1.21.2. ~~Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

1.21.3. ~~When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries.~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

コメントの追加 [伊藤38]: The Contractor also has to work during DNP and need skilled staff.

コメントの追加 [伊藤39]: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

NK: 機構のご意見はいかがでしょうか？

~~1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.~~

~~1.21.5-1.21.3.~~ Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer **for his consent**.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

~~1.21.6-1.21.4.~~ Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)

1.22.4. The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by **specialist** trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

1.22.5. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6. The Contractor shall ~~select~~, train and equip ~~a specialist rescue team or teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7. who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue.~~

1.22.7. ~~Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.~~

NK: Harness is basically used now and belts is not, so deletion of belt is made.

コメントの追加 [伊藤40]: specially

コメントの追加 [岡本41]: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

コメントの追加 [伊藤42]: Move to 1.24

~~Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2.~~

~~The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.~~

~~1.22.9.1.22.9. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.~~

~~1.22.9.1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.~~

1.22.10.1.22.9. The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.

コメントの追加 [伊藤43]: ditto

1.22.11.1.22.10. Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

1.22.12.1.22.11. For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [Prohibition of Entry – Dangerous Work].

1.22.13.1.22.12. Hazardous Substances.

- (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists ~~Subcontractor(s)~~ that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.
- (2) ~~The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their submit detailed Safety Plans and Method Statements with respect to the removal and disposal of the Hazardous Substances shall also be submitted to the Engineer in accordance with JSSS 1.7 [Contractor's Safety Plans] and JSSS 1.9 [Contractor's Method Statements].~~

コメントの追加 [伊藤45]: modified accordingly

1.23 Permit to Work System

1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

~~1.23.2. The system shall be designed to control safety for Dangerous Work all types of high risk work likely to be encountered, including for example:~~

コメントの追加 [伊藤46]: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

~~Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.~~

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to "for example" as in the following subclause.~~

普通の高所作業などはDWではないと全体で読めるのならばこれでよし。さもなくばそう読めるように書いてもらう。

- ~~(1) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~
- ~~(2) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~
- ~~(3) Diving Works.~~

~~NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.~~

I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO

コメントの追加 [岡本47]: MD 氏に賛成

1.23.4.1.23.3. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.5.1.23.4. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.6.1.23.5. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. ~~Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.~~

コメントの追加 [伊藤48]: Moved to 1.24.5.

NK-1: JICA commented to modify and add "as specified in the Specification" to 1.20.2 in Issue 6.

NK consider that "as specified in Particular Safety Specification" between "the Works," and "the Contractor" if we follow JICA's comment.

NK-2: JICA commented that they want to use "as specified in Particular Safety Specification" more than "unless otherwise specified in Particular Safety Specification" because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA's request to use "as specified in PSSS"?

コメントの追加 [岡本49]: 基本は PSSS に記載すべきで、記載されない場合は Contractor 自身の Discretion になるものと思量。

1) I do not recommend any use or reliance on "as specified in PSSS". If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.

2) "Unless otherwise specified" followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a "failsafe" in JSSS production.

3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.

4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.

5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.

コメントの追加 [岡本50]: 他のコントラクターやサイトに入らざるを得ない住民など全てコントラクターの責任とするのはしようがない。

"other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.

"and any other places as may be specified in the Contract as forming part of the Site" comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

NK: 貴機構のご意見はいかがでしょうか？

~~1.24.2.1.24.1.~~ The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

~~1.24.3.1.24.2.~~ ~~Unless otherwise specified in the Particular Safety Specification, in~~ Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, ~~to or for the use of any accompanying family members of~~ the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site. ~~If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.~~

NK: JICA want to clarify where "other places (if any) are."

~~Deleted see above~~

~~1.24.4.1.24.3.~~ The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

~~1.24.5.1.24.4.~~ ~~Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include~~The Contractor shall provide the following medical and first aid facilities:

- ~~(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~(2) First aid training, appointment of first aiders and dissemination of information.~~
- ~~(3) Type of communication facilities and measures for emergency response.~~
- ~~(4) Medical staff to be assigned at the Site.~~
- ~~(5) Medical Facilities on the Site together with description of equipment and consumables.~~
- ~~(6) Temporary water and power supply to maintain use during mains supply failure.~~
- ~~(7) Transportation facilities. Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.~~
- ~~(8) Additional facilities specified in the Particular Safety Specification, if any.~~
- ~~(9) Medical staff to be assigned at the Site.~~
- ~~(10) Emergency medivac services where necessary.~~

NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.

I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?

- ~~(4)(1) Medical Facilities on the Site together with description of equipment and consumables.~~
 - ~~(5)(1) Temporary water and power supply to maintain use during mains supply failure.~~
 - ~~(6)(1) Type of communication facilities and measures for emergency response.~~
 - ~~(7)(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~1.24.6. First aid training, appointment of first aiders and dissemination of information.~~

~~1.24.5. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities~~

コメントの追加 [伊藤51]: "Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

コメントの追加 [伊藤52]: See comment to 1.2.2 (6)

コメントの追加 [岡本53]: Where the Site is located in a large distance from a sufficiently equipped hospital.

2と4~7は残す(2は ambulance という言葉は使わず Transportation とする) は1と3は Particular に飛ばす

do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.

コメントの追加 [伊藤54]: See comment to 1.2.2 (6)

~~1.24.7.1.24.6. Where the Works include the following for example, (The Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.~~

コメントの追加 [伊藤55]: Merged with 1.22.6

- (1) Work on or near existing electrical equipment, cables, wiring, services and systems.
- (2) Dangerous Work such as Confine Spaces, work at height.

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

~~(3) Diving Work.~~

コメントの追加 [伊藤56]: Diving work is also Dangerous Work

~~(4) Similar special circumstances.~~

1.24.7. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.

コメントの追加 [伊藤57]: Move from 1.22

1.24.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.

This should be "may" since the nature of Works may vary?

コメントの追加 [伊藤58]: Move from 1.22

All rescue team members/Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].

Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid].

コメントの追加 [伊藤59]: Agree

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, the HSO the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6.

コメントの追加 [伊藤60]: Agree

I disagree completely and do not recommend this (or any such) change. As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.

NK: 貴機構のご意見はいかがでしょうか?

コメントの追加 [岡本61]: ここは Contractor でしょう。工事に対しての責任はコントラクターなので。

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;

- (b) Discontinuing construction work related to or in the vicinity of the accident; and
- (c) Implementing any further measures instructed by the Engineer.

1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ **the Contractor's** recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].

Please see above notes on this subject. This should remain as the HSO, I disagree and do not recommend this (or any such) change.

1.25.3. For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].

1.26 Emergency Response Plan

1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and ~~as far as reasonably possible~~ shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, ~~where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have and to reasonably avoided, or~~ overcome or lessened the effects to a reasonable extent.

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

1.26.2. The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the **Site, whether** engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

コメントの追加 [伊藤62]: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

コメントの追加 [伊藤63]: Thank you for being non-native friendly. FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

1.26.3. Where, due to the location of the Site, there is a risk of **flooding**, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage **and flooding arising from such flooding**, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site **and to any third parties and neighbours** and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or **portal of portal of tunnelling of sufficient strength, durability and suitability.**

コメントの追加 [伊藤64]: See 1.2.2 (6)

コメントの追加 [伊藤65]: Better to add

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?

NK: We accept to leave as it is

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [Contractor's General Obligations] and JSSS 1.9 [Contractor's Method Statements].

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

~~This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.~~

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.1?

Please see 1.26.6 for my assumption of your requirements.

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

- 1) **The Contractor can only plan for what he can reasonably foresee or anticipate and**
- 2) **It is necessary to state this so that no confusion is introduced with FIDIC GC 19.**

コメントの追加 [岡本66]: この部分は理解できない。削除して単純に 1.26.6 の記載につなげればよい。

Better to jump to 1.26.6 without this.

3) This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.

NK: 1.26.5 はさらに検討すべきかと考えておりますが、とりあえずこのままで提出致します。貴機構のご意見がありましたらご教示願います。

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

コメントの追加 [伊藤67]: See 1.2.2(6)

1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11. For further measures and requirements refer to JSSS 2.7 [Adverse Weather Requirements].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of **labour union, if any Contractor's Personnel.**
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **occurred in the previous month and measures to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda.

- (d) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (e) Safety instructions received from the Engineer;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and

- (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Ditto above

Is the sequence here acceptable or shall it change as above?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.

(5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1. On larger Projects with multiple contract packages and contractors and **unless otherwise stated** in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3. The Chairman of the Safety Committee **shall** be the Employer.

1.29.4. The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

*NK: JICA commented to delete this as holding meetings are **not monthly basis but optional**.*

*We propose "**periodically as requested by the Employer**" and ask you to reply to this comment as reply is not mentioned in the document with notes.*

Please clarify what you want to be deleted.

NK: Deletion is "on monthly basis".

1.29.5. The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace "shall" with "may" in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state "unless otherwise specified."

With this change I think that no other change is necessary.

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1. Refer to GC 2.3 [**Employer's Personnel**] and GC 4.6 [**Co-operation**] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) **the Employer's Personnel,**
- (2) **any other contractors employed by the Employer,**
- (3) **the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.**

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [Safety Procedures] and GC 4.18 [Protection of the Environment].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.

I don't understand your comment, please advise what change you require. (本Q&Aは無視願います。)

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries in the previous period and measures to be taken to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;

E15_200327 Chapter 1 General Iss 7 updated-NK (Oka + ITO コメ) as of 20200412.docx200325 Chapter 1 General Iss 7 updated .docx

- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4. Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the **Engineer's** monthly progress report.

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties~~, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage.
- (17) Others.

1.31.3. All data shall be in a format and content given consent by the Engineer.

1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

コメントの追加 [岡本68]: Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.

コメントの追加 [岡本69]: 現時点ではいいかも知れないが、1.31, 1.32, 1.33 を統合した方が良く思量。重複が多い・理解ができないなどの理由による。

1.31 と 1.33 は記録の話。1.32 はその報告の話。であるならば、
①32 と 33 の順序を入れ替える。
②そうした記録は保管して Engineer の Inspection が受けられるようにしておくことをそれぞれで記述
③Monthly Safety Report で統計とその他の記録のサマリーを報告。

とすればよいのではないかと？

コメントの追加 [伊藤70]: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics, 4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined: "statistics → records → their reporting"

1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.32 Safety Reports

1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.

NK Is it necessary to add "for"?

Yes, it can be

- (2) Contractor/HSO and Joint Site Safety Inspections.
- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [Progress Reports].

コメントの追加 [伊藤71]:Joint Site Safety Inspection Report ?

1.33 Health and Safety Records

1.33.1. The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [General Safety Measures] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.34 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Deleted see above.

- 1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [Safety Reports].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

- 1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by **the HSO** ~~(or his delegated and technically qualified assistant)~~ at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed **by the HSO**, thereby certifying the items as being **safe for use**.

コメントの追加 [伊藤72]: Agree with MD

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.

I do not recommend your suggested change.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as **not being safe for use**, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.
- (2) New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

コメントの追加 [岡本73]: Engineerが inspection / testingを命じその Test resultを Engineerに提出。結果 failした場合に、Engineerが使用を Reject するとして若干の書き換えが必要。

コメントの追加 [岡本74]: Temporary Works is covered in (2)

コメントの追加 [伊藤75]: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

※ 1.35.4 に関しましてお記のご事案に前編様のご意見をの趣をの趣、記します。

1.36 Health Matters

1.36.1. The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2. Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.

コメントの追加 [伊藤76]: Same comment as 1.24

1.36.1. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to

~~fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.~~

~~1.36.2-1.36.3.~~ Occupational health care shall be provided by the Contractor and shall include ~~for~~ **example:**

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [Working Environment]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) **Avoiding** Frequent or excessive manual handling of loads, stress and fatigue.
- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability.

~~1.36.3-1.36.4.~~ The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational **H** healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

~~1.36.4. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.5. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site **to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.**

~~1.36.5-1.36.6.~~ Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

コメントの追加 [伊藤77]: See 1.2.2 (6)

コメントの追加 [岡本78]:
1.24 と同じならびで 1.36 全体を書き直し「 (伊藤)

コメントの追加 [伊藤79]: Better to add ???

コメントの追加 [伊藤80]: Is this health care service?

コメントの追加 [伊藤81]: See 1.2.2 (6)

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No, I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

Changed already.

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.6+4.7 [Specified Standards and Regulations] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework.

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded. I have assume therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.6+4.7 [Specified Standards and Regulations] to cover this generally.

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ito san's comment.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

コメントの追加 [岡本82]: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

コメントの追加 [伊藤83]: 削除する？

- 1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.
- 1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [Health and Safety Officer at the Site (HSO)].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

"Necessary qualification" can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.

NK: *From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.*

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

I understand your comment and have no objection to the deletion of 1.37.6

- 1.37.7. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2. ~~The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub Subclause (e) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS.

NK: MD 氏は上記の理由で次の 1.37.8 の条項は不要であると考え削除を提案しています。ご検討をお願いします。

~~1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) Appointment of appropriately qualified and experienced staff.~~
- ~~(2) Preparation of adequate Temporary Works designs.~~
- ~~(3) Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) Preparation of a Temporary Works register and records~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment~~
- ~~(6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - ~~(a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and~~
 - ~~(b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.

However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO, I believe that it is a correct requirement which in practice should not be more than a counter signature.

1.37.9. ~~In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.~~

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.

The following clause can be deleted

~~1.37.10. For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].~~

1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

コメントの追加 [伊藤84]: Understand.
But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties, and shall obtain the consent of the Engineer.

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

Yes I agree and have reworded this as above.

Q-1 Is consent by the Engineer given to specialist staff?

This part can be deleted.

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

I have reworded all, please refer to the above

1.38 User Training

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

Recommend that it be included here as a default requirement.

NK: 貴機構のご意見はいかがでしょうか？

~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(1) Safe system and Plant use, operation and process control.~~
- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(3) Training in use of all hardware and software packages.~~
- ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(5) Recording and reporting.~~
- ~~(6) Emergency operation procedure.~~
- ~~(7) Maintenance management procedures.~~
- ~~(8) Inventory and store control systems.~~
- ~~(9) Particular safety procedures, including:~~
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~

コメントの追加 [岡本85]: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~

~~(d) Safety measures for the Works and all items of Plant.~~

~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.6. Other requirements for User Training~~

~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~

~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~

~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~

~~(4) The Engineer may choose to send representatives to witness the training.~~

~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~

~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~

~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~

~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~

~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~

~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~

~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~

~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~

~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~

~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~

- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.~~
- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~
- ~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.391.38 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

NK: 貴機構のご意見はいかがでしょうか？

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by

the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.

- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) **“Operation Leader”** (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [*Particular Safety Specification*] ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 1.7-3-4.)

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

コメントの追加 [岡本86]: User’s Guide はあっても良い。

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.

- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2, where:**
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE.

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK: ありません、現時点ではJSSSでは規定していません。

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
- For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of

E15_200327 Chapter 1 General Iss 7 updated-NK (Oka + ITO コメ) as of 20200412.docx200325 Chapter 1 General Iss 7 updated.docx

workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.

- (19) **“Personal Protective Equipment”** or **“PPE”** means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) **“Safety Belt”** means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) **“Safety Harness”** means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) **“Scaffold”** or **“Scaffolding”** means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) **“Skill Training”** means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) **“Spotter”** means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) **“Trade Effluent”** means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) **“Unexploded Ordnance”** or **“UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) ~~“User Training” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.~~
- (28) **“Working Platform”** means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training

[E15_200327 Chapter 1 General Iss 7 updated-NK \(Oka + ITO コス\) as of 20200412.docx200325 Chapter 1 General Iss 7 updated.docx](#)

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

~~A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with "Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works", published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.~~

~~NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?~~

~~I think both are useful as the contractor should also be aware of requirements.~~

~~It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.~~

~~I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further:~~

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety

コメントの追加 [岡本87]: Specとして残しても良いのではと考えます。

コメントの追加 [伊藤88]: Please add "outline (or policy?) of risk assessment" as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11)
"Safety Plan" means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods,.....

management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

~~Confirm~~ ~~Describe how which scheme~~ the Bidder *institutes the Safety Management System* ~~is accredited under~~.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying **the outline of safety** measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

OK I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan **for** the Works

NK: May the title be Works?

I have edited as above

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

コメントの追加 [岡本89]:
Modified in accordance with modification to JSSS1.5

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

[E15_200327 Chapter 1 General Iss 7 updated-NK \(Oka + ITO コス\) as of 20200412.docx](#)200325-Chapter 1-General Iss 7 updated-.doex

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [**Fire Prevention**].

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

~~(27)~~ User Training

Refer to JSSS 1.38 [*User Training*]

~~An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.~~

~~(28)~~(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex to the

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

[loc](#)

Form JSSS/BSO - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture ("JV")] (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSO, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirements

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the *Project* Safety Specification.

コメントの追加 [伊藤90]: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor.) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

SUBSEQUENT REPORT INFORMATION (POST-INVESTIGATION):	
1) Cause(s) of the accident:	
2) Counter-measures proposed by the Contractor to avoid recurrence of similar accidents and risks:	
3) Number of reported accident(s) occurred in the past one (1) year in the same Contract Package as the accident occurred:	
4) Number of reported near misses occurred in the past one (1) year in the same Contract Package as the accident occurred:	
5) Other Information:	

Report Prepared by: (name): _____ (sign) : _____ Report Submission Date(s) _____ Time: _____	Contractor's Health and Safety Officer (HSO)
Receipt acknowledged by: (name): _____ (sign): _____ Report Receipt Date(s) _____ Time: _____	Engineer

(above to be inserted with detail and signatures at end of each report)

DCI Notes:

We have provided comment where necessary or where requested by NK/JICA.

Our comment is not required by JICA on “blue” shaded items, therefore none is generally provided. This does not mean that we have no comment to make or that we recommend the changes are supportable or correct, which they are often not.

In some instances, we have prepared further notes for NK information so that NK are aware of the further reasons for our concerns.

We have also noticed that some original text may have been changed without any clear identification. Please note that we may not have not made comment on these items. We have also not reviewed the text word-for-word to identify all such changes.

Due to the complicated nature of this document, it is difficult for us to properly edit punctuation, numbering and cross references, which is better achieved on a clean copy. We have tried to do this but assume that we will recheck this again later.

Clause numbering has been reformatted throughout and page numbering adjusted.

We have not issued a clean copy as obviously the notes are important for now but when answers can be provided to the further notes and queries herein, we will be pleased to update and prepare a clean coordinated copy.

Due to clause numbering and heading changes, it will be necessary to update all other cross references in other Chapters where they relate to this Chapter 1, we do this when a clean copy of all is available.

Copy of Mail from Mr. Ito, JICA on 2020/4/23

Dear Sakoda-san,

Very sorry for this late reply with respect to Chapter 1 and User guide.

Regarding Chapter 1, we have sometimes modified directly the text, and sometimes put comments.

After several times of exchange between us, please be informed of the followings:

- 1) As for the modifications of text with a comment highlighted in light blue, you don't have to examine the contents any more. You are requested only to check the quality of language.
- 2) As for the modifications of text without any comment, same. You are requested only to check the quality of language.
- 3) The modifications of text with a comment highlighted in green are sometimes questions and sometimes requests for advice. So, would you please come up with an appropriate solution?

As for the User Guide, our comments are still preliminary since the draft was still preliminary one.

We have, nevertheless, worked in the same manner as mentioned above as long as practicable.

Thank you for your consideration,

I had suggested that copyright and disclaimer clauses would appear to be necessary for JSSS and had further requested that these suggestions be reviewed by JICA legal sources and that confirmation or comment with any revised text be obtained and provided. To date please note that this has not been received, the following remain therefore as good faith suggestions.

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

- 1) Japanese Acts, Orders and Ordinances including:
 - Industrial Safety and Health Act
 - Order for Enforcement of Industrial Safety and Health Act
 - Ordinance on Industrial Safety and Health
 - Safety Ordinance for Cranes
 - Ordinance on Safety and Health of Work under High Pressure
 - Ordinance on Prevention of Anoxia, etc.
 - Ordinance on Prevention of Hazards Due to Dust
 - Explosives Control Act
 - Order for Enforcement of Explosives Control Act
 - Ordinance on Explosives Control
- 2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.
- 4) ~~The International Red Cross and Red Crescent Movement (IRCRCM)~~
NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?
True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 14 also. IRCRCM seems to be a convenient and internationally applicable basis.
The above is not necessary; this page is for copyright rules and as we have not copied or used their script, it can be deleted.
- 5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Previous Suggestion for JICA consideration:

COPYRIGHT

Users of this document are free to copy, publish, distribute, transmit and adapt the information herein, on the condition that they acknowledge JICA as the source of the information and include a link to the JICA website.

DISCLAIMER

JICA has prepared and issued this document in good faith for the reference of executing agencies, contractors and project teams engaged under the Japanese ODA programme, to encourage the attainment of a higher standard of health and safety management on its construction projects. JICA, together with the Executing Agencies of its ODA Projects shall not accept or assume any liability or responsibility for any events or the consequences deriving from the use of this document. The document is provided without any express or implied warranty, including without limitation, warranties of accuracy, completeness, fitness for purpose, in general or on particular projects. This document is intended to provide general reference and shall not be relied upon as a specific legal source or reference or used in any way as a basis of any claim by a contractor against any employer or vice versa under any contract for the execution of any works.

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Declaration.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.

We have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: NK inquired JICA whether it is not problem to include the form of Safety Declaration in the User Guide because the SBD does not allow addition.

NK5/6YH: JICA did not response to the above inquiry. We will proceed as MD proposed.

1.2 General Reference Notes

1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2 The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.

(6) *Unless otherwise stated in JSSS or the context is otherwise clear,* (JC1) *Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.* (JC2)

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site. (NKのコメントにより、すでに削除済ですが、Q&Aは残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now it constantly refers to the Site only. This will also be considered for mention in the User Guide

IC1: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works"

NK5/6YH: NK would like to select the 1 above for JSSS:

IC2: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

This clause is intended only to ensure that the Employer's Personnel and any other persons who are entitled to be on the Site are automatically provided with the same health and safety measures that are provided to the Contractor's Personnel, whenever there is a mention of "Contractor's Personnel".

Thereafter there should be no other reference to "Employer's Personnel and any other persons who are entitled to be on the Site" unless it is for reasons other than the provision of health and safety requirements. I have reviewed other clauses and deleted some, where this is necessary.

For the purpose of this reference only it is not necessary to add any additional wording to "Site".

コメントの追加 [伊藤1]: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works"

コメントの追加 [岡本2]: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

I suggest the clause can then be as now suggested by JICA or even left simply as it was.

- (1) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (2) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

~~1.3.1~~ JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The “Project Safety Specification” shall have priority over the other parts of the Specification in respect of health and safety matters. Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows (JC3)

~~1.3.2~~ JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:

~~1.3.3~~ The Project Safety Specification (including JSSS), and

~~1.3.4~~ The Technical Specification

1.3.5 The priorities of the document comprising the Specification are as follows:

~~1.3.6~~ Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS,

~~1.3.7~~ 1.3.1 The “Project Safety Specification” shall have priority ~~over the~~ Technical Specification in respect of health and safety matters.

NK: Q1: We think it needs to explain/define “Technical Specification” as same as User Guide 1.3.2 (3) The “Technical Specification” shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

Yes I agree but the problem again is that “Specification” is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.

I have added the explanation as above but please note that this is a compromise.

Q2: Is “other parts of” necessary?

Thank you and no, if isn't, see above. (Already deleted.)

JC3: Better to avoid using “Technical specification”

Fig A1.4.1 moved to User Guide

NK5/6: No comment to JC because JICA want to modify as they commented.

I am informed that my comment is not required on “blue” shaded items, therefore none is provided

Suggested editing

~~1.3.8~~ 1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary (JC4)

コメントの追加 [岡本3]:

Better to avoid using “Technical specification”

Fig A1.4.1 moved to User Guide.

~~The User Guide shall not form a part of the Contract.~~

NK: MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

Notes to NK: the statement that the User Guide does not form a part of the Contract is important and intended to limit risk for JICA.

The deletion is shaded in blue so I must not comment.

The biggest user of JSSS is actually the Contractor, and if it is published at the same time as the User Guide on the same JICA website the contractor will refer to it and this could create future problems.

Future claims from contractors can be predicted on this for example that the Bid documents have not been prepared properly according to the User Guide or that the full information (for example required by User Guide clause 1.3.3) has been not been provided or has been withheld. Whether such claims are insupportable under the contract or not, they must still be defended and this takes time and money usually which JICA pay.

JSSS 1.3.4 was intended to very simply prevent this but it has been deleted and I have been asked not to comment, so what can I do?

After further consideration on this subject and as advised in my last comment of Annex 1, I also suggest that it is better to rename the "User Guide", for example as the "Guide for Use of Executing Agencies", it is more correct and may reduce the risk of claim even though it will not solve this problem fully.

1.4 Compliance with JSSS and Other Regulations

1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3 The Contractor shall comply fully with the requirements of JSSS Projectas ~~supplemented and modified by the Particular~~ Safety Specification.

1.4.4 ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.~~(JC5)

JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

1.4.5 ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.~~(JC6)

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

コメントの追加 [伊藤4]: Not necessary

コメントの追加 [岡本5]: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

コメントの追加 [岡本6]: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

1.4.6 If, for the particular parts of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

There is no JICA comment on this.

Your suggested combined clause is suitable, I have edited as follows:

If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

1.4.7 Specified Standards and Regulations(JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

For example, OSHA requirements to which you have referred in JSSS, are actually their regulations not standards.

These regulations are intended for the US and are enforceable only there under their rule of law.

Using OSHA does not mean or imply that you are adopting related US laws or rules for enforcement.

To avoid any legal association, please refer to subclause (4) below and also throughout the other "technical" chapters of JSSS where reference is made to OSHA by using the phrase to the "technical requirements of...."

This is very much a compromise but something like this is necessary to support your choice of OSHA as a reference basis.

My own opinion is that OSHA will not form a part of the applicable Laws or the Laws of the Country with which the Contractor is to comply under the Contract (see GC 1.13 and 13.7 respectively), however I recommend that JICA should check this opinion to support their choice of OSHA, HSE etc.

Please advise of any further requirements or if you require any change.

- (1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.(JC8)

JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5

NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.

There appears to be no problem with transferring the above clause to here but it needs deleting in the Annex to avoid duplication.

- (2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is

コメントの追加 [伊藤7]: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country...

コメントの追加 [J8]: Better to add this in the main text of JSSS as mentioned in A1.1.5 ?

acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

~~(2)~~(3) *Application of detailed parts of any standards or regulations specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request. (JC9)*

IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided
Please refer to editing as shown in red

~~(3)~~(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".

1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)

IC10: We don't really understand the meaning of this.

NK5/6: YH considers this cannot be understood. To MD, please review this sentence..

Please clarify the meaning your query as I cannot clearly understand.

Similar to GC 1.5, the documents in JSSS are basically to be taken as mutually explanatory of one another however the priority of the documents should be stated, in order to resolve any future ambiguity or discrepancy. For this reason, I have suggested that for any interpretation difficulty;

between Chapter 1 (which is General) and all other chapters, then Chapter 1 will prevail and apply between Chapters 2 to 6 (which are also general) and all others (Chapters 7 to 10 and future), Chapters 2 to 6 will apply

Please advise of any change that you require.

1.4.10 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion ~~and Defects Notification Period. ~~during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification. (JC11)~~~~

コメントの追加 [伊藤9]: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer’s property except as stated in this clause.

NK: we agree to leave this as specified.

JC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

NK5/6: Will modify as commented.

I am informed that my comment is not required on “blue” items but am a little confused as NK are requested to redraft.

Notes for NK:

The following information is given for NK use.

I completely understood the JICA intentions during the earlier discussion in January which is why the above advice (highlighted in green) was given.

The Contractor must have already completed the Works before commencement of the DNP and they have already been taken over, occupied and put into use by the Employer.

The Contractor of course has a contractual obligation to take care of the health and safety of his employees when they are completing any work which is outstanding or executing any work required to remedy defects during the DNP and it is not necessary to state this in JSSS.

However, the Contractor has no obligation to continue to provide the majority of the facilities or services of JSSS during the DNP as the Works are completed, handed over, occupied and used by the Employer and most if not all temporary facilities will already have been removed.

To state that “the Contractor shall comply with the requirements of JSSS throughout the DNP” is not correct.

The Contractor for example has no obligation to provide ongoing services and facilities during the DNP, meaning no clinic, ambulance, medical facilities, fire-fighting, support to Employer and Engineer, spare PPE, training, scaffolding, contractor’s equipment and temporary works general availability etc etc, all of which are “requirements” of JSSS.

I am concerned that this will be misunderstood or even abused by some employers and consultants and that because this is so stated the contractor will be requested to provide services and facilities that he is no longer responsible for.

If any facilities are particularly required (e.g. clinic, ambulance, medical facilities, fire-fighting, spare PPE, training etc this should be clearly stated in the Particular Safety Specification so that the Contractor is aware and so that it can be included in his bid.

The added text is not therefore advisable.

1.4.11 The Contractor shall fully inform his personnel, his Subcontractor’s, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor’s Safety Management System

1.5.1 The Contractor shall institute a health and safety management system in accordance with ~~OHSAS 18001 or ISO 45001:2018~~ (JC11a) ~~The Contractor shall submit original or certified~~

コメントの追加 [伊藤10]: OHSAS does not exist any more??
Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.

1.5.2 ~~The Contractor shall state the applicable standard in the Contractor's Safety Plan.~~ (JC12)

JC12: If delete OHSAS above, delete accordingly.

NK5/6: To MD, please review this.

1.5.3 ~~The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.~~ Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)

JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

NK5/6: Will modify as commented.

1.5.4 The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct?この考え方で正しいでしょうか?

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK, please can you advise me of the text that you want to insert here and I will edit this as necessary.

1.6 Checking and Validation of Submissions

1.6.1 In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

JC13a: coordinator?

NK5/6: We think so.

1.6.2 ~~For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [*Care and Supply of Documents*] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.~~ (JC14)

コメントの追加 [伊藤11]: If delete OHSAS above, delete accordingly

コメントの追加 [伊藤12]: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

コメントの追加 [伊藤13]: coordinator?

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences. GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).

Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.

We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

NK5/6: Will modify as commented.

NK, please can you advise me of the text that you want to insert here and I will edit the spelling grammar of this as necessary.

1.7 Contractor's Safety Plans

1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, ~~Employer's Personnel and other persons entitled to be on the Site.~~ (JC15)

JC15: See 1.2.2 (6).

NK5/6: No comment.

This is connected with the provision of health and safety measures as referred to in 1.2.2 (6) and can be deleted to be compatible.

1.7.3 The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated ~~Overall~~ Bid Stage Safety Plan)
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works)

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

コメントの追加 [伊藤14]: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1). Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor. We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4 The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level. ~~throughout the Time for Completion of the Works.~~

1.7.5 Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility. ~~and at any time throughout the Time for Completion of the Works.~~

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes thank you, that is true, but better to delete the phrase rather than add.

1.7.6 Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7 Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

My comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it here.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8 Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9 Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works. (JC16).

JC16: Should it be "of the Works or any part thereof"?

NK5/6: We agreed the above modification.

Yes for consistency that is better but I suggest to further consistency please use:

"the Works or any part of the Works."

- (2) The Contractor shall submit:

(a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [Commencement Stage Safety Plan].

(b) The Particular Safety Plans by the date 14 days before each particular parts of the Works starts to be executed, if no sufficient details are prescribed in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed this.

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree, many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:
- (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
 - (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
 - (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

1.7.10 The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.

1.7.11 Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

1.7.12 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

コメントの追加 [岡本15]: Should it be "of the Works or any part thereof" ?

1.8 Risk Assessment

- 1.8.1 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.

This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), it is safety warning, I suggest that the full expression should remain.

- 1.8.3 The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE.

NK: May we know what "improved PPE" mean?

Change

1.9 Contractor's Method Statements

- 1.9.1 The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2 Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and (JC17) include details of all Permanent Works and Temporary Works with supporting documents such as:

JC17: Better to have a linkage with the risk assessment.

NK5/6: Will modify as commented.

(1) Studies, investigations and designs.

NK: We suggest to change to "Studies, investigations, and designs"?

Change

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including superintendents, workers, operation leaders and Contractor's Equipment.

NK: We consider "worker" will be used because it is used in other Chapter though FIDIC uses "labour".

コメントの追加 [伊藤16]: Better to have a linkage with the risk assessment.

OK I have changed anyway but it now needs wider wording, labour is also used in FIDIC

(6) Inspection and monitoring plan.

1.9.3 The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.

1.9.4 Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider "for his information" can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

change

1.10 Engineer's Safety Representative

1.10.1 ~~Unless otherwise specified in the Particular Safety Specification, the Engineer may delegate his power and authority to any of his assistant's delegated representative at the Site who (JC18) shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.~~

IC18: Particular Safety Specification is not necessary with this modification.

NK5/6: Will modify as commented.

1.10.2 The terms of the appointment shall be in accordance with GC 3.2 [Delegation by the Engineer].

1.10.3 Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

コメントの追加 [伊藤17]: Particular Safety Specification is not necessary with this modification.

- 1.11.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2 If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.

~~1.11.3 If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur. (JC19)~~

IC19: The sentence is not complete???

NK5/6: To Md, please review the sentence.

Thank you, I suggest editing as follows:

1.11.4 If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as:

- (1) the cause has been investigated and established by the Contractor;
- (2) corrective and preventive measures have been formulated by the Contractor and proposed to the Engineer;
- (3) the Engineer's consent has been obtained for such measures; and
- (4) the measures have been implemented to ensure that no such accident can reoccur.

1.11.5 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1 For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [*Health and Safety*], shall be construed as "Health and Safety Officer at the Site".

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No. This is necessary to correspond to the definition.

Please note that this is a compromise. PC change would have been preferable.

1.12.2 Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.

- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

~~Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK Level 6 Diploma level or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.~~

No problem with the above, I suggest editing as follows:

Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:

- (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
- (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or
- (c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

JC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or	University or technical college science course other courses
					in S&H 2 years 4 years
					Senior high school science course other courses
					in S&H 4 years 6 years
					Others
					in S&H 7 years
				2. Industrial safety consultants.	

コメントの追加 [岡本18]: To NK: Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES 1.Occupational S and H Program. U.S. Army Corps of Engineers, EM-385	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager shall be the CSP.	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.
4	Singapore	Regulations	1)Representative of the Contractor 2)Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)	
5	India	Regulation	1)Safety Officer 2)Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course	
6	Thailand	Regulation	1)Head Man Level 2)Technique Level 3)High Technique Level 4)Professional Level 5)Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We consider NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot find such person. Large contractors and European contractors may find them.

We propose to add (7) “unless otherwise specified in Particular Safety Specification” before “the HSO...”

have split this clause for clarity

suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7)

It is also subject to receiving the consent of the Engineer.

NK: We think “two (2) years experience outside the Country” is also too high requirement for the local contractors and also Japanese.

We propose to delete “this two years outside the Country” and specify requirement in Particular Safety Specification depending on the Works.

suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

NK, please refer to editing above.

1.12.3 Supporting Personnel

Heading is changed to be consistent with the content

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO’s duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

to this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein

MM: HSO should always be ultimately responsible as the leader really of the Contractor’s safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...”は、“The Contractor shall ...”へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor’s Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in

accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) ~~The HSO shall be expected to develop internal procedures whereby all supporting personnel, (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.~~

JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirement for immediately advising the HSO...."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence.
(次のように分解できるのだと思います。それほど違和感はありませんが。)

- 1) the requirements for any inspection
- 2) the details of any inspection

To MD, we would like to review the sentence because of sentence seems too long.

I suggest the above is edited as follows:

- (6) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:
 - (a) Supporting personnel are made aware of the requirements for any inspection and the details thereof.
 - (b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work
 - (c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.

Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.

コメントの追加 [伊藤19]: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO...."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

- (7) Where the Works **or any part of the Works** is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified **supporting personnel** for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4 Inspections

- (1) The HSO shall be responsible for ensuring:
- (a) That all working areas **of the Site (JC22)** are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;

コメントの追加 [伊藤20]: The working areas are not always a part of the Site

JC22: The working areas are not always a part of the Site

NK5/6: No comment to JC because JICA want to modify as they commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all **affected persons** and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and

This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), however I suggest that in this case the wording is changed as above to make it non-specific and therefore of wider w=effect

- (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].

- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above

1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
- (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
- (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
- (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
- (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;

- (e) Temporarily stopping the Works or **any part** of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
- (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
- (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
- (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
- (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [**HSO - Scope of Duties and Authority**] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.

- (4) If the Engineer gives no such notice of non-compliance for the original proposal within ~~seven fourteen (14)~~ (JC23) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving ~~seven-three (73)~~ (JC24) days' notice in writing of the resumption date.
- To be proactive, the Engineer may give consent at any stage within the above stated time scales.

コメントの追加 [岡本21]: 14 days are too long.

コメントの追加 [伊藤22]: 7 days are too long.

JC23& 24: 14 days are too long, and 7 days are too long.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.
Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended

- (1) **Daily** Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place,

- scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- (e) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as ; ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
 - (f) Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
 - (g) Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
 - (h) Site Safety Inspections. ~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

No problem deleted already

1.16 Joint Site Safety Inspections

- 1.16.1 In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4 The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

this is not quite correct but I have divided anyway

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2 Safety inspection are intended to search for risks and hazards, which present a threat to safe working.
 - 1.17.3 The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing

basically on the following five questions:

- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
- (2) Are the Safety Plan requirements being met?
- (3) Is there documented proof of compliance?
- (4) Is health and safety training effective?
- (5) Is the Contractor's health and safety management system working effectively?

1.17.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.

~~1.17.5~~ The audit ~~team~~ procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.

~~1.17.5~~~~1.17.6~~ ~~Unless otherwise consented to by the Engineer, t~~The audit shall be headed by a senior member of the Contractor's head office health and safety team.

~~1.17.6~~~~1.17.7~~ If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

~~1.17.7~~~~1.17.8~~ The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.

~~1.17.8~~~~1.17.9~~ The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

~~1.17.9~~~~1.17.10~~ The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

this is not quite correct but I have divided anyway

~~1.17.10~~~~1.17.11~~ The audits shall be conducted ~~on a random basis~~ at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11~~~~1.17.12~~ The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor. (JC25)

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows:(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

JC25: It is not practical that the auditing team of the headquarters visit the Site within 3 to 7 days after the Engineer's instruction.

NK: 1.17.11(1.17.12) will be deleted.

~~1.17.12~~~~1.17.13~~ Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

~~This comment, to be delete.~~

~~1.17.13~~1.17.14 An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

~~1.17.14~~1.17.15 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

1.18.1 To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.

1.18.2 In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.

~~change not correct~~

1.18.3 ~~Labourer~~Workers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.

1.18.4 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.

1.18.5 ~~The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement. (JC26)~~

JC26: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.18.6 The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.

The above will require editing as above in view of your change

1.18.7 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:

- (1) Work content and work environment.
- (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.

コメントの追加 [岡本23]: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

- (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
- (4) Allocation of an achievable and safe work volume and time.
- (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].

1.18.8 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.

1.18.9 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.

1.18.10 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2.1a). I have used "He" and "his" for example consistently and if it changes here it will require further change.

1.19 Safety Training Generally

1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.19.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

1.19.31.19.4 Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate). (JC27)

JC27: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.20 Safety Induction Training

1.20.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom **he-the HSO** is responsible, including the

コメントの追加 [J24]: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

Employer's Personnel and all other persons who are entitled to be on the Site at the request of the Employer or Engineer.

Ditto above

No problem

This is training and may not be directly connected with the provision of health and safety measures as referred to in 1.2.2 (6). I suggest for clarity that the full wording should remain.

1.20.2 The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.
- (5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).

NK: May we know where we can find to refer to special training?

Rephrased

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3 Practical on-Site demonstrations shall be included.

1.20.4 Training Personnel (JC28)

JC28: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

NK5/6: NK agreed to the above.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor

shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1 The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. ~~The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.~~ (JC29)

JC29: Not needed to say so in the specification.

NK: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.21.2 The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available in the Country or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects., the Contractor shall:

(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or

(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries. (JC30) all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.~~

JC30: May be the case in many projects, but skilled staff may be sometimes locally mobilized

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Notes for NK

This is already reflected in FIDIC, 6.1 second paragraph. The suggested change actually changes the FIDIC contract requirements by introducing the wording: "to the extent practicable and reasonable". Such a change is not necessary and not recommended.

I had drafted this clause to strengthen the requirements for importing foreign resources, obviously where they are not available locally. The suggested added wording has no contractual meaning and will definitely weaken if not destroy any attempt by the Engineer (or Employer) to impose stronger requirements for importing foreign skilled

コメントの追加 [伊藤25]: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

コメントの追加 [岡本26]: Not needed to say so in the specification.

コメントの追加 [伊藤27]: May be the case in many project, but skilled staff may be sometimes locally mobilized.

persons even though the Employer is already paying for it. I note the other deletions, which also tend to weaken requirements.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion *and Defect Notification Period.*(JC31)

JC31: The Contractor also has to work during DNP and need skilled staff.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

~~Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply.:(JC32)~~

JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

NK5/6: To MD, please review the comment and modify the sentences.

Your comment requests that training be provided for other workers in addition to operation leaders.

Your original draft required training only for operation leaders and workers engaged in dangerous work.

Your draft documents contained requirements which were very unclear and which had little or actually no connection with the contract.

Dangerous work is covered by 1.20.2

Please refer to my comments on your original draft which I have explained since; I have advised that the Contractor already has a basic obligation to provide appropriately qualified, skilled and experienced personnel under the contract (see GC 6.1 and 6.9) and these contract requirements must not be compromised.

I had explained that it is illogical and contractually incorrect to require the Contractor to provide skilled personnel (where necessary importing skilled foreign personnel) under the Contract, expect the Employer to pay for this via the Contract Price, yet then assign non-compliant workers and other personnel and expect the Employer to pay for further skill training.

If this is required, the extent to which this is to be applied clearly needs to be carefully defined and controlled otherwise it can be argued that having complied with the training requirements he is not responsible for providing any additional capable and skilled persons unless the employer allows and pays for more skill training.

I am reluctant to add further skill training without knowing your precise additional requirements. Can you therefore please describe who shall receive skill training, to what level, with what resources, how to be managed and paid for and how this is to be made compatible with the Contract and I will edit your text as necessary and include this against earlier advice.

On the basis that skill training is only required to develop the skills of local operation leaders (which is still stretching the contract), I suggest editing this subclause as follows:

1.21.21.21.3 Further Training of Operation Leaders

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled workforce that he considers are suitable to act as future Operation Leaders.
- (2) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities.

コメントの追加 [伊藤28]: The Contractor also has to work during DNP and need skilled staff.

コメントの追加 [伊藤29]: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

skill levels and awareness of international safety and quality standards.

- (3) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.
- (4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.

"For information" really has no meaning.

If only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

- (5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.
- (6) Details-Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

~~Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

I cannot agree with or recommend the deletion of the clause regarding consent of the Engineer before demobilisation of foreign Operation Leaders, it is written for a purpose. It is sometimes difficult to get a contractor to assign any skilled foreign personnel on JICA projects in remote locations even when they are clearly necessary, for reasons of safety, quality and performance. Even when mobilised for example to comply with this clause, the contractor will have an incentive to demobilise such personnel as soon as he possibly can to optimise his profits rather than consider safety, etc.. I have recommended that some control is vital i.e. review and consent of the Engineer.

Other clauses that have now been deleted were also necessary to add to the flavour of this sensitive clause.

It now has little meaning or effect and basically a unscrupulous contractor will can now argue that the assignment of some foreign operation leaders and trainers for a short period complies with the requirements, his contract obligations are then all satisfied and having demobilised same persons, the employer is responsible for inadequacies beyond that point by not specifying more training.

1.21.3-

~~1.21.4 When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries.~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only. If JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

Please see above; the deletion of the other clause is not recommended. This training clause is an unusual requirement which is not compatible with the contract and it deserves full explanation as there is otherwise a risk that it will be misused in future.

It does not, then

~~(7) It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.~~

~~(8)~~(7) Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer **for his consent.**

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

~~1.21.5~~1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

I have added the following because of apparent concerns over the meaning of JSSS 2.5.4.13:

1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by **specialist (JC33)** trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

JC33: specially

NK5/6: To MD, Please check it.

Can also be "specially" if you prefer

コメントの追加 [伊藤30]: specially?

1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6 ~~The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7. who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue. (JC34).~~

JC34: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6

NK5/6: Will modify as commented.

1.22.7 ~~Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC35)~~

NK: Harness is basically used now and belts is not, so deletion of belt is made.

Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 3.

The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.

JC35: Move to 1.24

NK5/6: Will modify as commented.

~~The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.~~

1.22.91.22.8 ~~If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC36).~~

JC36: ditto

NK5/6: Will modify as commented.

1.22.101.22.9 ~~The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.~~

1.22.111.22.10 Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

1.22.121.22.11 For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [Prohibition of Entry – Dangerous Work].

1.22.131.22.12 Hazardous Substances.

- (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists ~~Subcontractor(s)~~ (JC37) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

JC37: not necessarily Subcontractors

NK5/6: Will modify as commented.

No problem

- (2) ~~The Contractor shall obtain the Engineer's consent for such specialist Subcontractors~~

コメントの追加 [岡本31]: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

コメントの追加 [伊藤32]: Move to 1.24

コメントの追加 [伊藤33]: ditto

コメントの追加 [伊藤34]: not necessarily Subcontractors

~~and their submit detailed Safety Plans and Method Statements with respect to the removal and disposal of the Hazardous Substances shall also be submitted (JC38) to the Engineer in accordance with JSSS 1.7 [Contractor's Safety Plans] and JSSS 1.9 [Contractor's Method Statements].~~

コメントの追加 [伊藤35]: modified accordingly

JC38: modified accordingly

NK5/6: Will modify as commented.

No problem

1.23 Permit to Work System

1.23.1 The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2 The system shall be designed to control safety for ~~Dangerous Work~~ all types of high risk work likely to be encountered, including for example: (JC39)

コメントの追加 [伊藤36]: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

JC39: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

NK5/6: Will modify as commented.

~~1.23.3 Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work:~~

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to "for example" as in the following subclause.~~

~~(1) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~

~~(2) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~

~~(3) Diving Works.~~

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

~~I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.~~

1.23.4 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.5 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.6 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

~~1.24.1 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.(JC40)~~

コメントの追加 [伊藤37]: Moved to 1.24.5.

JC40: Moved to 1.24.5.

NK5/6: Will modify as commented.

No comment

NK-1: JICA commented to modify and add “as specified in the Specification” to 1.20.2 in Issue 6.

NK consider that “as specified in Particular Safety Specification” between “the Works,” and “the Contractor” if we follow JICA’s comment.

NK-2: JICA commented that they want to use “as specified in Particular Safety Specification” more than “unless otherwise specified in Particular Safety Specification” because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA’s request to use “as specified in PSSS”?

- 1) I do not recommend any use or reliance on “as specified in PSSS”. If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.
- 2) “Unless otherwise specified” followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a “failsafe” in JSSS production.
- 3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.
- 4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.
- 5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who “other persons who are entitled to be on the Site” are, and where “other places (if any) are.

“other persons who are entitled to be on the Site” is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor’s Personnel and Employer’s Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor’s, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor’s compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.

and any other places as may be specified in the Contract as forming part of the Site” comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

1.24.2 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3 ~~Unless otherwise specified in the Particular Safety Specification, in (JC41) Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.~~

NK: JICA want to clarify where “other places (if any) are.

Deleted see above

JC41: Free of charge for everyone” need not to be as default. I don’t believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

コメントの追加 [伊藤38]: “Free of charge for everyone” need not to be as default. I don’t believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

コメントの追加 [伊藤39]: See comment to 1.2.2 (6)

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

JC42: See comment to 1.2.2 (6).

NK5/6: Will modify as commented.

NK5/6: YH inquired if the sentence of "the family members of all other persons" is necessary to be deleted.

Yes, this applies only to remote sites as described originally in 1.24.1.

As 1.24.1 is moved then maybe this needs to be moved also or it needs editing, "such medical services" is not then correct

I had originally tried always to use the expression "Unless otherwise specified in the Particular Safety Specification" so what is written in JSSS is a safe default and the risk of error is therefore reduced. This has now been changed here and in 1.36 so reliance is now placed upon the PSS which I had tried to avoid.

1.24.4 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5 ~~Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include~~The Contractor shall provide the following medical and first aid facilities:

- ~~(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~(2) First aid training, appointment of first aiders and dissemination of information.~~
- ~~(3) Type of communication facilities and measures for emergency response.~~
- ~~(4) Medical staff to be assigned at the Site.~~
- ~~(4) Medical Facilities on the Site together with description of equipment and consumables.~~
- ~~(5) Temporary water and power supply to maintain use during mains supply failure.~~
- ~~(6) Transportation facilities. Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.~~
- ~~(2)(7) Additional facilities specified in the Particular Safety Specification, if any.~~
- ~~Medical staff to be assigned at the Site.~~
- ~~(3) Emergency medical services where necessary. (JC43)~~

NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.

Disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?

JC43: Where the Site is located in a large distance from a sufficiently equipped hospital.

NK5/6: Will modify as commented.

Your above added clause 1.24.5 is not correct contractually, is not necessary and I do not recommend that it is included, please refer to notes under 1.24.6 below.

- ~~(4)(1) Medical Facilities on the Site together with description of equipment and consumables.~~
- ~~(5)(1) Temporary water and power supply to maintain use during mains supply failure.~~
- ~~(6)(1) Type of communication facilities and measures for emergency response.~~
- ~~(7)(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~1.24.6 First aid training, appointment of first aiders and dissemination of information.~~

~~1.24.7.1.24.6~~ Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.(JC44)

JC44: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

I do not recommend that your suggested changes are made.

Please refer to GC 6.7 [Health and safety] which in terms of Contractor's basic H and S obligations, should apply and prevail. This is why I had carefully worded this clause and stated "to comply with his obligations under the Contract".

By changing this to "as specified in the Particular Safety Specification" will change the basic requirements of the Contract and should not be done. Ignoring ambiguity and priorities, whatever is stated in the PSS (unless exactly the same as GC 6.7) will unnecessarily and incorrectly change the contract.

Similarly, it is not necessary to define or restrict the services and facilities to be provided as has been attempted in your added 1.24.5 above. I do not recommend that your clause is added meaning that the general requirements of GC 6.7 continue to apply.

The added clause 1.24.5 is not correct anyway as for example "ambulance service" which you have deleted is a requirement of the contract anyway.

To assist the Contractor with his Bid, I had suggested that the Employer/consultant may wish to assist the Contractor by stating actual site requirements in the PSS but not amending the basic requirements of the contract in the process.

On balance I do not see why any real change is necessary to this clause and what is suggested is confusing rather than improving.

~~1.24.8.1.24.7~~ Where the Works include the following for example, ~~†~~The Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained ~~†~~(JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

~~(1) — Work on or near existing electrical equipment, cables, wiring, services and systems.~~

~~(2) — Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

~~(3)(1) Diving Work. (JC46)~~

JC46: Diving work is also Dangerous Work

NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.

~~(4) — Similar special circumstances.~~

コメントの追加 [伊藤40]: See comment to 1.2.2 (6)

コメントの追加 [伊藤41]: Merged with 1.22.6

コメントの追加 [伊藤42]: Diving work is also Dangerous Work

1.24.9] 1.24.8 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)

JC47: Move from 1.22.

This should be "may" since the nature of Works may vary.

NK5/6: To MD, please review this comment.

I am informed that my comment is not required on "blue" shaded items

It should be "shall", because where the nature of the Works so dictates, it "shall" be provided not "may" otherwise compliance appears optional, which is not the intention.

コメントの追加 [伊藤43]: Move from 1.22

This should be "may" since the nature of Works may vary?

1.24.9] 1.4.9 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC48)

JC48: Move from 1.22.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

コメントの追加 [伊藤44]: Move from 1.22

1.24.9] 1.4.10 All rescue team members Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].

1.24.9] 2.4.10 Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid]. (JC49)

JC49: Agree.

NK5/6: Will modify as agreed.

No comment

コメントの追加 [伊藤45]: Agree

1.25 Measures at the Time Accidents Occur

1.25.1 When an accident occurs, the HSO the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6. (JC50)

I disagree completely and do not recommend this (or any such) change. As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.

JC50: Agree.

NK5/6: Will modify as agreed.

For the purposes of safety, the HSO must immediately take this action when he is aware of it and this should remain as his duty, not the contractor as you suggest. The interests are different and if immediate action by HSO is not taken, it should be the HSO that is held responsible.

コメントの追加 [伊藤46]: Agree

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:

- (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
- (b) Discontinuing construction work related to or in the vicinity of the accident; and
- (c) Implementing any further measures instructed by the Engineer.

1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].

Please see above notes on this subject. This should remain as the HSO. I disagree and do not recommend this (or any such) change.

1.25.3 For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].

1.26 Emergency Response Plan

1.26.1 To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and ~~as far as reasonably possible~~ shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, ~~where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have and to reasonably avoided, or overcome or lessened the effects to a reasonable extent. (JC51)~~

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above.

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.3 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

JC51: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

NK5/6: Will modify as commented.

I give no further comment.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. (JC52)

JC52: Thank you for being non-native friendly.

コメントの追加 [伊藤47]: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

コメントの追加 [伊藤48]: Thank you for being non-native friendly. FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes, this can be changed as above.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

コメントの追加 [伊藤49]: See 1.2.2 (6)

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

No comment

- (2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.

コメントの追加 [伊藤50]: Better to add

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change

NK: We accept to leave as it is

JC54: Better to add.

NK5/6: Will modify as commented.

No comment

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [Contractor's General Obligations] and JSSS 1.9 [Contractor's Method Statements].

1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

~~This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.(JC55)~~

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.6

Please see 1.26.6 for my assumption of your requirements.

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

1) The Contractor can only plan for what he can reasonably foresee or anticipate and

2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19

3) This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7

JC55: Better to jump to 1.26.6 without this.

NK5/6: Will modify as commented.

No further comment

NK: Deleted as we cannot assume other requirements by the Employer.

1.26.6 The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

コメントの追加 [岡本51]: Better to jump to 1.26.6 without this.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. (JC56)

コメントの追加 [伊藤52]: See 1.2.2(6)

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

This is connected with the provision of health and safety measures as referred to in 1.2.2 (6) and can be deleted to be compatible.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9 If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11 For further measures and requirements refer to JSSS 2.7 [Adverse Weather Requirements].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of labour union, if any Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.

(9) Any other necessary personnel.

1.27.3 The HSO shall be the chairman of the Safety Committee.

1.27.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **occurred in the previous month and measures to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda.

- (d) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (e) Safety instructions received from the Engineer;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and
- (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

1.27.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;

- (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

On the above

is the sequence here acceptable or shall it change as above?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1 On larger Projects with multiple contract packages and contractors and unless otherwise stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3 The Chairman of the Safety Committee **shall** be the Employer.

1.29.4 The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are not monthly basis but optional.

We propose "periodically as requested by the Employer" and ask you to reply to this comment as reply is not mentioned in the document with notes.

Please clarify what you want to be deleted.

NK: Deletion is "on monthly basis".

1.29.5 The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace “shall” with “may” in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state “unless otherwise specified.”

With this change I think that no other change is necessary.

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1 Refer to GC 2.3 [*Employer’s Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer’s Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any relevant authorities ~~legally constituted public authorities~~, who may be employed in the execution on or near the Site of any work not included in the Contract.

I have now given definition to “relevant authorities” and therefore suggest the above correction

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor’s efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor’s Safety Plan and that their personnel comply with the Contractor’s Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer’s Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3 If any other contractors are employed by the Employer or if any relevant authorities ~~legally constituted public authorities~~ responsible to the Employer ~~are~~ ~~is~~ working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any relevant authorities legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.

Don't understand your comment, please advise what changes you require. (本 Q&A は無視願います。)

I have now given definition to "relevant authorities" and therefore suggest the above correction

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any relevant authorities any legally constituted public authorities;

I have now given definition to "relevant authorities" and therefore suggest the above correction

- (c) Accidents, injuries in the previous period and measures to be taken to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the ~~Engineer's~~ monthly progress report. (JC57)

JC57: Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.

NK5/6: Will modify as commented..

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.31 Safety Statistics

コメントの追加 [岡本53]: Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.

1.31.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties~~, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage. (JC58)
- (17) Others.

JC58: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.

4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.31.3 All data shall be in a format and content given consent by the Engineer.

1.31.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.32 Safety Reports

コメントの追加 [伊藤54]: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.
4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

1.32.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions **taken, for improvement.**

NK Is it necessary to add “for”?

Yes, it can be

- (2) **Contractor/HSO and Joint Site Safety Inspections.**(JC59)

JC59:Joint Site Safety Inspection Report ?

NK5/6: Will modify as commented.

- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor’s monthly progress report, required by GC 4.21 [*Progress Reports*].

1.33 Health and Safety Records

1.33.1 The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor’s Personnel.
- (6) Health management for the Contractor’s Personnel, documents regarding workers’ health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2 All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor’s Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.34 Health and Safety Incentive Schemes

1.34.1 The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of “legitimate” (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Deleted see above

1.34.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

コメントの追加 [伊藤55]:Joint Site Safety Inspection Report ?

- 1.34.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.34.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.34.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.34.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.34.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.34.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [Safety Reports].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

- 1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO (or his delegated and technically qualified assistant) (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.

コメントの追加 [伊藤56]: Agree with MD

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 (Supporting Staff) where this is explained.

do not recommend your suggested change.

JC60: Agree with MD

NK5/6: Will modify as commented.

No comment

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

JC61: Temporary Works is covered in (2)

NK5/6: Will modify as commented.

- (2) New or up to date recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and

I suggest that "recent" is changed to "up to date" to be consistent with clause (1), to give it improved meaning (although still not definitive), particularly in view of the omission of the 5 year age limitation (which was definitive).

that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

This inspection was originally for the purpose of checking that the equipment was new or less than 5-years old.

However, as the age criteria has now been deleted, there is no reason why the Engineer should inspect the equipment and no criteria by which he can determine that the equipment is compliant or otherwise. This being the case, I recommend that this useful safeguard clause should now be deleted also.

Without clear age, criteria I do not recommend that any inspection would be time limited, could not include a full mechanical or operational check and ultimately will result in personal opinion. It may also be compromise later attempts to reject equipment at site when it is then found to be unsafe.

Had the age criteria still been maintained, agency inspection would be a very easy and possibly more efficient alternative.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

have defined this as 1.35.1 and as it is an important item for which there should be no future argument.

コメントの追加 [岡本57]: Temporary Works is covered in (2)

コメントの追加 [伊藤58]: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffolding, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1

Can we delete "and Temporary Works" in (2)?

I do not recommend it

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not want this to apply, please let me have your instructions on what shall be changed and how

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit
JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant

NK5/6: Will modify as commented.

I note that aside from using the word "recent" which now has no real meaning (see above suggested change) the 5-year age limitation has been deleted here (and in the BDS).

This therefore effectively prevents the engineer from clearly and undisputedly rejecting aged and potentially unsafe or non-compliant equipment including equipment, which might be in good condition but is without modern safety features or which is inherently unsafe.

1.36 Health Matters

1.36.1 The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2 Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons. (JC63)

JC63: Same comment as 1.24

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

コメントの追加 [伊藤59]: Same comment as 1.24

1.36.1.36.3 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC64)

JC64: See 1.2.2 (6).

NK5/6: Will modify as commented.

1.36.2.1.36.4 Occupational health care shall be provided by the Contractor and shall include ~~for example:~~

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [Working Environment]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Avoiding (JC65) Frequent or excessive manual handling of loads, stress and fatigue.

JC65: Better to add ???

NK5/6: Will modify as commented.

- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability. (JC66)

JC66: Is this health care service?

NK5/6: Will modify as commented.

1.36.3.1.36.5 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational H-healthcare proposal.

コメントの追加 [伊藤60]: See 1.2.2 (6)

コメントの追加 [伊藤61]: Better to add ???

コメントの追加 [伊藤62]: Is this health care service?

- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for emergency response.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

~~1.36.4 Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.6 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

Please refer to my earlier comment under 1.24.6 and for the same reasons I do not recommend that this change be made.

~~1.36.5~~ 1.36.7 Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No. I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)

changed already

JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

NK5/6: Will modify as commented.

コメントの追加 [伊藤63]: See 1.2.2 (6)

コメントの追加 [岡本64]: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

No comment

1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework (JC69).

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded. I have assumed therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [*Specified Standards and Regulations*] to cover this generally.

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per the said comment.

JC69: delete it?

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

No comment

1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

"Necessary qualification" can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

~~Understand your comment and have no objection to the deletion of 1.37.6.~~

1.37.7 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor's Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer ~~may have no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2. ~~The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS. (JC70).

NK: MD氏は上記の理由で次の1.37.8の条項は不要であると考え削除を提案しています。ご検討をお願いします。

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

Will look at this when I review the user guide

1.37.8 ~~Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) Appointment of appropriately qualified and experienced staff.~~
- ~~(2) Preparation of adequate Temporary Works designs.~~
- ~~(3) Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) Preparation of a Temporary Works register and records~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment.~~

コメントの追加 [伊藤65]: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

- (6) ~~Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:~~
- (a) ~~Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and~~
 - (b) ~~Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

~~The above applies when BS 5975 doesn't therefore, I suggest (subject to JICA and NK agreement) that this can be deleted.~~

~~However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO. I believe that it is a correct requirement which in practice should not be more than a counter signature.~~

1.37.9 ~~In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.~~

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

~~I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.~~

~~The following clause can be deleted~~

~~1.37.10 For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].~~

1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

1.37.12 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. ~~and shall obtain the consent of the Engineer.~~

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

~~Yes I agree and have reworded this as above.~~

Q-1 Is consent by the Engineer given to specialist staff?

~~This part can be deleted.~~

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

~~I have reworded all, please refer to the above.~~

1.38 User Training (Deleted) ~~User Training~~(Jc71)

JC71: ~~We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.~~

NK5/6: Will delete as commented.

コメントの追加 [岡本66]: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Note for NK: This is safety during construction, it refers to the provision of effective safety training for equipment and systems provided during under ODA construction contracts.

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

I recommend that it be included here as a default requirement

~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(1) Safe system and Plant use, operation and process control.~~
- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(3) Training in use of all hardware and software packages.~~
- ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(5) Recording and reporting.~~
- ~~(6) Emergency operation procedure.~~
- ~~(7) Maintenance management procedures.~~
- ~~(8) Inventory and store control systems.~~
- ~~(9) Particular safety procedures, including:
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~~~

~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.6. Other requirements for User Training~~

- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
- ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~

- ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(4) The Engineer may choose to send representatives to witness the training.~~
- ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~
- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.~~
- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not~~

~~sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.38 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I gain work on the User Guide.

- 1.39.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) **“Operation Leader”** (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [*Particular Safety Specification*] ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 6.

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

Please refer to my earlier notes repeated above from the previous issue of the draft.

Following my further review and study, I feel that this is an important issue which if not addressed, may create unnecessary future risk for JICA

Please refer to my notes on this subject under Clause 1.3.2 and consider changing the title of the “User Guide” perhaps to “*Guide for the Use of Executing Agencies*”

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols. classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.
- For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].
- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.

- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.
- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2**, where:
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK, 再考いたします。(現時点ではJSSSでは規定していません。)

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
- For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.

- (17) **“Personal Fall Arrest System”** or **“PFAS”** means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) **“Personal Fall Restraint System”** or **“PFRS”** (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.
- (19) **“Personal Protective Equipment”** or **“PPE”** means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) **“Safety Belt”** means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) **“Safety Harness”** means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) **“Scaffold”** or **“Scaffolding”** means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) **“Skill Training”** means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) **“Spotter”** means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
- Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) **“Trade Effluent”** means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) **“Unexploded Ordnance”** or **“UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) ~~**“User Training”** means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.~~
- (28) **“Working Platform”** means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED Automatic External Defibrillator

BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training
PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will reworded something like the following, which I will do when go back to work on the User Guide further.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor’s Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder’s intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) “Safety Plan” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

See (2) below:

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder’s Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic company policies on risk assessment and health and safety management,

(compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

Transferred to below

コメントの追加 [伊藤67]: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11)
“Safety Plan” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams.

Transferred from above

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System (JC73)

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

~~Confirm~~ Describe how which scheme the Bidder *institutes the Safety Management System* is accredited under.

JC73: Modified in accordance with modification to JSSS1.5

NK5/6: Will modify as commented.

No comment

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

NK: I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

NK: May the title be Works?

I have edited as above

コメントの追加 [岡本68]:
Modified in accordance with modification to JSSS1.5

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention*]

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

~~(27) User Training~~

~~Refer to JSSS 1.38 [*User Training*]~~

~~An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.~~

~~(28)~~(27) Legal Requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

1

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture ("JV")] (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that after full investigation and research of domestic resources, he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export (JC74) in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

K74: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

NK5/6: To MD, we would like to ask you to modify as commented.

Please see above

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works, ~~(not more than five (5) years old, not more than five (5) years old,~~ all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirement.

I note that 5 years has been deleted. Please refer to my further notes under 1.35

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;

4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the *Project* Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2. A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Deflation.

1.2 General Reference Notes

1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2. The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an equivalent diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.
- (6) Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer’s Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Works are being executed.

NK: There are many descriptions of “other the Site aces (if any) where the Works are being executed” in JSSS. GC defines as 1.1.6.7 “Site” means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specificatio?

(7) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1. JSSS shall form a part of the Project Safety Specification which in turn forms a part of the Specification as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents].

1.3.2. The priorities of the document comprising the Specification are as follows:

- (1) Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS,
- (2) The “Project Safety Specification” shall have priority over other parts of the Technical Specification in respect of health and safety matters.

NK: Q1: We think it needs to explain/define “Technical Specification” as same as User Guide 1.3.2 (3) The “Technical Specification” shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

Q2: Is “other parts of” necessary?

1.3.3. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

1.4 Compliance with JSSS and Other Regulations

1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2. JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3. The Contractor shall comply fully with the requirements of JSSS as supplemented and modified by the Particular Safety Specification.

1.4.4. Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer’s Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.

1.4.5. Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

1.4.6. If there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer’s consent.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

1.4.7. Specified Standards and Regulations:

- (1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.
- (2) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.

1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion, during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.

NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)

1.4.11. The Contractor shall fully inform his personnel, his Subcontractor’s, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor’s Safety Management System

1.5.1. The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018.

1.5.2. The Contractor shall state the applicable standard in the Contractor’s Safety Plan.

1.5.3. The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval

or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

1.6.2. For the purposes of interpretation for JSSS, the final paragraph of **GC 1.8** [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

1.7 Contractor's Safety Plans

1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Works are being executed.

1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated Overall Safety Plan)
- (3) Particular Safety Plans (Updated) separate plans if necessary for particular parts of the Works

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level throughout the **Time for Completion of the Works**.

1.7.5. Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the **Time for Completion of the Works**.

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

1.7.6. Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [Content of Bid Stage Safety Plan].

- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7. Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days of the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

1.7.8. Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.
- (2) Whenever required by the Engineer, the Contractor shall submit Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

- (3) Requirements for submission by the Contractor and response (if any) by the Engineer to Particular Safety Plans, shall be as follows:
 - (a) The Engineer may review the Particular Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
 - (b) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
 - (c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

- 1.7.9. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.
- 1.7.10. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.
- 1.7.11. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

- 1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed of all hazards and risks on the Site.
- 1.8.3. The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE or improved PPE.

NK: May we know what "improved PPE" mean?

1.9 Contractor's Method Statements

- 1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2. Method Statements shall include details of all Permanent Works and Temporary Works with supporting documents such as:
- (1) Design studies and reports.

NK: We suggest to change to "Studies, investigations, and designs"?

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including labour and Contractor's Equipment.

NK: We consider "worker" will be used because it are used in other Chapter though FIDIC uses "labour".

- (6) Inspection and monitoring plan.

- 1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.
- 1.9.4. Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer **for his information.**

NK: We consider "for his information" can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

1.10 Engineer's Safety Representative

- 1.10.1. Unless otherwise specified in the Particular Safety Specification, the Engineer's delegated representative at the Site shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.
- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.

- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [Suspension of Work] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [Suspension of Work] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur.
- 1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [Health and Safety], shall be construed as "Health and Safety Officer at the Site".

NK: HSO is defined in A1.1.1(3), so is 1.12.1 deleted?

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an alternative and equivalent internationally recognised qualification covering health and safety and risk management, minimum ten (10) years' work experience in construction of which minimum four (4) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country), and whom the Contractor considers is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.

We propose to add (7) “unless otherwise specified in Particular Safety Specification” before “the HSO...”

NK: We think “two (2) years experience outside the Country” is also too high requirement for the local contractors and also Japanese.

We propose to delete “this two years outside the Country” and specify requirement in Particular Safety Specification depending on the Works.

1.12.3. Supporting Staff

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO’s duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

MM: HSO should always be ultimately responsible as the leader really of the Contractor’s safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

- (4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...” は、“The Contractor shall ...”へ変更する。*

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor’s Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.*
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor’s Personnel.*

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.*
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections*

performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.

- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel, shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.
- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas of the Site are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
 - (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authorities

NK: JICA added "and Authorities2 in the last comment.

1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
 - (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe

- behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
- (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

(i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO – Scope of Duties*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within fourteen (14) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with

the proposal subject to complying with his other obligations under the Contract, by giving seven (7) days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

- (1) Overall Safety Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); *(by construction managers, Operation Leaders, HSO)*
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and *(by construction managers, HSO)*
 - (c) Monitoring the implementation of the Safety Plan. *(by HSO)*
- (2) Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; *(by construction managers, HSO)*
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; *(by construction managers, Operation Leaders)*
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: *(by construction managers, Operation Leaders)*
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training; *(by construction managers, HSO)*
- (e) Instruction and management of all safety measures; and *(by construction managers, Operation Leaders, HSO)*
- (f) **Joint Site Safety Inspections.** *(by construction managers, Operation Leaders, HSO)*

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

1.16 Joint Site Safety Inspections

- 1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured and that such compliance is monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
 - 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
 - (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
 - 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
 - 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer. Unless otherwise consented to by the Engineer, the audit shall be headed by a senior member of the Contractor's head office health and safety team.
 - 1.17.6. If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

- 1.17.7. The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.
- 1.17.8. The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.
- 1.17.9. The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems; they shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

- 1.17.10. The audits shall be conducted ~~on a random basis~~ at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11. The Engineer may at his option 6a random health and safety audit by giving 72 hours' written notice to the Contractor.~~

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

~~1.17.12. Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.~~

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

- 1.17.13. An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.
- 1.17.14. The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

- 1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.
- 1.18.2. In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability; ~~all~~ shall be equipped with correct ~~t~~-PPE, tools, equipment and safety equipment.
- 1.18.3. Labourers and unskilled workers shall never be assigned to any work on Site on their own; ~~all~~ shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.
- 1.18.4. The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.18.5. The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement.

- 1.18.6. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.18.7. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.18.8. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.9. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.10. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that ~~he~~ the HSO resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

1.19 Safety Training Generally

- 1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
- 1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.
- 1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

1.20 Safety Induction Training

- 1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom ~~he~~ the HSO is responsible, including the

Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed at the request of the Employer or Engineer.

1.20.2. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.
- (5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. (Refer to separate requirements for **special training**).

NK: May we know where we can find to refer to special training?

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [*Contractor's Personnel*] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced

in their respective trades or occupations. The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.

- 1.21.2. The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects.

Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:.

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer **for his consent.**

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details of such training shall be submitted with the Bid Stage Safety Plan.

NK: This request is specified in Annex 1.2 (24) as Outline shall be submitted in Bid Stage SP.

- 1.21.3. Subject to receiving the consent of the Engineer, the Contractor may demobilise the imported resources on the understanding that he is satisfied **that candidates** that have been successfully **qualified** and that they are able to act fully in accordance with the requirements of the Contract.

NK: This sentence may be necessary to be reviewed.

- 1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice **in** based upon capability **in** accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.

- 1.21.5. Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full

compliance with GC 6.9 [*Contractor's Personnel*]. The Contactor shall report the names of any such Contractor's Personnel to the Engineer **for his consent**.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

1.21.6. Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [*Permit System*] that is to be worn conspicuously and be available for validation by the Engineer.

1.22.4. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.5. The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site, who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue.

1.22.6. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction ~~belts~~/harnesses/ropes measures.

NK: Harness is basically used now and belts is not, so deletion of belt is made.

1.22.7. The requirement for rescue teams and rescue equipment shall **be as** specified in the Particular Safety Specification.

1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.

1.22.9. The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.

1.22.10. Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

1.22.11. For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

1.22.12. Hazardous Substances.

- (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialist Subcontractor(s) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

- (2) The Contractor shall obtain the Engineer's consent for such specialist Subcontractors and their detailed Safety Plans and Method Statements shall also be submitted to the Engineer in accordance with JSSS 1.7 [*Contractor's Safety Plans*] and JSSS 1.9 [*Contractor's Method Statements*].

1.23 Permit to Work System

1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2. The system shall be designed to control safety for all types of high-risk work likely to be encountered, including for example:

- (1) Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.
- (2) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.
- (3) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.
- (4) Diving Works.

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

1.23.3. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.4. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.5. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.

NK-1: JICA commented to modify and add "so specified in the Specification" to 1.20.2 in Issue 6.

NK consider that "as specified in Particular Safety Specification" between "the Works," and "the Contractor if we follow JICA's comment.

NK-2: JICA commented that they want to use "as specified in Particular Safety Specification" more than "unless otherwise specified in Particular Safety Specification" because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSS)

Can you specify as JICA's request to use "as specified in PSS?"

NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.

1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3. **Unless otherwise specified in the Particular Safety Specification**, medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.

NK: JICA want to clarify where "other places (if any) are."

1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5. Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include:

- (1) Medical staff to be assigned at the Site.
- (2) Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
- (3) Emergency **medivac** services where necessary.

NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.

- (4) Medical Facilities on the Site together with description of equipment and consumables. **in**
- (5) Temporary water and power supply to maintain use during mains supply failure.
- (6) Type of communication facilities and measures for emergency response.
- (7) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (8) First aid training, appointment of first aiders and dissemination of information.

1.24.6. Where the Works include the following for example, the Contractor shall train selected Contractor's Personnel to perform rescue operations in a safe manner in the event of any accident:

- (1) Work on or near existing electrical equipment, cables, wiring, services and systems.
- (2) Dangerous Work **such as Confine Spaces, work at height.**

NK: We consider describing example as above.

- (3) Diving Work.
- (4) Similar special circumstances.

1.24.7. All rescue team members in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [*Personal Protective Equipment (PPE) and First Aid Equipment*].

1.24.8. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by **OSHA** and as referred to in JSSS 2.9 [*Personal Protective Equipment (PPE) and First aid Equipment*].

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, **the HSO the Contractor** shall immediately discontinue the concerned work, **inform the Engineer** and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6.

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.

- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ **the Contractor's** recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].

1.25.3. For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.26 Emergency Response Plan

1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and as far as reasonably possible, shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have reasonably avoided or overcome or lessened the effects.

NK-1: Can we delete one of two "reasonably possible" above?

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

1.26.2. The Contractor shall keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3. Where, due to the location of the Site, there is a risk of **flooding**, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.
- (2) Provision of temporary support to all sides and soffits of excavations or **portal of tunnelling** of sufficient strength, durability and suitability.

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] and JSSS 1.9 [*Contractor's Method Statements*].

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and other places (if any) where the Works are being executed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11. For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **occurred in the previous month and measures to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration requirements under the Laws of the Country;
- (i) Safety and health awards, media attention and the like; and
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1. On larger Projects with multiple contract packages and contractors and if so stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3. The Chairman of the Safety Committee shall be the Employer.

1.29.4. The Employer shall hold regular Project Safety Committee meetings, on a monthly basis unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are not monthly basis but optional.

We propose "periodically as requested by the Employer" and ask you to reply to this comment as reply is not mentioned in the document with notes.

1.29.5. The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace "shall" with "may" in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

1.30.1. Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities,

... who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;

- (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
- (c) Accidents, injuries **in the previous period** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4. Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the Engineer's monthly progress report.

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, casualties, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of **candidates** given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.

(16) HSO instructions issued for work stoppage.

(17) Others.

1.31.3. All data shall be in a format and content given consent by the Engineer.

1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.32 Safety Reports

1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

(1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken **for** improvement.

NK Is it necessary to add "for"?

(2) Contractor/HSO and Joint Site Safety Inspections.

(3) Weekly Safety Report: summary of safety matters of the week.

(4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.33 Health and Safety Records

1.33.1. The Contractor shall keep health and safety records for the following:

(1) Accidents, fatalities, near-misses.

(2) Inspection records and checklists.

(3) Meetings for safety and health management.

(4) Monitoring of safety and health management activities.

(5) Health and safety education and training for the Contractor's Personnel.

(6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.

(7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.34 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce **legitimate** work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

- 1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [*Safety Reports*].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

- 1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by **the HSO (or his delegated and technically qualified assistant)** at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed **by the HSO**, thereby certifying the items as being **safe for use**.

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as **not being safe for use**, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and **other safety equipment** and **Temporary Works** of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.
- (2) New or recent Contractor's Equipment and **Temporary Works** (not more than **five (5) years old**, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Can we delete "and Temporary Works" in (2)?

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies owns old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

We propose to delete the 2nd sentence above.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or

maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

1.36 Health Matters

- 1.36.1. The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.
- 1.36.2. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.
- 1.36.3. Occupational health care shall be provided by the Contractor and shall include for example:
- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
 - (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
 - (3) Frequent or excessive manual handling of loads, stress and fatigue.
 - (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability.
- 1.36.4. The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:
- (1) Health care staff to be assigned at the Site.
 - (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
 - (3) Healthcare services to be provided including lectures and education on health matters.
 - (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
 - (5) Occupational **H**healthcare proposal.
 - (6) Temporary water and power supply to maintain use during mains supply failure.
 - (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

- 1.36.5. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed.

1.36.6. Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, **Bidders the Contractor** are required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including **Class A Falsework**.

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is specifically excluded from BS EN 12812:2004.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

"Necessary qualification" can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer's consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.3.6.

1.37.7. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [*Contractor's Method Statements*]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:

- (1) Appointment of appropriately qualified and experienced staff.
- (2) Preparation of adequate Temporary Works designs.
- (3) Independent internal or external checking of the Temporary Works Design.
- (4) Preparation of a Temporary Works register and records
- (5) Pre-erection inspection of all Temporary Works, including materials, components and equipment.
- (6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - (a) Check that the Temporary Works have been erected in accordance with the design and issue by the **HSO-Contractor** of a suitable sign showing it **as complete and safe to use;** and
 - (b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the **HSO-Contractor of a suitable sign showing that it is ready for dismantling**

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

1.37.9. The **Safety Plan Method statement** shall include measures to ensure that the design, erection, maintenance, dismantling and removal are all carried out by competent and experienced individuals and in a controlled and closely supervised manner.

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

- 1.37.10. For further information on **Method Statements** refer to JSSS 1.9 [*Contractor's Method Statements*].
- 1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [*Inspection and Monitoring of Temporary Works*].
- 1.37.12. Whether there is or is not any legal requirement under the Laws of the Country for academic, educational or vocational qualification, all of the Contractor's Temporary Works specialist staff **and the specialist staff of Temporary Works Subcontractors** shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate, work experience in construction and in Temporary Works design or supervision as appropriate and whom the Contractor ascertains are qualified to perform the duties and **have been given consent by the Engineer**.

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

Q-1 Is consent by the Engineer given to specialist staff?

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

1.38 User Training

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

- 1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.
- 1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.
- 1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:
- (1) Safe system and Plant use, operation and process control.
 - (2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements
 - (3) Training in use of all hardware and software packages.
 - (4) Laboratory control (sampling and analysis) including operation of laboratory equipment.
 - (5) Recording and reporting.
 - (6) Emergency operation procedure.
 - (7) Maintenance management procedures.
 - (8) Inventory and store control systems.
 - (9) Particular safety procedures, including:
 - (a) Safe working procedure;
 - (b) Housekeeping of the facilities;

- (c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and
 - (d) Safety measures for the Works and all items of Plant.
- 1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.
- 1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.
- 1.38.6. Other requirements for User Training
- (1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.
 - (2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.
 - (3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.
 - (4) The Engineer may choose to send representatives to witness the training.
 - (5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.
 - (6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.
 - (7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.
 - (8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.
 - (9) The Contractor shall use visual media as much as possible throughout the training process.
 - (10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.
 - (11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.
 - (12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.
 - (13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.
 - (14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.

- (15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.
- (16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.
- (17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week-days.
- (18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.
- (19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance

certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) “**Particular Safety Specification**” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (9) “**Project Safety Specification**” means the document that contains Part 1 [*JSSS*] and Part 2 [*Particular Safety Specification*] as illustrated in Annex 1.4 [*Figures and Illustrations*].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.
- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.

- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2, where:**
 - (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.

For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.
- (19) “**Personal Protective Equipment**” or “**PPE**” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) “**Safety Harness**” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.

- (22) “**Scaffold**” or “**Scaffolding**” means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) “**Spotter**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
- Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) “**Trade Effluent**” means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) “**Unexploded Ordnance**” or “**UXO**” shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) “**User Training**” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.
- (28) “**Working Platform**” means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training
PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.

ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

A1.2.2. The Bid Stage Safety Plan shall be an outline plan which must, cover each of the items listed below with sufficient detail to demonstrate that the Bidder understands the requirements and with sufficient information to indicate the Bidder’s intentions, so that this can be understood and properly evaluated:

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder’s Personnel

A description of the health and safety management organisation at Site headed by the Bidder’s Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor’s Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder’s Safety Management System

Refer to JSSS 1.5 [*Contractor’s Safety Management System*]

Confirm which scheme the Bidder is accredited under.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the **outline of** safety measures to be applied to ensure compliance with the requirements.

NK: JICA added " outline" in the last comment.

Include a description of the scope of work for the principal specialist persons to be employed in the management and design of Temporary Works and the arrangements for controlling risks arising from the design, erection, maintenance, dismantling and removal of Temporary Works.

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

(7) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(8) Safety Plan for the Permanent Works

NK: May the title be Works?

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(9) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(10) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(11) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(12) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(13) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and

Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(14) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(15) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(16) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(17) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(18) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(19) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

(20) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(21) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention – Additional Requirements*].

(22) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(23) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(24) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(25) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

(26) User Training

Refer to JSSS 1.38 [*User Training*]

An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.

(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment **and Temporary Works** of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment **and Temporary Works** (not more than **five (5) years old**, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site and other places (if any) where the Works are being executed, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.

8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor,) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date

Copy of Mail from Mr. Ito, JICA on 2020/4/23

Dear Sakoda-san,

Very sorry for this late reply with respect to Chapter 1 and User guide.

Regarding Chapter 1, we have sometimes modified directly the text, and sometimes put comments.

After several times of exchange between us, please be informed of the followings:

- 1) As for the modifications of text with a comment highlighted in light blue, you don't have to examine the contents any more. You are requested only to check the quality of language.
- 2) As for the modifications of text without any comment, same. You are requested only to check the quality of language.
- 3) The modifications of text with a comment highlighted in green are sometimes questions and sometimes requests for advice. So, would you please come up with an appropriate solution?

As for the User Guide, our comments are still preliminary since the draft was still preliminary one.

We have, nevertheless, worked in the same manner as mentioned above as long as practicable.

Thank you for your consideration,

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

1) Japanese Acts, Orders and Ordinances including:

- Industrial Safety and Health Act*
- Order for Enforcement of Industrial Safety and Health Act*
- Ordinance on Industrial Safety and Health*
- Safety Ordinance for Cranes*
- Ordinance on Safety and Health of Work under High Pressure*
- Ordinance on Prevention of Anoxia, etc.*
- Ordinance on Prevention of Hazards Due to Dust*
- Explosives Control Act*
- Order for Enforcement of Explosives Control Act*
- Ordinance on Explosives Control*

2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.

3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.

4) The International Red Cross and Red Crescent Movement (ICRCM)

NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?

True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 10 also). ICRCM seems to be a convenient and internationally applicable basis.

5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Suggestion for JICA:

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2. A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance 1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Declaration.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does not require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this

I have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise

NK: NK inquired JICA whether it is not problem to include the form of Safety Declaration in the User Guide because the SBD does not allow addition.

NK5/6YH: JICA did not response to the above inquiry. We will proceed as MD proposed.

1.2 General Reference Notes

1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2. The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.

(6) Unless otherwise stated in JSSS or the context is otherwise clear, (JC1) any reference in JSSS requiring the provision by the Contractor of health and safety measures for

Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.(JC2)

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.(NK のコメントにより、すでに削除済ですが、Q&A は残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now it constantly refers to the Site only. This will also be considered for mention in the User Guide

JC1: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works"

NK5/6YH: NK would like to select the 1 above for JSSS:

JC2: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS L7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works"

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract

Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

~~1.3.1. JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The “Project Safety Specification” shall have priority over the other parts of Specification in respect of health and safety matters. Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows: (JC3)~~

~~1.3.2. JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:~~

~~1.3.3. The Project Safety Specification (including JSSS), and~~

~~1.3.4. The Technical Specification~~

~~1.3.5. The priorities of the document comprising the Specification are as follows:~~

~~1.3.6. Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS,~~

~~1.3.7. 1.3.1. The “Project Safety Specification” shall have priority over the Technical Specification in respect of health and safety matters.~~

NK: Q1: We think it needs to explain/define “Technical Specification” as same as User Guide 1.3.2 (3) The “Technical Specification” shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

~~Yes I agree but the problem again is that “Specification” is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.~~

~~I have added the explanation as above but please note that this is a compromise.~~

Q2: Is “other parts of” necessary?

~~Thank you and no, it isn't, see above. (Already deleted.)~~

JC3: Better to avoid using “Technical specification”

~~Fig A1.4.1 moved to User Guide.~~

NK5/6: No comment to JC because JICA want to modify as they commented.

~~1.3.8. 1.3.2. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.~~

~~I recommend that the following is necessary (JC4)~~

~~The User Guide shall not form a part of the Contract.~~

NK: : MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

1.4 Compliance with JSSS and Other Regulations

1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2. JSSS shall not limit the Contractor’s statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3. The Contractor shall comply fully with the requirements of JSSS ~~Projectas supplemented and modified by the Particular~~ Safety Specification.

1.4.4. ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.(JC5)~~

JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

1.4.5. ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply. (JC6)~~

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.

NK5/6: Will delete as commented.

1.4.6. ~~If, for the particular part of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plansinternationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.~~

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

1.4.7. Specified Standards and Regulations(JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

(1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date. (JC8)

JC8: Better to add this in the main text of JSSS as mentioned in A.1.1.5 ?

NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.

(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

(2)(3) Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request. (JC9)

IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of “waiver” should be provided.

NK5/6: Will modify as commented.

(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)

IC10: We don't really understand the meaning of this

NK5/6: YH considers this cannot be understood. To MD, please review this sentence..

1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion *and Defect Notification Period.* ~~during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.~~ (JC11)

NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer’s property except as stated in this clause.

NK: we agree to leave this as specified.

IC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

NK5/6: Will modify as commented.

1.4.11. The Contractor shall fully inform his personnel, his Subcontractor’s, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor’s Safety Management System

1.5.1. The Contractor shall institute a health and safety management system in accordance with ~~OHSAS 18001 or~~ ISO 45001:2018. (JC11a) The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.

1.5.2. ~~The Contractor shall state the applicable standard in the Contractor's Safety Plan.~~ (JC12)

JC12: If delete OHSAS above, delete accordingly.

NK5/6: To MD, please review this.

1.5.3. ~~The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.~~ Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)

JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

NK5/6: Will modify as commented.

1.5.4. The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct? この考え方で正しいでしょうか？

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

JC13a: coordinator?

NK5/6: We think so.

1.6.2. ~~For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [*Care and Supply of Documents*] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.~~ (JC14)

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).

Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.

We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

NK5/6: Will modify as commented.

1.7 Contractor's Safety Plans

1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site. (JC15)

JC15: See 1.2.2 (6).

NK5/6: No comment.

1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated ~~Overall~~ Bid Stage Safety Plan)
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level. ~~throughout the Time for Completion of the Works.~~

1.7.5. Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility. ~~and at any time throughout the Time for Completion of the Works.~~

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes thank you, that is true, but better to delete the phrase rather than add.

1.7.6. Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7. Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

Fair comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it there.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8. Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9. Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works. (JC16)

JC16: Should it be "of the Works or any part thereof"?

NK5/6: We agreed the above modification.

- (2) The Contractor shall submit:
 - (a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [*Commencement Stage Safety Plan*].

- (b) The Particular Safety Plans by the date 14 days before each particular parts of the Works starts to be executed, if no sufficient details are prescribed in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed this

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree; many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:

- (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
- (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
- (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

1.7.10. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.

1.7.11. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

1.7.12. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.

1.8.3. The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.

- (3) Determining measures of risk reduction or elimination.

1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous methods of construction.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Engineering measures.
- (4) Management measures including improving skills with additional training.
- (5) Use of PPE.

NK: May we know what “improved PPE” mean?

Deleted

1.9 Contractor’s Method Statements

1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.

1.9.2. Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and (JC17) include details of all Permanent Works and Temporary Works with supporting documents such as:

JC17: Better to have a linkage with the risk assessment.

NK5/6: Will modify as commented.

- (1) Studies, investigations and designs.

NK: We suggest to change to “Studies, investigations, and designs”?

Changed

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including superintendents, workers, operation leaders and Contractor’s Equipment.

NK: We consider “worker” will be used because it is used in other Chapter though FIDIC uses “labour”.

Ok I have changed anyway but it now needs wider wording, labour is also used in FIDIC

- (6) Inspection and monitoring plan.

1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.

1.9.4. Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer’s request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with

- the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
 - (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
 - (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
 - (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider “for his information” can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

Changed.

1.10 Engineer’s Safety Representative

- 1.10.1. ~~Unless otherwise specified in the Particular Safety Specification, the~~ The Engineer may delegate his power and authority to any of his assistant’s delegated representative at the Site who (JC18) shall act as the Engineer’s health and safety representative for the purpose of complying with any health and safety obligations under JSSS.

JC18: Particular Safety Specification is not necessary with this modification.

NK5/6: Will modify as commented.

- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term “Engineer” is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor’s responsibility under GC 4.1 [*Contractor’s General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor’s performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer’s consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and

corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur. (JC19)

JC19: The sentence is not complete???

NK5/6: To Md, please review the sentence.

1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [Health and Safety], shall be construed as "Health and Safety Officer at the Site".

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No: This is necessary to correspond to the definition

Please note that this is a compromise, PC change would have been preferable

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

Where there is no legal requirement under the Laws of the Country **or unless otherwise specified in the Particular Safety Specification**, the HSO shall have appropriate academic, educational or vocational qualification such as that **International Diploma** issued by the National Examination Board in Occupational Safety and Health (NEBOSH) **in UK Level 6 Diploma level** or **Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA** or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

IC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience	
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or	University or technical college science course other courses	in S&H 2 years 4 years
					Senior high school science course other courses	in S&H 4 years 6 years
					Others	in S&H 7 years
2. Industrial safety consultants.						
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES I.Occupational S and H Program. U.S. Army Corps of Engineers, EM-385	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager shall be the CSP.	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience	
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.	
4	Singapore	Regulations	1)Representative of the Contractor 2)Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)		
5	India	Regulation	1)Safety Officer 2)Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course		
6	Thailand	Regulation	1)Head Man Level 2)Technique Level 3)High Technique Level 4)Professional Level 5)Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training		
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training		
8	Vietnam	Regulation	Not found yet.			

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular

Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.

We propose to add (7) “unless otherwise specified in Particular Safety Specification” before “the HSO...”

I have split this clause for clarity

I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7)

It is also subject to receiving the consent of the Engineer.

NK: We think “two (2) years experience outside the Country” is also too high requirement for the local contractors and also Japanese.

We propose to delete “this two years outside the Country” and specify requirement in Particular Safety Specification depending on the Works.

I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

1.12.3. Supporting Staff

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO's duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein

MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...”は、“The Contractor shall ...”へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his

behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel, (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.

JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO...."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence. (次のように分解できるのだと思います。それほど違和感はありませんが。)

- 1) the requirements for any inspection
- 2) the details of any inspection

To MD, we would like to review the sentence because of sentence seems too long.

- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:

- (a) That all working areas ~~of the Site (JC22)~~ are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;

JC22: The working areas are not always a part of the Site

NK5/6: No comment to JC because JICA want to modify as they commented.

- (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
- (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above

1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
- (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

I disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [HSO - Scope of Duties and Authority] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within ~~seven fourteen~~ (14) (JC23) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving ~~seven-three~~ (7) (JC24) days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

JC23& 24: 14 days are too long, and 7 days are too long.

NK5/6: Will modify as commented.

- (5) The Contractor resumes the Works or part of the Works on the due date.

- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him. I do not recommend but we try to do it.

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended

(1) **Daily** Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- (e) Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections-~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended.

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

No problem deleted already

1.16 Joint Site Safety Inspections

- 1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

This is not quite correct but I have divided anyway

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
 - 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
 - (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
 - 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
 - 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.

~~1.17.5.1.17.6.~~ ~~Unless otherwise consented to by the Engineer,~~ The audit shall be headed by a senior member of the Contractor's head office health and safety team.

~~1.17.6.1.17.7.~~ If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

~~1.17.7.1.17.8.~~ The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.

~~1.17.8.1.17.9.~~ The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

~~1.17.9.1.17.10.~~ The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

This is not quite correct but I have divided anyway

~~1.17.10.1.17.11.~~ The audits shall be conducted on a random basis at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11.1.17.12.~~ The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor. (JC25)

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

I do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly.

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows;(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

JC25: It is not practical that the auditing team of the headquarters visit the Site within 3 to 7 days after the Engineer's instruction.

NK: 1.17.11(1.17.12) will be deleted.

~~1.17.12.1.17.13.~~ Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

No comment. to be deleted

~~1.17.13.1.17.14.~~ An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

~~1.17.14.1.17.15.~~ The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

- 1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.
- 1.18.2. In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.

Change not correct

- 1.18.3. ~~Labourer~~Workers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.
- 1.18.4. The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.18.5. ~~The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement. (JC26)~~

JC26: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

NK5/6: Will delete as commented.

- 1.18.6. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.18.7. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.18.8. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.9. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.10. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly

displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

It is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2.(a). I have used "He" and "his" for example consistently and if it changes here it will require further change

1.19 Safety Training Generally

1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

~~1.19.3.~~1.19.4. Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate). (JC27)

JC27: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

NK5/6: Will modify as commented.

1.20 Safety Induction Training

1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom **he-the HSO** is responsible, including the Employer's Personnel and all other persons who are entitled to be on **the Site at** the request of the Employer or Engineer.

Ditto above

1.20.2. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.

(5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).

NK: May we know where we can find to refer to special training?

Rephrased

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. Training Personnel (JC28)

JC28: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

NK5/6: NK agreed to the above.

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. *The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.* (JC29)

JC29: Not needed to say so in the specification.

NK: Will delete as commented.

1.21.2. The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available in the Country or not available

~~in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects., the Contractor shall:~~

~~(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or~~

~~(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.~~

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, (JC30)all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.~~

JC30: May be the case in many projects, but skilled staff may be sometimes locally mobilized.

NK5/6: Will modify as commented.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion and Defect Notification Period.(JC31)

JC31: The Contractor also has to work during DNP and need skilled staff.

NK5/6: Will modify as commented.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:. (JC32)

JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

NK5/6: To MD, please review the comment and modify the sentences.

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.

"For information" really has no meaning.

If only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

Details Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

~~1.21.2. Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

~~1.21.3. When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

~~1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.~~

~~1.21.5.~~ 1.21.3. Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

~~1.21.6.~~ 1.21.4. Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)

1.22.4. The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist (JC33) trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

JC33: specially ?

NK5/6: To MD, Please check it.

1.22.5. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6. The Contractor shall ~~select~~, train and equip ~~a specialist rescue team or~~ teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7. ~~who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue.~~ (JC34).

JC34: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

NK5/6: Will modify as commented.

~~1.22.7. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.~~ (JC35)

NK: Harness is basically used now and belts is not, so deletion of belt is made.

Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2.

The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.

JC35: Move to 1.24

NK5/6: Will modify as commented.

~~1.22.8.1.22.7. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.~~

~~1.22.9.1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.~~ (JC36).

JC36: ditto

NK5/6: Will modify as commented.

~~1.22.10.1.22.9.~~ The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.

~~1.22.11.1.22.10.~~ Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

~~1.22.12.1.22.11.~~ For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

~~1.22.13.1.22.12.~~ Hazardous Substances.

(1) If the Contractor during the execution of the Works, encounters and is required by the

Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists ~~Subcontractor(s)~~ (JC37) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

JC37: not necessarily Subcontractors

NK5/6: Will modify as commented.

- (2) The Contractor shall ~~obtain the Engineer's consent for such specialist Subcontractors and their submit~~ detailed Safety Plans and Method Statements with respect to the removal and disposal of the Hazardous Substances shall also be submitted (JC38) to the Engineer in accordance with JSSS 1.7 [Contractor's Safety Plans] and JSSS 1.9 [Contractor's Method Statements].

JC38: modified accordingly

NK5/6: Will modify as commented.

1.23 Permit to Work System

1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2. The system shall be designed to control safety for Dangerous Work ~~all types of high risk work likely to be encountered, including for example:~~ (JC39)

JC39: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

NK5/6: Will modify as commented.

~~1.23.3. Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.~~

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex I.1. If you insist, change to "for example" as in the following subclause.~~

- ~~(1) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~
- ~~(2) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~
- ~~(3) Diving Works.~~

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

~~I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.~~

1.23.4. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.5. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.6. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. ~~Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or~~

~~are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.~~ (JC40)

JC40: Moved to 1.24.5.

NK5/6: Will modify as commented.

NK-1: JICA commented to modify and add “so specified in the Specification” to 1.20.2 in Issue 6.

NK consider that “as specified in Particular Safety Specification” between “the Works,” and “the Contractor” if we follow JICA’s comment.

NK-2: JICA commented that they want to use “as specified in Particular Safety Specification” more than “unless otherwise specified in Particular Safety Specification” because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA’s request to use “as specified in PSSS?”

- 1) I do not recommend any use or reliance on “as specified in PSSS”. If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.
- 2) “Unless otherwise specified” followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a “failsafe” in JSSS production.
- 3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.
- 4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.
- 5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who “other persons who are entitled to be on the Site” are, and where “other places (if any) are.

“other persons who are entitled to be on the Site” is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor’s Personnel and Employer’s Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor’s, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor’s compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.

“and any other places as may be specified in the Contract as forming part of the Site” comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3. ~~Unless otherwise specified in the Particular Safety Specification, m~~(JC41) Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, ~~to or for the use of any accompanying family members of~~ the Contractor’s Personnel, the Employer’s Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.

NK: JICA want to clarify where “other places (if any) are.

~~Deleted see above~~

JC41: Free of charge for everyone” need not to be as default. I don’t believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

JC42: See comment to 1.2.2 (6).

NK5/6: Will modify as commented.

NK5/6: YH inquired if the sentence of “the family members of all other persons” is necessary to be deleted.

1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5. ~~Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include~~The Contractor shall provide the following medical and first aid facilities:

~~(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~

~~(2) First aid training, appointment of first aiders and dissemination of information.~~

~~(3) Type of communication facilities and measures for emergency response.~~

~~(4) Medical staff to be assigned at the Site.~~

~~(4) Medical Facilities on the Site together with description of equipment and consumables.~~ in

~~(5) Temporary water and power supply to maintain use during mains supply failure.~~

~~(6) Transportation facilities. Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.~~

~~(2)(7) Additional facilities specified in the Particular Safety Specification, if any.~~

~~Medical staff to be assigned at the Site.~~

~~(3) Emergency medivac services where necessary.~~(JC43)

NK: We feel that the provision of medivac services seems excessive unless health insurance can cover it.

~~I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?~~

JC43: Where the Site is located in a large distance from a sufficiently equipped hospital.

NK5/6: Will modify as commented.

~~(4)(1) Medical Facilities on the Site together with description of equipment and consumables.~~ in

~~(5)(1) Temporary water and power supply to maintain use during mains supply failure.~~

~~(6)(1) Type of communication facilities and measures for emergency response.~~

~~(7)(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~

~~1.24.6. First aid training, appointment of first aiders and dissemination of information.~~

~~1.24.7.1.24.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor’s Personnel and Employer’s Personnel and all other persons who are entitled to be on the Site.~~(JC44)

JC44: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

~~1.24.8.1.24.7. Where the Works include the following for example, (1) The Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained :- (JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.~~

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

- (1) ~~Work on or near existing electrical equipment, cables, wiring, services and systems.~~
- (2) ~~Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

~~(3)(1) Diving Work. (JC46)~~

JC46: Diving work is also Dangerous Work

NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.

~~(4) Similar special circumstances.~~

~~1.24.9.1.24.8. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)~~

JC47: Move from 1.22.

~~This should be "may" since the nature of Works may vary?~~

NK5/6: To MD, please review this comment.

~~1.24.10.1.24.9. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident (JC48)~~

JC48: Move from 1.22.

NK5/6: Will modify as commented.

~~1.24.11.1.24.10. All rescue team members Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].~~

~~1.24.12.1.24.11. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].~~

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

~~Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PPE and First Aid] (JC49)~~

JC49: Agree.

NK5/6: Will modify as agreed.

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, ~~the HSO~~ **the Contractor** shall immediately discontinue the concerned work, **inform the Engineer** and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6. (JC50)

I disagree completely and do not recommend this (or any such) change. As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.

JC50: Agree.

NK5/6: Will modify as agreed.

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].

Please see above notes on this subject. This should remain as the HSO, I disagree and do not recommend this (or any such) change

1.25.3. For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.26 Emergency Response Plan

1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and as far as reasonably possible, shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have and to reasonably avoided, or overcome or lessened the effects to a reasonable extent. (JC51)

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary

JC51: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

NK5/6: Will modify as commented.

1.26.2. The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground

surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. (JC52)

JC52: Thank you for being non-native friendly.

FIDIC 1999 and MDB version have been supported worldwide because of its “understandability”. Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer’s Personnel, Contractor’s Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3. Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer’s Personnel, Contractor’s Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

- (2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of “portal” and this change just introduces argument on interpretation, why change?

NK: We accept to leave as it is

JC54: Better to add.

NK5/6: Will modify as commented.

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [Contractor’s General Obligations] and JSSS 1.9 [Contractor’s Method Statements].

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

~~This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.~~(JC55)

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.1?

Please see 1.26.6 for my assumption of your requirements

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

- 1) The Contractor can only plan for what he can reasonably foresee or anticipate and
- 2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19.
- 3) This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.

JC55: Better to jump to 1.26.6 without this.

NK5/6: Will modify as commented.

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on **the Site**. (JC56)

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11. For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of labour union, if any ~~Contractor's Personnel~~.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **occurred in the previous month and measures to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda.

- (d) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (e) Safety instructions received from the Engineer;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and
- (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Ditto above

Is the sequence here acceptable or shall it change as above?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1. On larger Projects with multiple contract packages and contractors and **unless otherwise stated** in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3. The Chairman of the Safety Committee **shall** be the Employer.

1.29.4. The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are **not monthly basis but optional**.

We propose "**periodically as requested by the Employer**" and ask you to reply to this comment as reply is not mentioned in the document with notes.

Please clarify what you want to be deleted

NK: Deletion is "on monthly basis".

1.29.5. The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace "shall" with "may" in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state "unless otherwise specified."

With this change I think that no other change is necessary

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1. Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding “who may be employed in the execution on or near the Site of any work not included in the Contract.” to (d) though it mentioned in the first sentence.

I don't understand your comment, please advise what change you require (本 Q&A は無視願います。)

- (3) Agenda should relate to coordination among different contractors including for example:
- (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries **in the previous period** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4. Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the ~~Engineer's~~ monthly progress report. (JC57)

JC57: **Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.**

NK5/6: Will modify as commented..

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties,~~ location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.

- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage. (JC58)
- (17) Others.

JC58: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.

4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

- 1.31.3. All data shall be in a format and content given consent by the Engineer.
- 1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.
- 1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.32 Safety Reports

- 1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:
 - (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.

NK Is it necessary to add "for"?

Yes, it can be

- (2) Contractor/HSO and Joint Site Safety Inspections.(JC59)

JC59:Joint Site Safety Inspection Report ?

NK5/6: Will modify as commented.

- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.33 Health and Safety Records

- 1.33.1. The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.34 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Deleted see above

1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.

1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.

1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.

1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.

1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.

1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [*Safety Reports*].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO (or his delegated and technically qualified assistant) (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.

I do not recommend your suggested change

JC60: Agree with MD

NK5/6: Will modify as commented.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result ~~of such examination, inspection, measurement or testing~~, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

(1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

JC61: Temporary Works is covered in (2).

NK5/6: Will modify as commented.

- (2) New or recent Contractor's Equipment and Temporary Works, ~~not more than five (5) years old upon the date that it is mobilised to the Site~~, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor ~~before shipment~~ ~~before delivering the Site (JC62)~~ ~~by an independent testing, inspection and certification agency~~ to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

NK: We considers in actual basis as follows:

- Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

- Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1

Can we delete "and Temporary Works" in (2)?

I do not recommend it

- Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication

- Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

HCA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

NK5/6: Will modify as commented.

1.36 Health Matters

1.36.1. The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2. Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. *If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.* (JC63)

JC63: Same comment as 1.24

NK5/6: Will modify as commented.

~~1.36.1.~~1.36.3. ~~Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.~~ (JC64)

JC64: See 1.2.2 (6).

NK5/6: Will modify as commented.

~~1.36.2.~~1.36.4. Occupational health care shall be provided by the Contractor and shall include ~~for~~ **example:**

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Avoiding (JC65) Frequent or excessive manual handling of loads, stress and fatigue.

JC65: Better to add ???

NK5/6: Will modify as commented.

- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability. (JC66)

JC66: Is this health care service?

NK5/6: Will modify as commented.

~~1.36.3.~~1.36.5. The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational **H**healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit

NK: We will further consider it.

~~1.36.4. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

~~1.36.5.~~ **1.36.7.** Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared

Please see (4) following, the above can be omitted if required.

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the **HSO**'s recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No, I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, **the Contractor is** required to comply with the management standard with respect to design, erection, use and dismantling of

Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)

Changed already

JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

NK5/6: Will modify as commented.

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works ~~including Class A Falsework~~ (JC69).

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded. I have assume therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [*Specified Standards and Regulations*] to cover this generally.

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ito san's comment.

JC69: delete it?

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

“Necessary qualification” can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer’s consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

I understand your comment and have no objection to the deletion of 1.37.6

1.37.7. Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design; ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2. ~~The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer’s Duties and Authority] Sub-Subclause (e) and issued without prejudice to the Contractor’s overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS. (JC70).

NK: MD 氏は上記の理由で次の 1.37.8 の条項は不要であると考え削除を提案しています。ご検討をお願いいたします。

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

~~1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) — Appointment of appropriately qualified and experienced staff.~~
- ~~(2) — Preparation of adequate Temporary Works designs.~~
- ~~(3) — Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) — Preparation of a Temporary Works register and records~~

- (5) ~~Pre-erection inspection of all Temporary Works, including materials, components and equipment.~~
- (6) ~~Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:~~
- (a) ~~Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and~~
- (b) ~~Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.

However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO, I believe that it is a correct requirement which in practice should not be more than a counter signature.

1.37.9. In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.

The following clause can be deleted

~~1.37.10. For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].~~

1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. ~~and shall obtain the consent of the Engineer.~~

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

Yes I agree and have reworded this as above.

Q-1 Is consent by the Engineer given to specialist staff?

This part can be deleted.

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

I have reworded all, please refer to the above

1.38 **User Training(JC71)**

JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

NK5/6: Will delete as commented.

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

I recommend that it be included here as a default requirement.

~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(1) Safe system and Plant use, operation and process control.~~
- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(3) Training in use of all hardware and software packages.~~
- ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(5) Recording and reporting.~~
- ~~(6) Emergency operation procedure.~~
- ~~(7) Maintenance management procedures.~~
- ~~(8) Inventory and store control systems.~~
- ~~(9) Particular safety procedures, including:
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~~~

~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.6. Other requirements for User Training~~

- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
- ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~

- ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(4) The Engineer may choose to send representatives to witness the training.~~
- ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.~~
- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.~~
- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not~~

~~sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d)

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered

This is the reason behind including this in JSSS

This clause may need some slight modification when I again work on the User Guide

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) “**Particular Safety Specification**” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4~~ [*Figures and Illustrations*].
- (9) “**Project Safety Specification**” means the document that contains Part 1 [JSSS] and Part 2 [*Particular Safety Specification*] ~~as illustrated in Annex 1.4~~ [*Figures and Illustrations*].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

(12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.

(13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 0.)

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.

- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2, where:**
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK: 再考いたします。(現時点では JSSS では規定していません。)

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
- For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of

workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.

- (19) **“Personal Protective Equipment”** or **“PPE”** means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) **“Safety Belt”** means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) **“Safety Harness”** means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) **“Scaffold”** or **“Scaffolding”** means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) **“Skill Training”** means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) **“Spotter”** means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
- Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) **“Trade Effluent”** means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) **“Unexploded Ordnance”** or **“UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) ~~“User Training” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.~~
- (28) **“Working Platform”** means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

~~A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1—Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF 39.~~

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor’s Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder’s intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder’s Personnel

A description of the health and safety management organisation at Site headed by the Bidder’s Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor’s Personnel involved in health and safety management at the Site.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System (JC73)

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

~~Confirm-Describe how which scheme~~ the Bidder institutes the Safety Management Systemis accredited under.

JC73: Modified in accordance with modification to JSSS1.5

NK5/6: Will modify as commented.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

OK I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

NK: May the title be Works?

I have edited as above

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention*].

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

~~(27) User Training~~

~~Refer to JSSS 1.38 [*User Training*]~~

~~An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.~~

~~(28)~~(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex to the

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

loc

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, *[insert name and position of authorised signatory]*, being duly authorised by *[insert name of Bidder/members of joint venture ("JV")]* (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export (JC74) in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

IC74: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

NK5/6: To MD, we would like to ask you to modify as commented.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirements

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.

6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor,) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

Annex 1.4: Figures and Illustrations (JC75)

JC75: Delete if nothing else other than Fig A 1.4.1

NK5/6: Will delete as commented.

Copy of Mail from Mr. Ito, JICA on 2020/4/23

Dear Sakoda-san,

Very sorry for this late reply with respect to Chapter 1 and User guide.

Regarding Chapter 1, we have sometimes modified directly the text, and sometimes put comments.

After several times of exchange between us, please be informed of the followings:

- 1) As for the modifications of text with a comment highlighted in light blue, you don't have to examine the contents any more. You are requested only to check the quality of language.
- 2) As for the modifications of text without any comment, same. You are requested only to check the quality of language.
- 3) The modifications of text with a comment highlighted in green are sometimes questions and sometimes requests for advice. So, would you please come up with an appropriate solution?

As for the User Guide, our comments are still preliminary since the draft was still preliminary one.

We have, nevertheless, worked in the same manner as mentioned above as long as practicable.

Thank you for your consideration,

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

- 1) Japanese Acts, Orders and Ordinances including:
 - Industrial Safety and Health Act
 - Order for Enforcement of Industrial Safety and Health Act
 - Ordinance on Industrial Safety and Health
 - Safety Ordinance for Cranes
 - Ordinance on Safety and Health of Work under High Pressure
 - Ordinance on Prevention of Anoxia, etc.
 - Ordinance on Prevention of Hazards Due to Dust
 - Explosives Control Act
 - Order for Enforcement of Explosives Control Act
 - Ordinance on Explosives Control
- 2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.
- 4) **The International Red Cross and Red Crescent Movement (IRCRCM)**
NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?
True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 10 also). IRCRCM seems to be a convenient and internationally applicable basis.
- 5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Suggestion for JICA:

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1. Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2. A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Deflation.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.

have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: NK inquired JICA whether it is not problem to include the form of Safety Declaration in the User Guide because the SBD does not allow addition.

NK5/6YH: JICA did not response to the above inquiry. We will proceed as MD proposed.

1.2 General Reference Notes

1.2.1. For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2. The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.

(6) Unless otherwise stated in JSSS or the context is otherwise clear, (JC1) aAny reference in JSSS requiring the provision by the Contractor of health and safety measures for

コメントの追加 [伊藤1]: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or
2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works”

Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.(JC2)

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.(NKのコメントにより、すでに削除済ですが、Q&Aは残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now constantly refers to the Site only. This will also be considered for mention in the User Guide

JC1: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better.

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works."

NK5/6YH: NK would like to select the 1 above for JSSS:

JC2: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

(7) Any reference in JSSS to "relevant authority" or "relevant authorities" shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract

コメントの追加 [岡本2]: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

~~1.3.1. JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The "Project Safety Specification" shall have priority over the other parts of Specification in respect of health and safety matters. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows: (JC3)~~

~~1.3.2. JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:~~

~~1.3.3. The Project Safety Specification (including JSSS), and~~

~~1.3.4. The Technical Specification~~

1.3.5. The priorities of the document comprising the Specification are as follows:

1.3.6. Within the "Project Safety Specification" the Particular Safety Specification shall have priority over JSSS;

~~1.3.7.1.3.1. The "Project Safety Specification" shall have priority over the Technical Specification in respect of health and safety matters.~~

NK: Q1: We think it needs to explain/define "Technical Specification" as same as User Guide 1.3.2 (3) The "Technical Specification" shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

~~Yes I agree but the problem again is that "Specification" is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.~~

~~I have added the explanation as above but please note that this is a compromise.~~

Q2: Is "other parts of" necessary?

~~Thank you and no, it has been above. (Already deleted.)~~

JC3: Better to avoid using "Technical specification"

Fig A1.4.1 moved to User Guide

NK5/6: No comment to JC because JICA want to modify as they commented.

~~1.3.8.1.3.2. The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.~~

~~I recommend that the following is necessary (JC4)~~

~~The User Guide shall not form a part of the Contract.~~

NK: : MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

1.4 Compliance with JSSS and Other Regulations

1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2. JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3. The Contractor shall comply fully with the requirements of JSSS ~~Projectas supplemented and modified by the Particular~~ Safety Specification.

コメントの追加 [岡本3]:

Better to avoid using "Technical specification"

Fig A1.4.1 moved to User Guide.

コメントの追加 [伊藤4]: Not necessary

1.4.4. ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.~~(JC5)

JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

1.4.5. ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.~~(JC6)

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.

NK5/6: Will delete as commented.

1.4.6. ~~If, for the particular part of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.~~

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

1.4.7. Specified Standards and Regulations(JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

- (1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.(JC8)

JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5

NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.

- (2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

- (2)(3) Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.(JC9)

コメントの追加 [岡本5]: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

コメントの追加 [岡本6]: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

コメントの追加 [伊藤7]: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

コメントの追加 [J8]: Better to add this in the main text of JSSS as mentioned in A1.1.5

コメントの追加 [伊藤9]: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.

IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of “waiver” should be provided.

NK5/6: Will modify as commented.

(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words “team leader”, “on-site supervisor”, “on-site supervision”, “field superintendent”, “work chief” and the like shall be collectively construed as reference to the appropriate member of the Contractor’s Personnel, any reference to the “safety and health manager of the Contractor” and the like shall be construed as reference to the HSO and “The construction plan and safety and health plan”, shall be construed as the “Safety Plan”.

1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

- (1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.
- (2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)

IC10: We don't really understand the meaning of this.

NK5/6: YH considers this cannot be understood. To MD, please review this sentence..

1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion and Defect Notification Period. ~~— during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification.~~ (JC11)

NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer’s property except as stated in this clause.

NK: we agree to leave this as specified.

IC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

NK5/6: Will modify as commented.

1.4.11. The Contractor shall fully inform his personnel, his Subcontractor’s, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor’s Safety Management System

コメントの追加 [岡本10]: We don't really understand the meaning of this. ????

コメントの追加 [伊藤11]: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

1.5.1. The Contractor shall institute a health and safety management system in accordance with ~~OHSAS 18001 or ISO 45001:2018~~ (JC11a) The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.

1.5.2. ~~The Contractor shall state the applicable standard in the Contractor's Safety Plan.~~ (JC12)

JC12: If delete OHSAS above, delete accordingly.

NK5/6: To MD, please review this.

1.5.3. ~~The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17.~~ (JC13)

JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

NK5/6: Will modify as commented.

1.5.4. The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct? この考え方で正しいでしょうか?

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

JC13a: coordinator?

NK5/6: We think so.

1.6.2. ~~For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible.~~ (JC14)

コメントの追加 [伊藤12]: OHSAS does not exist any more??

Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

コメントの追加 [伊藤13]: If delete OHSAS above, delete accordingly

コメントの追加 [伊藤14]: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

コメントの追加 [伊藤15]: coordinator?

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences. GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).

Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.

We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

NK5/6: Will modify as commented.

1.7 Contractor's Safety Plans

1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and
- (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site. (JC15)

IC15: See 1.2.2 (6)

NK5/6: No comment.

1.7.3. The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated Overall Bid Stage Safety Plan)
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works)

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4. The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works.

コメントの追加 [伊藤16]: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1). Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor. We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

コメントの追加 [伊藤17]: See 1.2.2 (6)

1.7.5. Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility, and at any time throughout the Time for Completion of the Works.

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes, thank you, that is true, but better to delete the phrase rather than add.

1.7.6. Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7. Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

Fair comment. I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it here.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8. Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9. Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works. (JC16)

JC16: Should it be "of the Works or any part thereof"?

NK5/6: We agreed the above modification.

- (2) The Contractor shall submit:
 - (a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [*Commencement Stage Safety Plan*].

コメントの追加 [岡本18]: Should it be "of the Works or any part thereof" ?

- (b) The Particular Safety Plans by the date 14 days before each particular parts of the Works starts to be executed, if no sufficient details are prescribed in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed this.

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree, many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:

- (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
- (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
- (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

1.7.10. The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.

1.7.11. Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.

1.7.12. The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

1.8.1. In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.

1.8.2. The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.

1.8.3. The procedural flow of risk assessment shall be as follows.

- (1) Identifying hazards.
- (2) Evaluating risks.

(3) Determining measures of risk reduction or elimination.

1.8.4. The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:

- (1) Removal of hazards such as eliminating dangerous methods of construction.
- (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
- (3) Engineering measures.
- (4) Management measures including improving skills with additional training.
- (5) Use of PPE.

NK: May we know what "improved PPE" mean?

relate

1.9 Contractor's Method Statements

1.9.1. The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.

1.9.2. Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and (JC17) include details of all Permanent Works and Temporary Works with supporting documents such as:

JC17: Better to have a linkage with the risk assessment.

NK5/6: Will modify as commented.

- (1) Studies, investigations and designs.

NK: We suggest to change to "Studies, investigations, and designs"?

change

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including superintendents, workers, operation leaders and Contractor's Equipment.

NK: We consider "worker" will be used because it is used in other Chapter though FIDIC uses "labour".

NK I have changed anyway but it now needs wider wording. labour is also used in FIDIC

- (6) Inspection and monitoring plan.

1.9.3. The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.

1.9.4. Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with

コメントの追加 [伊藤19]: Better to have a linkage with the risk assessment.

the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.

- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider "for his information" can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

Change

1.10 Engineer's Safety Representative

- 1.10.1. ~~Unless otherwise specified in the Particular Safety Specification, the Engineer may delegate his power and authority to any of his assistant's delegated representative at the Site who (JC18) shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.~~

IC18: Particular Safety Specification is not necessary with this modification.

NK5/6: Will modify as commented.

- 1.10.2. The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3. Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1. Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2. If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.
- 1.11.3. If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and

コメントの追加 [伊藤20]: Particular Safety Specification is not necessary with this modification.

corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can occur. (JC19)

JC19: The sentence is not complete???

NK5/6: To Md, please review the sentence.

1.11.4. The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1. For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [Health and Safety], shall be construed as "Health and Safety Officer at the Site".

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No. This is necessary to correspond to the definition.

Please note that this is a compromise. PC change would have been preferable.

1.12.2. Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK Level 6 Diploma level or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

コメントの追加 [岡本21]: The sentence is not complete???

コメントの追加 [岡本22]: To NK: Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia

IC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or	University or technical college science course other courses
					in S&H 2 years
					Senior high school science course other courses
					in S&H 4 years
					in S&H 6 years
					in S&H 7 years
				2. Industrial safety consultants.	
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES 1.Occupational S and H Program. U.S. Army Corps of Engineers, EM-385	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager shall be the CSP.	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.
4	Singapore	Regulations	1)Representative of the Contractor 2)Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)	
5	India	Regulation	1)Safety Officer 2)Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course	
6	Thailand	Regulation	1)Head Man Level 2)Technique Level 3)High Technique Level 4)Professional Level 5)Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular

Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We consider NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot find such person. Large contractors and European contractors may find them.

We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."

I have split this clause for clarity.

I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7).

It is also subject to receiving the consent of the Engineer.

NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.

We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.

I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

1.12.3. Supporting Staff

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO's duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary.

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein.

MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の "The HSO shall inspect work area before starting work..."は、 "The Contractor shall ..."へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence "The HSO shall inspect work area before starting work..." shall be replaced with "the Contractor".

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his

behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall be expected to develop internal procedures whereby all supporting personnel; (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.

JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO...."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence. (次のように分解できるのだと思います。それほど違和感はありませんが。)

- 1) the requirements for any inspection
- 2) the details of any inspection

To MD, we would like to review the sentence because of sentence seems too long.

- (6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4. Inspections

- (1) The HSO shall be responsible for ensuring:

コメントの追加 [伊藤23]: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO...."

But how "and the details of any inspection, for" relates to other part of this sentence???

Non-natives would have difficulty to understand.

- (a) That all working areas ~~of the Site~~ (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;

コメントの追加 [伊藤24]: The working areas are not always a part of the Site

JC22: The working areas are not always a part of the Site

NK5/6: No comment to JC because JICA want to modify as they commented.

- (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
- (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above.

- 1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.
- 1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:
- (1) Health and Safety Management Work:
- (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
- (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
- (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
- (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
- (e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
- (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
- (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
- (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
- (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

~~disagree and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.~~

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1. If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within ~~seven fourteen (14)~~ (JC23) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving ~~seven three (7)~~ (JC24) days' notice in writing of the resumption date.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

JC23& 24: 14 days are too long, and 7 days are too long.

NK5/6: Will modify as commented.

- (5) The Contractor resumes the Works or part of the Works on the due date.

コメントの追加 [岡本25]: 14 days are too long.

コメントの追加 [伊藤26]: 7 days are too long.

- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.
Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it.

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- ~~(b)~~ Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended.

- (1) **Daily** Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already.

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- ~~(c)~~ Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as : ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- ~~(d)~~ Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- ~~(e)~~ Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections. ~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended.

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

No problem deleted already

1.16 Joint Site Safety Inspections

- 1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

This is not quite correct but I have divided anyway

- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2. Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
 - 1.17.3. The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
 - (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
 - 1.17.4. The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
 - 1.17.5. The audit team procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.

~~1.17.5-1.17.6.~~ ~~Unless otherwise consented to by the Engineer,~~ The audit shall be headed by a senior member of the Contractor's head office health and safety team.

~~1.17.6-1.17.7.~~ If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

~~1.17.7-1.17.8.~~ The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.

~~1.17.8-1.17.9.~~ The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

~~1.17.9-1.17.10.~~ The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

This is not quite correct but I have decided anyway.

~~1.17.10-1.17.11.~~ The audits shall be conducted ~~on a random basis~~ at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11-1.17.12.~~ The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor. (JC25)

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly.

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows:(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

JC25: It is not practical that the auditing team of the headquarters visit the Site within 3 to 7 days after the Engineer's instruction.

NK: 1.17.11(1.17.12) will be deleted.

~~1.17.12-1.17.13.~~ Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

No comment. to be deleted.

~~1.17.13-1.17.14.~~ An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

~~1.17.14-1.17.15.~~ The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

- 1.18.1. To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.
- 1.18.2. In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.
- ~~Change not correct~~
- 1.18.3. ~~Labourer~~ Workers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.
- 1.18.4. The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.18.5. ~~The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement. (JC26)~~
- JC26: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???
- NK5/6: Will delete as commented.
- 1.18.6. The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.18.7. Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].
- 1.18.8. If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.9. The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.10. The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly

コメントの追加 [岡本27]: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

It is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2 (a). I have used "He" and "his" for example consistently and if it changes here it will require further change.

1.19 Safety Training Generally

1.19.1. The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2. The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.19.3. Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

~~1.19.3.~~ 1.19.4. Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate). (JC27)

JC27: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

NK5/6: Will modify as commented.

1.20 Safety Induction Training

1.20.1. Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom **he-the HSO** is responsible, including the Employer's Personnel and all other persons who are entitled to be on **the Site at** the request of the Employer or Engineer.

Ditto above

1.20.2. The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.

~~(5)~~ **Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).**

NK: May we know where we can find to refer to special training?

Rephrase

コメントの追加 [J28]: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3. Practical on-Site demonstrations shall be included.

1.20.4. **Training Personnel (JC28)**

JC28: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

NK5/6: NK agreed to the above.

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5. **Records of education and training**

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1. The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. ~~The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.~~ (JC29)

JC29: Not needed to say so in the specification.

NK: Will delete as commented.

1.21.2. The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available in the Country or not available

コメントの追加 [伊藤29]: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

コメントの追加 [岡本30]: Not needed to say so in the specification.

~~in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects, the Contractor shall:~~

~~(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or~~

~~(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.~~

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, (JC30) all of whom shall be appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.~~

JC30: May be the case in many projects, but skilled staff may be sometimes locally mobilized.

NK5/6: Will modify as commented.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion ~~and Defect Notification Period.~~(JC31)

JC31: The Contractor also has to work during DNP and need skilled staff.

NK5/6: Will modify as commented.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply:.(JC32)

JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences.
I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

NK5/6: To MD, please review the comment and modify the sentences.

- (1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.
- (2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer **for his consent.**

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.

"For information" really has no meaning.

If only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

コメントの追加 [伊藤31]: May be the case in many project, but skilled staff may be sometimes locally mobilized.

コメントの追加 [伊藤32]: The Contractor also has to work during DNP and need skilled staff.

コメントの追加 [伊藤33]: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

Details Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

~~1.21.2. Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

~~1.21.3. When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries.~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Consent is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only. If JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

~~1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.~~

~~1.21.5.1.21.3.~~ Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

See above notes, it really should be "consent"

~~1.21.6.1.21.4.~~ Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

~~I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.31~~

~~1.22.4. The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist (JC33) trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.~~

コメントの追加 [伊藤34]: specially ?

~~JC33: specially~~

~~NK5/6: To MD, Please check it.~~

1.22.5. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

~~1.22.6. The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7, who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue (JC34).~~

コメントの追加 [岡本35]: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

JC34: ~~1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.~~

~~NK5/6: Will modify as commented.~~

~~1.22.7. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC35)~~

コメントの追加 [伊藤36]: Move to 1.24

~~NK: Harness is basically used now and belts is not, so deletion of belt is made.~~

~~Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2.~~

~~The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works~~

~~JC35: Move to 1.24~~

~~NK5/6: Will modify as commented.~~

~~1.22.8. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.~~

~~1.22.9. 1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC36).~~

~~JC36: ditto~~

~~NK5/6: Will modify as commented.~~

~~1.22.10. 1.22.9. The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.~~

コメントの追加 [伊藤37]: ditto

~~1.22.11. 1.22.10. Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.~~

~~1.22.12. 1.22.11. For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [Prohibition of Entry – Dangerous Work].~~

~~1.22.13. 1.22.12. Hazardous Substances.~~

(1) If the Contractor during the execution of the Works, encounters and is required by the

Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists ~~Subcontractor(s)~~ (JC37) that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

JC37: not necessarily Subcontractors

NK5/6: Will modify as commented.

NK5/6: Will modify as commented.

1.23 Permit to Work System

1.23.1. The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2. The system shall be designed to control safety for ~~Dangerous Work all types of high-risk work likely to be encountered, including for example:~~ (JC39)

JC39: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

NK5/6: Will modify as commented.

~~1.23.3. Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.~~

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to "for example" as in the following subclause~~

- ~~(1) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~
- ~~(2) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~
- ~~(3) Diving Works.~~

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

~~believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO~~

1.23.4. The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.5. Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.6. The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1. ~~Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or~~

コメントの追加 [伊藤38]: not necessarily Subcontractors

コメントの追加 [伊藤39]: modified accordingly

コメントの追加 [伊藤40]: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

~~are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.(JC40)~~

コメントの追加 [伊藤41]: Moved to 1.24.5.

JC40: Moved to 1.24.5.

NK5/6: Will modify as commented.

NK-1: JICA commented to modify and add "so specified in the Specification" to 1.20.2 in Issue 6.

NK consider that "as specified in Particular Safety Specification" between "the Works," and "the Contractor" if we follow JICA's comment.

NK-2: JICA commented that they want to use "as specified in Particular Safety Specification" more than "unless otherwise specified in Particular Safety Specification" because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA's request to use "as specified in PSSS"?

- 1) I do not recommend any use or reliance on "as specified in PSSS". If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.
- 2) "Unless otherwise specified" followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a "failsafe" in JSSS production.
- 3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities whether specified further by the Employer or not and the PSSS must not compromise this.
- 4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.
- 5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.

"other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed. and any other places as may be specified in the Contract as forming part of the Site" comes from the definition of Site (JC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3. ~~Unless otherwise specified in the Particular Safety Specification, m(JC41)Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.(JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.~~

コメントの追加 [伊藤42]: "Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

コメントの追加 [伊藤43]: See comment to 1.2.2 (6)

NK: JICA want to clarify where “other places (if any) are.

~~Deleted see above~~

JC41: Free of charge for everyone” need not to be as default. I don’t believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

JC42: See comment to 1.2.2 (6).

NK5/6: Will modify as commented.

NK5/6: YH inquired if the sentence of “the family members of all other persons” is necessary to be deleted.

1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5. ~~Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include~~The Contractor shall provide the following medical and first aid facilities:

- ~~(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~(2) First aid training, appointment of first aiders and dissemination of information.~~
- ~~(3) Type of communication facilities and measures for emergency response.~~
- ~~(4) Medical staff to be assigned at the Site.~~
- ~~(4) Medical Facilities on the Site together with description of equipment and consumables.~~
- ~~(5) Temporary water and power supply to maintain use during mains supply failure.~~
- ~~(6) Transportation facilities, Ambulance services to be provided, including drivers and attendants to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.~~
- ~~(7) Additional facilities specified in the Particular Safety Specification, if any.~~
- ~~Medical staff to be assigned at the Site.~~
- ~~(3) Emergency medical services where necessary. (JC43)~~

NK: We feel that the provision of medical services seems excessive unless health insurance can cover it.

~~I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive.~~

JC43: Where the Site is located in a large distance from a sufficiently equipped hospital.

NK5/6: Will modify as commented.

- ~~(4)(1) Medical Facilities on the Site together with description of equipment and consumables.~~
- ~~(5)(1) Temporary water and power supply to maintain use during mains supply failure.~~
- ~~(6)(1) Type of communication facilities and measures for emergency response.~~
- ~~(7)(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~1.24.6. First aid training, appointment of first aiders and dissemination of information.~~

~~1.24.7.1.24.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor’s Personnel and Employer’s Personnel and all other persons who are entitled to be on the Site. (JC44)~~

JC44: See comment to 1.2.2 (6)

コメントの追加 [伊藤44]: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

~~1.24.8.1.24.7. Where the Works include the following for example, †The Contractor shall train selected Contractor’s Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained †(JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.~~

コメントの追加 [伊藤45]: Merged with 1.22.6

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

- (1) ~~Work on or near existing electrical equipment, cables, wiring, services and systems.~~
- (2) ~~Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

~~(3)(1) Diving Work. (JC46)~~

JC46: Diving work is also Dangerous Work

コメントの追加 [伊藤46]: Diving work is also Dangerous Work

NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.

~~(4) Similar special circumstances.~~

~~1.24.9.1.24.8. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)~~

JC47: Move from 1.22.

This should be “may” since the nature of Works may vary.

コメントの追加 [伊藤47]: Move from 1.22
This should be “may” since the nature of Works may vary.

NK5/6: To MD, please review this comment.

~~1.24.9.2.4.9. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC48)~~

JC48: Move from 1.22

コメントの追加 [伊藤48]: Move from 1.22

NK5/6: Will modify as commented.

~~1.24.9.3.1.3.1. All rescue team members Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].~~

~~1.24.9.3.1.3.2. Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].~~

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

Better to delete reference here “as recommended by OSHA” and include your clear requirements in JSSS 2.9 [PP and First Aid]. (JC49)

JC49: Agree.

コメントの追加 [伊藤49]: Agree

NK5/6: Will modify as agreed.

1.25 Measures at the Time Accidents Occur

1.25.1. When an accident occurs, the HSO the Contractor shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:

NK: JICA added in the last comment.

NK: We consider “the HSO” shall be “the Contractor” as mentioned in Issue 6. (JC50)

コメントの追加 [伊藤50]: Agree

I disagree completely and do not recommend this (or any such) change. As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible.

JC50: Agree.

NK5/6: Will modify as agreed.

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.25.2. Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ the Contractor's recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [Additional Contractor Forms].

Please see above notes on this subject. This should remain as the HSO. I disagree and do not recommend this (or any such) change.

1.25.3. For resumption of work procedures, refer to JSSS 1.14 [Procedure for Resuming the Works].

1.26 Emergency Response Plan

1.26.1. To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and ~~as far as reasonably possible~~ shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, ~~where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have and to reasonably avoided, or~~ overcome or lessened the effects to a reasonable extent. [JC51]

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary

JC51: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

NK5/6: Will modify as commented.

1.26.2. The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground

コメントの追加 [伊藤51]: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. [JC52]

JC52: Thank you for being non-native friendly.

FIDIC 1999 and MDB version have been supported worldwide because of its “understandability”. Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer’s Personnel, Contractor’s Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3. Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer’s Personnel, Contractor’s Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

- (2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of “portal” and this change just introduces argument on interpretation, why change

NK: We accept to leave as it is

JC54: Better to add.

NK5/6: Will modify as commented.

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [Contractor’s General Obligations] and JSSS 1.9 [Contractor’s Method Statements].

コメントの追加 [伊藤52]: Thank you for being non-native friendly. FIDIC 1999 and MDB version have been supported worldwide because of its “understandability”. Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

コメントの追加 [伊藤53]: See 1.2.2 (6)

コメントの追加 [伊藤54]: Better to add

1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

~~This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.(JC55)~~

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.5

Please see 1.26.6 for my assumption of your requirements.

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

1) The Contractor can only plan for what he can reasonably foresee or anticipate and

2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19

3) This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.

JC55: Better to jump to 1.26.6 without this.

NK5/6: Will modify as commented.

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

コメントの追加 [岡本55]: Better to jump to 1.26.6 without this.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. (JC56)

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11. For further measures and requirements refer to JSSS 2.7 [Adverse Weather Requirements].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1. The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2. Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of labour union, if any Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3. The HSO shall be the chairman of the Safety Committee.

1.27.4. The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

コメントの追加 [伊藤56]: See 1.2.2(6)

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries occurred in the previous month and measures to be taken to prevent any reoccurrence;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda.

- (d) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (e) Safety instructions received from the Engineer;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country;
- (h) Safety and health awards, media attention and the like; and
- (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (j) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

1.27.5. Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries in the previous month and measures to be taken to prevent any reoccurrence;

NK: Are the phrases in red to be added?

ditto above

Is the sequence here acceptable or shall it change as above?

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1. On larger Projects with multiple contract packages and contractors and **unless otherwise stated** in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2. Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3. The Chairman of the Safety Committee **shall** be the Employer.

1.29.4. The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are **not monthly basis but optional**.

We propose "**periodically as requested by the Employer**" and ask you to reply to this comment as reply is not mentioned in the document with notes.

Please clarify what you want to be deleted.

NK: Deletion is "on monthly basis".

1.29.5. The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace "shall" with "may" in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state "unless otherwise specified."

With this change I think that no other change is necessary.

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1. Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any legally constituted public authorities, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2. The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3. If any other contractors are employed by the Employer or if any legally constituted public authorities responsible to the Employer is working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any legally constituted public authorities.

NK: We considers it is easy to understand attendee by adding “who may be employed in the execution on or near the Site of any work not included in the Contract.” to (d) though it mentioned in the first sentence.

don't understand your comment, please advise what change you require (本 Q&A は無視願います。)

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer’s Personnel, the Employer’s other contractors and the works of any legally constituted public authorities;
 - (c) Accidents, injuries **in the previous period** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4. Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the **Engineer’s** monthly progress report. (JC57)

JC57: **Engineer’s monthly progress report is normally not shared with the Contractor. Delete “Engineer’s” to mean Contractor’s progress report.**

NK5/6: Will modify as commented..

コメントの追加 [岡本57]: Engineer’s monthly progress report is normally not shared with the Contractor. Delete “Engineer’s” to mean Contractor’s progress report.

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) **Accident: description, casualties, location, time, type and cause.**
- (2) **Near-miss: description, ~~casualties~~, location, time, type and cause.**
- (3) **Lost-time: lost hours of casualties, duration of discontinuation.**
- (4) **Remedial measures taken.**
- (5) **Total working hours for calculation of frequency rate, severity rate and annual incident rate.**
- (6) **Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.**
- (7) **Record of reports as may be required by government authorities.**

- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage. (JC58)
- (17) Others.

JC58: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.

4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

- 1.31.3. All data shall be in a format and content given consent by the Engineer.
- 1.31.4. The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.
- 1.31.5. The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.32 Safety Reports

- 1.32.1. The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:
 - (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.

NK Is it necessary to add "for"?

Yes, it can be

- (2) Contractor/HSO and Joint Site Safety Inspections. (JC59)

JC59:Joint Site Safety Inspection Report ?

NK5/6: Will modify as commented.

- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [Progress Reports].

1.33 Health and Safety Records

- 1.33.1. The Contractor shall keep health and safety records for the following:

コメントの追加 [伊藤58]: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.
4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

コメントの追加 [伊藤59]:Joint Site Safety Inspection Report ?

- (1) Accidents, fatalities, near-misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [*General Safety Measures*] and other parts of JSSS.

1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [*Safety Reports*].

1.34 Health and Safety Incentive Schemes

1.34.1. The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Related see above

1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.

1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.

1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.

1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.

1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.

1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.

1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [*Safety Reports*].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO for his delegated and technically qualified assistant (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.

コメントの追加 [伊藤60]: Agree with MD

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.

do not recommend your suggested change.

JC60: Agree with MD

NK5/6: Will modify as commented.

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

(1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

コメントの追加 [岡本61]: Temporary Works is covered in (2)

JC61: Temporary Works is covered in (2).

NK5/6: Will modify as commented.

- (2) New or recent Contractor's Equipment and Temporary Works, ~~not more than five (5) years old upon the date that it is mobilised to the Site~~, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor ~~before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency~~ to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

コメントの追加 [伊藤62]: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

NK: We considers in actual basis as follows:

- Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

- Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

- Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

- Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit. JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant.

NK5/6: Will modify as commented.

1.36 Health Matters

1.36.1. The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2. Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons. (JC63)

JC63: Same comment as 1.24

NK5/6: Will modify as commented.

1.36.1.1.36.3. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC64)

JC64: See 1.2.2 (6).

NK5/6: Will modify as commented.

1.36.2.1.36.4. Occupational health care shall be provided by the Contractor and shall include ~~for~~ example:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [Working Environment]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Avoiding (JC65) Frequent or excessive manual handling of loads, stress and fatigue.

JC65: Better to add ???

NK5/6: Will modify as commented.

- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability. (JC66)

JC66: Is this health care service?

NK5/6: Will modify as commented.

1.36.3.1.36.5. The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

コメントの追加 [伊藤63]: Same comment as 1.24

コメントの追加 [伊藤64]: See 1.2.2 (6)

コメントの追加 [伊藤65]: Better to add ???

コメントの追加 [伊藤66]: Is this health care service?

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational ~~H~~ healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will add.

NK: We will further consider it.

~~1.36.4. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

~~1.36.5.1.36.7.~~ Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the **HSO's** recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No. I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, **the Contractor is** required to comply with **the management standard with respect to design, erection, use and dismantling of**

コメントの追加【伊藤67】: See 1.2.2 (6)

Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework (JC68)

Changed already

JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

NK5/6: Will modify as commented.

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework (JC69).

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?

Section 1. General 1 Scope: "This guidance is also applicable to the design of what is termed class A falsework (1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded. I have assume therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [*Specified Standards and Regulations*] to cover this generally.

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ho san's comment.

JC69: delete it?

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

コメントの追加 [岡本68]: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

“Necessary qualification” can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer’s consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

~~Understand your comment and have no objection to the deletion of 1.37.6.~~

1.37.7. Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 ~~or any other acceptable standard in accordance with JSSS 1.37.2. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer’s Duties and Authority] Sub-Subclause (c) and issued without prejudice to the Contractor’s overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS. (JC70).

NK: MD 氏は上記の理由で次の 1.37.8 の条項は不要であると考え削除を提案しています。ご検討をお願いします。

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

1.37.8. ~~Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) — Appointment of appropriately qualified and experienced staff.~~
- ~~(2) — Preparation of adequate Temporary Works designs.~~
- ~~(3) — Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) — Preparation of a Temporary Works register and records~~

コメントの追加 [伊藤69]: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

- (5) ~~Pre erection inspection of all Temporary Works, including materials, components and equipment.~~
- (6) ~~Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:~~
- (a) ~~Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and~~
- (b) ~~Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

~~The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.~~

~~However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO. I believe that it is a correct requirement which in practice should not be more than a counter signature.~~

1.37.9. In accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

~~I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.~~

~~The following clause can be deleted~~

~~1.37.10. For further information on Method Statements refer to JSSS 1.9 [*Contractor's Method Statements*].~~

1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [*Inspection and Monitoring of Temporary Works*].

~~1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. and shall obtain the consent of the Engineer.~~

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

~~Yes I agree and have reworded this as above.~~

Q-1 Is consent by the Engineer given to specialist staff?

~~This part can be deleted.~~

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

~~have reworded all, please refer to the above~~

1.38 ~~User Training~~(JC71)

コメントの追加 [岡本70]: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important

NK5/6: Will delete as commented.

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

Recommend that it be included here as a default requirement

~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(1) Safe system and Plant use, operation and process control.~~
- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(3) Training in use of all hardware and software packages.~~
- ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(5) Recording and reporting.~~
- ~~(6) Emergency operation procedure.~~
- ~~(7) Maintenance management procedures.~~
- ~~(8) Inventory and store control systems.~~
- ~~(9) Particular safety procedures, including:
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~~~

~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.6. Other requirements for User Training~~

- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
- ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~

- ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(4) The Engineer may choose to send representatives to witness the training.~~
- ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~
- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.~~
- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not~~

~~sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I gain work on the User Guide.

- 1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4. Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5. Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) **“Operation Leader”** (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [Particular Safety Specification] ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.
- (13) “**User Guide**” means the document of that title separately published by JICA and which contain the guidelines for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no “User Guide” specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 6.

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as “An Employer’s Guide” or something like that to make it very clear.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.
- For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].
- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.

- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as **Zone 0, Zone 1 or Zone 2, where:**
- (a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;
 - (b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and
 - (c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK, 再考いたします。(現時点ではJSSSでは規定していません。)

- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
- For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of

workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.

- (19) **“Personal Protective Equipment”** or **“PPE”** means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) **“Safety Belt”** means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) **“Safety Harness”** means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) **“Scaffold”** or **“Scaffolding”** means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) **“Skill Training”** means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) **“Spotter”** means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) **“Trade Effluent”** means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) **“Unexploded Ordnance”** or **“UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) ~~“User Training” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.~~
- (28) **“Working Platform”** means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training

PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

~~A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.~~

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

~~I think both are useful as the contractor should also be aware of requirements.~~

~~It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.~~

~~I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further.~~

~~A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor’s Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.~~

~~A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder’s intentions, so that this can be understood and properly evaluated. (JC72)~~

JC72: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) “Safety Plan” means a document (or documents) that contains the *overall risk assessments* together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder’s Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

(3) Health and Safety Management System, Responsibility and Authority of Bidder’s Personnel

A description of the health and safety management organisation at Site headed by the Bidder’s Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor’s Personnel involved in health and safety management at the Site.

コメントの追加 [伊藤71]: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11)
“Safety Plan” means a document (or documents) that contains the *overall risk assessments* together with the details of all health and safety arrangements, methods.....

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System (JC73)

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

~~Confirm~~ Describe how ~~which scheme~~ the Bidder *institutes the Safety Management System* is accredited under.

JC73: Modified in accordance with modification to JSSS1.5

NK5/6: Will modify as commented.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

OK I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

NK: May the title be Works?

I have edited as above

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

コメントの追加 [岡本72]:
Modified in accordance with modification to JSSS1.5

- (12) Safety Measures for Contractor's Equipment
Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]
A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.
- (13) Proposed Health and Safety Incentive Scheme
Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]
A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.
- (14) Safety Information Sharing and Communications Policy
A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.
A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.
- (15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)
Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]
A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.
- (16) Site Inspection Plan
A description of the methods for Site inspections by the HSO, types of inspection and frequency.
The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work
- (17) Site Security
A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.
The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.
- (18) Policy for Preventing Traffic Accidents
A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention*].

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

~~(27) User Training~~

~~Refer to JSSS 1.38 [*User Training*]~~

~~An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.~~

~~(28)~~(27) Legal requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

[Annex to the](#)

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

loc

Form JSSS/BSO - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture ("JV")] (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSO, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export (JC74) in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

K74: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

NK5/6: To MD, we would like to ask you to modify as commented.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works (not more than five (5) years old, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirements.

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.

コメントの追加 [伊藤73]: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor.) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

SUBSEQUENT REPORT INFORMATION (POST-INVESTIGATION):	
1) Cause(s) of the accident:	
2) Counter-measures proposed by the Contractor to avoid recurrence of similar accidents and risks:	
3) Number of reported accident(s) occurred in the past one (1) year in the same Contract Package as the accident occurred:	
4) Number of reported near misses occurred in the past one (1) year in the same Contract Package as the accident occurred:	
5) Other Information:	

Report Prepared by: (name): _____ (sign) : _____ Report Submission Date(s) _____ Time: _____	Contractor's Health and Safety Officer (HSO)
Receipt acknowledged by: (name): _____ (sign): _____ Report Receipt Date(s) _____ Time: _____	Engineer

(above to be inserted with detail and signatures at end of each report)

--	---	--

IC1: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or
2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works”

NK5/6YH: NK would like to select the 1 above for JSSS:

IC2: Safety measures are needed not only in the Site

We would like to have advice of NK/MD. The current draft JSSS says:

- A: the Site (very often) and
- B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of “the Site” in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the “Site” in 1.2.2, for example:

“Unless otherwise stated in JSSS or the context is otherwise clear, “Site” used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works”.

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat “the Site and other places (if any) where the Contractor intends to execute the Works” every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

(7) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for

IC1: In this chapter 1, the expression “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site” which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say “the Contractor’s Personnel” or
2. Without this additional wording, every time repeat “all Contractor’s Personnel, Employer’s Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works”

NK5/6YH: NK would like to select the 1 above for JSSS:

IC2: Safety measures are needed not only in the Site

We would like to have advice of NK/MD. The current draft JSSS says:

- A: the Site (very often) and
- B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of “the Site” in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the “Site” in 1.2.2, for example:

“Unless otherwise stated in JSSS or the context is otherwise clear, “Site” used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works”.

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat “the Site and other places (if any) where the Contractor intends to execute the Works” every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

This clause is intended only to ensure that the Employer’s Personnel and any other persons who are entitled to be on the Site are automatically provided with the same health and safety measures that are provided to the Contractor’s Personnel, whenever there is a mention of “Contractor’s Personnel”.

Thereafter there should be no other reference to “Employer’s Personnel and any other persons who are entitled to be on the Site” unless it is for reasons other than the provision of health and safety requirements. I have reviewed other clauses and deleted some, where this is necessary.

For the purpose of this reference only it is not necessary to add any additional wording to “Site”.

I suggest the clause can then be as now suggested by JICA or even left simply as it was.

NK: Modified as JICA added.

(7) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.

(8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular

--	--	---

NK: MD proposed the addition above. NK considers it is not necessary.

JC4: Not necessary.

NK5/6: Deleted as commented.

1.4 Compliance with JSSS and Other Regulations

- 1.4.1. JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.
- 1.4.2. JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.
- 1.4.3. The Contractor shall comply fully with the requirements of ~~JSSS Project as supplemented and modified by the Particular~~ Safety Specification.
- 1.4.4. ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.(JC5)~~

JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

1.4.5. ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.-(JC6)~~

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

Notes to NK: the statement that the User Guide does not form a part of the Contract is important and intended to limit risk for JICA.

The deletion is shaded in blue so I must not comment.

The biggest user of JSSS is actually the Contractor, and if it is published at the same time as the User Guide on the same JICA website the contractor will refer to it and this could create future problems.

Future claims from contractors can be predicted on this for example that the Bid documents have not been prepared properly according to the User Guide or that the full information (for example required by User Guide clause 1.3.3) has been not been provided or has been withheld. Whether such claims are insupportable under the contract or not, they must still be defended and this takes time and money usually which JICA pay.

JSSS 1.3.4 was intended to very simply prevent this but it has been deleted and I have been asked not to comment, so what can I do?

After further consideration on this subject and as advised in my last comment of Annex 1, I also suggest that it is better to rename the "User Guide", for example as the "Guide for Use of Executing Agencies", it is more correct and may reduce the risk of claim even though it will not solve this problem fully.

NK6/2: We proposed the title of User Guide as "Guide for Use of Executing Agencies".

1.4 Compliance with JSSS and Other Regulations

- 1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.
- 1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.
- 1.4.3 The Contractor shall comply fully with the requirements of ~~JSSS Project as supplemented and modified by the Particular~~ Safety Specification.
- 1.4.4 ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.(JC5)~~

JC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK6/2: Confirmed.

1.4.5 ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.-(JC6)~~

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

1.4 Compliance with JSSS and Other Regulations

- 1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.
- 1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.
- 1.4.3 The Contractor shall comply fully with the requirements of Project Safety Specification.

It is intended to be for the situation where JSSS has been agreed to be used, but it is lacking in some areas in which case we use the Laws.

JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.

NK5/6: Will delete as commented.

1.4.6. If, for the particular part of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

1.4.7. Specified Standards and Regulations (JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding, right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

(1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date. (JC8)

JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5

NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.

JC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK6/2: Confirmed.

1.4.6 If, for the particular parts of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

There is no JICA comment on this.

Your suggested combined clause is suitable, I have edited as follows:

If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

NK6/2: We adopted the MD's reviewed sentence above.

1.4.7 Specified Standards and Regulations (JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

For example, OSHA requirements to which you have referred in JSSS, are actually their regulations not standards.

These regulations are intended for the US and are enforceable only there under their rule of law.

Using OSHA does not mean or imply that you are adopting related US laws or rules for enforcement.

To avoid any legal association, please refer to subclause (4) below and also throughout the other "technical" chapters of JSSS where reference is made to OSHA by using the phrase to the "technical requirements of ..."

This is very much a compromise but something like this is necessary to support your choice of OSHA as a reference basis.

My own opinion is that OSHA will not form a part of the applicable Laws or the Laws of the Country with which the Contractor is to comply under the Contract (see GC 1.13 and 1.3.7 respectively), however I recommend that JICA should check this opinion to support their choice of OSHA, HSE etc.

Please advise of any further requirements or if you require any change.

NK: We agree to MD's opinion and have no request so far.

1.4.4 If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

1.4.5 Specified Standards and Regulations

<p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(2)(3) <u>Application of detailed parts of standard or regulation specified in JSSS may be waived at a formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</u> (JC9)</p> <p>IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.</p> <p>NK5/6: Will modify as commented.</p> <p>(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.8. Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".</p> <p>1.4.9. If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p>	<p>(1) <u>Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.</u> (JC8)</p> <p>IC8: Better to add this in the main text of JSSS as mentioned in A1.1.5</p> <p>NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.</p> <p>There appears to be no problem with transferring the above clause to here but it needs deleting in the Annex to avoid duplication.</p> <p>NK6/2: A1.1.5 is deleted as specified in (1) here.</p> <p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(2)(3) <u>Application of detailed parts of any standards or regulations specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</u> (JC9)</p> <p>IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.</p> <p>NK5/6: Will modify as commented.</p> <p>I am informed that my comment is not required on "blue" shaded items, therefore none is provided</p> <p>Please refer to editing as shown in red</p> <p>NK6/2: Confirmed.</p> <p>(3)(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.8 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".</p> <p>1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p>	<p>(1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.</p> <p>(2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.</p> <p>(3) Application of detailed parts of any standards or regulations specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.</p> <p>(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.</p> <p>1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".</p> <p>1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:</p> <p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p>
--	---	--

<p>(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.</p> <p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)</p> <p>JC10: We don't really understand the meaning of this.</p> <p>NK5/6: YH considers this cannot be understood. To MD, please review this sentence.</p> <p>1.4.10. Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion <u>and Defect Notification Period.</u> during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification. (JC11)</p> <p>NK: We consider that this phrase may be changed to "and the Defects Notification Period"? (Though the phrase is correctly expressed.)</p> <p>No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).</p> <p>The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer's property except as stated in this clause.</p> <p>NK: we agree to leave this as specified.</p> <p>JC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.</p> <p>With this modification, Particular Safety Specification in User Guide will not be necessary any more.</p> <p>NK5/6: Will modify as commented.</p>	<p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)</p> <p>JC10: We don't really understand the meaning of this.</p> <p>NK5/6: YH considers this cannot be understood. To MD, please review this sentence.</p> <p>Please clarify the meaning your query as I cannot clearly understand.</p> <p>Similar to GC 1.5, the documents in JSSS are basically to be taken as mutually explanatory of one another however the priority of the documents should be stated, in order to resolve any future ambiguity or discrepancy. For this reason, I have suggested that for any interpretation difficulty:</p> <p>between Chapter 1 (which is General) and all other chapters, then Chapter 1 will prevail and apply</p> <p>between Chapters 2 to 6 (which are also general) and all others (Chapters 7 to 10 and future), Chapters 2 to 6 will apply</p> <p>Please advise of any change that you require.</p> <p>NK6/2: I understood by MD's explanation. No change is required.</p> <p>1.4.10 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion <u>and Defects Notification Period.</u> during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as may be further specified in the Particular Safety Specification. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.</p> <p>With this modification, Particular Safety Specification in User Guide will not be necessary any more.</p> <p>NK5/6: Will modify as commented.</p> <p><i>I am informed that my comment is not required on "blue" items but am a little confused as NK are requested to redraft.</i></p> <p>Notes for NK:</p> <p><i>The following information is given for NK use.</i></p> <p><i>I completely understood the JICA intentions during the earlier discussion in January which is why the above advice (highlighted in green) was given.</i></p> <p><i>The Contractor must have already completed the Works before commencement of the DNP and they have already been taken over, occupied and put into use by the Employer.</i></p> <p><i>The Contractor of course has a contractual obligation to take care of the health and safety of his employees when they are completing any work which is outstanding or executing</i></p>	<p>(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.</p> <p>1.4.8 The Contractor shall comply with the requirements of JSSS throughout the Time for Completion and Defects Notification Period. The Contractor's obligations to provide temporary services and facilities finish at the end of the Time for Completion unless otherwise specified in the Particular Safety Specification.</p>
--	---	--

<p>1.4.11. The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1. The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018. (JC11a) <u>The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.</u></p> <p>JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.</p> <p>NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.</p>	<p>any work required to remedy defects during the DNP and it is not necessary to state this in JSSS.</p> <p>However, the Contractor has no obligation to continue to provide the majority of the facilities or services of JSSS during the DNP as the Works are completed, handed over, occupied and used by the Employer and most if not all temporary facilities will already have been removed.</p> <p>To state that "the Contractor shall comply with the requirements of JSSS throughout the DNP" is not correct.</p> <p>The Contractor for example has no obligation to provide ongoing services and facilities during the DNP, meaning no clinic, ambulance, medical facilities, fire-fighting, support to Employer and Engineer, spare PPE, training, scaffolding, contractor's equipment and temporary works general availability etc etc, all of which are "requirements" of JSSS.</p> <p>I am concerned that this will be misunderstood or even abused by some employers and consultants and that because this is so stated the contractor will be requested to provide services and facilities that he is no longer responsible for.</p> <p>If any facilities are particularly required (e.g. clinic, ambulance, medical facilities, fire-fighting, spare PPE, training etc this should be clearly stated in the Particular Safety Specification so that the Contractor is aware and so that it can be included in his bid.</p> <p>The added text is not therefore advisable.</p> <p>NK: As explained in User Guide, we revise as follows:</p> <p>NK6/2: The issues discussed by JICA and MD are different how to specify continued compliance to requirements during the DNP stipulated in JSSS.</p> <p>JICA want to specify to continue for the Contractor to take safety measures for workers during the DNP.</p> <p>MD wants specify requirements for facilities and services such as medical services for the Employer during the DNP.</p> <p>We propose to revise 1.4.10 as shown below.</p> <p>1.4.10 Unless otherwise specified in the Particular Safety Specification, The Contractor shall comply with the requirements of JSSS throughout the Time for Completion and Defects Notification Period.</p> <p>The Contractor's obligations to provide temporary services and facilities finish at the end of the Time for Completion unless otherwise specified in the Particular Safety Specification.</p> <p>1.4.11 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1 The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001:2018. (JC11a) <u>The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.</u></p> <p>JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.</p> <p>NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.</p> <p>1.5.2 The Contractor shall state the applicable standard in the Contractor's Safety Plan. (JC12)</p> <p>JC12: If delete OHSAS above, delete accordingly.</p> <p>NK5/6: To MD, please review this.</p>	<p>1.4.9 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.</p> <p>1.5 Contractor's Safety Management System</p> <p>1.5.1 The Contractor shall institute a health and safety management system in accordance with ISO 45001. The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation</p>
--	---	--

1.5.2. ~~The Contractor shall state the applicable standard in the Contractor's Safety Plan. (JC12)~~

~~JC12: If delete OHSAS above, delete accordingly.~~

~~NK5/6: To MD, please review this.~~

1.5.3. ~~The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)~~

~~JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.~~

~~NK5/6: Will modify as commented.~~

1.5.4. The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent. –

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct?この考え方で正しいでしょうか?

1.6 Checking and Validation of Submissions

1.6.1. In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

~~JC13a: coordinator~~

~~NK5/6: We think so.~~

~~1.6.2. For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the~~

1.5.3 ~~The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)~~

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

~~JC13a: coordinator~~

~~NK5/6: We think so.~~

~~1.6.2 For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible. (JC14)~~

1.5.2 Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17.

1.5.3 The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

1.6 Checking and Validation of Submissions

1.6.1 In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordinator, design and supervision staff and any independent checkers as appropriate.

<p>Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible. (JC14)</p> <p>NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.</p> <p>This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)</p> <p>It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences: GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."</p> <p>JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).</p> <p>Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.</p> <p>We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".</p> <p>NK5/6: Will modify as commented.</p> <p>1.7 Contractor's Safety Plans</p> <p>1.7.1. The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.</p> <p>1.7.2. The Safety Plans shall set out or refer to all the health and safety requirements:</p> <ol style="list-style-type: none"> (1) that are stated in JSSS; (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and (3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site. (JC15) <p>JC15: See 1.2.2 (6).</p> <p>NK5/6: No comment.</p>	<p>NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. --	---	--

Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].

- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK ~~Level 6 Diploma level~~ or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.

JC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience	
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or other courses	University or technical college	in S&H 2 years
					science course	4 years
					Senior high school science course	in S&H 4 years
		Others	in S&H 6 years			
		Others	in S&H 7 years			
		2. Industrial safety consultants.				
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES 1. Occupational Safety and Health Program.	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience	

Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.

- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

~~Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK Level 6 Diploma level or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.~~

No problem with the above, I suggest editing as follows:

Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:

- (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
- (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or
- (c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

JC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience	
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or other courses	University or technical college	in S&H 2 years
					science course	4 years
					Senior high school science course	in S&H 4 years
		Others	in S&H 6 years			
		Others	in S&H 7 years			
		2. Industrial safety consultants.				
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience	

shall be licensed or registered in the Country and perform such duties as are legally mandated.

- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:
 - (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
 - (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or
 - (c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

		U.S. Army Corps of Engineers, EM-385	shall be the CSP.		
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.
4	Singapore	Regulations	1) Representative of the Contractor 2) Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)	
5	India	Regulation	1) Safety Officer 2) Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course	
6	Thailand	Regulation	1) Head Man Level 2) Technique Level 3) High Technique Level 4) Professional Level 5) Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

(2) In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

(3) Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

(4) Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

		GUIDELINES 1. Occupational S and H Program. U.S. Army Corps of Engineers, EM-385	Professionals (BCSP) The Safety and Health Manager shall be the CSP.		
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.
4	Singapore	Regulations	1) Representative of the Contractor 2) Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)	
5	India	Regulation	1) Safety Officer 2) Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course	
6	Thailand	Regulation	1) Head Man Level 2) Technique Level 3) High Technique Level 4) Professional Level 5) Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training	
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training	
8	Vietnam	Regulation	Not found yet.		

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

(1) In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

(2) Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

(3) Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3)

<p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.</p> <p>We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."</p> <p>I have split this clause for clarity</p> <p>I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7.)</p> <p>It is also subject to receiving the consent of the Engineer.</p> <p>NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.</p> <p>We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.</p> <p>I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.</p> <p>1.12.3. Supporting Staff</p> <p>NK-1: JICA commented and minutes recorded in January as follows:</p> <p>7.1.1 (5) HSO's duties:</p> <p>JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.</p> <p>No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary</p> <p>Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?</p> <p>Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein</p>	<p>International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.</p> <p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>NK: We considers NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot not find such person. Large contractors and European contractors may find them.</p> <p>We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."</p> <p>I have split this clause for clarity</p> <p>I suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7.)</p> <p>It is also subject to receiving the consent of the Engineer.</p> <p>NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.</p> <p>We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.</p> <p>I suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.</p> <p>NK, please refer to editing above.</p> <p>NK6/6: Agreed to your editing and request to check (8) because it seems something understandable.</p> <p>1.12.3 Supporting Personnel</p> <p>Heading is changed to be consistent with the content</p> <p>NK-1: JICA commented and minutes recorded in January as follows:</p> <p>7.1.1 (5) HSO's duties:</p> <p>JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.</p> <p>No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary</p> <p>Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?</p> <p>Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein</p> <p>MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.</p> <p>NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:</p>	<p>(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, and be whom the Contractor collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.</p> <p>1.12.3 Supporting Personnel</p>
---	--	--

<p>MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties <u>delegated as necessary to a number of personnel including Operation Leaders</u>. This is described in Chapter 1.10.1 and has been discussed. No change is required.</p> <p>NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:</p> <p>3. Common requirements in JSSS</p> <p>(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...” は、“The Contractor shall ...”へ変更する。</p> <p>HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.</p> <p>From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.</p> <p>Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.</p> <p>NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).</p> <p>We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.</p> <p>Based on the above idea, we want to revise some sentences below.</p> <p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.</p> <p>I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p> <p>(5) The HSO shall be expected to develop internal procedures whereby all supporting personnel (JC21) shall be aware of the requirements</p>	<p>3. Common requirements in JSSS</p> <p>(4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...” は、“The Contractor shall ...”へ変更する。</p> <p>HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.</p> <p>From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.</p> <p>Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.</p> <p>NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).</p> <p>We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor's Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.</p> <p>Based on the above idea, we want to revise some sentences below.</p> <p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.</p> <p>I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor's Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p> <p>(5) The HSO shall be expected to develop internal procedures whereby all supporting personnel (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>JC21: It is understood “internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO...”</p>	<p>(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.</p> <p>(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.</p> <p>(3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.</p> <p>(4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.</p>
--	---	--

<p>for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>JC21: It is understood "internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO..."</p> <p>But how "and the details of any inspection, for" relates to other part of this sentence???</p> <p>Non-natives would have difficulty to understand.</p> <p>NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence. (次のように分解できるのだと思います。それほど違和感はありませんが。)</p> <p>1) the requirements for any inspection 2) the details of any inspection</p> <p>To MD, we would like to review the sentence because of sentence seems too long.</p> <p>(6) Where the Works or parts thereof are to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified support staff for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4. Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas of the Site (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>JC22: The working areas are not always a part of the Site</p> <p>NK5/6: No comment to JC because JICA want to modify as they commented.</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to the relevant Contractor's Personnel and Employer's Personnel and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p>	<p>But how "and the details of any inspection, for" relates to other part of this sentence???</p> <p>Non-natives would have difficulty to understand</p> <p>NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence</p> <p>1) the requirements for any inspection 2) the details of any inspection</p> <p>To MD, we would like to review the sentence because of sentence seems too long.</p> <p>I suggest the above is edited as follows:</p> <p>(6) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:</p> <p>(a) Supporting personnel are made aware of the requirements for any inspection and the details thereof.</p> <p>(b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work</p> <p>(c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.</p> <p>Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>(7) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas of the Site (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>JC22: The working areas are not always a part of the Site</p> <p>NK5/6: No comment to JC because JICA want to modify as they commented.</p> <p>I am informed that my comment is not required on "blue" shaded items, therefore none is provided</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p> <p>This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), however I suggest that in this case the wording is changed as above to make it non-specific and therefore of wider effect.</p>	<p>(5) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:</p> <p>(a) Supporting personnel are made aware of the requirements for any inspection and the details thereof.</p> <p>(b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work</p> <p>(c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.</p> <p>Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.</p> <p>(6) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.</p> <p>1.12.4 Inspections</p> <p>(1) The HSO shall be responsible for ensuring:</p> <p>(a) That all working areas are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;</p> <p>(b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and</p>
--	--	--

<p>(c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [<i>Contractor's Equipment, Temporary Works, Safety Equipment and PPE</i>].</p> <p>(2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.</p> <p>1.13 HSO - Scope of Duties and Authority</p> <p>NK: JICA added "and Authorities" in the last comment.</p> <p>Now changed as above</p> <p>1.13.1. The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.</p> <p>1.13.2. The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:</p> <p>(1) Health and Safety Management Work:</p> <p>(a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;</p> <p>(b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;</p> <p>(c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;</p> <p>(d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;</p> <p>(e) Temporarily stopping the Works or any parts of the Works where the Engineer so instructs in accordance with JSSS 1.11 [<i>Safety Compliance Instructions from the Engineer</i>];</p> <p>(f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;</p> <p>(g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;</p> <p>(h) Appointment of further supporting personnel (refer to 1.12.3 [<i>Supporting Staff</i>]);</p> <p>(i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;</p> <p>NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. ---	--	--

NK5/6: Will modify as commented.

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1. The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2. In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

(5) Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~by construction managers, Operation Leaders, HSO,~~
- ~~(b)~~ Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~by construction managers, HSO,~~
- (c) Monitoring the implementation of the Safety Plan. ~~by HSO,~~

Above is not recommended

(1) Daily Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~by construction managers, HSO,~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~by construction managers, Operation Leaders,~~

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it

Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~by construction managers, Operation Leaders, HSO,~~
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~by construction managers, HSO,~~
- (c) Monitoring the implementation of the Safety Plan. ~~by HSO,~~

Above is not recommended

(1) Daily Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~by construction managers, HSO,~~
 - (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~by construction managers, Operation Leaders,~~
 - ~~(c)~~ Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ; ~~by construction managers, Operation Leaders,~~
- 5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;

- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

(1) Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM);
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
- (c) Monitoring the implementation of the Safety Plan.

(2) Daily Safety Management of Contractor's Personnel:

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM;
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures;
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline
- (d) Instruction and management of safety education and training;
- (e) Instruction and management of all safety measures; and

<p>(⇒) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ; (by construction managers, Operation Leaders)</p> <p>5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;</p> <p>(⇒) Instruction and management of safety education and training; (by construction managers, HSO)</p> <p>(⇒) Instruction and management of all safety measures; and (by construction managers, Operation Leaders, HSO)</p> <p>(f) Site Safety Inspections—(by construction managers, Operation Leaders, HSO)</p> <p>None of above is recommended</p> <p>NK: We withdraw the addition.</p> <p>NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.</p> <p>No problem deleted already</p> <p>1.16 Joint Site Safety Inspections</p> <p>1.16.1. In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.</p> <p>1.16.2. Frequency of Joint Site Safety Inspections shall be at least once a week.</p> <p>1.16.3. Where any safety risks are detected during the inspections, the Contractor shall take immediate action.</p> <p>1.16.4. The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.</p> <p>1.16.5. The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.</p> <p>1.17 Compliance Monitoring and Auditing</p> <p>1.17.1. The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:</p> <p>NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.</p> <p>This is not quite correct but I have divided anyway</p> <ol style="list-style-type: none"> (1) Create checklists for monitoring. (2) Carry out regular and random inspections. ---	---	---

throughout the Time for Completion and Defect Notification Period.(JC31)

JC31: The Contractor also has to work during DNP and need skilled staff

NK5/6: Will modify as commented.

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply: (JC32)

JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text

NK5/6: To MD, please review the comment and modify the sentences.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply: (JC32)

JC32-1: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

JC32-2: I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text

NK5/6: To MD, please review the comment and modify the sentences for JC32-1.

NK6/6: We proposed for JC32-2 as modified MD's proposed 1.21.3.

Your comment requests that training be provided for other workers in addition to operation leaders.

Your original draft required training only for operation leaders and workers engaged in dangerous work.

Your draft documents contained requirements which were very unclear and which had little or actually no connection with the contract.

Dangerous work is covered by 1.20.2

Please refer to my comments on your original draft which I have explained since; I have advised that the Contractor already has a basic obligation to provide appropriately qualified, skilled and experienced personnel under the contract (see GC 6.1 and 6.9) and these contract requirements must not be compromised.

I had explained that it is illogical and contractually incorrect to require the Contractor to provide skilled personnel (where necessary importing skilled foreign personnel) under the Contract, expect the Employer to pay for this via the Contract Price, yet then assign non-compliant workers and other personnel and expect the Employer to pay for further skill training.

If this is required, the extent to which this is to be applied clearly needs to be carefully defined and controlled otherwise it can be argued that having complied with the training requirements he is not responsible for providing any additional capable and skilled persons unless the employer allows and pays for more skill training.

I am reluctant to add further skill training without knowing your precise additional requirements. Can you therefore please describe who shall receive skill training, to what level, with what resources, how to be managed and paid for and how this is to be made compatible with the Contract and I will edit your text as necessary and include this against earlier advice.

On the basis that skill training is only required to develop the skills of local operation leaders (which is still stretching the contract), I suggest editing this subclause as follows:

NK6/6: Training of OL is accepted as MD proposed below. That for skilled workers are proposed to add and modify 1.21.3.

1.21.21.3 Further Training of Operation Leaders

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled workforce that he considers are suitable to act as future Operation Leaders.

maintain the required standards of performance, quality, health and safety throughout the Time for Completion and Defect Notification Period.

1.21.3 Further Training of Operation Leaders and Skilled Workers

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under

<p>(1) To compliment this OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to provide basic skill training to develop the ability of local counterpart trainee operation leaders in the necessary skills for the Works and who in future, will pass on their knowledge to their working colleagues and compatriots.</p> <p>(2) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer <u>for his consent</u>.</p> <p>NK: We think “for his consent” can be replaced with “for information” as written in Issue 6.</p> <p>Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.</p> <p>“For information” really has no meaning.</p> <p>If only “for information”, Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.</p> <p>The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p><u>Details-Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.</u></p> <p>NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.</p> <p>(7) This has been repeatedly discussed and explained.</p> <p>(8) If safety is to improve, this must happen from Bid stage onwards.</p> <p>(9) Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.</p> <p>NK: We agree to MD’s opinion. However, the above sentence needs to be modified to such as “Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted.”</p> <p><u>1.21.2-1.21.3. Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor’s Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.</u></p>	<p>(2) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.</p> <p>(3) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.</p> <p>(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.</p> <p>NK: We think “for his consent” can be replaced with “for information” as written in Issue 6.</p> <p>Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer.</p> <p>“For information” really has no meaning.</p> <p>If only “for information”, Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.</p> <p>(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p>(6) <u>Details-Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.</u></p> <p>NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.</p> <p>This has been repeatedly discussed and explained.</p> <p>If safety is to improve, this must happen from Bid stage onwards.</p> <p>Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, is often too late.</p> <p>NK: We agree to MD’s opinion. However, the above sentence needs to be modified to such as “Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted.”</p> <p><u>1.21.2 Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor’s Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.</u></p> <p>I cannot agree with or recommend the deletion of the clause regarding consent of the Engineer before demobilisation of foreign Operation Leaders, it is written for a purpose. It is sometimes difficult to get a contractor to assign any skilled foreign personnel on JICA projects in remote locations even when they are clearly necessary, for reasons of safety, quality and performance. Even when mobilised for example to comply with this clause, the contractor will have an incentive to demobilise such personnel as soon as he possibly can to optimise his profits rather than consider safety, etc.. I have recommended that some control is vital i.e. review and consent of the Engineer.</p> <p>Other clauses that have now been deleted were also necessary to add to the flavour of this sensitive clause.</p>	<p>the Contract, the Contractor shall be required to select candidates from his local skilled and unskilled workforce that he considers are suitable to act as future Operation Leaders and skilled workers, respectively.</p> <p>(2) Training of Operation Leaders</p> <p>(a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.</p> <p>(b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.</p> <p>(3) Training of Skilled Workers</p> <p>(a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.</p> <p>(b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness <u>according to the work</u> and also to pass on their knowledge in future to their working colleagues and compatriots.</p> <p>(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.</p> <p>(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.</p> <p>(6) Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.</p>
---	--	--

<p>1.21.3. When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries.</p> <p>NK: This sentence may be necessary to be reviewed.</p> <p>Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.</p> <p>Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.</p> <p>1.21.4. It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.</p> <p>1.21.5. Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.</p> <p>NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.</p> <p>See above notes, it really should be "consent"</p> <p>1.21.6. Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.</p> <p>1.22 Dangerous Work</p> <p>1.22.1. Particular care shall be taken by the Contractor when performing any Dangerous Work.</p> <p>1.22.2. Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the</p>	<p>If now has little meaning or effect and basically a unscrupulous contractor will can now argue that the assignment of some foreign operation leaders and trainers for a short period complies with the requirements, his contract obligations are then all satisfied and having demobilised same persons, the employer is responsible for inadequacies beyond that point by not specifying more training.</p> <p>1.21.3 When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries.</p> <p>NK: This sentence may be necessary to be reviewed.</p> <p>Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.</p> <p>Please also note that this entire clause is my suggestion only, if JICA and/or NK do not want it, please advise and I will delete all such training as necessary.</p> <p>Please see above; the deletion of the other clause is not recommended. This training clause is an unusual requirement which is not compatible with the contract and it deserves full explanation as there is otherwise a risk that it will be misused in future.</p> <p>(7) It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.</p> <p>(8) Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.</p> <p>NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.</p> <p>See above notes, it really should be "consent"</p> <p>NK6/6: (8) is moved to 1.21.5 because they are general requirement in 1.21.</p> <p>1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.</p> <p>1.22 Dangerous Work</p> <p>1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.</p> <p>1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.</p> <p>1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by</p>	<p>1.21.4 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. <p>nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.</p> <p>1.22.3. The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.</p> <p>I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)</p> <p>1.22.4. The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist (JC33) trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.</p> <p>JC33: specially</p> <p>NK5/6: To MD, Please check it.</p> <p>1.22.5. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.</p> <p>1.22.6. The Contractor shall select-train and equip a specialist rescue team or teams of selected workers at the Site <u>for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7.</u> who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue. (JC34).</p> <p>JC34: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.</p> <p>NK5/6: Will modify as commented.</p> <p>1.22.7. Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC35)</p> <p>NK: Harness is basically used now and belts is not, so deletion of belt is made.</p> <p>Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2</p> <p>The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.</p> <p>JC35: Move to 1.24</p> <p>NK5/6: Will modify as commented.</p> <p>1.22.8.1.22.7. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.</p> <p>1.22.9.1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC36).</p>	<p>issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.</p> <p>I have added the following because of apparent concerns over the meaning of JSSS 2.5.1.(3)</p> <p>1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist (JC33) trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.</p> <p>JC33: specially</p> <p>NK5/6: To MD, Please check it.</p> <p>Can also be "specially" if you prefer.</p> <p>NK6/6 Confirmed.</p> <p>1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.</p> <p>1.22.6 The Contractor shall select-train and equip a specialist rescue team or teams of selected workers at the Site <u>for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7.</u> who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue. (JC34).</p> <p>JC34: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.</p> <p>NK5/6: Will modify as commented.</p> <p>1.22.7 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC35)</p> <p>NK: Harness is basically used now and belts is not, so deletion of belt is made.</p> <p>Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2</p> <p>The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.</p> <p>JC35: Move to 1.24</p> <p>NK5/6: Will modify as commented.</p> <p>NK6/6 Confirmed moved to 1.24.7.</p> <p>1.22.8.1.22.7. The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.</p> <p>1.22.9.1.22.8. If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC36).</p> <p>JC36: ditto</p> <p>NK5/6: Will modify as commented.</p> <p>1.22.10.1.22.9 The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately</p>	<p>nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.</p> <p>1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.</p> <p>1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specially trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.</p> <p>1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.</p> <p>1.22.6 The Contractor shall train and equip teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7.</p> <p>1.22.7 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. Moved 1.24.7</p>

This is a "failsafe" in JSSS production.</p> <p>3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.</p> <p>4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors</p>	<p>1.23.3 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.</p> <p>1.23.4 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.</p> <p>1.23.5 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.</p> <p>1.24 Accident Response Plan</p>
---	--	--

<p>Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.</p> <p>4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.</p> <p>5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.</p> <p>NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.</p> <p>"other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.</p> <p>and any other places as may be specified in the Contract as forming part of the Site comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.</p> <p>1.24.2. The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.3. Unless otherwise specified in the Particular Safety Specification, (JC41) Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.</p> <p>NK: JICA want to clarify where "other places (if any) are.</p> <p>Deleted see above</p> <p>JC41: Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!</p> <p>1) If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.</p> <p>JC42: See comment to 1.2.2 (6).</p> <p>NK5/6: Will modify as commented.</p> <p>NK5/6: YH inquired if the sentence of "the family members of all other persons" is necessary to be deleted.</p>	<p>do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.</p> <p>5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.</p> <p>NK6/6: We advised to JICA already the above "as" and "unless". The facilities in distance is already advised in User Guide". .</p> <p>NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.</p> <p>"other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.</p> <p>and any other places as may be specified in the Contract as forming part of the Site comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.</p> <p>NK6/6: confirmed.</p> <p>1.24.2 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.3 Unless otherwise specified in the Particular Safety Specification, (JC41) Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site. (JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.</p> <p>NK: JICA want to clarify where "other places (if any) are.</p> <p>Deleted see above.</p> <p>JC41: Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!</p> <p>If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.</p> <p>JC42: See comment to 1.2.2 (6).</p> <p>NK5/6: Will modify as commented.</p> <p>NK5/6: YH inquired if the sentence of "the family members of all other persons" is necessary to be deleted.</p> <p>Yes, this applies only to remote sites as described originally in 1.24.1.</p> <p>As 1.24.1 is moved then maybe this needs to be moved also or it needs editing, "such medical services" is not then correct</p> <p>I had originally tried always to use the expression "Unless otherwise specified in the Particular Safety Specification" so what is written in JSSS is a safe default and the risk of error is therefore reduced. This has now been changed here and in 1.36 so reliance is now placed upon the PSS which I had tried to avoid.</p> <p>NK6/6: confirmed.</p>	<p>1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.</p> <p>1.24.2 Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, for the use of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such medical services shall also be made available free of charge for the family members of the aforementioned personnel/persons.</p>
--	---	--

<p>1.24.4. The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.</p> <p>1.24.5. Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example includeThe Contractor shall provide the following medical and first aid facilities:</p> <p>(1) <u>Deployment of appropriate first aid appliances, aids, instruments and medicines.</u></p> <p>(2) <u>First aid training, appointment of first aiders and dissemination of information.</u></p> <p>(3) <u>Type of communication facilities and measures for emergency response.</u></p> <p>(4) Medical staff to be assigned at the Site.</p> <p>(4) <u>Medical Facilities on the Site together with description of equipment and consumables.</u></p> <p>(5) <u>Temporary water and power supply to maintain use during mains supply failure.</u></p> <p>(6) <u>Transportation facilities. ---	---	--

1.24.7. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC44)

JC44: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

1.24.8. Where the Works include the following for example, tThe Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained -(JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

~~(1) Work on or near existing electrical equipment, cables, wiring, services and systems.~~

~~(2) Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary —

~~(3) (1) Diving Work.-(JC46)~~

services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC44)

JC44: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

I do not recommend that your suggested changes are made.

Please refer to GC 6.7 [Health and safety] which in terms of Contractor's basic H and S obligations, should apply and prevail. This is why I had carefully worded this clause and stated "to comply with his obligations under the Contract".

By changing this to "as specified in the Particular Safety Specification" will change the basic requirements of the Contract and should not be done. Ignoring ambiguity and priorities, whatever is stated in the PSS (unless exactly the same as GC 6.7) will unnecessarily and incorrectly change the contract.

Similarly, it is not necessary to define or restrict the services and facilities to be provided as has been attempted in your added 1.24.5 above. I do not recommend that your clause is added meaning that the general requirements of GC 6.7 continue to apply.

The added clause 1.24.5 is not correct anyway as for example "ambulance service" which you have deleted is a requirement of the contract anyway.

To assist the Contractor with his Bid, I had suggested that the Employer/consultant may wish to assist the Contractor by stating actual site requirements in the PSS but not amending the basic requirements of the contract in the process.

On balance I do not see why any real change is necessary to this clause and what is suggested is confusing rather than improving.

NK6/6: We got your notes, however it seems difficult to specify requirements for all contractors from small to large project, or in excessively far distance from town. I think it shall be specified in in PSS.

~~1.24.12 1.24.11 Where the Works include the following for example, tThe Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained -(JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.~~

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

~~(1) Work on or near existing electrical equipment, cables, wiring, services and systems.~~

~~(2) Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary —

~~(3) Diving Work.-(JC46)~~

JC46: Diving work is also Dangerous Work

NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.

~~(4) Similar special circumstances.~~

1.24.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.

1.24.6 The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. Workers so trained are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.

---	--	---

With the changes to your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

JC51: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

NK5/6: Will modify as commented.

1.26.2. The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. (JC52)

JC52: Thank you for being non-native friendly.

FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3. Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

I give no further comment.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. (JC52)

JC52: Thank you for being non-native friendly.

FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above. NK: confirmed.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

No comment.

- (2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage from such flooding, earthquake or volcanic activity.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

<p>(2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.</p> <p>NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.</p> <p>My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?</p> <p>NK: We accept to leave as it is</p> <p>JC54: Better to add.</p> <p>NK5/6: Will modify as commented.</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4. Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5. Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p> <p>This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract. (JC55)</p> <p>NK: We consider that the Contractor may have difficulty to assume what activities can be made.</p> <p>We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.</p> <p>Which underlining? In 1.26.1</p> <p>Please see 1.26.6 for my assumption of your requirements.</p> <p>Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.</p> <p>Please note:</p> <ol style="list-style-type: none"> 1) The Contractor can only plan for what he can reasonably foresee or anticipate and 2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19 3) This only leaves simple search and contact activities which has little or no meaning <p>JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.</p> <p>Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.</p> <p>JC55: Better to jump to 1.26.6 without this.</p>	<p>NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.</p> <p>My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?</p> <p>NK: We accept to leave as it is</p> <p>JC54: Better to add.</p> <p>NK5/6: Will modify as commented.</p> <p>No comment</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p> <p>This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract. (JC55)</p> <p>NK: We consider that the Contractor may have difficulty to assume what activities can be made.</p> <p>We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.</p> <p>Which underlining? In 1.26.1</p> <p>Please see 1.26.6 for my assumption of your requirements</p> <p>Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.</p> <p>Please note:</p> <ol style="list-style-type: none"> 1) The Contractor can only plan for what he can reasonably foresee or anticipate and 2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19 3) This only leaves simple search and contact activities which has little or no meaning <p>JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.</p> <p>Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.</p> <p>JC55: Better to jump to 1.26.6 without this.</p> <p>NK5/6: Will modify as commented.</p> <p>No further comment</p> <p>1.26.6 The Emergency Response Plan, shall cover:</p>	<p>(2) Provision of temporary support to all sides and soffits of excavations or portal of tunnelling of sufficient strength, durability and suitability</p> <p>(3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.</p> <p>1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [<i>Contractor's General Obligations</i>] and JSSS 1.9 [<i>Contractor's Method Statements</i>].</p> <p>1.26.5 Unless otherwise specified in the Particular Safety Specification, the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.</p>
--	--	---

NK5/6: Will modify as commented.

1.26.6. The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7. The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8. Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. (JC56)

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

~~Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. (JC56)~~

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

This is connected with the provision of health and safety measures as referred to in 1.2.2 (6) and can be deleted to be compatible.

NK6/6: confirmed.

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.6 The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

1.26.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

<p>Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.</p> <p>1.26.9. If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.</p> <p>1.26.10. The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.</p> <p>1.26.11. --	---	---

JC57: Engineer's monthly progress report is normally not shared with the Contractor.
Delete "Engineer's" to mean Contractor's progress report.

NK5/6: Will modify as commented.

1.31 Safety Statistics

1.31.1. The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2. Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties~~, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of **candidates** given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage. (JC58)
- (17) Others.

JC58: Statistics and Records are mixed.

1 to 3 and 5 relate to statistics.

4 and 6 to 16 relate to records.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided NK6/6: confirmed.

1.31 Safety Statistics

1.31.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties~~, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of **candidates** given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc. NK: confirmed.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK6/6: We modified based on the above comment JC58. Changed order 1.32 and 1.33. We selected statics items which shall be submitted in daily safety report.

1.31 Safety Statistics

1.31.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2 Actual statistics shall include the following:

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (5) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (6) Number of health and safety staff.
- (7) Number of candidates given safety induction and other training.
- (8) Number of safety inspections,
- (9) Number of detections of non-compliant, unsafe or lack of Contractor's Equipment.
- (10) Number of instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (11) Number of Engineer's Instructions issued for work suspension.
- (12) Number of HSO instructions issued for work stoppage.
- (13) Others.

1.31.3 All data shall be in a format and content given consent by the Engineer.

1.31.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.32 Health and Safety Records

1.32.1 The Contractor shall keep health and safety records for the following:

- (1) Inspection records and checklists.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and

--	---	---

<p>(6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.</p> <p>(7) Work environment records and other records required by JSSS Chapter 2 [<i>General Safety Measures</i>] and other parts of JSSS.</p> <p>1.33.2. All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.33.3. A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [<i>Safety Reports</i>].</p> <p>1.34 Health and Safety Incentive Schemes</p> <p>1.34.1. The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.</p> <p>NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)</p> <p>We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.</p> <p>Deleted see above.</p> <p>1.34.2. It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.</p> <p>1.34.3. It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.</p> <p>1.34.4. Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.</p> <p>1.34.5. Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.</p> <p>1.34.6. The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.</p> <p>1.34.7. As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.</p> <p>1.34.8. The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [<i>Safety Reports</i>].</p>	<p>medical examination results) shall be stored in compliance with the Laws of the Country.</p> <p>(7) Work environment records and other records required by JSSS Chapter 2 [<i>General Safety Measures</i>] and other parts of JSSS.</p> <p>1.33.2 All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.</p> <p>1.33.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [<i>Safety Reports</i>].</p> <p>NK6/6: Moved 1.33 to 1.32 and modified.</p> <p>1.34 Health and Safety Incentive Schemes</p> <p>1.34.1 The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.</p> <p>NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)</p> <p>We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.</p> <p>Deleted see above. <p>1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE</p> <p>1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p> <p>1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO or his delegated and technically qualified assistant (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.</p> <p>We want to ask you to modify the 1.35.2 as the above.</p> <p>As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.</p> <p>I do not recommend your suggested change.</p> <p>JC60: Agree with MD</p> <p>NK5/6: Will modify as commented.</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. <u>The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.</u></p> <p>If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p>	<p>1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p> <p>1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO or his delegated and technically qualified assistant (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.</p> <p>We want to ask you to modify the 1.35.2 as the above.</p> <p>As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.</p> <p>I do not recommend your suggested change.</p> <p>JC60: Agree with MD</p> <p>NK5/6: Will modify as commented.</p> <p>No comment.</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. <u>The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.</u></p> <p>If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p> <p>1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:</p>	<p>1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE</p> <p>1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.</p> <p>All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.</p> <p>1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.</p> <p>If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.</p> <p>1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.</p> <p>If, as a result, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.</p>
--	--	---

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

JC61: Temporary Works is covered in (2).

NK5/6: Will modify as commented.

- (2) New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

JC61: Temporary Works is covered in (2).

NK5/6: Will modify as commented.

- (2) New or up to date recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and

I suggest that "recent" is changed to "up to date" to be consistent with clause (1), to give it improved meaning (although still not definitive), particularly in view of the omission of the 5 year age limitation (which was definitive).

NK6/6: agreed.

that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

This inspection was originally for the purpose of checking that the equipment was new or less than 5-years old.

However, as the age criteria has now been deleted, there is no reason why the Engineer should inspect the equipment and no criteria by which he can determine that the equipment is compliant or otherwise. This being the case, I recommend that this useful safeguard clause should now be deleted also.

Without clear age, criteria I do not recommend that any inspection would be time limited, could not include a full mechanical or operational check and ultimately will result in personal opinion. It may also be compromise later attempts to reject equipment at site when it is then found to be unsafe.

Had the age criteria still been maintained, agency inspection would be a very easy and possibly more efficient alternative.

NK: We considers in actual basis as follows:

Q1: Is Scaffoldings classified in (1) TW? If so, no need to discuss the inspection of Scaffoldings before shipment? Shall Scaffoldings be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this is 1.35.1 and as it is an important item for which there should be no future argument.

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffoldings, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

- (2) New or up to date Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before delivering to the Site to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not what this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant.

NK5/6: Will modify as commented.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit.

JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant.

NK5/6: Will modify as commented.

I note that aside from using the word "recent" which now has no real meaning (see above suggested change) the 5-year age limitation has been deleted here (and in the BDS).

This therefore effectively prevents the engineer from clearly and undisputedly rejecting aged and potentially unsafe or non-compliant equipment including equipment, which

<p>1.36 Health Matters</p> <p><u>1.36.1.</u> The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. --	--	--

~~1.36.3-1.36.5.~~ The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational ~~HA~~ healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

~~1.36.4. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

~~1.36.5-1.36.7.~~ Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

~~1.36.3-1.36.5.~~ The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational ~~HA~~ healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for **emergency response**.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

~~1.36.4. Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

1.36.6. Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

Please refer to my earlier comment under 1.24.6 and for the same reasons I do not recommend that this change be made.

NK6/6: PSS 1.36 in Ussr Guide has referred this 1.36.6. We want to specify as above.

~~1.36.5-1.36.7.~~ Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

1.36.4 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for emergency response.

1.36.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.

1.36.6 Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.
- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.

<p>(2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.</p> <p>(3) The report shall include details of the HSO's recommended counter-measures.</p> <p>NK: Is "HSO" replaced with Contractor as same as (2) above?</p> <p>No, I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.</p> <p>(4) The Engineer is to be consulted on the types of illness for which reports are to be informed.</p> <p>1.37 Design and Management of Temporary Works</p> <p>1.37.1. Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with <u>the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)</u></p> <p>Changed already</p> <p>JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.</p> <p>NK5/6: Will modify as commented.</p> <p>1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.7 [<i>Specified Standards and Regulations</i>] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works <u>including Class A Falsework (JC69)</u>.</p> <p>NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?</p> <p>Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.</p> <p>Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.</p> <p>The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.</p> <p>It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded, I have assume therefore that it is necessary to state the need for Class A Falsework.</p> <p>Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.</p> <p>Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [Specified Standards and Regulations] to cover this generally.</p> <p>Previous clause 1.34.6 has already been deleted.</p> <p>There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per Ito san's comment.</p> <p>JC69: delete it?</p>	<p>(2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.</p> <p>(3) The report shall include details of the HSO's recommended counter-measures.</p> <p>NK: Is "HSO" replaced with Contractor as same as (2) above?</p> <p>No, I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.</p> <p>(4) The Engineer is to be consulted on the types of illness for which reports are to be informed.</p> <p>1.37 Design and Management of Temporary Works</p> <p>1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with <u>the management standard with respect to design, erection, use and dismantling of Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (JC68)</u></p> <p>Changed already</p> <p>JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.</p> <p>NK5/6: Will modify as commented.</p> <p>No comment.</p> <p>1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.7 [<i>Specified Standards and Regulations</i>] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works <u>including Class A Falsework (JC69)</u>.</p> <p>NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specified specially referring to the following BS5975?</p> <p>Section 1: General 1 Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.</p> <p>Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.</p> <p>The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.</p> <p>It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded, I have assume therefore that it is necessary to state the need for Class A Falsework.</p> <p>Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. --	---	--

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6. Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [Health and Safety Officer at the Site (HSO)].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

“Necessary qualification” can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer’s consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

~~I understand your comment and have no objection to the deletion of 1.37.6.~~

1.37.7. Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

No comment.

1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [Health and Safety Officer at the Site (HSO)].~~

JC: JICA commented as follows:

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

“Necessary qualification” can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer’s consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

~~I understand your comment and have no objection to the deletion of 1.37.6.~~

NK6/6: confirmed.

1.37.7 Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate

1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

1.37.6 Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 ~~or any other acceptable standard in accordance with JSSS 1.37.2. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS (JC70).

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

~~1.37.8. Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) Appointment of appropriately qualified and experienced staff.~~
- ~~(2) Preparation of adequate Temporary Works designs.~~
- ~~(3) Independent internal or external checking of the Temporary Works Design.~~
- ~~(4) Preparation of a Temporary Works register and records.~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment.~~
- ~~(6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - ~~(a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use, and~~
 - ~~(b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

that the Contractor has systems in place to ensure compliance with BS 5975 ~~or any other acceptable standard in accordance with JSSS 1.37.2. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer's Duties and Authority] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS (JC70).

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

Will look at this when I review the user guide.

NK6/6: confirmed.

~~1.37.8 Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) Appointment of appropriately qualified and experienced staff.~~
- ~~(2) Preparation of adequate Temporary Works designs.~~

- ~~(4) Preparation of a Temporary Works register and records.~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment.~~
- ~~(6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - ~~(a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use, and~~
 - ~~(b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

The Engineer may review Temporary Works design, for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2.

<p>Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?</p> <p>The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.</p> <p>However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO, I believe that it is a correct requirement which in practice should not be more than a counter signature.</p> <p>1.37.9. In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.</p> <p>NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?</p> <p>Understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.</p> <p>The following clause can be deleted</p> <p>1.37.10. For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].</p> <p>1.37.11. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.12. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. and shall obtain the consent of the Engineer.</p> <p>NK: We think 1.3.12 is too long sentence to clearly understand requirement.</p> <p>Yes I agree and have reworded this as above.</p> <p>Q-1 Is consent by the Engineer given to specialist staff?</p> <p>This part can be deleted.</p> <p>Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?</p> <p>We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.</p> <p>I have reworded all, please refer to the above</p> <p>1.38 User Training (JC71)</p> <p>JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.</p> <p>NK5/6: Will delete as commented.</p> <p>NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:</p> <p>(11) MM: This section will be left in the next draft and perhaps deleted in the final draft.</p>	<p>Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?</p> <p>The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.</p> <p>However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. [Inspection and Monitoring of Temporary Works].</p> <p>1.37.9 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.</p>
--	--	--

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

~~recommend that it be included here as a default requirement~~

~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(1) Safe system and Plant use, operation and process control.~~
- ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(3) Training in use of all hardware and software packages.~~
- ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(5) Recording and reporting.~~
- ~~(6) Emergency operation procedure.~~
- ~~(7) Maintenance management procedures.~~
- ~~(8) Inventory and store control systems.~~
- ~~(9) Particular safety procedures, including:
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~~~

~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.6. Other requirements for User Training—~~

- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
- ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

(e) — MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

~~recommend that it be included here as a default requirement~~

~~1.38.7. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~

~~1.38.8. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~

~~1.38.9. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~

- ~~(10) Safe system and Plant use, operation and process control.~~
- ~~(11) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
- ~~(12) Training in use of all hardware and software packages.~~
- ~~(13) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
- ~~(14) Recording and reporting.~~
- ~~(15) Emergency operation procedure.~~
- ~~(16) Maintenance management procedures.~~
- ~~(17) Inventory and store control systems.~~
- ~~(18) Particular safety procedures, including:
 - ~~(e) Safe working procedure;~~
 - ~~(f) Housekeeping of the facilities;~~
 - ~~(g) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(h) Safety measures for the Works and all items of Plant.~~~~

~~1.38.10. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~

~~1.38.11. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~

~~1.38.12. Other requirements for User Training—~~

- ~~(20) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~

- ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(4) The Engineer may choose to send representatives to witness the training.~~
- ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~
- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe~~

- ~~(21) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~
- ~~(22) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(23) The Engineer may choose to send representatives to witness the training.~~
- ~~(24) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(25) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(26) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty six (56) days before any training commences.~~
- ~~(27) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(28) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(29) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(30) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(31) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(32) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(33) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(34) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(35) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise~~

use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.

~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~

~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(19)(1) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

~~provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty six (56) days.~~

~~(36) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~

~~(37) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~

~~(38) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.39 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

1.39.1. If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.

1.39.2. Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.

1.39.3. Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.

1.38 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

The stipulation of User Guide is deleted in JSSS, so I think (13) "User Guide" is not necessary as directly related with the Contractor.</p> <p>A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:</p>	<p>with the Contractor's safety regulations and who can also be referred to within the OSHA definition as a "Competent Person".</p> <p>(7) "OSHA" means the technical requirements of "OSHA Standard Part 1926 Safety and Health Regulations for Construction", as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.</p> <p>(8) "Particular Safety Specification" means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project.</p> <p>(9) "Project Safety Specification" means the document that contains Part 1 [JSSS] and Part 2 [<i>Particular Safety Specification</i>].</p> <p>(10) "Project" means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.</p> <p>(11) "Safety Plan" means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [<i>Contractor's General Obligations</i>] as supplemented by JSSS 1.7 [<i>Contractor's Safety Plans</i>].</p> <p>(12) "Safety" shall also mean "occupational health and safety" and "health and safety".</p> <p>(13) "User Guide Guide for the Use of Executing Agencies" means the document of that title separately published by JICA for the Executing Agencies and which contain the guides for incorporation of JSSS into the bidding and contract documents for relevant Projects.</p> <p>A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:</p>
---	---	--

<p>(1) “Accident Response” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [<i>Accident Response Plan</i>].</p> <p>(2) “Confined Spaces” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.</p> <p>(3) “Cofferdam” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.</p> <p>(4) “Dangerous Goods” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.</p> <p>(5) “Dangerous Work” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure. For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p>	<p>(1) “Accident Response” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [<i>Accident Response Plan</i>].</p> <p>(2) “Confined Spaces” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.</p> <p>(3) “Cofferdam” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.</p> <p>(4) “Dangerous Goods” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.</p> <p>(5) “Dangerous Work” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure. For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p>	<p>(1) “Accident Response” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [<i>Accident Response Plan</i>].</p> <p>(2) “Confined Spaces” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.</p> <p>(3) “Cofferdam” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.</p> <p>(4) “Dangerous Goods” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.</p> <p>(5) “Dangerous Work” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.</p> <p>(6) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure. For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [<i>Diving Works</i>].</p> <p>(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.</p> <p>(8) “Elevated Access Structures” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.</p> <p>(9) “Emergency Response” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [<i>Emergency Response Plan</i>].</p> <p>(10) “Falling Objects” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.</p> <p>(11) “Falsework” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.</p>
--	--	--

<p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:</p> <p>(a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;</p> <p>(b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and</p> <p>(c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.</p> <p>NK: May we know the source of Classification? May we know if this Zones are specified in JSSS? Classification of Zones is from the Technical Measures Document of HSE. https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm OSHA also have a classification which is more complicated. Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.</p> <p>(15) “Hoisting Operation” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.</p> <p>For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [<i>Hoisting and Rigging</i>].</p> <p>(16) “Operational Area” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.</p> <p>(17) “Personal Fall Arrest System” or “PFAS” means a fall protection system that is designed to arrest a worker in a fall from a working level.</p>	<p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:</p> <p>(a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;</p> <p>(b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and</p> <p>(c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.</p> <p>NK: May we know the source of Classification? If you do not want to use this, please advise me and I will delete.</p> <p>NK6/6: Chapter 2 specifies as follows: 2.1.5. Further Requirements for Dangerous Work Further to the requirements of JSSS 1.22 [Dangerous Work] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, r ... We want to specify as (14) without specifying Zones 0 to 2.</p> <p>(15) “Hoisting Operation” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.</p> <p>For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [<i>Hoisting and Rigging</i>].</p> <p>(16) “Operational Area” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.</p> <p>(17) “Personal Fall Arrest System” or “PFAS” means a fall protection system that is designed to arrest a worker in a fall from a working level.</p>	<p>(12) “Formwork” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.</p> <p>(13) “Hazardous Substances” means any substance, whether solid, liquid or gas, that may cause harm to health.</p> <p>(14) “Hazardous Areas” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:</p> <p>(a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;</p> <p>(b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and</p> <p>(c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.</p> <p>(15) “Hoisting Operation” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.</p> <p>For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [<i>Hoisting and Rigging</i>].</p> <p>(16) “Operational Area” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.</p> <p>(17) “Personal Fall Arrest System” or “PFAS” means a fall protection system that is designed to arrest a worker in a fall from a working level.</p>
--	---	--

<p>(18) “Personal Fall Restraint System” or “PFRS” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.</p> <p>(19) “Personal Protective Equipment” or “PPE” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.</p> <p>(20) “Safety Belt” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.</p> <p>(21) “Safety Harness” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.</p> <p>(22) “Scaffold” or “Scaffolding” means a temporary structure or structures that provide access on or from which persons work or to support Goods.</p> <p>(23) “Skill Training” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [<i>Skill Training</i>]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.</p> <p>(24) “Spotter” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [<i>Spotters Flagmen and the Like</i>]. Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.</p> <p>(25) “Trade Effluent” means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.</p> <p>(26) “Unexploded Ordnance” or “UXO” shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.</p> <p>(27) “User Training” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel</p>	<p>(18) “Personal Fall Restraint System” or “PFRS” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.</p> <p>(19) “Personal Protective Equipment” or “PPE” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.</p> <p>(20) “Safety Belt” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.</p> <p>(21) “Safety Harness” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.</p> <p>(22) “Scaffold” or “Scaffolding” means a temporary structure or structures that provide access on or from which persons work or to support Goods.</p> <p>(23) “Skill Training” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [<i>Skill Training</i>]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.</p> <p>(24) “Spotter” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [<i>Spotters Flagmen and the Like</i>]. <p>Annex 1.2: Content of Bid Stage Safety Plan</p> <p>A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding</p>	<p>Annex 1.2: Content of Bid Stage Safety Plan</p> <p>A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding</p>	<p>Annex 1.2: Content of Bid Stage Safety Plan</p>																																																																																																																																				

Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further:

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add "outline (or policy?) of risk assessment" as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) "Safety Plan" means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic policies on health and safety management (compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further:

A1.2.3. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.4. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add "outline (or policy?) of risk assessment" as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) "Safety Plan" means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

See (2) below: NK6/6: Confirmed.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic company policies on risk assessment and health and safety management,

(compliance with Laws of the Country and description of responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

Transferred to below: NK6/6: Confirmed.

A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor's Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2 The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic company policies on risk assessment and health and safety management,

<p>(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel</p> <p>A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.</p> <p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.</p> <p>(5) Bidder's Safety Management System (JC73)</p> <p>Refer to JSSS 1.5 [<i>Contractor's Safety Management System</i>]</p> <p>Confirm-Describe how which scheme the Bidder <u>institutes the Safety Management System</u> is accredited under.</p> <p>JC73: Modified in accordance with modification to JSSS1.5</p> <p>NK5/6: Will modify as commented.</p> <p>(6) Temporary Works</p> <p>Refer to JSSS 1.37 [<i>Design and Management of Temporary Works</i>].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying <u>the outline of safety</u> measures to be applied to ensure compliance with the requirements.</p> <p>NK: JICA added "outline" in the last comment.</p> <p>OK I have amended</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>NK: We consider that the above sentence is independent clause from (6) above and locate in some place.</p> <p>I have edited as above.</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [<i>Contractor's General Obligations</i>], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p>	<p>(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel</p> <p>A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.</p> <p>A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams.</p> <p>Transferred from above. NK6/6: Confirmed.</p> <p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.</p> <p>(5) Bidder's Safety Management System (JC73)</p> <p>Refer to JSSS 1.5 [<i>Contractor's Safety Management System</i>]</p> <p>Confirm-Describe how which scheme the Bidder <u>institutes the Safety Management System</u> is accredited under.</p> <p>JC73: Modified in accordance with modification to JSSS1.5</p> <p>NK5/6: Will modify as commented.</p> <p>No comment.</p> <p>(6) Temporary Works</p> <p>Refer to JSSS 1.37 [<i>Design and Management of Temporary Works</i>].</p> <p>A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying <u>the outline of safety</u> measures to be applied to ensure compliance with the requirements.</p> <p>NK: JICA added "outline" in the last comment.</p> <p>OK I have amended</p> <p>(7) Temporary Facilities on Site</p> <p>The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)</p> <p>NK: We consider that the above sentence is independent clause from (6) above and locate in some place.</p> <p>I have edited as above.</p> <p>(8) Safety Measures for Contractor's Design of the Permanent Works</p> <p>If, under GC 4.1 [<i>Contractor's General Obligations</i>], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.</p> <p>(9) Safety Plan for the Works</p>	<p>(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel</p> <p>A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.</p> <p>A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams.</p> <p>(4) Health and Safety Laws</p> <p>A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. --	---	--

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Yellow marking and red letters : Comments by NK (20200319) & (20200327)

Green – subsequent changes made by DCI, Replied to NK inquiry and added DCI notes (20200325)

200514 DCI Comment

DCI Notes:

We have provided comment where necessary or where requested by NK/JICA.

Our comment is not required by JICA on “blue” shaded items, therefore none is generally provided. This does not mean that we have no comment to make or that we recommend the changes are supportable or correct, which they are often not.

In some instances, we have prepared further notes for NK information so that NK are aware of the further reasons for our concerns.

We have also noticed that some original text may have been changed without any clear identification. Please note that we may not have not made comment on these items. We have also not reviewed the text word-for-word to identify all such changes.

Due to the complicated nature of this document, it is difficult for us to properly edit punctuation, numbering and cross references, which is better achieved on a clean copy. We have tried to do this but assume that we will recheck this again later.

Clause numbering has been reformatted throughout and page numbering adjusted.

We have not issued a clean copy as obviously the notes are important for now but when answers can be provided to the further notes and queries herein, we will be pleased to update and prepare a clean coordinated copy.

Due to clause numbering and heading changes, it will be necessary to update all other cross references in other Chapters where they relate to this Chapter 1, we do this when a clean copy of all is available.

200514 DCI Comment

Copy of Mail from Mr. Ito, JICA on 2020/4/23

Dear Sakoda-san,

Very sorry for this late reply with respect to Chapter 1 and User guide.

Regarding Chapter 1, we have sometimes modified directly the text, and sometimes put comments.

After several times of exchange between us, please be informed of the followings:

- 1) As for the modifications of text with a comment highlighted in light blue, you don't have to examine the contents any more. You are requested only to check the quality of language.
- 2) As for the modifications of text without any comment, same. You are requested only to check the quality of language.
- 3) The modifications of text with a comment highlighted in green are sometimes questions and sometimes requests for advice. So, would you please come up with an appropriate solution?

As for the User Guide, our comments are still preliminary since the draft was still preliminary one.

We have, nevertheless, worked in the same manner as mentioned above as long as practicable.

Thank you for your consideration,

I had suggested that copyright and disclaimer clauses would appear to be necessary for JSSS and had further requested that these suggestions be reviewed by JICA legal sources and that confirmation or comment with any revised text be obtained and provided. To date please note that this has not been received, the following remain therefore as good faith suggestions.

ACKNOWLEDGEMENTS

JICA have referred to other publications during the preparation of this document and parts of such other publications have been used in the preparation hereof. JICA acknowledges and gives credit to these sources/publications which include:

- 1) Japanese Acts, Orders and Ordinances including:
 - Industrial Safety and Health Act
 - Order for Enforcement of Industrial Safety and Health Act
 - Ordinance on Industrial Safety and Health
 - Safety Ordinance for Cranes
 - Ordinance on Safety and Health of Work under High Pressure
 - Ordinance on Prevention of Anoxia, etc.
 - Ordinance on Prevention of Hazards Due to Dust
 - Explosives Control Act
 - Order for Enforcement of Explosives Control Act
 - Ordinance on Explosives Control
- 2) OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulation (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- 3) Construction (Design and Management) Regulations 2015, published by the UK Health and Safety Executive.
- 4) ~~The International Red Cross and Red Crescent Movement (IRCRCM)~~
NK: In 2.9.2 First aid kit: ANSI Z308.1 is referred to. Is the above 4) necessary?
True: ANSI is the kit but first aid courses will also be necessary (see added clauses in Section 2.9 and Chapter 14 also. IRCRCM seems to be a convenient and internationally applicable basis.
The above is not necessary; this page is for copyright rules and as we have not copied or used their script, it can be deleted.
- 5) Conditions of Contract for Construction for Building and Engineering Works Designed by The Employer published by Fédération Internationale des Ingénieurs-Conseils (FIDIC)

Previous Suggestion for JICA consideration:

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.

1.1.2 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [Additional Contractor Forms], Form JSSS/BSD - Bidder’s Safety Declaration.

NK: We consider the 1.1.2 is to be mentioned in Guidance. We propose to move 1.1.2 to Guidance1.3 and modify the 1.1.2 as follows:

1.1.2 The Contractor shall take measures declared in the Contractor’s Safety Declaration.

This is specifically a Bid form to be submitted with the Bid and the wording is correct. Actually, this does require a change to the JICA Standard Bidding Document as included in our earlier draft but JICA do not want to do this.

have modified the User Guide to state this but the same problem will arise, the User Guide requires the Executing Agency to change the Bidding Documents but the SBD prevent this.

If JICA do not change the SBD this will continue to be a problem and for now all else must therefore be an unsatisfactory compromise.

NK: NK inquired JICA whether it is not problem to include the form of Safety Declaration in the User Guide because the SBD does not allow addition.

NK5/6YH: JICA did not response to the above inquiry. We will proceed as MD proposed.

1.2 General Reference Notes

1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [Definitions and Abbreviations].

1.2.2 The following further general reference notes apply to the content of JSSS:

- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
- (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
- (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
- (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
- (5) Any reference to academic, educational or vocational qualification of Contractor’s Personnel within this document and unless otherwise stated, shall mean a currently valid academic, educational or vocational qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country in respect of a person who has successfully finished a course of comprehensive education and training by that institution or an **equivalent alternative** diploma, degree, or other official certification issued by an acknowledged educational institution of another country and whom the Contractor has ascertained is sufficient and to whom the Engineer has given consent if the latter is a requirement of the Contract.

(6) *Unless otherwise stated in JSSS or the context is otherwise clear,* (JC1) *Any reference in JSSS requiring the provision by the Contractor of health and safety measures for Contractor's Personnel shall also be deemed to include the provision by the Contractor of the same such health and safety measures for Employer's Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.* (JC2)

NK: There are many descriptions of "other the Site areas (if any) where the Works are being executed" in JSSS. GC defines as 1.1.6.7 "Site" means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site. (NKのコメントにより、すでに削除済ですが、Q&Aは残しました。)

May we know the following?

Q1: Which places you are assuming as other places?

Q2: Are other places specified in the Particular Safety Specification?

Other places may be specified in the Contract as forming part of the Site such as offsite storage areas provided by the Employer or Employer's and Engineer's compounds and facilities all of which may be remote from the Site but for which the Contractor still has the usual obligations such as care, insurance, maintenance, etc.

This is obviously creating difficulty with interpretation, so I have deleted all such reference in JSSS and it now it constantly refers to the Site only. This will also be considered for mention in the User Guide

IC1: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works"

NK5/6YH: NK would like to select the 1 above for JSSS:

IC2: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works."

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

NK5/6YH: NK would like to ask MD to review and select proper wording for JSSS:

This clause is intended only to ensure that the Employer's Personnel and any other persons who are entitled to be on the Site are automatically provided with the same health and safety measures that are provided to the Contractor's Personnel, whenever there is a mention of "Contractor's Personnel".

Thereafter there should be no other reference to "Employer's Personnel and any other persons who are entitled to be on the Site" unless it is for reasons other than the provision of health and safety requirements. I have reviewed other clauses and deleted some, where this is necessary.

For the purpose of this reference only it is not necessary to add any additional wording to "Site".

コメントの追加 [伊藤1]: In this chapter 1, the expression "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site" which is very long, and would be even longer with our next comment, is sometimes observed.

NK with MD may wish to choose one of the following options, whichever is better:

1. With this additional wording, simply say "the Contractor's Personnel" or

2. Without this additional wording, every time repeat "all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works"

コメントの追加 [岡本2]: Safety measures are needed not only in the Site.

We would like to have advice of NK/MD. The current draft JSSS says:

A: the Site (very often) and

B: the Site and other places (if any) where the Contractor intends to execute the Works. (only in JSSS 1.7)

Safety measures are needed not only in the Site but other working areas the Contractor uses (but not designated as the Site in the Contract). In this sense, to be more correct, we believe most of "the Site" in JSSS now should be modified as B above.

Therefore, it seems to us wise to add an interpretation of the "Site" in 1.2.2, for example:

"Unless otherwise stated in JSSS or the context is otherwise clear, "Site" used in JSSS shall be deemed to include any places other than the Site where the Contractor intends to execute the Works".

Disadvantage of this solution is that Site is defined in the GC and we may create confusion with this new interpretation.

Otherwise, we may repeat "the Site and other places (if any) where the Contractor intends to execute the Works" every time. But this is too long, so a bit awkward.

How do you think?

I suggest the clause can then be as now suggested by JICA or even left simply as it was.

- (1) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
- (2) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that Project shall apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the revision and issue of JSSS to be used for the Project shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

~~1.3.1~~ JSSS shall form a part of the Project Safety Specification, as defined in Annex 1.1, which in turn forms a part of the Specification. The “Project Safety Specification” shall have priority over the other parts of the Specification in respect of health and safety matters. Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS, as illustrated in Annex 1.4: [Figures and Illustrations], Fig A1.4.1 [Incorporation of JSSS in Bid and Contract Documents] and as follows: (JC3)

~~1.3.2~~ JSSS shall be included as a part of the Specification for the Works, which shall be subdivided into two parts namely:

~~1.3.3~~ The Project Safety Specification (including JSSS); and

~~1.3.4~~ The Technical Specification

~~1.3.5~~ The priorities of the document comprising the Specification are as follows:

~~1.3.6~~ Within the “Project Safety Specification” the Particular Safety Specification shall have priority over JSSS;

~~1.3.7~~~~1.3.1~~ The “Project Safety Specification” shall have priority ~~over the~~ Technical Specification in respect of health and safety matters.

NK: Q1: We think it needs to explain/define “Technical Specification” as same as User Guide 1.3.2 (3) The “Technical Specification” shall comprise the specification for the general and technical aspects of the Works, excluding requirements for health and safety.

Yes I agree but the problem again is that “Specification” is already defined in the General Conditions of Contract and any change should be therefore be through a Particular Conditions change but JICA do not want this.

I have added the explanation as above but please note that this is a compromise.

Q2: Is “other parts of” necessary?

Thank you and no, if isn't, see above. (Already deleted.)

JC3: *Better to avoid using “Technical specification”*

Fig A1.4.1 moved to User Guide

NK5/6: No comment to JC because JICA want to modify as they commented.

I am informed that my comment is not required on “blue” shaded items, therefore none is provided

Suggested editing

~~1.3.8~~~~1.3.2~~ The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

I recommend that the following is necessary (JC4)

コメントの追加 [岡本3]:

Better to avoid using “Technical specification”

Fig A1.4.1 moved to User Guide.

~~The User Guide shall not form a part of the Contract.~~

NK: MD proposed the addition above. NK considers it is not necessary.

IC4: Not necessary.

NK5/6: Deleted as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

Notes to NK: the statement that the User Guide does not form a part of the Contract is important and intended to limit risk for JICA.

The deletion is shaded in blue so I must not comment.

The biggest user of JSSS is actually the Contractor, and if it is published at the same time as the User Guide on the same JICA website the contractor will refer to it and this could create future problems.

Future claims from contractors can be predicted on this for example that the Bid documents have not been prepared properly according to the User Guide or that the full information (for example required by User Guide clause 1.3.3) has been not been provided or has been withheld. Whether such claims are insupportable under the contract or not, they must still be defended and this takes time and money usually which JICA pay.

JSSS 1.3.4 was intended to very simply prevent this but it has been deleted and I have been asked not to comment, so what can I do?

After further consideration on this subject and as advised in my last comment of Annex 1, I also suggest that it is better to rename the "User Guide", for example as the "Guide for Use of Executing Agencies", it is more correct and may reduce the risk of claim even though it will not solve this problem fully.

1.4 Compliance with JSSS and Other Regulations

1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3 The Contractor shall comply fully with the requirements of JSSS Projectas ~~supplemented and modified by the Particular~~ Safety Specification.

1.4.4 ~~Compliance with JSSS shall not impose or imply any role or responsibility upon the Employer or the Employer's Personnel for health and safety or management of the Works all of which is to be performed by the Contractor in accordance with the Contract.~~(JC5)

IC5: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

1.4.5 ~~Where JSSS and the Particular Safety Specification contain insufficient or no safety regulations for any part of the Works, the Laws of the Country shall apply.~~(JC6)

NK: 1.4.5 seems duplicate with GC 1.13 Compliance with Laws: The Contractor shall, in performing the Contract, comply with applicable Laws. Unless otherwise stated in the Particular Conditions. Is 1.4.5 necessary?

It is intended to be for the situation where JSSS has been agreed to be use, but it is lacking in some areas in which case we use the Laws.

IC6: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6.

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided.

コメントの追加 [伊藤4]: Not necessary

コメントの追加 [岡本5]: Not very clear, thus not necessary. If this is to say any act by the Engineer shall not relieve the Contractor from his responsibility, such statement already exists in GC 3.1.

コメントの追加 [岡本6]: The Law of the Country shall be respected in any case, and that is specified in 1.4.2. See also our modification to 1.4.6

1.4.6 If, for the particular parts of the Works, the Project Safety Specification does not contain safety requirements and there are no safety regulations contained in the Laws of the Country for the particular part of the Works, the Contractor shall propose suitable safety measures in the Safety Plans internationally acceptable safety regulations for the Engineer's consent. These may contain proposing application of internationally recognised standard or regulation.

NK: Is 1.4.6 new clause to specify regulations? May we know the reason of addition?

It is intended for use where we have dropped back to the Laws but there are no particular Laws available.

I have no objection if both are deleted.

NK: NK propose to combine 1.4.5 and 1.4.6 below.

If there are no or insufficient safety provisions in the Laws of the Country and in JSSS and the Particular Safety Specification for the particular part of the Works, and if the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent. (subject to MD's review.)

There is no JICA comment to the above.

There is no JICA comment on this.

Your suggested combined clause is suitable, I have edited as follows:

NK6/6: We adopt the following:

1.4.6 If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

1.4.7 Specified Standards and Regulations(JC7)

JC7: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

NK5/6: YH think these regulations do not include the law. To MD, please review this comment and sentences.

For example, OSHA requirements to which you have referred in JSSS, are actually their regulations not standards.

These regulations are intended for the US and are enforceable only there under their rule of law.

Using OSHA does not mean or imply that you are adopting related US laws or rules for enforcement.

To avoid any legal association, please refer to subclause (4) below and also throughout the other "technical" chapters of JSSS where reference is made to OSHA by using the phrase to the "technical requirements of"

This is very much a compromise but something like this is necessary to support your choice of OSHA as a reference basis.

My own opinion is that OSHA will not form a part of the applicable Laws or the Laws of the Country with which the Contractor is to comply under the Contract (see GC 1.13 and 13.7 respectively), however I recommend that JICA should check this opinion to support their choice of OSHA, HSE etc.

Please advise of any further requirements or if you require any change.

- (1) Unless otherwise instructed by the Engineer, any reference standard or regulation shall mean a reference to the latest issued edition of that standard or regulation as at the Base Date.(JC8)

JC8: Better to add this in the main text of JSSS as mentioned in A1.1.5?

NK5/6: YH think these regulations do not include the law. We would like to ask MD to review this.

There appears to be no problem with transferring the above clause to here but it needs deleting in the Annex to avoid duplication.

- (2) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is

コメントの追加 [伊藤7]: We believe this 1.4.6 treats OSHA, BS, ISO, etc. which are mentioned in JSSS. Is our understanding right? If so, we just want to make sure that the word "regulation" will not induce misunderstanding that it includes Law of the Country.

コメントの追加 [J8]: Better to add this in the main text of JSSS as mentioned in A1.1.5?

acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

~~(2)~~(3) *Application of detailed parts of any standards or regulations specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request. (JC9)*

IC9: We are afraid that OSHA, in particular, contains very detailed requirements some of which may be relevant in American context but not anywhere else. As discussed at the last meeting with MD, we believe that this kind of "waiver" should be provided.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Please refer to editing as shown in red

~~(3)~~(4) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

1.4.8 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".

1.4.9 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.

(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear. (JC10)

IC10: We don't really understand the meaning of this.

NK5/6: YH considers this cannot be understood. To MD, please review this sentence..

Please clarify the meaning your query as I cannot clearly understand.

Similar to GC 1.5, the documents in JSSS are basically to be taken as mutually explanatory of one another however the priority of the documents should be stated, in order to resolve any future ambiguity or discrepancy. For this reason, I have suggested that for any interpretation difficulty;

between Chapter 1 (which is General) and all other chapters, then Chapter 1 will prevail and apply

between Chapters 2 to 6 (which are also general) and all others (Chapters 7 to 10 and future), Chapters 2 to 6 will apply

Please advise of any change that you require.

NK6/6: We proposed alternative of 1.4.10 in NK6/6 below.

1.4.10 Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of JSSS throughout the Time for Completion ~~and Defects Notification Period. - during any additional period(s) within the Defects Notification Period when the Contractor may be completing any outstanding work or remedying any defective work and as~~

~~may be further specified in the Particular Safety Specification.~~ (JC11) Please see NK6/6 below for proposed 1.4.10.

NK: We consider that this phrase may be changed to “and the Defects Notification Period”? (Though the phrase is correctly expressed.)

No, your suggested change would not be correct this has been especially drafted following JICA comment in January. The Contractor has no continuous automatic obligation throughout the DNP. Upon Taking Over the works are finished except for any agreed and minor outstanding works and rectification of defects. The Employer takes over all responsibility for the Works as it his property, he is insuring and he is responsible for the safety of all persons on his property. All temporary facilities should have been removed before this unless specifically described otherwise in the Contract (Particular Safety Specification).

The Contractor actually has very limited responsibilities for his own employees when they are engaged upon the Employer’s property except as stated in this clause.

NK: we agree to leave this as specified.

JC11: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

NK5/6: Will modify as commented.

I am informed that my comment is not required on “blue” items but am a little confused as NK are requested to redraft.

Notes for NK:

The following information is given for NK use.

I completely understood the JICA intentions during the earlier discussion in January which is why the above advice (highlighted in green) was given.

The Contractor must have already completed the Works before commencement of the DNP and they have already been taken over, occupied and put into use by the Employer.

The Contractor of course has a contractual obligation to take care of the health and safety of his employees when they are completing any work which is outstanding or executing any work required to remedy defects during the DNP and it is not necessary to state this in JSSS.

However, the Contractor has no obligation to continue to provide the majority of the facilities or services of JSSS during the DNP as the Works are completed, handed over, occupied and used by the Employer and most if not all temporary facilities will already have been removed.

To state that “the Contractor shall comply with the requirements of JSSS throughout the DNP” is not correct.

The Contractor for example has no obligation to provide ongoing services and facilities during the DNP, meaning no clinic, ambulance, medical facilities, fire-fighting, support to Employer and Engineer, spare PPE, training, scaffolding, contractor’s equipment and temporary works general availability etc etc, all of which are “requirements” of JSSS.

I am concerned that this will be misunderstood or even abused by some employers and consultants and that because this is so stated the contractor will be requested to provide services and facilities that he is no longer responsible for.

If any facilities are particularly required (e.g. clinic, ambulance, medical facilities, fire-fighting, spare PPE, training etc this should be clearly stated in the Particular Safety Specification so that the Contractor is aware and so that it can be included in his bid.

The added text is not therefore advisable.

NK6/6: As explained in User Guide, we revise as follows:

NK6/2: The issues discussed by JICA and MD are different how to specify continued compliance to requirements during the DNP stipulated in JSSS.

JICA want to specify to continue for the Contractor to take safety measures for workers during the DNP.

コメントの追加 [伊藤9]: We are afraid that our intention was not very much understood by NK/MD. At any time during DNP, the Contractor may be required to intervene for repair. So safety measures must continue to be kept during all DNP.

With this modification, Particular Safety Specification in User Guide will not be necessary any more.

MD wants specify requirements for facilities and services such as medical services for the Employer during the DNP.

We propose to revise 1.4.10 as shown below.

1.4.10 The Contractor shall comply with the requirements of JSSS throughout the Time for Completion and Defects Notification Period.

The Contractor's obligations to provide temporary services and facilities finish at the end of the Time for Completion unless otherwise specified in the Particular Safety Specification.

1.4.11 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor's Safety Management System

1.5.1 The Contractor shall institute a health and safety management system in accordance with OHSAS 18001 or ISO 45001. ~~2018.~~ (JC11a) The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation.

JC11a: OHSAS does not exist any more? Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

NK5/6: OHSAS18001 will be expired on March 11, 2012. To MD, do we make note till the expiry date? NK agreed to delete the year.

1.5.2 The Contractor shall state the applicable standard in the Contractor's Safety Plan. (JC12)

JC12: If delete OHSAS above, delete accordingly.

NK5/6: To MD, please review this.

1.5.3 The Contractor shall submit original or certified true copies to the Engineer of his current certification of compliance with such standard issued by an acceptable organisation. Alternatively, instead of complying with JSSS 1.5.1 above, the Contractor may institute a safety management system by himself and regularly conduct audits in accordance with JSSS 1.17. (JC13)

JC13: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

NK5/6: Will modify as commented.

1.5.4 The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

NK: JICA deleted 1.5.3 in the last comment because JICA wants for the Contractor to institute and operate HS management system but not request submission of certification. (actually and practically certificate is not much important). We think 1.5.3 should be deleted.

I have deleted the requirement with the Bid (see Annex 1.3), however if the contractor is to comply with a scheme how does the Engineer know which scheme and how to verify compliance?

It has no little or no meaning otherwise.

NK: JICA intention is only to apply the safety management system excluding the certification and auditing by the certification body. Therefore, 1.5.3 is considered not request certification. To JICA, is this understanding correct? この考え方で正しいでしょうか?

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK, please can you advise me of the text that you want to insert here and I will edit this as necessary.

1.6 Checking and Validation of Submissions

1.6.1 In accordance with GC 4.9 [Quality Assurance] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval

コメントの追加 [伊藤10]: OHSAS does not exist any more??

Necessary? If we amend 1.4.7 (1) as above, the year of publication is not needed.

コメントの追加 [伊藤11]: If delete OHSAS above, delete accordingly

コメントの追加 [伊藤12]: Imposing ISO 45000 is not realistic. We should give an alternative to the Contractor.

or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination (JC13a), design and supervision staff and any independent checkers as appropriate.

コメントの追加 [伊藤13]: coordinator?

NK: Is this correct that we think 1.6.1 is added in relation with design of TW, etc.?

Not only TW it also applies to his Safety Plans, Method statements, any shop or working drawings. In fact any Contractor submissions are stated.

JC13a: coordinator

NK5/6: We think so.

~~1.6.2 For the purposes of interpretation for JSSS, the final paragraph of GC 1.8 [Care and Supply of Documents] shall not apply to submissions of the Contractor including the examples provided in the foregoing paragraph for which the Contractor will be deemed to have carried out all necessary internal checking and validation and for which the Contractor shall remain responsible. (JC14)~~

NK: We think JICA will not accept 1.6.2 because GC does not describe exception of the MS in GC 1.8. This was discussed with you and Mr Hayashi in last January. We want not include 1.6.2.

This is a problem resulting from the refusal to issue PC changes and it is a compromise which is aimed to cover the risk of potential claims that JICA may have to fund. I believe that with the increased amount of submissions such as method statements, safety plans and temporary works details, there is an increased possibility that the Engineer could comment but chooses not to or even overlooks or misses, errors. If this happens there is the risk of avoiding responsibility if an error or defect (what is this?) should have been discovered. (JC14)

It is a strange but potentially onerous obligation that is inconsistent with GC 4.9 even if 1.8 does not state the consequences. GC 1.8 states: "If a Party becomes aware of an error or defect in a document which was prepared for use in executing the Works, the Party shall promptly give notice to the other Party of such error or defect."

JC14: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).

Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.

We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

NK5/6: Will modify as commented.

NK, please can you advise me of the text that you want to insert here and I will edit the spelling grammar of this as necessary.

コメントの追加 [伊藤14]: Any act of the Engineer (or absence of act) does not relieve the Contractor from his responsibility (GC 3.1).
Any documents prepared and internally validated by the Contractor may contain errors and JICA expects the Engineer, as professional, to assume the role of "double checker" to a reasonable extent. Otherwise, any submission to the Engineer would be meaningless. This does not mean that JICA considers the Engineer should check all the documents prepared by the Contractor.
We think we should not excessively stick to the question of "from whom to whom the responsibility may be transferred".

1.7 Contractor's Safety Plans

1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) that are stated in JSSS;
- (2) that comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract; and

(3) that are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel, Employer's Personnel and other persons entitled to be on the Site. (JC15)

JC15: See 1.2.2 (6).

NK5/6: No comment.

This is connected with the provision of health and safety measures as referred to in 1.2.2 (6) and can be deleted to be compatible.

1.7.3 The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated Overall Bid Stage Safety Plan)
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works

NK: Is it not necessary to mention "Updated"? We think first and updated separate plans are necessary.

I don't quite understand your comment, the Bid Stage Plan is followed by an updated plan after Commencement but this is still an early plan and the same plan (or parts of it) will probably require to be further revised and updated as the detail of works develop and before any parts of the works commence.

NK: We understand your meaning.

1.7.4 The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level throughout the Time for Completion of the Works.

1.7.5 Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility and at any time throughout the Time for Completion of the Works.

NK: Is it necessary to add "throughout the Time for Completion, during any additional period(s) within the Defects Notification Period and as may be further specified in the Particular Safety Specification" as mentioned in JSSS 1.4.10?

Yes thank you, that is true, but better to delete the phrase rather than add.

1.7.6 Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [Content of Bid Stage Safety Plan].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7 Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

NK: Is it not necessary to specify to review Commencement Stage SP?

Can we consider Commencement Stage SP is not be reviewed and the Engineer may review it and give comment in accordance with GC 1.8 Care and Supply of Documents though Japanese draft is specified to review it within 14 days?

Fair comment: I had modified the following clause 1.7.8 to deal with Particular Safety Plans. The Commencement Stage Safety plan is another contract stage submission subject to the same procedures so I have added it there.

Please also note the above correction to the submission date of the plan which should be twenty-eight (28) days after the Commencement Date.

1.7.8 Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9 Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the whole and any part of the Works. (JC16)

JC16: Should it be "of the Works or any part thereof"?

NK5/6: We agreed the above modification.

Yes for consistency that is better but I suggest to further consistency please use:

"the Works or any part of the Works."

- (2) The Contractor shall submit:

- (a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [Commencement Stage Safety Plan].
- (b) The Particular Safety Plans by the date 14 days before each particular parts of the Works starts to be executed, if no sufficient details are prescribed in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.

NK Q1: We consider "the requested information" can be replaced with "Particular Safety Plans"?

I have changed the

Q2: JSSS 1.6.6 of issue 6 specifies required information of (1) to (16) to be included in Particular SP.

We consider it is better to specify the (1) to (16) in 1.7.8 for the Contractor can understand what they shall plan and Bid stage and Commencement stage SP are prepared as Outline Overall Safety Plan

I disagree, many of the items mentioned in Issue 6 are to be included in the Method statement and all other items are included in Annex 1.3 all of which will be progressively developed. There is no need to include additional information here.

NK: understand.

- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:
 - (c) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
 - (d) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and

コメントの追加 [岡本15]: Should it be "of the Works or any part thereof" ?

- (e) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

- 1.7.10 The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.
- 1.7.11 Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.
- 1.7.12 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

- 1.8.1 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.

This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), it is safety warning. I suggest that the full expression should remain.

- 1.8.3 The procedural flow of risk assessment shall be as follows.
 - (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
 - (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE.

NK: May we know what "improved PPE" mean?

Retained

1.9 Contractor's Method Statements

- 1.9.1 The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2 Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and (JC17) include details of all Permanent Works and Temporary Works with supporting documents such as:

コメントの追加 [伊藤16]: Better to have a linkage with the risk assessment.

JC17: Better to have a linkage with the risk assessment.

NK5/6: Will modify as commented.

(1) Studies, investigations and designs.

NK: We suggest to change to “Studies, investigations, and designs”?

Changes

- (2) Structural calculations and any other calculations.
- (3) Specifications and technical details.
- (4) Proposed construction procedure, sequence and method.
- (5) Construction resources including superintendents, workers, operation leaders and Contractor’s Equipment.

NK: We consider “worker” will be used because it is used in other Chapter though FIDIC uses “labour”.

Ok I have changed anyway but it now needs wider wording, labour is also used in FIDIC

- (6) Inspection and monitoring plan.

1.9.3 The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.

1.9.4 Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer’s request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

NK: We consider “for his information” can be deleted because this phrase is not used for Safety Plan though Issue 6 used it.

Changes:

1.10 Engineer's Safety Representative

- 1.10.1 ~~Unless otherwise specified in the Particular Safety Specification, the Engineer may delegate his power and authority to any of his assistant's delegated representative at the Site who (JC18) shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.~~

IC18: Particular Safety Specification is not necessary with this modification.

NK5/6: Will modify as commented.

- 1.10.2 The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3 Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2 If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.

~~1.11.2 If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works of any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as the cause has been investigated and established by the Contractor and corrective and preventive measures have been formulated, proposed such measures to the Engineer, obtained the Engineer's consent and implemented such measures to ensure that no such accident can reoccur. (JC19)~~

IC19: The sentence is not complete???

NK5/6: To Md, please review the sentence.

Thank you, I suggest editing as follows:

- 1.11.4 If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works of any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as:
- (1) the cause has been investigated and established by the Contractor;
 - (2) corrective and preventive measures have been formulated by the Contractor and proposed to the Engineer;
 - (3) the Engineer's consent has been obtained for such measures; and
 - (4) the measures have been implemented to ensure that no such accident can reoccur.
- 1.11.5 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

コメントの追加 [伊藤17]: Particular Safety Specification is not necessary with this modification.

1.12.1 For the purposes of interpretation under JSSS, the reference to “accident prevention officer at the Site” in GC 6.7 [Health and Safety], shall be construed as “Health and Safety Officer at the Site”.

NK: HSO is defined in A1.1.1(3), so can 1.12.1 be deleted?

No. This is necessary to correspond to the definition.

Please note that this is a compromise. PC change would have been preferable.

1.12.2 Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [Contractor's Personnel], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [Health and Safety].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [Law and Language], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) ~~Where there is no legal requirement under the Laws of the Country, the HSO shall have appropriate academic, educational or vocational qualification such as that issued by the National Examination Board in Occupational Safety and Health (NEBOSH) Level 6 Diploma level or an equivalent alternative internationally recognised qualification covering health and safety and risk management. (JC20)~~

~~Where there is no legal requirement under the Laws of the Country or unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as that International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK Level 6 Diploma level or Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) in USA or an equivalent alternative internationally recognised qualification covering health and safety and risk management.~~

No problem with the above, I suggest editing as follows:

Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:

- (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
- (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or

コメントの追加 [岡本18]: To NK: Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

(c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

KC20: To NK, Please check if NEBOSH level 6 or equivalent qualification is not too high (taking account of the reality under projects financed by JICA, in particular in Asia)

NK5/6: We rechecked the qualification of HSO required in the world and tabulated below:

No	Country	Law/Regulation	Title	Requirements	Work Experience	
1	Japan	Ordinance on Industrial Safety and Health	Safety Officer	1. Trained personnel for 9 hrs training course, or	University or technical college science course other courses	in S&H 2 years 4 years
					Senior high school science course other courses	in S&H 4 years 6 years
					Others	in S&H 7 years
2. Industrial safety consultants.						
2	USA	OSHA APPENDIX C TO §1926.65 COMPLIANCE GUIDELINES 1.Occupational S and H Program. U.S. Army Corps of Engineers, EM-385	e.g. Certified Safety Professionals (CSP) by Board of Certified Safety Professionals (BCSP) The Safety and Health Manager shall be the CSP.	CSP 1) Bachelor's degree, and 2) BCSP Qualified Credential (e.g. NEBOSH National or International Diploma in Occupational Health and Safety) 3) CSP examination	4 years of safety experience	
3	UK	Internet Information	Environmental Health and safety manager	1) Bachelor's degree in Safety Engineering, etc. 2) National/International Diploma 1. NEBOSH National Diploma in Occupational Health and Safety. 2. British Safety Council Level 6 Diploma in Occupational Safety and Health., etc.	5 years related experience in environmental health and safety.	
4	Singapore	Regulations	1)Representative of the Contractor 2)Safety Supervisor	1) Training and exam. of 3 days 2) Training of 10 hrs per week for 6 months (60 hrs)		
5	India	Regulation	1)Safety Officer 2)Safety Staff	1) Graduation of safety course more than 2 years in college 2) Training course		
6	Thailand	Regulation	1)Head Man Level 2)Technique Level 3)High Technique Level 4)Professional Level 5)Management Level	1) 12 hr training 2) Ditto 3) 180 hr training 4) Graduation of Occupational health bachelor course, or person trained & passed exam., or safety officer of 5 years experience and trained & passed exam. 5) 12 hr training		
7	Indonesia	Regulation	Occupational Health and safety Expert	10 days (90 hrs) training		
8	Vietnam	Regulation	Not found yet.			

NK: We found each country has its regulation regarding qualification of Safety Officer. Japanese one is almost same level as Head Man Level and Technique Level in Thailand.

In Japanese regulation, the Project Manger shall be a General Safety and Health Manager and supervise the Safety officer(s). Japanese contractors may not assign Japanese engineers directly as HSO though they have experience and knowledge of safety management in construction sites and also ability to manage safety in ODA projects. However, they have no academic certificates in Japan and also international training certificates. The Japanese contractors who work for ODA projects may employ safety specialist who having qualification required in the contract or make their engineers be certified by international organizations such as NEBOSH and BCSP. The contractor's engineers can get such certificates by on-line training course.

Japan, USA and UK give special importance to the S&H work experience, Singapore and Indonesia do to training of 60 to 90 hrs course, and Thailand do to any of bachelor, training or experience.

Actually, depending on scale and accident risk of construction project, the employer or contractor seem to determine requirements of HSO for example the following may be applied for large or complicated projects, NEBOSH International National Diploma (Level 6) in UK and CSP (Certified Safety Professionals) by

BCSP in USA, for small projects, International General Certificate (A level) in UK and SMS (Safety Management Specialists) in USA.

NK: From the above, we propose to revise the (7) as above so that the qualification of HSO shall be 1) licensed or registered in the Country (legal requirement under the Laws of the Country), 2) specified in the Particular Safety Specification, and 3) International Diploma issued by NEBOSH in UK or Certified Safety Professionals by BCSP in USA or an equivalent alternative.

(8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management, two (2) years of which shall have been spent in health and safety work upon an international project (or projects) outside the Country, and be whom the Contractor, collectively with the academic, educational or vocational qualification described above, is qualified to perform the duties subject also to receiving the consent of the Engineer.

NK: We consider NEBOSH Level 6 Diploma level is good idea., however there are few persons who meet the above requirements in ODA projects. Local and most Japanese contractors cannot find such person. Large contractors and European contractors may find them.

We propose to add (7) "unless otherwise specified in Particular Safety Specification" before "the HSO..."

have split this clause for clarity

suggest that NEBOSH is OK as it is because an equivalent alternative is acceptable (see use of this term in JSSS 1.4.7)

It is also subject to receiving the consent of the Engineer.

NK: We think "two (2) years experience outside the Country" is also too high requirement for the local contractors and also Japanese.

We propose to delete "this two years outside the Country" and specify requirement in Particular Safety Specification depending on the Works.

suggest that it is better to state here as a basic standard. If JSSS cannot specify a general standard, the choice of Executing Agencies will vary greatly. I will draft a relevant clause for the User Guide but please note that I have reduced the experience requirements and deleted the international requirements.

NK, please refer to editing above.

NK6/6: Agreed to your editing and request to check (8) modified because it seems something understandable.

1.12.3 Supporting Personnel

Heading is changed to be consistent with the content

NK-1: JICA commented and minutes recorded in January as follows:

7.1.1 (5) HSO's duties:

JC: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan.

No this is not a correct understanding, the HSO duties and obligations are far wider which is why this clause is correct and necessary.

Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

Yes, he will be very busy which is why he must be qualified and experience and given the full support staff that he requires and why he must receive the support of other Contractor's Personnel particularly Operation Leaders, all as stated herein.

MM: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.

NK-2: JICA commented again in the meeting for Chap 8 Excavation works on 2020/2/20 as follows:

3. Common requirements in JSSS

- (4) HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の “The HSO shall inspect work area before starting work...”は、“The Contractor shall ...”へ変更する。

HSO has full responsibility for all safety and has a duty to check whether the person in charge of construction works execute measures at the Site specified in the Safety Plan.

From this idea, the HSO in the sentence “The HSO shall inspect work area before starting work...” shall be replaced with “the Contractor”.

Please let me review the Excavation comments when I receive them, however this looks correct as he is responsible for inspecting the safety arrangements, even if another person does the inspection on his behalf. It needs no change but the work will not always be directly inspected by him, he can and will delegate but he is singularly responsible and will sign it off.

NK-3: JICA agreed in the meeting in January. However, they reconsidered this issue after the meeting and commented as above (4).

We consider HSO cannot actually carry out daily check of TW facilities, PPE, Contractor’s Equipment, etc. before commencement of works. Such daily checks shall be made by the construction staff at the Site in accordance with the Safety Plan. HSO and his staff shall check the safety activities of the construction staff by reviewing check records and daily site inspection by the HSO and his staff.

Based on the above idea, we want to revise some sentences below.

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor’s Personnel.

NK: We propose to delete (2) from the idea of mentioned above NK-3. The supporting personnel shall be full time assignment. The Contractor shall establish system of daily check by the site staff or designated personnel for check by the Contractor and reporting by the site manager to the HSO.

I think that (2) is clear, correct and necessary. Please refer to the following clauses also. It can be full time assistants or other Contractor’s Personnel also who shall check certain aspects and who shall also have other responsibilities given to them by the HSO.

- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) ~~The HSO shall be expected to develop internal procedures whereby all supporting personnel, (JC21) shall be aware of the requirements for and the details of any inspection, for immediately advising the HSO of any unsafe conditions and of any recommendations to prohibit the start or to stop or change safety practices for the particular work and submittal requirements, ultimately allowing the HSO to sign all inspection records as if the inspection has been carried out by the HSO.~~

JC21: It is understood “internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO.....”

But how “and the details of any inspection, for” relates to other part of this sentence???

Non-natives would have difficulty to understand.

NK5/6: YH think the sentence can be separated as follows though no so much difficult to understand the sentence. (次のように分解できるのだと思います。それほど違和感はありませんが。)

- 1) the requirements for any inspection
- 2) the details of any inspection

To MD, we would like to review the sentence because of sentence seems too long.

I suggest the above is edited as follows:

コメントの追加 [伊藤19]: It is understood “internal procedures whereby all supporting personnel shall be aware of the requirements for immediately advising the HSO.....”

But how “and the details of any inspection, for” relates to other part of this sentence???

Non-natives would have difficulty to understand.

- (6) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:
- (a) Supporting personnel are made aware of the requirements for any inspection and the details thereof.
 - (b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work
 - (c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.
- Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.
- (7) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4 Inspections

- (1) The HSO shall be responsible for ensuring:
- (a) That all working areas of the Site (JC22) are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;

JC22: The working areas are not always a part of the Site

NK5/6: No comment to JC because JICA want to modify as they commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and

This is not directly connected with the provision of health and safety measures as referred to in 1.2.2 (6), however I suggest that in this case the wording is changed as above to make it non-specific and therefore of wider w-effect

- (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].
- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

NK: JICA added "and Authorities" in the last comment.

Now changed as above

- 1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.
- 1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

コメントの追加 [伊藤20]: The working areas are not always a part of the Site

- (1) Health and Safety Management Work:
- (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or **any part** of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training **Operation Leaders** in the health and safety aspects of their work including requirements for inspection and **confirmation** of results to HSO;

NK: As proposed to 1.12.3, we propose that the supporting personnel does not include the construction staff. We propose the following to replace(i) above:

- (i) Instructing and training the person in charge of construction works and the Contractor's Equipment in the health and safety aspects of their work including requirements for inspection and reporting of results to HSO;

disagrees and do not feel that any change is necessary. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly.

- (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
- (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
- (l) Planning and implementation of various training and education implementation plans;
- (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
- (n) Preparing regular internal and external reports on health and safety activities; and
- (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

- 1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] then, unless otherwise

instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within ~~seven fourteen (14)~~ (JC23) days of the date of receipt or for the resubmitted proposal within seven (7) days of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving ~~seven-three (73)~~ (JC24) days' notice in writing of the resumption date.

コメントの追加 [岡本21]: 14 days are too long.

コメントの追加 [伊藤22]: 7 days are too long.

To be proactive, the Engineer may give consent at any stage within the above stated time scales.

JC23& 24: 14 days are too long, and 7 days are too long.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

NK: We think the 1.15 is same as Japanese draft, however, we feel it is not clear who take the following action.

Is there any good idea to express the H&S management shall be made by management personnel consisting of construction managers, Operation Leaders, HSO (for reference I added personnel in charge of the activities below.).

Please see above notes, I do not feel that the following is desirable or necessary.

For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend but we try to do it.

(1) Overall Safety Management Activities:

- (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM); ~~(by construction managers, Operation Leaders, HSO)~~
- (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and ~~(by construction managers, HSO)~~
- (c) Monitoring the implementation of the Safety Plan. ~~(by HSO)~~

Above is not recommended.

(2) **Daily** Safety Management of Contractor's Personnel:

NK: We would like to add "Daily" before Safety in (2) to distinguish from (1).

No problem added already.

- (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM; ~~(by construction managers, HSO)~~
- (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures; ~~(by construction managers, Operation Leaders)~~
- (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as: ; ~~(by construction managers, Operation Leaders)~~
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
- (d) Instruction and management of safety education and training; ~~(by construction managers, HSO)~~
- (e) Instruction and management of all safety measures; and ~~(by construction managers, Operation Leaders, HSO)~~
- (f) Site Safety Inspections-~~(by construction managers, Operation Leaders, HSO)~~

None of above is recommended.

NK: We withdraw the addition.

NK: in (f), Joint will be deleted as Joint Site Safety Inspections is made by the HSO and the Engineer.

No problem deleted already.

1.16 Joint Site Safety Inspections

- 1.16.1 In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4 The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is **ensured**. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:

NK: We propose to divide the above to two sentences because the above sentence is long and contains two subjects.

This is not quite correct but I have divided anyway.

- (1) Create checklists for monitoring.
- (2) Carry out regular and random inspections.

- (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
- (4) Create storage and filing systems for the monitoring records.
- (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.

1.17.2 Safety inspection are intended to search for risks and hazards, which present a threat to safe working.

1.17.3 The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:

- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
- (2) Are the Safety Plan requirements being met?
- (3) Is there documented proof of compliance?
- (4) Is health and safety training effective?
- (5) Is the Contractor's health and safety management system working effectively?

1.17.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.

~~1.17.5~~ The audit ~~team~~ procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.

~~1.17.5.1.17.6~~ ~~Unless otherwise consented to by the Engineer, t~~he audit shall be headed by a senior member of the Contractor's head office health and safety team.

~~1.17.6.1.17.7~~ If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.

~~1.17.7.1.17.8~~ The HSO may attend audits but only in an advisory capacity and team members shall not be required or allowed to audit their own work.

~~1.17.8.1.17.9~~ The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.

~~1.17.9.1.17.10~~ The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems.

The Audits shall not replace the regular health and safety inspections.

NK: We think the above sentence is better to be divided two sentences.

this is not quite correct but I have divided it into 2

~~1.17.10.1.17.11~~ The audits shall be conducted ~~on a random basis~~ at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.

~~1.17.11.1.17.12~~ The Engineer may at his option instigate a random health and safety audit by giving 72 hours' written notice to the Contractor. (JC25)

NK: JICA deleted in the last comment. We also consider the Engineer does not do auditing but inspection/supervise the Contractor's activities, and agree to delete this.

do not really understand why it is deleted, as in any case the Engineer should be able to request/initiate an audit if he feels that the H and S system is not working properly

NK: NK misunderstood this clause as the Engineer to do audit. We recommend now as follows;(time limit is given considering the preparation and trip time of the auditing team, and the safety management state cannot be improved in short time except such as cleaning the site, etc. If the Contractor takes actions for the auditing in short time, there is a merit for the Contractor to show example of required improvement.

The Engineer may at his option instruct the Contractor to execute a health and safety audit by giving proper preparation time for the auditing team between 3 days and 7 days.

JC25: It is not practical that the auditing team of the headquarters visit the Site within 3 to 7 days after the Engineer's instruction.

NK: 1.17.11(1.17.12) will be deleted.

~~1.17.12 1.17.13~~ Prearranged audits are not recommended as this will tend to artificially improve the application of safety measures by respective personnel as the time approaches, to avoid criticism.

NK: JICA commented "Such "not to do" should not be included in the specification." and deleted this sentence in the last comment. We agree to delete this because the auditing team cannot come to the site from Headquarters located in other countries by short notice, and the ISO auditing is made by around one month notice or as scheduled.

No comment, to be deleted.

~~1.17.13~~ 1.17.14 An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.

~~1.17.14~~ 1.17.15 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

1.18.1 To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.

1.18.2 In compliance with GC 6.9 [Contractor's Personnel], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.

change not correct

1.18.3 ~~Labourer~~Worker and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.

1.18.4 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.

1.18.5 ~~The Contractor shall specifically ascertain that Contractor's Personnel are all appropriately qualified, skilled and experienced in their respective trades or occupations and the Contractor shall keep records of compliance with this requirement. (JC26)~~

JC26: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.18.6 The HSO shall countersign all such records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective

コメントの追加 [岡本23]: Duplication with 1.18.2. Also, difficult to have a concrete image on what kind of records???

trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.

The above will require editing as above in view of your change

1.18.7 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:

- (1) Work content and work environment.
- (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
- (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
- (4) Allocation of an achievable and safe work volume and time.
- (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].

1.18.8 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.

1.18.9 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.

1.18.10 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that **the HSO** resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

NK: We think it is better to replace "he" with "the HSO" though he/she is nowadays used.

It is not necessary, please refer to JSSS 1.2.2 (8) and GC 1.2 (a). I have used "He" and "his" for example consistently and if it changes here it will require further change.

1.19 Safety Training Generally

1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

1.19.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.

~~1.19.3~~1.19.4 Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate). (JC27)

JC27: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

コメントの追加 [J24]: Very often, foreign people (Filipinos or Singaporeans, for example) are mobilised as manager class personnel in many construction sites. And those people must be trained (e.g. induction training) in English.

1.20 Safety Induction Training

1.20.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom ~~he~~ the HSO is responsible, including the Employer's Personnel and all other persons who are entitled to be on the Site at the request of the Employer or Engineer.

Ditto above

No problem

This is training and may not be directly connected with the provision of health and safety measures as referred to in 1.2.2 (6). I suggest for clarity that the full wording should remain.

1.20.2 The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.

~~(5)~~ Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [Dangerous Work] for additional training requirements. (Refer to separate requirements for special training).

NK: May we know where we can find to refer to special training?

Rephrased

- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3 Practical on-Site demonstrations shall be included.

1.20.4 Training Personnel (JC28)

JC28: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

NK5/6: NK agreed to the above.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.20.5 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.21 Skill Training

1.21.1 The Contractor is reminded of his obligations under GC 6.9 [Contractor's Personnel] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations. ~~The Contractor has been appointed under the Contract on this fundamental understanding and it is not therefore incumbent upon the Employer to support basic skill training of the Contractor's Personnel engaged upon the Works in terms of time and cost.~~ (JC29)

JC29: Not needed to say so in the specification.

NK: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.21.2 ~~The Contractor is also reminded of his obligations under GC 6.1 [Engagement of Staff and Labour] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if The Contractor shall be deemed to be aware that in many countries and locations for which ODA is provided, the qualified, skilled and experienced Contractor's Personnel required by the Contract is frequently not available in the Country or not available in the numbers or of the standards of for the periods required. This is particularly the case in view of the international level of quality, health and safety practice, and performance that is demanded for these ODA Projects, the Contractor shall:~~

~~(1) source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries; and/or~~

~~(2) recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.~~

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall be expected to source and assign upon the Works, Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, (JC30) all of whom shall be~~

コメントの追加 [伊藤25]: We believe that 1.20.4 and 1.20.5 should be transferred to 1.19 since the contents are relevant to all the training (not only to the induction training).

コメントの追加 [岡本26]:
Not needed to say so in the specification.

コメントの追加 [伊藤27]: May be the case in many project, but skilled staff may be sometimes locally mobilized.

~~appropriately qualified, skilled and experienced to the standards required, sufficiently to meet the Contractor's obligations for performance, quality, health and safety under the Contract.~~

JC30: May be the case in many projects, but skilled staff may be sometimes locally mobilized.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Notes for NK

This is already reflected in FIDIC, 6.1 second paragraph. The suggested change actually changes the FIDIC contract requirements by introducing the wording: "to the extent practicable and reasonable". Such a change is not necessary and not recommended.

I had drafted this clause to strengthen the requirements for importing foreign resources, obviously where they are not available locally. The suggested added wording has no contractual meaning and will definitely weaken if not destroy any attempt by the Engineer (or Employer) to impose stronger requirements for importing foreign skilled persons even though the Employer is already paying for it. I note the other deletions, which also tend to weaken requirements.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion and Defect Notification Period.(JC31)

JC31: The Contractor also has to work during DNP and need skilled staff.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

~~Unless otherwise specified in the Particular Safety Specification and without limiting the Contractor's obligations as above, the Contractor shall be required to employ selected candidates as potential operation leaders, with whom the Contractor shall implement a policy of mutual cooperation and training and ensure that this is adopted by all other Contractor's Personnel all of whom shall work closely with and transfer necessary knowledge and skills via OJT to such candidates to raise skill levels and awareness of international standards and for which the following shall apply: (JC32)~~

JC32: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

NK5/6: To MD, please review the comment and modify the sentences.

Your comment requests that training be provided for other workers in addition to operation leaders.

Your original draft required training only for operation leaders and workers engaged in dangerous work.

Your draft documents contained requirements which were very unclear and which had little or actually no connection with the contract.

Dangerous work is covered by 1.20.2

Please refer to my comments on your original draft which I have explained since; I have advised that the Contractor already has a basic obligation to provide appropriately qualified, skilled and experienced personnel under the contract (see GC 6.1 and 6.9) and these contract requirements must not be compromised.

I had explained that it is illogical and contractually incorrect to require the Contractor to provide skilled personnel (where necessary importing skilled foreign personnel) under the Contract, expect the Employer to pay for this via the Contract Price, yet then assign non-compliant workers and other personnel and expect the Employer to pay for further skill training.

If this is required, the extent to which this is to be applied clearly needs to be carefully defined and controlled otherwise it can be argued that having complied with the training requirements he is not responsible for providing any additional capable and skilled persons unless the employer allows and pays for more skill training.

コメントの追加 [伊藤28]: The Contractor also has to work during DNP and need skilled staff.

コメントの追加 [伊藤29]: This sentence is too complicated to be understood by a non-native like me. Could you rephrase with a set of shorter and concise sentences?

I somehow understand that this mentions the training for operation leaders. On the other hand, nothing is mentioned about skill training those other than operation leaders. We believe the latter should be added in the text.

I am reluctant to add further skill training without knowing your precise additional requirements. Can you therefore please describe who shall receive skill training, to what level, with what resources, how to be managed and paid for and how this is to be made compatible with the Contract and I will edit your text as necessary and include this against earlier advice.

On the basis that skill training is only required to develop the skills of local operation leaders (which is still stretching the contract), I suggest editing this subclause as follows:

NK6/6: Training of OL is accepted as MD proposed below. That for skilled workers are proposed to add and modify 1.21.3. Sentences 2.1.3 to 2.1.5 are copied at NK6/6 below.

1.21.3 Further Training of Operation Leaders

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled workforce that he considers are suitable to act as future Operation Leaders.
- (2) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.
- (3) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.
- (4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

Consent is better which is why I have used it. There will be a great tendency for the Contractor not to comply with these requirements properly and it needs to be enforceable somehow, otherwise safety (and quality and performance) will suffer

For information" really has no meaning.

Only "for information", Contractor can proceed even if the course syllabus and hours are clearly inadequate and would not otherwise be acceptable.

- (5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.
- (6) Details-Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

NK: This request is specified in Annex 1.2 (24)(26) as Outline shall be submitted in Bid Stage SP.

This has been repeatedly discussed and explained.

If safety is to improve, this must happen from Bid stage onwards.

Every part of the Bid SP is Outline but some information is necessary on each subject listed in the Annex and should be submitted at Bid stage. If it is inadequate, only then can it be clarified and negotiated before the Contract is signed. After signing, it is often too late.

NK: We agree to MD's opinion. However, the above sentence needs to be modified to such as "Updated details of such training mentioned in the Bid Stage Safety Plan shall be submitted."

~~Subject to receiving the consent of the Engineer, the Contractor may demobilise the Contractor's Personnel from other countries on the understanding that he is satisfied that candidates that have been successfully qualified and that they are able to act fully in accordance with the requirements of the Contract.~~

I cannot agree with or recommend the deletion of the clause regarding consent of the Engineer before demobilisation of foreign Operation Leaders, it is written for a purpose. It is sometimes difficult to get a contractor to assign any skilled foreign personnel on JICA projects in remote locations even when they are clearly necessary.

for reasons of safety, quality and performance. Even when mobilised for example to comply with this clause, the contractor will have an incentive to demobilise such personnel as soon as he possibly can to optimise his profits rather than consider safety, etc.. I have recommended that some control is vital i.e. review and consent of the Engineer.

Other clauses that have now been deleted were also necessary to add to the flavour of this sensitive clause.

It now has little meaning or effect and basically a unscrupulous contractor will can now argue that the assignment of some foreign operation leaders and trainers for a short period complies with the requirements, his contract obligations are then all satisfied and having demobilised same persons, the employer is responsible for inadequacies beyond that point by not specifying more training.

~~1.21.3~~

~~1.21.4 When the Contractor is satisfied that candidates have been successfully trained and qualified, and that they are able to act fully in accordance with the requirements of the Contract and subject to receiving the consent of the Engineer, the Contractor may demobilise his Contractor's Personnel from other countries~~

NK: This sentence may be necessary to be reviewed.

Please review the above. Control is essential otherwise the working trainers will be demobilised too soon.

Please also note that this entire clause is my suggestion only. If JICA and/or NK do not want it, please advise and I will delete all such training as necessary.

Please see above; the deletion of the other clause is not recommended. This training clause is an unusual requirement which is not compatible with the contract and it deserves full explanation as there is otherwise a risk that it will be misused in future.

~~that does not, that~~

~~(7) It is to be noted that by this request, the Employer is not suggesting that Operation Leaders shall always be locally employed and trained for the purpose, this remains the Contractor's choice based upon capability in accordance with the Contract and as determined by suitable availability. The emphasis here is on counterpart personnel who shall be assigned alongside qualified, skilled and experienced personnel who, on behalf of the Contractor, shall remain responsible for the performance of the Works at the Site.~~

~~(8)~~(7) Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.

NK: We think "for his consent" can be replaced with "for information" as written in Issue 6.

~~see above notes, it really should be "consent"~~

~~1.21.5~~1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

NK/6: We propose to replace the above 1.21.3 to 1.21.4 with follows:

1.21.3 Further Training of Operation Leaders and Skilled Workers

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled and unskilled workforce that he considers are suitable to act as future Operation Leaders and skilled workers, respectively.
- (2) Training of Operation Leaders

- (a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.
- (b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.

(3) Training of **Skilled Workers**

- (a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their **management abilities**, skill levels and awareness of international safety and quality standards.
- (b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability skills and awareness **according to the work** and also to pass on their knowledge in future to their working colleagues and compatriots.

(4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his consent.

(5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

(6) Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

1.21.4 Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [Contractor's Personnel]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his consent.

1.215 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [Permit System] that is to be worn conspicuously and be available for validation by the Engineer.

have added the following because of apparent concerns over the meaning of JSSS 2.5.1.13.

1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by specialist

コメントの追加 [伊藤30]: specially?

(JC33) trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.

JC33: specially

NK5/6: To MD, Please check it.

Can also be "specially" if you prefer

1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

1.22.6 The Contractor shall select, train and equip a specialist rescue team or teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24.6 and 1.24.7, who can be called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated when working on Dangerous Work and to provide suitable, specialist and appropriate first aid treatment. Workers in such teams shall be allowed to continue with their normal work when not required for emergency rescue. (JC34).

JC34: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

NK5/6: Will modify as commented.

1.22.7 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC35)

NK: Harness is basically used now and belts is not, so deletion of belt is made.

Please do not delete, safety belts are still used for PFRS and for other purposes, they are defined in Annex 1.1 and specified in Chapter 2.

The following subclause needs to be deleted, it is the Contractor not the Employer that determines what is necessary according to the scope of Works.

JC35: Move to 1.24

NK5/6: Will modify as commented.

1.22.8 The requirement for rescue teams and rescue equipment shall be as specified in the Particular Safety Specification.

1.22.9 1.22.8 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident. (JC36).

JC36: ditto

NK5/6: Will modify as commented.

1.22.10 1.22.9 The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.

1.22.11 1.22.10 Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.

1.22.12 1.22.11 For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [Prohibition of Entry – Dangerous Work].

1.22.13 1.22.12 Hazardous Substances.

- (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists ~~Subcontractor(s)~~ (JC37) that are

コメントの追加 [岡本31]: 1.22.6 to 1.22.9 are relevant not only to Dangerous Work. "Rescue" is also mentioned in 1.24.6 more in general. So, integrated with 1.24.6.

コメントの追加 [伊藤32]: Move to 1.24

コメントの追加 [伊藤33]: ditto

コメントの追加 [伊藤34]: not necessarily Subcontractors

appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.

JC37: not necessarily Subcontractors

NK5/6: Will modify as commented.

No problem

- (2) [The Contractor shall ~~obtain the Engineer's consent for such specialist Subcontractors and their submit~~ detailed Safety Plans and Method Statements ~~with respect to the removal and disposal of the Hazardous Substances shall also be submitted (JC38)~~ to the Engineer in accordance with JSSS 1.7 [Contractor's Safety Plans] and JSSS 1.9 [Contractor's Method Statements].

コメントの追加 [伊藤35]: modified accordingly

JC38: modified accordingly

NK5/6: Will modify as commented.

No problem

1.23 Permit to Work System

1.23.1 The Contractor shall prepare and implement a "Permit to Work System" and a description of this shall be included in the Safety Plan.

1.23.2 The system shall be designed to control safety for ~~Dangerous Work all types of high-risk work likely to be encountered, including for example: (JC39)~~

コメントの追加 [伊藤36]: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

JC39: Agree with MD's comments. All the examples stated here (i.e. Excavation, Diving, etc.) must be Dangerous Work.

NK5/6: Will modify as commented.

~~1.23.3 Dangerous Work such as work in Confined Spaces and work mentioned in JSSS 2.3.3 Example of Dangerous Work.~~

~~There is no need to change this or give any examples, please refer to the definition of Dangerous Work in Annex 1.1. If you insist, change to "for example" as in the following subclause.~~

~~(1) Work in elevated positions, for example, transmission towers ladders and scaffolding, roof or ceiling work.~~

~~(2) Work where there is a risk of collapse such as in Excavation Works and Foundation Piling Works.~~

~~(3) Diving Works.~~

NK: We consider that permit will be practically issued to works such dangerous works as that in confined space and tower, etc. There is risk in works on ladders and scaffolding, however these are so many workers working there and not so high risk. We are better to specify higher risk works than normal risk ones.

~~I believe that this will vary according to the actual project scope and I recommend to leave as it is. It is better to be left to the discretion of the HSO.~~

1.23.4 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.

1.23.5 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.

1.23.6 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

1.24.1 ~~Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC40)~~

JC40: Moved to 1.24.5.

NK5/6: Will modify as commented.

No comment

NK-1: JICA commented to modify and add "so specified in the Specification" to 1.20.2 in Issue 6.

NK consider that "as specified in Particular Safety Specification" between "the Works," and "the Contractor" if we follow JICA's comment.

NK-2: JICA commented that they want to use "as specified in Particular Safety Specification" more than "unless otherwise specified in Particular Safety Specification" because the Employer shall be involved to specify his requirements. (Particular Safety Specification =PSSS)

Can you specify as JICA's request to use "as specified in PSSS"?

- 1) I do not recommend any use or reliance on "as specified in PSSS". If something is then not so mentioned in PSSS, (even when it should be), this means that there is no requirement stated.
- 2) "Unless otherwise specified" followed by stated requirements is the preferred and better method as the stated requirements in JSSS are then a default and even if nothing further is stated in PSSS, there will always be these requirements to rely on. This is a "failsafe" in JSSS production.
- 3) More importantly, it must be understood that the availability of these facilities is a total Contractor responsibility under FIDIC (Clause 6.7), under which the Contractor must provide such facilities, whether specified further by the Employer or not and the PSSS must not compromise this.
- 4) The problem is that work in distant and remote places is a very common feature of JICA projects (such as hydro, water supply, power, irrigation etc.) and frequently proper health and safety facilities are just not made available by the Contractor at the Site at the expense of human life and safety. Often there are no local health authorities, or they are not equipped or not capable or they are too far away to be of any value. Very often contractors do not provide facilities to save money and health and safety suffers badly. This is fairly common practice and a common problem.
- 5) The changes are suggested as a means of improving this situation and they should therefore be viewed against this background.

NK-3: JICA want to clarify who "other persons who are entitled to be on the Site" are, and where "other places (if any) are.

"other persons who are entitled to be on the Site" is from FIDIC (Clause 4.8 and others) and for whom the Contractor has responsibility for care, protection and safety. This is all-embracing and extends beyond Contractor's Personnel and Employer's Personnel to allow anyone who has a legal entitlement to be there (e.g. other contractor's, residents, others who have a right of way through the site, families of site staff (if formally living there and others). I have stated this so that the extent of contractor's compliance with JSSS is clear and so that it does not diverge from the contract. I do not recommend that it is changed.

and any other places as may be specified in the Contract as forming part of the Site" comes from the definition of Site (GC 1.1.6.7) which I have already deleted throughout for clarity and for which will consider and may add an appropriate note in the User Guide.

1.24.2 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.

1.24.3 ~~Unless otherwise specified in the Particular Safety Specification, in (JC41) Medical, first aid and related services and facilities at the Site for accidental injuries shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be~~

コメントの追加 [伊藤37]: Moved to 1.24.5.

コメントの追加 [伊藤38]: "Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

on the Site. ~~(JC42) If so specified in the Particular Safety Specification, such medical services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.~~

コメントの追加 [伊藤39]: See comment to 1.2.2 (6)

NK: JICA want to clarify where "other places (if any) are.

~~Deleted see above~~

JC41: Free of charge for everyone" need not to be as default. I don't believe the wife of the Director of project management unit in Hanoi or Jakarta should be able to benefit from free medical services provided by the Contractor!

If the nature of the Works (e.g. very remote area, etc) justifies, the Employer should specify additional requirements in the Particular Safety Specification.

JC42: See comment to 1.2.2 (6).

NK5/6: Will modify as commented.

NK5/6: YH inquired if the sentence of "the family members of all other persons" is necessary to be deleted.

Yes, this applies only to remote sites as described originally in 1.24.1.

As 1.24.1 is moved then maybe this needs to be moved also or it needs editing, "such medical services" is not then correct

I had originally tried always to use the expression "Unless otherwise specified in the Particular Safety Specification" so what is written in JSSS is a safe default and the risk of error is therefore reduced. This has now been changed here and in 1.36 so reliance is now placed upon the PSS which I had tried to avoid.

1.24.4 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.

1.24.5 ~~Unless otherwise specified in the Particular Safety Specification, the additional facilities shall for example include~~The Contractor shall provide the following medical and first aid facilities:

- (1) Deployment of appropriate first aid appliances, aids, instruments and medicines.
- (2) First aid training, appointment of first aiders and dissemination of information.
- (3) Type of communication facilities and measures for emergency response.
- (4) ~~Medical staff to be assigned at the Site.~~
- (4) Medical Facilities on the Site together with description of equipment and consumables.
- (5) Temporary water and power supply to maintain use during mains supply failure.
- (6) Transportation facilities Ambulance services to be provided, ~~including drivers and attendants~~ to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
- ~~(2)(7) Additional facilities specified in the Particular Safety Specification, if any.~~
- ~~Medical staff to be assigned at the Site.~~
- ~~(3) Emergency medical services where necessary.~~ (JC43)

NK: We feel that the provision of medical services seems excessive unless health insurance can cover it.

~~I disagree if it means saving a life. Whether health insurance covers it or not is irrelevant. There will be situations where it is available and necessary to save life, so can JICA say that fatality is acceptable as the alternative was too expensive?~~

JC43: Where the Site is located in a large distance from a sufficiently equipped hospital.

NK5/6: Will modify as commented.

Your above added clause 1.24.5 is not correct contractually, is not necessary and I do not recommend that it is included, please refer to notes under 1.24.6 below.

- ~~(4)(1) Medical Facilities on the Site together with description of equipment and consumables.~~
 - ~~(5)(1) Temporary water and power supply to maintain use during mains supply failure.~~
 - ~~(6)(1) Type of communication facilities and measures for emergency response.~~
 - ~~(7)(1) Deployment of appropriate first aid appliances, aids, instruments and medicines.~~
- ~~1.24.6 First aid training, appointment of first aiders and dissemination of information.~~

~~1.24.7.1.24.6 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC44)~~

JC44: See comment to 1.2.2 (6)

NK5/6: Will modify as commented.

I do not recommend that your suggested changes are made.

Please refer to GC 6.7 [Health and safety] which in terms of Contractor's basic H and S obligations, should apply and prevail. This is why I had carefully worded this clause and stated "to comply with his obligations under the Contract".

By changing this to "as specified in the Particular Safety Specification" will change the basic requirements of the Contract and should not be done. Ignoring ambiguity and priorities, whatever is stated in the PSS (unless exactly the same as GC 6.7) will unnecessarily and incorrectly change the contract.

Similarly, it is not necessary to define or restrict the services and facilities to be provided as has been attempted in your added 1.24.5 above. I do not recommend that your clause is added meaning that the general requirements of GC 6.7 continue to apply.

The added clause 1.24.5 is not correct anyway as for example "ambulance service" which you have deleted is a requirement of the contract anyway.

To assist the Contractor with his Bid, I had suggested that the Employer/consultant may wish to assist the Contractor by stating actual site requirements in the PSS but not amending the basic requirements of the contract in the process.

On balance I do not see why any real change is necessary to this clause and what is suggested is confusing rather than improving.

~~1.24.8.1.24.7 Where the Works include the following for example, (1) The Contractor shall train selected Contractor's Personnel to perform emergency rescue operations in a safe manner in the event of any accident. Workers so trained (JC45) are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.~~

JC45: Merged with 1.22.6

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

- ~~(1) Work on or near existing electrical equipment, cables, wiring, services and systems.~~
- ~~(2) Dangerous Work such as Confine Spaces, work at height.~~

NK: We consider describing example as above.

コメントの追加 [伊藤40]: See comment to 1.2.2 (6)

コメントの追加 [伊藤41]: Merged with 1.22.6

Please see above notes and Annex 1.1 Definitions. I do not agree that any such examples are necessary

~~(3)(1) Diving Work (JC46)~~

JC46: Diving work is also Dangerous Work

NK5/6: We cannot understand how to this comment (JC46). To MD, please review this comment.

~~(4) Similar special circumstances.~~

1.24.91.24.8 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures. (JC47)

JC47: Move from 1.22.

This should be "may" since the nature of Works may vary

NK5/6: To MD, please review this comment.

I am informed that my comment is not required on "blue" shaded items

It should be "shall", because where the nature of the Works so dictates, it "shall" be provided not "may" otherwise compliance appears optional, which is not the intention.

~~1.24.91.24.9 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.(JC48)~~

JC48: Move from 1.22.

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

~~1.24.91.24.10 All rescue team members Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].~~

~~1.24.91.24.11 Adequate first aid equipment and supplies shall in any case be readily available at the Site as recommended by OSHA and as referred to in JSSS 2.9 [PPE and First Aid].~~

NK: JICA wants specific clauses in OSHA. We can mention OSHA, Part 1910 - Occupational Safety and Health Standards, Subpart K Medical and First Aid.

Better to delete reference here "as recommended by OSHA" and include your clear requirements in JSSS 2.9 [PP and First Aid].(JC49)

JC49: Agree.

NK5/6: Will modify as agreed.

No comment

1.25 Measures at the Time Accidents Occur

1.25.1 When an accident occurs, ~~the HSO the Contractor~~ the HSO shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:

NK: JICA added in the last comment.

NK: We consider "the HSO" shall be "the Contractor" as mentioned in Issue 6. (JC50)

I disagree completely and do not recommend this (or any such) change. As I have explained repeatedly, the HSO must have this authority in order to fulfil his safety control functions effectively. The HSO is responsible for safety, the Contractor's Representative is responsible for making a profit and these interests are not always compatible

JC50: Agree.

NK5/6: Will modify as agreed.

コメントの追加 [伊藤42]: Diving work is also Dangerous Work

コメントの追加 [伊藤43]: Move from 1.22

This should be "may" since the nature of Works may vary?

コメントの追加 [伊藤44]: Move from 1.22

コメントの追加 [伊藤45]: Agree

コメントの追加 [伊藤46]: Agree

For the purposes of safety, the HSO must immediately take this action when he is aware of it and this should remain as his duty, not the contractor as you suggest. The interests are different and if immediate action by HSO is not taken, it should be the HSO that is held responsible.

NK6/6: This is the duty of the HSO, so replaced from the Contractor to the HSO to make who take actions in the Contractor at accident clear as specified in 1.13 HSO - Scope of Duties and Authority, 1.13.2 (1) (d) Temporarily stopping the Works or any part of the Works following any accident... and (g) Preparing proposals, reporting and consulting with the Engineer, ...

- (1) Safely locate and extract casualties.
- (2) Provide first aid treatment at the Site.
- (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.

1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.

- (1) The Contractor shall inform the Engineer and submit details of any accident.
- (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
- (3) The Accident Report shall include details of ~~the HSO's~~ ~~the Contractor's~~ ~~the HSO's~~ recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].

Please see above notes on this subject. This should remain as the HSO. I disagree and do not recommend this (or any such) change.

NK6/6: Understood your opinion. It needs to explain why NK changed opinion to JICA.

1.25.3 For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.26 Emergency Response Plan

1.26.1 ~~To the extent reasonably possible~~, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and ~~as far as reasonably possible~~ shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.

The Contractor shall ~~the~~ take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, ~~where the Contractor could reasonably have anticipated the events and provided against them before entering into the Contract and which, having arisen, the Contractor could have and to reasonably avoided, or~~ overcome or lessened the effects to a reasonable extent. (JC51)

NK-1: Can we delete one of two "reasonably possible" above?

Yes, delete as above.

NK-2: We considers "where the ... into the Contract" is not necessary to mentioned here as discussed in 2.7.1 (2).

With the changes in your draft that have now been agreed, I have already modified JSS 2.7 and I thought that the above can now be deleted as shown, however your later comments against 1.26.5 are confusing me greatly and I am unsure. Can you please answer my request against 1.26.5 first and I can then modify the above if necessary.

JCS1: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

コメントの追加 [伊藤47]: JICA support NK's comment. The Contractor shall be responsible for the safety whether He "could have anticipated before entering in to contract" or not.

NK5/6: Will modify as commented.

I give no further comment

1.26.2 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:

NK: The sentence is too long for me to understand well. May I ask to make two simple sentences?

It is perfectly correct as it is however have split it. (JC52)

JC52: Thank you for being non-native friendly.

FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

NK5/6: No comment.

- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
- (2) The safety and stability of the Works and Goods.
- (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.

1.26.3 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage and flooding arising from such flooding, earthquake or volcanic activity.

NK: The flooding is hardly occurred by earthquake and volcanic activity. Therefore, we propose the above sentence is modified as above and below.

Yes this can be changed as above.

Such measures to be implemented shall include:

- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site and (JC53) to any third parties and neighbours and property not connected with the Works but potentially affected thereby.

JC53: See 1.2.2 (6).

NK5/6: Will modify as commented.

No comment

- (2) Provision of temporary support to all sides and soffits of excavations or portal of portal of (JC54) tunnelling of sufficient strength, durability and suitability.

NK: We considers tunnel is strong enough to earthquake/volcanic activity but weak to flood water entering into the tunnel.

My recommendation is still (as written) to leave it as it was and make this as wide a term as possible to increase the coverage. There is no acceptable definition of "portal" and this change just introduces argument on interpretation, why change?

NK: We accept to leave as it is.

JC54: Better to add.

コメントの追加 [伊藤48]: Thank you for being non-native friendly. FIDIC 1999 and MDB version have been supported worldwide because of its "understandability". Their English is correct and easy to understand even for non-native. JSSS should be drafted in the same way.

コメントの追加 [伊藤49]: See 1.2.2 (6)

コメントの追加 [伊藤50]: Better to add

NK5/6: Will modify as commented.

No comment

- (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.

1.26.4 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [Contractor's General Obligations] and JSSS 1.9 [Contractor's Method Statements].

1.26.5 ~~Unless otherwise specified in the Particular Safety Specification,~~ the Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.

~~This plan shall comprise a procedure describing the provision of assistance by the Contractor with search and contact activities and the use of any remaining facilities after possible exceptional events or circumstances, including but not restricted to Force Majeure events. The plan does not require the Contractor to provide repair, reinstatement or medical treatment services. These services are beyond the scope of JSSS and shall be the subject of instructions issued under the Contract.(JC55)~~

NK: We consider that the Contractor may have difficulty to assume what activities can be made.

We propose to delete the sentences underlined for the assistance as you also mentioned beyond the scope of JSSS.

Which underlining? In 1.26.1?

Please see 1.26.6 for my assumption of your requirements.

Your draft has never been clear to me and I am still having difficulty to understand what your draft means and what are your intentions and requirements.

Please note:

1) The Contractor can only plan for what he can reasonably foresee or anticipate and

2) It is necessary to state this so that no confusion is introduced with FIDIC GC 19

3) This only leaves simple search and contact activities which has little or no meaning.

JSSS cannot specify what other measures the Contractor is to take after a Force majeure event (which I guess your emergency plan is trying to cover) as these events and any counter measures cannot be predicted.

Please can you clarify exactly what you are requiring the Contractor to do in the event of an earthquake, hurricane, typhoon or volcanic activity, so I can finalise this clause and also JSSS 2.7.

JC55: Better to jump to 1.26.6 without this.

NK5/6: Will modify as commented.

No further comment

NK: Deleted as we cannot assume other requirements by the Employer.

1.26.6 The Emergency Response Plan, shall cover:

- (1) Evacuation plan, showing evacuation routes and assembly points.
- (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
- (3) Emergency contact system.
- (4) Use of existing and available medical and other related facilities.
- (5) Emergency stocks of bottled water, lights, ropes, shovels.

The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.

コメントの追加 [岡本51]: Better to jump to 1.26.6 without this.

1.26.7 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.

The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.

The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.

The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:

- (1) Employer's Personnel at the Site and also at their respective head office where different.
- (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
- (3) Contractor's Personnel at the Site and also at the head office where different.
- (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.

1.26.8 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.

~~Training shall be provided for all Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site. (JC56)~~

コメントの追加 [伊藤52]: See 1.2.2(6)

JC56: See 1.2.2(6).

NK5/6: To Md, please review this comment.

~~This is connected with the provision of health and safety measures as referred to in 1.2.2 (6) and can be deleted to be compatible.~~

Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.9 If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.10 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.11 For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.

- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) Representative of labour union, if any Contractor's Personnel.
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3 The HSO shall be the chairman of the Safety Committee.

1.27.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (c) Accidents, fatalities, injuries occurred in the previous month and measures to be taken to prevent any reoccurrence;
 - (d) Monthly or weekly schedule of important health and safety matters;

NK: Are the phrases in red to be added?

Is this sort of comment really necessary? Yes it can be changed but this is only an abbreviated sample agenda

- (e) Feedback on the regular safety, coordination and other meetings with the Engineer;
- (f) Safety instructions received from the Engineer;
- (g) Items to be coordinated with police, fire department and other related organisations;
- (h) Compliance and registration requirements under the Laws of the Country;
- (i) Safety and health awards, media attention and the like;
- (j) Hazards, safety and health problems identified by any members of the Safety Committee;
- (k) Effectiveness of existing Safety Plans and suggestions for revision and improvement; and
- (l) Other matters.

NK: May we change the order as (a) is after (h) and (c) is before (a) for order of discussion.

Again, is this sort of comment really necessary? I have changed this

NK: modified as requested by JICA.

1.27.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

With above:

Is the sequence here acceptable or shall it change as above?

NK6/6: Yes.

- (d) Hazards, safety and health problems identified by any members of the Safety Committee;
- (e) Status of resolution of previous problems;
- (f) Items to be coordinated with police, fire department and other related organisations;
- (g) Compliance and registration requirements under the Laws of the Country; and
- (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1 On larger Projects with multiple contract packages and contractors and unless otherwise stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).
- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3 The Chairman of the Safety Committee **shall** be the Employer.

1.29.4 The Employer **shall** hold regular Project Safety Committee meetings, **on a monthly basis** unless otherwise agreed.

NK: JICA commented to delete this as holding meetings are not monthly basis but optional.

We propose "periodically as requested by the Employer" and ask you to reply to this comment as reply is not mentioned in the document with notes.

Please clarify what you want to be deleted.

NK: Deletion is "on monthly basis".

1.29.5 The Employer **shall** prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

NK: JICA commented to replace "shall" with "may" in Clauses 1.29.3 to 1.29.5.

We want to ask you to reply to this comment as reply is not mentioned in the document with notes.

Please note that I have already edited the first paragraph to state "unless otherwise specified."

With this change I think that no other change is necessary.

NK: MD 氏の回答をご参照願います。

1.30 Health and Safety Coordination with Other Contractors

NK: We think that all of 1.30.1 and 1.30.2 below are requests to the Employer.

We propose to move them to the User Guide.

I disagree, this affects the Contractor also and it is important that it is stated here so that there is common and very clear legal agreement between Employer and Contractor on who does what.

I think that this requires mention in both JSSS and the User Guide to avoid future dispute.

Please also note my understanding that the User Guide is not a part of the Contract and please let me know if you require differently.

NK: MD 氏の回答をご参照願います。

1.30.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) the Employer's Personnel,
- (2) any other contractors employed by the Employer,
- (3) the personnel of any relevant authorities ~~legally constituted public authorities~~, who may be employed in the execution on or near the Site of any work not included in the Contract.

I have now given definition to "relevant authorities" and therefore suggest the above correction

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

- 1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.
- 1.30.3 If any other contractors are employed by the Employer or if any **relevant authorities legally constituted public authorities** responsible to the Employer ~~are is~~ working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:
- (1) Frequency of the meetings: as and when considered necessary by Engineer.
 - (2) Unless otherwise agreed, attendees shall include representatives of:
 - (a) The Employer;
 - (b) The Contractor;
 - (c) Other contractors employed by the Employer; and
 - (d) Personnel of any **relevant authorities legally constituted public authorities**.

NK: We considers it is easy to understand attendee by adding "who may be employed in the execution on or near the Site of any work not included in the Contract." to (d) though it mentioned in the first sentence.

Don't understand your comment, please advise what change you require. (本 Q&A は無視願います。)

I have now given definition to "relevant authorities" and therefore suggest the above correction

- (3) Agenda should relate to coordination among different contractors including for example:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any **relevant authorities any legally constituted public authorities**;

I have now given definition to "relevant authorities" and therefore suggest the above correction

- (c) Accidents, injuries **in the previous period** and measures **to be taken** to prevent any reoccurrence;

NK: Are the phrases in red to be added?

See previous note

- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the **Engineer's** monthly progress report. (JC57)

JC57: **Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.**

NK5/6: Will modify as commented..

コメントの追加 [岡本53]: Engineer's monthly progress report is normally not shared with the Contractor. Delete "Engineer's" to mean Contractor's progress report.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

1.31 Safety Statistics

1.31.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2 Actual statistics shall include the following:

NK6/6: we modified (1) to (17) as shown in NK6/6 below.

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, ~~casualties~~, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Remedial measures taken.
- (5) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (6) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (7) Record of reports as may be required by government authorities.
- (8) Number of health and safety staff.
- (9) Number of Contractor's safety meetings and frequency.
- (10) Number of candidates given safety induction and other training.

NK: Are "candidates" replaced with "Contractor's Personnel"?

No, they are all candidates for training and can include others e.g. Employer's Personnel and others, etc.

- (11) Number of safety inspections,
- (12) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (13) Instructions issued for unsafe behaviour or unsafe site conditions.
- (14) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (15) Engineer's Instructions issued for work suspension.
- (16) HSO instructions issued for work stoppage. (JC58)
- (17) Others.

JC58: **Statistics and Records are mixed.**

1 to 3 and 5 relate to statistics.

4 and 6 to 16 relate to records.

コメントの追加 [伊藤54]: **Statistics and Records are mixed.**

**1 to 3 and 5 relate to statistics,
4 and 6 to 16 relate to records.**

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32".

By doing this, things will be streamlined : "statistics → records → their reporting"

It must be better to merge 1.31 and 33 and, inside of the "new 1.31", describe statistics and records separately. Alternatively, simply change order between 1.32 and 1.33, and all about records are to be included in the new "1.32"

By doing this, things will be streamlined : "statistics → records → their reporting"

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

NK6/6: We modified based on the above comment JC58. Changed order 1.32 and 1.33. We selected statics items which shall be submitted in daily safety report.

- (1) Accident: description, casualties, location, time, type and cause.
- (2) Near-miss: description, location, time, type and cause.
- (3) Lost-time: lost hours of casualties, duration of discontinuation.
- (4) Total working hours for calculation of frequency rate, severity rate and annual incident rate.
- (5) Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.
- (6) Number of health and safety staff.
- (7) Number of candidates given safety induction and other training.
- (8) Number of safety inspections.
- (9) Number of detections of non-compliant, unsafe or lack of Contractor's Equipment.
- (10) Number of instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (11) Number of Engineer's Instructions issued for work suspension.
- (12) Number of HSO instructions issued for work stoppage.
- (13) Others.

1.31.3 All data shall be in a format and content given consent by the Engineer.

1.31.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.

1.31.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

NK6/6: We modified based on the above comment JC58. Changed order 1.32 and 1.33. We selected statics items which shall be submitted in daily safety report. The revised 1.32 and 1.33 is below.

1.32 Health and Safety Records

1.32.1 The Contractor shall keep health and safety records for the following:

- (1) Inspection records and checklists.
- (2) Meetings for safety and health management.
- (3) Monitoring of safety and health management activities.
- (4) Health and safety education and training for the Contractor's Personnel.
- (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (6) Work environment records and other records required by JSSS Chapter 2 [General Safety Measures] and other parts of JSSS.
- (7) Record of reports as may be required by government authorities.
- (8) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
- (9) Instructions issued for unsafe behaviour or unsafe site conditions.
- (10) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
- (11) Engineer's Instructions issued for work suspension.
- (12) HSO instructions issued for work stoppage.
- (13) Others

1.32.2 All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.32.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.32 1.33 Safety Reports

1.32.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:

- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.

NK Is it necessary to add "for"?

Yes, it can be

- (2) Contractor/HSO and Joint Site Safety Inspections.(JC59)

JC59:Joint Site Safety Inspection Report ?

NK5/6: Will modify as commented.

- (3) Weekly Safety Report: summary of safety matters of the week.
- (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [Progress Reports].

1.33 Health and Safety Records

1.33.1 The Contractor shall keep health and safety records for the following:

- (1) Accidents, fatalities, near misses.
- (2) Inspection records and checklists.
- (3) Meetings for safety and health management.
- (4) Monitoring of safety and health management activities.
- (5) Health and safety education and training for the Contractor's Personnel.
- (6) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
- (7) Work environment records and other records required by JSSS Chapter 2 [General Safety Measures] and other parts of JSSS.

1.33.2 All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.

1.33.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under JSSS 1.32 [Safety Reports].

1.34 Health and Safety Incentive Schemes

1.34.1 The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for the legitimate purpose of promoting workplace safety and health.

NK: May we know if the word of "legitimate" (conforming to the law or to rules) is necessary?(対応済み)

We consider the work rules may include the Contractor determines by himself such as 5S activity in addition of requirements by the Law and JSSS.

Deleted see above

コメントの追加 [伊藤55]:Joint Site Safety Inspection Report ?

- 1.34.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.34.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.34.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.34.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.34.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.34.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.34.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under JSSS 1.32 [*Safety Reports*].

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

- 1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by **the HSO** ~~(or his delegated and technically qualified assistant)~~ (JC60) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed **by the HSO**, thereby certifying the items as being **safe for use**.

コメントの追加 [伊藤56]: Agree with MD

NK: As we commented in 1.12.3, the inspection shall be made by the designated personnel for check by the Contractor and the HSO shall monitor the inspection system.

We want to ask you to modify the 1.35.2 as the above.

As already discussed and explained it is not necessary to state this here or elsewhere. Please refer to earlier notes and also to JSSS 1.12.3 [Supporting Staff] where this is explained.

I do not recommend your suggested change.

JC60: Agree with MD

NK5/6: Will modify as commented.

No comment

If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for

which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works (JC61) of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

JC61: Temporary Works is covered in (2)

NK5/6: Will modify as commented.

- (2) New or up to date recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and

I suggest that "recent" is changed to "up to date" to be consistent with clause (1), to give it improved meaning (although still not definitive), particularly in view of the omission of the 5 year age limitation (which was definitive).

that all of the above will be used correctly and for the purpose intended.

~~Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment before delivering the Site (JC62) by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.~~

This inspection was originally for the purpose of checking that the equipment was new or less than 5-years old.

However, as the age criteria has now been deleted, there is no reason why the Engineer should inspect the equipment and no criteria by which he can determine that the equipment is compliant or otherwise. This being the case, I recommend that this useful safeguard clause should now be deleted also.

Without clear age, criteria I do not recommend that any inspection would be time limited, could not include a full mechanical or operational check and ultimately will result in personal opinion. It may also be compromise later attempts to reject equipment at site when it is then found to be unsafe.

Had the age criteria still been maintained, agency inspection would be a very easy and possibly more efficient alternative.

NK: We considers in actual basis as follows:

コメントの追加 [岡本57]: Temporary Works is covered in (2)

コメントの追加 [伊藤58]: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant?

Q1: Is Scaffolding classified in (1) TW? If so, no need to discuss the inspection of Scaffolding before shipment? Shall Scaffolding be new or up to date? If not, they shall be not more than 5 years old as specified in (2)?

Steel and system scaffolding etc. is considered as Contractor's Equipment but other types may be TW. This is also not covered by Chapter 4 of your draft.

I have defined this in 1.35.1 and as it is an important item for which there should be no future argument.

Q2: Does the Temporary Works in (2) mean Earthwork Support, Scaffolding, etc? We think the Temporary Works are constructed at the Site. If so, (2) can be considered as materials of TW shall not more than 5 years old. We already specify materials of TW in Chapter 4 TW.

Yes, see it includes all of these and yes much will be constructed or assembled at the Site but some major components (e.g. steel sheet piling, anchors, support systems and other components and materials) may be imported in which case this applies. Please refer also to definition in 1.35.1.

Can we delete "and Temporary Works" in (2)?

I do not recommend it.

Q3: The Contractor's Equipment discussed to be inspected at origin in the last meeting were concrete plant you explained and tunnel boring machine Mr Date did. They are mainly related with work progress when they are old.

This is not my recollection although it was mentioned as examples and my explanation covered all types of Contractor's Equipment.

We consider old trucks, dump trucks, cranes, etc. causes serious accident due to poor maintenance. The local contractors/subcontractors and rental companies own old construction equipment including cranes, pile driving machines, etc. which caused serious accident, too.

If the equipment is not more than 5 years, I think not necessary to make pre-inspection at origin.

If you don't want pre-inspection at origin that is of course your choice. How to ascertain that it is compliant if there is no pre-inspection? It is too late when it arrives on site. I have given my suggestion and repeatedly explained this.

If JICA do not want this to apply, please let me have your instructions on what shall be changed and how.

We propose to delete the 2nd sentence above.

I do not agree for above reason but respect your wish. Just delete it.

In stead of 2nd sentence, we propose to specify the inspection of Contractor's Equipment as specified in Chapter 4 below, "The Contractor shall submit the inspection sheets of Contractor's Equipment at the time of its mobilization to receive the consent to the Contractor's Equipment by the Engineer."

JSSS 4.4 INSPECTION, MAINTENANCE AND REPAIR, 4.4.1 Requirements Generally, (3) Inspection at the time when Contractor's Equipment is mobilised to the Site "In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition."

There is no reason why anything should be added here and do not suggest that this is added as it is unnecessary duplication.

Q4: We found regulations of cars in countries by internet. They limit vehicles not more than such old as 3, 5, 8 and 15 years. The regulation of import of second hand machinery and facility in Vietnam is that they shall be not more than 10 years old.

The above mentioned 5 years old equipment seems short for recent construction equipment. We wonder 10 years old seem reasonable. How do you think 10 years old?

JICA are paying market bid rates for the best most productive and safest equipment, why should this be compromised? I have already given my explanations and recommendation, please let me have your instructions on what this shall be changed to or if it shall be deleted.

Many contractors will definitely not like this age imposition because it is regularly abused in the pursuit of profit. JC62: Equipment and TW may be domestically procured. So, "shipment" may not cover domestically procured ones. "before delivering the Site" may be more relevant.

NK5/6: Will modify as commented.

I note that aside from using the word "recent" which now has no real meaning (see above suggested change) the 5-year age limitation has been deleted here (and in the BDS).

This therefore effectively prevents the engineer from clearly and undisputedly rejecting aged and potentially unsafe or non-compliant equipment including equipment, which might be in good condition but is without modern safety features or which is inherently unsafe.

1.36 Health Matters

1.36.1 The Contractor is reminded of his obligations under GC 6.7 [*Health and Safety*] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2 *Healthcare services and facilities at the Site shall be made available free of charge, to or for the use of the Contractor's Personnel, the Employer's Personnel and all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services shall also be made available for free of charge for the family members of the aforementioned personnel/persons.* (JC63)

JC63: Same comment as 1.24

NK5/6: Will modify as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

コメントの追加 [伊藤59]: Same comment as 1.24

~~1.36.1.36.3 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site.~~ (JC64)

JC64: See 1.2.2 (6).

NK5/6: Will modify as commented.

~~1.36.2.1.36.4 Occupational health care shall be provided by the Contractor and shall include ~~for~~ example:~~

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [*Working Environment*]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) *Avoiding* (JC65) ~~F~~requent or excessive manual handling of loads, stress and fatigue.

JC65: *Better to add ???*

NK5/6: Will modify as commented.

- (4) *F*itness to work examinations, including eyesight, hearing and physical mobility and capability. (JC66)

JC66: *Is this health care service?*

NK5/6: Will modify as commented.

1.36.3.1.36.5 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.

コメントの追加 [伊藤60]: See 1.2.2 (6)

コメントの追加 [伊藤61]: Better to add ???

コメントの追加 [伊藤62]: Is this health care service?

- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational ~~H~~healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.
- (7) Type of communication facilities and measures for emergency response.

NK: May we know example of emergency response?

Please let me know what facilities you require and I will edit.

NK: We will further consider it.

~~1.36.4 Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall also be made available free of charge, to or for the use of any accompanying family members of the Contractor's Personnel, the Employer's Personnel and the family members of all other persons who are entitled to be on the Site.~~

~~36.6 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect to comply with his obligations under the Contract and as are necessary to fully protect all Contractor's Personnel and Employer's Personnel and all other persons who are entitled to be on the Site. (JC67)~~

JC67: See 1.2.2 (6).

NK5/6: Will modify as commented.

Please refer to my earlier comment under 1.24.6 and for the same reasons I do not recommend that this change be made.

~~1.36.5~~1.36.7 Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.

NK: Does the serious illness mean occupational illness, infectious disease, mosquito born illness, etc.?

It is up to you. Under GCC 6.7 The Contractor is required to maintain records and make reports concerning health matters to the Engineer as the Engineer may reasonably require. This is a further suggestion to try to reduce the volume and contents of report to be prepared.

Please see (4) following, the above can be omitted if required.

- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.

NK: Is "HSO" replaced with Contractor as same as (2) above?

No. I do not recommend this. Please refer to the previous notes on this subject, the Contractor may send it but the Health and Safety Officer will prepare it.

- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with the management standard with respect to design, erection, use and dismantling of

コメントの追加 [伊藤63]: See 1.2.2 (6)

Temporary Works provided in Section 1 and Section 2 of BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework, (JC68)

Changed already

JC68: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

NK5/6: Will modify as commented.

No comment

1.37.2 An alternative standard is acceptable by reference to JSSS 1.4.7 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works ~~including Class A Falsework~~ (JC69).

NK: Is "Class A Falsework" instead of "Falsework" which JICA drafted specially referring to the following BS5975?

Section 1: General | Scope "This guidance is also applicable to the design of what is termed class A falsework 1) in BS EN 12812:2004, the design of which is for example specifically excluded from BS EN 12812:2004.

Please also refer to BS 5975, Foreword, page VII, penultimate paragraph.

The European standard on falsework, BS EN 12812, exists in parallel with this British Standard. It specifies performance requirements for the design of falsework in accordance with one of three classes: A, B1 and B2. Limit state design methods are specified for design classes B1 and B2. It does not provide guidance for the structural design of Class A. It is recommended that Section 3 is used to provide guidance for Class A falsework.

It appears to follow that BS EN 12812 is not necessarily an acceptable alternative for example because Class A is excluded, I have assume therefore that it is necessary to state the need for Class A Falsework.

Please be aware that I have not reviewed or studied the BS in detail so please do not assume that I have. I do recommend that it is studied by JICA and NK to ascertain that it is applicable.

Previous clause 1.34.3 regarding alternatives is not now required as I have drafted and included JSSS 1.4.7 [*Specified Standards and Regulations*] to cover this generally.

Previous clause 1.34.6 has already been deleted.

There is no need for the suggested insertion into the following clause (previous Clause 1.34.7) as per the said comment.

JC69: delete it?

NK5/6: Will delete as commented because the sentence is for the management of Temporary Works, so Class A Falsework; one of TWs, is not needed to be specially mentioned.

No comment

1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

~~1.37.6 Procedures for the appointment and any replacement of the senior Temporary Works coordination, design or supervision staff shall be the same as described for the HSO in JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].~~

JC: JICA commented as follows:

コメントの追加 [岡本64]: It is not always easy to follow BS5975's requirements with respect to design standard, while BS5975 is good as for procedures. So better to mention Section 1 & 2.

Issue 6 1.34.8 Too much to require the Contractor name all the specialist staff at the Bid stage. It is also excessive to require consent of the Engineer for those specialist staff.

“Necessary qualification” can be combined with 1.34.12 or 1.34.13.

Issue 6 1.34.9 If comply with JSSS1.9, all the specialist staff shall be appointed before the commencement, and subject to the Engineer’s consent.

NK: From this comment, the 1.37.12 below is enough requirement. 1.37.6 above specifies to refer to 1.12, which 1.12 is for HSO, it seems difficult to apply for personnel of TW.

As 1.3.12 specifies requirement and necessity of consent of the Engineer, we propose to delete 1.37.6.

Understand your comment and have no objection to the deletion of 1.37.6.

1.37.7 Without affecting the Contractor’s responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor’s Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [Contractor’s Method Statements]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor’s design or methods.

The Engineer ~~may has no obligation under the Contract to~~ review Temporary Works design, ~~however he may choose to do so~~ for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 ~~or any other acceptable standard in accordance with JSSS 1.37.2. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [Engineer’s Duties and Authority] Sub-Subclause (c) and issued without prejudice to the Contractor’s overriding responsibility for the safety and adequacy of the Temporary Works.~~

I have given further thought to the following clause which was originally considered as an exception. I am now of the opinion that offering such alternative to an Employer to state his requirements in the PSSS is not a good idea as it may result have a negative effect.

Most JICA funded projects are large projects and will have a Temporary Works content.

I suggest that the following alternative clause should be deleted to make these important requirements very clear.

If there is only a small and simple TW content, even if the BS 5975 is applied it will not cause any major harm or cost.

The sample specification provided some time back by JICA for the Hong Kong Project showed that all work shall comply with the BS. (JC70).

NK: MD 氏は上記の理由で次の 1.37.8 の条項は不要であると考え削除を提案しています。ご検討をお願いいたします。

JC70: Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

NK5/6: Will modify as commented.

Will look at this when I review the user guide

1.37.8 ~~Where the Particular Safety Specification does not specifically require the Contractor to comply with BS5975, the Contractor shall in any event demonstrate by description in the Safety Plan and his actions that he has effective arrangements in place for controlling risks arising from the design, selection of materials, components and equipment, use, management, dismantling and removal of Temporary Works including for example, by ensuring the following:~~

- ~~(1) — Appointment of appropriately qualified and experienced staff.~~
- ~~(2) — Preparation of adequate Temporary Works designs.~~
- ~~(3) — Independent internal or external checking of the Temporary Works Design.~~

コメントの追加 (伊藤65): Understand. But, could you transfer 1.37.8 to User Guide for guidance for small project (including grant aid projects)?

- ~~(4) Preparation of a Temporary Works register and records~~
- ~~(5) Pre erection inspection of all Temporary Works, including materials, components and equipment.~~
- ~~(6) Control and supervision of the Temporary Works erection, safe use, maintenance and dismantling of the Temporary Works, including procedures to:
 - ~~(a) Check that the Temporary Works have been erected in accordance with the design and issue by the HSO Contractor of a suitable sign showing it as complete and safe to use; and~~
 - ~~(b) Confirm when the Permanent Works have attained adequate strength to allow dismantling of the Temporary Works and issue by the HSO Contractor of a suitable sign showing that it is ready for dismantling.~~~~

NK: As mentioned HSO will inspect the execution of Safety Program by designated personnel and safety conditions at the site in another clause,

we consider HSO will be replaced with Contractor as JICA commented:

Should it be HSO? When BS5975 applies. TWC/TWS are expected to issue a permit (See 11.2.3 and 11.3.3 of BS5975). So, not necessarily HSO?

The above applies when BS 5975 doesn't therefore I suggest (subject to JICA and NK agreement) that this can be deleted.

However, yes, the Temporary Works staff are all involved to make sure that the Temporary Works are designed and executed correctly, however the HSO is ultimately responsible for ALL safety on the Works and nothing should avoid his overview. I recommend that this should remain as HSO. I believe that it is a correct requirement which in practice should not be more than a counter signature.

1.37.9 In accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.

NK: We feel this is Method Statement as it mentions the measures and 1.3.10 refers to MT. How do you think?

I understand and agree with your comment. However, JSSS 1.18 gives rules for the proper placement of Contractor's Personnel and it probably better therefore to rephrase this as above.

The following clause can be deleted

~~1.37.10 For further information on Method Statements refer to JSSS 1.9 [Contractor's Method Statements].~~

1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

1.37.12 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties. ~~and shall obtain the consent of the Engineer.~~

NK: We think 1.3.12 is too long sentence to clearly understand requirement.

Yes I agree and have reworded this as above.

Q-1 Is consent by the Engineer given to specialist staff?

This part can be deleted.

Q-2 Is it not necessary to mention about staff of subcontractor as the Contractor includes subcontractor?

We propose to divide the sentence to two requirement sentences: 1) qualification, etc. and 2) application and consent by the Engineer.

Have reworded all, please refer to this above.

1.38 User Training (Deleted) User Training(Jc71)

JC71: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

NK5/6: Will delete as commented.

I am informed that my comment is not required on "blue" shaded items, therefore none is provided

Note for NK: This is safety during construction, it refers to the provision of effective safety training for equipment and systems provided during under ODA construction contracts.

NK: we considers JICA may not specify 1.38 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

~~Recommendation that it be included here as a default requirement.~~

- ~~1.38.1. Unless otherwise specified in the Particular Safety Specification and prior to issuance of the Taking Over Certificate for the Works or any parts or Sections thereof, the Contractor shall provide User Training for the Employer's Personnel including all users, operational and maintenance staff to ensure that they are fully able and qualified to safely use, operate, repair and maintain all the Works and all Plant provided under the Contract.~~
- ~~1.38.2. The Works or any parts or Sections thereof shall not be considered to be complete for the purposes of taking over until User Training for that part or Section has been completed and so certified as such by the Engineer.~~
- ~~1.38.3. User Training shall vary according to the scope of the Works however it shall generally cover the following:~~
- ~~(1) Safe system and Plant use, operation and process control.~~
 - ~~(2) System and Plant maintenance and repair, including identifying, ordering, stocking, auditing, draw down and issue of spare parts and equipment replacements~~
 - ~~(3) Training in use of all hardware and software packages.~~
 - ~~(4) Laboratory control (sampling and analysis) including operation of laboratory equipment.~~
 - ~~(5) Recording and reporting.~~
 - ~~(6) Emergency operation procedure.~~
 - ~~(7) Maintenance management procedures.~~
 - ~~(8) Inventory and store control systems.~~
 - ~~(9) Particular safety procedures, including:~~
 - ~~(a) Safe working procedure;~~
 - ~~(b) Housekeeping of the facilities;~~
 - ~~(c) Identification of accident prone, dangerous or hazardous conditions, locations or operations; and~~
 - ~~(d) Safety measures for the Works and all items of Plant.~~
- ~~1.38.4. Any changes to the above with further particular details of User Training shall be provided in the Particular Safety Specification.~~
- ~~1.38.5. The Contractor shall also be responsible for training some candidates (as selected by the Employer and accepted by the Contractor) to be future trainers, so that when qualified by the Contractor such trainers will be able to train future candidates to use, operate, repair and maintain the Works and all Plant provided under the Contract.~~
- ~~1.38.6. Other requirements for User Training~~

コメントの追加 [岡本66]: We think JSSS should stay in the range of safety during construction although safe use of constructed infrastructure is also important.

- ~~(1) The Contractor shall not be responsible for paying expenses or salaries of candidates attending the User Training.~~
- ~~(2) User Training shall be on Site in the completed facilities, unless otherwise specified in the Particular Safety Specification.~~
- ~~(3) The Contractor shall ensure that all instructors are appropriately qualified, skilled and experienced and competent for the purpose and consented to by the Engineer.~~
- ~~(4) The Engineer may choose to send representatives to witness the training.~~
- ~~(5) The number of Employer's staff to be trained shall be provided in the Particular Safety Specification.~~
- ~~(6) Unless otherwise specified in the Particular Safety Specification, all training shall be conducted in the language of the Country.~~
- ~~(7) The Contractor shall prepare a comprehensive training programme for each part or Section of the Works and for all Plant therein including the preparation of comprehensive manuals containing full course notes, reference material and timetable. The programme and manuals shall be submitted for the review and consent of the Engineer at least fifty-six (56) days before any training commences.~~
- ~~(8) Unless otherwise specified in the Particular Safety Specification, the training manuals and all technical literature shall be prepared in both the all training shall be conducted in the language of the Country and also the English language.~~
- ~~(9) The Contractor shall use visual media as much as possible throughout the training process.~~
- ~~(10) Training shall cover both theoretical and practical operation and maintenance procedures on the Works including the Plant actually constructed and/or installed.~~
- ~~(11) The training courses shall be conducted by the Contractor and also by senior qualified staff of the manufacturers and system providers all of whom shall be experienced in each specific aspect of the Plant supplied and/or installed by them and training therefor.~~
- ~~(12) Factory User Training shall not be required unless otherwise specified in the Particular Safety Specification.~~
- ~~(13) The Employer shall nominate the candidates for training. The Contractor shall have the right to decline any of the candidates if he considers that such candidates do not meet his required minimum academic, educational, vocational or practical standards or for reasons of extreme incompetence and to request the Employer to nominate substitutes.~~
- ~~(14) The Employer shall have all candidates who have been accepted by the Contractor, ready and available for the User Training in accordance with the Contractor's approved user training programme.~~
- ~~(15) Upon completion of User Training the Contractor shall test all candidates with written and practical examination and ascertain for himself that they have acquired sufficient knowledge and aptitude to use, operate and maintain the respective Plant, equipment or systems and obtain the consent of the Engineer through submission to the Engineer of reviewed and graded test results.~~
- ~~(16) The periods of training shall be determined by the Contractor according to the particular subject concerned or as otherwise provided in the Particular Safety Specification. Training generally shall be of sufficient periods for the Contractor to satisfy himself that the candidates are fully and adequately qualified for the safe use, operation and maintenance of the Works or any part or Section thereof including all Plant therein. Unless otherwise specified in the Particular Safety Specification, overall training duration shall not be less than fifty-six (56) days.~~

- ~~(17) Unless otherwise required for operational reasons, User Training shall only be conducted during the normal working hours and on normal working week days.~~
- ~~(18) Periods of User Training shall be extended or repeated, if on completion of the planned training period(s), in either the Contractor's or the Engineer's opinion, candidates are not sufficiently qualified to safely use, operate and/or maintain the Works or any part or Section thereof including all Plant therein.~~
- ~~(19) The Contractor shall issue formal certificates, officially indicating that candidates are qualified by the Contractor to safely operate and maintain the Works or any part or Section thereof including all Plant therein or, in the case of trainers, to train future candidates.~~

1.38 Unexploded Ordnance (UXO)

NK: we considers JICA may not specify 1.39 in detail as the minutes of meeting below:

MM: This section will be left in the next draft and perhaps deleted in the final draft.

NK: We propose to specify only to remind the Contractor to follow the requirement in Particular Safety Specification.

MD's reply: The Employer should inform the Contractor of the likely existence of UXO and if possible remove. The Contractor shall report any UXO then found to the Employer/Engineer for further instruction. This needs to be included in JSSS and the User Guide so that both parties are aware of the other's obligations. I have edited this to make the Employer responsible and have and separated accordingly.

NK: We have no comments to 1.39. xd v

For your further information, please note that this is an Employer's Risk under GC 17.3 (d).

The problem is, that GC 17.3 places no obligation upon the Employer (who should be more aware than anyone of the possible risk) to advise of the existence, to survey and remove such UXO before bidding or after if then encountered.

This is the reason behind including this in JSSS.

This clause may need some slight modification when I again work on the User Guide.

- 1.39.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.39.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.39.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.39.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.39.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) **“Executing Agency”** means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) **“GC”** and **“PC”** followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) **“Health and Safety Officer”** or **“HSO”** means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) **“JICA Standard Safety Specification”** or **“JSSS”** means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) **“Method Statement”** means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) **“Operation Leader”** (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) **“OSHA”** means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) **“Particular Safety Specification”** means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (9) **“Project Safety Specification”** means the document that contains Part 1 [JSSS] and Part 2 [*Particular Safety Specification*] ~~as illustrated in Annex 1.4 [Figures and Illustrations].~~
- (10) **“Project”** means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) **“Safety Plan”** means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the

entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor's General Obligations*] as supplemented by JSSS 1.7 [*Contractor's Safety Plans*].

- (12) **"Safety"** shall also mean "occupational health and safety" and "health and safety".
- (13) **"User Guide for the Use of Executing Agencies"** means the document of that title separately published by JICA for the Executing Agencies and which contain the guides for incorporation of JSSS into the bidding and contract documents for relevant Projects.

NK: There is no "User Guide" specified in JSSS. Does it necessary to define it in JSSS?

I think as it will be published on line probably at the same time as JSSS, it does need definition and more importantly, it requires a clear statement in JSSS, that it is NOT a part of the Contract (see added clause JSSS 0).

It is my understanding that the User Guide is for the reference of the Employer only and it is probably also a good idea therefore to describe it as "An Employer's Guide" or something like that to make it very clear.

Please refer to my earlier notes repeated above from the previous issue of the draft.

Following my further review and study, I feel that this is an important issue which if not addressed, may create unnecessary future risk for JICA

Please refer to my notes on this subject under Clause 1.3.2 and consider changing the title of the "User Guide" perhaps to "Guide for the Use of Executing Agencies"

NK6/6: We proposed JICA to change the title as you proposed "Guide for the Use of Executing Agencies". The stipulation of User Guide is deleted in JSSS, so I think (13) "User Guide" is not necessary as directly related with the Contractor. Please review the above modification.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) **"Accident Response"** means the requirements for the Contractor's response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) **"Confined Spaces"** means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) **"Cofferdam"** means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) **"Dangerous Goods"** means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) **"Dangerous Work"** means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) **"Diver"** means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.
- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.
- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts. Every Hazardous Area is different and each has specific requirements depending on the nature of the environment in that area and the elements that are present. ~~Hazardous areas may be categorised by the level of risk of an explosion based on the frequency and duration of the occurrence of an explosive atmosphere by classifying the Hazardous Area as Zone 0, Zone 1 or Zone 2, where:~~
 - ~~(a) Zone 0: An area in which an explosive gas atmosphere is present continuously or for long periods;~~
 - ~~(b) Zone 1: An area in which an explosive gas atmosphere is likely to occur in normal operation; and~~
 - ~~(c) Zone 2: An area in which an explosive gas atmosphere is not likely to occur in normal operation and, if it occurs, will only exist for a short time.~~

NK: May we know the source of Classification?

May we know if this Zones are specified in JSSS?

Classification of Zones is from the Technical Measures Document of HSE

<https://www.hse.gov.uk/comah/sragtech/techmeasareaclas.htm>

OSHA also have a classification which is more complicated.

Please be aware that in the absence of information in your draft, this is my suggestion but in every case and I rely on JICA and NK to check and confirm this. If you do not want to use this, please advise me and I will delete.

NK/6: Chapter 2 specifies as follows:

2.1.5. Further Requirements for Dangerous Work

Further to the requirements of JSSS 1.22 [*Dangerous Work*] and in relation to work in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous, r ...

We want to specify as (14) without specifying Zones o to 2.

- (15) **“Hoisting Operation”** means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.
For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].
- (16) **“Operational Area”** means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) **“Personal Fall Arrest System”** or **“PFAS”** means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) **“Personal Fall Restraint System”** or **“PFRS”** (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.
- (19) **“Personal Protective Equipment”** or **“PPE”** means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) **“Safety Belt”** means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) **“Safety Harness”** means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) **“Scaffold”** or **“Scaffolding”** means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) **“Skill Training”** means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) **“Spotter”** means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].
Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
- (25) **“Trade Effluent”** means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.
- (26) **“Unexploded Ordnance”** or **“UXO”** shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.

- (27) ~~“User Training” means training to be provided by the Contractor for those Employer’s Personnel who shall be using, managing, operating, repairing and maintaining the Works, and any part or Section thereof and all Plant therein to ensure that such personnel are fully qualified and able to perform their duties in a safe, systematic and competent manner without risk of accident.~~
- (28) **“Working Platform”** means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training
PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute.
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard.
BS EN	British Standard European Norm.
HSE	UK Health and Safety Executive.
ISO	International Organisation for Standardisation.
ILO	International Labor Organization.
JIS	Japanese Industrial Standards.

A1.1.5. Unless otherwise instructed by the Engineer, a reference to any standard or code shall mean a reference to the latest issued edition of that standard or code as at the Base Date of the Contract.

Annex 1.2: Content of Bid Stage Safety Plan

A1.2.1 This Annex lists the required content for the Bid Stage Safety Plan which is to be provided in accordance with “Standard Bidding Documents Under Japanese ODA Loans, Procurement of Works”, published by the Japan International Cooperation Agency (JICA). The Safety plan is to be included in the Bidding Documents Part 1 – Bidding Procedures, Section I. Instructions to Bidders, Section IV. Bidding Forms Technical Proposal, Health and Safety Plan, page BF-39.

NK: We consider that A1.2.1 will be mentioned in User Guide and deleted in JSSS. How do you think?

I think both are useful as the contractor should also be aware of requirements.

It is very important that the Employer/Consultant are prevented from altering the detail of this Annex in their Bidding Documents in any way, as all items are required in the Bid Stage Plan, all are coordinated with JSSS, the same structure, terminology and numbering must be used.

I suggest that this will be reworded something like the following, which I will do when go back to work on the User Guide further.

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [Contractor’s Safety Plan]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder’s intentions, so that this can be understood and properly evaluated. (JC72)

JC72: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11) “Safety Plan” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

NK5/6: To MD, we would like to ask you to add as commented.

See (2) below:

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder’s Corporate Policy on Health and Safety Management

A description of the Bidder’s corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic company policies on risk assessment and health and safety management,

(compliance with Laws of the Country and description of responsibilities and authority of the Bidder’s head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams, etc.).

Transferred to below

コメントの追加 [伊藤67]: Please add “outline (or policy?) of risk assessment” as one of the items to be included in the Bid Stage Safety Plan in accordance with the definition of Safety Plan.

A1.1.1 (11)
“Safety Plan” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods.....

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams.

Transferred from above

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System (JC73)

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

~~Confirm~~ Describe how which scheme the Bidder *institutes the Safety Management Systems* accredited under.

JC73: Modified in accordance with modification to JSSS1.5

NK5/6: Will modify as commented.

No comment

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

NK: JICA added "outline" in the last comment.

NK I have amended

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.)

NK: We consider that the above sentence is independent clause from (6) above and locate in some place.

I have edited as above

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

NK: May the title be Works?

I have edited as above

コメントの追加 [岡本68]:
Modified in accordance with modification to JSSS1.5

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions, stopping work

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

~~It is to be noted that JSSS and the Contract contain minimum requirements and the Contractor shall provide such additional facilities and measures that he considers necessary to meet the high standard of health and safety management expected.~~

NK: We consider that the above sentence is independent clause from (19) above and locate in some place.

Deletion is OK

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc.

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention*]

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

~~(27) User Training~~

~~Refer to JSSS 1.38 [*User Training*]~~

~~An outline description of the proposed user training plans for the Employer's Personnel in the Safe Use, Operation and Maintenance of the Works.~~

~~(28)~~(27) Legal Requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

1

Form JSSS/BSO - Bidder's Safety Declaration

[This form is to be Inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture ("JV")] (hereinafter referred to as the "Bidder") to execute this Form JSSS/BSO, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that after full investigation and research of domestic resources, he has given full and careful consideration and fully accepts the need and has made full allowance for the importation to the Country and the use upon the Works and subsequent re-export (JC74) in accordance with the Contract of all required Contractor's Equipment, PPE, Temporary Works and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

K74: Some equipment, PPE, TW etc. may be procured locally. Would you add some wording on possible local procurement as long as it respects international standard?

NK5/6: To MD, we would like to ask you to modify as commented.

Please see above

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or recent Contractor's Equipment and Temporary Works, ~~(not more than five (5) years old, not more than five (5) years old,~~ all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

NK: As commented in 1.35.4, we consider that TW in 1. And 2. need to be clarified and TW in 2. may not be necessary to be not more than 5 years old. We want to discuss these more.

Please refer to my recommendations and notes in 1.35 and advise me of your requirement.

I note that 5 years has been deleted. Please refer to my further notes under 1.35

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards;

4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.
9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor.) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

SUBSEQUENT REPORT INFORMATION (POST-INVESTIGATION):	
1) Cause(s) of the accident:	
2) Counter-measures proposed by the Contractor to avoid recurrence of similar accidents and risks:	
3) Number of reported accident(s) occurred in the past one (1) year in the same Contract Package as the accident occurred:	
4) Number of reported near misses occurred in the past one (1) year in the same Contract Package as the accident occurred:	
5) Other Information:	

Report Prepared by: (name): _____ (sign) : _____ Report Submission Date(s) _____ Time: _____	Contractor's Health and Safety Officer (HSO)
Receipt acknowledged by: (name): _____ (sign): _____ Report Receipt Date(s) _____ Time: _____	Engineer

(above to be inserted with detail and signatures at end of each report)

JICA STANDARD SAFETY SPECIFICATION (JSSS) CHAPTER 1: GENERAL REQUIREMENTS

1.1 Safety Declaration

- 1.1.1 Adopting the slogan “SAFETY FIRST”, the Contractor shall proactively aim to achieve “Zero-Accident” by applying the highest achievable standards of health and safety management.
- 1.1.2 A Safety Declaration shall be submitted with the Bid, declaring the Bidder’s commitments and obligations, in accordance with JSSS Annex 1.3 [*Additional Contractor Forms*], Form JSSS/BSD - Bidder’s Safety Declaration,

1.2 General Reference Notes

- 1.2.1 For Definitions, abbreviations and standards contained in JSSS, refer to JSSS Annex 1.1 [*Definitions and Abbreviations*].
- 1.2.2 The following further general reference notes apply to the content of JSSS:
- (1) References to “Bid” and “Contract” and to “Bidder” and “Contractor” shall be interchangeable according to the context of their use. “Bid” and “Bidder” shall become “Contract” and “Contractor” after the Contract Agreement has been executed.
 - (2) References to “Laws of the Country” shall include all safety standards under such Laws and shall also include references to Laws of any other jurisdiction that may be stated in the Contract Data.
 - (3) Any reference to “Contractor” within this document shall also be deemed to include “Subcontractor” and “Subcontractors”, for whom the Contractor shall remain fully responsible.
 - (4) Any reference to “Safety” unless otherwise evident from the text shall also be construed as reference to “Health and Safety”.
 - (5) Any reference to academic, educational or vocational qualification **within this document, shall mean a valid qualification demonstrated by a certified true copy of a diploma, degree, or other official certification issued by an acknowledged educational institution of the Country or an equivalent alternative certification issued by an acknowledged educational institution of another country.**
 - (6) Unless otherwise stated in JSSS or the context is otherwise clear, any reference in JSSS requiring the provision by the Contractor of health and safety measures **and facilities** for Contractor’s Personnel shall also be deemed to include the provision by the Contractor of the same health and safety measures and **facilities** for Employer’s Personnel and all other persons that are entitled to be on the Site and other places (if any) where the Contractor intends to execute the Works.
 - (7) Any reference in JSSS to “relevant authority” or “relevant authorities” shall mean one or more legally constituted public authorities that own or have legal jurisdiction over the work or property concerned.
 - (8) JSSS shall form a part of the Contract for the Works and therefore the definitions contained in the Conditions of Contract for Construction for Building and Engineering Works Designed by the Employer, Multilateral Development Bank Harmonised Edition June 2010, General Conditions together with the Particular Conditions Part A - Contract Data and Part B - Specific Provisions, as applied to that **Contract**, apply equally and are used in JSSS.

Unless specified otherwise or instructed by the Engineer, the **issue** of JSSS to be used for the **Contract** shall be that applicable at the Base Date.

1.3 Incorporation of JSSS into the Contract

1.3.1 JSSS shall form a part of the Project Safety Specification which, in turn forms a part of the Specification. The Project Safety Specification shall have priority over the other parts of the Specification in respect of health and safety matters. Within the Project Safety Specification, the Particular Safety Specification shall have priority over JSSS.

1.3.2 The Annexes to Chapter 1: General Requirements shall be read and construed as an integral part of JSSS.

1.4 Compliance with JSSS and Other Regulations

1.4.1 JSSS specifies the minimum health and safety requirements to be complied with by the Contractor throughout the execution of the Works.

1.4.2 JSSS shall not limit the Contractor's statutory or regulatory duties and responsibilities under the Laws of the Country and/or the specific health and safety requirements of the Contract.

1.4.3 The Contractor shall comply fully with the requirements of the Project Safety Specification.

1.4.4 If there are no or insufficient safety provisions in the Laws of the Country, in JSSS or in the Particular Safety Specification for the particular part of the Works, the Contractor shall propose suitable internationally acceptable safety regulations for the Engineer's consent.

1.4.5 Specified Standards

(1) Unless otherwise instructed by the Engineer, a reference to any standard (hereinafter deemed to include specified safety regulations or codes) shall mean a reference to the latest issued edition of that standard as at the Base Date of the Contract.

(2) Any standard specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard specified.

(3) Application of detailed parts of any standards specified in JSSS may be waived at the formal request of the Contractor, only if the Contractor justifies with supporting particulars that those detailed parts are not relevant to the Contract and the Engineer gives his consent to such Contractor's request.

(4) Where JSSS refers to the standards of other countries, such reference is only to the technical requirements contained in such standards and not to any related laws or legal enforceability of any of those other countries.

1.4.6 Where there is any reference to OSHA and unless otherwise evident from the text, the words "team leader", "on-site supervisor", "on-site supervision", "field superintendent", "work chief" and the like shall be collectively construed as reference to the appropriate member of the Contractor's Personnel, any reference to the "safety and health manager of the Contractor" and the like shall be construed as reference to the HSO and "The construction plan and safety and health plan", shall be construed as the "Safety Plan".

1.4.7 If any ambiguity or discrepancy is found in or between the various Chapters of JSSS or any reference documents and JSSS, the Engineer shall issue any necessary clarification or instruction. For the purposes of interpretation:

(1) The requirements of Chapter 1: General Requirements, shall prevail over the requirements of other Chapters of the document.

(2) JSSS Chapters 2 to 6 contain requirements which are of general application and the content of each shall apply to content of all others unless otherwise stated or unless the context is otherwise clear.

1.4.8 The Contractor shall comply with the requirements of JSSS throughout the Time for Completion and the Defects Notification Period.

Unless otherwise specified in the Particular Safety Specification, the Contractor's obligations to provide temporary services and facilities shall finish at the end of the Time for Completion.

1.4.9 The Contractor shall fully inform his personnel, his Subcontractor's, suppliers and sub-consultants and all other parties who are associated with the Works of the existence, content, purpose and objectives of JSSS.

1.5 Contractor's Safety Management System

1.5.1 The Contractor shall institute a health and safety management system in accordance with ISO 45001 or an equivalent alternative.

1.5.2 Alternatively, the Contractor may institute his own safety management system and regularly conduct audits in accordance with JSSS 1.17 [*Compliance Monitoring and Auditing*].

1.5.3 The safety management system shall be proposed as a part of the Contractor's Safety Plans to the Engineer for his consent.

1.6 Checking and Validation of Submissions

1.6.1 In accordance with GC 4.9 [*Quality Assurance*] the Contractor shall demonstrate compliance with the Contract by including evidence of his own internal prior review, check and approval or agreement of all submissions including Safety Plans, Method Statements, Temporary Works (such as drawings, designs and calculations) and of all supporting documents, through written confirmation and signature of each of the Contractor's responsible personnel, including for example the Contractor's Representative, HSO, Temporary Works coordination, design and supervision staff and any independent checkers as appropriate.

1.7 Contractor's Safety Plans

1.7.1 The Contractor shall prepare Safety Plans for the Works showing the Contractor's proposed health and safety management policies, systems and plans specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.

1.7.2 The Safety Plans shall set out or refer to all the health and safety requirements:

- (1) That are stated in JSSS.
- (2) That comply with the Contractor's health and safety obligations under the Laws of the Country and the Contract.
- (3) That are necessary to effect and maintain a healthy and safe working environment for all Contractor's Personnel.

1.7.3 The Contractor shall be required to prepare and submit the Safety Plans principally at three stages:

- (1) Bid Stage Safety Plan (Outline Overall Safety Plan).
- (2) Commencement Stage Safety Plan (Updated Bid Stage Safety Plan).
- (3) Particular Safety Plans (Updated separate plans if necessary for particular parts of the Works).

1.7.4 The Safety Plans shall ultimately provide an accurate and comprehensive description of the Contractor's arrangements to ensure that health and safety management is maintained at a high level.

1.7.5 Submission of any Safety Plan and inclusion in the Bid or Contract or any further submission to the Engineer, shall not place any limit upon the Contractor's obligations. Any additional requirements as determined by the Contract or consequent to instructions of the Engineer or by requirements at the Site, shall be complied with by the Contractor under his own responsibility.

1.7.6 Bid Stage Safety Plan:

- (1) This shall be an outline plan, containing indicative content for all of the subjects listed in JSSS Annex 1.2 [*Content of Bid Stage Safety Plan*].
- (2) The plan shall demonstrate that the Bidder has a clear understanding of the health and safety requirements for the Works and contain clear and sufficient detail of each item to indicate the Bidder's intentions, so that this can be understood and properly evaluated.

1.7.7 Commencement Stage Safety Plan

- (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site.
- (2) This shall be an updated Safety Plan for the whole of the Works showing the Contractor's proposed health and safety management policies, systems and plans etc. specifically prepared for all parts of the Works, the Site and other places (if any) where the Contractor intends to execute the Works.
- (3) The Commencement Stage Safety Plan shall be based upon the Bid Stage Safety Plan, further developed as necessary by the HSO to provide a comprehensive overall Safety Plan demonstrating the Contractor's intended compliance with the Contract.

1.7.8 Particular Safety Plans

- (1) These shall be prepared as necessary to suit changing circumstances or conditions at the Site, or following the issue of later Method Statements, or where considered necessary by the HSO or when required by the Engineer.

1.7.9 Procedures for Submission and Review

- (1) The Contractor shall submit the Commencement Stage Safety Plan and the Particular Safety Plans showing details of the health and safety arrangements which the Contractor proposes to adopt for the execution of the Works or any part of the Works.
- (2) The Contractor shall submit:
 - (a) the Commencement Stage Safety Plan in accordance with JSSS 1.7.7 [*Commencement Stage Safety Plan*]; and
 - (b) The Particular Safety Plans by the date fourteen (14) days prior to the commencement of each particular part of the Works where sufficient detail has not been included in the Commencement Stage Safety Plan and/or within fourteen (14) days after the date of the Engineer's request.
- (3) Requirements for response (if any) by the Engineer and any re-submission by the Contractor and, shall be as follows:
 - (a) The Engineer may review the Safety Plans and may give notice of non-compliance to the Contractor stating the extent to which the Safety Plan does not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer;
 - (b) If the Engineer gives no such notice of non-compliance for the original Safety Plan within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Safety Plan subject to complying with his other obligations under the Contract; and
 - (c) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of

the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Safety Plan subject to his other obligations under the Contract.

- 1.7.10 The Contractor shall, as stated in JSSS and as the Engineer may reasonably require, maintain records and make reports in compliance with the applicable health and safety regulations and Laws) concerning the health and safety of all persons entitled to be on the Site and other places (if any) where the Works are being executed and any damage to any property.
- 1.7.11 Compliance with the Safety Plan and JSSS shall not relieve the Contractor from any duty, obligation or responsibility under or in connection with the Contract.
- 1.7.12 The Contractor shall also consider the opinions of his workers and other Contractor's Personnel in preparing Safety Plans or updated Safety Plans.

1.8 Risk Assessment

- 1.8.1 In performing risk assessments, the Contractor shall find and correct all potential risks and hazards primarily by trying to eliminate or reduce such risks and hazards through making feasible changes in working conditions rather than relying on PPE.
- 1.8.2 The Contractor shall fully inform all Contractor's Personnel, Employer's Personnel and all other persons who are entitled to be on the Site of all hazards and risks on the Site.
- 1.8.3 The procedural flow of risk assessment shall be as follows.
- (1) Identifying hazards.
 - (2) Evaluating risks.
 - (3) Determining measures of risk reduction or elimination.
- 1.8.4 The procedural flow for risk reduction measures shall be as follows with earlier listed items having higher priority:
- (1) Removal of hazards such as eliminating dangerous methods of construction.
 - (2) Changing to a safer construction method and alternating to low risk processes, operations, materials or equipment.
 - (3) Engineering measures.
 - (4) Management measures including improving skills with additional training.
 - (5) Use of PPE.

1.9 Contractor's Method Statements

- 1.9.1 The Contractor shall prepare Method Statements for all parts of the Works with details of the arrangements and methods which the Contractor proposes to adopt for the execution of the Works and any parts of the Works.
- 1.9.2 Method Statements shall be developed taking account of the results of risk assessment in accordance with JSSS 1.8 and include details of all Permanent Works and Temporary Works with supporting documents such as:
- (1) Studies, investigations and designs.
 - (2) Structural calculations and any other calculations.
 - (3) Specifications and technical details.
 - (4) Proposed construction procedure, sequence and method.
 - (5) Construction resources including superintendents, workers, operation leaders and Contractor's Equipment.
 - (6) Inspection and monitoring plan.

- 1.9.3 The preparation of Method Statements shall indicate that the Contractor has put internal procedures in place to encourage the systematic approach to performing the Works and in an efficient, safe and environmentally compliant manner.
- 1.9.4 Whenever required by the Engineer, the Contractor shall submit Method Statements showing details of the arrangements and methods which the Contractor proposes to adopt for the execution of any part of the Works. The Contractor shall submit the requested information within fourteen (14) days of the date of the Engineer's request.

Requirements for submission by Contractor and response (if any) by the Engineer to Method Statements, shall be as follows:

- (1) The Engineer may review the Method Statements and may give notice of non-compliance to the Contractor stating the extent to which the Method Statements do not comply with the Contract. Within fourteen (14) days after receiving any such notice the Contractor shall rectify any non-compliance and resubmit to the Engineer.
- (2) If the Engineer gives no such notice of non-compliance for the original Method Statement within twenty-one (21) days of the date of receipt or for the resubmitted within fourteen (14) days of receipt, the Contractor shall proceed in accordance with the Method Statement subject to complying with his other obligations under the Contract.
- (3) For Contractor resubmissions following receipt of a notice of non-compliance, the Engineer may give notice to the Contractor stating the extent to which the resubmission does not comply with the Contract. Within fourteen (14) days after receiving this notice the Contractor shall rectify such non-compliance. If the Engineer gives no further notice of non-compliance within fourteen (14) days of the date of receipt of the resubmission, the Contractor shall proceed in accordance with the resubmitted Method Statement subject to his other obligations under the Contract.
- (4) The Contractor shall submit a revised Method Statement whenever required by the Engineer or when any previous Method Statement for any part of the Works is inconsistent with actual conditions or requirements prevailing at the Site.
- (5) The Method Statement shall be revised as necessary by the Contractor or the HSO and each revision shall be submitted promptly to the Engineer.

1.10 Engineer's Safety Representative

- 1.10.1 The Engineer may delegate his power and authority to any of his assistants at the Site who shall act as the Engineer's health and safety representative for the purpose of complying with any health and safety obligations under JSSS.
- 1.10.2 The terms of the appointment shall be in accordance with GC 3.2 [*Delegation by the Engineer*].
- 1.10.3 Whenever the term "Engineer" is used in JSSS this shall be deemed to include the resident engineer or any other assistant of the Engineer if so appointed in accordance with the terms of their delegated authority.

1.11 Safety Compliance Instructions from the Engineer

- 1.11.1 Without affecting or diminishing the Contractor's responsibility under GC 4.1 [*Contractor's General Obligations*] and to ensure the adequacy, stability and safety of all Site operations and of all methods of construction, the Engineer shall observe the Contractor's performance at the Site and if in his opinion the Contractor is failing or has failed to carry out any part of the Works in accordance with the Safety Plan or other health and safety requirements of the Contract, the Engineer may give notice and instruct the Contractor to take necessary corrective and preventive measures to comply with the Contract.
- 1.11.2 If any part of the Works is considered by the Engineer to pose a danger and which in his opinion could result in an accident, the Engineer may instruct the Contractor to suspend such part of the Works under GC 8.8 [*Suspension of Work*] until the Contractor has advised the Engineer of the

proposed corrective and preventive measures, obtained the Engineer's consent and implemented such measures to ensure that no further risk exists.

1.11.3 If an accident has occurred, the Engineer may instruct the Contractor to suspend the Works or any part of the Works under GC 8.8 [*Suspension of Work*] and not allow work to recommence until such time as:

- (1) The cause has been investigated and established by the Contractor.
- (2) Corrective and preventive measures have been formulated by the Contractor and proposed to the Engineer.
- (3) The Engineer's consent has been obtained for such measures.
- (4) The measures have been implemented to ensure that no such accident can reoccur.

1.11.4 The actions arising as above irrespective of the issue of any action or instruction by the Engineer, shall be deemed to be the responsibility of the Contractor.

1.12 Health and Safety Officer at the Site (HSO)

1.12.1 For the purposes of interpretation under JSSS, the reference to "accident prevention officer at the Site" in GC 6.7 [*Health and Safety*], shall be construed as "Health and Safety Officer at the Site".

1.12.2 Requirements for the HSO:

- (1) The Contractor shall assign the HSO upon the Site of the Works, on or before the Commencement Date.
- (2) If the named person is for any reason unavailable or if the appointed person fails to act as HSO and is removed from the Site of the Works under GC 6.9 [*Contractor's Personnel*], or if the person resigns and/or leaves the employment of the Contractor at the Site, the Contractor shall submit the name and particulars of a suitable and equally experienced and qualified replacement to the Engineer for his consent.
- (3) The HSO shall be an employee of the Contractor or a specialist health and safety consultant and unless otherwise specified in the Particular Safety Specification, the HSO shall be assigned full time upon the Works and responsibilities, authority and duties shall be in accordance with GC 6.7 [*Health and Safety*].
- (4) The Contractor shall not revoke the appointment of the HSO or appoint a replacement without the prior consent of the Engineer.
- (5) The HSO shall possess appropriate educational qualification for such position and also (if so required by the Laws of the Country) shall be licensed or registered in the Country and perform such duties as are legally mandated.
- (6) The HSO shall where possible be fluent in the ruling language of the Contract and also the language for communications stated in the Contract as defined in GC 1.4 [*Law and Language*], it is acceptable for the HSO to use a translator for either or both of these languages.
- (7) Where there is no legal requirement under the Laws of the Country and unless otherwise specified in the Particular Safety Specification, the HSO shall have appropriate academic, educational or vocational qualification such as:
 - (a) an International Diploma issued by the National Examination Board in Occupational Safety and Health (NEBOSH) in UK; or
 - (b) Certification as a Certified Safety Professionals (CSP) by the Board of Certified Safety Professionals (BCSP) in USA; or
 - (c) an equivalent alternative internationally recognised qualification covering health and safety and risk management.

- (8) Unless otherwise specified in the Particular Safety Specification, the HSO shall also have minimum five (5) years' work experience in construction of which minimum two (2) years shall be in health and safety management and whom the Contractor considers is qualified and able to perform the duties subject to receiving the consent of the Engineer.

1.12.3 Supporting Personnel

- (1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
- (2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.
- (3) Irrespective of any such appointment the HSO shall remain singularly responsible for the actions of such supporting personnel in terms of health and safety management.
- (4) Any reference in JSSS to the HSO performing inspections or the like for the health and safety aspects of any parts of the Works, shall be understood to include any inspections performed by any of these supporting personnel on behalf of the HSO and for which the HSO shall remain responsible.
- (5) The HSO shall prepare an internal procedure for the management of his supporting personnel, to ensure that:
 - (a) Supporting personnel are made aware of the requirements for any inspection and the details thereof;
 - (b) Supporting personnel immediately advise the HSO of any unsafe conditions with recommendations to prohibit the start or to stop or to change safety practices for the particular work; and
 - (c) Communications and submissions between HSO and supporting personnel are efficient, timely and clear.

Following implementation and compliance with the above procedure, the HSO shall sign all inspection records as if the inspection has been carried out by the HSO.

- (6) Where the Works or any part of the Works is to be performed in shifts or in excess of normal working hours, or over an extensive working area or where major works are being undertaken simultaneously, or like circumstances, the Contractor shall appoint additional qualified supporting personnel for the HSO all as necessary to ensure that the HSO is always able to perform his duties efficiently and effectively and so that health and safety management is not adversely affected.

1.12.4 Inspections

- (1) The HSO shall be responsible for ensuring:
 - (a) That all working areas are inspected on a regular basis (at least once every working day or as otherwise required by JSSS) to detect if any unsafe practices, works or conditions exist and that all required safety measures are in place;
 - (b) That if such unsafe practices, works or conditions are found to exist, then to immediately issue instructions to all affected persons and immediately implement corrective measures in cooperation with such personnel or if this is not possible then to temporarily stop all construction activity on that part of the Works until such corrective action has been taken; and
 - (c) That all inspection requirements of JSSS are complied with including the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].

- (2) Any site inspections attended by the HSO, may also include the attendance of the Engineer at the option of the Engineer.

1.13 HSO - Scope of Duties and Authority

1.13.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

1.13.2 The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:

- (1) Health and Safety Management Work:
- (a) Preparation and submission of Safety Plans, implementation, evaluation, improvement and revision thereof;
 - (b) Preparation of monthly schedule of health and safety management activities, informing the Contractor's Personnel;
 - (c) Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;
 - (d) Temporarily stopping the Works or any part of the Works following any accident or where the HSO considers it unsafe to continue or where there is unsafe behaviour or practices of the Contractor's Personnel or any non-compliance with the Safety Plan Instructions and other measures;
 - (e) Temporarily stopping the Works or **any part** of the Works where the Engineer so instructs in accordance with JSSS 1.11 [*Safety Compliance Instructions from the Engineer*];
 - (f) Investigating accidents, establishing cause, formulating and implementing preventive measures to avoid risk and prevent reoccurrence;
 - (g) Preparing proposals, reporting and consulting with the Engineer, especially when an accident occurs or any risk or hazardous situation is likely;
 - (h) Appointment of further supporting personnel (refer to 1.12.3 [*Supporting Staff*]);
 - (i) Instructing and training Operation Leaders in the health and safety aspects of their work including requirements for inspection and confirmation of results to HSO;
 - (j) Instructing the Contractor's Personnel to take improvement measures for maintaining health and safety and preventing accidents;
 - (k) Assisting with the selection and assignment of workers and other Contractor's Personnel, including ascertaining the physical and mental health, age and capability in consideration of the nature of work to be carried out;
 - (l) Planning and implementation of various training and education implementation plans;
 - (m) Creating and implementing procedures for monitoring and maintaining accident and safety statistics, including fatalities, lost time records and near-miss cases;
 - (n) Preparing regular internal and external reports on health and safety activities; and
 - (o) Hazard prediction activity.

1.14 Procedure for Resuming the Works

1.14.1 If the Engineer has issued an instruction under JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] or if the HSO has temporarily stopped the Works or any part of the Works in accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] then, unless otherwise instructed by the Engineer, the procedure for resuming the Works or any part of the Works, shall be as follows:

- (1) The Contractor (represented by the HSO) shall investigate and establish the cause, formulate preventive measures to ensure that the risk is avoided and accident cannot occur/reoccur.
- (2) The Contractor (represented by the HSO), shall prepare and submit his proposal describing the investigation, cause and preventive measures to the Engineer.
- (3) The Engineer may review the Contractor's proposal and may give notice of non-compliance to the Contractor stating the extent to which the proposal does not comply with the Contract. Within seven (7) days after receiving any such notice the Contractor shall rectify such non-compliance and resubmit to the Engineer.
- (4) If the Engineer gives no such notice of non-compliance for the original proposal within **seven (7) days** of the date of receipt or for the resubmitted proposal within **seven (7) days** of receipt, the Contractor shall resume the Works or part thereof in accordance with the proposal subject to complying with his other obligations under the Contract, by giving **three (3) days'** notice in writing of the resumption date.
To be proactive, the Engineer may give consent at any stage within the above stated time scales.
- (5) The Contractor resumes the Works or part of the Works on the due date.
- (6) The Contractor verifies the effectiveness of the preventive measures and informs the Engineer.
- (7) The Contractor carries out a risk assessment and revises the Safety Plan and Method Statements as necessary.

1.15 Contractor's Safety Management Activities

1.15.1 The Contractor shall faithfully implement the Safety Plan performing all necessary management activities to ensure total compliance.

1.15.2 In addition to the tasks of the HSO described above, the Contractor's health and safety management activities shall include (but are not limited to):

- (1) Overall Safety Management Activities:
 - (a) Arranging, chairing, attending meetings as described above and other internal Contractor meetings including Toolbox Meetings (TBM);
 - (b) Attending pre-work meetings, pre-start meetings, schedule meetings; and
 - (c) Monitoring the implementation of the Safety Plan.
- (2) **Daily** Safety Management of Contractor's Personnel:
 - (a) Instruction and management on health and safety at general morning meetings, pre-work meetings, TBM;
 - (b) Providing specific advice and instructions to all Contractor's Personnel on their assigned work tasks in advance of starting so that all workers are aware of the requirements of the Method Statements and Safety Plan including work place, scope, methods, safety PPE, timing and safety procedures;
 - (c) Instruction and management of traditional Japanese cleanliness safety campaigns known in Japan as:
5S ACTIVITIES where: Seiri = sorting, Seiton = tidying, Seiso = cleaning, Seiketu = cleanliness and Shituke = discipline;
 - (d) Instruction and management of safety education and training;
 - (e) Instruction and management of all safety measures; and

(f) Site Safety Inspections.

1.16 Joint Site Safety Inspections

- 1.16.1 In addition to the HSO's own daily Site Safety Inspections, the HSO shall conduct regular Joint Site Safety Inspections with the Engineer. Respective safety staff may also attend.
- 1.16.2 Frequency of Joint Site Safety Inspections shall be at least once a week.
- 1.16.3 Where any safety risks are detected during the inspections, the Contractor shall take immediate action.
- 1.16.4 The Engineer may be invited or may choose to participate in the Contractor's daily site safety inspections which will then be deemed to be a Joint Site Safety Inspection.
- 1.16.5 The Contractor shall prepare a report of each Joint Site Safety Inspection and submit this to the Engineer within seven (7) days after the inspection. A further copy shall be included in the Contractor's monthly progress report.

1.17 Compliance Monitoring and Auditing

- 1.17.1 The HSO shall develop and implement systems to ensure that compliance with the Safety Plan is ensured. Such compliance shall be monitored efficiently and transparently at all times, for which purpose the Contractor shall:
- (1) Create checklists for monitoring.
 - (2) Carry out regular and random inspections.
 - (3) Monitor failed, unsafe or non-compliant conditions and analyse data to determine what measures are most effective in ensuring safety and minimising accidents.
 - (4) Create storage and filing systems for the monitoring records.
 - (5) Copy safety information to the Engineer as may be necessary for the Engineer's file if so requested by the Engineer.
- 1.17.2 Safety inspections are intended to search for risks and hazards, which present a threat to safe working.
- 1.17.3 The Contractor shall also carry out regular health and safety audits, to ascertain if the Contractor's Safety Plan and health and safety management systems are working by focussing basically on the following five questions:
- (1) Does the Safety Plan cover all regulatory and construction industry best practice requirements?
 - (2) Are the Safety Plan requirements being met?
 - (3) Is there documented proof of compliance?
 - (4) Is health and safety training effective?
 - (5) Is the Contractor's health and safety management system working effectively?
- 1.17.4 The persons or team designated to conduct the audits should take a fact-finding approach to gather data and members shall be familiar with the Safety Plan and the nature of the Works.
- 1.17.5 The audit procedures shall be prepared by a senior member of the Contractor's head office health and safety team and shall require the consent of the Engineer.
- 1.17.6 The audit shall be headed by a senior member of the Contractor's head office health and safety team.
- 1.17.7 If so agreed by the Engineer, audits may be outsourced by the Contractor to a health and safety company subject to obtaining the consent of the Engineer.
- 1.17.8 The HSO may attend audits but only in an advisory capacity and team members shall not be

required or allowed to audit their own work.

- 1.17.9 The Contractor shall invite the Engineer to attend in the capacity of a witness ensuring that the audit is being carried out effectively and with a balanced, fair and non-biased approach.
- 1.17.10 The health and safety audits are primarily to check the effectiveness of the Safety Plan, the Contractor's health and safety personnel and the Contractor's health and safety management systems. The Audits shall not replace the regular health and safety inspections.
- 1.17.11 The audits shall be conducted at least twice every year and without giving notice to the Contractor's Personnel or others when any audit is to take place.
- 1.17.12 An audit report shall be prepared by the leader of the audit team, detailing the findings of the team and submitted to the Engineer within seven (7) days after the audit. The report shall be signed by all attendees of the Contractor to certify their agreement to the content and to any recommendations for improvement.
- 1.17.13 The HSO shall analyse the findings of the audit, revise the Safety Plan and change health and safety management practices as necessary to ensure the required improvement. The Engineer shall be fully informed of all such revisions and changes.

1.18 Proper Placement of Contractor's Personnel

- 1.18.1 To a varying extent, many types of construction works are inherently dangerous and accordingly the Contractor under his duty of care must ensure that risks arising from all such potential dangers are avoided and Contractor's Personnel consequently protected.
- 1.18.2 In compliance with GC 6.9 [*Contractor's Personnel*], the Contractor shall assign only those personnel who are appropriately qualified, skilled and experienced in their respective trades or occupations. Contractor's Personnel shall also be suitable and capable of performing the work tasks for which they are selected in consideration of their physical fitness, mental condition, age and capability, all shall be equipped with correct PPE, tools, equipment and safety equipment.
- 1.18.3 Workers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.
- 1.18.4 The correct grades and numbers of Contractor's Personnel shall be assigned to respective work tasks and reasonable times and durations and support facilities shall be afforded by the Contractor to promote the safe and effective discharge of duties.
- 1.18.5 The HSO shall countersign all records to certify his confirmation that each member of the Contractor's Personnel is appropriately qualified, skilled and experienced in their respective trades or occupations prior to their placement. These records shall be made available for inspection by the Engineer.
- 1.18.6 Suitability of Contractor's Personnel and their work assignment shall be assessed by the Contractor with the assistance of the HSO in consideration of:
- (1) Work content and work environment.
 - (2) Educational or vocational qualifications, practical experience, skill training and eligibility for category, title, rank or position by virtue of their achieved and demonstrated capability.
 - (3) Physical and mental health condition upon commencement of employment and on a regular basis before daily work starts.
 - (4) Allocation of an achievable and safe work volume and time.
 - (5) Allocation of suitable work to older workers and also to workers under 18 in compliance with GC 6.21 [*Child Labour*].

- 1.18.7 If the Laws of the Country require operating, supervising or management staff or any other Contractor's Personnel to have a licence, particular academic, educational or vocational qualification, diploma, registration or certification for any of their services or operations at Site, the Contractor shall ascertain that all such Contractor's Personnel possess such documents.
- 1.18.8 The Contractor shall ascertain the authenticity and validity of licenses and all other documentation for Contractor's Personnel and if necessary shall independently test all personnel to ascertain that they do possess sufficient knowledge, academic, educational or vocational qualification, experience and skills.
- 1.18.9 The Contractor shall implement an identification (ID) pass system whereby all Contractor's Personnel carry ID passes with name, photograph, blood type, official ID number and statement of the skill and position for which the worker is qualified and assigned. This shall be clearly displayed by the person and be available for inspection and validation by the Engineer at all times. If any of the Contractor's Personnel is found not to have such valid ID for the position upon which he is assigned, the Engineer will instruct that person directly to stop work immediately, contact the HSO immediately and instruct that the HSO resolves the situation without delay by immediately removing the offending person from the particular work being undertaken and from the Site and assigning a suitable replacement, unless otherwise instructed by the Engineer.

1.19 Safety Training Generally

- 1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
- 1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.
- 1.19.3 Training shall be provided free-of-charge to all participants and conducted during normal working hours, all trainees shall be paid their normal wages during training and the Contractor shall bear all necessary associated costs and expenses.
- 1.19.4 Training shall be provided in a language which the persons to be trained fully understand (i.e. the language of the persons to be trained or the language for communications as defined in GC 1.4 as appropriate).

1.19.5 Training Personnel

- (1) Trainers (which description shall include teachers and educators also) can be personnel employed by the Contractor or external trainers for whom the Contractor shall remain responsible, all experienced, academically, educationally or vocationally qualified and (if required by the Laws of the Country), formally registered as trainers, teachers and educators.
- (2) All trainers shall be fluent in the language of the persons to be trained.
- (3) In case of absence of availability of suitable personnel in the Country, the Contractor shall mobilise personnel from other countries whom the Contractor considers possess the necessary academic, educational or vocational qualification, ability and experience, subject to receiving the advance consent of the Engineer. In such case, proficient translators, familiar with construction safety terms shall be provided by the Contractor where necessary.

1.19.6 Records of education and training

The Contractor shall create and maintain records of all trainees, showing full details of training subjects and their capability, achievements etc., and all shall be made available for the inspection of the Engineer.

1.20 Safety Induction Training

1.20.1 Safety induction training shall be provided by the Contractor for all Contractor's Personnel, any subcontractors, suppliers and others for whom he is responsible, including the Employer's Personnel and all other persons who are entitled to be on the Site at the request of the Employer or Engineer.

1.20.2 The following subjects shall be covered:

- (1) Responsible persons, chain of command and means of communication.
- (2) Use of Contractor's Equipment, small tools and tackle, machinery, Temporary Works, Goods, materials; potential danger and required care.
- (3) Working procedures generally.
- (4) Inspections before starting and during execution of any work, reporting unsafe working conditions and equipment.
- (5) Dangerous Works; General rules, locations, posting warning signs, precautions and general working requirements. Refer to JSSS 1.22 [*Dangerous Work*] for additional training requirements.
- (6) PPE and other safety devices; use, handling and care, reporting worn, damaged or defective equipment.
- (7) Maintaining all working areas in an orderly, tidy and clean condition at all times.
- (8) Accidents; action, evacuation and treatment, basic first-response medical aid, reporting.
- (9) Firefighting; actions, precautions and control.
- (10) Health and safety rules.
- (11) Causes and prevention of diseases and conditions which may be injurious to health that may occur in relation to the work concerned.
- (12) Emergency Response Plan; evacuation and calling list.
- (13) Other related health and safety matters.

1.20.3 Practical on-Site demonstrations shall be included.

1.21 Skill Training

1.21.1 The Contractor is reminded of his obligations under GC 6.9 [*Contractor's Personnel*] which require that all Contractor's Personnel shall be appropriately qualified, skilled and experienced in their respective trades or occupations.

1.21.2 The Contractor is also reminded of his obligations under GC 6.1 [*Engagement of Staff and Labour*] according to which the Contractor is encouraged, to the extent practicable and reasonable, to mobilize the local human resources with appropriate qualifications and experience. However, if the qualified, skilled and experienced Contractor's Personnel required by the Contract is not available in the Country or not available in the numbers or of the standards for the periods required, the Contractor shall:

- (1) Source and assign upon the Works Contractor's Personnel (of at least Operation Leader and skilled worker status) from other countries, and/or
- (2) Recruit candidates in the Country and train them to provide the skill required to properly perform their assignments.

This shall be in such numbers and for such periods as are necessary to maintain the required standards of performance, quality, health and safety throughout the Time for Completion and Defect Notification Period.

- (1) The Contractor shall test and qualify such personnel and provide them with formal

written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.

- (2) Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.
- (3) Skill training may be omitted in full or in part for any Contractor's Personnel who, the Contractor has ascertained, hold valid academic, educational or vocational qualification and who are appropriately skilled and experienced in their respective trades or occupations in full compliance with GC 6.9 [*Contractor's Personnel*]. The Contractor shall report the names of any such Contractor's Personnel to the Engineer for his **information**.

1.21.3 Further Training of Operation Leaders and Skilled Workers

- (1) Unless otherwise specified in the Particular Safety Specification and without limiting or changing the Contractor's obligations under the Contract, the Contractor shall be required to select candidates from his local skilled and unskilled workforce that he considers are suitable to act as future Operation Leaders and skilled workers, respectively.
- (2) Training of Operation Leaders
 - (a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their management abilities, skill levels and awareness of international safety and quality standards.
 - (b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability, skills and awareness and also to pass on their knowledge in future to their working colleagues and compatriots.
- (3) Training of Skilled Workers
 - (a) The Contractor shall ensure that his personnel work closely with and transfer necessary knowledge and skills via OJT to such candidates to develop their skill levels and awareness of international safety and quality standards.
 - (b) To compliment the OJT, the Contractor shall provide classroom-based training courses and assign qualified instructors to develop the ability, skills and awareness according to the work and also to pass on their knowledge in future to their working colleagues and compatriots.
- (4) The Contractor shall develop the syllabus and teaching hours appropriately and submit details to the Engineer for his **information**.
- (5) The Contractor shall test and qualify such personnel and provide them with formal written confirmation of their training, testing and academic, educational or vocational qualification, with copies provided to the Engineer if so requested by the Engineer.
- (6) Outline of such training shall be submitted with the Bid Stage Safety Plan. Details of the training shall be further developed in the Commencement Stage Safety Plan and onward.

1.21.4 Unless otherwise specified in the Particular Safety Specification, the Contractor shall not bring into the Country for use upon the Works any unqualified, unskilled or inexperienced foreign Contractor's Personnel.

1.22 Dangerous Work

1.22.1 Particular care shall be taken by the Contractor when performing any Dangerous Work.

1.22.2 Contractor's Personnel who are to perform or be involved at the Site in the performance of Dangerous Work, in addition to the usual safety induction training, shall be given further special

training according to the nature of the Dangerous Work upon which they are to be engaged so that they can safely perform such work.

- 1.22.3 The HSO shall check and certify that each of the trained workers are authorised to be engaged upon particular types of Dangerous Work, by issuing an official permit in accordance with JSSS 1.23 [*Permit System*] that is to be worn conspicuously and be available for validation by the Engineer.
- 1.22.4 The HSO shall ensure where Dangerous Work is to be performed, that preparatory pre-work inspections are carried out to investigate and assess the work to be performed and ascertain the conditions likely to be encountered. Such inspection work shall be carried out by **specialty** trained personnel. The Contractor shall prepare safety procedures to ensure that any such inspection personnel are not placed at risk because of any unsafe environmental or other adverse or dangerous conditions.
- 1.22.5 A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.
- 1.22.6 The Contractor shall train and equip teams of selected workers at the Site for emergency rescue operation in accordance with JSSS 1.24 [*Accident Response Plan*].
- 1.22.7 The Contractor shall prepare and implement procedures for effective safety control of Dangerous Work. Such procedures may include zoning arrangements whereby different degrees of risk are separately categorised into different levels of requirement. The contents of this shall be included in the Method Statement and Safety Plan.
- 1.22.8 Signage shall clearly describe the Dangerous Work and state the reasons why the area is dangerous.
- 1.22.9 For measures for prohibiting entry, methods of demarcation and further definition of Dangerous Work, refer to JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].
- 1.22.10 Hazardous Substances.
 - (1) If the Contractor during the execution of the Works, encounters and is required by the Particular Safety Specification or instructed by the Engineer to remove any Hazardous Substances (for example: asbestos and similarly dangerous or hazardous materials), the Contractor shall employ suitable specialists that are appropriately and specifically qualified, skilled and experienced in the safe and environmentally acceptable removal and disposal of the Hazardous Substances.
 - (2) The Contractor shall submit detailed Safety Plans and Method Statements with respect to the removal and disposal of the Hazardous Substances to the Engineer in accordance with JSSS 1.7 [*Contractor's Safety Plans*] and JSSS 1.9 [*Contractor's Method Statements*].

1.23 Permit to Work System

- 1.23.1 The Contractor shall prepare and implement a “Permit to Work System” and a description of this shall be included in the Safety Plan.
- 1.23.2 The system shall be designed to control safety for Dangerous Work.
- 1.23.3 The system shall ensure that all foreseeable risks have been considered and that the required control measures for safe working have been implemented before any specific work is permitted to proceed.
- 1.23.4 Permits shall certify that workers are protected when they perform and workers shall sign the permit and register to show that they understand the risks and the precautions necessary.
- 1.23.5 The HSO shall assess the work and check safety at each stage and manage the Permit to Work System.

1.24 Accident Response Plan

- 1.24.1 The Contractor shall be responsible for responding to and treating accidents at the Site in an efficient and dedicated manner with the provision of rescue and treatment services using trained personnel with experienced and qualified medical staff and adequate and equipped facilities at the Site.
- 1.24.2 Unless otherwise specified in the Particular Safety Specification, medical, first aid and related services and facilities at the Site for accidental injuries shall be made available free of charge for the use of the Contractor's Personnel, the Employer's Personnel all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such medical services and facilities shall also be made available free of charge for the family members of the aforementioned personnel/persons.
- 1.24.3 The Contractor shall prepare an Accident Response Plan as a part of the Safety Plan.
- 1.24.4 The Contractor shall provide the following medical and first aid facilities:
- (1) Deployment of appropriate first aid appliances, aids, instruments and medicines.
 - (2) First aid training, appointment of first aiders and dissemination of information.
 - (3) Type of communication facilities and measures for emergency response.
 - (4) Medical Facilities on the Site together with description of equipment and consumables.
 - (5) Temporary water and power supply to maintain use during mains supply failure.
 - (6) Transportation facilities to be provided to efficiently and carefully transport casualties to clinics on Site or hospitals off the Site.
 - (7) Additional facilities specified in the Particular Safety Specification, if any.
- 1.24.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of medical services and facilities, or where local health authorities do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect all relevant personnel.
- 1.24.6 The Contractor shall train selected Contractor's Personnel to perform emergency rescue in a safe manner in the event of any accident. Workers so trained are called upon in the event of any emergency to rescue any person(s) who may become trapped or injured or otherwise affected or incapacitated and to provide suitable, specialist and appropriate first aid treatment. They shall be allowed to continue with their normal work when not required for emergency rescue.
- 1.24.7 Rescue equipment shall include respiratory protective equipment for rescue operations, where the nature of the Works would dictate, safety extraction belts/harnesses/ropes measures.
- 1.24.8 If an accident occurs and rescue is required, the Contractor shall prohibit any personnel to engage in rescue activities other than those trained to do so in order to prevent secondary accident.
- 1.24.9 Workers trained for emergency rescue, in addition to normal first aid treatment, shall be trained to perform CPR and also to operate an AED in accordance with the requirements of JSSS 2.9 [PPE and First Aid].
- 1.24.10 Adequate first aid equipment and supplies shall in any case be readily available at the Site and as referred to in JSSS 2.9 [PPE and First Aid].

1.25 Measures at the Time Accidents Occur

- 1.25.1 When an accident occurs, the HSO shall immediately discontinue the concerned work, inform the Engineer and take all efforts to:
- (1) Safely locate and extract casualties.

- (2) Provide first aid treatment at the Site.
 - (3) Implement Secondary accident prevention activities, including:
 - (a) Preserving the accident site, make safe and prevent anyone interfering or entering;
 - (b) Discontinuing construction work related to or in the vicinity of the accident; and
 - (c) Implementing any further measures instructed by the Engineer.
- 1.25.2 Report of Accident Occurrence, Cause, Investigation, Result and Recurrence, Prevention Measures.
- (1) The Contractor shall inform the Engineer and submit details of any accident.
 - (2) Having investigated and established the cause of any accident, the Contractor shall report the detail and conclusion of the investigation as soon as practicable and in any event no later than 48 hours after its occurrence, or as may be instructed otherwise by the Engineer.
 - (3) The Accident Report shall include details of the recommended counter-measures to prevent any reoccurrence and shall be in the format included in JSSS Annex 1.3 [*Additional Contractor Forms*].
- 1.25.3 For resumption of work procedures, refer to JSSS 1.14 [*Procedure for Resuming the Works*].

1.26 Emergency Response Plan

- 1.26.1 To the extent reasonably possible, the Contractor shall keep himself fully informed at all times of likely forecasted climatic conditions, from TV, radio and internet and shall be aware when heavy winds, storms, rainfall or snowfall and electrical storms or other adverse climatic conditions are likely and can be reasonably anticipated.
- 1.26.2 The Contractor shall take all necessary measures to protect Contractor's Personnel, the Works and all Goods for incorporation therein from injury or damage caused by any such adverse climatic conditions, and to avoid, overcome or lessen the effects to a reasonable extent.
- 1.26.3 The Contractor shall keep all areas of the Site, free from surface water and ground water at all times and by whatever means are necessary. This shall include all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, as necessary to ensure:
- (1) The safety of Employer's Personnel, Contractor's Personnel and all other persons entitled to be on the Site, whether engaged in construction operations or otherwise on or in the vicinity of or adjacent to the Site.
 - (2) The safety and stability of the Works and Goods.
 - (3) The safety and stability of all ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, to prevent landslides due to surface water from rainfall and snowmelt, tidal water, ground water and any changes in ground water level, river or stream erosion, human activity and the like.
- 1.26.4 Where, due to the location of the Site, there is a risk of flooding, earthquake or volcanic activity, the Contractor shall take measures to prevent damage including damage from landslides and consequent injury, damage from such flooding, earthquake or volcanic activity.
- Such measures to be implemented shall include:
- (1) Avoiding the use of permanent or temporary earth dams, enclosures, containment structures, spoil heaps or the like where the effect of the above described climatic, seismic or volcanic conditions could weaken or destroy such structures and potentially create the consequent risk of danger to all relevant persons, including third parties and property not connected with the Works but potentially affected thereby.

-
- (2) Provision of temporary support to all sides and soffits of excavations or portal of tunnelling of sufficient strength, durability and suitability.
 - (3) Provision of sufficient temporary drains and drain trenches to assist the flow of water and any further measures to prevent the effect of water entry to the Works, including pumping and provision of power for such measures.
- 1.26.5 Measures as required by the above shall be described by the Contractor in the Method Statements which may be requested by the Engineer in accordance with GC 4.1 [*Contractor's General Obligations*] and JSSS 1.9 [*Contractor's Method Statements*].
- 1.26.6 The Contractor shall prepare an Emergency Response Plan as a part of the Safety Plan.
- 1.26.7 The Emergency Response Plan, shall cover:
- (1) Evacuation plan, showing evacuation routes and assembly points.
 - (2) Emergency communication facilities such as telephones, radios, transceivers, loudspeakers, sirens, etc. Such facilities shall be inspected by the HSO and maintained at all times so that they can be utilised in any emergency.
 - (3) Emergency contact system.
 - (4) Use of existing and available medical and other related facilities.
 - (5) Emergency stocks of bottled water, lights, ropes, shovels.
- The Contractor shall provide and maintain in a state of readiness such equipment described above, that will remain useable in the case of an emergency. Where applicable sufficient back-up power shall be provided when power may be knocked out, long-life batteries, power generators with fuel capacity to allow long term use and the like.
- 1.26.8 The emergency contact system shall describe measures for quickly establishing locations, methods of contact and a listing of the persons, organisations and departments, that need to be located and contacted in the event of an emergency.
- The list shall be posted in a visible location in the Contractor's Site office with a copy in the Employer's and Engineer's Site offices so that all personnel are informed.
- The emergency contact list shall include name(s) of the person(s) responsible for making the contact, relevant contact persons, all with their respective telephone numbers and where relevant their radio contact.
- The list shall include contact details and any further relevant information for the following parties, and define the extent to which contact is to be made in accordance with the type of emergency:
- (1) Employer's Personnel at the Site and also at their respective head office where different.
 - (2) Relevant government authorities and agencies, administrative agencies, police stations, ambulance and fire stations, and the like.
 - (3) Contractor's Personnel at the Site and also at the head office where different.
 - (4) Subcontractors personnel and the personnel of any other contractors or suppliers at the Site and also at the head office where different.
- 1.26.9 Unless otherwise specified in the Particular Safety Specification, the Contractor shall conduct emergency response training based on the Emergency Response Plan at least every six (6) months, including training all personnel at the site on evacuation plan and emergency contact system.
- Details of the training shall be included as a part of the Emergency Response Plan and included with the Safety Plan.

1.26.10 If and when an emergency occurs, the Contractor shall share necessary information amongst prescribed persons on the emergency contact list described above and take appropriate measures including work discontinuation, evacuation of workers, making the Works, all premises and Contractor's Equipment safe, etc., all as circumstances reasonably permit and as instructed by the Engineer.

1.26.11 The Contractor shall also allow use of existing medical facilities, ambulances and equipment all as circumstances reasonably permit or as instructed by the Engineer.

1.26.12 For further measures and requirements refer to JSSS 2.7 [*Adverse Weather Requirements*].

1.27 Contractor's Safety Committee and Regular Safety Meetings

1.27.1 The Contractor shall create an internal Safety Committee to assist with promoting and maintaining effective health and safety management.

1.27.2 Members of the Contractor's Safety Committee shall include:

- (1) Contractor's Representative.
- (2) HSO.
- (3) Medical and first aid staff.
- (4) Contractor's senior site staff.
- (5) Contractor's head office safety manager (as necessary).
- (6) Subcontractors' representatives, health and safety personnel, site staff.
- (7) **Representative of labour union, if any.**
- (8) (If necessary) Representatives of the relevant government authorities and agencies.
- (9) Any other necessary personnel.

1.27.3 The HSO shall be the chairman of the Safety Committee.

1.27.4 The Contractor shall arrange regular Safety Committee Meetings for the purpose of sharing information regarding health and safety management among the Contractor's Personnel:

- (1) Frequency of the meetings: At least once a month.
- (2) Agenda:
 - (a) Accidents, fatalities, injuries occurred **in the previous month** and measures **to be taken** to prevent any reoccurrence;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Feedback on the regular safety, coordination and other meetings with the Engineer;
 - (d) Safety instructions received from the Engineer;
 - (e) Items to be coordinated with police, fire department and other related organisations;
 - (f) Compliance and registration requirements under the Laws of the Country;
 - (g) Safety and health awards, media attention and the like;
 - (h) **Hazards, safety and health problems identified by any members of the Safety Committee;**
 - (i) Effectiveness of existing Safety Plans and suggestions for revision and improvement; **and**
 - (j) Other matters.

1.27.5 Report on the Safety Committee Meetings

The Contractor shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.

A copy of this report shall be submitted to the Engineer within seven (7) days after the meeting and a further copy shall be included in the Contractor's monthly progress report.

1.28 Engineer's Regular Safety Meetings

1.28.1 The Engineer will arrange and host a regular safety meeting to be attended by representatives of the Employer and the Contractor for the purpose of sharing information regarding health and safety management among the representatives of the Employer and the Contractor. Parties present shall have the authority to represent the organisation they belong to on health and safety matters:

- (1) Frequency of the meetings: Once a month.
- (2) Agenda:
 - (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
 - (b) Monthly or weekly schedule of important health and safety matters;
 - (c) Accidents, fatalities, injuries **in the previous month** and measures **to be taken** to prevent any reoccurrence;
 - (d) Hazards, safety and health problems identified by any members of the Safety Committee;
 - (e) Status of resolution of previous problems;
 - (f) Items to be coordinated with police, fire department and other related organisations;
 - (g) Compliance and registration requirements under the Laws of the Country; and
 - (h) Safety and health awards, media attention and the like.

1.28.2 Report on the Engineer's Regular Safety Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) A copy of this report shall be submitted to the Contractor and Employer within seven (7) days after the meetings.
- (3) A further copy shall be included in the Engineer's Monthly Report submitted to the Employer.
- (4) The Contractor shall act immediately upon any oral instruction which is a consequence of the Contractor's failure to comply with his obligations under the Contract.
- (5) The Engineer shall issue a formal instruction for any variation requests.

1.29 Project Safety Committee

1.29.1 On larger Projects with multiple contract packages and contractors and unless otherwise stated in the Particular Safety Specification for those Projects, the Employer shall create a Project Safety Committee for the purpose of ensuring mutual understanding and effective implementation of health and safety management throughout the entire Project team.

1.29.2 Unless otherwise agreed, the members of the Project Safety Committee shall include:

- (1) The Employer.
- (2) The Engineer(s).

- (3) The Contractor's Representative(s).
- (4) Health and Safety Officers of all members.

1.29.3 The Chairman of the Safety Committee shall be the Employer.

1.29.4 The Employer shall hold Project Safety Committee meetings, **periodically as requested by the Employer.**

1.29.5 The Employer shall prepare a report summarising the concerns raised and conclusions of all items discussed at the Project Safety Committee Meeting.

1.30 Health and Safety Coordination with Other Contractors

1.30.1 Refer to GC 2.3 [*Employer's Personnel*] and GC 4.6 [*Co-operation*] regarding the respective obligations and requirements for the Contractor regarding cooperation with:

- (1) The Employer's Personnel.,
- (2) Any other contractors employed by the Employer,
- (3) The personnel of any **relevant authorities**, who may be employed in the execution on or near the Site of any work not included in the Contract.

In relation to the above, the Employer shall ensure that all of the above personnel and contractors co-operate with the Contractor's efforts and that they take actions similar to those that the Contractor is required to take under relevant parts of GC 4.8 [*Safety Procedures*] and GC 4.18 [*Protection of the Environment*].

The Contractor shall provide sufficient information to the Employer who shall then ensure that all of the above personnel and contractors are fully informed of the Contractor's Safety Plan and that their personnel comply with the Contractor's Safety Plan.

When preparing the Safety Plan, the Contractor shall identify the hazards and assess the risks of all aspects. To do this properly, information (including method statements, risk assessments and safety plans) may be needed from other contractors who will be working at the Site. The Employer shall therefore ensure that the Contractor is provided with all such other information as is requested by the Contractor necessary so that this can be incorporated into the Safety Plan. The Employer will also ensure that the Contractor is able to contact such other contractors and liaise with them on matters of health and safety.

When risks arise because of potential interactions between the Contractor and other personnel or contractors (e.g. site transport matters) or a number of contractors are exposed to a common risk (e.g. from the site electrical distribution system), the Employer shall instruct these other contractors to adopt the same principles of risk prevention and control that are applied by the Contractor unless otherwise agreed.

1.30.2 The Particular Safety Specification shall clearly describe any works for which the Employer is proposing to employ other contractors and any parts of the Site where the Employer's Personnel will be working together with a clear description of such works and the location, timing and other conditions for such works.

1.30.3 If any other contractors are employed by the Employer or if any **relevant authorities** responsible to the Employer **are** working on or near the Site of any work, the Engineer shall arrange and host Health and Safety Coordination Meetings:

- (1) Frequency of the meetings: as and when considered necessary by Engineer.
- (2) Unless otherwise agreed, attendees shall include **representatives of the Employer, Contractor and any other contractors and relevant authorities who may be employed in the execution of any work on or near the Site not included in the Contract**
- (3) Agenda should relate to coordination among different contractors including for example:

- (a) Effectiveness of existing Safety Plans and suggestions for revision and improvement;
- (b) Issues, problems and response due to the mutual impact of the work of the Contractor, Employer's Personnel, the Employer's other contractors and the works of any **relevant authorities**;
- (c) Accidents, injuries **in the previous period** and measures **to be taken** to prevent any reoccurrence;
- (d) Status of resolution of previous problems;
- (e) Items to be coordinated with police, fire department and other related organisations;
- (f) Compliance and registration requirements under the Laws of the Country;
- (g) Safety and health awards, media attention and the like; and
- (h) Other matters.

1.30.4 Report on the Health and Safety Coordination Meetings:

- (1) The Engineer shall prepare a report summarising the concerns raised and conclusions of all items listed in the agenda as above.
- (2) This report shall be submitted to the Employer, Contractor and other attendees within seven (7) days after the meeting.
- (3) A further copy shall be included in the **Contractor's** monthly progress report.

1.31 Safety Statistics

1.31.1 The Contractor shall collect and compile statistical data for safety performance on the Works in order to permit monitoring of achievement and prevention of reoccurrence of accidents, near-misses and the like, therefore contributing to the improvement of safety on the Works.

1.31.2 Actual statistics shall include the following:

- (1) **Accident: description, casualties, location, time, type and cause.**
- (2) **Near-miss: description, location, time, type and cause.**
- (3) **Lost-time: lost hours of casualties, duration of discontinuation.**
- (4) **Total working hours for calculation of frequency rate, severity rate and annual incident rate.**
- (5) **Number of users of the first aid station, number of people treated for disease/injury, description of disease/injury, causes.**
- (6) **Number of health and safety staff.**
- (7) **Number of candidates given safety induction and other training.**
- (8) **Number of safety inspections,**
- (9) **Number of detections of non-compliant, unsafe or lack of Contractor's Equipment.**
- (10) **Number of instructions issued for failure to use PPE, or inadequate or ineffective PPE.**
- (11) **Number of Engineer's Instructions issued for work suspension.**
- (12) **Number of HSO instructions issued for work stoppage.**
- (13) **Others.**

1.31.3 All data shall be in a format and content given consent by the Engineer.

- 1.31.4 The statistical results shall be prepared and submitted in the Daily Safety Report to the Engineer for validation and mutual agreement.
- 1.31.5 The data shall subsequently be compiled and included in the Contractor's Monthly Safety Report to be submitted under **JSSS 1.33** [*Safety Reports*].

1.32 Health and Safety Records

- 1.32.1 The Contractor shall keep health and safety records for the following:
- (1) Inspection records and checklists.
 - (2) Meetings for safety and health management.
 - (3) Monitoring of safety and health management activities.
 - (4) Health and safety education and training for the Contractor's Personnel.
 - (5) Health management for the Contractor's Personnel, documents regarding workers' health conditions (such as medical history and medical examination results) shall be stored in compliance with the Laws of the Country.
 - (6) Work environment records and other records required by JSSS Chapter 2 [General Safety Measures] and other parts of JSSS.
 - (7) Record of reports as may be required by government authorities.
 - (8) Detection of non-compliant, unsafe or lack of Contractor's Equipment.
 - (9) Instructions issued for unsafe behaviour or unsafe site conditions.
 - (10) Instructions issued for failure to use PPE, or inadequate or ineffective PPE.
 - (11) Engineer's Instructions issued for work suspension.
 - (12) HSO instructions issued for work stoppage.
 - (13) Others.
- 1.32.2 All records shall be in a format and content given consent by the Engineer and all shall be made available for inspection by the Engineer.
- 1.32.3 A summary of the above records shall be submitted to the Engineer as a part of the Contractor's Monthly Safety Report to be submitted under **JSSS 1.33** [*Safety Reports*].

1.33 Safety Reports

- 1.33.1 The Contractor shall provide regular safety reports to the Engineer to keep him fully informed of compliance with the Safety Plan and all matters of health and safety. Reports shall include:
- (1) Daily Safety Report: number of workers at site, works in progress (outline), near-misses/incidents/accidents, safety findings, actions taken, for improvement.
 - (2) Contractor/HSO and Joint Site Safety **Inspection Reports**.
 - (3) Weekly Safety Report: summary of safety matters of the week.
 - (4) Monthly Safety Report: summary of safety matters for the month, monthly and cumulative safety statistics. The Monthly Safety Report shall be submitted as an attachment to the Contractor's monthly progress report, required by GC 4.21 [*Progress Reports*].

1.34 Health and Safety Incentive Schemes

- 1.34.1 The Contractor shall consistently enforce work rules (whether or not an injury or illness is reported) to demonstrate his commitment to creating a culture of safety, not just the appearance of reducing rates. Action should not be taken to penalise any worker for reporting a work-related injury or illness rather than for **the purpose of promoting workplace safety**.

- 1.34.2 It is considered that incentive schemes are an important tool to promote an improvement in workplace health and safety and the Contractor is therefore required to develop and implement such health and safety incentive schemes.
- 1.34.3 It is suggested that workers should be rewarded for reporting near-misses or hazards, as this promotes worker involvement in the health and safety management process.
- 1.34.4 Consideration should also be given to rate-based incentive schemes which concentrate on reducing the number of reported injuries and illnesses by rewarding workers with certification and/or prizes or bonuses at the end of an injury-free period and which also could reward Operation Leaders or managers based on the lack of injuries within their respective teams.
- 1.34.5 Any scheme must however be implemented in such a manner that it does not discourage reporting by workers, such as taking negative action against a worker by withholding a prize or bonus because of a reported injury.
- 1.34.6 The Contractor shall introduce adequate precautions to ensure that workers feel free to report an injury or illness.
- 1.34.7 As an alternative to rate-based achievement schemes, incentive schemes that take positive steps to emphasise safety, not just incident rates are often useful such as schemes that reward workers for identifying potentially unsafe, dangerous or hazardous conditions on the Site.
- 1.34.8 The Contractor shall describe the proposed health and safety incentive scheme in the Safety Plan and shall also inform the Employer and Engineer about the progress and achievement of such schemes through their Monthly Safety Report submitted under **JSSS 1.33 [Safety Reports]**.

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

- 1.35.1 Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.

All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

- 1.35.2 The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.

If the HSO ascertains at any time that any items are **not suitable for use**, he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

- 1.35.3 The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor. The Contractor shall submit the report of such examination, inspection, measurement or testing to the Engineer.

If, as a result, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such

Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4 As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [Additional Contractor Forms]), the Contractor shall mobilise for use upon the Works:

- (1) New and up to date Personal Protective Equipment (PPE) and other safety equipment of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.
- (2) New or up to date Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works.

1.36 Health Matters

1.36.1 The Contractor is reminded of his obligations under GC 6.7 [Health and Safety] to take all reasonable precautions, at all times to maintain the health of the Contractor's Personnel and ensure that suitable arrangements are made for all necessary welfare and hygiene requirements and for the prevention of epidemics. Under other clauses of the Contract, the Contractor is required to protect the Contractor's Personnel from insect and pest nuisance, and to take other measures to reduce danger to their health.

1.36.2 Unless otherwise specified in the Particular Safety Specification, healthcare services and facilities at the Site shall be made available free of charge for the use of the Contractor's Personnel, the Employer's Personnel all other persons who are entitled to be on the Site. If so specified in the Particular Safety Specification, such healthcare services and facilities shall also be made available free of charge for the family members of the aforementioned personnel/persons.

1.36.3 Occupational health care shall be provided by the Contractor and shall include:

- (1) Environmental health care with consideration and precautions against asbestos, dust, lead and other metals, gases, hazardous and toxic chemicals, sunlight, engine exhaust emissions, (refer also to JSSS 2.1 [Working Environment]).
- (2) Occupational health care including noise, frequent or excessive use of vibrating tools.
- (3) Avoiding frequent or excessive manual handling of loads, stress and fatigue.
- (4) Fitness to work examinations, including eyesight, hearing and physical mobility and capability.

1.36.4 The Contractor shall prepare a Health Care Plan as a part of the Safety Plan including, descriptions and where necessary details or quantities of:

- (1) Health care staff to be assigned at the Site.
- (2) Provision of anti-mosquito measures including nets, medications or inoculations and the like in malarial prone areas.
- (3) Healthcare services to be provided including lectures and education on health matters.
- (4) Healthcare treatment facilities and medicines on the Site together with description of equipment and consumables.
- (5) Occupational healthcare proposal.
- (6) Temporary water and power supply to maintain use during mains supply failure.

1.36.5 Where the Site is located at an excessive distance from urban areas and/or where there is a lack of immediate availability of healthcare services and facilities, or where local health authorities

do not exist or are lacking in capability or standard of care, or where so required by the nature of the Works, the Contractor shall be responsible for providing additional healthcare services and facilities at the Site to comply with his obligations as specified in the Particular Safety Specification and as are necessary to fully protect **all relevant personnel**.

1.36.6 Report of Serious Illness

- (1) The Contractor shall inform the Engineer and submit details of any serious illness.
- (2) Having investigated and established the cause of any serious illness, the Contractor shall report the detail and conclusion of the investigation as soon as practicable to the Engineer.
- (3) The report shall include details of the HSO's recommended counter-measures.
- (4) The Engineer is to be consulted on the types of illness for which reports are to be informed.

1.37 Design and Management of Temporary Works

1.37.1 Unless otherwise specified in the Particular Safety Specification, the Contractor **is required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework**.

1.37.2 An alternative standard is acceptable by reference to **JSSS 1.4.5** [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works.

1.37.3 It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4 It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5 The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

1.37.6 Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS 1.9 [*Contractor's Method Statements*]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer may review Temporary Works design for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975 or any other acceptable standard in accordance with JSSS 1.37.2.

1.37.7 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [*Inspection and Monitoring of Temporary Works*].

1.37.8 Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.

1.38 Unexploded Ordnance (UXO)

- 1.38.1 If there is a possibility that any UXO may exist at the Site, then unless otherwise specified in the Particular Safety Specification, this shall be surveyed and investigated by the Employer and the result of this investigation shall be clearly stated and full information including survey and investigation results shall be provided by the Employer in the Particular Safety Specification.
- 1.38.2 Unless otherwise specified in the Particular Specification, clearance of UXO shall be undertaken by the Employer and at the cost of the Employer.
- 1.38.3 Completion of clearance shall be evidenced through the issue by the Employer's specialist remover of a certificate of UXO clearance from the Site area. Unless otherwise approved by the Engineer, no work shall commence in affected areas of the Site until the receipt of a copy of this certificate.
- 1.38.4 Should the Contractor encounter any UXO, after a clearance certificate has been issued in accordance with the above, he shall immediately stop all affected work at the affected area of the Site, clear the area of all Contractor's Personnel, Employer's Personnel and all other persons and notify the Engineer and relevant authorities.
- 1.38.5 Unless otherwise agreed between Employer and Contractor, the Employer shall then make further arrangements for removal and disposal, then obtain and issue a further clearance certificate. Work shall resume in the affected areas after the Contractor has received a copy of the further clearance certificate together with any further instructions from the Engineer.

ANNEXES TO CHAPTER 1: GENERAL REQUIREMENTS

Annex 1.1: Definitions and Abbreviations

A1.1.1. The following words and expressions in JSSS relating to the Conditions of Contract and the content of JSSS shall have the definitions stated:

- (1) “**Executing Agency**” means the representative organisation of a recipient government of the JICA Loan tasked with the responsibility (inter-alia) for managing the implementation of the Project including preparation of Bidding Documents and usually defined in the Contract as the Employer.
- (2) “**GC**” and “**PC**” followed immediately by a reference number means respectively General Conditions of Contract and Particular Conditions of Contract, Clause or Sub-Clause.
- (3) “**Health and Safety Officer**” or “**HSO**” means the Contractor’s health and safety officer at the Site to be appointed by the Contractor in accordance with GC 6. 7 [*Health and Safety*] as construed in accordance with JSSS 1.12 [*Health and Safety Officer at the Site (HSO)*].
- (4) “**JICA Standard Safety Specification**” or “**JSSS**” means the document of this title published officially by JICA on their website as may be further modified by the Particular Safety Specification for the Works.
- (5) “**Method Statement**” means a document that shows the details of the arrangements, methods and resources that the Contractor proposes to adopt for the execution of the Works or any part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] and supplemented by JSSS 1.9 [*Contractor’s Method Statements*].
- (6) “**Operation Leader**” (also known variously as a “Ganger”, “Leading Hand”, “Foreman” (working and non-working), “Team Leader”, “Superintendent”, “Supervisor” and the like) means a member of the Contractor’s workforce who through experience, training and testing is deemed by the Contractor to be appropriately qualified, skilled and experienced in their respective trade or occupation to work with, lead and/or supervise the teams of workers, directing them and/or superintending them in the performance of their assigned duties and to ensure their compliance with the Contractor’s safety regulations and who can also be referred to within the OSHA definition as a “Competent Person”.
- (7) “**OSHA**” means the technical requirements of “OSHA Standard Part 1926 Safety and Health Regulations for Construction”, as written in Code of Federal Regulations (29 CFR) and published by the Occupational Safety and Health Administration, U.S. Department of Labor.
- (8) “**Particular Safety Specification**” means the document that contains the particular additions and modifications to JSSS, necessary to create a precise and relevant specification of the health and safety requirements for the Project.
- (9) “**Project Safety Specification**” means the document that contains Part 1 [*JSSS*] and Part 2 [*Particular Safety Specification*].
- (10) “**Project**” means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.
- (11) “**Safety Plan**” means a document (or documents) that contains the overall risk assessments together with the details of all health and safety arrangements, methods and resources that the Contractor proposes to adopt for health and safety management of the entire Works or any Section or part of the Works, as referred to in GC 4.1 [*Contractor’s General Obligations*] as supplemented by JSSS 1.7 [*Contractor’s Safety Plans*].

(12) “**Safety**” shall also mean “occupational health and safety” and “health and safety”.

A1.1.2. The following words and expressions in JSSS relating to the technical content of JSSS shall have the definitions stated:

- (1) “**Accident Response**” means the requirements for the Contractor’s response to an accident at the Site or Sites, as further referred to in JSSS 1.23.1 [*Accident Response Plan*].
- (2) “**Confined Spaces**” means spaces that are not designed for continuous occupation but are provided for persons to enter and perform certain works (including inspection, maintenance and repairs) and that consequently may have limited or restricted means for entry or exit. Due to the likelihood of insufficient ventilation, the Contractor shall be aware of a potentially unhealthy or dangerous environment and he shall be deemed to have investigated and taken measures against such risks in every case.
- (3) “**Cofferdam**” means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
- (4) “**Dangerous Goods**” means corrosive, flammable, explosive, spontaneously combustible, toxic, oxidising, or water-reactive materials. They must be identified in the workplace (and when being transported) by different coloured 'diamond' symbols, classified on the basis of immediate physical or chemical effects, such as fire, explosion, corrosion and poisoning. An accident involving dangerous goods could seriously injure persons and seriously damage property and/or the environment.
- (5) “**Dangerous Work**” means Permanent or Temporary Works to be executed by the Contractor in Confined Spaces, Hazardous Areas, or Operational Areas or in the presence of or requiring the use of Hazardous Substances or Dangerous Goods or other work which is especially and potentially dangerous and which requires the use of specialist skills, safety equipment, safety measures and PPE.
- (6) “**Diver**” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure.

For definition of further terms relating to Diving Works, refer to JSSS Chapter 10 [*Diving Works*].

- (7) “**Earthwork Support**” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.
- (8) “**Elevated Access Structures**” means the substantial, elevated, temporary working platforms, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at Sites with difficult access or with restricted room for construction operations or steeply sloping or offshore Sites.
- (9) “**Emergency Response**” means the requirements for the Contractor’s response to any Emergency at the Site or Sites, as further referred to in JSSS 1.26 [*Emergency Response Plan*].
- (10) “**Falling Objects**” means objects falling from heights including displaced, dropped, or blown Goods, tools, debris or waste material.
- (11) “**Falsework**” means temporary supporting structures used to support parts of the Temporary Works or Permanent Works during construction, until the latter are stable, self-supporting and safe.
- (12) “**Formwork**” means temporary containment structures for in-situ concrete and the immediately supporting members pending the concrete achieving sufficient strength to support its own weight and act safely as a structural component.

- (13) “**Hazardous Substances**” means any substance, whether solid, liquid or gas, that may cause harm to health.
- (14) “**Hazardous Areas**” means areas where there is a risk of explosion due to the presence of flammable or explosive gases, vapours, mists or dusts.
- (15) “**Hoisting Operation**” means the selection of Hoisting Equipment appropriate to the purpose, preparation of Method Statements and Safety Plans and safely implementing the hoisting and placing of loads in position.

For definition of further terms relating to Hoisting Operations and associated rigging, refer to JSSS Chapter 6 [*Hoisting and Rigging*].

- (16) “**Operational Area**” means an area in a functioning process, treatment, manufacturing or like facility where the Contractor is required to perform Works while the Employer is continuing operations.
- (17) “**Personal Fall Arrest System**” or “**PFAS**” means a fall protection system that is designed to arrest a worker in a fall from a working level.
- (18) “**Personal Fall Restraint System**” or “**PFRS**” (also referred to as a “Positioning Device System”) means a fall protection system that is designed to restrict the movement of workers, preventing them from reaching the edge of any working area and therefore eliminating the risk of a fall.
- (19) “**Personal Protective Equipment**” or “**PPE**” means equipment that is worn by the person to minimize exposure to hazards that cause serious workplace injuries and illnesses, which may result from falling objects, excessive noise, dust, contact with chemical, radiological, physical, electrical, mechanical, or other workplace hazards.
- (20) “**Safety Belt**” means a sufficiently substantial strap to be secured about the waist for attaching to a lanyard or line to restrain the movement of workers and prevent them from reaching locations from where they may be at risk of falling.
- (21) “**Safety Harness**” means a sufficiently substantial harness to be secured about the body for attaching to a lanyard, lifeline and deceleration device to safely arrest and support any worker during a fall.
- (22) “**Scaffold**” or “**Scaffolding**” means a temporary structure or structures that provide access on or from which persons work or to support Goods.
- (23) “**Skill Training**” means additional training to be provided by the Contractor for the counterpart Contractor’s Personnel to develop and improve their trade skills in performing their work at the Site and shall include OJT and theoretical training in accordance with JSSS 1.21 [*Skill Training*]. Such training shall also include examining and testing by the Contractor and certification of attainment in such skills.
- (24) “**Spotter**” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [*Spotters Flagmen and the Like*].

Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.

- (25) “**Trade Effluent**” means any liquid waste (effluent) that is discharged from premises being used for a business, trade or industrial process, other than surface water and domestic sewage.

- (26) “**Unexploded Ordnance**” or “**UXO**” shall mean unexploded bombs, or explosive remnants of war or explosive weapons (such as bombs, shells, grenades, land mines, naval mines, cluster munition, and the like) that did not explode when they were employed and still pose a risk of detonation, sometimes long after they were used or discarded.
- (27) “**Working Platform**” means a platform on or within a scaffold that is intended and designed to support persons or Goods.

A1.1.3. The following abbreviations of technical terms shall have the meanings stated:

AED	Automatic External Defibrillator
BMGV	Biological Monitoring Guidance Values
CPR	Cardiopulmonary Resuscitation
ODA	Official Development Aid
OJT	On Job Training
PFAS	Personal Fall Arrest System
PFRS	Personal Fall Restraint System
PPE	Personal Protective Equipment
TBM	Tool Box Meetings
TWA	Time Weighted Average
WEL	Workplace Exposure Limits

A1.1.4. The following abbreviations of standards, codes and the like shall have the meanings stated:

ACI	American Concrete Institute
ANSI	American National Standards Institute
ASHTO	American Association of State of Highway Transportation Officials
ASME	American Society of Mechanical Engineers
ASTM	American Society for Testing and Materials.
BS	British Standard
BS EN	British Standard European Norm
HSE	UK Health and Safety Executive
ISO	International Organisation for Standardisation
ILO	International Labor Organization
JIS	Japanese Industrial Standards

Annex 1.2: Content of Bid Stage Safety Plan

A1.2.1. This Annex lists the required content for the Bid Stage Safety Plan as referred to in JSSS 1.7 [*Contractor's Safety Plan*]. Unless otherwise Specified in the Particular Safety Specification, the Contractor shall follow this format and structure in the Bid Stage Safety Plan. The same format and structure shall be used later for the Commencement Stage Safety Plan but with the content and developed as necessary to show the required detail.

A1.2.2. The Bid Stage Safety Plan shall be an outline plan but it must cover each of the items listed below with sufficient detail provided to demonstrate that the Bidder understands the requirements and indicates the Bidder's intentions, so that this can be understood and properly evaluated.

(1) Description of the Works

A description of the Works supported by overall layout plan(s) to provide a clear understanding of the overall layout and content of the Works and showing main construction items and areas, roads, Site access and egress locations, working areas, storage areas, temporary offices, laydown areas, warehouses and like facilities and including a summary of principal work items and significant quantities, etc.

(2) Bidder's Corporate Policy on Health and Safety Management

A description of the Bidder's corporate health and safety management policy covering the aims and intentions for improving the level of health and safety. The policy shall include a description of the purpose of health and safety (prevention of occupational accidents, maintenance of physical and mental health of workers, etc.), a description of the basic **company policies on risk assessment** and health and safety management.

(3) Health and Safety Management System, Responsibility and Authority of Bidder's Personnel

A description of the health and safety management organisation at Site headed by the Bidder's Health and Safety Officer at Site (HSO) and showing the approximate numbers, responsibilities and authority of any other Contractor's Personnel involved in health and safety management at the Site.

A description of the responsibilities and authority of the Bidder's head office health and safety personnel together with the communication procedures for contact and support for the Site safety teams.

(4) Health and Safety Laws

A list of Laws (including all standards) of the Country which require the Bidders compliance for the health and safety of his workers and for the health and safety management of the Works. If the Contractor considers any parts to be superseded by JSSS then the relevant Clause number of JSSS shall be inserted.

(5) Bidder's Safety Management System

Refer to JSSS 1.5 [*Contractor's Safety Management System*]

Describe the scheme that the Bidder is proposing and how he intends to implement same.

(6) Temporary Works

Refer to JSSS 1.37 [*Design and Management of Temporary Works*].

A Safety Plan for Temporary Works listing the principal items, describing the content, and specifying the outline of safety measures to be applied to ensure compliance with the requirements.

(7) Temporary Facilities on Site

The plan shall include a description of the general health and safety rules (e.g. smoking areas, traveling speed on Site, cleanliness, tidiness, latrines, wash rooms, shelters, etc.).

(8) Safety Measures for Contractor's Design of the Permanent Works

If, under GC 4.1 [*Contractor's General Obligations*], the Contract specifies that the Contractor shall design any part of the Permanent Works, the Bidder shall provide a description of the arrangements for controlling risks arising from such design of the Permanent Works.

(9) Safety Plan for the Works

A Safety Plan for the whole of the Works with separate parts provided for each part of the Works, including descriptions of the likely risks and measures for preventing accidents on the Site.

(10) Safety Plan for Dangerous Work.

Refer to JSSS 1.22 [*Dangerous Work*]

A listing of any Dangerous Work which will be encountered on the Site and general details of the Safety Plan for such Dangerous Work by reference to JSSS Annex 1.1 [*Definitions and Abbreviations*] and GC 4.1 [*Contractor's General Obligations*].

(11) Permit to Work System

Refer to JSSS 1.23 [*Permit to Work System*]

A listing of all high-risk areas of the Works that shall be subject to the Permit to Work System together with a description of proposed procedure.

(12) Safety Measures for Contractor's Equipment

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the procedures for inspecting and maintaining the Contractor's Equipment together with all spare parts, including inspections prior to shipment, after arrival at Site and during use to ensure that all Contractor's Equipment at the Site is maintained in a safe, efficient, non-polluting and acceptable condition. It shall include a general description of all regular maintenance and repair activities.

(13) Proposed Health and Safety Incentive Scheme

Refer to JSSS 1.34 [*Health and Safety Incentive Schemes*]

A description of the Proposed Health and Safety Incentive Scheme, designed to encourage conscious consideration of health and safety by Contractor's Personnel and to reward improvement.

(14) Safety Information Sharing and Communications Policy

A description of the information sharing and communication systems for health and safety within the organisation of the Contractor and between the Contractor and Employer, Engineer and relevant government agencies, etc. Reference shall be made to the various health and safety meetings described in JSSS.

A description of safety management activities for Contractor's Personnel shall be included together with the method for giving and receiving feedback and opinions regarding health and safety.

(15) Health and Safety Equipment, Facilities and Personal Protective Equipment (PPE)

Refer to JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*]

A description of the intended policies for the deployment of safety equipment, facilities and PPE to reduce health and safety risks, detailing the items and methods for providing and replacing (when worn, lost or damaged) general PPE and the use of additional PPE for particular working locations, environments and conditions.

(16) Site Inspection Plan

A description of the methods for Site inspections by the HSO, types of inspection and frequency.

The description shall also include the methods for reporting, recording and utilising results and also for posting warnings, no entry notices, giving instructions and stopping work.

(17) Site Security

A description of the proposed Site security methods explaining how access to the Site by third parties, neighbours, nearby residents and any trespassers upon the Site will be prevented or (if and when applicable) permitted.

The description shall include the provision and control of entry and exit gates, barriers etc., security posts, security patrols and any other measures to reasonably ensure the security of the Site.

(18) Policy for Preventing Traffic Accidents

A description of the measures to be implemented for the prevention of traffic accidents on the public roads outside the Site and on roads and all other trafficked areas within the Site.

A description of the measures to be implemented to prevent workers riding in the back of pick-ups or trucks, or boarding or alighting from them near the Site, compulsory wearing of seat belts, systems of warning, punishment and dismissal for non-compliance should also be included.

(19) Reporting Procedure for Unsafe Conditions and Behaviour

A procedure for the reporting of unsafe conditions and unsafe behaviour on the Site (including near-misses) together with improvement actions including instructions, implementation and the recording of improvement measures.

(20) Accident Response Plan

Refer to JSSS 1.23.1 [*Accident Response Plan*]

The Plan shall describe the facilities to be provided and also cover the preparation and submission of the accident report, describing when an accident report will be prepared and submitted, the method of investigation of causes, planning and implementation of preventive measures against recurrence.

(21) Health Care Plan

Refer to JSSS 1.36 [*Health Matters*]

A description of the proposed facilities, furniture and equipment for rest stations, restroom, dining facilities, canteens, sanitary facilities, sports and leisure facilities, shower facilities, changing room etc..

A health care plan with services and facilities for maintaining the health and occupational health of all Contractor's Personnel.

(22) Fire Response Plan

Refer to JSSS 2.8 [*Fire Prevention*]

Details of the fire prevention services to be provided at the Site.

The Fire Response Plan required by JSSS 2.8 [*Fire Prevention*].

(23) Emergency Response Plan

Refer to JSSS 1.26 [*Emergency Response Plan*]

Details of the Emergency Response Plan.

(24) Monitoring and Review of Health and Safety Management Activities

The procedures for monitoring and reviewing the purpose, method, timing, utilisation of results, development, etc. of health and safety management activities such as safety inspections, morning toolbox meetings, 5S activities (refer to JSSS 1.15 [*Contractor's Safety Management Activities*]).

(25) Safety Induction Training

Refer to JSSS 1.20 [*Safety Induction Training*]

An outline description of the required safety induction training for all proposed health and safety training plans, describing methods, facilities, time, teaching materials, policies for selecting trainers, etc. and covering safety induction.

Details of special training required for Dangerous Works shall also be included.

(26) Skill Training

Refer to JSSS 1.21 [*Skill Training*]

An outline description of the proposed skill training plans for local counterpart Operation Leaders, describing OJT and classroom components, facilities, participants, time, teaching materials, policies for selecting trainers and the counterparts.

(27) Legal Requirements

A description in brief with references to the legal requirements and remedies in the Country for injuries and death at work and for persons affected by illness, together with a summary of any workmen's accident compensation insurance or stating that there are no such legal requirements if that is the case, and any other legal obligations and remedies.

Annex 1.3: Additional Contractor Forms

Attached Forms:

Form JSSS/BSD - Bidder's Safety Declaration

Form JSSS/SAR - Sample Accident Report

Form JSSS/BSD - Bidder's Safety Declaration

[This form is to be inserted in the Bidding Documents after the existing Form-ACK, with new page number, renumbering existing pages appropriately and inserting suitable reference in the Table of Forms]

I, [insert name and position of authorised signatory], being duly authorised by [insert name of Bidder/members of joint venture (“JV”)] (hereinafter referred to as the “Bidder”) to execute this Form JSSS/BSD, hereby declare our commitment to comply with the health and safety requirements of the Contract.

The Bidder declares, that if selected to undertake the Works, he will ensure that the Site is established and maintained as a healthy and safe workplace for the Contractor's Personnel, the Employer's Personnel and all other persons entitled to be thereon or that may be affected by operations thereby.

The Bidder hereby declares that after full investigation and research of resources within the Country, he has given full and careful consideration and fully accepts the need and has made full allowance for the importation, the use upon the Works and subsequent re-export in accordance with the Contract of all required Contractor's Equipment, Temporary Works, PPE and all other safety resources necessary to maintain the highest achievable international level of health and safety upon the Works.

The Bidder declares that he will mobilise for use upon the Works:

1. New and up to date PPE and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged, and
2. New or up to date Contractor's Equipment and Temporary Works, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works;

and that all of the above will be used correctly and for the purpose intended.

The Bidder further declares that he shall:

1. Carry out regular and thorough safety inspections, find and correct any health and safety problems on the Works, primarily by trying to eliminate or reduce hazards through making feasible changes in working conditions rather than relying on PPE to eliminate or reduce risks.
2. Employ workers with appropriate skill, educational or vocational qualification, experience and capability.
3. Fully inform workers about hazards.
4. Provide health and safety training to all Contractor's Personnel, any subcontractors, suppliers and others for whom the Contractor is responsible, the Employer's Personnel and all other persons who are entitled to be on the Site, in a language and vocabulary they can understand.
5. Keep accurate records of work-related injuries and illnesses.
6. Perform tests in the workplace, such as air sampling as required by the Project Safety Specification.
7. Provide required new PPE at no cost to workers and ensure that this is used properly, kept in good condition and replaced in the case of being worn-out, lost or damaged.
8. Assign only workers who, in consideration of health, physical condition and age are suited to the operations to which they are assigned.

9. Provide eyesight, hearing and mobility examinations and other medical tests required by the Contract.
10. Post injury and illness information and data where workers can see them.
11. Inform the Engineer and submit details of any accident as soon as practicable and in any event no later than twenty-four (24) hours after the occurrence and, in the case of a fatal accident shall inform the Engineer immediately.
12. Not retaliate against workers for using their rights under the Laws of the Country.

The requirements of this declaration shall apply fully to all of the Bidder's proposed Subcontractors, suppliers and specialists engaged by the Bidder on the Works, for whom the Bidder shall remain fully responsible.

The Bidder also affirms that if the Bid is successful, the Health and Safety Officer at Site, named below and also included in Bidding Form, Form PER -1: Proposed Personnel, unless otherwise required by the Bidding Documents, shall be assigned from the Commencement Date, full-time upon the Site of the Works and shall not be replaced or substituted at any time except with the consent of the Engineer.

If the Bid is accepted the Bidder agrees that this Declaration together with all other documents comprised in the Bid Stage Safety Plan shall form a part of the Contract, at and from which time all references to "Bidder" shall be construed as references to "Contractor".

Form JSSS/SAR – Sample Accident Report

[The form is to be completed by the Contractor, submitted to the Engineer when applicable and in accordance with JSSS 1.25 [Measures at the Time Accidents Occur]

CONTRACT INFORMATION:	
1) Name of Project:	
2) Project Reference Number : (e.g. L/A No., G/A No.)	
3) Contract Number:	
4) Package Description:	
5) Employer: (name and nationality)	
6) Contractor: (name and nationality) (If casualty(ies) is(are) belonging to subcontractor,) Subcontractor: (name and nationality)	
7) Engineer: (name and nationality)	
8) Press Report about the Accident (Name of Media, Date, and Copy of Report to be attached)	

(above to be inserted before all reports)

FIRST REPORT INFORMATION:	
1) Date and time of accident occurrence (local time):	
2) Date and time of first verbal report to Engineer:	
3) Exact location of accident occurrence:	
4) Brief background and apparent cause:	
5) (i) Number of casualty(ies)/ (ii) Information of casualty(ies) (Nationality, Age, Sex, Position, Experience Year)/ (iii) Description of injuries incurred	
6) Physical damages to the Works, Site and any properties of the third parties	
7) Present medical status of casualty(ies):	
8) Present work status:	
9) List attached information (e.g. Layout and sketch drawings, photographs, notes and report):	
10) Accident Report Submission Date	

SUBSEQUENT REPORT INFORMATION (POST-INVESTIGATION):	
1) Cause(s) of the accident:	
2) Counter-measures proposed by the Contractor to avoid recurrence of similar accidents and risks:	
3) Number of reported accident(s) occurred in the past one (1) year in the same Contract Package as the accident occurred:	
4) Number of reported near misses occurred in the past one (1) year in the same Contract Package as the accident occurred:	
5) Other Information:	

Report Prepared by: (name): _____ (sign) : _____ Report Submission Date(s) _____ Time: _____	Contractor's Health and Safety Officer (HSO)
Receipt acknowledged by: (name): _____ (sign): _____ Report Receipt Date(s) _____ Time: _____	Engineer

(above to be inserted with detail and signatures at end of each report)
