include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a Safety Belt for fall arrest systems is prohibited. Wherever PFAS is provided for use, the Contractor shall ensure that it is used.
- (14) “**Personal Fall Restraint System**” or “**PFRS**” means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall. PPE for PFRS shall comprise of either a Safety Belt or body harness, together with an anchorage, connectors and other necessary equipment, typically including a lanyard, lifeline and other devices. Wherever PFRS is provided for use, the Contractor shall ensure that it is used.
- (15) “**Personal Protective Equipment**” or “**PPE**” means equipment that is worn to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (16) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard, lifeline or deceleration device. Any safety belt that has actually been subjected to a fall or previous in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for the safety of any worker.
- (17) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.18 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (18) “**Spotter**” or “**Flagman**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*] A reference to either **person** in JSSS shall be deemed to include a reference to the other or both.
- (19) “**Trade Effluent**” shall mean any liquid waste (effluent), other than surface water and domestic sewage that is discharged from premises being used for a business, trade or industrial process.

(20) **“Unexploded Ordnance” or “UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.

(21) **“User Training”** means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

BMGV Biological Monitoring Guidance Values

ODA Official Development Aid

OJT On Job Training

PFAS Personal Fall Arrest System

PFRS Personal Fall Restraint System

PPE Personal Protective Equipment

PW Permanent Works

TBM Tool Box Meetings

TW Temporary Works

TWA Time Weighted Average

WEL Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ANSI American National Standards Institute.

ASTM American Society for Testing and Materials.

BS British Standard.

BS EN British Standard European Norm.

HSE UK Health and Safety Executive.

ISO International Organisation for Standardisation.

ILO International Labor Organization.

JIS Japanese Industrial Standards.

Annex 1.2: Content of Safety Plan at Bid Stage

A1.2.1. At Bid Stage the Safety Plan shall be provided with brief indicative content as an outline Safety Plan. This must however, cover each of the subjects listed in this Annex, demonstrate that the Bidder understands the requirements and it shall contain clear and sufficient detail to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If any parts are superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Reference "Catch-all" Technical Standards

Refer to JSSS 1.4 [*Laws and Reference Standards*]JSSS - Laws and Reference Standards

Confirm in the Bid Stage Safety Plan whether the standards of OSHA are to apply as the "catch-all" and if not, then the Bidder shall state the name of an equivalent internationally recognised standard for health and safety of the same or similar detail, content, coverage and international acceptance as OSHA, (such as HSE or similar), in the Bid Stage Safety Plan.

(6) Bidder's Safety Certification and Implementation Policy

Refer to JSSS 1.5 [*Contractor's Safety Certification*]

Confirm which scheme the Bidder is accredited under.

Attach a valid original (or an authorised true copy) of the current certification under OHSAS 18001 or ISO 45001:2018 or approved equivalent from an internationally recognised and approved organisation, with Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form.

(7) Temporary Works (TW)

Refer to JSSS 1.34 [*Temporary Works*]

A Safety Plan for TW listing the principal items, describing the content, and specifying the safety measures to be applied to ensure compliance with the requirements.

Include a description of the scope of work for the principal specialist persons to be employed in the management and design of TW and the arrangements for controlling risks arising from the design, erection, maintenance, dismantling and removal of TW.

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works ensuring that the requirements of GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3, Sub-Subclauses (a) to (d) and any other requirements of the Contract are fulfilled.

(9) Safety Plan for the Permanent Works (PW)

A description of the general health and safety rules for the PW (e.g. limitation of smoking area, traveling speed on site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.) indicating measures for preventing accidents on the Site.

Particular Safety Plans for the various parts of the Works.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.19 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.2.2 [Definitions] and GC 4.1 [*Contractor's General Obligations*] as amended by Annex 1.3.

(11) Safety Measures for Contractor's Equipment

Refer to JSSS 1.32 [*Safety Equipment, Contractor's Equipment and Temporary Works*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(12) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.31 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety and to reward for improvement.

(13) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(14) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.32 [*Safety Equipment, Contractor's Equipment and Temporary Works*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(15) Site Inspection Plan

A description of the methods for on-Site inspections by the HSO and frequency. The description shall also include the methods for reporting, recording and utilising results.

(16) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure their health and safety.

(17) Policy for Preventing Traffic Accidents

A general description of the comprehensive measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

(18) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(19) Accident Response Plan

Refer to JSSS 1.20 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report and describe the method of investigation of causes, planning and implementation of preventive measures against recurrence.

It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

(20) Health Care Plan

Refer to JSSS 1.33 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(21) Fire Prevention

Refer to JSSS 1.22 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site

The fire-fighting plan required by JSSS 2.8 [*Fire Prevention – Additional Requirements*].

(22) Emergency Response Plan

Refer to JSSS 1.23 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(23) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety patrols, morning toolbox meetings, 5S and KYT activities (refer to JSSS 1.12 [*Contractor's Safety Management Activities*])

(24) Safety Induction Training

Refer to JSSS 1.17 [*Safety Induction Training*]

An outline description of the proposed health and safety training plans, describing methods, facilities, participants, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(25) Skill Training

Refer to JSSS 1.18 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers.

(26) User Training

Refer to JSSS 1.35 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of the workmen's accident compensation insurance and other remedies.

Annex 1.3: Required Amendments to “JICA Standard Bidding Documents”

[This Annex applies to Executing Agencies (Employers and their consultants) for use in their preparation of PQ and Bidding Documents, evaluation of Bids and award of Contracts]

JICA advise that the amendments described below shall be made to the “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA), October 2012, version 1.1. (hereinafter referred to as “JSBD”).

JICA intend to re-issue the JSBD incorporating these amendments in detail at some date in the future however, in order that JSSS can be used without delay on particular Projects, for which such use of JSSS has become effective and where the parties have formally and specifically agreed to adopt JSSS for the Project, (as described in JSSS Chapter 1: Preamble Notes, Clauses B and C), the Bidding Documents for such particular Projects shall be drafted to take account of the following amendments in advance of the re-publication of the re-issued JSBD, in accordance with the following instructions.

Amendments to JSBD Part 1: Bidding Procedures

A1.3.1 Bidders Safety Accreditation:

If a Bidder is required to be accredited in accordance with JSSS 1.5 [*Contractor’s Safety Certification*], make the following changes:

- 1) Part 1 – Bidding Procedures, Section I: Instructions to Bidders:

Change the numbering of existing clause from 4.6 to 4.7 and add the following new clause numbered 4.6:

A Bidder and all members constituting the Bidder, shall have the required certifications and/or accreditations (if any) specified in the BDS.

- 2) Part 1 – Bidding Procedures, Section **II: Bid Data Sheet:**

Add a new item referenced to ITB 4.6, stating as follows:

Required Accreditations: OHSAS 18001, ISO 45001: 2018 or equivalent from an internationally recognised and approved organisation.

- 3) Part 1 – Bidding Procedures, Section III: Evaluation and Qualification Criteria:

Modify 2.1 Eligibility to include a new item numbered 2.1.4 with the following data:

<i>Factor:</i>	Accreditation
<i>Requirement:</i>	Safety Accreditation required by ITB 4.6 and JSSS/BDS
<i>Compliance Requirement:</i>	Single Entity and JV must meet the requirements.
<i>Documentation: Forms</i>	ELI – 1 and 2, with attachments

- 4) Form ELI -1: Bidder Information Form and ELI-2 Bidder's Party Information Form:

Include an additional required attachment at the end of the bottom box of this form as follows:

4. Attached is an original or certified true-copy of

Safety Accreditation required by ITB 4.6 and JSSS/BDS

A1.3.2 Particular Safety Specification Requirements:

Part 1 – Bidding Procedures, Section I: Instructions to Bidders, Section VI. Works Requirements, Specification, pages WR-3 to WR-5.

Add the following additional text on page WR-5 to follow on from the existing text.

JICA Standard Safety Specification

JICA Standard Safety Specification (hereinafter referred to as JSSS) contains detailed requirements for health and safety including procedural requirements for the preparation, submission, review and response processes for Method Statements and Safety Plans for the execution of the Works.

Care shall be therefore be taken when drafting Bidding Documents for Projects where JSSS is to be used to ensure that there is no duplication of the JSSS requirements in the Technical Specification¹ for such Projects. Unnecessary and duplicated reference **must** be avoided.

JICA stress the importance of the Employer creating a sound working environment for the Contractor and therefore Bidding Documents should include for example: reasonable Time(s) for Completion; reasonable, continuous and unobstructed access to the Site and sufficient Site area(s), working and storage areas, all wherever possible. Requirements shall be clearly described in the Bidding Documents.

It must also be recognised that JSSS constitutes a range of standard safety requirements that shall apply generally on JICA ODA Projects and consequently it will be necessary to specify particular safety requirements for each specific Project. Such particular safety requirements shall be carefully and precisely drafted and included in the relevant parts of the Bidding Documents as noted below for such Projects and covering for example the following²:

JSSS Reference	Particular Requirements to be stated
1.7 Engineer’s Safety Representative	<p><i>(On large Projects with multiple contract packages and contractors)</i> The Bidding Documents shall state if the Engineer will appoint a full-time or part-time Safety Representative as an assistant upon the Works or state if the Engineer will act in this capacity.</p> <p>If no such requirements are stated in the Bidding Documents, it is to be assumed that the Engineer’s representative at the Site shall act in this capacity.</p>
1.9 Contractor’s Health and Safety Officer at the Site	<p><i>(On small Projects)</i> The Bidding Documents shall state if the HSO is NOT required to be assigned full-time on the Works.</p> <p>If not so stated in the Bidding Documents, the Contractor must assign a full-time dedicated HSO and if applicable other support personnel as required by JSSS.</p> <p>JICA advise that full-time assignment is the normal requirement and part-time or shared assignment is only allowable on very small projects with separate written justification to be provided by the Executing Agency to JICA.</p> <p>In addition to stating as above, if there is a requirement for the HSO, in Section IV. Bidding Forms, Bill of Quantities, Bill No.</p>

¹ To avoid any potential confusion with the “JICA Standard Safety Specification”, reference is made above to “Technical Specification” as this is the description used in JSBD although not in the FIDIC Conditions of Contract where this is defined as “Specification”.

² See also later checklist Form JSSS/CPR

JSSS Reference	Particular Requirements to be stated
	<p>1: General Items, change item 106 description to “Provide HSO and staff” with unit rate for provision being shown as “month”.</p> <p>Quantity in months shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p>
1.18 Skill Training	<p>The Bidding Documents shall state whether classroom-based skill training of counterpart Operation Leaders is, or is not required. The Contractor shall be expected in any event to provide OJT via his senior personnel to local counterparts.</p> <p>If it is required, the Bidding Documents shall state how many candidates shall be selected, for which skill groups and for how long.</p> <p>This shall be determined by the scope and nature of the Works but JICA suggest a usual maximum teaching period of three months for each candidate with say ten (10) candidates selected for four (4) skill groups, i.e. forty (40) candidates in total.</p> <p>Classroom lessons will be part-time, at least one (1) weekday and two (2) weekday evenings per week. Candidates shall be paid their full wages and allowances during teaching time.</p> <p>The Contractor shall design syllabi to compliment the candidates’ skill group, their work and position at the Site. In addition to skill training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>The Contractor shall provide classrooms which can also be a part of their office facilities at the Site and provide the use of Training Facilities (herein defined as including furniture, equipment, computers, sample tools and working equipment, other teaching aids and the like). Unless otherwise stated in the Bidding Documents, teachers shall be qualified and experienced foreign Operation Leaders assigned by the Contractor to the Works.</p> <p>In addition to stating as above and if there is a requirement for such classroom-based skill training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of Operation Leaders as teachers: Unit: man-month Quantity: Total estimated man-months</p> <p>Use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>

JSSS Reference	Particular Requirements to be stated
1.19 Hazardous Substances	<p>After Site survey and investigation (if necessary) the Bidding Documents shall if there is any likelihood of the existence of Hazardous Substances at the Site of the Works or in any existing buildings and structures.</p> <p>If there is such a likelihood, then the Bidding Documents shall state this and describe the Employer's requirements for removal and disposal that must be comied with by the Contractor.</p>
1.20 Accident Response Plan	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 [Health and Safety] as amended by Annex 1.3, due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs. (4) Additional treatment and recovery rooms. (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty. (6) Emergency air-ambulance services. <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as "Sum" and unit rate/quantity for provision being shown as "month".</p> <p>Quantity in "months" shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.20.8 Community Medical Support	<p>The Employer, by agreement with JICA, may also wish to extend the provision of first aid, medical and health services and facilities at the Site for the use of any local community or third parties or neighbours, not connected with the Works but living directly</p>

JSSS Reference	Particular Requirements to be stated
	<p>adjacent to and potentially affected by the Works.</p> <p>If this becomes a requirement, the scope, extent and duration of such services and facilities shall be carefully described in the documents together with the responsibility (if any) and obligations of the Contractor (or Employer) to insure.</p>
<p>1.22 Fire Prevention</p>	<p>Without reducing the Contractor's obligations, the Bidding Documents shall describe the particular scope of fire prevention services that are to be provided by the Contractor for the Works.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as "Sum" and unit rate/quantity for provision being shown as "month".</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
<p>1.23 Emergency Response Plan</p>	<p>In higher risk areas, the Employer may require the Contractor to establish, train and maintain a specialist team at the Site to assist in the event of an emergency as described in JSSS 1.23. The Bidding Documents shall specify the size of the team and shall also specify in detail the equipment to be provided so that the Contractor is made fully aware and is able to assess the extent, risk and cost of the requirements.</p> <p>An appropriate pay item shall be included for this in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as "Sum" and unit rate/quantity for provision being shown as "month".</p>
<p>1.26 Project Safety Committee</p>	<p><i>(On large Projects with multiple contract packages and contractors)</i> The Bidding Documents shall state if a Project Safety Committee is to be established for the Project and describe any further requirements.</p>
<p>1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer's Personnel]</p>	<p>(JSSS 1.27.2) The Bidding Documents shall describe the individual scope of Works for any other contractors to be employed by the Employer on the Site and where possible identify them by name. Also list any legally constituted public authorities who may be employed in the execution on or near the Site of any work not included in the Contract, and specify scope, working locations, access and timing as far as possible.</p>
<p>1.33 Health Matters</p>	<p>The Bidding Documents shall include a listing and description of the additional services and facilities that Bidders are required to provide at the Site in addition to those already required by GC 6.7 [Health and Safety] due to the distance from urban areas, lack of immediate availability of suitable medical facilities, where local health authorities do not exist or are lacking in capability or</p>

JSSS Reference	Particular Requirements to be stated
	<p>standard of care, or where so required by the nature of the Works.</p> <p>Examples of additional facilities include:</p> <ol style="list-style-type: none"> (1) Enhanced medical staff with qualified doctor(s). (2) Enhanced first aid and treatment facilities and staff. (3) Enhanced medical equipment, medical supplies, medicines and drugs. (4) Additional treatment and recovery rooms. (5) An equipped ambulance based at the Site with qualified driver and attenders on full time twenty-four (24) hour, seven (7) day per week, stand-by duty. (6) Emergency air-ambulance services. <p>In addition to stating as above, if there is a requirement for such additional facilities, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items, with unit for provision of facilities shown as “Sum” and unit rate/quantity being shown as “month”.</p> <p>Quantity in “months” shall be of the required period for provision which will usually be the Time for Completion and any required time during the Defects Notification Period.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.34 Temporary Works	<p>The Bidding Documents shall state if Bidders shall comply with BS5975: 2019 on the Works, for which purpose, reference shall be made to the basic criteria described in JSSS 1.34.</p> <p>If Bidders are required to comply with BS5975: 2019, the Bidding Documents shall include a listing and description of the required staff for the coordination, design and supervision of the Temporary.</p> <p>Examples of such staff include:</p> <ol style="list-style-type: none"> (1) Temporary Works Coordinator (TWC). (2) Temporary Works Designer (TWD). (3) Temporary Works Supervisor (TWS). <p>The Bidding Documents shall require Bidders to name TWC and TWD in the Bid for which purpose reference is to be made to this Annex 1.3.</p>

JSSS Reference	Particular Requirements to be stated
	<p>If Bidders are NOT required to comply with BS5975: 2019, the Bidding Documents shall state that Bidders are to comply in any event with the requirements of JSSS 1.34.12 and submit full details in the Safety Plan.</p> <p>In addition, separate written justification shall be provided by the Executing Agency to JICA.</p>
1.35 User Training	<p>The Bidding Documents shall state whether User Training of Employer's Personnel is required so that the Works or any part or Section thereof can be used, operated and maintained safely.</p> <p>If it is required, the Bidding Documents shall modify or add to the requirements of JSSS 1.35 and state the precise requirements including details of required training, numbers of candidates and duration of training.</p> <p>This shall be determined by the scope and nature of the Works and the number of users, management staff, operators, maintenance staff who will be engaged upon the Works.</p> <p>Lessons will be full-time.</p> <p>The Contractor shall design syllabi to compliment the training courses and in addition to user training, syllabi shall include health and safety training to an international level of appreciation with a general introduction to OSHA and other international safety standards and regulations. The Contractor shall test candidates upon completion of their course, prepare and issue certificates of attendance and successful completion of each course.</p> <p>In addition to stating as above and if there is a requirement for such user training, appropriate pay items shall be included for each of the above in Section IV. Bidding Forms, Bill of Quantities, Bill No. 1: General Items for:</p> <p>Assignment of teachers for user training Unit: man-month Quantity: Total estimated man-months</p> <p>Provision and use of Training Facilities: Sum</p> <p>If any Training Facilities are to be handed to the Employer or issued to candidates, then this shall be clearly stated, items shall be listed with quantities and fully specified in the Bidding Documents, otherwise all such Training Facilities shall remain the property of the Contractor and shall be removed on completion.</p>
1.36 Unexploded Ordnance	<p>After Site survey and investigation (if necessary) the Bidding Documents shall if there is any likelihood of the existence of UXO on the Site.</p> <p>If there is such a likelihood, then the Bidding Documents shall state this and describe the Employer's procedures for the removal and disposal of UXO.</p> <p>As an exception the Employer shall submit reasons for choosing</p>

JSSS Reference	Particular Requirements to be stated
	<p>the alternative method to JICA on Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents and confirm that investigation and removal shall be the responsibility of the Bidder and describe the requirements and procedures</p>
<p>A.1.1.2 (11) Work in Operational Areas</p>	<p>If the Works are to be executed in whole or in part in Operational Areas (as defined in Annex 1.1) this shall be stated and times of operation and conditions with any restrictions on the Contractor's working methods, times and arrangements shall be described in detail.</p> <p>The respective responsibilities for insurance, health and safety management, security, health and welfare facilities, etc., between the Employer and Contractor(s) shall be clearly described so that there is no doubt over what each party is to perform or provide. A copy of the Employer's working procedures, including their health and safety procedures shall be provided to Bidders for their study during the Bidding period.</p>
<p>2.2: Site Perimeter Fencing:</p>	<p>The Bidding Documents shall describe the required Site Perimeter fencing the—showing the required extent, dimensions, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p> <p>Permanent or temporary fencing within the Site shall be described and shown for example around hazardous areas or around operating plant areas.</p> <p>Gates barriers and other treatment at Site entrances shall be described together with any arrangements for communications, lighting and power supply.</p> <p>Requirements for security at the Site entrance and also around the site shall be described and whether this is to be provided by the Contractor or the Employer.</p>
<p>Offices, Accommodation and Related Amenities and Facilities</p>	<p>The Bidding Documents shall describe the required Employer's, Engineer's and Contractor's construction offices, staff accommodation and related amenities and facilities to be provided by the Contractor and describe the responsibility for the maintenance and repair of same. The Bidding Documents show the required scope, design, constructional details and specification, whether temporary or permanent and this shall also be shown on the Drawings.</p> <p>The Contractor's responsibility for potable water supply, water and power supply, waste water and sewage drainage and treatment shall be clearly described and shown.</p> <p>The extent of provision by the Contractor shall take due account of the nature and location of the Site and the condition of access thereto.</p> <p>If any facilities as required under the Contract or additional facilities as required by JSSS are to be handed to the Employer on taking over then this shall be clearly stated, items shall be listed</p>

JSSS Reference	Particular Requirements to be stated
	with quantities and fully specified in the Bidding Documents, otherwise all such facilities shall remain the property of the Contractor and shall be removed on completion.

To assist with compliance of the above requirements, a checklist has been prepared and is attached to this Annex 1.3.

A1.3.3 Required Detail of Bid Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Safety Plan, page BF-33.

Delete “[Insert Safety Plan]” and in this place insert the following:

Copy and paste here the exact same final text of JSSS Annex 1.2 as ultimately agreed.

A1.3.4 Bid Evaluation Requirements for Safety Plan:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section III. Evaluation and Qualification Criteria, 1, Evaluation, 1.1 Evaluation of Technical Bids.

(Applies to both Section III. Evaluation and Qualification Criteria (Following Prequalification) and Section III. Evaluation and Qualification Criteria (Without Prequalification), Pages EQC-1)

In the paragraph stating [Evaluation of the Bidder’s Technical Proposal will include an assessment of the Bidder’s technical capacity to mobilise key equipment and personnel for the Contract consistent with its proposal regarding work methods, scheduling, and material sourcing in sufficient detail and fully in accordance with the requirements stipulated in Section VI, Works Requirements.] insert “and Safety Plan” in the third line after the words, “work methods”.

Insert the following additional paragraph after the above paragraph:

“Evaluation of the Safety Plan shall take account of the Health and Safety Officer, and if compliance with BS5795: 2019 is a specified requirement of the Bidding Documents (refer to JSSS Annex 1.3) of any principal Temporary Works coordination, design and supervision staff, in item 1.1.2 Personnel and of PPE and any other safety equipment from the Safety Plan in item 1.1.3 Equipment.”

A1.3.5 Health and Safety Officer and (if applicable) Temporary Works staff:

Part 1 – Bidding Procedures, Section I. Instructions to Bidders Section III. Evaluation and Qualification Criteria against 1.1.2 Personnel.

Delete position 2 as stated and insert as follows:

- 2 Health and Safety Officer at the Site

Delete position 3 and the words “e.g. Health and Safety (Accident Prevention Officer) and insert the following:

(if any of the following are a specified requirement of the Bidding Documents by reference to JSSS Annex 1.3):

3. Temporary Works Coordinator
4. Temporary Works Designer
5. Temporary Works Supervisor

On the following line insert the words:

Other personnel to be inserted as appropriate.

Under “Notes for Employer” delete notes 1 and 2 and in this place insert the words:

The proposal for all required personnel shall be evaluated.

A1.3.6 Bidder’s Safety Declaration (Form JSSS/BSD):

Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms

Include “Form JSSS/BSD – Bidder’s Safety Declaration” in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumber existing pages BF-56 and BF-57 appropriately and insert suitable reference in the Table of Forms on page BF-1.

The Employer requires all Bidders to appoint the Health and Safety Officer at the Site (HSO) prior to Bid submission and this HSO shall sign Form JSSS/BSD in addition to the Bidder’s Official Representative.

Please refer to end of this JSSS Annex1.3 for a copy of Form JSSS/BSD

Amendments to JSBD Part 3 - Particular Conditions of Contract

The following GC Sub-Clauses are to be modified as stated and as a consequence, future reference to these numbered Sub-Clauses, shall be to PC rather than GC.

A1.3.7 Submission and Review of Method Statements and Safety Plans:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 4.1 Contractor’s General Obligations</p>	<p><i>Delete that part of the fifth paragraph of this Sub-Clause which states:</i></p> <p>The Contractor shall, whenever required by the Engineer, submit details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works.”</p> <p><i>and in this place insert:</i></p> <p>(a) The Contractor shall, whenever required by the Engineer, submit Method Statements and/or Safety Plans each with details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the request.</p> <p>(b) The Engineer may review the Method Statements and/or Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Method Statement and /or Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.</p> <p>If the Engineer gives no such notice of non-compliance for the original Method Statement and/or Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted Method Statement and/or Safety Plan within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement and/or Safety Plan subject to</p>
--	--

	<p>complying with his other obligations under the Contract.</p> <p>(c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement and/or Safety Plan subject to his other obligations under the Contract.</p> <p>(d) The Contractor shall submit a revised Method Statement and/or Safety Plan whenever required by the Engineer or when any previous Method Statement and/or Safety Plan for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site in accordance with the requirements described in items (a) to (c) above.</p>
--	---

A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 4.8 Contractor's Health and Safety Obligations</p>	<p><i>Delete this Sub-Clause completely and replace with the following:</i></p> <p>The Contractor shall:</p> <ul style="list-style-type: none"> (a) Comply with all applicable health and safety Laws of the Country, all standards and regulations, (b) Comply with all applicable health and safety obligations specified in the Contract including those contained in the JICA Standard Safety Specification (JSSS) and which as an entire document is to be read and construed as an integral part of the Contract by virtue of this Contract Sub-Clause amendment; (c) Comply with all directions issued by the Contractor's Health and Safety Officer (appointed under Sub-Clause 6. 7 [<i>Health and Safety</i>] as amended by this JSSS Annex 1.3; (d) Take care of the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed; (e) Keep the Site, the Works (and the other places (if any) where the Works are being executed) clear of unnecessary obstruction so as to avoid
--	--

	<p>danger to these persons;</p> <p>(f) Provide fencing, lighting, safe access, guarding and watching of:</p> <p>(i) the Works, until the Works are taken over under Clause 10 [<i>Employer's Taking Over</i>]; and</p> <p>(ii) any part of the Works where the Contractor is executing outstanding works or remedying any defects during the Defects Notification Period; and</p> <p>(g) Provide any Temporary Works (including roadways, footways, guards and fences) that may be necessary, because of the execution of the Works, for the use and protection of the public and of owners and occupiers of adjacent land and property.</p> <p>Within twenty-eight (twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, the Contractor shall submit to the Engineer for information an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>This shall be based upon the Safety Plan issued at bid stage, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan to demonstrate the Contractor's intended compliance with the Contract.</p> <p>This document shall be in addition to any other similar document required under applicable health and safety Laws of the Country.</p> <p>This Safety Plan shall set out or refer to all the health and safety requirements:</p> <p>(a) that are stated in JSSS;</p> <p>(b) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and</p> <p>(c) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.</p> <p>Requirements for submission by Contractor and response (if any) by the Engineer, shall be in accordance with GC 4.1 [<i>Contractor's General</i></p>
--	--

	<p><i>Obligations</i>] as amended by Annex 1.3.</p> <p>The Safety plan shall be revised as necessary by the Contractor or the HSO or at the reasonable request of the Engineer and each revision shall be submitted promptly to the Engineer for his information.</p> <p>In addition to the safety reporting requirements of sub paragraph (g) of Sub-Clause 4.21 [<i>Progress Reports</i>] the Contractor shall inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.</p> <p>The Contractor shall, comply with the health and safety recording and reporting requirements of JSSS.</p> <p>The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.</p> <p>Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.</p>
--	---

A1.3.9 Change “accident prevention officer” to “Health and Safety Officer”:

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause GC 6.7 Health and Safety	<i>In the second paragraph, delete the words “accident prevention officer at the Site” and insert “Health and Safety Officer at the Site”</i>
--	---

A1.3.10 Revised Order of Priority of Documents

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

Sub-Clause GC 1.5 Priority of Documents	<p><i>Delete sub-items (a) to (i) and insert the following sub-items (a) to (j):</i></p> <ul style="list-style-type: none"> (a) the Contract Agreement (if any), (b) the Letter of Acceptance, (c) the Letter of Tender, (d) the Particular Conditions - Part A, (e) the Particular Conditions - Part B, (f) these General Conditions, (g) the JICA Standard Safety Specification (JSSS) and the signed Bidder’s Declaration,
--	--

	<p>(h) the Specification,</p> <p>(i) the Drawings, and</p> <p>(j) the Schedules and any other documents forming part of the Contract.</p>
--	---

A1.3.11 Raised Awareness of Available Resources on ODA Projects

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 6.9</p> <p>Contractor's Personnel</p>	<p><i>Add the following paragraphs to the end of the existing Sub-Clause:</i></p> <p>The Contractor shall be deemed to be aware that in many countries and locations for which Official Development Aid (ODA) is provided, the qualified, skilled and experienced Contractor's Personnel required by this Sub-Clause is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, quality and performance that is demanded for these ODA Projects.</p> <p>The Contractor shall therefore be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries and all of whom shall be appropriately qualified, skilled and experienced to the standards required and sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.</p> <p>This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Contract.</p> <p>Without limiting the Contractor's obligations under the first two above added paragraphs of this Sub-Clause, the Contractor shall also employ counterpart local Contractor's Personnel with whom the Contractor shall implement a policy of mutual cooperation and ensure that this is adopted by all other Contractor's Personnel who shall work closely with and transfer necessary knowledge and skills to the counterpart staff to raise skill levels and awareness of international standards.</p> <p>The Contractor shall provide further skill training including classroom courses for all local personnel to compliment the direct on-job-training.</p> <p>The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic qualification, with copies provided to the Engineer if so requested by the Engineer.</p>
--	---

	<p>Details of such training shall be submitted with the Bid Safety Plan.</p> <p>Any such employment, training and academic qualification and employment of local personnel shall not mean that the Contractor can demobilise the imported resources unless the Contractor and Engineer are satisfied that the remaining Contractor's Personnel are able to act fully in accordance with the requirements of the Contract.</p>
--	---

A1.3.12 Assignment of Foreign Personnel on ODA Projects

Part 3 – Conditions of Contract and Contract Forms, Section VIII. Particular Conditions, Part B - Specific Provisions.

<p>Sub-Clause GC 6.12 Foreign Personnel</p>	<p><i>Insert the following additional paragraph after the first paragraph of Sub-Clause 6.12:</i></p> <p>Such foreign personnel shall be qualified, skilled and experienced Personnel of Operation Leader status or above.</p> <p>Unless otherwise stated in the Bidding Documents, the Contractor shall not bring into the Country any unqualified, unskilled or inexperienced foreign Contractor's Personnel.</p>
---	---

A1.3.13 Listing of Documents to be included in the Contract Agreement:

Part 3 – Conditions of Contract and Contract Forms, Section IX. Annex to the Particular Conditions - Contract Forms

<p><i>[Option A: One-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p><i>In paragraph 2. delete sub-items (i) to (ix) and insert the following sub-items (i) to (x):</i></p> <ul style="list-style-type: none"> (i) the Letter of Acceptance; (ii) the Letter of Bid; (iii) the addenda Nos <i>[insert addenda numbers, if any]</i> (if any); (iv) the Particular Conditions; (v) the General Conditions; (vi) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration; (vii) the Specification; (viii) the Drawings; (ix) the completed Schedules; and (x) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.
---	--

and:

<p><i>[Option B: Two-Envelope Bidding]</i></p> <p>Contract Agreement</p>	<p><i>In paragraph 2. delete sub-items (i) to (x) and insert the following sub-items (i) to (xi):</i></p> <ul style="list-style-type: none">(i) the Letter of Acceptance;(ii) the Letter of Technical Bid;(iii) the Letter of Price Bid;(iv) the addenda Nos [<i>insert addenda numbers, if any</i>] (if any);(v) the Particular Conditions;(vi) the General Conditions;(vii) the JICA Standard Safety Specification (JSSS) and signed Bidder's Declaration;(viii) the Specification;(ix) the Drawings;(x) the completed Schedules; and(xi) the Acknowledgement of Compliance with Guidelines for Procurement under Japanese ODA Loans.

Form JSSS/CPR - Checklist of Particular Requirements in Bidding Documents

[This form is to be prepared by the Executing Agency after completing the preparation of the PQ and Bidding Documents and submitted to JICA local office together with the Draft PQ and Bidding Documents when the concurrence of JICA is being requested for these documents]

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
1.5 Bidder's Safety Accreditation	<i>Required or not.</i>				Default is "Yes",
	<i>Documents fully amended</i>				Default is "Yes".
1.7 Engineer's Safety Representative	<i>Required to be assigned or not.</i>				Default is "No", not required except on large projects.
1.9 Contractor's Health and Safety Officer at the Site	<i>Required to be assigned full-time or not</i>				Default is "Yes", normally required to be full time
1.19.12 Hazardous Substances	<i>Are any likely to exist?</i>				Default is "No". If "Yes" Full detail and copy of survey shall be provided in Technical Specification and requirements for removal
1.20 Accident Response Plan	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification (unless local facilities are readily available)
1.20.8 Community Medical Support	<i>Required or not</i>				Default is "No", unless agreed earlier with JICA
1.22 Fire Prevention	<i>Additional facilities required at Site or not</i>				Default is "Yes", full detail shall be provided in Technical Specification (unless local facilities are readily available)
1.23 Emergency Response Plan	<i>Full details of additional rescue facilities provided</i>				Default is "No", unless higher risk area
1.26 Project Safety Committee	<i>Required or not.</i>				Default is "No", not required except on

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
					large projects.
1.27 Health and Safety Coordination with Other Contractors, refer also to GC 2.3 [Employer's Personnel]	Full details provided by Employer				Default is "Yes". Full detail shall be provided in Technical Specification
1.33 Health Matters	Additional facilities required at Site or not				Default is "Yes", full detail shall be provided in Technical Specification" (unless local facilities are readily available)
1.34 Temporary Works	Compliance with BS 5975:2019 required or not				Default is "Yes".
1.35 User Training	Full details provided by Employer				Default is "Yes". Full detail shall be provided in Technical Specification
1.36 Unexploded Ordnance	Is it likely to exist?				Default is "No". If "Yes" Full detail shall be provided in Technical Specification
	If yes is Employer to remove?				Default is "Yes". Full detail shall be provided in Technical Specification
	If yes is Contractor to remove?				Normally "No" If Contractor to remove, state why.
A.1.1.2 (11) Work in Operational Areas	Operational Areas exist on the Site?				No default
	If Operational Areas exist on the Site full detail provided?				If applicable, default is "Yes".

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
A.1.1.2 (11) Work in Operational Areas	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
2.2: Site Perimeter Fencing:	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
Offices, Accommodation and Related Amenities and Facilities	<i>Full details provided by Employer</i>				Default is “Yes”. Full detail shall be provided in Technical Specification
A1.3.3 Required detail of Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.4 Bid Evaluation Requirements for Safety Plan	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.5 Health and Safety Officer and (if applicable) Temporary Works staff	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.6 Bidder’s Safety Declaration (Form JSSS/BSD)	<i>Bidding Documents amended to include the Form JSSS/BDS?</i>				Default is “Yes”.
A1.3.7 Submission and Review of Method Statements and Safety Plans	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.8 JSSS Comprised as Part of the Contract with Further Safety Requirements	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.

JSSS Reference	Requirement:	Yes (✓)	No (✓)	If not default, explain why:	Default and Notes
A1.3.9 Change “accident prevention officer” to “Health and Safety Officer”	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.10 Revised Order of Priority of Documents	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.11 Raised Awareness of Available Resources on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.12 Assignment of Foreign Personnel on ODA Projects	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.
A1.3.13 Listing of Documents to be included in the Contract Agreement	<i>Bidding Documents amended to show the full requirements?</i>				Default is “Yes”.

Form JSSS/BSD - Bidder's Safety Declaration

[Refer to earlier Annex 1.3 item 1.3.6: This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page BF-56; renumbering existing pages BF-56 and BF-57 appropriately and inserting suitable reference in the Table of Forms on page BF-1]

I, *[insert name and position of authorised signatory]*, being duly authorized by *[insert name of Bidder/members of joint venture ("JV")]* (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSD hereby declare our commitment to comply with the requirements of the JICA Standard Safety Specification (JSSS).

The Bidder declares, that if selected to undertake the Works in connection with the Contract, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Employer's Personnel and the Contractor's Personnel and any other persons entitled to be thereon or that may be affected by operations thereby and that the Bidder is aware and accepts to follow all of the relevant health and safety Laws of the Country and the requirements of JSSS.

Irrespective of the Laws of the Country and the enforcement or otherwise of same, the Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, Personal Protective Equipment, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will import for sole use upon the Works (where not available in the Country):

1. New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old unless otherwise pre-inspected at origin by the Engineer at the Contractor's expense and pre-approved), all fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, academic qualification, experience and capability;
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel and Employer's Personnel in a language and vocabulary they can understand;
5. Keep accurate records of work-related injuries and illnesses;
6. Perform tests in the workplace, such as air sampling as required by JSSS;
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged;
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned;

9. Provide eyesight, hearing and mobility examinations and other medical tests required by JSSS;
10. Post injury and illness information and data where workers can see them;
11. Inform the Engineer and submit details of any accident or illness as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately; and
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if he is successful with his Bid, the Health & Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If our Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Annex 1.5: Subjects of Skill Training Course for Counterpart Operation Leaders

Under FIDIC GC 6.9, “The Contractor’s Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations.”

This is a basic requirement and it is not incumbent upon the Employer to accept otherwise or to pay further for skill training of the Contractor’s Personnel to achieve this standard.

However please refer to JSSS 1.18 [Skill Training] which we have added to provide OJT and also classroom-based skill training for local counterpart Operation Leaders. The idea is that skill knowledge will be passed on by them in future.

We suggest that Skill Training shall be according to the scope of Works in the Project with the emphasis on direct OJT if necessary from foreign Operation Leaders.

This could/should be complimented by some classroom training, testing and even perhaps certifying in some way by the contractor.

However, the syllabus so far prepared is far too complicated and will be difficult to understand and apply.

Please can this be simplified.

Consideration must also be given to payment for this and it is necessary to include a simple payment mechanism in the Bidding Documents for such training otherwise it will not happen.

Please refer to Annex 1.3, where I have included some suggestions.

Annex 1.xxx: Dangerous or Harmful Operations

Recommend that this is not used

Dangerous Work has now been specifically defined (See Annex 1.1 definitions) and in a much wider sense and we recommend that this Annex 1.xxx is now not applicable and not necessary; it has little or no meaning.

Annex 1.xxx: Subjects of Special Education for Dangerous or Harmful Operations

Awaiting further information from NK

This is not recommended; the contractor is responsible for determining what is dangerous or not, not JICA and he is then responsible for whatever methods, education, choice of equipment etc. etc. to make certain that workers are able to work safely in such “dangerous” or “harmful operations”.

It is possible that if JICA state what education is required and if the contractor then chooses to employ an unqualified workforce but educates then as requested by JSSS and there is then an accident, JSSS/JICA could be adjudged in some way responsible.

We understood that this is not the intention of JSSS.

*When Contractor’s Personnel are engaged in any operations including potentially dangerous or harmful operations ALL personnel shall be selected by the contractor as qualified and experienced and given all necessary health, safety **and skill** training by the Contractor appropriate to the operations concerned. There is no advantage on giving examples to a contractor who should already know what is required, is responsible, is being paid for this and has insured for the consequences.*

Annex 1.xxx: Work Requiring the Assignment of an Operation Leader

Please refer to JSSS 1.19 and Annex 1 definition of Operation leaders.

This Annex 1.xxx is not necessary, not recommended and potentiality creates a liability for JICA.

What if it excludes some work and there is an accident?

NO worker should be left to work on his own, ALL should be trained, skilled and guided and properly supervised.

Also, Operation Leaders are not by definition one type of skilled person, there are many different kinds each so qualified according to his skill group and trade.

<p>1. 総則</p> <p>1.8 請負者の要員の適正配置</p> <p>1.8.1 要員の適正配置上の留意点</p> <p>請負者は、以下の事項を考慮し、作業に必要な資格・技能・経験を有する要員を適正に配置しなければならない。</p> <p>請負者は要員の配置を記録し、安全衛生管理者は適正な配置を確認する。エンジニアはこの記録を随時閲覧できるものとする。</p> <p>(1) 作業内容及び作業環境 (2) 業務経験、能力等 (3) 18歳未満の者に対する配慮 (4) 健康状態、毎日の作業前の健康状態 (5) 作業量の適正配分</p> <p>なお、健康状態に関する書類(既往歴と健康診断結果等)は、当該国における個人情報保護に関する法令を遵守し保管しなければならない。</p>	<p>1. General</p> <p>1.8 Proper Placement of Contractor's Personnel</p> <p>1.8.1 Points of Proper Placement of Contractor's Personnel</p> <p>The Contractor shall properly assign the Contractor's personnel who have the necessary qualifications, skills, and experience considering the following matters.</p> <p>The Contractor shall record the placement of workers and the Health and Safety Officer shall confirm the appropriateness of placement. The Engineer shall be able to view the record at any time.</p> <p>(1) Work content and work environment (2) Work experience and ability etc. (3) Consideration for workers under 18 (4) Health condition, and health condition before daily work starts (5) Proper allocation of work volume</p> <p>In addition, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the laws and regulations concerning personal information protection in the relevant country.</p>	<p>As I informed you in the last October, JICA and NK discussed Operation Leader (OL)</p> <p>The discussion was made about works for OL to be assigned (high risk works), responsibilities of OL and example syllabus for education/training for OL as shown in the left.</p> <p>I know and understand your opinion about these as you already specified and commented in the JSSS Issue 6.</p> <p>This is one of issues to be discussed in January, therefore I would like to send you for your information for next meeting though I have not yet reviewed the contents in English R0 prepared by our member.</p> <p>I would like to discuss these next year.</p> <p>Thank you.</p> <p>Sakoda</p>
<p>1.8.2 作業主任の配置</p> <p>請負者は、各作業の安全を確保するために、各作業を直接指揮・監督する下記の作業主任を、各作業に配置しなければならない。</p> <p>(1) 作業主任の任命</p> <p>請負者は、円滑な作業の遂行と労働災害の防止のために、当該作業に対する十分な経験及び作業能力を有し、作業チームの作業員を適切に指揮・統率する能力があると請負者が認めるもの(competent person)を、作業主任として任命し、その者に当該作業の作業員の指揮、その他次の(2)に定める事項を行わせなければならない。</p> <p>(2) 作業主任の職務</p> <p>作業主任は、作業計画及び安全計画に基づき、請負者が定めた枠組みの中で、作業チームで行う作業に関し、以下の職務を遂行しなければならない。</p> <p>(a) 作業を直接指揮し、作業員の監督、作業員への指示、進行状況の監視を行うこと。 (b) 作業内容に応じて作業員を適正に配置すること。 (c) 使用する材料の欠点の有無を点検し、不良品を取り除くこと。</p>	<p>1.8.2 Placement of Operation Leaders</p> <p>In order to ensure the safety of each work, the Contractor shall assign an Operation Leader who directly supervise the work.</p> <p>(1) Appointment of Operation Leaders</p> <p>The Contractor shall appoint a competent person who has sufficient experience and ability to perform the work smoothly and prevent occupational accidents to the Operation Leader, and shall instruct him to direct and lead the workers of the work team as well as performing other matters specified in (2) below.</p> <p>(2) Duties of Operation Leaders</p> <p>Based on the method and Safety Plan, the Operation Leader shall fulfill the following duties regarding work performed by the team within the framework (responsibilities) defined by the Contractor.</p> <p>(a) Direct the work, give instructions and supervise the workers, and monitor the progress. (b) Place workers appropriately according to the work content.</p>	

<p>(d) 作業に係る設備及び作業場所、使用する機械、器具、工具の日常点検を行うこと。</p> <p>(e) 上記の設備、作業場所、機械、器具、工具に異常を認めるときは、作業を開始しないこと、又は直ちに作業を中止すること。異常を請負者の監督員 (Contractor's superintendent) に報告すること。</p> <p>(f) 当該作業に関する安全措置が安全計画に従い講じられているかどうかを確認すること。</p> <p>(g) 要求性能墜落制止用器具、保護帽等の保護具の使用状況を監視すること。</p> <p>(h) 非常時の退避の方法を、作業員にあらかじめ指示すること。</p> <p>(i) 作業の危険性及び有害性を発見した場合、必要に応じ対策を行う、又は請負者の監督員に報告すること。</p> <p>(j) 必要に応じ作業環境の改善を、監督員へ提案すること。</p> <p>(k) 2.7 [悪天候及び地震時の対策]に規定する状況の発生時、又はその他仮設物等の異常発生時において、作業の中止、監督員への連絡等を含む対応を行うこと。</p> <p>(l) 1.12[事故発生時の措置]に従い、事故発生時の対応を行うこと。</p> <p>(m) 作業員の安全意識を高めること。</p> <p>(3) 作業主任を任命したときは、氏名、担当事項を作業場の見やすい箇所に掲示し、作業員に周知すること。</p>	<p>(c) Check the material used for defects and remove defective products.</p> <p>(d) Perform daily inspections of equipment, machines, instruments and tools used and work place related to the work.</p> <p>(e) If any defect or abnormality is found in the above equipment, work place, machine, instrument or tool, do not start the work or stop the work immediately and report the anomaly to the Contractor's superintendent.</p> <p>(f) Check if the necessary safety measures for the work are taken according to the Safety Plan.</p> <p>(g) Monitor the usage of personal protective equipment such as personal fall restraint system and safety helmet.</p> <p>(h) Instruct workers in advance how to evacuate in case of an emergency.</p> <p>(i) If any work hazard is found, take measures as necessary or report them to the Contractor's superintendent.</p> <p>(j) Propose improvements to the work environment as necessary to the superintendent.</p> <p>(k) When the situation specified in 2.7 [Countermeasures against Adverse Weather and Earthquakes] occurs, or other abnormalities such as temporary structures are noticed, take measures including stopping the work and contacting superintendents.</p> <p>(l) Take actions in the event of an accident in accordance with 1.12 [Measures at the Time of Accident Occurrence].</p> <p>(m) Increase workers' safety awareness.</p> <p>(3) When appointing the Operation Leaders, post the name and works in charge in an easy-to-read place in the workplace to notify the workers.</p>	
<p>1.9 安全衛生教育訓練</p> <p>1.9.1 教育訓練の実施</p> <p>請負者は、当該国の法律を遵守し、安全衛生管理者主導の下、教育訓練を次の請負者の要員を対象に行わなければならない。</p> <p>(a) 新規入場者及び作業内容の変更が予定される者</p> <p>(b) 危険又は有害な業務へ配置予定の者</p> <p>(c) 作業主任に任命が予定されている者</p> <p>ただし、当該業務に関し当該国の公的機関が発行する資格の保持者又は当該国若しくは他国の公的機関が実施する教育訓練の受講終了者等で、教育の項目の全部又は一部について十分な知識及び技能を有していると請負者が判断する作業員については、当該項目についての教育を省略することができる。</p> <p>請負者は、教育・訓練計画の概要(対象者、時期、教材、教育者・訓練者の選定</p>	<p>1.9 Health and Safety Education and Training</p> <p>1.9.1 Implementation of education and training</p> <p>The Contractor shall comply with the laws of the Country and, under the guidance of the Health and Safety Officer, conduct education and training for the following Contractor's personnel.</p> <p>(a) Those who newly enter the site and those who are scheduled to change the work</p> <p>(b) Those who are planned to be assigned to a particularly dangerous or harmful work</p> <p>(c) Those who are planned to be appointed as Operation Leaders</p> <p>However, for those who have qualifications issued by the public organization in the Country or who have completed the training provided by the public</p>	

<p>に関する方針等)を安全衛生計画書に含めなければならない。また、教育・訓練の開始前には、その詳細を含んだ安全衛生計画書をエンジニアへ提出しなければならない。</p> <p>なお、教育・訓練は就業時間内に行わなくてはならない。また、教育・訓練に必要な費用は請負者が負担しなければならない。</p> <p>1.9.2 教育訓練の内容</p> <p>(1) 新規入場者及び作業内容の変更が予定される者の教育 請負者は新規入場者及び作業内容の変更が予定される者に対して、それぞれが従事する業務に関する安全及び衛生のため必要な、次の事項を含む教育を行わなければならない。</p> <p>(a) 指揮命令系統とコミュニケーション方法 (b) 機械等、原材料等の危険性又は有害性及びこれらの取扱い方法 (c) 安全装置、有害物抑制装置又は保護具の性能及びこれらの取扱い方法 (d) 作業手順 (e) 作業開始前の点検 (f) 当該業務に関して発生するおそれのある疾病の原因及び予防 (g) 整理、整頓、清潔の保持 (h) 事故・緊急時等における応急措置及び退避 (i) 安全衛生ルール (j) その他、当該業務に関する安全又は衛生のために必要な事項</p> <p>なお、教育事項の全部又は一部に関し十分な知識及び技能を有していると認められる者については、当該事項についての教育を省略することができる。</p> <p>(2) 危険又は有害な業務へ配置予定の者への教育 本仕様書の Annex 2 に掲げる特に危険又は有害な業務に作業員に従事させるときは、当該作業員に、当該作業に関する危険性・有害性に関する知識及び作業方法等、安全衛生のための教育を行わなければならない。 請負者は、Annex 3 に例示する教育内容、本仕様書に規定する各作業の安全上必要な事項、法律及び国際的に認められた規定を参考として、教育科目及び教育時間を決定しなくてはならない。</p> <p>(3) 作業主任に任命が予定されている者への教育 請負者は、1.8.3(2)に規定の作業主任の責務を遂行するために、作業主任の任命に当たり、本仕様書に規定する各作業の安全上必要な事項、法律及び国際的に認められた規定を参考として、当該作業の作業主任のための教育科目及び教育時間を決定し、教育を行わなければならない。 請負者は、Annex 4 に記載の作業に任命する作業主任には、上記(3)の教育に加えて、Annex 5 に例示する教育内容を参考に、教育科目及び教育時間を決定し、教育を行わなければならない。</p> <p>(4) 実地訓練の実施 教育の実施時には、必要に応じ保護具の取り扱いなどの実地訓練も取り入</p>	<p>organization in the Country or other countries, and in addition, if the Contractor judges they have sufficient knowledge and skills, then all or some of the items, education on the items can be omitted.</p> <p>The Contractor shall include in the Health and Safety Plan the outline of the education and training plans (participants, time, teaching materials, policy of selecting educators and trainers). In addition, the Contractor shall submit the Health and Safety Plan which includes the details of the education and training to the Engineer before the start of then.</p> <p>Education and training shall be conducted during working hours and the Contractor shall bear the expenses necessary for education and training.</p> <p>1.9.2 Contents of Education and Training</p> <p>(1) Those who newly enter the site and those who are scheduled to change the work The Contractor shall provide those who newly enter the site and those who are scheduled to change the work with education necessary for health and safety of the work that they are engaged in, including the following matters.</p> <p>(a) Chain of command and communication method for the work (b) Hazard or danger of machineries and raw materials, etc., and methods of handling them (c) Performance and handling methods of safety devices, hazardous substance control devices and protective equipment (d) Work procedure (e) Inspection before start of the work (f) Causes and prevention of diseases that may occur in relation to the work concerned (g) Maintenance of sorting, tidying, cleanliness of the site (h) Emergency measures and evacuation at the time of accident etc. (i) Health and safety rules (j) Other matters necessary for health or safety related to the works concerned</p> <p>However, education about the matter concerned can be omitted for those who are considered to have sufficient knowledge and skills about all or a part of the matter to be taught.</p> <p>(2) Those who are planned to be assigned to a particularly dangerous or harmful work When engaging workers in a particularly dangerous or harmful work listed in Annex 2 of this Specification, the Contractor shall give workers the education regarding danger and harmfulness, work method and health and safety matters concerning the work to be engaged.</p>	
---	---	--

<p>れなければならない。</p> <p>(5) 教育訓練担当者 教育訓練担当者は、当該国の法律に基づく教育資格を有する請負者の要員又は外部講師とし、法律に規定が無い場合は安全衛生管理者又は請負者が必要となる能力、経験があると認め、エンジニアが同意する者とする。</p> <p>(6) 教育訓練記録 教育訓練を行なったときは、受講者、科目等の記録を作成して保存し、エンジニアの要求のあるときは閲覧に供さなければならない。</p> <p>1.9.3 請負者の要員以外への安全衛生ルールの説明 請負者は、請負者の要員以外で現場に入場を許可された者に対して、必要に応じて現場の安全衛生に関するルールを説明しなければならない。</p>	<p>The Contractor shall determine the subjects and hours with reference to stipulations in this Specification with regard to matters necessary for safety of the works, or referring to Laws or internationally recognized provisions.</p> <p>(3) Those who are planned to be appointed as Operation Leaders In order to fulfill the duties of the Operation Leaders as stipulated in 1.8.3 (2), the Contractor shall provide necessary education prior to appointment of the Operation Leaders with subjects and hours determined with reference to stipulations in this Specification with regard to matters necessary for safety of the works, or referring to Laws or internationally recognized provisions. For the Operation Leader appointed to the work described in Annex 4, in addition to the education described in (3) above, the Contractor shall provide the special education of which subjects and time determined referring to the educational content exemplified in Annex 5.</p> <p>(4) Conduct of on-site training At the time of education, on-site training such as handling of protective equipment shall be taken in as necessary.</p> <p>(5) Education and training personnel Education and training lecturers shall be the Contractor's personnel who are qualified as a lecturer under the laws of the country concerned or external lecturers. In case of absence of such provision in the country concerned, the Health and Safety Officer or personnel whom the Contractor recognizes having necessary ability and experience and the Engineer agrees can become a lecturer.</p> <p>(6) Records of education and training When education and training is conducted, the Contractor shall create and store records of trainees, subjects, etc. and provide them for viewing by the Engineer when required by the Engineer.</p> <p>1.9.3 Explanation of health and safety rules to persons other than the Contractor's personnel The Contractor shall explain health and safety rules of the site, as necessary, to persons other than the Contractor's personnel who are permitted to enter the site.</p>	
<p>Annex 2 特に危険又は有害な作業</p> <p>(1) クレーン、移動式クレーン又はデリック等の揚貨装置の運転作業</p> <p>(2) ガス溶接作業</p> <p>(3) アーク溶接作業</p> <p>(4) フォークリフト運転作業</p> <p>(5) 車両系建設機械(整地・運搬・積込み用及び掘削用)運転作業</p> <p>(6) 車両系建設機械(基礎工事用)運転作業</p> <p>(7) 車両系建設機械(解体用)運転作業</p>	<p>Annex 2 List of Particularly Dangerous or Harmful Work</p> <p>(1) Crane and mobile crane operation or operation of lifting equipment such as derrick</p> <p>(2) Gas welding operation</p> <p>(3) Arc welding operation</p> <p>(4) Forklift operation</p> <p>(5) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging)</p> <p>(6) Vehicle-type construction equipment operation (for foundation work)</p> <p>(7) Vehicle-type construction equipment operation (for demolition work)</p>	

- (8) 不整地運搬車運転作業
- (9) 高所作業車運転作業
- (10) クレーン、移動式クレーン又はデリックの玉掛け作業
- (11) 研削といしの取替え又は取替え時の試運転作業
- (12) 立木の伐木作業
- (13) ボーリングマシンの運転作業
- (14) 動力により駆動される巻上げ機の運転作業
- (15) 建設用リフトの運転作業
- (16) ゴンドラの操作作業
- (17) 酸素欠乏危険場所における作業
- (18) 有機溶剤を使用する作業
- (19) 粉じんのある場所での作業
- (20) ずい道等の掘削作業、ずり、資材等の運搬、覆工コンクリートの打設等の作業
- (21) 自動車用タイヤに空気圧縮機を用いて当該タイヤに空気を充てんする業務
- (22) 足場の組立て、解体又は変更の作業
- (23) 昇降器具を用いて、当該昇降器具により身体を保持しつつ行うロープ高所作業
- (24) 墜落制止用器具のうちフルハーネス型のものを用いて行う作業

- (8) Rough terrain hauler operation
- (9) Areal work platform operation
- (10) Sling work for crane, mobile crane and derrick
- (11) Grinding wheel replacement or commissioning work at the time of replacement
- (12) Tree felling operation
- (13) Boring machine operation
- (14) Power driven hoisting machine operation
- (15) Construction work lift operation
- (16) Suspended work platform operation
- (17) Operation under the dangerous condition of oxygen deficiency
- (18) Operations that use organic solvents
- (19) Operation at a place with dust
- (20) Excavating tunnel, transporting muck and materials, placing lining concrete
- (21) Filling the tires with air using air compressors for automobile tires
- (22) Assembling, dismantling or changing scaffolding
- (23) Rope height work performed with the lifting device
- (24) Work to be performed using a full harness type of fall prevention device

以後は行を再構成して修正

Annex 3 特に危険又は有害な業務の教育内容の例示

(a) 移動式クレーン運転

科目	範囲
1 移動式クレーンに関する知識	種類及び型式、主要構造部分、作動装置、安全装置、ブレーキ機能、取扱い方法、点検及び整備の方法
2 原動機及び電気に関する知識	内燃機関、蒸気機関、油圧駆動装置、感電による危険性
3 移動式クレーンの運転のために必要な力学に関する知識	力(合成、分解、つり合い及びモーメント)、重心、荷重、ワイヤロープ、フック及びつり具の強さ、ワイヤロープの掛け方と荷重との関係
4 実技	移動式クレーンの運転・操作の方法 移動式クレーン運転のための合図

(b) アーク溶接

科目	範囲
1. アーク溶接等に関する知識	アーク溶接等の基礎理論、電気に関する基礎知識
2. アーク溶接装置に関する基礎知識	直流アーク溶接機、交流アーク溶接機、交流アーク溶接機用自動電撃防止装置、溶接棒等及び溶接棒等のホルダー、配線
3. アーク溶接等の作業の方法に関する知識	作業前の点検整備、溶接、溶断等の方法、溶接部の点検、作業後の処置、災害防止
4 実技	アーク溶接等の業務のために使用する設備の取扱い

(c) フォークリフト運転

科目	範囲
----	----

Annex 3 Examples of Educational Contents for Particularly Dangerous or Harmful Works

(a) Mobile crane operation

Subject	Scope
1 Knowledge of mobile cranes	Type and model, main structural parts, operating device, safety device, brake function, handling method, method of inspection and maintenance
2 Knowledge about motor and electricity	Internal combustion engine, steam engine, hydraulic drive, danger from electric shock
3 Knowledge of mechanics necessary for operation of mobile crane	Force (composition, decomposition, balance and moment), center of gravity, load, wire rope, hook and hook strength, relationship between wire rope application and load
4 Practical skill	Method of mobile crane operation Signs for mobile crane operation

(b) Arc welding operation

Subject	Scope
1 Knowledge of arc welding etc.	Basic theory of arc welding, basic knowledge about electricity
2 Basic knowledge on arc welding equipment	DC arc welder, AC arc welder, automatic electric shock prevention device for AC arc welder, welding rod and rod holder, wiring
3 Knowledge of arc welding work methods	Inspection and maintenance before work, methods of welding and cutting, inspection of welds, post-work measures, accident prevention
4 Practical skill	Handling of equipment for arc welding work

(c) Forklift operation

Subject	Scope
1 Knowledge of equipment structure and handling methods for the travel of a forklift.	Structure and method of handling for forklift engine, power transmission device, traveling device, steering device, braking device, auxiliary device for traveling
2 Knowledge of equipment structure and handling	Structure and handling method of hydraulic equipment (including safety valve), head guard, backrest, auxiliary devices for cargo handling, method of inspection

1 フォークリフトの走行に関する装置の構造及び取扱いの方法に関する知識	フォークリフトの原動機、動力伝達装置、走行装置、かじ取り装置、制動装置及び走行に関する附属装置の構造並びにこれらの取扱い方法
2 フォークリフトの荷役に関する装置の構造及び取扱いの方法に関する知識	フォークリフトの荷役装置、油圧装置(安全弁を含む。)、ヘッドガード、バックレスト及び荷役に関する附属装置の構造並びにこれらの取扱い方法、点検及び整備の方法
3 フォークリフトの運転に必要な力学に関する知識	力(合成、分解、つり合い及びモーメント)重量、重心及び物の安定、速度及び加速度、荷重、応力、材料の強さ
4 実技	走行の操作、荷役の操作

(d) 車両系建設機械運転(整地・運搬・積込み用及び掘削用)

科目	範囲
1 走行に関する装置の構造及び取扱いの方法に関する知識	車両系建設機械(整地・運搬・積込み用及び掘削用)の原動機、動力伝達装置、走行装置、操縦装置、ブレーキ、電気装置、警報装置及び走行に関する附属装置の構造及び取扱い方法
2 作業に関する装置の構造、取扱い及び作業方法に関する知識	車両系建設機械(整地・運搬・積込み用及び掘削用)の種類及び用途、作業装置及び作業に関する附属装置の構造及び取扱い方法、車両系建設機械(整地・運搬・積込み用及び掘削用)による一般的作業方法
3 運転に必要な一般的事項に関する知識	車両系建設機械(整地・運搬・積込み用及び掘削用)の運転に必要な力学及び土質工学、土木施工の方法、ワイヤロープ及び補助具、点検及び整備の方法
4 実技	走行の操作、作業のための装置の操作

(e) 車両系建設機械運転(基礎工事用)

科目	範囲
1 走行に関する装置の構造及び取扱いの方法に関する知識	車両系建設機械(基礎工事用)の原動機、動力伝達装置、走行装置、操縦装置、ブレーキ、電気装置、警報装置及び走行に関する附属装置の構造及び取扱い方法
2 作業に関する装置の構造、取扱い及び作業方法に関する知識	車両系建設機械(基礎工事用)の種類及び用途、作業装置及び作業に関する附属装置の構造及び取扱い方法、車両系建設機械(基礎工事用)による一般的作業方法
3 運転に必要な一般的事項に関する知識	車両系建設機械(基礎工事用)の運転に必要な力学及び土質工学、土木施工の方法、ワイヤロープ及び補助具、点検及び整備の方法
4 実技	走行の操作、作業のための装置の操作

(f) 有機溶剤を使用する業務

科目	範囲
1 作業環境管理	有機溶剤蒸気の発散防止対策に係る設備及び換気のための設備並びにそれらの保守、点検の方法、作業環境の状態の把握及び整備
2 作業管理	作業管理の方法、労働衛生保護具
3 健康管理	有機溶剤の種類及び有害性、有機溶剤の使用される業務、有機溶剤による健康障害、その予防方法及び応急措置、健康診断及び事後措置
4 災害事例	災害事例とその防止対策

(g) 玉掛業務

methods for cargo handling	and maintenance
3 Knowledge of mechanics necessary for forklift operation	Force (composition, decomposition, balance and moment) weight, center of gravity and stability of objects, speed and acceleration, load, stress, material strength
4 Practical skill	Operation of traveling, operation of cargo handling

(d) Vehicle-type construction equipment operation (for ground levelling, transportation, loading and digging)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods motors for vehicle-type construction equipment (for ground levelling, transportation, loading and digging), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for ground levelling, transportation, loading and digging), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(e) Vehicle-type construction equipment operation (for foundation work)

Subject	Scope
1 Knowledge of the structure and handling of the equipment for travel	Structures and handling methods of motors for vehicle-type construction equipment (for foundation work), power transmission devices, travel devices, steering devices, brakes, electrical devices, alarm devices, and auxiliary devices for travel
2 Knowledge of equipment structure, handling and working methods related to work	Types and applications of vehicle-type construction equipment (for foundation work), structures and handling methods of work equipment, auxiliary device and method of general work
3 Knowledge of general matters required for operation	Mechanics and soil engineering required for operation of vehicle-type construction equipment (for foundation work), methods of civil works, wire ropes and auxiliary tool, method of inspection and maintenance
4 Practical skill	Operation of traveling, operation of equipment for work

(f) Operations that use organic solvents

Subject	Scope
1 Work environment management	Method of maintenance and inspection of equipment for venting prevention measures of organic solvent vapor and equipment for ventilation, Grasp and maintain the working environment
2 Work management	Work management method, occupational health protective equipment
3 Health management	Types and hazards of organic solvents, operations using organic solvents, health hazards caused by organic solvents, prevention methods and first-aid measures, medical checkup and follow-up measures
4 Accident case	Accident cases and prevention measures

(g) Sling work

Subject	Scope
1 Knowledge of cranes, mobile cranes and derricks (hereinafter referred to as "cranes etc.")	Type and model, structure and function, safety device and brake
2 Knowledge of mechanics necessary for slinging work	Force (composition, decomposition, balance and moment), center of gravity of simple figures and stability of objects, friction, weight, load
3 Method of slinging	Selection and use of the sling tool, basic work action (including safe operation

科目	範囲
1 クレーン、移動式クレーン及びデリック(以下「クレーン等」という。)に関する知識	種類及び型式、構造及び機能、安全装置及びブレーキ
2 クレーン等の玉掛けに必要な力学に関する知識	力(合成、分解、つり合い及びモーメント)、簡単な図形の重心及び物の安定、摩擦、重量、荷重
3 クレーン等の玉掛けの方法	玉掛用具の選定及び使用の方法、基本動作(安全作業方法を含む。)、合図の方法
4 実技	運転のための合図、クレーン等の玉掛の作業

(h) ロープ高所作業

科目	範囲
1 ロープ高所作業に関する知識	ロープ高所作業の方法
2 メインロープ等に関する知識	メインロープ等の種類、構造、強度及び取扱い方法、メインロープ等の点検及び整備の方法
3 労働災害の防止に関する知識	墜落による労働災害の防止のための措置、安全帯及び保護帽の使用法並びに保守点検の方法
4 実技	ロープ高所作業の方法、メインロープ等の点検

(i) 墜落用制止器具のうちフルハーネス型のものを用いて行う作業

科目	範囲
1 作業に関する知識	作業に用いる設備の種類、構造及び取扱い方法、作業に用いる設備の点検及び整備の方法、作業の方法
2 墜落制止用器具(フルハーネス型のものに限る。以下同じ)に関する知識	墜落制止用器具のフルハーネス及びランヤードの種類及び構造、墜落制止用器具のフルハーネスの装着の方法、墜落制止用器具のランヤードの取付け設備等への取付け方法及び選定方法、墜落制止用器具の点検及び整備の方法、墜落制止用器具の関連器具の使用法
3 労働災害の防止に関する知識	墜落による労働災害の防止のための措置、落下物による危険防止のための措置、感電防止のための措置、保護帽の使用法及び保守点検の方法、事故発生時の措置、その他作業に伴う災害及びその防止方法
4 実技	墜落制止用器具の使用法等

Annex 4 特定の作業の作業主任を任命する作業

- (1) 地山の掘削及び土止め支保工作業
- (2) ずい道等の掘削等作業
- (3) ずい道等の覆工作業
- (4) 型枠支保工の組立て等作業
- (5) 足場の組立て等作業
- (6) 建築物等の鉄骨の組立て等作業
- (7) 鋼橋架設等作業
- (8) コンクリート橋架設等作業
- (9) 採石のための掘削作業

	method), method of signaling
4 Practical skill	Signs for operation, work with a sling for a crane

(h) Rope height work

Subject	Scope
1 Knowledge of rope height work	Method of rope height work
2 Knowledge about main ropes etc.	Types of main ropes, structure, strength and handling methods, methods of inspection and maintenance of main ropes, etc.
3 Knowledge about prevention of occupational accidents	Measures for the prevention of occupational accidents caused by the fall, methods of using, maintaining and inspecting safety belts and protective helmet
4 Practical skill	Method of rope height work, inspection of main rope etc.

(i) Work to be performed using a full harness type of fall prevention equipment

Subject	Scope
1 Work knowledge	Types of equipment used for work, structure and handling methods, methods for inspecting and maintaining equipment used for work, methods of work
2 Knowledge of fall prevention equipment (limited to full harness type, the same shall apply hereinafter)	Types and structures of full harnesses and lanyards for fall prevention equipment, methods for mounting the full harnesses, installation and selection methods for lanyards, methods of inspection and maintenance of fall prevention equipment, how to use the related equipment for fall prevention equipment
3 Knowledge about the prevention of occupational accidents	Measures to prevent occupational accidents due to fall, measures to prevent hazards due to falling objects, measures to prevent electric shock, methods of using protective helmet and methods of maintenance and inspection, and other accident due to work and its preventive measures
4 Practical skill	Method of using fall prevention equipment

Annex 4 Specific Works Requiring to Appoint Operation Leader

- (1) Earth excavation and shoring work
- (2) Tunnel excavation work
- (3) Tunnel lining work
- (4) Form and shoring assembly/demolition work
- (5) Scaffolding assembly/demolition work
- (6) Steel frames assembly work of buildings
- (7) Steel bridge construction work
- (8) Concrete bridge construction work
- (9) Excavation work for quarrying

- (10) 木造建築物の組立て等作業
- (11) 有機溶剤作業
- (12) 酸素欠乏・硫化水素危険作業
- (13) 車両系荷役運搬機械作業
- (14) 車両系建設機械等作業
- (15) 杭打(抜)機又はボーリングマシンの組立て等作業
- (16) 高所作業車作業
- (17) 電気発破作業
- (18) ロープ高所作業
- (19) クレーンの組立て等作業
- (20) 移動式クレーンのジブの組立て等作業
- (21) デリックの組立て等作業

- (10) Wooden building assembly work
- (11) Organic solvent work
- (12) Dangerous work under oxygen deficiency/hydrogen sulfide
- (13) Vehicle-type material handling/transporting equipment work
- (14) Vehicle-type construction equipment work
- (15) Assembling work of pile driver/puller machines or boring machines
- (16) Areal work platform work
- (17) Electric blasting work
- (18) Rope height work
- (19) Assembling work of cranes
- (20) Assembling work of mobile crane jibs
- (21) Assembling work of derrick

Annex 5 特定の作業の作業主任の教育内容の例示

(a) 地山の掘削及び土止め支保工作業の作業主任

科目	範囲
1 作業の方法に関する知識	地山の掘削の方法、浮石、埋設物等の処理、湧(ゆう)水の処理及び排水の方法、法(のり)面防護の方法、土砂及び岩石の性質、土止め支保工の種類、材料、構造、組立図、点検及び補修、土止め支保工の切りばり、腹おこし等の取付け及び取りはずしの作業に関する事項
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、電気及び内燃機関、器具及び工具、服装及び保護具
3 作業環境、安全等に関する知識	有害ガス、崩壊の予知、危険防止のための措置、作業標準、事故発生時における措置

(b) ずい道等の掘削等作業の作業主任

科目	範囲
1 作業の方法に関する知識	ずい道等の掘削の方法、ずり積みの方法、ずい道支保工の種類及び構造、ずい道支保工の組立ての方法、ロックボルトの取付けの方法等
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、電気及び内燃機関、器具及び工具、危険防止のための措置等
3 作業環境、安全等に関する知識	有害ガス及び可燃性ガス、作業標準、事故発生時における措置等

(c) ずい道等の覆工作業の作業主任

科目	範囲
1 作業の方法に関する知識	ずい道型わく支保工の種類、材料、構造、組立図、点検及び補修、ずい道型わく支保工の組立て及び解体の作業の方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、服装及び保護具、危険防止のための措置
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置等

(d) 採石のための掘削作業の作業主任

科目	範囲
1 岩石の種類、岩石の採取のための掘削の方法等に関する知識	岩石の種類、岩石の採取のための掘削の方法、浮石の処理、湧水の処理及び排水の方法、法面防護の方法、土砂及び岩石の性質

Annex 5 Example of Educational Contents for Operation Leader for Specific Works

(a) Operation leader for earth excavation and shoring work

Subject	Scope
1 Knowledge of work method	Method of ground excavation, treatment of loose rocks and buried objects, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock, and the type, material, structure, assembly drawing, maintenance and inspection of earth shoring, matters related to installation and removal of strut and wailing
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Harmful gases, collapse prediction, measures for preventing hazards, work standards, measures at the time of disaster occurrence

(b) Operation leader for tunnel excavation work

Subject	Scope
1 Knowledge of work method	Method of tunnel excavation, mucking, and types, structure and method of assembling of tunnel support, method of installing rock bolts
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools
3 Knowledge about work environment, safety measures etc.	Harmful gases and toxic gases, measures for preventing hazards, work standards, measures at the time of disaster occurrence

(c) Operation leader for tunnel lining work

Subject	Scope
1 Knowledge of work method	Types, materials, structure and assembling drawings, inspection and repair of tunnel support, method of assembling and dismantling tunnel support
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, instruments and tools, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Measures for preventing hazards, work standards, measures at the time of disaster occurrence

(d) Operation leader for excavation work for quarrying

Subject	Scope
1 Knowledge of rock types, drilling	Types of rock, method of excavation for extraction of rock, treatment

2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、電気及び内燃機関、器具及び工具、服装及び保護具、危険防止のための措置
3 作業環境、安全等に関する知識	有害ガス、崩壊予知、作業標準、事故発生時における措置

(e) 型枠支保工の組立て等作業の作業主任

科目	範囲
1 作業の方法に関する知識	型枠及び型枠支保工の種類及び材料、型枠支保工の構造、組立図、点検等、型枠及び型枠支保工の組立て及び解体の作業の方法、悪天候時における作業の方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、電気、墜落防止及び落下物防護のための設備、服装及び保護具、危険防止のための措置
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置

(f) 足場の組立て等作業の作業主任

科目	範囲
1 作業の方法に関する知識	足場の種類、材料、構造及び組立図、足場の組立て、解体及び変更の作業の方法、点検及び補修、登りさん橋、朝顔等の構造並びにこれらの組立て、解体及び変更の作業の方法に関する事項、悪天候時における作業の方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、電気、墜落防止のための設備、落下物による危険防止のための措置、服装及び保護具
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置

(g) 建築物等の鉄骨の組立て等作業の作業主任

科目	範囲
1 作業の方法に関する知識	建築物及び塔の種類、材料、構造、設計図及び工作図、建築物等の鉄骨の組立て等の作業の方法、点検、悪天候時における作業の方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、電気、墜落防止のための設備、落下物による危険防止のための措置、服装及び保護具
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置

(h) 鋼橋架設等作業の作業主任

科目	範囲
1 作業の方法に関する知識	橋梁の種類、材料、構造、設計図及び工作図、工法の種類及び作業の方法、架設等に係る点検の方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、電気、墜落防止のための設備、落下物による危険防止のための措置、悪天候時における作業の方法、服装及び保護具
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置

(i) 木造建築物の組立て等作業の作業主任

科目	範囲
1 木造建築物の構造部材の組立て、屋根下地の取付け等に関する知識	軸組み、小屋組み、床組み、枠組壁等の主要構造部分の工法、屋根及び外壁下地の工法、継手及び仕口の工法、建て方作業の方法及び順序、軸組み等の補強方法
2 工事中設備、機械、器具等に関する知識	工事中設備及び機械の取扱い、器具及び工具、電気、墜落防止のための設備、落下物による危険防止のための措置、服装の及び保護具

methods for rock excavation, etc.	of loose rock, method of treatment and drainage of spring water, method of slope protection, nature of soil and rock
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, electricity and internal combustion engines, instruments and tools, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Harmful gases, measures for preventing hazards, collapse prediction, work standards, measures at the time of disaster occurrence

(e) Operation leader for form and shoring assembly/demolition work

Subject	Scope
1 Knowledge of work method	Types and materials of form and form shoring, structure of form shoring, assembly drawings, inspection, etc. Methods of assembly and dismantling of form and frame shoring
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Measures for preventing danger, methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(f) Operation leader for scaffolding assembly/demolition work

Subject	Scope
1 Knowledge of work method	Types of scaffolds, materials, structures and assembly drawings, methods of scaffold assembly, disassembly and change of work, inspections and repairs. Matters of structures and methods assembly, disassembly and changes of climbing bridges, protective shelf, etc.
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment and facilities for preventing fall and protecting from fall objects, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Measures for preventing danger, methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(g) Operation leader for steel frames assembly work of buildings

Subject	Scope
1 Knowledge of work method	Types of buildings and towers, materials, structures, design drawings, shop drawings, equipment and tools, methods of work for assembling steel frames of buildings, etc., inspection
2 Knowledge of construction equipment, machines, instruments etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment for fall prevention, measures to prevent hazards from falling objects, clothing and protective equipment,
3 Knowledge about work environment, safety measures etc.	Methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(h) Operation leader for steel bridge construction work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity, equipment for fall prevention, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Measures to prevent hazards from falling objects, methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(i) Operation leader for wooden building assembly work

Subject	Scope
---------	-------

3 作業環境、安全等に関する知識	作業標準、事故発生時における措置
------------------	------------------

(j) コンクリート橋架設等作業の作業主任

科目	範囲
1 作業の方法に関する知識	橋梁の種類、材料、構造、設計図及び工作図、工法の種類及び作業の方法、架設等に係る点検の方法、悪天候時における作業の方法
2 工事用設備、機械、器具等に関する知識	工事用設備及び機械の取扱い、器具及び工具、電気、墜落防止のための設備、落下物による危険防止のための措置、服装及び保護具
3 作業環境、安全等に関する知識	作業標準、事故発生時における措置

(k) 有機溶剤作業の作業主任

科目	範囲
1 健康障害及びその予防措置に関する知識	有機溶剤による健康障害の病理、症状、予防方法及び応急措置
2 作業環境の改善方法に関する知識	有機溶剤の性質、有機溶剤の製造及び取扱いに係る器具その他の設備の管理、作業環境の評価及び改善の方法
3 保護具に関する知識	有機溶剤の製造又は取扱いに係る保護具の種類、性能、使用方法及び管理

(l) 酸素欠乏・硫化水素危険作業の作業主任

科目	範囲
1 危険の発生原因と救急そ生に関する知識	酸素欠乏及び硫化水素の発生の原因及び防止措置に関する知識 酸素欠乏症、硫化水素中毒及び救急そ生に関する知識
2 保護具に関する知識	酸素欠乏等の保護具の種類、性能、使用方法及び管理
3 作業及び救急措置に関する実技	酸素及び硫化水素の濃度の測定方法、救急そ生の方法

1 Knowledge about assembling structural members of wooden buildings, installing roof bed, etc.	Construction methods of main structural parts such as frame, cabin, floor structure, framed walls, construction methods of roof and outer wall foundation, joints, order of construction, reinforcement method for frame
2 Knowledge of construction equipment, machines, instruments etc.	Equipment for fall prevention, measures to prevent hazards from falling objects, clothing and protective equipment
3 Knowledge about work environment, safety measures etc.	Methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(j) Operation leader for concrete bridge construction work

Subject	Scope
1 Knowledge of work method	Types of bridges, materials, structures, design drawings and shop drawings, types of construction methods and methods of work, methods of inspection pertaining to erection, etc.
2 Knowledge of construction equipment, machines, instruments, work environment, etc.	Handling of construction equipment and machinery, equipment and tools, electricity equipment for fall prevention, measures to prevent hazards from falling objects, clothing and protective equipment,
3 Knowledge about work environment, safety measures etc.	Methods of work in adverse weather, work standards, measures at the time of disaster occurrence

(k) Operation leader for organic solvent work

Subject	Scope
1 Knowledge of health hazards and their preventive measures.	Pathology, symptoms, prevention methods and first-aid measures of health problems caused by organic solvents
2 Knowledge for improving the work environment	Properties of organic solvents, management of equipment and other facilities related to production and handling of organic solvents, methods of evaluation and improvement of working environment
3 Knowledge of protective equipment	Type, performance, method of use and management of protective equipment pertaining to the production or handling of organic solvents

(l) Dangerous work under oxygen deficiency/hydrogen sulfide

Subject	Scope
1 Knowledge about the cause of danger and resuscitation	Knowledge of the causes of oxygen deficiency and hydrogen sulfide and preventive measures, Knowledge of hypoxia, hydrogen sulfide poisoning and resuscitation
2 Knowledge about protective equipment	Types, performance, usage and management of protective equipment for oxygen deficiency etc.
3 Practical skills related to work and emergency therapeutic measures	Measuring method of oxygen and hydrogen sulfide concentration, emergency resuscitation method

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

***Japan International Cooperation Agency
(JICA)***

_____, **2020**

Prepared: DCI for NK
Issue: 7 (updated)
Revision:
Date: 13/03/2020

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

1) Japanese Acts, Orders and Ordinances including:

- Industrial Safety and Health Act*
- Order for Enforcement of Industrial Safety and Health Act*
- Ordinance on Industrial Safety and Health*
- Safety Ordinance for Cranes*
- Ordinance on Safety and Health of Work under High Pressure*
- Ordinance on Prevention of Anoxia, etc.*
- Ordinance on Prevention of Hazards Due to Dust*
- Explosives Control Act*
- Order for Enforcement of Explosives Control Act*
- Ordinance on Explosives Control*

2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.

3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.

(Suggested First aid qualification in Section 2.9):

4) The International Red Cross and Red Crescent Movement

5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Suggestion for JICA:

COPYRIGHT

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

- 1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.
- 1.1.2. A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [*Additional Contractor Forms*], Form JSSS/BSD - Bidder’s Safety Declaration,

1.2 General Reference Notes

- 1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [*Definitions and Abbreviations*].
- 1.2.2. The following further general reference notes apply to the content of JSSS:
 - (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
 - (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
 - (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
 - (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
 - (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
 - (6) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer’s Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.
 - (7) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
 - (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

- 1.3.1. JSSS shall form a part of the Project Safety Specification which in turn forms a part of the Specification as illustrated in Annex 1.4: [*Figures and Illustrations*], Fig A1.4.1 [*Incorporation of JSSS in Bid and Contract Documents*].
- 1.3.2. The priorities of the document comprising the Specification are as follows:
 - (1) Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS,
 - (2) The “Project Safety Specification” shall have priority over other parts of the Technical Specification in respect of health and safety matters.
- 1.3.3. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

1.4 Compliance with JSSS and Other Regulations

- 1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.
- 1.4.2. JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.
- 1.4.3. The Contractor shall comply fully with the requirements of JSSS as supplemented and modified by the Particular Safety Specification.
- 1.4.4. Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer’s Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.
- 1.4.5. Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.
- 1.4.6. If there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer’s consent.
- 1.4.7. Specified Standards and Regulations:
 - (1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.
 - (2) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.
- 1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

- 1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:
- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
 - (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.
- 1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion, during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.
- 1.4.11. The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor's Safety Management System

- 1.5.1. The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018.
- 1.5.2. The Contractor shall state the applicable standard in the Contractor's Safety Plan.
- 1.5.3. The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

1.6 Checking and Validation of Submissions

- 1.6.1. In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.
- 1.6.2. For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [*Care and Supply of Documents*] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.

1.7 Contractor's Safety Plans

- 1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- 1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:
- (1) that are stated in JSSS;
 - (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
 - (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.

- 1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:
- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
 - (2) Commencement Stage Safety Plan (Updated Overall Safety Plan)
 - (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works)
- 1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works.
- 1.7.5. Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the Time for Completion of the Works.
- 1.7.6. Bid Stage Safety Plan:
- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
 - (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.
- 1.7.7. Commencement Stage Safety Plan
- (1) This shall be submitted within twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
 - (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
 - (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.
- 1.7.8. Particular Safety Plans
- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.
 - (2) Whenever required by the Engineer, the Contractor shall, submit Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.
 - (3) Requirements for submission by Contractor and response (if any) by the Engineer to Particular Safety Plans, shall be as follows:
 - (a) The Engineer may review the Particular Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;

- (b) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
 - (c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.
- 1.7.9. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.
- 1.7.10. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.
- 1.7.11. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

- 1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.
- 1.8.3. The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE or improved PPE.

1.9 Contractor's Method Statements

- 1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2. Method Statements shall include details of all Permanent Works and Temporary Works with supporting documents such as:
- (1) Design studies and reports.

- (2) Structural calculations and any other calculations.
 - (3) Specifications and technical details.
 - (4) Proposed construction procedure, sequence and method.
 - (5) Construction resources including labour and Contractor's Equipment.
 - (6) Inspection and monitoring plan.
- 1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.
- 1.9.4. Whenever required by the Engineer, the Contractor shall, submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer for his information.

1.10 Engineer's Safety Representative

- 1.10.1. Unless otherwise specified in the Particular Safety Specification, the Engineer's delegated representative at the Site shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.
- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the

Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.

- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [Suspension of Work] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [Suspension of Work] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur.
- 1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7[*Health and Safety*], shall be construed as "Health and Safety Officer at the Site".

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [*Health and Safety*].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [*Law and Language*], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an alternative and equivalent internationally recognised qualification covering health and safety and risk management, minimum ten (10) years' work experience in construction of which minimum four (4) years shall be in health and safety

management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country), and whom the Contractor considers is qualified to perform the duties subject also to receiving the consent of the Engineer.

1.12.3. Supporting Staff

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.
- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel, shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.
- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas of the Site are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
 - (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.11 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties

- 1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.
- 1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:
- (1) Health and Safety Management Work:
 - (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;
 - (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
 - (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
 - (l) Planning and implementation of various training and education implementation plans;
 - (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
 - (n) Preparing regular internal and external reports on health and safety activities; and
 - (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

- 1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO – Scope of Duties*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:
- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.

- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.
- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

- (1) Overall Safety Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM);
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (c) Monitoring the implementation of the Safety Plan.
- (2) Safety Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM;
 - (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures;
 - (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:

5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
 - (d) Instruction and management of safety education and training;
 - (e) Instruction and management of all safety measures; and
 - (f) Joint Site Safety Inspections.

1.16 Joint Site Safety Inspections

- 1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured and that such compliance is monitored efficiently and transparently at all times, for which purpose the Contractor shall:
 - (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections, are intended to search for risks and hazards, which present a threat to safe working.
- 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
 - (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
- 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer. Unless otherwise consented to by the Engineer, the audit shall be headed by a senior member of the Contractor's head office health and safety team.
- 1.17.6. If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.
- 1.17.7. The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.17.8. The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

- 1.17.9. The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems; they shall not replace the regular health and safety inspections.
- 1.17.10. The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.
- 1.17.11. The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.
- 1.17.12. Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.
- 1.17.13. An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.
- 1.17.14. The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

- 1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.
- 1.18.2. In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct, PPE, tools, equipment and safety equipment.
- 1.18.3. Labourers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.
- 1.18.4. The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.18.5. The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.
- 1.18.6. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.18.7. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
 - (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.

- (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.18.8. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.9. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.10. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that he resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

1.19 Safety Training Generally

- 1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
- 1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.
- 1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

1.20 Safety Induction Training

- 1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom he is responsible, including the Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed at the request of the Employer or Engineer.
- 1.20.2. The following subjects shall be covered:
- (1) Responsible persons, chain of command and means of communication.
 - (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
 - (3) Working procedures generally.
 - (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.
 - (5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. (Refer to separate requirements for special training).
 - (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.

- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [*Contractor's Personnel*] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.

1.21.2. The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects.

Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion.

Unless otherwise specified in the Particular Safety Specification and without limiting the

Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details of such training shall be submitted with the Bid Stage Safety Plan.

- 1.21.3. Subject to receiving the consent of the Engineer, the Contractor may demobilise the imported resources on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.
- 1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice in based upon capability accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.
- 1.21.5. Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [*Contractor's Personnel*]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.
- 1.21.6. Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

- 1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.
- 1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.
- 1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [*Permit System*] that is to be worn conspicuously and be available for validation by the Engineer.
- 1.22.4. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.
- 1.22.5. The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site, who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on

Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue.

- 1.22.6. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.
- 1.22.7. The requirement for rescue teams and rescue equipment shall be specified in the Particular Safety Specification.
- 1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.
- 1.22.9. The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.
- 1.22.10. Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.
- 1.22.11. For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].
- 1.22.12. Hazardous Substances.
 - (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialist Subcontractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.
 - (2) The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their detailed Safety Plans and Method Statements shall also be submitted to the Engineer in accordance with JSSS 1.7 [*Contractor's Safety Plans*] and JSSS 1.9 [*Contractor's Method Statements*].

1.23 Permit to Work System

1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2. The system shall be designed to control safety for all types of high-risk work likely to be encountered, including for example:

- (1) Dangerous Work.
- (2) Work in elevated positions, for example, ladders and scaffolding, roof or ceiling work.
- (3) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.
- (4) Diving Works.

1.23.3. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.4. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.5. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

- 1.24.1. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.
- 1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.
- 1.24.3. Unless otherwise specified in the Particular Safety Specification, medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.
- 1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.
- 1.24.5. Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include:
 - (1) Medical staff to be assigned at the Site.
 - (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
 - (3) Emergency medivac services where necessary.
 - (4) Medical Facilities on the Site together with description of equipment and consumables.in
 - (5) Temporary water and power supply to maintain use during mains supply failure.
 - (6) Type of communication facilities and measures for emergency response.
 - (7) Deployment of appropriate first aid appliances, aids, instruments and medicines.
 - (8) First aid training, appointment of first aiders and dissemination of information.
- 1.24.6. Where the Works include the following for example, the Contractor shall train selected Contractor's Personnel to perform rescue operations in a safe manner in the event of any accident:
 - (1) Work on or near existing electrical equipment, cables, wiring, services and systems.
 - (2) Dangerous Work.
 - (3) Diving Work.
 - (4) Similar special circumstances.
- 1.24.7. All rescue team members in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [*Personal Protective Equipment (PPE) and First Aid Equipment*].
- 1.24.8. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [*Personal Protective Equipment (PPE) and First aid Equipment*].

1.1 Measures at the Time Accidents Occur

- 1.25.1. When an accident occurs, the HSO shall immediately discontinue the concerned work and take all efforts to:
- (1) Safely locate and extract casualties.
 - (2) Provide first aid treatment at the Site.
 - (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.
- 1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.
- (1) The Contractor shall inform the Engineer and submit details of any accident.
 - (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
 - (3) The Accident Report shall include details of the HSO's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].
- 1.25.3. For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.2 Emergency Response Plan

- 1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and as far as reasonably possible, shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

- 1.26.2. The Contractor shall keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure:
- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
 - (2) The safety and stability of the Works and Goods.
 - (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.
- 1.26.3. Where, due to the location of the Site, there is a risk of earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such earthquake or volcanic activity.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or tunnelling of sufficient strength, durability and suitability.
- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] and JSSS 1.9 [*Contractor's Method Statements*].

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency,
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels,

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.

- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11. For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.3 Contractor's Safety Committee and Regular Safety Meetings

1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;

- (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration requirements under the Laws of the Country;
- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.4 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries and measures to prevent any reoccurrence;
 - (d) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (e) Status of resolution of previous problems;
 - (f) Items to be coordinated with police, fire department and other related organisations;
 - (g) Compliance and registration requirements under the Laws of the Country; and
 - (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.

- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.5 Project Safety Committee

- 1.29.1. On larger Projects with multiple contract packages and contractors and if so stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.
- 1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:
 - (1) The Employer.
 - (2) The Engineer(s).
 - (3) The Contractor's Representative(s).
 - (4) Health and Safety Officers of all members.
- 1.29.3. The Chairman of the Safety Committee shall be the Employer.
- 1.29.4. The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.
- 1.29.5. The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.6 Health and Safety Coordination with Other Contractors

- 1.30.1. Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:
 - (1) the Employer's Personnel,
 - (2) any other contractors employed by the Employer,
 - (3) the personnel of any legally constituted public authorities,... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

- 1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.
- 1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:
- (1) Frequency of the meetings: as and when considered necessary by Engineer.
 - (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.
 - (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries and measures to prevent any reoccurrence;
 - (d) Status of resolution of previous problems;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like; and
 - (h) Other matters.
- 1.30.4. Report on the Health and Safety Coordination Meetings:
- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
 - (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
 - (3) A further copy shall be included in the Engineer's monthly progress report.

1.7 Safety Statistics

- 1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.
- 1.31.2. Actual statistics shall include the following:
- (1) Accident: description, casualties, location, time, type and cause.
 - (2) Near-miss: description, casualties, location, time, type and cause.
 - (3) Lost-time: lost hours of casualties, duration of discontinuation.
 - (4) Remedial measures taken.

- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.
- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage.
- (17) Others.

1.31.3. All data shall be in a format and content given consent by the Engineer.

1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.8 [*Safety Reports*].

1.8 Safety Reports

1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, improvement.
- (2) Contractor/HSO and Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.9 Health and Safety Records

1.33.1. The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

- (7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.8 [*Safety Reports*].

1.10 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce legitimate work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.

1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.

1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.

1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.

1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.

1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.8 [*Safety Reports*].

1.11 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO (or his delegated and technically qualified assistant) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and

weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being **safe for use**.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as **not being safe for use**, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.
- (2) New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

1.12 Health Matters

1.36.1. The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.

1.36.3. Occupational health care shall be provided by the Contractor and shall include for example:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
 - (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
 - (3) Frequent or excessive manual handling of loads, stress and fatigue.
 - (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability.
- 1.36.4. The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:
- (1) Health care staff to be assigned at the Site.
 - (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
 - (3) Healthcare services to be provided including lectures and education on health matters.
 - (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
 - (5) Occupational Healthcare proposal.
 - (6) Temporary water and power supply to maintain use during mains supply failure.
 - (7) Type of communication facilities and measures for emergency response.
- 1.36.5. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.
- 1.36.6. Report of Serious Illness
- (1) The Contractor shall inform the Engineer and submit details of any serious illness.
 - (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
 - (3) The report shall include details of the HSO's recommended counter-measures.
 - (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.13 Design and Management of Temporary Works

- 1.37.1. Unless otherwise specified in the Particular Safety Specification, Bidders are required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.
- 1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework.
- 1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.
- 1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

- 1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.
- 1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- 1.37.7. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [*Contractor's Method Statements*]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

- 1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:
- (1) Appointment of appropriately qualified and experienced staff.
 - (2) Preparation of adequate Temporary Works designs.
 - (3) Independent internal or external checking of the Temporary Works Design.
 - (4) Preparation of a Temporary Works register and records
 - (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment.
 - (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - (a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO of a suitable sign showing it **as complete and safe to use;** and
 - (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO of a suitable sign showing that it is ready for dismantling.**
- 1.37.9. The Safety Plan shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

- 1.37.10. For further information on Method Statements refer to JSSS 1.9 [*Contractor's Method Statements*].
- 1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [*Inspection and Monitoring of Temporary Works*].
- 1.37.12. Whether there is or is not any legal requirement under the Laws of the Country for academic, educational or vocational qualification, all of the Contractor's Temporary Works specialist staff and the specialist staff of Temporary Works Subcontractors shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate, work experience in construction and in Temporary Works design or supervision as appropriate and whom the Contractor ascertains are qualified to perform the duties and have been given consent by the Engineer.

1.14 User Training

- 1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.
- 1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.
- 1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:
- (1) Safe system and Plant use, operation and process control.
 - (2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements
 - (3) Training in use of all hardware and software packages.
 - (4) Laboratory control (sampling and analysis) including operation of laboratory equipment.
 - (5) Recording and reporting.
 - (6) Emergency operation procedure.
 - (7) Maintenance management procedures.
 - (8) Inventory and store control systems.
 - (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;
 - (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.
- 1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.
- 1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.38.6. Other requirements for User Training

- (1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.
- (2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.
- (3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.
- (4) The Engineer may choose to send representatives to witness the training.
- (5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.
- (6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.
- (7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.
- (8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.
- (9) The Contractor shall use visual media as much as possible throughout the training process.
- (10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.
- (11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.
- (12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.
- (13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
- (14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.
- (15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.
- (16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.

- (17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
- (18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
- (19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.

1.15 Unexploded Ordnance (UXO)

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) “**Particular Safety Specification**” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (9) “**Project Safety Specification**” means the document that contains Part 1 [*JSSS*] and Part 2 [*Particular Safety Specification*] as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.
- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.2 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.

- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:
 - (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.
- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.

For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.
- (19) “**Personal Protective Equipment**” or “**PPE**” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) “**Safety Harness**” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) “**Scaffold**” or “**Scaffolding**” means a temporary structure or structures that provide access on or from which persons work or to support Goods.

- (23) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) “**Spotter**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
- Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) “**Trade Effluent**” means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) “**Unexploded Ordnance**” or “**UXO**” shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) “**User Training**” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.
- (28) “**Working Platform**” means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training
PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers

ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan which must, cover each of the items listed below with sufficient detail to demonstrate that the Bidder understands the requirements and with sufficient information to indicate the Bidder’s intentions, so that this can be understood and properly evaluated:

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder’s Personnel

A description of the health and safety management organisation at Site headed by the Bidder’s Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor’s Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder’s Safety Management System

Refer to JSSS 1.5 [*Contractor’s Safety Management System*]

Confirm which scheme the Bidder is accredited under.

(6) Temporary Works

Refer to JSSS 1.13 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the safety measures to be applied to ensure compliance with the requirements.

Include a description of the scope of work for the principal specialist persons to be employed in the management and design of Temporary Works and the arrangements for

controlling risks arising from the design, erection, maintenance, dismantling and removal of Temporary Works.

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

(7) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(8) Safety Plan for the Permanent Works

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(9) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(10) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(11) Safety Measures for Contractor's Equipment

Refer to JSSS 1.11 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(12) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.10 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(13) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(14) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.11 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(15) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(16) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(17) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(18) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(19) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

(20) Health Care Plan

Refer to JSSS 1.12 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(21) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention – Additional Requirements*].

(22) Emergency Response Plan

Refer to JSSS 1.2 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(23) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(24) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(25) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

(26) User Training

Refer to JSSS 1.14 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, *[insert name and position of authorised signatory]*, being duly authorised by *[insert name of Bidder/members of joint venture (“JV”)]* (hereinafter referred to as the “Bidder”) to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.1 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor,) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

SUBSEQUENT REPORT INFORMATION (POST-INVESTIGATION):	
1) Cause(s) of the accident:	
2) Counter-measures proposed by the Contractor to avoid recurrence of similar accidents and risks:	
3) Number of reported accident(s) occurred in the past one (1) year in the same Contract Package as the accident occurred:	
4) Number of reported near misses occurred in the past one (1) year in the same Contract Package as the accident occurred:	
5) Other Information:	

Report Prepared by: (name): _____ (sign) : _____ Report Submission Date(s) _____ Time: _____	Contractor's Health and Safety Officer (HSO)
Receipt acknowledged by: (name): _____ (sign): _____ Report Receipt Date(s) _____ Time: _____	Engineer

(above to be inserted with detail and signatures at end of each report)

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

***Japan International Cooperation Agency
(JICA)***

_____, **2020**

Prepared: DCI for NK
Issue: 7 (updated)
Revision:
Date: 25/03/2020

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

1) Japanese Acts, Orders and Ordinances including:

Industrial Safety and Health Act
Order for Enforcement of Industrial Safety and Health Act
Ordinance on Industrial Safety and Health
Safety Ordinance for Cranes
Ordinance on Safety and Health of Work under High Pressure
Ordinance on Prevention of Anoxia, etc.
Ordinance on Prevention of Hazards Due to Dust
Explosives Control Act
Order for Enforcement of Explosives Control Act
Ordinance on Explosives Control

2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.

3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.

4) The International Red Cross and Red Crescent Movement (ICRCM)

NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?

True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 10 also). ICRCM seems to be a convenient and internationally applicable basis.

5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Suggestion for JICA:

COPYRIGHT

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2. A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Deflation.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.

I have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: MD氏は上記のようにSBDの様式の追加は認められていないが、User Guideに含めました。請負者の安全宣言の様式をUser Guideに含めることは、SBDの規定上、問題ないでしょうか？

1.2 General Reference Notes

1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2. The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (6) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the

Contractor of the same such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the **Site**.

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.(NK のコメントにより、すでに削除済ですが、Q&A は残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now it constantly refers to the Site only. This will also be considered for mention in the User Guide

(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the **Employer, Multilateral** Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1. JSSS shall form a part of the Project Safety Specification which in turn forms a part of the Specification as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows:

(1) JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:

(a) The Project Safety Specification (including JSSS), and

(b) The Technical Specification

1.3.2. The priorities of the document comprising the Specification are as follows:

(1) Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS,

(2) The "Project Safety Specification" shall have priority over the Technical Specification in respect of health and safety matters.

NK: Q1: We think it needs to explain/define "Technical Specification" as same as User Guide 1.3.2 (3) The "Technical Specification" shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

Yes I agree but the problem again is that "Specification" is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.

I have added the explanation as above but please note that this is a compromise.

Q2: Is "other parts of" necessary?

Thank you and no, it isn't, see above. (すでに削除済みです。)

1.3.3. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary

The User Guide shall not form a part of the Contract.

NK: : MD 氏は上の追記を提案していますが、入札図書として出てこないもので不要と考えます。

1.4 Compliance with JSSS and Other Regulations

1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2. JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3. The Contractor shall comply fully with the requirements of JSSS as supplemented and modified by the Particular Safety Specification.

1.4.4. Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.

1.4.5. Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

1.4.6. If there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: 1.4.5 と 1.4.6 を合わせた次のような規定ではいかがかと考えます。

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

1.4.7. Specified Standards and Regulations:

(1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

(2) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the

Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".

1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.

1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion, during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.

NK: We consider that this phrase may be changed to "and the Defects Notification Period"? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer's property except as stated in this clause.

NK: we agree to leave this as specified.

1.4.11. The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor's Safety Management System

1.5.1. The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018.

1.5.2. The Contractor shall state the applicable standard in the Contractor's Safety Plan.

1.5.3. The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. この考え方で正しいでしょうか?

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval

or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

1.6.2. For the purposes of interpretation for JSSS, the final paragraph of **GC 1.8** [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered.

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

NK: 貴機構のご意見はいかがでしょうか？

1.7 Contractor's Safety Plans

1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site.

1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated Overall Safety Plan)
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level. ~~throughout the Time for Completion of the Works.~~

~~1.7.5. Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility. and at any time throughout the Time for Completion of the Works.~~

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes thank you, that is true, but better to delete the phrase rather than add.

1.7.6. Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7. Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days ~~after~~ the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

Fair comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it there.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8. Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9. Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works.
- (2) The Contractor shall submit:

(a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [Commencement Stage Safety Plan].

(b) The Particular Safety Plans within fourteen (14) days after the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed this

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree; many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

(3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:

- (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
- (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
- (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

1.7.10. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.

1.7.11. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

1.7.12. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.

1.8.3. The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.

- (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE.

NK: May we know what "improved PPE" mean?

Deleted

1.9 Contractor's Method Statements

- 1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2. Method Statements shall include details of all Permanent Works and Temporary Works with supporting documents such as:

- (1) **Studies, investigations and designs.**

NK: We suggest to change to "Studies, investigations, and designs"?

Changed

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including **superintendents, workers, operation leaders** and Contractor's Equipment.

NK: We consider "worker" will be used because it is used in other Chapter though FIDIC uses "labour".

Ok I have changed anyway but it now needs wider wording, labour is also used in FIDIC

- (6) Inspection and monitoring plan.
- 1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.
- 1.9.4. Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.

- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider "for his information" can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

Changed.

1.10 Engineer's Safety Representative

- 1.10.1. Unless otherwise specified in the Particular Safety Specification, the Engineer's delegated representative at the Site shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.
- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur.
- 1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to “accident prevention officer at the Site” in GC 6.7 [Health and Safety], shall be construed as “Health and Safety Officer at the Site”.

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No: This is necessary to correspond to the definition.

Please note that this is a compromise, PC change would have been preferable.

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management.
- (8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country), and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.

We propose to add (7) “unless otherwise specified in Particular Safety Specification” before “the HSO...”

I have split this clause for clarity

I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7.

It is also subject to receiving the consent of the Engineer.

NK: We think “two (2) years experience outside the Country” is also too high requirement for the local contractors and also Japanese.

We propose to delete “this two years outside the Country” and specify requirement in Particular Safety Specification depending on the Works.

I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

1.12.3. Supporting Staff

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO's duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein .

MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

- (4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...” は、“The Contractor shall ...”へ変更する。*

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.*

- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

NK: MD氏は、まだ supporting personnel についての貴機構の意見をまだ十分理解していないように感じておりますが、貴機構のご意見はいかがでしょうか？。

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel, shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.
- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:
- (a) That all working areas of the Site are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
- (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
- (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above

- 1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.
- 1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:
- (1) Health and Safety Management Work:
 - (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;*

I disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.

NK: 貴機構のコメントを伝えましたが、MD氏はまだ上記の意見です。貴機構のご意見はいかがでしょうか？

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and

- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it.

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); *(by construction managers, Operation Leaders, HSO)*
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and *(by construction managers, HSO)*

- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

~~Above is not recommended~~

- (1) ~~Daily~~ Safety Management of Contractor's Personnel:

~~NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).~~

~~No problem added already~~

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- (e) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ; ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- (e) Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections-~~(by construction managers, Operation Leaders, HSO)~~

~~None of above is recommended.~~

~~NK: We withdraw the addition.~~

~~NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.~~

~~No problem deleted already~~

1.16 Joint Site Safety Inspections

1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.

1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.

1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.

1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.

1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ~~ensured. Such compliance~~ shall be monitored efficiently and transparently at all ~~times, for~~ which purpose the Contractor shall:

~~NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.~~

~~This is not quite correct but I have divided anyway~~

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
- 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
- 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer. Unless otherwise consented to by the Engineer, the audit shall be headed by a senior member of the Contractor's head office health and safety team.
- 1.17.6. If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.
- 1.17.7. The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.17.8. The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.
- 1.17.9. The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

This is not quite correct but I have divided anyway

1.17.10. The audits shall be conducted ~~on a random basis~~ at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11. The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.~~

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

I do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly.

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows;(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

NK: 機構のご意見はいかがでしょうか。

~~1.17.12. Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.~~

NK: JICA commented “Such “not to do” should not be included in the specification.” and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

No comment, to be deleted

1.17.13. An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

1.17.14. The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor’s Personnel

1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor’s Personnel consequently protected.

1.18.2. In compliance with GC 6.9 [*Contractor’s Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor’s Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.

Change not correct

1.18.3. Labourers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor’s safety regulations.

1.18.4. The correct grades and numbers of Contractor’s Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.

1.18.5. The Contractor shall specifically ascertain that Contractor’s Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

1.18.6. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor’s Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.

- 1.18.7. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.18.8. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.9. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.10. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

It is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2.(a). I have used "He" and "his" for example consistently and if it changes here it will require further change.

1.19 Safety Training Generally

- 1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
- 1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.
- 1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

1.20 Safety Induction Training

- 1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom ~~he~~ **the HSO** is responsible, including the Employer's Personnel and all other persons who are entitled to be on **the Site at** the request of the Employer or Engineer.

Ditto above

1.20.2. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.
- (5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).

NK: May we know where we can find to refer to special training?

Rephrased

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which

require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.

- 1.21.2. The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects.

Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:.

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.

"For information" really has no meaning.

If only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details of such training shall be submitted with the Bid Stage Safety Plan.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

1.21.3. Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.

1.21.4. When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

NK: 機構のご意見はいかがでしょうか？

1.21.5. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

1.21.6. Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

1.21.7. Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)

1.22.4. The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist trained personnel. The Contractor shall prepare safety procedures to ensure that any such

inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

- 1.22.5. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.
- 1.22.6. The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site, who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue.
- 1.22.7. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.

NK: Harness is basically used now and belts is not, so deletion of belt is made.

Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2.

The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.

~~1.22.8. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.~~

- 1.22.9. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.
- 1.22.10. The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.
- 1.22.11. Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.
- 1.22.12. For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].
- 1.22.13. Hazardous Substances.
- (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialist Subcontractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.
 - (2) The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their detailed Safety Plans and Method Statements shall also be submitted to the Engineer in accordance with JSSS 1.7 [*Contractor's Safety Plans*] and JSSS 1.9 [*Contractor's Method Statements*].

1.23 Permit to Work System

- 1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.
- 1.23.2. The system shall be designed to control safety for all types of high-risk work likely to be encountered, including for example:

(1) Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3

Example of Dangerous Work.

There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex I.1. If you insist, change to “for example” as in the following subclause.

- (2) Work in elevated positions, for example, transmission towers ~~ladders and scaffolding, roof or ceiling work.~~
- (3) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.
- (4) Diving Works.

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.

- 1.23.3. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.
- 1.23.4. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.
- 1.23.5. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

- 1.24.1. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of **the Works**, the **Contractor** shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor’s Personnel and Employer’s **Personnel and all other persons who are entitled to be on the Site.**

NK-1: JICA commented to modify and add “so specified in the Specification” to 1.20.2 in Issue 6.

NK consider that “as specified in Particular Safety Specification” between “the Works,” and “the Contractor” if we follow JICA’s comment.

NK-2: JICA commented that they want to use “as specified in Particular Safety Specification” more than “unless otherwise specified in Particular Safety Specification” because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA’s request to use “as specified in PSSS”?

- 1) *I do not recommend any use or reliance on “as specified in PSSS”. If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.*
- 2) *“Unless otherwise specified” followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a “failsafe” in JSSS production.*
- 3) *More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.*
- 4) *The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to*

be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.

5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who “other persons who are entitled to be on the Site” are, and where “other places (if any) are.

“other persons who are entitled to be on the Site” is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor’s Personnel and Employer’s Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor’s, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor’s compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.

“and any other places as may be specified in the Contract as forming part of the Site” comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

NK: 貴機構のご意見はいかがでしょうか？

1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3. Unless otherwise specified in the Particular Safety Specification, medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site.

NK: JICA want to clarify where “other places (if any) are.

Deleted see above

1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5. Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include:

- (1) Medical staff to be assigned at the Site.
- (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
- (3) Emergency medivac services where necessary.

NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.

I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?

- (4) Medical Facilities on the Site together with description of equipment and consumables. **in**
- (5) Temporary water and power supply to maintain use during mains supply failure.
- (6) Type of communication facilities and measures for emergency response.
- (7) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (8) First aid training, appointment of first aiders and dissemination of information.

1.24.6. Where the Works include the following for example, the Contractor shall train selected Contractor’s Personnel to perform rescue operations in a safe manner in the event of any accident:

- (1) Work on or near existing electrical equipment, cables, wiring, services and systems.
- (2) Dangerous Work **such as Confine Spaces, work at height.**

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

- (3) Diving Work.
- (4) Similar special circumstances.

1.24.7. All rescue team members in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [**PPE and First Aid**].

1.24.8. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by **OSHA** and as referred to in **JSSS 2.9 [PPE and First Aid]**.

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid].

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, **the HSO the Contractor** shall immediately discontinue the concerned work, **inform the Engineer** and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6.

I disagree completely and do not recommend this (or any such) change . As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.

NK: 貴組織のご意見はわかりでしょうか

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of **the HSO's, the Contractor's** recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].

Please see above notes on this subject. This should remain as the HSO, I disagree and do not recommend this (or any such) change.

1.25.3. For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.26 Emergency Response Plan

1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and as far as reasonably possible shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall the take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

1.26.2. The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it .

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3. Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or portal-of tunnelling of sufficient strength, durability and suitability.

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?

NK: We accept to leave as it is.

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] and JSSS 1.9 [*Contractor's Method Statements*].

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.1?

Please see 1.26.6 for my assumption of your requirements.

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

- 1) *The Contractor can only plan for what he can reasonably foresee or anticipate and*
- 2) *It is necessary to state this so that no confusion is introduced with FIDIC GC 19.*
- 3) *This only leaves simple search and contact activities which has little or no meaning.*

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.

NK: 1.26.5 はさらに検討すべきかと考えておりますが、とりあえずこのままで提出致します。貴機構のご意見がありましたらご教示願います。

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

- 1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

- 1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on **the Site**.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

- 1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

- 1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

- 1.26.11. For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.27 Contractor's Safety Committee and Regular Safety Meetings

- 1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

- 1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.

- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **occurred in the previous month and measures to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda.

- (d) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (e) Safety instructions received from the Engineer;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and
- (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.

- (2) Agenda:
- (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Ditto above

Is the sequence here acceptable or shall it change as above?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1. On larger Projects with multiple contract packages and contractors and **unless otherwise stated** in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3. The Chairman of the Safety Committee **shall** be the Employer.

1.29.4. The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are not monthly basis but optional.

We propose "periodically as requested by the Employer" and ask you to reply to this comment as reply is not mentioned in the document with notes.

Please clarify what you want to be deleted.

NK: Deletion is “on monthly basis”.

1.29.5. The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace “shall” with “may” in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state “unless otherwise specified..”

With this change I think that no other change is necessary.

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1. Refer to GC 2.3 [*Employer’s Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer’s Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor’s efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor’s Safety Plan and that their personnel comply with the Contractor’s Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer’s Personnel

will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.

I don't understand your comment, please advise what change you require (本Q&Aは無視願います。)

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries in the previous period and measures to be taken to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4. Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.

- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage.
- (17) Others.

1.31.3. All data shall be in a format and content given consent by the Engineer.

1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.32 Safety Reports

1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.

NK Is it necessary to add "for"?

Yes, it can be

- (2) Contractor/HSO and Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.33 Health and Safety Records

1.33.1. The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.34 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Deleted see above.

1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.

1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.

1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.

1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.

1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.

1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [*Safety Reports*].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by **the HSO (or his delegated and technically qualified assistant)** at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed **by the HSO**, thereby certifying the items as being **safe for use**.

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.

I do not recommend your suggested change.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as **not being safe for use**, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and **other safety equipment** and **Temporary Works** of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.
- (2) **New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site**, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

NK: JSSSに照らしまして上記をご参考に貴機構のご意見をお願い致します。

1.36 Health Matters

1.36.1. The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the **Site**.

1.36.3. Occupational health care shall be provided by the Contractor and shall include for example:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Frequent or excessive manual handling of loads, stress and fatigue.
- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability.

1.36.4. The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational **H**healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

1.36.5. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on **the Site**.

1.36.6. Report of Serious Illness

(1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

(2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.

(3) The report shall include details of the **HSO**'s recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No, I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.

(4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, **the Contractor is** required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

Changed already

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including **Class A Falsework**.

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph:

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded, I have assume therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

*Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [*Specified Standards and Regulations*] to cover this generally.*

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ito san's comment.

- 1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.
- 1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [Health and Safety Officer at the Site (HSO)].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

"Necessary qualification" can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

I understand your comment and have no objection to the deletion of 1.37.6

- 1.37.7. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS.

NK: MD氏は上記の理由で次の1.37.8の条項は不要であると考え削除を提案しています。ご検討をお願いします。

~~1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) Appointment of appropriately qualified and experienced staff.~~
- ~~(2) Preparation of adequate Temporary Works designs.~~
- ~~(3) Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) Preparation of a Temporary Works register and records~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment.~~
- ~~(6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - ~~(a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it is complete and safe to use; and~~
 - ~~(b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.

However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO, I believe that it is a correct requirement which in practice should not be more than a counter signature.

1.37.9. **In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel],** the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.

The following clause can be deleted

~~1.37.10. For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].~~

1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

~~1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. and shall obtain the consent of the Engineer.~~

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

Yes I agree and have reworded this as above.

Q-1 Is consent by the Engineer given to specialist staff?

This part can be deleted.

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

I have reworded all, please refer to the above

1.38 User Training

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

I recommend that it be included here as a default requirement.

NK: 貴機構のご意見はいかがでしょうか？

1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.

1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.

1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:

- (1) Safe system and Plant use, operation and process control.
- (2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements
- (3) Training in use of all hardware and software packages.
- (4) Laboratory control (sampling and analysis) including operation of laboratory equipment.
- (5) Recording and reporting.
- (6) Emergency operation procedure.
- (7) Maintenance management procedures.

- (8) Inventory and store control systems.
 - (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;
 - (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.
- 1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.
- 1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.38.6. Other requirements for User Training
- (1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.
 - (2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.
 - (3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.
 - (4) The Engineer may choose to send representatives to witness the training.
 - (5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.
 - (6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.
 - (7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.
 - (8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.
 - (9) The Contractor shall use visual media as much as possible throughout the training process.
 - (10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.
 - (11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.
 - (12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.
 - (13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his

- required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
- (14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.
 - (15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.
 - (16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.
 - (17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
 - (18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
 - (19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

NK: 貴機構のご意見はいかがでしょうか？

1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and

the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.

- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) “**Particular Safety Specification**” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (9) “**Project Safety Specification**” means the document that contains Part 1 [*JSSS*] and Part 2 [*Particular Safety Specification*] as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

(12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.

(13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 0.)

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols. classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.

- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2, where:**
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE.

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK: 再考いたします。(現時点ではJSSSでは規定していません。)

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
- For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of

workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.

- (19) “**Personal Protective Equipment**” or “**PPE**” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) “**Safety Harness**” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) “**Scaffold**” or “**Scaffolding**” means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) “**Spotter**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
- Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) “**Trade Effluent**” means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) “**Unexploded Ordnance**” or “**UXO**” shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) “**User Training**” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.
- (28) “**Working Platform**” means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

~~A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1—Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF 39.~~

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further:

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor’s Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder’s intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder’s Personnel

A description of the health and safety management organisation at Site headed by the Bidder’s Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor’s Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety

management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

Confirm which scheme the Bidder is accredited under.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

OK I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

NK: May the title be Works?

I have edited as above

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after

arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [**Fire Prevention**].

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

(27) User Training

Refer to JSSS 1.38 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(28) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment **and Temporary Works** of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment **and Temporary Works** (not more than **five (5) years old**, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirements

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on **the Site, in** a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.

8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor,) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

**Japan International Cooperation Agency
(JICA)**

_____, 2020

Prepared: DCI for NK
Issue: 7 (updated)
Revision:
Date: 25/03/2020

[E15_200327 Chapter 1 General Iss 7 updated-NK \(Oka + ITO コメ\) as of 20200412.docx](#)[200325-Chapter 1-General Iss 7 updated.docx](#)

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

- 1) Japanese Acts, Orders and Ordinances including:
 - Industrial Safety and Health Act
 - Order for Enforcement of Industrial Safety and Health Act
 - Ordinance on Industrial Safety and Health
 - Safety Ordinance for Cranes
 - Ordinance on Safety and Health of Work under High Pressure
 - Ordinance on Prevention of Anoxia, etc.
 - Ordinance on Prevention of Hazards Due to Dust
 - Explosives Control Act
 - Order for Enforcement of Explosives Control Act
 - Ordinance on Explosives Control
- 2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.
- 4) **The International Red Cross and Red Crescent Movement (ICRCM)**
NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?
True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 10 also). ICRCM seems to be a convenient and internationally applicable basis.
- 5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2. **A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.**

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance 1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Declaration.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.

I have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: MD 氏は上記のように SBD の様式の追加は認められていないが、User Guide に含めました。請負者の安全宣言の様式を User Guide に含めることは、SBD の規定上、問題ないでしょうか？

1.2 General Reference Notes

1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2. The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.

(6) **Unless otherwise stated in JSSS or the context is otherwise clear,** any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same

コメントの追加 [伊藤1]: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or
2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works”

such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.(NK のコメントにより、すでに削除済ですが、Q&A は残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now constantly refers to the Site only. This will also be considered for mention in the User Guide

- (7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one of more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

~~1.3.1~~ JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The "Project Safety Specification" shall have priority over the other parts of Specification in respect of health and safety matters. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows

~~1.3.2~~ JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:

~~1.3.3~~ The Project Safety Specification (including JSSS); and

~~1.3.4~~ The Technical Specification

1.3.5. The priorities of the document comprising the Specification are as follows:

1.3.6. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS;

~~1.3.7.1.3.1.~~ The "Project Safety Specification" shall have priority ~~over the~~ Technical Specification in respect of health and safety matters.

NK: Q1: We think it needs to explain/define "Technical Specification" as same as User Guide 1.3.2 (3) The "Technical Specification" shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

コメントの追加 [岡本2]: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and
B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works".

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

コメントの追加 [岡本3]:

Better to avoid using "Technical specification"

Fig A1.4.1 moved to User Guide.

Yes I agree but the problem again is that "Specification" is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.

I have added the explanation as above but please note that this is a compromise.

Q2: Is "other parts of" necessary?

Thank you and no, it isn't, see above. (すでに削除済みです。)

1.3.8.1.3.2. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary

The User Guide shall not form a part of the Contract.

NK: : MD氏は上の追記を提案していますが、入札図書として出てこないのので不要と考えます。

1.4 Compliance with JSSS and Other Regulations

1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2. JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3. The Contractor shall comply fully with the requirements of ~~JSSS~~ **Projectas supplemented and modified by the Particular** Safety Specification.

~~1.4.4. Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.~~

~~1.4.5.1.4.4. Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.~~

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

~~1.4.6.1.4.5. If, for the particular part of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans; internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.~~

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: 1.4.5 と 1.4.6 を合わせた次のような規定ではいかがかと考えます。

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

1.4.7.1.4.6. Specified Standards and Regulations

(1) *Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.*

(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting

コメントの追加 [伊藤4]: Not necessary

コメントの追加 [岡本5]: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

コメントの追加 [岡本6]: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

コメントの追加 [伊藤7]: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

コメントの追加 [J8]: Better to add this in the main text of JSSS as mentioned in A1.1.5

particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

~~(+)(3)~~ Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.

~~(2)(4)~~ Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

~~1.4.8.1.4.7.~~ Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".

~~1.4.9.1.4.8.~~ If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.

~~1.4.10.1.4.9.~~ Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion and Defect Notification Period, during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.

NK: We consider that this phrase may be changed to "and the Defects Notification Period"? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer's property except as stated in this clause.

NK: we agree to leave this as specified.

~~1.4.11.1.4.10.~~ The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor's Safety Management System

1.5.1. The Contractor shall institute a health and safety management system in accordance with ~~OHSAS 18001 or ISO 45001:2018.~~ The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

コメントの追加 [伊藤9]: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.

コメントの追加 [岡本10]: We don't really understand the meaning of this. ????

コメントの追加 [伊藤11]: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

コメントの追加 [伊藤12]: OHSAS does not exist any more??

Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

~~1.5.2. The Contractor shall state the applicable standard in the Contractor's Safety Plan.~~

コメントの追加 [伊藤13]: If delete OHSAS above, delete accordingly

~~1.5.2. The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17.~~

コメントの追加 [伊藤14]: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

1.5.3. The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. この考え方で正しいでしょうか?

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.

コメントの追加 [伊藤15]: coordinator?

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

~~1.6.2. For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.~~

コメントの追加 [岡本16]: MD氏の intention は全ての submission について ISO9000 プロセスのような手続きを採用するように求めている。個人的には賛成するものの日本の会社は全般にわたる document control はできないので無理な要求と思量。

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered.

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

コメントの追加 [伊藤17]: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1). Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor. We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

NK: 貴機構のご意見はいかがでしょうか?

1.7 Contractor's Safety Plans

1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:

E15_200327 Chapter 1 General Iss 7 updated-NK (Oka + ITO コメ) as of 20200412.docx200325 Chapter 1 General Iss 7 updated.docx

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site

コメントの追加 [伊藤18]: See 1.2.2 (6)

1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated ~~Overall~~ Bid Stage Safety Plan)
- (3) Particular Safety Plans (Updated) separate plans if necessary for particular parts of the Works

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level. ~~throughout the Time for Completion of the Works.~~

~~1.7.5.~~ Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility. ~~and at any time throughout the Time for Completion of the Works.~~

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes thank you, that is true, but better to delete the phrase rather than add.

1.7.6. Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7. Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days ~~after~~ the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

Fair comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it there.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8. Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9. Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works.
- (2) The Contractor shall submit:
 - (a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [Commencement Stage Safety Plan].
 - (b) The Particular Safety Plans by the date 14 days before each particular parts of the Works starts to be executed, if no sufficient details are prescribed in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.

コメントの追加 [岡本19]: Should it be "of the Works or any part thereof" ?

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed this

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree; many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:
 - (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
 - (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
 - (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of

E15_200327 Chapter 1 General Iss 7 updated-NK (Oka + ITO コメ) as of 20200412.docx200325 Chapter 1 General Iss 7 updated .docx

the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

- 1.7.10. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.
- 1.7.11. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.
- 1.7.12. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

- 1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.
- 1.8.3. The procedural flow of risk assessment shall be as follows.
 - (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
 - (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE.

NK: May we know what "improved PPE" mean?

Deleted

1.9 Contractor's Method Statements

- 1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2. Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and include details of all Permanent Works and Temporary Works with supporting documents such as:
 - (1) Studies, investigations and designs.

NK: We suggest to change to "Studies, investigations, and designs"?

Changed

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.

コメントの追加 [伊藤20]: Better to have a linkage with the risk assessment.

- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including **superintendents, workers, operation leaders** and Contractor's Equipment.

NK: We consider "worker" will be used because it is used in other Chapter though FIDIC uses "labour".

Ok I have changed anyway but it now needs wider wording, labour is also used in FIDIC

- (6) Inspection and monitoring plan.
- 1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.
- 1.9.4. Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider "for his information" can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

Changed.

1.10 Engineer's Safety Representative

- 1.10.1. ~~Unless otherwise specified in the Particular Safety Specification, the Engineer may delegate his power and authority to any of his assistant's delegated representative~~ at the Site who shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.
- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

コメントの追加 [伊藤21]: Particular Safety Specification is not necessary with this modification.

[E15_200327 Chapter 1 General Iss 7 updated-NK \(Oka + ITO コメ\) as of 20200412.docx](#)200325-Chapter 1-General Iss 7 updated -doex

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur.
- 1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

コメントの追加 [岡本22]: The sentence is not complete???

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [*Health and Safety*], shall be construed as "Health and Safety Officer at the Site".

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No: This is necessary to correspond to the definition.

Please note that this is a compromise. PC change would have been preferable.

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [*Health and Safety*].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [*Law and*

Language], it is acceptable for the HSO to use a translator for either or both of these languages.

- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

- (8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

コメントの追加 [岡本23]: To NK: Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia

NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.

We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."

I have split this clause for clarity.

I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7).

It is also subject to receiving the consent of the Engineer.

NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.

We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.

I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

1.12.3. Supporting Staff

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO's duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein

MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

- (4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...” は、“The Contractor shall ...”へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

NK: MD 氏は、まだ supporting personnel についての貴機構の意見をまだ十分理解していないように感じておりますが、貴機構のご意見はいかがでしょうか？

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.
- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

コメントの追加 [岡本24]: MD 氏は十分に理解しつつ Operation Leader などのサポートを言っていると思量。(例えば下記の(5)など)

コメントの追加 [伊藤25]: It is understood “internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO.....”

But how “and the details of any inspection, for” relates to other part of this sentence???

Non-natives would have difficulty to understand.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas ~~of the Site~~ are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
 - (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

コメントの追加 [伊藤26]: The working areas are not always a part of the Site

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above

1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

I disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.

NK: 貴機構のコメントを伝えましたが、MD氏はまだ上記の意見です。貴機構のご意見はいかがでしょうか？

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [Safety Compliance Instructions from the Engineer] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [HSO - Scope of Duties and Authority] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within ~~seven fourteen (147)~~ days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving ~~seven three (73)~~ days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.

コメントの追加 [岡本27]: 前述と同じ。OK。

コメントの追加 [岡本28]: 14 days are too long.

コメントの追加 [伊藤29]: 7 days are too long.

- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it.

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended

- (1) **Daily** Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as : ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- (e) Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections. ~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended.

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

E15_200327 Chapter 1 General Iss 7 updated-NK (Oka + ITO ☞ ×) as of 20200412.docx200325 Chapter 1 General Iss 7 updated.docx

No problem deleted already

1.16 Joint Site Safety Inspections

- 1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

This is not quite correct but I have divided anyway

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
 - 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
 - (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
 - 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
 - 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.

~~1.17.5.1.17.6. Unless otherwise consented to by the Engineer, the~~ The audit shall be headed by a senior member of the Contractor's head office health and safety team.

[E15_200327 Chapter 1 General Iss 7 updated-NK \(Oka + ITO コス\) as of 20200412.docx](#)200325 Chapter 1 General Iss 7 updated.docx

~~1.17.6-1.17.7.~~ If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

~~1.17.7-1.17.8.~~ The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.

~~1.17.8-1.17.9.~~ The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

~~1.17.9-1.17.10.~~ The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

This is not quite correct but I have divided anyway

~~1.17.10-1.17.11.~~ The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11-1.17.12.~~ The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor.

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

I do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly.

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows;(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

NK: 機構のご意見はいかがでしょうか。

~~1.17.12-1.17.13.~~ Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

No comment, to be deleted

~~1.17.13-1.17.14.~~ An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

~~1.17.14-1.17.15.~~ The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

コメントの追加 [伊藤30]: エンジニアからの指示を受けて本社から3~7日で来い、というのは現実的とは思えません。

コメントの追加 [岡本31]: Safety auditをコントラクターの本社が行う、事前の Contractor's Personnelへの通知は行わない。これに賛成です。現場の所長は知っていて当然であるが、下請けや作業員は来ることを知らないベースです。

1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.

1.18.2. In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.

Change not correct

1.18.3. ~~Labourer~~Workers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.

1.18.4. The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.

~~1.18.5. The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.~~

~~1.18.6.~~1.18.5. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.

~~1.18.7.~~1.18.6. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:

- (1) Work content and work environment.
- (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
- (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
- (4) Allocation of an achievable and safe work volume and time.
- (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].

~~1.18.8.~~1.18.7. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.

~~1.18.9.~~1.18.8. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.

~~1.18.10.~~1.18.9. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work

コメントの追加 [岡本32]: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

It is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2.(a). I have used "He" and "his" for example consistently and if it changes here it will require further change

1.19 Safety Training Generally

1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

~~1.19.3.~~1.19.4. Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate).

1.20 Safety Induction Training

1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom **he the HSO** is responsible, including the Employer's Personnel and all other persons who are entitled to be on **the Site at** the request of the Employer or Engineer.

Ditto above

1.20.2. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.

~~(5)~~ Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. **Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).**

NK: May we know where we can find to refer to special training?

Rephrased

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.

コメントの追加 [J33]: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. ~~The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.~~

1.21.2. ~~The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if ~~The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available in the Country or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects., the Contractor shall:~~~~

- ~~(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or~~
- ~~(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.~~

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.~~

コメントの追加 [伊藤34]: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

コメントの追加 [岡本35]: Not needed to say so in the specification.

コメントの追加 [岡本36]: 後述の 1.21.13 や 1.21.14 も合わせ読むと、恐らく MD 氏の理解は「途上国に必要なスキルを持った人間はいない。従って外国から連れてこなければならない。連れてきた外人は原則使い続けなければならない」この理解を前提にスペックを書くのは不適切。(伊藤)

コメントの追加 [伊藤37]: May be the case in many project, but skilled staff may be sometimes locally mobilized.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion and Defect Notification Period.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.

"For information" really has no meaning.

If only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24/26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."
