NK: We referred to the relevant parts of HSG150 and modified. The Contractor shall comply with the following	**6.4.4 Portable Ladders and Stepladders** The Contractor shall comply with the following

(1) 移動はしご

請負者は、作業員が移動はしごを使用して移動する必要のある場合は、次の措置を講じなければならない。
→E 7.4.4 冒頭部に規定済み
(a) 次に定めるところに適合した移動はしごを使用させること。
(i) 丈夫な構造とすること。
(ii) 材料は、著しい損傷、腐食等がないものであること。
(iii) 幅は、30cm 以上であること。
(iv) 踏み桟は、25 cm から 35cm の間隔で、且つ、等間隔であること。
→上記(i)～(iv)は E 7.4.4 (1)(a)～(d)に規定済み
(b) すべり止め装置の取付け及び転位を防止するために次のいずれかの措置等を講じること。
(i) はしごの上方を建築物に取付ける。
→E 7.4.4 (3)(h)に規定済み
(ii) 他の作業員がはしごの下方を支える。
→E 7.4.4 (3)(i)(iii)に規定済み
(c) はしごの使用時には次の措置等を講じること。
(i) 据え付け角度は L(水平長):H(高さ)は 1:4(75.5 度)とする。
→E 7.4.4 (3)(e)に規定済み
(ii) はしごの上部の床からの突き出しは 100cm 以上とする。
→E 7.4.4 (3)(f)に規定済み
(d) 移動はしごを継ないで使用することを禁止する。→E 7.4.4 (3)(g)に規定済み)

(2) 脚立

請負者は、脚立を使って作業員に移動させるときは、次に定めるところに適合した脚立を使用させなければならない。
(a) 丈夫な構造とすること。
(b) 材料は、著しい損傷、腐食等がないものであること。
(c) 脚と水平面との角度を 75° 以下とし、かつ、折りたたみ式のものにあっては、脚と水平面との角度を確実に保つための金具等を備えるものであること。
→上記(a)～(c)は E 7.4.4 (2)(a)～(c)に規定済み

The Contractor shall comply with the following requirements regarding the use portable ladders and stepladders:
(1) Structure and specification of ladders
(a) Shall be of sound structure, clean and not contaminated by any slippery material;
(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;
(c) Be at least 30 cm wide;
(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and
(e) Have slip-proof steps or have other measures to prevent slipping.
(2) Structure and specification of stepladders
(a) Shall be of sound structure, clean and not contaminated by any slippery material;
(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;
(c) The angle between the front rail and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;
(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.
(e) Rails shall have non-slip feet or shoes.
(3) Use of ladders and stepladders

---

requirements regarding the use portable ladders and stepladders:
(1) Structure and specification of ladders
(a) Shall be of sound structure, clean and not contaminated by any slippery material;

JC1O: こんな書き方があるのか。タイトルを Portable Ladders として Potable ladder shall; (a).....
Is there such way of writing? I propose to replace the title with, for example, “Portable Ladders”, and “Potable ladder shall; (a) ..”
NK1: modified as commented.

(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;
(c) Be at least 30 cm wide;
(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and
(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Structure and specification of stepladders
(a) Shall be of sound structure, clean and not contaminated by any slippery material;

JC1O: Same as above.
NK1: Modified.

JC1D: 前項(1) (a)と重複
Same as the previous section (1) (a) Duplicates.
NK: Requirement same for (1) and (2).

(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

JC1D: 前項(1) (b)と重複
Same as the previous section (1) (b). Duplicates.
NK: Same as the previous comment.

(c) The angle between the front rail and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

JC1D: HSG 150 では”stiles”としているようです。
In HSG 150, the “front rail” seems to be used as "stiles".
NK: “front rail” is used in US The Code of Federal Regulations of the United States of America.
(https://books.google.co.jp/books?id=woU6AAAAIAAJ&pg=PA72&lpg=PA72&dq=front+rail+step+ladder&source=bl&ots=S38ct5egJ7&sig=ACfU3U0uHTs_ADUHGctBGXwmY5rGwsu5IA&hl=ja&sa=X&ved=2ahUKEwj7-baBn-zoAhUKBKYKHci4A-cQ6AEwE3oECAsQMg#v=onepage&q=front%20rail%20step%20ladder&f=false)
Left as it is.

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.
(e) Rails shall have non-slip feet or shoes.
(3) Use of ladders and stepladders

---

requirements regarding the use portable ladders and stepladders:
(1) ~~Structure and specification of~~ Portable ladders shall
(a) ~~Shall~~ Be of sound structure, clean and not contaminated by any slippery material;
(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;
(c) Be at least 30 cm wide;
(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and
(e) Have slip-proof steps or have other measures to prevent slipping.
(2) ~~Structure and specification of~~ Stepladders shall:
(a) Be of sound structure, clean and not contaminated by any slippery material;
(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;
(c) The angle between the front rail and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;
(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.
(e) Rails shall have non-slip feet or shoes.

	(Unless otherwise stated, the following requirements apply to both ladders and stepladders) (a) Users must read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment; (b) Users must avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders near power lines or exposed energised electrical equipment; (c) Ladders must be inspected prior to use. If a ladder is damaged, it must be removed from service and suitably tagged until repaired or discarded; (d) Ladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it; (e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees); (f) Ladders shall have the top projecting at least 1 m over the landing floor; (g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed; (h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing; (i) Ladders shall be secured before any use and prevented from slipping during use by: (i) Securing the side rails at or near the top and the bottom; (ii) Providing an effective anti-slip shoe or foot; and (iii) Having another worker support the lower part of the ladder. (j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use; (k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;	(Unless otherwise stated, the following requirements apply to both ladders and stepladders) (a) Users must read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment; (b) Users must avoid electrical hazards, always look for overhead power lines before handling ladders. 7.5 足場	**7.5. SCAFFOLDING**	**7.5. SCAFFOLDING** JC1D: HSG 150 3rd edition 2006 General access scaffolds (page 28/141)を参照されて全面的な改訂が望まれます。	**6.5 SCAFFOLDING**

7.5.1 一般事項	**7.5.1. General**	I hope revision is fully made with reference to HSG 150 3rd edition 2006 General access scaffolds (page 28/141). JC1: 指針をベースに作成した和文にもとに、必要な事項及び規定を追加する形で英文を作成しています。和文での必要事項を網羅していますが、HSG は具体的な数値規定がないため参照とはせず、OSHA をベースとした規定に 7.5 全体を改訂します。 This English JSSS was prepared based on the Japanese version which was prepared based on the safety guidelines of Ministry of Construction, Japan. 7.5 has covered requirements in Japanese version. However, 7.5 is modified based on OSHA because HSG does not specify concrete values required for JSSS. **7.5.1. General** JC1O: 日本語 ver.とは異なる内容となっている。 MM: JICA:The content is different from the Japanese ver. Check it again, please. MD: The comment is correct, it is very different basically because MD considered it necessary to modify as mentioned in the draft version which also included some guidance notes, comments and queries. NK : We will discuss the draft with JICA and necessary changes. NK1: We will revise this Section referring to MD's comment in Issue 1 and HSG. NK1: "Scaffolding" is defined in Chapter 1 A1.1.2 as follows: *(22) "Scaffold" or "Scaffolding" means a temporary structure or structures that provide access on or from which persons work or to support Goods.*	**6.5.1 General**
(1) 足場とは作業のために設ける作業床及びそれを支持するものからなる仮設物のうち、作業構台を除くものをいう。 →規定無し。→Chapter 1 A1.1.2 (22)で Scaffolding は定義済みのため。	(1) This Section contains requirements for various types of scaffolding including tubular steel scaffolding and modular or system scaffolding, in various configurations.	(1) This Section contains requirements for various types of scaffolding including tubular steel scaffolding and modular or system scaffolding, in various configurations.	(1) This Section contains requirements for various types of Scaffolding defined in JSSS Chapter 1, A1.1.2 including ~~tubular steel~~ supported scaffoldings for example tube and coupler, ~~and modular or system~~ fabricated frame, mobile scaffoldings, suspended scaffolding for example interior hung scaffolding, trestle scaffoldings in various configurations and mobile elevating work platforms.
(2) 本節では鋼管足場、つり足場、移動式足場について、以下に規定する。 →E 7.5.1 (1)に規定済み	(2) Not all types are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.	(2) Not all types are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.	(2) Not all types are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.
(3) 請負者は、足場からの墜落防止に対しては、本仕様書 2.5[墜落防止]、足場・作業床での作業に際して物体の飛来又は落下により工事関係者に危険を及ぼすおそれのある場合は、2.6[飛来落下の防止措置]に拠る規定に、各々従わねばならない。 →E 7.5.1(7)に規定済み	(3) All tubular steel scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations.	(3) All tubular steel scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations. JC1D: Contractor's Personnel なのは当然のこと It is obvious who do those is Contractor's Personnel. NK1: Important thing is to specify that Personnel trained and certified for such operations shall be assigned. The actions required are for design, erection, test, inspect, use, dismantle and removal, therefore this sentence does not specify personnel positions like HSO, worker, Operation Leader. Therefore, not modified.	(3) All ~~tubular steel~~ scaffoldings shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel who ~~that~~ have been trained and certified for such operations in accordance with JSSS~~1.16~~ 1.18 [*Proper Placement of Contractor's Personnel*].
(4) 請負者は、足場の安全事項についての当該国の法律及び本仕様書のいずれにも規定が無い事項は、次に示すいずれかの基準における規定を遵守しなければならない。 →E 7.5.2 [Compliance Standards](1)及び(a)～(c)として下記(a)及び(b)を規定済み (a) 米国 OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds 及び ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design	(4) All modular or system scaffolding (consisting	(4) All modular or system scaffolding (consisting	~~(4) All modular or system scaffolding (consisting of~~

(b) 英国 BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design (5) 足場の計画、設計は、その上で行う作業に従事する作業員、作業員が使用する道具等の重量を勘案した上載荷重を考慮し、本章 7.1.3[仮設構造物の設計及び設計照査]に基づき計画、設計すること。 →E 7.5.2 (2)に相当	of prefabricated individual components, braces and accessories) shall be designed, assembled, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*]. (5) All scaffolding work shall be carried out strictly in accordance with the manufacturer's written instructions. (6) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 0 [*Design and Provision of TW Generally*]. (7) Please refer to all other related JSSS requirements including but not restricted to: (a) JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*]; (b) JSSS 1.35 [*Design and Management of Temporary Works*] (c) JSSS 2.5 [*Fall Prevention*] (d) JSSS 2.6 [*Falling Objects*]; (e) JSSS 0 [*Portable Ladders and Stepladders*]; (8) Scaffolds and scaffold components must not be loaded in excess of their maximum intended loads or rated capacities, whichever is less. (9) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other	of prefabricated individual components, braces and accessories) shall be designed, assembled, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*]. JC1D: 前コメントに同じ。書きます？ Same as previous comment. Is it necessary to stipulate? NK1: (3) and (4) are merged in (3) (5) All scaffolding work shall be carried out strictly in accordance with the manufacturer's written instructions. (6) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 0 [*Design and Provision of TW Generally*]. (7) Please refer to all other related JSSS requirements including but not restricted to: JC1D: この表現は好ましくない。必要であれば、関連クローズをすべて書き出すことが望まれる。スペック作成者の信頼度が下がる。 The expression of "but not restricted to "is not desirable. If necessary, it is desirable to write out all relevant closes. The reliability of the spec write is reduced. NK1: (7) above will be deleted based on the JC's comment and the point that Compliance Standards is defined in 7.5.2. JC1O:英語不明。 Cannot understand this sentence means. NK: Deleted (a) to (e) and added common requirement in (7) from 6.5.3. (a) JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*]; (b) JSSS 1.35 [*Design and Management of Temporary Works*] (c) JSSS 2.5 [*Fall Prevention*] (d) JSSS 2.6 [*Falling Objects*]; (e) JSSS 0 [*Portable Ladders and Stepladders*]; (8) Scaffolds and scaffold components must not be loaded in excess of their maximum intended loads or rated capacities, whichever is less. 	(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK. (2) Unless otherwise stated in the Contract or in any of the standards for compliance, each scaffold and scaffold component must support without failure its own weight and at least four times the maximum intended load applied or transmitted to it.	applied or transmitted to it. JC1D: 参考までに関連する standard を示してください Please indicate relevant standard. JC1O: 安全係数 4 の根拠？ Are there any specified grounds for safety factor 4? NK: It is from OSHA §1926.451 General requirements below. a) Capacity. (1) Except as provided in paragraphs, each scaffold and scaffold component shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it. (2) is moved to 6.5.1 (7). NK1: 各節で規定していますので、まとめて新款 6.5.3 足場床を、OSHA を遵守することを追加します。 As each Section specifies Platform, new section 6.5.3 is added below.	~~four times the maximum intended load applied or transmitted to it.~~ **6.5.3 Platform of Scaffolding** The platform of Scaffolding shall comply to the following: (1) Each platform on all working levels of scaffoldings shall be fully planked or decked between the front uprights and the ~~guardrail~~ handrails supports as follows: (a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage. (b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary. (c) Where the Contractor makes the demonstration provided for in paragraph (a) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not 24 cm. (d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required. (2) Except as provided separately for each Scaffolding, platform and walkway shall be at least ~~46~~ 45 cm wide. Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least ~~46~~ 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

			(3) Except as provided separately for each Scaffolding, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling. (4) Other requirements than specified in the above, the platform of Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.
		NK1: 足場の種類・名称を OSHA の規定に合わせて変更し鋼管足場に加えて、ビテイ足場を追記します。 The names and types of scaffoldings are modified following OSHA. Fabricated frame Scaffolding as a part of supported scaffoldings.	**6.5.4 Supported Scaffoldings** (1) General (a) The Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means (b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation. (c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement. (d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement. (e) Scaffolds over 38.0 m in height above their base plates shall be designed in accordance with JSSS 1.37 [*Design and Management of Temporary Works*], and shall be constructed and loaded in accordance with such design. (f) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms. (g) Other general requirements than specified in the above, the supported Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported scaffolds. (2) Tube and Coupler Scaffolding (a) Transverse bracing forming an “X” across the width of the scaffold shall be installed at the scaffold ends and at least at every third set of posts horizontally (measured from only one end) and every fourth runner
7.5.2 鋼管足場 請負者は、次を遵守して計画、設計を行わなければな	**7.5.3. Tubular Steel Scaffolding.** (1) Tubular steel scaffolding comprises steel	**7.5.3. <u>Tubular Steel Scaffolding</u>** JC1O: 内容は新 Are the contents new? NK1: 鋼管足場の和文に追加しています。	

らない。

tubes and connector clips, with boarded working platforms, handrails, toe boards and access ladders, steps or stairs.

(2) Ladders shall be provided in accordance with JSSS 7.4 [*Walkways, Ladders and Stepladders*].

(3) Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].

(4) Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].

(5) The following safety measures shall apply:

(a) Ensure that all scaffolding is erected plumb, level and squared;

(b) Prevent any scaffold from moving, sliding, rocking or settling by ensuring that posts are securely founded and provided with mudsills or other base plate types and measures to distribute the load, screw-jacks or other levelling devices;

(c) Ensure that all joints between scaffolding tubes are formed with the correct type of coupling and that all are securely fixed and tightened;

(d) Ensure that all scaffolds are securely anchored or tied to supporting structures;

(e) Ensure that all scaffolding is securely braced with stays, raking and cross bracing to render the scaffold stable and secure for the purpose and in all likely climatic and other relevant conditions;

(f) Provide working platforms of sufficient dimension and structural capability to perform the required function;

(g) Ensure that working platforms are close boarded with no open joints in excess of 3cm and that toeboards are provided;

(h) Ensure that all scaffold boards are adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and

(i) Ensure that all holes left by putlogs and supports after dismantling shall be repaired in a safe working manner.

JC1D: (1)以下(5)まで、特に Tubular steel scaffolding に限定した規定でないように思います。BS EN 12811-1 を参照すれば、特に Annex B や C において設計上の安全対策（カップラーやベースジャッキの強度）が規定されています。
(1) to (5) below, I think it is not requirements limited to tubular steel scaffolding. With reference to BS EN 12811-1, design safety measures (strength of couplers and base jacks) are specified in Annex B and C in particular.

JC1: BS EN 12811-1 の順守を 6.5.2(1)(c)に規定しています。管足場に特有な事項を規定することとし、ここに残します。
The compliance to BS EN 12811-1 is stipulated in 6.5.2(1)(c). To specify particular requirements for the tubular steel scaffolding, the clauses are left and modified.

(1) Tubular steel scaffolding comprises steel tubes and connector clips, with boarded working platforms, handrails, toe boards and access ladders, steps or stairs.

(2) Ladders shall be provided in accordance with JSSS 7.4 [*Walkways, Ladders and Stepladders*].

(3) Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].

(4) Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].

(5) The following safety measures shall apply:

(a) Ensure that all scaffolding is erected plumb, level and squared;

(b) Prevent any scaffold from moving, sliding, rocking or settling by ensuring that posts are securely founded and provided with mudsills or other base plate types and measures to distribute the load, screw-jacks or other levelling devices;

(c) Ensure that all joints between scaffolding tubes are formed with the correct type of coupling and that all are securely fixed and tightened;

(d) Ensure that all scaffolds are securely anchored or tied to supporting structures;

(e) Ensure that all scaffolding is securely braced with stays, raking and cross bracing to render the scaffold stable and secure for the purpose and in all likely climatic and other relevant conditions;

(f) Provide working platforms of sufficient dimension and structural capability to perform the required function;

(g) Ensure that working platforms are close boarded with no open joints in excess of 3cm and that toeboards are provided;

vertically.

(b) On straight run scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both directions, and shall extend from the base of the end posts upward to the top of the scaffold at approximately a 45 degree angle.

(c) Where conditions preclude the attachment of bracing to posts, bracing shall be attached to the runners as close to the post as possible.

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible.

(e) Runners shall be installed along the length of the Scaffolding, located on both the inside and outside posts at level.

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminum. The use of gray cast iron is prohibited.

(g) Other requirements than specified in the above, the tube and coupler Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (b) Tube and coupler scaffolds.

(3) Fabricated frame Scaffolding

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected scaffold is always plumb, level, and square. All brace connections shall be secured.

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means.

(c) Where uplift can occur which would displace scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means.

(d) Brackets used to support cantilevered loads shall:

7.5.3　つり足場

請負者は、つり足場(ゴンドラのつり足場を除く。以下本節において同じ。)については、次の措置を講じなければならない。→OSHA 及び JSSS の該当条項を規定するように、英文を改訂します。

(1) 作業床の最大積載荷重は、つりワイヤロープ及びつり鋼線の安全係数が 10 以上、つり鎖及びつりフックの安全係数が 5 以上並びにつり鋼帯並びにつり足場の下部及び上部の支点の安全係数が鋼材にあっては 2.5 以上、木材にあっては 5 以上となるように定めること。
→E 7.5.4 (2)(a)に規定済み

(2) 次のいずれかに該当する材料を使用しないこと。
(a) つりワイヤロープ
(i) ワイヤロープ一よりの間において素線(フィラ線を除く。以下同じ。)の数の 10%以上の素線が切断しているもの
(ii) 直径の減少が公称径の 7%を超えるもの
(iii) キンクしたもの
(iv) 著しい形崩れ又は腐食があるもの
→上記(i)～(iv)は E 7.5.4 (2)(f)(i)～(iii)に規定済み
(b) つり鎖
(i) 伸びが、つり鎖が製造されたときの長さの 5%を超えるもの
(ii) リンクの断面の直径の減少が、当該つり鎖が製造されたときの当該リンクの断面の直径の 10%を超えるもの
(iii) 亀裂があるもの
→上記(i)～(iii)は E 7.5.4 (2)(g)(i)～(iii)に規定済み
(c) つり鋼線及びつり鋼帯
著しい損傷、変形又は腐食のあるもの
→ E 7.5.4 (2)(h)に規定済み

(3) つり足場の設置時の措置
(a) 作業床は、幅を 40cm 以上とし、かつ、隙間がないようにすること。

7.5.4. Suspended Scaffolds

(1) Suspended scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and with all necessary support framing.

(2) The following safety measures shall apply (except gondola suspended scaffolds):
(a) The maximum loading capacity of the working platform shall be determined to ensure a safety factor of 10 or more for hanging wire ropes and hanging steel wires, 5 or more for hanging chains and hanging hooks, 2.5 or more for hanging steel bands and fulcrums at the bottom and top of the hanging scaffolds and 5 or more for timber.
(b) Timber boarded working platforms shall be provided to provide a safe and uninterrupted working surface.
Alternatively, proprietary type Light Weight Staging (LWS), shall be provided to provide a safe and uninterrupted working platform. LWS shall be 0.45m wide aluminium frame with slip-resistant coated plywood decking or similar, al shall be designed, tested and approved to the appropriate class of BS 2037 Class 1 and suitable for the required use.
(c) Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].
(d) Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].
(e) Suspension ropes and cables must be connected to overhead supports by
(h) Ensure that all scaffold boards are adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and
(i) Ensure that all holes left by putlogs and supports after dismantling shall be repaired in a safe working manner.

NK1: (2) to (4) are moved to 6.5.1 (7).

7.5.4. Suspended Scaffolds

JC1O:内容は新
Is it new specification?
NK: 和文に追加しています。

JC1D: OSHA の HP(以下に添付)をすれば以下(2)(b)&(c)が適合しない scaffold もありそうです。ここ(7.5.4) 全体の規定を参照した規格を再確認してください。
https://www.osha.gov/SLTC/etools/scaffolding/suspended/index.html なお、tubular steel scaffolding が上部の構造物から支持されている場合は、7.5.4 には適合しない、7.5.3 に含まれると理解してよいですか？
In OSHA's HP (attached below), it seems that (2) (b) & (c) cannot apply to some scaffolds. Please check the standards to cover whole requirements of 7.5.4.
https://www.osha.gov/SLTC/etools/scaffolding/suspended/index.html
Can we understand that the tubular steel scaffolding which is supported by the upper structure is not appropriate to be specified in 7.5.4 and it shall be included in 7.5.3?

NK1: 和文は、OSHA の Catenary 形式のつり足場を規定しています。そのため、その他の形式の吊り足場は OSHA に準じることと規定します。
The Japanese JSSS specifies for interior hung type in OSHA. JSSS will specify for other types of suspended Scaffold to comply to OSHA.
Interior hung type: Platform suspended from the ceiling or roof structure by fixed-length supports.)

(1) Suspended scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and with all necessary support framing.

(2) The following safety measures shall apply (except gondola suspended scaffolds):
(a) The maximum loading capacity of the working platform shall be determined to ensure a safety factor of 10 or more for hanging wire ropes and hanging steel wires, 5 or more for hanging chains and hanging hooks, 2.5 or more for hanging steel bands and fulcrums at
(i) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;
(ii) Not be bent or twisted from these positions; and
(iii) Be used only to support personnel, unless the scaffold has been designed for other loads.
(e) Other requirements than specified in the above, the fabricated frame Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (c) Fabricated frame scaffolds.

6.5.5 Suspended Scaffoldings

(1) General
(a) Suspended Scaffoldings comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, and with or without hoisting equipment.
(b) The Contractor shall comply to the requirements stipulated for the suspended scaffolds in OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of scaffolds].

(2) The following safety measures shall apply to the interior hung scaffolds which are suspended only from the roof structure or other structural member such as ceiling beams and non-adjustable:
(a) Capacity of interior hung Scaffoldings;
(i) Each scaffold and scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.
(ii) Each suspension rope, including connecting hardware, used on suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.
(b) Construction of interior hung Scaffoldings;
(i) Overhead supporting members (roof structure, ceiling beams, or other

(b) 床材は、転位し、又は脱落しないように、足場桁等に取り付けること。
(c) 足場桁、作業床等に控えを設ける等動揺又は転位を防止すること。
→上記(a)～(c)はE 7.5.4 (3)(a)～(c)に規定済み。
→OSHAに準じた規定に変更します。

(4) 作業上の禁止事項
つり足場の上で、脚立、はしご等を用いて作業員に作業させないこと。→E 7.5.4 (4)に規定済み

shackles, clips, thimbles, or equivalent means.
(f) Do not use hanging wire ropes where:
(i) 10% or more of the element wires (excluding filler wires) are not in one continuous tensile strand.
(ii) There is a reduction in the diameter exceeding 7% of the original nominal diameter.
(iii) There are any kinks or any deformation or corrosion.
(g) Do not use hanging chains where:
(i) Elongation exceeds 5% of the original length at the date of manufacture.
(ii) There is a reduction in the diameter of links exceeding 10% of the original diameter at the date of manufacture.
(iii) There are any breaks, splits, cracks, or any deformation or corrosion
(h) Do not use any hanging steel wires or hanging steel belts where there is any deformation, damage or corrosion.

(3) Measures when constructing suspended scaffolds
(a) Working platforms shall be minimum 45 cm wide and close boarded with no open joints;
(b) All scaffold boards shall be adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and
(c) Stays shall be provided to prevent movement or displacement of the working platform.

(4) Prohibited activity
The use of any ladders or stepladders on suspended scaffolding is prohibited.

the bottom and top of the hanging scaffolds and 5 or more for timber.

JC1D: maximum loading を足場の部分の強度から決定すると読める。手順が逆ではないか。又、OSHA、1926.451(a)(3) には、Each suspension rope, including connecting hardware, used on non-adjustable suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.とあり、他にも安全係数が規定されている。以下の安全に関する係数についても参照・確認されたい。
It can be read that the maximum loading is determined from the strength of the scaffold part. Is the decision order reversed? In OSHA, 1926.451 (a) (3), Each suspension rope, including connecting hardware, used on non-adjustable suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.
There are other safety factors. Please refer to and confirm the following safety factors.
NK1: English version was prepared based on Japanese version. Each safety factor in E 7.5.4 (2) (a) above is the English translation of the Japanese Set Ver. J 7.5.3 (1), and those safety factor has been already determined in the past meeting.
Modified to refer to directly OSHA.

(b) Timber boarded working platforms shall be provided to provide a safe and uninterrupted working surface.
Alternatively, proprietary type Light Weight Staging (LWS), shall be provided to provide a safe and uninterrupted working platform. LWS shall be 0.45m wide aluminium frame with slip-resistant coated plywood decking or similar, al shall be designed, tested and approved to the appropriate class of BS 2037 Class 1 and suitable for the required use.
(c) Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].
(d) Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].

JC1D: Already commented.
NK1: Modified.

(e) Suspension ropes and cables must be connected to overhead supports by shackles, clips, thimbles, or equivalent means.
(f) Do not use hanging wire ropes where:
(i) 10% or more of the element wires (excluding filler wires) are not in one continuous tensile strand.
(ii) There is a reduction in the diameter exceeding 7% of the original nominal diameter.
(iii) There are any kinks or any deformation or corrosion.
(g) Do not use hanging chains where:

structural members) shall be inspected and checked for strength before the scaffold is erected;
(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g., strength, durability).

(c) Inspection
(i) The Scaffolding shall be inspected before every work shift and If any abnormality is found, the work shall be stopped.
(ii) Wire ropes, chains, hooks and chains used in the Scaffolding shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment] (4)(a) [Wire ropes], (b) [Chains] and (c)[Hooks, shackles]. If any abnormality is found, they shall be replaced.

(d) Prohibited activity

The use of any ladders or stepladders on suspended Scaffoldings shall be prohibited.

7.5.4 移動式足場 →E 7.5.5 に規定済み。 請負者は、移動式足場については、次の措置を講じなければならない。 (1) 移動式足場の選定→(1)は規定無し。→理由：下記参照。 (a) 対象とする作業に適した、高さ、幅、長さの移動式足場を用いること。 (b) 移動式足場は、英国基準 BS EN1004 Mobile access and working towers made of Prefabricated elements に適合するもの、又はエンジニアが同等以上と認めたものを使用すること。 (2) 組立てに際しての留意事項 (a) 購入した移動式足場の場合、製造業者が作成する筋交いの必要性や安全に組立てできる高さ等を含む組立て手順を説明するマニュアルに従い、組立てに関し十分な知識と経験を持つ者（competent person）に組立てを行わせること。	**7.5.5. Tower Scaffolds (including Mobile Tower Scaffolds)**	(i) Elongation exceeds 5% of the original length at the date of manufacture. 次の移動式足場の用途外の使用を禁止すること。
(a) 材料の吊り上げや物体の投下用のシュートの

(1) Tower scaffolds comprise one or more working platforms in a tower structure arrangement, with integral access steps, stairs or ladders and which are usually constructed with prefabricated or specialist system scaffolding and components.

(2) The following safety measures shall apply:
(a) Provide measures to prevent tower scaffolds from moving, sliding, rocking or settling by ensuring that the base is level and vertical posts are securely founded and equipped with mudsills or other base plate types and measures to distribute the load, screw-jacks or other levelling devices and castors;
(b) Ensure that all joints are formed with the correct type of fittings or components and that all parts are secure and tightened;
(c) Ensure that all tower scaffolds are securely anchored or tied to supporting surfaces;
(d) Ensure that all scaffolds are securely braced with appropriate beams, trusses, raking and cross bracing to render the scaffold stable and secure for the purpose and in all conditions;
(e) Provide working platforms of sufficient dimension and structural capability to perform the required function;
(f) Working platforms shall be close boarded with no open joints;
(g) All scaffold boards shall be adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and

(3) Additional Measures for Mobile Scaffolds
(a) Ensure that castors and brakes are of sufficient capability and maintained in full working order; and
(b) Ensure that adequate restraints are provided to give additional stability when in use.

(4) Safety Measures to apply before relocating Mobile Scaffolds:
(a) Check the floor surface in advance to prevent mobile scaffolds from overturning due to any irregularities or obstructions;
(b) Ensure that all joints are formed with the correct type of fittings or components and that all parts are secure and tightened;
(c) Ensure that all tower scaffolds are securely anchored or tied to supporting surfaces;

JC1O: all tower scaffolds が anchoring/tying される必要がありますか？
Do all tower scaffolds need to be anchoring / tying?
NK1: NK propose to add a condition that anchoring should be performed when used.

(d) Ensure that all scaffolds are securely braced with appropriate beams, trusses, raking and cross bracing to render the scaffold stable and secure for the purpose and in all conditions;
(e) Provide working platforms of sufficient dimension and structural capability to perform the required function;
(f) Working platforms shall be close boarded with no open joints;
(g) All scaffold boards shall be adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and

(3) Additional Measures for Mobile Scaffolds
(a) Ensure that castors and brakes are of sufficient capability and maintained in full working order; and
(b) Ensure that adequate restraints are provided to give additional stability when in use.

(4) Safety Measures to apply before relocating Mobile Scaffolds:
(a) Check the floor surface in advance to prevent mobile scaffolds from overturning due to any irregularities or obstructions;
(b) Move mobile scaffolds only after releasing brakes on all castors;
(c) Do not move mobile scaffolds when any workers or Goods are on the scaffold,
(d) Ensure that there are no obstructions in the route including any overhead obstructions; and

unless the Scaffolding is designed for such propulsion systems.

(5) Scaffolds shall be stabilized to prevent tipping during movement.

(6) Platforms shall not extend outward beyond the base supports of the Scaffolding unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where leveling of the Scaffolding is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffolding legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffoldings:
(a) Check the floor surface in advance to prevent the Scaffoldings from overturning due to any irregularities or obstructions;
(b) Move the Scaffoldings only after releasing brakes on all castors;
(c) Do not move the Scaffoldings when any workers or Goods are on the scaffold,
(d) Ensure that there are no obstructions in the route including any overhead obstructions; and
(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffoldings and the vicinity.

(10) Prohibited activity
Use of the Scaffoldings shall be prohibited for the following:
(a) Use as a support for lifting dropping Goods, debris or waste materials or for dropping same;
(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffoldings or workers on the scaffold; and
(d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Other requirements than specified in the above, the fabricated frame Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

支えとして使用すること。
(b) シート（布）で覆うこと（sheeting）や強風にさらす目的に使用すること。
(c) グリットブラスト（防食研磨）又はウォータージェット用に使用すること。
(d) 作業床を、移動はしご、脚立、架台（trestles）等の支持台(support)として使用すること。

7.5.9 脚立を用いての作業の際の留意事項

→ E 7.5.6 は、いずれも脚立（架台：trestle）の単独使用による作業時の安全事項と、複数の脚立に足場板を架け渡した上での作業時の安全事項について整理している。英語版では E 7.5.6 (1)及び(2)にて、上の分類を

(b) Move mobile scaffolds only after releasing brakes on all castors;
(c) Do not move mobile scaffolds when any workers or Goods are on the scaffold,
(d) Ensure that there are no obstructions in the route including any overhead obstructions; and
(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the moving scaffolds and the vicinity.

(5) Ensure that the following measures for example have been taken before any Tower or Mobile Scaffold is put into use:
(a) Scaffold is positioned in at the nearest location to the work location so that workers can perform their work safely and without risk of injury or fall;
(b) Brakes are activated at all times except during movement.
(c) Effectiveness of brakes has been checked before operating.
(d) Alternatively, fix ratchet and pawl system to the castors and secure the scaffold to a firm structure,
(e) Mobile scaffolds are not used where there are irregularities or slopes, and
(f) When outriggers are provided, ensure that there are no abnormalities in the outrigger mounting and ensure that they are extended properly and securely founded.

(6) Prohibited activity
Use of Tower scaffolds shall be prohibited for the following:
(a) Use as a support for lifting dropping Goods, debris or waste materials or for dropping same;
(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffolds or workers on the scaffold; and
(d) Use as floor to support mobile ladders, stepladders, trestles.

7.5.6. Trestle Scaffolds

(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the moving scaffolds and the vicinity.

(5) Ensure that the following measures for example have been taken before any Tower or Mobile Scaffold is put into use:
(a) Scaffold is positioned in at the nearest location to the work location so that workers can perform their work safely and without risk of injury or fall;
(b) Brakes are activated at all times except during movement.
(c) Effectiveness of brakes has been checked before operating.
(d) Alternatively, fix ratchet and pawl system to the castors and secure the scaffold to a firm structure,
(e) Mobile scaffolds are not used where there are irregularities or slopes, and
(f) When outriggers are provided, ensure that there are no abnormalities in the outrigger mounting and ensure that they are extended properly and securely founded.

(6) Prohibited activity
Use of Tower scaffolds shall be prohibited for the following:
(a) Use as a support for lifting dropping Goods, debris or waste materials or for dropping same;
(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffolds or workers on the scaffold; and
(d) Use as floor to support mobile ladders, stepladders, trestles.

7.5.6. Trestle Scaffolds

JC1O: 脚立足場　内容は新 Is it new specification?
NK1: 7.5.9 脚立を用いての作業の際の留意事項脚立足場の英訳です。This is not new. This is Japanese 7.5.9.

JC1D: 漠然と想像は出来ますが、OSHA1926.451-General requirements を参照しても見つかりません。参考にした資料の開示をお願いします。I can vaguely imagine it, but I can't find it by looking at OSHA1926.451-General

6.5.7 Trestle Scaffoldings

(1) Trestle Scaffoldings can comprise:
(a) Special proprietary type free-standing trestle platforms; or
(b) scaffold boards or supported on stepladders or other tripod type portable ladders.
(2) For requirements on Stepladders refer to JSSS

示しているが、和文版では明示的に分類していない。また、脚立の単独使用による作業時の安全事項に係る規定について、英語版では E 7.4.4 (3)で規定している。
→OSHA を参照に規定する。

請負者は、脚立を用いての作業に際しては、次を遵守しなくてはならない。

(1) 脚立を用いての作業は、高さ 2m 以上は不可。2m 以上の高さの作業の場合は足場を組む等の他の措置をとること。
→E 6.4.4 (3)(e)へ

(2) 踏み面は、作業を安全に行なうため必要な面積を有すること。
→E 6.4.4 (3)(b)へ

(3) 開き止め金具は確実にロックすること。
→E 6.4.4 (3)(h)へ

(4) 脚立が安定しない場所には設置しない。
→E 6.4.4 (3)(f)に規定済み

(5) 出入口やドアの前では使用しない。
→E 6.4.4 (3)(m)へ

(6) 天板に乗って、又は天板を跨いで作業をさせないこと。
→E 6.4.4 (3)(n)へ

(7) 脚立の上で作業する時は、天板を含め上から 3 段目以下の踏みさんに乗り作業をさせること。
→E 6.4.4 (3)(o)へ

(8) 脚立の上で作業する時は、3 点以上の支持によること。
→E 6.4.4 (3)(p)へ

(9) 上向き作業をしないこと。
→E 6.4.4 (3)(q)へ

(10) 踏みさん上に足場板をかけて作業を行う場合は、次を遵守すること。
→E 7.5.6 (3)(a)～(c)に対応する規定済み。

(a) 脚立の中心線間の間隔は 1.8m以下、足場板の幅は 40cm 以上とし、重ね長さは 20cm以上として、3 以上の支持物にかけ渡すこと。

(b) 足場板の支点からの突出部の長さは 10cm 以上とし、かつ、作業員が当該突出部に足を掛けるおそれのない場合を除き、足場板の長さの 1/18 以下とすること。

(c) 足場板は丈夫なものを使用し、著しい損傷、変形または腐食のあるものを使用してはならない。

7.5.5 標識類の表示

請負者は、作業床の最大積載荷重及び足場の点検・維持管理の責任者名を、足場の見やすい箇所に表示しなければならない。
→E 7.5.7 に規定済み。(但し、英語版では HSO による検査後の使用について規定している。)→(NK の方針: 英語版に基づき規定する。)

(1) Trestle scaffolds can comprise:
(a) Special proprietary type free-standing trestle platforms; or
(b) LWS as specified in JSSS (i) [*Suspended Scaffold*] or scaffold boards or supported on stepladders or other tripod type portable ladders.

(2) For requirements on Stepladders refer to JSSS 0 [*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:
(a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the LWS or scaffold boards shall be at least 0.45m.
(b) If timber scaffold boards are used, the overlap between boards shall be at least 20cm.
(c) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards (unless otherwise approved by the HSO)

7.5.7. Notices to be Displayed on Scaffolds

In addition to any notices for use following inspections by HSO, the Contractor shall display a notice indicating the maximum load capacity of each scaffold, together with the name of the person responsible for inspection and maintenance of the scaffold.
All notices shall be clearly visible and in easy-to-see locations.

requirements. Please disclose the reference materials.

NK1: It is specified in OSHA.
https://www.osha.gov/SLTC/etools/scaffolding/supported/specialty.html#Step_Platform_and_Trestle_Ladder_Scaffolds

Step, Platform, and Trestle Ladder Scaffold

(1) Trestle scaffolds can comprise:
(a) Special proprietary type free-standing trestle platforms; or
(b) LWS as specified in JSSS (i) [*Suspended Scaffold*] or scaffold boards or supported on stepladders or other tripod type portable ladders.

(2) For requirements on Stepladders refer to JSSS 0 [*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:
(a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the LWS or scaffold boards shall be at least 0.45m.
(b) If timber scaffold boards are used, the overlap between boards shall be at least 20cm.
(c) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards (unless otherwise approved by the HSO).

7.5.7. Notices to be Displayed on Scaffolds

In addition to any notices for use following inspections by HSO, the Contractor shall display a notice indicating the maximum load capacity of each scaffold, together with the name of the person responsible for inspection and maintenance of the scaffold.
All notices shall be clearly visible and in easy-to-see locations.

JC1O: HSO の役割について再度討議することが必要ではないか。HSO は作業を中断するなど安全に関してはプロマネよりも強い権限を持つ。ここでは Scaffolds を検査して証明するような施工に密着したロールを持たせている。自分

0 [*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:
(a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the scaffold boards shall be at least 45 cm.
(b) Scaffoldings' platforms shall not be placed any higher than the second highest rung or step of the ladder supporting the platform.
(c) If timber scaffold boards are used, the overlap between boards shall be at least 20cm.
(d) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

6.5.8 Notices to be Displayed on Scaffoldings

In addition to any notices for use following inspections by HSO, the Contractor shall display a notice indicating the maximum load capacity of each scaffold, together with the name of the person responsible for inspection and maintenance of the scaffold.
All notices shall be clearly visible and in easy-to-see locations.

7.5.6 組立、変更及び解体

請負者は、足場の組立、変更又は解体の作業を行うときは、次の措置を講じなければならない。

→E 7.5.8 冒頭部に規定済み

(1) 足場の組立て、解体又は変更の作業を行うときは、特定の作業の作業主任を任命し、作業を直接指揮させること。
→E 7.5.8 (1)に規定済み。

(2) 作業の時期、範囲及び順序を、作業員に作業前に周知すること。
→規定無し。→MD: Not necessary to mention, covered as a general requirement in Chapter 1.

(3) 作業に際しては、作業員以外の者へ危害が及ばないよう、本仕様書 2.3[立入禁止の措置]に従い、柵・囲い等の設置により作業区域を明示したうえで、作業員以外の者の立入りを禁止すること。さらに、必要に応じて監視員を配置し、上記の立入禁止を徹底すること。→E 7.5.8 (2)に規定済み

(4) 高さが 2m 以上の構造の足場の場合、足場材の緊結、取りはずし、受渡し等の作業には幅 40cm 以上の足場板を設けること。
→E 7.5.8 (3)に、高さ 2m 以上の場所での足場組立時には資材仮置きのための boarded area を設ける、との規定はあるが上記の幅 40cm 以上の足場板設置には言及していない。
→(NK の方針：英語版に無い幅 40cm 以上の記述を E 6.5.8 (4)として挿入する。)

(5) 上記(4)の作業には、墜落制止用器具を安全に取り付けるための設備等を設け、かつ、作業員に墜落制止用器具を使用させること。
→E 7.5.8 (4)に規定済み

7.5.8. Scaffold Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged assembly or erection, alteration and dismantling of any scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) Scaffold boards shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage.

(6) Working platforms shall be at least 45cm wide.

が証明したものに対して自分で使用停止するようなロールでは機能しないと考えるが、いかが。
I think it is necessary to discuss the role of HSO again. HSOs have greater authority than professional managers regarding safety issue such as suspending work.
Here, the HSO has a role that is deeply involved in construction procedure such as inspecting and proving Scaffolds. However, the role the present stipulation indicates that stops the use of what the HSO have proven himself will not work as a mechanism. How about this?
JC1: The duty of HSO is discussed in Chapter 1, so no modify is made.

7.5.8. Scaffold Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of scaffolding tubes, couplings, fittings or components and other materials and equipment.

JC1O: MM: 意味が理解できない。
Cannot understand what it means.
JC1: 足場材の仮置き場の設置を規定しています。No modification is made.

(4) All workers engaged assembly or erection, alteration and dismantling of any scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) Scaffold boards shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage.

(6) Working platforms shall be at least 45cm wide.

JC1O: 40cm では？ Is it 40cm?
NK1: The platforms width is 40 cm in Japan, 60cm in UK and 18 inch (45.7 cm) in OSHA.
The provisions for Scaffoldings in JSSS are mostly referred to OSHA, therefore rounded width of 45 cm from 45.7 cm is used.

6.5.9 Scaffold Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged assembly or erection, alteration and dismantling of any scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) ~~Scaffold boards shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage.~~

(6) ~~Working platforms shall be at least 45 40cm wide.~~

(6) 高さ 2m 以上の箇所での作業及びスレート等の屋根の上での作業においては、次の作業床を設置すること。

(a) 床材は十分な強度を有するものを使用すること。また、幅は 40cm 以上とし、床材間のすき間は 3cm 以下とし、床材と建地との隙間は、12cm 未満とすること。床材は、転位又は脱落しないよう支持物に 2 箇所以上取り付けること。

→E 7.5.8 (7)及び(8)に規定済み

(b) 床材を作業に応じて移動させる場合は、3 箇所以上の支持物にかけ、支点からの突出部の長さは 10cm 以上とし、かつ足場板長の 18 分の 1 以下とすること。また、足場板を長手方法に重ねるときは支点上で重ね、その重ねた部分の長さは 20cm 以上とすること。

→E 7.5.8 (9)及び(10)に規定済み

(7) 足場の材料については、著しい損傷、変形又は腐食のないものを使用すること。木材については、強度上の著しい欠点となる割れ、虫食い、節等がなく、かつ、木皮を取り除いたものを使用すること。

→E 7.5.8 (5)に規定済み。(但し、少々記述が異なる。)

(8) 落下による危険が生じるおそれがある場合、材料、器具、工具等の上げ下ろし時には、作業員につり網、つり袋を使用させること。

→規定無し。→理由:Already stated.(MD 氏) →(NK の方針:J 2.6.5 (2)、E 2.6.6 (2)でそれぞれ規定済であり不要。削除する。

(9) 作業のため物体が落下することにより、作業員に危険を及ぼすおそれのあるときは、本仕様書 2.6 [飛来落下の防止措置]の措置を講じること。

→規定無し。→理由:下記参照。

(10) 架空線等に近接して作業を行う場合には、本仕様書 3.2[架空線等上空施設一般] の措置を講じること。

→規定無し。→理由:下記参照。

(11) 悪天候のため、作業の実施について危険が予想されるときは、本仕様書 2.7[悪天候及び地震時の対策]の規定に従い、作業を中止すること。

→規定無し。→理由:下記参照。

→(9)～(11)の規定無しの理由,MD: Not really necessary to repeat the following unless a special requirement is added.(MD 氏) →削除する。

(7) The clearance between planks shall not exceed 3 cm and the clearance between floors and standards shall not exceed 12cm.

(8) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support to with no movement, dislocation and no gaps that mat create a dropping hazard.

(9) When moving scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the scaffolding boards.

(10) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

7.5.9. Mobile Elevating Work Platforms

NK1: The quality and width is specified in 6.5.3 Platform of Scaffolding (1) (a) and (2), respectively, so (5) and (6) are deleted.

(7) The clearance between planks shall not exceed 3 cm and the clearance between floors and standards shall not exceed 12cm.

JC1O:??

NK1: The spaces of 2.5 cm and 24 cm are specified in 6.5.3 Platform of Scaffolding (1) (b) and (c), so (7) is deleted.

(8) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support to with no movement, dislocation and no gaps that mat create a dropping hazard.

(9) When moving scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the scaffolding boards.

(10) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

7.5.9. Mobile Elevating Work Platforms

JC1D: 前項 7.5.5 で including Mobile Tower Scaffolds として扱っていますが、本項との区別が付きにくいです。確認願い

~~(7) The clearance between planks shall be of 3cm or less, not exceed 3 cm and the clearance between floors and standard posts shall not exceed be of less than 12cm.~~

(8) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support to with no movement, dislocation and no gaps that mat create a dropping hazard.

(9) When moving scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the scaffolding boards.

(10) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.10 Mobile Elevating Work Platforms (Aerial Lifts)

This section specifies for the mobile elevating work platforms (aerial lifts) including extensible boom

7.5.8 高所作業車を用いての作業の際の留意点

請負者は、高所作業車を用いて作業を行うときは、次の措置を講じなければならない。

→E 7.5.9 冒頭部に規定済み

(1) 作業主任

特定の作業の作業主任を任命し、作業を直接指揮させること。

→対応する規定は E 7.5.9 (1)にあるが、下記理由にて MD 氏の更新提案あり。

→MD: Think Operation Leader not necessary to state, trained staff yes.

→英語版とする。

(2) 高所作業車の設置、運転

(a) 高所作業車を作業場所に設置するときは、高所作業車の転倒又は転落による労働者の危険を防止するため、アウトリガーを完全に張出させること。また地盤の沈下防止対策をとること。

→E 7.5.9 (3)に規定済み

(b) 本仕様書 2.3[立入禁止の措置]に従い、作業区画を設置し、立入禁止措置を講じること。

→E 7.5.9 (4)に規定済み

(c) 高所作業車の製造者が定める運転に関する注意事項を作業員に遵守させること。

(d) 安全装置がある場合は、故意に機械の安全装置を解除させないこと。

→E 7.5.9 (5)に規定済み

(e) 請負者は、高所作業車を走行させるときは、次の措置を講じること。

(i) 作業床を所定の最低降下位置まで下げてから走行する。

→E 7.5.9 (6)に規定済み

(ii) 作業床において走行操作をしない車両の場合は、作業床に作業員を載せたまま走行してはならない。

→E 7.5.9 (7)に規定済み。(但し英和が一致していない)

(iii) 作業床において走行操作をする車両の場合は、平たん・堅固でない場所を走行してはならない。

→E 7.5.9 (8)に規定済み。(但し英和が一致していない)

(iv) 上記以外で、作業床において走行操作をしない車両の場合で、平坦で堅固な場所において作業床に作業員を載せたまま高所作業車を走行させるときは、次の措置を講じなければならない。

→下記 3 項目含めて E 7.5.9 (9)(a)～(c)に規定済み(但し英和が一致していない)

誘導者を配置し、その者に高所作業車を誘導させること。

- 一定の合図を定め、誘導者に当該合図を行わせること。

The following safety measures shall apply for placing and operating mobile elevating work platforms:

(1) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate and all operation shall carried out in accordance with the manufacturer's written instruction.

(2) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment.

(3) Take necessary measures avoid overturning including fully extending outriggers and preventing uneven settling of the ground.

(4) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry – Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel.

(5) Do not switch off or isolate any safety devices.

(6) Drive only after lowering the working platform to the specified lowest descent position.

(7) In the case of any mobile elevating work platform that is not operated remotely from the working platform, the equipment shall never be driven with a worker on the working platform.

(8) In the case of any mobile elevating work platform that is operated remotely from the working platform, the equipment shall never be driven on unlevel surfaces, soft or weak ground.

(9) In the case of any mobile elevating work platform that is not operated remotely from the working platform, the following measures shall be taken when driving the equipment:

(a) Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*],

(b) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(c) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(10) When leaving the operating position and when work is not continuing or stopped the operator shall:

(a) Put the working platform in the lowest position

ます。

Although it is treated as Mobile Tower Scaffolds in the previous section 7.5.5, it is difficult to distinguish from this section. Please check.

NK1: 7.5.5. Tower Scaffolds (including Mobile Tower Scaffolds) is revised to 6.5.5 Mobile Scaffoldings. The term of mobile elevating work platforms is used in UK and that is aerial lifts in OSHA.

NK1: The both terms are stipulated.

NK1: Revised overall including OSHA provisions in 1926.453 Aerial lifts.

The following safety measures shall apply for placing and operating mobile elevating work platforms:

(1) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate and all operation shall carried out in accordance with the manufacturer's written instruction.

JC1O: HSO が certify する？HSO は Safety System が機能しているかを確認する立場では？

Does HSO certifies? I think the role of HSO is to check whether the Safety System is working.

NK1: Duty of HSO is discussed in Chapter 1, so it is left.

(2) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment.

(3) Take necessary measures avoid overturning including fully extending outriggers and preventing uneven settling of the ground.

(4) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry – Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel.

(5) Do not switch off or isolate any safety devices.

(6) Drive only after lowering the working platform to the specified lowest descent position.

(7) In the case of any mobile elevating work platform that is not operated remotely from the working platform, the equipment shall never be driven with a worker on the working platform.

(8) In the case of any mobile elevating work platform that is operated remotely from the working platform, the equipment shall never be driven on unlevel surfaces, soft or weak ground.

(9) In the case of any mobile elevating work platform that is not operated remotely from the working platform, the following measures shall be taken when driving the equipment:

JC1O: (7)～(9)よく意味が分かりません。

MM: Cannot understand (7) to (9).

platforms, articulating boom platforms, vertical towers and a combination of any such devices.

The following safety measures shall apply for placing and operating mobile elevating work platform:

(1) General

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate the mobile elevating work platforms in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel.

(b) All operation shall be carried out in accordance with the manufacturer's written instruction.

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment.

(d) Any safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [Prohibition of Entry - Dangerous Work], demarcate work areas and take measures to prevent entry to unauthorised personnel.

(b) Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [Spotters, Flagmen and the like],

(c) Determine signals in accordance with JSSS 2.4.5 [Signals], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set.

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed.

(c) When outriggers are used, they shall be positioned on pads or a solid surface.

(d) Lift controls shall be tested each day prior

- あらかじめ、作業時における当該高所作業車の作業床の高さ及びブームの長さ等に応じた高所作業車の適正な制限速度を定め、それにより運転者に運転させること。

(f) 運転者が走行のため運転位置から離れる場合は、当該運転者に次の措置を講じさせること。

(i) 作業床に作業員が乗って作業を行っていない及び作業を行おうとしていない場合

→下記２項目含めてE 7.5.9 (10)(a)～(c)に規定済み

- 作業床を最低降下位置に置かせること。
- 原動機を止め、かつ、停止の状態を保持するためのブレーキ(駐車ブレーキ)を確実にかける等の高所作業車の逸走を防止する措置をとらせること。

(ii) 作業床に作業員が乗って作業を行い、又は行おうとしている場合、当該高所作業車の停止の状態を保持するためのブレーキを確実にかける等の措置を講じさせること。

→E 7.5.9 (11)に規定済み

(iii) 高所作業車を用いて作業を行うときは、乗車席及び作業床以外の箇所に作業員を乗せてはならない。

→E 7.5.9 (12)に規定済み

(iv) 高所作業車を、その製造者が規定した制限荷重(高所作業車の構造及び材料に応じて、作業床に人又は荷を乗せて上昇させることができる最大の荷重。)を超えて使用させてはならない。

(3) 作業床の操作

作業床以外の箇所で作業床を操作するときは、作業床上の作業員と作業床以外の箇所で作業床を操作する者との間の連絡を確実にするため、本仕様書 2.4.2 [合図の統一]に従い一定の合図を定め、当該合図を行う者を指名してその者に合図を行わせること。

→E 7.5.9 (13)に規定済み。(但し内容が少々異なる。)

作業床での作業

請負者は、高所作業車の作業床で作業を行う作業員の安全のために、次の措置を講じること。

(a) 作業員には、墜落制止用器具、保護帽等の保護具を使用させること。

→E 7.5.9 (14)(a)に規定済み

(b) 作業床から現場の鉄骨などへの乗り移り、手摺りに足を掛け手作業する等の危険な行動を、作業員に禁じること。

→E 7.5.9 (14)(b)に規定済み

(c) 本仕様書2.7[悪天候及び地震時の対策]に従い悪天候のときは 2m 以上の高所作業を中止させなければならない。

→E 7.5.9 (14)(c)に規定済み

(b) Stop the prime engine/motor

(c) Apply the parking brake securely and ensure the equipment is securely parked.

(11) If a worker is working on the working platform or is about to work, ensure that the parking brake is securely applied.

(12) When using the mobile elevating work platform, workers shall be positioned only on the passenger seat or on the working platform.

(13) Working Platform Operation

When operating the working platform at a place other than the structure or building floor, ensure communication is possible between the worker on the working platform and the person operating the working platform.

Establish the necessary signals and locate a Spotter in accordance with JSSS 2.4 [*Spotters, Flagmen and the Like*].

(14) Working on the Working Platform

(a) Have workers use PPE including PFRS;

(b) Prohibit workers from take dangerous actions such as moving from the working platform to a steel structure, standing on and working from handrail, and

(c) Stop work at a height of 2m or more in case of adverse weather in accordance with JSSS 2.7 [Adverse Weather Requirements].

(15) Inspection and maintenance of mobile elevating work platform

Following to be coordinated later with Section 4

(a) Carry out inspection of mobile elevating work platform in accordance with JSSS 4.1.5 [*Inspection and Maintenance*] and JSSS 4.2.1 [*Inspection and Maintenance*],

(b) Repair work of mobile elevating work platform and installation/removal of its working platform shall be carried out following JSSS 4.2.5 [*Safety Measures during Inspection and Maintenance Work*] and JSSS 4.2.6 [*Safety measures at Installation and Removal Work of Attachments, etc.*].

(16) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

JC1: Modified and deleted.

(a) Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*],

(b) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(c) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(10) When leaving the operating position and when work is not continuing or stopped the operator shall:

(a) Put the working platform in the lowest position

(b) Stop the prime engine/motor

(c) Apply the parking brake securely and ensure the equipment is securely parked.

(11) If a worker is working on the working platform or is about to work, ensure that the parking brake is securely applied.

(12) When using the mobile elevating work platform, workers shall be positioned only on the passenger seat or on the working platform.

JC1O: passenger seat は余分
I think it is not necessary for passenger seat?
NK: Agree. Deleted (12).

(13) Working Platform Operation

When operating the working platform at a place other than the structure or building floor, ensure communication is possible between the worker on the working platform and the person operating the working platform.

Establish the necessary signals and locate a Spotter in accordance with JSSS 2.4 [*Spotters, Flagmen and the Like*].

(14) Working on the Working Platform

(a) Have workers use PPE including PFRS;

(b) Prohibit workers from take dangerous actions such as moving from the working platform to a steel structure, standing on and working from handrail, and

(c) Stop work at a height of 2m or more in case of adverse weather in accordance with JSSS 2.7 [Adverse Weather Requirements].

(15) Inspection and maintenance of mobile elevating work platform

to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Have workers use PPE including PFRS;

(c) Prohibit workers from take dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail,

(d) When the mobile elevating work platform has both platform (upper) and lower controls. Upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency,

(e) When leaving the operating position and when work is not continuing or stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor;

(iii) Apply the parking brake securely and ensure the equipment is securely parked; and

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [Adverse Weather Requirements].

(5) Measures of moving mobile elevating work platform

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation.

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(4) 高所作業車の点検、修理

(a) 本仕様書 4.1.6[建設機械の点検計画]、4.1.7[搬入時の確認]、4.1.8[日常点検]、4.1.9[定期点検]に従い、高所作業車の点検を行うこと。
→E 7.5.9 (15)(a)に相当する規定あり。

(b) 高所作業車の修理、作業床の装着又は取り外しの作業は、本仕様書 4.2.2[点検・修理作業時の安全確保]及び 4.2.3[アタッチメント等作業装置の装着及び取りはずし作業]に従い行うこと。
→E 7.5.9 (15)(b)に相当する規定あり。

(5) 用途以外の使用禁止

高所作業車を、荷の吊り上げ等の当該高所作業車の主たる用途以外に使用してはならない。
→E 7.5.9 (16)に規定済み

7.5.7 点検
→対応する E 7.5.10 見出しは[General Inspection and maintenance of Scaffolding]

請負者は、足場の組立、変更又は解体作業時、組立完成時、足場を使用する作業開始前、荒天及び中震後の作業開始前における点検について、次の措置を講じなければならない。

→E 7.5.10 の冒頭に対応する規定がある。

(1) 足場の組立完成時には、足場の組立等作業主任に、設計図通りの組立てであることを点検させ、設計図通りでない場合は手直しすること。
→E 7.5.10(1)に規定あり。

(2) 足場における作業を行うときは、その日の作業の開始前に、作業を行う箇所に設けた交差筋交い、さん、幅木、手摺及び中さん等の足場用墜落防止設備の取り外し及び脱落の有無について点検を行ない、異常を認めたときは直ちに補修を行うこと。
→E 7.5.10(2)に規定あり。

(3) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候若しくは地震又は足場の組立て、一部解体若しくは変更の後において、足場における作業を行うときは、作業開始前に、次の事項について点検を行ない、異常を認めたときは直ちに補修を行うこと。

7.5.10. General Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every scaffold from which a person could fall 2m or more must be thoroughly examined by the HSO (or his delegated assistant):
  (a) Before it is brought into use;
  (b) After any substantial alteration or extension;
  (c) At least once in every 7 days; and
  (d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO.

The thorough examination and regular inspections shall include:

(1) Check if the Scaffold is provided and used in accordance with its design.

(2) Check the structural condition of the Scaffold and of any deterioration, defect or damage

Following to be coordinated later with Section 4

  (a) Carry out inspection of mobile elevating work platform in accordance with JSSS 4.1.5 [*Inspection and Maintenance*] and JSSS 4.2.1 [*Inspection and Maintenance*],
  (b) Repair work of mobile elevating work platform and installation/removal of its working platform shall be carried out following JSSS 4.2.5 [*Safety Measures during Inspection and Maintenance Work*] and JSSS 4.2.6 [*Safety measures at Installation and Removal Work of Attachments, etc.*].

NK: after finalization of Chap. 4, reference no. shall be adjusted.

(16) Prohibition of use for other purposes
Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

7.5.10. General Inspection and Maintenance of Scaffolding

JC1O: この節では HSO がアクティブな役割を負担している。staff とした方がいいのでは
In this section the HSO has an active role. Wording as "staff" is better?

NK1: Duty of HSO is discussed in Chapter 1, so it is left.

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every scaffold from which a person could fall 2m or more must be thoroughly examined by the HSO (or his delegated assistant):
  (a) Before it is brought into use;
  (b) After any substantial alteration or extension;
  (c) At least once in every 7 days; and
  (d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO.

The thorough examination and regular inspections shall include:

JC1O: 下記の事項が良く理解できない

MM: The following items cannot be understood well.

JC1:(MD) There are a number of items listed most of which are excluded from the NK draft which I suggest are necessary. Please review and advise what is required.

(6) Inspection and maintenance of mobile elevating work platform

  (a) Carry out inspection of mobile elevating work platform in accordance with JSSS 4.1.5 [Inspection and Maintenance] and JSSS 4.2.1 [Inspection and Maintenance],

  (b) Repair work of mobile elevating work platform and installation/removal of its working platform shall be carried out following JSSS 4.2.5 [Safety Measures during Inspection and Maintenance Work] and JSSS 4.2.6 [Safety measures at Installation and Removal Work of Attachments, etc.].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

6.5.11 General Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every scaffold from which a person could fall 2m or more must be thoroughly examined by the HSO (or his delegated assistant):
  (a) Before it is brought into use;
  (b) After any substantial alteration or extension;
  (c) At least once in every 7 days; and
  (d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared and kept by the HSO.

(3) The thorough examination and regular inspections shall include:

  (a) Check if the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(a) 床材の損傷、取付け及び掛渡しの状態 →E 7.5.10 (4)(a)に規定済み (b) 建地、布、腕木等の緊結部、接続部及び取付部の緩みの状態→E 7.5.10 (4)(b)に規定あり (c) 緊結材及び緊結金具の損傷及び腐食の状態 →E 7.5.10 (4)(c)に規定済み (d) 足場用墜落防止設備の取り外し及び脱落の有無→E 7.5.10 (4)(d)に規定済み (e) 幅木等の取付状態及び取り外しの有無 →E 7.5.10 (4)(e)に規定済み (f) 脚部の沈下及び滑動の状態（つり足場を除く）→E 7.5.10 (4)(f)に規定済み (g) 筋かい、控え、壁つなぎ等の補強材の取付状態及び取り外しの有無 →E 7.5.10 (4)(g)に規定済み (h) 建地、布及び腕木の損傷の有無 →E 7.5.10 (4)(h)に規定済み (i) ~~突りょうとつり索との取付部の状態及びつり装置の歯止めの機能~~ →ゴンドラ作業に係る規定であり、(i)の削除を提案します。 (4) 負者は、上の(4)の規定に従い点検を行ったときは、次の事項を記録し、足場を使用する作業を行う仕事が終了するまでの間、これを保存すること。 (a) 点検の結果 (b) 点検の結果に基づいて行った補修等の措置を講じた場合は、措置の内容 →E 7.5.10 (5)に規定済み。	(3) Check if the bracing, crossing ties, toe boards, handrails and mid-rails are not missing. (4) Check: (a) Condition of working platforms and of any damage to fixings; (b) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like; (c) Condition and any damage and corrosion of couplings, fittings, clamps and accessories; (d) Fall prevention facilities are intact and secure; (e) Condition of mountings and presence of toe boards; (f) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement; (g) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; (h) Condition of mountings and presence of posts, standards, ledgers and transoms. (5) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.	NK1: Modified them and discuss with JICA. (1) Check if the Scaffold is provided and used in accordance with its design. (2) Check the structural condition of the Scaffold and of any deterioration, defect or damage (3) Check if the bracing, crossing ties, toe boards, handrails and mid-rails are not missing. JC1D: 前項 7.5.4 でコメント済み。Commented already in 7.5.4 NK1: Cannot understand the comment. (4) Check: (a) Condition of working platforms and of any damage to fixings; (b) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like; (c) Condition and any damage and corrosion of couplings, fittings, clamps and accessories; (d) Fall prevention facilities are intact and secure; (e) Condition of mountings and presence of toe boards; (f) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement; (g) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; (h) Condition of mountings and presence of posts, standards, ledgers and transoms. (5) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.	~~Check the structural condition of the Scaffold and of any deterioration, defect or damage;~~ (b) Check if the bracing, crossing ties, toe boards, handrails and mid-rails which are provided are not missing. (c) Check items include: (i) Condition of working platforms and of any damage to fixings; (ii) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like; (iii) Condition and any damage and corrosion of couplings, fittings, clamps and accessories; (iv) Fall prevention facilities are intact and secure; (v) Condition of mountings and presence of toe boards; (vi) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement; (vii) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; (viii) Condition of mountings and presence of posts, standards, ledgers and transoms. (4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.
7.6 作業構台	**7.6. ELEVATED ACCESS STRUCTURES**	**7.6. ELEVATED ACCESS STRUCTURES** JC1O: この英語訳でいいですか？？ MM: Is this expression of elevated access structures appropriate? NK1: MD think so yes, there is no international standard wording and MD developed it. It has functional meaning in three words. MD considers it is necessary to define this and has included in Annex 1.1 (issue 7) as follows: *(7) “Elevated Access Structures” means substantial, elevated, temporary working areas, usually comprised of structural steel columns, beams, framing and floor decking*	**6.6 ELEVATED ACCESS STRUCTURES**

7.6.1 一般事項

(1) 作業構台の定義

作業構台とは、仮設の支柱及び作業床等により構成する設備で、下記(2)の用途で使用されるものをいう。
→E 1. Annex 1.1 (7)に定義済み

(2) 作業構台の用途

作業構台は、作業場所が狭い場所、水面上、急傾斜面上等に位置するため、作業に必要な場所を確保できない場合に仮設として設置するもので、工事用の建設機械や運搬機械の通行や作業、仮設プラント等の設置や運転、工事用車両の通行や駐車、資機材等の運搬や仮置き等を用途とするものである。
→E 7.6.1 冒頭部に規定済み

7.6.1 General

Elevated Access Structures (as defined in JSSS Annex 1.1) act as a temporary working and storage area and to accommodate Contractor's Equipment, Goods and temporary facilities to permit the construction operations to be performed from the Elevated Access Structures on an immediately underlying or adjacent Site.

and used for performing work at sites with difficult access or with restricted room for construction operations or steeply sloping or offshore sites.
Result: Leave as it is.

7.6.1 General

Elevated Access Structures (as defined in JSSS Annex 1.1) act as a temporary working and storage area and to accommodate Contractor's Equipment, Goods and temporary facilities to permit the construction operations to be performed from the Elevated Access Structures on an immediately underlying or adjacent Site.

JC1O: もう少し的確に表現しないと意味が伝わりません。
Unless otherwise described a little more properly, the meaning will not be understood. Proposed as below.

"act as a temporary working platform for heavy-usage such as a working platform for heavy machineries, a concrete mixing plant or a considerable large storage area. It is in some case, a part access bridge to the working area."
NK1: NK considers the sentence is understandable by adding some words.

The working platforms are used in UK for work at height for example scaffold as shown below. To avoid the same term used for work at height, the proposed term of Elevated Access Structures is better to be used.

The Work at Height Regulations 2005、OSHA, UK defines as "working platform"—
(a) means any platform used as a place of work or as a means of access to or egress from a place of work;
(b) includes any scaffold, suspended scaffold, cradle, mobile platform, trestle, gangway, gantry and stairway which is so used.

MD will review the above comment and modify id necessary.

JC1D: 作業構台のことと思いますが、Annex 1.1 には見当たりません。英訳の難しいところも考えられますが、MD さんがこれを理解している、と考えてよいのでしょうか？
I think it is a work gantry, but I can't find it in Annex 1.1. It may be difficult to translate into English, but can you think that MD understands this?
NK1: "Elevated Access Structures" is defined in JSSS Annex 1.1 (7). MD understood its meaning as NK showed photos for it.

JC1D: adjacent "Site"は妙です。発注者が規定した Site の中に構築されるものです。"working area"は"Site"の中に設定されるべきものです(GC 1.1.6.7 "Site"参照ください)。水域上の working area も、Site の中に設営されます。以下この錯誤による規定の矛盾が散見されるようです。改善ください。
Adjacent "Site" is strange. It is built in the Site specified by the Employer. "Working area" should be set in "the Site" (refer to GC 1.1.6.7 "Site"). The working area over the water area is also set up in the Site. It seems that

6.6.1 General

Elevated Access Structures (as defined in JSSS Annex 1.1) act as an access, parking, temporary working and storage area and to accommodate Contractor's Equipment, Goods and temporary facilities to permit the construction operations to be performed from the Elevated Access Structures ~~on an immediately underlying or adjacent~~ in the Site.

7.6.2 作業構台の設計・組立・解体

→E 7.6.2 見出しは[Design and Management Generally]

(1) 作業構台の設計

下記事項を考慮し、本章 7.1.3[仮設構造物の設計及び設計照査]にもとづき計画、設計すること。

→E 7.6.2 (1)に規定済み。(但し、JSSS 7.1.1 参照と記載)

→下記(a)～(c)及び設計変更の際の参照規定に係る記述はない。→MD: I suggest no need to state the following as there would be much more to state however the Contractor is in any event responsible for .

→(E 6.1.1、JSSS 1.33 に TW の設計と建設について一般事項を規定していることから、本款では規定しない)

(a) 使用機械、車両等の重量を勘案した上載荷重
(b) 支柱の滑動・沈下
(c) 7.6.4[作業構台の点検]のために必要な設備

作業構台の設計を変更するときは、本章 7.1.3[仮設工事の設計及び設計照査]の規定に従って設計変更を行うこと、また、作業計画書を変更すること。

(2) 作業構台の組立、解体

請負者は、作業構台の組立及び解体時には、次の措置を講じなければならない。

(a) 組立又は解体の作業の安全措置

→E 7.6.2 (2)(a)～(d)に規定済み。

(i) 本仕様書 2.3[立入禁止の措置]の(1)の規定に従い、当該作業者以外の者の立入りを禁止する措置
(ii) 本仕様書 2.4[監視員、誘導員の配置]に規定の監視員、誘導員の配置、合図の統一の措置
(iii) 本仕様書 2.6[飛来落下の防止措置]に規定の物体の飛来落下の防止の措置
(iv) 本仕様書 6[揚貨・玉掛け作業]に規定の揚貨作業時の安全措置

(b) 作業範囲、時期及び順序についての周知

組立又は解体の作業時期、範囲及び順序を当該作業に従事する作業員に周知すること。また、作業は施工計画に忠実に行わなければならないことを周知すること。

→規定なし。→理由 MD:The above is not necessary it is already a requirement of JSSS 1.13 [Contractor's Safety Management Activities] →重複のため、規定しない。

(3) 作業員の墜落防止の措置

作業員の墜落のおそれのある箇所には手摺、柵等の墜落防止用の設備を設けること。詳細は 2.5.3[足場・作業床からの墜落防止措置]、2.5.4[作業床端、開口部からの墜落防止措置]に規定に従うこと。

→規定なし。→MD:Already covered.

7.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 0 [*Design and Provision of TW Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:
(a) JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];
(b) JSSS 1.35 [*Design and Management of Temporary Works*]
(c) JSSS 2.5 [*Fall Prevention*]
(d) JSSS 2.6 [*Falling Objects*];

(3) Erection and Removal of Elevated Access Structures
The Contractor shall:
(a) Designate any working areas where an Elevated Access Structures is being erected, altered or removed as Dangerous Areas, and the Contractor shall enclose the working area where possible with temporary fences or barriers, prevent entry of any non - authorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

inconsistencies in the rules due to this misunderstanding are seen below. Please improve them.

NK1: Modified.

7.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 7.1.1 [*Design and Provision of TW Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:
(a) JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];
(b) JSSS 1.35 [*Design and Management of Temporary Works*]
(c) JSSS 2.5 [*Fall Prevention*]
(d) JSSS 2.6 [*Falling Objects*];

JC1: (a) and (b) are left and others are deleted because they are general requirements.

(3) Erection and Removal of Elevated Access Structures
The Contractor shall:
(a) Designate any working areas where an Elevated Access Structures is being erected, altered or removed as Dangerous Areas, and the Contractor shall enclose the working area where possible with temporary fences or barriers, prevent entry of any non - authorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JC1D: Comment 7.6.1 に同じです。Site の確保方法は発注者が仕様書・図面などで設置場所・使用を規定しておくべきことです。水域上の Site についても同様です。
Same as comment for adjacent Site. The method of securing the site should be such that the Employer should specify the installation location and use in the specifications and drawings. The same goes for Sites on water area.

NK1: 架設構台の建設現場は、2.3 に規定の危険な作業地域に指定して安全対策を取ることを規定しています。建設現場は、7.6.1 で in the Site と規定していますので、(a)の変更は不要です。
This clause specifies to designate the site as Dangerous Areas and take safety measures following JSSS 2.3 [Prohibition of Entry - Dangerous Work]. The construction

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1 [*Design and Provision of TW Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:
(a) JSSS 1.~~33~~35[*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];
(b) JSSS 1.~~35~~ 37 [*Design and Management of Temporary Works*];
~~(c) JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];~~
~~(d) JSSS 2.4 [*Spotters, Flagmen and the Like*];~~
~~(e) JSSS 2.5 [*Fall Prevention*];~~
~~(f) JSSS 2.6 [*Falling Objects*];~~
~~(g) JSSS 6 [*Hoisting and Rigging*];~~

(3) Erection and Removal of Elevated Access Structures
The Contractor shall:
(a) Designate any working areas where an Elevated Access Structures is being erected, altered or removed as Dangerous Areas, and the Contractor shall enclose the working area where possible with temporary fences or barriers, prevent entry of any non - authorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

→(NK の方針:削除する。)

(4) 車両の転落防止の措置

作業床から車両の転落の危険のおそれのある箇所には、転落防止のため、十分な強度を有する地覆・車止めを設置し、取付・固定は確実に行うこと。
→E 7.6.2 (3)(c)に規定済み。

(5) 悪天候時の対応

悪天候のため、組立・解体作業の実施について危険が予想されるときは、本仕様書 2.7[悪天候及び地震時の対策]の規定に従い、作業を中止すること。
→規定なし。→MD:2.7 Adverse Weather Requirements 2.7.2 Preventive Measures)で纏めて規定する。

7.6.3 作業構台の使用

→E 7.6.3 見出しは[Further Safety Requirements]

請負者は、作業構台における安全を確保するため、次の措置を講じなければならない。
→E 7.6.3 冒頭部に規定済み。

(1) 作業構台の最大上載荷重を、パネル、ボード等を利用して見やすい位置に掲示したうえで、当該荷重を超える車両、建設機械等を進入させないこと。
→E 7.6.3 (1)及び(2)に規定済み

(2) 作業員の通行のために、本仕様 7.4.2[通路の設定]に従い、通路を設定すること。
→E 7.6.3 (5)に規定済み

(3) 建設機械等と作業員との接触防止のため、本仕様書 4.1.2[各作業の作業員への周知]、4.1.10[運用時の安全措置]に従い、必要な措置を講じること。
→E 7.6.3 (9)に規定済み。

(b) Implement safety measures for lifting and slinging work in accordance with JSSS 6 [*Lifting and Slinging Work*].

To be coordinated with JSSS 6 later. Rigging?

The following is not necessary it is already a requirement of JSSS 1.13 [Contractor's Safety Management Activities]

(c) Use of Measures to prevent Vehicles from falling
The Contractor shall provide and fix continuous "W" Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor's Equipment, to prevent such vehicles or Contractor's Equipment from falling where there is any risk.
The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor's Equipment are working or parking to prevent the vehicles or Contractor's Equipment accidentally moving and colliding with the crash barrier.
All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

(d) Use of Measures to prevent collision with Marine Vessels
For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

7.6.3 **Further Safety Requirements**

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not

of Elevated Access Structures is made in the Site as specified in 7.6.1. Therefore, no modification is made.

(b) Implement safety measures for lifting and slinging work in accordance with JSSS 6 [*Lifting and Slinging Work*].

To be coordinated with JSSS 6 later. Rigging?

The following is not necessary it is already a requirement of JSSS 1.13 [Contractor's Safety Management Activities]

NK1: This is a general requirement, so it may be deleted.

(c) Use of Measures to prevent Vehicles from falling
The Contractor shall provide and fix continuous "W" Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor's Equipment, to prevent such vehicles or Contractor's Equipment from falling where there is any risk.
The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor's Equipment are working or parking to prevent the vehicles or Contractor's Equipment accidentally moving and colliding with the crash barrier.
All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

JC1O: 路面をギザギザにすることでしょうか？
MM: Does this expression mean the road surface to be jagged?
JC1: It means steel crash barriers.
Result: Leave it as it is.

(d) Use of Measures to prevent collision with Marine Vessels
For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

7.6.3 **Further Safety Requirements**

(8) Provide PFAS or PFRS to workers at construction and removal of Elevated Access Structures, and where appropriate. (9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be

7.6.4 作業構台の点検

請負者は、作業構台で作業を行うときは、次に示す点検を行い、異常を認めたときは直ちに補修しなければならない。次の(2)に規定の点検の点検結果及び補修の記録は、作業が終了するまで保管しなければならない。→E 7.6.4 (3)に規定済み

(1) 作業開始前の点検

その日の作業を開始する前に、作業を行う箇所に設けた手すり、中桟及び床材等の取り外し及び脱落の有無の点検をおこなうこと。→7.6.4 (1)(c)に週例点検を規定

(2) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候及び地震の発生後、作業構台の組立て、一部解体又は変更の後において、作業構台における作業を行うときは、作業開始前に、次の事項について点検を行い、異常を認めたときは直ちに補修を行うこと。→7.6.4 (2)に規定済み。

(a) 支柱の滑動及び沈下の状態
(b) 床材の損傷、取付け及び掛渡しの状態
(c) 支柱、はり、筋かい等の緊結部、接続部及び取付部の緩みの状態
(d) 緊結材及び緊結金具の損傷及び腐食の状態
(e) 水平つなぎ、筋かい等の補強材の取付状態及び取り外しの有無

→7.6.4 (2)(a)に一般的に規定済み。

7.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure must be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;
(b) After any substantial alteration or extension;
(c) At least once in every 7 days; and
(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO.

The thorough examination and regular inspections shall include:

(1) Check if the Elevated Access Structure is provided and used in accordance with its design.
(2) Check:
(a) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;
(b) Fall prevention and all other safety requirements and facilities are intact and fully operational; and
(c) the measures and any precautions that must be complied with.

7.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure must be thoroughly examined by the HSO (or his delegated assistant):

JC1O: the Contractor でいいのでは？
Better to "the Contractor"?
JC1: The duty of HSO is discussed in Chapter 1, so no modify is made.

(a) Before it is brought into use;
(b) After any substantial alteration or extension;
(c) At least once in every 7 days; and

JC1O: 必ずしも毎週仮設構台を確認する必要はないと考えます。デック、手すり、輪留めくらい？
MM: It is not necessary to check the Elevated Access Structure EAS) every week. Check might be made on the decks, handrails, car stops?
JC1: If that is your instruction I will change, however, please note that the extent of weekly inspection is variable. Considering the requirements of (4) below, I would recommend that a check at least on a weekly basis (particularly settlement) is very necessary.
If it is not a weekly check, what is the suggested frequency?
Results: Leave it as it is.

(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO.

JC1O:HSO ???
SS1: The duty of HSO is discussed in Chapter 1, so no modify is made.

The thorough examination and regular inspections shall include:

(1) Check if the Elevated Access Structure is provided and used in accordance with its design.
(2) Check:
(a) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;
(b) Fall prevention and all other safety requirements and facilities are intact and fully operational; and
complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure must be thoroughly examined by the ~~HSO (or his delegated assistant)~~:

(a) Before it is brought into use;
(b) After any substantial alteration or extension;
(c) At least once in every 7 days; and
(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO.

(3) The thorough examination and regular inspections shall include:

(a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design.
(b) Check items include:
(i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;

	(c) All other requirements of this Section are still being complied with. (3) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.	(c) All other requirements of this Section are still being complied with. (3) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.	(ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and (iii) All other requirements of this Section are still being complied with. (4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

General Safety Requirements** The Contractor shall avoid accidents to workers engaged on electrical works and also those workers ~~who are~~ who are not electricians but who are	**6.7.3 General Safety Requirements** The Contractor shall avoid accidents to workers engaged on electrical works and also those workers ~~who are~~ who are not electricians but who are

	carrying out other works, such as plumbers and joiners by taking appropriate measures including the following: (1) Understanding the system (a) Ensure that those responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe. (b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or the execution of any part of the Works by any tradesmen is liable to disturb or damage the existing electrical system and expose persons to electrical danger. (2) Portable electrical equipment (a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works. The Contractor shall use cordless tools, suitable for external use under Site conditions. (b) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.	carrying out other works~~, such as plumbers and joiners~~ by taking appropriate measures including the following: (1) Understanding the system (a) Ensure that ~~those~~ Contractor's Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe. (b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or the execution of any part of the Works by any tradesmen is liable to disturb or damage the existing electrical system and expose ~~persons~~ workers to electrical danger. NK1: The sentence (b) is long and difficult to understand. Can you simplify this sentence and also review terms? JC1O: electrician? Who? NK1: tradesman は熟練工員、職人の意味であり、electrician(電気技師，電気工)を含みます。下記の英英辞典とOSHAの用語を参照願います。 A. in https://dictionary.cambridge.org/ 1) "tradesmen" means someone who works in a trade that needs skill at using your hands, usually in the building industry. 2) "trade" means a job, especially one that needs special skill, that involves working with your hands: (·She went to college to learn a trade.) the people who work in a particular business or industry or in the same one: 3) "electrician" means a person who puts in, checks, and repairs electrical wires and electrical equipment B. OSHA: Subpart K-Electrical Qualified person: One familiar with the construction and operation of the equipment and the hazards involved. (2) Portable electrical equipment (a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works. The Contractor shall use cordless tools, suitable for external use under Site conditions. JC1O: proposed to modify to "cordless tools or other suitable tools for external" NK1: Modify it as indicated. (b) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.	carrying out other works, ~~such as plumbers and joiners~~ by taking appropriate measures including the following: (1) Understanding the system (a) Ensure that ~~those~~ Contractor's Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe. (b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or the execution of any part of the Works by any tradesmen is liable to disturb or damage the existing electrical system and expose ~~persons~~ workers to electrical danger. (2) Portable electrical equipment (a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works. The Contractor shall use cordless tools or other suitable for external use under Site conditions. (b) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.

(c) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(3) Residual current (trip) devices
(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault.
(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply.
(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.
(d) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.

(4) Lighting systems
Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.
(5) Temporary electrical systems must not be used in excess of intended loads or rated capacity whichever is less.
(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

JC1O: 分からないので確認してください。
Please check the CTE because I cannot understand its meaning.
NK1: （1） CTE は、変圧器の設置方式の一つで、移動式電動器具の安全な配電方式として一般的に使用されていると次に説明があります。
The CTE is one of earth systems in transforms and very common in electrical distribution systems and site safety operations explained in the following web:
https://www.gstransformers.com/technical/110v-centre-tap-earth-55v-0v-55v.html
移動式電動器具のための CTE 方式では、安全のために漏電遮断器が併用されていると記述が上の記事にあります。
CTE system for portable tools are usually installed with residual-current device (RCD) for safety reasons.
(2) BS での低電圧への変電に関する規定
BS 7671:2018 Requirements for Electrical Installations. IET Wiring Regulations(入手済)
411.8 Reduced low voltage systems 411.8.1 General
411.8.1.2 The nominal voltage of the reduced low voltage circuts shall not exceed 110 V AC rms between lines (three phase 63.5 V to earthed neutral, single phase55 V to earthed midpoint).
（3）HSE Safety Topics
https://www.hse.gov.uk/construction/safetytopics/systems.htm
Electricity - Systems in buildings, Portable electrical equipment
Tools, plugs and cables designed for DIY (do-it-yourself) and domestic use are not suitable for site conditions.
You should use cordless tools or those that operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.
感電事故防止のために、低圧電圧を 3 相と単相で規定しています。内容は妥当です。
The Regulation specifies low voltage for 3 and single phase. I cannot understand perfectly, however the stipulation (b) is correct.

~~(c) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.~~

NK1: (c) is common requirement, so (c) can be moved to (7). Can you confirm this moving?

(3) Residual current (trip) devices
(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault.
(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply.
(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.
~~(d) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then~~

(3) Residual current (trip) devices
(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault.
(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply.
(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

7.7.2 作業計画と作業員への周知

(1) 請負者は、本仕様書 1.3[安全衛生にかかわる計画書]に規定の事項に加え、次の事項を加えた作業計画書及び安全衛生詳細計画書を作成しなければならない。

→E 7.7.4 に規定済み。

(a) 当該工事で適用する当該国の電気関係の法律及び電力供給を受ける電力会社の規定

→E 7.7.4 に当該国の規則の写しの添付を規定している。

(b) 電線、ケーブルの規格と電圧

→E 7.7.4(1)に規定済み

(c) 電線、ケーブルの防護工

→E 7.7.4(2)に規定済み

(d) 電気系統図

→E 7.7.4(3)に規定済み

(2) 請負者は、仮設電気設備の設置、移転、撤去、修理等の作業を行うときは、作業員の感電を防止するため次の事項を含めた安全上の措置について、必要に応じ作業員へ周知しなければならない。

→下記(a)～(c)含めて規定なし。→理由：第 1 章で規定すみ。

(a) 作業場所、作業内容、作業方法

7.7.4. Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the power authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.
(2) Protective work for electric wires and cables.
(3) Electric diagram.

7.7.5. Responsible Personnel

(1) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.
(2) All other persons shall be prohibited from operating repairing or interfering with the

~~every month, records of these checks shall be kept.~~

NK1: (d) is common requirement, so (d) can be moved to (7). Can you confirm this moving?

NK1: Reference for RCD:参考：漏電遮断器
https://ja.wikipedia.org/wiki/%E6%BC%8F%E9%9B%BB%E9%81%AE%E6%96%AD%E5%99%A8
漏電遮断器または漏電ブレーカー（Earth Leakage Circuit Breaker : ELCB・ELB・ECB、Ground-Fault Circuit Interrupter : GFCI、Residual Current Circuit Breaker : RCCB、Residual Current Device : RCD）とは、漏電による漏れ電流を検出して回路を自動的に遮断する機能をもつ遮断器である。 通常の配線用遮断器が過負荷や短絡による過電流から回路を保護しているのに対し、漏電遮断器は地絡による感電を防止する目的で回路に設けられる。ただし、殆どの製品では過電流遮断機能が付いている。

(4) Lighting systems
Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.
(5) Temporary electrical systems must not be used in excess of intended loads or rated capacity whichever is less.
(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.
(7) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.

NK1: (c) and (d) above are moved to (7).

7.7.4. Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the power authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.
(2) Protective work for electric wires and cables.

(b) 感電の危険のある作業、場所
(c) 感電防止のための措置

7.7.3 設置と管理

(1) 請負者は、本仕様書 1.8[請負者の要員の適正配置]に従い、必要な資格を有し、電気に関する十分な知識と経験を持つ者（competent person）に、仮設電気設備の設置と管理をさせなければならない。→E 7.7.1(3)に対応する規定済み。

(2) 請負者は、仮設電気設備の管理の担当者の氏名を、当該仮設電気設備に明示するとともに、当該担当者以外の操作を禁止する旨を表示しなければならない。
→E 7.7.5 (1)及び(2)に対応する規定済み。

7.7.4 点検・検査

→ E 7.7.6 に規定済み。

(1) 仮設電気設備の点検・整備

請負者は、仮設電気設備の点検、整備に関して次の事項を遵守し、仮設電気設備の保守管理を行わなければならない。→E 7.7.6 の冒頭部に規定済み

(a) 日常点検
→E 7.7.6 (1)(a)～(c)に対応する規定済み

柵・囲い等の付帯施設の状況の確認も含めた仮設電気設備の日常点検表を準備し、点検・検査を行い、その結果を記録すること。

(b) 定期点検
→E 7.7.6 (2)(a)～(c)に対応する規定済み

仮設電気設備の絶縁抵抗値の測定、過電流・地絡等に対する保護装置の機能確認を含む定期点検表を準備し、点検・検査を行い、その結果を記録すること。

(c) 整備・補修
→E 7.7.6 (3)(a)～(c)に対応する規定済み。（但し、本項目について、英語版では電気設備や部品の HSO による再検査、安全宣言後の動作再開すること、と規定している。）

点検の結果、必要が認められた場合は、整備を実施すること。また、整備、補修が完了するまで仮設電気設備を使用しないこと。

(2) 点検の担当者及び報告
→ E 7.7.5 に規定済み。

請負者は、仮設電気設備の日常点検及び定期点検は、仮設電気設備の管理の担当者に行わせ、点検結果を工事終了まで保管しなければならない。また、点検結果は、毎月作成する進捗報告書に含めなくてはならない。

(3) 悪天候及び地震時の点検
→規定なし。→ Already covered in JSSS 2.7 no need to repeat in every case:

temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

(3) Unless otherwise agreed, the HSO or the same person in charge shall be responsible for daily and periodical inspection and maintenance and for reporting the result of such inspections to the HSO and Engineer in the Monthly Safety Report.

7.7.6. Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection
(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;
(b) Inspect daily; and
(c) Record the inspection results.

(2) Periodical inspection
(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;
(b) Inspect periodically; and
(c) Record the inspection results.

(3) Maintenance and repair
(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;
(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and
(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

7.7.7. Safety Measures during the Work

The Contractor shall take the following safety

operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

(3) ~~Unless otherwise agreed,~~ the HSO ~~or the same person in charge~~ shall be responsible for daily and periodical inspection and maintenance and for reporting the result of such inspections to ~~the HSO and~~ Engineer in the Monthly Safety Report.

NK1: The stipulation of the HSO’s duty regarding inspection should be consistence with other Sections.
To MD; please review and modify them.

NK1: May I know what is assumed by “Unless otherwise agreed”.

7.7.6. Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection
(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;
(b) Inspect daily; and
(c) Record the inspection results.

(2) Periodical inspection
(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;
(b) Inspect periodically; and
(c) Record the inspection results.

(3) Maintenance and repair
(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;
(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and
(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

electrical installation.

(2) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

(3) ~~Unless otherwise agreed,~~ the HSO ~~or the same person in charge~~ shall be responsible for daily and periodical inspection and maintenance and for reporting the result of such inspections to ~~the HSO and~~ Engineer in the Monthly Safety Report.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection
(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;
(b) Inspect daily; and
(c) Record the inspection results.

(2) Periodical inspection
(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;
(b) Inspect periodically; and
(c) Record the inspection results.

(3) Maintenance and repair
(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;
(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and
(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

悪天候及び地震時の点検は、本仕様書 2.7[悪天候及び地震時の対策]に従い行なわなければならない。

7.7.5 作業時の安全措置

請負者は、仮設電気設備の設置、移転、撤去、修理等の作業に際して、次に示す安全措置を講じなければならない。→E 7.7.7 の冒頭部に規定済み

(1) 材料及び器具

仮設電気設備の設備、材料及び器具は、当該国の法律で規定、あるいは電力供給を受ける電力会社の指定する規格品を用いなければならない。
→規定なし。→MD：Suggest no need, covered by JSSS 1.33 and also higher standards may be requested if local company not good enough.

(2) 配線工事→(a)～(d)含めてE 7.7.7 (1)に規定済み
- (a) 電線と仮設の構造物、通行車両等との間隔は、適正に保つよう配線工事を行うこと。
- (b) (a)において適正な間隔が保てない場合は、絶縁防護管で電線を防護すること。
- (c) 作業の支障とならない箇所に配線すること。
- (d) 配線ケーブルを作業床に配線する場合は露出させてはならない。

(3) 配電盤・分電盤・開閉器
→(a)及び(b)含めてE 7.7.7 (2)に規定済み
- (a) 配電盤・分電盤・開閉器は防水構造で金属製の施錠可能な箱を用い、アースを行うこと。
- (b) 配電盤・分電盤のヒューズ及びしゃ断器は、負荷容量に適合したものであること。

(4) 受電設備、変電設備には、柵・囲い等を施すとともに、危険標示を行い、出入口は施錠すること。
→ E 7.7.7 (3)(a)～(c)に対応する規定あり。(英語版の方が詳細に規定している。)

(5) アース
→(a)及び(b)含めてE 7.7.7 (4)に規定済み
- (a) 仮設電気設備は、漏電による感電の危険防止のため、各設備に必要なアースを行うこと。
- (b) アース電極は、銅又は鋼等の導電性の高いものであること。

(6) 仮設電気設備の移設、修理の作業
- (a) 移設や修理の作業は、通電を停止して行い、絶縁用防具の装着の確認、検電を行った後に行うこと。
  →E 7.7.7 (5)(a)に規定済み
- (b) 作業中又は作業を終了した場合において、仮設電気設備に通電しようとするときは、あらかじめ、当該作業に従事する作業員に感電の危険が生ずるおそれのないことを確認した後でなければ、通電してはならない。
  →E 7.7.7 (5)(b)に規定済み

(7) 仮設電気設備の設置、移設、修理の作業が終了したときは、検査を行ったのち設備を使用すること。
→E 7.7.7 (5)(c)に規定済み。(但し、施設の設置、

measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring
- (a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;
- (b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;
- (c) Locate cabling/wiring where it does not obstruct other works; and
- (d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches
- (a) Enclose Switchgear, Panels and Switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and
- (b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers
- (a) Power Receiving Equipment, Transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;
- (b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and
- (c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)
- (a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and
- (b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work

7.7.7. Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring
- (a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;
- (b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;
- (c) Locate cabling/wiring where it does not obstruct other works; and
- (d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches
- (a) Enclose Switchgear, Panels and Switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and
- (b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers
- (a) Power Receiving Equipment, Transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

NK1: The terms above (2) and (3) are not defined in Chap.1 A1.1.2. Might they not be capitalized?
- (b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and
- (c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)
- (a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and
- (b) Grounding electrodes shall be highly conductive such as copper or steel.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring
- (a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;
- (b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;
- (c) Locate cabling/wiring where it does not obstruct other works; and
- (d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches
- (a) Enclose ~~S~~ switchgear, ~~P~~ panels and ~~S~~ switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and
- (b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers
- (a) Power ~~R~~ receiving ~~E~~ equipment, ~~T~~ transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;
- (b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and
- (c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)
- (a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and
- (b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work

移転、修理作業後は HSO による検査と安全宣言の後で作業再開、と規定している点が異なる。)	(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that protective equipment for insulation is installed and no electricity is measured by electricity detection; (b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and (c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".	(5) Relocation and Repair Work JC1O: コントラクターの temporary electrical installation を言っているか、現場を通過している公共電線のことをいっているか、明確ではないので、仮設電線であることを明確にする. It is not clear whether it refers to the temporary electrical installation of the Contractor or the public electric wire passing through the site, so here, it should be clear that (5) indicates for a temporary electric wire. NK1: 7.7.7 の序文に"removing, repairing temporary electric facilities"と記述していますので、(5)は仮設電気設備となります。 The first sentence of 7.7.7 describes "removing, repairing temporary electric facilities", so (5) specifies for temporary electric facilities including temporary wiring. (a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that protective equipment for insulation is installed and no electricity is measured by electricity detection; *Not sure of above meaning, do you mean PPE?* NK1: The protective equipment is not PPE but protective tube of electric wire as shown in the photo.  (b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and (c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".	(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that ~~protective equipment~~ protective tube of electric wire for insulation is installed and no electricity is measured by electricity detection; (b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and (c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".
7.8 電気溶接・ガス切断作業 **7.8.1 一般事項** 本節では、アーク溶接作業(以下、「電気溶接」という。)及びアセチレンガス、プロパンガス等のガス切断作業(以下、「ガス切断」という。)の安全について規定する。 →E 7.8.1 (1)に規定済み。(但し、アセチレン、プロパン	**7.8. 等とガス一般として規定している。

7.8.2 電気溶接作業

請負者は、電気溶接作業を行うに当たっては、次の措置を講じなければならない。

(1) 使用前点検について、次の項目を点検し、異常を認めた時は直ちに、補修又は取り換えること。

(a) 自動電撃防止装置が正常に作動すること
→E 7.8.3 (1)(a)に規定済み

(b) 溶接機のフレームにアースを取り付けたものであること
→E 7.8.3 (1)(b)に規定済み

(c) アース線の取付け状態
→E 7.8.3 (1)(c)に規定済み

(d) 溶接機のケーブルの被覆に損傷がないこと
→E 7.8.3 (1)(d)に規定済み

(e) 溶接棒ホルダー、アースクランプの絶縁防護部分及びケーブルの接続部に損傷がないこと
→E 7.8.3 (1)(e)に規定済み

(f) 溶接機及び溶接器具の製造者の作成したマニュアルに規定の使用前点検項目
→E 7.8.3 (1)(f)に規定済み

shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

7.8.2 Compliance Standards

By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the following technical requirements:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J-Welding and Cutting, Gas welding and cutting.

7.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting.

(1) Check measures before:

(a) Automatic preventer of electric shock is fitted and is functioning properly?

(b) Frame of welding machine is grounded?

(c) Grounding conductor is installed properly and working?

(d) There is no damage to welding cables?

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections?

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or

shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

7.8.2 Compliance Standards

By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the following technical requirements:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J-Welding and Cutting, 1926.351 Gas welding and cutting.

NK1: I think it is better to specify Section No. of OSHA to specify particular clauses in OSHA.

7.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting.

(1) Check measures before:

(a) Automatic preventer of electric shock is fitted and is functioning properly?

MD: Do you mean ELCB (Earth Leakage Circuit Breaker) ?

NK1: Not ELCB. The term is replaced with voltage reduction device (VRD) recommended in OSHA 1910.254(b)(3)(iv) *For a.c. welding under wet conditions or warm surroundings where perspiration is a factor, the use of reliable automatic controls for reducing no load voltage is recommended to reduce the shock hazard.*

(b) Frame of welding machine is grounded?

(c) Grounding conductor is installed properly and working?

(d) There is no damage to welding cables?

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections?

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use

shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the following technical requirements:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J-Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting.

(1) Check measures before:

(a) Automatic voltage reduction device for reducing no load voltage to prevent ~~preventer of~~ electric shock is fitted and is functioning properly?

(b) Frame of welding machine is grounded?

(c) Grounding conductor is installed properly and working?

(d) There is no damage to welding cables?

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections?

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or

(2) 溶接作業時の措置 (a) 迷走電流の発生を防止するため、帰線側ケーブルの接続は母材（溶接物）の溶接作業箇所に近接させること →E 7.8.3 (2)(a)に規定済み (b) ケーブルを使用し、鉄筋棒等の代替品を使用しないこと →E 7.8.3 (2)(b)に規定済み (c) 作業を中断するときは、溶接棒を溶接棒ホルダーから外し、溶接機の電源を切ること →E 7.8.3 (2)(c)に規定済み (d) 感電事故防止のため、雨天時には屋外での作業を中止すること、及び溶接機が濡れない措置を講じること →E 7.8.3 (2)(d)に規定済み (e) 周囲の作業員が、電気溶接の作業中に電撃を感じた場合は、その原因の特定を行い、電撃の原因の除去が完了するまでの間、溶接作業は中止すること →E 7.8.3 (2)(e)に規定済み。	defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used. (2) Measures to be adopted during operation: (a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location; (b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars; (c) When not working, remove electrode from holder and turn off the welding machine; and (d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet. (e) If operator(s) receive an electric shock, the Contractor shall stop the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.	until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used. The term is replaced with voltage reduction device (VRD) as explained in (1)(a).	(b) The ~~automatic preventer of electric shock~~ voltage reduction device ~~preventer of~~ shall be regularly inspected and tested at least once every six months.

7.8.3 ガス切断作業

請負者はガス切断作業を行うに当たっては、次の措置を講じなければならない。

(1) 使用前点検について、次の項目を点検し、異常を認めた時は直ちに、補修又は取り換えること。

(a) 逆火防止装置が付いていること
→E 7.8.4 (1)(a)に規定済み

(b) ガス容器、調整器、逆火防止装置(安全器)、ホースバンド、ホース、吹管、火口等に損傷がないこと
→E 7.8.4 (1)(b)に規定済み

(c) ガス容器の調整器、口金は随時検査を受けたものであること
→E 7.8.4 (1)(c)に規定済み。(但し、内容は少々異なる。)

(2) ガス切断器具の取り扱い

ガス切断器具を取扱う作業員に、次のことを周知、徹底させること。

(a) ガス等のホース及び吹管については、損傷、摩耗等によるガス等の漏えいのおそれがないものを使用すること
→E 7.8.4 (2)(a)に規定済み

(b) 吹管は丁寧に取扱い、点火したまま放置しないこと、吹管を床や通路上に置かないこと。
→E 7.8.4 (2)(b)に規定済み。

(c) 点火状態で圧力調整器を操作しないこと
→E 7.8.4 (2)(c)に規定済み

(d) ガス等のホースと吹管及びガス等のホース相互の接続箇所については、ホースバンド、ホースクリップ等の締付具を用いて確実に締付けを行なうこと
→E 7.8.4 (2)(d)に規定済み

(e) 火口が過熱すると逆火を起こしやすくなるため、長時間作業する時は、時々作業を中断し

7.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) Backfire prevention device is installed?

(b) There is no damage to gas cylinders, regulators, backfire prevention device, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment?

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use".

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Workers engaged in gas cutting and welding shall be aware of the following requirements:

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, backfire is likely to occur, therefore interrupt

7.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) Backfire prevention device is installed?

NK1: Backfire prevention device is term used in Japan. The following flashback arrestor mentioned in Wikipedia and ISO is used in JSSS.
flashback arrestor or flash arrestor is a gas safety device most commonly used in oxy-fuel welding and cutting to stop the flame or reverse flow of gas back up into the equipment or supply line. It protects the user and equipment from damage or explosions.
ISO 5175-1:2017 Gas welding equipment — Safety devices — Part 1: Devices incorporating a flame (flashback) arrestor.

(b) There is no damage to gas cylinders, regulators, backfire prevention device, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment?

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use".

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Workers engaged in gas cutting and welding shall be aware of the following requirements:

JC1O: Revised "Workers" to "Welders"
NK1: Modified as commented.

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, backfire is likely to occur, therefore interrupt

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) ~~Backfire prevention device~~ flashback arrestor to stop flame back up into the equipment or gas supply line is installed?

(b) There is no damage to gas cylinders, regulators, ~~backfire prevention device~~ flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment?

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use".

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

~~Workers~~ Welders engaged in gas cutting and welding shall be aware of the following requirements:

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, ~~backfire~~ flashback is likely to occur, therefore

酸素を僅かに出しながら水中に漬けて冷却すること →E 7.8.4 (2)(e)に規定済み (f) 作業を終了または中断する時は、必ず容器バルブを完全に閉め、調整器のガスを完全に抜くこと →E 7.8.4 (2)(f)に規定済み	continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and (f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.	continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and (f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.	interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and (f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.
(3) ガス容器の取り扱い ガス容器を取扱う作業員に、次のことを周知、徹底させること。→J 7.8.4 (3)冒頭部に規定済み	(3) Handling of gas cylinders Workers shall be trained to handle gas cylinders so that they are aware of the following requirements:	(3) Handling of gas cylinders Workers shall be trained to handle gas cylinders so that they are aware of the following requirements: JC1: Replaced “Workers” with “Welders and workers” NK1: Modified as commented.	(3) Handling of gas cylinders ~~Workers~~ Welders and workers shall be trained to handle gas cylinders so that they are aware of the following requirements:
(a) ガス容器は次の場所に置かないこと →(i)～(iii)は E 7.8.4 (3)(a)に規定済み (i) 通風又は換気の不十分な場所 (ii) 火気を使用する場所及びその附近 (iii) 火薬類、危険物その他の爆発性若しくは発火性の物又は多量の易燃性の物を製造し、又は取り扱う場所及びその附近	(a) Not to place gas cylinders: (i) Where there is insufficient ventilation. (ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks. (iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas. (i) When there is a risk of freezing, do not place gas cylinders in wet or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.
(4) 切断作業時の措置 (a) 屋内の作業場所等では換気を行うこと →E 7.8.4 (4)(a)に規定済み	(4) Safety measures for gas welding and cutting work	(4) Safety measures for gas welding and cutting work	(4) Safety measures for gas welding and cutting work

(b) ガス切断装置のガス漏れの点検を行う場合は、石けん水を使用する等の安全な方法により行い、火気は使用しないこと
→E 7.8.4 (4)(b)に規定済み
(c) 作業を行う場所の近くには適当な消火設備又は消火器を備えておき、必要な時に直ちに使用できるよう常に維持すること
→E 7.8.4 (4)(c)に規定済み
(d) 使用する際は、容器の口金に付着している油類、塵埃を除去すること
→E 7.8.4 (4)(d)に規定済み
(e) 点火及び消化は、酸素供給バルブを閉じて行うこと
→E 7.8.4 (4)(e)に規定済み
(f) 当該作業の作業員には保護眼鏡及び保護手袋を着用させること。
→E 7.8.4 (4)(f)に規定済み

(5) ガス切断作業装置の定期点検

ガス切断作業装置は、4.1.7[建設機械の点検・整備]及び 4.1.9[定期点検]に準拠して定期点検を行うこと。
→E 7.8.4 (5)(a)に対応する規定あり。

7.8.4 電気溶接、ガス切断作業における火災予防

請負者は、電気溶接、ガス切断作業による火災の予防のために、次の措置を講じなければならない。
→E 7.8.5 冒頭部に規定済み

(1) 可燃・引火物又は爆発性の材料を入れたことのある容器を溶接又は切断するときは、容器を洗浄してから作業すること。
→E 7.8.5 (1)に規定済み

(2) 溶接・切断等の作業は、可能な場合には火災に対して安全な場所に移動して行うこと。移動できない場合は、火災の危険性のあるものを移動するか、火花等に対する適切な防護措置を講じること。
→E 7.8.5 (2)に対応する規定あり。

(3) 可燃・引火性塗料が使用されている場所、あるいは可燃・引火物がある場所及びほこりが堆積し火災の危険のある場所では溶接・切断等の作業をしないこと。
→E 7.8.5 (3)に対応する規定済み。→可燃・引火性塗料、可燃・引火物、埃のある場所等を追記する。

(a) Ensure that all internal and external work areas are fully ventilated;
(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire.
(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.
(d) Remove oil and dust adhering to the valve of gas cylinders.
(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed.
(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*Personal Protective Equipment (PPE)*].
(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

MD:DCI will coordinate with JSSS 4.1 after that Section is *reviewed:*

(a) Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.1.7 [*Inspection and Maintenance of Construction Machine*] and JSSS 4.1.9 [*Periodical Inspection*].

7.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.
(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.
(3) Welding or cutting work shall not be conducted near Dangerous Goods or

(a) Ensure that all internal and external work areas are fully ventilated;
(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire.
(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.
(d) Remove oil and dust adhering to the valve of gas cylinders.
(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed.
(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*Personal Protective Equipment (PPE)*].
(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

MD:DCI will coordinate with JSSS 4.1 after that Section is *reviewed:*

(a) Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.1.7 [*Inspection and Maintenance of Construction Machine*] and JSSS 4.1.9 [*Periodical Inspection*].

7.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.
(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.
(3) Welding or cutting work shall not be conducted near Dangerous Goods or

(a) Ensure that all internal and external work areas are fully ventilated;
(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire.
(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.
(d) Remove oil and dust adhering to the valve of gas cylinders.
(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed.
(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*Personal Protective Equipment (PPE)*].
(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

(a) Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.1.7 [*Inspection and Maintenance of Construction Machine*] and JSSS 4.1.9 [*Periodical Inspection*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.
(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.
(3) Welding or cutting work shall not be conducted near Dangerous Goods or

(4) 溶接、切断作業場所には、適切な消火器を設置し、必要な時に直ちに使用できるよう常に維持すること。→E 7.8.5 (4)に規定済み (5) 溶接・切断作業が、壁、床、天井及びその近辺で行われる場所において、溶接・切断の火花が壁、床、天井に入り、又はこれらに溶接・切断の熱が伝わることにより火災の危険性がある場合には、監視員を配置すること。 →規定なし。MD：7.8.1 (3) above, the following is not necessary. →追記する。	Hazardous Substances or in or near to Hazardous Areas. (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.	Hazardous Substances or in or near to Hazardous Areas. NK1: I wonder if it is easy for the Contractor to see concrete examples such as the place where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates. (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at welding or cutting work place when there is risk of fire by the heat transmitted or sparks of welding or cutting getting into walls, floors, ceilings and so on. NK1: From the serious fatal fire accident of 5 dead and 40 injured in building construction site in Japan in 2018 shown in the following site, we want to add (5) referring to the OSHA Clause below. https://www.japantimes.co.jp/news/2018/07/27/national/five-killed-40-injured-huge-fire-construction-site-tokyo-suburb-tama/#.XqPSROR7l9A *§1926.352 Fire prevention.* *(f) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the side on which the welding is being performed.*	Hazardous Substances or in or near to Hazardous Areas, for example places where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates. (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at welding or cutting work place when there is risk of fire by the heat transmitted or sparks of welding or cutting getting into walls, floors, ceilings and so on.

Minutes of Meeting, Attachment C, Details of Discussion in the 39th to 42th Meetings , January 17, 22, 24, and 27, 2020

Chapter 7 Temporary Works

No	Item discussed	Action by NK
	7.1.1 “with the Contract requirement for TW”	The “with the Contract requirements” will be deleted and the sentences will be modified.
	7.1.1 (5) HSO’s duties The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan. Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?	HSO should always be ultimately responsible as the leader really of the Contractor’s safety team with support duties delegated as necessary to a number of personnel including Operation Leaders. This is described in Chapter 1.10.1 and has been discussed. No change is required.
	7.1.3 (3) “unless otherwise stated in the Contract”	User Guide will describe the Employer shall specify his requirements regarding instrumentation and recording system. The expression “unless otherwise stated in the Bidding Documents” (interchangeable with Contract) should remain in the Contractor’s document.
	Sub-Clause 7.1.3 (4): Requirements for Instrumentation Isn't that specified in the Contract Document series? At present, the description is left to the Contractor's discretion. Is it no problem?	NK will change the documents so that Employer specifies his requirements for instrumentation and monitoring of property outside the Site and Engineer’s involvement with instrumentation and monitoring of Contractor’s work within the Site. JICA agreed and will provide hard copy of example.

No	Item discussed	Action by NK
	7.1.3 (5) (a) Management by Visual Inspection As for measurement using instruments, the Employer should be involved. Thus, change the description to "What is specified in Annex 1.3 ...".	NK stated the Employer will be, this will be specified.
	7.1.3 (5) (b) Management by Instrument Measurement 1) Involvement of Engineer and 2) The contract documents should stipulate the target structure to be measured, the measurement method, and the allowable measurement values. The Engineer should be involved in the review process. If the affected third-party structures and affected areas are included, shouldn't the Engineer (or the Employer in some cases) be strongly involved?	Documents will be studied and if necessary changes made to include appropriate reference. Changes must be carefully worded to avoid any effect to the Contractor's basic responsibility under the Contract (otherwise JSSS may have a liability). NK will add this in User Guide.
	7.1.4 Compliance standards	JICA and NK will discuss and include standards accordingly.
	7.1.5 Specialist Temporary Works Necessary or not?	It is intended to cover specialist ground and temporary works that can be carried out by a limited number of specialists. To be further considered in future draft.
	7.2 EARTHWORK SUPPORT How about calling it "Temporary" Earth Retaining Structure? (Same for Cofferdam)	No need to change (see also the definition).
	7.2.2 Planning and Design Only site information at the time of bidding is described. How about adding "Any relevant site information that the contractor has encountered or obtained during the execution of the Works".	NK will add further requirements deriving from Contractor's further studies since commencement.
	7.2.3 Inspection and Monitoring JICA hope "Visual Monitoring" is fine.	NK leave it as it is.
	7.2.5 Safety Measures for Shoring (1) Change shoring to include "Walings and Struts" throughout.	NK leave it as it is.
	7.2.5 (4) Since wooden is not used in Japan, can it be deleted?	As this is not for use in Japan and timber is widely used NK leave it as it is.
	7.2.7 Adjacent Goods, Excavated Spoil and the like Although "and the like" is often used throughout, but be careful. "and the like" is used when similar next terms are arranged in parallel. In this case simply in etc.?	This is a common phrase in contract and specification wording and has common interpretation that there are further similar things that are to be included. Et cetera (etc.) does not necessarily have the same meaning, it depends what precedes it and should not be generally used in Specifications. NK explained and understood by JICA, no change required.
	7.3.4 General Safety and Construction Requirements (Shoring) This is a retaining item and is not related to the Cofferdam.	Cofferdams also require strutting and shoring. It is already stated in the draft as "Shore Strut Support". NK leave it as it is.
	7.4 WALKWAYS, LADDERS AND STEPLADDERS Pedestrian Walkway should be easier to understand. This is term in Singapore and Canada.	NK suggest that "Walkway" is more appropriate used in OSHA and defined as: "If an area is, or could be, used to gain access to other locations, it is to be considered a walkway. ... A general work location where one or more employees are performing work, such as a shipyard, pier, barge, vessel, or vessel section." NK leave it as it is. NK will clean up editing of 7.4.1 (1).
	7.4.4 Portable Ladders and Stepladders	These are same as draft in English. NK leave it as it is.

No	Item discussed	Action by NK
	Copyright: It seems that it is the content that brought some specifications. If there is no copyright issue, it can be used as it is.	
	7.5 SCAFFOLDING The content is different from the Japanese ver. Check it again, please.	The comment is correct, it is very different basically because MD considered it necessary to modify as mentioned in the draft version which also included some guidance notes, comments and queries. NK will discuss the draft with JICA and necessary changes.
	7.5.2 Compliance Standards (1) (b): ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements Is it new information? JICA hasn't confirmed it yet. (2) Is there any specified ground for safety factor 4?	(1) (b) ANSI is included in Japanese Draft. (2) It is from OSHA §1926.451 General requirements copied below. (a) Capacity. (1) Except as provided in paragraphs, each scaffold and scaffold component shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it. NK leave it as it is.
	7.5.8. Scaffold Assembly, Erection, Alteration and Dismantling Generally (3) Cannot understand what it means. (6) Not 45cm, 40cm is correct	(3) NK will modify it so that platform is for scaffolding workers. (6) In UK, they are usually 22.5cm wide, in US 25.4 cm (10 inches) therefore even ignoring gaps, minimum working platform width cannot usually be 40cm. In Japan 40cm for working platform. OSHA is: "It is recommended that the width of a working platform shall be a minimum of 600 millimetres wide and a scaffold which is used for the deposit of materials shall be a minimum of 800 millimetres wide. A scaffold used for the support of a higher platform should be at least 1.05 metres wide." JICA considers different standards are acceptable, and applicable standards in principle are 1st is Japanese regulation and 2nd is OSHA. NK will discuss with JICA.
	7.5.9 Mobile Elevating Work Platforms Items (7), (8) and (9) Cannot understand.	NK modify them and discuss with JICA.
	7.5.10 General Inspection and Maintenance of Scaffolding (2) The following items are not well understood.	NK modify them and discuss with JICA.
	7.6 ELEVATED ACCESS STRUCTURES Title of Section: Is this expression appropriate?	NK think so yes, there is no international standard wording and NK developed it. It has functional meaning in three words. NK consider it is necessary to define this and has included in Annex 1.1 (issue 7) as follows: (7) "Elevated Access Structures" means substantial, elevated, temporary working areas, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at sites with difficult access or with restricted room for construction operations or steeply sloping or offshore sites. NK leave it as it is.
	7.6.2 (c) Use of Measures to prevent Vehicles from falling Does this expression of "continuous "W" Section" mean the road surface to be jagged?	It means steel crash barriers. NK leave it as it is.
	7.6.4 Inspection and Maintenance It is not necessary to check the temporary gantry every week. Target might be about decks, railings, wheels?	The extent of weekly inspection is variable. NK would recommend that a check at least on a weekly basis (particularly settlement) is very necessary. NK leave it as it is.
	It raises the further question, Should JICA copyright JSSS.	Probably not but to be considered by JICA.

Chapter 7 Temporary Works
Discussion Points for meeting on 27 January 2020
(Draft internal 25/01/2020 MD)

Including Result of Discussion

Selected Items for Discussion and Clarification:

Sub-Clause 7.1.1 (5)

JICA: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan. Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

NK: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary.
This is described in Chapter 1.10.1 and has been discussed

Result: Discussed in relation to Chapter 1.10.1 and resolved, no change required.

Sub-Clause 7.1.3 (4): Requirements for Instrumentation

JICA: Isn't that specified in the Contract Document series? At present, the description is left to the Contractor's discretion. Is it no problem?

NK: We will change the documents so that Employer specifies his requirements for instrumentation and monitoring of property outside the Site and
Engineer's involvement with instrumentation and monitoring of Contractor's work within the Site.

Result: NK approach agreed, Date san will provide hard copy of example.

Sub-Clause 7.1.3 (5) (a) Management by Visual Inspection

JICA: As for measurement using instruments, the Employer should be involved.
Thus, change the description to "What is specified in Annex 1.3 ...".

NK: Employer will be, this will be specified

Result: See above

Sub-Clause 7.1.3 (5) (b) Management by Instrument Measurement

JICA: 1) Involvement of Engineer and
2) The contract documents should stipulate the target structure to be measured, the measurement method, and the allowable measurement values.

NK: Documents will be studied and if necessary changes made to include appropriate reference. Changes must be carefully worded to avoid any effect to the Contractor's basic responsibility under the Contract otherwise JICA may have a liability

JICA The Engineer should be involved in the review process.

NK: Yes, see above but it needs careful wording to avoid any effect on the contractor's liability otherwise JICA may have a liability

(Same answer applies to the many references to this subject)

Result: See above

JICA: If the affected third-party structures and affected areas are included, shouldn't the Engineer (or the Employer in some cases) be strongly involved?

NK: Yes, see above, will be added to documents (in user guide).

Result: See above

Sub-Clause 7.1.4 Compliance standards

MD note: Please refer to the earlier full draft and kindly advise of which standards are NOT to apply.

Result: JICA and NK will discuss and advise MD accordingly

Sub-Clause 7.1.5. Specialist Temporary Works

JICA: Necessary or not?

NK: It is intended to cover specialist ground and temporary works.
Please let me know if required or not

Result: Delete not Required

7.2 EARTHWORK SUPPORT

JICA: How about calling it "Temporary" Earth Retaining Structure? (Same for Cofferdam),

NK: Change will be made.

Result: No need to change (see also the definition)

Sub-Clause 7.2.2. Planning and Design

JICA: Only site information at the time of bidding is described. How about adding "Any relevant site information that the contractor has encountered or obtained during the execution of the Works".

NK: Other investigation is necessary after commencement and this will be added

Result: NK to add further requirements deriving from Contractor's further studies since commencement.

Sub-Clause 7.2.3. Inspection and Monitoring

JICA: I hope “Visual Monitoring” is fine.
NK (MD): Please let me know if it is not, I am editing the specification only and I assume that it represented your agreed requirements. Please check as necessary.
Result: Leave as it is
Sub-Clause 7.2.5. Safety Measures for Shoring
JICA: (1) Change shoring to include “Walings and Struts” throughout.
NK: Will be changed; suggest this clause already covers it, (should be “waling and strutting”).
Result: Leave as it is
Sub-Clause 7.2.5 (4)
JICA: Since wooden is not used in Japan, can it be deleted?
NK: This is not for use in Japan and timber is widely used
Result: Leave as it is
Sub-Clause 7.2.7. Adjacent Goods, Excavated Spoil and the like
JICA: Although “and the like” is often used throughout, but be careful. “and the like” is used when similar next terms are arranged in parallel. In this case simply in etc.?
NK: This is a common phrase in contract and specification wording and has common interpretation that there are further similar things that are to be included.
Et cetera (etc.) does not necessarily have the same meaning, it depends what precedes it and should not be generally used is Specifications.
Result: explained and understood by JICA, no change required
Sub-Clause 7.3.4. General Safety and Construction Requirements
JICA: (Shoring) This is a retaining item and is not related to the Cofferdam.
NK: Comment not understood, coffer dams also require strutting and shoring.
It is already stated in the draft as “Shore Strut Support”.
Shall this be changed to strutting?
Result: Leave as it is
7.4. WALKWAYS, LADDERS AND STEPLADDERS
NK General Comment: This section has already been given some further editing
JICA: Pedestrian Walkway should be easier to understand.
This is the case in Singapore and Canada.
NK: We suggest that “Walkway” is more appropriate, is used in OSHA and defined as:
“If an area is, or could be, used to gain access to other locations, it is to be considered a walkway. ... A general work location where one or more employees are performing work, such as a shipyard, pier, barge, vessel, or vessel section.”
(MD: Please confirm what is required)
Result: Leave as it is.
Clean up editing of 7.4.1 (1)
Sub-Clause 7.4.4. Portable Ladders and Stepladders
Result: Leave as it is
JICA Copyright: It seems that it is the content that brought some specifications. If there is no copyright issue, it can be used as it is.
MD Note: I don’t really understand the comment but please note that I am not checking copyright compliance, this is a JICA/NK responsibility which I assumed had been complied with.
Please check and if there are any issues please advise me.
Result: Leave as it is
It raises the further question, I suggest that JICA should copyright JSSS.
Copyright of JSSS: To be considered buy JICA
7.5. SCAFFOLDING
JICA: The content is different from the Japanese ver. Check it again, please.
MD: Your comment is correct, it is very different basically because I considered that the draft is not up to a reasonable standard.
MD General Comment:
Please also note that I had provided a draft version which included some guidance notes, comments and queries. This appears to have been ignored.
NK Please provide clarification to my queries.
Result: Discuss scaffolding compliance standards with NK.
NK to Discuss Scaffolding draft with JICA and advise MD or any changes.
Sub-Clause 7.5.2. Compliance Standards
JICA: (1) (b): ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements
Is it new information? JICA hasn't confirmed it yet.
MD: This is included in your draft, please confirm what is required.
Also, please refer to my draft and note that I am still awaiting advice on this, please refer to my earlier full draft
NK to Discuss Scaffolding draft with JICA and advise MD or any changes.

JICA: (2) Is there any specified grounds for safety factor 4?
NK: Yes, please refer to OSHA.
Please note also that the draft is not sufficient or compatible with OSHA
Result: Nothing to change leave JICA reference in unless otherwise advised by NK.

Sub-Clause 7.5.3. Tubular Steel Scaffolding.
(and same JICA comment in 7.5.4, 7.5.5 and 7.5.6
JICA: Item title: Is it new information? JICA hasn't confirmed it yet.
MD: Yes I have edited this as I think necessary.
I don't understand what is meant by JICA hasn't confirmed?
I have edited what I have received and the document that I have issued contains terms which I believe are understandable.
Please study my earlier draft and confirm if it is acceptable or if necessary, advise me of any particular changes that you require.
Please also note that I have asked questions in my draft which are still not answered.
Result: NK will discuss with JICA and advise MD
Sub-Clause 7.5.8. Scaffold Assembly, Erection, Alteration and Dismantling Generally
JICA: Item (3) Cannot understand what it means.
NK (MD) Please refer to your draft item 7.5.6 (4), it is difficult to understand but I can give some meaning, much better if you clarify, Original text was:
"For scaffolds with a height of 2m or more, when carrying out works of fastening, removing or handling over materials for scaffoldings, provide scaffolding boards having a width of 40 cm or more,"
Result: MD to edit, platform is for scaffolding workers
JICA Item (6) Not 45cm, 40cm is correct
NK (MD):Please refer to my note in the draft document sent to you.
"Scaffold Boards are usually 225 wide.
In UK, they are usually 22.5cm wide, in US 25.4 cm (10 inches) therefore even ignoring gaps, minimum working platform width cannot usually be 40cm.
JICOSH is 40cm for working platform.
OSHA is:
"It is recommended that the width of a working platform shall be a minimum of 600 millimetres wide and a scaffold which is used for the deposit of materials shall be a minimum of 800 millimetres wide. A scaffold used for the support of a higher platform should be at least 1.05 metres wide."
Please confirm exactly what is required.
Result: NK to consider, discuss with JICA and advise MND accordingly
Sub-Clause 7.5.9 Mobile Elevating Work Platforms
JICA Items (7), (8) and (9) Cannot understand (7) to (9).
NK (MD): I find it difficult but not impossible however, please refer to the NK draft, items 7.5.8 (e) (ii) to (iv).
I have included the same text here without any real change.
I agree that your draft is difficult to understand but I can just about do that.
Please advise what is required.
Result: NK to consider, discuss with JICA and advise MND accordingly
Item (12)
JICA: I think it is not necessary for passenger seat?
NK (MD):The NK draft states:
"When using the mobile elevating work platform, workers shall not be boarded on other than the passenger seat and working floor, and "
I have not really changed this, understanding that your draft had been agreed.
Please advise what is required.
Result: Leave as it is
Sub-Clause 7.5.10. General Inspection and Maintenance of Scaffolding
JICA: The following items are not well understood.
NK (MD) There are a number of items listed most of which are excluded from the NK draft which I suggest are necessary.
Please review and advise what is required.
Result: NK to consider, discuss with JICA and advise MD accordingly
7.6. ELEVATED ACCESS STRUCTURES
Title of Section:
JICA: Is this expression appropriate?
NK (MD): I think so yes, there is no international standard wording and I was asked to develop something.
It has functional meaning in three words.
I also consider it is necessary to define this therefore please also refer to the definition I have included in Annex 1.1 (issue 7)

(7) "Elevated Access Structures" means substantial, elevated, temporary working areas, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at sites with difficult access or with restricted room for construction operations or steeply sloping or offshore sites.

Result: Leave as it is

(c) Use of Measures to prevent Vehicles from falling

JICA: Does this expression mean the road surface to be jagged?

NK: Not clear but no, it means steel crash barriers as stated

Result: Leave as it is

Sub-Clause 7.6.4. Inspection and Maintenance

JICA: It is not necessary to check the temporary gantry every week. Target might be about decks, railings, wheels?

NK (MD) If that is your instruction I will change, however, please note that the extent of weekly inspection is variable. Considering the requirements of (4) below, I would recommend that a check at least on a weekly basis (particularly settlement) is very necessary.
If it is not a weekly check, what is the suggested frequency?

Result: Leave as it is.

Chapter 1 (Issue 7)

1.35 Contractor's Equipment, Temporary Works, Safety Equipment and PPE

1.35.1. Contractor's Equipment, Temporary Works, Safety Equipment and PPE to be used upon the Works, (for example electrical systems, welding and cutting equipment, scaffolding, system Formwork and Falsework, etc.) together with all components, systems, materials and equipment, safety equipment and PPE (referred to collectively in this clause as Contractor's Equipment and Temporary Works), shall be suitable and fit for the purpose for which they are intended.
All shall be used in full accordance with the manufacturer's printed instructions or accepted industry practice and shall be used, stored, handled, assembled, erected, installed, maintained and dismantled by qualified, skilled, specially trained and experienced personnel.

1.35.2. The Contractor shall ensure that all items of Contractor's Equipment and Temporary Works for use upon the Works are inspected by the HSO (or his delegated and technically qualified assistant) at the required location before the commencement of any operation or use and regularly inspected thereafter to ensure continued compliance with the foregoing. Following any such inspection, all tested items shall be labelled by the Contractor with clear, durable and weatherproof labels confirming the last/current date of inspection, date of next inspection and signed by the HSO, thereby certifying the items as being safe for use.
If the HSO ascertains at any time that any items are suitable for such certification he shall immediately stop all use of that item, label the item as not being safe for use, stop all work for which that item and any associated items is being used and cease any such work until the situation is corrected by repair, re-testing and certifying. Similarly, the Engineer may issue instructions to stop all use of any item and stop all work for which that item and any associated items is used when it is discovered that the certification is not available or is not currently valid.

1.35.3. The Engineer may also instruct that any Contractor's Equipment and Temporary Works shall be subjected to examination, inspection, measurement or testing, by the Contractor at the expense of the Contractor.
If, as a result of such examination, inspection, measurement or testing, any such Contractor's Equipment and Temporary Works is found to be defective, or otherwise not in accordance with JSSS or the Contract, the Engineer may reject such Contractor's Equipment and Temporary Works by giving notice to the Contractor, with reasons. The Contractor shall then promptly make good the defect and ensure by repair as necessary and re-testing that the rejected item(s) complies with the Contract.

1.35.4. As confirmed in Form JSSS/BSD Bidder's Safety Declaration (refer to JSSS Annex 1.3 [*Additional Contractor Forms*]), the Contractor shall mobilise for use upon the Works:

(1) New and up to date Personal Protective Equipment (PPE) and other safety equipment and Temporary Works of an international standard, suitable and fit for the purpose for which it is intended, in full working order, complete with all necessary spare parts and consumables, suitable and safe for use on the Works, all to meet with the consent of the Engineer and in sufficient quantities to allow for replacement in the case of being worn-out, lost or damaged.

(2) New or recent Contractor's Equipment and Temporary Works, not more than five (5) years old upon the date that it is mobilised to the Site, all suitable and fit for the purpose for which it is intended, in full working order, clean, non-polluting, complete with all necessary spare parts and consumables, suitable and safe for use on the Works; and that all of the above will be used correctly and for the purpose intended.

Contractor's Equipment and Temporary Works shall be pre-inspected at origin at the expense of the Contractor before shipment by an independent testing, inspection and certification agency to ensure compliance with the foregoing paragraph subject to receiving the consent of the Engineer.

1.37 Design and Management of Temporary Works

1.37.1. Unless otherwise specified in the Particular Safety Specification, the Contractor is required to comply with BS5975: Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

1.37.2. An alternative standard is acceptable by reference to JSSS 1.4.1 [*Specified Standards and Regulations*] providing that the proposed alternative also contains equivalent or higher standards for the management of Temporary Works including Class A Falsework.

1.37.3. It is to be noted that BS5975 constitutes guidance and recommendations and it is not quoted herein as if it constitutes a specification or an integral part of JSSS. The Contractor shall however justify in writing any course of action that deviates from the recommendations of BS5975 and shall submit such justification to the Engineer for his information and consent.

1.37.4. It is to be noted that certain design standards included or referred to in the BS (for example wind loadings), are restricted to use in the United Kingdom, in which case the Contractor shall be assumed to have adopted the design standards applicable in the Country of the Works.

1.37.5. The Contractor shall prepare and implement suitable procedures whereby all Temporary Works staff during the course of their work and on completion shall prepare and sign formal records of all Temporary Works under their management and control, thereby certifying that all has been performed, completed and validated in accordance with BS5975. All such records shall be in a format and content subject to the consent of the Engineer and all shall be made available for inspection by the Engineer.

1.37.6. Without affecting the Contractor's responsibilities for design of the Temporary Works, the Engineer shall cooperate with the Contractor's Temporary Works staff and shall provide pertinent information about the design of the Permanent Works which may be of relevance and assistance to the Contractor with the Temporary Works design.

The Contractor shall submit Method Statements for any parts of the Temporary Works (including designs and calculations of Falseworks) as may be requested by the Engineer for his review in accordance with JSSS **エラー！参照元が見つかりません。** [*Contractor's Method Statements*]. If the Engineer chooses to review same, this shall not be construed as a check or validation of the Contractor's design or methods.

The Engineer has no obligation under the Contract to review Temporary Works design, however he may choose to do so for those parts which he considers to be of vital importance for safety. The Contractor shall cooperate and work with the Engineer on this task to demonstrate that the Contractor has systems in place to ensure compliance with BS 5975. The Engineer shall have no obligation to issue any response or comment, however, if he chooses to do so, any such response or comment shall be deemed to be provided in good faith, shall be treated accordingly under GC 3.1 [*Engineer's Duties and Authority*] Sub-Subclause (c) and issued without prejudice to the Contractor's overriding responsibility for the safety and adequacy of the Temporary Works.

1.37.7. In accordance with JSSS **エラー！参照元が見つかりません。** [P*roper Placement of Contractor's Personnel*], the Contractor shall ensure that the design, erection, maintenance, dismantling and removal of Temporary Works, are all carried out by competent and experienced persons and in a controlled and closely supervised manner.

1.37.8. For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [*Inspection and Monitoring of Temporary Works*].

1.37.9. Irrespective of any legal requirement under the Laws of the Country, all of the Contractor's Temporary Works specialist staff shall have appropriate academic, educational or vocational qualification for Temporary Works coordination, design or supervision as appropriate. Such staff shall also have work experience in construction and in Temporary Works design or supervision as appropriate. The Contractor shall ascertain for himself that all such staff are qualified to perform their duties.

JC: Comments by JICA, (JCxx): No. of JICA Comments NK: Reply to the comments and revision from Issue 1. MM: Minute of Meeting of No. 39 to 42 on 2020/1/17, 22, 24 & 27 5. Comments on the Chapters 1, 2, 3 and 7 JICA and NK discussed JICA's comments on Chapters 1, 2, 3 and 7. Details with results of discussions are shown in abbreviated form in the Attachment C. Discussion on Chapters 1 and 3 was based upon a review at the meetings of the JICA original commented documents. Discussion on Chapters 2 and 7 was based upon a list of main discussion points prepared by NK and as shown in the Attachment D and E.	Update changes by MD since Issue 1 Changes due to JICA and NK comments *Comments and queries* JICA/NK: Due to the number and nature of the comments and changes received, I have prepared a further notes, explanations and suggestions in this issue to help with further understanding. This document needs to be read together with other chapters particularly chapter 7, to obtain a full understanding. Due to the present content, I would prefer to review, edit, check all cross references and finalise after receiving your response to this issue.	NK: NK は、JICA の Issue1 へのコメントの対応案 R2(左欄)を作成し、MD 氏へ送付した。MD 氏は R2 にもとづき JICA 及び NK のコメントに対応した Issue2 (中央欄)を作成した。右欄は、NK が Issue 2 を見直し、提案する Issue 2 である。 本 Issue 2 への JICA のコメントをもとに、本 5 章仮設工事のドラフトファイナルを作成致します。
6. (7.) TEMPORARY WORKS (JC01) NK: 章番号で旧７、新６が混在しています。 JC01: もう少し、用語、内容、英語での表現を精査しないと議論の土台にならないように思います。 The terms, content, and English expressions need to be scrutinized a bit more to be discussed. JC1: Revised taking into consideration the comment above. **6.1 (7.1) GENERAL REQUIREMENTS** This Section 7.1 applies to all TW included in JSSS Chapter 7. **6.1.1 (7.1.1) Design and Provision of TW Generally** Unless otherwise stated in the Contract, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all TW as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS ~~1.33~~1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*], ~~1.35~~1.37 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the Contract requirements (JC02)for TW and: JC02: Contract requirements の内容が明確でない、あるいは意図的に省略されたとき、すべてコントラクターに委ねることにならないか。 When the contents of the Contract requirements are not clear or intentionally omitted, I wonder if responsibilities will be left to the Contractor? NK1: Contract requirements は、JSSS 以外の契約の中の他の規定を意味しています。請負者任せになるのではないかとの懸念に関し、次のように考えます。 "as specified in the Contract/Special Safety Specification"と規定し、JSSS に最低限の要求事項を規定しない場合、コメントとおりの意図的省略が懸念されます。 "unless otherwise stated in the Contract/Special Safety Specification"と記述し、JSSS に請負者への最低限の要求事項を規定することで、請負者任せにしないことになります。 本款では、(1)から(6)に請負者の要求事項を規定しておりますので、本文はこのままとします。 The Contract requirements mean other requirements stipulated in other parts of the Contract than JSSS. We respond to the comments if responsibilities will be left to the Contractor or not.	**6. TEMPORARY WORKS** **6.1 GENERAL REQUIREMENTS OF TEMPORARY WORKS** This Section 6.1 applies to all Temporary Works included in JSSS Chapter 6. **6.1.1 Design and Provision of Temporary Works Generally** Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all Temporary Works as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*], JSSS 1.37 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the requirements specified in the Contract for Temporary Works and:	**6. TEMPORARY WORKS** **6.1 GENERAL REQUIREMENTS OF TEMPORARY WORKS** This Section 6.1 applies to all Temporary Works included in JSSS Chapter 6. **6.1.1 Design and Provision of Temporary Works Generally** Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all Temporary Works as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*], JSSS 1.37 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the requirements specified in the Contract for Temporary Works and:

In case JSSS stipulates “as specified in the Contract/Special Safety Specification” and does not specify minimum requirements in JSSS, there is worry that the Employer intentionally omit to specify the requirements.
It can be avoided by the JSSS when JSSS stipulates “unless otherwise stated in the Contract/Special Safety Specification” and minimum requirements to the Contractor.
With above reasons, we leave the clauses as it is.

(1) Provide TW which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) Manage the design, use and removal of TW fully in accordance with JSSS 1.35 [*Design and Management of Temporary Works*].

(3) Maintain and repair all TW when in use to ensure the continued optimal and safe performance.

(4) Monitor all TW when in use and any affected PW, existing buildings, structures, ground or surfaces that may be affected by the TW through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the TW are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall establish procedures whereby:

(a) No unauthorised modification of TW is allowed.

(b) No unauthorised use of TW is allowed.

(c) The HSO shall inspect all TW upon completion of erection and certify and label them as “Safe for Use” before any use is allowed. (JC03)

JC03: HSO が仮設構造をチェックして certify する。TW の撤去時期を確認して certify するようになっている。 HSO の役割は safety Plan に準拠して施工されているかを確認することではないかと思料。
これでは全く HSO が現場の作業手順に忙殺され全体を見ることが出来なくならないか。
(This comment in English is recorded in MM below.)

MM: Sub-Clause 7.1.1 (5)

JICA: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan. Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

NK: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary.

This is described in Chapter 1.10.1 and has been discussed

Result: Discussed in relation to Chapter 1.10.1 and resolved, no change required.

Chapter 1, 1.10 (Issue 6) stipulate as follows:
1.10 HSO - Scope of Duties
1.10.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.
Chapter 1 (Issue 7)
1.12.3. Supporting Staff
(1)The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.

(1) Provide Temporary Works which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) Manage the design, use and removal of Temporary Works fully in accordance with JSSS 1.37 [*Design and Management of Temporary Works*].

(3) Maintain and repair all Temporary Works when in use to ensure the continued optimal and safe performance.

(4) Monitor all Temporary Works when in use and any affected Permanent Works, existing buildings, structures, ground or surfaces that may be affected by the Temporary Works through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the Temporary Works are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall establish procedures whereby:

(a) Unauthorised modification of Temporary Works is not allowed;

(b) Unauthorised use of Temporary Works is not allowed;

(c) The HSO shall inspect all Temporary Works upon completion of erection and certify and label them as “Safe for Use” before any use is allowed;

(1) Provide Temporary Works which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) Manage the design, use and removal of Temporary Works fully in accordance with JSSS 1.37 [*Design and Management of Temporary Works*].

(3) Maintain and repair all Temporary Works when in use to ensure the continued optimal and safe performance.

(4) Monitor all Temporary Works when in use and any affected Permanent Works, existing buildings, structures, ground or surfaces that may be affected by the Temporary Works through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the Temporary Works are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall establish procedures whereby:

(a) Unauthorised modification of Temporary Works is not allowed;

(b) Unauthorised use of Temporary Works is not allowed;

(c) The HSO shall inspect all Temporary Works upon completion of erection and certify and label them as “Safe for Use” before any use is allowed;

1.13 HSO - Scope of Duties and Authority
1.13.1. ditto
1.13.2.The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:
(1)Health and Safety Management Work:
(c)Regular (daily) inspections of the Works at the Site to ensure the Contractor's compliance with the Safety Plan, Instructions and other measures;

NK1: HSO は安全に全責任を負います。安全の点検方法は次が想定されます。
(1) (NK 案) HSO 及び HSO の補助員（HSO が作業主任等に権限委譲）が、安全計画に従い点検を、直接行う。
(2) (JC 案) 現場担当や作業主任等が、安全計画に従い点検する。HSO は、現場の安全点検の遂行を管理する。
これらの長短所は以下である。
(1)の場合、全ての点検の責任が HSO にあり、安全上不備がある場合、改善や修理、作業開始の中止等が即時に行える利点がある。現場の HSO の補助員は、2 つの指揮系統（工区責任者等と HSO）に属することとなることから、事前の調整が重要である。
(2)の場合、安全の責任は、現場担当や作業主任等の点検を行うもの又は工区責任者等となる。この場合、現場進捗や費用管理と安全管理は相反する。そのため、進捗や費用が優先され、安全が次となる。HSO からの指示は、PM、工区責任者、現場担当や作業主任の流れとなり、即時の安全対策ができない。

NK1: HSO に安全の責任があることを明確にし、JSSS に規定の安全管理を遂行させるために、(f)へのコメントへの回答の通り、原案通りを提案します。
The clauses make clear the HSO has full responsibility to the Safety. To make the HSO execute the HSO's duties stipulated in the JSSS, the clauses are left as they are as explained in (f) below.

(d) The HSO shall regularly inspect TW and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the TW until repaired and re-inspected.

(e) The HSO inspects TW upon the completion of the required PW and before TW are dismantled, demolished and removed accompanied by the ~~TWS and TWC~~ Contractor's Temporary Works specialist staff specified in JSSS 1.37.12 as appropriate, and certifies that the PW are completed and the TW can be removed.

(f) The HSO inspects after removal of the TW to ensure that removal has been completed properly and that no part of the TW remains, that any rectification of the PW is completed and all is left in safe order and condition. (JC04)

JC04: From (c)-(f). Should it be HSO? Attention should be paid to harmony with BS5975 (in particular 11.2.3 and 11.3.3 of BS5975).

NK1:安全に関する責任は HSO にあり、HSO は全ての作業、仮設物の安全を確認する責務があります。
第 1 章では次のように規定しています。1.37 Design and Management of Temporary Works の BS5975 の規定内容に従い(e)と(f) は変更します。
The HSO is responsible for the safety and has duty to confirm the safety of whole works and TW. Chapter 1 stipulates as below. Following the provisions of BS5975 stipulated in 1.37 Design and Management of Temporary Works, (e) and (f) are modified.
1.12.3. Supporting Staff
(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.

(d) The HSO shall regularly inspect Temporary Works and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the Temporary Works until repaired and re-inspected;

(e) The HSO shall inspect Temporary Works upon the completion of the required Permanent Works and before Temporary Works are dismantled, demolished and removed accompanied by the Contractor's Temporary Works specialist staff specified in JSSS 1.37 [*Design and Management of Temporary Works*] as appropriate, and certify that the Permanent Works are completed and the Temporary Works can be safely removed; and

(f) The HSO shall inspect after removal of the Temporary Works to ensure that removal has been completed properly and that no part of the Temporary Works remains, that any rectification of the Permanent Works is completed and all is left in safe order and condition.

(d) The HSO shall regularly inspect Temporary Works and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the Temporary Works until repaired and re-inspected;

(e) The HSO shall inspect Temporary Works upon the completion of the required Permanent Works and before Temporary Works are dismantled, demolished and removed accompanied by the Contractor's Temporary Works specialist staff specified in JSSS 1.37 [*Design and Management of Temporary Works*] as appropriate, and certify that the Permanent Works are completed and the Temporary Works can be safely removed; and

(f) The HSO shall inspect after removal of the Temporary Works to ensure that removal has been completed properly and that no part of the Temporary Works remains, that any rectification of the Permanent Works is completed and all is left in safe order and condition.

(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.
(In this section, supporting staff are TWC and).
The last comments of MD are copied below:
I refer to my comments against JSSS 1.3 and 1.14:
"…. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly."
and "For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend that we try to do it."
The HSO should remain responsible for maintaining safety at all times; if he delegates and who he delegates to and how they communicate, is his choice and responsibility.
Regarding the management of construction performance, quality, quantity and environmental compliance etc. etc. other persons are independently responsible.
I suggest that the Engineer has no duty to advise or direct the Contractor how to manage his internal affairs and I advise against trying to do this.
In terms of 8.2.(3) JSSS is for safety matters, so the HSO must inspect this and other works to assess that all is safe.
The construction staff must also inspect and give instructions etc for other purposes but surely it is not within the scope of JSSS to advise on that.
Sometimes also, opinions will differ because interests are different, for example the HSO may not allow piling work to start if he perceives any risk to safety.
On the other hand, a construction manager or site engineer may choose to take risks for example to speed up the start if work is running late.
If we state, "the Contractor shall.." this unnecessarily introduces ambiguity to JSSS and I do advise against it.
I suggest that if any change is to be made (which I do not think necessary) it should however be in Chapter 1 which prevails.
All other chapters of JSSS would be better confined to safety and therefore generally refer to HSO.

(6) Safety Plan for TW

The Contractor shall include details of all TW in the Safety Plan to be submitted in accordance with JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*].

6.1.2 Method Statements

Refer to JSSS 1.7 [*Contractor's Method Statements*].

6.1.3 Inspection and Monitoring of TW (JC05)

JC05: モニタリングの要求項目と許容値は契約図書に規定されるべきもので、請負者はそれらを満足する具体的な計画を立て、エンジニアにその同意を求め施工する手順になる。ここの書きぶりは、計測項目やその許容値まで請負者に委ねる様に理解される。強い違和感がある。
Requirements on monitoring and permissible values should be specified in the contract documents, following that, the Contractor shall prepare a concrete plan to get consent by the Engineer and proceed to construction. Present description seems the measurement items and its allowable values are left to the Contractor's discretion. I feel strong sense of discomfort.
NK: 特別な要求事項は Particular Safety Specification(PSS)に規定します。JSSS では請負者が遵守すべき最低限の事項を規定することと致します。unless otherwise specified in the PSSS という規定でコメントに対応し変更します。

(6) Safety Plan for Temporary Works

The Contractor shall include details of all Temporary Works in the Safety Plan to be submitted in accordance with JSSS 1.7 [*Contractor's Safety Plans*].

6.1.2 Method Statements

Refer to JSSS 1.9 [*Contractor's Method Statements*].

6.1.3 Monitoring Impact of Works on Other Properties

This subclause is not only applicable to Temporary Works but also to Excavation, Piling, Earthwork Support, Coffer dams and maybe others and for which the requirements are not stated or not clearly stated.

I have therefore changed the heading as above so that it has wider coverage.

Rather than include separate and repetitive requirements in other Chapters and Sections, for your assistance I have developed this clause as a standard cross reference.

Please refer to my earlier comments on this subject in JSSS 7.2.1 (6) regarding the stipulation of "criteria of allowable values".

I suggest that there is no need to add the wording "regarding the allowable measurement, control values and control limit values," to this subclause.

(6) Safety Plan for Temporary Works

The Contractor shall include details of all Temporary Works in the Safety Plan to be submitted in accordance with JSSS 1.7 [*Contractor's Safety Plans*].

6.1.2 Method Statements

Refer to JSSS 1.9 [*Contractor's Method Statements*].

6.1.3 Monitoring Impact of Works on Other Properties

Special requirements will be specified in Particular Safety Specification(PSS). JSSS specify minimum requirements to be taken by the Contractor. The comments above will be taken in by specifying "unless otherwise specified in the PSSS,…" and modifying the description below.

(1) The Contractor shall prepare a Monitoring Plan as a part of the Method Statement, for the purpose of demonstrating that the particular TW are performing safely, to the designed limits and for the intended purpose.

(2) Monitoring shall be accomplished through regular inspection, measurement and survey.

(3) Where TW are providing structural support to the Permanent Works or to existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like that may be affected or potentially affected by the performance of the TW, and unless otherwise stated the ~~Contract~~ (JC06) Particular Safety Specification, the Contractor shall provide and install an instrumentation and recording system that will provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the TW.

JC06: For "unless otherwise stated in the Contract". ????

NK1: The phrases after "unless otherwise stated in the Contract" specifies the minimum requirements for which the Contractor shall take action.
User Guide will describe the Employer shall specify his requirements regarding instrumentation and recording system.

This will (if necessary) be described in the Particular Safety Specification but I recommend that this will be the exception rather than the norm.

For your assistance, I have added to and edited this subclause and added requirements for the Engineer's consent and involvement.

I have also included appropriate cross reference to this subclause in Chapter 7 and 8 Excavation and Piling

(1) The Contractor shall monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose.

(2) The Contractor shall also monitor any vibration, settlement and other potentially damaging effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.

(3) Monitoring shall be accomplished by the Contractor through regular inspection, measurement and survey and instrument monitoring and recording as determined by the nature and scope of the Works or as required by the Particular Safety Specification.

(4) Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:

(a) Excavation Works (including Blasting Works);

(b) Foundation Piling Works;

(c) Ground improvement;

(d) Temporary ~~ground~~ dewatering in underground; (NK: deleted.)

(e) Temporary Works such as major items of Earthwork Support, Coffer Dams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;

(f) Other parts of the Works required to evidence the Contractor's compliance with the Contract; and

(g) Other parts of the Works which may be specified in the Particular Safety Specification.

(5) The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:

(a) The Contractor's proposed maximum monitoring criteria for vibration, settlement and all other potential effects of the ~~Excavation~~ Works, which by the Contractor's own calculations will ensure that no damage or weakening is caused to other properties; (NK: deleted.)

(for Reference) Weaken: meaning and example of use
https://dictionary.cambridge.org/dictionary/english/weaken?q=weakening
means to (cause to) become less strong, powerful, determined, or effective: e.g.
We know that prolonged exposure to vibration can weaken aircraft components.

(b) The types, locations and numbers of monitoring instruments and other equipment;

(c) The measurement frequency and recording methods; and

(1) The Contractor shall monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose.

(2) The Contractor shall also monitor any vibration, settlement and other potentially damaging effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.

(3) Monitoring shall be accomplished by the Contractor through regular inspection, measurement and survey and instrument monitoring and recording as determined by the nature and scope of the Works or as required by the Particular Safety Specification.

(4) Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:

(a) Excavation Works (including Blasting Works);

(b) Foundation Piling Works;

(c) Ground improvement;

(d) Temporary dewatering in underground;

(e) Temporary Works such as major items of Earthwork Support, Coffer Dams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;

(f) Other parts of the Works required to evidence the Contractor's compliance with the Contract; and

(g) Other parts of the Works which may be specified in the Particular Safety Specification.

(5) The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:

(a) The Contractor's proposed maximum monitoring criteria for vibration, settlement and all other potential effects of the Works, which by the Contractor's own calculations will ensure that no damage or weakening is caused to other properties;

(b) The types, locations and numbers of monitoring instruments and other equipment;

(4) ~~Requirements for instrumentation systems shall be as follows:~~ Unless otherwise stated in the Particular Safety Specification regarding the instruments and measurement methods, locations and structures, and numbers of measurement points, requirements for instrumentation systems shall be as follows: (JC07)

(d) The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.

(6) The Contractor shall:

(a) Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the Temporary Works;

(b) Provide qualified staff to perform the monitoring;

(c) Maintain and calibrate the monitoring equipment as necessary throughout the execution of the Works;

(d) Perform survey and monitoring on a regular basis throughout the execution of the Works;

(e) Confirm the occurrence and extent of any adverse impact of the Works execution by means of regular inspections of all other properties;

(f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;

(g) Evaluate the measurement results and modify the monitoring criteria as necessary; and

(h) Submit an evaluation report if necessary with any changes to the Safety Plan for ~~Excavation~~ Works to the Engineer before proceeding with the ~~Excavation~~ Works. (NK: deleted.)

The following has been edited and included above:

~~(6) The Contractor shall prepare a Monitoring Plan as a part of the Method Statement, for the purpose of demonstrating that the particular Temporary Works are performing safely, to the designed limits and for the intended purpose.~~

~~(7) Monitoring shall be accomplished through regular inspection, measurement and survey.~~

~~(8) Where Temporary Works are providing structural support to the Permanent Works or to ground, foundations, buildings, structures, roads, railways, waterways, paved areas or any other property, either on or outside the Site that may be affected or potentially affected by the performance of the Temporary Works, and unless otherwise specified in the Particular Safety Specification, the Contractor shall provide and install an instrumentation and recording system that will provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the Temporary Works.~~

(9) Requirements for instrumentation systems shall be as follows:

(c) The measurement frequency and recording methods; and

(d) The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.

(6) The Contractor shall:

(a) Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the Temporary Works;

(b) Provide qualified staff to perform the monitoring;

(c) Maintain and calibrate the monitoring equipment as necessary throughout the execution of the Works;

(d) Perform survey and monitoring on a regular basis throughout the execution of the Works;

(e) Confirm the occurrence and extent of any adverse impact of the Works execution by means of regular inspections of all other properties;

(f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;

(g) Evaluate the measurement results and modify the monitoring criteria as necessary; and

(h) Submit an evaluation report if necessary with any changes to the Safety Plan for Works to the Engineer before proceeding with the Works.

(7) Requirements for instrumentation systems shall be as follows:

JC07: 契約図書において指示されるものではないか。コントラクターの裁量に委ねているように読めないか
(The above comment in English is recorded in MM below.)

MM: JICA: Isn't that specified in the Contract Document series? At present, the description is left to the Contractor's discretion. Is it no problem?

NK: We will change the documents so that Employer specifies his requirements for instrumentation and monitoring of property outside the Site and Engineer's involvement with instrumentation and monitoring of Contractor's work within the Site.

Result: NK approach agreed, Date san will provide hard copy of example.

(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;

(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of earth retaining works are provided;

(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;

(d) The HSO~~, TWC~~ (JC08) and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued complaint and safe performance of all TW; and

JC08: 削除すべき。To delete "TWC".
NK: deleted.

(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.8 [Engineer's Safety Representative], JSSS 1.9 [Safety Compliance Instructions from the Engineer] and JSSS 1.14 [Joint Site Safety Inspections].

(5) Management based on Monitoring and Inspection (JC09)

JC09: 計器計測をするものは発注者が関わるべきもの　Annex1.3 で指定のものについては…といった書き方にする。(This comment is recorded below.)

MM: JC: As for measurement using instruments, the Employer should be involved. Thus, change the description to "What is specified in Annex 1.3 ...".
NK: NK stated the Employer will be, this will be specified.
Result: See above

(a) Management by Visual Inspection

If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement (JC10&11)

JC10: やはり、計器によって計測をする仮設構造物は少なく、重要仮設であることが殆どなので、エンジニアの役割を記載したい。コントラクターが計測計画を作成しエンジニアに提出し、計測ウォーニングレベルを協議の上で設定するのがいいのでは。
There are few temporary structures which monitoring shall be made with instruments, and most of them are important temporary structures, so I want to

(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;

(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of ~~earth retaining~~ works are provided; (NK: modified.)

(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;

(d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of all Temporary Works; and

(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [*Engineer's Safety Representative*], JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.16 [*Joint Site Safety Inspections*].

(10) Management based on Monitoring and Inspection

(a) Management by Visual Inspection:

If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement:

The wording of the following clause is correct there is no need to add the wording "regarding the allowable measurement, control values and control limit values,".

This will (if necessary) be described in the Particular Safety Specification but I recommend that this will be the exception rather than the norm.

(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;

(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of works are provided;

(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;

(d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of all Temporary Works; and

(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [*Engineer's Safety Representative*], JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.16 [*Joint Site Safety Inspections*].

(8) Management based on Monitoring and Inspection

(a) Management by Visual Inspection:

If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement:

stipulate the role of the Engineer in JSSS. My suggestion is as follows;
The Contractor shall prepare the monitoring plan, submit it to the Engineer, and set the warning monitoring level by consulting with the Engineer.

JC11: 契約図書に、計測すべき対象構造物・計測方法と許容計測値が規定されるべき。
The contract documents shall stipulate the structures to be monitored, the measurement method, and the allowable measurement values.

MM: Sub-Clause 7.1.3 (5) (b) Management by Instrument Measurement
JICA:1) Involvement of Engineer and
2) The contract documents should stipulate the target structure to be measured, the measurement method, and the allowable measurement values.
NK: Documents will be studied and if necessary changes made to include appropriate reference. Changes must be carefully worded to avoid any effect to the Contractor's basic responsibility under the Contract otherwise JICA may have a liability

JICA: The Engineer should be involved in the review process.
NK: Yes, see above but it needs careful wording to avoid any effect on the contractor's liability otherwise JICA may have a liability
(Same answer applies to the many references to this subject)
Result: See above

JICA: If the affected third-party structures and affected areas are included, shouldn't the Engineer (or the Employer in some cases) be strongly involved?
NK: Yes, see above, will be added to documents (in user guide).
Result: See above

Unless otherwise stated in the ~~Contract~~ Particular Safety Specification, regarding the allowable measurement, control values and control limit values, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established as necessary.

(i) Primary control value:

Increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value.

(ii) Secondary control value:

Suspend work and implement the countermeasures.

(iii) Control limit value

Stop work immediately, prohibit entry of any unauthorised persons to the affected area(s), (JC12) take radical measures to prevent failure and review construction method. (JC13)

JC12: 影響を与えた第三者の構造物・affected area も含むとすると、エンジニア(場合によっては発注者)が強く関与すべきではないか。
If the affected third-parties' structures and affected areas are included, shall the Engineer (or the Employer in some cases) be strongly involved?
NK1:計測値の報告を追加で規定します。
Reporting of measured is added as right.

JC13: review においてもエンジニアが関与すべき。

I have edited the clause and added requirements for the Engineer's consent and involvement:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the Contractor and necessary actions taken:

(i) Primary control value:

When this value is reached, the Contractor shall increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.

The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.

(ii) Secondary control value:

When this value is reached and unless otherwise instructed by the Engineer, the Contractor shall stop the relevant part of the Works and implement the countermeasures.

(iii) Control limit value:

When this value is reached, the Contractor shall immediately stop the relevant part of the Works, advise all affected persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.

The following has been edited and included above:

~~When the measured value reaches each of the above control values, the Contractor shall implement the measures stated.~~

Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the Contractor and necessary actions taken:

(i) Primary control value:

When this value is reached, the Contractor shall increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.

The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.

(ii) Secondary control value:

When this value is reached and unless otherwise instructed by the Engineer, the Contractor shall stop the relevant part of the Works and implement the countermeasures.

(iii) Control limit value:

When this value is reached, the Contractor shall immediately stop the relevant part of the Works, advise all affected persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.

Engineers should be involved in the review.
NK1: added.

The Contractor shall submit the measured values of (i) weekly or as agreed by the Engineer and those of (ii) and (iii) immediately after measured to the Engineer.

When the measured value reaches each of the above control values, the Contractor shall implement the measures stated and report to the Engineer.

The Contractor shall submit the revised Method Statement including the reviewed construction method to the Engineer.

6.1.4 Compliance Standards (JC14)

(1) By reference to JSSS 1.35 [*Design and Management of Temporary Works*] the Contractor shall comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

(2) In relation to TW, the Contractor shall also comply with: (JC15)

(a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design;

(b) BS EN 12812 Falsework. Performance requirements and general design; and

(c) Such other standards that are referred to in particular parts of JSSS.

(3) ~~Where strength and durability are essential for the performance of TW and where no other suitable standards exist in respect of TW, the Contractor shall comply with the relevant parts of the following standards~~: (JC15)When the Contractor design TW with design standards other than specified in the JSSS and the Particular Safety Specification, the Contractor shall propose internationally acceptable design standards to be applied for TW design to the Engineer for his consent.

JC14, MM: Sub-Clause 7.1.4 Compliance standards
MD note: Please refer to the earlier full draft and kindly advise of which standards are NOT to apply.
Result: JICA and NK will discuss and advise MD accordingly

JC15: ここをどうする？
How does this part these (2) and (3) be dealt with?

~~The Contractor shall submit the measured values of (i) weekly or as agreed by the Engineer and those of (ii) and (iii) immediately after measured to the Engineer.~~

~~When the measured value reaches each of the above control values, the Contractor shall implement the measures stated and report to the Engineer.~~

~~The Contractor shall submit the revised Method Statement including the reviewed construction method to the Engineer.~~

I suggest that the following clause be added to ensure that the contract requirements are clear and that no ambiguity exists. Please note also that this is based upon the sample (Hong Kong MTR) provided by JICA.

(11) Contract Compliance

Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.

The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.

6.1.4 Compliance Standards

(1) By reference to JSSS 1.37 [*Design and Management of Temporary Works*] and unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

(2) In relation to Temporary Works, the Contractor shall also comply with:

(a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design;

(b) BS EN 12812 Falsework. Performance requirements and general design; and

(c) Such other standards that are referred to in particular parts of JSSS.

~~(3) Where strength and durability are essential for the performance of TW and where no other suitable standards exist in respect of TW, the Contractor shall comply with the relevant parts of the following standards: When the Contractor design TW with design standards other than specified in the JSSS and the Particular Safety Specification, the Contractor shall propose internationally acceptable design standards to be applied for TW design to the Engineer for his consent~~

There is no need for the above original clause because of the comment received and also no need for the additional wording as this is covered by JSSS 1.4.5, 1.4.6 and 1.4.7

~~6.1.1 Specialist Temporary Works~~

~~(4) All Temporary Works (including systems or components thereof)~~

(9) Contract Compliance

Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.

The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.

6.1.4 Compliance Standards

(1) By reference to JSSS 1.37 [*Design and Management of Temporary Works*] and unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with BS5975~~: 2019~~ Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

(2) In relation to Temporary Works, the Contractor shall also comply with:

(a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design;

(b) BS EN 12812 Falsework. Performance requirements and general design; and

(c) Such other standards that are referred to in particular parts of JSSS.

JC15: BS 8002 において temporary retaining wall (TRW)設計を除外するとは規定されていないように読めます。
さらに、TRW は市街地の土木作業においては、隣接した第三者の構造物（建築、土木構造物）を含む土質基礎部分をサポートすることも容易に想定され、この時 BS 5975 でカバーしきれるものでしょうか？
BS 8002 が参照する BS EN 1990-2002 の Geotechnical Category の概念も重要になるのではないでしょうか。
また、場内電気配線／機器も仮設設計に属するものとすると、BS 5975 では対応していません。ご検討ください。
以上のような視点で記載された standards の必要性においても検討されたい。
BS 8002 seems that it does not stipulate that the design of Temporary Retaining Wall (TRW) is excluded.
In addition, it may be necessary to support the soil including adjacent third-parties' structure foundations (buildings, civil structures) in urban areas. In this case, is it sufficient to refer only to BS 5975? As an example, the concept of the Geotechnical Category of BS EN 1997 referred to by BS 8002 may also be important.
In addition, BS 5975 does not specify electrical wiring / equipment in the Site which are a part of TW design. Please study these. From the view points above, please reconsider the appropriateness of the standards listed.

NK: Main purpose of JSSS is to specify measures for safety. There are so many standards for the design of various kinds of TW. The Contractor shall propose internationally acceptable design standards to be applied for TW design to the Engineer for his consent. (Reference clause is JSSS 1.4.1 copied below.)

1.4.1 Specified Standards and Regulations:

(1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

(2) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

Refer to above notes particularly the following repeated here:

Unless the stated design standards show standards of related TW they should not be included here otherwise this will be "over-specified" and the specification will perhaps be abused for example by engineers demanding new materials when they are not necessary.

Are these following standards necessary? I have included the above new preamble but feel that the following should be deleted, they are not TW or applicable to TW:

(a) ~~BS 6031 Code of practice for earthworks;~~
(b) ~~BS 8002 Code of practice for earth retaining structures;~~
(c) ~~BS 8002 Code of practice for earth retaining structures;~~
(d) ~~BS 8004 Code of practice for foundations;~~
(e) ~~BS 8081 Code of Practice for grouted anchors;~~
(f) ~~BS EN 1993 (all parts) Eurocode 1. Basis of structural design;~~
(g) ~~BS EN 1992 (all parts) Eurocode 2. Design of concrete structures;~~
(h) ~~BS EN 1993 (all parts) Eurocode 3. Design of steel structures; and~~
(i) ~~BS EN 1997-1 Eurocode 7. Geotechnical design. General rules.~~ (JC16)

~~such as selected types of Earthwork Support, Cofferdams, Scaffolding and the like shall be executed by qualified specialist Contractors or Subcontractors that are appropriately and especially skilled and experienced with the particular type of Temporary Works, using qualified, skilled and experienced personnel with appropriate types and quantities of specialist equipment.~~

~~(5) If the Contractor for the Works is not required to be such a qualified specialist then at Design or Bidding Stage, the Implementing Agency should take measures to procure qualified specialist Subcontractors and then specify or instruct that the work be carried out by nominating such Subcontractors in accordance with GC 5. [*Nominated Subcontractors*] against a Provisional Sum to be included in the Bidding Documents for that purpose.~~

~~(6) If not and unless otherwise stated or named in the Contract, the Contractor should be required to appoint a qualified and specialist Subcontractor, qualification criteria shall be given in the Bidding Document and prior Engineer's consent shall be obtained in accordance with GC 4.4 [*Subcontractors*] for any Subcontractor that meets such criteria.~~

The above was to apply to specialist contractors which may be required for particular proprietary types of TW.

It is deleted based upon JICA/NK instruction

JC16: 殆どの Standard は本設構造の設計に関連する内容なので削除してもいい。
Most Standards above are related to the design of the main structure and may be deleted.
NK: Deleted.

6.1.5 ~~Specialist Temporary Works~~ (JC17&18)

JC17: Is this Clause necessary?
NK1: This clause is deleted because the TW shall be designed and constructed under the responsibility of the Contractor unless otherwise specified to use specialist TW in the Contract, and we don't know the project adopted "specialist contractors" and "nominated contractor" for TW.

MM: Sub-Clause 7.1.5 Specialist Temporary Works
JICA: Necessary or not?
NK: It is intended to cover specialist ground and temporary works.
Please let me know if required or not
Result: Delete not Required

~~(1) Specialist TW (including systems or components thereof) such as types of Earthwork Support, Cofferdams and the like shall be executed by qualified specialist Contractors or Subcontractors that are appropriately and especially skilled and experienced with the particular type of TW, using qualified, skilled and experienced personnel with appropriate types and quantities of specialist equipment.~~

~~(2) If the Contractor for the Works is not required to be such a qualified specialist then at Design or Bidding Stage, the Implementing Agency should take measures to procure qualified specialist Subcontractors and then specify or instruct that the work be carried out by nominating such Subcontractors in accordance with GC 5. [*Nominated Subcontractors*] against a Provisional Sum to be included in the Bidding Documents for that purpose.~~

~~(3) If not and unless otherwise stated or named in the Contract, the Contractor should be required to appoint a qualified and specialist Subcontractor, qualification criteria shall be given in the Bidding Document and prior Engineer's consent shall be obtained in accordance with GC 4.4 [*Subcontractors*] for any Subcontractor that meets such criteria.~~

JC18: GC 5 [Nominated Subcontractors]を採用することに違和感を覚えます。
Implementing Agency はまず Contract Document 作成のコンサルタントにその設計業務を実施させ（従って必要な地質調査・室内試験等も行わせることになり、これが contract Data として開示されることになります）、その結果を入札図書に開示し、応札者にはそれらの情報に基づいて、自らの解釈で設計を行い、実施に当たってはエンジニアの介在が必要になる、と考えています。GC 5 の採用提案は、その設計下請けの設計に対する品質に問題があるとしたとき、発注者に責任が及ぶことも考えられます。
For GC 5. [Nominated Subcontractors] on (2). For using GC 5 [Nominated Subcontractors], something feels wrong with my idea. Because, the Implementing Agency firstly have the consultant who prepares the Contract Document perform the design work and disclose the results in the tender documents. The bidder designs based on this information. The proposal to adopt GC 5 may also be liable to the Employer if there is a problem with the quality of the design subcontracting
NK: Deleted.

6.2 EARTHWORK SUPPORT (JC19)	**6.2 EARTHWORK SUPPORT**	**6.2 EARTHWORK SUPPORT**

JC19: BS8002: Code of practice for earth retaining structures では、”Earth Retaining Structure”と記載している。[Temporary Earth Retaining Structure]とすればどうか。
BS 8002 stated "Earth Retaining Structure". How about calling it as [Temporary Earth Retaining Structure]?

MM: 7.2 EARTHWORK SUPPORT
JICA: How about calling it “Temporary” Earth Retaining Structure? (Same for Cofferdam),
NK: Change will be made.
Result: No need to change (see also the definition below)
Definition:
A1.1.2
(7) “Earthwork Support” means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.

6.2.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation and the avoidance of any damage to property.

(3) Earthwork Support (JC20) can include for example the provision of:

JC20: Capital Letter ではない。
It should not be capitalized term.
NK: Defined in A1.1.2, so capitalized.

(a) Timberwork including sheeting, planking, strutting and support systems;

(b) Steel sheet piling including shoring, strutting and support systems;

(c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;

(d) Sloping or battering sides of excavations; and

(e) Ground improvement, slope stabilisation, injection, ground freezing and the like.

(f) Ground Anchor (JC21)

JC21: (f)Ground Anchor が必要かと考えます。I think (f) is necessary.
NK: Add as commented.

MM(20200220) : 2. 英文第 8 章土工工事
(2) 深さ 1.5m 以上の掘削では、原則土留め工を設置することを規定する。
2. Chapter 8 Excavation Works
(2) In principle, excavation more than 1.5m high shall be specified to provide earth retaining.
NK: Added as (4)

(4) The Contractor shall provide earth retaining for the excavation equal to or deeper than 1.5 m in principle other than the case that excavation can be made with safe slopes depending on the soil conditions.

JICA/NK: Please note that there are no specified compliance standards (OSHA or HSE) for either this Section 6.2 or Excavation in Chapter 7, therefore either this needs to be added or you need to assure yourselves that these requirements are complete and comprehensive. From my own review this does appear to be comprehensive.

6.2.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor shall maintain the structural integrity of ground, buildings, structures, roads, railways, waterways, services and surface paving and the like that can be affected by Excavation Works and shall provide and maintain whatever Earthwork Support is necessary to comply with this requirement and ensure the safety of all persons that are in, under or adjacent to any excavation and to avoid any damage to persons and property on or outside the Site.

(3) Earthwork Support shall include for example the provision of:

(a) Timberwork including sheeting, planking, strutting and support systems;

(b) Steel sheet piling including shoring, strutting and support systems;

(c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;

(d) Ground improvement, slope stabilisation, injection, ground freezing and the like; and

(e) Ground Anchors

The following has been added by JICA/NK via their comment.

Please refer to my comment against JSSS 7.2.1 (5) and also 7.5.1 and note that for reasons given there, I do not recommend that this OSHA requirement be added here, hence the deletion here and elsewhere in Chapter 7:

MD comment against 7.2.1 (5) ((4)?) : See above, all sides shall be supported, even a 1m excavation can cause 13stabilization and danger.

Comment against 7.5.1: (1)When performing trench excavation with depth of 1.5m or more, adequate and stable Earthwork Support shall be provided.; and

The above is not recommended as it conflicts with other clauses, please refer to earlier notes. It is deleted here and dealt with in Section 6.2 (6.3?).

~~(4) The Contractor shall provide earth retaining for the excavation equal to or deeper than 1.5 m in principle other than the case that excavation can be made with safe slopes depending on the soil conditions.~~

As an exception something like the following might be permissible but I am really not comfortable and do not recommend even this:

6.2.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor shall maintain the structural integrity of ground, buildings, structures, roads, railways, waterways, services and surface paving and the like that can be affected by Excavation Works and shall provide and maintain whatever Earthwork Support is necessary to comply with this requirement and ensure the safety of all persons that are in, under or adjacent to any excavation and to avoid any damage to persons and property on or outside the Site.

(3) Earthwork Support shall include for example the provision of:

(a) Timberwork including sheeting, planking, strutting and support systems;

(b) Steel sheet piling including shoring, strutting and support systems;

(c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;

(d) Ground improvement, slope stabilisation, injection, ground freezing and the like; and

(e) Ground Anchors

(4) Without prejudice to the Contractor’s overriding obligations as specified above, the requirements for providing Earthwork Support

6.2.2 Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

NK: (2)から(4)の規定に対し、JC で“発注者が指定すべき”とコメントあります。(2)から(4)は設計上考慮すべき項目を列挙しています。これらは、GC4.18 の具体的項目です。

JICA commented to specify places, values, etc. in (2) to (4) by the Employer. The (2) to (4) below specify items to be taken into consideration in the design. These are concrete items for GC 4.18 below.

GC4.18 Protection of the Environment

The Contractor shall take all reasonable steps to protect the environment (both on and off the Site) and to limit damage and nuisance to people and property resulting from pollution, noise and other results of his operations.

コメントに対応するために、(6)に Particular Safety Specification の規定を設計に考慮することを追記します。

Added (6) to include the above comments.

(1) All relevant site data (JC22) which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].(JC22)

JC22: 入札時点の Site Information だけしか記載されていない。”Any relevant site information that the Contractor has encountered or obtained during the execution of the Works”を追記しては。(Comment in English is in MM below.)

MM: Sub-Clause 7.2.2. Planning and Design

JICA: Only site information at the time of bidding is described. How about adding “Any relevant site information that the contractor has encountered or obtained during the execution of the Works”.

NK: Other investigation is necessary after commencement and this will be added

Result: NK to add further requirements deriving from Contractor’s further studies since commencement.

(2) Ground water level (JC23)and potential of liquefaction, boiling or piping, heave and the like and the prevention of any damaging effect upon excavations and Earthwork Support.(JC24)

JC23: 地下水位の低下が可能か否か、これは発注者が指定すべき。

Whether or not the groundwater level can be lowered shall be specified by the Employer.

NK: 本款の序文で請負者が設計で考慮すべき事項は次であるとして(1)以下を規定している。ここで地下水位を下げて良いとは規定していない。考慮すべ

(4) Without prejudice to the Contractor’s overriding obligations as specified above, the requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by the HSO and judged by him to be safe, stable and free from any risk of movement or collapse:

To MD, the above (4) seems too contractual stipulation. Is it possible to specify it more understandable for people at the Site?

(a) Excavation in rock; and

(b) Excavation less than 1.5 m deep.

(5) For sloping or benched sides to excavations (in lieu of Earthwork Support), refer to JSSS 7.2.1 (3) [*Excavation Work - Particular Safety Measures*]

6.2.2 Planning and Design

The Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

Although it is not necessary (as it follows anyway), the above wording has been added as per comment given

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like and the prevention of any damaging effect upon excavations and Earthwork Support.

It is not correct to add “level” above as the Contractor must take account of the existence and all effects of any ground water, e.g. its nature, pressure, flow etc

may be waived by the HSO for the following excavations which have been inspected at the Site by the HSO and judged by him to be safe, stable and free from any risk of movement or collapse:

(a) Excavation in rock; and

(b) Excavation less than 1.5 m deep.

(5) For sloping or benched sides to excavations (in lieu of Earthwork Support), refer to JSSS 7.2.1 (3) [*Excavation Work - Particular Safety Measures*].

6.2.2 Planning and Design

The Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like ~~and~~ for the design of and the prevention of any damaging effect upon excavations and Earthwork Support. (NK: Added.)

き事項の一つが地下水である。記述は変更しない。ただし、地下水位とするために Ground water level へ変更します。
The first sentence mentioned to take account of all factors including (1) and others. There is not mentioned whether ground water level can be lowered. One of factors to be considered is ground water level. The term of ground water is replaced with ground water level.

JC24: これも発注者が規定すべき。
These shall also be stipulated by the Employer.
NK: これらの項目は、設計上考慮すべき事項であることから、(6)を追記します。
This is items to be considered, so added (6).

(3) Affect by the Earthwork Support (JC25) on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

JC25: 発注者が許容値を規定すべき。
The Employer shall specify the allowable value.
NK: Ditto as (2).

(4) Vibration from site operations (e.g. piling) or adjacent traffic or railways and the like. (JC26)

JC26: 発注者が許容値を規定すべき。
The Employer shall specify the allowable value.
NK: Ditto as (2).

(5) Access and working space (JC27) necessary to execute the Permanent Works.

JC27: GC 4.13 Rights of Way and Facilities の初めの文節において、発注者が準備するべき。また、"Site"は working areas も含めて、発注者が準備するべき。
In the first clause of GC 4.13 Rights of Way and Facilities, it shall be prepared by the Employer. Also, "Site" shall be prepared by the Employer, including working areas.
NK1: (5)は設計で考慮すべき項目である。契約で提供された現場内でどのように土留めを行うかのために、アクセスと作業スペースを考慮することと規定しており、変更する必要は無いと考えます。
(5) specifies two factors to be taken account in the design. Those shall be designed in the Site provided by the Employer. We consider not necessary to modify (5).

(6) Values of ground water level fluctuation , vibration, displacement and other damage and nuisance to people, property and existing structures, etc. not to exceed specified in the Particular Safety Specification.

(3) The effect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) Vibration from site operations (e.g. piling) or adjacent traffic or railways and the like.

(5) Access and working space necessary to execute the Permanent Works.

~~(6) Values of ground water level fluctuation , vibration, displacement and other damage and nuisance to people, property and existing structures, etc. not to exceed specified in the Particular Safety Specification.~~

NK2: JICA コメントにもとづき上記(6)の追記を提案し、MD 氏と交信しました。MD 氏から、FIDIC GC4.10 及び 17.1、Hong Kong MTR の CC2.1.9 を参照し、GC の原則である請負者はどの建物へも被害を起こさない責務を厳守すべきであり、発注者に責任が生じる許容値を規定する(6)追記はすべきでないと、下記のように助言しています。
NK は MD 氏の下記の助言に同意し、(6)の追記は提案しないことに致しました。

MD's Comments is as follows on allowable values proposed in (6):

I disagree with the addition of the above subclause. Please refer to GC 4.10 under which the Employer shall make available "all relevant data in the Employer's possession on sub-surface and hydrological conditions at the Site" (underline added).

(3) The effect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) The effect by vibration from site operations (e.g. piling) on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like. ~~or adjacent traffic or railways and the like.~~ (NK: modified.)

(5) Access and working space necessary to execute the Permanent Works.

	It remains however entirely the risk and responsibility of the contractor to interpret such data (if any is made available) and to then determine what effect this will have upon the manner in which he performs the Works. *GC 4.10 also states:* *"To the extent which was practicable (taking account of cost and time), the Contractor shall be deemed to have obtained all necessary information as to risks, contingencies and other circumstances which may influence or affect the Tender or Works. To the same extent, the Contractor shall be deemed to have inspected and examined the Site, its surroundings, the above data and other available information, and to have been satisfied before submitting the Tender as to all relevant matters, including (without limitation):* *(a) the form and nature of the Site, including sub-surface conditions,* *(b) the hydrological and climatic conditions,* *etc.* *It is incorrect and even dangerous contractually to state that Earthwork Support (which is the subject of this section and completely the responsibility of the Contractor) should have any allowable tolerances or that any allowable margins of "damage and nuisance to people, property and existing structures, etc. (whatever that may actually mean), is acceptable or is contractually or legally supportable.* *This has little if anything to do with safety and I am sure unintentionally, appears aimed only for the benefit of the contractor.* *I do not recommend the inclusion and have therefore deleted this addition.* *Please also refer to my notes on potential damage to other properties caused by excavation, blasting and piling.* MD's comment in Chapter 7 Excavation Works, 7.2 PARTICULAR SAFETY MEASURES 7.2.1 General (6) *The original text of the above clause has been suggested to be revised by JICA/NK as follows:* The Contractor shall execute all Excavation Works and associated filling, backfilling and support work so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such adverse effects by designing and providing permanent or temporary supports and reinforcement before commencing Excavation Works. *I do not recommend that the above change be made for the following reasons:* *The essential basis of the Contract (and the rule of Law in most countries) is that the Works shall be executed by the Contractor without causing any damage at all to neighbouring properties.* *If any damage is caused then the Employer is open to claim for repairing such damage from adjacent owners and for which the Contractor should be liable subject to the requirements of the Contract.* *FIDIC GC 17.1 (b) applies.* *Insurance may also be compromised if not handled properly under GC 18.3.(d)*	

	(ii). *The added text to this clause is not necessary, it confuses any meaning and implies that there is some flexibility i.e. that some damage or "adverse effect" is acceptable if it falls within "allowable values" when as a common basis this is not correct.* *If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,* *I recommend that the default situation should be that the Contractor is instructed as a general rule via JSSS to set up and manage monitoring to ensure his compliance (i.e. that damage does not occur), This is in principle as the earlier draft of JSSS.* *This will require further development of the contractor's monitoring requirements and I have drafted a new clause 7.5.3 to deal with this.* *In any exceptional rare case for example on large projects in congested areas and where damage is likely and unavoidable then the Employer should already have consulted and agreed with the owners and residents that the Works can be executed in a manner that may cause some damage and has agreed that compensation will be paid for such damage in accordance with a scale of damage. However, I suggest that this should not be a norm or a usual situation and that JSSS or the User Guide should not imply that this is a common option and I suggest that it should be the exception rather than the norm. Otherwise it will be misunderstood by some Executing Agencies that such damage may be allowable when actually it is isn't.* *During our January 2020 discussion, I said I would research this further and requested JICA to provide examples of the reference documentation for the Hong Kong MTR.* *I have briefly studied the information provided by JICA and consequently believe that this may have been wrongly interpreted. In reviewing I feel it is important to note that:* *1) Damage is the responsibility of the Contractor and the Engineer has no authority to determine what damage is acceptable or not.* *2) The Engineer is not part of the relationship between Site owner and adjacent owners and if any damage is caused to neighbouring property, the Engineer's opinion is not relevant, adjacent owners usually have a basic right of claim against the Employer.* *JICA appear to consider that some damage to adjacent buildings, structures, railway, roads, footpaths slopes and utilities etc., is "allowable" within certain specified limits but I feel that this is not correct and not supportable under the HK MTR information provided.* *It is apparent that:* *1) No damage or deformation to buildings, paving and services, etc. is allowable* *2) If any damage is caused, the Contractor shall stop the Works and shall then be responsible for proposing and implementing remedial measures.* *I consider that monitoring of any movement is not for the purpose of judging whether damage is reasonable or not but is to predict whether any damage is likely to occur, in which case, it then in total becomes the contractor's responsibility to remedy.*	

6.2.3 Inspection and Monitoring

Refer to JSSS 6.1.3 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

NK: JSSS 1.3.11 [Inspection and Monitoring of TW] stipulate as follows:
1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

NK: Referring to the JC comment to (2) below, the preparation of Inspection and Monitoring Plan and include in Safety Plan are added to the above sentence.

The Contractor shall prepare Inspection and Monitoring Plan of visual inspection and instrument monitoring in accordance with this 6.2.3 and include the Inspection and Monitoring Plan in the Safety Plan for the Earth Support.
In addition to the above, the Inspection and Monitoring Plan shall be prepared for the Earth Support, other structures and locations are specified to be specially monitored in the Particular Safety Plan,

(1) Visual Inspection ~~and Monitoring~~ (JC27)

JC27: visual monitoring でよいのでは。
The title of "Visual Monitoring" seems better.

MM: Sub-Clause 7.2.3 Inspection and Monitoring

Please note also that in the sample provided for the Hong Kong MTR, whilst sample monitoring ranges are provided, Specifications Clause 2.19 (3) on page 2/10, makes clear that this is for information only and that in any event, the Contractor must meet his obligations under the Contract:

> ***"the Contractor shall satisfy himself that the specified criteria is adequate to fulfil his contractual obligations and shall take any additional measures necessary to avoid damage to property."***

Pages 40 and 42 are missing from the provided copy of the HK MTR Conditions of Contract, therefore I cannot complete my review of the Contractor's obligations for care of the Works under Clause 22 of the Contract.

I do not in any event recommend the concept of the Employer or Engineer establishing measurement criteria as a general rule for predicting damage, as it is difficult to do and if wrong it could affect liability of the Employer and Engineer and even JICA if they are called upon to fund it.

This can be complex legal and contractual territory that I recommend should not be dealt with by JSSS as if it were a simple and common issue.

FIDIC GC 17.1 (b) below applies and I suggest that it should not be compromised by the suggested addition to this clause.

> *GC 17 Risk and Responsibility*
>
> *17.1 Indemnities The Contractor shall indemnify and hold harmless the Employer, … against and from all claims, damages, losses and expenses (including legal fees and expenses) in respect of:*
>
> *(b) damage to or loss of any property, real or personal (other than the Works), to the extent that such damage or loss arises out of or in the course of or by reason of the Contractor's design (if any), the execution and completion of the Works and the remedying of any defects, unless and to the extent that any such damage or loss is attributable to any negligence, willful act or breach of the Contract by the Employer, the Employer's Personnel, their respective agents, or anyone directly or indirectly employed by any of them.*

6.2.3 Inspection and Monitoring

I think that "Inspection" and "monitoring" are both correct in this heading here as they are different and this is therefore clear.

Please note though that I have greatly expanded JSSS 6.1.3 for reasons given there so this clause 6.2.3 can be much reduced to omit any duplication.

Refer to JSSS 6.1.3 [***Monitoring Impact of Works on Other Properties***].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

6.2.3 Inspection and Monitoring

Refer to JSSS 6.1.3 [***Monitoring Impact of Works on Other Properties***].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

JICA: I hope “Visual Monitoring” is fine.
NK (MD): Please let me know if it is not, I am editing the specification only and I assume that it represented your agreed requirements. Please check as necessary.
Result: Leave as it is.

NK1: The following is comparison of terms “inspection” and “monitoring”
1) GC 4.20 Employer’s Equipment and Free-Issue Materials
The Contractor shall then visually inspect them, and shall promptly give notice to the Engineer
GC 20.1 Contractor’s Claims
the Engineer may, after receiving any notice under this Sub-Clause, monitor the record-keeping and/or instruct the Contractor to
from internet, their difference is as follows:
2) https://wikidiff.com/monitoring/inspection
inspection is act of examining something, often closely while
monitoring is the act of listening, carrying out surveillance on, and/or recording the emissions of one's own or allied forces for the purpose of maintaining and improving procedural standards and security, or for reference, as applicable.
3) https://dictionary.cambridge.org/dictionary/english/inspection
Inspection: the act of looking at something carefully, or an official visit to a building or organization to check that everything is correct and legal:
Monitoring: to watch and check a situation carefully for a period of time in order to discover something about it:
Visual Inspection は目視、Monitoring は監視と考え、(1)は Visual Inspection に変更します。

(a) The Contractor shall prepare a Visual Inspection (JC28) ~~checklist~~ Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the ~~checklist~~ Plan; and

JC28: Visual monitoring では？ Is it Visual monitoring?
NK: Same as（1）above.

(b) Examples of Inspection Objects and Inspection ~~Types~~ Items (JC29) are given in the following Table.

JC29: (b) is modified to “Sample Items of visual monitoring are given in the following table.”
NK: The difference between terms of examples and sample is as follows:
http://www.differencebetween.net/language/words-language/difference-between-example-and-sample/
Both “example” and “sample” imply a part and also act like representatives of a whole. An example, by definition, is a noun that shows and mirrors other things. ... On the other hand, a sample is a small part of something much bigger. Unlike an example, a sample is random and not specific.
The term of “Examples” is left and the “Type” is replaced with “Items”.

Table 6(7).2.1: Visual Inspection ~~Checklist~~ Items

	Inspection Object	Inspection ~~Type~~ Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members,

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the Plan; and

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.1: Visual Inspection Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members,

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the Plan; and

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.1: Visual Inspection Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
	Base of excavation	Water spring and ground water flow.

		or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent Buildings or Structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement or leakage of or damage to underground utilities

(2) Instrument Monitoring

(a) ~~Unless otherwise stated in the Contract,~~ the Contractor shall prepare an Instrument Monitoring ~~checklist~~ Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ~~ongoing~~ monitoring based upon the content of the ~~checklist~~ Plan . (JC30)

To MD: May we know what the “ongoing” means.

JC30: 契約の記載がなければ、コントラクターは計器計測の準備をすることから記載が始まっている。その前に、重要な仮設に関しては、契約に記載がなくても、Visual and Instrument Monitoring の計画を作成し、エンジニアに提出しなければならない。次のように
(a) the Contractor shall prepare an Instrument Monitoring checklist .....”
It is stipulated “Unless otherwise stated in the Contract, the Contractor are to prepare for instrument measurement.”
Prior to this sentence, it is necessary to stipulate that for important temporary constructions, a plan for Visual and Instrument Monitoring shall be prepared and submitted to the Engineer, even if not stated in the contract as (a) the Contractor shall prepare an Instrument Monitoring checklist .....”.

JC30: 英語の表現がおかしい。
English expression seems inappropriate.

NK: Unless otherwise stated in the Contract…の規定を、次のように解釈します。
契約に規定が無い限り、請負者は、現場の特定、地盤条件、必要な土留めの樹生興に応じた計測によるモニタリングの計画を作成し、モニタリングを実施しなくてはならない。（ongoing の意味は不明のため MD 氏へ問いあわせます。）
提案の“even if not stated in the contract”と同じ意味と考えます。
JC で提案の特別に重要な仮設構造物の選定は、現規定では請負者の判断次第となりますので、Particular Safety Plan で規定することが必要と考えます。
We consider that the sentence of “Unless otherwise stated in the Contract” and JC’s proposed sentence “even if not stated in the contract…” are almost same meaning.
The proposed “important temporary constructions” need to be specified in the Particular Safety Plan.

NK: JC のコメントを考慮し、本款の出だしに Inspection and Monitoring Plan の作成と、エンジニアに提出される Safety Plan に含めることを追加して規定します。及び特別にモニタリングすべき構造物は、PSS に規定することを規定します。→6.1.3(3)に追記済み。
Considering the JC comment, at the beginning of this Clause, it is added that Inspection and Monitoring Plan shall be prepared and included in the Safety Plan. The important TW to be monitored is specified in the PSS.→Added in 6.1.3(3)

(b) Examples of ~~I~~ inspection ~~O~~ objects and ~~I~~ inspection ~~Types~~ ~~I~~ items

		Opening of joints or breakage of cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent buildings or structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of or damage to underground utilities

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out monitoring based upon the content of the Plan; and

		Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent buildings or structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of or damage to underground utilities

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out monitoring based upon the content of the Plan; and

(b) Examples of inspection objects and inspection items are given in the following Table.

are given in the following Table.(JC31)

JC31: (b) may be modified to "Sample Items of Instrument monitoring are given in the following table."
NK: As explained in 7.2.3 (b), NK suggest example is used.

Table 6(7).2.2: Instrument Monitoring ~~Checklist~~ Items

	Object	Inspection ~~Type~~ Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of walings, struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of spring of water, water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; ~~cracks, weakening,~~ subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement of~~, damage or leakage to~~ underground utilities

6.2.4 General ~~Safety and Construction~~ requirements (JC32)

JC32: 削除. To be deleted.
NK: deleted.→Chapter 7 Excavation is included, so title is left as it is.

(1) Excavations shall be protected from and kept free of ground water and surface water at all times.

(2) Earthwork Support works shall proceed progressively so that no excavated faces (JC33) are left without support or at risk of weakening or collapse at any time.

JC33: excavated wall??
NK: the term of face is left as it is as it is used in HSE as follows:
https://www.hse.gov.uk/quarries/hardtarget/tips.htm
Tips and excavation, The faces of excavations have to be kept stable
Not modified.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.2: Instrument Monitoring Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of walings, struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of ground water, rate of water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; cracks, ~~weakening,~~ subsidence, deformation and tilting of structures I suggest that this should remain. NK: Instrument for measuring weakening may not be available, so weakening is deleted.
6	Underground utilities	Displacement or leakage of or damage to underground utilities I suggest that this should be consistent with the visual inspection Plan. . NK: Instrument for measuring damage may not be available, so damage is deleted.

6.2.4 General Safety and Construction Requirements

~~1) Excavations shall be protected from and kept free of ground water and surface water at all times.~~

Above is already included already in Chapter 7 Excavation

The following items are transferred here from Chapter 7 as they are of general application:

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

No need following as already covered by JSSS 1.35

~~(2) Manufactured (prefabricated) materials for Earthwork Support shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer.~~

There are no such drawings in JSSS and no meaning to this requirement. This is also all Contractor design.

~~(3) Earthwork Support designed by the Contractor shall be installed in accordance with the design and construction procedure~~

Table 6.2.2: Instrument Monitoring Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of walings, struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of ground water, rate of water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; cracks, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of underground utilities

6.2.4 General Safety and Construction Requirements

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

6.2.5 Safety Measures for Shoring (JC34)

JC34: ここで言っているのは腹起しとストラットなので、Walings and Struts という表現でいい。
MM: Sub-Clause 7.2.5.Safety Measures for Shoring
JICA: (1) Change shoring to include “Walings and Struts” throughout.
NK: Will be changed; suggest this clause already covers it, (should be “waling and strutting”).
Result: Leave as it is.
NK: (1) defines shoring include walings, strutting and others, so the title is left as it is.

Unless otherwise stated in the Contract:

(1) “Shoring” shall include waling, shoring, strutting and like support.(JC35)

JC35: 表題を変更すれば削除 If the title is changed, delete it.
NK: Title is not changed, so (1) is left.

(2) Shoring (JC36) shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

JC36: Walings and Struts ?
NK: Title is not changed, so (2) is left.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring (JC37) shall be jointed with two or more doubling plates.

JC37: 木製は日本では使用せず。削除しても
MM: Sub-Clause 7.2.5 (4)
JICA: Since wooden is not used in Japan, can it be deleted?
NK: This is not for use in Japan and timber is widely used
Result: Leave as it is

(4) Connecting parts of shoring or diagonal shoring or intersections,

~~drawings.~~

The following is not completely clear however it is already covered by 6.2.1 (2) above

~~(4) Earthwork Support with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site.~~

(5) Workers shall not be allowed to enter any excavation until Earthwork Support is installed prior to the work;

(6) Earthwork Support shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.

(7) Excavation to a level greater than 60cm below the bottom of Earthwork Support shall not be allowed;

(8) If temporary removal of individual members of Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing additional temporary struts to support the additional loads imposed on parts of the system;

(9) When removing Earthwork Support, the Contractor shall prohibit anyone other than the workers engaged in the removal work to enter the working area and vicinity; and

(10) Backfilling and compaction of any excavation shall be performed in parallel with the removal of Earthwork Support.

6.2.5 Safety Measures for Shoring

~~Unless otherwise stated in the Contract~~:

(1) “Shoring” shall include waling, shoring, strutting and like support.

(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(2) Workers shall not be allowed to enter any excavation until Earthwork Support is installed prior to the work;

(3) Earthwork Support shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.

(4) Excavation to a level greater than 60cm below the bottom of Earthwork Support shall not be allowed;

(5) If temporary removal of individual members of Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing additional temporary struts to support the additional loads imposed on parts of the system;

(6) When removing Earthwork Support, the Contractor shall prohibit anyone other than the workers engaged in the removal work to enter the working area and vicinity; and

(7) Backfilling and compaction of any excavation shall be performed in parallel with the removal of Earthwork Support.

6.2.5 Safety Measures for Shoring

(1) “Shoring” shall include waling, shoring, strutting and like support.

(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(4) Connecting parts of shoring or diagonal shoring or intersections~~,~~ shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(5) ~~Intermediate piles~~ (JC38) Struts shall be securely and rigidly supported by ~~shoring~~ intermediate piles, when the intermediate piles are provided.

JC38: It is stated that the intermediate piles will be secured, but "Shouldn't it be a statement that Struts should be securely installed?"
NK: Modified.

(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable ~~wedges~~ (JC39) materials.

NK39: Retaining Walls/Piles and Walings shall be contacted with suitable materials としては
I propose to modify as "Retaining Walls/Piles and Walings shall be contacted with suitable materials"?
NK: Modified.

(8) Connections of shoring shall be reinforced with bolted (timber) (JC40) or welded (steel) stiffeners.

JC40: Since wooden material is not used in Japan, can it be deleted?
NK: leaved it as it is.

6.2.6 Safety Measures for Ground Anchor Work

Unless otherwise stated in the Contract:

(1) Prevent anyone other than designated (JC41) personnel from operating the boring machine(JC42).

JC41: replace designated with permitted?
NK: leave as it is as designate means assign a job or role to (someone) and almost same as permit.

JC42: replace machine with equipment?
NK: BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Boring machine is left as it is.

(2) Prevent anyone from accessing the rear of the tension jack to prevent workers from injury through breaking of the anchor tendon during tensioning. (JC43)

JC43: 意味が多分通じない。
I think (2) cannot be understood.
NK: (2) is the stipulation in the Japanese set-version. OSHA stipulation is as follows:
OSHA Subpart Q—Concrete and Masonry Construction
§1926.701 General requirements.
(c) Post-tensioning operations. (1) No employee (except those essential to the post-tensioning operations) shall be permitted to be behind the jack during tensioning operations.
NK: Alternative proposal:
Prevent anyone (except those essential to the post-tensioning operations) from accessing behind the jack during tensioning operations of the anchor tendon.
NK ask MD to review this stipulation.

(3) Check for any damage in the grout ~~pressure~~ (JC43)hoses and joints before commencing any grout injection.

(4) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

The following is taken from the draft

(5) Struts shall be securely and rigidly fixed with intermediate piles, when the intermediate piles are provided.

(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

"Wedges" is correct:

(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges.

(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.

6.2.6 Safety Measures for Ground Anchor Work

~~Unless otherwise stated in the Contract:~~

(1) Prevent anyone other than designated personnel from operating the boring machine.

(2) ~~Prevent anyone from accessing the rear of the tension jack to prevent workers from injury through breaking of the anchor tendon during tensioning.~~

(3) Prevent anyone (except those essential to the post-tensioning operations) from accessing behind the tensioning jack during tensioning to prevent any injury through breaking of the anchor tendon during tensioning.

(5) Struts shall be securely and rigidly fixed with intermediate piles, when the intermediate piles are provided.

(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges.

(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.

6.2.6 Safety Measures for Ground Anchor Work

(1) Prevent anyone other than designated personnel from operating the boring machine.

(2) Prevent anyone (except those essential to the post-tensioning operations) from accessing behind the tensioning jack during tensioning to prevent any injury through breaking of the anchor tendon during tensioning.

(3) Check for any damage in the grout hoses and joints before commencing any grout injection.

JC43: deleted.

6.2.7 Adjacent Goods, Excavated ~~spoil~~ material (JC44)and the like

(1) When placing any Goods, excavated spoil and the like (JC45) on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling. (JC46)

JC44: 捨て土ではないので。
I guess that the term to be used is not "spoil" but "excavated materials".
NK1: BS defines as follows:
BS 6100-3: Building and civil engineering – Vocabulary –
Part 3: Civil engineering – General
03 23023 spoil: excavated material that is unsuitable or surplus to requirements
Modified, however MD commented spoil is correct. NK agree to this because excavated earth/rock shall be immediately removed from the site and excavated spoil materials shall not be placed on the site.

JC45: 全体に and the like を多用しているが、要注意です。and the like は同様の次項を並列した際に使用。この場合は単に etc.では？
Although "and the like" is often used throughout JSSS, but be careful.
"and the like" is used when similar next terms are arranged in parallel. In this case simply in etc.?

MM: Sub-Clause 7.2.7. Adjacent Goods, Excavated Spoil and the like

JICA: Although "and the like" is often used throughout, but be careful. "and the like" is used when similar next terms are arranged in parallel. In this case simply in etc.?
NK: This is a common phrase in contract and specification wording and has common interpretation that there are further similar things that are to be included.
Et cetera (etc.) does not necessarily have the same meaning, it depends what precedes it and should not be generally used is Specifications.
Result: explained and understood by JICA, no change required

JC46: Is English expression of (1) appropriate?
NK: It is considered (1) is understandable and appreciate.

(2) Do not place any Goods, excavated ~~spoil~~(JC47)~~-~~material, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.

JC47: Same comments as (1) above.
NK: Modified, however MD commented spoil is correct. NK agree to this because excavated earth/rock shall be immediately removed from the site and excavated spoil materials shall not be placed on the Earth Support.

6.3 COFFERDAMS (JC48)

JC48: Temporary Cofferdam としては？
I propose to modify to "Temporary Cofferdam".
NK: Referring to the definition of the term of "cofferdam" in BS and US Army Corps of Engineers, the cofferdams are temporary structure:
BS ISO 6707-1 3.1.2.24 cofferdam
structure (3.1.1.4), usually temporary, that is built to support the surrounding ground (3.4.2.1) or to exclude water or soil (3.4.2.2) sufficiently to permit work within it to proceed safely without excessive pumping.
US Army Corps of Engineers EM 385-1-1 Manual
APPENDIX Q Definitions
Cofferdam: a temporary structure used to keep water (and earth) out of an excavation during construction of the permanent structure.
The title is left as it is.

(4) Check for any damage in the grout hoses and joints before commencing any grout injection.

6.2.7 Adjacent Goods, Excavated Spoil and the like

"Spoil" is correct

(1) When placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling.

(2) Do not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.

6.3 COFFERDAMS

6.2.7 Adjacent Goods, Excavated Spoil and the like

(1) When placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling.

(2) Do not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.

6.3 COFFERDAMS

6.3.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam.

(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

6.3.2 Planning and Design

Unless otherwise stated in the Contract/Particular Safety Specification, the Contractor shall design Cofferdams (JC48)so that they are fit for the purpose for which they are intended and take account of all relevant factors (JC49) including: (JC50)

JC48: temporary cofferdam では？Capital letter でしょうか？
Are "Cofferdams" "temporary cofferdam"?
Is "Cofferdams" capitalized term?
NK: "Cofferdams" is defined in Annex A1.1.2 as follows, so capitalized term is used as it is.:
(3)"Cofferdam" means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
Not modified.

JC49: relevant factors として下さい。
Please replace "factors" with "relevant factors"
NK1: Modified.

JC50: 下記事項を including としてすべて名詞止にするのは難しいのでは。内容が複雑すぎます。
It seems difficult to include the following factors which are described in form of noun-type stop (ending a sentence with a noun or noun phrase). This paragraph is too complex to understand.
NK1: We considers they can be understood, but we will ask MD to review this comment.

(1) All relevant site data (JC51) which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

JC51: 入札時点の Site Information だけしか記載されていない。"Any relevant site information that the Contractor has encountered or obtained during the execution of the Works"を追記しては。
Only Site Information at the time of bidding is described. How about adding, "Any relevant site information that the Contractor has encountered or obtained during the execution of the Works"
NK: Added.

(2) The effect of any vibration (JC52) from site operations (e.g. driven piling).

JC52: Allowable value should be specified in the contract documents. For Blasting, there are regulatory values such as Restriction on Peak Particle Velocity and Vibration Amplitude, and for Noise, there are level on "max", "sound pressure level (85 dBA)" and "peak sound level (110 dB)".
NK1: The requirement shall be specified in the Particular Safety Specification (PSS). The User Guide will advise the Employer to specify their requirement in the PSS.
A phrase regarding the PSS is added at the first sentence and a stipulation is added at the end of 6.3.2 regarding the specified values in the PSS.

6.3.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam.

(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

6.3.2 Planning and Design

Unless otherwise specified in the Particular Safety Specification, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including:

Please note the above wording "Unless otherwise specified in the Particular Safety Specification" within the context of the JICA comment on the following:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) The effect of any vibration from site operations (e.g. driven piling).

The JICA comment to add "allowable values" for vibration (e.g. from piling) in the Particular Safety Specification is not agreed with and not recommended. If this is Contractor Design (which is usually the case for Temporary Works), the Contractor is completely responsible for the design and performance. Cofferdams shall be designed to accommodate the Contractor's own construction methods which the Employer may not be aware at the design stage and has limited or no control over during the construction stage. In any case this is adequacy and safety

6.3.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam.

(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

6.3.2 Planning and Design

Unless otherwise specified in the Particular Safety Specification, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) The effect of any vibration from site operations (e.g. driven piling).

(MD commented against it in right.)

(3) Access and working space necessary to execute the ~~Permanent~~ (JC52) Works.(JC53)

JC52: 削除 Permanent だけではないので
Delete it. Because not only permanent.
NK1: deleted.

JC53: This is an issue to be considered by the Employer. Planning access roads to meet the Contractor's own requirements is not just a provision of cofferdam.
NK1: Replied in (2) of 7(6).3.2.

(4) ~~River or tidal flow rates, highest and lowest water levels and tidal levels, wave height, required freeboard and any other relevant river, lake or marine conditions.~~ (JC54 & JC55) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions.

JC54: 要言葉の整理
Terms shall be reviewed and organized.
NK1: modified.

JC55: 発注者が考慮すべき事
This is an issue to be considered by the Employer.
NK1: NK1: Replied in (2) of 7(6).3.2.

(5) Marine traffic. (JC56)

JC56: Working Site establishment on the surface of water to deal with other vessels' traffic, shall be given in the contract documents prepared by the Employer.
NK1: NK1: Replied in (2) of 7(6).3.2.

(6) Avoidance of any damage (JC56) by piling operations and the protection and improvement (JC56) of the structural integrity of existing river or canals, banks, dykes and the like.

JC56: 影響を苦慮する対象物(構造物等)とその許容値は契約図書に明記されるべき
Objects (structures, etc.) to be considered for impact and their allowable values should be clearly specified in contract documents.
NK1: Replied in (2) of 7(6).3.2.

(7) ~~Reduction of river cross sectional area, resultant increased flow rates and suction effects with a consequent requirement for protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.~~ (JC57&58) Reduction of river cross sectional area, increased flow rates and protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

JC57: 種々の事項を一緒に記載しているので分からない。
Since various items are described together, they cannot be understood.
NK: Modified.

JC58:河川工事に伴う有効流量断面積の減少は請負者の責任ではなく、その工事計画段階で対処されなければならない。従って、対処方法を契約図書で明示しなければならない。

of cofferdams must be 100% not 99% and this should not be compromised by given "allowable" margins.

Please refer to further comments on this subject in JSSS 7.2.1 (6) and 7.6.9. (NK: which are copied in in 6.2.2 (6) NK" above.)

(3) Access and working space necessary to execute the Works.

I refer to the JICA comment "This is an issue to be considered by the Employer. Planning access roads to meet the Contractor's own requirements is not just a provision of cofferdam." This is not correct within the purpose of the clause. This clause describes the extent of inclusion within the contractor's own design and with regard to access, the Contractor must provide for whatever access and working space for the Works that is available and within which he must confine his operations. The Employer has no obligation to plan the contractor's access roads or operations for him, he must provide the site area of course but the contractor must design and plan his work to fit within this. What is the connection here with safety?

(4) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions.

I have reworded the above as requested but tidal flow rates are not now covered.

I refer to the JICA comment "This is an issue to be considered by the Employer". Why is this an issue for the Employer? This clause is for the scope of the contractor's design obligations and the contractor must take account of all of these factors within his design. Whether the employer provides information or not does not affect this and is of no relevance to the wording of this clause.

What is the connection here with safety?

(5) Marine traffic.

I refer to the JICA comment "Working Site establishment on the surface of water to deal with other vessels' traffic, shall be given in the contract documents prepared by the Employer."

This is not the always the case and is not an obligation of the Employer. Please refer to further comments on this subject in JSSS 7.2.1 (2) and 6.2.2. (6)

(6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

Ditto.

(7) Reduction of river cross sectional area, increased flow rates and protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

(3) Access and working space necessary to execute the Works.

(4) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions.

(5) Marine traffic.

(6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

(7) Reduction of river cross sectional area, increased flow rates and protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

Reduction of the effective flow area due to river works is not the responsibility of the Contractor, but must be dealt with at the construction planning stage.
Therefore, the countermeasures must be clearly stated in the contract documents.

NK1: NK think all above JC comments have been already defined in (1) underlined. So, NK leave it as it is.

(8) ~~Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.~~ (JC59&60) Rigid structural design of Cofferdams in case of structures consisting of sheet piling, walings, struts by jointing between struts, walings and others not to be loosened by floods, waves, etc.

JC59: 理解不能。cannot understand.

NK: Modified.

JC60: Cofferdam 設計時の与条件であり、前項(4)の条件に伴う動荷重も含めての指摘と考える。freeboard は発生する気象条件から発生する波高を推算し、前項(4)の highest water level にそれを加算し、かつ freeboard を考慮する等の規定がスペックで規定されるべきである。

This is a condition given during the design of the Cofferdam, and is considered to be an indication including the dynamic load associated with the condition in (4) above. Freeboard should estimate the wave height generated from the meteorological conditions, add it to the highest water level in the previous section (4), and incorporate provisions such as consideration of the freeboard into the specifications.

NK1: Replied in (2) of 7(6).3.2.

(9) Provision of at least two ~~safe escape routes~~ (JC61) emergency evacuation routes from the working ~~areas~~ (JC62) place by means of ladders, stairs, etc. to evacuate in the case of danger of collapsing of or inundation in the Cofferdam. ~~water penetration~~(JC63).

JC611: 言葉の整理が必要

Need to organize terms.

NK1: modified.

JC62: Replacement of terms:

For “safe escape routes”. →emergency evacuation routes.

For “working areas”. →working place.

NK1: modified.

JC63: 水がちょろちょろの浸潤で避難する訳がない。danger of collapse of cofferdam では？

For “water penetration”. There is no reason to evacuate because of the penetration of water. ”danger of collapse of cofferdam” is better.

NK1: modified.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for safe dismantling and removal.

(12) Water pollution prevention measure(JC64)

JC64: 契約図書規定されるべき。This shall be specified in the Contract.

NK1: Water pollution shall be stipulated in specification for environment but not in JSSS, so not added. (MD added with modification.)

(13) Values of vibration, displacement and other damage and nuisance to people, property and existing structures, etc. not to exceed specified in the Particular Safety Specification

NK1: as mentioned for (2), addition of (13) is made. (NK1: The requirement shall be specified in the Particular Safety Specification (PSS). The User Guide will advise the Employer to specify their requirement in the PSS.

(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.

I suggest that the above is better than that now given, these are “relevant factors”.

(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam.

Your requirement to change the above to “emergency evacuation routes” is not clear. Are these additional to the normal safe escape routes if so how many are required in total? NK: the above is OK.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for avoiding water pollution from construction and dismantling of cofferdams.

I think that the above is a reasonable suggestion and should be added here.

(12) Measures for safe dismantling and removal.

(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.

(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for avoiding water pollution from construction and dismantling of cofferdams.

(12) Measures for safe dismantling and removal.

A phrase regarding the PSS is added at the first sentence and a stipulation is added at the end of 6.3.2 regarding the specified values in the PSS.)
(NK proposed the above (13) but withdraw after discussion with MD.)

6.3.3 Inspection and Monitoring

Refer to JSSS ~~6.1.3~~ 1.3.11 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

The Contractor shall prepare Inspection and Monitoring Plan of visual inspection and instrument monitoring in accordance with this 6.3.3 and include the Inspection and Monitoring Plan in the Safety Plan for the Cofferdams.

In addition to the above, the Inspection and Monitoring Plan shall be prepared for the Cofferdams, other structures and locations are specified to be specially monitored in the Particular Safety Plan,

(1) Visual Inspection ~~and Monitoring~~ (NK)

(a) The Contractor shall prepare a Visual Inspection ~~checklist~~ Plan (NK) depending on (JC66)the characteristics of the Cofferdam and carry out regular inspections (JC67) based upon the content of the ~~checklist~~ Plan.

JC66: この表現はおかしい。reflected では？
This expression of "depending on" seems to be incorrect, I think. "reflected" is correct?
NK: depending on は、～に応じの意味があります。
It has meaning of "to be decided by or to change according to the stated thing:", so leave it as it is.

JC67: inspections →monitoring?
NK: NK leave it as it is.
NK1: Inspection check list is replaced with Inspection check plan.

(b) Examples of Inspection Objects and Inspection ~~Types~~ Items are given in the following Table.(JC68)

JC68: Propose to replace (b) with Sample Items of Visual monitoring are given in the following table.
NK1: as replied in 7(6).2.3 (1) (b), modified.

Table 6(7).3.1: Visual Inspection ~~Checklist~~ Items

	Inspection Object	Inspection ~~Type~~ Items
1	Cofferdam Generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, twist of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. ~~Liquefaction.~~
5	Neighbouring or adjacent Structures	Cracks, weakening, subsidence, deformation and tilting of structures

6.3.3 Inspection and Monitoring

Refer to JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

The additional two paragraphs requested by the comments are not now necessary, requirements are included in JSSS 6.1.3

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the Plan; and

(b) Examples of Inspection Objects and Inspection items are given in the following Table.

Table 6.3.1: Visual Inspection Plan

	Object	Inspection Items
1	Cofferdam generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, twist of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base.
5	Neighbouring Properties or Structures on or	Cracks, weakening, subsidence, deformation and tilting of structures

6.3.3 Inspection and Monitoring

Refer to JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the Plan; and

(b) Examples of Inspection Objects and Inspection items are given in the following Table.

Table 6.3.1: Visual Inspection Plan

	Object	Inspection Items
1	Cofferdam generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, twist of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base.
5	Neighbouring Properties or Structures on or	Cracks, weakening, subsidence, deformation and tilting of structures

~~6~~	~~Underground Utilities~~	~~Displacement, damage or leakage to underground utilities~~

To MD: Please seen details about the above table in document A1.

(2) Instrument Monitoring

(a) ~~Unless otherwise stated in the Contract,~~ the Contractor shall prepare an Instrument Monitoring ~~checklist~~ Plan depending on (JC69) the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the content of the ~~checklist~~ Plan.

JC69: As commented above.
NK1: as replied to (1) above.

(b) Examples of ~~I~~ inspection ~~O~~ objects and ~~I~~ inspection ~~Types~~ ~~I~~ items are given in the following Table. (JC70)

JC70: 前述の表を参照
As commented in 7.2.2.
NK1: modified.

Table 6(7).3.2: Instrument Monitoring ~~Checklist~~ Items (JC71)

JC71: 前述の表を参照。 As commented in 7.2.2.
NK1: modified.

	Monitoring Object	~~Inspection~~ Monitoring ~~Type~~ Items
1	Cofferdam Generally	Displacement, stress of ~~Earthwork Support~~ Cofferdams Earth pressure and water pressure acting on ~~Earthwork Support~~ Cofferdams
2	Shoring and strutting	Axial force of strut and other supports ~~and ground anchors~~.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring or adjacent structures	Displacement,~~ cracks, weakening,~~ subsidence, deformation and tilting of structures
~~6~~	Underground Utilities	~~Displacement, damage or leakage to underground utilities~~

To MD: Please see details about the above table in document A1 (sent you.).

6.3.4 General ~~Safety and Construction~~ Requirements

Unless otherwise stated in the Contract/Particular Safety Specification, the Contractor shall comply with the following requirements: (JC72 & 73)

~~(1) Shoring shall be securely installed and fixed to Cofferdam to prevent detachment and any movement or failure.~~
~~(2) All members acting in compression (excluding diagonal struts) shall be butt jointed, and timber shoring shall be jointed with two or more doubling plates.~~
~~(3) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).~~
~~(4) Gaps between Cofferdam and shoring shall be securely packed with suitable wedges.~~
~~(5) Connections of shoring shall be reinforced with welded stiffeners.~~

JC72: 土留めの項目で仮締切とは異なる。

	Properties or Structures on or outside the Site	tilting of structures

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required ~~Earthwork Support~~ Cofferdams and carry out ongoing monitoring based upon the content of the Plan; and.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.3.2: Instrument Monitoring Plan

	Object	**Monitoring Items**
1	Cofferdam Generally	Displacement, stress of Cofferdams Earth pressure and water pressure acting on Cofferdams
2	Shoring and strutting	Axial force of strut and other supports.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring properties or structures on or outside the Site	Displacement, cracks, subsidence, deformation and tilting of structures

6.3.4 General Safety and Construction Requirements

	outside the Site	

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required ~~Earthwork Support~~ Cofferdams and carry out ongoing monitoring based upon the content of the Plan; and.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.3.2: Instrument Monitoring Plan

	Object	**Monitoring Items**
1	Cofferdam Generally	Displacement, stress of Cofferdams Earth pressure and water pressure acting on Cofferdams
2	Shoring and strutting	Axial force of strut and other supports.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring properties or structures on or outside the Site	Displacement, cracks, subsidence, deformation and tilting of structures

6.3.4 General Safety and Construction Requirements

These are requirements for retaining and not related to the Cofferdam.

NK1: Cofferdams also require strutting and shoring. Modified to refer to the construction method of the Earthwork Support.

JC73: 施工品質・設計に属する規定で、安全規定とは異なる、と考えます。
The above requirements are belonging to construction quality and design, and differs from the safety requirement.

NK1: Some other sections also specify same to ensure construction safety, so it is suggested that above description is left after modification.

~~In addition, the Contractor shall:~~

(1) Construct the Cofferdams with shoring by the same method stipulated in JSSS 6.2.5 [Safety Measures for Shoring] for Earthwork Support.

(2) Train (JC74) all Contractor's Personnel to work in the Cofferdams ~~as necessary~~ so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

JC74: Cofferdam 内での一般土木作業員に対するトレーニングとは何か？ 作業員は安全が確保されていることを前提に作業に入るのであり、作業員個々に Cofferdam の健全性に留意するような要求は違和感がある。請負者が作業中止基準を定め退避指示を発令することが通常である。
What is training for general civil workers in Cofferdam? Workers start works on the premise that safety is ensured, and I feel strange for each worker to pay attention to the soundness of Cofferdam stipulate in this (1). It is common for the Contractor to set work stop criteria and issue evacuation order.

NK1:作業員に対して、通常より、Cofferdam 内で発生し得る危険事項について説明、注意喚起を促す目的の規定です。現状の記述を残すことを提案します。
This stipulate that the Contractor shall explain the risks in the Cofferdams and make workers pay attentions to the risk. NK propose to leave it as it is.

(3) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like. (JC74)

(4) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

JC74: 水域内での作業水域確保の規定は、発注者からの出されるべきである。
The Employer shall issue requirements to secure working areas in the water.

NK1: これは一般的な規定であり、特別な規定は PSS に規定することとする。
This is general safety requirement. The PSS will specify particular requirement when necessary.

(5) Establish a system and appoint a person to issue order to Evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (JC745

JC75: 請負者が締め切り内全体の安全の確認をする体制確立を規定すべきではないか。誰が退避指示を出すのか、規定すべき。
The Contractor should establish a system to confirm the safety of the Cofferdams. The parson in charge to issue the evacuation order should be specified.

NK1: Modified.

(6) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-

(1) Construct the Cofferdams with shoring by the same method stipulated in JSSS 6.2.5 [*Safety Measures for Shoring*].

(2) Train all Contractor's Personnel who are to work on the construction, maintenance and removal of the Cofferdam or within the Cofferdam, so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

(3) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like.

(4) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

(5) Establish a system to confirm the safety of the Cofferdams, appoint a person-in-charge who shall be present at all times and shall be responsible for issuing an evacuation order if and when necessary.

(6) Evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (NK: Added.)

(1) Construct the Cofferdams with shoring by the same method stipulated in JSSS 6.2.5 [*Safety Measures for Shoring*].

(2) Train all Contractor's Personnel who are to work on the construction, maintenance and removal of the Cofferdam or within the Cofferdam, so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

(3) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like.

(4) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

(5) Establish a system to confirm the safety of the Cofferdams, appoint a person-in-charge who shall be present at all times and shall be responsible for issuing an evacuation order if and when necessary.

(6) Evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area.

(7) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering

entering the Cofferdam until it has been inspected by the HSO and certified by him to be “Safe for Use”.

6.3.5 Adverse ~~Changes in~~ Sudden Rise of Water Level. (JC76)

JC76a: adverse change の場合は避難しかないので、ここは文脈から Sudden Increase of Water Level では
In the case of adverse change, evacuation is the only solution, isn’t it? Is it proper to replace the title with Sudden Increase of Water Level?
NK1: 水位が仮締切の天端より相当低い時は水位の急上昇は危険ではない。仮締切を越流するような急上昇を対象とした場合、現タイトルでよいのでは。
The sudden rise of water level is not dangerous when water level is much lower the top of Cofferdam. The measures for the sudden rise of water level which will overtop the Cofferdam are specified below. So, the title is not changed.

JC76b: 前項 7.3.2 (4)及び(8)の状況を超える状況とは、台風やそれに伴う洪水、津波などを想定される。
The situation that exceeds the situation of 7.3.2 (4) and (8) in the preceding paragraph is assumed to be a typhoon, flood, tsunami, etc.
NK1: Yes.

JC76c: 全体として文章のつながりが不明瞭。(2)の described below はどこを指しているのか。(3)の Monitoring conditions は measure なのか、等。
Overall , the connection of sentences is unclear. For example, which does the “described below” in (2) point? Are the “Monitoring conditions” in (3) measures?
NK: For “described below”, change it to “shown in 7(6).3.6”. For “Monitoring Condition”, NK specifically describes.

(1) The Contractor shall be aware of and assess any risk due to adverse and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan.

(2) This shall include procedures for monitoring water levels as described below.

To MD: “This” means the safety Plan? I want to stipulate what “This” means.

(3) Measures for this shall include:

(a) Monitoring ~~conditions~~ (JC77) of water levels with equipment at the Site and obtaining forecasting information of water levels;

JC77: Monitoring conditions とは何か。ここでは水位計、潮位標(tidal gauge)、さらには自記風向風速計、自記気圧計などが想定される。high standard を要求するのであれば、発注者が規定すべき。
What are monitoring conditions? A water gauge, a tidal gauge, a self-recording anemometer, a self-recording barometer, and the like are assumed. If high standards are required, the Employer should specify it.
NK1: Modified. This is general safety requirement. The PSS will specify particular requirement when necessary.

(b) ~~Training of all Contractor’s Personnel;~~(JC78)

JC78: procedures for monitoring water levels から乖離している
deviates from procedures for monitoring water levels
NK1: Training is specified in 6.3.4 (2), so (b) is deleted.

(c) Communications among persons in charge of monitoring of water levels, responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam; (JC79)

JC79: 水域管理者との Communication でしょうか？
Communication with water area managers?
NK1: The communication is between persons in charge of monitoring of the water level,

(7) Implement repair and improvement measures to ensure the safety of Contractor’s Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be “Safe for Use”.

6.3.5 Excessive and Sudden Rise in Water Level

(1) The Contractor shall be aware of and assess any risk due to ~~adverse~~ excessive and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (NK: Made consistent with the title of 6.3.5.)

(2) The Safety Plan shall include procedures for monitoring water levels as described below.

(a) Monitoring water levels with instruments and recording equipment at the Site and obtaining forecasting information of water levels;

(b) Communications among persons in charge of monitoring of water levels, persons responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam;

the Cofferdam until it has been inspected by the HSO and certified by him to be “Safe for Use”.

6.3.5 Excessive and Sudden Rise in Water Level

(1) The Contractor shall be aware of and assess any risk due to excessive and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan.

(2) The Safety Plan shall include procedures for monitoring water levels as described below.

(a) Monitoring water levels with instruments and recording equipment at the Site and obtaining forecasting information of water levels;

(b) Communications among persons in charge of monitoring of water levels, persons responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam;

responsible for the safety in the Cofferdams, issuing evacuation order and workers in the Cofferdam.

(d) Instructions to Contractor's Personnel for evacuation;

(e) Stop work in accordance with JSSS 1.10 [*HSO – Scope of Duties*] ; and

(f) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so. (JC80)

JC80: procedures for monitoring water levels から乖離している。
The stipulation of (b)-(f) deviates from procedures for monitoring water levels.
NK1: (3) specifies measures for adverse sudden rise of water level. It is not only monitoring water level but also other measures given as (b) to (f). Modified.

6.3.6 Monitoring Water Level and Other Conditions (JC81)

JC81: 前項 7.3.5 (a)でコメント済み。high standard を要求するのであれば、契約図書で具体的に明記すべき。
Commented in the previous section 7.3.5 (a). If a high standard is required, it should be clearly stated in the contract documents.
NK1: This is general safety requirement. The PSS will specify particular requirement when necessary.

In addition to the requirements of JSSS ~~2.1.6.~~ 2.1.7 [*Monitoring and Records*] and unless otherwise stated in the Contract/Particular Safety Specification, the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day, tidal data, speed and direction of waterflow, wave height, wind speed and direction.

The Contractor shall provide <u>all instruments and facilities</u> (JC82) to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.

JC82: 自記記録方式の波高計、潮位計、水位計、流速計、濁度計は求められるのは、異常気象・海象等の force majeure あるいは unforeseeable physical condition 判定のための資料として必要であれば、発注者でその規格を規定すべきである。請負者の自己判断によることはばらつきが生じ好ましくない。
If the Employer needs data for decision of force majeure or unforeseeable physical conditions such as abnormal weather and sea conditions, the employer shall specify the specification of self-recording wave height meter, tide gauge, water gauge, current meter, and turbidity meter.
The self-determination by the Contractor is not preferable because the specification may vary.
NK1: This is general safety requirement. The PSS will specify particular requirement when necessary.

6.4 <u>WALKWAYS</u>, LADDERS AND STEPLADDERS (JC83)

JC83: Pedestrial Walkway とした方が分かりやすいのでは。 Singapore やカナダの事例ではそうなっています。
Is it easy to understand to use "Pedestrian Walkway"? This term is used in Singapore and Canada.
NK1: Considering the following information, NK leaves as they are as walkways are used only for pedestrian.
JSSS Chap 2 (Issue 3) 2.5.7 (1) defines them as follows:
JSSS 2.5.7 Temporary Access Around the Site
(1) Walkways and Passageways
<u>Walkways" mean pedestrian footpaths</u> at ground level <u>/ working places</u>(NK added) or ramped for the use of Contractor's Personnel.

(c) Instructions to Contractor's Personnel for evacuation;

(d) Stop work in accordance with JSSS 1.13 [*HSO – Scope of Duties and Authority*]; and

(e) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.

6.3.6 Monitoring Water Level and Other Conditions

In addition to the requirements of JSSS 2.1.7 [*Monitoring and Records*] ~~and unless otherwise stated in the Contract,~~ the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day~~, tidal data, speed and direction of waterflow, wave height, wind speed and direction~~. (NK: These items are deleted because they are difficult measured and also not directly necessary for the safety of the Cofferdam.)

The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.

6.4 WALKWAYS, LADDERS AND STEPLADDERS

(c) Instructions to Contractor's Personnel for evacuation;

(d) Stop work in accordance with JSSS 1.13 [*HSO – Scope of Duties and Authority*]; and

(e) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.

6.3.6 Monitoring Water Level and Other Conditions

In addition to the requirements of JSSS 2.1.7 [*Monitoring and Records*], the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day.

The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.

6.4 WALKWAYS, LADDERS AND STEPLADDERS

Passageways" are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.
OSHA defines and stipulates as follows:
Subpart L—Scaffolds §1926.450 Scope, application and definitions applicable to this subpart.
Walkway means a portion of a scaffold platform used only for access and not as a work level.
§1926.851 Stairs, passageways, and ladders.
(a) Only those stairways, passageways, and ladders, designated as means of access to the structure of a building, shall be used. Other access ways shall be entirely closed at all times.
HSE use the terms as follows:
HSE L24 (Second edition) 2013 Approved Code of Practice and guidance: Workplace (Health, Safety and Welfare) Regulations 1992 123 To prevent slips and trips:
・ *keep walkways and work areas clear of obstructions;*
Regulation 25 Facilities for rest and to eat meals Disabled persons 25A Where necessary, those parts of the workplace (including in particular doors, passageways, stairs, showers, washbasins, lavatories and workstations) used

6.4.1 General

(1) This Section comprises safety measures relating to the movement (JC84) ~~or~~ of persons to and around the Site and includes temporary ~~pedestrian~~ walkways, pedestrian bridges, portable ladders and stepladders.

JC84: "the movement"とは何の movement でしょうか？
What does the "the movement" mean? What is doing movement?
NK1: movement of the persons. Modified.
NK: The following (2) is added as general requirement moved from 6.4.2 (9).

(2) The Contractor shall provide Contractor's Personnel the facilities of walkways, pedestrian bridges, ramps, portable ladders and stepladders, stairs and ladders, and the like to enable them to get to their work location in a safe and convenient manner.

(3) For temporary steps and staircase structures the requirements of JSSS ~~6.5~~ 6.5 [*Scaffolding*] shall apply.

(4) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply.

(5) Details of the following shall be included in the Safety Plan required by JSSS ~~1.6~~ 1.7 [*Contractor's Safety Plan ~~Temporary Works~~*]:

To MD: I want to ask you to modify this referring to Issue 7 for (6).

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type (JC85) walkways where the height and length is 10m or more;

JC85: bridge type? pedestrian walkway on a platform?
NK1: 架設通路の意味です。Leave it as it is.

(c) Types of temporary walls, barriers or other separation between walkways and working areas or roads ~~or footpaths~~ on ~~or around~~ the Site; and (JC86)

JC86: 英語が分からない。 Cannot understand what this sentence means.
NK1: Modified and restricted walkways on the Site.

6.4.1 General

(1) This Section comprises safety measures relating to the safe movement to and around the Site of all Contractor's Personnel, Employer's Personnel and all other persons that are entitled to be on the Site and includes temporary walkways, bridges and ramps, portable ladders, stepladders and stairs.

I have included comments and have extended the above wording of the above to accommodate the added clause 6.4.2 (9).

(2) For temporary steps and staircase structures the requirements of JSSS 6.5 [Scaffolding] shall apply.

(3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply.

(4) Details of the following shall be included in the Safety Plan required by JSSS 1.7 [*Contractor's Safety Plans*]:

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more;

(c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and

6.4.1 General

(1) This Section comprises safety measures relating to the safe movement to and around the Site of all Contractor's Personnel, Employer's Personnel and all other persons that are entitled to be on the Site and includes temporary walkways, bridges and ramps, portable ladders, stepladders and stairs.

(2) For temporary steps and staircase structures the requirements of JSSS 6.5 [Scaffolding] shall apply.

(3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply.

(4) Details of the following shall be included in the Safety Plan required by JSSS 1.7 [*Contractor's Safety Plans*]:

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more;

(c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and

(d) Locations of emergency exits and evacuation routes.(JC87)

JC87: emergency evacuation routes でいいのでは。
Is “emergency evacuation routes” better?
NK1: Leaved it as it is.

6.4.2 Walkways

The Contractor shall:

(1) Provide designated (JC88) walkways ~~to,~~ in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

JC88: To modify it to “designate pedestrian walkways.
NK1: Both seems OK. NK asks MD to consider the comment.
To MD, please review which is proper.

(2) Provide and maintain clear signage ~~with adequate lighting~~ so that all users are aware of the locations and routes of the walkways and can safely use them. ~~same and so that all Contractor's Personnel engaged in adjacent working operations are aware of and avoid entering such locations and routes.~~ (JC89)

JC89: 英語不明。 Cannot understand this sentence means.
NK: Modified.

(3) ~~Provide potable lighting such as head torches, lanterns, hand-held torches or the like for workers where considered necessary by the HSO.~~ Provide and maintain adequate lighting on ~~–~~ the walkways except when potable lighting such as head torches, lanterns, hand-held torches or the like is provided for workers where considered necessary by the HSO.(JC90)

JC90a: 日本語のスペックと内容が違う。
(3) is different from the Japanese JSSS version.
NK1: Modified referring to Japanese version.

JC90b: 安衛則 541 条では、坑道・常時通行の用に供しない場所で労働者に適当な照明具を所持させるときは、照明設備は除外としている。ここではそれを HSO の判断にゆだねているが、適切か？又、坑道などでは停電時対応の非常灯が設備されていても、cap lamp（防爆型）の携行を求める鉱山法もあり得るが。
Article 541 of the Jap. Regulation precludes the use of lighting equipment when workers are required to have appropriate lighting equipment in tunnels or places not used for regular pass. However, (3) is left to the discretion of the HSO, is it appropriate?
In addition, even if an emergency light is installed in a mine tunnel or the like in case of a power outage, there is a mine law that requires carrying a cap lamp (explosion-proof type).
NK1: Modified (2) and (3) to simply specify.

(4) Ensure that walkways have sufficient dimensions (JC91) and load capability for the intended purpose.

JC91: Propose replace with dimensions with width
NK leave it as it is.

(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

(6) Ensure that temporary bridge type walkways shall have sufficient dimensions (JC92) and load capability for the intended purpose.

JC92: Propose replace with dimensions with width

The above use of “footpaths” and “around the Site” is correct, it refers to the site boundary where any public footpaths and/or roads require separation and protection from construction site operations.

(d) Locations of emergency exits and evacuation routes.

6.4.2 Walkways

The Contractor shall:

(1) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

The above wording is all correct, even if no temporary construction is necessary the phrase covers all.

(2) Provide and maintain clear signage so that all users are aware of the locations and routes.

(3) Provide and maintain adequate lighting except when portable lighting such as head torches, lanterns, hand-held torches or the like is provided for workers where considered necessary by the HSO.

(4) Ensure that walkways have sufficient dimensions and load-bearing capability for the intended purpose.

(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

(d) Locations of emergency exits and evacuation routes.

6.4.2 Walkways

The Contractor shall:

(1) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

(2) Provide and maintain clear signage so that all users are aware of the locations and routes.

(3) Provide and maintain adequate lighting except when portable lighting such as head torches, lanterns, hand-held torches or the like is provided for workers where considered necessary by the HSO.

(4) Ensure that walkways have sufficient dimensions and load-bearing capability for the intended purpose.

(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

(6) Ensure that temporary bridge type walkways shall have sufficient dimensions and load capability for the intended purpose.

NK: leave it as it is.

(7) Ensure that ramps do not exceed a gradient of 30 degrees and that they are provided with handrails. Steeper gradients walkways shall be provided with steps or staircases or ladders where appropriate.

To MD: Is this addition correct?

(8) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].(JC93)

JC93: 英語不明。 Cannot understand this sentence means.
JC1: No modification is made.

~~(9) Ensure that Contractor's Personnel working at heights or depths in excess 1.5m, are provided with facilities to enable them to get to their work location in a safe and convenient manner.~~ (JC94)

JC94: English expression is correct?
NK: Expression is correct. The above (9) shall be modified and moved to 6.4.1 General (2) because this general requirement and the 1.5 m height limitation shall be removed..

6.4.3 Emergency Exits and Evacuation Routes (JC95)

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and of the locations and routes of emergency walkways ladders and the like for evacuation and maintain all such locations and routes in a clean, safe and readily available condition.

JC95: 前項 7.4.2 において安全な walkway の規定がされているので、その内のいずれか(複数？)を emergency exits and/or evacuation routes として兼ねる設備のような規定でよいのではないか。
また、ここでは ladder/stepladder も考慮されるべきかと。
Some of walkways specified in 7.4.2 may be specified as can be specified as emergency exits and/or evacuation routes. Ladder/stepladder should be considered as emergency exits and/or evacuation routes here.
NK: Modified.

6.4.4 Portable Ladders and Stepladders (JC96)

JC96a: どっかのスペックを持ってきた内容となっている。著作権の問題がなければ可。

(6) Ensure that temporary bridge type walkways shall have sufficient dimensions and load capability for the intended purpose.

(7) Ensure that ramps do not exceed a gradient of 30 degrees and that they are provided with handrails. Steeper gradients shall be provided with steps or staircases or ladders where appropriate.

The addition of "walkways" to the above is not necessary within the context of the clause.

(8) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].

(9) ~~Ensure that Contractor's Personnel working at heights or depths in excess of 1.5m, are provided with facilities to enable them to get to their work location in a safe and convenient manner.~~

I have included the relevant parts of the above as requested in 6.4.1 (1) above.

6.4.3 Emergency Exits and Evacuation Routes

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and of the locations and routes of emergency walkways, steps, ladders and the like for evacuation and maintain all such locations and routes in a clean, safe and readily available condition.

6.4.4 Vertical Access

The Contractor shall provide steps, stairs and ramps as means of providing safe access or egress from excavations or different working levels.

Steps and stairs ramps shall be constructed from:

(1) Scaffolding in accordance with JSSS 6.5 [*Scaffolding*], provided with handrails and non-slip treads.

(2) Portable ladders in accordance with JSSS 6.4.5 [*Portable Ladders and Stepladders*].

(3) Purpose made timber or metal ramps with plywood boarding and structural timber framing.

I have added the above so that it is coordinated with the addition in Excavation, clause 7.2.2 (3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [Vertical Access].

(7) Ensure that ramps do not exceed a gradient of 30 degrees and that they are provided with handrails. Steeper gradients shall be provided with steps or staircases or ladders where appropriate.

(8) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].

6.4.3 Emergency Exits and Evacuation Routes

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and of the locations and routes of emergency walkways, steps, ladders and the like for evacuation and maintain all such locations and routes in a clean, safe and readily available condition.

6.4.4 Vertical Access

The Contractor shall provide steps, stairs and ramps as means of providing safe access or egress from excavations or different working levels.

Steps and stairs ramps shall be constructed from:

(1) Scaffolding in accordance with JSSS 6.5 [*Scaffolding*], provided with handrails and non-slip treads.

(2) Portable ladders in accordance with JSSS 6.4.5 [*Portable Ladders and Stepladders*].

(3) Purpose made timber or metal ramps with plywood boarding and structural timber framing.

6.4.5 Portable Ladders and Stepladders

It seems that the provisions here are copy of other specifications. If there is no copyright issue, they can be used as they are.
NK1: 和文案と同じです。These are same as draft in Japanese. NK leave them as they are.

JC96b: 7.4.4 (1)-(4)において HSG150 (3rd edition, published 2006), Ladders and stepladders page 41 of 141 を参照されることを希望します。
I hope to refer to HSG150 (3rd edition, published 2006), Ladders and stepladders page 41 of 141for 7.4.4 (1) to (4).
NK: We referred to the relevant parts of HSG150 and modified.

The Contractor shall comply with the following requirements regarding the use portable ladders and stepladders:

(1) ~~Structure and specification of~~ (JC97) Portable ladders shall:

JC97: こんな書き方があるのか。タイトルを Portable Ladders として Potable ladder shall; (a).....
Is there such way of writing? I propose to replace the title with, for example, "Portable Ladders", and "Potable ladder shall; (a) .."
NK1: modified as commented.

(a) ~~Shall~~ Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) ~~Structure and specification of~~ (JC98) Stepladders shall:

JC98: Same as above.
NK1: Modified.

(a) ~~Shall~~ Be of sound structure, clean and not contaminated by any slippery material; (JC99)

JC99: 前項(1) (a)と重複 Same as the previous section (1) (a) Duplicates.
NK: Requirement is same for (1) and (2).

(b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition; (JC100)

JC100: 前項(1) (b)と重複 Same as the previous section (1) (b). Duplicates.
NK: Ditto.

(c) The angle between the front rail (JC101) and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

JC101: HSG 150 では"stiles"としているようです。
In HSG 150, the "front rail" seems to be used as "stiles".
NK: "front rail" is used in US The Code of Federal Regulations of the United States of America.
https://books.google.co.jp/books?id=woU6AAAAIAAJ&pg=PA72&lpg=PA72&dq=front+rail+step+ladder&source=bl&ots=S38ct5egJ7&sig=ACfU3U0uHTs_ADUHGctBGXwmY5rGwsu5IA&hl=ja&sa=X&ved=2ahUKEwj7-baBn-zoAhUKBKYKHci4A-cQ6AEwE3oECAsQMg#v=onepage&q=front%20rail%20step%20ladder&f=false
Left as it is.

(d) Steps shall be non-slip and of sufficient size to ensure safe

6.4.5 Portable Ladders and Stepladders

The Contractor shall comply with the following requirements regarding the use of portable ladders and stepladders:

(1) Portable ladders shall:

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Stepladders shall

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Have an angle between the front rail and the floor not exceeding 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

The Contractor shall comply with the following requirements regarding the use of portable ladders and stepladders:

(1) Portable ladders shall:

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Stepladders shall

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Have an angle between the front rail and the floor not exceeding 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

(Unless otherwise stated, the following requirements apply to both ladders and stepladders)

(a) Users must read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users must avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders near power lines or exposed energised electrical equipment;

(c) Ladders must be inspected prior to use. If a ladder is damaged, it must be removed from service and suitably tagged until repaired or discarded;

(d) Ladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees);

(f) Ladders shall have the top projecting at least 1 m over the landing floor;

(g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

(i) Ladders shall be secured before any use and prevented from slipping during use by:

(i) Securing the side rails at or near the top and the bottom;

(ii) Providing an effective anti-slip shoe or foot; and

(iii) Having another worker support the lower part of the ladder.

(j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(l) Every ladder shall be used in such a way that:

(i) A secure handhold and secure support are always available to the user; and

(ii) The user can maintain a safe handhold when carrying a load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

(Unless otherwise stated, the following requirements apply to both ladders and stepladders)

(a) Users shall read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users shall avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders near power lines or exposed energised electrical equipment;

(c) Ladders shall be inspected prior to use. If a ladder is damaged, it shall be removed from service and suitably tagged until repaired or discarded;

(d) Ladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees);

(f) Ladders shall have the top projecting at least 1 m over the landing floor;

(g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

(i) Ladders shall be secured before any use and prevented from slipping during use by:

(i) Securing the side rails at or near the top and the bottom;

(ii) Providing an effective anti-slip shoe or foot; and

(iii) Having another worker support the lower part of the ladder.

(j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(l) Every ladder shall be used in such a way that:

(i) A secure handhold and secure support are always available to the user; and

(ii) The user can maintain a safe handhold when carrying a

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

(Unless otherwise stated, the following requirements apply to both ladders and stepladders)

(a) Users shall read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users shall avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders near power lines or exposed energised electrical equipment;

(c) Ladders shall be inspected prior to use. If a ladder is damaged, it shall be removed from service and suitably tagged until repaired or discarded;

(d) Ladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees);

(f) Ladders shall have the top projecting at least 1 m over the landing floor;

(g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

(i) Ladders shall be secured before any use and prevented from slipping during use by:

(i) Securing the side rails at or near the top and the bottom;

(ii) Providing an effective anti-slip shoe or foot; and

(iii) Having another worker support the lower part of the ladder.

(j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(l) Every ladder shall be used in such a way that:

(i) A secure handhold and secure support are always available to the user; and

(ii) The user can maintain a safe handhold when carrying a load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short

load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short duration of use. (4) Additional Requirements for Use of Stepladders (a) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing scaffolding in accordance with JSSS 6.5 [*Scaffolding*]; (b) Step ladders shall not be used as a single ladder or in a partially closed position; (c) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. (d) Restraint Clasps shall be securely locked before any use. (e) Stepladders shall not be placed on unstable or uneven surfaces. (f) Stepladders shall not be positioned in front of doors. (g) The top rung of a ladder or step of a step ladder shall not be used as a rung/step unless designed for that purpose. (h) For use of Stepladders as a support for trestle scaffolding refer to JSSS 6.5 [*Scaffolding*]. **6.4.5 Inspection** In accordance with JSSS ~~1.11~~ 1.13 [*HSO - Scope of Duties and Authority*] the HSO shall regularly inspect all walkways, ladders and step ladders, ensure that same are safe and fit for the intended purpose and visibly certify each as “Safe for Use” or otherwise.	load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short duration of use. (4) Additional Requirements for Use of Stepladders (a) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing Scaffolding in accordance with JSSS 6.5 [*Scaffolding*]; (b) Step ladders shall not be used as a single ladder or in a partially closed position; (c) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. (d) Restraint Clasps shall be securely locked before any use; (e) Stepladders shall not be placed on unstable or uneven surfaces; (f) Stepladders shall not be positioned in front of doors; (g) The top rung of a ladder or step of a step ladder shall not be used as a rung/step unless designed for that purpose; and (h) For use of Stepladders as a support for trestle Scaffolds refer to JSSS 6.5 [*Scaffolding*]. **6.4.6 Inspection** In accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] the HSO shall regularly inspect all walkways, ladders and step ladders, ensure that same are safe and fit for the intended purpose and visibly certify each as “Safe for Use” or otherwise.	duration of use. (4) Additional Requirements for Use of Stepladders (a) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing Scaffolding in accordance with JSSS 6.5 [*Scaffolding*]; (b) Step ladders shall not be used as a single ladder or in a partially closed position; (c) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. (d) Restraint Clasps shall be securely locked before any use; (e) Stepladders shall not be placed on unstable or uneven surfaces; (f) Stepladders shall not be positioned in front of doors; (g) The top rung of a ladder or step of a step ladder shall not be used as a rung/step unless designed for that purpose; and (h) For use of Stepladders as a support for trestle Scaffolds refer to JSSS 6.5 [*Scaffolding*]. **6.4.6 Inspection** In accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] the HSO shall regularly inspect all walkways, ladders and step ladders, ensure that same are safe and fit for the intended purpose and visibly certify each as “Safe for Use” or otherwise.
6.5 SCAFFOLDING (JC102) JC102: HSG 150 3rd edition 2006 General access scaffolds (page 28/141)を参照されて全面的な改訂が望まれます。 I hope revision is fully made with reference to HSG 150 3rd edition 2006 General access scaffolds (page 28/141). JC1: 指針をベースに作成した和文にもとに、必要な事項及び規定を追加する形で英文を作成しています。和文での必要事項を網羅していますが、HSG は具体的な数値規定がないため参照とはせず、**OSHA をベースとした規定に 6.5 全体を改訂致します。** This English JSSS was prepared based on the Japanese version which was prepared based on the safety guidelines of Ministry of Construction, Japan. 6.5 has covered requirements in Japanese version. However, **6.5 is modified based on OSHA because HSG does not specify concrete values required for JSSS.** To MD: I modified based on OSHA because the OSHA provision are easy to refer for example to names of types and dimensions of scaffoldings in internet and HSG are not so much as OSHA. Please kindly understand my modification because JICA comments they cannot understand NK English draft. **NK1: 足場の種類・名称を OSHA の規定に合わせて変更します。単管足場に加えて、枠組足場を追記します。**	**6.5 SCAFFOLDING**	**6.5 SCAFFOLDING**

The names and types of scaffoldings are modified following OSHA. Fabricated frame Scaffolding as a part of supported scaffoldings.
To MD: Based on OSHA, I added and modified Scaffoldings all as below.

NK1: 足場の規定を次のように変更致します。

6. SCAFFOLDING (目次の比較) (黄色網掛は名称変更、青色は追加です。)

No.	Issue 1	No.	Issue 2 (Revised from Issue 1)	Referred OSHA

6.5.1 General (JC103)

JC103: 日本語 ver.とは異なる内容となっている。
MM: JICA: The content is different from the Japanese ver. Check it again, please.
MD: The comment is correct, it is very different basically because MD considered it necessary to modify as mentioned in the draft version which also included some guidance notes, comments and queries.
NK : We will discuss the draft with JICA and necessary changes.
NK1: 上記にもとづき、種類名称を変えて英文を変更します。
We will revise this Section referring to MD's comment in Issue 1 and OSHA.
"Scaffolding" is defined in Chapter 1 A1.1.2 as follows:
(22) "Scaffold" or "Scaffolding" means a temporary structure or structures that provide access on or from which persons work or to support Goods.

(1) This Section contains requirements for various types of Scaffolding defined in JSSS Chapter 1, A1.1.2 including ~~tubular steel~~ supported scaffoldings for example tube and coupler, ~~and modular or system~~

6.5.1 General

(1) This Section contains requirements for various types of Scaffolding ~~defined in JSSS Chapter 1, A1.1.2~~ including supported scaffolds (for example tube and coupler scaffolds and fabricated frame scaffolds),

6.5.1 General

(1) This Section contains requirements for various types of Scaffolding including supported scaffolds (for example tube and coupler scaffolds

fabricated frame, mobile scaffoldings, suspended scaffolding for example interior hung scaffolding, trestle scaffoldings in various configurations and mobile elevating work platforms.	mobile scaffolds, suspended scaffolds ~~for example interior hung scaffolding~~, trestle scaffolds ~~in various configurations~~ and mobile elevating work platforms.	and fabricated frame scaffolds), mobile scaffolds, suspended scaffolds trestle scaffolds and mobile elevating work platforms.
	To avoid any criticism or misunderstanding, I have not generally altered your revised clauses (except punctuation and as shown in red fonts) but please note as follows:	
	If OSHA is used individual types are referred to as "Scaffolds" collectively it is "Scaffolding".	
	"Scaffolding" is a plural noun, so no need for an "s"	
	There is not always a need to cross reference to Annex 1 Definitions, whenever a definition is used, capitalisation is sufficient.	
	Various types mean for example tube and coupler scaffolds and fabricated frame scaffolds	
	Various configurations mean for example "interior hung scaffolding" or "trestle scaffolding".	
(2) Not all types are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.	(2) Not all types of Scaffolding are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.	(2) Not all types of Scaffolding are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context.
(3) All ~~tubular steel~~ scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel (JC104) who ~~that~~ that have been trained and certified for such operations in accordance with JSSS ~~1.16~~ 1.18 [*Proper Placement of Contractor's Personnel*].	(3) All Scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].	(3) All Scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].
JC104: Contractor's Personnel なのは当然のこと It is obvious who do those is Contractor's Personnel. NK1: Important thing is to specify that Personnel trained and certified for such operations shall be assigned. The actions required are for design, erection, test, inspect, use, dismantle and removal, therefore this sentence does not specify personnel positions like HSO, worker, Operation Leader. Therefore, not modified.		
~~(4) All modular or system scaffolding (consisting of prefabricated individual components, braces and accessories) shall be designed, assembled, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel (JC105) that have been trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].~~		
JC105: 前コメントに同じ。書きます？ Same as previous comment. Is it necessary to stipulate? NK1: (3) and (4) are merged in (3)		
(4) All scaffolding work when the manufacturer's written instructions exist for example for fabricated frames, mobile elevating work platforms shall be carried out strictly in accordance with the manufacturer's written instructions.	(4) All Scaffolding, ~~when the manufacturer's written instructions exist for example for fabricated frames, mobile elevating work platforms~~ shall be carried out in compliance with the manufacturer's written instructions or the design of the Contractor.	(4) All Scaffolding shall be carried out in compliance with the manufacturer's written instructions or the design of the Contractor.
	The above (green) has been changed to be consistent with other clauses.	
	I do not recommend the added NK wording in red as it has little or no meaning and reduces the ability to apply this requirement properly. The origin text is necessary to support proper training :	
	What is the meaning of exist? "Available"? "Cannot find it"?	

(5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of 1.37 [Design and Management of Temporary Works].

(6) ~~Please refer to all other related JSSS requirements including but not restricted to~~ (JC106 & 107): Handrails, toeboards and ladders in Scaffolding shall be provided in accordance with JSSS 2.5.5 [Handrails], 2.5.6 [Toeboards] and 7.4 [Walkways, Ladders and Stepladders], respectively.

JC106: この表現は好ましくない。必要であれば、関連クローズをすべて書き出すことが望まれる。スペック作成者の信頼度が下がる。
The expression of "but not restricted to "is not desirable. If necessary, it is desirable to write out all relevant closes. The reliability of the spec writer is reduced.
NK1: The (7) above will be deleted based on the JC's comment and the point that Compliance Standards is defined in 7.5.2.
JC107:英語不明。 Cannot understand this sentence means.
NK: Deleted (a) to (e) and added common requirement in (7) below from 6.5.3.

~~(a) JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];~~
~~(b) JSSS 1.35 [*Design and Management of Temporary Works*]~~
~~(c) JSSS 2.5 [*Fall Prevention*]~~
~~(d) JSSS 2.6 [*Falling Objects*];~~
~~(e) JSSS 6.4.4 [*Portable Ladders and Stepladders*];~~

(7) Unless specified for each scaffolding, each scaffold and scaffold component shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(8) Scaffolds and scaffold components must not be loaded in excess of their maximum intended loads or rated capacities, whichever is less. (JC108)

JC108: HSG 150 3rd edition 2006 General access scaffolds 145 項で明記されている。
It is clarified in the General access scaffolds, section 145, HSG 150 3rd edition 2006.
NK1: No modification.

(9) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. ~~The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.~~ (JC109)

JC109: HSG 150 3rd edition 2006 General access scaffolds 145 項では明記されている。 It is clarified in the General access scaffolds, section 145, HSG 150 3rd edition 2006.
NK1: No modification.

(10) Scaffolding shall be removed immediately upon completion of the work for which it is provided. (JC110)

JC110: General で記述することでしょうか？ Shall it be written in General?

Why bother to include the clause if it is not vital or if it can be avoided? It is not old material and all should be available on line.

NK: There are scaffolding designed and constructed by the Contractor at the site such as tube and coupler scaffolds. The Contractor can obtain the specifications (strength, etc.) of tubes and couplers but may not the manufacturer's written instructions. NK added "and design of the Contractor".

(5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of ~~JSSS 1.37 [Design and Management of Temporary Works]~~ 6.1.1 [Design and Provision of Temporary Works Generally]. (NK modifies)

The above suggested change is not recommended, the original text is correct. JSSS 7.1.1 includes JSS 1.37 but also includes additional requirements.

~~(6) Please refer to all other related JSSS requirements including but not restricted to:~~

The use of the term "but not restricted to" in the above is perfectly acceptable in legal documents of this type and does not reduce "the reliability of the spec writer" as suggested. It is designed to aid the reader without creating a commitment or obligation for the writer. To omit the following is therefore OK but not helpful particularly bearing in mind the complicated nature or JSSS.

If not required, above (6) heading requires deletion.

NK: As (a) to (e) are deleted, so (6) is deleted now.

~~(a) JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*];~~
~~(b) JSSS 1.37 [*Design and Management of Temporary Works*]~~
~~(c) JSSS 2.5 [*Fall Prevention*]~~
~~(d) JSSS 2.6 [*Falling Objects*];~~
~~(e) JSSS 6.4.4 [*Portable Ladders and Stepladders*];~~

(7) Unless specified elsewhere in JSSS or in any of the compliance standards, all Scaffolding and Scaffold components shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

I suggest as above

(8) Scaffolds and Scaffold components shall not be loaded in excess of their maximum intended loads or rated capacities, whichever is less.

(9) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.

NK state no change for above so why delete?
NK: We agreed to your stipulation and will not delete it.

(10) Scaffolding shall be removed immediately upon completion of the work for which it is provided.

(5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 6.1.1 [Design and Provision of Temporary Works Generally].

(6) Unless specified elsewhere in JSSS or in any of the compliance standards, all Scaffolding and Scaffold components shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(7) Scaffolds and Scaffold components shall not be loaded in excess of their maximum intended loads or rated capacities, whichever is less.

(8) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.

(9) Scaffolding shall be removed immediately upon completion of the work for which it is provided.

NK: It shall be specified in General because (10) is a part of 6.5.1 General for all Scaffolding.

(11) ~~All Temporary Electrical Installations~~ (JC111a)~~shall be designed, installed, inspected, tested, altered and removed by Contractor's Personnel that qualified, trained and certified for such operations in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].~~ (JC111b)

JC111a: temporary electrical installation とは？ What is temporary electrical installation?
JC11b: 不要、ここは scaffolding の規定。 Not required as this is the requirement for scaffolding.
NK: Deleted.

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 (JC112) – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

JC112: 新 内容未確認 Is it new information? JICA hasn't confirmed it yet.
NK1: ANSI is included in Japanese draft. Left it as it is.

(2) ~~Unless otherwise stated in the Contract or in any of the standards for compliance, each scaffold and scaffold component must support without failure its own weight and at least four times~~ (JC113a)~~the maximum intended load applied or transmitted to it.~~ (JC113b)

JC113a: 安全係数 4 の根拠？ Are there any specified grounds for safety factor 4?
JC113b: 参考までに関連する standard を示してください。 Please indicate relevant standard.
NK: It is from OSHA §1926.451 General requirements below.
a) Capacity. (1) Except as provided in paragraphs, each scaffold and scaffold component shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.
(2)above is moved to 6.5.1 (7).

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

Further to our earlier discussion on permission to work and signage and in the absence of any further formation I have drafted the following. This includes previous clause 6.5.9 and all is here as it applies generally:

6.5.3 Notices to be Displayed on Scaffolds

(1) Following inspections by HSO, suitable signage shall be applied to Scaffolds clearly indicating for example:

(a) "Scaffold Complete and Safe For Use";

(b) "Scaffold Not Complete - Do Not Use"; and

(c) "Scaffold Not Safe For Use".

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

6.5.3 Notices to be Displayed on Scaffolds

(1) Following inspections by HSO, suitable signage shall be applied to Scaffolds clearly indicating for example:

(a) "Scaffold Complete and Safe For Use";

(b) "Scaffold Not Complete - Do Not Use"; and

(c) "Scaffold Not Safe For Use".

6.5.3 Platform of Scaffolding

NK1: 作業床に関し各節でそれぞれ規定していますので、まとめて新款 6.5.4 足場床を、OSHA を遵守することを追加します。
As each Section specifies Platform, new section 6.5.3 is added below to specify generally for all scaffold and comply with OSHA.

The platform of Scaffolding shall comply to the following:

(1) Each platform on all working levels of scaffoldings shall be fully planked or decked between the front uprights and the ~~guardrail~~ handrails supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage.

(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary.

(c) Where the Contractor makes the demonstration provided for in paragraph (a) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not 24 cm.

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

(2) Except as provided separately for each Scaffolding, platform and walkway shall be at least ~~46~~ 45 cm wide.

Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least ~~46~~ 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for each Scaffolding, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Other requirements than specified in the above, the platform of Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

(2) When any Scaffold is to be used for loading of Goods, the Contractor shall display a notice indicating the maximum load capacity of each Scaffold.

(3) Scaffolds shall also be tagged with the names of the erector and the person responsible for inspection and maintenance of the Scaffold.

(4) All notices shall be clearly visible and in easy-to-see locations.

The following is added by NK:

6.5.4 Scaffold Platforms

Scaffold platforms shall comply with the following:

(1) Each platform on all working levels of Scaffolding shall be fully planked or decked between the front uprights and the handrail supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage;

(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary;

(c) Where the Contractor makes the demonstration provided for in paragraph (b) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not exceed 24 cm; and

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing Scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

(2) Except as may be provided separately for individual types of Scaffold, Scaffold platforms and walkways shall be at least 45 cm wide.

Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for individual types of Scaffold, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

(2) When any Scaffold is to be used for loading of Goods, the Contractor shall display a notice indicating the maximum load capacity of each Scaffold.

(3) Scaffolds shall also be tagged with the names of the erector and the person responsible for inspection and maintenance of the Scaffold.

(4) All notices shall be clearly visible and in easy-to-see locations.

6.5.4 Scaffold Platforms

Scaffold platforms shall comply with the following:

(1) Each platform on all working levels of Scaffolding shall be fully planked or decked between the front uprights and the handrail supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage;

(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary;

(c) Where the Contractor makes the demonstration provided for in paragraph (b) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not exceed 24 cm; and

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing Scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

(2) Except as may be provided separately for individual types of Scaffold, Scaffold platforms and walkways shall be at least 45 cm wide.

Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for individual types of Scaffold, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

6.5.4 Supported Scaffoldings

NK1: 6.5 の序文で説明しました下から支持された足場として、OSHA 1926.451 General requirements, (c) Criteria for supported Scaffolds を参考に 6.5.4 を新規に規定します。

As explained in the beginning of 6.5, the 6.5.4 below is specified referring to OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

(1) General

(a) The Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation.

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement.

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement.

(e) Scaffolds over 38.0 m in height above their base plates shall be designed in accordance with JSSS 1.37 [Design and Management of Temporary Works], and shall be constructed and loaded in accordance with such design.

(f) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms.

(g) Other general requirements than specified in the above, the supported Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported scaffolds.

6.5.4 ~~Tubular Steel Scaffolding.~~ (JC113)

JC113a: 内容は新? Are the contents new?

NK1: 鋼管足場の和文に追加しています。 They are addition to Japanese version.

JC113b: (1)以下(5)まで、特に Tubular steel scaffolding に限定した規定でないように思います。BS EN 12811-1 を参照すれば、特に Annex B や C において設計上の

I have generally not altered your above revised clause (except punctuation and as shown in red fonts) but please note as follows:

If using OSHA terms, the heading and phrase would read better as "Scaffold Platform".

6.5.5 Supported Scaffolds

(1) General

(a) Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means;

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation;

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement;

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement;

(e) ~~Scaffolds over 38.0 m in height above their base plates shall be designed in accordance with JSSS 1.37 [*Design and Provision of Temporary Works Generally*] and shall be constructed and loaded in accordance with such design.~~

NK: reviewed again OSHA. The requirement is as below. There are same requirements for other scaffolds. The (e) is only for that of 38m high. JSSS 1.37 has already covered designer required, so NK deleted (e) now.

(6) Scaffolds over 125 feet (38.0 m) in height above their base plates shall be designed by a registered professional engineer, and shall be constructed and loaded in accordance with such design

(f) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms; and

(g) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

I have generally not altered your above revised clause (except punctuation and as shown in red fonts) but please note as follows:

If using OSHA terms, the heading and term would read better as "Supported Scaffolds".

I suggest the cross reference to JSSS 1.37 in para (e) be changed to JSSS 6.1.1 [Design and Provision of Temporary Works Generally] which includes JSS 1.37 but also includes additional requirements.

6.5.5 Supported Scaffolds

(1) General

(a) Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means;

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation;

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement;

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement;

(e) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms; and

(f) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

(2) Tube and Coupler Scaffolds

安全対策(カップラーやベースジャッキの強度)が規定されています。
(1) to (5) below, I think it is not requirements limited to tubular steel scaffolding. With reference to BS EN 12811-1, design safety measures (strength of couplers and base jacks) are specified in Annex B and C in particular.

JC1: BS EN 12811-1 の順守を 6.5.2(1)(c)に規定しています。鋼管足場に特有な事項を規定することとし、ここに残します。
The compliance to BS EN 12811-1 is stipulated in 6.5.2(1)(c). To specify particular requirements for the tubular steel scaffolding, the clauses are left and modified.

(1) ~~Tubular steel scaffolding comprises steel tubes and connector clips, with boarded working platforms, handrails, toe boards and access ladders, steps or stairs.~~
(2) ~~Ladders shall be provided in accordance with JSSS 6.4 [*Walkways, Ladders and Stepladders*].~~
(3) ~~Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].~~
(4) ~~Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].~~
(5) ~~The following safety measures shall apply:~~
(e) ~~Ensure that all scaffolding is erected plumb, level and squared;~~
(f) ~~Prevent any scaffold from moving, sliding, rocking or settling by ensuring that posts are securely founded and provided with mudsills or other base plate types and measures to distribute the load, screw jacks or other levelling devices;~~
(g) ~~Ensure that all joints between scaffolding tubes are formed with the correct type of coupling and that all are securely fixed and tightened;~~
(h) ~~Ensure that all scaffolds are securely anchored or tied to supporting structures;~~
(i) ~~Ensure that all scaffolding is securely braced with stays, raking and cross bracing to render the scaffold stable and secure for the purpose and in all likely climatic and other relevant conditions;~~
(j) ~~Provide working platforms of sufficient dimension and structural capability to perform the required function;~~
(k) ~~Ensure that working platforms are close boarded with no open joints in excess of 3cm and that toeboards are provided;~~
(l) ~~Ensure that all scaffold boards are adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and~~
(m) ~~Ensure that all holes left by putlogs and supports after dismantling shall be repaired in a safe working manner.~~

NK1: NK1: (2) to (4) are moved to 6.5.1 (7).

NK1: 6.5.4 Tubular Steel Scaffolding に代わり、6.5 の序文で提案の単管足場を、OSHA 1926.452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.を参考に 6.5.4 (2)に新規に規定します。
For 6.5.4Tubular Steel Scaffoldings, Tube and Coupler Scaffolding explained in the beginning of 6.5 is specified in (2) below referring to OSHA Subpart L-Scaffolds, 1926. 452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.

(2) Tube and Coupler Scaffolding

(a) Transverse bracing forming an “X” across the width of the scaffold shall be installed at the scaffold ends and at least at every third set of posts horizontally (measured from only one end) and

(2) Tube and Coupler Scaffolds

every fourth runner vertically.

(b) On straight run scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both directions, and shall extend from the base of the end posts upward to the top of the scaffold at approximately a 45 degree angle.

(c) Where conditions preclude the attachment of bracing to posts, bracing shall be attached to the runners as close to the post as possible.

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible.

(e) Runners shall be installed along the length of the Scaffolding, located on both the inside and outside posts at level.

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminum. The use of gray cast iron is prohibited.

(g) Other requirements than specified in the above, the tube and coupler Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (b) Tube and coupler scaffolds.

NK1: 和文で鋼管足場として規定した枠組足場を、OSHA 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds を参考に 6 新規に.5.4 (3)を規定します。

Fabricated frame Scaffolding specified in Tubular steel scaffolding is specified in (3) below referring to OSHA Subpart L-Scaffolds, 1926. 452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

(3) Fabricated frame Scaffolding

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected scaffold is always plumb, level, and square. All brace connections shall be secured.

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means.

(c) Where uplift can occur which would displace scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means.

(d) Brackets used to support cantilevered loads shall:

(i) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;

(ii) Not be bent or twisted from these positions; and

(iii) Be used only to support personnel, unless the scaffold has

(a) Transverse bracing forming an "X" across the width of the Scaffold shall be installed at the Scaffold ends and at least at every third set of posts horizontally (measured from only one end) and every fourth runner vertically;

(b) On straight run Scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both directions, and shall extend from the base of the end posts upward to the top of the Scaffold at approximately a 45 degree angle;

(c) Where conditions preclude the attachment of bracing to posts, bracing shall be attached to the runners as close to the post as possible;

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible;

(e) Runners shall be installed along the length of the Scaffold, located on both the inside and outside posts at level;

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminium, the use of grey cast iron is prohibited; and

(g) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.

I have generally not altered your above revised clause (except punctuation and as shown in red fonts)

(3) Fabricated Frame Scaffolds

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected Scaffold is always plumb, level, and square. All brace connections shall be secured;

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means;

(c) Where uplift can occur, which would displace Scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means;

(d) Brackets used to support cantilevered loads shall:

(i) Be seated with side-brackets parallel to the frames and end-

been designed for other loads.

(e) Other requirements than specified in the above, the fabricated frame Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (c) Fabricated frame scaffolds.

6.5.5 ~~Suspended Scaffolds~~ (JC114)

JC114a:内容は新? Is it new specification?
NK: 和文に追加済みです。 It has been added to Japanese version.

JC114b: OSHA の HP(以下に添付)をすれば以下(2)(b)&(c)が適合しない scaffold もありそうです。ここ(7.5.4) 全体の規定を参照した規格を再確認してください。
https://www.osha.gov/SLTC/etools/scaffolding/suspended/index.html なお、tubular steel scaffolding が上部の構造物から支持されている場合は、7.5.4 には適合しない、7.5.3 に含まれると理解してよいですか？
In OSHA's HP (attached below), it seems that (2) (b) & (c) cannot apply to some scaffolds. Please check the standards to cover whole requirements of 7.5.4.
https://www.osha.gov/SLTC/etools/scaffolding/suspended/index.html
Can we understand that the tubular steel scaffolding which is supported by the upper structure is not appropriate to be specified in 7.5.4 and it shall be included in 7.5.3?
NK1: 和文は、OSHA の Catenary 形式のつり足場を規定しています。そのため、その他の形式の吊り足場は OSHA に準じることと規定します。
The Japanese JSSS specifies for interior hung type in OSHA. JSSS will specify for other types of suspended Scaffold to comply to OSHA.
Interior hung type: Platform suspended from the ceiling or roof structure by fixed-length supports.)

(1) ~~Suspended scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and with all necessary support framing.~~

(2) ~~The following safety measures shall apply (except gondola suspended scaffolds):~~

(a) ~~The maximum loading capacity~~ (JC115)~~of the working platform shall be determined to ensure a safety factor of 10 or more for hanging wire ropes and hanging steel wires, 5 or more for hanging chains and hanging hooks, 2.5 or more for hanging steel bands and fulcrums at the bottom and top of the hanging scaffolds and 5 or more for timber.~~

JC115: maximum loading を足場の部分の強度から決定すると読める。手順が逆ではないか。又、OSHA、1926.451(a)(3) には、Each suspension rope, including connecting hardware, used on non-adjustable suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.とあり、他にも安全係数が規定されている。以下の安全に関する係数についても参照・確認されたい。
It can be read that the maximum loading is determined from the strength of the scaffold part. Is the decision order reversed? In OSHA, 1926.451 (a) (3), Each suspension rope, including connecting hardware, used on non-adjustable suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.
There are other safety factors. Please refer to and confirm the following safety factors.
NK1: English version was prepared based on Japanese version.

(d) Brackets used to support cantilevered loads shall:

(i) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;

(ii) Not be bent or twisted from these positions; and

(iii) Be used only to support personnel, unless the Scaffold has been designed for other loads.

(e) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

I have generally not altered your above revised clause (except as shown in red fonts)

6.5.6 Suspended Scaffolds

brackets at 90 degrees to the frames;

(ii) Not be bent or twisted from these positions; and

(iii) Be used only to support personnel, unless the Scaffold has been designed for other loads.

(e) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

6.5.6 Suspended Scaffolds

Each safety factor in E 7.5.4 (2) (a) above is the English translation of the Japanese Set Ver. J 7.5.3 (1), and those safety factor has been already determined in the past meeting.
Modified to refer to directly OSHA.

~~*In the above are "hanging wire ropes" and "hanging steel wires" the same? If not please advise what they are. I assume that this could be "ropes" and "steel cables" but please clarify with a spec for ropes.*~~

(b) ~~Timber boarded working platforms shall be provided to provide a safe and uninterrupted working surface.~~
~~Alternatively, proprietary type Light Weight Staging (LWS), shall be provided to provide a safe and uninterrupted working platform. LWS shall be 0.45m wide aluminium frame with slip-resistant coated plywood decking or similar, al shall be designed, tested and approved to the appropriate class of BS 2037 Class 1 and suitable for the required use.~~

(c) ~~Handrails shall be provided in accordance with JSSS 2.5.5 [*Handrails*].~~(JC115)

(d) ~~Toeboards shall be provided in accordance with JSSS 2.5.6 [*Toeboards*].~~(JC115)

(e) ~~Suspension ropes and cables must be connected to overhead supports by shackles, clips, thimbles, or equivalent means.~~

JC115: Already commented.
NK1: Modified.

(4) ~~Do not use hanging wire ropes where:~~
- (i) ~~10% or more of the element wires (excluding filler wires) are not in one continuous tensile strand.~~
- (ii) ~~There is a reduction in the diameter exceeding 7% of the original nominal diameter.~~
- (iii) ~~There are any kinks or any deformation or corrosion.~~

(5) ~~Do not use hanging chains where:~~
- (i) ~~Elongation exceeds 5% of the original length at the date of manufacture.~~
- (ii) ~~There is a reduction in the diameter of links exceeding 10% of the original diameter at the date of manufacture.~~
- (iii) ~~There are any breaks, splits, cracks, or any deformation or corrosion~~

(6) ~~Do not use any hanging steel wires or hanging steel belts where there is any deformation, damage or corrosion.~~

Why are these different to hanging wire ropes as above? please clarify:

(7) ~~Measures when constructing suspended scaffolds~~
- (a) ~~Working platforms shall be minimum 45 cm wide and close boarded with no open joints;~~
- (b) ~~All scaffold boards shall be adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and~~
- (c) ~~Stays shall be provided to prevent movement or displacement of the working platform.~~

(8) ~~Prohibited activity~~
~~The use of any ladders or stepladders on suspended scaffolding is prohibited.~~

NK1: 6.5.5 で規定のつり足場を、OSHA 1926.452 Additional requirements applicable to specific types of Scaffolds を参考に、6.5.5 に内容を代えて規定します。OSHA で規定の複数の種類のつり足場の中の和文で規定の interior hung scaffolds を 6.5.5(2)に規定します。
The Suspended Scaffoldings in 6.5.5 is specified referring to OSHA 1926.452 Additional requirements applicable to specific types of Scaffolds. Out of various

types of Suspended Scaffoldings specified in OSHA, interior hung scaffolds is specified in 6.5.5(2).

6.5.5 Suspended Scaffoldings

(1) General

(a) Suspended Scaffoldings comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, and with or without hoisting equipment.

(b) The Contractor shall comply to the requirements stipulated for the suspended scaffolds in OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of scaffolds].

(2) The following safety measures shall apply to the interior hung scaffolds which are suspended only from the roof structure or other structural member such as ceiling beams and non-adjustable:

(a) Capacity of interior hung Scaffoldings;

(i) Each scaffold and scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(ii) Each suspension rope, including connecting hardware, used on suspension scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction of interior hung Scaffoldings;

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the scaffold is erected;

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g., strength, durability).

(c) Inspection

(i) The Scaffolding shall be inspected before every work shift and If any abnormality is found, the work shall be stopped.

(ii) Wire ropes, chains, hooks and chains used in the Scaffolding shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment] (4)(a) [Wire ropes], (b) [Chains] and (c)[Hooks, shackles]. If any abnormality is found, they shall be replaced.

(d) Prohibited activity
The use of any ladders or stepladders on suspended Scaffoldings shall be prohibited.

(1) General

(a) Suspended Scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, with or without hoisting equipment; and

(b) Further requirements to those specified above for suspended Scaffolds, shall comply with the provisions of OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of Scaffolds].

(2) The following safety measures shall apply to interior hung Scaffolds which are suspended ~~only~~ from ~~the~~ roof structures, ceiling beams or other structural members. ~~such as ceiling beams and which non-adjustable~~:

(a) Capacity: of interior hung Scaffolds:

(i) Each Scaffold and Scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it; and

(ii) Each suspension rope, including connecting hardware, used on non-adjustable suspension Scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction: of interior hung Scaffolds:

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the Scaffold is erected; and

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g. strength, durability).

(c) Inspection:

(i) Scaffolds shall be inspected before every work shift and If any abnormality is found, the work shall be stopped; and

(ii) Wire ropes, chains, hooks and shackles used in the Scaffolds shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment] (~~4)(a) [Wire ropes], (b) [Chains] and (c)[Hooks, shackles]~~. If any abnormality is found, they shall be replaced.

(d) Prohibited activity

(1) General

(a) Suspended Scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, with or without hoisting equipment; and

(b) Further requirements to those specified above for suspended Scaffolds, shall comply with the provisions of OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of Scaffolds].

(2) The following safety measures shall apply to interior hung Scaffolds which are suspended from roof structures, ceiling beams or other structural members.–

(a) Capacity: of interior hung Scaffolds:

(i) Each Scaffold and Scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it; and

(ii) Each suspension rope, including connecting hardware, used on non-adjustable suspension Scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction: of interior hung Scaffolds:

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the Scaffold is erected; and

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g. strength, durability).

(c) Inspection:

(i) Scaffolds shall be inspected before every work shift and If any abnormality is found, the work shall be stopped; and

(ii) Wire ropes, chains, hooks and shackles used in the Scaffolds shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment]. If any abnormality is found, they shall be replaced.

(d) Prohibited activity

The use of any ladders or stepladders on suspended Scaffolds shall be prohibited.

6.5.6 ~~Tower Scaffolds (including Mobile Tower Scaffolds)~~ (JC116)

JC116a: 移動式足場　内容は全て新?　Is it new specification?
NK1: 7(6).5.5 is prepared based on Japanese 7.5.4 Movable Scaffold.

JC116b: HSE document “Health and safety in construction”, 160 If a tower scaffold is used;を参照されることをお勧めします。同様に、Mobile Tower Scaffolding についても、同じ HSE document の 173 When using MEWPs を参照されること、お勧めします。
We recommend that the HSE document “Health and safety in construction”, 160 If a tower scaffold is used is referred.　Similarly, for Mobile Tower Scaffolding, refer to 173 When using MEWPs in the same HSE document.
NK1: Japanese version was prepared based on HSE.

(1) ~~Tower scaffolds comprise one or more working platforms in a tower structure arrangement, with integral access steps, stairs or ladders and which are usually constructed with prefabricated or specialist system scaffolding and components.~~

(2) ~~The following safety measures shall apply:~~

(a) ~~Provide measures to prevent tower scaffolds from moving, sliding, rocking or settling by ensuring that the base is level and vertical posts are securely founded and equipped with mudsills or other base plate types and measures to distribute the load, screw jacks or other levelling devices and castors;~~

(b) ~~Ensure that all joints are formed with the correct type of fittings or components and that all parts are secure and tightened;~~

(c) ~~Ensure that all tower scaffolds are securely anchored or tied to supporting surfaces;~~ (JC117)

JC117: all tower scaffolds が anchoring/tying される必要がありますか？
Do all tower scaffolds need to be anchoring / tying?
NK1: NK propose to add a condition that anchoring should be performed when used.

(d) ~~Ensure that all scaffolds are securely braced with appropriate beams, trusses, raking and cross bracing to render the scaffold stable and secure for the purpose and in all conditions;~~

(e) ~~Provide working platforms of sufficient dimension and structural capability to perform the required function;~~

(f) ~~Working platforms shall be close boarded with no open joints;~~

(g) ~~All scaffold boards shall be adequately secured to the scaffold structure to prevent any movement, detachment or displacement; and~~

(3) ~~Additional Measures for Mobile Scaffolds~~

(a) ~~Ensure that castors and brakes are of sufficient capability and maintained in full working order; and~~

(b) ~~Ensure that adequate restraints are provided to give additional stability when in use.~~

(4) ~~Safety Measures to apply before relocating Mobile Scaffolds:~~

(a) ~~Check the floor surface in advance to prevent mobile scaffolds from overturning due to any irregularities or obstructions;~~

(b) ~~Move mobile scaffolds only after releasing brakes on all castors;~~

(c) ~~Do not move mobile scaffolds when any workers or Goods are on the scaffold;~~

(d) ~~Ensure that there are no obstructions in the route including any overhead obstructions; and~~

The use of any ladders or stepladders on suspended Scaffolds shall be prohibited.

I have generally not altered your above revised clause (except punctuation and as shown in red fonts) but please note as follows:

If using OSHA terms, the heading and term would read better as “Suspended Scaffolds”.

6.5.7 Mobile Scaffolds

6.5.7 Mobile Scaffolds

(e) ~~Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the moving scaffolds and the vicinity.~~

(5) ~~Ensure that the following measures for example have been taken before any Tower or Mobile Scaffold is put into use:~~

(a) ~~Scaffold is positioned in at the nearest location to the work location so that workers can perform their work safely and without risk of injury or fall;~~

(b) ~~Brakes are activated at all times except during movement.~~

(c) ~~Effectiveness of brakes has been checked before operating.~~

(d) ~~Alternatively, fix ratchet and pawl system to the castors and secure the scaffold to a firm structure.~~

(e) ~~Mobile scaffolds are not used where there are irregularities or slopes, and~~

(f) ~~When outriggers are provided, ensure that there are no abnormalities in the outrigger mounting and ensure that they are extended properly and securely founded.~~

(3) ~~Prohibited activity~~

~~Use of Tower scaffolds shall be prohibited for the following:~~

(a) ~~Use as a support for lifting dropping Goods, debris or waste materials or for dropping same;~~

(b) ~~Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;~~

(c) ~~Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffolds or workers on the scaffold; and~~

(d) ~~Use as floor to support mobile ladders, stepladders, trestles.~~

NK1: 6.5.6 で規定の Tower Scaffolds (including Mobile Tower Scaffolds)を、OSHA 1926.452 Additional requirements applicable to specific types of Scaffolds (w) Mobile scaffolds を参考に、6.5.6 に内容を代えて規定します。

The Tower Scaffolds (including Mobile Tower Scaffolds) is specified in 6.5.6 below referring to OSHA 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

6.5.6 Mobile Scaffoldings

(1) Scaffoldings shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffoldings shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffolding casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffolding while the Scaffolding is used in a stationary manner.

(3) Manual force used to move the Scaffolding shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(4) Power systems used to propel mobile Scaffoldings shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on motors shall not be used to propel scaffolds unless the Scaffolding is designed for such propulsion systems.

(5) Scaffolds shall be stabilized to prevent tipping during movement.

(1) Mobile Scaffolds shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the Scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffolds shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffold casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffold while the Scaffold is used in a stationary manner.

(3) Manual force used to move the Scaffold shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(1) Mobile Scaffolds shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the Scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffolds shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffold casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffold while the Scaffold is used in a stationary manner.

(3) Manual force used to move the Scaffold shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(4) Power systems used to propel mobile Scaffolds shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on

(6) Platforms shall not extend outward beyond the base supports of the Scaffolding unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where leveling of the Scaffolding is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffolding legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffoldings:
- (a) Check the floor surface in advance to prevent the Scaffoldings from overturning due to any irregularities or obstructions;
- (b) Move the Scaffoldings only after releasing brakes on all castors;
- (c) Do not move the Scaffoldings when any workers or Goods are on the scaffold,
- (d) Ensure that there are no obstructions in the route including any overhead obstructions; and
- (e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffoldings and the vicinity.

(10) Prohibited activity

Use of the Scaffoldings shall be prohibited for the following:
- (a) Use as a support for lifting dropping Goods, debris or waste materials or for dropping same;
- (b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
- (c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffoldings or workers on the scaffold; and
- (d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Other requirements than specified in the above, the fabricated frame Scaffolding shall comply the provisions in OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

~~6.5.7 Trestle Scaffolds~~ (JC117)

JC117a: 脚立足場　内容は新 Is it new specification?

NK1:　7.5.9 脚立を用いての作業の際の留意事項脚立足場の英訳です。This is not new. This is Japanese 7.5.9.

JC117b: 漠然と想像は出来ますが、OSHA1926.451-General requirements を参照しても見つかりません。参考にした資料の開示をお願いします。I can vaguely imagine it, but I can't find it by looking at OSHA1926.451-General requirements. Please disclose the reference materials.

NK1: It is specified in OSHA.

(4) Power systems used to propel mobile Scaffolds shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on motors shall not be used to propel Scaffolds unless the Scaffold is designed for such propulsion systems.

(5) Scaffolds shall be stabilised to prevent tipping during movement.

(6) Platforms shall not extend outward beyond the base supports of the Scaffold unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where levelling of the Scaffold is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffold legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffolds:
- (a) Check the floor surface in advance to prevent the Scaffold from overturning due to any irregularities or obstructions;
- (b) Move the Scaffold only after releasing brakes on all castors;
- (c) Do not move the Scaffold when any workers or Goods are on the Scaffold;
- (d) Ensure that there are no obstructions in the route including any overhead obstructions; and
- (e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffold or in the vicinity.

(10) Prohibited activity

Use of the Scaffolds shall be prohibited for the following:
- (a) Use as a support for lifting ~~dropping~~ Goods, debris or waste materials or for dropping same; (NK deleted.)
- (b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
- (c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffold or workers on the Scaffold; and
- (d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Further requirements to those specified above shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

I have generally not altered your above revised clause (except punctuation and as shown in red fonts) but please note as follows:

No need plural "scaffoldings". The heading and term would be more correct as "Mobile Scaffolds" not Scaffolding

"Distortion" may be a more internationally understandable word than "racking"

6.5.8 Trestle Scaffolds

motors shall not be used to propel Scaffolds unless the Scaffold is designed for such propulsion systems.

(5) Scaffolds shall be stabilised to prevent tipping during movement.

(6) Platforms shall not extend outward beyond the base supports of the Scaffold unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where levelling of the Scaffold is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffold legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffolds:
- (a) Check the floor surface in advance to prevent the Scaffold from overturning due to any irregularities or obstructions;
- (b) Move the Scaffold only after releasing brakes on all castors;
- (c) Do not move the Scaffold when any workers or Goods are on the Scaffold;
- (d) Ensure that there are no obstructions in the route including any overhead obstructions; and
- (e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffold or in the vicinity.

(10) Prohibited activity

Use of the Scaffolds shall be prohibited for the following:
- (a) Use as a support for lifting Goods, debris or waste materials or for dropping same;
- (b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;
- (c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffold or workers on the Scaffold; and
- (d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Further requirements to those specified above shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

6.5.8 Trestle Scaffolds

https://www.osha.gov/SLTC/etools/scaffolding/supported/specialty.html#Step_Platform_and_Trestle_Ladder_Scaffolds
Step, Platform, and Trestle Ladder Scaffold

(1) ~~Trestle scaffolds can comprise:~~
  (a) ~~Special proprietary type free-standing trestle platforms; or~~
  (b) ~~LWS as specified in JSSS 6.5.5 [*Suspended Scaffold*] or scaffold boards or supported on stepladders or other tripod type portable ladders.~~
(2) ~~For requirements on Stepladders refer to JSSS 6.4.4 [*Portable Ladders and Stepladders*].~~
(3) ~~The following safety measures shall apply:~~
  (a) ~~The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the LWS or scaffold boards shall be at least 0.45m.~~
  (b) ~~If timber scaffold boards are used, the overlap between boards shall be at least 20cm.~~
  (c) ~~The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards (unless otherwise approved by the HSO).~~

JC1: 和文の規定をもとに作成した英文案を次のように推敲しました。
Trestle Scaffoldings is specified in 6.5.7 based on the Japanese version above.

6.5.7 Trestle Scaffoldings

(1) Trestle Scaffoldings can comprise:
  (a) Special proprietary type free-standing trestle platforms; or
  (b) Scaffold boards or supported on stepladders or other tripod type portable ladders.

NK: 架台(ウマ)を指す。

(2) For requirements on Stepladders refer to JSSS 6.4.4 [*Portable Ladders and Stepladders*].
(3) The following safety measures shall apply:
  (a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the scaffold boards shall be at least 45 cm.
  (b) Scaffoldings' platforms shall not be placed any higher than the second highest rung or step of the ladder supporting the platform.
  (c) If timber scaffold boards are used, the overlap between boards shall be at least 20cm.
  (d) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

(1) Trestle Scaffold~~s~~ can comprise:
  (a) Special proprietary type free-standing trestle platforms; or
  (b) Scaffold boards or lightweight staging boards supported on stepladders or other tripod type portable ladders.
(2) For requirements on Stepladders refer to JSSS 6.4.5 [*Portable Ladders and Stepladders*].
(3) The following safety measures shall apply:
  (a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the Scaffold boards shall be at least 45 cm;
  (b) Scaffold boards ~~platforms~~ shall not be placed any higher than the second highest rung or step of the ladder supporting the platform;
  (c) If timber Scaffold boards are used, the overlap between boards shall be at least 20cm; and
  (d) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

(1) Trestle Scaffolds can comprise:
  (a) Special proprietary type free-standing trestle platforms; or
  (b) Scaffold boards or lightweight staging boards supported on stepladders or other tripod type portable ladders.
(2) For requirements on Stepladders refer to JSSS 6.4.5[*Portable Ladders and Stepladders*].
(3) The following safety measures shall apply:
  (a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the Scaffold boards shall be at least 45 cm;
  (b) Scaffold boards shall not be placed any higher than the second highest rung or step of the ladder supporting the platform;
  (c) If timber Scaffold boards are used, the overlap between boards shall be at least 20cm; and
  (d) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

6.5.8 Notices to be Displayed on Scaffolds (JC118)

In addition to any notices for use following inspections by HSO, the Contractor shall display a notice indicating the maximum load capacity of each scaffold, together with the name of the person responsible for inspection and maintenance of the scaffold.

All notices shall be clearly visible and in easy-to-see locations.

JC118: HSO の役割について再度討議することが必要ではないか。HSO は作業を中断するなど安全に関してはプロマネよりも強い権限を持つ。ここでは Scaffolds を検査して証明するような施工に密着したロールを持たせている。自分が証明したものに対して自分で使用停止するようなロールでは機能しないと考えるが、いかが。
I think it is necessary to discuss the role of HSO again. HSOs have greater authority than professional managers regarding safety issue such as suspending work.
Here, the HSO has a role that is deeply involved in construction procedure such as inspecting and proving Scaffolds. However, the role the present stipulation indicates that stops the use of what the HSO have proven himself will not work as a mechanism. How about this?
JC1: The duty of HSO is discussed in Chapter 1, so no modify is made.

6.5.9 Scaffold Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of scaffolding tubes, couplings, fittings or components and other materials and equipment. (JC119)

JC119: MM: 意味が理解できない。 Cannot understand what it means.
JC1: 足場材の仮置き場の設置を規定しています。
The meaning is as mentioned above. No modification is made.

(4) All workers engaged assembly or erection, alteration and dismantling of any scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) ~~Scaffold boards shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage.~~

(6) ~~Working platforms shall be at least 45cm wide~~. (JC120)

JC120: 40cm では？ Is it 40cm?
NK1: The platforms width is 40 cm in Japan, 60cm in UK and 18 inches (45.7 cm) in OSHA.
The provisions for Scaffoldings in JSSS are mostly referred to OSHA, therefore rounded width of 45 cm from 45.7 cm is used.

I have generally not altered your above revised clause (except punctuation and as shown in red fonts) but please note as follows:

No need plural "scaffoldings"

The heading and term would be more correct as "Trestle Scaffolds" not Scaffolding

~~6.5.9 Notices to be Displayed on Scaffolds~~

Clause transferred to 6.5.3 above and expanded.

6.5.9 Scaffolding Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of Scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.

6.5.9 Scaffolding Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of Scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.

NK1: The quality and width are specified in 6.5.3 Platform of Scaffolding (1) (a) and (2), respectively, so (5) and (6) are deleted.

(7) ~~The clearance between planks shall not exceed 3 cm and the clearance between floors and standards shall not exceed 12cm.~~ (JC121)

JC121:??
NK1: The spaces of 2.5 cm and 24 cm are specified in 6.5.3 Platform of Scaffolding (1) (b) and (c), so (7) is deleted.

(8) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support to with no movement, dislocation and no gaps that mat create a dropping hazard.

(9) When moving scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the scaffolding boards.

(10) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.11 General Inspection and Maintenance of Scaffolding (JC126)

JC126: この節では HSO がアクティブな役割を負担している。staff とした方がいいのでは?
In this section the HSO has an active role. Wording as "staff" is better?
NK1: Duty of HSO is discussed in Chapter 1, so it is left.

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every scaffold from which a person could fall 2m or more must be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared and kept by the HSO.

(3) The thorough examination and regular inspections shall include: (JC127)

JC127: 下記の事項が良く理解できない
MM: The following items cannot be understood well.
JC1:(MD) There are a number of items listed most of which are excluded from the NK draft which I suggest are necessary.
Please review and advise what is required.

(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.

(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.

(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

I suggest that the following 6.5.10 is moved to here. It is at the end of your draft but it is actually a general scaffolding requirement similar to the above. It is then followed by the hoist which is really a stand-alone subclause already including its own inspection and maintenance. (NK agreed.)

6.5.10 General Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.

(3) The examinations and regular inspections shall include:

(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.

(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.

(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.10 General Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.

(3) The examinations and regular inspections shall include:

NK1: Modified them and discuss with JICA.

(a) Check if the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design.

(b) ~~Check the structural condition of the Scaffold and of any deterioration, defect or damage~~

(c) Check if the bracing, crossing ties, toe boards, handrails and mid-rails (JC128) which are provided are not missing.

JC128: 前項 7.5.4 でコメント済み。Commented already in 7.5.4
NK1: Cannot understand the comment.

(d) Check items include:

(i) Condition of working platforms and of any damage to fixings;

(ii) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(iii) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

(iv) Fall prevention facilities are intact and secure;

(v) Condition of mountings and presence of toe boards;

(vi) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(vii) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials;

(viii) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

~~6.5.11 Mobile Elevating Work Platforms~~ (JC122)

JC122: 前項 7.5.5 で including Mobile Tower Scaffolds として扱っていますが、本項との区別が付きにくいです。確認願います。
Although it is treated as Mobile Tower Scaffolds in the previous section 7.5.5, it is difficult to distinguish from this section. Please check.
NK1: 移動足場(Mobile Tower Scaffolds)と高所作業車(mobile elevating work platforms/aerial lifts)を、それぞれ 6.5.5 と 6.5.11 に規定します
Tower Scaffolds (including Mobile Tower Scaffolds) is specified in 6.5.5 Mobile Scaffoldings. Mobile elevating work platforms/aerial lifts is specified in 6.5.11. The term of mobile elevating work platforms is used in UK and that is aerial lifts in OSHA. The both terms are stipulated in 6.5.11.
NK1: 6.5.11 は、OSHA 1926.453 Aerial lifts を参考に全体的に変更しました。
Revised overall including OSHA provisions in 1926.453 Aerial lifts.

This section specifies for the mobile elevating work platforms (aerial lifts) including extensible boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Condition of working platforms and of any damage to fixings;

(c) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

(e) Fall prevention facilities are intact and secure;

(f) Condition of mountings and presence of toe boards;

(g) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(h) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and

(i) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

6.5.11 Mobile Elevating Work Platforms

(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Condition of working platforms and of any damage to fixings;

(c) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

(e) Fall prevention facilities are intact and secure;

(f) Condition of mountings and presence of toe boards;

(g) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(h) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and

(i) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

6.5.11 Mobile Elevating Work Platforms

The following safety measures shall apply for placing and operating mobile elevating work platforms:

(1) ~~Only trained Contractor's Personnel, certified as such by the HSO~~ (JC123) ~~shall be permitted to operate and all operation shall carry out in accordance with the manufacturer's written instruction.~~

JC123: HSO が certify する？HSO は Safety System が機能しているかを確認する立場では？
Does HSO certifies? I think the role of HSO is to check whether the Safety System is working.
NK1: Duty of HSO is discussed in Chapter 1, so it is left.

(2) ~~Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment.~~

(3) ~~Take necessary measures avoid overturning including fully extending outriggers and preventing uneven settling of the ground.~~

(4) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry – Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel.

(5) ~~Do not switch off or isolate any safety devices.~~

(6) ~~Drive only after lowering the working platform to the specified lowest descent position.~~

(7) ~~In the case of any mobile elevating work platform that is not operated remotely from the working platform, the equipment shall never be driven with a worker on the working platform.~~

(8) ~~In the case of any mobile elevating work platform that is operated remotely from the working platform, the equipment shall never be driven on unlevel surfaces, soft or weak ground.~~

(9) ~~In the case of any mobile elevating work platform that is not operated remotely from the working platform, the following measures shall be taken when driving the equipment:~~ (JC124)

JC124: (7)～(9)よく意味が分かりません。
MM: Cannot understand (7) to (9).
JC1: Modified and deleted.

(a) ~~Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*],~~

(b) ~~Determine signals in accordance with JSSS 2.4.5 [*Signals*], and~~

(c) ~~Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.~~

(10) ~~When leaving the operating position and when work is not continuing or stopped the operator shall:~~

(a) ~~Put the working platform in the lowest position~~

(b) ~~Stop the prime engine/motor~~

(c) ~~Apply the parking brake securely and ensure the equipment is securely parked.~~

(11) ~~If a worker is working on the working platform or is about to work, ensure that the parking brake is securely applied.~~

(12) ~~When using the mobile elevating work platform, workers shall be positioned only on the passenger~~ seat (JC125) ~~or on the working platform.~~

JC125: passenger seat は余分 I think it is not necessary for passenger seat?
NK: Agree. Deleted (12).

(13) ~~Working Platform Operation~~
~~When operating the working platform at a place other than the structure or building floor, ensure communication is possible between the worker on the working platform and the person operating the working platform.~~
~~Establish the necessary signals and locate a Spotter in accordance with JSSS 2.4 [*Spotters, Flagmen and the Like*].~~

(14) ~~Working on the Working Platform~~
(a) ~~Have workers use PPE including PFRS;~~
(b) ~~Prohibit workers from take dangerous actions such as moving from the working platform to a steel structure, standing on and working from handrail, and~~
(c) ~~Stop work at a height of 2m or more in case of adverse weather in accordance with JSSS 2.7 [Adverse Weather Requirements].~~

(15) ~~Inspection and maintenance of mobile elevating work platform~~

Following to be coordinated later with Section 4
(a) ~~Carry out inspection of mobile elevating work platform in accordance with JSSS 4.1.5 [*Inspection and Maintenance*] and JSSS 4.2.1 [*Inspection and Maintenance*],~~
(b) ~~Repair work of mobile elevating work platform and installation/removal of its working platform shall be carried out following JSSS 4.2.5 [*Safety Measures during Inspection and Maintenance Work*] and JSSS 4.2.6 [*Safety measures at Installation and Removal Work of Attachments, etc.*].~~

NK: after finalization of Chap. 4, reference no. shall be adjusted.

(16) ~~Prohibition of use for other purposes~~
~~Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.~~

6.5.10 Mobile Elevating Work Platforms

This section specifies for the mobile elevating work platforms (aerial lifts) including extensible boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

The following safety measures shall apply for placing and operating mobile elevating work platforms:

(1) General

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate the mobile elevating work platforms in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel.

(b) All operation shall be carried out in accordance with the manufacturer's written instruction.

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment.

(d) Any safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [Prohibition of Entry - Dangerous Work],

This Subclause specifies requirements for mobile elevating work platforms (also known as aerial lifts) including extendable boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

(1) The following safety measures shall apply for placing and operating mobile elevating work platforms:

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel];

(b) All operation shall be carried out in accordance with the manufacturer's written instructions;

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment; and

(d) Safety devices shall not be switched off or isolated.

This Subclause specifies requirements for mobile elevating work platforms (also known as aerial lifts) including extendable boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

(1) The following safety measures shall apply for placing and operating mobile elevating work platforms:

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel];

(b) All operation shall be carried out in accordance with the manufacturer's written instructions;

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment; and

(d) Safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry - Dangerous Work*], demarcate work areas and take measures to prevent entry to

demarcate work areas and take measures to prevent entry to unauthorised personnel.

(b) Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [Spotters, Flagmen and the like],

(c) Determine signals in accordance with JSSS 2.4.5 [Signals], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set.

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed.

(c) When outriggers are used, they shall be positioned on pads or a solid surface.

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Have workers use PPE including PFRS;

(c) Prohibit workers from take dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail,

(d) When the mobile elevating work platform has both platform (upper) and lower controls. Upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency,

(e) When leaving the operating position and when work is not continuing or stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor;

(iii) Apply the parking brake securely and ensure the equipment is securely parked; and

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [Adverse Weather Requirements].

(5) Measures of moving mobile elevating work platform

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry - Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel;

(b) Place a Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*] ~~and who can request help and lower the working platform should the operator be incapacitated and if somebody does fall, have an escape or recovery plan in place before hand;~~ (NK: The added part is different from requests to Spotter in other Chapters such as Contractor's equipment, so the added part is deleted.)

(c) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set;

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed;

(c) When outriggers are used, they shall be positioned on pads or a solid surface; and

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Workers shall use PPE including PFRS;

(c) Workers shall be prohibited from taking dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail;

(d) When the mobile elevating work platform has both platform (upper) and lower controls, the upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency;

(e) When leaving the operating position and when work is not continuing or stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor; and

unauthorised personnel;

(b) Place a Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*];

(c) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set;

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed;

(c) When outriggers are used, they shall be positioned on pads or a solid surface; and

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Workers shall use PPE including PFRS;

(c) Workers shall be prohibited from taking dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail;

(d) When the mobile elevating work platform has both platform (upper) and lower controls, the upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency;

(e) When leaving the operating position and when work is not continuing or stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor; and

(iii) Apply the parking brake securely and ensure the equipment is securely parked.

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [*Adverse Weather Requirements*].

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation.

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(a) Carry out inspection of mobile elevating work platform in accordance with JSSS 4.1.5 [Inspection and Maintenance] and JSSS 4.2.1 [Inspection and Maintenance],

(b) Repair work of mobile elevating work platform and installation/removal of its working platform shall be carried out following JSSS 4.2.5 [Safety Measures during Inspection and Maintenance Work] and JSSS 4.2.6 [Safety measures at Installation and Removal Work of Attachments, etc.].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

(iii) Apply the parking brake securely and ensure the equipment is securely parked.

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [*Adverse Weather Requirements*].

(5) Measures of moving mobile elevating work platform

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation; and

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(a) Carry out inspection in accordance with JSSS 4.2 [*Requirements Generally*]; and

(b) Carry out maintenance, repair and installation/removal of the working platform in accordance with JSSS 4.2.2 [*Defects and Repair During Operation*], JSSS 4.3.3 [*Safety Measures During Cleaning, Inspection and Maintenance*] and JSSS 4..3.6 [*Safety Measures During Connection of Attachments*].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

(5) Measures of moving mobile elevating work platform

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation; and

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(a) Carry out inspection in accordance with JSSS 4.2 [*Requirements Generally*]; and

(b) Carry out maintenance, repair and installation/removal of the working platform in accordance with JSSS 4.2.2 [*Defects and Repair During Operation*], JSSS 4.3.3 [*Safety Measures During Cleaning, Inspection and Maintenance*] and JSSS 4..3.6 [*Safety Measures During Connection of Attachments*].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

6.6 ELEVATED ACCESS STRUCTURES (JC129)

JC129: この英語訳でいいですか？？
MM: Is this expression of elevated access structures appropriate?
NK1: MD think so yes, there is no international standard wording and MD developed it. It has functional meaning in three words.
MD considers it is necessary to define this and has included in Annex 1.1 (issue 7) as follows:
(7) "Elevated Access Structures" means substantial, elevated, temporary working areas, usually comprised of structural steel columns, beams, framing and floor decking and used for performing work at sites with difficult access or with restricted room for construction operations or steeply sloping or offshore sites.
Result: Leave as it is

6.6.1 General

Elevated Access Structures (as defined in JSSS Annex 1.1) (JC131) act as an access, parking, temporary working and storage area and to accommodate Contractor's Equipment, Goods and temporary facilities to permit the construction operations to be performed from the Elevated Access Structures ~~on an immediately underlying or adjacent~~ (JC132) in the Site. (JC130)

JC130: もう少し的確に表現しないと意味が伝わりません。
Unless otherwise described a little more properly, the meaning will not be understood. Proposed as below.
"act as a temporary working platform for heavy-usage such as a working platform for heavy machineries, a concrete mixing plant or a considerable large storage area. It is in some case, a part access bridge to the working area."

6.6 ELEVATED ACCESS STRUCTURES

6.6.1 General

Elevated Access Structures act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site.

Please note that because of access restrictions, these structures can be over or along the side of the new works and therefore the wording "underlying or adjacent" is correct.

6.6 ELEVATED ACCESS STRUCTURES

6.6.1 General

Elevated Access Structures act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site.

NK1: NK considers the sentence is understandable by adding some words.
The working platforms are used in UK for work at height for example scaffold as shown below. To avoid the same term used for work at height, the proposed term of Elevated Access Structures is better to be used.
The Work at Height Regulations 2005、OSHA, UK defines as “working platform”—
(a) means any platform used as a place of work or as a means of access to or egress from a place of work;
(b) includes any scaffold, suspended scaffold, cradle, mobile platform, trestle, gangway, gantry and stairway which is so used.
MD will review the above comment and modify id necessary.

JC131: 作業構台のことと思いますが、Annex 1.1 には見当たりません。英訳の難しいところとも考えられますが、MD さんがこれを理解している、と考えてよいのでしょうか？
I think it is a work gantry, but I can't find it in Annex 1.1. It may be difficult to translate into English, but can you think that MD understands this?
NK1: “Elevated Access Structures” is defined in JSSS Annex 1.1 (7). MD understood its meaning as NK showed photos for it.

JC132: adjacent “Site”は妙です。発注者が規定した Site の中に構築されるものです。”working area”は”Site”の中に設定されるべきものです(GC 1.1.6.7 “Site”参照ください)。水域上の working area も、Site の中に設営されます。以下この錯誤による規定の矛盾が散見されるようです。改善ください。
Adjacent “Site” is strange. It is built in the Site specified by the Employer. “Working area” should be set in “the Site” (refer to GC 1.1.6.7 “Site”). The working area over the water area is also set up in the Site. It seems that inconsistencies in the rules due to this misunderstanding are seen below. Please improve them.
NK1: Modified.

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1 [*Design and Provision of TW Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.~~33~~35 [*Contractor’s Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) JSSS 1.~~35~~ 37 [*Design and Management of Temporary Works*]

~~(c) JSSS 2.5 [*Fall Prevention*]~~

~~(d) JSSS 2.6 [*Falling Objects*];~~

JC1: (a) and (b) are left and others are deleted because they are general requirements.

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where an Elevated Access Structures is being erected, altered or removed as Dangerous Areas, and the Contractor shall enclose the working area where possible with temporary fences or barriers, prevent entry of any non - authorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (JC133)

JC133: Comment 7.6.1 に同じです。Site の確保方法は発注者が仕様書・図面などで

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1 [*Design and Provision of Temporary Works Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.35 [Contractor’s Equipment, Temporary Works, Safety Equipment and PPE]; and

(b) JSSS 1.37 [Design and Management of Temporary Works].

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where any Elevated Access Structures are being erected, altered or removed as Dangerous Areas and enclose the working area where possible with temporary fences or barriers, prevent entry of any unauthorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work];*

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1[*Design and Provision of Temporary Works Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.35 [Contractor’s Equipment, Temporary Works, Safety Equipment and PPE]; and

(b) JSSS 1.37 [Design and Management of Temporary Works].

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where any Elevated Access Structures are being erected, altered or removed as Dangerous Areas and enclose the working area where possible with temporary fences or barriers, prevent entry of any unauthorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work];*

設置場所・使用を規定しておくべきことです。水域上の Site についても同様です。
Same as comment for adjacent Site. The method of securing the site should be such that the Employer should specify the installation location and use in the specifications and drawings. The same goes for Sites on water area.
NK1: 架設構台の建設現場は、2.3 に規定の危険な作業地域に指定して安全対策を取ることを規定しています。建設現場は、7.6.1 で in the Site と規定していますので、(a)の変更は不要です。
This clause specifies to designate the site as Dangerous Areas and take safety measures following JSSS 2.3 [Prohibition of Entry - Dangerous Work]. The construction of Elevated Access Structures is made in the Site as specified in 7.6.1. Therefore, no modification is made.

(b) ~~Implement safety measures for lifting and slinging work in accordance with JSSS~~ 6 [*Lifting and Slinging Work*].

NK1: This is a general requirement, so it may be deleted.
MD: To be coordinated with JSSS 6 later. Rigging?
The following is not necessary it is already a requirement of JSSS 1.13 [Contractor's Safety Management Activities]

(c) Use of Measures to prevent Vehicles from falling

The Contractor shall provide and fix continuous "W" Section, (JC134) heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor's Equipment, to prevent such vehicles or Contractor's Equipment from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor's Equipment are working or parking to prevent the vehicles or Contractor's Equipment accidentally moving and colliding with the crash barrier.

All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

JC134: 路面をギザギザにすることでしょうか？
MM: Does this expression mean the road surface to be jagged?
JC1: It means steel crash barriers.
Result: Leave it as it is.

(d) Use of Measures to prevent collision with Marine Vessels

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe

(b) Use of Measures to prevent Vehicles from falling;

The Contractor shall provide and fix continuous "W" Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor's Equipment, to prevent such vehicles or Contractor's Equipment from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor's Equipment are working or parking to prevent the vehicles or Contractor's Equipment accidentally moving and colliding with the crash barrier.

All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

(c) Use of Measures to prevent collision with Marine Vessels;

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe working

(b) Use of Measures to prevent Vehicles from falling;

The Contractor shall provide and fix continuous "W" Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor's Equipment, to prevent such vehicles or Contractor's Equipment from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor's Equipment are working or parking to prevent the vehicles or Contractor's Equipment accidentally moving and colliding with the crash barrier.

All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

(c) Use of Measures to prevent collision with Marine Vessels;

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe working

working load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load.

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate any Elevated Access Structures during use as Dangerous Areas and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS 6.4.2 [*Walkways*] (JC135),

JC135: pedestrian walkway としてください。
Change it to "Pedestrian walkway", please.
NK1: The walkways are specified in 6.4.1 as follows.
6.4.1 General
(1) This Section comprises safety measures relating to the movement of persons to and around the Site and includes temporary walkways, pedestrian bridges, portable ladders and stepladders.
To make term consistent, "walkway" is used. Leaved as it is.

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the sea, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS (JC136) to workers at construction and removal of Elevated Access Structures, where appropriate.

JC136: 高所作業の時なので、基本的には組立・撤去時か？まとめて Abbreviations を記載することが必要
Since they are the systems for working at heights, basically should it be specified that it be supplied at the time of assembly and removal? Abbreviations must be described together.
NK1: Definitions of two terms are specified in Chapter 1, A1.1.2 (17) and (18).

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure must be thoroughly examined by the ~~HSO~~ (JC137) ~~(or his delegated assistant)~~:

JC137: the Contractor でいいのでは？ Better to "the Contractor"?
NK1: The duty of HSO is discussed in Chapter 1, so no modify is made.

(a) Before it is brought into use;

load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load.

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate all work to and on any Elevated Access Structures and during use, as Dangerous Work and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS 6.4.2 [*Walkways*],

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the sea, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS to workers where appropriate including those engaged in the construction and removal of the Elevated Access Structures.

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure shall be thoroughly examined by the HSO:

(a) Before it is brought into use;

load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load.

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate all work to and on any Elevated Access Structures and during use, as Dangerous Work and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS 6.4.2 [*Walkways*],

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the sea, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS to workers where appropriate including those engaged in the construction and removal of the Elevated Access Structures.

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure shall be thoroughly examined by the HSO:

(a) Before it is brought into use;

(b) After any substantial alteration or extension; (c) At least once in every 7 days (JC138); and JC138: 必ずしも毎週仮設構台を確認する必要はないと考えます。デック、手すり、輪留めくらい？ MM: It is not necessary to check the Elevated Access Structure every week. Check might be made on the decks, handrails, car stops? JC1: If that is your instruction I will change, however, please note that the extent of weekly inspection is variable. Considering the requirements of (4) below, I would recommend that a check at least on a weekly basis (particularly settlement) is very necessary. If it is not a weekly check, what is the suggested frequency? Results: Leave it as it is. (d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety. (2) A written record of the thorough examination and the regular inspections and details of any repair measures must be prepared by the HSO (JC139). JC139:HSO ??? NK1: The duty of HSO is discussed in Chapter 1, so no modify is made. (3) The thorough examination and regular inspections shall include: (a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design. (b) Check items include: (i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement; (ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and (iii) All other requirements of this Section are still being complied with. (4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.	(b) After any substantial alteration or extension; (c) At least once in every 7 days; and (d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety. (2) A written record of the examination and regular inspections and details of any repair measures shall be prepared by the HSO. (3) The examination and regular inspections shall include: (a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design; (b) Check items include: (i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement; (ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and (iii) All other requirements of this Section are still being complied with. (4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.	(b) After any substantial alteration or extension; (c) At least once in every 7 days; and (d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety. (2) A written record of the examination and regular inspections and details of any repair measures shall be prepared by the HSO. (3) The examination and regular inspections shall include: (a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design; (b) Check items include: (i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement; (ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and (iii) All other requirements of this Section are still being complied with. (4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.
6.7 TEMPORARY ELECTRICAL INSTALLATIONS To MD: I found the following document you might referred to for this Section in HSE. May I know titles of other document for my reference in future. 1) HSE Safety Topics: Electricity - Systems in buildings https://www.hse.gov.uk/construction/safetytopics/systems.htm 2) HSE HSG85 (Third edition) Published 2013 Electricity at work: Safe working practices https://www.hse.gov.uk/pubns/books/hsg85.htm 3) HSE: Guidance: The Electricity at Work, Regulations 1989 https://www.hse.gov.uk/pubns/priced/hsr25.pdf To MD: Comments in this Section are marked as follows: JICA : sentences in yellow highlighted NK: sentences in blue highlighted **6.7.1 General**	**6.7 TEMPORARY ELECTRICAL INSTALLATIONS** **6.7.1 General**	**6.7 TEMPORARY ELECTRICAL INSTALLATIONS** **6.7.1 General**

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

NK1: Added relocation, repair mentioned in Japanese version.

(2) As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation.

NK1: Is this necessary mention “less than permanent”?

Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations ~~must~~ shall be designed, installed, inspected, tested, altered and removed by Contractor’s Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.~~16~~18 [*Proper Placement of Contractor’s Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor must shall take precautions against the risk of death or injury from electricity during construction work. Refurbishment work in existing buildings presents the greatest risk and all ~~must~~ shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.

(5) The temporary electrical installations and all equipment used ~~must~~ shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

NK1: “must” and “shall” are used above, can we use all only “shall”?

6.7.2 Compliance Standards

By reference to JSSS 1.4 [*JSSS ~~Laws and Reference Standards~~ Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

NK1: Is it necessary to stipulate section no. 1926.405??

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers ~~who are~~ who are not electricians but who are carrying out other works, ~~such as plumbers and joiners~~ by taking appropriate measures including the following:

(1) Understanding the system

(a) Ensure that ~~those~~ Contractor’s Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

(2) As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation.

https://www.osha.gov/laws-regs/interlinking/standards/1926.405(a)(2)(i)

OSHA allows this to be a class less than the permanent works, which seems reasonable as this is only for temporary use

Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations shall be designed, installed, inspected, tested, altered and removed by Contractor’s Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor’s Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor shall take precautions against the risk of death or injury from electricity during construction work. Refurbishment work in existing buildings presents the greatest risk and all shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.

(5) The temporary electrical installations and all equipment used shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

6.7.2 Compliance Standards

Changed in 2.5 therefore for consistency to be changed everywhere;

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Temporary Electrical Installations complying with the technical requirements specified in OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers who are not electricians but who are carrying out other works, by taking appropriate measures including the following:

(1) Understanding the system

(a) Ensure that Contractor’s Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

(2) As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation.

Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations shall be designed, installed, inspected, tested, altered and removed by Contractor’s Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor’s Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor shall take precautions against the risk of death or injury from electricity during construction work. Refurbishment work in existing buildings presents the greatest risk and all shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.

(5) The temporary electrical installations and all equipment used shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

6.7.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Temporary Electrical Installations complying with the technical requirements specified in OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers who are not electricians but who are carrying out other works, by taking appropriate measures including the following:

(1) Understanding the system

(a) Ensure that Contractor’s Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where

understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe.	any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe; and	any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe; and
(b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or the execution of any part of the Works by any tradesmen (JC140) is liable to disturb or damage the existing electrical system and expose ~~persons~~ workers to electrical danger.	(b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or if the execution of any part of the Works is liable to disturb or damage the existing electrical system and expose persons to electrical danger.	(b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or if the execution of any part of the Works is liable to disturb or damage the existing electrical system and expose persons to electrical danger.

NK1: The sentence (b) is long and difficult to understand. Can you simplify this sentence and also review terms?

JC140: electrician? Who?

NK1: tradesman は熟練工員、職人の意味であり、electrician(電気技師，電気工)を含みます。下記の英英辞典と OSHA の用語を参照願います。

A. in https://dictionary.cambridge.org/

1) “tradesmen” means someone who works in a trade that needs skill at using your hands, usually in the building industry.

2) “trade” means a job, especially one that needs special skill, that involves working with your hands: (‧She went to college to learn a trade.)　the people who work in a particular business or industry or in the same one:

3) “electrician” means a person who puts in, checks, and repairs electrical wires and electrical equipment

B. OSHA: Subpart K-Electrical

Qualified person: One familiar with the construction and operation of the equipment and the hazards involved.

(2) Portable electrical equipment	(2) Portable electrical equipment	(2) Portable electrical equipment
(a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works. The Contractor shall use cordless tools, other suitable for external use under Site conditions. (JC141)	(a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works; (b) The Contractor shall use cordless tools or other tools suitable for external use under Site conditions; and	(a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works; (b) The Contractor shall use cordless tools or other tools suitable for external use under Site conditions; and

JC141: proposed to modify to “cordless tools or other suitable tools for external”

NK1: Modify it as indicated.

(b) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) (JC141) supply system so that the maximum voltage to earth does not exceed 55V.	(c) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.	(c) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.

JC141: 分からないので確認してください。

Please check the CTE because I cannot understand its meaning.

NK1: （1） CTE は、変圧器の設置方式の一つで、移動式電動器具の安全な配電方式として一般的に使用されていると次に説明があります。

The CTE is one of earth systems in transforms and very common in electrical distribution systems and site safety operations explained in the following web:
https://www.gstransformers.com/technical/110v-centre-tap-earth-55v-0v-55v.html
移動式電動器具のための CTE 方式では、安全のために漏電遮断器が併用されていると記述が上の記事にあります。
CTE system for portable tools are usually installed with residual-current device (RCD) for safety reasons.

(2) BS の低電圧への変電に関する規定

BS 7671:2018 Requirements for Electrical Installations. IET Wiring Regulations(入手済)
411.8 Reduced low voltage systems　411.8.1 General
411.8.1.2 The nominal voltage of the reduced low voltage circuits shall not exceed 110 V AC rms between lines (three phase 63.5 V to earthed neutral, single phase55 V to earthed midpoint).

（3）HSE Safety Topics
https://www.hse.gov.uk/construction/safetytopics/systems.htm

Electricity - Systems in buildings, Portable electrical equipment
Tools, plugs and cables designed for DIY (do-it-yourself） and domestic use are not suitable for site conditions.
You should use cordless tools or those that operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.
感電事故防止のために、低圧電圧を 3 相と単相で規定しています。内容は妥当です。
The Regulation specifies low voltage for 3 phases and single phase. I cannot understand perfectly, however the stipulation (b) is correct.

(c) ~~Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.~~

NK1: (c) is common requirement, so (c) can be moved to (7). To MD; Can you confirm this moving?

(3) Residual current (trip) devices

(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault.

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply.

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(d) ~~Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.~~

NK1: (d) is common requirement, so (d) can be moved to (7). To MD, Can you confirm this moving?

NK1: Reference for RCD: 参考：漏電遮断器
https://ja.wikipedia.org/wiki/%E6%BC%8F%E9%9B%BB%E9%81%AE%E6%96%AD%E5%99%A8
漏電遮断器または漏電ブレーカー（Earth Leakage Circuit Breaker : ELCB・ELB・ECB、Ground-Fault Circuit Interrupter : GFCI、Residual Current Circuit Breaker : RCCB、Residual Current Device : RCD）とは、漏電による漏れ電流を検出して回路を自動的に遮断する機能をもつ遮断器である。 通常の配線用遮断器が過負荷や短絡による過電流から回路を保護しているのに対し、漏電遮断器は地絡による感電を防止する目的で回路に設けられる。ただし、殆どの製品では過電流遮断機能が付いている。

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems ~~must~~ shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

(7) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then

(d) ~~Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.~~

Moved to (7)_ below

(3) Residual current (trip) devices

(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault;

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply; and

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(d) ~~Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.~~

Moved to (8)_ below

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

Moved from above:

(7) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(3) Residual current (trip) devices

(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault;

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply; and

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

every month, records of these checks shall be kept.

NK1: (c) and (d) above are moved to (7).

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the power authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(1) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(2) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

(3) ~~Unless otherwise agreed,~~ the HSO ~~or the same person in charge~~ shall be responsible for daily and periodical inspection and maintenance and for reporting the result of such inspections to ~~the HSO and~~ Engineer in the Monthly Safety Report.

NK1: May I know what is assumed by "Unless otherwise agreed".
NK1: The stipulation of the HSO's duty regarding inspection should be consistence with other Sections.
To MD; please review and modify them.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(8) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the relevant authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(1) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(2) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

(3) ~~The HSO or the person in charge shall be responsible for daily and periodical inspection and maintenance and for reporting the result of such inspections to the HSO and Engineer in the Monthly Safety Report.~~

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(7) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(8) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the relevant authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(1) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(2) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of

(c) Record the inspection results.

(3) Maintenance and repair

(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;

(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and

(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring

(a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor’s Equipment, vehicles and persons are maintained;

(b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;

(c) Locate cabling/wiring where it does not obstruct other works; and

(d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches

(a) Enclose ~~S~~ switchgear, ~~P~~ panels and ~~S~~ switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and

(b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers

(a) Power ~~R~~ receiving ~~E~~ equipment, ~~T~~ transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

NK1: The terms above (2) and (3) are not defined in Chap.1 A1.1.2. Might they not be capitalized?

(b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and

(c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)

(a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(c) Record the inspection results.

(3) Maintenance and repair

(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;

(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and

(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring

(a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor’s Equipment, vehicles and persons are maintained;

(b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;

(c) Locate cabling/wiring where it does not obstruct other works; and

(d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches

(a) Enclose switchgear, panels and switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and

(b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers

(a) Power receiving equipment, transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

(b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and

(c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)

part to prevent the risk of electric shock due to electrical leakage; and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work (JC142)

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that that ~~protective equipment~~ protective tube of electric wire for insulation is installed and no electricity is measured by electricity detection;

MD: Not sure of above meaning, do you mean PPE?

NK1: The protective equipment is not PPE but protective tube of electric wire as shown in the photo.

JC142: コントラクターの temporary electrical installation を言っているか、現場を通過している公共電線のことをいっているか、明確ではないので、仮設電線であることを明確にする。
It is not clear that the (5) above specify for the Contractor's temporary electrical installation or public electricity supply lines passing in the Site. It needs to specify the Contractor's temporary electrical installation.

NK1: 6.7.7 specifies "The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities."
It seems not need to specify but added temporary electrical installation.

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work of Temporary Electrical Installation

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that temporary protective casings have been installed over existing cables and no electricity is measured by electricity detection;

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

(a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work of Temporary Electrical Installation

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that temporary protective casings have been installed over existing cables and no electricity is measured by electricity detection;

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.5 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

Changed in 2.5 therefore for consistency to be changed everywhere;

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*],

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.5 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*],

items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the following technical requirements:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

NK1: I think it is better to specify Section No. of OSHA to specify particular clauses in OSHA.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting.

(1) Check measures before:

(a) Automatic voltage reduction device for reducing no load voltage to prevent ~~preventer of~~ ~~preventer of~~ electric shock is fitted and is functioning properly?

MD Do you mean ELCB?

NK1: Not ELCB. The term is replaced with voltage reduction device (VRD) recommended in OSHA 1910.254 (b)(3)(iv)
For a.c. welding under wet conditions or warm surroundings where perspiration is a factor, the use of reliable automatic controls for reducing no load voltage is recommended to reduce the shock hazard.

(b) Frame of welding machine is grounded?

(c) Grounding conductor is installed properly and working?

(d) There is no damage to welding cables?

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections?

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars;

(c) When not working, remove electrode from holder and turn off the welding machine; and

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet.

for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Electric and Gas Welding and Cutting complying with the technical requirements specified in the following standards:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting:

(1) Check measures before:

(a) Automatic voltage reduction device for reducing no load voltage to prevent the shock hazard, is fitted and is functioning properly;

(b) Frame of welding machine is grounded;

(c) Grounding conductor is installed properly and working;

(d) There is no damage to welding cables;

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars;

(c) When not working, remove electrode from holder and turn off the welding machine;

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet;

(e) If any worker receives an electric shock, the Contractor shall stop

for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Electric and Gas Welding and Cutting complying with the technical requirements specified in the following standards:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting:

(1) Check measures before:

(a) Automatic voltage reduction device for reducing no load voltage to prevent the shock hazard, is fitted and is functioning properly;

(b) Frame of welding machine is grounded;

(c) Grounding conductor is installed properly and working;

(d) There is no damage to welding cables;

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars;

(c) When not working, remove electrode from holder and turn off the welding machine;

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet;

(e) If any worker receives an electric shock, the Contractor shall stop

(e) If ~~operator(s)~~ (JC143) workers working nearby receive an electric shock, the Contractor shall stop the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

JC143: 付近の worker だったのでは。Is it workers working nearby?
NK1: Replaced with workers working nearby.

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*Personal Protective Equipment (PPE)*].

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

MD: will coordinate with JSSS 4.1 after that Section is reviewed:

(3) Periodical inspection of welding machines and welding equipment.

(a) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.1.7 [*Inspection and Maintenance of Construction Machine*] and JSSS 4.1.9[*Periodical Inspection*].

(b) The ~~automatic preventer of electric shock~~ voltage reduction device ~~preventer of~~ shall be regularly inspected and tested at least once every six months.

MD: Do you mean ELCB?:

NK1: Not ELCB. The term is replaced with voltage reduction device (VRD) as explained in (1)(a).

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) ~~Backfire prevention device~~ flashback arrestor to stop flame back up into the equipment or gas supply line is installed?

NK1: Backfire prevention device is term used in Japan. The following flashback arrestor mentioned in Wikipedia and ISO is used in JSSS.
flashback arrestor or flash arrestor is a gas safety device most commonly used in oxy-fuel welding and cutting to stop the flame or reverse flow of gas back up into the equipment or supply line. It protects the user and equipment from damage or explosions.
ISO 5175-1:2017 Gas welding equipment — Safety devices — Part 1: Devices incorporating a flame (flashback) arrestor.

(b) There is no damage to gas cylinders, regulators, ~~backfire prevention device~~ flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment?

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use".?

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the

---

the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

(3) Periodical inspection of welding machines and welding equipment.

(a) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*] and

(b) The voltage reduction device shall be regularly inspected and tested at least once every six months.

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) Flashback arrestor to stop flame back-up into the equipment or gas supply line is installed;

(b) There is no damage to gas cylinders, regulators, flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment;

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use"; and

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment

---

the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

(3) Periodical inspection of welding machines and welding equipment.

(a) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*] and

(b) The voltage reduction device shall be regularly inspected and tested at least once every six months.

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(a) Flashback arrestor to stop flame back-up into the equipment or gas supply line is installed;

(b) There is no damage to gas cylinders, regulators, flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment;

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use"; and

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment

equipment has been inspected, tested and certified as “Safe for Use” by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

~~Workers~~ (JC144) Welders engaged in gas cutting and welding shall be aware of the following requirements:

JC144: Revised “Workers” to “Welders”
NK1: Modified as commented.

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, ~~backfire~~ flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

~~Workers~~ (JC144) Welders and workers shall be trained to handle gas cylinders so that they are aware of the following requirements:

JC144: Replaced “Workers” with “Welders and workers”
NK1: Modified as commented.

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation.

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks.

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place ~~empty acetylene containers upright~~ compressed gas cylinders in an upright position at all times except, if necessary, for short periods of time while cylinders are actually being hoisted or carried;

JC(NK): Replaced (f) with the following:
OSHA 1926.350 Gas welding and cutting (a) Transporting, moving, and storing compressed gas cylinders, (9)

has been inspected, tested and certified as “Safe for Use” by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Welders engaged in gas cutting and welding shall be aware of the following requirements:

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

Workers and welders shall be trained to handle gas cylinders so that they are aware of the following requirements:

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation;

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks; and

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place compressed gas cylinders upright at all times except while cylinders are actually being hoisted or carried;

has been inspected, tested and certified as “Safe for Use” by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Welders engaged in gas cutting and welding shall be aware of the following requirements:

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

Workers and welders shall be trained to handle gas cylinders so that they are aware of the following requirements:

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation;

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks; and

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place compressed gas cylinders upright at all times except while cylinders are actually being hoisted or carried;

"the Compressed gas cylinders shall be secured in an upright position at all times except, if necessary, for short periods of time while cylinders are actually being hoisted or carried"

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate from other cylinders in storage and before and during use; and

(i) When there is a risk of freezing, do not place gas cylinders in wet or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire.

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.

(d) Remove oil and dust adhering to the valve of gas cylinders.

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed.

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*Personal Protective Equipment (PPE)*].

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

DCI will coordinate with JSSS 4.1 after that Section is reviewed:

(a) Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.1.7 [*Inspection and Maintenance of Construction Machine*] and JSSS 4.1.9 [*Periodical Inspection*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate from other cylinders in storage and before and during use; and

(i) When there is a risk of freezing, do not place gas cylinders in wet or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work:

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire;

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary;

(d) Remove oil and dust adhering to the valve of gas cylinders;

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate from other cylinders in storage and before and during use; and

(i) When there is a risk of freezing, do not place gas cylinders in wet or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work:

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire;

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary;

(d) Remove oil and dust adhering to the valve of gas cylinders;

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all

such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures. (3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas, for example places where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates. NK1: I wonder if it is easy for the Contractor to see concrete examples such as the place where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates. (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at welding or cutting work place when there is risk of fire by the heat transmitted or sparks of welding or cutting getting into walls, floors, ceilings and so on. NK1: From the serious fatal fire accident of 5 dead and 40 injured in building construction site in Japan in 2018 shown in the following site, we want to add (5) referring to the OSHA Clause below. https://www.japantimes.co.jp/news/2018/07/27/national/five-killed-40-injured-huge-fire-construction-site-tokyo-suburb-tama/#.XqPSROR7l9A *§1926.352 Fire prevention.* *(f) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the opposite side as are taken on the side on which the welding is being performed.*	such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures. (3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas. *Please refer to the definition of Hazardous Areas and note that there is no need to add the additional wording "for example places where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates" as this is already covered by the definition.* (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at areas where welding or cutting work is taking place when there is risk of fire by the heat transmitted or sparks of welding or cutting, getting into walls, floors, ceilings and the like. (6) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the opposite side as are taken on the side on which the welding is being performed.	such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures. (3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas. (4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at areas where welding or cutting work is taking place when there is risk of fire by the heat transmitted or sparks of welding or cutting, getting into walls, floors, ceilings and the like. (6) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the opposite side as are taken on the side on which the welding is being performed.

6. TEMPORARY WORKS

6.1 GENERAL REQUIREMENTS OF TEMPORARY WORKS

This Section 6.1 applies to all Temporary Works included in JSSS Chapter 6.

6.1.1 Design and Provision of **Temporary Works** Generally

Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all Temporary Works as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*], JSSS 1.37 [*Design and Management of Temporary Works*] and the specified standards.

The Contractor shall comply with the requirements specified in the Contract for Temporary Works and:

(1) Provide Temporary Works which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) Manage the design, use and removal of Temporary Works fully in accordance with JSSS 1.37 [*Design and Management of Temporary Works*].

(3) Maintain and repair all Temporary Works when in use to ensure the continued optimal and safe performance.

(4) Monitor all Temporary Works when in use and any affected Permanent Works, existing buildings, structures, ground or surfaces that may be affected by the Temporary Works through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the Temporary Works are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall establish procedures whereby:

(a) Unauthorised modification of Temporary Works is not allowed;

(b) Unauthorised use of Temporary Works is not allowed;

(c) The HSO shall inspect all Temporary Works upon completion of erection and certify and label them as "Safe for Use" before any

6. TEMPORARY WORKS

6.1 GENERAL REQUIREMENTS OF TEMPORARY WORKS

This Section 6.1 applies to all Temporary Works included in JSSS Chapter 6.

6.1.1 Design and Provision of Temporary Works Generally

Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all Temporary Works as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*], JSSS 1.37 [*Design and Management of Temporary Works*] and the specified standards.

The Contractor shall comply with the requirements specified in the Contract for Temporary Works and:

(1) Provide Temporary Works which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) Manage the design, use and removal of Temporary Works fully in accordance with JSSS 1.37 [*Design and Management of Temporary Works*].

(3) Maintain and repair all Temporary Works when in use to ensure the continued optimal and safe performance.

(4) Monitor all Temporary Works when in use and any affected Permanent Works, existing buildings, structures, ground or surfaces that may be affected by the Temporary Works through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the Temporary Works are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall ensure that~~establish procedures whereby~~:

(a) ~~Unauthorised m~~Modification of Temporary Works is not allowed unless it is authorized by HSO; (JC1)

JC1: unauthorised しているのは文脈から Contactor、not allowed されているのは Contractor？では誰が modification を authorise するのかという疑問が出てくる。主語を明確にした方が良い。
There is a question who authorize modification. The subject of the (a) sentence is not clear.
NK: Modified.

(b) Unauthorised use of Temporary Works is not allowed; (JC2)

JC2: 上記と同様に主語がはっきりするよう修正してください。
Ditto (JC1). Please modify to make clear the subject.
NK: Modified.

(c) The HSO shall inspect all Temporary Works upon completion of erection and certify and label them as "Safe for Use" before any

6. TEMPORARY WORKS

6.1 GENERAL REQUIREMENTS OF TEMPORARY WORKS

This Section 6.1 applies to all Temporary Works included in JSSS Chapter 6.

6.1.1 Design and Provision of **Temporary Works** Generally

Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all Temporary Works as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*], JSSS 1.37 [*Design and Management of Temporary Works*] and the specified standards.

The Contractor shall comply with the requirements specified in the Contract for Temporary Works and:

(1) Provide Temporary Works which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) Manage the design, use and removal of Temporary Works fully in accordance with JSSS 1.37 [*Design and Management of Temporary Works*].

(3) Maintain and repair all Temporary Works when in use to ensure the continued optimal and safe performance.

(4) Monitor all Temporary Works when in use and any affected Permanent Works, existing buildings, structures, ground or surfaces that may be affected by the Temporary Works through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the Temporary Works are performing safely, to the designed limits and intended purpose.

(5) The Contractor shall ensure that:

(a) Modification of Temporary Works is not allowed unless it is authorized by HSO;

(b) Unauthorised use of Temporary Works by any persons is not allowed;

(c) The HSO shall inspect all Temporary Works upon completion of erection and certify and label them as "Safe for Use" before any

use is allowed;

(d) The HSO shall regularly inspect Temporary Works and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the Temporary Works until repaired and re-inspected;

(e) The HSO shall inspect Temporary Works upon the completion of the required Permanent Works and before Temporary Works are dismantled, demolished and removed accompanied by the Contractor's Temporary Works specialist staff specified in JSSS 1.37 [Design and Management of Temporary Works] as appropriate, and certify that the Permanent Works are completed and the Temporary Works can be safely removed; and

(f) The HSO shall inspect after removal of the Temporary Works to ensure that removal has been completed properly and that no part of the Temporary Works remains, that any rectification of the Permanent Works is completed and all is left in safe order and condition.

(6) Safety Plan for Temporary Works

The Contractor shall include details of all Temporary Works in the Safety Plan to be submitted in accordance with JSSS 1.7 [*Contractor's Safety Plans*].

6.1.2 Method Statements

Refer to JSSS 1.9 [*Contractor's Method Statements*].

6.1.3 Monitoring Impact of Works on Other Properties

use is allowed;

(d) The HSO shall regularly inspect Temporary Works and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the Temporary Works until repaired and re-inspected;

(e) The HSO shall inspect Temporary Works upon the completion of the required Permanent Works and before Temporary Works are dismantled, demolished and removed accompanied by the Contractor's Temporary Works specialist staff specified in JSSS 1.37 [*Design and Management of Temporary Works*] as appropriate, and certify that the Permanent Works are completed and the Temporary Works can be safely removed; and

(f) The HSO shall inspect after removal of the Temporary Works to ensure that removal has been completed properly and that no part of the Temporary Works remains, that any rectification of the Permanent Works is completed and all is left in safe order and condition.

(6) Safety Plan for Temporary Works

The Contractor shall include details of all Temporary Works in the Safety Plan to be submitted in accordance with JSSS 1.7 [*Contractor's Safety Plans*].

6.1.2 Method Statements

Refer to JSSS 1.9 [*Contractor's Method Statements*].

6.1.3 Monitoring of Works and Surroundings~~Impact of Works on Other Properties~~ (JC3)

JC3: 1) モニタリングをコントラクーの責任の下に行わせるときに、コントラクターの助けになることは何か？2) それをユーザーガイドに記述しておく?
3) また岡本さんが15枚目で指摘している地下水位に発注者が関心を示すような場合の対処等もユーザーガイドに落とすか？
1) What helps the contractor when the monitoring is made under the responsibility of the Contractor?
2) Will it be mentioned in the user guide?
3) Are the countermeasures for changing of underground water level specified in the User Guide when the Employer has interest to the change as mentioned in pp 15 as commented by Mr. Okamoto?

NK: 1) 基本的に工事及び周囲に影響をを起こさない工法を請負者が取らなくてはならいこ。発注者が注意すべき懸念する事項を、請負者に注意することが助けになると考える。
Basically, the Contractor shall execute works without any influence to the works and other properties. It is helpful to the contractor that the Employer state the items to be paid attention by the Contractor.
2)User Guide の Issue 2 では、すでに次を提案している。
UG has drafted as copied below.
3) How to take countermeasures will not be mentioned in the UG unless the Employer want to direct the method.

Copy of User Guide (UG) Issue 2

JSSS 6.1.3 Monitoring Impact of Works on Other Properties

use is allowed;

(d) The HSO shall regularly inspect Temporary Works and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as "Not Safe for Use" and prevent access to the Temporary Works until repaired and re-inspected;

(e) The HSO shall inspect Temporary Works upon the completion of the required Permanent Works and before Temporary Works are dismantled, demolished and removed accompanied by the Contractor's Temporary Works specialist staff specified in JSSS 1.37 [*Design and Management of Temporary Works*] as appropriate, and certify that the Permanent Works are completed and the Temporary Works can be safely removed; and

(f) The HSO shall inspect after removal of the Temporary Works to ensure that removal has been completed properly and that no part of the Temporary Works remains, that any rectification of the Permanent Works is completed and all is left in safe order and condition.

(6) Safety Plan for Temporary Works

The Contractor shall include details of all Temporary Works in the Safety Plan to be submitted in accordance with JSSS 1.7 [*Contractor's Safety Plans*].

6.1.2 Method Statements

Refer to JSSS 1.9 [*Contractor's Method Statements*].

6.1.3 Monitoring of Works and Surroundings

	The Contractor is required under this clause of JSSS, to monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose. *The Contractor is further required under the same clause of JSSS "to monitor any vibration, settlement and other potentially damaging effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties."* *If there is a risk that the execution of the Works may cause any damage to any "other properties" (as referred to in JSSS 6.1.3) and if the Executing Agency considers that particular minimum requirements for monitoring equipment, locations and methods are helpful or necessary, then these shall be stated in the Particular Safety Specification and the requirements shall be described. The methods may include for example the inclusion of monitoring criteria to assist the Contractor in establishing his own procedures for monitoring to avoid any damage to other properties.* *If these particular minimum requirements are included, it is important also to state in the relevant clause in the Particular Safety Specification that the requirements are for assistance only and that they shall not in any way affect the Contractor's obligation to execute the Works without causing any damage to other properties.*	
(1) The Contractor shall monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose.	(1) The Contractor shall monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose. (2) For more details, refer to 2 章（の該当部分）(JC4)	(1) The Contractor shall monitor the Temporary Works to demonstrate that they are performing safely, to the designed limits and for the intended purpose. (2) For more details, refer to JSSS 2.1.7 [Monitoring and Records].
	JC4: Please specify the reference section of Chapter 2 regarding monitoring. NK: added and (3) to (10) below are deleted.	
(2) The Contractor shall also monitor any vibration, settlement and other potentially damaging effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.	(3) The Contractor shall also monitor any vibration, settlement and other adverse effects~~potentially damaging effects~~ arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties. (JC5)	NK: The (3) to (10) below shall be deleted because they are moved to 2.1.7. (3) ~~*The Contractor shall also monitor any vibration, settlement and other adverse effects arising out of the execution of the Works to ascertain if these are causing any adverse effect to ground, buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.*~~
	JC5: 本設の内容も含まれるので、1 章の Safety Plan を論じている節にモニタリングの実施について簡潔に記述し、Annex1.2 においてもモニタリングに言及し、そのうえで、ここで記載されている詳細は 2 章に移してください（内容についてのコメントを反映したうえでお願いします）。 6.1.3 は（1）だけ残して、あとは安全管理一般の移設先をリファーするようお願いします。 The provisions of (2) to (9) hereunder are not only for TW but also permanent Works, for example, pile driving works for foundation of permanent structures. Therefore, they shall be moved to Chapter 2 2: GENERAL SAFETY MEASURES 2.1.7 Monitoring and Record. Please stipulate briefly execution of monitoring in the Section for the Safety Plan in Chapter 1 and Annex 1.2. Only (1) of 6.1.3 shall be left as it is and (2) will stipulate to refer to 2.1.7. NK: will add in Annex 1.2, moved to 2.1.7 and modified (2) above.	

(3) Monitoring shall be accomplished by the Contractor through regular inspection, measurement and survey and instrument monitoring and recording as determined by the nature and scope of the Works or as required by the Particular Safety Specification.

(4) Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:

(a) Excavation Works (including Blasting Works);

(a) Foundation Piling Works;

(b) Ground improvement;

(c) Temporary dewatering in underground;

(d) Temporary Works such as major items of Earthwork Support, Coffer Dams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;

(e) Other parts of the Works required to evidence the Contractor's compliance with the Contract; and

(f) Other parts of the Works which may be specified in the Particular Safety Specification.

(5) The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:

(a) The Contractor's proposed maximum monitoring criteria for vibration, settlement and all other potential effects of the Works, which by the Contractor's own calculations will ensure that no damage or weakening is caused to other properties;

(b) The types, locations and numbers of monitoring instruments and other equipment;

(c) The measurement frequency and recording methods; and

(d) The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.

(6) The Contractor shall:

(a) Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the Temporary Works;

(b) Provide qualified staff to perform the monitoring;

(c) Maintain and calibrate the monitoring equipment as necessary

(4) Monitoring shall be accomplished by the Contractor through regular inspection, measurement, ~~and~~ survey, ~~and~~ instrument monitoring and recording as determined by the nature and scope of the Works, ~~or as~~ Contractor shall take additional monitoring measures if so required by the Particular Safety Specification. (JC 6)

JC6: ユーザーガイドで、PSS で規制値などを指定すべき場合において発注者が果たすべき役割を論じてください。(例えば EIA とか周辺住民との協議などで、騒音や粉じんなど一定の規制をしなければならないことがあるはずです。)
Please describe about the roles of the Employer when the Employer specifies the criteria of monitoring in the PSS. (For example, there might be some kinds of limitation of noise, dust, etc.)
NK: Modified as commented and will review PSS issue 2 regarding the JC6.

(5) Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:

(a) Earth ~~Excavation W~~works ~~(including Blasting Works)~~; (JC7)

JC7: 大規模盛土工の円弧滑り観測などもあるから earth works の方が適切。ただし、定義語でないので小文字にします。
Earth works is better than excavation works because monitoring for embankment will be made at the Site.
NK: modified as commented..

(b) Foundation Piling Works;

(c) Ground improvement;

(d) Temporary dewatering in underground;

(e) Temporary Works such as major items of Earthwork Support, Coffer Dams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;

(f) Other parts of the Works required to evidence the Contractor's compliance with the Contract; and

(g) Other parts of the Works ~~which may be~~ specified in the Particular Safety Specification.

(6) The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:

(a) The Contractor's proposed ~~maximum~~ monitoring criteria for vibration, settlement and all other potential effects of the Works, which by the Contractor's own calculations will ensure that no damage or weakening is caused to other properties;

(b) The types, locations and numbers of monitoring instruments and other equipment;

(c) The measurement frequency and recording methods; and

(d) The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.

(7) The Contractor shall:

(a) Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the ~~Temporary~~ Works; (JC8)

(4) ~~*Monitoring shall be accomplished by the Contractor through regular inspection, measurement, and survey, and instrument monitoring and recording as determined by the nature and scope of the Works or as the Contractor shall take additional monitoring measures if so required by the Particular Safety Specification.*~~

(5) ~~*Works that require monitoring shall include the following where any risk of damage is perceived by the HSO or Engineer:*~~

(a) ~~*Excavation*~~ *Earth Works* ~~*(including Blasting Works);*~~

(b) ~~*Foundation Piling Works;*~~

(c) ~~*Ground improvement;*~~

(d) ~~*Temporary dewatering in underground;*~~

(e) ~~*Temporary Works such as major items of Earthwork Support, Coffer Dams and the like; to demonstrate that they are performing safely, to the designed limits and for the intended purpose;*~~

(f) ~~*Other parts of the Works required to evidence the Contractor's compliance with the Contract; and*~~

(g) *Other parts of the Works* ~~*which may be*~~ *specified in the Particular* ~~*Safety Specification.*~~

(6) ~~*The Contractor shall prepare a monitoring plan as a part of the Safety Plan for the above Works which shall describe:*~~

(a) *The Contractor's proposed* ~~*maximum*~~ *monitoring criteria for* ~~*vibration, settlement and all other potential effects of the Works, which by the Contractor's own calculations will ensure that no damage or weakening is caused to other properties;*~~

(b) ~~*The types, locations and numbers of monitoring instruments and other equipment;*~~

(c) ~~*The measurement frequency and recording methods; and*~~

(d) ~~*The countermeasures to be applied when the actual measured values are close to or exceed the various minimum, intermediate and maximum criteria.*~~

(7) ~~*The Contractor shall:*~~

(a) ~~*Provide and maintain all survey equipment, monitoring and recording equipment to provide comprehensive, accurate and contemporary or live data with records, showing the*~~ *performance characteristics of the* ~~*Temporary*~~ *Works;*

throughout the execution of the Works;

(d) Perform survey and monitoring on a regular basis throughout the execution of the Works;

(e) Confirm the occurrence and extent of any adverse impact of the Works execution by means of regular inspections of all other properties;

(f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;

(g) Evaluate the measurement results and modify the monitoring criteria as necessary; and

(h) Submit an evaluation report if necessary with any changes to the Safety Plan for Works to the Engineer before proceeding with the Works.

(7) Requirements for instrumentation systems shall be as follows:

(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;

(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of works are provided;

(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;

(d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of all Temporary Works; and

(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [*Engineer's Safety Representative*], JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.16 [*Joint Site Safety Inspections*].

(8) Management based on Monitoring and Inspection

(a) Management by Visual Inspection:

If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement:

JC8: このあたり 2 章に移すことになれば Temporary はいらないので削除してください。同様に、Works と Temporary Works の使い方について個々にご検討ください。

Please delete these parts because the (2) to (9) are moved to Chapter 2. When moving to Chapter 2, please delete "Temporary". Please pay attention to the use of Works and Temporary Works in each stipulation.

NK: we will do as commented.

(b) Provide qualified staff to perform the monitoring;

(c) Maintain and calibrate the monitoring instruments and equipment as necessary throughout the execution of the Works;

(d) Perform survey and monitoring on a regular basis throughout the execution of the Works;

(e) Confirm the occurrence and extent of any adverse effects~~impact~~ of the Works execution by means of regular inspections of all other properties;

(f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;

(g) Evaluate the measurement results and modify the monitoring criteria as necessary; and

(h) Submit an evaluation report (if necessary) with any changes to the Safety Plan for Works to the Engineer before proceeding with the Works.

(8) Requirements for instrumentation systems shall be as follows:

(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;

(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of works are provided;

(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;

(d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of ~~all Temporary~~ the Works; and

(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [*Engineer's Safety Representative*], JSSS 1.11 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.16 [*Joint Site Safety Inspections*].

(9) Management based on Monitoring and Inspection

(a) Management by Visual Inspection:

If and when the Contractor finds any irregularity ~~abnormality~~ through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including

~~(b) Provide qualified staff to perform the monitoring;~~

~~(c) Maintain and calibrate the monitoring instruments and equipment as necessary throughout the execution of the Works;~~

~~(d) Perform survey and monitoring on a regular basis throughout the execution of the Works;~~

~~(e) Confirm the occurrence and extent of any adverse~~ *effect* ~~impact of the Works execution by means of regular inspections of all other properties;~~

~~(f) Take the measures prescribed when necessary to comply with the Contractor's obligations, propose remedial measures and implement such measures after receiving the consent of the Engineer;~~

~~(g) Evaluate the measurement results and modify the monitoring criteria as necessary; and~~

~~(h) Submit an evaluation report if necessary with any changes to the Safety Plan for Works to the Engineer before proceeding with the Works.~~

~~(8) Requirements for instrumentation systems shall be as follows:~~

~~(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement;~~

~~(b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of works are provided;~~

~~(c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor;~~

~~(d) The HSO and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued compliant and safe performance of~~ *all Temporary* ~~the~~ *Works; and*

~~(e) The Engineer shall be invited to attend the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.10 [Engineer's Safety Representative], JSSS 1.11 [Safety Compliance Instructions from the Engineer] and JSSS 1.16 [Joint Site Safety Inspections].~~

~~(9) Management based on Monitoring and Inspection~~

~~(a) Management by Visual Inspection:~~

If and when the Contractor finds any irregularity ~~abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement,~~

Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the Contractor and necessary actions taken:

(i) Primary control value:

When this value is reached, the Contractor shall increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.

The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.

(i) Secondary control value:

When this value is reached and unless otherwise instructed by the Engineer, the Contractor shall stop the relevant part of the Works and implement the countermeasures.

(ii) Control limit value:

When this value is reached, the Contractor shall immediately stop the relevant part of the Works, advise all affected persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.

(9) Contract Compliance

Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.

The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply

verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures.

(b) Management by Instrument Measurement:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the Contractor and necessary actions shall be taken as follows: (JC9)

JC9: この文章は今まで変更を加えていますが、もう少し！
Please add a little more though additions have already been made to this sentence.
"The Contractor shall provide the following three critical limits in its design of the Temporary Works, and shall take an appropriate action when any critical limit is being reached through the monitoring;"
NK: Added.

(i) Primary control value: (JC10)

JC10: Primary limit / Secondary limit / Control limit
NK: Modified as commented.

When this value is reached, (JC11) the Contractor shall increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.

JC11: When a value of measurement is reached to this limit,…
NK: Modified as commented.

The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.

(ii) Secondary control value:

When this value is reached ~~and unless otherwise instructed by the Engineer~~, (JC12) the Contractor shall stop the relevant part of the Works and implement the countermeasures.

JC12: ditto.
NK: Modified as commented.

(iii) Control limit value:

When this value is reached,(JC13) the Contractor shall immediately stop the relevant part of the Works, advise all affected persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.

JC13: ditto.

(10) Contract Compliance

Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.

~~survey or added instrumentation and the implementation of urgent countermeasures.~~

(b) ~~Management by Instrument Measurement:~~

~~Unless otherwise specified in the Particular Safety Specification, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established by the~~ *Contractor and necessary actions shall be taken.* ~~as follows:~~

The Contractor shall provide the following three critical limits in its design of the Temporary Works, and shall take an appropriate action when any critical limit is being reached through the monitoring;

(i) *Primary* ~~control value:~~ *limit:*

~~When this value is reached~~, *When a value of measurement is reached to this limit, the Contractor shall increase the* ~~incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value and obtain the Engineer's consent for such countermeasures.~~

~~The Contractor shall submit the measured values on a weekly basis to the Engineer unless otherwise instructed by the Engineer.~~

(ii) *Secondary* ~~control value:~~ *limit:*

~~When this value is reached and unless otherwise instructed by the Engineer,~~ *When a value of measurement is reached to this limit, the Contractor shall stop the relevant part of the* ~~Works and implement the countermeasures.~~

(iii) *Control limit* ~~value:~~

~~When this value is reached,~~ *When a value of measurement is reached to this limit, the Contractor shall immediately stop the relevant part of the Works, advise all affected* ~~persons, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure, review and revise the Method Statement and Safety Plan, and comply with the Engineer's Instructions before proceeding.~~

(10) ~~Contract Compliance~~

~~Notwithstanding the requirements of this subclause of JSSS, the Contractor is reminded of his overall responsibility under the Contract in respect of damage to property.~~

with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.

6.1.4 Compliance Standards

(1) By reference to JSSS 1.37 [*Design and Management of Temporary Works*] and unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with BS5975~~: 2019~~ Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework.

(2) In relation to Temporary Works, the Contractor shall also comply with:

(a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design;

(b) BS EN 12812 Falsework. Performance requirements and general design; and

(c) Such other standards that are referred to in particular parts of JSSS.

The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.

6.1.4 Compliance Standards

(1) By reference to JSSS 1.37 [*Design and Management of Temporary Works*] and unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the Section 1 and Section 2 of BS5975~~: 2019~~ Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework as management standard with respect to design, erection, use and dismantling of Temporary Works. (JC14)

JC14: modified in accordance with JICA's comment on JSSS 1.37

(2) In relation to Temporary Works, the Contractor shall, subject to JSSS 1.4.~~6~~7, also comply with: (JC15)

~~(a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design;~~

(a) (b) BS EN 12812 Falsework. Performance requirements and general design; ~~and~~

(b) (c) Such ~~other~~ standards that are referred to in particular parts of JSSS; and~~.~~

~~(b)~~(c) Other standards proposed by the Contractor to which the consent of the Engineer is provided.

JC15: 1) JSSS1.4.6 Specified Standards and Regulations に言及する(同等以上であれば他のスタンダード等の適用も可)
2) 引用していただいていた BS EN 12811 は 6.5 でも引用されているので不要です。
3) BS12812 は内容を検討し、様々な仮設においても関係があるのであれば、上記のような形で残してください(そうでなければ削除で結構です)。
4)また別表で取りまとめたように、Compliance Standard が記述されている節もあれば、ない節もあり、特に記述がない節のためにキャッチオールの規定が必要であると考えます。その趣旨で修正案の(c)の記述を入れてください。

1) To stipulate to refer to JSSS1.4.6 Specified Standards and Regulations (equivalent standards can be applied.)

2) BS EN 12811 is duplicatedly referred to in (a) here and 6.5, so deleted.

3) Please study the contents of BS12812. If it is related with various TW, please leave as it is, if not, (c) can be deleted.

4) As shown in the table (not attached here), there are chapters/sections which stipulate "Compliance Standard" and do not stipulate it. For chapters/sections which do not stipulate it, it needs catch all stipulation. Taking into consideration the above idea, please insert the revised (c).

NK: 1) Revised as modified.
2) Deleted as commented.
3) Deleted as stipulated for BS12812 specifies for false work excluding scaffoldings and duplicated with BS5975. The former is permissible stress design method and the latter is limit state design method.
4) This is specified I 1.4.5, so no addition I made..

1.4.5 Specified Standards

~~*The Contractor shall satisfy himself that the monitoring criteria and requirements specified above, or in other respective Chapters of JSSS and/or in the Particular Safety Specification, are sufficient to comply with his obligations under the Contract and he shall take any additional measures necessary to avoid damage to property.*~~

6.1.4 Compliance Standards

(1) By reference to JSSS 1.37 [*Design and Management of Temporary Works*] and unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the Section 1 and Section 2 of BS5975~~: 2019~~ Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework as management standard with respect to design, erection, use and dismantling of Temporary Works.

(2) In relation to Temporary Works, the Contractor shall, subject to JSSS 1.4.5 [Specified Standards], also comply with:

(a) Section 3: Falsework of BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework; and

(b) Such ~~other~~ standards that are referred to in particular parts of JSSS.

	(1) Unless otherwise instructed by the Engineer, a reference to any standard (hereinafter deemed to include specified safety regulations or codes) shall mean a reference to the latest issued edition of that standard as at the Base Date of the Contract. *(2) Any standard specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard specified.*	
6.2 EARTHWORK SUPPORT **6.2.1** General (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support. (2) The Contractor shall maintain the structural integrity of ground, buildings, structures, roads, railways, waterways, services and surface paving and the like that can be affected by Excavation Works and shall provide and maintain whatever Earthwork Support is necessary to comply with this requirement and ensure the safety of all persons that are in, under or adjacent to any excavation and to avoid any damage to persons and property on or outside the Site. (3) Earthwork Support shall include for example the provision of: (c) Timberwork including sheeting, planking, strutting and support systems; (d) Steel sheet piling including shoring, strutting and support systems; (e) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like; (f) Ground improvement, slope stabilisation, injection, ground freezing and the like; and (g) Ground Anchors	**6.2 EARTHWORK SUPPORT** **6.2.1 General** (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support. (2) The Contractor shall maintain the structural integrity of existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like ~~ground, buildings, structures, roads, railways, waterways, services and surface paving and the like~~ (JC16)that can be affected by c~~E~~arth ~~Excavation~~ w~~W~~orks (JC17) and shall provide and maintain whatever Earthwork Support is necessary to comply with this requirement and ensure the safety of all persons that are in, under or adjacent to any excavation and to avoid any damage to persons and property on or outside the Site. JC16: Modified to uniform the expressions with 6.2.2 onward. NK: modified as above. JC17: Earth Works でしょうか？ NK: revised to earth work. (3) Earthwork Support shall include for example the provision of: (a) Timberwork including sheeting, planking, strutting and support systems; (b) Steel sheet piling including shoring, strutting and support systems; (c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like; (d) Ground improvement, slope stabilisation, injection, ground freezing and the like; and (e) Ground Anchors (4) Without prejudice to the Contractor's overriding obligations as specified above, the requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by the HSO and judged by him to be safe, stable and free from any risk of movement or collapse: (a) Excavation in rock; and (b) Excavation less than 1.5 m deep.	**6.2 EARTHWORK SUPPORT** **6.2.1** General (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support. (2) The Contractor shall maintain the structural integrity of existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like ~~ground, buildings, structures, roads, railways, waterways, services and surface paving and the like~~ that can be affected by ~~Excavation Works~~ earth works and shall provide and maintain whatever Earthwork Support is necessary to comply with this requirement and ensure the safety of all persons that are in, under or adjacent to any excavation and to avoid any damage to persons and property on or outside the Site. (3) Earthwork Support shall include for example the provision of: (a) Timberwork including sheeting, planking, strutting and support systems; (b) Steel sheet piling including shoring, strutting and support systems; (c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like; (d) Ground improvement, slope stabilisation, injection, ground freezing and the like; and (e) Ground Anchors (4) Without prejudice to the Contractor's overriding obligations as specified above, the requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by the HSO and judged by him to be safe, stable and free from any risk of movement or collapse: To MD, The (4) above seems different from other parts as it stipulates "Without prejudice to the Contractor's overriding obligations as specified above". Is it necessary to mention this phrase? (a) Excavation in rock; and (b) Excavation less than 1.5 m deep.

(4) Without prejudice to the Contractor's overriding obligations as specified above, the requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by the HSO and judged by him to be safe, stable and free from any risk of movement or collapse:

(a) Excavation in rock; and

(b) Excavation less than 1.5 m deep.

(5) For sloping or benched sides to excavations (in lieu of Earthwork Support), refer to JSSS 7.2.1 (3) [*Excavation Work - Particular Safety Measures*].

6.2.2 Planning and Design

The Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like ~~and~~ for the design of and the prevention of any damaging effect upon excavations and Earthwork Support. (NK: Added.)

(3) The effect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) The effect by vibration from site operations (e.g. piling) on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like. ~~or adjacent traffic or railways and the like.~~ (NK: modified.)

(5) Access and working space necessary to execute the Permanent Works.

6.2.3 Inspection and Monitoring

Refer to JSSS エラー！参照元が見つかりません。 [***Monitoring Impact of Works on Other Properties***].

Further requirements for work in this Section are stated below.

---

(5) For sloping or benched sides to excavations (in lieu of Earthwork Support), refer to JSSS 7.2.1 (3) [*Excavation Work - Particular Safety Measures*].

6.2.2 Planning and Design

The Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data ~~which may have been~~ provided by the Employer before or after the Base Date~~in the Bidding Documents~~ (JC18)and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which ~~the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*]~~may affect the Works or their surroundings (i.e. existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like).(JC19)

JC18: GC 4.10 says : The Employer shall similarly make available to the Contractor all such data which come into the Employer's possession after the Base Date.
NK: modified as revised.

JC19: 削除。4.10 は入札前の Site Data を言っている。ここは安全スペックなので不適当。Which the Contractor have obtained.では？
Deleted. GC 4.10 mentions Site Data before bidding. This is safety spec, so it may be not appropriate. How about to replace it with "Which the Contractor have obtained"?
NK: The proposed phrase has been stipulated in (1), so not added it.

(2) Ground~~-~~water and potential of liquefaction, boiling or piping, heave and the like ~~and~~ for the design of ~~and the prevention of any damaging effect upon excavations and~~ Earthwork Support. (NK: Added.) (JC20)

JC20: デザインの話なので、不要です.
This phrase is not necessary because (2) is spec. for design.
NK: Modified as commented.

(3) The effect by the c~~E~~arthwork ~~Support~~ on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) The effect of~~by~~ vibration from site operations (e.g. piling) on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like. ~~or adjacent traffic or railways and the like.~~ (NK: modified.)

(5) Access and working space necessary to execute the Permanent Works.

6.2.3 Inspection and Monitoring

Refer to JSSS エラー！参照元が見つかりません。 [***Monitoring Impact of Works on Other Properties***] (JC21).

JC21: 2章に移動？ Shall this no. be replaced with Chapter 2?
NK: Leave as this as already specified in 6.1.3 referring to JSSS 2.1.7 [Monitoring and Records].

Further requirements for work in this Section are stated below.

---

(5) For sloping or benched sides to excavations (in lieu of Earthwork Support), refer to JSSS 7.2.1 (3) [*Excavation Work - Particular Safety Measures*].

6.2.2 Planning and Design

The Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data ~~which may have been~~ provided by the Employer before or after the Base Date ~~in the Bidding Documents~~ and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which ~~the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*]~~ and may affect the Works or their surroundings (i.e. existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like).

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like ~~and~~ for the design of ~~and the prevention of any damaging effect upon excavations and~~ Earthwork Support.

(3) The effect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) The effect by vibration from site operations (e.g. piling) on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like. ~~or adjacent traffic or railways and the like.~~ (NK: modified.)

(5) Access and working space necessary to execute the Permanent Works.

6.2.3 Inspection and Monitoring

Refer to JSSS エラー！参照元が見つかりません。 [~~***Monitoring Impact of Works on Other Properties***~~ ***Monitoring of Works and Surroundings***].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the Plan; and

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.1: Visual Inspection Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent buildings or structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of or damage to underground utilities

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Site (JC22) and the required Earthwork Support and carry out regular inspections based upon the content of the Plan; and

JC22: この章だけでなく他の章でも Site という表現が出てきますが Site 以外の working area も含めるべきものと考えます。だとした場合に、それらを含む定義語を作るなどなんらかの工夫が全体を通して必要と考えます。

The term “Site” is used in this and other Chapters. We consider that the Site shall include working area of the Contractor such as precast concrete manufacturing plant, stores, labor camps, etc. outside of the Site. It is necessary to define a term that the Site includes such working area to use through the JSSS.

NK: GC 1.1.6.7 mentions

“Site” means the places where the Permanent Works are to be executed including storage and working areas and to which Plant and Materials are to be delivered, and any other places as may be specified in the Contract as forming part of the Site.

In order to avoid the case that the Contract does not specify other places in PC for GC 1.1.6.7, JSSS 1.22 shall include the following sentence to include the working area in the Site to apply JSSS to all places where the Contractor’s personnel work and live.

“(x) References to “the Site” in JSSS shall include any places for example, working areas, factories, stores, labor camps, etc. outside of the Site where necessary for the execution of the Contract.

To MD, please review the above and include it in Chapter 1.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.1: Visual Inspection Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, ~~twist of~~deformation and abnormal sound of ~~–~~struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent buildings or structures	Cracks, ~~weakening,~~ subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of or damage to underground utilities

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the Plan; and

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.1: Visual Inspection Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, ~~twist~~ deformation and abnormal sound of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent buildings or structures	Cracks, ~~weakening,~~ subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of or damage to underground utilities

(2) Instrument Monitoring

(c) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out monitoring based upon the content of the Plan; and

(d) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.2: Instrument Monitoring Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of walings, struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of ground water, rate of water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; cracks, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of underground utilities

6.2.4 General Safety and Construction Requirements

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

(2) Workers shall not be allowed to enter any excavation until Earthwork Support is installed prior to the work;

(3) Earthwork Support shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.

(4) Excavation to a level greater than 60cm below the bottom of Earthwork Support shall not be allowed;

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the ~~required~~ (JC23) Earthwork Support and carry out monitoring ~~based upon the content of the Plan;~~ (JC24) and

JC23: Required は不要. Not necessary to mention “Required.”.
NK: deleted.

JC24: これは不要。Carry out monitoring で分かる.
This phase is not necessary as it can be understood by “Carry out monitoring”.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.2: Instrument Monitoring Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of ~~walings,~~ (JC25) struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of ground water, rate of water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; cracks, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of underground utilities

JC25: Waling には軸力ではなく曲げモーメントが発生するので不要.
Waling has bending moment but not axial force, so waling is deleted.
NK: deleted as commented.

6.2.4 General Safety and Construction Requirements

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

(2) Workers shall not be allowed to enter any place of excavation until Earthwork Support is installed prior to the work;

(3) Earthwork Support shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.

(4) Excavation to a level greater than 60cm below the planned bottom level of support when the support itself is not yet installed ~~greater than 60cm below the bottom of Earthwork Support shall not be allowed;~~(JC26)

JC26: 原文のままでは掘削作業が不可能。
The excavation by the original sentence cannot be made, so it is revised.

(2) Instrument Monitoring

(c) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the ~~required~~ Earthwork Support and carry out monitoring ~~based upon the content of the Plan~~; and

(d) Examples of inspection objects and inspection items are given in the following Table.

Table 6.2.2: Instrument Monitoring Plan

	Object	Inspection Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of ~~walings,~~ struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of ground water, rate of water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; cracks, subsidence, deformation and tilting of structures
6	Underground utilities	Displacement or leakage of underground utilities

6.2.4 General Safety and Construction Requirements

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

(2) Workers shall not be allowed to enter any excavation until Earthwork Support is installed prior to the work;

(3) Earthwork Support shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.

(4) Excavation to a level greater than 60cm below the planned bottom level of support when the support itself is not yet installed. ~~the bottom of Earthwork Support shall not be allowed;~~

(5) If temporary removal of individual members of Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing additional temporary struts to support the additional loads imposed on parts of the system;

(6) When removing Earthwork Support, the Contractor shall prohibit anyone other than the workers engaged in the removal work to enter the working area and vicinity; and

(7) Backfilling and compaction of any excavation shall be performed in parallel with the removal of Earthwork Support.

6.2.5 Safety Measures for Shoring

(1) "Shoring" shall include waling, shoring, strutting and like support.

(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(4) Connecting parts of shoring or diagonal shoring or intersections~~,~~ shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(5) Struts shall be securely and rigidly fixed with intermediate piles, when the intermediate piles are provided.

(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges.

(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.

NK: revised as commented.

(5) If temporary removal of individual members of Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing additional temporary struts to support the additional loads imposed on parts of the system;

(6) When removing Earthwork Support, the Contractor shall prohibit anyone other than the workers engaged in the removal work to enter the working area and vicinity; and

(7) Backfilling and compaction of any excavation shall be performed in parallel with the removal of Earthwork Support.

6.2.5 Safety Measures for Shoring

(1) "Shoring" shall include waling, shoring, strutting and like support.

(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(4) Connecting parts of shoring or diagonal shoring or intersections~~,~~ shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(5) Struts shall be securely and rigidly fixed with intermediate piles, when the intermediate piles are provided.

(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges. (JC27)

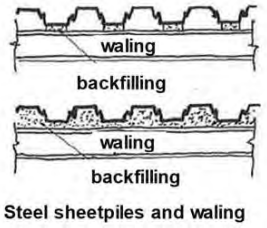
(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.

JC27: 日本語版では「土留め壁と腹おこしの隙間は充填を行うこと。また、腹おこしと切りばりの接合部はスチフナー等で補強を行うこと。」としていましたが、意味が変わってしまっています(7と8の特に7がおかしい)。日本語に沿って正しく表現してください。

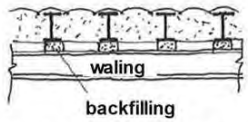
Japanese JSSS specifies "The gap between the earth retaining wall and the waling shall be filled. Also, the connection part of the strut and waling shall be reinforced with stiffeners." The meaning has been changed in the (7) and (8). Please revise them as specified as Japanese one.

NK: modified as commented referring the figures below.

To MD, please review and edit the modified (7) and (8).



Steel sheetpiles and waling



soilcement and H-steel piles and waling

(5) If temporary removal of individual members of Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing additional temporary struts to support the additional loads imposed on parts of the system;

(6) When removing Earthwork Support, the Contractor shall prohibit anyone other than the workers engaged in the removal work to enter the working area and vicinity; and

(7) Backfilling and compaction of any excavation shall be performed in parallel with the removal of Earthwork Support.

6.2.5 Safety Measures for Shoring

(1) "Shoring" shall include waling, shoring, strutting and like support.

(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.

(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

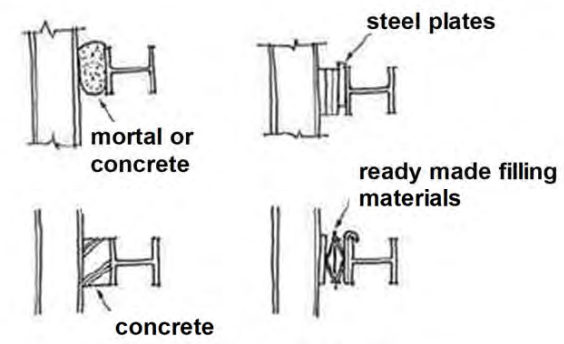
(4) Connecting parts of shoring or diagonal shoring or intersections~~,~~ shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(5) Struts shall be securely and rigidly fixed with intermediate piles, when the intermediate piles are provided.

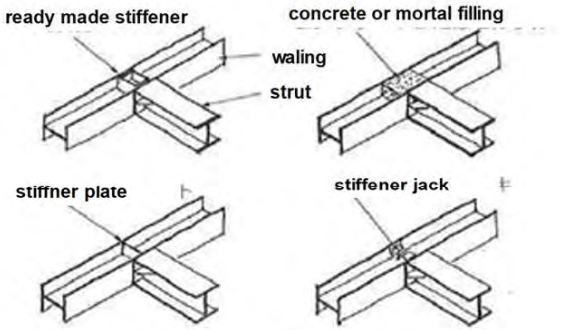
(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.

(7) Gaps between ~~Earthwork Support and shoring shall be securely packed with suitable wedges.~~ earth retaining wall (steel sheet piles, H-shape steel piles and the like) and waling shall be filled with mortal, concrete, steel plates, suitable wedges.

(8) Connections ~~of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners~~ between struts and walings shall be reinforced with ready-made stiffeners, stiffener plates, concrete/mortal filling, stiffener jacks, etc.



Types of backfillig materials



reignforcement of connection part of waling and strut

6.2.6 Safety Measures for Ground Anchor Work

(1) Prevent anyone other than designated personnel from operating the boring machine.

(2) Prevent anyone (except those essential to the post-tensioning operations) from accessing behind the tensioning jack during tensioning to prevent any injury through breaking of the anchor tendon during tensioning.

(3) Check for any damage in the grout hoses and joints before commencing any grout injection.

6.2.7 Adjacent Goods, Excavated Spoil and the like

(1) When placing any **Goods, excavated spoil and the like** on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling.

(2) Do not place any **Goods, excavated spoil, backfill material and the like** where the weight exceeds the load considered in the design of the Earthwork Support.

6.2.6 Safety Measures for Ground Anchor Work

(1) ~~Prevent a~~Anyone other than designated personnel ~~from~~ shall not operate ~~operating~~ the boring machine.

(2) ~~Prevent~~ No one (except those essential to the post-tensioning operations) shall be permitted to be ~~anyone (except those essential to the post-tensioning operations) from accessing~~ behind the tensioning jack during tensioning to prevent any injury through breaking of the anchor tendon during tensioning.

(3) The Contractor shall check ~~Check for~~ any damage in the grout hoses and joints before commencing any grout injection.

6.2.7 Adjacent Goods, Excavated Spoil and the like

(1) When placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, the Contractor shall take measures to prevent it from falling.

(2) The Contractor shall ~~Do~~ not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load

6.2.6 Safety Measures for Ground Anchor Work

(1) ~~Prevent a~~Anyone other than designated personnel ~~from operating~~ shall not operate the boring machine.

(2) ~~Prevent anyone (except those essential to the post-tensioning operations) from accessing~~ No one (except those essential to the post-tensioning operations) shall be permitted to be behind the tensioning jack during tensioning to prevent any injury through breaking of the anchor tendon during tensioning.

(3) The Contractor shall check ~~Check for~~ any damage in the grout hoses and joints before commencing any grout injection.

6.2.7 Adjacent Goods, Excavated Spoil and the like

(1) When placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, the Contractor shall take measures to prevent it from falling.

	considered in the design of the Earthwork Support.	(2) The Contractor shall ~~Do~~ not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.
6.3 COFFERDAMS **6.3.1** General (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam. (2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.	**6.3 COFFERDAMS** **6.3.1 General** (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam. (2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel pipe ~~beam~~. (JC28) piles and the like. JC28: 見たことがない。pipe なら判るが。 We don't know this. We know steel pipe piles. NK: revised as commented.	**6.3 COFFERDAMS** **6.3.1** General (1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam. (2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel ~~beam~~ pipe piles and the like.
6.3.2 Planning and Design Unless otherwise specified in the Particular Safety Specification, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including:	**6.3.2 Planning and Design** ~~Unless otherwise specified in the Particular Safety Specification,~~ (JC29) ~~t~~The Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including: JC29: かかる例外規定はここでは不要。Fit for purpose でない cofferdam を作ることが許されるのか？なお、土留めの Planning and Design のところにも、かかる例外規定はついていない。 It is not necessary to stipulate exceptional requirement here. Is permitted to construct cofferdams which is not fir for the purpose? There is no stipulation of such exception in Planning and Design of Earth Support. NK: deleted as commented.	**6.3.2** Planning and Design ~~Unless otherwise specified in the Particular Safety Specification, the~~ The Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including:
(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].	(1) All relevant site data which may have been provided by the Employer before or after the Base Date ~~in the Bidding Documents~~ and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances which may affect the Works. ~~or XXXX which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*]~~. (JC29) JC29: Same comments as 6.2.2, copied below. *JC18: GC 4.10 says : The Employer shall similarly make available to the Contractor all such data which come into the Employer's possession after the Base Date.* NK: modified as commented above.	(1) All relevant site data which may have been provided by the Employer ~~in the Bidding Documents~~ before or after the Base Date and any relevant site information that the Contractor has encountered or obtained during the execution of the Works, together with all necessary further information as to risks, contingencies and other circumstances ~~which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*]~~ which may affect the Works.
(2) The effect of any vibration from site operations (e.g. driven piling). (3) Access and working space necessary to execute the Works. (4) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions. (5) Marine traffic. (6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.	(2) The effect of any vibration from site operations (e.g. driven piling). (3) Access and working space necessary to execute the Works. (4) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions. (5) Marine traffic. (6) Avoidance of any damage by piling operations to and the protection ~~and improvement~~ (JC30) of the structural integrity of existing river or canals, banks, dykes and the like.	(2) The effect of any vibration from site operations (e.g. driven piling). (3) Access and working space necessary to execute the Works. (4) River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions. (5) Marine traffic. (6) Avoidance of any damage by piling operations and the protection ~~and improvement~~ of the structural integrity of existing river or canals, banks, dykes and the like.

(7) Reduction of river cross sectional area, increased flow rates and protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.

(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for avoiding water pollution from construction and dismantling of cofferdams.

(12) Measures for safe dismantling and removal.

6.3.3 Inspection and Monitoring

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the Plan; and

(b) Examples of Inspection Objects and Inspection items are given in the following Table.

Table 6.3.1: Visual Inspection Plan

	Object	Inspection Items
1	Cofferdam generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, twist of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base.
5	Neighbouring Properties or Structures on or outside the Site	Cracks, weakening, subsidence, deformation and tilting of structures

JC30: Should the Contactor consider even improvement?
NK: deleted as commented.

(7) Reduction of river cross sectional area, increased flow rates and protection ~~and improvement~~ (JC31) of the structural integrity of existing river or canals, banks, dykes and the like.

JC31: Same as above.
NK: deleted as commented.

(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.

(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for avoiding water pollution from construction and dismantling of cofferdams.

(12) Measures for safe dismantling and removal.

6.3.3 Inspection and Monitoring

Refer to JSSS エラー! 参照元が見つかりません。 [*Monitoring Impact of Works on Other Properties*].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the Plan; and

(b) Examples of Inspection Objects and Inspection items are given in the following Table.

Table 6.3.1: Visual Inspection Plan

	Object	Inspection Items
1	Cofferdam generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, ~~twist~~ deformation and abnormal sound of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base.
4	Neighbouring Properties or Structures on or outside the Site	Cracks, ~~weakening,~~ subsidence, deformation and tilting of structures

(7) Reduction of river cross sectional area, increased flow rates and protection ~~and improvement~~ of the structural integrity of existing river or canals, banks, dykes and the like.

(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.

(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.

(11) Measures for avoiding water pollution from construction and dismantling of cofferdams.

(12) Measures for safe dismantling and removal.

6.3.3 Inspection and Monitoring

Refer to JSSS エラー! 参照元が見つかりません。 [~~*Monitoring Impact of Works on Other Properties*~~ ***Monitoring of Works and Surroundings***].

Further requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection Plan depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the Plan; and

(b) Examples of Inspection Objects and Inspection items are given in the following Table.

Table 6.3.1: Visual Inspection Plan

	Object	Inspection Items
1	Cofferdam generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, ~~twist~~ deformation and abnormal sound of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of excavation	Water spring and ground water flow. Sand boiling. Heaving of the base.
5	Neighbouring Properties or Structures on or	Cracks, ~~weakening,~~ subsidence, deformation and tilting of structures

(2) Instrument Monitoring

(c) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required ~~Earthwork Support~~ Cofferdams and carry out ongoing monitoring based upon the content of the Plan; and.

(d) Examples of inspection objects and inspection items are given in the following Table.

Table 6.3.2: Instrument Monitoring Plan

	Object	Monitoring Items
1	Cofferdam Generally	Displacement, stress of Cofferdams Earth pressure and water pressure acting on Cofferdams
2	Shoring and strutting	Axial force of strut and other supports.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring properties or structures on or outside the Site	Displacement, cracks,-subsidence, deformation and tilting of structures

6.3.4 General Safety and Construction Requirements

(1) Construct the Cofferdams with shoring by the same method stipulated in JSSS エラー！参照元が見つかりません。[*Safety Measures for Shoring*].

(2) Train all Contractor's Personnel who are to work on the construction, maintenance and removal of the Cofferdam or within the Cofferdam, so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

(3) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like.

(4) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

(5) Establish a system to confirm the safety of the Cofferdams, appoint a person-in-charge who shall be present at all times and shall be responsible for issuing an evacuation order if and when necessary.

(2) Instrument Monitoring

(a) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the ~~required Earthwork Support~~ Cofferdams and carry out ~~ongoing~~ monitoring ~~based upon the content of the Plan~~; and.

(b) Examples of inspection objects and inspection items are given in the following Table.

Table 6.3.2: Instrument Monitoring Plan

	Object	Monitoring Items
1	Cofferdam Generally	Displacement, stress of Cofferdams Earth pressure and water pressure acting on Cofferdams
2	Shoring and strutting	Axial force of strut and other supports.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
4	Neighbouring properties or structures on or outside the Site	Displacement, cracks,-subsidence, deformation and tilting of structures

6.3.4 General Safety and Construction Requirements

(1) The Contractor shall c~~C~~onstruct the Cofferdams with shoring by the same method stipulated in JSSS エラー！参照元が見つかりません。 [*Safety Measures for Shoring*].

(2) The Contractor shall provide training to ~~Train~~ all Contractor's Personnel who are to work on the construction, maintenance and removal of the Cofferdam or within the Cofferdam, so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

(3) The Contractor shall d~~D~~isplay visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, ~~emergency~~safe (JC32) escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like.

JC32: 6.3.2 (9)での書き方に合わせてください。
Please follow the writing method in 6.3.2 (9): *"(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of any danger of collapse of or inundation in the Cofferdam."*
NK: modified as commented above.

(4) The Contractor shall i~~I~~mplement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

(5) The Contractor shall e~~E~~stablish a system to confirm the safety of the Cofferdams, appoint a person-in-charge who shall be present at all

	outside the Site	

(2) Instrument Monitoring

(c) The Contractor shall prepare an Instrument Monitoring Plan depending on the characteristics of the Site, the ground conditions and the required Cofferdams and carry out ~~ongoing~~ monitoring ~~based upon the content of the Plan~~; and.

(d) Examples of inspection objects and inspection items are given in the following Table.

Table 6.3.2: Instrument Monitoring Plan

	Object	Monitoring Items
1	Cofferdam Generally	Displacement, stress of Cofferdams Earth pressure and water pressure acting on Cofferdams
2	Shoring and strutting	Axial force of strut and other supports.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
4	Neighbouring properties or structures on or outside the Site	Displacement, cracks,-subsidence, deformation and tilting of structures

6.3.4 General Safety and Construction Requirements

(1) ~~Construct~~ The Contractor shall construct the Cofferdams with shoring by the same method stipulated in JSSS エラー！参照元が見つかりません。 [*Safety Measures for Shoring*].

(2) ~~Train~~ The Contractor shall provide training to all Contractor's Personnel who are to work on the construction, maintenance and removal of the Cofferdam or within the Cofferdam, so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.

(3) ~~Display~~ The Contractor shall display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, ~~emergency~~ safe escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like.

(4) The Contractor shall ~~I~~implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

(5) The Contractor shall ~~E~~ establish a system to confirm the safety of the Cofferdams, appoint a person-in-charge who shall be present at all

(6) Evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (7) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use".	times and shall be responsible for issuing an evacuation order if and when necessary. (6) The Contractor shall e~~E~~vacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (7) Whenever any defect is identified in the Cofferdam, the Contractor shall (JC33) i~~I~~mplement repair ~~and improvement measures~~ to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use". JC33: 表現がこれでよいかは別途検討するとして、何かを補う必要がある。 It is necessary to supplement some requirement in this (7) though this expression shall be examined proper or not separately.	times and shall be responsible for issuing an evacuation order if and when necessary. (6) The Contractor shall ~~E~~ evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (7) Whenever any defect is identified in the Cofferdam, the Contractor shall ~~I~~implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use".
6.3.5 Excessive and Sudden Rise in Water Level (1) The Contractor shall be aware of and assess any risk due to **excessive** and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (2) The Safety Plan shall include procedures for monitoring water levels as described below. (a) Monitoring water levels with instruments and recording equipment at the Site and obtaining forecasting information of water levels; (b) Communications among persons in charge of monitoring of water levels, persons responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam; (c) Instructions to Contractor's Personnel for evacuation; (d) Stop work in accordance with JSSS 1.13 [*HSO – Scope of Duties and Authority*]; and (e) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.	**6.3.5 Excessive and Sudden Rise in Water Level** (1) The Contractor shall ~~be aware of and assess~~ analyse any risk due to sudden rise of water level and excessive ~~and sudden rise in~~ water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (2) The Safety Plan shall include procedures for monitoring water levels as described below. (a) Monitoring water levels with instruments and recording equipment at the Site and obtaining forecasting information of water levels; (b) Communications among persons in charge of monitoring of water levels, persons responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam; (c) Instructions to Contractor's Personnel for evacuation; (d) Stop work in accordance with JSSS 1.13 [*HSO – Scope of Duties and Authority*]; and (e) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.	**6.3.5** Excessive and Sudden Rise in Water Level (1) The Contractor shall ~~be aware of and assess~~ analyse any risk due to sudden rise of water level and excessive ~~and sudden rise in~~ water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (2) The Safety Plan shall include procedures for monitoring water levels as described below. (a) Monitoring water levels with instruments and recording equipment at the Site and obtaining forecasting information of water levels; (b) Communications among persons in charge of monitoring of water levels, persons responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam; (c) Instructions to Contractor's Personnel for evacuation; (d) Stop work in accordance with JSSS 1.13 [*HSO – Scope of Duties and Authority*]; and (e) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.
6.3.6 Monitoring Water Level and Other Conditions In addition to the requirements of JSSS 2.1.7 [*Monitoring and Records*], the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.	**6.3.6 Monitoring Water Level and Other Conditions** In addition to the requirements of JSSS 2.1.7 [*Monitoring and Records*], the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.	**6.3.6** Monitoring Water Level and Other Conditions In addition to the requirements of JSSS 2.1.7 [*Monitoring and Records*], the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.
6.4 WALKWAYS, LADDERS AND STEPLADDERS	**6.4 WALKWAYS~~, LADDERS AND STEPLADDERS~~** JC6/10: Title of 6.4 is proposed to revise above. NK: In the meeting of 6/10, JICA agreed that title would not be revise.	**6.4 WALKWAYS, LADDERS AND STEPLADDERS**
6.4.1 General (1) This Section comprises safety measures relating to the safe movement to and around the Site of all Contractor's Personnel, Employer's Personnel and all other persons that are entitled to be on the Site and	**6.4.1** General (1) This Section includes ~~comprises~~ safety measures relating to the safe movement to and around the Site of all Contractor's Personnel, Employer's Personnel and all other persons that are entitled to be on	**6.4.1** General (1) This Section includes ~~comprises~~ safety measures relating to the safe movement to and around the Site of all Contractor's Personnel, Employer's Personnel and all other persons that are entitled to be on

includes temporary walkways, bridges and ramps, portable ladders, stepladders and stairs.	the Site (JC34) with respect to ~~and includes~~ temporary walkways~~, bridges and ramps, portable ladders, stepladders and stairs~~. JC34: Site だけでよいのか？ Is it sufficient to specify only "the Site"? NK: We will define "the Site" in Chapter 1 for only JSSS as proposed below. *6.2.3 JC22: The term "Site" is used in this and other Chapters. We consider that the Site shall include working area of the Contractor such as precast concrete manufacturing plant, stores, labor camps, etc. outside of the Site. It is necessary to define a term that the Site includes such working area to use through the JSSS.* *NK: In order to avoid the case that the Contract does not specify other places in PC for GC 1.1.6.7, JSSS 1.22 shall include the following sentence to include the working area in the Site to apply JSSS to all places where the Contractor's personnel work and live.* *"(x) References to "the Site" in JSSS shall include any places for example, working areas, factories, stores, labor camps, etc. outside of the Site where necessary for the execution of the Contract.* NK: "the Site" in JSSS will be left as it is because the definition of the Site will be made as proposed above. (2) In this section, "walkways" shall mean route or passage for safe movement of pedestrians including walkway, bridge type walkway, ramp, portable ladders and stepladders. JC6/10: Meeting of JICA and NK was held on 6/10 and concluded regarding the term of walkways and passageways as follows: JC: There are terms of "Walkways" and Passageways" for access in JSSS and references as follows: a) JSSS 2.5.7 Temporary Access Around the Site defines as follows: (1) Walkways and Passageways For the purposes of interpretation: "Walkways" mean pedestrian footpaths at ground level or ramped for the use of Contractor's Personnel. "Passageways" are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities. b) Japanese regulation translated to English is mentioned as Passage and Temporary Passage. c) NK noted as follows: footpath: way for the use of pedestrians (BS) walkway: a portion of a scaffold platform used only for access (OSHA) passageway: means of access to the structure of a building (OSHA) d) HSE Guidance HSG 150 Health and safety in construction uses term of walkways except passageway once. https://www.hse.gov.uk/pubns/priced/hsg150.pdf JICA want to use one consistent term in JSSS. JC6/10: As the results of discussion, the term for access in JSSS will be changed as follows: 1) Passageway and (Temporary) Walkways の用語につき検討した。その結果、HSE の Guidance HSG 150 Health and safety in construction をもとに、歩く人用の通路として walkways の用語を使用することとし、covered walkways や elevated walkways 等のように使用する。 2) 仮設通路（temporary walkways）の用語は使用しない。 3) 各章の通路の用語を統一し、walkways へ変更する。 1) The terms of Passageway and (Temporary) Walkways are discussed. The discussion result is "walkways" will be used in JSSS based on the use of "walkways" in the HSG 150 Health and safety in construction. The term of walkways is used for pedestrian. JSSS will use the phrases such as covered walkways, elevated walkways, etc. 2) The term of temporary walkways will not be used as all walkways in the Site are temporary during construction. 3) The term of passageways in JSSS will be replaced with walkways.	the Site with respect to ~~and includes~~ ~~temporary~~ walkways~~, bridges and ramps, portable ladders, stepladders and stairs~~. (2) In this Section, "walkways" shall mean route or passage for safe movement of pedestrians including walkway, bridge type walkway, covered walkways, ramp, ladders and stepladders. To MD, do we define "Walkways" in Chapter 1 Annex 1.1.2 as Walkways are used in many Chapters in JSSS.

(2) For temporary steps and staircase structures the requirements of JSSS エラー! 参照元が見つかりません。 [Scaffolding] shall apply.

(3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply.

(4) Details of the following shall be included in the Safety Plan required by JSSS 1.7 [*Contractor's Safety Plans*]:

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more;

(c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and

(d) Locations of emergency exits and evacuation routes.

6.4.2 Walkways

The Contractor shall:

(1) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

(2) Provide and maintain clear signage so that all users are aware of the locations and routes.

(3) Provide and maintain adequate lighting except when portable lighting such as head torches, lanterns, hand-held torches or the like is provided for workers where considered necessary by the HSO.

NK6/10: Following the above, we will use the term of walkways instead of passageways and replace the latter with the former in other Chapters.

JC6/10: The meeting concluded regarding the use of portable ladders and step ladders as follows:

(2) 6.4.4 Vertical Access

1) Portable ladders 及び Step ladders の使用に関し、上記 HSG 150 及び HSG Brief Guide NDG455 Safe use of ladders and stepladders をもとに、固定はしご以外の移動はしご及び脚立を上下間の通路に原則使用しないことを規定する。

2) 移動はしご及び脚立の使用は、低リスクであることを条件とすることを規定する。

3) 6.4.4 (2) Portable ladders…の規定は削除とする

JC: On the basis of the HSG 150 and HSG Brief Guide NDG455 Safe use of ladders and stepladders https://www.hse.gov.uk/pubns/indg455.pdf, JICA want to specify as follows:

1) Portable ladders and step ladders shall not be used for access except fixed ladders in principle.

2) Portable ladders and step ladders may be used provided that the risk of use is low.

3) The provision of 6.4.4 (2) Portable ladders… shall be deleted.

NK6/10: Following the above, we will additionally specify the 1) and 2) above in 6.5.1. and delete 6.4.4 (2)

(2) For temporary steps and staircase structures the requirements of JSSS エラー! 参照元が見つかりません。 [Scaffolding] shall apply.

(3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [Fall Prevention] shall apply.

(4) Details of the following shall be included in the Safety Plan required by JSSS 1.7 [*Contractor's Safety Plans*]:

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more;

(c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and

(d) Locations of emergency exits and evacuation routes.

~~6.4.2~~ ~~Walkways~~ (JC35)

JC35: 独立した6．4．2ではなく、6．4．1General の続きとして再構成してください。
Please include 6.4.2 in 6.4.1 as part of General.

NK: modified as commented.

The Contractor shall:

(1) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

(2) Provide and maintain clear signage so that all users are aware of the locations and routes.

(3) Portable ladders and stepladders other than fixed ladders shall not be used for walkways in principle. Portable ladders and stepladders may be used provided that the risk of their use is low.

(4) For temporary steps and staircase structures the requirements of JSSS エラー! 参照元が見つかりません。 [Scaffolding] shall apply.

(5) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply.

(6) Details of the following shall be included in the Safety Plan required by JSSS 1.7 [*Contractor's Safety Plans*]:

(a) Locations and available periods of walkways to be provided;

(b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more;

(c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and

(d) Locations of emergency exits and evacuation routes.

(7) The Contractor shall:

(a) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.

(b) Provide and maintain clear signage so that all users are aware of the locations and routes.

(c) Provide and maintain adequate lighting. ~~except when portable~~

(4) Ensure that walkways have sufficient dimensions and load-bearing capability for the intended purpose.

(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

(6) Ensure that temporary bridge type walkways shall have sufficient dimensions and load capability for the intended purpose.

(7) Ensure that ramps do not exceed a gradient of 30 degrees and that they are provided with handrails. Steeper gradients shall be provided with steps or staircases or ladders where appropriate.

(8) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].

6.4.3 Emergency Exits and Evacuation Routes

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and of the locations and routes of emergency walkways, steps, ladders and the like for evacuation and maintain all such locations and routes in a clean, safe and readily available condition.

6.4.4 Vertical Access

The Contractor shall provide steps, stairs and ramps as means of providing safe access or egress from excavations or different working levels.

Steps and stairs ramps shall be constructed from:

(1) Scaffolding in accordance with JSSS エラー! 参照元が見つかりません。 [*Scaffolding*], provided with handrails and non-slip treads.

(2) Portable ladders in accordance with JSSS エラー! 参照元が見つかりません。 [*Portable Ladders and Stepladders*].

(3) Purpose made timber or metal ramps with plywood boarding and structural timber framing.

6.4.5 Portable Ladders and Stepladders

The Contractor shall comply with the following requirements regarding the use of portable ladders and stepladders:

(3) Provide and maintain adequate lighting ~~except when portable lighting such as head torches, lanterns, hand held torches or the like is provided for workers where considered necessary by the HSO~~.

(4) Ensure that walkways have sufficient dimensions and load-bearing capability for the intended purpose.

(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

~~(6) Ensure that temporary bridge type walkways shall have sufficient dimensions and load capability for the intended purpose.~~

~~(7)~~(6) Ensure that walkways ~~ramps~~ do not exceed a gradient of 30 degrees ~~and that they are provided with handrails~~. Steeper gradients shall be provided with steps or staircases or ladders where appropriate.

~~(8)~~(7) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].

6.4.2 Emergency Exits and Safe Escape ~~Evacuation~~ Routes

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and safe escape routes, ~~and of the locations and routes of emergency walkways, steps, ladders and the like for evacuation~~ (JC36) and maintain all such locations and routes in a clean, safe and readily available condition.

JC36: emergency walkway というものを特別に作るような誤解を与えないか？
The stipulation of emergency walkways give impression to specially construct emergency structures, so modified as above.
NK: modified as revised above.

6.4.3 Vertical Access

The Contractor shall provide steps, stairs and ramps as means of providing safe access or egress from excavations or different working levels.

Steps and stairs ramps shall be constructed from:

(1) Scaffolding in accordance with JSSS エラー! 参照元が見つかりません。 [*Scaffolding*], provided with handrails and non-slip treads.

(2) Portable ladders in accordance with JSSS エラー! 参照元が見つかりません。 [*Portable Ladders and Stepladders*].

(3) Purpose made timber or metal ramps with plywood boarding and structural timber framing.

JC6/10:.4.4 (2) Portable ladders…の規定は削除とする。
The provision of 6.4.4 (2) Portable ladders… shall be deleted.
NK: The first and second sentences mention about steps, stairs and ramps, so (2) is not related with those. We agreed to delete (2).
To MD, please review the sentences modified as they cannot be read smoothly.

6.4.4 Portable Ladders and Stepladders

~~lighting such as head torches, lanterns, hand held torches or the like is provided for workers where considered necessary by the HSO.~~

(d) Ensure that walkways have sufficient dimensions and load-bearing capability for the intended purpose.

(e) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.

(f) ~~Ensure that temporary bridge type walkways shall have sufficient dimensions and load capability for the intended purpose.~~

(g) Ensure that ~~ramps~~ walkways do not exceed a gradient of 30 degrees ~~and that they are provided with handrails~~. Steeper gradients shall be provided with steps or staircases or ladders where appropriate.

(h) Ensure that ramps, steps and staircases have slip resistant surfaces and that they are provided with handrails and toe boards in accordance with JSSS 2.5.5 [*Handrails*] and JSSS 2.5.6 [*Toeboards*].

6.4.2 Emergency Exits and ~~Evacuation~~ Safe Escape Routes

The Contractor shall provide clear and illuminated signage so that all persons are made aware of the locations of emergency exits and safe escape routes ~~of the locations and routes of emergency walkways, steps, ladders and the like for evacuation~~ and maintain all such locations and routes in a clean, safe and readily available condition.

6.4.3 Vertical Access

The Contractor shall provide steps, stairs and ramps as means of providing safe access or egress from excavations or different working levels.

Steps, ~~and~~ stairs and ramps shall be constructed ~~from~~ as follows:

(1) In ~~S~~ scaffolding in accordance with JSSS エラー! 参照元が見つかりません。 [*Scaffolding*], provided with handrails and non-slip treads.

(2) ~~Portable ladders in accordance with JSSS エラー! 参照元が見つかりません。 [*Portable Ladders and Stepladders*].~~

(3) From purpose-made-timber or metal ramps with plywood boarding and structural timber framing.

To MD, please review the sentences modified as they cannot be read smoothly.

6.4.4 Portable Ladders and Stepladders

(1) Portable ladders shall:

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Stepladders shall

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Have an angle between the front rail and the floor not exceeding 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

(Unless otherwise stated, the following requirements apply to both ladders and stepladders)

(a) Users shall read and follow all labels/markings on ladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users shall avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders near power lines or exposed energised electrical equipment;

(c) Ladders shall be inspected prior to use. If a ladder is damaged, it shall be removed from service and suitably tagged until repaired or discarded;

(d) Ladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees);

(f) Ladders shall have the top projecting at least 1 m over the landing floor;

(g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

The Contractor shall comply with the following requirements regarding the use of portable ladders and stepladders:

(1) Portable ladders shall:

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Stepladders shall

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Have an angle between the front rail and the floor not exceeding 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

~~(~~Unless otherwise required in the Contract~~stated~~, the ~~following~~ Contractor shall ensure with respect to use of ~~requirements apply to~~ both ladders and stepladders that:. ~~)~~

(a) Users shall read and follow all labels/markings on ladders or stepladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users shall avoid electrical hazards, always look for overhead power lines before handling ladders. Avoid using metal ladders or stepladders near power lines or exposed energised electrical equipment;

(c) Ladders or stepladders shall be inspected prior to use. If a ladder or stepladder is damaged, it shall be removed from service and suitably tagged until repaired or discarded;

(d) Ladders or stepladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(e) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees); (JC37)

JC37: (e) to (k) only relate to ladders. Create a new (4) as “Additional Requirements for Use of Ladders”
はしごにのみ関係がある事項なので、新しく項目建てして分離してください。

The Contractor shall comply with the following requirements regarding the use of portable ladders and stepladders:

(1) Portable ladders shall:

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Be at least 30 cm wide;

(d) Have steps with an interval of 25cm to 35cm and evenly spaced; and

(e) Have slip-proof steps or have other measures to prevent slipping.

(2) Stepladders shall

(a) Be of sound structure, clean and not contaminated by any slippery material;

(b) Be without visible signs of defect, damage, corrosion, and shall otherwise in safe condition;

(c) Have an angle between the front rail and the floor not exceeding 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor;

(d) Steps shall be non-slip and of sufficient size to ensure safe operation; and.

(e) Rails shall have non-slip feet or shoes.

(3) Use of ladders and stepladders

Unless otherwise ~~stated~~ required in the Contract, the ~~following requirements apply to~~ Contractor shall ensure with respect to use of both ladders and stepladders that: ~~)~~

(a) Users shall read and follow all labels/markings on ladders or stepladders, be aware of and never exceed the maximum load rating of a ladder and of the weight it is supporting, including the weight of any tools or equipment;

(b) Users shall avoid electrical hazards, always look for overhead power lines before handling ladders or stepladders. Avoid using metal ladders or stepladders near power lines or exposed energised electrical equipment;

(c) Ladders or stepladders shall be inspected prior to use. If a ladder or stepladder is damaged, it shall be removed from service and suitably tagged until repaired or discarded;

(d) Ladders or stepladders shall only be placed on a stable, firm and sufficiently strong base giving level and safe support and so that the rungs or steps remain horizontal, as well as any loading placed on it;

(4) Additional Requirements for Use of ladders

The Contractor shall ensure with respect to use of ladders:

(a) Ladders shall maintain an angle between foot and floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees);

(i) Ladders shall be secured before any use and prevented from slipping during use by:

(iv) Securing the side rails at or near the top and the bottom;

(v) Providing an effective anti-slip shoe or foot; and

(vi) Having another worker support the lower part of the ladder.

(j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(l) Every ladder shall be used in such a way that:

(vii) A secure handhold and secure support are always available to the user; and

(viii) The user can maintain a safe handhold when carrying a load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short duration of use.

(4) Additional Requirements for Use of Stepladders

(m) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing Scaffolding in accordance with JSSS エラー! 参照元が見つかりません。 [*Scaffolding*];

(n) Step ladders shall not be used as a single ladder or in a partially closed position;

NK: Separated to (4)

(f) Ladders shall have the top projecting at least 1 m over the landing floor;

(g) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(h) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

(i) Ladders shall be secured before any use and prevented from slipping during use by:

(i) Securing the side rails at or near the top and the bottom;

(ii) Providing an effective anti-slip shoe or foot; and

(iii) Having another worker support the lower part of the ladder.

(j) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(k) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(l) Every ladder shall be used in such a way that:

(i) ~~A secure handhold and secure support are always available to the user; and~~ (JC38)

JC38: Ladder に handhold はないと思います。 We think there is no handhold in ladders.
NK: Deleted as commented.

~~(iii)~~(ii) The user can maintain a safe handhold when carrying a load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short duration of use. (JC39)

JC39: Stepladder のところに移動させてください。 Please move (ii) to (5) Stepladders.
NK: moved as commented.

To MD, the stipulation (ii) is a little different from following requirements given in Stepladders (pp 4/7) in HSE Brief Guide NDG455 Safe use of ladders and stepladders. Can you review the (ii) above and specify it in (5) (i).
When deciding if it is safe to carry out a particular task on a stepladder where you cannot maintain a handhold (eg to put a box on a shelf, hang wallpaper, install a smoke detector on a ceiling), this needs to be justified, taking into account:
the height of the task;
whether a handhold is still available to steady yourself before and after the task;

(4) Additional Requirements for Use of Stepladders

(a) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing Scaffolding in accordance with JSSS エラー! 参照元が見つかりません。 [*Scaffolding*];

(b) Ladders shall have the top projecting at least 1 m over the landing floor;

(c) Ladders shall not be placed on boxes, or other unstable bases to obtain additional height and connected ladders to give greater height or reach shall not be allowed;

(d) Suspended ladders shall be anchored in a secure manner so that they cannot be displaced or swing;

(e) Ladders shall be secured before any use and prevented from slipping during use by:

(i) Securing the side rails at or near the top and the bottom;

(ii) Providing an effective anti-slip shoe or foot; and

(iii) Having another worker support the lower part of the ladder.

(f) No extendable ladder shall be used where its sections cannot be locked and which could therefore move while in use;

(g) Where a ladder or a series of ladders rise for a vertical height of 9 m or more above the base level, safe landing areas or rest platforms shall be provided at suitable intervals wherever possible;

(h) ~~Every ladder shall be used in such a way that:~~

(i) ~~A secure handhold and secure support are always available to the user; and~~

(ii) ~~The user can maintain a safe handhold when carrying a load unless, in the case of a step ladder, the maintenance of a handhold is not practicable when a load is carried, and a risk assessment has demonstrated that the use of a stepladder is justified because of the low risk and the short duration of use.~~

(5) Additional Requirements for Use of Stepladders

The Contractor shall ensure with respect to use of stepladders:

(a) Stepladders shall not be used for work at heights of 2m or more. The Contractor shall adopt other measures for work in excess of 2m such as or providing Scaffolding in accordance with JSSS エ

(o) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. (p) Restraint Clasps shall be securely locked before any use; (q) Stepladders shall not be placed on unstable or uneven surfaces; (r) Stepladders shall not be positioned in front of doors; (s) The top rung of a ladder or step of a step ladder shall not be used as a rung/step unless designed for that purpose; and (t) For use of Stepladders as a support for trestle Scaffolds refer to JSSS エラー! 参照元が見つかりません。 [*Scaffolding*]. **6.4.6** Inspection In accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] the HSO shall regularly inspect all walkways, ladders and step ladders, ensure that same are safe and fit for the intended purpose and visibly certify each as "Safe for Use" or otherwise.	(b) Step ladders shall not be used as a single ladder or in a partially closed position; (c) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. (d) Restraint Clasps shall be securely locked before any use; (e) Stepladders shall not be placed on unstable or uneven surfaces; (f) Stepladders shall not be positioned in front of doors; (g) The top rung of a ladder or step of a step ladder shall not be used as a rung/step unless designed for that purpose; and (h) For use of Stepladders as a support for trestle Scaffolds refer to JSSS エラー! 参照元が見つかりません。 [*Scaffolding*]. **6.4.5 Inspection** In accordance with JSSS 1.13 [*HSO - Scope of Duties and Authority*] the HSO shall regularly inspect all walkways, ladders and step ladders, ensure that same are safe and fit for the intended purpose and visibly certify each as "Safe for Use" or otherwise.	ラー! 参照元が見つかりません。 [*Scaffolding*]; (b) Step ladders shall not be used as a single ladder or in a partially closed position; (c) Treads of stepladders shall have the correct sized area and slip resistant finish for safe working. 6.5 SCAFFOLDING **6.5.1 General** (1) This Section contains requirements for various types of Scaffolding including supported scaffolds (for example tube and coupler scaffolds and fabricated frame scaffolds), mobile scaffolds, suspended scaffolds trestle scaffolds and mobile elevating work platforms. (2) Not all types of Scaffolding are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context. (3) All Scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*]. (4) All Scaffolding shall be carried out in compliance with the manufacturer's written instructions or the design of the Contractor. (5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 6.1.1 [Design and Provision of Temporary Works Generally].	**6.5 SCAFFOLDING** **6.5.1 General** (1) This Section contains requirements for various types of Scaffolding including supported scaffolds (for example tube and coupler scaffolds and fabricated frame scaffolds), mobile scaffolds, suspended scaffolds trestle scaffolds and mobile elevating work platforms. (2) Not all types of Scaffolding are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context. (3) All Scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*]. (4) All Scaffolding shall be carried out in compliance with the manufacturer's written instructions or the design of the Contractor. (5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 6.1.1 [Design and Provision of Temporary Works Generally].	**6.5 SCAFFOLDING** **6.5.1 General** (1) This Section contains requirements for various types of Scaffolding including supported scaffolds (for example tube and coupler scaffolds and fabricated frame scaffolds), mobile scaffolds, suspended scaffolds trestle scaffolds and mobile elevating work platforms. (2) Not all types of Scaffolding are separately described in this Section and the requirements of this Section are therefore of general application. Requirements for any one type of Scaffolding shall also apply generally to all types and configurations unless otherwise stated or apparent from the wording and context. (3) All Scaffolding shall be designed, erected, tested, inspected, used, dismantled and removed by Contractor's Personnel that have been trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*]. (4) All Scaffolding shall be carried out in compliance with the manufacturer's written instructions or the design of the Contractor. (5) The design, management, provision, safe use and safe removal of Scaffolding shall comply with the requirements of JSSS 6.1.1 [Design and Provision of Temporary Works Generally].

(6) Unless specified elsewhere in JSSS or in any of the compliance standards, all Scaffolding and Scaffold components shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(7) Scaffolds and Scaffold components shall not be loaded in excess of their maximum intended loads or rated capacities, whichever is less.

(8) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.

(9) Scaffolding shall be removed immediately upon completion of the work for which it is provided.

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

6.5.3 Notices to be Displayed on Scaffolds

(1) Following inspections by HSO, suitable signage shall be applied to Scaffolds clearly indicating for example:

(d) "Scaffold Complete and Safe For Use";

(e) "Scaffold Not Complete - Do Not Use"; and

(f) "Scaffold Not Safe For Use".

(2) When any Scaffold is to be used for loading of Goods, the Contractor shall display a notice indicating the maximum load capacity of each Scaffold.

(3) Scaffolds shall also be tagged with the names of the erector and the person responsible for inspection and maintenance of the Scaffold.

(4) All notices shall be clearly visible and in easy-to-see locations.

(6) Unless specified elsewhere in JSSS or in any of the compliance standards, all Scaffolding and Scaffold components shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(7) Scaffolds and Scaffold components shall not be loaded in excess of their maximum intended loads or rated capacities, whichever is less.

(8) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.

(9) Scaffolding shall be removed immediately upon completion of the work for which it is provided.

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

6.5.3 Notices to be Displayed on Scaffolds

(1) Following inspections by HSO, suitable signage shall be applied to Scaffolds clearly indicating for example:

(a) "Scaffold Complete and Safe For Use";

(b) "Scaffold Not Complete - Do Not Use"; and

(c) "Scaffold Not Safe For Use".

(2) When any Scaffold is to be used for loading of Goods, the Contractor shall display a notice indicating the maximum load capacity of each Scaffold.

(3) Scaffolds shall also be ~~tagged~~posted (JC40)with the names of the erector and the person responsible for inspection and maintenance of the Scaffold.

JC40: 他の箇所でも post を使っているようですので統一してください。
Please use "post" to make consistent use as " post" is used in other places.
NK: Dictionary shows "tag" means to put a tag on something, and "post" means "to stick or pin a notice on wall" tag is used post.
To MD, please review JC40.

(4) All notices shall be clearly visible and in easy-to-see locations.

NK: moved from 6.5.9 and 6.5.10 after 6.5.3 following the comments JC47 and JC49.

(6) Unless specified elsewhere in JSSS or in any of the compliance standards, all Scaffolding and Scaffold components shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it.

(7) Scaffolds and Scaffold components shall not be loaded in excess of their maximum intended loads or rated capacities, whichever is less.

(8) Scaffolding shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads. The Contractor shall provide other specific types of Contractor's Equipment (such as material hoists) for that purpose.

(9) Scaffolding shall be removed immediately upon completion of the work for which it is provided.

6.5.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of any one of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds;

(b) ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA; and

(c) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

6.5.3 Notices to be Displayed on Scaffolds

(1) Following inspections by HSO, suitable signage shall be applied to Scaffolds clearly indicating for example:

(a) "Scaffold Complete and Safe For Use";

(b) "Scaffold Not Complete - Do Not Use"; and

(c) "Scaffold Not Safe For Use".

(2) When any Scaffold is to be used for loading of Goods, the Contractor shall display a notice indicating the maximum load capacity of each Scaffold.

(3) Scaffolds shall also be ~~tagged with~~ posted the names of the erector and the person responsible for inspection and maintenance of the Scaffold.

To MD, please review JC40.

(4) All notices shall be clearly visible and in easy-to-see locations.

6.5.4 Scaffolding Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, ~~assembling~~, altering or dismantling operation on all types of Scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.

(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.

(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.5 ~~General~~ Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.

(3) The examinations and regular inspections shall include:

(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Condition of working platforms and of any damage to fixings;

6.5.4 Scaffold Platforms

Scaffold platforms shall comply with the following:

(1) Each platform on all working levels of Scaffolding shall be fully planked or decked between the front uprights and the handrail supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage;

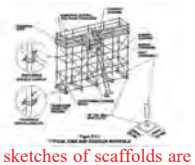
(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary;

(c) Where the Contractor makes the demonstration provided for in paragraph (b) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not exceed 24 cm; and

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing Scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

6.5.4 Scaffold Platforms (JC41)

JC41: このあたりはスケッチを入れないとやっぱり理解できません。本スペック作成後の課題としたいと思います。
Provisions here cannot be understood without showing sketches of platforms. We propose to consider the sketches after preparation of JSSS.



NK: The provisions in 6.5 are based on OSHA Subpart L. The sketches of scaffolds are shown in OSHA. Users of JSSS can refer to sketches in OSHA. Therefore, may not be necessary to include in JSSS.

Scaffold platforms shall comply with the following:

(1) Each platform on all working levels of Scaffolding shall be fully planked or decked between the front uprights and the handrail supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage;

(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary;

(c) Where the Contractor makes the demonstration provided for in paragraph (b) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not exceed 24 cm; and

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing Scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

(2) Except as may be provided separately for individual types of Scaffold, Scaffold platforms and walkways shall be at least 45 cm wide.

(c) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

(e) Conditions and any damage of ~~F~~ fall prevention facilities ~~are intact and secure~~;

(f) Condition of mountings and presence of toe boards;

(g) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(h) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and

(i) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as “Safe for Use” by the HSO.

6.5.6 Scaffold Platforms

Scaffold platforms shall comply with the following:

(1) Each platform on all working levels of Scaffolding shall be fully planked or decked between the front uprights and the handrail supports as follows:

(a) Platforms shall be of adequate size and strength and with true dimension and no twist or bending, no splits, holes or damage;

(b) Each platform unit shall be installed so that the space between adjacent units and the space between the platform and the uprights is no more than 2.5 cm wide, except where the Contractor can demonstrate that a wider space is necessary;

(c) Where the Contractor makes the demonstration provided for in paragraph (b) above, the platform shall be planked or decked as fully as possible and the remaining open space between the platform and the uprights shall not exceed 24 cm; and

(d) The requirement to provide full planking or decking does not apply to platforms used solely as walkways or solely by the workers performing Scaffold erection or dismantling. In these situations, only the planking that the Contractor establishes is necessary to provide safe working conditions is required.

(2) Except as may be provided separately for individual types of Scaffold, Scaffold platforms and walkways shall be at least 45 cm wide.

Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for individual types of Scaffold, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

6.5.5 Supported Scaffolds

(1) General

(a) Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means;

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation;

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement;

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement;

(e) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms; and

(f) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

(2) Tube and Coupler Scaffolds

(a) Transverse bracing forming an “X” across the width of the Scaffold shall be installed at the Scaffold ends and at least at every third set of posts horizontally (measured from only one end) and every fourth runner vertically;

(b) On straight run Scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both directions, and shall extend from the base of the end posts upward to the top of the Scaffold at approximately a 45 degree angle;

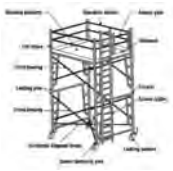
Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for individual types of Scaffold, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

6.5.5 Supported Scaffolds (JC42)

JC42: スケッチがないと？ Same as JC41.



(1) General

(a) Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means;

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation;

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement;

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement;

(e) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms; and

(f) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

(2) Tube and Coupler Scaffolds

(a) Transverse bracing forming an “X” across the width of the Scaffold shall be installed at the Scaffold ends and at least at every third set of posts horizontally (measured from only one end) and every fourth runner vertically;

(b) On straight run Scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both directions, and shall extend from the base of the end posts upward to the top of the Scaffold at approximately a 45 degree angle;

(c) Where conditions preclude the attachment of bracing to posts,

(2) Except as may be provided separately for individual types of Scaffold, Scaffold platforms and walkways shall be at least 45 cm wide.

Where scaffolds must be used in areas that the Contractor can demonstrate are so narrow that platforms and walkways cannot be at least 45 cm wide, such platforms and walkways shall be as wide as feasible, and the workers on those platforms and walkways shall be protected from fall hazards by the use of handrails and/or personal fall arrest systems.

(3) Except as provided separately for individual types of Scaffold, the front edge of all platforms shall not be more than 36 cm from the face of the work, unless handrails are erected along the front edge and/or personal fall arrest systems are used to protect the workers from falling.

(4) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (b) Scaffold platform construction.

6.5.7 Supported Scaffolds

(1) General

(a) Scaffolds with a height to base width (including outrigger supports, if used) ratio of more than four to one (4:1) shall be restrained from tipping by guying, tying, bracing, or equivalent means;

(b) Poles, legs, posts, frames, and uprights shall bear on base plates and mud sills or other adequate firm foundation;

(c) Footings shall be level, sound, rigid, and capable of supporting the loaded Scaffolding without settling or displacement;

(d) Poles, legs, posts, frames, and uprights shall be plumb and braced to prevent swaying and displacement;

(e) When moving platforms to the next level, the existing platform shall be left undisturbed until the new bearers or end frames have been set in place and braced prior to receiving the new platforms; and

(f) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.451 General requirements, (c) Criteria for supported Scaffolds.

(2) Tube and Coupler Scaffolds

(a) Transverse bracing forming an “X” across the width of the Scaffold shall be installed at the Scaffold ends and at least at every third set of posts horizontally (measured from only one end) and every fourth runner vertically;

(b) On straight run Scaffolds, longitudinal bracing across the inner and outer rows of posts shall be installed diagonally in both

(c) Where conditions preclude the attachment of bracing to posts, bracing shall be attached to the runners as close to the post as possible;

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible;

(e) Runners shall be installed along the length of the Scaffold, located on both the inside and outside posts at level;

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminium, the use of grey cast iron is prohibited; and

(g) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.

(3) Fabricated Frame Scaffolds

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected Scaffold is always plumb, level, and square. All brace connections shall be secured;

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means;

(c) Where uplift can occur, which would displace Scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means;

(d) Brackets used to support cantilevered loads shall:

(iii) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;

(iv) Not be bent or twisted from these positions; and

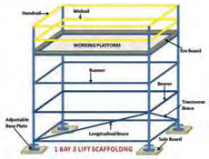
(v) Be used only to support personnel, unless the Scaffold has been designed for other loads.

(e) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

bracing shall be attached to the runners as close to the post as possible;

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible; (JC43)

JC43: Figure?



(e) Runners shall be installed along the length of the Scaffold, located on both the inside and outside posts at level;

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminium, the use of grey cast iron is prohibited; and

(g) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.

(3) Fabricated Frame Scaffolds

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected Scaffold is always plumb, level, and square. All brace connections shall be secured;

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means;

(c) Where uplift can occur, which would displace Scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means; (JC44)

JC44: どんな場合でも鉛直に繋いでいるのではないでしょうか。
Are connections of parts of scaffold made vertically in any cases?

NK: Explanation of necessity of this requirement stipulated in OSHA 1926.452(c)(4) is made in the following place:
https://www.4safenv.state.nv.us/sites/default/files/assets/docs/NV%20OSHA%20INTERP/scaffold%20pins.pdf

Uplift may be occurred by mobile equipment, wind, monsoonal events, earthquakes, etc., so it is required to ensure the locking mechanism by lock pins.

Other website below shows the lock pins in photo:
https://slideplayer.com/slide/5842232/19/images/48/Additional+Specific+Requirements.jpg

(c) is left as it is.

(d) Brackets used to support cantilevered loads shall:

(i) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;

directions, and shall extend from the base of the end posts upward to the top of the Scaffold at approximately a 45 degree angle;

(c) Where conditions preclude the attachment of bracing to posts, bracing shall be attached to the runners as close to the post as possible;

(d) Bearers shall be installed transversely between posts, and when coupled to the posts, shall have the inboard coupler bear directly on the runner coupler. When the bearers are coupled to the runners, the couplers shall be as close to the posts as possible;

(e) Runners shall be installed along the length of the Scaffold, located on both the inside and outside posts at level;

(f) Couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminium, the use of grey cast iron is prohibited; and

(g) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (b) Tube and coupler Scaffolds.

(3) Fabricated Frame Scaffolds

(a) Frames and panels shall be braced by cross, horizontal, or diagonal braces, or combination thereof, which secure vertical members together laterally. The cross braces shall be of such length as will automatically square and align vertical members so that the erected Scaffold is always plumb, level, and square. All brace connections shall be secured;

(b) Frames and panels shall be joined together vertically by coupling or stacking pins or equivalent means;

(c) Where uplift can occur, which would displace Scaffold end frames or panels, the frames or panels shall be locked together vertically by pins or equivalent means;

6.5.6 Suspended Scaffolds

(1) General

(a) Suspended Scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, with or without hoisting equipment; and

(b) Further requirements to those specified above for suspended Scaffolds, shall comply with the provisions of OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of Scaffolds].

(2) The following safety measures shall apply to interior hung Scaffolds which are suspended from roof structures, ceiling beams or other structural members.–

(a) Capacity: of interior hung Scaffolds:

(i) Each Scaffold and Scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it; and

(ii) Each suspension rope, including connecting hardware, used on non-adjustable suspension Scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction: of interior hung Scaffolds:

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the Scaffold is erected; and

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g. strength, durability).

(c) Inspection:

(i) Scaffolds shall be inspected before every work shift and If any abnormality is found, the work shall be stopped; and

(ii) Wire ropes, chains, hooks and shackles used in the Scaffolds shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment]. If any abnormality is found, they shall be replaced.

(ii) Not be bent or twisted from these positions; and

(iii) Be used only to support personnel, unless the Scaffold has been designed for other loads.

(e) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

6.5.6 Suspended Scaffolds

(1) General

(a) Suspended Scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, with or without hoisting equipment; and

(b) Further requirements to those specified above for suspended Scaffolds, shall comply with the provisions of OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of Scaffolds].

(2) The following safety measures shall apply to interior hung Scaffolds which are suspended from roof structures, ceiling beams or other structural members.–

(a) Capacity: of interior hung Scaffolds:

(i) Each Scaffold and Scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it; and

(ii) Each suspension rope, including connecting hardware, used on non-adjustable suspension Scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction: of interior hung Scaffolds:

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the Scaffold is erected; and

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g. strength, durability).

(c) Inspection:

(i) Scaffolds shall be inspected before every work shift and ~~i~~If any abnormality is found, the work shall be stopped; and

(ii) Wire ropes, chains, hooks and shackles used in the Scaffolds shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging Equipment]. If any abnormality is found, they shall be replaced.

(d) Prohibited activity

(d) Brackets used to support cantilevered loads shall:

(iv) Be seated with side-brackets parallel to the frames and end-brackets at 90 degrees to the frames;

(v) Not be bent or twisted from these positions; and

(vi) Be used only to support personnel, unless the Scaffold has been designed for other loads.

(e) Further requirements to those specified above, shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of Scaffolds, (c) Fabricated frame Scaffolds.

6.5.8 Suspended Scaffolds

(1) General

(a) Suspended Scaffolds comprise working platforms suspended from upper levels for example with ropes, cables or chains and all necessary support framing, with or without hoisting equipment; and

(b) Further requirements to those specified above for suspended Scaffolds, shall comply with the provisions of OSHA, Subpart L-Scaffolds, 1926.451 [General requirements] and 1926.452 [Additional requirements applicable to specific types of Scaffolds].

(2) The following safety measures shall apply to interior hung Scaffolds which are suspended from roof structures, ceiling beams or other structural members.–

(a) Capacity: of interior hung Scaffolds:

(i) Each Scaffold and Scaffold component except as provided (ii) below shall be capable of supporting, without failure, its own weight and at least 4 times the maximum intended load applied or transmitted to it; and

(ii) Each suspension rope, including connecting hardware, used on non-adjustable suspension Scaffolds shall be capable of supporting, without failure, at least 6 times the maximum intended load applied or transmitted to that rope.

(b) Construction: of interior hung Scaffolds:

(i) Overhead supporting members (roof structure, ceiling beams, or other structural members) shall be inspected and checked for strength before the Scaffold is erected; and

(ii) Suspension ropes and cables shall be connected to the overhead supporting members by shackles, clips, thimbles, or other means that meet equivalent criteria (e.g. strength, durability).

(c) Inspection:

(i) Scaffolds shall be inspected before every work shift and ~~i~~if any abnormality is found, the work shall be stopped; and

(ii) Wire ropes, chains, hooks and shackles used in the Scaffolds shall be inspected before every work shift in accordance with JSSS 5.4.1 [Hoisting and Rigging

(d) Prohibited activity

The use of any ladders or stepladders on suspended Scaffolds shall be prohibited.

6.5.7 Mobile Scaffolds

(1) Mobile Scaffolds shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the Scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffolds shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffold casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffold while the Scaffold is used in a stationary manner.

(3) Manual force used to move the Scaffold shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(4) Power systems used to propel mobile Scaffolds shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on motors shall not be used to propel Scaffolds unless the Scaffold is designed for such propulsion systems.

(5) Scaffolds shall be stabilised to prevent tipping during movement.

(6) Platforms shall not extend outward beyond the base supports of the Scaffold unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where levelling of the Scaffold is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffold legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffolds:

(a) Check the floor surface in advance to prevent the Scaffold from overturning due to any irregularities or obstructions;

(b) Move the Scaffold only after releasing brakes on all castors;

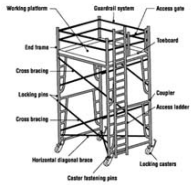
(c) Do not move the Scaffold when any workers or Goods are on the Scaffold;

(d) Ensure that there are no obstructions in the route including any

The use of any ladders or stepladders on suspended Scaffolds shall be prohibited.

6.5.7 Mobile Scaffolds (JC45)

JC45: Sketch?



(1) Mobile Scaffolds shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the Scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffolds shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffold casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffold while the Scaffold is used in a stationary manner.

(3) Manual force used to move the Scaffold shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(4) Power systems used to propel mobile Scaffolds shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on motors shall not be used to propel Scaffolds unless the Scaffold is designed for such propulsion systems.

(5) Scaffolds shall be stabilised to prevent tipping during movement. (JC46)

JC46: 動かすときに必要な措置は(9)で書かれている印象です。ここに敢えて類似の内容を記載する必要はあるでしょうか。内容が違うようであれば、教えてください。
It seems measures when moving scaffold are specified in (9). Is there a necessity to stipulate in (5) separately from (9)? If contents are different, please explain it.
NK: (5) is deleted as same contents as (9).

(6) Platforms shall not extend outward beyond the base supports of the Scaffold unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where levelling of the Scaffold is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffold legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffolds:

(a) Check the floor surface in advance to prevent the Scaffold from overturning due to any irregularities or obstructions;

(b) Move the Scaffold only after releasing brakes on all castors;

(c) Do not move the Scaffold when any workers or Goods are on the Scaffold;

(d) Ensure that there are no obstructions in the route including any

Equipment]. If any abnormality is found, they shall be replaced.

(d) Prohibited activity

The use of any ladders or stepladders on suspended Scaffolds shall be prohibited.

6.5.9 Mobile Scaffolds

(1) Mobile Scaffolds shall be braced by cross, horizontal, or diagonal braces, or combination thereof, to prevent racking or collapse of the Scaffold and to secure vertical members together laterally so as to automatically square and align the vertical members. Scaffolds shall be plumb, level, and squared. All brace connections shall be secured.

(2) Scaffold casters and wheels shall be locked with positive wheel and/or wheel and swivel locks, or equivalent means, to prevent movement of the Scaffold while the Scaffold is used in a stationary manner.

(3) Manual force used to move the Scaffold shall be applied as close to the base as practicable, but not more than 1.5 m above the supporting surface.

(4) Power systems used to propel mobile Scaffolds shall be designed for such use. Forklifts, trucks, similar motor vehicles or add-on motors shall not be used to propel Scaffolds unless the Scaffold is designed for such propulsion systems.

(5) ~~Scaffolds shall be stabilised to prevent tipping during movement.~~

(6) Platforms shall not extend outward beyond the base supports of the Scaffold unless outrigger frames or equivalent devices are used to ensure stability.

(7) Where levelling of the Scaffold is necessary, screw jacks or equivalent means shall be used.

(8) Caster stems and wheel stems shall be pinned or otherwise secured in Scaffold legs or adjustment screws.

(9) Safety measures shall be applied before relocating the Scaffolds:

(a) Check the floor surface in advance to prevent the Scaffold from overturning due to any irregularities or obstructions;

Scaffold;

(d) Ensure that there are no obstructions in the route including any overhead obstructions; and

(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffold or in the vicinity.

(10) Prohibited activity

Use of the Scaffolds shall be prohibited for the following:

(a) Use as a support for lifting Goods, debris or waste materials or for dropping same;

(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;

(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffold or workers on the Scaffold; and

(d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Further requirements to those specified above shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

6.5.8 Trestle Scaffolds

(1) Trestle Scaffolds can comprise:

(a) Special proprietary type free-standing trestle platforms; or
(b) Scaffold boards or lightweight staging boards supported on stepladders or other tripod type portable ladders.

(2) For requirements on Stepladders refer to JSSS 6.4.5[*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:

(a) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the Scaffold boards shall be at least 45 cm;
(b) Scaffold boards shall not be placed any higher than the second highest rung or step of the ladder supporting the platform;
(c) If timber Scaffold boards are used, the overlap between boards shall be at least 20cm; and
(d) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

6.5.9 Scaffolding Assembly, Erection, Alteration and Dismantling Generally

The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of Scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

overhead obstructions; and

(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffold or in the vicinity.

(10) Prohibited activity

Use of the Mobile Scaffolds shall be prohibited for the following:

(a) Use as a support for lifting Goods, debris or waste materials or for dropping same;

(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;

(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffold or workers on the Scaffold; and

(d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Further requirements to those specified above shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

6.5.8 Trestle Scaffolds

(1) Trestle Scaffolds can comprise:

(a) Special proprietary type free-standing trestle platforms; or
(b) Scaffold boards or lightweight staging boards supported on stepladders or other tripod type portable ladders.

(2) For requirements on Stepladders refer to JSSS 6.4.5[*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:

(e) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the Scaffold boards shall be at least 45 cm;
(f) Scaffold boards shall not be placed any higher than the second highest rung or step of the ladder supporting the platform;
(g) If timber Scaffold boards are used, the overlap between boards shall be at least 20cm; and
(h) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

6.5.9 Scaffolding Assembly, Erection, Alteration and Dismantling Generally (JC47)

JC47: 6.5.3 の次に移動させてください。 Please move 6.5.9 after 6.5.3.
NK: moved after 6.5.3 and made it 6.5.4 as commented.

The Contractor shall take the following measures when assembling, ~~or~~ erecting, ~~assembling,~~ altering or dismantling operation on all types of Scaffolding:

(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.

(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary

(b) Move the Scaffold only after releasing brakes on all castors;

(c) Do not move the Scaffold when any workers or Goods are on the Scaffold;

(d) Ensure that there are no obstructions in the route including any overhead obstructions; and

(e) Do not allow any persons other than workers engaged in the relocation to enter the moving areas of the Scaffold or in the vicinity.

(10) Prohibited activity

Use of the Mobile Scaffolds shall be prohibited for the following:

(a) Use as a support for lifting Goods, debris or waste materials or for dropping same;

(b) Use for the purpose of providing a barrier by covering with sheet material with the risk of collapse due to exposure to wind;

(c) Use for work of grit blasting or water jetting, where the reaction force can destabilise the Scaffold or workers on the Scaffold; and

(d) Use as floor to support mobile ladders, stepladders, trestles.

(11) Further requirements to those specified above shall comply with the provisions of OSHA Subpart L-Scaffolds, 1926.452 Additional requirements applicable to specific types of scaffolds, (w) Mobile scaffolds.

6.5.10 Trestle Scaffolds

(1) Trestle Scaffolds can comprise:

(c) Special proprietary type free-standing trestle platforms; or
(d) Scaffold boards or lightweight staging boards supported on stepladders or other tripod type portable ladders.

(2) For requirements on Stepladders refer to JSSS 6.4.5[*Portable Ladders and Stepladders*].

(3) The following safety measures shall apply:

(i) The distance between the centre lines of the supporting stepladders shall not exceed 1.8m, width of the Scaffold boards shall be at least 45 cm;
(j) Scaffold boards shall not be placed any higher than the second highest rung or step of the ladder supporting the platform;
(k) If timber Scaffold boards are used, the overlap between boards shall be at least 20cm; and
(l) The length of projection of the platform from the end support shall be at least 10cm and not more than one-eighteenth of the length of the boards.

~~**6.5.9 Scaffolding Assembly, Erection, Alteration and Dismantling Generally**~~

~~The Contractor shall take the following measures when assembling or erecting, assembling, altering or dismantling operation on all types of Scaffolding:~~

(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.

(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.

(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.10 General Inspection and Maintenance of Scaffolding

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.

(3) The examinations and regular inspections shall include:

(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Condition of working platforms and of any damage to fixings;

(c) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.

(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.

(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.

(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.

(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.

6.5.10 ~~General~~ Inspection and Maintenance of Scaffolding (JC48, JC49)

JC48: General は不要. "General" is not necessary.

JC49: 上記と同様に.5.3 の次に移動させてください。
Please move 6.5.10 to after (6.)5.3.
NK: moved after 6.5.3 and made it 6.5.5 as commented.

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:

(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.

(3) The examinations and regular inspections shall include:

(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Condition of working platforms and of any damage to fixings;

(c) Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

~~(1) Scaffolding shall be assembled or erected, altered and dismantled only by competent personnel and the work should always be carried out under the direction of a competent Superintendent.~~

~~(2) Working areas where Scaffolding is being assembled or erected, altered and dismantled shall be designated as Dangerous Areas, and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any non - authorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].~~

~~(3) During erection of Scaffolding 2m high and above, boarded areas shall be provided for safe temporary storage of Scaffolding tubes, couplings, fittings or components and other materials and equipment.~~

~~(4) All workers engaged in the assembly or erection, alteration and dismantling of any Scaffolding shall be provide with PFAS and ensure that such workers use this.~~

~~(5) Scaffold boards shall each be securely fixed at a sufficient number of points to provide constant support with no movement or dislocation and no gaps that may create a dropping hazard.~~

~~(6) When moving Scaffold boards, ensure that they are securely supported in at least three (3) locations, the length of any projection from supports shall be at least 10cm and not exceeding one-eighteenth of the length of the Scaffold boards.~~

~~(7) When stacking the timber sole plate or runners ensure that they are stacked in the longitudinal direction, over supports and with 20 cm overlaps.~~

~~**6.5.10 General Inspection and Maintenance of Scaffolding**~~

~~Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall comply with the following:~~

~~(1) Every Scaffold from which a person could fall 2m or more shall be thoroughly examined by the HSO (or his delegated assistant):~~

~~(a) Before it is brought into use;~~

~~(b) After any substantial alteration or extension;~~

~~(c) At least once in every 7 days; and~~

~~(d) Whenever it has been exposed to adverse climatic conditions, earthquake or other factors which may have affected its safety.~~

~~(2) A written record of the examination and regular inspections with details of any repair measures shall be prepared and kept by the HSO.~~

~~(3) The examinations and regular inspections shall include:~~

~~(a) Check that the Scaffold is provided and used in accordance with the Method Statement, Safety Plan and its design;~~

mounting, portions of standards, ledgers, brackets, and the like;

(d) Condition and any damage and corrosion of couplings, fittings, clamps and accessories;

(e) Fall prevention facilities are intact and secure;

(f) Condition of mountings and presence of toe boards;

(g) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(h) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and

(i) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

6.5.11 Mobile Elevating Work Platforms

This Subclause specifies requirements for mobile elevating work platforms (also known as aerial lifts) including extendable boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

(1) The following safety measures shall apply for placing and operating mobile elevating work platforms:

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel];

(b) All operation shall be carried out in accordance with the manufacturer's written instructions;

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment; and

(d) Safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry - Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel;

(b) Place a Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*];

(e) Fall prevention facilities are intact and secure; (JC50)

JC50: ここだけ文章になっているようですので他の項目とスタイル(平仄)を合わせてください。
The style of (e) is different from others, please revise it same with others.
NK: revised as commented.

(f) Condition of mountings and presence of toe boards;

(g) Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;

(h) Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and

(i) Condition of mountings and presence of posts, standards, ledgers and transoms.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

6.5.11 Mobile Elevating Work Platforms

This Subclause (JC51) specifies requirements for mobile elevating work platforms (also known as aerial lifts) including extendable boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

JC51: Subclause でよいですか？念のための確認です。
Please confirm if "Subclause" is correct? This is only for confirmation.
To MD, do we use Chapter 1, Section 1.1, Subsection 1.1.1 or Clause 1.1.1?
Please confirm these.

(1) The following safety measures shall apply for placing and operating mobile elevating work platforms:

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel];

(b) All operation shall be carried out in accordance with the manufacturer's written instructions;

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment; and

(d) Safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry - Dangerous Work*], demarcate work areas and take measures to prevent entry to unauthorised personnel;

(b) Place a Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*];

(c) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(b) ~~Condition of working platforms and of any damage to fixings;~~

(c) ~~Condition and any loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, and the like;~~

(d) ~~Condition and any damage and corrosion of couplings, fittings, clamps and accessories;~~

(e) ~~Conditions and any damage of F fall~~ ~~prevention facilities are intact and secure~~;

(f) ~~Condition of mountings and presence of toe boards;~~

(g) ~~Condition of bases, screw jacks, castors, brakes, sole plates and the like and ensure there is no movement or settlement;~~

(h) ~~Condition of mountings and presence of diagonal bracings, stays, anchors, ties and other bracing, support or reinforcement materials; and~~

(i) ~~Condition of mountings and presence of posts, standards, ledgers and transoms.~~

(4) ~~The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Scaffolding until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.~~

6.5.11 Mobile Elevating Work Platforms

This ~~Subclause~~ Subsection specifies requirements for mobile elevating work platforms (also known as aerial lifts) including extendable boom platforms, articulating boom platforms, vertical towers and a combination of any such devices.

To MD, do we use Chapter 1, Section 1.1, Subsection 1.1.1 or Clause 1.1.1?
Please confirm these.

(1) The following safety measures shall apply for placing and operating mobile elevating work platforms:

(a) Only trained Contractor's Personnel, certified as such by the HSO shall be permitted to operate in accordance with JSSS 1.18 [Proper Placement of Contractor's Personnel];

(b) All operation shall be carried out in accordance with the manufacturer's written instructions;

(c) Mobile elevating work platforms shall never be used beyond the load limit specified by the manufacturer, which shall also be clearly displayed on the equipment; and

(d) Safety devices shall not be switched off or isolated.

(2) Measures before operation of mobile elevating work platform:

(a) Designate operation as "Dangerous Work" and in accordance with JSSS 2.3 [*Prohibition of Entry - Dangerous Work*],

(c) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set;

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed;

(c) When outriggers are used, they shall be positioned on pads or a solid surface; and

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Workers shall use PPE including PFRS;

(c) Workers shall be prohibited from taking dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail;

(d) When the mobile elevating work platform has both platform (upper) and lower controls, the upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency;

(e) When leaving the operating position and when work is not continuing or stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor; and

(iii) Apply the parking brake securely and ensure the equipment is securely parked.

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [*Adverse Weather Requirements*].

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set;

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed;

(c) When outriggers are used, they shall be positioned on pads or a solid surface; and

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) Workers shall use PPE including PFRS; (JC52)

JC52: PFRS 等を要求するのは、日本での慣行だと思います。OSHA や HSE でそこまで要求していないのであれば、削除していただいてよいと思います。
I think it's a Japanese practice to request to use PFRS, etc. If OSHA and/or HSE do not request this, (b) can be deleted.
NK: JSSS 2.5FALL PREVENTION stipulates measures, it is not necessary to specify (b) particularly for Mobile Elevating Work Platforms. (b) is deleted.

(c) Workers shall be prohibited from taking dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail;

(d) When the mobile elevating work platform has both platform (upper) and lower controls, the upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency;

(e) When leaving the operating position and when work is ~~not continuing or~~ (JC53) stopped the operator of the mobile elevating work platform shall:

JC53: 肯定と否定が一つの文で入っていてわかりにくい。
(e) above is difficult to understood because affirmation and denial are in one sentence, so deleted the phrase.
NK: deleted as commented.

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor; and

(iii) Apply the parking brake securely and ensure the equipment is securely parked.

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [*Adverse Weather Requirements*].

(5) Measures of moving mobile elevating work platform

demarcate work areas and take measures to prevent entry to unauthorised personnel;

(b) Place a Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [*Spotters, Flagmen and the like*];

(c) Determine signals in accordance with JSSS 2.4.5 [*Signals*], and

(d) Determine in advance the appropriate working speed limit for the mobile elevating work platform according to the height of the working platform and the length of the boom, etc. and ensure that the operator never drives the equipment in excess of this limit.

(3) Measures at locating mobile elevating work platform:

(a) The parking brakes of vehicle shall be set;

(b) Wheel chocks shall be installed before using the mobile elevating work platforms on an incline, provided they can be safely installed;

(c) When outriggers are used, they shall be positioned on pads or a solid surface; and

(d) Lift controls shall be tested each day prior to use to determine that such controls are in safe working condition.

(4) Measures at operation on mobile elevating work platform:

(a) Workers shall always stand firmly on the floor of the basket/working platform, and shall not sit or climb on the edge of the basket or use planks, ladders, or other devices for a work position;

(b) ~~Workers shall use PPE including PFRS;~~

(c) Workers shall be prohibited from taking dangerous actions such as moving from the working platform/basket to neighbouring structure, standing on and working from handrail;

(d) When the mobile elevating work platform has both platform (upper) and lower controls, the upper controls shall be in or beside the platform within easy reach of the operator. Lower controls shall provide for overriding the upper controls. Controls shall be plainly marked as to their function. Lower level controls shall not be operated unless permission has been obtained from the worker in the lift, except in case of emergency;

(e) When leaving the operating position and when work is ~~not continuing or~~ stopped the operator of the mobile elevating work platform shall:

(i) Put the working platform in the lowest position;

(ii) Stop the prime engine/motor; and

(5) Measures of moving mobile elevating work platform

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation; and

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(c) Carry out inspection in accordance with JSSS 4.2 [*Requirements Generally*]; and

(d) Carry out maintenance, repair and installation/removal of the working platform in accordance with JSSS 4.2.2 [*Defects and Repair During Operation*], JSSS 4.3.3 [*Safety Measures During Cleaning, Inspection and Maintenance*] and JSSS 4..3.6 [*Safety Measures During Connection of Attachments*].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

6.6 ELEVATED ACCESS STRUCTURES

6.6.1 General

Elevated Access Structures act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site.

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1[*Design and Provision of Temporary Works Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE]; and

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation; and

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(a) Carry out inspection in accordance with JSSS 4.2 [*Requirements Generally*]; and

(b) Carry out maintenance, repair and installation/removal of the working platform in accordance with JSSS 4.2.2 [*Defects and Repair During Operation*], JSSS 4.3.3 [*Safety Measures During Cleaning, Inspection and Maintenance*] and JSSS 4..3.6 [*Safety Measures During Connection of Attachments*].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

6.6 ELEVATED ACCESS STRUCTURES

6.6.1 General

Elevated Access Structures act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site. (JC54)

JC54: 他の節との表現の横並びをとりたい。This Section contains requirements of XXXX of Elevated Access Structure which act as…とか。

The above sentence is to be modified as same style in other Sections like "This Section contains requirements of XXXX of Elevated Access Structure which act as…".

NK: modified as commented.
To MD, please review the comment and sentence modified.

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1[*Design and Provision of Temporary Works Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE]; and

(iii) Apply the parking brake securely and ensure the equipment is securely parked.

(f) Stop work at a height of 2 m or more in case of adverse weather in accordance with JSSS 2.7 [*Adverse Weather Requirements*].

(5) Measures of moving mobile elevating work platform

(a) Mobile elevating work platform shall not be moved when the boom is elevated in a working position with workers in the basket, except for equipment which is specifically designed for this type of operation; and

(b) Before moving the mobile elevating work platform for travel, the boom(s) shall be inspected to see that it is properly cradled and outriggers are in stowed position.

(6) Inspection and maintenance of mobile elevating work platform

(c) Carry out inspection in accordance with JSSS 4.2 [*Requirements Generally*]; and

(d) Carry out maintenance, repair and installation/removal of the working platform in accordance with JSSS 4.2.2 [*Defects and Repair During Operation*], JSSS 4.3.3 [*Safety Measures During Cleaning, Inspection and Maintenance*] and JSSS 4..3.6 [*Safety Measures During Connection of Attachments*].

(7) Prohibition of use for other purposes

Mobile elevating work platforms shall not be used for any purpose other than the intended original purpose and for example shall never be used for hoisting loads.

6.6 ELEVATED ACCESS STRUCTURES

6.6.1 General

~~Elevated Access Structures act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site.~~

This Section includes safety measures relating to Elevated Access Structure which act as act as temporary access, parking, working and/or storage areas which also accommodate Contractor's Equipment, Goods and temporary facilities as necessary to permit the construction operations to be performed from these structures on the underlying or adjacent working area(s) within the Site.

To MD, please review the comment and sentence modified.

6.6.2 Design and Management Generally

(1) The design, management, provision, safe use and safe removal of Elevated Access Structures shall comply with the requirements of JSSS 6.1.1[*Design and Provision of Temporary Works Generally*].

(2) For related JSSS requirements, refer to the following and other related parts of JSSS including:

(a) JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety

(b) JSSS 1.37 [Design and Management of Temporary Works].

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where any Elevated Access Structures are being erected, altered or removed as Dangerous Areas and enclose the working area where possible with temporary fences or barriers, prevent entry of any unauthorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work];*

(b) Use of Measures to prevent Vehicles from falling;

The Contractor shall provide and fix continuous “W” Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor’s Equipment, to prevent such vehicles or Contractor’s Equipment from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor’s Equipment are working or parking to prevent the vehicles or Contractor’s Equipment accidentally moving and colliding with the crash barrier.

All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard.

(c) Use of Measures to prevent collision with Marine Vessels;

(b) JSSS 1.37 [Design and Management of Temporary Works].

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where any Elevated Access Structures are being erected, altered or removed as Dangerous Areas and enclose the working area where possible with temporary fences or barriers, prevent entry of any unauthorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work];*

(b) Use of Measures to prevent Vehicles from falling;

The Contractor shall provide and fix continuous “W” Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings, to the entire perimeter of all Elevated Access Structures where they are used by vehicles or Contractor’s Equipment, to prevent such vehicles or Contractor’s Equipment from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor’s Equipment are working or parking to prevent the vehicles or Contractor’s Equipment accidentally moving and colliding with the crash barrier.

All crash barriers and kerbs shall be painted in black and yellow bands to show them as a hazard. (JC55)

JC55: 全延長にガードレールを付けるというのは過剰な要求です。
殆どの場合はチャンネルなどの鋼材を取り付けていると思うので、その方向で修正をお願いします。

It is excessive requirement to provide guardrails its entire perimeter. In most cases, I think that steel materials such as channels are provided at the sites. Please modify the sentence in that direction above.

NK: modified as commented.

To MD: I referred to the photos below for this clause (b). I agreed to JC55 comment. Contractor’s Equipment will not run in high speed on the structure, so heavy duty crush barriers seems excessive. As steel angle or channel kerbs are provided for vehicles not to fall, move, and collide, so handrails are to be specified for workers not to fall. Please review the modified sentence.

http://www.taisenk.co.jp/pc_koudai.html#results

(c) Use of Measures to prevent collision with Marine Vessels;

Equipment and PPE]; and

(b) JSSS 1.37 [Design and Management of Temporary Works].

(3) Erection and Removal of Elevated Access Structures

The Contractor shall:

(a) Designate any working areas where any Elevated Access Structures are being erected, altered or removed as Dangerous Areas and enclose the working area where possible with temporary fences or barriers, prevent entry of any unauthorised personnel or prevent vessels from entering in the case of offshore or marine works and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work];*

(b) Use of Measures to prevent Vehicles from falling;

The Contractor shall provide and fix handrails specified in JSSS 2.5.5 [Handrails] ~~continuous “W” Section, heavy duty commercial type galvanised steel crash barriers of suitable strength and height (minimum 1.5m) with posts, fixings and fittings~~, to the ~~entire~~ perimeter of ~~all~~ Elevated Access Structures ~~where they are used by vehicles or Contractor’s Equipment,~~ to prevent workers ~~such vehicles or Contractor’s Equipment~~ from falling where there is any risk.

The Contractor shall also provide steel angle or channel kerbs welded to the surface of the decking in locations where vehicles or Contractor’s Equipment are working or parking to prevent the vehicles or Contractor’s Equipment from falling, accidentally moving and colliding with ~~the crash barrier~~ handrails.

All ~~crash barriers and~~ kerbs shall be painted in black and yellow bands to show them as a hazard.

(c) Use of Measures to prevent collision with Marine Vessels;

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe working load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load.

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate all work to and on any Elevated Access Structures and during use, as Dangerous Work and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS **エラー！参照元が見つかりません。** [*Walkways*],

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the sea, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS to workers where appropriate including those engaged in the construction and removal of the Elevated

For offshore work, the Contractor shall provide all necessary warning signs, audible alarms, beacons and lighting and serve all notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe working load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load. (JC56)

JC56: 作業構台はかなり大掛かりな作業場であり、異なるチームが同時に作業することもあるのではないでしょうか。その時、安全上の留意事項がこれだけでよいのでしょうか？(そのために具体的に何をすべきかを書いてください)
誰か特定の人間が責任をもつ、又は作業計画で確認する、と言ったことは必要ないでしょうか？

The Elevated Access Structures is a fairly large working area, and different teams may work at the same time. For such working conditions, are the safety requirements specified here sufficient? (Please stipulate some concrete requirements what the Contractor shall do.) For example someone shall take responsibility for the safety, safety shall be confirmed by the Method Statement, and so on.

NK: Responsibility of safety by HSO is specified in 6.1.1 (5). Most requirements are specified in 6.1, so two particular requirements are added in (10) and (11).

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate all work to and on any Elevated Access Structures and during use, as Dangerous Work and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS **エラー！参照元が見つかりません。** [*Walkways*],

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the water ~~sea~~, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS to workers where appropriate including

notices to the marine or other relevant authorities as necessary to ensure that all shipping, boats and other vessels are aware of changes to navigation due to the presence of any Elevated Access Structures and that all risk of collision is avoided.

6.6.3 Further Safety Requirements

The Contractor shall take all necessary measures to ensure the safe provision, use and removal of Elevated Access Structures, including but not restricted to the following:

(1) Provide warning notices clearly showing the maximum safe working load in clearly visible locations.

(2) Ensure that the Contractor, together with any other parties considered collectively, NEVER exceed the maximum safe working load.

(3) Provide any further signs containing user information or other mandatory usage requirements such as speed limits and markings all as necessary to demarcate roadways and walkways, working, storage, parking and other areas.

(4) Designate all work to and on any Elevated Access Structures and during use, as Dangerous Work and take all further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) Provide walkways in accordance with JSSS **エラー！参照元が見つかりません。** [*Walkways*],

(6) Provide adequate lighting to ensure the safety of Contractor's Equipment, equipment of other parties, vehicles and persons in transit or whilst working.

(7) (for offshore work) Provide rescue and lifesaving equipment to be used in the event that any persons fall into the water ~~sea~~, including a rescue tender and life belts or the like.

(8) Provide PFAS or PFRS to workers where appropriate including those engaged in the construction and removal of the Elevated Access Structures.

Access Structures.

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure shall be thoroughly examined by the HSO:

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections and details of any repair measures shall be prepared by the HSO.

(3) The examination and regular inspections shall include:

(a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Check items include:

(i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;

(ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and

(iii) All other requirements of this Section are still being complied with.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

those engaged in the construction and removal of the Elevated Access Structures.

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure shall be thoroughly examined by the HSO:

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections and details of any repair measures shall be prepared by the HSO.

(3) The examination and regular inspections shall include:

(a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Check items include:

(i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;

(ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and

(iii) All other requirements of this Section are still being complied with.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

(9) Prevent any accident or collision by ensuring that all Contractor's Personnel that may be working on Elevated Access Structures and any Employer's personnel and other persons that may be present on such structures are fully informed about the work that may be in progress from time to time, including transportation and delivery of Goods and of the measures and any precautions that must be complied with.

(10) Hold coordination meeting to secure the safety of workers among different teams before they work at the same time on the Elevated Access Structures.

(11) Instruct safety measures to workers when different teams work at same time on the Elevated Access Structures at general morning meetings, pre-work meetings, TBM;

6.6.4 Inspection and Maintenance

Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall comply with the following:

(1) Every Elevated Access Structure shall be thoroughly examined by the HSO:

(a) Before it is brought into use;

(b) After any substantial alteration or extension;

(c) At least once in every 7 days; and

(d) Whenever it has been exposed to adverse climatic conditions, heavy seas, earthquake or other factors which may have affected its safety.

(2) A written record of the examination and regular inspections and details of any repair measures shall be prepared by the HSO.

(3) The examination and regular inspections shall include:

(a) Check if the Elevated Access Structure is provided and used in accordance with the Method Statement, Safety Plan and its design;

(b) Check items include:

(i) The structural condition of the Elevated Access Structure and of any deterioration, defect, damage or settlement;

(ii) Fall prevention and all other safety requirements and facilities are intact and fully operational; and

(iii) All other requirements of this Section are still being complied with.

(4) The Contractor shall carry out all necessary remedial and repair work necessary to rectify any deterioration, defect or damage and shall if necessary stop the use of the Elevated Access Structure until such work has been properly completed, re-inspected and re-certified as "Safe for Use" by the HSO.

6.7 TEMPORARY ELECTRICAL INSTALLATIONS

6.7.1 General

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

(2) As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation.

Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations shall be designed, installed, inspected, tested, altered and removed by Contractor's Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor shall take precautions against the risk of death or injury from electricity during construction work. Refurbishment work in existing buildings presents the greatest risk and all shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.

6.7 TEMPORARY ELECTRICAL INSTALLATIONS

6.7.1 General

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

(2) As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation. (JC57)

Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.

JC57: もう少し厳格に specify してください。出所となっている原典には、何か定義があったのではないでしょうか。
Please specify more strictly. The source of this stipulation may have definition.
NK: The source is OSHA 1926.405 Wiring methods, components, and equipment for general use. (a) Wiring methods. (2) Temporary wiring (i) Scope copied below.

(i) Scope. The provisions of paragraph (a)(2) of this section apply to temporary electrical power and lighting wiring methods which may be of a class less than would be required for a permanent installation.
Except as specifically modified in paragraph (a)(2) of this section, all other requirements of this subpart for permanent wiring shall apply to temporary wiring installations.
Temporary wiring shall be removed immediately upon completion of construction or the purpose for which the wiring was installed.
NK: JSSS cannot specify temporary wiring in detail and also class of permanent installation. To avoid confusion at the site, we delete (2).

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations shall be designed, installed, inspected, tested, altered and removed by Contractor's Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor shall take precautions against the risk of death or injury from electricity during construction work. Refurbishment work in existing buildings presents the greatest risk and all shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.(JC58)

JC58: In particular, when executing refurbishment work of existing buildings where greater risk exist, the Contractor shall (この後に 3.1.2 (d)にあるような具体的な内容をもってくる)。

Please specify concrete stipulation after "In particular, when executing refurbishment work of existing buildings where greater risk exist, the Contractor shall" as specified in JSSS 3.1.2 (d) copied below.

（参照 3.12(d)の記述）(reference: 3.1.2 (d))
Provide and use cable avoidance tools such as Cable Locator, and locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area.
NK: Modified as commented.
To MD, please review the comment and revisions.

6.7 TEMPORARY ELECTRICAL INSTALLATIONS

6.7.1 General

(1) This Section contains safety requirements for the provision, use, relocation, repair and removal of temporary electrical power and lighting installations at the Site.

(2) ~~As this Section relates to temporary installations to be used during construction, temporary wiring methods can be of a class less than would be required for a permanent installation.~~

~~Mains switchgear, equipment and outlets however shall comply with the same standards as for a permanent installation.~~

(3) Although this work is temporary, it shall be particularly noted that temporary electrical installations shall be designed, installed, inspected, tested, altered and removed by Contractor's Personnel that are qualified electricians, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

(4) The Contractor shall take precautions against the risk of death or injury from electricity during construction work. In particular, when executing refurbishment work of existing buildings where greater risk exists, the Contractor shall locate the location, route or position on ground surfaces, walls and floors of Underground or Concealed Services, mark routes with paint and/or wooden pegs or barriers and clear signage and ensure that no unauthorised work take place within the area in accordance with JSSS 3.1 [UNDERGROUND AND CONCEALED SERVICES], 3.1.2 [Preparation and Work Planning]. ~~Refurbishment work in existing buildings presents the greatest risk and all shall be planned, managed and monitored to ensure that workers are not exposed to risk from electricity.~~

To MD, please review the comment and revisions.

(5) The temporary electrical installations and all equipment used shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

6.7.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Temporary Electrical Installations complying with the technical requirements specified in OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers who are not electricians but who are carrying out other works, by taking appropriate measures including the following:

(1) Understanding the system

(a) Ensure that Contractor's Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe; and

(b) Ensure that relevant parts of existing electrical systems are isolated if there is any risk or if the execution of any part of the Works is liable to disturb or damage the existing electrical system and expose persons to electrical danger.

(2) Portable electrical equipment

(a) Ensure that tools, plugs and cables designed for domestic use are not used for construction works;

(b) The Contractor shall use cordless tools or other tools suitable for external use under Site conditions; and

(c) Where cordless tools are not used and where so justified by available voltage, ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.

(5) The temporary electrical installations and all equipment used shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

6.7.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Temporary Electrical Installations complying with the technical requirements specified in OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers who are not electricians but who are carrying out other works, by taking appropriate measures including the following:

(1) Understanding the system

(a) Ensure that Contractor's Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site (JC59) or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe; and

JC59: Site だけでよいのか？ Is it sufficient to specify "Site" only?
NK: As replied to JC22, the Site will be defined to include the working areas in Chapter 1.

(b) Ensure that relevant parts of existing electrical systems are isolated ~~if there is any risk or~~ if the execution of any part of the Works ~~is liable~~ may ~~to~~ disturb or damage the existing electrical system and expose persons to electrical danger.

(2) Portable electrical equipment

(a) The Contractor shall ~~E~~ensure that tools, plugs and cables designed for domestic use are not used for construction works unless necessity to use them are justified and accepted by HSO;

(b) The Contractor shall use cordless tools or other tools suitable for ~~external use under~~ the Site conditions; and

(c) Where cordless tools are not used and where so justified by available voltage, the Contractor shall ensure that tools operate from a 110V centre tapped to earth (CTE) supply system (JC60) so that the maximum voltage to earth does not exceed 55V.

JC60: 220V の特高電圧を使用する tool が多いと思います。現在の記述だと 110V にしか対応できないので、220V にも対応できる記述に修正してください。
There are lots of tools operated with 220V. (c) stipulates only use of tools operated with 110V. Please revise (c) so that tools of 220V can be used.
NK: (c)は英国の HSE の規定をもとに作成しています。
OSHA を参考に追記します

(5) The temporary electrical installations and all equipment used shall be safe, regularly inspected and properly maintained.

(6) Temporary electrical installations shall be removed immediately upon completion of the work for which they are used.

6.7.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Temporary Electrical Installations complying with the technical requirements specified in OSHA PART 1926-Safety and Health Regulations for Construction, Subpart K-Electrical; 1926.405 Wiring Methods, Components and Equipment for General Use.

6.7.3 General Safety Requirements

The Contractor shall avoid accidents to workers engaged on electrical works and also those workers who are not electricians but who are carrying out other works, by taking appropriate measures including the following:

(1) Understanding the system

(a) The Contractor shall ~~E~~ ensure that Contractor's Personnel responsible for planning, managing or performing any part of the Works fully understand the electrical system on Site or inside any existing building where any work is to be carried out, to ensure that the integrity of the electrical system is not compromised and all workers remain safe; and

(b) The Contractor shall ~~E~~ ensure that relevant parts of existing electrical systems are isolated ~~if there is any risk or~~ if the execution of any part of the Works ~~is liable to~~ may disturb or damage the existing electrical system and expose persons to electrical danger.

(2) Portable electrical equipment

(a) The Contractor shall ~~E~~ ensure that tools, plugs and cables designed for domestic use are not used for construction works unless necessity to use them are justified and accepted by HSO;

(b) The Contractor shall use cordless tools or other tools suitable for ~~external use under~~ the Site conditions; and

~~(c) Where cordless tools are not used and where so justified by available voltage, the Contractor shall ensure that tools operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.~~

(c) Where cordless tools are not used, the Contractor shall select cord- and plug-connected tools at first which are operated with the maximum voltage to earth does not exceed 50V/55V.

(d) Where cordless tools are not used and cord- and plug-connected tools mentioned in (c) above are not used, the Contractor shall select cord- and plug-connected tools which are operated as stipulated below;

（3）HSE Safety Topics

https://www.hse.gov.uk/construction/safetytopics/systems.htm

Electricity - Systems in buildings, Portable electrical equipment

Tools, plugs and cables designed for DIY (do-it-yourself） and domestic use are not suitable for site conditions.

You should use cordless tools or those that operate from a 110V centre tapped to earth (CTE) supply system so that the maximum voltage to earth does not exceed 55V.

HSE, Electrical safety and you, A brief guide

https://www.hse.gov.uk/pubns/indg231.pdf

Reduce the voltage

One of the best ways of reducing the risk of injury when using electrical equipment is to limit the supply voltage to the lowest needed to get the job done, such as

- where electrically powered tools are used, battery-operated ones are safest; or

- portable tools designed to be run from a 110 volt centre-tapped-to-earth supply are readily available

ネット情報に次があります。

英国では電圧230V の工具からの感電は致命的なものになるため、建設現場で230V を変圧器で減圧させ 110V の電源で使う工具しか使用できない。とあります。http://www.monotsukuri.net/nvq/nvq_08.pdf

安衛則 333 条漏電による感電の防止で、次を規定している。

「電動機械器具」で、対地電圧が150V をこえる移動式若しくは可搬式のもの…については、漏電による感電の危険を防止するため、当該電動機械器具が接続される電路に、当該電路の定格に適合し、感度が良好であり、かつ、確実に作動する感電防止用漏電しや断装置を接続しなければならない。

２　事業者は、前項に規定する措置を講ずることが困難なときは、電動機械器具の金属製外わく、電動機の金属製外被等の金属部分を、次に定めるところにより接地して使用しなければならない。

OSHA は次のように規定している。

Subpart K, 1926.404 Wiring design and protection. (f) Grounding. (7) Supports, enclosures, and equipment to be grounded

(iv) Equipment connected by cord and plug.

Under any of the conditions described in paragraphs (f)(7)(iv)(A) through (f)(7)(iv)(C) of this section, exposed noncurrent-carrying metal parts of cord- and plug-connected equipment which may become energized shall be grounded:

(A) If in a hazardous (classified) location (see §1926.407).

(B) If operated at over 150 volts to ground, except for guarded motors and metal frames of electrically heated appliances if the appliance frames are permanently and effectively insulated from ground.

(C) If the equipment is one of the types listed in paragraphs (f)(7)(iv)(C)(1) through (f)(7)(iv)(C)(5) of this section. However, even though the equipment may be one of these types, it need not be grounded if it is exempted by paragraph (f)(7)(iv)(C)(6).

(1) Hand held motor-operated tools;

(2) Cord- and plug-connected equipment used in damp or wet locations or by employees standing on the ground or on metal floors or working inside of metal tanks or boilers;

(3) Portable and mobile X-ray and associated equipment;

(4) Tools likely to be used in wet and/or conductive locations; and

(5) Portable hand lamps.

(6) Tools likely to be used in wet and/or conductive locations need not be grounded if supplied through an isolating transformer with an ungrounded secondary of not over 50 volts. Listed or labeled portable tools and appliances protected by a system of double insulation, or its equivalent, need not be grounded. If such a system is employed, the equipment shall be distinctively marked to indicate that the tool or appliance utilizes a system of double insulation.

NK: (c) is specified based on HSE. Japanese regulation and OSHA specify as above and they are almost same.

Under any of the conditions described in paragraphs (i) through (iii) below, exposed noncurrent-carrying metal parts of cord- and plug-connected tools shall be grounded:

(i) If in a hazardous (classified) location stipulated in OSHA §1926.407 Hazardous (classified) locations.

(ii) If operated at over 150V to ground, except for guarded motors and metal frames of electrically heated appliances if the appliance frames are permanently and effectively insulated from ground.

(iii) If the equipment is one of the types listed in paragraphs i) through v) below. ~~However, even though the equipment may be one of these types, it need not be grounded if it is exempted by paragraph vi) below.~~

i) Hand held motor-operated tools;

ii) Cord- and plug-connected equipment used in damp or wet locations or by workers standing on the ground or on metal floors or working inside of metal tanks or boilers;

iii) Portable and mobile X-ray and associated equipment;

iv) Tools likely to be used in wet and/or conductive locations; and

v) Portable hand lamps.

~~vi) Tools likely to be used in wet and/or conductive locations need not be grounded if supplied through an isolating transformer with an ungrounded secondary of not over 50V. Listed or labeled portable tools and appliances protected by a system of double insulation, or its equivalent, need not be grounded. If such a system is employed, the equipment shall be distinctively marked to indicate that the tool or appliance utilizes a system of double insulation.~~

(3) Residual current (trip) devices

(a) Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault;

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply; and

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

(7) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(8) Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of the Laws and regulations of the Country and the relevant authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

If stipulates both requirements in UK and OSHA will confuse because different voltage limits such as 110V/50V and 150V/50V in UK and OSHA/japan, respectively.
(c) is replaced with new one based on HSE and (d) is added referring OSHA.
Some sentences may not be necessary as shown with deletion line.

(3) Residual current (trip) devices

(a) ~~Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault~~Ensure that equipment, tools, leads, wires or cables are free of defect or damage, in particular when mains supply is used.; (JC61)

JC61: 原文はスペックの requirement の記述になっていない。
The (a) is not the style of requirement in specification, so modified.
NK: modified as commented.

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply; and

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

(7) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(8) ~~Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.~~(JC62)

JC62: English is too rough to understand.
Since Inspection, Maintenance and Repair are elaborated in JSSS6.7.6, (8) may be deleted.
NK: deleted as commented.

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] shall include a copy of (JC63) the Laws and regulations of the Country and the relevant authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

JC63: 全文をコピーするのか？shall make reference to とかでいいのでは？
Shall all document be copied all? It may be possible to specify "shall make reference to".
NK: modified as commented.

---

(3) Residual current (trip) devices

(a) ~~Where mains supply is used, the risk of injury is high if equipment, tools, leads, wires or cables are damaged or if there is a fault~~Ensure that equipment, tools, leads, wires or cables are free of defect or damage, in particular when mains supply is used;

(b) Use residual current (trip) devices (RCD) to detect some faults in the electrical system and rapidly switch off the supply; and

(c) RCDs shall be properly installed and enclosed; checked daily; treated with care; kept free of moisture and dirt; and protected against vibration and mechanical damage.

(4) Lighting systems

Protect cabling and bulbs against breakage. If a bulb breaks, the exposed filament may present a hazard. Have a system for checking bulbs regularly to maintain electrical safety and to keep the site well-lit.

(5) Temporary electrical systems shall not be used in excess of intended loads or rated capacity whichever is less.

(6) Temporary electrical systems shall not be used for any purpose other than the intended original purpose.

(7) Regularly inspect power tools and take them out of service if they are damaged. Tools should be serviced by qualified electricians; makeshift repairs are prohibited.

(8) ~~Electrical equipment and tools shall be checked for damage before every shift, have a visual inspection every week and have a combined inspection and test before first use on a site and then every month, records of these checks shall be kept.~~

6.7.4 Method statement for Temporary Electrical Installations

The Method Statement for temporary electrical installations (required by the Contract and JSSS 1.7 [*Contractor's Method Statements*] ~~shall include a copy of~~ shall make reference to the Laws and regulations of the Country and the relevant authority which supplies power to the Contractor in relation with relevant temporary electrical installations and shall show:

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(4) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(5) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(c) Record the inspection results.

(3) Maintenance and repair

(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;

(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and

(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(1) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(2) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(c) Record the inspection results.

(3) Maintenance and repair

(a) As a result of inspection, carry out any maintenance, repair or replacement if and as necessary;

(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and

(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring

(a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries,

(1) Required Standards and voltages of electric wires and cables.

(2) Protective work for electric wires and cables.

(3) Electric diagram.

6.7.5 Responsible Personnel

(4) The Contractor shall post the name and contact information for the person in charge of managing and operating the temporary electrical installation.

(5) All other persons shall be prohibited from operating repairing or interfering with the temporary electrical installation unless otherwise instructed or approved by the HSO or person in change.

6.7.6 Inspection, Maintenance and Repair

The Contractor shall inspect the temporary electric facilities and perform all requisite maintenance, replacement and repair to ensure the continued and safe operation including the following:

(1) Daily inspection

(a) Prepare a daily inspection checklist of the temporary electric installations including the condition of associated buildings, enclosures, fences and the like;

(b) Inspect daily; and

(c) Record the inspection results.

(2) Periodical inspection

(a) Prepare periodical (weekly and monthly) inspection checklist including measurement of insulation resistance values of temporary electric installations and the operating status of protective devices against overcurrent, grounding fault, etc.;

(b) Inspect periodically; and

(c) Record the inspection results.

(3) Maintenance and repair

(a) As a result of inspection, carry any maintenance, repair or replacement if and as necessary;

(b) Stop operation of the temporary electric installations or affected parts thereof and prevent any further operation until maintenance, repair or replacement is completed; and

(c) Reinspect, the temporary electric installations or parts thereof, and after the HSO has declared same as “Safe for Use”, operation can then re-commence.

6.7.7 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Cabling/Wiring

(a) Carry out cabling/wiring work so that safety distances between

(a) Carry out cabling/wiring work so that safety distances between cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;

(b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;

(c) Locate cabling/wiring where it does not obstruct other works; and

(d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches

(a) Enclose switchgear, panels and switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and

(b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers

(a) Power receiving equipment, transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

(b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and

(c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)

(a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work of Temporary Electrical Installation

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that temporary protective casings have been installed over existing cables and no electricity is measured by electricity detection;

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;

(b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;

(c) Locate cabling/wiring where it does not obstruct other works; and

(d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches

(a) Enclose switchgear, panels and switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and

(b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers

(a) Power receiving equipment, transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

(b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and

(c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)

(a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work of Temporary Electrical Installation

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that temporary protective casings have been installed over existing cables and no electricity is measured by electricity detection;

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

cabling/wiring and any other cabling/wiring, posts, gantries, other structures, buildings, enclosures Contractor's Equipment, vehicles and persons are maintained;

(b) If appropriate separation distances cannot be maintained, enclose cabling/wiring in insulated ducts, conduit or trunking;

(c) Locate cabling/wiring where it does not obstruct other works; and

(d) Always enclose cabling/wiring in insulated ducts, conduit or trunking in working areas or Operational Areas to avoid any risk of contact, damage or injury.

(2) Switchgear, Panels and Switches

(a) Enclose switchgear, panels and switches in waterproof and lockable metal enclosures to suit the environmental conditions and of which shall be grounded; and

(b) Fuses and circuit breakers shall be suitable for their use and load capacity.

(3) Power Receiving Equipment and Transformers

(a) Power receiving equipment, transformers and the like, shall be located in securely fenced or enclosed and locked compounds, enclosures or buildings from which entry by unauthorised persons shall be prohibited;

(b) Any work in such areas shall be designated as Dangerous Work and the provisions of JSSS 2.1.4 [*Further Requirements for Dangerous Work*] shall be applied; and

(c) All such places shall be clearly indicated as dangerous no entry areas with clear and obvious signage.

(4) Grounding (earthing)

(a) All temporary electric installations shall be grounded for each part to prevent the risk of electric shock due to electrical leakage; and

(b) Grounding electrodes shall be highly conductive such as copper or steel.

(5) Relocation and Repair Work of Temporary Electrical Installation

(a) Relocation and repair work to or in the vicinity of temporary electrical installations shall only be performed after the power supply has been turned off, isolation has been confirmed, confirmation that temporary protective casings have been installed over existing cables and no electricity is measured by electricity detection;

(b) When re-energising temporary electric installations during or after any relocation or repair work, the Contractor shall ascertain in advance that there is no risk of electric shock to any persons engaged on or in the vicinity of the relocation or repair work; and

(c) When installation, relocation or repair work of temporary electric installations is completed, the facilities shall be operated only after testing and inspection of the installation by the HSO and after the HSO has declared same as "Safe for Use".

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.5 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Electric and Gas Welding and Cutting complying with the technical requirements specified in the following standards:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting:

(3) Check measures before:

(a) Automatic voltage reduction device for reducing no load voltage to prevent the shock hazard, is fitted and is functioning properly;

(b) Frame of welding machine is grounded;

(c) Grounding conductor is installed properly and working;

(d) There is no damage to welding cables;

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(4) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars;

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.5 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Electric and Gas Welding and Cutting complying with the technical requirements specified in the following standards:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting:

(1) Check measures before operation:

(a) Automatic voltage reduction device for reducing no load voltage to prevent the shock hazard, is fitted and is functioning properly;

(b) Frame of welding machine is grounded;

(c) Grounding conductor is installed properly and working;

(d) There is no damage to welding cables;

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use the correct type and size of cables and never use alternatives such as tools or reinforcing bars; (JC64)

6.8 ELECTRIC AND GAS WELDING AND CUTTING

6.8.1 General

(1) This Section contains safety requirements for electric and gas, welding and cutting.

(2) Electric and Gas welding and cutting work shall be designated as Dangerous Work and the provisions of JSSS 2.1.5 [*Further Requirements for Dangerous Work*] shall be applied.

(3) Electric and Gas welding and cutting work shall only be performed, inspected and tested by Contractor's Personnel that are qualified welders, trained and certified for such operations in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and that follow strict procedures prepared by the Contractor and specified in the Method Statement and Safety Plan.

6.8.2 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Electric and Gas Welding and Cutting complying with the technical requirements specified in the following standards:

(1) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J - Welding and Cutting, 1926.351 Arc welding and cutting.

(2) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart J- Welding and Cutting, 1926.351 Gas welding and cutting.

6.8.3 Electric Welding and Cutting

The Contractor shall take the following measures for the electric welding and cutting:

(1) Check measures before operation:

(a) Automatic voltage reduction device for reducing no load voltage to prevent the shock hazard, is fitted and is functioning properly;

(b) Frame of welding machine is grounded;

(c) Grounding conductor is installed properly and working;

(d) There is no damage to welding cables;

(e) There is no damage to electrode holder, insulation of earth clamp or cable connections; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Measures to be adopted during operation:

(a) Prevent the occurrence of stray currents by securely fixing the earth cable with an earth clamp to a suitable earth, close to the work location;

(b) Use ~~the correct type and size of cables~~ cables of correct type and size and never use alternatives such as tools or reinforcing bars;

To MD, please review the above comment.

(c) When not working, remove electrode from holder and turn off the welding machine;

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet;

(e) If any worker receives an electric shock, the Contractor shall stop the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

(5) Periodical inspection of welding machines and welding equipment.

(h) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*] and

(i) The voltage reduction device shall be regularly inspected and tested at least once every six months.

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before:

(j) Flashback arrestor to stop flame back-up into the equipment or gas supply line is installed;

(k) There is no damage to gas cylinders, regulators, flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment;

(l) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use"; and

(m) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Welders engaged in gas cutting and welding shall be aware of the following requirements:

JC64: "Use cables of correct type and size" seems more correct. Well, it' up to MD's judgement.
To MD, please review the above comment.

(c) When not working, remove electrode from holder and turn off the welding machine;

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet;

(e) If any worker receives an electric shock, the Contractor shall stop the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

(3) Periodical inspection of welding machines and welding equipment.

(a) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*] and

(b) The voltage reduction device shall be regularly inspected and tested at least once every six months.

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before operation:

(a) Flashback arrestor to stop flame back-up into the equipment or gas supply line is installed;

(b) There is no damage to gas cylinders, regulators, flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment;

(c) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use"; and

(d) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

Welders engaged in gas cutting and welding shall be aware of the following requirements:(JC65)

JC65: No similar text is provided in the Electric welding above. Delete this or add a similar text in the Electric welding.

(c) When not working, remove electrode from holder and turn off the welding machine;

(d) Weld only in suitable environment and climatic conditions. Stop working outdoors during rainfall and take measures to prevent the welding machine, cables and accessories from getting wet;

(e) If any worker receives an electric shock, the Contractor shall stop the work immediately, identify the cause, prohibit use of the equipment until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the electric arc with their naked eyes.

(3) Periodical inspection of welding machines and welding equipment.

(a) Electric welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*] and

(b) The voltage reduction device shall be regularly inspected and tested at least once every six months.

6.8.4 Gas Welding and Cutting

The Contractor shall take the following measures for gas welding and cutting.

(1) Check measures before operation::

(c) Flashback arrestor to stop flame back-up into the equipment or gas supply line is installed;

(d) There is no damage to gas cylinders, regulators, flashback arrestor, hose bands, hoses, blow pipes, tip nozzles, and other accessories and equipment;

(e) Gas cylinders, regulators and caps and other relevant accessories and equipment have been inspected periodically and certified by HSO as "Safe for Use"; and

(f) Carry out all such further checks that are required by the manufacturer's official maintenance and repair manual.

If any items are found to be missing or defective, the Contractor shall prohibit use until it has been repaired or replaced and the equipment has been inspected, tested and certified as "Safe for Use" by HSO, before it can be used.

(2) Handling of gas welding and cutting equipment

~~Welders engaged in gas cutting and welding shall be aware of the following requirements:~~

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

Workers and welders shall be trained to handle gas cylinders so that they are aware of the following requirements:

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation;

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks; and

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place compressed gas cylinders upright at all times except while cylinders are actually being hoisted or carried;

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate from other cylinders in storage and before and during use; and

(i) When there is a risk of freezing, do not place gas cylinders in wet

NK: deleted.

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

Workers and welders shall be trained to handle gas cylinders so that they are aware of the following requirements:

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation;

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks; and

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place compressed gas cylinders upright at all times except while cylinders are actually being hoisted or carried;

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate them from each other ~~cylinders~~ in storage ~~and before~~ and during use; (JC66) and

JC66: 充填済のものと空のものを別々に分けておく、ということならば、こういう表現にならないか？
In storage と during use は理解できるが、before というのはよくわからない。
Before というのは実質的には in storage に含まれるのではないでしょうか？

Does it become this sentence if full and empty cylinders are separated?
"In storage" and "during use" can be understood, but "before" cannot be understood.
Does the "Before" practically mean including "in storage".
To MD, please review the comment above and sentence modified.

(i) When there is a risk of freezing, do not place gas cylinders in wet

(a) Gas hoses and gas weld sets, shall not be damaged or worn and have no risk of gas leakage;

(b) Gas weld sets shall be turned off when not in use and shall not be left lying around;

(c) Gas pressure regulators shall not be operated during cutting or welding operation;

(d) Connections between cylinders, gas hoses and gas weld sets shall be securely tightened with appropriate connectors;

(e) When tip nozzle overheats, flashback is likely to occur, therefore interrupt continuous working, from time to time and cool the nozzle by submerging in water whilst discharging oxygen at low pressure; and

(f) When finishing or interrupting work, completely close the container valves and vent gas in regulators.

(3) Handling of gas cylinders

Workers and welders shall be trained to handle gas cylinders so that they are aware of the following requirements:

(a) Not to place gas cylinders:

(i) Where there is insufficient ventilation;

(ii) Near to fires, flames, heat sources, electrical sparks or grinding sparks; and

(iii) Near to Dangerous Goods or Hazardous Substances or near to Hazardous Areas.

(b) Handle gas cylinders with care and do not drop, throw or mishandle;

(c) Keep cylinders cool by shading and do not expose to direct sunlight;

(d) Position during storage and use so that there is no risk of falling;

(e) Seal cylinders when transporting;

(f) Place compressed gas cylinders upright at all times except while cylinders are actually being hoisted or carried;

(g) Do not place gas cylinders in the vicinity of lightning conductors or grounding rods for electrical equipment;

(h) Mark all gas cylinders as either full or empty, and separate them from each other ~~cylinders~~ in storage ~~and before~~ and during use; and

or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work:

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire;

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary;

(d) Remove oil and dust adhering to the valve of gas cylinders;

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations, including:

(1) When welding or cutting is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) Welding or cutting work shall be carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.

(3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas.

(4) Appropriate types and quantities of fire extinguisher shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.

(5) Spotter(s) shall be provided at areas where welding or cutting work is

or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work:

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire;

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary;

(d) Remove oil and dust adhering to the valve of gas cylinders;

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting operations (JC66), including:

JC66: Operation と work と何もないのと、混じっている印象です。統一をお願いします。
It seems that operation, work and nothing are mixed, please make consistent term be used.
NK: The term of "work" will be consistently used but "operation" is not used.

(1) When welding or cutting work is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) When ~~W~~welding or cutting work is ~~shall be~~ carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.

(3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas.

(4) A sufficient number of fire extinguishers of ~~A~~appropriate types ~~and quantities of fire extinguisher~~ shall be provided, near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary.

(i) When there is a risk of freezing, do not place gas cylinders in wet or humid places. When valves of cylinder or regulating valves freeze, thaw them out with hot water, do not flame or direct fire.

(4) Safety measures for gas welding and cutting work:

(a) Ensure that all internal and external work areas are fully ventilated;

(b) When checking for gas leakage from the gas welding or cutting equipment, use a liquid detergent or similar, never use flames or fire;

(c) Provide adequate fire extinguishing equipment near the working place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary;

(d) Remove oil and dust adhering to the valve of gas cylinders;

(e) Ignition and digestion shall be accomplished only with oxygen supply valve closed;

(f) Ensure that workers wear appropriate PPE including personal face protectors for welding and protective gloves as specified in JSSS 2.9 [*PPE and First Aid*]; and

(g) Instruct all workers not to look directly at the weld with their naked eyes.

(5) Periodical inspection of gas welding and cutting equipment.

Gas welding and cutting equipment shall be inspected and tested periodically in accordance with JSSS 4.2 [*Inspection, Maintenance and Repair*] and JSSS 4.3 [*Safety Requirements*].

6.8.5 Fire Prevention

The Contractor shall take all necessary measures to prevent fires caused by welding and cutting ~~operations~~ works, including:

(1) When welding or cutting work is carried out on/in containers previously filled with Dangerous Goods or Hazardous Material, the containers shall be thoroughly cleaned so that they are completely free from such Dangerous Goods or Hazardous Material before starting work.

(2) When welding or cutting work ~~shall~~ be is carried out at place where there is a risk of causing fire either to adjacent buildings or to Contractor's Equipment, Goods, debris, waste or other materials, then fire prevention measures shall be adopted. This may include moving all such Contractor's Equipment, Goods, debris, waste or other materials, from the work and taking other protective measures.

(3) Welding or cutting work shall not be conducted near Dangerous Goods or Hazardous Substances or in or near to Hazardous Areas.

(4) A sufficient number of fire extinguishers of ~~A~~ appropriate types ~~and quantities of fire extinguisher~~ shall be provided, near the working

taking place when there is risk of fire by the heat transmitted or sparks of welding or cutting, getting into walls, floors, ceilings and the like. (6) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the opposite side as are taken on the side on which the welding is being performed.	(5) Spotter(s) shall be provided at areas where welding or cutting work is taking place when there is risk of fire by the heat transmitted or sparks of welding or cutting, getting into walls, floors, ceilings and the like. (6) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions mentioned in this JSSS 6.8.5 –shall be taken on the opposite side as are taken on the side on which the welding is being performed.	place, always maintained and certified, suitably labelled, available and positioned so that it can be used immediately when necessary. (5) Spotter(s) shall be provided at areas where welding or cutting work is taking place when there is risk of fire by the heat transmitted or sparks of welding or cutting, getting into walls, floors, ceilings and the like. (6) When welding, cutting, or heating work is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions mentioned in this JSSS 6.8.5 shall be taken on the opposite side as are taken on the side on which the welding work is being performed.

		8 Excavations 8.1 General 8.2 Safety Measures to be considered in Excavation Planning 8.3 Safety Measures for Excavation Works 8.3.1 Placement of Personnel 8.3.2 Safety Measures before Excavation 8.3.3 Safety Measures during Excavation 8.4 Manual Excavation Works 8.5 Mechanical Excavation Works 8.6 Trench Excavation 8.6.1 General 8.6.3 Safety Measures during Trench Excavation
8 土工工事 **8.1 一般事項** (1) 本章では、明り掘削及び発破作業について規定する。明り掘削にはトレンチ掘削を含むものとする。 (2) 用語の定義 トレンチ掘削とは、ガス管や上下水道管等を敷設するために行われる掘削の深さが幅よりも大きいものをいう。一般的に幅が 4.6m(15feet)以下の掘削をいう。 (3) 請負者は、盛土工事に関しては、本仕様書の掘削作業の規定に準拠して、安全措置を講じなければならない。 (4) 請負者は、道路上で土工事の作業を行う場合は、2.2.2 [道路占用時の措置]及び 2.4.1[監視員、誘導員の配置]に規定の措置を講じなければならない。 (5) 請負者は、埋設物がある場所での掘削工事に関しては、本仕様書 3.1[地下埋設物]に規定の措置を講じなければならない。	**8. Excavations *(Excavation Works)*** **8.1 General** (1) This chapter stipulates open excavations and blasting excavations. Open excavations include trench excavations. (2) Definitions Trench excavation means excavation performed for laying gas pipes and water /sewage pipes etc. which has the depth larger than the width. In general, excavation is less than 4.6m (15feet) wide. (3) The Contractor shall take safety measures for the embankment work conforming to the provisions for excavation work in this Specification. (4) When the contractor performs earthwork work on the road, the Contractor shall take the measures prescribed in 2.2.3 [Measures for Road Occupation] and 2.4 [Spotters, Flagmen and the Like]. (5) The Contractor shall take the measures prescribed in 3.1 [Underground Services] for excavation work where there is any underground service.	**8 Excavations** **8.1 General** (1) This Chapter stipulates open excavations and blasting excavations. Open excavations include trench excavations. (2) Definitions Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet). *To MD; BS alternative (3.1.2.2): horizontal or slightly inclined long, narrow open excavation, usually with vertical sides.* (3) The Contractor shall take safety measures for the embankment works conforming to the provisions for excavation work in JSSS. (4) When the Contractor performs excavation work on the road, the Contractor shall take the measures specified in JSSS 2.2.3 [Measures for Road Occupation] and 2.4 [Spotters, Flagmen and the Like]. (5) The Contractor shall take the measures specified in JSSS 3.1 [Underground Services] for excavation work where there is underground services.
8.2 掘削工事の計画における安全上の留意事項 (1) 地形、表土、土質、地質の状態を考慮した安全な掘削の順序、掘削の位置及び掘削土砂の運搬の方法等を計画すること。 (2) 掘削の高さ、のり勾配、段切りの計画 掘削の高さ、勾配(sloping)、段切り(benching)は、本契約で別途に定めがない限り、地山の形状、地質・土質等に応じて以下の基準に準拠しなければならない。 OSHA Subpart P―Excavations, § 1926.652 Requirements for	**8.2 Safety Points to be considered in Excavation Planning** For safe execution of excavation work, the Contractor shall: (1) Plan the safe excavation sequence, excavation location and method of transporting excavated soil in consideration of topography, topsoil, soil and geological conditions. (2) Unless otherwise specified in the Contract, excavation depth, sloping, and benching shall comply with the following standards depending on the shape, geology and soil quality of the ground.	**8.2 Safety Measures to be considered in Excavation Planning** For the safe execution of excavation works, the Contractor shall: (1) Plan the safe excavation sequence, excavation location and method of transporting excavated materials taking into consideration of topography, topsoil, soil and geological conditions of the Site; (2) Unless otherwise specified in the Contract, excavation height, sloping, and benching shall comply with the following standards depending on the shape, soil and geological conditions of the Site; OSHA Subpart P—Excavations §1926.652 Requirements for protective systems. (b) Design of sloping and benching systems.

JSSS in Japanese（Provisional Final Version R1 12/19）	English Translation（R0 12/15）	English (R1_12/30)
protective systems. (b) Design of sloping and benching systems. (3) 仮設工事の掘削の土留め工 本仕様書 7.2[土留め工]、7.2.1[一般](2)「土質に見合った勾配を保って掘削できる場合を除き、掘削の深さが 1.5mを超える場合には、原則として、土留め工を施すものとする。」に従い、土留工を計画すること。 (4) 地山の含水、湧水を考慮した適切な排水工を施し、作業場所を乾いた状態に保持して掘削すること。 (5) れんが壁、コンクリートブロツク塀、擁壁等の建設物に近接する箇所で掘削の作業を行なう場合において、これらの損壊等により作業者に危険を及ぼすおそれのあるときは、本契約で別途に定められたとおりに補強すること。 (6) 掘削箇所の上部に存在する浮き石、立木等により、作業員又は建設機械に危険が及ぶ恐れがあり、本契約に定めがない場合は次の措置を講じること。 (a) 浮き石等の除去、落石防護柵等の設置等の対策についてエンジニアと協議すること。 (b) 協議の結果、施工方法を含む安全措置についてエンジニアに提案し、その指示に従うこと。	OSHA Subpart P—Excavations §1926.652 Requirements for protective systems. (b) Design of sloping and benching systems. (3) Earth retaining for excavation of temporary work (a) Except in the case as specified in 7.2.1[Earth Retaining Work] (2), where the excavation depth exceeds 1.5m, the earth retaining work shall be planned in general. (b) For trench excavation, plan according to the provisions in 8.6 [Trench excavation]. (4) Execute excavation with appropriate drainage of the water content and spring water of the ground by eliminating the influence of those water as much as possible. (5) If excavation work is performed near a structure such as brick / concrete block wall or earth retaining wall, and when there is a risk of danger to the worker due to a damage to the structure, reinforce the structure concerned as stipulated separately in the Contract. (6) If fragmented rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract. (a) Consult with the Engineer about measures such as removal of fragmented rocks and installation of rock fall protection fences etc. **(b)** Based on the result of discussions, propose safety measures including construction methods to the Engineer and follow the instructions.	(3) Earth retaining for excavation of temporary works In accordance with JSSS 7.2.1[Earth Retaining Work] (2), the earth retaining shall be planned in principle to be provided for the excavation of depth exceeds 1.5m; (4) Execute excavation under dry condition by providing appropriate drainage to drain the water contained in the ground and spring water at the Site; (5) When excavation work is performed near structures such as brick wall, concrete block wall, earth retaining wall, and there is a risk of danger to the workers by the damage to the structures by the excavation work, reinforce the structures concerned as stipulated separately in the Contract; (6) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract; (a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and (b) Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and take actions in accordance with the Engineer's instruction.
8.3 掘削作業の安全措置 **8.3.1 要員の配置** (1) 深さ 1.5m以上の掘削作業を行うときは、本仕様書 1.8[請負者の要員の適正配置]に従い作業主任を配置しなければならない。 (2) 本仕様書 2.4[監視員、誘導員の配置]に従い、必要に応じて監視員を配置すること。但し、下記の場所においては必ず配置すること。 (a) 道路に隣接した場所又は道路内 (b) 本仕様書 3[地下埋設物・架空線等上空施設一般]に規定の架空線等上空施設近くの場所 (c) 次の掘削作業箇所 (i) 建物、その他の施設等に隣接する場所 (ii) 見通しの悪い場所、崖縁 (iii) 土石等の落下崩壊のおそれのある場所 (iv) 掘削機械、運搬機械が、作業員と近接して掘削作業を行う場所	**8.3 Safety Measures for Excavation Work** **8.3.1 Placement of Personnel** (1) When excavating at a depth of 1.5m or more, an Operation Leader shall be assigned in accordance with this Specification 1.8 [Proper Placement of Contractor's Personnel]. (2) In accordance with this Specification 2.4 [Spotters, Flagmen and the Like], spotters shall be assigned as necessary. However, be sure to place them at the following locations. (a) Places adjacent to or on the road (b) Places near overhead facilities such as stipulated in this Specification 3 [Existing Underground and Overhead Services] (c) Following excavation locations (i) Places adjacent to buildings, other facilities, etc. (ii) Places with poor visibility, cliff edges (iii) Places where there is a risk of falling or collapsing rocks or soil	**8.3 Safety Measures for Excavation Works** **8.3.1 Placement of Personnel** (1) When excavating ground at depth of 1.5m or more, an Operation Leader shall be assigned in accordance with JSSS 1.8 [Proper Placement of Contractor's Personnel]. (2) In accordance with JSSS 2.4 [Spotters, Flagmen and the Like], spotters shall be assigned as necessary. They shall be surely placed at the following locations: (a) Places adjacent to or on the road; (b) Places near overhead facilities such as stipulated in JSSS 3 [Existing Underground and Overhead Services]; (c) Following excavation locations; (i) Places adjacent to buildings, other facilities, etc.; (i) Places with poor visibility and cliff edges; (ii) Places where there is risk of falling or collapsing of rocks or soil; and (iii) Places where excavation and transporting equipment perform excavation works close to workers.

JSSS in Japanese（Provisional Final Version R1 12/19）	English Translation（R0 12/15）	English (R1_12/30)
	(iv) Where excavation and transporting equipment perform excavation work in close proximity to workers	
8.3.2 掘削作業前の安全措置 請負者は、掘削作業を行なうときは、次の措置を講じなければならない。 (1) その日の作業を開始する前、降雨後及び地震の後、地山の崩壊又は土石の落下による作業員の危険を防止するため、点検者を指名して、作業箇所及びその周辺の地山について点検を行わせること。 (2) 浮石及びき裂の有無及び状態並びに含水、湧水及び凍結の状態の変化を点検し、異常がある場合は安全措置が講じること。安全措置が講じられた後でなければ、作業を行なわないこと。 (3) 掘削場所への昇降場所には、本仕様書 7.4.2[通路の設定]に従い、階段、傾斜路等の設備を設けること。 (4) 埋設物は、3.1[埋設物一般]に従い、適切に支持又は防護するとともに、状況に応じて埋設物の位置、注意事項を明確に標示し、防護柵を設ける等の措置を講じること。 (5) 作業者及び建設機械・運搬車両の掘削箇所での転落を防ぐため、本仕様書 2.3[立入禁止の措置]に準拠し、立入防止施設（柵、仮囲い等）、警告のための旗・看板等を設置すること。 (6) 掘削する箇所の下部において、掘削土砂・岩石の落下により第 3 者、作業員、建設機械等に危険を及ぼすおそれのある場合は、次の措置を講じること。 (a) 危険個所の特定、本仕様書 2.3[立入禁止の措置]に従い立入防止施設（柵、仮囲い等）、警告看板の設置等を行うこと。 (b) 落下する岩等を受けることのできる防護柵等を設置すること。 (7) 落石等に対する危険予防措置 (a) 掘削面からの緩んだ岩や土砂の落下による危険から作業員を守るために、緩んだ岩等を除去するとともに、適切な防護措置を講ずること。 (b) 掘削により土石が落下するおそれがあるときは、あらかじめ、土止め支保工を設け、防護網を張り、労働者の立入りを禁止する等当該危険を防止するための措置を講じること。	**8.3.2 Safety Measures before Excavation** When performing excavation work, the Contractor shall: (1) Appoint an inspector and inspect the work site and surrounding ground in order to prevent danger of workers due to collapse of ground or fall of debris before starting work for the day, after rainfall and after an earthquake. (2) Check for fragmented rocks and cracks, and changes in water content, spring water and freezing conditions, and take safety measures if there are any abnormalities, and allow no work to start unless safety measures have been taken. (3) Install facilities such as stairs and ramps as a means of access or egress from the excavation site in accordance with 7.4.2 [Setting of Passage] in this Specification. (4) Support or protect the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences. (5) In order to prevent workers and construction equipment / transport vehicles from falling at the excavation site, in accordance with this Specification 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc. (6) Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. due to fall of excavated soil / rock at the bottom of the excavation site. (a) Install fall prevention fences for excavated soil (b) Install protective fences that can catch falling rocks, etc. (c) Identify dangerous locations, install entry prevention facilities (fences, temporary enclosures, etc.), warning signs, etc. in accordance with this Specification 2.3 [Prohibition of Entry] (7) Risk prevention measures against falling rocks (a) In order to protect workers from the dangers of loose rocks and soil falling from the excavated surface, remove the loose rocks and take appropriate protective measures. **(b)** When there is a risk of debris falling due to excavation, take measures to prevent such dangers, such as setting up an earth	**8.3.2 Safety Measures before Excavation** When performing excavation works, the Contractor shall: (1) Appoint a person in charge of inspector and inspect the excavation work site and surrounding ground to prevent danger of workers by the collapse of ground or fall of soil/rock before starting work for the day and after rainfall/earthquake; (2) Check of existence of loose rocks on and cracks in the excavation work site and surrounding ground, and change in water content of ground, spring water and freezing condition, and take safety measures if there are any abnormalities, and prohibit to start the work unless safety measures have been taken; (3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage]; (4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences; (5) To prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.; (6) Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock at the lower parts (bottom)of the excavation site; (a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and (b) Install protective fences that can catch falling rocks, etc. (7) Risk prevention measures against falling rocks (a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and (b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site.

JSSS in Japanese （Provisional Final Version R1 12/19）	English Translation（R0 12/15）	English (R1_12/30)
	retaining support and a protective net, and prohibiting workers from entering.	
8.3.3 掘削作業中の安全措置 (1) 法肩付近に土砂又は機材等を置かないこと。 (2) 掘削中に、崩落等の発生の可能性があると判断されたときは、全ての必要な安全措置が実施されるまで作業を中止し、危険にさらされる作業員を掘削現場から退出させること。 (3) 仮設の掘削工事で埋め戻しが必要な箇所は、作業が完了した後は出来るだけ速やかに埋め戻すこと。 (4) 明り掘削の作業を行なう場所については、当該作業を安全に行なうため必要な照度を保持すること。	**8.3.3 Safety Measures during Excavation** During excavation work, the Contractor shall: (1) Not place excavated soil or equipment near the shoulder. (2) When it is judged that there is a possibility of collapsing during excavation, suspend the operation until all necessary safety measures are implemented, and remove workers at risk from the excavation site. (3) Refill the temporary excavated areas that need to be backfilled as soon as possible after the work is completed. **(4)** For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.	**8.3.3 Safety Measures during Excavation** During the excavation works, the Contractor shall: (1) Not place excavated soil or equipment near the shoulder of excavated slopes; (2) When it is judged that there is a possibility of collapsing of ground during excavation, suspend the operation until all necessary safety measures are implemented, and remove workers at risk from the excavation site. (3) Backfill the temporary excavated areas that need to be filled as soon as possible after the work is completed. (4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.
8.4 人力掘削 **8.4.1 人力掘削作業上の安全事項** 請負者は、人力掘削を行う場合は、以下の安全事項を遵守して作業を行わなければならない。 (1) 垂直又は垂直に近く切り立つ掘削面・地盤、既設構造物の基礎の下の地盤の掘削（すかし掘り）をしないこと。 (2) 2 名以上で同時に掘削作業を行うときは、相互に十分な間隔を保つこと。 (3) 浮石を割る、又は起こすときは、石の安定と転がる方向を見定めて作業すること。 (4) てこ（lever）を使うときは、あらかじめ動かすものに適した長さと強さを有するものを選ぶこと。	**8.4 Manual Excavation** **8.4.1 Safety Points for Manual Excavation Work** The Contractor shall comply with the following safety matters when performing manual excavation work. (1) Excavation of the excavated surface / ground that stands vertically or close to the vertical, or the ground under the foundation of existing structures shall not be permitted. (2) When two or more workers perform manual excavation work at the same time, keep a sufficient distance from each other. (3) When cracking or raising a fragmented rock, pay attention with the stability of the stone and its rolling direction. (4) When using a lever for raising a rock, choose one that has a length and strength appropriate for the object.	**8.4 Manual Excavation Works** The Contractor shall perform manual excavation works complying with the following safety measures: (1) Excavation of the excavated surface/ground that stands vertically or close to the vertical, or the ground under the foundation of existing structures shall not be permitted; (2) When two or more workers perform manual excavation work at the same time, keep sufficient distance from each other; (3) When breaking or removing loose rock, pay attention to the stability of the rock and its falling direction; and (4) When using a lever for removing a rock, choose one that has appropriate length and strength for the work.
8.5 機械掘削 請負者は、機械掘削作業にあたり、掘削作業に従事する機械(以下、「機械」という。）の運転者及び作業員の安全に関し、次の措置を講じなければならない。 (1) 本仕様書 2.3[立入禁止の措置]に従い、機械の作業により作業員に危険がおよぶ場所への立入りを禁止し、見やすい箇所にその旨を標示するとともに、立入防止施設（柵、仮囲い等）または監視人を配置すること。 (2) 本仕様書 4.2.3[建設機械の運用時の安全措置]、4.2.4[建設機械の用途外使用の制限]及び次の(3)以降に規定の安全措置を講ずること。 (3) 機械の運転者は、次の事項を遵守し機械を運転すること。 (a) 作業範囲付近の他の作業員の位置に絶えず注意し、機械を運転すること。	**8.5 Mechanical Excavation** The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as “equipment”) and workers engaged in excavation work. (1) In accordance with this Specification 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to machine work by placing a notice of “No Entry” at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing a spotter. (2) Take the safety measures prescribed in 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.	**8.5 Mechanical Excavation Works** The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as “equipment”) and workers engaged in the mechanical excavation works with the equipment: (1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of “No Entry” at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing spotters. (2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below. (3) The operators shall operate the equipment following the following rules: (a) Operate the equipment with paying attention always to the

JSSS in Japanese （Provisional Final Version R1 12/19）	English Translation（R0 12/15）	English (R1_12/30)
(b) 機械を後進させるときは、後方に作業員がいないことを確認し、誘導員の指示に従い後進すること。 (c) 作業後は、掘削作業中の斜面及び崩れやすい地盤に機械を置かないこと。 (d) 機械のバケットは、他の機械の運転席の上を通過させないこと。 (4) 作業員は、次の事項を遵守し作業すること。 (a) 土砂を積込み中のバケット等の下に入らないこと。 (b) 土砂の積込み、降ろし作業中のダンプトラックに近づかないこと	(3) The operators shall operate the equipment observing the following rules. (a) Operate the equipment with constant attention to the position of other workers near the working range. (b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the flagman. (c) After work, do not place the equipment on the slope where excavation is in progress or on the ground that tends to collapse. (d) The bucket shall not pass over the operator's seat of another equipment. (4) Workers other than operators shall work observing the following rules. (a) Do not enter under the bucket that is loading soil etc. (b) Keep away from the dump truck that is loading or unloading soil etc.	position of workers near the working range; (b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the flagman; (c) After the work, do not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collap. (d) The bucket shall not pass over the operator's seat of another equipment. (4) Workers shall work follow the following rules. (a) Not enter under the bucket that is loading materials; and (b) Keep away from dump trucks under loading or unloading materials.
トレンチ掘削 **8.5.1 一般事項** 請負者は、トレンチ掘削における掘削面の崩壊による作業員への危険を防止するため次の措置を講じなければならない。 (1) トレンチ掘削を行うときには、掘削の深さが 1.5mを超える場合には、特に理由がない限り土留め工を施すこと。 (2) 1.5m 未満の深さのトレンチ掘削においては、次に例示するような土留め工を設置しなければならない。 (a) 簡易土留め（トレンチボックス・トレンチシールド） (b) 軽量鋼矢板土留め (c) 油圧式アルミニウム支保工、木材支保工	**8.6 Trench Excavation** **8.6.1 General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation. (1) When performing trench excavation with a depth of 1.5m or more, in accordance with the provisions of (2) of this specification 7.2 [Earth Retaining Works] and 7.2.1 [General], earth retaining work shall be installed unless any particular reason exists. (2) For trench excavation with a depth of less than 1.5m, one of protective systems exampled below shall be installed. (a) Simple earth retaining (Trench box, Trench shield) (b) Lightweight sheet pile earth retaining (c) Aluminum hydraulic shoring, Timber shoring	**8.6 Trench Excavation** **8.6.1 General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation. (1) When performing trench excavation with depth of 1.5m or more, earth retaining shall be provided unless any particular reason exists; and (2) For trench excavation with a depth of less than 1.5m, protective systems such as exampled below shall be installed; (a) Simple earth retaining (Trench box, Trench shield); (b) Lightweight sheet pile earth retaining; and (c) Aluminum hydraulic shoring, Timber shoring.
8.6.2 トレンチ掘削中の安全上の措置 (1) トレンチ掘削用土留め工の部材は、掘削幅、深さに適し、土留めの機能を損なうような破損や欠陥のないものを使用すること。 (2) 既成品の土留め工の部材の場合、当該部材の製造者の作成したマニュアルに従い使用すること。 (3) 請負者の設計による土留め工の場合、設計図及び施工手順図にもとづき設置すること。 (4) 地山の崩壊、掘削箇所に近接する構造物の倒壊等から作業員を保護できる十分な強度を持つ土留め工を設置すること。 (5) 土留め工が作業に先行して設置されるまで掘削するトレンチ内に作業員を立ち入らせないこと。 (6) 土留め工の下端から 60cm 以上の掘削は行わないこと。	**8.6.2 Safety Measures during Trench Excavation** (1) Materials and equipment used for protective systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function. (2) Manufactured materials used for protective systems shall be used in a manner that is consistent with the recommendations of the manufacturer. (3) For earth retaining work by the Contractor's design, it shall be installed based on the design drawing and construction procedure drawing. (4) Install earth retaining works with sufficient strength to protect workers from collapse of the ground and structures near the excavation site. (5) Do not allow workers to enter the trench until the earth retaining work is installed prior to the work.	**8.6.3 Safety Measures during Trench Excavation** (1) Materials and equipment to be used for earth retaining systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function; (2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be provided in accordance with the design and construction procedure drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work;

JSSS in Japanese（Provisional Final Version R1 12/19）	English Translation（R0 12/15）	English (R1_12/30)
(7) 作業のために一時的に土留め工の部材を取り外す必要があるときは、土留め工に作用する荷重を負担する仮部材を取り付けるなどの措置を講じること。 (8) 土留め工を取り外すときは、当該場所及び付近に取外し作業に従事する作業員以外の者を立ち入らせないこと。 (9) 掘削場所の埋戻しは、掘削場所から土留め工を取り外す作業と並行して行うこと。	(6) Excavation to a level greater than 60cm below the bottom of the system shall not be allowed. (7) If temporary removal of individual members is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to carry the loads imposed on the support system. (8) When removing the earth retaining work, do not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity. (9) Backfilling of the trench shall be performed in parallel with the removal the earth retaining work.	(6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) Backfilling of the trench shall be performed in parallel with the removal of the earth retaining system.

		8 Excavation 8.7 Blasting Excavation 8.7.1 General 8.7.2 Personnel for Blasting Works 8.7.3 Preparation of Plan 8.7.4 Measures to Workers and Residents 8.7.5 Measures of Handling Explosives 8.7.6 Test Blasting 8.7.7 Monitoring for Impact to Surrounding Buildings 8.7.8 Measures of Blasting Work 8.7.9 Measures after Blasting
8 土工工事 **8.7 発破掘削** **8.7.1 一般事項** (1) 本節では、請負者の要員及び第 3 者の発破掘削作業にかかわる安全措置について規定する。発破作業自体にかかる計画については method statement に記載する。 (2) 本節の 8.7.3[計画書の作成]及び 8.7.4[作業員及び周辺住民への措置]は、明り掘削に対してのみ適用する。 (3) 本仕様書で使用する用語の定義は次である。 (a) 火薬類とは、火薬、爆薬、雷管等の火工品をいう。 (b) 危険区域（exclusion zone）とは、発破を行うとき、許可された作業員以外の者の立入りを禁止する地域をいう。 (4) 請負者は、発破掘削作業に伴う火薬類の取扱い（購入、運搬、貯蔵、使用、不要火薬類の処分等）は、当該国の法律、本契約で別途定める事項及び本仕様書に規定する事項を遵守して、行わなくてはならない。 (5) 請負者は当該国の法律、本契約、本仕様書に規定がない事項は、BS 5607 : Code of practice for the safe use of explosives in the construction industry を参照し、必要な措置をとらなくてはならない。 (6) 請負者は発破作業とそれに伴う火薬類の取扱いに伴う必要な許認可を取得するための一切の手続きを実施するものとし、発注者は許認可の取得に必要な協力を行うこととする。	**8 Excavation** **8.7 Blasting Excavation** **8.7.1 General** (1) This section stipulates safety measures for the Contractor's personnel and third parties regarding blasting work. The blasting operation plan shall be described in the relevant method statement. (2) 8.7.3 [Preparation of Plan] and 8.7.4 [Measures for workers and local residents] in this section apply only to open excavation works. (3) The term used in this Specification means as follows: (a) "explosives" mean any explosive, blasting agent and blasting supplies such as detonator etc. (b) "exclusion zone" means an area where, when blasting, no one except authorized workers is allowed to enter. (4) The Contractor shall deal with explosives associated with blasting work (purchase, transport, storage, use, disposal of unnecessary explosives, etc.) in compliance with the Laws of the Country and the provisions separately stipulated in the Contract and this Specification. (5) For items not stipulated in the Laws, the Contract nor this Specification, the Contractor shall take the necessary measures referring to the UK BS 5607: Code of practice for the safe use of explosives in the construction industry. (6) The Contractor shall carry out all procedures for obtaining the necessary approvals for the blasting work and the handling of explosives associated therewith, and the Employer shall perform the necessary cooperation for obtaining the approvals.	**8 Excavation** **8.7 Blasting Excavation** **8.7.1 General** (1) This Section stipulates safety measures for the Contractor's personnel and third parties regarding blasting works. The blasting operation plan shall be described in the relevant Method Statement. (2) JSSS 8.7.3 [Preparation of Plan] and 8.7.4 [Measures for workers and residents] in this section shall apply only to the open excavation works. (3) The terms used in JSSS means as follows: (a) "explosives" mean any explosive, blasting agent and blasting supplies such as detonator, etc. *(BS 5607: 3.24 explosive article, substance or mixture of substances that is manufactured to produce a practical effect by explosion)* (b) "exclusion zone" means an area where, when blasting, no one except authorized workers is allowed to enter. *(BS 5607: 3.22 exclusion zone, zone from which all site personnel and the public are excluded)* (4) The Contractor shall deal with explosives associated with blasting work (purchase, transport, storage, use, disposal of unnecessary explosives, etc.) in compliance with the Laws of the Country and the provisions stipulated in the Contract and JSSS. (5) For items not stipulated in the Laws, the Contract and JSSS, the Contractor shall take the necessary measures referring to BS 5607: Code of practice for the safe use of explosives in the construction industry. (6) The Contractor shall take all procedures for obtaining the necessary permission for the blasting work and the handling of explosives associated therewith, and the Employer shall extend the necessary cooperation to the Contractor for obtaining the permission.

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
8.7.2 発破作業の要員 請負者は発破作業の要員に関し、次の措置を行わなくてはならない。 (1) 発破作業の作業員の配置 請負者は、発破作業を行うときは、発破担当エンジニア（explosive engineer）、発破技士（shotfirer）を、本仕様書 1.8 [請負者の要員の適正配置]に従い、配置しなければならない。 (2) 発破作業の作業員の責務と要件 (a) 発破担当エンジニアは、発破作業の計画・設計を行い、作業の主導及び安全管理を行うこと。発破担当エンジニアは、請負者が当該業務の知識、経験、能力がある(competent)と認める者であること。 (b) 発破技士は、火薬類の保管、運搬、貯蔵、発破の作業及び現場の安全管理を行うこと。発破技士は、当該国の法律で規定がある場合、発破業務の有資格者、規定が無い場合は、請負者が発破業務の知識、経験、能力がある(competent)と認める者であること。 (3) 安全教育と指導 発破作業に従事する作業員に以下の事項に関する知識が備わっていることを確保すること。また必要に応じて、関連の教育訓練を実施すること。 (a) 発破による危険の性質 (b) 発破作業での不安全状態と不安全行動 (c) 発破作業の手順 (d) 発破時の退避と退避解除の手順 (e) 火薬類の不発発生時の安全対策 (f) 緊急時対応	**8.7.2 Personnel for Blasting Work** The Contractor shall take the following measures regarding blasting personnel: (1) Placement of personnel for blasting works For blasting work, the Contractor shall assign explosive engineers and shotfirers in accordance with 1.8 [Proper Placement of Contractor's Personnel] of this Specification. (2) Responsibilities and requirement of personnel for blasting works (a) The explosive engineer shall plan the blasting work, lead the work and perform the safety management of the work. The explosive engineer shall be one that the Contractor recognizes knowledgeable, experienced, and competent in the blasting works. (b) The shotfirer shall perform safekeeping, transportation and storage of explosives, and perform blasting work and site safety management. The shotfirer shall be qualified for blasting work if required by the Laws of the Country, otherwise, the Contractor shall be deemed knowledgeable, experienced, and competent in blasting work. (3) Safety education and guidance The Contractor shall ensure that personnel engaged in blasting works have knowledge of the following, if required conduct related education and training: (a) Nature of hazards by blasting (b) Unsafe states and unsafe behaviors in blasting work (c) Procedure of blasting work (d) Procedures for evacuation and canceling evacuation at the time of blasting (e) Safety measures when a misfire occurred (f) Emergency response	**8.7.2 Personnel for Blasting Works** The Contractor shall take the following measures regarding blasting personnel: (1) Placement of personnel for blasting works For blasting work, the Contractor shall assign explosive engineer and shotfirers in accordance with JSSS 1.8 [Proper Placement of Contractor's Personnel]. (2) Responsibilities and requirement of personnel for blasting works (a) The explosive engineer shall plan the blasting works, lead the works and perform the safety management of the works. The explosive engineer shall be one whom the Contractor recognizes knowledgeable, experienced, and competent in the blasting works. (b) The shotfirer shall perform safekeeping, transportation and storage of explosives, and perform blasting work and site safety management. The shotfirer shall be qualified for blasting work if required by the Laws of the Country, otherwise, the Contractor shall be one whom the Contractor recognizes knowledgeable, experienced, and competent in the blasting works. (3) Safety education and guidance The Contractor shall ensure that personnel engaged in blasting works have knowledge of the followings, if required conduct related education and training: (a) Nature of hazards by blasting; (b) Unsafe states and unsafe behaviors in blasting work; (c) Procedure of blasting work; (d) Procedures for evacuation and return after evacuation at the time of blasting; (e) Safety measures when misfire of explosives occurred; and (f) Emergency response *(actions)*.
8.7.3 計画書の作成 請負者は、発破作業を行うときは、本仕様書 1.3［安全衛生にかかわる計画書］に規定の事項に加え、次の安全上の措置について安全計画書に記述する。 (1) 発破作業のリスク分析と対策 (2) 火薬類の輸送、保管、使用及び処分時の安全措置 (3) 発破作業時の作業員・周辺住民への安全措置 (4) 危険区域の決定 (5) 発破作業の影響がある区域、建物、構造物の特定 (6) 法律又は契約において規定される発破作業時の制約要因（振動、騒音等）を考慮した対策	**8.7.3 Preparation of Plan** The Contractor shall, when performing blasting work, describe the following safety measures in the safety plan in addition to the items prescribed 1.6 [Contractor's Safety Plan] of this Specification. (1) Risk analysis and countermeasures related to blasting work (2) Safety measures for transportation, storage, use and disposal of explosives (3) Safety measures for workers and local residents during blasting works (4) Determination of exclusion zone (5) Identification of area, buildings and structures affected by blasting work (6) Measures that take into account constraints (vibrational acceleration, etc.)	**8.7.3 Preparation of Plan** The Contractor shall, when performing blasting work, describe the following safety measures in the safety plan in addition to the items prescribed in JSSS 1.6 [Contractor's Safety Plan]. (1) Risk analysis and countermeasures in blasting works; (2) Safety measures for transportation, safekeeping, use and disposal of explosives; (3) Safety measures for workers and residents during blasting works; (4) Determination of exclusion zone; (5) Identification of area, buildings and structures affected by blasting work;

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
(7) 試験発破 (8) 周辺の建物等への発破の振動による影響のモニタリング (9) 発破担当エンジニア、発破技士の識別方法 (10) 発破時の監視員の配置 (11) 周辺住民への発破作業の開始日時の通知、発破作業直前の周知方法 (12) 危険区域からの作業員の発破前の退避方法 (13) 発破時に用いる警報システム (14) 不発の火薬類の処理 (15) 発破に関する法的及び管理目的で必要な記録の一覧表	during blasting work specified by Laws or the Contract (7) Test blasting (8) Monitoring the impact of blasting vibration on surrounding buildings (9) Identifying method of explosive engineers and shotfirers from other workers (10) Placement of spotters at the time of blasting (11) Notification of the start date and time of blasting work to the local residents around the site, method of notice immediately before blasting (12) Evacuation method of workers from exclusion zone before blasting (13) Warning system for giving warning at the time of blasting (14) Treating misfired explosives (15) List of records related to blasting required for legal and administrative purposes	(6) Measures for constraints such as vibration, noises, etc. to be taken into account during blasting works required by Laws or the Contract; (7) Test blasting; (8) Monitoring method of the impact by blasting vibration to the surrounding buildings; (9) Identifying method of the explosive engineer and shotfirers from other workers; (10) Placement of Spotters at the time of blasting; (11) Method of notification of the start date and time of blasting work to the residents around the site, and notice immediately before blasting; (12) Evacuation method of workers from exclusion zone before blasting; (13) Warning system at the time of blasting; (14) Treating procedures and method of misfired explosives (The plan for the treating procedure of misfired explosives shall be prepared referring to BS5607: Code of practice for the safe use of explosives in the construction industry, 10.5 Misfires.); and (15) List of records related to blasting required legally and administratively.
8.7.4 作業員及び周辺住民への措置 (1) 周辺住民への発破作業の周知 発注者が行う関係官庁、周辺住民・建物所有者への発破作業の作業内容、安全対策等を説明する説明会のために、発注者から要請があった場合は、請負者は発注者に協力すること。 周辺住民への発破作業の開始日時の予定を通知し、発破作業前には作業の開始を周知すること。 (2) 作業員及び周辺住民への危害防止の措置 発破作業による作業員及び周辺住民への危害の防止のため、次の措置を講じること。 (a) 掘削、小割、岩塊除去等の発破による飛び石や周辺地山・岩石の崩落・転落防止のため、過装薬禁止、飛散防止対策等の措置を実施すること。 (b) 危険区域を定め立札・赤旗等で明示し、危険区域内への発破作業員以外の作業員の立入りを禁止すること。 (c) 危険区域境には発破時刻、サイレン符号その他の注意事項を示した掲示板を立てること。 (d) 退避場所を設定し、これを作業員に周知すること。 (e) 発破技士と監視員との連絡・通信機器をそろえ、適宜機器の点検を行うこと。 (f) 点火のときには、危険区域の境界に監視員を配置し、全ての作業員の退避を確認した後に点火を行うこと。	**8.7.4 Measures to Workers and Local Residents** (1) Dissemination of blasting work to local residents The Contractor shall cooperate with the Employer when requested by the Employer for a briefing session conducted by the Employer explaining the work contents, safety measures, etc. of the blasting work to the local residents, related authorities and building owners. The Contractor shall notify the public around the site of the schedule of the start of blasting work, and shall also inform the start of the work before the actual blasting. (2) Measures to prevent harm to workers and the local residents The Contractor shall take the following measures to prevent harm to workers and the local residents due to blasting work: (a) Implement measures such as prohibition of overloading and prevention of scattering in order to prevent the flying rocks and collapse of surrounding rocks from blasting for excavation, splitting, and rock removal. (b) Define dangerous areas and indicate them with signs, red flags, etc., and prohibit the entry of workers other than workers for blasting work and third parties into the area. (c) Place a bulletin board showing the blasting time, siren code and other precautions at the boundary of dangerous area. (d) Establish evacuation area and disseminate it to workers.	**8.7.4 Measures to Workers and Residents** (1) Dissemination of blasting work to residents The Contractor shall cooperate with the Employer when requested by the Employer for briefing conducted by the Employer explaining the work contents, safety measures, etc. of the blasting works to the related authorities, residents and building owners. The Contractor shall notify the residents around the site of the planned schedule of the start of blasting work, and also inform them of the start of the work before the actual blasting. (2) Measures to prevent risks to workers and the residents The Contractor shall take the following measures to prevent harm to workers and the residents by the blasting work: (a) Implement measures such as prohibition of overloading and prevention of scattering to prevent the flying rocks and collapse of surrounding rocks by blasting for excavation, splitting, and rock removal. (b) Define dangerous areas and indicate them with signs, red flags, etc., and prohibit the entry of workers other than workers for blasting work into the area. (c) Place bulletin boards showing the blasting time, siren code and other precautions at the boundary of dangerous area. (d) Establish evacuation area and disseminate it to workers. (e) Provide communication equipment between the shotfirer and the Spotter, and check appropriately the equipment. (f) Firing shall be performed after the Spotters assigned have confirmed that all workers evacuated.

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
(g) 発破作業は、可能な限り昼間に実施すること。	(e) Prepare communication equipment between the shotfirer and the spotter, and check the equipment as appropriate. (f) Firing shall be performed after the spotters assigned have confirmed that all workers evacuated. (g) Insofar as possible, surface blasting shall be performed during in the daytime.	(g) Insofar as possible, blasting in the open excavation works shall be performed during in the daytime.
8.7.5 火薬類の取り扱い上の措置 (1) 火薬庫での貯蔵 現場で火薬類を貯蔵する火薬庫は、次の事項を遵守すること。 (a) 現場に火薬庫を建設するときは、当該国の法律に従い建設すること。 (b) 火薬庫の倉庫番は、当該国の法律に従い適切な人員を配置すること。 (c) 火薬庫の出納した火薬類の種類、数量、出納の年月日時刻、出納者を記録し、出納記録の内容を確認し、保存すること。 (d) エンジニアの指示があるときには、出納記録を提出すること。 その他の安全上の留意事項については、BS 5607: Code of practice for the safe use of explosives in the construction industry, 9.3 Storage を参照し、必要な措置を講じること。 (2) 火薬類の運搬 現場の火薬庫から発破作業現場に火薬類を運搬する場合には、当該国の法律を遵守するとともに、BS5607: Code of practice for the safe use of explosives in the construction industry, 9.4 Transport of explosives on site を参照し、必要な措置を講じること。 (3) 発破作業現場 発破作業現場では、次の事項を遵守すること。 (a) 火薬庫から発破作業現場へ運搬する火薬量は、発破作業日の消費見込数量を大きく越えないこと。 (b) 発破作業現場に火薬類を翌日以降の発破作業のために在置しないこと。 (c) 当日使用しなかった火薬類は火薬庫へ返却すること。 (4) 火薬類の取扱い 火薬類の取扱いは、次の事項を遵守して行うこと。 (a) 爆薬、雷管等を叩いたり、投げ出したり、取り落としたりすることのないように慎重に取扱うこと。 (b) 火薬類の収納容器は木その他電気不良導体で作られた頑丈なもので、内面に鉄類が現れない構造とすること。 (c) 爆薬と雷管は別々に異なった施錠可能な容器に収納すること。 (d) 火薬類の収納容器は衝撃等に対して安全なものとすること。	**8.7.5 Measures of Handling Explosives** (1) Storage at the explosive magazine A magazine that stores explosives on site shall be as follows: (a) The explosive magazine shall be constructed at the site in accordance with the Laws. (b) Appropriate number of personnel shall be assigned as the warehousemen for the explosive magazine in accordance with the Laws. (c) The Contractor shall record the type and inventory and use of all explosives, the date and time with the personnel concerned, and confirm the contents of the record, and retain the record. (d) The Contractor shall record the inventory and use of all explosives and, when instructed, submit the record to the Engineer For other safety matters, the Contractor shall take necessary measures referring to the UK BS 5607: Code of practice for the safe use of explosives in the construction industry. (2) Transportation of explosives When transporting explosives from the explosive magazine at the site to the blasting site, the Contractor shall comply with the Laws and take necessary measures referring to BS5607: Code of practice for the safe use of explosives in the construction industry. (3) The Contractor shall comply with the following matters: (a) The number/quantity of explosives to be transported from the explosive magazine to the blasting site shall not greatly exceed the expected consumption on the day. (b) No extra explosives shall not be kept at the blasting work site for blasting work of the next day. (c) Explosives not used on the day shall be returned to the explosive magazine. (4) Handling explosives The Contactor shall comply with the following rules for handing explosives.	**8.7.5 Measures of Handling Explosives** (1) Storage of explosives at the explosive store The explosive store that stores explosives in the Site shall be as follows: (a) The explosive store shall be constructed in the Site in accordance with the Laws. (b) Appropriate number of personnel shall be assigned as the explosive storekeeper for the explosive store in accordance with the Laws. (c) The Contractor shall record the types and quantities of explosives received and issued at the explosive store, the date and time of received and issued, and the personnel concerned, and check the records and keep the records. (d) The Contractor shall submit the records to the Engineer when the Engineer requests. For other safety measures, the Contractor shall take necessary measures referring to BS 5607: Code of practice for the safe use of explosives in the construction industry, 9.3 Storage. (2) Transportation of explosives When transporting explosives from the explosive store at the Site to the blasting site, the Contractor shall comply with the Laws and take necessary measures referring to BS5607: Code of practice for the safe use of explosives in the construction industry, 9.4 Transport of explosives on site. (3) Quantity of explosives at the blasting site (a) The quantity of explosives to be transported from the explosive store to the blasting site shall not greatly exceed the expected quantity of consumption on the day. (b) No extra explosives shall be kept at the blasting work site for blasting work of the next day. (c) Explosives not used on the day shall be returned to the explosive store. (4) Handling of explosives The Contactor shall handle the explosives as follows: (a) Handle explosives and detonators with extreme care so that they are not hit, thrown or dropped; (b) The container for explosives should be sturdily made of wood or

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
(e) 火薬類の運搬、貯蔵、取扱い作業中の場所及び火薬類の貯蔵場所及び周辺では、喫煙、マッチ・ライター・火炎の使用、火花の出る作業等を禁止し、必要な場所にその旨の表示をすること。 (5) 数量の管理 火薬類の数量管理は、次の事項を遵守して行うこと。 (a) 発破技士は、発破の都度、年月日時刻、受入、消費、残りの数量、発破孔数、装てん方法について記録すること。 (b) 発破作業の担当者は、発破作業記録を検査確認すること。 (c) 請負者は記録を保存し、エンジニアの指示があるときには記録を提出すること。 (6) エンジニアに対する通知 エンジニアへの通知は、次の事項を遵守して行うこと。 (a) 火薬類の現場への搬入通知は遅くとも搬入予定の前日の正午までにエンジニアへ書面で通知すること。 (b) 発破作業の実施通知は遅くとも前日の正午までにエンジニアへ書面で通知すること。 (c) 毎週金曜日午前中までに翌週の搬入発破作業の予定をエンジニアへ書面で通知すること。	(a) Handle explosives and detonators with extreme care so that they are not hit, thrown, or dropped. (b) The container for explosives should be sturdily made of wood and other poor conducting conductors and be structured so that metals such as iron do not appear on the inner surface. (c) Explosives and detonators shall be stored in separate lockable containers. (d) The containers for explosives shall be safe against impacts, etc. (e) Smoking, use of matches, lighters, flames, sparking, etc. shall be prohibited in areas where explosives are being transported, stored and handled. Place a notice board where necessary. (5) Quantity management of explosives The Contractors shall manage explosives quantity as follows: (a) The shotfirer shall record the blasting date and time, receipt, consumption, remaining quantity, number of blast holes, and loading method. (b) The explosive engineer shall check the blasting work record. (c) The Contractor shall keep the records and submit to the Engineer when instructed. (6) Notice to the Engineer The Contractor shall give notice to the Engineer as follows: (a) Notification of bringing explosives into the site shall be given to the Engineer at least by noon the day before the scheduled arriving. (b) Notification of execution of blasting shall be given to the Engineer in writing by noon the day before at the latest. (c) Notification of the next week's blasting schedule shall be given to the Engineer by Friday morning	non-conducting materials and metals such as iron do not appear on its inner surface. (c) Explosives and detonators shall be separately stored in lockable containers. (d) The containers for explosives shall be safe against impacts, etc. (e) Smoking, use of matches, lighters, flames, sparking, etc. shall be prohibited in areas where explosives are being transported, stored and handled. Place notice boards where necessary. (5) Records of blasting and explosives The Contractors shall manage explosives quantity as follows: (a) The shotfirer shall make blasting work records to show the date and time of each blasting, receipt, consumption, remaining quantity of explosives of the day, number of blast holes and loading method of the blasting. (b) The explosive engineer shall check the blasting work records. (c) The Contractor shall keep the records and submit to the Engineer when instructed. (6) Notice to the Engineer The Contractor shall give notice to the Engineer as follows: (a) Notification of transportation of explosives into the Site shall be given to the Engineer at least by noon the day before the scheduled date of the arriving of explosives. (b) Notification of execution of blasting shall be given to the Engineer in writing by noon the day before at the latest. (c) Notification of the next week's blasting schedule shall be given to the Engineer by Friday morning.
8.7.6 試験発破 請負者は、次の目的のために本仕様書 8.7.3[計画書の作成]で規定の計画に従い試験発破を行ない、試験発破の結果に応じ、安全計画書を変更しなくてはならない。 (1) 発破に影響を与える発破地点の岩質・地形の特性等を確認すること。 (2) 計画した発破方法、火薬量、飛散防止措置の妥当性を確認すること。 (3) 発破による請負者の要員、発注者の要員、周辺住民、現場内及び隣接する既設の構造物・地盤の安全を確認すること。 (4) 発破による振動値が、契約で別途規定する又はエンジニアが指示する周辺の建物等への発破による許容振動値以下であることを確認すること。	**8.7.6 Test Blasting** The Contractor shall perform the test blasting in accordance with the plan provided in 8.7.3 [Preparation of Plan] for the following purposes, and modify the safety plan according to the result of the test blasting. (1) Confirm the characteristics of rock and topography at the blasting site that would affect blasting. (2) Confirm the suitability of the planned blasting method, explosive amount, and scattering prevention measures. (3) Confirm the safety of Contractor’s personnel, Employer’s personnel, local residents, existing on-site and adjacent structures and grounds due to blasting.	**8.7.6 Test Blasting** The Contractor shall perform the test blasting in accordance with the plan provided in 8.7.3 [Preparation of Plan] for the following purposes, and modify the safety plan according to the result of the test blasting: (1) Confirm the characteristics of rock and topography at the blasting site that would affect blasting; (2) Confirm the suitability of the planned blasting method, explosive amount, and scattering prevention measures; (3) Confirm the safety of Contractor’s personnel, Employer’s personnel, residents, existing on-site and adjacent structures and grounds due to blasting; and (4) Confirm that the vibration value due to blasting is lower than the allowable vibration value due to blasting of nearby buildings, etc.

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
	(4) Confirm that the vibration value due to blasting is below the allowable vibration value due to blasting of nearby buildings etc. specified separately in this Contract or instructed by the Engineer.	specified in the Contract or instructed by the Engineer.
8.7.7 周辺の建物等への影響のモニタリング 請負者は、本契約で別途規定する又はエンジニアが指示する周辺の建物等への発破による振動の影響を測定するために、次の計測によるモニタリングを行わなければならない。 (1) モニタリング計画の作成 (a) 発破の振動による影響を測定するモニタリング計画を作成し、安全衛生計画書に含めること。 (b) モニタリングの方法、計測機器、計測地点、計測の頻度、記録方法を計画すること。 (c) 計測の結果、振動値が、本契約で別途規定する又はエンジニアが指示する許容振動値に近い場合及び許容振動値以上の場合の対策を計画すること。 (d) 本契約で別途規定がない限り、計測は毎発破作業毎に実施し、エンジニアが振動値は計画とおりであると判断した後は 3 日間隔、その後は 7 日間隔、1 ヵ月以降は 1 ヶ月間隔で実施することを計画すること。 (2) 計測の実施と評価 (a) 本契約で別途規定の仕様に従い次を行うこと。 (i) 計測機器の準備、据え付けと計測 (ii) 振動計測結果の評価 (b) 計測機器は試験発破の実施前にキャリブレーションを行うこと。 (c) 次の発破の前までに評価書及び必要に応じ発破計画の変更をエンジニアへ提出すること。	**8.7.7 Monitoring for Impact on Surrounding Buildings** The Contractor shall perform monitoring by the following measurement in order to measure the effect of vibration caused by blasting to surrounding buildings etc. specified separately in this Contract or instructed by the Engineer (1) Preparation of monitoring plan (a) Develop a monitoring plan to measure the impact of blasting vibrations and include it in the safety plan. (b) Plan monitoring methods, equipment, points, frequency of measurement, and recording methods. (c) Plan countermeasures for the case that the vibration value measured is close to or higher than the allowable vibration value specified separately in the Contract or instructed by the Engineer. (d) Unless otherwise specified in the Contract, plan to perform measurement at each blasting operation at first, and every 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and after 1 month elapsed, plan to perform at monthly intervals. (2) Implementation and evaluation of measurement (a) Perform the followings in accordance with the specifications separately stipulated in the Contact: (i) Preparation and installation of measuring equipment, and implementation of measurement (ii) Evaluation of vibration measurement results (b) Calibrate the measurement equipment before test blasting. (c) Submit the evaluation report and if necessary, any changes to the blast plan to the Engineer before the next blast.	**8.7.7 Monitoring for Impact to Surrounding Buildings** The Contractor shall perform monitoring with the following measurement to measure the effect of vibration caused by blasting to the surrounding buildings, etc. specified in the Contract or instructed by the Engineer: (1) Preparation of monitoring plan (a) Develop a monitoring plan to measure the impact of blasting vibrations and include it in the safety plan; (b) Plan monitoring methods, equipment, locations, frequency of measurement, and recording methods; (c) Plan countermeasures for the case that the vibration value measured is close to or higher than the allowable vibration value specified in the Contract or instructed by the Engineer; and (d) Unless otherwise specified in the Contract, plan to perform measurement at each blasting operation at first, and every 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and after 1 month elapsed, plan to perform at monthly intervals. (2) Implementation and evaluation of measurement (a) Perform the followings in accordance with the specifications stipulated in the Contact: (i) Preparation and installation of measuring equipment, and implementation of measurement; and (ii) Evaluation of vibration measurement results; (b) Calibrate the measurement equipment before test blasting; and (c) Submit the evaluation report and if necessary, any changes to the blasting plan to the Engineer before the next blasting.
8.7.8 発破作業時の措置 (1) 発破作業員の識別措置 発破作業の作業員には、他の作業員と識別出来る腕章、保護帽の標示等の措置を講じること。 (2) せん孔作業の留意事項 (a) せん孔では、前回の発破孔は使用しないこと。 (b) せん孔作業中に不発の火薬類が発見された場合は、せん孔を中止し、8.7.3 [計画書の作成](14)で計画した不発の火薬類の処理手順、	**8.7.8 Measures of Blasting Work** (1) Measures to identify blasting workers For blasting workers, measures shall be taken such as armbands and marks on the protective caps that can be distinguished from other workers. (2) Points to consider on drilling work (a) No drilling shall be allowed using any hole of previous blasting (b) If an unexploded charge is found during the drilling operation, the	**8.7.8 Measures of Blasting Work** (1) Measures to identify blasting workers For blasting workers, measures shall be taken such as armbands and marks on the safety helmets that can be distinguished from other workers. (2) Measures in drilling work (a) No drilling shall be allowed using any hole of previous blasting; (b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
及び 8.7.9[発破作業後の措置](2)[不発の火薬類の処理]に基づき不発の火薬類を処置すること。 (3) 装てん作業の留意事項 (a) 電気雷管を結線するまでは、短絡を保持すること。また電灯線・動力線その他漏電のおそれのあるものに近づけないこと。 (b) 装てん中は、付近でせん孔その他の作業をしないこと。 (c) 装てん前に孔をよく掃除して小石等を残さないこと。 (d) 装てんしなかった爆薬・雷管は、火薬庫へ返納すること。 装てん作業の安全上のその他の留意点については、BS5607: Code of practice for the safe use of explosives in the construction industry, 10 Safety when using explosives に準ずること。 (4) 雷管の取り扱い上の留意事項 (a) 電気雷管の発破作業の留意事項 (i) 母線は切断、損傷がないことを確認し、導通を確認すること。 (ii) 結線もれ、結線ちがい等がないように点検すること。 (iii) 電気雷管発破を行う時には迷走電流がないことを確認すること。 (iv) 無線通信施設、レーダー、移動式を含む無線電話等の近傍の現場で、高周波放射(radio-frequency radiation)による電気雷管の危険がある場合は、本契約で別途規定がない限り、電気雷管を使用しないこと。 (v) 電気雷管への悪影響がないことが保証されない携帯電話の発破作業場所への持ち込みを禁止すること。 (vi) 雷探知機を発破作業場所の近傍に設置し、落雷の危険がある時は発破作業を中止し、発破作業員は安全な場所に退避すること。 電気雷管の発破作業のその他の安全上の留意点については、BS5607: Code of practice for the safe use of explosives in the construction industry, 10.4.3 Electric detonators に準ずること。 (b) 非電気雷管の発破作業の留意事項 (i) ショックチューブを切断したり傷つけたりしないこと。 (ii) 点火前には結線を目視でチェックし、結線漏れや間違いの無いことを必ず点検すること。 (5) 発破の点火作業の留意事項 (a) 点火位置は、爆破の程度に応じて隔離した安全な場所とすること。 (b) 発破器は安全衛生計画書に基づき適切に保管すること。また、点火するとき以外はハンドルを発破器から取り外しておくこと。 (c) 発破器と母線との連結は、点火直前に行うこと。 (6) 発破作業時の留意事項 既設の構造物の近くで行なう発破作業は、本契約で別途定める所有者へ	drilling shall be discontinued and the unexploded charge shall be re-fired in accordance with the procedure planned in 8.7.3 [Preparation of Plan] and 8.7.7 [Measures after Blasting] (2) [Measure for Unexploded Charges]. (3) Points to consider on loading work (a) Electric detonator leg wires shall be kept short-circuited until they are connected into the circuit for firing. Also, keep detonators away from electric light lines, power lines, and other items that may cause electric leakage. (b) While loading, no activity including drilling shall be permitted in the vicinity. (c) Before loading, thoroughly clean the holes and do not leave any pebbles. (d) Explosives and detonators not loaded shall be returned to the explosive magazine. For other safety matters for loading work, the Contractor shall conform to the UK BS 5607: Code of practice for the safe use of explosives in the construction industry, 10 Safety when using explosives. (4) Points to consider for handling detonators (a) Points of blasting work using electric detonators (i) Check that the bus wire is not cut or damaged, and check for continuity. (ii) Check that there are no forgotten wire connection or false wire connection. (iii) Make sure there are no stray electric current when using electric detonators. (iv) If there is a danger of electric detonators due to radio-frequency radiation at a site near a radio communication facility, radar, wireless telephone including mobile type, do not use an electric blasting unless otherwise specified in the Contract. (v) Prohibit bringing into the blasting areas any mobile phone that is not guaranteed that it will not adversely affect the electric detonators. (vi) Install a lightning detector near the blasting area, stop blasting work when there is a risk of lightning strike, and evacuate workers to a safe place. For other safety matters for blasting with electric detonator, the Contractor shall conform to the UK BS 5607: Code of practice for the safe use of explosives in the construction industry, 10.4.3 Electric	treated in accordance with the procedure planned in 8.7.3 [Preparation of Plan] and 8.7.7 [Measures after Blasting] (2) [Treatment of misfired explosives]. (3) Measures in loading work (a) Electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing. Keep detonators away from electric light lines, power lines, and other items that may cause electric leakage. (b) While loading, no activity including drilling shall be permitted in the vicinity. (c) Before loading, thoroughly clean the holes and do not leave any pebbles, etc. (d) Explosives and detonators not used shall be returned to the explosive magazine. For other safety measures for loading work, the Contractor shall take safety measures referring to BS 5607: Code of practice for the safe use of explosives in the construction industry, 10 Safety when using explosives. (4) Measures in handling detonators (a) Measures of blasting work using electric detonators (i) Check if the bus wire is not cut or damaged, and check its continuity. (ii) Check if there are no forgotten wire connection or false wire connection. (iii) Make sure there are no stray electric current when using electric detonators. (iv) If there is danger of electric detonators due to radio-frequency radiation at a site near radio communication facility, radar, wireless telephone including mobile type, do not use electric detonators unless otherwise specified in the Contract. (v) Prohibit bringing into the blasting areas any mobile phone that is not guaranteed that it will not adversely affect the electric detonators. (vi) Install a lightning detector near the blasting area, stop blasting work when there is a risk of lightning strike, and evacuate workers to a safe place. For other safety matters for blasting with electric detonator, the Contractor shall take safety measures referring to BS 5607: Code of practice for the safe use of explosives in the construction industry, 10.4.3 Electric detonators. (b) Measures of blasting using non-electric detonators (i) Do not cut or damage the shock tube; and (ii) Before firing, check the connections visually and make sure that there are no forgotten or false connection. (5) Measures in ignition

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
の通知、使用者や所有者の退避のほか、発破に伴う飛石の飛散防止措置等必要な安全対策を行ったうえで、作業を実施すること。	detonators. (b) Points of blasting using non-electric detonators (i) Do not cut or damage the shock tube. (ii) Before firing, check the connections visually and make sure that there are no forgotten or false connection. (5) Points to consider for ignition work (a) Ignition shall be made at a safe place isolated according to the degree of the blast. (b) The blasting machine shall be properly stored according to the safety plan. Also, the handle shall be removed from the blasting machine except when igniting. (c) The connection between the blasting machine and the bus wire shall be made immediately before ignition. (6) Point to consider for blasting work The blasting work performed near the existing structures shall be carried out with the necessary safety measures separately specified in the Contract such as prevention of flying stones from the blasting in addition to notifying the owner, evacuation of the user and the owner of the structures concerned.	(a) Ignition shall be made at a safe place isolated according to the degree of the blast. (b) The shotfiring apparatus shall be properly stored according to the safety plan. The handle shall be removed from the shotfiring apparatus except when igniting. (c) The connection between the shotfiring apparatus and the bus wire shall be made just before ignition. (6) Measures at blasting near existing structures The blasting near existing structures shall be carried out taking the necessary safety measures specified in the Contract such as prevention of flying stones from the blasting site in addition to notifying of blasting to their owners, evacuation of the users and owners of the structures concerned.
8.7.9 発破終了後の措置 (1) 発破終了後の現場の安全の確認 発破作業後の岩盤および周辺の岩盤の崩落・崩壊の危険の有無を検査し、安全と認めるまで、発破技士以外の作業員は発破場所及びその付近に立ち入らないこと。 (2) 不発の火薬類の処理 点火後、装てんされた火薬類が爆発しないとき、又は装てんされた火薬類が爆発したことの確認が困難であるときは、次の事項を含む安全衛生計画書に規定の不発の火薬類の処理に従い、処理を行うこと。なお、不発の火薬類の処理の計画は、BS5607: Code of practice for the safe use of explosives in the construction industry, 10.5 Misfires を参照して作成されたものであること。 (a) 不発の火薬類の処理が必要なときは、直ちに発破器からハンドル等の点火スイッチ及び発破母線を取り外すこと。 (b) 発破母線を短絡又は接地させること。 (c) 請負者の発破担当エンジアへ報告し、指示を受けること。 (d) 発破技士及びその他認められた者以外の発破現場への立入りを禁止すること。発破現場への立入りは、計画で規定している不発発生からの経過時間以降とすること。	**8.7.9 Measures after Blasting** (1) Confirmation of safety of blasting area after blasting Until the shotfirer has inspected rocks at the blasting site and the surroundings for the danger of falling or collapsing and judged its safety satisfactorily, workers other than the shotfirer shall not enter the blasting site or its vicinity. (2) Disposal of misfired explosives If, after ignition, the loaded explosives did not explode, or if it is difficult to confirm the explosion, dispose of the misfired explosives specified in the safety plan, including following measures. The plan for the disposal of misfired explosives shall be prepared with reference to BS5607: Code of practice for the safe use of explosives in the construction industry, 10.5 Misfires. (a) When it is necessary to dispose of misfired explosives, immediately remove the ignition switch such as the handle and the bus wire from the blasting machine. (b) Short-circuit or ground the bus wire. (c) Report to the explosive engineer for instructions.	**8.7.9 Measures after Blasting** (1) Confirmation of safety of blasting area after blasting Until the shotfirer has inspected rocks at and surrounding of the blasting site to check the danger of falling or collapsing of rocks and judged its safety, workers other than the shotfirer shall not enter the blasting site or its vicinity. (2) Treatment of misfired explosives If, after ignition, the loaded explosives did not explode, or if it is difficult to confirm the explosion, the misfired explosives shall be treated as planned in the safety plan including the following measures: (a) When it is necessary to treat misfired explosives, immediately remove the shotfiring apparatus such as the handle and the bus wire from the shotfiring apparatus. (b) Making short-circuit or grounding the bus wires. (c) Report to the explosive engineer for instructions. (d) Prohibit anyone other than the shotfirer and other authorized personnel from entering the blasting site. The entering to the blasting site shall be made after the elapsed time from the occurrence of misfire specified in the plan. (e) Clearly indicate the presence of misfired explosives and install fences etc., to prevent anyone other than the shotfirer and the authorized person from approaching to the site.

JSSS in Japanese（R2 Prov final 12/28）	JSSS in English（R0 1/3）	JSSS in English（R1 1/8）
(e) 不発の火薬類の存在を明示し、認められた者以外が現場に近づかないよう柵等を設置すること。 (f) 不発の原因の特定、不発の火薬類の対処の決定を適切な手順で行うこと。 (g) 不発の火薬類の記録をとること。 (h) 不発の火薬類が処理されるまでは、当該現場及びその付近において、不発の火薬類処理のための削孔作業等以外の作業を行わないこと。	(d) Prohibit anyone other than the shotfirer and other authorized personnel from entering the blasting site. Access to the blasting site shall be after the elapsed time from the occurrence of misfire specified in the plan. (e) Clearly indicate the presence of misfired explosives and install fences etc., to prevent anyone other than the authorized person from approaching the site. (f) Appropriate procedures shall be taken to identify the cause of the misfire and to determine the handling of the misfired explosive. (g) Keep records of misfired explosives. (h) Until disposal of misfired explosives is completed, no work shall be permitted other than drilling etc. for the disposal of misfired explosives at or near the site.	(f) Appropriate procedures shall be taken to identify the cause of the misfire and to determine the handling of the misfired explosive. (g) Keep records of misfired explosives. (h) Until treatment of the misfired explosives is completed, no work shall be permitted other than drilling, etc. for the treatment of misfired explosives at or near the site.

NK will response them in making the English version Issue 2 in addition to the comments for the Issue 1. **2. Chapter8 Excavation Work** (1) Provisions regarding Trench Excavation” will be added based on the Japanese version. (2) It shall be stipulated that the excavation of 1.5 m or more shall be provided with earth retaining in principle. (3) In Issue 1, provisions in Chapter 4 state regarding safety matters for excavation equipment, however, the provisions specific for equipment for the excavation works shall be stipulated in Chapter 7.	**7.1 GENERAL** 7.1.1 Scope **7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS** 7.2.1 General 7.2.2 Safety Measures before Commencing Excavation Work 7.2.3 Safety Measures during Excavation Works **7.3 MANUAL EXCAVATION WORKS** **7.4 MECHANICAL EXCAVATION WORK** **7.5 TRENCH EXCAVATION** 7.5.1 General 7.5.2 Safety Measures during Trench Excavation **7.6 EXCAVATION BY BLASTING** 7.6.1 Scope 7.6.2 Definitions 7.6.3 Compliance Standards 7.6.4 Personnel for Blasting Works 7.6.5 Blasting Safety Plan 7.6.6 Risk prevention of Workers and Neighbouring Residents 7.6.7 Handling and Storing of Explosives 7.6.8 Trial Blasting 7.6.9 Monitoring Impact on Adjacent Buildings and Structures 7.6.10 Particular Safety Measures for Blasting Work 7.6.11 Measures after Blasting

		(4) The essence of OSHA shall be added for clauses which are referring to relevant provisions of OSHA (5) In the Excavation by Blasting, the provisions on allowable values of vibration and displacement, on monitoring locations, buildings, etc., and on the involvement of the Engineers will be added. (6) Test blasting is to be defined as default and the provisions in English version will be adopted as they are. **3. Ways to stipulate requirements in JSSS** (1) JSSS in Japanese specifies requirements in other chapter for each work. JSSS issue 1 in English has generalized and specifies requirements in one chapter and not specifies in other chapter for each work. JICA requests to leave the generalized requirements in one chapter and specify particular requirement in each work when there is specific requirement related with each work. (2) The expression of "unless otherwise specified in the Contract" is superseded with "as specified in the Contract (see Annex 1.3)" according to the contents of stipulations. (3) As submittals of Method Statement and Safety Plan are already stipulated in Chapter 1, thus in other chapters, submittal of those will not be specified repeatedly. However, specify what needs to be specific to the work concerned. (4) The HSO take all responsibility for safety. The HSO's duty is to review and check whether the safety activities are taken at the site by the Site staff in charge of construction (the Contractor) in accordance with the Safety Plan and manage safety at the Site. From this concept, "The HSO shall inspect work area before starting work…" is to be revised to "The Contractor shall …" (5) Provisions of JSSS shall be Reader-friendly description as much as possible.	
8 土工工事 **8.1 一般事項** (1) 本章では、明り掘削及び発破作業について規定する。明り掘削にはトレンチ掘削を含むものとする。**→E8.1.1(1)に規定済み**（トンネル掘削を除外し、トレンチ掘削には触れていない。） (2) 用語の定義 トレンチ掘削とは、ガス管や上下水道管等を敷設するために行われる掘削の深さが幅よりも大きいものをいう。一般的に幅が 4.6m（15feet）以下の掘削をいう。**→規定なし。**→7.5 に追記する (3) 請負者は、盛土工事に関しては、本仕様書の掘削作業の規定に準拠して、安全措置を講じなければならない。**→E8.2.1(1)に規定済み** (4) 請負者は、道路上で土工工事の作業を行う場合は、2.2.2 [道路占用時の措置]及び 2.4.1[監視員、誘導員の配置]に規定の措置を講じなければならない。**→規定なし。**（全体的に規定済みであるため。）→規定しない。	**8.1 GENERAL** **8.1.1. Scope** (1) This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting together with all associated embankment filling, backfilling and Earthwork Support.	**8.1 GENERAL** **8.1.1. Scope** This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting ~~together with all associated embankment filling, backfilling and Earthwork Support.~~ JC: 盛土の話は不要。earthwork support については仮設に記載があるので不要。 トレンチの話は復活させてください。なぜトレンチだけ議論するのかという意見はあると思いますが、関連した事故が多いという事実に鑑みここだけは特別に復活させてください。OSHA との重複があっても構いません。 Embankment is not necessary to stipulate. Earthwork support, too because it is stipulated in Chapter 4. Reinstate "Trench Excavation". There may be opinions that why only trench excavations must be stipulated,	**7.1 GENERAL** **7.1.1 Scope** This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting. JC1 NK1 NK2

(5) 請負者は、埋設物がある場所での掘削工事に関しては、本仕様書 3.1[地下埋設物]に規定の措置を講じなければならない。→**規定なし。**（同上）→規定しない。

8.2 掘削工事の計画における安全上の留意事項

(1) 地形、表土、土質、地質の状態を考慮した安全な掘削の順序、掘削の位置及び掘削土砂の運搬の方法等を計画すること。→**E8.2.1 (1)/(2)に規定済み（表現修正）**

(2) 掘削の高さ、のり勾配、段切りの計画

掘削の高さ、勾配(sloping)、段切り(benching)は、本契約で別途に定めがない限り、地山の形状、地質・土質等に応じて以下の基準に準拠しなければならない。

OSHA Subpart P—Excavations,§1926.652 Requirements for protective systems. (b) Design of sloping and benching systems. →**E8.2.1(3)に規定済み**

(3) 仮設工事の掘削の土留め工

本仕様書 7.2[土留め工]、7.2.1[一般](2)「土質に見合った勾配を保って掘削できる場合を除き、掘削の深さが 1.5mを超える場合には、原則として、土留め工を施すものとする。」に従い、土留工を計画すること。→**E8.2.1(4)に規定済み （1.5m の規定を追加する。）**

(4) 地山の含水、湧水を考慮した適切な排水工を施し、作業場所を乾いた状態に保持して掘削すること。

→**規定なし。**→Issue 6 の 1.23.2 に次の規定あり。
The Contractor shall keep all areas of the Site, all newly exposed ground surfaces, excavated areas and/or excavations for structures, piling, trenches, pits, shafts, tunnels and the like, free from surface water and ground water at all times and by whatever means are necessary to ensure: →本款を参照し追記する。

(5) れんが壁、コンクリートブロック塀、擁壁等の建設物に近接する箇所で掘削の作業を行なう場合において、これらの損壊等により作業者に危険を及ぼすおそれのあるときは、本契約で別途に定められたとおりに補強すること。→**E8.2.1(7)に規定済み（対象を拡大。Annex 1.3 に規定。）**

(6) 掘削箇所の上部に存在する浮き石、立木等により、作業員又は建設機械に危険が及ぶ恐れがあり、本契約に定めがない場合は次の措置を講じること。

→**規定なし。**（2.6 [飛来落下の防止措置]に移動すべき内容）→追記する。

8.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS

8.2.1. General

(1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependent on the shape, nature the soil, hydraulic and geological conditions of the Site.

(4) Earthwork Support

In accordance with JSSS 7.2 [Earthwork Support] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide whatever Earthwork Support may be necessary to achieve this.

(5) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations,

however, based on the fact that there have been so many accidents related with trench excavation, we request to stipulate in JSSS, even there may be duplication with OSHA.

NK: Deleted as commented. Provisions for Trench Excavation will be reinstated in 7.5.

8.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS

8.2.1. General

(1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like~~,~~ taking account of all the conditions of the Site ~~in conformity with GC 4.10~~.

(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.

(4) Earthwork Support

In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide ~~whatever Earthwork Support may be necessary to achieve this.~~

JC: 日本語版 8.2(3)にある「土質に見合った勾配を保って掘削できる場合を除き、掘削の深さが 1.5mを超える場合には、原則として、土留め工を施すものとする。」という記述が抜けているので復活させて下さい。

Please reinstate the provision in 8.2 (3) of Japanese version "In accordance with JSSS 7.2.1[Earth Retaining Work] (2), the earth retaining shall be planned in principle to be provided for the excavation of depth exceeds 1.5m;".

NK: added as right.

(5) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work without causing any damage to or weakening of surrounding subsurface

7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS

7.2.1. General

(1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like taking account of all the conditions of the Site.

(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.

(4) ~~Earthwork Support~~ In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide earthwork support for the excavation of depth exceeds 1.5m in principle unless it is possible to excavate with a slope suitable for the soil condition.

(5) In accordance with JSSS 1.23 [Emergency Response Plan?], 1.23.2, the Contractor shall. execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.

(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and

(a) 浮き石等の除去、落石防護柵等の設置等の対策についてエンジニアと協議すること。

(b) 協議の結果、施工方法を含む安全措置についてエンジニアに提案し、その指示に従うこと。

8.3 掘削作業の安全措置

8.3.1 要員の配置

(1) 深さ 1.5m 以上の掘削作業を行うときは、本仕様書 1.8[請負者の要員の適正配置]に従い作業主任を配置しなければならない。**→規定なし。**（作業主任は、1.16 [要員の配置]で規定済み。）

(2) 本仕様書 2.4[監視員、誘導員の配置]に従い、必要に応じて監視員を配置すること。但し、下記の場所においては必ず配置すること。**→規定なし。（不要。必要ならば 2.4 [監視員等の配置]**

(a) 道路に隣接した場所又は道路内**→規定なし。**

(b) 本仕様書 3[地下埋設物・架空線等上空施設一般]に規定の架空線等上空施設近くの場所**→規定なし。**

(c) 次の掘削作業箇所

(i) 建物、その他の施設等に隣接する場所**→規定なし。**

(ii) 見通しの悪い場所、崖縁**→規定なし。**

(iii) 土石等の落下崩壊のおそれのある場所**→規定なし。**

(iv) 掘削機械、運搬機械が、作業員と近接して掘削作業を行う場所**→規定なし。**

8.3.2 掘削作業における安全措置

請負者は、掘削作業を行なうときは、次の措置を講じなければならない。

(1) その日の作業を開始する前、降雨後及び地震の後、地山の崩壊又は土石の落下による作業員の危険を防止するため、点検者を指名して、作業箇所及びその周辺の地山について点検を行わせること。浮石及びき裂の有無及び状態並びに含水、湧水及び凍結の状態の変化を点検し、異常がある場合は安全措置が講じること。安全措置が講じられた後でなければ、作業を行なわないこと。**→E8.2.2(1)/(2)に規定済み**（最終的な責任者は HSO という立場。）JICA コメントに従い変更。

structures, buildings, roads, paved areas or the like, either on or adjacent to the Site and unless otherwise specified in the Contract, the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.

8.2.2. Safety Measures before Commencing Excavation Works

(1) The HSO shall inspect the excavation work area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake to ensure that there are:

(a) No potentially unsafe areas where there may be any risk of Landslide;

conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site and ~~unless otherwise specified~~ as specified in the Contract (see ~~Annex 1.~~3 Particular Safety Specification~~)~~, the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.

JC: 日本語版 8.2(5)では「本契約で別途に定められたとおりに補強する」であり、ニュアンスが全く異なる。Annex1.3 で、発注者が requirement を定めるという書き方にして下さい。

The provision of 8.2 (5) of Japanese version mentions “as stipulated separately in the Contract”. The nuance of English version is completely different. Please modify it as the Employer determines the requirement.

NK: is modified as right.

NK: added (7) of JSSS in English as right.

8.2.2. Safety Measures before Commencing Excavation Works

(1) The ~~HSO~~ Contractor shall inspect the excavation work area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake to ensure that there are;

MM3.(4) : HSO は、安全に関する全責任を取るが、安全計画で規定の安全措置を現場の担当者が実行しているかを点検する責務を行うとの考えから、英文の“The HSO shall inspect work area before starting work…”は、“The Contractor shall …”へ変更する。

The HSO take all responsibility for safety. The HSO’s duty is to review and check whether the safety activities are taken at the site by the Site staff in charge of construction (the Contractor) in accordance with the Safety Plan and manage safety at the Site.

From this concept, “The HSO shall inspect work area before starting work…” is to be revised to “The Contractor

support work without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site, and ~~unless otherwise specified~~ as specified in the Contract (see ~~Annex 1.~~3 Particular Safety Specification~~)~~, the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.

(7) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and take actions in accordance with the Engineer’s instruction.

7.2.2. Safety Measures before Commencing Excavation Works

(1) The Contractor shall inspect the excavation work area and surrounding area before starting work each day and after adverse climatic conditions or earthquake to ensure that the following items meet the criteria of allowable values and counter measures determined by the Contractor and given in the Contract (see the Particular Safety Specification) to avoid adverse effects to surrounding areas and buildings by excavation:

	(b) No loose rock or boulders which may be at risk of falling; (c) No cracks in the excavation work area and the surrounding area; (d) No changes in ground water level, surface or any spring water; and (e) No deleterious effect due to freezing conditions.	shall …" NK: Revised as commented here and also other clauses. JC: 掘削の範囲内においてはコントラクターが責任を持つが、掘削の範囲外に及ぼす各種の影響は、契約書で許容値あるいは対策が発注者から示されなければならない。そういう前提で記述をしてください。 The premise is that the allowable effect and countermeasures shall be given by the Employer for surrounding areas outside of excavation. The provision shall be made on the premise. NK: The clause is modified as right. (a) ~~No~~ potentially unsafe areas where there may be any risk of landslide; (b) ~~No~~ loose rocks or boulders which may be at risk of falling; (c) ~~No~~ cracks in the excavation work area and the surrounding area; (d) ~~No~~ changes in ground water level, surface or any spring water; and (e) ~~No~~ deleterious effect due to freezing conditions. JC: 「No ～」といった書き方は過剰。cracks にしても、水位にしても、絶対にダメという話になると工事をすることができなくなるため、記述を変更してください。 The expression "No something" is excessive. Those (for example no cracks, no change of water level) make works impossible to perform.	(a) ~~No~~ Potentially unsafe areas where there may be any risk of landslide; (b) ~~No~~ Loose rocks or boulders which may be at risk of falling; (c) ~~No~~ Cracks in the excavation work area and the surrounding area; (d) ~~No~~ Changes in ground water level, surface or any spring water; and (e) ~~No~~ Deleterious effect due to freezing conditions.
(2) 掘削場所への昇降場所には、本仕様書 7.4.2[通路の設定]に従い、階段、傾斜路等の設備を設けること。→**規定なし。**（他との重複）→7.2.2 へ追記する。 (3) 埋設物は、3.1[埋設物一般]に従い、適切に支持又は防護するとともに、状況に応じて埋設物の位置、注意事項を明確に標示し、防護柵を設ける等の措置を講じること。→**規定なし。**（他との重複）→7.2.2 へ追記する。 (4) 作業者及び建設機械・運搬車両の掘削箇所での転落を防ぐため、本仕様書 2.3[立入禁止の措置]に準拠し、立入防止施設（柵、仮囲い等）、警告のための旗・看板等を設置すること。→**規定なし。**（他との重複）→7.2.2 へ追記する。 (5) 掘削作業を行なう箇所において、地山の崩壊又は土石の落下により作業員に危険を及ぼすおそれのあるときは、あらかじめ、土止め支保工を設け、防護網を張り、作業員の立入りを禁止する等当該危険を防止するための措置を講じること。→**規定なし。**（他との重複）→7.2.2 へ追記する。 (6) 掘削する箇所の下部において、掘削土砂・岩石の落下により第三者、作業員に危険を及ぼすおそれ	(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.	NK: The conditions are changed to relate to the criteria (in (1) above) given in the Contract as right. (2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety. MM: as mentioned MM 3.(1) mentioned in the first line above. NK: added requirements in Japanese JSSS as right.	(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety. (3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage]; (4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences; (5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance

のあるときは、次の措置を講じること。→**規定なし。**（他との重複）→7.2.2 へ追記する。

(a) 危険個所の特定、本仕様書 2.3[立入禁止の措置]に従い立入防止施設（柵、仮囲い等）、警告看板の設置等を行うこと。→**規定なし。**（他との重複→7.2.2 へ追記する。）

(b) 落下する岩等を受けることのできる防護柵等を設置すること。→**規定なし。**（他との重複）→7.2.2 へ追記する。

(7) 掘削作業中の安全措置→**E8.2.3 に規定済み**

(a) 法肩付近に土砂又は機材等を置かないこと。→**E8.2.3 (1)に規定済み**

(b) 掘削中に、崩落等の発生の可能性があると判断されたときは、全ての必要な安全措置が実施されるまで作業を中止し、危険にさらされる作業員を掘削現場から退出させること。→**E8.2.3 (2)に規定済み**

(c) 仮設の掘削工事で埋め戻しが必要な箇所は、作業が完了した後は出来るだけ速やかに埋め戻すこと。→**E8.2.3 (3)に規定済み**

(d) 明り掘削の作業を行なう場所については、当該作業を安全に行なうため必要な照度を保持すること。→**E8.2.3 (4)に規定済み**

8.2.3. Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

8.2.3. Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

8.3 MANUAL EXCAVATION WORKS

with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.;

(6) Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock at the lower parts (bottom) of the excavation site;

(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and

(b) Install protective fences that can catch falling rocks, etc.

(7) Risk prevention measures against falling rocks

(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and

(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

7.3 MANUAL EXCAVATION WORKS

8.4 人力掘削の安全措置

請負者は、人力掘削を行う場合は、以下の安全事項を遵守して作業を行わなければならない。

(1) 垂直又は垂直に近く切り立つ掘削面・地盤、既設構造物の基礎の下の地盤の掘削（すかし掘り）をしないこと。→E8.3.1 (1)に規定済み

(2) 2 名以上で同時に掘削作業を行うときは、相互に十分な間隔を保つこと。→E8.3.1 (2)に規定済み

(3) 浮石を割る、又は起こすときは、石の安定と転がる方向を見定めて作業すること。→E8.3.1 (3)に規定済み

(4) てこ（leverage）を使うときは、あらかじめ動かすものに適した長さと強さを有するものを選ぶこと。→E8.3.1 (4)に規定済み

8.5 機械掘削の安全措置 →規定なし。（他との重複）

請負者は、機械掘削作業にあたり、掘削作業に従事する機械(以下、「機械」という。) の運転者及び作業員の安全に関し、次の措置を講じなければならない。→規定なし。（他との重複）→7.4 へ追記する。

(1) 本仕様書 2.3[立入禁止の措置]に従い、機械の作業により作業員に危険がおよぶ場所への立入りを禁止し、見やすい箇所にその旨を標示するとともに、立入防止施設（柵、仮囲い等）または監視人を配置すること。→規定なし。→7.4 へ追記する。

(2) 本仕様書 4.2.3[建設機械の運用時の安全措置]、4.2.4[建設機械の用途外使用の制限]及び次の(3)以降に規定の安全措置を講ずること。→規定なし。→7.4 へ追記する。

(3) 機械の運転者は、次の事項を遵守し機械を運転すること。

8.3. MANUAL EXCAVATION WORKS

8.3.1. General

During manual excavation works, the Contractor shall:

(1) Not permit any excavation without providing Earthwork Support to all vertical surfaces.

(2) Maintain sufficient distance between workers.

(3) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(4) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

~~**8.3.1 General**~~

During manual excavation works, the Contractor shall:

(1) Not permit any excavation without providing Earthwork Support to all vertical surfaces.

(2) Maintain sufficient distance between workers.

(3) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(4) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

JC: 8.2.1 (4) のコメントの記載があれば、不要の筈です。 少なくともこの記載ぶりではわずかな掘削でも土留めが必要となるので過剰です。 ちなみに「すかし掘り」のことを言っていた筈ですがそうなっていません。

(a) This expression is excessive because it means that earth retaining is required regardless of the depth. (b) Originally, the Japanese version intended to prohibit to excavate under the existing foundation etc.

NK: For (a), the clause is modified as right.
For (b), a new clause (2) is added from 8.4.1 (1) of Japanese version.

NK: as mentioned MM 3. (1) mentioned in the first line above, added 7.4 MECHANICAL EXCAVATION WORK to specify requirements in Japanese JSSS as right.

During manual excavation works, the Contractor shall:

(1) Not permit any excavation of depth exceeds 1.5m in principle without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4).

(2) Not permit excavation of the excavated surface/ground that stands vertically or close to the vertical, and excavation of the ground under the foundation of existing structures

(3) Maintain sufficient distance between workers.

(4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

7.4 MECHANICAL EXCAVATION WORK

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as “equipment”) and workers engaged in the mechanical excavation works with the equipment:

(1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of “No Entry” at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.

(3) The operators shall operate the equipment

(a) 作業範囲付近の他の作業員の位置に絶えず注意し、機械を運転すること。→**規定なし。**→7.4 へ追記する。 (b) 機械を後進させるときは、後方に作業員がいないことを確認し、誘導員の指示に従い後進すること。→**規定なし。**→7.4 へ追記する。 (c) 作業後は、掘削作業中の斜面及び崩れやすい地盤に機械を置かないこと。→**規定なし。**→7.4 へ追記する。 (d) 機械のバケットは、トラックの運転席の上を通過させないこと。→**規定なし。**→7.4 へ追記する。 (4) 作業員は、次の事項を遵守し作業すること。 (a) 土砂を積込み中のバケット等の下に入らないこと。→**規定なし。**→7.4 へ追記する。 (b) 土砂の積込み、降ろし作業中のダンプトラックに近づかないこと。→**規定なし。**→7.4 へ追記する。			following the following rules: (a) Operate the equipment with paying attention always to the position of workers near the working range; (b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters; (c) After the work, do not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse. (d) The bucket of equipment shall not pass over the operator's seat of another equipment. (4) Workers shall work follow the following rules. (a) Not enter under the bucket of equipment that is loading materials; and (b) Keep away from dump trucks under loading or unloading materials.
8.6 トレンチ掘削の安全措置→規定なし。(トレンチ掘削のみを取り上げることの理由なし。)→7.5 を追加する。 **8.6.1 一般事項** 請負者は、トレンチ掘削における掘削面の崩壊による作業員への危険を防止するため次の措置を講じなければならない。→**規定なし。**→7.5 を追加する。 (1) トレンチ掘削を行うときには、掘削の深さが 1.5mを超える場合には、特に理由がない限り土留め工を施すこと。→**規定なし。**→7.5 を追加する。 (2) 1.5m 未満の深さのトレンチ掘削においては、次に例示するような土留め工を設置しなければならない。→**規定なし。**→7.5 を追加する。 (a) 簡易土留め(トレンチボックス・トレンチシールド)→**規定なし。** (b) 軽量鋼矢板土留め→**規定なし。**→7.5 を追加する。 (c) 油圧式アルミニウム支保工、木材支保工→**規定なし。**→7.5 を追加する。 **8.6.2 トレンチ掘削における安全措置→規定なし。→7.5 を追加する。**		NK: as mentioned MM 3. (1) mentioned in the first line above, 7.5 TRENCH EXCAVATION to specify requirements in Japanese JSSS is added as right.	**7.5 TRENCH EXCAVATION** **7.5.1. General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation. Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet). (1) When performing trench excavation with depth of 1.5m or more, earth retaining shall be provided unless any particular reason exists; and (2) For trench excavation with a depth of less than 1.5m, protective systems such as exampled below shall be installed; (a) Simple earth retaining (Trench box, Trench shield); (b) Lightweight sheet pile earth retaining; and (c) Aluminum hydraulic shoring, Timber shoring. **7.5.2 Safety Measures during Trench Excavation**

(1) トレンチ掘削用土留め工の部材は、掘削幅、深さに適し、土留めの機能を損なうような破損や欠陥のないものを使用すること。→**規定なし。**→7.5 を追加する。 (2) 既成品の土留め工の部材の場合、当該部材の製造者の作成したマニュアルに従い使用すること。→**規定なし。**→7.5 を追加する。 (3) 請負者の設計による土留め工の場合、設計図及び施工手順図にもとづき設置すること。→**規定なし。**→7.5 を追加する。 (4) 地山の崩壊、掘削箇所に近接する構造物の倒壊等から作業員を保護できる十分な強度を持つ土留め工を設置すること。→**規定なし。**→7.5 を追加する。 (5) 土留め工が作業に先行して設置されるまで掘削するトレンチ内に作業員を立ち入らせないこと。→**規定なし。**→7.5 を追加する。 (6) 土留め工の下端から 60cm 以上の掘削は行わないこと。→**規定なし。**→7.5 を追加する。 (7) 作業のために一時的に土留め工の部材を取り外す必要があるときは、土留め工に作用する荷重を負担する仮部材を取り付けるなどの措置を講じること。→**規定なし。**→7.5 を追加する。 (8) 土留め工を取り外すときは、当該場所及び付近に取外し作業に従事する作業員以外の者を立ち入らせないこと。→**規定なし。**→7.5 を追加する。 (9) 掘削場所の埋戻しは、掘削場所から土留め工を取り外す作業と並行して行うこと。→**規定なし。**→7.5 を追加する。			(1) Materials and equipment to be used for earth retaining systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function; (2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be provided in accordance with the design and construction procedure drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) Backfilling of the trench shall be performed in parallel with the removal of the earth retaining system.
8.7 発破掘削	**8.4. EXCEPTION BY BLASTING**	**8.4. EXCEPTION BY BLASTING** JC: Blasting は安全規定の塊みたいなものであるので、BS 5607 を引用するなら(OSHA でもよい)、思い切って項目を全面的にフォローし内容も参考にしてよいのではないか。さらに第三者の構造物に対する許容値について MTR M&W を参考にすることを推奨する。 何故そのように推奨するかといえば、コントラクター任せになっているように思える記述が多いためです。本来発破については具体的な規定が契約に含まれるべきなので、そういった規定がどこかにあります(あるべき)ということを前提とした書きぶりにしてください。 As Blasting is soul of safety specification, it seems better	**7.6 EXCEPTION BY BLASTING**

8.7.1 一般事項

(1) 本節では、請負者の要員及び第三者の発破掘削作業にかかわる安全措置について規定する。

発破作業自体にかかる計画については、施工計画書(Method Statement)に記載する。**→E8.4.1 (1)/(2)に規定済み**

(2) 本節の 8.7.3[計画書の作成]及び 8.7.4[作業員及び周辺住民への措置]は、明り掘削に対してのみ適用する。**→規定なし。** →明り掘削のみを7.6.1(1)へ追記する。

(3) 本仕様書で使用する用語の定義は次である。

(a) 火薬類とは、火薬、爆薬、雷管等の火工品をいう。**→E8.4.2 (2)に規定済み**

(b) 危険区域(exclusion zone)とは、発破を行うとき、許可された作業員以外の者の立入りを禁止する地域をいう。**→E8.4.2 (3)に規定済み**

8.4.1. Scope

(1) This Section specifies safety measures in connection with excavation in rock that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives.

(2) The Blasting Works plan shall be described in the relevant Method Statement.

(3) This Section applies particularly to Blasting Works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.

8.4.2. Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "Blasting" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "Explosives" means mean any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

The reason why advice above is given is that there are many descriptions in JSSS Issue 1 which leave the Contractor decide. Fundamentally (originally), concrete requirements for the blasting shall be included in the Contract. Therefore, it needs to describe JSSS indicating that there are or should be such requirements.

NK: Basic requirement is that the Contractor shall execute the blasting works in accordance with the Law of the Country. The safety is the Contractor's responsibility. The concrete requirements mean influence to structures of 3rd parties, NK agree to specify the acceptable values by the Employer if so determined by the Employer, however principally GC request no influence and damage by the Works. NK will study the comments given below and specify as requested by JC. NK request JICA to review the revised JSSS in right.

8.4.1. Scope

(1) This Section specifies safety measures in connection with excavation in rock that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives.

NK: added in open in right because 8.4 specifies excluding underground excavation with blasting.

JC: 何故キャピタル－ 定義語なのか(**B**lasting with **E**xplosives) 8.4.2 (1), (2) 参照。Why are they written in capital letters? Are they defined? See 8.4.2 (1), (2).

NK: They are defined in 8.4.2. NK will ask MD the reason of definition.

(2) The Blasting Works plan shall be described in the relevant Method Statement.

(3) This Section applies particularly to Blasting Works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.

NK: There are two terms in 7.6: "Blasting Works" and "Blasting works". Tentatively, "Blasting works" is used in right because "excavation work" is used in 7.1 and "Blasting" is defined in 8.4.2. (To MD: Please confirm the term.)

8.4.2. Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means mean any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting

7.6.1. Scope

(1) This Section specifies safety measures in connection with excavation in rock in open that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives.

(2) The Blasting ~~Works~~ works plan shall be described in the relevant Method Statement.

(3) This Section applies particularly to Blasting ~~Works~~ works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.

7.6.2. Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means mean any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(4) 請負者は、発破掘削作業に伴う火薬類の取扱い（購入、運搬、貯蔵、使用、不要火薬類の処分等）は、当該国の法律、本契約で別途定める事項及び本仕様書に規定する事項を遵守して、行わなくてはならない。**→規定なし。**（総則で法律等に従うことは前提として規定している。）

(5) 請負者は当該国の法律、本契約、本仕様書に規定がない事項は、BS 5607: Code of practice for the safe use of explosives in the construction industry を参照し、必要な措置を講じなくてはならない。**→E8.4.3 (1)に規定済み**

(6) 請負者は、発破作業とそれに伴う火薬類の取扱いに伴う必要な許認可を取得するための一切の手続きを実施するものとし、発注者は許認可の取得に必要な協力を行うこととする。**→E8.4.3 (2)に規定済み**

8.7.2 発破作業の要員

請負者は、発破作業の要員に関し、次の措置を講じなくてはならない。

(1) 発破作業の作業員の配置

発破作業を行うときは、発破担当エンジニア（explosive engineer）、発破技士(shotfirer)を、本仕様書 1.8[請負者の要員の適正配置]に従い、配置すること。**→E8.4.4 (1)に規定済み**

(2) 発破作業の作業員の責務と要件**→E8.4.4 (2)に規定済み（competent については削除している）**

(3) "Exclusion Zone" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [Prohibition of Entry – Dangerous Work] Clause 2.3.1 (c).

8.4.3. Compliance Standards

(1) By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals in accordance with GC 2.2 [Permits, Licences or Approvals].

8.4.4. **Personnel for Blasting Works**

(1) Further to the requirements of JSSS 1.16 [Proper Placement of Contractor's Personnel], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosive Engineer; and

(b) Shotfirer(s)

(2) Responsibilities and requirement of personnel for Blasting Works:

(a) The Explosive Engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works;

agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

8.4.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals ~~in accordance with GC 2.2 [*Permits, Licences or Approvals*]~~.

JC: Referencing to GC2.2 is not necessary here.
NK: The reference is deleted.

8.4.4. Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosive Engineer; and

(b) Shotfirer(s)

JC: It seems that capital and lowercase letters are used without rules.

NK: Unless a word is defined, it will be written with lowercase. The above is modified as right because of itemisation. Hereinafter, "explosive engineer" and "shotfirer" are used only by lowercase letters.

(2) Responsibilities and requirement of personnel for Blasting Works:

(a) The explosive engineer shall plan the

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

7.6.4. Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting ~~Works~~ works:

(a) Explosive engineer; and

(b) Shotfirer(s)

(2) Responsibilities and requirement of personnel for Blasting ~~Works~~ works:

(a) The explosive engineer shall plan the Blasting ~~Works~~ works, lead the Blasting ~~Works~~ works at Site and perform the safety management of the

(a) 発破担当エンジニアは、発破作業の計画・設計を行い、作業の主導及び安全管理を行うこと。発破担当エンジニアは、請負者が当該業務の知識、経験、能力がある()と認める者であること。

(b) 発破技士は、火薬類の保管、運搬、貯蔵、発破の作業及び現場の安全管理を行うこと。発破技士は、当該国の法律で規定がある場合、発破業務の有資格者、規定が無い場合は、請負者が発破業務の知識、経験、能力がある(competent)と認める者であること。

(3) 安全教育と指導

発破作業に従事する作業員に以下の事項に関する知識が備わっていることを確保すること。また必要に応じて、関連の教育訓練を実施すること。
→E8.4.4 (3)に規定済み

(a) 発破による危険の性質**→E8.4.4 (3)(a)に規定済み**

(b) 発破作業での不安全状態と不安全行動**→E8.4.4 (3)(b)に規定済み**

(c) 発破作業の手順**→E8.4.4 (3)(c)に規定済み**

(d) 発破時の退避と退避解除の手順**→E8.4.4 (3)(d)に規定済み**

(e) 火薬類の不発発生時の安全対策**→E8.4.4 (3)(e)に規定済み**

(f) 緊急時対応**→E8.4.4 (3)(f)に規定済み**

---

and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [Proper Placement of Contractor's Personnel], the Contractor shall ensure that personnel engaged in Blasting Works have knowledge of and are able to comply with the following:

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return Procedures;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

8.4.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan

Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that personnel engaged in Blasting Works have knowledge of and are able to comply with the following:

JC: これが上記(1)で定義する 2 種類の専門職を指しているのか、それとも他の人を含むのかが不明瞭です。上記の 2 種類の専門職に限定して良いのであれば、blasting works はその 2 種類の専門家のみによって行われるという意味の文が(1)に入っているべきです。

The phrase "personnel engaged in Blasting Works" is not clear if it means only the explosive engineer and shotfirer as defined in (1) above or it includes other personnel, too. If the former is the case, the clause (1) should include the sentence that blasting works shall perform only by the explosive engineer and shotfirers.

NK: BS5607 に記述の 2 つの専門職、歩哨、その他の発破作業員がチームで作業します。
Blasting Works are executed by the team consisting of the explosive engineer, shotfirers, sentries (BS5607 7.4.2.4) and other workers involved in the blasting operations (BS5607 3.44.2 NOTE).
(3) is modified as right.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return Procedures;

JC: 避難した人を帰還させるのか、火薬の所定の場所への返却なのかが不明瞭です。

The word "return" in (d) is not clear if it means to make evacuated personnel to the original places or return surplus explosives to the magazine.

NK: It means to make the evacuated personnel to the original working places. Words are added as right.

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

Blasting ~~Works~~ works ; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting ~~Works~~ works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that personnel engaged in Blasting ~~Works~~ works , namely explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations, have knowledge of and are able to comply with the following:

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting ~~Works~~ works ;

(c) Procedures for Blasting ~~Works~~ works ;

(d) Evacuation and return procedures of the evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

7.6.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan

8.7.3 計画書の作成

請負者は、発破作業を行うときは、本仕様書 1.3[安全衛生にかかわる計画書]に規定の事項に加え、次の安全上の措置について安全計画書に記述しなければならない。**→E8.4.5 に規定済み**

(1) 発破作業のリスク分析と対策**→E8.4.5 (1)に規定済み**

(2) 火薬類の輸送、保管、使用及び処分時の安全措置**→E8.4.5 (2)に規定済み**

(3) 発破作業時の作業員・周辺住民への安全措置**→E8.4.5 (3)に規定済み**

(4) 危険区域の決定**→E8.4.5 (4)に規定済み**

(5) 発破作業の影響がある区域、建物、構造物の特定**→E8.4.5 (5)に規定済み**

(6) 法律又は契約において規定される発破作業時の制約要因(振動、騒音等)を考慮した対策**→E8.4.5 (6)に規定済み**

(7) 試験発破**→E8.4.5 (7)に規定済み**

(8) 周辺の建物等への発破の振動による影響のモニタリング**→E8.4.5 (8)に規定済み**

(9) 発破担当エンジニア、発破技士の識別方法**→E8.4.5 (9)に規定済み**

(10) 発破時の監視員の配置**→E8.4.5 (10)に規定済み**

(11) 周辺住民への発破作業の開始日時の通知、発破作業直前の周知方法**→E8.4.5 (11)に規定済み**

(12) 危険区域からの作業員の発破前の退避方法**→E8.4.5 (12)に規定済み**

(13) 発破時に用いる警報システム**→E8.4.5 (13)に規定済み**

(14) 不発の火薬類の処理**→E8.4.5 (14)に規定済み**

(15) 発破に関する法的及び管理目的で必要な記録の一覧表**→E8.4.5 (15)に規定済み**

8.7.4 作業員及び周辺住民への措置

(1) 周辺住民への発破作業の周知

発注者が行う関係官庁、周辺住民・建物所有者への発破作業の作業内容、安全対策等を説明する説明会のために、発注者から要請があった場合は、請負者は発注者に協力すること。

周辺住民への発破作業の開始日時の予定を通知し、発破作業前には作業の開始を周知すること。**→E8.4.6 (1)に規定済み**

(2) 作業員及び周辺住民への危害防止の措置

発破作業による作業員及び周辺住民への危害の防止のため、次の措置を講じること。**→E8.4.6 (2)**

---

describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.6 [Contractor's Safety Plan] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance

8.4.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

JC: エンジニアが同意すべきものであるということがどこかで書かれているべきだと思います。
It should be stated somewhere that the Blasting Safety Plan shall be agreed by the Engineer.

NK: MM 3.(3)に記述のように、第 1 章 1.6 Contractor's Safety Plan で Safety Plan の提出を規定しています。又、第 1 章に the Engineer may review the Safety Plan…を規定予定です。本章のみに、エンジニアの同意が必要と書くことは、不要と考えます。
As mentioned in MM 3.(3) Chapter 1 has specified the Contractor shall submit Safety Plan and will specify "the Engineer may review the Safety Plan…".
Therefore, it is not necessary to specify "the Contractor shall get concurrence to the Safety Plan by the Engineer." for this Chapter only.

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works.

JC: これを定義して"Concerned Personnel"などのように呼んで以降の記載に使用するようにしては。例えば(12)項、8.4.6(1)など。

It is recommended to define as for example, "Concerned Personnel" and use the term instead of repeating the long expression in the clauses such as (12) below and 8.4.6. (1).

NK: referred to BS5607 and GC below for the above JC. It will be defined as "personnel affected by the Blasting Works" as right.

BS 5607 mentions as follows:
6.4 Exclusion zone and warning procedures
the risk of injury to contractor's personnel, third parties and members of the public is reduced to as low as reasonably practicable.
7.4.2.1 General
notified to all personnel involved in securing the zone and others affected by the event, including the general public.
GC: 4.8 Safety Procedures
for the use and protection of the public and of owners and occupiers of adjacent land.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings,

---

describing all required safety measures for Blasting ~~Works~~ works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting ~~Works~~ works ~~(hereinafter collectively referred to as~~ "personnel affected by the Blasting works" in this Section).

(4) Determination of Exclusion Zone.

(5) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the

に規定済み

(a) 掘削、小割、岩塊除去等の発破による飛び石や周辺地山・岩石の崩落・転落防止のため、過装薬禁止、飛散防止対策等の措置を実施すること。**→E8.4.6 (2)(a)/(b)/(c)に規定済み**

(b) 危険区域を定め立札・赤旗等で明示し、危険区域内への発破作業員以外の作業員の立入りを禁止すること。**→E8.4.6 (2)(d)に規定済み**

(c) 危険区域境には発破時刻、サイレン符号その他の注意事項を示した掲示板を立てること。**→E8.4.6 (2)(e)(f)に規定済み**

(d) 退避場所を設定し、これを作業員に周知すること。**→E8.4.6 (2)(g)に規定済み**

(e) 発破技士と監視員との連絡・通信機器をそろえ、適宜機器の点検を行うこと。**→E8.4.6 (2)(h)に規定済み**

(f) 点火のときには、危険区域の境界に監視員を配置し、全ての作業員の退避を確認した後に点火を行うこと。**→E8.4.6 (2)(i)に規定済み**

(g) 発破作業は、可能な限り昼間に実施すること。**→E8.4.6 (2)(j)に規定済み**

requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Test Blasting.

(8) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

8.4.6. Information to Workers and Neighbouring Residents

(1) Dissemination of Information

structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

JC: 許容値が定まり、その範囲内での発破のかけかたが定まり、すると必然的に affected area が定まる、という論理に従い、5,6 は入れ替えます。
It is logically appropriate to change the order of (5) and (6). (First, determining the allowable values, secondly determining the blasting method within the values, then, the affected area is inevitably determined.)
NK: The order of (5) and (6) is changed as commented.

(7) Test Blasting.

(8) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

JC: The JC for (3) advise to replace all personnel with "Concerned Personnel" or another term
NK: Personnel and persons in (3) is different from (12) as the latter is limited to personnel to leave Exclusion Zone. It is left as it is.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

8.4.6. Information to Workers and Neighbouring Residents

(1) Notice of Blasting (JC: Changed.)

~~The Contractor shall assist the Employer when so requested by the Employer in giving~~

Contract.

(6) Identification of affected areas, buildings, structures and property.

(7) ~~Test~~ Trial Blasting.

(8) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.6. Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify, in appropriate

	The Contractor shall assist the Employer when so requested by the Employer in giving briefings to related authorities, neighbouring residents and building owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information. The Contractor shall notify all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, the actual start dates and times and give notice immediately before the Blasting work commences.	~~briefings to related authorities, neighbouring residents and building owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information.~~ (JC: Deleted.) The Contractor shall notify all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, the actual start dates and times and give notice immediately before the Blasting work commences. JC: The JC for (3) advise to replace all affected personnel with "Concerned Personnel" or another term NK: This is replaced with personnel affected by the Blasting Works as right. JC: 個別の世帯を一軒一軒訪問して知らせるということではないと考えますが、それを想起させる書き方になってはいませんでしょうか。 It does not mean to notify about blasting work by visiting individual residence. The writing seems to remind such a situation? NK: Modified as right.	manners, all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, the actual start dates and times and give notice immediately before the Blasting work commences.
	(2) Risk Prevention The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting Works including the following: (a) Prohibition of overcharging with Explosives; (b) Prevention of scattering of flying rock and	(2) Risk Prevention The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting Works including the following: (a) Prohibition of overcharging with Explosives; JC: 言いたいことはわかるが、具体性が無い。test blasting を基に請負者が計画する段数ごとの火薬量の確認を、エンジニアが行う。 It is not specific requirement though it is understandable. The Engineer shall check the explosive quantity planned by the Contractor based on the test blasting. NK: 施工法に関する計画は請負者の責任であり、薬量の確認は請負者が行うべきである。エンジニアは、計画が契約に従い作成しているかをレビューする。右のように追記する。 The Contractor is responsible for planning of method of blasting. The Contractor shall check the quantity of explosive if necessary by an explosive design checker as same as design check for temporary works. The Engineer may review Method Statement and Safety Plan whether the Contractor plan method and safety measures in accordance with the Contract. Addition is made as the right. (b) Prevention of scattering of flying rock and other debris as prescribed in the Contract (if any); (JC added.)	(2) Risk Prevention Measures The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting ~~Works~~ works including the following: (a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting; (b) Prevention of scattering of flying rock and other debris with materials, for example,

	other debris;	JC: 具体性が無い。(その他項目にも共通して言えることですがここでは)求める飛散防止装置を発注者が規定することがデフォルトであるべきです。そのニュアンスが感じられません。必要に応じて特記に逃げるなどの策を検討願います。 It is not specific requirement. (Other clauses can be said commonly.) It shall be default for the Employer to determine the prevention measures of scattering of rocks. This concept that the Employer specify in the Contract cannot be read now. Please consider to specify specific requirements or to refer to the Particular Safety Specification. NK: 上の(a)と同じく、具体的な方法は請負者の責任が計画することです。特別な要求事項があれば、発注者は特記に記載することとします。 As mentioned (a) above, the Contractor is responsible for the preparation of detail method of construction including the prevention measures. The Employer specify when there is special requirement. Modified as right. JC: →具体的な方法を明示してください(BS などの規格にリファーできる内容があればリファーしてください)。 Please describe specific methods. (Please refer to the contents of BS if available.) NK: added 12.7.6 Blast protection of BS 5607	sand, nets, steel plates, timber, etc. mentioned in 12.7.6 [Blast protection] of BS 5607 and specified in the Contract (if any).
	(c) Prevention of collapse of surrounding rocks or ground areas;	(c) Prevention of collapse of surrounding rocks or ground as prescribed in the Contract (if any); (JC added.) JC: control blasting、つまり presplitting/smooth blasting の規定を意味するのか？ また発破による最終法面の規定なのか、あるいは隣接する構造物の基礎に対する規定なのか不明瞭である。発破とは本来 surrounding rocks や ground areas を緩めるものである。 NK: This specifies prevention of collapse by excessive loosening of surrounding rocks or ground areas. Modified as right. "as prescribed …" is not added because the Employer will not specify more than this.	(c) Prevention of collapse of surrounding rocks or ground more than planned in the Method Statement;
	(d) Define all Blasting as Dangerous Work and take measures in accordance with Section 2.3 [Prohibition of Entry – Dangerous	JC: これは Information to Workers and ...ではなく実施上の注意事項を纏めたものなので、適切な位置に移動させてください。 "Risk Prevention" is not "Information to Workers and Neighbouring Residents" but points to pay attention in performing the work. Please move to proper place. NK: NK thinks that it is better to change the title of this section to "Risk Prevention of Workers and Neighbouring Residents" and title of (2) to "Risk Prevention Measures" so that the title and the contents coincide. (d) Define all Blasting as Dangerous Work and take measures in accordance with Section 2.3 [Prohibition of Entry – Dangerous Work];	(d) Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a

	Work]; (e) Provide audible warning sirens to warn of impending, current and completed Blasting operations; (f) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area; (g) Establish evacuation requirements, routes and assembly areas and inform all workers and effected persons; (h) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment; (i) Perform firing only after the Spotters have confirmed that all workers have been evacuated; and (j) Unless otherwise specified in the Contract, perform Blasting Works only during the daytime.	JC: 2.3 には一般的な立ち入り禁止措置の話しか記載されていませんので、2.3 はリファーせずに具体的に発破作業の際の退避エリアを規定すべきと考えます。 As JSSS 2.3 stipulates only prohibition of entry in general and is not proper to refer to in this clause. The evacuation area at the time of blasting should be stipulated concretely. NK: Modified the clause (d) and located (e)(f) below (d) as right. (e) Provide audible warning sirens to warn of impending, current and completed Blasting operations; (f) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area; (g) Establish evacuation requirements, routes and assembly areas and inform all workers and effected persons; JC: 緊急避難路のような規定に感じます。単純に evacuation の確認でよいのではないでしょうか。 It gives an impression of an emergency evacuation route. Isn't it enough to simply check evacuation? NK: As a risk prevention measure, it is important to establish and inform evacuation requirement and routes etc. Modified as right. (h) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment; JC: 発破士との連絡手段として、電磁波の発生する通話機器は使用可能か確認願います。BS 5067 6.3 に以下の規定が有ります。(h) Please make sure if a telephone that generates electromagnetic waves can be used as a means of contacting the shotfirer. There is a stipulation inBS5607 as follows: (h) On-site use of radio transmitters and mobile telephones should be strictly controlled during blasting operations NK: There is a clause in 8.7.8 (4)(a)(v) of Japanese version to prohibit bringing in mobile phone that may affect adversely the electric detonator. Add the clause to (f) as right. (i) Perform firing only after the Spotters have confirmed that all workers have been evacuated; and JC: (g)と統合のうえ、避難してから発破をかけるという趣旨が明確になるよう変更してください。 Combine (g) with (i) to make the procedure clear that only after evacuation, blasting shall be fired. NK: modified as (e) in right by combining former (g) and (i).. (j) Unless otherwise specified in the Contract, perform Blasting Works only during the daytime.	system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following: (i) Provide audible warning sirens to warn of impending, current and completed Blasting operations; (ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area; (e) Establish evacuation requirements, ~~routes~~ and assembly areas at blasting operation and inform all ~~workers and effected persons~~ ~~the~~ personnel affected by the Blasting Works; and Perform firing only after the Spotters have confirmed that all ~~workers~~ personnel affected by the Blasting Works have been evacuated; and (f) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment; (g) Prohibit bringing into the blasting areas any mobile phone that is not guaranteed that it will not adversely affect the electric detonators; and (h) Unless otherwise specified in the Contract, perform Blasting ~~Works~~ works only during the daytime.

8.7.5 火薬類の取り扱い上の措置

(1) 火薬庫での貯蔵→E8.4.7

現場で火薬類を貯蔵する火薬庫は、次の事項を遵守すること。

(a) 現場に火薬庫を建設するときは、当該国の法律に従い建設すること。→E8.4.7 (1)(a) に規定済み（法律遵守に加えて、火薬庫の構造及び各種要件について規定。）

(b) 火薬庫の倉庫番は、当該国の法律に従い適切な人員を配置すること。→E8.4.7 (1)(b) に規定済み

(c) 火薬庫の出納した火薬類の種類、数量、出納の年月日時刻、出納者を記録し、出納記録の内容を確認し、保存すること。→E8.4.7 (1)(c) に規定済み

(d) エンジニアの指示があるときには、出納記録を提出すること。→E8.4.7 (1)(d) に規定済み

その他の安全上の留意事項については、BS 5607: Code of practice for the safe use of explosives in the construction industry, 9.3 Storage を参照し、必要な措置を講じること。→E8.4.7 (1)後段に規定済み

(2) 火薬類の運搬

現場の火薬庫から発破作業現場に火薬類を運搬する場合には、当該国の法律を遵守するとともに、BS5607: Code of practice for the safe use of explosives in the construction industry, 9.4 Transport of explosives on site を参照し、必要な措置を講じること。→E8.4.7 (2)に規定済み

8.4.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

8.4.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with ~~the Laws~~;

JC: “the laws of the Country” の間違いです。

“the Laws” in (a) is wrong. Should be “the laws of the Country”.

NK: GC stipulate as 1.1.6.5 “Laws” means all national (or state) legislation… and 2.2 (a) copies of the Laws of the Country…,Modified as commented.

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JC: Blasting は安全規定の塊みたいなものであるので、BS 5607 を引用するなら（OSHA でもよい）、思い切って項目を全面的にフォローし内容も参考にしてよいのではないか。さらに第三者の構造物に対する許容値について MTR M&W を参考にすることを推奨する。

As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

NK: modified following the comments as much as possible.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) The quantity of Explosives to be

7.6.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with 9.3 [Storage] of BS 5607.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(3) 発破作業現場

発破作業現場では、次の事項を遵守すること。

(a) 火薬庫から発破作業現場へ運搬する火薬量は、発破作業日の消費見込数量を大きく越えないこと。

(b) 発破作業現場に火薬類を翌日以降の発破作業のために在置しないこと。**→E8.4.7 (3)(b)に規定済み**

(c) 当日使用しなかった火薬類は火薬庫へ返却すること。**→E8.4.7 (3)(c)に規定済み**

(4) 火薬類の取扱い

火薬類の取扱いは、次の事項を遵守して行うこと。

(a) 爆薬、雷管等を叩いたり、投げ出したり、取り落としたりすることのないように慎重に取扱うこと。**→E8.4.7 (4)(a)に規定済み**

(b) 火薬類の収納容器は木その他電気不良導体で作られた頑丈なもので、内面に鉄類が現れない構造とすること。**→E8.4.7 (4)(b)に規定済み**

(c) 爆薬と雷管は別々に異なった施錠可能な容器に収納すること。**→E8.4.7 (4)(c)に規定済み**

(d) 火薬類の収納容器は衝撃等に対して安全なものとすること。**→E8.4.7 (4)(d)に規定済み**

(e) 火薬類の運搬、貯蔵、取扱い作業中の場所及び火薬類の貯蔵場所及び周辺では、喫煙、マッチ・ライター・火炎の使用、火花の出る作業等を禁止し、必要な場所にその旨の表示をすること。**→E8.4.7 (4)(e)に規定済み**

(5) 数量の管理

火薬類の数量管理は、次の事項を遵守して行うこと。

(a) 発破技士は、発破の都度、年月日時刻、受入、消費、残りの数量、発破孔数、装てん方法について記録すること。**→E8.4.7 (5)(a)に規定済み**

(b) 発破作業の担当者は、発破作業記録を検査確認すること。**→E8.4.7 (5)(b)に規定済み**

(c) 請負者は記録を保存し、エンジニアの指示があるときには記録を提出すること。**→E8.4.7 (5)(c)に規定済み**

(a) The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;

(b) No extra or surplus Explosives shall be stored at the Blasting site; and

(c) Explosives not used on the day shall be returned to the Explosives store.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported,

---

(a) The quantity of Explosives to be transported from store to the Blasting site shall ~~not greatly exceed~~ the estimated quantity of consumption ~~for that day~~;

JC: 事前の計画書で1shotごとの火薬量はプロポーズされているので、それを著しく超えて発破の現場へ持ち込むことはエンジニアが許さないはず。しかしながら火薬が余ることは想定しうるので、その措置を規定する、という流れの方が書きやすいのではないか。

MM: “greatly exceed”という表現は適切ではない。
The expression is not appropriate.
NK: modified as right. (“suitable” is agreed in the meeting)

(b) No extra or surplus Explosives shall be stored at the Blasting site; and

(c) Explosives not used on the day shall be returned to the Explosives store.

JC: 1shotごとの余りを、火薬庫に戻すことが適切か否かはその国の法律や余った火薬の状態にも拠ります。火薬庫に戻すことを必須とする書き方が適切か否かは確認願います。また、BS 5607との整合性も確認してください。
→BS5607の9.6に具体的な措置の記載があるので確認ください。

Please confirm if the procedure (c) is a must to return unused explosives to magazine. Check with BS5607 (there is a provision for measures for such a case in BS 5607 9.6).

NK: BS 5607 9.6 is “Disposal of unwanted explosives or explosives which have deteriorated during storage”, which is irrelevant. Rather, there is a procedure for returning unused explosives in 12.8.2 as follows:

12.8.2: Only the amount of explosive which can be readily charged in one day should be taken into the structure. Uncharged explosives should be removed to a location where they can be stored legally until the following day.

Modified as right.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

---

(a) The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting;

(b) No extra or surplus Explosives shall be stored at the Blasting site; and

(c) Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact

(6) エンジニアに対する通知

エンジニアへの通知は、次の事項を遵守して行うこと。

(a) 火薬類の現場への搬入通知は遅くとも搬入予定の前日の正午までにエンジニアへ書面で通知すること。**→E8.4.7 (6)(a)に規定済み**

(b) 発破作業の実施通知は遅くとも前日の正午までにエンジニアへ書面で通知すること。**→E8.4.7 (6)(b)に規定済み**

(c) 毎週金曜日午前中までに翌週の搬入発破作業の予定をエンジニアへ書面で通知すること。**→E8.4.7 (6)(c)に規定済み**

8.7.6 試験発破

請負者は、次の目的のために本仕様書8.7.3[計画書の作成]で規定の計画に従い試験発破を行ない、試験発破の結果に応じ、安全計画書を変更しなくてはならない。**→E8.4.8 に規定済み**

(6) 発破に影響を与える発破地点の岩質・地形の特性等を確認すること。**→E8.4.8 (1)に規定済み**

(7) 計画した発破方法、火薬量、飛散防止措置の妥当

stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed and remaining, number of blast holes and loading method for the Blasting;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

8.4.8. Test Blasting

The Contractor shall perform test Blasting in accordance with the Blasting Safety Plan provided in 8.7.6 [Blasting Safety Plan] for the following purposes, and modify the said safety plan according to the results of the test Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention other protection

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed and remaining, number of blast holes and loading method for the Blasting;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

8.4.8. ~~Test~~ Trial Blasting

NK: proposed to replace “test Blasting” with “trial blasting” as used in BS 5607, 6.2.4 Ground/airborne vibrations.

The Contractor shall perform ~~test~~ trial Blasting in accordance with the Blasting Safety Plan provided in 8.7.6 [*Blasting Safety Plan*] for the following purposes, and modify the said safety plan according to the results of the test Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and loading method for the Blasting, and treatment of misfired Explosives;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting ~~Works~~ works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8. ~~Test~~ Trial Blasting

The Contractor shall perform ~~test~~ trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the ~~test~~ trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect

性を確認すること。→E8.4.8 (2)に規定済み

(8) 発破による請負者の要員、発注者の要員、周辺住民、現場内及び隣接する既設の構造物・地盤の安全を確認すること。→E8.4.8 (3)に規定済み

(9) 発破による振動値が、契約で別途規定する又はエンジニアが指示する周辺の建物等への発破による許容振動値以下であることを確認すること。→E8.4.8 (4)に規定済み

8.7.7 周辺の建物等への影響のモニタリング

請負者は、本契約で別途規定する又はエンジニアが指示する周辺の建物等への発破による振動の影響を測定するために、次の計測によるモニタリングを行わなければならない。→E8.4.9 前文に規定済み

(1) モニタリング計画の作成

(a) 発破の振動による影響を測定するモニタリング計画を作成し、安全衛生計画書に含めること。

(b) モニタリングの方法、計測機器、計測地点、計測の頻度、記録方法を計画すること。→E8.4.9 (1)(b)に規定済み

(c) 計測の結果、振動値が、本契約で別途規定する又はエンジニアが指示する許容振動値に近い場合及び許容振動値以上の場合の対策を計画すること。→E8.4.9 (1)(c)に規定済み

(d) 本契約で別途規定がない限り、計測は毎発破作業毎に実施し、エンジニアが振動値は計画とおりであると判断した後は 3 日間隔、その後は 7 日間隔、1 ヵ月以降は 1 ヶ月間隔で実施することを計画すること。→E8.4.9 (1)(d)に規定済み

(2) 計測の実施と評価

(a) 本契約で別途規定の仕様に従い次を行うこと。

(i) 計測機器の準備、据え付けと計測 →E8.4.9 (2)(a)/(b)に規定済み

measures.

(3) Confirm the safety of Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

8.4.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused.

For this purpose, the Contractor shall:

(1) Prepare a monitoring plan as a part of the Blasting Safety Plan, which will:

(a) Measure the extent and impact of Blasting vibrations;

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention other protection measures.

(3) Confirm the safety of Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

NK: as defined in 7.6.5 (3), the above is replaced with "personnel affected by the Blasting works"

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

NK added responding JC comment for the Engineer to be involved in blasting works.

8.4.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused.

JC: 対象物についての規定は契約書あるいは追加的にエンジニアからの要請で実施されるべき。振動の許容値についても発注者側で規定されるべき。MTR M&W 25.20 (c), 25.30～25.35 等参照されたい。

The monitoring object shall be determined by the Contract or instruction by the Engineer. The allowable vibration value also shall be given by the Employer. Refer to MTR M&W 25.20(c), 25.30~25.35.

JC: 契約に定めがある筈なので、それを前提とした記述にしてください（as specified in the Contract と入れるなど）

There should be relevant stipulation in the Contract. Please modify the expression including above, for example, inserting "as specified in the Contract".

NK: The clause is modified as right.

For this purpose, the Contractor shall:

(1) Prepare a monitoring plan as a part of the Blasting Safety Plan, which will:

(a) Measure the extent and impact of Blasting vibrations;

the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, ~~and~~ and scattering prevention and other protection measures.

(3) Confirm the safety of ~~Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations~~ personnel affected by the Blasting works.

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

7.6.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused as specified in the Contract or instructed by the Engineer.

For this purpose, the Contractor shall:

(1) Prepare a monitoring plan as a part of the Blasting Safety Plan, which will:

(a) Measure the extent and impact of Blasting vibrations by vibration

(ii) 振動計測結果の評価 →E8.4.9 (2)(c)に規定済み

(b) 計測機器は試験発破の実施前にキャリブレーションを行うこと。→E8.4.9 (2)(d)に規定済み

(c) 次の発破の前までに評価書及び必要に応じ発破計画の変更をエンジニアへ提出すること。→E8.4.9 (2)(e)に規定済み

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer; and

(d) Unless otherwise specified in the Contract, perform measurement at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Measurement and Evaluation

The Contractor shall

(a) Provide and maintain measuring equipment;

(b) Carry out measurement at the frequencies described above;

(c) Evaluate the measurement results;

(d) Calibrate the measurement equipment before test Blasting and other Blasting operations; and

(e) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer; and

JC: ここでは allowable vibration value のみ契約書あるいはエンジニアから規定されるとなっていて、モニターする対象物について規定されていない。

In clause (c), there is a stipulation for allowable vibration value, however, no stipulation for the objects.

NK: Regarding the objects to be monitored and apply countermeasures are stated in the top statement of this section. (in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site… as specified in the Contract or instructed by the Engineer.), so leave it as it is.

(d) Unless otherwise specified in the Contract, perform measurement at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Measurement and Evaluation

JC: monitoring と measurement の違いは何か？
What is the difference between “monitoring” and “measurement”?

NK: “Measurement” in (2) is changed to “Monitoring” as the result of discussion in the meeting 2020/02/20.

The Contractor shall

(a) Provide and maintain measuring equipment;

(b) Carry out measurement at the frequencies described above;

(c) Evaluate the measurement results;

(d) Calibrate the measurement equipment before test Blasting and other Blasting operations; and

JC: It is strange that (d) regarding calibration of measurement equipment is located at the bottom. This should be right after (a).

NK: The content of (d) is moved to (b).

(e) Submit the evaluation report and if necessary, any changes to the Blasting

monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer;

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer; and

(d) Unless otherwise specified in the Contract, perform measurement at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Monitoring and Evaluation

The Contractor shall

(a) Provide and maintain measuring equipment;

(b) Calibrate the measurement equipment before trial Blasting and other Blasting operations;

(c) Carry out measurement at the frequencies described above;

(d) Evaluate the measurement results; and

8.7.8 発破作業時の措置

(1) 発破作業員の識別措置

発破作業の作業員には、他の作業員と識別出来る腕章、保護帽の標示等の措置を講じること。**→E8.4.10 (1)に規定済み**

(2) せん孔作業の留意事項

(a) せん孔では、前回の発破孔は使用しないこと。**→E8.4.10 (2)(a)に規定済み**

(b) せん孔作業中に不発の火薬類が発見された場合は、せん孔を中止し、8.7.3 [計画書の作成](14)で計画した不発の火薬類の処理手順、及び8.7.9[発破作業後の措置](2)[不発の火薬類の処理]に基づき不発の火薬類を処置すること。

(3) 装てん作業の留意事項

(a) 電気雷管を結線するまでは、短絡を保持すること。また電灯線・動力線その他漏電のおそれのあるものに近づけないこと。**→E8.4.10 (3)(a)/(b)に規定済み**

(b) 装てん中は、付近でせん孔その他の作業をしないこと。**→E8.4.10 (3)(c)に規定済み**

(c) 装てん前に孔をよく掃除して小石等を残さないこと。**→E8.4.10 (3)(d)に規定済み**

(d) 装てんしなかった爆薬・雷管は、火薬庫へ返納すること。**→E8.4.10 (3)(e)に規定済み**

装てん作業の安全上のその他の留意点については、BS5607: Code of practice for the safe use of explosives in the construction industry, 10 Safety when using explosives に準ずること。**→E8.4.10 (3)後段に規定済み**

---

next Blasting operation.

8.4.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting operations from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 8.7.6 [Blasting Safety Plan] and 8.7.12 [Measures after Blasting], (2) [Treatment of misfired Explosives].

(3) Explosives Charging

(a) Electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(b) Detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources

---

Safety Plan to the Engineer before the next Blasting operation.

8.4.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting operations from other workers.

JC: all worker engaged in Blasting operation に違和感有。shotfirer、blasting engineer に限定して良いのではないか。

"all workers engaged in Blasting operations" should limited to the Blasting Engineer and Shotfirers.

NK: BS には(1)に関する規定は無い。7.6.4(3)に記述の発破作業の従事者を他の作業員特別することを右のように規定します。As mentioned in JSSS 7.6.4 (3), the blasting work team consists of the explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations. There is no clause to specify Identification of Blasting workers in BS 5607.
(1) is modified as right.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 8.7.6 [*Blasting Safety Plan*] and 8.7.12 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

JC: charging の内容になっていません。よって、BS5607 の 10.2 の内容を網羅させる形に記載を変えてください。そのうえで、最後の文(BS 遵守に係る一文)は削除してください。
This clause (3) is not provision of "charging" . Change the clause covering the contents of BS 5607 10.2 and delete the sentence for referring to BS.

NK: Items (a)~(e) are "Points to care for loading explosives" in Japanese version which are derived from the Pre-study in 2019. They are left as they are.
Added some clauses of BS 5607 10.2 so that the contents of BS can be included.

(a) Electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(b) Detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources

---

(e) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

7.6.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide armbands, uniforms or marked safety helmets to distinguish the explosive engineer, shotfirer(s), Spotters and other workers engaged in Blasting operations from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5. [*Blasting Safety Plan*] and 7.6.11. [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) No other activity such as drilling shall be permitted in the vicinity, whilst loading;

(b) Before loading, thoroughly clean the holes

	that may cause electric leakage;	that may cause electric leakage;	and do not leave any dust or debris;
		NK: (a) and (b) are moved to (4) because they are specially for electric detonator.	
	(c) No other activity such as drilling shall be permitted in the vicinity, whilst loading;	(c) No other activity such as drilling shall be permitted in the vicinity, whilst loading;	(c) Shock and friction which can cause accidental initiation of the charges such as below shall be avoided;
	(d) Before loading, thoroughly clean the holes and do not leave any dust or debris; and	(d) Before loading, thoroughly clean the holes and do not leave any dust or debris; and	(d) the over-vigorous use of stemming rods to force explosives into a shot hole;
	(e) Unused Explosives shall be returned to the Explosives store.	(e) ~~Unused Explosives shall be returned to the Explosives store.~~	(e) the use of drill rods or other metal tools in a shot hole containing explosives;
		NK: Item (e) is a duplication of 8.4.7 (3)(c) “Explosives not used on the day shall be returned to the Explosives store.”. Deleted.	(f) vehicles running over explosives and other hazards involving impact or concussion;
	For other safety measures for loading work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.	~~For other safety measures for loading work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives~~ (JC: Deleted)	(g) rock, stone or similar material being projected from the blast, causing an accidental detonation of explosives, so that excess explosives should be removed from the blast site to a place of safety before blasting takes place; and
			(h) shock tube detonators being initiated when subjected to “snap, slap and shoot”.
			For other safety measures for explosive charging, the Contractor shall take safety measures referring to 10.2 [Handling and charging of explosives] of BS 5607.
	(4) Handling Detonators	(4) Handling Detonators	(4) Handling Detonators
		JC: 上記(3)同様、BS5607 10.4.3 の内容を書き出すような形にしてください。Same as (3) above, state the clause by deriving from BS 5607 10.4.3.	
		NK: Same as (3) above, leave as it is and referring to BS 5607 10.4.3 as well.	
(4) 雷管の取り扱い上の留意事項	(a) Measures for Blasting using electric detonators	(a) Measures for Blasting using electric detonators	(a) Measures for Blasting using electric detonators
(a) 電気雷管の発破作業の留意事項	(i) Check if the bus wire is not cut or damaged, and check its electrical continuity.	(i) Check if the bus wire is not cut or damaged, and check its electrical continuity.	(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;
(i) 母線は切断、損傷がないことを確認し、導通を確認すること。**→E8.4.10 (4)(a)(i)に規定済み**		JC: “bus wire”？→誤訳と思われます。 Could it (“bus wire”) be a mis-translation?	(ii) Check if ~~the bus wire is~~ shotfiring cables are not cut or damaged, its electrical continuity and short-circuited
(ii) 結線もれ、結線ちがい等がないように点検すること。**→E8.4.10 (4)(a)(ii)に規定済み**		NK: In OSHA and ACE, there is the definition of “Bus wire: an expendable wire used in parallel or series-in-parallel circuits to which are connected the leg wires of electric blasting caps.” BS 5607 10.4.3.2 b) specifies “All firing lines should be short-circuited” and 10.501 a) shotfiring cable. The bus wire is replaced with shotfiring cable.	(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;
(iii) 電気雷管発破を行う時には迷走電流がないことを確認すること。**→E8.4.10 (4)(a)(iii)に規定済み**			
(iv) 無線通信施設、レーダー、移動式を含む無線電話等の近傍の現場で、高周波放射(radio-frequency radiation)による電気雷管の危険がある場合は、本契約で別途規定がない限り、電気雷管を使用しな			

いこと。→**E8.4.10 (4)(a)(iv)に規定済み**

(v) 電気雷管への悪影響がないことが保証されない携帯電話の発破作業場所への持ち込みを禁止すること。→**E8.4.10 (4)(a)(vi)に規定済み**

(vi) 雷探知機を発破作業場所の近傍に設置し、落雷の危険がある時は発破作業を中止し、発破作業員は安全な場所に退避すること。→**E8.4.10 (4)(a)(vii)に規定済み**

電気雷管の発破作業のその他の安全上の留意点については、BS5607: Code of practice for the safe use of explosives in the construction industry, 10.4.3 Electric detonators に準ずること。→**E8.4.10 (4)(a)後段に規定済み**

(ii) Check if there are no missing or previous wiring connections or wrong wiring connections.

(iii) Make sure there are no stray electric currents when using electric detonators.

(iv) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar, wireless telephone including mobile type.

(v) Do not use electric detonators unless otherwise specified in the Contract.

(vi) Prohibit bringing all mobile phones and radios from the Blasting areas.

(vii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(ii) Check if there are no missing or previous wiring connections or wrong wiring connections.

(iii) Make sure there are no stray electric currents when using electric detonators.

(iv) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar, wireless telephone including mobile type.

~~(v) Do not use electric detonators unless otherwise specified in the Contract.~~

JC: 電気式発破で危険が予見される場合（迷走電流の懸念がある場合）に electric detonators を使用いてはならない、という趣旨の規定にしてください。
Please modify the sentence so as to mean that if a danger by stray electric current is predicted, electric detonators shall not be used.

NK: 上の(iii)に規定済み。(v)は(iv)の一部です。Regarding prohibition of using electric detonator due to stray electric current is stated in (iii) above. (v) is written mistakenly separating a part of (iv), "unless otherwise specified in the Contract" is moved to (iv), and (v) is deleted.

~~(vi) Prohibit bringing all mobile phones and radios from the Blasting areas.~~

NK: (vi)is deleted and (iv) is modified as specified in BS 5607 10.2 below.
10.2 Handling and charging of explosives
When shotfirers are handling and charging explosives at the blast site, they should at all times avoid shock, friction and static electricity or induced radio waves from mobile phones or other electronic devices which can cause accidental initiation of the charges, such as
d) the use of mobile phones or other electronic devices;

(vii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(iv) Check if ~~the bus wire is~~ all shotfiring cables are not cut or damaged, and check its electrical continuity.

(v) Check if there are no missing or previous wiring connections or wrong wiring connections.

(vi) Make sure there are no stray electric currents when using electric detonators.

(vii) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar, wireless telephone, mobile phones unless otherwise specified in the Contract.

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric

(b) 非電気雷管の発破作業の留意事項

(i) ショックチューブを切断したり傷つけたりしないこと。**→E8.4.10 (4)(b)(i)に規定済み**

(ii) 点火前には結線を目視でチェックし、結線漏れや間違いの無いことを必ず点検すること。**→E8.4.10 (4)(b)(ii)に規定済み**

(5) 発破の点火作業の留意事項

(a) 点火位置は、爆破の程度に応じて隔離した安全な場所とすること。**→E8.4.10 (5)(a)/(b)に規定済み**

(b) 発破器は安全衛生計画書に基づき適切に保管すること。また、点火するとき以外はハンドルを発破器から取り外しておくこと。**→E8.4.10 (5)(c)に規定済み**

(c) 発破器と母線との連結は、点火直前に行うこと。**→E8.4.10 (5)(d)に規定済み**

(6) 発破作業時の留意事項

既設の構造物の近くで行なう発破作業は、本契約で別途定める所有者への通知、使用者や所有者の退避のほか、発破に伴う飛石の飛散防止措置等必要な安全対策を行ったうえで、作業を実施すること。**→E8.4.10 (6)に規定済み**

8.7.9 発破終了後の措置

(1) 発破終了後の現場の安全の確認

発破作業後の岩盤および周辺の岩盤の崩落・崩壊の危険の有無を検査し、安全と認めるまで、発破技士以外の作業員は発破場所及びその付近に立ち入らないこと。**→E8.4.11 (1)に規定済み**

(2) 不発の火薬類の処理

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(b) The shotfiring apparatus shall be properly stored according to the safety plan;

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) The connection between the shotfiring apparatus and the bus wire shall be made just before ignition.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer, in which case the Contractor shall comply with the specified or instructed requirements.

8.4.11. Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until after the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(b) The shotfiring apparatus shall be properly stored according to the safety plan;

JC: ignition の話ではないのではないでしょうか。
Isn't it (b) about ignition?

NK: It is deemed important to prevent misuse and theft of shotfiring apparatus due to improper storage. Orders of (a) to (d) are changed.

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) The connection between the shotfiring apparatus and the bus wire shall be made just before ignition.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer, in which case the Contractor shall comply with the specified or instructed requirements.

8.4.11. Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until after the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

JC: BS 5607 10.5 Misfires を参照して、主要な項目を記述した

detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and ~~the bus wire~~ shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) The shotfiring apparatus shall be properly stored according to the Safety Plan:

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer, in which case the Contractor shall comply with the specified or instructed requirements.

7.6.11. Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

点火後、装てんされた火薬類が爆発しないとき、又は装てんされた火薬類が爆発したことの確認が困難であるときは、次の事項を含む安全衛生計画書に規定の不発の火薬類の処理に従い、処理を行うこと。なお、不発の火薬類の処理の計画は、BS5607: Code of practice for the safe use of explosives in the construction industry, 10.5 Misfires を参照して作成されたものであること。**→E8.4.11 (2)に規定済み（BS5607 は、E8.4.5 (14)に移動。）**

(a) 不発の火薬類の処理が必要なときは、直ちに発破器からハンドル等の点火スイッチ及び発破母線を取り外すこと。**→E8.4.11 (2)(a)に規定済み**

(h) 不発の火薬類が処理されるまでは、当該現場及びその付近において、不発の火薬類処理のための削孔作業等以外の作業を行わないこと。**→E8.4.11 (2)(g)に規定済み**

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the Blasting Safety plan and the following measures shall be adopted initially by the shotfirer:

(a) Immediately remove the shotfiring apparatus such as the handle and the bus wire from the shotfiring apparatus;

(b) Make short-circuit or ground and completely isolate the bus wires;

(c) Report to the Explosive Engineer for further instructions;

(d) Prohibit anyone other than the shotfirer and other authorised personnel from entering the Blasting site. Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(e) Clearly indicate the presence of misfired Explosives and install barriers and signs and prevent anyone other than the shotfirer and authorised person(s) from approaching to the Blasting site;

(f) Take appropriate procedures to identify the cause of the misfire and to determine the handling of the misfired explosive;

(g) No other work shall be permitted until treatment of the misfired Explosives is completed;

(h) The Explosive Engineer shall notify the Engineer immediately after any misfire event;

(i) The Shotfirer shall prepare records of

うえで、BS を順守すべき旨規定してください。具体的には以下のような要素が抜けていると考えます。
・不発の際の処理（re-fire、火薬を取り除く措置など）
・misfire の場合のフローチャートに示される、場合に応じた手順

Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)

NK: BS 規定の措置は 5 頁に渡り要求事項が多いため、コメントをもとに、右欄の規定案を作成しました。

NK: Taking into account the contents, modification is made as right.

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the Blasting Safety plan and the following measures shall be adopted initially by the shotfirer:

(a) Immediately remove the shotfiring apparatus such as the handle and the bus wire from the-shotfiring apparatus;

(b) Make short-circuit or ground and completely isolate the bus wires;

(c) Report to the explosive engineer for further instructions;

(d) Prohibit anyone other than the shotfirer and other authorised personnel from entering the Blasting site. Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(e) ~~Clearly indicate the presence of misfired Explosives and install barriers and signs and prevent anyone other than the shotfirer and authorised person(s) from approaching to the Blasting site;~~

JC: 発破の現場で新たにこのようなことはしないものと考えます。Action such as (e) is not actually not made at the blasting site. Deleted.

(f) Take appropriate procedures to identify the cause of the misfire and to determine the handling of the misfired explosive;

(g) No other work shall be permitted until treatment of the misfired Explosives is

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives

The following treatment procedure shall be taken:

(i) Immediate remedial action;

(ii) Delayed remedial action;

(iii) Further attempt at detonation; and

(iv) Inspection to confirm complete detonation.

(b) Immediate remedial action

The following initial remedial actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

	misfired Explosives showing the date and time of the Blasting Works and the result of the subsequent treatment. The Explosive Engineer shall check and countersign the records; and (j) The Contractor shall submit the records to the Engineer immediately after the successful treatment of the misfire event.	completed; (h) The explosive engineer shall notify the Engineer immediately after any misfire event; JC: これは可能か？ Is it possible? NK: modified them to the Contractor and within a week. (i) ~~The shotfirer shall prepare records of misfired Explosives showing the date and time of the Blasting Works and the result of the subsequent treatment. The Explosive Engineer shall check and countersign the records; and~~ JC: ~~8.4.5(7)~~ 8.4. (5) Blasting and Explosives に record 一般のことが書いてあるので不要。No need to specify (i) because 8.4.5(7) mentions about record (general). NK: Deleted. (j) ~~The Contractor shall submit the records to the Engineer immediately after the successful treatment of the misfire event.~~ JC: ditto NK: Deleted.	(v) make a further attempt to fire the shot; and (vi) report to the explosive engineer for further instructions; (vii) not collect any exposed explosives before further action is taken; (viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and (ix) other actions specified in 10.5.4.1 [Initial actions]in BS5607. (c) Delayed remedial action and further attempt at detonation After the immediate remedial action, the delayed remedial action and further attempt at detonation shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607. (d) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (e) The Contractor shall notify the Engineer within a week after any misfire event.

7.1 GENERAL **7.1.1 Scope** This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting. **7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS** **7.2.1. General** (1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner. (2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like taking account of all the conditions of the Site.	**7.2 GENERAL** **7.2.1 Scope** This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting. **7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS** **7.2.1. General** (1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner. (2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like ~~taking into account of all the conditions of the Site~~. JC: 確かに小生が言ったことですが、もう少し考えた言い回しが欲しかったです。下記例示ですが長すぎるか？下記例示ですが長すぎるか？ Though this is commented last time, we wanted sentence a little more considered.	**7.3 GENERAL** **7.3.1 Scope** This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting. **7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS** **7.2.1. General** (1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner. (2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor.

	that I thought a little more. Is the following example sentence too long? "taking into account of all information given by the Employer in the Bidding document and/or subsequently obtained by it." NK: Modified as right.	
(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.	(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.	(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.
(4) ~~Earthwork Support~~ In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide earthwork support for the excavation of depth exceeds 1.5m in principle unless it is possible to excavate with a slope suitable for the soil condition.	(4) In accordance with JSSS 7.2 [Earthwork Support] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide earthwork support for the excavation of depth ~~exceeds 1.5m in principle unless it is possible to excavate with a slope suitable for~~ the soil condition. JC: GC と同じ adequate and stable という表現をもってきました。 "adequate and stable" used in GC is used here and modified as right.	(4) In accordance with JSSS 7.2 [Earthwork Support] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide earthwork support for the excavation of depth exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition ..
(5) In accordance with JSSS 1.23 [Emergency Response Plan?], 1.23.2, the Contractor shall. execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.	NK: modified as right. (5) ~~In accordance with JSSS 1.23 [Emergency Response Plan], 1.23.2,~~ the Contractor shall execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site. JC: 引用方法としておかしくないですか？1.23.2 は不要ですね。 This reference seems to be wrong. 1.23.2 is unnecessary. NK: The 1.23.6 (3) in 1.23 [Emergency Response Plan] in Issue 7 specifies drainage, however reader of JSS may be confused as the reader consider what relation of excavation works and emergency is, so deleted this reference as right.	(5) The Contractor shall execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.
(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site, and ~~unless otherwise specified~~ as specified in the Contract (~~see Annex 1.3~~ Particular Safety Specification~~)~~, the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.	(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work ~~without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site, and as specified in the Contract (see Particular Safety Specification),~~ the Contractor shall take all necessary measures to prevent the occurrence of such ~~damage or weakening~~ by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works. JC: any という表現はきつすぎます。The sentence of "any" is too strict. JC: modified as above.	(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such adverse effects by designing and providing permanent or temporary supports and reinforcement before commencing Excavation Works.
(7) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract; (a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and (b) Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and take actions in accordance with the Engineer's	(7) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract; (a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and (b) Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and take actions in accordance with the Engineer's	(7) If loose rocks, standing trees, etc. existing outside the Site above the excavation area in the Site may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract; (a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and (b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and~~ Take actions in accordance with the Engineer's instruction.

instruction.

7.2.2. Safety Measures before Commencing Excavation Works

(1) The Contractor shall inspect the excavation work area and surrounding area before starting work each day and after adverse climatic conditions or earthquake to ensure that the following items meet the criteria of allowable values and counter measures determined by the Contractor and given in the Contract (see the Particular Safety Specification) to avoid adverse effects to surrounding areas and buildings by excavation:

(a) ~~No~~ Potentially unsafe areas where there may be any risk of landslide;

(b) ~~No~~ Loose rocks or boulders which may be at risk of falling;

(c) ~~No~~ Cracks in the excavation work area and the surrounding area;

(d) ~~No~~ Changes in ground water level, surface or any spring water; and

(e) ~~No~~ Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety

instruction.

JC: (b)の中に二つの要素が入っているので、下記のように分類・表記しなおしてはいかがでしょうか

There are two different elements in item (b). We propose to re-sort the contents as follows.
(a) removal of loose rocks ~ ~ ~
(b) take safety measures including change to the construction method
(c) requesting the Engineer to issue a variation???

NK: Addition is made to make location of loos rocks, etc and excavation area.

NK: Site 区域外の Loose rock 等による Site 内の工事者への危険に対しては、エンジニアの指示を受け安全措置をとることが適切である。Variation まで規定するか疑問ではあることから、右のように変更する。

For the danger against loose rocks, etc. located outside the Site, the Contractor shall take measures as instructed by the Engineer. It is doubtful to mention about variation.

NK modified as right.

7.2.2. Safety Measures before Commencing Excavation Works

(1) The Contractor shall inspect the excavation work area and surrounding area before starting work each day and after adverse climatic conditions or earthquake ~~to ensure that the following items meet the criteria of allowable values and counter measures determined by the Contractor and given in the Contract (see the Particular Safety Specification) to avoid adverse effects to surrounding areas and buildings by excavation:~~

JC: この箇所は日々の業務開始前、地震等の直後に状況確認をせよ、という話なので、allowable value について論じる必要はないと思います。(allowable value については、7.(6)に親和性が高いので、活用させていただきました。)
This clause stipulates to check the area before starting the work every day and after earthquake, etc. It is not necessary to mention about allowable values. ("allowable value" is used in 7. (6) as it has high affinity.)

NK: JC deleted the relevant part as above.

JC: "adverse climatic conditions"は"strong rain fall"ぐらいでいいのでは(異常時だけではないので)
Isn't it enough with "strong rain fall" instead of "adverse climatic conditions"?

NK: JSSS 2.7 mentions measures for heavy rain, strong wind and storms, heavy snow and ice, lightning, earthquake and tsunami as adverse weather, and 2.7.7 specifies Inspection of Temporary Works after Adverse Weather and Earthquake.
NK added the to refer to 2.7 as right.

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rocks or boulders which may be at risk of falling;

(c) Cracks in the excavation work area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in

7.2.2. Safety Measures before Commencing Excavation Works

(1) The Contractor shall inspect the excavation work area and surrounding area before starting work each day and after adverse climatic conditions or earthquake mentioned in JSSS: 2.7 [ADVERSE WEATHER REQUIREMENTS]. The inspection shall include the following areas and items:

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rocks or boulders which may be at risk of falling;

(c) Cracks in the excavation work area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety

measures before work is allowed to commence and continue in order to ensure their continued safety.	order to ensure their continued safety.	measures before work is allowed to commence and continue in order to ensure their continued safety.
(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage];	(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage];	(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage];
(4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences;	(4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences; JC: これだけでは何を記載しているか判断ができない。(地上からの落下防止)？ It is hard to understand what this clause provides. Is it for protection against falling? NK: 原文（和文）は埋設物の保護について規定しており、防護柵も落下防止ではなく、埋設物を防護する柵である。明確にするためにその旨を追加する。 The Japanese draft is mentioning about protection for the underground services. Add a phrase “for the services” at the end of the sentence.	(4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services;
(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.;	(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.; JC: fall protection facilities / entry control facilities なのか Is the entry prevention facilities fall protection or entry control? NK: 掘削区域での作業員・重機等の転落を防ぐために、立入防止柵を設けることで、entry control である。 “entry prevention facilities” means entry control facility to prevent those from their falling at the site..	(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.;
(6) Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock at the lower parts (bottom) of the excavation site;	(6) Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock ~~at~~ into the lower parts (bottom) of the excavation site; JC: danger to construction equipment はおかしくないですか。danger to person なら理解できるが、人と機械は同等の扱いか？workers or other persons “Danger to construction equipment” sounds strange. Are persons and equipment treated same in this meaning? NK: 右のように修正しました。 “Damage to equipment” may be more suitable. Modified as right. JC: 少し自信がないのですが、at だと、「掘削現場における下部が崩落して」という意味にも取れないではないような気がします(「そこが抜ける」、というイメージ)。 I wonder which is correct “at” or “into”. NK: 掘削の下部(底部)に対策工を設置することへ変更します。 We modify as follows: “measures shall be provided at the lower part” as Take the following measures at the lower parts (bottom) of the excavation site; when there is a risk of …	(6) Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock;
(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and (b) Install protective fences that can catch falling rocks, etc.	(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and (b) Install protective fences that can catch falling rocks, etc.	(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and (b) Install protective fences that catch falling rocks, etc.

(7) Risk prevention measures against falling rocks

(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and

(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

JC: "catch falling rocks"という表現の違和感は私だけ？
Am I the only one who feels a sense of discomfort?

NK: 英英辞典とインターネットで調べますと、それぞれの意味は以下でした。

Receive means: to get or be given something: (来た物を受け取る、例 E-mail)
Catch means: to take hold of something, especially something that is moving through the air: (動く物を受け取る、つかまえる、例ボール)

catch falling rocks での画像検索では、落石防止柵が出てきますので、catch のままと致します。 We leave "catch" as it is.

(7) Risk prevention measures against falling rocks

(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and

(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site.

JC: (b)について、前もって土留めや防護網を設置し、作業員の立入りを禁止することが適切なのか。
Is it appropriate to provide earth retaining and protective net beforehand and to prohibit workers to enter into the excavation area?

NK: 落石の危険性がある場合に、前もって危険防止措置をとると規定することに問題はないと思われるが、現文では作業員が入場できないととれるので、安全が確認できるまでとする。
It is appropriate to take preventive measures against possibility of falling rocks. However, the present clause can be read that no worker shall enter the site. Change the sentence that workers are prohibited to enter until safety is confirmed as right.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.

JC: (3)は意味が通じなくなってしまった。

(3) has become unable to understand.

NK: The Japanese draft was that for temporary excavation, it is required to backfill immediately after the work is completed. Modified.
(3) is modified as right.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

(7) Risk prevention measures against falling rocks

(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and

(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill the temporary excavation area as immediately as possible after the relevant work is completed.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

7.3 MANUAL EXCAVATION WORKS

During manual excavation works, the Contractor shall:

(1) Not permit any excavation of depth exceeds 1.5m in principle without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4).

(2) Not permit excavation of the excavated surface/ground that stands vertically or close to the vertical, and excavation of the ground under the foundation of existing structures

(3) Maintain sufficient distance between workers.

(4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

7.4 MECHANICAL EXCAVATION WORK

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical excavation works with the equipment:

(1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.

(3) The operators shall operate the equipment following the following rules:

(a) Operate the equipment with paying attention always to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, do not park the equipment on the slope where

7.3 MANUAL EXCAVATION WORKS

During manual excavation works, the Contractor shall:

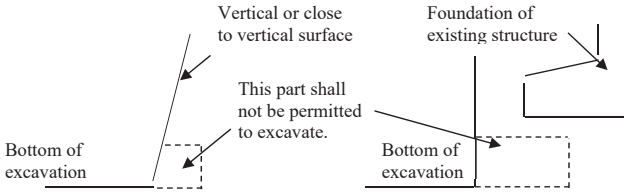
(1) Not permit any excavation of depth exceeds 1.5m ~~in principle~~ without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4).

JC: deleted "in principle".

(2) Not permit excavation of the excavated surface/ground that stands vertically or close to the vertical, and excavation of the ground under the foundation of existing structures.

JC: modified as right.

NK: JC requests MD to check and modify the expression of this clause after understanding the situation shown below.



(3) Maintain sufficient distance between workers.

(4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

7.4 MECHANICAL EXCAVATION WORK

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical excavation works with the equipment:

(1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.

(3) Ensure that the operators shall: ~~operate the equipment following the following rules:~~

(a) Operate the equipment with paying attention always to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, ~~do~~ not park the equipment on the slope where excavation is in progress or on the ground that has a

7.3 MANUAL EXCAVATION WORKS

During manual excavation works, the Contractor shall:

(1) Not permit any excavation of depth exceeds 1.5m without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4).

(2) Not permit excavation of the vertical surface of the excavated area, or excavation of the ground under the foundation of existing structures.

(3) Maintain sufficient distance between workers.

(4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

7.4 MECHANICAL EXCAVATION WORK

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical excavation works with the equipment:

(1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.

(3) Ensure that the operators shall:

(a) Operate the equipment with paying attention always to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse.

excavation is in progress or on the ground that has a possibility to collapse.

(d) The bucket of equipment shall not pass over the operator's seat of another equipment.

(4) Workers shall work follow the following rules.

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

7.5 TRENCH EXCAVATION

7.5.1. General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).

(1) When performing trench excavation with depth of 1.5m or more, earth retaining shall be provided unless any particular reason exists; and

(2) For trench excavation with a depth of less than 1.5m, protective systems such as exampled below shall be installed;

(a) Simple earth retaining (Trench box, Trench shield);

(b) Lightweight sheet pile earth retaining; and

(c) Aluminum hydraulic shoring, Timber shoring.

7.5.2 Safety Measures during Trench Excavation

(1) Materials and equipment to be used for earth retaining systems shall

possibility to collapse.

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of another equipment.

(4) Ensure that workers shall: ~~follow the following rules:~~

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

7.5 TRENCH EXCAVATION

7.5.1. General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).

(1) When performing trench excavation with depth of 1.5m or more, adequate and stable earth retaining shall be provided ~~unless any particular reason exists~~.; and

(2) For trench excavation with a depth ~~of less than~~ exceeding 1.5m, protective systems ~~such as exampled below~~ as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;

JC: Changed from "less than" to "exceeding".

NK: (1) is for 1.5 m or more, and (2) is for less than 1.5 m. Therefore, (2) is left as it is.

(a) Simple earth retaining (Trench box, Trench shield);

(b) Lightweight sheet pile earth retaining; and

(c) Aluminum hydraulic shoring, Timber shoring.

JC: 軽量鋼矢板　英語これでいいですか？steel sheet pile　でいいのでは

Is "Lightweight sheet pile" correct term in English? Is "steel sheet pile" OK?

NK: 特許庁の書類、インターネットの英語の製品紹介で、"lightweight sheet pile"を使用している。対象としている比較的浅いトレンチ掘削では通常のシートパイルは使用しないので、軽量鋼矢板であることは明確にしたいため、このままとする。
Japan Patent Office and internet for product catalogue use the term "lightweight sheet pile".
For relatively shallow trench excavation, ordinary sized ones are not used. It is better to distinguish the different use of normal and lightweight sheet piles.
Left as it is.

7.5.2 Safety Measures during Trench Excavation

(1) Materials and equipment to be used for earth retaining systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function;

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of another equipment.

(4) Ensure that workers shall:

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

7.5 TRENCH EXCAVATION

7.5.1. General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).

(1) When performing trench excavation with depth of 1.5m or more, adequate and stable earth retaining shall be provided.; and

(2) For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;

(a) Simple earth retaining (Trench box, Trench shield);

(b) Lightweight sheet pile earth retaining; and

(c) Aluminum hydraulic shoring, Timber shoring.

7.5.2 Safety Measures during Trench Excavation

(1) Materials and equipment to be used for earth retaining systems shall

be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function; (2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be provided in accordance with the design and construction procedure drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) Backfilling of the trench shall be performed in parallel with the removal of the earth retaining system.	(2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be installed in accordance with the design and construction procedure drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) The Contractor shall perform backfilling of the trench shall be performed in parallel with the removal of the earth retaining system. JC: modified (8) and (9) as above.	be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function; (2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be installed in accordance with the design and construction procedure drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) The Contractor shall perform backfilling of the trench shall be performed in parallel with the removal of the earth retaining system.
7.6 EXCAVATION BY BLASTING **7.6.1. Scope** (1) This Section specifies safety measures in connection with excavation in rock in open that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives. (2) The Blasting ~~Works~~ works plan shall be described in the relevant Method Statement. (3) This Section applies particularly to Blasting ~~Works~~ works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site. **7.6.2. Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) "**Blasting**" means blowing-up or breaking apart solid rock with the	**7.6 EXCAVATION BY BLASTING** **7.6.1. Scope** (1) This Section specifies safety measures in connection with excavation in rock in open that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives. JC: こういう言い方するのか要確認 Confirmation is required if the expression "excavation in rock in open" is appropriate. NK: As a term "open-cut excavation" is usually used for excavation in open site area. Modified as right. 「明り掘削」は" open-cut excavation" が通常であるので、" in connection with open-cut rock excavation" と修正する。 (2) The Blasting works plan shall be described in the relevant Method Statement. (3) This Section applies particularly to Blasting works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site. **7.6.2. Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) "**Blasting**" means blowing-up or breaking apart solid rock with the	**7.6 EXCAVATION BY BLASTING** **7.6.1. Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

use of Explosives.

(2) "**Explosives**" means mean any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

use of Explosives.

(2) "**Explosives**" means mean any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], unless otherwise specified in JSSS, the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

JC: この言葉は少なくともこの場合絶対必要だと思います。BS の表現には主語がなく、誰がそれぞれのアクションに責任を持っているのかが不明です。

例えば、JSSS の中では振動や騒音等に対する許容値を発注者が契約の中で定めることにしていますが、定めるにあたっては発注者側で周辺の建物等に関する survey を行うことが必須のはずです。

一方、BS においては、BS5607　6.2.1 において、a detailed survey and examination of the site, buildings or structures and adjoining areas and property should be carried out in accordance with BS 5930.という記述があり、これでは誰がやるのかが不明です。

従って、JSSS に規定の内容が優先され、その他は BS に従うことを明らかにしておかなければ、許容値の設定、関係当局との調整等、全てコントラクターの責任になってしまいます。

The phrase "unless otherwise specified in JSSS" is indispensable in this case at least. BS does not mention subject, so it is not clear who is responsible for each action.

For example, JSSS specifies that the Employer shall specify allowable values of vibration, noise, etc. in the Contract. The Employer should survey these allowable values for structures, etc. around the Site when the Employer specify these allowable values.

On the other hand, BS5607, 6.2.1 mentions "a detailed survey and examination of the site, buildings or structures and adjoining areas and property should be carried out in accordance with BS 5930.". It is not clear who carry out the survey and investigation.

Therefore, it is necessary to stipulate clearly that provisions in JSSS are given priority and others than JSSS shall comply with BS. Otherwise, the Contractor has to burden broad responsibilities including determination of allowable values and coordination with relevant authorities.

NK: Added the phrase as suggested by JC. MD, please review JC.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

(2) "**Explosives**" means ~~mean~~ any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], unless otherwise specified in JSSS, the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

7.6.4. Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting ~~Works~~ works:

(a) Explosive engineer; and

(b) Shotfirer(s)

(2) Responsibilities and requirement of personnel for Blasting ~~Works~~ works:

(a) The explosive engineer shall plan the Blasting ~~Works~~ works, lead the Blasting ~~Works~~ works at Site and perform the safety management of the Blasting ~~Works~~ works ; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting ~~Works~~ works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that personnel engaged in Blasting ~~Works~~ works , namely explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations, have knowledge of and are able to comply with the following:

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting ~~Works~~ works ;

(c) Procedures for Blasting ~~Works~~ works ;

(d) Evacuation and return procedures of the evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

7.6.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting ~~Works~~ works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal

7.6.4. Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting works:

(a) Explosive engineer; and

(b) Shotfirer(s)

(2) Responsibilities and requirement of personnel for Blasting works:

(a) The explosive engineer shall plan the Blasting works, lead the Blasting works at Site and perform the safety management of the Blasting works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that ~~personnel engaged in Blasting works, namely~~ explosive engineer and shotfirer(s), ~~Spotters (sentries) and other workers involved in the blasting operations,~~ have sufficient knowledge of ~~and are able to comply with~~ the following:

JC: BS5607 8.3 には No person other than those designated in **8.2** should be in possession of explosives on site.という記述があり、また 8.4 以降の記述は blasting engineer と shotfirer に関して技量や知見を求める記述になっているところ、(3)の対象をその両者に限定した書き方にしてあります。

BS5607 8.3 describes "No person other than those designated in **8.2** should be in possession of explosives on site" and Sections after 8.2 describe about only requirements on skills and knowledges of blasting engineer and shotfirers. Therefore, (3) is revised to describe limitedly for the both.

NK: NK think all members of blasting team shall know knowledge (a) to (f) generally or Professionally. However, NK modifies as JIC comment.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting works;

(c) Procedures for Blasting works;

(d) Evacuation and return procedures of the evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

7.6.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents

7.6.4. Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting works:

(a) Explosive engineer; and

(b) Shotfirer(s)

(2) Responsibilities and requirement of personnel for Blasting works:

(a) The explosive engineer shall plan the Blasting works, lead the Blasting works at Site and perform the safety management of the Blasting works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that explosive engineer and shotfirer(s) have sufficient knowledge of the following:

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting-works;

(c) Procedures for Blasting works;

(d) Evacuation and return procedures of the evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response (actions).

7.6.5. Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel

of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting ~~Works works (hereinafter collectively referred to as "~~personnel affected by the Blasting works" in this Section).

(4) Determination of Exclusion Zone.

(5) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(6) Identification of affected areas, buildings, structures and property.

(7) ~~Test~~ Trial Blasting.

(8) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.6. Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify, in appropriate manners, all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, the actual start dates and times and give notice immediately before the Blasting work commences.

---

and building owners on or adjacent to the Site and who may be affected by the Blasting works (hereinafter collectively referred to as "personnel affected by the Blasting works" in this Section).

(4) Determination of Exclusion Zone.

(5) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(6) Identification of affected areas, buildings, structures and property.

(7) Trial Blasting.

(8) Environmental monitoring plan and methods to record the impact of Blasting on affected areas, buildings, structures and property.

JC: (6)に合わせておく必要はないですか？
Isn't it necessary to combine (6) and (8)?

NK: 項目(6)と(8)は密接に関係しているが、内容そのものは異なるため、一つの項目としてまとめることは適切ではないと考える。(7)と(8)の順序を入れ替えることで、identification に続いて monitoring となり、関係性が明らかになると思われる。
The contents of item (6) and (8) are closely related, however, they are different matters as actions. Therefore, it would be better to change the order of (7) and (8) so that identification and monitoring become clear to be closely related.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.6. Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify, ~~in appropriate manners,~~ all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, Such information shall be updated as necessary, in particular, ~~the actual start dates and times and give notice~~ immediately before the Blasting work commences.

The Contractor shall notify ~~in appropriate manners,~~ all affected persons including neighbouring residents and building owners of

---

and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting works (hereinafter collectively referred to as "personnel affected by the Blasting works" in this Section).

(4) Determination of Exclusion Zone.

(5) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(6) Identification of affected areas, buildings, structures and property.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected areas, buildings, structures and property.

(8) Trial Blasting

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.6. Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work. Such information shall be updated as necessary, in particular, immediately before the Blasting work commences.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting ~~Works~~ works including the following:

(a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting;

(b) Prevention of scattering of flying rock and other debris with materials, for example, sand, nets, steel plates, timber, etc. mentioned in 12.7.6［Blast protection] of BS 5607 and specified in the Contract (if any).

(c) Prevention of collapse of surrounding rocks or ground more than planned in the Method Statement;

(d) Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations;

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;

(e) Establish evacuation requirements, ~~routes~~ and assembly areas at blasting operation and inform all ~~workers and effected persons the~~ personnel affected by the Blasting Works; and

Perform firing only after the Spotters have confirmed that all ~~workers~~ personnel affected by the Blasting Works have been evacuated; and

(f) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(g) Prohibit bringing into the blasting areas any mobile phone that is

the planned schedule and start dates and times for Blasting work. Such information shall be updated as necessary, in particular, ~~the actual start dates and times and give notice~~ immediately before the Blasting work commences.

JC: BS5607 6.6 でも notification という言葉が使われているので、notify という表現でもよいと思います。updated という言葉も BS5607 6.6 からとりました。

The term “notification” is used in also BS5607 6.6, therefore, “notify” is deemed to be right in this context. The term “update” is also derived from BS5606 6.6. JC modified as above.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting works including the following:

(a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting;

(b) Prevention of scattering of flying rock and other debris with materials, for example, sand, nets, steel plates, timber, etc. mentioned in 12.7.6［Blast protection] of BS 5607 and specified in the Contract (if any).

(c) ~~Prevention of collapse of surrounding rocks or ground more than planned in the Method Statement;~~

JC:「想定を超えた爆破とならないように●●する」の●●の部分が具体的に記述できないようならば、削除してもよいと思います。Overcharge しない、ということならば既に(a)に書いてあります。

The required sentence is “the prevention of blasting more than planned by measures of ●●”. If the “●●” cannot be described, (c above can be deleted because prohibition of overcharging is specified in (a).

NK: deleted.

(c) Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations;

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;

(d) Establish evacuation requirements, and assembly areas at blasting operation and inform all personnel affected by the Blasting Works; and

Perform firing only after the Spotters have confirmed that all personnel affected by the Blasting Works have been evacuated; and

(e) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(f) Prohibit bringing into the blasting areas any mobile phone that ~~is not guaranteed that it will not~~ may adversely affect the electric

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting works including the following:

(a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting;

(b) Prevention of scattering of flying rock and other debris with materials, for example, sand, nets, steel plates, timber, etc. mentioned in 12.7.6［Blast protection] of BS 5607 and specified in the Contract (if any).

~~(c) Prevention of collapse of surrounding rocks or ground more than planned in the Method Statement;~~

(c) Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations;

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;

(d) Establish evacuation requirements, and assembly areas at blasting operation and inform all personnel affected by the Blasting Works; and

Perform firing only after the Spotters have confirmed that all personnel affected by the Blasting Works have been evacuated; and

(e) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(f) Prohibit bringing into the blasting areas any mobile phone that may affect adversely the electric detonator; and

not guaranteed that it will not adversely affect the electric detonators; and

(h) Unless otherwise specified in the Contract, perform Blasting ~~Works~~ works only during the daytime.

7.6.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with 9.3 [Storage] of BS 5607.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting;

(b) No extra or surplus Explosives shall be stored at the Blasting site; and

(c) Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.

detonators; and

Prohibit bringing into the blasting areas any mobile phone that that may affect adversely the electric detonator; and

JC: BS と同じ表現とする。
Modified to make the expression same as in BS.
NK: modified

(g) Unless otherwise specified in the Contract, perform Blasting works only during the daytime.

7.6.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with 9.3 [Storage] of BS 5607.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting; and

(b) No extra or surplus Explosives shall be stored at the Blasting site.

(c) ~~Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.~~

JC: BS5607 12.8.2 は Demolition の場合に関連した記述で、他にもいろいろな場合（掘削、水中、トンネル等）の記述が併記されているなかで、これを持ってくるのが正しいのかはよくわかりません。

一方、同 BS の 9 条は全般にかかる安全対策について論じていますが、その中の 9.3.4 に以下のような具体的な記述があります。

If more explosives have been issued than are required and the intention is to return them to the licensed store, they should be examined by the shotfirer before return・・・(以下長いので略)。

むしろこちらを引っ張ってくるべきだと思います。すると、JSSS7.6.7(1)で Storage

(g) Unless otherwise specified in the Contract, perform Blasting works only during the daytime.

7.6.7. Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with 9.3 [Storage] of BS 5607.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting; and

(b) No extra or surplus Explosives shall be stored at the Blasting site.

~~(c) Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.~~

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and loading method for the Blasting, and treatment of misfired Explosives;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting ~~Works~~ works shall be given to the Engineer by no later than noon on the day preceding

について論じている箇所で、BS5607 9.3 に全体として従うことが求められているので、ここからは(c)の記述を削除してもよいと思います。

BS5607 12.8.2 specify about demolition. JSS describes other various cases (excavation, underwater, tunnel, etc.), so it is not sure correct to adopt the description of 12.8.2 to (c).

On the other hand, in BS5607 9 which stipulates general safety measures, 9.3.4 stipulates concretely as follows:

"If more explosives have been issued than are required and the intention is to return them to the licensed store, they should be examined by the shotfirer before return・・・."

It is better to refer to this 9.3.4. As JSSS 7.6.7 (1) regarding Storage of explosive, stipulates that BS 5607 9.3 shall be complied with in overall.

Therefore, item (c) is not necessary. JC deleted.

NK: deleted as commented.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and loading method for the Blasting, and treatment of misfired Explosives;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and ~~loading~~ charging method for the Blasting, and treatment of misfired Explosives;

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting works shall be given to the Engineer by no later than noon on the day preceding the

the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8. ~~Test~~ Trial Blasting

The Contractor shall perform ~~test~~ trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the ~~test~~ trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, ~~and~~ scattering prevention and other protection measures.

(3) Confirm the safety of ~~Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations~~ personnel affected by the Blasting works.

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

7.6.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused as specified in the Contract or instructed by the Engineer.

For this purpose, the Contractor shall:

(1) Prepare a monitoring plan as a part of the Blasting Safety Plan, which will:

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8. Trial Blasting

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, scattering prevention and other protection measures.

(3) Confirm the safety of personnel affected by the Blasting works.

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

7.6.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations ~~to measure the extent of vibration~~ in the ~~all~~ affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ~~particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations~~ to ensure that ~~no~~ vibration damage or weakening ~~is~~ caused by the Blasting operations will remain within the allowable values ~~as~~ specified in the Contract or instructed by the Engineer.

JC: Blasting Safety Plan と紐づける等、ここまでの記述の流れを汲んだ記述にしました。"no vibration damage" は表現がきつすぎる。

The sentence is modified so that the description follows the context of JSSS as a whole such as relating with the Blasting Safety Plan. "No vibration damage" is too severe to stipulate. JC modified as above.

NK: modifies.

For this purpose, the Contractor shall:

(1) Prepare a monitoring plan as a part of the Blasting Safety Plan, which will:

JC: 7.6.5 (8)に Environmental monitoring plan という言葉があるがそれと同じならば用語を統一しておくべき。

In 7.6.5.(8), the term "Environment monitoring plan" is used. If "monitoring plan" in (1) above means same as 7.6.5.(8), terms shall be unified.

NK: 同じものを指しているので、environmental monitoring plan に統一します。

scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8. Trial Blasting

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, scattering prevention and other protection measures.

(3) Confirm the safety of personnel affected by the Blasting works.

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

7.6.9. Monitoring Impact on Adjacent Buildings and Structures

The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.

For this purpose, the Contractor shall:

(1) Prepare an environmental monitoring plan as a part of the Blasting Safety Plan, which will:

(a) Measure the extent and impact of Blasting vibrations by vibration monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer;

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer; and

(d) Unless otherwise specified in the Contract, perform measurement at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Monitoring and Evaluation

The Contractor shall

(a) Provide and maintain measuring equipment;

(b) Calibrate the measurement equipment before trial Blasting and other Blasting operations;

(c) Carry out measurement at the frequencies described above;

(d) Evaluate the measurement results; and

(e) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

7.6.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide armbands, uniforms or marked safety helmets to distinguish the explosive engineer, shotfirer(s), Spotters and other workers engaged in Blasting operations from other workers.

As these two terms are the same meaning, modified to use "environment monitoring plan".

(a) Measure the extent and impact of Blasting vibrations by vibration monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer and as determined by the Contractor;

JC: 契約に発注者が指定したからといって、被害が生じた時のコントラクターの責は免れないので、記載は両方(発注者も指定するし、コントラクターも必要と考えるもののモニターをする)のがいいと考えます。

Even though the Employer specifies values, the Contractor cannot be avoidable being responsible for damage caused . Therefore, it is better to specify both values by the Employer and Contractor to monitor.

NK: added "and as determined by the Contractor" to (a) and (c).

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer and as determined by the Contractor; and

(d) Unless otherwise specified in the Contract, perform measurement at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Monitoring and Evaluation

The Contractor shall

(a) Provide and maintain measuring equipment;

(b) Calibrate the measurement equipment before trial Blasting and other Blasting operations;

(c) Carry out measurement at the frequencies described above;

(d) Evaluate the measurement results; and

(e) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

JC: "measurement" should be "monitoring".
NK: Changed to "monitoring" to coincide as right.

7.6.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide ~~armbands,~~ clear visible identification mark uniforms or marked safety helmets to distinguish the explosive engineer and shotfirer(s), ~~Spotters and other workers~~ engaged in Blasting operations from other workers.

JC: clear visible identification mark とかにすべき。腕章は無い！7.6.4(3)を explosive engineer と shotfirer に限定していることに連動して他は削除。

As there is no armbands, "clear visible identification mark", etc. is to be specified

The personnel for blasting work are limited as explosive engineer and shotfirer in 7.6.4.(3). Other than them are deleted.

(a) ~~Measure~~ Monitor the extent and impact of Blasting vibrations by vibration monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer and as determined by the Contractor;

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer and as determined by the Contractor; and

(d) Unless otherwise specified in the Contract, perform monitoring at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) Monitoring and Evaluation

The Contractor shall

(a) Provide and maintain monitoring equipment;

(b) Calibrate the monitoring equipment before trial Blasting and other Blasting operations;

(c) Carry out monitoring at the frequencies described above;

(d) Evaluate the monitoring results; and

(e) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

JC: "measurement" should be "monitoring".

NK: Changed to "monitoring" to coincide as right.

7.6.10. Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

Provide ~~armbands,~~ clear visible identification mark, uniforms or marked safety helmets to distinguish the explosive engineer and shotfirer(s) ~~Spotters and other workers~~ engaged in Blasting operations from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5. [*Blasting Safety Plan*] and 7.6.11. [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) No other activity such as drilling shall be permitted in the vicinity, whilst loading;

(b) Before loading, thoroughly clean the holes and do not leave any dust or debris;

(c) Shock and friction which can cause accidental initiation of the charges such as below shall be avoided;

(d) the over-vigorous use of stemming rods to force explosives into a shot hole;

(e) the use of drill rods or other metal tools in a shot hole containing explosives;

(f) vehicles running over explosives and other hazards involving

NK: "armbands" is changed as commended. Personnel other than explosive engineer and shotfirer are deleted.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5. [*Blasting Safety Plan*] and 7.6.11. [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) ~~No other activity such as drilling shall be permitted in the vicinity, whilst loading;~~ Drilling operation is not permitted during charging of explosive

JC: Drilling operation is not permitted during charging of explosive.のように簡潔に。Simple expression is to be made such as "Drilling operation is not permitted during charging of explosive".

NK: Modified as commended.

(b) Before ~~loading~~ charging, thoroughly clean the holes and do not leave any dust or debris;

NK: 装填の用語として、OSHA は"1926.905 Loading of explosives"のように"loading"、BS は BS5607 "10.2 Handling and charging of explosives"のように"charging"を使用しています。本節は BS をもとに規定していることから、用語を"charging"に統一します。
The terms of "loading" and "charging" are used in OSHA and BS, respectively. In this Section, "charging" is used as BS is referred to.

(c) ~~Shock and friction which can cause accidental initiation of the charges such as below shall be avoided; Explosive shall be treated gently without giving strong friction or shock.~~ Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided;

JC: Simple expression recommended such as "Explosive shall be treated gently without giving strong friction or shock."

JC: (d)以降の記述が乱れています。全体を見直し、場合によっては記述をもう少し簡易にして、そのまま BS に飛ぶ等の工夫をしてください。

Description in (d) to (h) is incorrect. Please review the whole and make the description a little simpler in case, and take measures such as referring to BS.

NK: 以下の(d)から(h)の番号付けが間違っていました。正しくは(i)から(v)でした。そのため、(c)の such as below の文章に意味がなくなっていました。原案を変更し、上記赤字のように変更します。
The following (d) to (h) were incorrectly given numbered. Correct ones are (i) to (v). Therefore, the above (c) is strange sentence as JC commented. NK modified the (c) and revised numbers of following sentences: (iv) is deleted as it is not at time of explosive charging.

~~(d)~~ (i) The over-vigorous use of stemming rods to force explosives into a shot holes;

~~(e)~~ (ii) The use of drill rods or other metal tools in a shot hole containing explosives;

~~(f)~~ (iii) Vehicles running over explosives and other hazards involving impact or concussion;

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5. [*Blasting Safety Plan*] and 7.6.11. [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operation is not permitted during charging of explosive;

(b) Before ~~loading~~ charging , thoroughly clean the holes and do not leave any dust or debris;

(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided;

(i) The over-vigorous use of stemming rods to force explosives into a shot hole;

(ii) The use of drill rods or other metal tools in a shot hole containing explosives;

impact or concussion;

(g) rock, stone or similar material being projected from the blast, causing an accidental detonation of explosives, so that excess explosives should be removed from the blast site to a place of safety before blasting takes place; and

(h) shock tube detonators being initiated when subjected to “snap, slap and shoot”.

For other safety measures for explosive charging, the Contractor shall take safety measures referring to 10.2 [Handling and charging of explosives] of BS 5607.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(ii) Check if ~~the bus wire is~~ shotfiring cables are not cut or damaged, its electrical continuity and short-circuited

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;

(iv) Check if ~~the bus wire is~~ all shotfiring cables are not cut or damaged, and check its electrical continuity.

(v) Check if there are no missing or previous wiring connections or wrong wiring connections.

(vi) Make sure there are no stray electric currents when using electric detonators.

(vii) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar, wireless telephone, mobile phones unless otherwise specified in the Contract.

~~(g)~~ (iv) ~~Rock, stone or similar material being projected from the blast, causing an accidental detonation of explosives, so that excess explosives should be removed from the blast site to a place of safety before blasting takes place; and~~

~~(h)~~ (v) Shock tube detonators being initiated when subjected to “snap, slap and shoot”.

For other safety measures for explosive charging, the Contractor shall take safety measures referring to 10.2 [Handling and charging of explosives] of BS 5607.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(ii) Check if shotfiring cables are not cut or damaged ~~its electrical continuity and short-circuited~~;

JC: short-circuited の状態であるべきことは(i)で記述があるので削除してもよいと思います。
Status of short-circuit is already mentioned in (i), thus the part should be deleted.
NK: Deleted.

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;

(iv) ~~Check if all shotfiring cables are not cut or damaged, and check its electrical continuity.~~

JC: 上記（ii）と重複 (iv) is a duplication of (ii).
NK: Deleted.

(v) Check if there are no missing or previous wiring connections or wrong wiring connections.

JC: previous wiring connections とは？
What is “previous wiring connections”?

NK: previous wiring connections は、前回の発破の際の電線に結線していないかの意味であるため、”mis-connection with previous blast wires”に変更する。

The phrase “if there are previous wiring connections” means that “if the wire used for previous blasting is left and connected to the wiring this time. It is modified to “ mis-connection with previous blast wires.”

(vi) Make sure there are no stray electric currents ~~when using electric detonators.~~

JC: 最初に電気発破と言っているので不要。

This phrase is not necessary because (a) is for “Measures for Blasting using electric detonators.”
NK: Deleted as commented.

(vii) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar. ~~wireless telephone, mobile phones unless otherwise specified in the Contract~~.

(iii) Vehicles running over explosives and other hazards involving impact or concussion; and

(iv) Shock tube detonators being initiated when subjected to “snap, slap and shoot”.

For other safety measures for explosive charging, the Contractor shall take safety measures referring to 10.2 [Handling and charging of explosives] of BS 5607.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(ii) Check if shotfiring cables are not cut or damaged;

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;

(iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires.

(v) Make sure there are no stray electric currents ~~when using electric detonators.~~

(vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and ~~the bus wire~~ shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) The shotfiring apparatus shall be properly stored according to the Safety Plan:

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer, in which case the Contractor shall comply with the specified or instructed requirements.

7.6.11. Measures after Blasting

JC: 例示のような既設の設備の近辺で電気雷管を使うなという意味ならば、ワイヤレスフォン等は例示不要。

If the purpose of this item is that electric detonators shall not be used in the exemplified circumstances, prohibition of wireless phones etc. is not necessary.

NK: 和文 8.7.8 (4)(a)(iv)/(v)で、無線通信施設、レーダー等の近くでの電気雷管使用禁止(iv)と、影響がないと保証されない限り携帯電話を持ち込まない(v)と別れていたものが合体されてしまっていた。分けて規定する。

7.6.10. Particular Safety Measures for Blasting Work (4) (a) (viii) で Prohibit bringing into the blasting areas any mobile phone unless it is guaranteed that it will not adversely affect the electric detonators.と規定している。そのため、上記のコメントの箇所は削除する。

7.6.10. Particular Safety Measures for Blasting Work (4) (a) (viii) specifies Prohibit bringing into the blasting areas any mobile phone unless it is guaranteed that it will not adversely affect the electric detonators. Delete as commented.

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) ~~The shotfiring apparatus shall be properly stored according to the Safety Plan:~~

JC: 定義上 shotfiring apparatus は Explosive に含まれると理解されますので、7.6.7 の Storage でカバーされていると理解し、削除します。

As shotfiring apparatus included in explosives as a matter of definition, it is already covered by 7.6.7. Storage. Deleted.

NK: Deleted as commented.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer, ~~in which case the Contractor shall comply with the specified or instructed requirements~~.

JC: specification / instruction に含まれるのでは
Isn't this included in the specification / instruction?

NK: It is deemed natural that requirements are included in the specification/instruction by the Engineer. The underlined part is deleted.

facility, radar. ~~wireless telephone, mobile phones unless otherwise specified in the Contract~~.

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(c) The handle shall be removed from the shotfiring apparatus except when igniting.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer. ~~in which case the Contractor shall comply with the specified or instructed requirements~~.

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives

The following treatment procedure shall be taken:

(i) Immediate remedial action;

(ix) Delayed remedial action;

(x) Further attempt at detonation; and

(xi) Inspection to confirm complete detonation.

7.6.11. Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

JC: Explosive / explosive が混在している。
"Explosive" and "explosive" are both used in this section.

NK: As "Explosive" is a defined word in 7.6.2. Thus, "Explosive" should be used in this section. However, it is questionable if it should be defined at all same as "Blasting". To MD: please review the above.

(a) Procedure of treatment of misfired Explosives

The following treatment procedure of misfires Explosive shall be taken:

(i) Immediate remedial action;

(ii) Delayed remedial action;

(iii) Further attempt at detonation; and

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

JC: この用語が良く分かりません。4 種類あるが、以下の記載は Immediate と Delayed の 2 つ。他の 2 件は何なのか。ここで、不発処理の記載が必要であれば簡潔な内容とすべきと考える。

These four terms in (i) to (iv) cannot be understood well. Provisions are stated below for "immediate action" and "delayed action". What are the other two?

If provisions for treatment of misfire is necessary, it should be of simple contents.

NK: (i) Immediate remedial action は(b)に、(ii) Delayed remedial action 及び(iii)further attempt at detonation は(b)に定している。 (iv) Inspection to confirm complete detonation は、(d)として追加する。

JC の「簡潔な内容」に関しては、前回コメントの「BS 5607 10.5 Misfires を参照して、主要な項目を記述したうえで、BS を順守すべき旨規定してください。具体的には以下のような要素が抜けていると考えます。
・不発の際の処理（re-fire、火薬を取り除く措置など）
・misfire の場合のフローチャートに示される、場合に応じた手順」
に従ったものです。不発発生直後の行動については、この程度の具体的な規定が望ましいと考えます。

(i) Immediate remedial action is specified in (b), (ii) Delayed remedial action and (iii)further attempt at detonation is in (c). (iv) Inspection to confirm complete is added this time.

7.6.11. Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives

The following treatment procedure of misfires Explosive shall be taken:

(i) Immediate remedial action;

(ii) Delayed remedial action;

(iii) Further attempt at detonation; and

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action

The following initial remedial actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

(v) make a further attempt to fire the shot; and

(vi) report to the explosive engineer for further instructions;

(vii) not collect any exposed explosives before further action is taken;

(viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and

(ix) other actions specified in 10.5.4.1 [Initial actions]in BS5607.

(c) Delayed remedial action and further attempt at detonation

After the immediate remedial action, the delayed remedial action and further attempt at detonation shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.

The comment regarding “simple contents” is somewhat different from the following comment previously given by JICA.

“Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)” (Translation has been partially abbreviated.)

NK thinks that present provisions regarding the immediate remedial actions to take for misfire are concrete ones to be specified.

NK: 右欄にコメントに対応した追記を行いました。
As right, additional sentences are added in right to meet the JC comments.

(b) Immediate remedial action

The following initial ~~remedial~~ actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

(v) make a further attempt to fire the shot; and

(vi) report to the explosive engineer for further instructions;

(vii) not collect any exposed explosives before further action is taken;

(viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and

(x) other actions specified in 10.5.4.1 [Initial actions]in BS5607.

(c) Delayed remedial action and further attempt at detonation

After the immediate remedial action, the delayed remedial action and further attempt at detonation shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.

(b) Immediate remedial action

The following initial ~~remedial~~ actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

(v) make a further attempt to fire the shot; and

(vi) report to the explosive engineer for further instructions;

(vii) not collect any exposed explosives before further action is taken;

(viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and

(ix) other actions specified in 10.5.4.1 [Initial actions]in BS5607.

After the initial actions, the following initial remedial actions shall be taken by the shotfirer:

(i) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and

(iii) make a further attempt to fire the shot.

(c) Delayed remedial action and further attempt at detonation

After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken.

The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes.

(d) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (e) The Contractor shall notify the Engineer within a week after any misfire event.	(d) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (e) The Contractor shall promptly notify the Engineer ~~within a week after any misfire event~~ of any misfire event and the remedial actions. JC: modified (f) as above.	The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607. (d) Inspection to confirm complete detonation After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607. (e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (f) The Contractor shall promptly notify the Engineer ~~within a week after any misfire event~~ of any misfire event and the remedial actions.

7.1 GENERAL 7.1.1 Scope This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting ~~together with all associated embankment filling, backfilling and Earthwork Support.~~ JC1: Embankment is not necessary to stipulate. Earthwork support, too because it is stipulated in Chapter 4. Reinstate "Trench Excavation". There may be opinions that why only trench excavations must be stipulated, however, based on the fact that there have been so many accidents related with trench excavation, we request to stipulate in JSSS, even there may be duplication with OSHA. NK1: Deleted as commented. Provisions for Trench Excavation will be reinstated in 7.5.	**7 EXCAVATION WORKS** **7.1 GENERAL** 7.1.2 Scope *Please note that this item is reformatted to be consistent with later Chapters.* *The content of each Chapter are now correctly referred to as a heading, i,e, Excavation Works and also Blasting Works, which is a part of Excavation Works.* (1) This Chapter specifies the safety requirements for excavation works which include: (a) Open-cut and all other types of surface excavation; (b) Pits, trenches, basements and all other types of structural excavation; (c) Excavation using all methods such as manual excavation and machine excavation; (d) Excavation by Blasting (hereinafter referred to as "Blasting Works"); *I suggest that the following is left in as it is as embankment filling and backfilling are an intrinsic part of the works in this chapter. If not to be covered by these rules where is it to be covered?* *"Backfilling" has nothing to do with temporary excavations it is to excavation for permanent works whereby the contractor shall backfill working space and voids above foundations etc efficiently as soon as possible to ensure that openings are not left unsafe and open for excessive periods. It is also referred to in the later clause 7.2.1 (6).* (e) All associated embankment filling, backfilling and disposal; and (f) Earthwork Support, and which are hereinafter collectively referred to as "Excavation Works". (2) Excavation in tunnelling is not included. (3) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS. Additional particular requirements are contained in this Chapter. 7.1.3 ~~Safety Plan and Instructions to Workers~~ ~~(1) Prepare a safety plan describing the safety requirements for Excavation Works and Inform all relevant workers of the content and requirements.~~ ~~(2) Plan the execution of all Excavation Works by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.~~	**7 EXCAVATION WORKS** **7.1 GENERAL** 7.1.1 Scope (1) This Chapter specifies the safety requirements for excavation works which include: (a) Open-cut and all other types of surface excavation; (b) Pits, trenches, basements and all other types of structural excavation; (c) Excavation using all methods such as manual excavation and machine excavation; (d) Excavation by Blasting (hereinafter referred to as "Blasting Works"); (e) All associated embankment filling, backfilling and disposal; and (f) Earthwork Support, and which are hereinafter collectively referred to as "Excavation Works". (2) Excavation in tunnelling is not included. (3) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS. Additional particular requirements are contained in this Chapter.
7.2 PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS 7.2.1 General	**7.2 PARTICULAR SAFETY MEASURES** 7.2.1 General (1) The Contractor shall plan all Excavation Works so that they can be	**7.2 PARTICULAR SAFETY MEASURES** 7.2.1 General (1) The Contractor shall plan all Excavation Works so that they can be

(1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, ~~in conformity with GC 4.10. taking account of all the conditions of the Site.~~ taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor.

JC2: Though this is commented last time, we wanted sentence a little more considered. that I thought a little more. Is the following example sentence too long?

"taking into account of all information given by the Employer in the Bidding document and/or subsequently obtained by it."

NK2: Modified as right.

(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependant on the shape, nature the soil, hydraulic and geological conditions of the Site.

(4) ~~Earthwork Support~~ In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide ~~whatever Earthwork Support may be necessary to achieve this.~~ earthwork support for the excavation of depth ~~exceeds 1.5m in principle unless it is possible to excavate with a slope suitable for the soil condition.~~ exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.

JC1: Please reinstate the provision in 8.2 (3) of Japanese version "In accordance with JSSS 7.2.1[Earth Retaining Work] (2), the earth retaining shall be planned in principle to be provided for the excavation of depth exceeds 1.5m;".

NK1: added (5).

JC2: Term of "adequate and stable" used in GC is used here and modified as right.

executed in a safe and methodical manner.

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of Temporary Works, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

The following added wording to the above is not recommended:

"taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor."

The addition appears to have no connection with safety.

"Relevant information" meaning what and to whom?

"Subsequently" meaning what and when?

As "Contractor" is used rather than "Bidder" it follows that subsequently means after the contract has been awarded and therefore, that the Bid is to be based only upon the "relevant information" provided in the Bidding document.

This is not correct and it is a potentially risky change as it transfers the responsibility for describing all site conditions to the Employer via the bidding documents and ignores the Contractor's basic obligations.

The Contractor has a fundamental obligation to satisfy himself of conditions (taking account of cost and time) before he submits his Tender (Bid) and the full and relevant requirements are stated in GC 4.10.

Many claims are founded on interpretation of this clause and I do not recommend any change such as you have suggested, it is actually not necessary and may compromise interpretation of this basic clause.

Although reference is perhaps not vital, this is why I had included reference to GC 4.10 to emphasise that we were not changing the contract but this has been deleted

Also, TW now becomes Temporary Works as I advised in January

(3) Sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, dependant on the dimensional constraints of the Site and the nature of the soil, hydraulic and geological conditions.

(4) The Contractor shall be responsible for preserving the structural integrity of all sides and excavations and shall provide whatever Earthwork Support may be necessary to achieve this, in accordance with the requirements of JSSS 6.2 [*Earthwork Support*]

The following added wording (which is any case duplicated with JSSS 6.2 1 (4)) to the above is not recommended:

"earthwork support for the excavation of depth exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition"

As already advised I do not recommend any such change or the placing of any restriction on when support shall or shall not be provided, there is no need to do this when it is 100% the Contractor's risk anyway.

It to some extent follows OSHA but is actually not compliant with OSHA.

executed in a safe and methodical manner.

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of Temporary Works, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

(3) Sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, dependent on the dimensional constraints of the Site and the nature of the soil, hydraulic and geological conditions.

(4) The Contractor shall be responsible for preserving the structural integrity of all sides and excavations and shall provide whatever Earthwork Support may be necessary to achieve this, in accordance with the requirements of JSSS 6.2 [*Earthwork Support*]

NK: modified as right.

(5) ~~In accordance with JSSS 1.23 [Emergency Response Plan?], 1.23.2,~~ the Contractor shall. execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.

JC2: This reference seems to be wrong. 1.23.2 is unnecessary.

NK2: The 1.23.6 (3) in 1.23 [Emergency Response Plan] in Issue 7 specifies drainage, however reader of JSS may be confused as the reader consider what relation of excavation works and emergency is, so deleted this reference as right.

(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work ~~without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site and unless otherwise specified as specified in the Contract (see Annex 1.3 Particular Safety Specification),~~ so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such ~~damage or weakening~~ by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.

JC1: The provision of 8.2 (5) of Japanese version mentions "as stipulated separately in the Contract". The nuance of English version is completely different. Please modify it as the Employer determines the requirement.

NK1: is modified as (6).

JC2: The sentence of "any" is too strict.

NK2: modified as above.

NK1: added (7) to specify the Japanese 8. 2 (6)

(7) If loose rocks, standing trees, etc. existing outside the Site above the excavation area in the Site may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

NK2: Added outside and inside to make clear the rocks, etc. are not in the Site. This issue was argued by JICA at the beginning of preparation. It can be actually handled by Variation, however it is left as JICA wants.

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and~~ take actions in accordance with the Engineer's instruction.

JC2: There are two different elements in item (b). We propose to re-sort the contents as follows.
(a) removal of loose rocks ~ ~ ~

I had previously advised as follows:

Problem is that OSHA appears to restrict to a 1.51 m minimum depth, unless "examination of the ground by a competent person provides no indication of a potential cave-in." There is no definition of "competent person" nor do we suggest that it is necessary.

We also recommend that no such minimum should be stated and that the Contractor shall be responsible no matter what the depth, no such minimum is stated in JSSS 7.2.

I have now included the "Competent Person" in the definition of operation leader in Annex 1.1, but I still do not feel comfortable that such a loosely defined minimum be applied in a standard specification.

There may be a risk of accident and injury to workers due to collapse of sides e.g. the effect of the load and vibration from road traffic on trenches and pits in roads which are less than 1.5 metres deep, and also an effect on adjacent buildings, structures or Contractors Equipment. If not foreseen by the "competent person" this then creates a problem for the HSO.

I also note that later, examples of Earthwork Support measures have been added for sides less than 1.5 m deep so I suggest that this threshold is no longer required.

Further to the above however, I suggest that there should be no mention in this Chapter 7 of requirements for earthwork support as this is duplication of the common requirements in Section 6.2 and which will inevitably create ambiguity and confusion.

I have therefore deleted all reference to the 1.5 m threshold in Chapter 7 and sloping/benched sides and dealt with this entirely in Section 6.2.

~~(5) The Contractor shall execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.~~

I had deleted the above clause in the draft giving the following reason:

It is not only drainage that must be provided, the Contractor shall design and provide everything necessary. In any event this is already mentioned in JSSS 1.26.2 in a more comprehensive manner and need not be repeated more simplistically here.

I have edited the following clauses to make the wording consistent with the Contract and with JSSS 6.1 3 and 6.2.

(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and Earthwork Support without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage by other properties and obtain the prior consent of the Engineer to such measures

(5) The Contractor shall execute all Excavation Works and associated filling, backfilling and Earthwork Support without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage by other properties

(b) take safety measures including change to the construction method
(c) requesting the Engineer to issue a variation???

NK2: For the danger against loose rocks, etc. located outside the Site, the Contractor shall take measures as instructed by the Engineer. It is doubtful to mention about variation.

NK2: modified as above.

7.2.2 Safety Measures before Commencing Excavation Works

(1) The ~~HSO~~ Contractor shall inspect the excavation work area and surrounding areas before starting work each day and after adverse climatic conditions or ~~earthquake to ensure that there are: the following items meet the criteria of allowable values and counter measures determined by the Contractor and given in the Contract (see the Particular Safety Specification) to avoid adverse effects to surrounding areas and buildings by excavation~~: mentioned in JSSS: 2.7 [ADVERSE WEATHER REQUIREMENTS]. The inspection shall include the following areas and items:

JC1: The HSO take all responsibility for safety. The HSO's duty is to review and check whether the safety activities are taken at the site by the Site staff in charge of construction (the Contractor) in accordance with the Safety Plan and manage safety at the Site.

From this concept, "The HSO shall inspect work area before starting work…" is to be revised to "The Contractor shall …"

NK1: Revised as commented here and also other clauses.

JC1: The premise is that the allowable effect and countermeasures shall be given by the Employer for surrounding areas outside of excavation. The provision shall be made on the premise.

NK1: The clause is modified as above.

JC2: This clause stipulates to check the area before starting the work every day and after earthquake, etc. It is not necessary to mention about allowable values. ("allowable value" is used in 7. (6) as it has high affinity.)

NK2: JC deleted the relevant part as above.

JC2: "adverse climatic conditions"は"strong rain fall"ぐらいでいいのでは(異常時だけではないので)
Isn't it enough with "strong rain fall" instead of "adverse climatic conditions"?

NK2: JSSS 2.7 mentions measures for heavy rain, strong wind and storms, heavy snow and ice, lightning, earthquake and tsunami as adverse weather, and 2.7.7 specifies Inspection of Temporary Works after Adverse Weather and Earthquake.
NK added the to refer to 2.7 as right.

(a) ~~No~~ potentially unsafe areas where there may be any risk of Landslide;

(b) ~~No~~ loose rock or boulders which may be at risk of falling;

(c) ~~No~~ cracks in the excavation work area and the surrounding area;

(d) ~~No~~ changes in ground water level, surface or any spring water; and

(e) ~~No~~ deleterious effect due to freezing conditions.

JC1: The expression "No something" is excessive. Those (for example no cracks, no change of water level) make works impossible to perform.

NK1: The conditions are changed to relate to the criteria (in (1) above) given in the Contract as above.

before commencing relevant parts of the Excavation Works.

The original text of the above clause has been suggested to be revised by JICA/NK as follows:

The Contractor shall execute all Excavation Works and associated filling, backfilling and support work so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such adverse effects by designing and providing permanent or temporary supports and reinforcement before commencing Excavation Works.

I do not recommend that the above change be made for the following reasons:

The essential basis of the Contract (and the rule of Law in most countries) is that the Works shall be executed by the Contractor without causing any damage at all to neighbouring properties.

If any damage is caused then the Employer is open to claim for repairing such damage from adjacent owners and for which the contractor should be liable subject to the requirements of the contract.

FIDIC GC 17.1 (b) applies.

Insurance may also be compromised if not handled properly under GC 18.3.(d) (ii).

The added text to this clause is not necessary, it confuses any meaning and implies that there is some flexibility i.e. that some damage or "adverse effect" is acceptable if it falls within "allowable values" when as a common basis this is not correct.

If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,

I recommend that the default situation should be that the Contractor is instructed as a general rule via JSSS to set up and manage monitoring to ensure his compliance (i.e. that damage does not occur), This is in principle as the earlier draft of JSSS.

This will require further development of the contractor's monitoring requirements and I have drafted a new clause 7.5.3 to deal with this.

In any exceptional rare case for example on large projects in congested areas and where damage is likely and unavoidable then the Employer should already have consulted and agreed with the owners and residents that the Works can be executed in a manner that may cause some damage and has agreed that compensation will be paid for such damage in accordance with a scale of damage. However, I suggest that this should not be a norm or a usual situation and that JSSS or the User Guide should not imply that this is a common option and I suggest that it should be the exception rather than the norm. otherwise it will be misunderstood by some Executing Agencies that such damage may be allowable when actually it is isn't.

During our January 2020 discussion, I said I would research this further and requested JICA to provide examples of the reference documentation for the Hong Kong MTR.

and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Excavation Works.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

MM: as mentioned MM 3.(1) mentioned in the first line above.

NK1: added requirements in Japanese JSSS as (3) to (7) below.

(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage];

(4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services;

IJC2: t is hard to understand what this clause provides. Is it for protection against falling?

NK2: The Japanese draft is mentioning about protection for the underground services. Add a phrase "for the services" at the end of the sentence.

(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.;

JC2: Do the entry prevention facilities mean fall protection or entry control?

NK2: "entry prevention facilities" means entry control facility to prevent those from their falling at the site.

(6) ~~Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock at the lower parts (bottom) of the excavation site~~;

Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock;

JC2: "Danger to construction equipment" sounds strange. Are persons and equipment treated same in this meaning?

NK2: "Damage to equipment" may be more suitable. Modified as above.

JC2: I wonder which is correct "at" or "into".

NK2: We modify as follows: "measures shall be provided at the lower part" as Take the following measures at the lower parts (bottom) of the excavation site; when there is a risk of …

(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and

(b) Install protective fences that can catch falling rocks, etc.

JC2: Am I the only one who feels a sense of discomfort to (b) catch falling rocks?

NK2: English-English dictionary and internet show as follows:
Receive means: to get or be given something: (e.g. E-mail)

I have briefly studied the information provided by JICA and consequently believe that this may have been wrongly interpreted. In reviewing I feel it is important to note that:

1) Damage is the responsibility of the Contractor and the Engineer has no authority to determine what damage is acceptable or not.

2) The Engineer is not part of the relationship between Site owner and adjacent owners and if any damage is caused to neighbouring property, the Engineer's opinion is not relevant, adjacent owners usually have a basic right of claim against the Employer.

JICA appear to consider that some damage to adjacent buildings, structures, railway, roads, footpaths slopes and utilities etc., is "allowable" within certain specified limits but I feel that this is not correct and not supportable under the HK MTR information provided.

It is apparent that:

1) No damage or deformation to buildings, paving and services, etc. is allowable

2) If any damage is caused, the Contractor shall stop the Works and shall then be responsible for proposing and implementing remedial measures.

I consider that monitoring of any movement is not for the purpose of judging whether damage is reasonable or not but is to predict whether any damage is likely to occur, in which case, it then in total becomes the contractor's responsibility to remedy.

Please note also that in the sample provided for the Hong Kong MTR, whilst sample monitoring ranges are provided, Clause 2.19 (3) on page 2/10, makes clear that this is for information only and that in any event, the Contractor must meet his obligations under the Contract:

"the Contractor shall satisfy himself that the specified criteria is adequate to fulfil his contractual obligations and shall take any additional measures necessary to avoid damage to property."

Pages 40 and 42 are missing from the provided copy of the HK MTR Conditions of Contract, therefore I cannot complete my review of the Contractor's obligations for care of the Works under Clause 22 of the Contract.

I do not in any event recommend the concept of the Employer or Engineer establishing measurement criteria as a general rule for predicting damage, as it is difficult to do and if wrong it could affect liability of the Employer and Engineer and even JICA if they are called upon to fund it.

This can be complex legal and contractual territory that I recommend should not be dealt with by JSSS as if it were a simple and common issue.

FIDIC GC 17.1 (b) applies and I suggest that it should not be compromised by the suggested addition to this clause.

(7) If loose rocks, standing trees, etc. existing ~~outside the Site~~ above the excavation area ~~in the Site~~ may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer~~

(6) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) Take actions in accordance with the Engineer's instruction.

Catch means: to take hold of something, especially something that is moving through the air: (e.g. ball)
Internet figures for catch falling rocks show falling rock fences.
We leave "catch" as it is.

(7) Risk prevention measures against falling rocks

(a) To protect workers from the dangers of falling of loose rocks and s

(b) and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.

JC2: Is it appropriate to provide earth retaining and protective net beforehand and to prohibit workers to enter into the excavation area?

NK2: It is appropriate to take preventive measures against possibility of falling rocks. However, the present clause can be read that no worker shall enter the site. Change the sentence that workers are prohibited to enter until safety is confirmed as right.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) ~~Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.~~ Backfill the temporary excavation area as immediately as possible after the relevant work is completed.

JC2: (3) has become unable to understand.

NK2: The Japanese draft was that for temporary excavation, it is required to backfill immediately after the work is completed. Modified.

(4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.

~~and~~ Take actions in accordance with the Engineer's instruction.

The above is difficult to understand, conditions outside the Site are not usually within the Scope of a Contract.

If such hazards exist and were apparent at or before Tender stage, then the neighbour is usually legally obliged to remove the risk at his own cost and should be requested to do so.

If the risk is created by the execution of the Permanent Works then this can mean that the Contractor has created the risk by his methods and it should be a part of the contractor's scope responsibility anyway.

Rather than concentrating upon the manner in which this is dealt with contractually, I suggest that JSSS should concentrate on safety i,e. by the HSO removing the risk and taking appropriate measures immediately.

I suggest as follows:

(8) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to workers, unless otherwise instructed by the Engineer, the HSO shall prohibit workers from entering the working areas and issue appropriate instructions including for example to:

(a) Provide protective overhead safety barriers or safety nets;

(b) Carefully remove loose rocks;

(c) Provide (or improve existing) Earthwork Support to unstable areas;

7.2.2 Safety Measures before Commencing Excavation Works

(1) The HSO shall inspect the Excavation Works area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake as described in JSSS: 2.7 [*Adverse Weather Requirements*]. The inspection shall include the following areas and items:

In your draft for the above, "HSO" has been changed to "Contractor" which for reasons explained is not correct. I recommend that wherever an inspection is required for safety purposes it should state HSO as he is responsible. In practice he may delegate this internally e.g. to an operation leader but that is his choice.

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rock or boulders which may be at risk of falling;

(c) Cracks in the Excavation Works area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

(7) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to workers, unless otherwise instructed by the Engineer, the HSO shall prohibit workers from entering the working areas and issue appropriate instructions including for example to:

(a) Provide protective overhead safety barriers or safety nets;

(b) Carefully remove loose rocks;

(c) Provide (or improve existing) Earthwork Support to unstable areas;

7.2.2 Safety Measures before Commencing Excavation Works

(1) The HSO shall inspect the Excavation Works area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake as described in JSSS: 2.7 [*Adverse Weather Requirements*]. The inspection shall include the following areas and items:

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rock or boulders which may be at risk of falling;

(c) Cracks in the Excavation Works area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

	(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [*Vertical Access*] ~~7.4.2 [Setting of Passage];~~	(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [*Vertical Access*];
	Please note that I have added a new subclause in JSSS Section 6.4 Vertical Access, covering steps, stairs and ramps	
	(4) Provide support or protection for the underground services appropriately in accordance with JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services.	(4) Provide support or protection for the underground services appropriately in accordance with JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services.
	(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc..	(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.
	I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)	
	~~(6) Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock:~~	
	~~(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*]; and~~	
	~~(b) Install protective fences that catch falling rocks, etc.~~	
	I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)	
	~~(7) Risk prevention measures against falling rocks~~	
	~~(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and~~	
	~~(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.~~	
	7.2.3 Safety Measures during Excavation Works	7.2.3 Safety Measures during Excavation Works
	During the Excavation Works, the Contractor shall:	During the Excavation Works, the Contractor shall:
	(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.	(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.
	(2) Stop the Excavation Works where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.	(2) Stop the Excavation Works where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.
	(3) Backfill any temporary excavation area as soon as possible after the relevant work is completed.	(3) Backfill any temporary excavation area as soon as possible after the relevant work is completed.

	The original clause had nothing to do with temporary excavations it is to excavation for permanent works whereby the contractor shall backfill working space and above foundations etc. efficiently as soon as possible to ensure that openings are not left open and unsafe for excessive periods. *I recommend that the original clause goes in.* (4) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Works are completed. (5) For places where open Excavation Works are performed, maintain the necessary illuminance to perform the work safely.	(4) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Works are completed. (5) For places where open Excavation Works are performed, maintain the necessary illuminance to perform the work safely.
7.3 MANUAL EXCAVATION WORKS 7.3.1 ~~General~~ During manual excavation works, the Contractor shall: (1) ~~Not permit any excavation without providing Earthwork Support to all vertical surfaces.~~ Not permit any excavation of depth exceeds 1.5m ~~in principle~~ without providing Earthwork Support to all vertical surfaces as specified in JSSS 7.2.1 [General] (4). JC2: deleted "in principle" (2) Not permit excavation of the excavated surface/ground that stands vertically or close to the vertical, and excavation of the ground under the foundation of existing structures. JC: modified as right. NK: JC requests MD to check and modify the expression of this clause after understanding the situation shown below.  (3) Maintain sufficient distance between workers. (4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall. (5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work. JC1: (a) This expression is excessive because it means that earth retaining is required regardless of the depth. 1) (b) Originally, the Japanese version intended to prohibit to excavate under the existing foundation etc. NK1: For (a), the clause is modified as right. For (b), a new clause (2) is added from 8.4.1 (1) of Japanese version. MM: 3. (1) Addition of 7.4 MECHANICAL EXCAVATION WORK to specify requirements in Japanese JSSS as 7.4 below.	**7.3. MANUAL EXCAVATION WORKS** 7.3.1 General During manual Excavation Works, the Contractor shall: ~~(1) Not permit any excavation without providing Earthwork Support unless otherwise permitted by the HSO in accordance with JSSS 6.2 [*Earthwork Support*].~~ *The following added wording to the above is not recommended:* "depth exceeds 1.5m without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4). " *See above and previous notes, I do not recommend that the draft be changed in this way.* ***Please refer to my earlier notes; I do not recommend any reference here to the 1.5 m threshold and recommend that this is dealt with entirely in Section 6.2.*** ***The original text of this clause (as edited above) has been transferred to 7.1 as a general item.*** ~~(2) Not permit excavation of the vertical surface of the excavated area, or excavation of the ground under the foundation of existing structure~~ *Above is edited as follows:* (3) Not undermine any excavation under and beyond the vertical face. (4) Not excavate under existing foundations (5) Maintain sufficient distance between workers. (6) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall. (7) When using a lever for removing rock, select equipment that has appropriate length and strength for the work. *The following clause has been added in the JICA draft:* *All of the content (and more) is already included in Chapter 4 [Contractor's Equipment], it is not necessary to duplicate it here. Please confirm which is to be deleted, here or Chapter 4?*	**7.3. MANUAL EXCAVATION WORKS** 7.3.1 General During manual Excavation Works, the Contractor shall: (1) Not undermine any excavation under and beyond the vertical face. (2) Not excavate under existing foundations (3) Maintain sufficient distance between workers. (4) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall. (5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.
7.4 MECHANICAL EXCAVATION WORK	**7.4 MECHANICAL EXCAVATION WORK**	**7.4 MECHANICAL EXCAVATION WORK**

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical excavation works with the equipment:

(1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below.

(3) ~~The operators shall operate the equipment following the following rules:~~ Ensure that the operators shall:

JC2: Modified.

(a) Operate the equipment with paying attention always to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, ~~do~~ not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse.

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of another equipment.

(4) Ensure that workers shall: ~~Workers shall work follow the following rules.~~

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

MM 3. (1) addition of 7.5 TRENCH EXCAVATION to specify requirements in Japanese JSSS is added as 7.5 below.

7.5 TRENCH EXCAVATION

7.5.1 General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).

7.4.1 General

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical Excavation Works with the equipment:

(1) In accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], prohibit workers from entering the places where workers are in danger due to the mechanical Excavation Works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

As noted in the original draft, it is not good practice and there is no need to include such general cross reference to other sections. The referenced sections and chapters are of general application anyway.

Please refer to JSSS 1.4.9 (2) which explains this.

(2) Take the safety measures prescribed in JSSS Chapter 4 [*Contractor's Equipment*]

Cross reference is not necessary and references have changed.

(3) Ensure that the operators shall:

(a) Operate the equipment always paying careful attention to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse; and

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of other equipment.

(4) Ensure that workers shall:

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

The above and more is already included in Chapter 4 [Contractor's Equipment], why is it necessary to duplicate some of it here? I suggest that it is not necessary here.

7.5 TRENCHES, PITS AND OTHER TYPES OF STRUCTURAL EXCAVATION

In English international construction usage, "Trench excavation" is a classification of only one type of Excavation but there are many other accepted types which commonly include for example:

Pit excavation,

Basement excavation,

Excavation for deep piling

7.4.1 General

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical Excavation Works with the equipment:

(1) In accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], prohibit workers from entering the places where workers are in danger due to the mechanical Excavation Works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

(2) Take the safety measures prescribed in JSSS Chapter 4 [*Contractor's Equipment*]

(3) Ensure that the operators shall:

(a) Operate the equipment always paying careful attention to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse; and

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of other equipment.

(4) Ensure that workers shall:

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

7.5 TRENCHES, PITS AND OTHER TYPES OF STRUCTURAL EXCAVATION

(1) When performing trench excavation with depth of 1.5m or more, adequate and stable earth retaining shall be provided ~~unless any particular reason exists~~; and

(2) ~~For trench excavation with a depth of less than 1.5m, protective systems such as exampled below shall be installed;~~ For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;

JC2: Changed from "less than" to "exceeding".

NK2: (1) is for 1.5 m or more, and (2) is for less than 1.5 m. Therefore, (2) is left as it is.

(a) Simple earth retaining (Trench box, Trench shield);

(b) Lightweight sheet pile earth retaining; and

(c) Aluminum hydraulic shoring, Timber shoring.

JC2: Is "Lightweight sheet pile" correct term in English? Is "steel sheet pile" OK?

NK2: Japan Patent Office and internet for product catalogue use the term "lightweight sheet pile".
For relatively shallow trench excavation, ordinary sized ones are not used. It is better to distinguish the different use of normal and lightweight sheet piles. Left as it is.

7.5.2 Safety Measures during Trench Excavation

(1) Materials and equipment to be used for earth retaining systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function;

(2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer;

(3) The earth retaining system designed by the Contractor shall be provided in accordance with the design and construction procedure drawings;

(4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site;

(5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work;

(6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed;

(7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system;

(8) When removing the earth retaining system, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and

(9) The Contractor shall perform backfilling of the trench shall be ~~performed Backfilling of the trench shall be performed~~ in parallel with the removal of the earth retaining system.

Oversite excavation, cuttings, reduce level excavation, etc etc

There is no great difference in the risks between collapse of a trench or collapse of a pit or basement excavation all are similar and the prescribed safety measures are the same so:

Why separate only "trench excavation"? and

What happens to the required measures for the other types?

To describe only trench excavation and ignore all others, looks unusual and appears incomplete.

Reference to OSHA is creating this problem as US and English usage are slightly different.

OSHA uses the phrase "Excavation and trenching" as if both are different. In English construction usage, "Excavation" alone is commonly used and the various types (e.g. trench, pit and basement excavation) will be understood to be covered by this term.

This is why 7.1.1 is all embracing.

The given definition of "Trench Excavation" in the draft is not necessary as the word "trench" is in common usage.

It is also not correct, Trench Excavation is not "excavation performed for laying gas pipes and water /sewage pipes, etc.". "Trench excavation" will also cover for example excavations for any linear structure or material such as :

strip foundations, ground beams, cables and ducts etc. etc.

There is not so much in this clause anyway but if considered necessary, I would suggest it would be better re-headed as Excavation Generally or even "Trenches, Pits and Other Excavations" as above.

7.5.1 General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

See notes above, the following definition is not sufficient or necessary

~~Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).~~

~~(1) When performing trench excavation with depth of 1.5m or more, adequate and stable Earthwork Support shall be provided.; and~~

The above is not recommended as it conflicts with other clauses, please refer to earlier notes. It is deleted here and dealt with in Section 6.2

~~(2) For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;~~

~~(a) Simple earth retaining (Trench box, Trench shield);~~

~~(b) Lightweight sheet pile earth retaining; and~~

~~(c) Aluminium hydraulic shoring, Timber shoring.~~

The above appears illogical as there are numerous statements that no support is required below 1.5 metre depth yet then this is provided which specifies requirements.

7.5.1 General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation.

	I have not edited the added subclauses but suggest that they are deleted anyway 7.5.2 Safety Measures during ~~Trench~~ Excavation *None of the following items are unique to trench excavation, all items apply to all types of excavation.* *Also all of the following items are for Earthwork Support not Excavation and this would be better transferred to JSSS 6.2.4 to avoid duplication and ambiguity. I have already included relevant part of the following in 6.2.4 with suitable editing and this subclause can now be deleted.* *Reference to "earth retaining systems" should be changed to "Earthwork Support".* (1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function. ~~(2) Manufactured (prefabricated) materials for Earthwork Support shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer.~~ *No need already covered by JSSS 1.35* ~~(3) Earthwork Support designed by the Contractor shall be installed in accordance with the design and construction procedure drawings.~~ *There are no such drawings in JSSS and no meaning to this requirement. This is also all Contractor design.* ~~(4) Earthwork Support with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site.~~ *The above is not completely clear however it is already covered by 6.2.1 (2) above* (5) Workers shall not be allowed to enter any excavation ~~the trench~~ until Earthwork Support is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the Earthwork Support shall not be allowed; (7) If temporary removal of individual members of the Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing Earthwork Support, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) The Contractor shall perform backfilling of any ~~trench~~ excavation in parallel with the removal of the Earthwork Support. *Please refer to the notes against Clause 7.2 (6) above.* *I have added a comprehensive and common clause for contractor's monitoring of Excavation Works in* JSSS 6.1.3 [*Temporary Inspection and Monitoring Systems*]. *I think it should go here and not in Section 6.2 [Earthwork Support] as such settlement can be a result of excavation generally, including that caused by say*	7.5.2 Safety Measures during Excavation (1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function. (2) Workers shall not be allowed to enter any excavation ~~the trench~~ until Earthwork Support is installed prior to the work; (3) Excavation to a level greater than 60cm below the bottom of the Earthwork Support shall not be allowed; (4) If temporary removal of individual members of the Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (5) When removing Earthwork Support, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (6) The Contractor shall perform backfilling of any ~~trench~~ excavation in parallel with the removal of the Earthwork Support. 7.5.3 Monitoring Impact of Excavation Works on Other Properties The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

	water table lowering (e.g. well-point systems) and Earthwork Support, but not only for the Earthwork Support. *I have added suitable mention in Section 6.2 so that this is coordinated.* 7.5.3 Monitoring Impact of Excavation Works on Other Properties The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].	
7.6 EXCAVATION BY BLASTING 7.6.1 Scope (1) This Section specifies safety measures in connection with ~~excavation in rock~~ ~~in open~~ open-cut rock excavation that cannot be undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives. NK1: added in open in right because 8.4 specifies excluding underground excavation with blasting. JC1: Why are "Blasting" and" Explosives" written in capital letters? Are they defined? See 8.4.2 (1), (2). NK1: They are defined in 8.4.2. NK will ask MD the reason of definition. JC2: Confirmation is required if the expression "excavation in rock in open" is appropriate. NK2: As a term "open-cut excavation" is usually used for excavation in open site area. Modified as "in connection with open-cut rock excavation". (2) The ~~Works~~ works plan shall be described in the relevant Method Statement. (3) This Section applies particularly to ~~Works~~ works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site. NK1: There are two terms in 7.6: "Blasting Works" and "Blasting works". Tentatively, "Blasting works" is used above because "excavation work" is used in 7.1 and "Blasting" is defined in 8.4.2. (To MD: Please confirm the term.)	**7.6 BLASTING WORKS** *See above clause 7.1.1 where Blasting Works is defined. I have changed the following references accordingly:* 7.6.1 Scope (1) This Section specifies safety measures in connection with excavation in rock ~~open-cut rock excavation~~ that cannot be undertaken using conventional excavation techniques. *The revised wording "open" or "open cut" are not correct or necessary, excavation in rock can apply to all types of excavation where rock can be encountered (e.g. trenches, pits and basements). Suggest that the original wording is correct.* *The above definition is simple and clear but please advise if you need a other more detailed definition of "Rock"?* *I suggest that the following is necessary:* (2) Blasting Works for tunnelling is not included in the scope of this Chapter. Any such work shall be performed in accordance with the Particular Safety Specification. *I suggest that also that some limitation shall be including in JSSS to restrict the use of blasting as it may otherwise assume that is an acceptable alternative to more expensive removal techniques.* *I have therefore separated the clause, edited it and added further general requirements as follows:* 7.6.2 General Blasting Requirements (1) Blasting shall only be permitted to be performed by the Contractor: (a) When it is safe to do so and when there is no risk of injury or damage being caused to persons or property within or outside the Site (b) Where it specifically allowed or required by the Particular Safety Specification; and (c) During the execution of the Works after the Contractor has received the Engineer's approval or instruction. (2) Blasting when approved, shall only be permitted at times which have been predetermined and agreed with the Engineer and any relevant authority. ~~(3) The Blasting Works plan shall be described in the relevant Method Statement.~~	**7.6 BLASTING WORKS** 7.6.1 Scope (1) This Section specifies safety measures in connection with excavation in rock that cannot be undertaken using conventional excavation techniques. (2) Blasting Works for tunnelling is not included in the scope of this Chapter. Any such work shall be performed in accordance with the Particular Safety Specification. 7.6.2 General Blasting Requirements (1) Blasting shall only be permitted to be performed by the Contractor: (a) When it is safe to do so and when there is no risk of injury or damage being caused to persons or property within or outside the Site (b) Where it specifically allowed or required by the Particular Safety Specification; and (c) During the execution of the Works after the Contractor has received the Engineer's approval or instruction. (2) Blasting when approved, shall only be permitted at times which have been predetermined and agreed with the Engineer and any relevant authority.

7.6.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means ~~mean~~ any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], unless otherwise specified in JSSS, the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

JC2: The phrase "unless otherwise specified in JSSS" is indispensable in this case at least. BS does not mention subject, so it is not clear who is responsible for each action.

For example, JSSS specifies that the Employer shall specify allowable values of vibration, noise, etc. in the Contract. The Employer should survey these allowable values for structures, etc. around the Site when the Employer specify these allowable values.

On the other hand, BS5607, 6.2.1 mentions "a detailed survey and examination of the site, buildings or structures and adjoining areas and property should be carried out in accordance with BS 5930.". It is not clear who carry out the survey and

What does the above clause mean? The Blasting Safety Plan is described below. Please clarify

~~(4) This Section applies particularly to Blasting Works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.~~

Ditto, why would the use of explosives be possible outside the Site? Please see above suggested added clause (3), it is assumed that this can be deleted please check.

Noise: There appears to be no maximum criteria stated in the BS so I suggest the following:

7.6.3 Blasting Noise

Noise levels, measured in areas close to the Exclusion Zone and in areas accessible to other workers or the public shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB

7.6.4 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting Works. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.5 Compliance Standards

Changed in 2.5 therefore for consistency to be changed everywhere;

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Blasting Works complying with the technical requirements specified in BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

The above standard wording has been changed (for the better) as a consequence of JICA comment on Chapter 1 as above and I suggest for consistency that the same is applicable and should be used here.

I also suggest that more reliance should be placed upon the use of the BS and less on trying to repeat or "improve" parts of the BS in JSSS. If anything some of the clauses in JSSS could be omittec wgere the BS is more stringent or more clear.

.See later notes on survey and monitoring

7.6.3 Blasting Noise

Noise levels, measured in areas close to the Exclusion Zone and in areas accessible to other workers or the public shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB

7.6.4 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting Works. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.5 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Blasting Works complying with the technical requirements specified in BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

investigation.

Therefore, it is necessary to stipulate clearly that provisions in JSSS are given priority and others than JSSS shall comply with BS. Otherwise, the Contractor has to burden broad responsibilities including determination of allowable values and coordination with relevant authorities.

NK2: Added the phrase as suggested by JC. MD, please review JC.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals ~~in accordance with GC 2.2 [*Permits, Licences or Approvals*]~~.

JC1: Referencing to GC2.2 is not necessary here.

NK1: The reference is deleted.

7.6.4 Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting ~~W~~works:

(a) Explosive ~~E~~engineer; and

(b) Shotfirer(s).

JC1: It seems that capital and lowercase letters are used without rules.

NK1: Unless a word is defined, it will be written with lowercase. The above is modified as above because of itemisation. Hereinafter, "explosive engineer" and "shotfirer" are used only by lowercase letters.

(2) Responsibilities and requirement of personnel for Blasting ~~W~~works:

(a) The Explosive Engineer shall plan the Blasting Works, lead the Blasting ~~W~~works at Site and perform the safety management of the Blasting ~~W~~works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting ~~W~~works and site safety management.

(3) Safety education and guidance

~~Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that personnel engaged in W works; namely explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations, have knowledge of and are able to comply with the following:~~

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that explosive engineer and shotfirer(s) have sufficient knowledge of the following:

JC1: The phrase "personnel engaged in Blasting Works" is not clear if it means only the explosive engineer and shotfirer as defined in (1) above or it includes other personnel, too. If the former is the case, the clause (1) should include the sentence that blasting works shall perform only by the explosive engineer and shotfirers.

NK1: Blasting Works are executed by the team consisting of the explosive engineer, shotfirers, sentries (BS5607 7.4.2.4) and other workers involved in the blasting operations (BS5607 3.44.2 NOTE).

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

Part deleted.

7.6.6 Personnel for Blasting Works

Please refer to the BS with regard to the selection and qualification of blasting contractors to perform the blasting works, it seems logical but is this to apply? It seems insufficient that a contractor with no experience or proven capability can employ two blasting staff and then be qualified to perform the works.

(1) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosives engineer; and

(b) Shotfirer(s).

What about other team members e.g. blasting supervisor (see BS), explosives storekeeper, drivers carrying explosives, security staff, spotters

(2) Responsibilities and requirement of personnel for Blasting Works:

(a) The Explosives engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the Explosives engineer and shotfirer(s) have sufficient knowledge of and are able to comply with the following:

"personnel engaged in Blasting Works" means "all persons" so engaged. Why make this restrictive? Can state "all personnel involved.."?

What about other team members e.g. blasting supervisor, explosives storekeeper, drivers carrying explosives, security staff, spotters? All and more need to be made aware and this is only safety training. I suggest the original wording is wider.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

7.6.6 Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosives engineer; and

(b) Shotfirer(s).

(2) Responsibilities and requirement of personnel for Blasting Works:

(a) The Explosives engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the Explosives engineer and shotfirer(s) have sufficient knowledge of and are able to comply with the following:

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return procedures for any evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions)*.

(3) is modified as above.

JC2: BS5607 8.3 describes "No person other than those designated in **8.2** should be in possession of explosives on site" and Sections after 8.2 describe about only requirements on skills and knowledges of blasting engineer and shotfirers. Therefore, (3) is revised to describe limitedly for the both.

NK2: NK think all members of blasting team shall know knowledge (a) to (f) generally or Professionally. However, NK modifies as JIC comment.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting ~~W~~ works;

(c) Procedures for Blasting Works;

(d) Evacuation and return Procedures of the evacuated workers and personnel;

JC1: The word "return" in (d) is not clear if it means to make evacuated personnel to the original places or return surplus explosives to the magazine.

NK1: It means to make the evacuated personnel to the original working places. Words are added as right.

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions).*

7.6.5 Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

JC1: It should be stated somewhere that the Blasting Safety Plan shall be agreed by the Engineer.

NK1: As mentioned in MM 3.(3) Chapter 1 has specified the Contractor shall submit Safety Plan and will specify "the Engineer may review the Safety Plan…".

Therefore, it is not necessary to specify "the Contractor shall get concurrence to the Safety Plan by the Engineer." for this Chapter only.

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting ~~W~~works (hereinafter collectively referred to as "personnel affected by the Blasting works" in this Section)..

JC1: It is recommended to define as for example, "Concerned Personnel" and use the term instead of repeating the long expression in the clauses such as (12) below and 8.4.6. (1).

NK1: referred to BS5607 and GC below for the above JC. It will be defined as "personnel affected by the Blasting Works" as right.

BS 5607 mentions as follows:

6.4 Exclusion zone and warning procedures

the risk of injury to contractor's personnel, third parties and members of the public is reduced to as low as reasonably practicable.

7.4.2.1 General

notified to all personnel involved in securing the zone and others affected by the event, including the general public.

GC: 4.8 Safety Procedures

(c) Procedures for Blasting Works;

(d) Evacuation and return procedures for any evacuated workers and personnel;

Change not necessary but added anyway

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions).*

7.6.7 Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.7 [*Contractor's Safety Plans*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works (hereinafter collectively referred to as "persons affected by the Blasting Works" in this Section).

"Personnel" needs to be changes to "Persons"

Edited as above.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(8) Trial Blasting.

(9) Identification of the Explosives engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and the serving of notice immediately before commencement of

7.6.7 Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.7 [*Contractor's Safety Plans*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works (hereinafter collectively referred to as "persons affected by the Blasting Works" in this Section).

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(8) Trial Blasting.

(9) Identification of the Explosives engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and the serving of notice immediately before commencement of Blasting Works to other persons affected by the Blasting Works.

(12) Evacuation method of all personnel from the Exclusion Zone before

for the use and protection of the public and of owners and occupiers of adjacent land.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

JC1: It is logically appropriate to change the order of (5) and (6). (First, determining the allowable values, secondly determining the blasting method within the values, then, the affected area is inevitably determined.)

NK1: The order of (5) and (6) is changed as commented.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected areas, buildings, structures and property.

(8) ~~Test~~ Trial Blasting.

NK1: Following BS, Test is replaced Trial.

(9) ~~Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.~~

JC2: Isn't it necessary to combine (6) and (8)?

NK2: The contents of item (6) and (8) are closely related, however, they are different matters as actions. Therefore, it would be better to change the order of (7) and (8) so that identification and monitoring become clear to be closely related.

(10) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(11) Placement of Spotters.

(12) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(13) Evacuation method of all personnel from the Exclusion Zone before Blasting.

JC1: The JC for (3) advise to replace all personnel with "Concerned Personnel" or another term

NK1: Personnel and persons in (3) is different from (12) as the latter is limited to personnel to leave Exclusion Zone. It is left as it is.

(14) Warning system at the time of Blasting.

(15) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(16) List of legal and administrative records.

7.6.6 ~~Information to~~ **Risk Prevention of** Workers and Neighbouring Residents

JC1: Revised title.

(1) ~~Dissemination of Information~~ Notice of Blasting

JC1: Revised title.

Blasting Works to other persons affected by the Blasting Works.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.8 Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

~~The Contractor shall assist the Employer when so requested by the Employer in giving briefings to neighbouring communities, residents and property owners by explaining the Blasting work~~

Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.8 Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify all persons affected by the Blasting Works. of the planned schedule and start dates and times for Blasting Works. Such information shall be updated as necessary,

~~The Contractor shall assist the Employer when so requested by the Employer in giving briefings to related authorities, neighbouring residents and building owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information.~~

JC1: deleted.

The Contractor shall notify~~, in appropriate manners,~~ all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, ~~the actual start dates and times and give notice~~ immediately Such information shall be updated as necessary, in particular, before the Blasting work commences.

JC1: Modified.

JC2: The term "notification" is used in also BS5607 6.6, therefore, "notify" is deemed to be right in this context. The term "update" is also derived from BS5606 6.6.
JC modified as above.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting Works including the following:

(a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting;

JC: It is not specific requirement though it is understandable. The Engineer shall check the explosive quantity planned by the Contractor based on the test blasting.

NK: The Contractor is responsible for planning of method of blasting. The Contractor shall check the quantity of explosive if necessary by an explosive design checker as same as design check for temporary works.
The Engineer may review Method Statement and Safety Plan whether the Contractor plan method and safety measures in accordance with the Contract.
Addition is made as above.

(b) Prevention of scattering of flying rock and other debris with materials, for example, sand, nets, steel plates, timber, etc. mentioned in 12.7.6 [Blast protection] of BS 5607 and as prescribed in the Contract (if any);

JC1: Phrase underlined is added.

JC1: It is not specific requirement. (Other clauses can be said commonly.) It shall be default for the Employer to determine the prevention measures of scattering of rocks. This concept that the Employer specify in the Contract cannot be read now. Please consider to specify specific requirements or to refer to the Particular Safety Specification.

NK1: As mentioned (a) above, the Contractor is responsible for the preparation of detail method of construction including the prevention measures. The Employer specify when there is special requirement. Modified as right.

JC1: Please describe specific methods. (Please refer to the contents of BS if available.)

NK1: added 12.7.6 Blast protection of BS 5607

~~(c) Prevention of collapse of surrounding rocks or ground areas more than planned in the Method Statement;~~

JC1: Is this meaning control blasting (presplitting/smooth blasting) or final excavation surfaces by blasting, or foundation of structures neighboring the Site? It is not clear. Blasting is originally tool to loosening the surrounding rocks and ground

~~scope, extent, duration, timing and safety measures and related information.~~

The Contractor shall notify all persons affected by the Blasting Works. of the planned schedule and start dates and times for Blasting Works. Such information shall be updated as necessary, immediately before the Blasting Works commence.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all persons affected by the Blasting Works, including the following:

(a) Prohibition of overcharging with Explosives more than that specified in the Method Statement prepared based upon the trial Blasting;

~~(b)~~ Prevention of scattering of flying rock and other debris ~~including for example the provision of sand, nets, steel plates, timber, and the like as mentioned in 12.7.6 [Blast protection] of BS 5607 and as prescribed in the Contract (if any);~~

As a basic rule I do not suggest giving any examples, the Contractor is already required to comply with BS 5607 so it is not necessary to give any further reference.

I disagree that the Employer shall determine the prevention measures of scattering of rocks as a common basis as he is employing and paying the contractor as a qualified technical expert to do this work.

I recommend that the original wording should not be changed, the given examples are not specific and any attempt to define scope may compromise the employer and even JICA in the future.

(c) Prevention of collapse of surrounding rocks or ground areas;

This is based upon the JICA/NK draft and I do understand why it is deleted.

It may not be overcharging it could be for other reasons e.g. incorrect drilling and blasting location in the wrong place or direction according to geology.

Blasting must be controlled and contained within the area required without damaging surrounding areas. Aside from the risk of damage to other property, The employer should not be required to pay for repair or reinstatement of surrounding areas where the contractor has failed to control his own operations.

I suggest that the above is not deleted

~~(d) Define all Blasting Works as Dangerous Work and take measures in accordance with Section 2.3 [*Prohibition of Entry – Dangerous Work*].~~

(e) Demarcate the Exclusion Zone for Blasting Works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

The BS covers safety measures and more, is the following therefor necessary?

immediately before the Blasting Works commence.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all persons affected by the Blasting Works, including the following:

(a) Prohibition of overcharging with Explosives more than that specified in the Method Statement prepared based upon the trial Blasting;

(b) Prevention of scattering of flying rock and other debris.

(c) Prevention of collapse of surrounding rocks or ground areas;

(d) Demarcate the Exclusion Zone for Blasting Works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations.

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area.

(e) Establish evacuation requirements, routes and assembly areas and inform all persons affected by the Blasting Works;

(f) Perform firing only after the Spotters have confirmed that all persons affected by the Blasting Works have been evacuated;

(g) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(h) Prohibit bringing into the Blasting areas any mobile phone that may affect adversely the electric detonator; and

(i) Unless otherwise specified in the Particular Safety Specification, perform Blasting Works only during the daytime.

areas

NK1: This specifies prevention of collapse by excessive loosening of surrounding rocks or ground areas. Modified as above. “as prescribed …” is not added because the Employer will not specify more than this.

JC1: “Risk Prevention” is not “Information to Workers and Neighbouring Residents” but points to pay attention in performing the work. Please move to proper place.

NK1: NK thinks that it is better to change the title of this section to “Risk Prevention of Workers and Neighbouring Residents” and title of (2) to “Risk Prevention Measures” so that the title and the contents coincide.

JC2: The required sentence is “the prevention of blasting more than planned by measures of ●●”. If the “●●” cannot be described, (c above can be deleted because prohibition of overcharging is specified in (a).

NK2: deleted.

(d) ~~Define all Blasting as Dangerous Work and take measures in accordance with Section 2.3 [*Prohibition of Entry – Dangerous Work*];~~ Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

JC: As JSSS 2.3 stipulates only prohibition of entry in general and is not proper to refer to in this clause. The evacuation area at the time of blasting should be stipulated concretely.

NK: Modified the clause (d) and located (e)(f) below (d).

~~(e) Provide audible warning sirens to warn of impending, current and completed Blasting operations;~~

~~(f) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;~~

① Provide audible warning sirens to warn of impending, current and completed Blasting operations;

② Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;

(g) Establish evacuation requirements, ~~routes~~ and assembly areas at blasting operation and inform all ~~workers and effected persons the~~ personnel affected by the Blasting Works; and

(h) Perform firing only after the Spotters have confirmed that all ~~workers~~ personnel affected by the Blasting Works have been evacuated; and

JC1: It gives an impression of an emergency evacuation route. Isn’t it enough to simply check evacuation?

NK1: As a risk prevention measure, it is important to establish and inform evacuation requirement and routes etc.
Modified as right.

(i) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations.

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area.

(f) Establish evacuation requirements, routes and assembly areas and inform all persons affected by the Blasting Works;

(g) Perform firing only after the Spotters have confirmed that all persons affected by the Blasting Works have been evacuated;

(h) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(i) Prohibit bringing into the Blasting areas any mobile phone that may affect adversely the electric detonator; and

(j) Unless otherwise specified in the Particular Safety Specification, perform Blasting Works only during the daytime.

(j) ~~Perform firing only after the Spotters have confirmed that all workers have been evacuated; and~~ Prohibit bringing into the blasting areas any mobile phone that ~~is not guaranteed that it will not adversely affect the electric detonators;~~ may affect adversely the electric detonator; and

JC1: Combine (g) with (i) to make the procedure clear that only after evacuation, blasting shall be fired.

NK1: modified as (e) in right by combining former (g) and (i)

JC2: Modified to make the expression same as in BS.

NK: modified.

(k) Unless otherwise specified in the Contract, perform Blasting Works only during the daytime.

7.6.7 Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

JC1: added. "the Laws" in (a) is wrong. Should be "the laws of the Country".

NK: GC stipulate as 1.1.6.5 "Laws" means all national (or state) legislation… and 2.2 (a) copies of the Laws of the Country…Modified as commented.

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JC1: As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

NK1: modified following the comments as much as possible.

7.6.9 Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JICA have commented as follows:

JC1: As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

Please note:

1) The full HK blasting document contains no use or mention of the expression "allowable values" of any damage to "structures of 3rd parties"

2) The document includes criteria for measurement and recording but this does not state that any damage is allowable.

3) Similar to previous comments on Earthwork Support (see above), I suggest that the criteria is given to determine whether Blasting is likely to cause damage in which case the Blasting Works shall, stop and the contractor shall propose remedial measures before proceeding.

4) Pages 40 and 42 are missing from my copy of the HK MTR Conditions of Contract, therefore I cannot complete my review and give any final comments on the Contractor's basic obligation.

7.6.9 Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) No Explosives shall be stored at the Blasting site; and

(b) Explosives not used on the day shall be returned to the Explosives store.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) ~~The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;~~ The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting;

MM: The "greatly exceed" expression is not appropriate.

NK1: modified as right. ("suitable" is agreed in the meeting)

(b) No extra or surplus Explosives shall be stored at the Blasting site; and

(c) ~~Explosives not used on the day shall be returned to the Explosives store.~~ ~~Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.~~

JC1: Please confirm if the procedure (c) is a must to return unused explosives to magazine. Check with BS5607 (there is a provision for measures for such a case in BS 5607 9.6).

NK1: BS 5607 9.6 is "Disposal of unwanted explosives or explosives which have deteriorated during storage", which is irrelevant. Rather, there is a procedure for returning unused explosives in 12.8.2 as follows:

12.8.2: Only the amount of explosive which can be readily charged in one day should be taken into the structure. Uncharged explosives should be removed to a location where they can be stored legally until the following day. Modified as above.

JC2: BS5607 12.8.2 specify about demolition. JSS describes other various cases (excavation, underwater, tunnel, etc.), so it is not sure correct to adopt the description of 12.8.2 to (c).

I do recommend that any such reference and addition is correct or justified particularly for blasting.

My suggestion is the same as for Earthwork Support (see above notes) namely:

"If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,

If there is a chance of damage occurring due to an unavoidable method of execution, then I recommend that the default situation should be that the Contractor is instructed via JSSS to set up and manage monitoring to ensure his compliance i.e. that damage does not occur, subject to receiving the consent of the Engineer.

Regarding the additional reference to BS 5607, the Contractor is already required to comply with this BS so it is not necessary and I do not recommend giving reference to further particular BS clauses in JSSS.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

~~(a) The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;~~

(b) No ~~extra or surplus~~ Explosives shall be stored at the Blasting site; and

I suggest the above is better

(c) Explosives not used on the day shall be returned to the Explosives store.

Ditto

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes, charging method for the Blasting and

ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes, charging method for the Blasting and treatment of misfired Explosives;

(b) The Explosives engineer shall check and countersign the Blasting Works records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

On the other hand, in BS5607 9 which stipulates general safety measures, 9.3.4 stipulates concretely as follows:

"If more explosives have been issued than are required and the intention is to return them to the licensed store, they should be examined by the shotfirer before return・・・."

It is better to refer to this 9.3.4. As JSSS 7.6.7 (1) regarding Storage of explosive, stipulates that BS 5607 9.3 shall be complied with in overall.

Therefore, item (c) is not necessary. JC deleted.

NK2: deleted as commented.

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) ~~The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed and remaining, number of blast holes and loading method for the Blasting;~~ The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and ~~loading~~ charging method for the Blasting, and treatment of misfired Explosives;

JC1: modified.

JC2: modified loading to charging.

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting ~~W~~ works shall be given to the Engineer by no later than noon on the day preceding the

treatment of misfired Explosives;

(b) The Explosives engineer shall check and countersign the Blasting Works records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8 ~~Test~~ Trial Blasting

~~The Contractor shall perform test Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said safety plan according to the results of the test Blasting:~~ The Contractor shall perform ~~test~~ trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the ~~test~~ trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, ~~and~~ scattering prevention and other protection measures.

(3) Confirm the safety of ~~Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be~~ personnel affected by the Blasting works ~~affected by the Blasting operations.~~

NK1: as defined in 7.6.5 (3), the above is replaced with "personnel affected by the Blasting works"

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

NK added responding JC comment for the Engineer to be involved in blasting works.

7.6.9 Monitoring Impact on Adjacent Buildings and Structures

~~The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused as specified in the Contract or instructed by the Engineer.~~

The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.

JC1: The monitoring object shall be determined by the Contract or instruction by the Engineer. The allowable vibration value also shall be given by the Employer.

7.6.10 Trial Blasting

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Blasting Safety Plan according to the results of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention and other protection measures.

(3) Confirm the safety of all persons affected by the Blasting Works.

~~(4) Confirm that the vibration values of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.~~

Please refer to following clause 7.6.11 and as a consequence I suggest that the above is modified as follows:

(5) Confirm that the Contractor's criteria is adequate for the purpose of JSSS エラー！参照元が見つかりません。 [*Monitoring Impact on Other Properties*].

The Contractor shall submit the trial Blasting reports with any consequent changes to the Blasting Safety Plan to the Engineer before proceeding with the Blasting Works.

7.6.11 Monitoring Impact of Blasting Works on Other Properties

The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

There are numerous references to the requirements for monitoring the impact of the Works on other properties so (as with Excavation) I have developed JSSS 6.1.3 to cover this as a Common Specification.

It is only necessary therefore to include the above cross reference here and the following can therefore be deleted.

~~*The above Original (as re-edited)*~~

~~(1) The Contractor shall monitor the vibration, settlement and all other potential effects of the Blasting Works to ascertain any effect upon buildings, structures and other properties, paved areas, roads,~~

7.6.10 Trial Blasting

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Blasting Safety Plan according to the results of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention and other protection measures.

(3) Confirm the safety of all persons affected by the Blasting Works.

(4) Confirm that the Contractor's criteria is adequate for the purpose of JSSS エラー！参照元が見つかりません。 [*Monitoring Impact on Other Properties*].

The Contractor shall submit the trial Blasting reports with any consequent changes to the Blasting Safety Plan to the Engineer before proceeding with the Blasting Works.

7.6.11 Monitoring Impact of Blasting Works on Other Properties

The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

Refer to MTR M&W 25.20(c), 25.30~25.35.

JC1: There should be relevant stipulation in the Contract. Please modify the expression including above, for example, inserting "as specified in the Contract".

NK1: The clause is modified as right.

JC2: The sentence is modified so that the description follows the context of JSSS as a whole such as relating with the Blasting Safety Plan. "No vibration damage" is too severe to stipulate. JC modified as above.

NK2: modifies.

For this purpose, the Contractor shall:

(1) Prepare an environmental monitoring plan as a part of the Blasting Safety Plan, which will:

JC2: In 7.6.5.(8), the term "Environment monitoring plan" is used. If "monitoring plan" in (1) above means same as 7.6.5.(8), terms shall be unified.

NK2: As these two terms are the same meaning, modified to use "environment monitoring plan".

(a) ~~Measure~~ Monitor the extent and impact of Blasting vibrations by vibration monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer and as determined by the Contractor;

RC2: Even though the Employer specifies values, the Contractor cannot be avoidable being responsible for damage caused . Therefore, it is better to specify both values by the Employer and Contractor to monitor.

NK2: added "and as determined by the Contractor" to (a) and (c).

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer and as determined by the Contractor; and

JC1: In clause (c), there is a stipulation for allowable vibration value, however, no stipulation for the objects.

NK1: Regarding the objects to be monitored and apply countermeasures are stated in the top statement of this section. (in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site… as specified in the Contract or instructed by the Engineer.), so leave it as it is.

(d) Unless otherwise specified in the Contract, perform ~~measurement~~ monitoring at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) ~~Measurement~~ Monitoring and Evaluation

JC1: What is the difference between "monitoring" and "measurement"?

NK1: "Measurement" in (2) is changed to "Monitoring" as the result of discussion in the meeting 2020/02/20.

The Contractor shall

(a) Provide and maintain ~~measurement~~ monitoring equipment;

(b) Calibrate the ~~measurement~~ monitoring equipment before

~~footpaths, fences, railways, waterways, drainage, utilities and the like on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.~~

~~JICA require the following re-wording to the original text of this clause:~~

~~The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.~~

test Blasting and other Blasting operations;

(c) Carry out ~~measurement~~ monitoring at the frequencies described above;

(d) Evaluate the ~~measurement~~ monitoring results;

(e) ~~Calibrate the measurement equipment before test Blasting and other Blasting operations; and~~

JC1: It is strange that (d) regarding calibration of measurement equipment is located at the bottom. This should be right after (a).

NK1: The content of (d) is moved to (b).

(f) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

JC2: "measurement" should be "monitoring".

NK2: Changed to "monitoring" to coincide as right.

7.6.10 Particular Safety Measures for Blasting Work

(1) Identification of Blasting workers

~~Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting operations from other workers.~~

~~Provide armbands, uniforms or marked safety helmets to distinguish the explosive engineer, shotfirer(s), Spotters and other workers engaged in Blasting operations from other workers.~~

Provide ~~armbands,~~ clear visible identification mark, uniforms or marked safety helmets to distinguish the explosive engineer and shotfirer(s) ~~, Spotters and other workers~~ engaged in Blasting operations from other workers.

JC1: "all workers engaged in Blasting operations" should limited to the Blasting Engineer and Shotfirers.

NK1: As mentioned in JSSS 7.6.4 (3), the blasting work team consists of the explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations. There is no clause to specify Identification of Blasting workers in BS 5607. (1) is modified as right.

JC2: As there is no armbands, "clear visible identification mark", etc. is to be specified The personnel for blasting work are limited as explosive engineer and shotfirer in 7.6.4.(3). Other than them are deleted.

NK2: "armbands" is changed as commended. Personnel other than explosive engineer and shotfirer are deleted.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 7.6.5 [*Blasting Safety Plan*] and 7.611 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

JC1: This clause (3) is not provision of "charging" . Change the clause covering the contents of BS 5607 10.2 and delete the sentence for referring to BS.

7.6.12 Particular Safety Measures for Blasting Works

(1) Identification of Blasting workers

~~Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting Works from other workers.~~

Provide clear visible identification mark, uniforms or marked safety helmets to distinguish the Explosives engineer and shotfirer(s) engaged in Blasting Works from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 [*Blasting Safety Plan*] and 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operations shall not be permitted during charging of Explosives.

(b) Before charging, thoroughly clean the holes and do not leave any dust or debris; and

(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided:

(i) the over-vigorous use of stemming rods to force explosives into a shot hole.

(ii) the use of drill rods or other metal tools in a shot hole containing explosives.

(iii) vehicles running over explosives and other hazards involving impact or concussion.

(iv) shock tube detonators being initiated when subjected to "snap, slap and shoot".

7.6.12 Particular Safety Measures for Blasting Works

(1) Identification of Blasting workers

Provide clear visible identification mark, uniforms or marked safety helmets to distinguish the Explosives engineer and shotfirer(s) engaged in Blasting Works from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 [*Blasting Safety Plan*] and 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operations shall not be permitted during charging of Explosives.

(b) Before charging, thoroughly clean the holes and do not leave any dust or debris; and

(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided:

(i) the over-vigorous use of stemming rods to force explosives into a shot hole.

(ii) the use of drill rods or other metal tools in a shot hole containing explosives.

(iii) vehicles running over explosives and other hazards involving impact or concussion.

(iv) shock tube detonators being initiated when subjected to "snap, slap and shoot".

For other safety measures for charging work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using

NK1: Items (a)~(e) are “Points to care for loading explosives” in Japanese version which are derived from the Pre-study in 2019. They are left as they are.
Added some clauses of BS 5607 10.2 so that the contents of BS can be included.

(a) ~~Electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;~~

(b) ~~Detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;~~

1. NK: (a) and (b) are moved to (4) because they are specially for electric detonator.

(a) ~~No other activity such as drilling shall be permitted in the vicinity, whilst loading;~~ Drilling operation is not permitted during charging of explosive;

JC2: Drilling operation is not permitted during charging of explosive.のように簡潔に。Simple expression is to be made such as “Drilling operation is not permitted during charging of explosive”.

NK2: Modified as commended.

(b) Before ~~loading~~ charging, thoroughly clean the holes and do not leave any dust or debris;

(c) ~~Shock and friction which can cause accidental initiation of the charges such as below shall be avoided;~~ Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided;

JC2: Simple expression recommended such as “Explosive shall be treated gently without giving strong friction or shock.”

JC2: Description in (d) to (h) is incorrect. Please review the whole and make the description a little simpler in case, and take measures such as referring to BS.

NK2: The following (d) to (h) were incorrectly given numbered. Correct ones are (i) to (v). Therefore, the above (c) is strange sentence as JC commented. NK modified the (c) and revised numbers of following sentences: (iv) is deleted as it is not at time of explosive charging.

(i) the over-vigorous use of stemming rods to force explosives into a shot hole;

(ii) the use of drill rods or other metal tools in a shot hole containing explosives;

(iii) vehicles running over explosives and other hazards involving impact or concussion;

(iv) ~~rock, stone or similar material being projected from the blast, causing an accidental detonation of explosives, so that excess explosives should be removed from the blast site to a place of safety before blasting takes place; and~~

(v) shock tube detonators being initiated when subjected to "snap, slap and shoot".

(d) ~~No other activity such as drilling shall be permitted in the vicinity, whilst loading;~~

(e) ~~Before loading, thoroughly clean the holes and do not leave any dust or debris; and~~

(f) ~~Unused Explosives shall be returned to the Explosives store.~~

For other safety measures for loading work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators:

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing.

(ii) Check if shotfiring cables are not cut or damaged.

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage.

(iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires.

(v) Make sure there are no stray electric currents.

(vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility or radar.

(vii) Install a lightning detector near the Blasting area, stop Blasting Works when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(5) Measures for Blasting using non-electric detonators:

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(a) Measures in Ignition:

(b) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(c) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(d) The handle shall be removed from the shotfiring apparatus except when igniting.

I suggest that the following is not necessary as there are no requirements :

~~(6) Measures when Blasting near existing buildings and structures~~

~~Blasting near existing buildings or structures shall not be carried out unless specified in the Particular Safety Specification or instructed by the Engineer.~~

For other safety measures for charging work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators:

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing.

(ii) Check if shotfiring cables are not cut or damaged.

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage.

(iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires.

(v) Make sure there are no stray electric currents.

(vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility or radar.

(vii) Install a lightning detector near the Blasting area, stop Blasting Works when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(5) Measures for Blasting using non-electric detonators:

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(a) Measures in Ignition:

(b) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(c) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(d) The handle shall be removed from the shotfiring apparatus except when igniting.

comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.

(4) Handling Detonators

JC1: Same as (3) above, state the clause by deriving from BS 5607 10.4.3.

NK1: Same as (3) above, leave as it is and referring to BS 5607 10.4.3 as well.

(a) Measures for Blasting using electric detonators

JC1: Could it ("bus wire") be a mis-translation?

NK1: In OSHA and ACE, there is the definition of "Bus wire: an expendable wire used in parallel or series-in-parallel circuits to which are connected the leg wires of electric blasting caps."
BS 5607 10.4.3.2 b) specifies "All firing lines should be short-circuited" and 10.501 a) shotfiring cable. The bus wire is replaced with shotfiring cable.

JC1 Please modify the sentence so as to mean that if a danger by stray electric current is predicted, electric detonators shall not be used.

NK1: Regarding prohibition of using electric detonator due to stray electric current is stated in (iii) above. (v) is written mistakenly separating a part of (iv), "unless otherwise specified in the Contract" is moved to (iv), and (v) is deleted.
NK: (vi)is deleted and (iv) is modified as specified in BS 5607 10.2 below.

10.2 Handling and charging of explosives
When shotfirers are handling and charging explosives at the blast site, they should at all times avoid shock, friction and static electricity or induced radio waves from mobile phones or other electronic devices which can cause accidental initiation of the charges, such as
d) the use of mobile phones or other electronic devices;

~~(i) Make sure electric Check if the bus wire is not cut or damaged, and check its electrical continuity.~~

~~(ii) Check if there are no missing or previous wiring connections or wrong wiring connections.~~

~~(iii) Make sure there are no stray electric currents when using electric detonators.~~

~~(iv) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar, wireless telephone including mobile type.~~

~~(v) Do not use electric detonators unless otherwise specified in the Contract.~~

~~(vi) Prohibit bringing all mobile phones and radios from the Blasting areas.~~

~~(vii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.~~

NK1: It is complicated, so modified clauses are shown below.

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing;

(ii) Check if ~~the bus wire is~~ shotfiring ca;bles are not cut or damaged~~, its electrical continuity and short circuited~~

JC2: Status of short-circuit is already mentioned in (i), thus the part should be deleted.

NK2: Deleted.

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;

(iv) ~~Check if the bus wire is all shotfiring cables are not cut or damaged, and check its electrical continuity.~~

JC2: (iv) is a duplication of (ii).

NK2: Deleted.

(v) Check if there are no missing or previous wiring connections ~~or wrong wiring connections.~~ or mis-connection with previous blast wires.

JC2: What is "previous wiring connections"?

NK2: The phrase "if there are previous wiring connections" means that "if the wire used for previous blasting is left and connected to the wiring this time. It is modified to "mis-connection with previous blast wires."

(vi) Make sure there are no stray electric currents ~~when using electric detonators~~.

JC2: This phrase is not necessary because (a) is for "Measures for Blasting using electric detonators."

NK2: Deleted as commented.

(vii) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility, radar~~, wireless telephone, mobile phones unless otherwise specified in the Contract~~.

JC2: If the purpose of this item is that electric detonators shall not be used in the exemplified circumstances, prohibition of wireless phones etc. is not necessary.

NK2: 7.6.10. Particular Safety Measures for Blasting Work (4) (a) (viii) specifies Prohibit bringing into the blasting areas any mobile phone unless it is guaranteed that it will not adversely affect the electric detonators. Delete as commented.

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and ~~the bus wire~~ shotfiring cable shall be made just before ignition.

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(c) The handle shall be removed from the shotfiring apparatus

except when igniting; and

(d) ~~The shotfiring apparatus shall be properly stored according to the safety plan.~~

JC1: Isn't it (b) about ignition?

NK1: It is deemed important to prevent misuse and theft of shotfiring apparatus due to improper storage. Orders of (a) to (d) are changed.

JC2: As shotfiring apparatus included in explosives as a matter of definition, it is already covered by 7.6.7. Storage. Deleted.

NK2: Deleted as commented.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer~~, in which case the Contractor shall comply with the specified or instructed requirements.~~

JC2: Isn't this included in the specification / instruction?

NK2: It is deemed natural that requirements are included in the specification/instruction by the Engineer. The underlined part is deleted.

7.6.11 Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

JC1: Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)

NK1: Taking into account the contents, modification is made as right.

JC1 : (e) Action such as (e) is not actually not made at the blasting site. Deleted.

JC1: (h) Is it possible?

NK1: modified them to the Contractor and within a week.

JC1: No need to specify (i) because 8.4.5(7) mentions about record (general).

NK: Deleted.

JC1: (j) ditto.

NK: Deleted.

~~If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the Blasting Safety plan and the following measures shall be adopted initially by the shotfirer:~~

(a) ~~Immediately remove the shotfiring apparatus such as the handle and the bus wire from the shotfiring apparatus;~~

(b) ~~Make short circuit or ground and completely isolate the bus wires;~~

(c) ~~Report to the Explosive Engineer for further instructions;~~

7.6.13 Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting:

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until after the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives;

The following treatment procedure of misfired Explosives shall be taken:

(i) Immediate remedial action.

(ii) Delayed remedial action.

(iii) Further attempt at detonation.

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action;

The following initial actions shall be taken by the shotfirer:

(i) Prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

7.6.13 Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting:

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until after the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives;

The following treatment procedure of misfired Explosives shall be taken:

(i) Immediate remedial action.

(ii) Delayed remedial action.

(iii) Further attempt at detonation.

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action;

The following initial actions shall be taken by the shotfirer:

(i) Prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(d) ~~Prohibit anyone other than the shotfirer and other authorised personnel from entering the Blasting site. Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;~~

(e) ~~Clearly indicate the presence of misfired Explosives and install barriers and signs and prevent anyone other than the shotfirer and authorised person(s) from approaching to the Blasting site;~~

(f) ~~Take appropriate procedures to identify the cause of the misfire and to determine the handling of the misfired explosive;~~

(g) ~~No other work shall be permitted until treatment of the misfired Explosives is completed;~~

(h) ~~The Explosive Engineer shall notify the Engineer immediately after any misfire event;~~

(i) ~~The Shotfirer shall prepare records of misfired Explosives showing the date and time of the Blasting Works and the result of the subsequent treatment. The Explosive Engineer shall check and countersign the records; and~~

(j) ~~The Contractor shall submit the records to the Engineer immediately after the successful treatment of the misfire event.~~

NK1: It is complicated, so modified clauses are shown below.

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

JC2: Terms of "Explosive" and "explosive" are both used in this section.

NK2: As "Explosive" is a defined word in 7.6.2. Thus, "Explosive" should be used in this section. However, it is questionable if it should be defined at all same as "Blasting". To MD: please review the above.

(a) Procedure of treatment of misfired Explosives

The following treatment procedure of misfires Explosive shall be taken:

(i) Immediate remedial action;

(ii) Delayed remedial action;

(iii) Further attempt at detonation; and

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

JC2: These four terms in (i) to (iv) cannot be understood well. Provisions are stated below for "immediate action" and "delayed action". What are the other two? If provisions for treatment of misfire is necessary, it should be of simple contents.

NK2: (i) Immediate remedial action is specified in (b), (ii) Delayed remedial action and (iii)further attempt at detonation is in (c). (iv) Inspection to confirm complete is

(ii) Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan.

(iii) Disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together.

(iv) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found.

(v) Make a further attempt to fire the shot.

(vi) Report to the explosive engineer for further instructions.

(vii) Do not collect any exposed explosives before further action is taken.

(viii) Do not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire.

(ix) Other actions specified in 10.5.4.1 [Initial actions]in BS5607.

After the initial actions, the following initial remedial actions shall be taken by the shotfirer:

(i) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and

(ii) Make a further attempt to fire the shot.

(c) Delayed remedial action and further attempt at detonation:

(i) After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken.

(ii) The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes.

(iii) The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.

(d) Inspection to confirm complete detonation;

After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607.

(e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; and

(f) The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions.

(ii) Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan.

(iii) Disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together.

(iv) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found.

(v) Make a further attempt to fire the shot.

(vi) Report to the explosive engineer for further instructions.

(vii) Do not collect any exposed explosives before further action is taken.

(viii) Do not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire.

(ix) Other actions specified in 10.5.4.1 [Initial actions]in BS5607.

After the initial actions, the following initial remedial actions shall be taken by the shotfirer:

(i) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and

(ii) Make a further attempt to fire the shot.

(c) Delayed remedial action and further attempt at detonation:

(i) After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken.

(ii) The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes.

(iii) The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.

(d) Inspection to confirm complete detonation;

After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607.

(e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; and

(f) The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions.

added this time.

The comment regarding “simple contents” is somewhat different from the following comment previously given by JICA.

“Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)” (Translation has been partially abbreviated.)

NK thinks that present provisions regarding the immediate remedial actions to take for misfire are concrete ones to be specified.

NK2: As above, additional sentences are added in right to meet the JC comments.

(b) Immediate remedial action

The following initial ~~remedial~~ actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

(v) make a further attempt to fire the shot; and

(vi) report to the explosive engineer for further instructions;

(vii) not collect any exposed explosives before further action is taken;

(viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and

(ix) other actions specified in 10.5.4.1 [Initial actions]in BS5607.

After the initial actions, the following initial remedial actions shall be taken by the shotfirer:

(i) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and

(ii) make a further attempt to fire the shot.

(j) Delayed remedial action and further attempt at detonation

~~After the immediate remedial action, the delayed remedial action and further attempt at detonation shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.~~

After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken.

The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes. The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607. (k) Inspection to confirm complete detonation After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607. (l) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (m) ~~The Contractor shall notify the Engineer within a week after any misfire event.~~ The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions. JC2: modified (f) as above.		

JSSS in English R3 for Issue 2（2020/3/30） Red letters: NK revision JC1&2: JICA comment 1 (to Issue 1) &2 (to R2), MM: Minutes of Meeting (2/20), NK1 &2: NK Comment 1 to Issue2 &2 (to R2)	JSSS in English Issue 2 (2020/4/28 by MD) With comments by MD *MD Comments* NK6/22: Comments	JSSS in English R4 for Issue 3 DFR on Issue 2 of 2020/4/28 (2020/6/23) NK: Comment and Revision

7. EXCAVATION WORKS 7.1 **GENERAL** 7.1.1 **Scope** (1) This Chapter specifies the safety requirements for surface excavation work (excluding tunnelling) which shall include excavation of all types and using all methods including manual excavation, machine excavation and excavation by Blasting ~~together with all associated embankment filling, backfilling and Earthwork Support.~~ JC1: Embankment is not necessary to stipulate. Earthwork support, too because it is stipulated in Chapter 4. Reinstate "Trench Excavation". There may be opinions that why only trench excavations must be stipulated, however, based on the fact that there have been so many accidents related with trench excavation, we request to stipulate in JSSS, even there may be duplication with OSHA.	**7. 7 EXCAVATION WORKS** 7.1 **GENERAL** 7.1.1 **Scope** *Please note that this item is reformatted to be consistent with later Chapters.* *The contents of each Chapter are now correctly referred to as a heading, i,e, Excavation Works and also Blasting Works, which is a part of Excavation Works.* (1) This Chapter specifies the safety requirements for excavation works which include: (a) Open-cut and all other types of surface excavation; (b) Pits, trenches, basements and all other types of structural excavation; (c) Excavation using all methods such as manual excavation and machine excavation; (d) Excavation by Blasting (hereinafter referred to as "Blasting Works");	**7. EXCAVATION WORKS** 7.1 **GENERAL** 7.1.1 **Scope** (1) This Chapter specifies the safety requirements for excavation works which include: (a) Open-cut and all other types of surface excavation; (b) Pits, trenches, basements and all other types of structural excavation; (c) Excavation using all methods such as manual excavation and machine excavation; (d) Excavation by Blasting (hereinafter referred to as "Blasting Works");

NK1: Deleted as commented. Provisions for Trench Excavation will be reinstated in 7.5.

I suggest that the following is left in as it is as embankment filling and backfilling are an intrinsic part of the works in this chapter. If not to be covered by these rules where is it to be covered?

"Backfilling" has nothing to do with temporary excavations it is to excavation for permanent works whereby the Contractor shall backfill working space and voids above foundations etc. efficiently as soon as possible to ensure that openings are not left unsafe and open for excessive periods. It is also referred to in the later clause 7.2.1 (6).

(e) All associated embankment filling, backfilling and disposal; and

(f) Earthwork Support,

and which are hereinafter collectively referred to as "Excavation Works".

(2) Excavation in tunnelling is not included.

(3) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

7.1.1 ~~Safety Plan and Instructions to Workers~~

~~(1) Prepare a safety plan describing the safety requirements for Excavation Works and Inform all relevant workers of the content and requirements.~~

~~(2) Plan the execution of all Excavation Works by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.~~

NK6/22: 7.1.2 is added as MD proposed to stipulate at 7.5.1 Monitoring Impact of Excavation Works on Other Properties.
The Contractor shall comply with the requirements of JSSS 6.1.3 [Monitoring Impact of Works on Other Properties].

(e) All associated embankment filling, backfilling and disposal; and

(f) Earthwork Support,

and which are hereinafter collectively referred to as "Excavation Works".

(2) Excavation in tunnelling is not included.

(3) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

7.1.2 **Monitoring of Works and Surroundings**

(1) The Contractor shall monitor the Excavation Works to demonstrate that they are performing safely to the designed limits and for the intended purpose.

(2) For more details, refer to JSSS 2.1.7 [Monitoring and Records].

7.2 **PARTICULAR SAFETY MEASURES FOR EXCAVATION WORKS**

7.2.7 **General**

(1) The Contractor shall plan all excavation work so that it can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of TW, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, ~~in conformity with GC 4.10. taking account of all the conditions of the Site.~~ taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor.

JC2: Though this is commented last time, we wanted sentence a little more considered. that I thought a little more. Is the following example sentence too long?

"taking into account of all information given by the Employer in the Bidding document and/or subsequently obtained by it."

NK2: Modified as right.

7.2 **PARTICULAR SAFETY MEASURES**

7.2.1 **General**

(1) The Contractor shall plan all Excavation Works so that they can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of Temporary Works, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

The following added wording to the above is not recommended:

"taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor."

The addition appears to have no connection with safety.

"Relevant information" meaning what and to whom?

"Subsequently" meaning what and when?

7.2 **PARTICULAR SAFETY MEASURES**

7.2.1 **General**

(1) The Contractor shall plan all Excavation Works so that they can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of Temporary Works, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

(3) Unless otherwise specified in the Contract, requirements for sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, also dependent on the shape, nature the soil, hydraulic and geological conditions of the Site.

(4) ~~Earthwork Support~~ In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for preserving the structural integrity of all sides and soffits of excavations and shall provide ~~whatever Earthwork Support may be necessary to achieve this.~~ earthwork support for the excavation of depth ~~exceeds 1.5m in principle unless it is possible to excavate with a slope suitable for the soil condition.~~ exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition .

JC1: Please reinstate the provision in 8.2 (3) of Japanese version "In accordance with JSSS 7.2.1[Earth Retaining Work] (2), the earth retaining shall be planned in principle to be provided for the excavation of depth exceeds 1.5m;".
NK1: added (5).

JC2: Term of "adequate and stable" used in GC is used here and modified as right.
NK: modified as right.

As "Contractor" is used rather than "Bidder" it follows that subsequently means after the contract has been awarded and therefore, that the Bid is to be based only upon the "relevant information" provided in the Bidding document.

This is not correct and it is a potentially risky change as it transfers the responsibility for describing all site conditions to the Employer via the bidding documents and ignores the Contractor's basic obligations.

The Contractor has a fundamental obligation to satisfy himself of conditions (taking account of cost and time) before he submits his Tender (Bid) and the full and relevant requirements are stated in GC 4.10.

Many claims are founded on interpretation of this clause and I do not recommend any change such as you have suggested, it is actually not necessary and may compromise interpretation of this basic clause.

Although reference is perhaps not vital, this is why I had included reference to GC 4.10 to emphasise that we were not changing the contract but this has been deleted

Also, TW now becomes Temporary Works as I advised in January.

NK6/22: Agreed.

(3) Sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, dependent on the dimensional constraints of the Site and the nature of the soil, hydraulic and geological conditions.

(4) The Contractor shall be responsible for preserving the structural integrity of all sides and excavations and shall provide whatever Earthwork Support may be necessary to achieve this, in accordance with the requirements of JSSS 6.2 [*Earthwork Support*]

The following added wording (which is any case duplicated with JSSS 6.2 1 (4)) to the above is not recommended:

"earthwork support for the excavation of depth exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition"

As already advised I do not recommend any such change or the placing of any restriction on when support shall or shall not be provided, there is no need to do this when it is 100% the Contractor's risk anyway.

It to some extent follows OSHA but is actually not compliant with OSHA.

I had previously advised as follows:

> *Problem is that OSHA appears to restrict to a 1.51 m minimum depth, unless "examination of the ground by a competent person provides no indication of a potential cave-in." There is no definition of "competent person" nor do we suggest that it is necessary.*
>
> *We also recommend that no such minimum should be stated and that the Contractor shall be responsible no matter what the depth, no such minimum is stated in JSSS 7.2.*

I have now included the "Competent Person" in the definition of operation leader in Annex 1.1, but I still do not feel comfortable that such a loosely defined minimum be applied in a standard specification.

There may be a risk of accident and injury to workers due to collapse of sides e.g. the effect of the load and vibration from road traffic on trenches and pits in roads which are less than 1.5 metres deep, and also an effect on adjacent

(3) Sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, dependent on the dimensional constraints of the Site and the nature of the soil, hydraulic and geological conditions.

(4) The Contractor shall be responsible for preserving the structural integrity of all sides and excavations and shall provide whatever Earthwork Support may be necessary to achieve this, in accordance with the requirements of JSSS 6.2 [*Earthwork Support*]

buildings, structures or Contractors Equipment. If not foreseen by the "competent person" this then creates a problem for the HSO.

I also note that later, examples of Earthwork Support measures have been added for sides less than 1.5 m deep so I suggest that this threshold is no longer required.

Further to the above however, I suggest that there should be no mention in this Chapter 7 of requirements for earthwork support as this is duplication of the common requirements in Section 6.2 and which will inevitably create ambiguity and confusion.

I have therefore deleted all reference to the 1.5 m threshold in Chapter 7 and sloping/benched sides and dealt with this entirely in Section 6.2.

NK6/22: The 6.2.1 stipulates as follows:

6.2 EARTHWORK SUPPORT

6.2.1 General

(4) The requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by him and judged by him to be safe, stable and free from any risk of movement or collapse:

(a) Excavation in rock; and

(b) Excavation less than 1.5 m deep.

We agreed not to specify here about 1.5 m deep in this Chapter.

(5) ~~In accordance with JSSS 1.23 [Emergency Response Plan?], 1.23.2,~~ the Contractor shall. execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.

~~(5) The Contractor shall execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.~~

JC2 : This reference seems to be wrong. 1.23.2 is unnecessary.

NK2: The 1.23.6 (3) in 1.23 [Emergency Response Plan] in Issue 7 specifies drainage, however reader of JSS may be confused as the reader consider what relation of excavation works and emergency is, so deleted this reference as right.

I had deleted the above clause in the draft giving the following reason:

It is not only drainage that must be provided, the Contractor shall design and provide everything necessary. In any event this is already mentioned in JSSS 1.26.2 in a more comprehensive manner and need not be repeated more simplistically here.

NK: agreed to delete this.

I have edited the following clauses to make the wording consistent with the Contract and with JSSS 6.1 3 and 6.2.

(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and support work ~~without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site and unless otherwise specified as specified~~ in the Contract ~~(see Annex 1.3 Particular Safety Specification),~~ so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such ~~damage or weakening~~ by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Works.

~~(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and Earthwork Support without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").~~

~~The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation on or outside the Site.~~

~~The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage by other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Excavation Works.~~

JC1: The provision of 8.2 (5) of Japanese version mentions "as stipulated separately in the Contract". The nuance of English version is completely different. Please modify it as the Employer determines the requirement.

The original text of the above clause has been suggested to be revised by JICA/NK as follows:

The Contractor shall execute all Excavation Works and associated filling, backfilling and support work so that the criteria of allowable values specified in the Contract (see the Particular Safety

(5) The Contractor shall execute all Excavation Works and associated filling, backfilling and Earthwork Support without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage by other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Excavation Works.

NK1: is modified as (6).

JC2: The sentence of “any” is too strict.
NK2: modified as above.

NK1: added (7) to specify the Japanese 8. 2 (6)

Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such adverse effects by designing and providing permanent or temporary supports and reinforcement before commencing Excavation Works.

I do not recommend that the above change be made for the following reasons:

The essential basis of the Contract (and the rule of Law in most countries) is that the Works shall be executed by the Contractor without causing any damage at all to neighbouring properties.

If any damage is caused then the Employer is open to claim for repairing such damage from adjacent owners and for which the Contractor should be liable subject to the requirements of the Contract.

FIDIC GC 17.1 (b) applies.

17. Risk and Responsibility 17.1 Indemnities

> *The Contractor shall indemnify and hold harmless the Employer, the Employer's Personnel, and their respective agents, against and from all claims, damages, losses and expenses (including legal fees and expenses) in respect of:*
>
> *(b) damage to or loss of any property, real or personal (other than the Works), to the extent that such damage or loss arises out of or in the course of or by reason of the Contractor's design (if any), the execution and completion of the Works and the remedying of any defects,*

Insurance may also be compromised if not handled properly under GC 18.3.(d) (ii).

The added text to this clause is not necessary, it confuses any meaning and implies that there is some flexibility i.e. that some damage or “adverse effect” is acceptable if it falls within “allowable values” when as a common basis this is not correct.

If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,

I recommend that the default situation should be that the Contractor is instructed as a general rule via JSSS to set up and manage monitoring to ensure his compliance (i.e. that damage does not occur), This is in principle as the earlier draft of JSSS.

This will require further development of the contractor's monitoring requirements and I have drafted a new clause 7.5.3 to deal with this.

In any exceptional rare case for example on large projects in congested areas and where damage is likely and unavoidable then the Employer should already have consulted and agreed with the owners and residents that the Works can be executed in a manner that may cause some damage and has agreed that compensation will be paid for such damage in accordance with a scale of damage. However, I suggest that this should not be a norm or a usual situation and that JSSS or the User Guide should not imply that this is a common option and I suggest that it should be the exception rather than the norm, otherwise it will be misunderstood by some Executing Agencies that such damage may be allowable when actually it is isn't.

	During our January 2020 discussion, I said I would research this further and requested JICA to provide examples of the reference documentation for the Hong Kong MTR. *I have briefly studied the information provided by JICA and consequently believe that this may have been wrongly interpreted. In reviewing I feel it is important to note that:* *1) Damage is the responsibility of the Contractor and the Engineer has no authority to determine what damage is acceptable or not.* *2) The Engineer is not part of the relationship between Site owner and adjacent owners and if any damage is caused to neighbouring property, the Engineer's opinion is not relevant, adjacent owners usually have a basic right of claim against the Employer.* *JICA appear to consider that some damage to adjacent buildings, structures, railway, roads, footpaths slopes and utilities etc., is "allowable" within certain specified limits but I feel that this is not correct and not supportable under the HK MTR information provided.* *It is apparent that:* *1) No damage or deformation to buildings, paving and services, etc. is allowable.* *2) If any damage is caused, the Contractor shall stop the Works and shall then be responsible for proposing and implementing remedial measures.* *I consider that monitoring of any movement is not for the purpose of judging whether damage is reasonable or not but is to predict whether any damage is likely to occur, in which case, it then in total becomes the Contractor's responsibility to remedy.* *Please note also that in the sample provided for the Hong Kong MTR, whilst sample monitoring ranges are provided, Clause 2.19 (3) on page 2/10, makes clear that this is for information only and that in any event, the Contractor must meet his obligations under the Contract:* ***"the Contractor shall satisfy himself that the specified criteria is adequate to fulfil his contractual obligations and shall take any additional measures necessary to avoid damage to property."*** *Pages 40 and 42 are missing from the provided copy of the HK MTR Conditions of Contract, therefore I cannot complete my review of the Contractor's obligations for care of the Works under Clause 22 of the Contract.* *I do not in any event recommend the concept of the Employer or Engineer establishing measurement criteria as a general rule for predicting damage, as it is difficult to do and if wrong it could affect liability of the Employer and Engineer and even JICA if they are called upon to fund it.* *This can be complex legal and contractual territory that I recommend should not be dealt with by JSSS as if it were a simple and common issue.* *FIDIC GC 17.1 (b) applies and I suggest that it should not be compromised by the suggested addition to this clause.* NK6/22: We would like to specify this (6) as MD's proposed stipulation in accordance with GC and request JICA to review this again though JICA commented to include criteria of allowable values.	
(7) If loose rocks, standing trees, etc. existing outside the Site above the excavation area in the Site may pose a danger to workers or construction equipment, take the following measures unless	(7) If loose rocks, standing trees, etc. existing ~~outside the Site~~ above the excavation area ~~in the Site~~ may pose a danger to workers or construction equipment, take the following measures unless	(6) If loose rocks, standing trees, etc. existing above the excavation area may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

otherwise specified in the Contract;

NK2: Added outside and inside to make clear the rocks, etc. are not in the Site. This issue was argued by JICA at the beginning of preparation. It can be actually handled by Variation, however it is left as JICA wants.

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and~~ take actions in accordance with the Engineer's instruction.

JC2: There are two different elements in item (b). We propose to re-sort the contents as follows.
(a) removal of loose rocks ~ ~ ~
(b) take safety measures including change to the construction method
(c) requesting the Engineer to issue a variation???

NK2: For the danger against loose rocks, etc. located outside the Site, the Contractor shall take measures as instructed by the Engineer. It is doubtful to mention about variation.

NK2: modified as above.

7.2.8 **Safety Measures before Commencing Excavation Works**

(1) The ~~HSO~~ Contractor shall inspect [1]the excavation work area and surrounding areas before starting work each day and after adverse climatic conditions or ~~earthquake to ensure that there are: the following items meet the criteria of allowable values and counter measures determined by the Contractor and given in the Contract (see the Particular Safety Specification) to avoid adverse effects to surrounding areas and buildings by excavation~~: mentioned in JSSS: 2.7 [ADVERSE WEATHER REQUIREMENTS]. The inspection shall include the following areas and items:

JC1: The HSO take all responsibility for safety. The HSO's duty is to review and check whether the safety activities are taken at the site by the Site staff in charge of construction (the Contractor) in accordance with the Safety Plan and manage safety at the Site.

From this concept, "The HSO shall inspect work area before starting work…" is to be revised to "The Contractor shall …"

NK1: Revised as commented here and also other clauses.

otherwise specified in the Contract;

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and~~ Take actions in accordance with the Engineer's instruction.

The above is difficult to understand, conditions outside the Site are not usually within the Scope of a Contract.

If such hazards exist and were apparent at or before Tender stage, then the neighbour is usually legally obliged to remove the risk at his own cost and should be requested to do so.

If the risk is created by the execution of the Permanent Works then this can mean that the Contractor has created the risk by his methods and it should be a part of the contractor's scope responsibility anyway.

Rather than concentrating upon the manner in which this is dealt with contractually, I suggest that JSSS should concentrate on safety i,e. by the HSO removing the risk and taking appropriate measures immediately.

I suggest as follows:

(8) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to workers, unless otherwise instructed by the Engineer, the HSO shall prohibit workers from entering the working areas and issue appropriate instructions including for example to:

(a) Provide protective overhead safety barriers or safety nets;

(b) Carefully remove loose rocks;

(c) Provide (or improve existing) Earthwork Support to unstable areas;

NK6/22: agreed to the above.

7.2.2 **Safety Measures before Commencing Excavation Works**

(1) The HSO shall inspect the Excavation Works area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake as described in JSSS: 2.7 [*Adverse Weather Requirements*]. The inspection shall include the following areas and items:

In your draft for the above, "HSO" has been changed to "Contractor" which for reasons explained is not correct. I recommend that wherever an inspection is required for safety purposes it should state HSO as he is responsible. In practice he may delegate this internally e.g. to an operation leader but that is his choice.

NK6/22: agreed to the above (1) to specify the HSO because of the safety responsibilities of HSO.

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) Take actions in accordance with the Engineer's instruction.

(7) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to workers, unless otherwise instructed by the Engineer, the HSO shall prohibit workers from entering the working areas and issue appropriate instructions including for example to:

(a) Provide protective overhead safety barriers or safety nets;

(b) Carefully remove loose rocks; and

(c) Provide (or improve existing) Earthwork Support to unstable areas.

7.2.2 **Safety Measures before Commencing Excavation Works**

(1) The HSO shall inspect the Excavation Works area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake as described in JSSS: 2.7 [*Adverse Weather Requirements*]. The inspection shall include the following areas and items:

[1] Refer to JSSS 1.10 [*Contractor's Health and Safety Officer at the Site*]

JC1 : The premise is that the allowable effect and countermeasures shall be given by the Employer for surrounding areas outside of excavation. The provision shall be made on the premise.
NK1: The clause is modified as above.

JC2: This clause stipulates to check the area before starting the work every day and after earthquake, etc. It is not necessary to mention about allowable values. ("allowable value" is used in 7. (6) as it has high affinity.)
NK2: JC deleted the relevant part as above.

JC2: "adverse climatic conditions"は"strong rain fall"ぐらいでいいのでは(異常時だけではないので)
Isn't it enough with "strong rain fall" instead of "adverse climatic conditions"?
NK2: JSSS 2.7 mentions measures for heavy rain, strong wind and storms, heavy snow and ice, lightning, earthquake and tsunami as adverse weather, and 2.7.7 specifies Inspection of Temporary Works after Adverse Weather and Earthquake.
NK added the to refer to 2.7 as right.

(a) ~~No~~ potentially unsafe areas where there may be any risk of Landslide;

(b) ~~No~~ loose rock or boulders which may be at risk of falling;

(c) ~~No~~ cracks in the excavation work area and the surrounding area;

(d) ~~No~~ changes in ground water level, surface or any spring water; and

(e) ~~No~~ deleterious effect due to freezing conditions.

JC1: The expression "No something" is excessive. Those (for example no cracks, no change of water level) make works impossible to perform.
NK1: The conditions are changed to relate to the criteria (in (1) above) given in the Contract as above.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

MM: as mentioned MM 3.(1) mentioned in the first line above.
NK1: added requirements in Japanese JSSS as (3) to (7) below.

(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 7.4.2 [Setting of Passage];

(4) Provide support or protection for the underground services appropriately in accordance with 3.1 [Existing Underground and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services;

IJC2: It is hard to understand what this clause provides. Is it for protection against falling?
NK2: The Japanese draft is mentioning about protection for the underground services. Add a phrase "for the services" at the end of the sentence.

(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [Prohibition of Entry], install entry prevention facilities (fences,

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rock or boulders which may be at risk of falling;

(c) Cracks in the Excavation Works area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [*Vertical Access*] ~~7.4.2 [Setting of Passage];~~

Please note that I have added a new subclause in JSSS Section 6.4 Vertical Access, covering steps, stairs and ramps

(4) Provide support or protection for the underground services appropriately in accordance with JSSS Chapter 3 [*Existing*

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rock or boulders which may be at risk of falling;

(c) Cracks in the Excavation Works area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [*Vertical Access*];

(4) Provide support or protection for the underground services appropriately in accordance with JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], and take

temporary enclosures, etc.), warning flags, and signs, etc.;

JC2: Do the entry prevention facilities mean fall protection or entry control?
NK2: "entry prevention facilities" means entry control facility to prevent those from their falling at the site..

(6) ~~Take the following measures when there is a risk of danger to third parties, workers, construction equipment, etc. by the fall of excavated soil/rock at the lower parts (bottom) of the excavation site~~;

Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock;

JC2: "Danger to construction equipment" sounds strange. Are persons and equipment treated same in this meaning?
NK2: "Damage to equipment" may be more suitable. Modified as above.

JC2: I wonder which is correct "at" or "into".
NK2: We modify as follows: "measures shall be provided at the lower part" as Take the following measures at the lower parts (bottom) of the excavation site; when there is a risk of …

(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [Prohibition of Entry]; and
(b) Install protective fences that can catch falling rocks, etc.

JC2: Am I the only one who feels a sense of discomfort to (b) catch falling rocks?
NK2: English-English dictionary and internet show as follows:
Receive means: to get or be given something: (e.g. E-mail)
Catch means: to take hold of something, especially something that is moving through the air: (e.g. ball)
Internet figures for catch falling rocks show falling rock fences.
We leave "catch" as it is.

(7) Risk prevention measures against falling rocks
(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and
(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.

JC2: Is it appropriate to provide earth retaining and protective net beforehand and to prohibit workers to enter into the excavation area?
NK2: It is appropriate to take preventive measures against possibility of falling rocks. However, the present clause can be read that no worker shall enter the site. Change the sentence that workers are prohibited to enter until safety is confirmed as right.

7.2.9 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the excavation work where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all

Underground, Concealed and Overhead Services], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services.

(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc..

I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)

~~(6) Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock;~~

~~(a) Identify dangerous locations, install entry prevention facilities such as fences, temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*]; and~~

~~(b) Install protective fences that catch falling rocks, etc.~~

I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)

~~(7) Risk prevention measures against falling rocks~~

~~(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and~~

~~(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.~~

NK6/22: confirmed.

7.2.3 **Safety Measures during Excavation Works**

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the Excavation Works where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement

measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services.

(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc.

7.2.3 **Safety Measures during Excavation Works**

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the Excavation Works where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement

necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken. (3) ~~Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Work is completed.~~ Backfill the temporary excavation area as immediately as possible after the relevant work is completed. JC2: (3) has become unable to understand. NK2: The Japanese draft was that for temporary excavation, it is required to backfill immediately after the work is completed. Modified. (4) For places where open excavation work is performed, maintain the necessary illuminance to perform the work safely.	all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken. (3) Backfill any temporary excavation area as soon as possible after the relevant work is completed. *The original clause had nothing to do with temporary excavations it is to excavation for permanent works whereby the contractor shall backfill working space and above foundations etc. efficiently as soon as possible to ensure that openings are not left open and unsafe for excessive periods.* *I recommend that the original clause goes in.* NK6/22: agreed. (4) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Works are completed. (5) For places where open Excavation Works are performed, maintain the necessary illuminance to perform the work safely.	all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken. (3) Backfill any temporary excavation area as soon as possible after the relevant work is completed. (4) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Works are completed. (5) For places where open Excavation Works are performed, maintain the necessary illuminance to perform the work safely.
7.3 **MANUAL EXCAVATION WORKS** 7.3.7 ~~General~~ During manual excavation works, the Contractor shall: (1) ~~Not permit any excavation without providing Earthwork Support to all vertical surfaces.~~ Not permit any excavation of depth exceeds 1.5m ~~in principle~~ without providing Earthwork Support to all vertical surfaces as specified in JSSS 7.2.1 [General] (4). JC2: deleted "in principle". (2) Not permit excavation of the excavated surface/ground that stands vertically or close to the vertical, and excavation of the ground under the foundation of existing structures. JC: modified as right. NK: JC requests MD to check and modify the expression of this clause after understanding the situation shown below.  (3) Maintain sufficient distance between workers. (4) When breaking or removing loose rock, pay attention to the	7.3 **MANUAL EXCAVATION WORKS** 7.3.1 **General** During manual Excavation Works, the Contractor shall: ~~(1) Not permit any excavation without providing Earthwork Support unless otherwise permitted by the HSO in accordance with JSSS 6.2 [*Earthwork Support*].~~ *The following added wording to the above is not recommended:* "depth exceeds 1.5m without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4). " *See above and previous notes, I do not recommend that the draft be changed in this way.* *Please refer to my earlier notes; I do not recommend any reference here to the 1.5 m threshold and recommend that this is dealt with entirely in Section 6.2.* *The original text of this clause (as edited above) has been transferred to 7.1 as a general item.* NK6/22: agreed as mentioned in 7.2.1 (4) not to specify 1.5 m limits. ~~(2) Not permit excavation of the vertical surface of the excavated area, or excavation of the ground under the foundation of existing structure~~ *Above is edited as follows:* (3) Not undermine any excavation under and beyond the vertical face. (4) Not excavate under existing foundations (5) Maintain sufficient distance between workers. (6) When breaking or removing loose rock, pay attention to the	7.3 **MANUAL EXCAVATION WORKS** 7.3.1 **General** During manual Excavation Works, the Contractor shall: (1) Not undermine any excavation under and beyond the vertical face. (2) Not excavate under existing foundations. (3) Maintain sufficient distance between workers. (4) When breaking or removing loose rock, pay attention to the

stability of the rock and the direction of its fall. (5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work. JC1: (a) This expression is excessive because it means that earth retaining is required regardless of the depth. (b) Originally, the Japanese version intended to prohibit to excavate under the existing foundation etc. NK1: For (a), the clause is modified as right. For (b), a new clause (2) is added from 8.4.1 (1) of Japanese version. MM: 3. (1) Addition of 7.4 MECHANICAL EXCAVATION WORK to specify requirements in Japanese JSSS as 7.4 below.	stability of the rock and the direction of its fall. (7) When using a lever for removing rock, select equipment that has appropriate length and strength for the work. *The following clause has been added in the JICA draft:* *All of the content (and more) is already included in Chapter 4 [Contractor's Equipment], it is not necessary to duplicate it here. Please confirm which is to be deleted, here or Chapter 4?*	stability of the rock and the direction of its fall. (5) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.
7.4 MECHANICAL EXCAVATION WORK The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical excavation works with the equipment: (1) In accordance with JSSS 2.3 [Prohibition of Entry], prohibit workers from entering the places where workers are in danger due to the mechanical excavation works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters. (2) Take the safety measures prescribed in JSSS 4.2.3 [Safety Measures in Operation], 4.2.4 [Restriction to Operate Construction Equipment for Other Use] and (3) to (4) below. (3) ~~The operators shall operate the equipment following the following rules:~~ Ensure that the operators shall: JC2: Modified. (a) Operate the equipment with paying attention always to the position of workers near the working range; (b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters; (c) After the work, ~~do~~ not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse. (d) Make sure that the bucket of equipment shall not pass over the operator's seat of another equipment. (4) Ensure that workers shall: ~~Workers shall work follow the following rules.~~ (a) Not enter under the bucket of equipment that is loading materials; and (b) Keep away from dump trucks under loading or unloading materials. MM 3. (1) addition of 7.5 TRENCH EXCAVATION to specify requirements in Japanese JSSS is added as 7.5 below.	*The following clause has been added in the JICA draft:* *All of the content (and more) is already included in Chapter 4 [Contractor's Equipment], it is not necessary to duplicate it here. Please confirm which is to be deleted, here or Chapter 4?* NK6/22: agreed to delete 7.4 Mechanical Excavation because the following provisions are mostly general ones and covered in Chapter 4. Do we need to stipulate to refer to Chapter 4 for requirements of Mechanical Excavation as only manual excavation is specified? **7.4 MECHANICAL EXCAVATION WORK** 7.4.1 General The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical Excavation Works with the equipment: (1) In accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], prohibit workers from entering the places where workers are in danger due to the mechanical Excavation Works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters. *As noted in the original draft, it is not good practice and there is no need to include such general cross reference to other sections. The referenced sections and chapters are of general application anyway.* *Please refer to JSSS 1.4.9 (2) which explains this.* (2) Take the safety measures prescribed in JSSS Chapter 4 [*Contractor's Equipment*] *Cross reference is not necessary and references have changed.* (3) Ensure that the operators shall: (a) Operate the equipment always paying careful attention to the position of workers near the working range; (b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters; (c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse; and	~~7.4 MECHANICAL EXCAVATION WORK~~ ~~7.4.1 General~~ ~~The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical Excavation Works with the equipment:~~ ~~(1) In accordance with JSSS 2.3 [*Prohibition of Entry Dangerous Work*], prohibit workers from entering the places where workers are in danger due to the mechanical Excavation Works by placing notices of "No Entry" at easy to see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.~~ ~~(2) Take the safety measures prescribed in JSSS Chapter 4 [*Contractor's Equipment*]~~ ~~(3) Ensure that the operators shall:~~ ~~(a) Operate the equipment always paying careful attention to the position of workers near the working range;~~ ~~(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;~~ ~~(c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse; and~~ ~~(d) Make sure that the bucket of equipment shall not pass over the operator's seat of other equipment.~~

	(d) Make sure that the bucket of equipment shall not pass over the operator's seat of other equipment. (4) Ensure that workers shall: (a) Not enter under the bucket of equipment that is loading materials; and (b) Keep away from dump trucks under loading or unloading materials. *The above and more is already included in Chapter 4 [Contractor's Equipment], why is it necessary to duplicate some of it here? I suggest that it is not necessary here.*	~~(4) Ensure that workers shall:~~ ~~(a) Not enter under the bucket of equipment that is loading materials; and~~ ~~(b) Keep away from dump trucks under loading or unloading materials.~~
7.5 **TRENCH EXCAVATION**	7.5 **TRENCHES, PITS AND OTHER TYPES OF STRUCTURAL EXCAVATION** *In English international construction usage, "Trench excavation" is a classification of only one type of Excavation but there are many other accepted types which commonly include for example:* *Pit excavation,* *Basement excavation,* *Excavation for deep piling* *Oversite excavation, cuttings, reduce level excavation, etc.* *There is no great difference in the risks between collapse of a trench or collapse of a pit or basement excavation all are similar and the prescribed safety measures are the same so:* *Why separate only "trench excavation"? and* *What happens to the required measures for the other types?* *To describe only trench excavation and ignore all others, looks unusual and appears incomplete.* *Reference to OSHA is creating this problem as US and English usage are slightly different.* *OSHA uses the phrase "Excavation and trenching" as if both are different. In English construction usage, "Excavation" alone is commonly used and the various types (e.g. trench, pit and basement excavation) will be understood to be covered by this term.* *This is why 7.1.1 is all embracing.* *The given definition of "Trench Excavation" in the draft is not necessary as the word "trench" is in common usage.* *It is also not correct, Trench Excavation is not "excavation performed for laying gas pipes and water /sewage pipes, etc.". "Trench excavation" will also cover for example excavations for any linear structure or material such as :* *strip foundations, ground beams, cables and ducts etc. etc.* *There is not so much in this clause anyway but if considered necessary, I would suggest it would be better re-headed as Excavation Generally or even "Trenches, Pits and Other Excavations" as above.* NK6/22: agreed to change the title and specify as proposed above.	7.4 **TRENCHES, PITS AND OTHER TYPES OF STRUCTURAL EXCAVATION**

7.5.1 **General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation. Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet). (1) When performing trench excavation with depth of 1.5m or more, adequate and stable earth retaining shall be provided ~~unless any particular reason exists~~; and (2) ~~For trench excavation with a depth of less than 1.5m, protective systems such as exampled below shall be installed;~~ For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.; JC2: Changed from "less than" to "exceeding". NK2: (1) is for 1.5 m or more, and (2) is for less than 1.5 m. Therefore, (2) is left as it is. (a) Simple earth retaining (Trench box, Trench shield); (b) Lightweight sheet pile earth retaining; and (c) Aluminum hydraulic shoring, Timber shoring. JC2: Is "Lightweight sheet pile" correct term in English? Is "steel sheet pile" OK? NK2: Japan Patent Office and internet for product catalogue use the term "lightweight sheet pile". For relatively shallow trench excavation, ordinary sized ones are not used. It is better to distinguish the different use of normal and lightweight sheet piles. Left as it is. **7.5.2 Safety Measures during Trench Excavation** (1) Materials and equipment to be used for earth retaining systems shall be appropriate for the width and depth of the trench and free from damage or defects that might impair their proper function; (2) Manufactured (prefabricated) materials for earth retaining systems shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer; (3) The earth retaining system designed by the Contractor shall be provided in accordance with the design and construction procedure	7.5.1 **General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during trench excavation. NK6/22: Do we need to mention same as the title of this Section? *See notes above, the following definition is not sufficient or necessary.* ~~Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).~~ ~~(1) When performing trench excavation with depth of 1.5m or more, adequate and stable Earthwork Support shall be provided.; and~~ *The above is not recommended as it conflicts with other clauses, please refer to earlier notes. It is deleted here and dealt with in Section 6.2* ~~(2) For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;~~ ~~(a) Simple earth retaining (Trench box, Trench shield);~~ ~~(b) Lightweight sheet pile earth retaining; and~~ ~~(c) Aluminium hydraulic shoring, Timber shoring.~~ *The above appears illogical as there are numerous statements that no support is required below 1.5 metre depth yet then this is provided which specifies requirements.* NK6/22: agreed as mentioned in 7.2.1 (4) not to specify 1.5 m limits. *I have not edited the added subclauses but suggest that they are deleted anyway* 7.5.2 **Safety Measures during Trench Excavation** *None of the following items are unique to trench excavation, all items apply to all types of excavation.* *Also all of the following items are for Earthwork Support not Excavation and this would be better transferred to JSSS 6.2.4 [General Safety and Construction Requirements] to avoid duplication and ambiguity. I have already included relevant part of the following in 6.2.4 with suitable editing and this subclause can now be deleted.* *Reference to "earth retaining systems" should be changed to "Earthwork Support".* (1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function. ~~(2) Manufactured (prefabricated) materials for Earthwork Support shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer.~~ *No need already covered by JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and PPE].* ~~(3) Earthwork Support designed by the Contractor shall be installed in accordance with the design and construction procedure~~	7.4.1 **General** The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during ~~trench excavation~~ trenches, pits and other types of structural excavation. 7.4.2 **Safety Measures during Excavation** (1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

drawings; (4) Earth retaining system with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site; (5) Workers shall not be allowed to enter the trench until the earth retaining system is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the earth retaining system shall not be allowed; (7) If temporary removal of individual members of the earth retaining system is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing the earth retaining system, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) The Contractor shall perform backfilling of the trench shall be ~~performed Backfilling of the trench shall be performed~~ in parallel with the removal of the earth retaining system.	~~drawings.~~ *There are no such drawings in JSSS and no meaning to this requirement. This is also all Contractor design.* NK6/22: Th Contractor will actually prepare such drawings to install Earthwork Support at the Site though JSSS does not mention about drawings in 1.37 Design and Management of Temporary Works. Japanese draft stipulates such drawings. Now OK to delete (3). ~~(4) Earthwork Support with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site.~~ *The above is not completely clear however it is already covered by 6.2.1 (2) above* NK6/22: understood. (5) Workers shall not be allowed to enter any excavation ~~the trench~~ until Earthwork Support is installed prior to the work; (6) Excavation to a level greater than 60cm below the bottom of the Earthwork Support shall not be allowed; (7) If temporary removal of individual members of the Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (8) When removing Earthwork Support, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (9) The Contractor shall perform backfilling of any ~~trench~~ excavation in parallel with the removal of the Earthwork Support. *Please refer to the notes against Clause 7.2 (6) above.* *I have added a comprehensive and common clause for contractor's monitoring of Excavation Works in* JSSS 6.1.3 [*Temporary Inspection and Monitoring Systems*]. *I think it should go here and not in Section 6.2 [Earthwork Support] as such settlement can be a result of excavation generally, including that caused by say water table lowering (e.g. well-point systems) and Earthwork Support, but not only for the Earthwork Support.* *I have added suitable mention in Section 6.2 so that this is coordinated.* 7.5.1 Monitoring Impact of Excavation Works on Other Properties The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*]. NK6/22: As commented by JICA on Chapter 6 TW, the monitoring is moved to 2.1.7 [Monitoring and Records]. Instead of 7.5.1 above, we propose to specify at 7.1.2.	(2) Workers shall not be allowed to enter any excavation ~~the trench~~ until Earthwork Support is installed prior to the work; (3) Excavation to a level greater than 60cm below the bottom of the Earthwork Support shall not be allowed; (4) If temporary removal of individual members of the Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system; (5) When removing Earthwork Support, the Contractor shall not allow anyone other than the workers engaged in the removal work to enter the area and the vicinity; and (6) The Contractor shall perform backfilling of any ~~trench~~ excavation in parallel with the removal of the Earthwork Support. ~~7.4.1 Monitoring Impact of Excavation Works on Other Properties~~ ~~The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].~~
7.6 **EXCAVATION BY BLASTING** 7.6.1 **Scope** (1) This Section specifies safety measures in connection with ~~excavation in rock in open~~ open-cut rock excavation that cannot be	7.6 **BLASTING WORKS** *See above clause 7.1.1 where Blasting Works is defined. I have changed the following references accordingly:* 7.6.1 **Scope** (1) This Section specifies safety measures in connection with excavation in	7.5 **BLASTING WORKS** 7.5.1 **Scope** (1) This Section specifies safety measures in connection with excavation in

undertaken using conventional excavation techniques and which, following the Engineer's Instruction or consent, shall be undertaken by Blasting with Explosives.

NK1: added in open in right because 8.4 specifies excluding underground excavation with blasting.

JC1: Why are "Blasting" and" Explosives" written in capital letters? Are they defined? See 8.4.2 (1), (2).
NK1: They are defined in 8.4.2. NK will ask MD the reason of definition.

JC2: Confirmation is required if the expression "excavation in rock in open" is appropriate.
NK2: As a term "open-cut excavation" is usually used for excavation in open site area. Modified as "in connection with open-cut rock excavation".

(2) The ~~Works~~ works plan shall be described in the relevant Method Statement.

(3) This Section applies particularly to ~~Works~~ works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.

NK1: There are two terms in 7.6: "Blasting Works" and "Blasting works". Tentatively, "Blasting works" is used above because "excavation work" is used in 7.1 and "Blasting" is defined in 8.4.2. (To MD: Please confirm the term.)

rock ~~open-cut rock excavation~~ that cannot be undertaken using conventional excavation techniques.

The revised wording "open" or "open cut" are not correct or necessary, excavation in rock can apply to all types of excavation where rock can be encountered (e.g. trenches, pits and basements). Suggest that the original wording is correct.

The above definition is simple and clear but please advise if you need a other more detailed definition of "Rock"?

I suggest that the following is necessary:

(2) Blasting Works for tunnelling is not included in the scope of this Chapter. Any such work shall be performed in accordance with the Particular Safety Specification.

I suggest that also that some limitation shall be including in JSSS to restrict the use of blasting as it may otherwise assume that is an acceptable alternative to more expensive removal techniques.

I have therefore separated the clause, edited it and added further general requirements as follows:

7.6.2 **General Blasting Requirements**

(1) Blasting shall only be permitted to be performed by the Contractor:

(a) When it is safe to do so and when there is no risk of injury or damage being caused to persons or property within or outside the Site

(b) Where it specifically allowed or required by the Particular Safety Specification; and

(c) During the execution of the Works after the Contractor has received the Engineer's approval or instruction.

(2) Blasting when approved, shall only be permitted at times which have been predetermined and agreed with the Engineer and any relevant authority.

~~(3) The Blasting Works plan shall be described in the relevant Method Statement.~~

What does the above clause mean? The Blasting Safety Plan is described below. Please clarify.

NK6/22: Blasting works are made as a part of construction works consisting of clearing, excavation, concrete works, backfilling, etc. Method Statement will cover the whole parts of works, so above (3) stipulates the blasting work plan shall be a part of the relevant MS.

~~(4) This Section applies particularly to Blasting Works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.~~

Ditto, why would the use of explosives be possible outside the Site? Please see above suggested added clause (3), it is assumed that this can be deleted please check.

rock that cannot be undertaken using conventional excavation techniques.

(2) Blasting Works for tunnelling is not included in the scope of this Chapter. Any such work shall be performed in accordance with the Particular Safety Specification.

7.5.2 General Blasting Requirements

(1) Blasting shall only be permitted to be performed by the Contractor:

(a) When it is safe to do so and when there is no risk of injury or damage being caused to persons or property within or outside the Site

(b) Where it specifically allowed or required by the Particular Safety Specification; and

(c) During the execution of the Works after the Contractor has received the Engineer's approval or instruction.

(2) Blasting when approved, shall only be permitted at times which have been predetermined and agreed with the Engineer and any relevant authority.

7.6.2 **Definitions**

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means ~~mean~~ any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting operations. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.3 **Compliance Standards**

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], unless otherwise specified in JSSS, the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

JC2: The phrase "unless otherwise specified in JSSS" is indispensable in this case at least. BS does not mention subject, so it is not clear who is responsible for each action.

For example, JSSS specifies that the Employer shall specify allowable values of vibration, noise, etc. in the Contract. The Employer should survey these allowable values for structures, etc. around the Site when the Employer specify these allowable values.

On the other hand, BS5607, 6.2.1 mentions "a detailed survey and examination of the site, buildings or structures and adjoining areas and property should be carried out in accordance with BS 5930.". It is not clear who carry out the survey and

NK6/22: It states the risk shall be not expected outside the Site by the flying rocks of the blasting in the Site. (1) (a) specifies same, so (4) can be deleted.

Noise: There appears to be no maximum criteria stated in the BS so I suggest the following:

7.6.3 **Blasting Noise**

Noise levels, measured in areas close to the Exclusion Zone and in areas accessible to other workers or the public shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB

NK6/22: Japanese Noise Regulation Act stipulates noise of the specific construction works shall not exceed 85 dB at the boundary of the Project area.
NK agree to the MD's proposed level.
To MD, May I know your basis of a sound pressure level of 85 dB and/or a peak sound level of 110 dB
騒音規制法は、特定建設作業の騒音は敷地境界において 85 デシベルを超えないことと規定している。

7.6.4 **Definitions**

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting Works. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.5 **Compliance Standards**

Changed in 2.5 therefore for consistency to be changed everywhere;

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Blasting Works complying with the technical requirements specified in BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

The above standard wording has been changed (for the better) as a consequence of JICA comment on Chapter 1 as above and I suggest for consistency that the same is applicable and should be used here.

I also suggest that more reliance should be placed upon the use of the BS and less on trying to repeat or "improve" parts of the BS in JSSS. If anything some of the clauses in JSSS could be omittec wgere the BS is more stringent or more clear.

7.5.3 Blasting Noise

Noise levels measured ~~in areas close to the Exclusion Zone and in areas accessible to other workers or the public~~ at the boundary of the Project area shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB.

7.5.4 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "Blasting" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "Explosives" means any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "Exclusion Zone" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting Works. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.5.5 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Blasting Works complying with the technical requirements specified in BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

investigation.

Therefore, it is necessary to stipulate clearly that provisions in JSSS are given priority and others than JSSS shall comply with BS. Otherwise, the Contractor has to burden broad responsibilities including determination of allowable values and coordination with relevant authorities.

NK2: Added the phrase as suggested by JC. MD, please review JC.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or ~~approvals in accordance with GC 2.2 [*Permits, Licences or Approvals*]~~.

JC1: Referencing to GC2.2 is not necessary here.

NK1: The reference is deleted.

7.6.4 Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting ~~W~~works:

(a) Explosive ~~E~~engineer; and

(b) Shotfirer(s).

JC1: It seems that capital and lowercase letters are used without rules.

NK1: Unless a word is defined, it will be written with lowercase. The above is modified as above because of itemisation. Hereinafter, "explosive engineer" and "shotfirer" are used only by lowercase letters.

(2) Responsibilities and requirement of personnel for Blasting ~~W~~works:

(a) The Explosive Engineer shall plan the Blasting Works, lead the Blasting ~~W~~works at Site and perform the safety management of the Blasting ~~W~~works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting ~~W~~works and site safety management.

(3) Safety education and guidance

~~Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that personnel engaged in W works; namely explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations, have knowledge of and are able to comply with the following:~~

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that explosive engineer and shotfirer(s) have sufficient knowledge of the following:

JC1: The phrase "personnel engaged in Blasting Works" is not clear if it means only the explosive engineer and shotfirer as defined in (1) above or it includes other personnel, too. If the former is the case, the clause (1) should include the sentence that blasting works shall perform only by the explosive engineer and shotfirers.

NK1: Blasting Works are executed by the team consisting of the explosive engineer,

See later notes on survey and monitoring

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

Part deleted.

7.6.6 Personnel for Blasting Works

Please refer to the BS with regard to the selection and qualification of blasting contractors to perform the blasting works, it seems logical but is this to apply? It seems insufficient that a contractor with no experience or proven capability can employ two blasting staff and then be qualified to perform the works.

(1) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosives engineer; and

(a) Shotfirer(s).

What about other team members e.g. blasting supervisor (see BS), explosives storekeeper, drivers carrying explosives, security staff, spotters

NK6/22: JICA specified as above after discussion on our proposal based on BS, so no change is made at this stage.

(2) Responsibilities and requirement of personnel for Blasting Works:

NK6/22: JICA commented "Blasting Works" is not defined, so requested to change to "Blasting works". Do you define it?

(a) The Explosives engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the Explosives engineer and shotfirer(s) have sufficient knowledge of and are able to comply with the following:

"personnel engaged in Blasting Works" means "all persons" so engaged. Why make this restrictive? Can state "all personnel involved.."?

What about other team members e.g. blasting supervisor, explosives storekeeper, drivers carrying explosives, security staff, spotters? All and more need to be made aware and this is only safety training. I suggest the original wording is wider.

NK6/22: JICA specified as above after discussion on our proposal based on BS, so no change is made at this stage.

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

7.5.6 Personnel for Blasting Works

(1) Further to the requirements of JSSS 1.18 [Proper Placement of Contractor's Personnel], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosives engineer; and

(b) Shotfirer(s).

(2) Responsibilities and requirement of personnel for Blasting Works:

(a) The Explosives engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the Explosives engineer and shotfirer(s) have sufficient knowledge of and are able to comply with the following:

shotfirers, sentries (BS5607 7.4.2.4) and other workers involved in the blasting operations (BS5607 3.44.2 NOTE).

(3) is modified as above.

JC2: BS5607 8.3 describes "No person other than those designated in **8.2** should be in possession of explosives on site" and Sections after 8.2 describe about only requirements on skills and knowledges of blasting engineer and shotfirers. Therefore, (3) is revised to describe limitedly for the both.

NK2: NK think all members of blasting team shall know knowledge (a) to (f) generally or Professionally. However, NK modifies as JIC comment.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting ~~W~~ works;

(c) Procedures for Blasting Works;

(d) Evacuation and return Procedures of the evacuated workers and personnel;

JC1: The word "return" in (d) is not clear if it means to make evacuated personnel to the original places or return surplus explosives to the magazine.

NK1: It means to make the evacuated personnel to the original working places. Words are added as right.

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions).*

7.6.5 **Blasting Safety Plan**

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.6 [*Contractor's Safety Plan*] and including the following:

JC1: It should be stated somewhere that the Blasting Safety Plan shall be agreed by the Engineer.

NK1: As mentioned in MM 3.(3) Chapter 1 has specified the Contractor shall submit Safety Plan and will specify "the Engineer may review the Safety Plan…".

Therefore, it is not necessary to specify "the Contractor shall get concurrence to the Safety Plan by the Engineer." for this Chapter only.

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting ~~W~~ works (hereinafter collectively referred to as "personnel affected by the Blasting works" in this Section)..

JC1: It is recommended to define as for example, "Concerned Personnel" and use the term instead of repeating the long expression in the clauses such as (12) below and 8.4.6. (1).

NK1: referred to BS5607 and GC below for the above JC. It will be defined as "personnel affected by the Blasting Works" as right.

BS 5607 mentions as follows:

6.4 Exclusion zone and warning procedures

the risk of injury to contractor's personnel, third parties and members of the public is reduced to as low as reasonably practicable.

7.4.2.1 General

notified to all personnel involved in securing the zone and others affected by the event, including the general public.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return procedures for any evacuated workers and personnel;

Change not necessary but added anyway

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions).*

7.6.7 **Blasting Safety Plan**

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.7 [*Contractor's Safety Plans*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works (hereinafter collectively referred to as "persons affected by the Blasting Works" in this Section).

"Personnel" needs to be changes to "Persons"

Edited as above.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return procedures for any evacuated workers and personnel;

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(action*

7.5.7 **Blasting Safety Plan**

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.7 [*Contractor's Safety Plans*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works (hereinafter collectively referred to as "persons affected by the Blasting Works" in this Section).

GC: 4.8 Safety Procedures
for the use and protection of the public and of owners and occupiers of adjacent land.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

JC1: It is logically appropriate to change the order of (5) and (6). (First, determining the allowable values, secondly determining the blasting method within the values, then, the affected area is inevitably determined.)
NK1: The order of (5) and (6) is changed as commented.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected areas, buildings, structures and property.

(8) ~~Test~~ Trial Blasting.

NK1: Following BS, Test is replaced Trial.

~~(9) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.~~

JC2: Isn't it necessary to combine (6) and (8)?
NK2: The contents of item (6) and (8) are closely related, however, they are different matters as actions. Therefore, it would be better to change the order of (7) and (8) so that identification and monitoring become clear to be closely related.

(9) Identification of the explosive engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and notice immediately before Blasting to other Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting operations.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

JC1: The JC for (3) advise to replace all personnel with "Concerned Personnel" or another term
NK1: Personnel and persons in (3) is different from (12) as the latter is limited to personnel to leave Exclusion Zone. It is left as it is.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.6 ~~Information to~~ Risk Prevention of Workers and Neighbouring Residents

JC1: Revised title.

(1) ~~Dissemination of Information~~ Notice of Blasting

JC1: Revised title.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(8) Trial Blasting.

(9) Identification of the Explosives engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and the serving of notice immediately before commencement of Blasting Works to other persons affected by the Blasting Works.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.8 Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

~~The Contractor shall assist the Employer when so requested by the Employer in giving briefings to neighbouring communities, residents and property owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information~~

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(8) Trial Blasting.

(9) Identification of the Explosives engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and the serving of notice immediately before commencement of Blasting Works to other persons affected by the Blasting Works.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.5.8 Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

The Contractor shall notify all persons affected by the Blasting Works. of the planned schedule and start dates and times for Blasting Works. Such information shall be updated as necessary, immediately before the Blasting Works commence.

~~The Contractor shall assist the Employer when so requested by the Employer in giving briefings to related authorities, neighbouring residents and building owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information.~~

JC1: deleted.

The Contractor shall notify~~, in appropriate manners,~~ all affected persons including neighbouring residents and building owners of the planned schedule and start dates and times for Blasting work, ~~the actual start dates and times and give notice~~ immediately Such information shall be updated as necessary, in particular, before the Blasting work commences.

JC1: Modified.

JC2: The term "notification" is used in also BS5607 6.6, therefore, "notify" is deemed to be right in this context. The term "update" is also derived from BS5606 6.6.
JC modified as above.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all affected persons and property from the Blasting Works including the following:

(a) Prohibition of overcharging with Explosives more than specified in the Method Statement prepared based on the trial Blasting;

JC: It is not specific requirement though it is understandable. The Engineer shall check the explosive quantity planned by the Contractor based on the test blasting.
NK: The Contractor is responsible for planning of method of blasting. The Contractor shall check the quantity of explosive if necessary by an explosive design checker as same as design check for temporary works.
The Engineer may review Method Statement and Safety Plan whether the Contractor plan method and safety measures in accordance with the Contract.
Addition is made as above.

(b) Prevention of scattering of flying rock and other debris with materials, for example, sand, nets, steel plates, timber, etc. mentioned in 12.7.6 [Blast protection] of BS 5607 and as prescribed in the Contract (if any);

JC1: Phrase underlined is added.

JC1: It is not specific requirement. (Other clauses can be said commonly.) It shall be default for the Employer to determine the prevention measures of scattering of rocks. This concept that the Employer specify in the Contract cannot be read now. Please consider to specify specific requirements or to refer to the Particular Safety Specification.
NK1: As mentioned (a) above, the Contractor is responsible for the preparation of detail method of construction including the prevention measures. The Employer specify when there is special requirement. Modified as right.

JC1: Please describe specific methods. (Please refer to the contents of BS if available.)
NK1: added 12.7.6 Blast protection of BS 5607

~~(c) Prevention of collapse of surrounding rocks or ground areas more than planned in the Method Statement;~~

JC1: Is this meaning control blasting (presplitting/smooth blasting) or final excavation surfaces by blasting, or foundation of structures neighboring the Site? It is not clear. Blasting is originally tool to loosening the surrounding rocks and ground areas
NK1: This specifies prevention of collapse by excessive loosening of surrounding rocks or ground areas. Modified as above. "as prescribed …" is not added because the Employer will not specify more than this.

The Contractor shall notify all persons affected by the Blasting Works, of the planned schedule and start dates and times for Blasting Works. Such information shall be updated as necessary, immediately before the Blasting Works commence.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all persons affected by the Blasting Works, including the following:

(a) Prohibition of overcharging with Explosives more than that specified in the Method Statement prepared based upon the trial Blasting;

~~(b)~~ Prevention of scattering of flying rock and other debris ~~including for example the provision of sand, nets, steel plates, timber, and the like as mentioned in 12.7.6 [Blast protection] of BS 5607 and as prescribed in the Contract (if any);~~

As a basic rule I do not suggest giving any examples, the Contractor is already required to comply with BS 5607 so it is not necessary to give any further reference.

I disagree that the Employer shall determine the prevention measures of scattering of rocks as a common basis as he is employing and paying the contractor as a qualified technical expert to do this work.

I recommend that the original wording should not be changed, the given examples are not specific and any attempt to define scope may compromise the employer and even JICA in the future.

(c) Prevention of collapse of surrounding rocks or ground areas;

This is based upon the NK draft and I do understand why it is deleted.

It may not be overcharging it could be for other reasons e.g. incorrect drilling and blasting location in the wrong place or direction according to geology.

Blasting must be controlled and contained within the area required without damaging surrounding areas. Aside from the risk of damage to other property, The

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all persons affected by the Blasting Works, including the following:

(a) Prohibition of overcharging with Explosives more than that specified in the Method Statement prepared based upon the trial Blasting;

(b) Prevention of scattering of flying rock and other debris.

(c) Prevention of collapse of surrounding rocks or ground areas;

JC1: "Risk Prevention" is not "Information to Workers and Neighbouring Residents" but points to pay attention in performing the work. Please move to proper place.
NK1: NK thinks that it is better to change the title of this section to "Risk Prevention of Workers and Neighbouring Residents" and title of (2) to "Risk Prevention Measures" so that the title and the contents coincide.

JC2: The required sentence is "the prevention of blasting more than planned by measures of ●●". If the "●●" cannot be described, (c above can be deleted because prohibition of overcharging is specified in (a).
NK2: deleted.

(d) ~~Define all Blasting as Dangerous Work and take measures in accordance with Section 2.3 [*Prohibition of Entry - Dangerous Work*];~~ Define Exclusion Zone for Blasting works and take necessary measures to prohibit the personnel affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

JC: As JSSS 2.3 stipulates only prohibition of entry in general and is not proper to refer to in this clause. The evacuation area at the time of blasting should be stipulated concretely.
NK: Modified the clause (d) and located (e)(f) below (d).

~~(e) Provide audible warning sirens to warn of impending, current and completed Blasting operations;~~

~~(f) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;~~

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations;

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area;

(e) Establish evacuation requirements, ~~routes~~ and assembly areas at blasting operation and inform all ~~workers and effected persons the~~ personnel affected by the Blasting Works; and

(f) Perform firing only after the Spotters have confirmed that all ~~workers~~ personnel affected by the Blasting Works have been evacuated; and

JC1: It gives an impression of an emergency evacuation route. Isn't it enough to simply check evacuation?
NK1: As a risk prevention measure, it is important to establish and inform evacuation requirement and routes etc.
Modified as right.

(g) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(h) ~~Perform firing only after the Spotters have confirmed that all workers have been evacuated; and~~ Prohibit bringing into the blasting areas any mobile phone that ~~is not guaranteed that it will not adversely affect the electric detonators;~~ may affect adversely the electric detonator; and

JC1: Combine (g) with (i) to make the procedure clear that only after evacuation, blasting shall be fired.
NK1: modified as (e) in right by combining former (g) and (i)

JC2: Modified to make the expression same as in BS.

employer should not be required to pay for repair or reinstatement of surrounding areas where the contractor has failed to control his own operations.

I suggest that the above is not deleted

NK: agreed.

~~(d) Define all Blasting Works as Dangerous Work and take measures in accordance with Section 2.3 [*Prohibition of Entry - Dangerous Work*];~~

(d) Demarcate the Exclusion Zone for Blasting Works and take necessary measures to prohibit the ~~personnel~~ persons affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

The BS covers safety measures and more, is the following therefor necessary?

NK6/22: JICA wants JSSS to specify requirement and also concrete measures to guide the Contractor, so the following are left as original.

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations.

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area.

(e) Establish evacuation requirements, routes and assembly areas and inform all persons affected by the Blasting Works;

(f) Perform firing only after the Spotters have confirmed that all persons affected by the Blasting Works have been evacuated;

(g) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(h) Prohibit bringing into the Blasting areas any mobile phone that may affect adversely the electric detonator; and

(d) Demarcate the Exclusion Zone for Blasting Works and take necessary measures to prohibit the ~~personnel~~ persons affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations.

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area.

(e) Establish evacuation requirements, routes and assembly areas and inform all persons affected by the Blasting Works;

(f) Perform firing only after the Spotters have confirmed that all persons affected by the Blasting Works have been evacuated;

(g) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(h) Prohibit bringing into the Blasting areas any mobile phone that may affect adversely the electric detonator; and

NK: modified.

(i) Unless otherwise specified in the Contract, perform Blasting Works only during the daytime.

7.6.7 Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

JC1: added. "the Laws" in (a) is wrong. Should be "the laws of the Country".
NK: GC stipulate as 1.1.6.5 "Laws" means all national (or state) legislation… and 2.2 (a) copies of the Laws of the Country…,Modified as commented.

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JC1: As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.
NK1: modified following the comments as much as possible.

(i) Unless otherwise specified in the Particular Safety Specification, perform Blasting Works only during the daytime.

7.6.9 **Handling and Storing of Explosives**

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JICA have commented as follows:

JC1: As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

Please note:

1) The full HK blasting document contains no use or mention of the expression "allowable values" of any damage to "structures of 3rd parties"

2) The document includes criteria for measurement and recording but this does not state that any damage is allowable.

3) Similar to previous comments on Earthwork Support (see above), I suggest that the criteria is given to determine whether Blasting is likely to cause damage in which case the Blasting Works shall, stop and the contractor shall propose remedial measures before proceeding.

4) Pages 40 and 42 are missing from my copy of the HK MTR Conditions of Contract, therefore I cannot complete my review and give any final comments on the Contractor's basic obligation.

I do recommend that any such reference and addition is correct or justified particularly for blasting.

My suggestion is the same as for Earthwork Support (see above notes) namely:

"If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas

(i) Unless otherwise specified in the Particular Safety Specification, perform Blasting Works only during the daytime.

7.5.9 **Handling and Storing of Explosives**

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

	and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor., *If there is a chance of damage occurring due to an unavoidable method of execution, then I recommend that the default situation should be that the Contractor is instructed via JSSS to set up and manage monitoring to ensure his compliance i.e. that damage does not occur, subject to receiving the consent of the Engineer.* *Regarding the additional reference to BS 5607, the Contractor is already required to comply with this BS so it is not necessary and I do not recommend giving reference to further particular BS clauses in JSSS.*	
(2) Transportation of Explosives For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.	(2) Transportation of Explosives For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.	(2) Transportation of Explosives For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.
(3) Quantity of Explosives at the Blasting site	(3) Quantity of Explosives at the Blasting site	(3) Quantity of Explosives at the Blasting site
(a) ~~The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;~~ The quantity of Explosives to be transported from store to the Blasting site shall be suitable for the estimated quantity of consumption for the Basting; MM: The "greatly exceed" expression is not appropriate. NK1: modified as right. ("suitable" is agreed in the meeting)	~~(a) The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;~~	
(b) No extra or surplus Explosives shall be stored at the Blasting site; and	(b) No ~~extra or surplus~~ Explosives shall be stored at the Blasting site; and	(a) No Explosives shall be stored at the Blasting site; and
(c) ~~Explosives not used on the day shall be returned to the Explosives store. Explosives not used on the day shall be returned to the Explosives store or a location where they can be stored legally until the following day.~~ JC1: Please confirm if the procedure (c) is a must to return unused explosives to magazine. Check with BS5607 (there is a provision for measures for such a case in BS 5607 9.6). NK1: BS 5607 9.6 is "Disposal of unwanted explosives or explosives which have deteriorated during storage", which is irrelevant. Rather, there is a procedure for returning unused explosives in 12.8.2 as follows: 12.8.2: Only the amount of explosive which can be readily charged in one day should be taken into the structure. Uncharged explosives should be removed to a location where they can be stored legally until the following day. Modified as above. JC2: BS5607 12.8.2 specify about demolition. JSS describes other various cases (excavation, underwater, tunnel, etc.), so it is not sure correct to adopt the description of 12.8.2 to (c). On the other hand, in BS5607 9 which stipulates general safety measures, 9.3.4 stipulates concretely as follows: "If more explosives have been issued than are required and the intention is to return them to the licensed store, they should be examined by the shotfirer before return・・・." It is better to refer to this 9.3.4. As JSSS 7.6.7 (1) regarding Storage of explosive, stipulates that BS 5607 9.3 shall be complied with in overall. Therefore, item (c) is not necessary. JC deleted. NK2: deleted as commented.	*I suggest the above is better* (c) Explosives not used on the day shall be returned to the Explosives store. *Ditto*	(b) Explosives not used on the day shall be returned to the Explosives store.

(4) Handling of Explosives

(d) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(e) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(f) Explosive and detonators shall be separately stored in lockable containers;

(g) The containers for Explosives shall protect against water ingress, impact damage; and

(h) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) ~~The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed and remaining, number of blast holes and loading method for the Blasting;~~ The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes and ~~loading~~ charging method for the Blasting, and treatment of misfired Explosives;

JC1: modified.
JC2: modified loading to charging.

(b) The Explosive Engineer shall check and countersign the Blasting work records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting ~~W~~ works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.8 ~~Test~~ Trial Blasting

~~The Contractor shall perform test Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said safety plan according to the results of the test Blasting:~~ The

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes, charging method for the Blasting and treatment of misfired Explosives;

(b) The Explosives engineer shall check and countersign the Blasting Works records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.10 **Trial Blasting**

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Blasting Safety Plan according to the results

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes, charging method for the Blasting and treatment of misfired Explosives;

(b) The Explosives engineer shall check and countersign the Blasting Works records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.5.10 **Trial Blasting**

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Blasting Safety Plan according to the results

Contractor shall perform ~~test~~ trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.5 [*Blasting Safety Plan*] for the following purposes, and modify the said Safety Plan according to the results of the ~~test~~ trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, ~~and~~ scattering prevention and other protection measures.

(3) Confirm the safety of ~~Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be~~ personnel affected by the Blasting works ~~affected by the Blasting operations.~~

NK1: as defined in 7.6.5 (3), the above is replaced with "personnel affected by the Blasting works"

(4) Confirm that the vibration value of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.

The Contractor shall submit the trial blasting reports and any changes to the Blasting Safety Plan to the Engineer before proceeding Blasting operation.

NK added responding JC comment for the Engineer to be involved in blasting works.

7.6.9 Monitoring Impact on Adjacent Buildings and Structures

~~The Contractor shall monitor the vibrations caused by the Blasting operations to measure the extent of vibration in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations to ensure that no vibration damage or weakening is caused as specified in the Contract or instructed by the Engineer.~~

The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.

JC1: The monitoring object shall be determined by the Contract or instruction by the Engineer. The allowable vibration value also shall be given by the Employer. Refer to MTR M&W 25.20(c), 25.30~25.35.

JC1： There should be relevant stipulation in the Contract. Please modify the expression including above, for example, inserting "as specified in the Contract".

NK1: The clause is modified as right.

JC2: The sentence is modified so that the description follows the context of JSSS as a whole such as relating with the Blasting Safety Plan. "No vibration damage" is too severe to stipulate. JC modified as above.

NK2: modifies.

For this purpose, the Contractor shall:

(1) Prepare an environmental monitoring plan as a part of the Blasting Safety Plan, which will:

JC2: In 7.6.5.(8), the term "Environment monitoring plan" is used. If "monitoring plan" in (1) above means same as 7.6.5.(8), terms shall be unified.

of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention and other protection measures.

(3) Confirm the safety of all persons affected by the Blasting Works.

~~(4) Confirm that the vibration values of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.~~

Please refer to following clause 7.6.11 and as a consequence I suggest that the above is modified as follows:

(5) Confirm that the Contractor's criteria ~~is~~ are adequate for the purpose of JSSS エラー！参照元が見つかりません。 [*Monitoring Impact on Other Properties*].

The Contractor shall submit the trial Blasting reports with any consequent changes to the Blasting Safety Plan to the Engineer before proceeding with the Blasting Works.

7.6.11 Monitoring Impact of Blasting Works on Other Properties

The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

There are numerous references to the requirements for monitoring the impact of the Works on other properties so (as with Excavation) I have developed JSSS 6.1.3 to cover this as a Common Specification.

It is only necessary therefore to include the above cross reference here and the following can therefore be deleted.

NK6/22: The monitoring is specified in 2.1.7 following JICA comments, so monitoring is stipulated in 7.1.2 as noted above.

~~*The above Original (as re-edited)*~~

~~(1) The Contractor shall monitor the vibration, settlement and all other potential effects of the Blasting Works to ascertain any effect upon buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities and the like on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.~~

~~*JICA require the following re-wording to the original text of this clause:*~~

~~The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.~~

of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention and other protection measures.

(3) Confirm the safety of all persons affected by the Blasting Works.

(4) Confirm that the Contractor's criteria ~~is~~ are adequate for the purpose of JSSS エラー！参照元が見つかりません。 [*Monitoring Impact on Other Properties*].

The Contractor shall submit the trial Blasting reports with any consequent changes to the Blasting Safety Plan to the Engineer before proceeding with the Blasting Works.

7.5.11 Monitoring Impact of Blasting Works on Other Properties

The Contractor shall comply with the requirements of JSSS ~~6.1.3 [*Monitoring Impact of Works on Other Properties*].~~ 7.1.2 [Monitoring of Works and Surroundings].

NK2: As these two terms are the same meaning, modified to use “environment monitoring plan”.

(a) ~~Measure~~ Monitor the extent and impact of Blasting vibrations by vibration monitoring system and in terms of peak particle velocity and vibrational amplitude as specified in the Contract or instructed by the Engineer and as determined by the Contractor;

RC2: Even though the Employer specifies values, the Contractor cannot be avoidable being responsible for damage caused . Therefore, it is better to specify both values by the Employer and Contractor to monitor.
NK2: added “and as determined by the Contractor” to (a) and (c).

(b) Monitor the Blasting methods and equipment, showing the locations, measurement frequency and recording methods;

(c) Plan countermeasures in the instance that the actual measured vibration value is close to or exceeds the allowable vibration value specified in the Contract or instructed by the Engineer and as determined by the Contractor; and

JC1: In clause (c), there is a stipulation for allowable vibration value, however, no stipulation for the objects.
NK1: Regarding the objects to be monitored and apply countermeasures are stated in the top statement of this section. (in all affected areas particularly in the position of existing buildings, structures and other property on or adjacent to the Site… as specified in the Contract or instructed by the Engineer.), so leave it as it is.

(d) Unless otherwise specified in the Contract, perform ~~measurement~~ monitoring at each Blasting operation, at the first day and then every subsequent 3 days after the Engineer judges that the vibration value is as planned, then every 7 days, and every 1 month thereafter.

(2) ~~Measurement~~ Monitoring and Evaluation

JC1: What is the difference between “monitoring” and “measurement”?
NK1: “Measurement” in (2) is changed to “Monitoring” as the result of discussion in the meeting 2020/02/20.

The Contractor shall

(a) Provide and maintain ~~measurement~~ monitoring equipment;

(b) Calibrate the ~~measurement~~ monitoring equipment before test Blasting and other Blasting operations;

(c) Carry out ~~measurement~~ monitoring at the frequencies described above;

(d) Evaluate the ~~measurement~~ monitoring results;

(e) ~~Calibrate the measurement equipment before test Blasting and other Blasting operations; and~~

JC1: It is strange that (d) regarding calibration of measurement equipment is located at the bottom. This should be right after (a).
NK1: The content of (d) is moved to (b).

(f) Submit the evaluation report and if necessary, any changes to the Blasting Safety Plan to the Engineer before the next Blasting operation.

JC2: “measurement” should be “monitoring”.
NK2: Changed to “monitoring” to coincide as right.

7.6.10 **Particular Safety Measures for Blasting Work**

7.6.12 **Particular Safety Measures for Blasting Works**

7.5.12 **Particular Safety Measures for Blasting Works**

(1) Identification of Blasting workers

~~Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting operations from other workers.~~

~~Provide armbands, uniforms or marked safety helmets to distinguish the explosive engineer, shotfirer(s), Spotters and other workers engaged in Blasting operations from other workers.~~

Provide ~~armbands,~~ clear visible identification mark, uniforms or marked safety helmets to distinguish the explosive engineer and shotfirer(s) ~~Spotters and other workers~~ engaged in Blasting operations from other workers.

JC1: "all workers engaged in Blasting operations" should limited to the Blasting Engineer and Shotfirers.

NK1: As mentioned in JSSS 7.6.4 (3), the blasting work team consists of the explosive engineer, shotfirer(s), Spotters (sentries) and other workers involved in the blasting operations. There is no clause to specify Identification of Blasting workers in BS 5607. (1) is modified as right.

JC2: As there is no armbands, "clear visible identification mark", etc. is to be specified

The personnel for blasting work are limited as explosive engineer and shotfirer in 7.6.4.(3). Other than them are deleted.

NK2: "armbands" is changed as commended. Personnel other than explosive engineer and shotfirer are deleted.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 7.6.5 [*Blasting Safety Plan*] and 7.611 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

JC1: This clause (3) is not provision of "charging" . Change the clause covering the contents of BS 5607 10.2 and delete the sentence for referring to BS.

NK1: Items (a)~(e) are "Points to care for loading explosives" in Japanese version which are derived from the Pre-study in 2019. They are left as they are. Added some clauses of BS 5607 10.2 so that the contents of BS can be included.

(a) ~~Electric detonator's leg wires shall be kept short circuited until they are connected into the circuit for firing;~~

(b) ~~Detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage;~~

NK: (a) and (b) are moved to (4) because they are specially for electric detonator.

(c) ~~No other activity such as drilling shall be permitted in the vicinity, whilst loading;~~ Drilling operation is not permitted during charging of explosive;

JC2: Drilling operation is not permitted during charging of explosive.のように簡潔に。Simple expression is to be made such as "Drilling operation is not permitted during charging of explosive".

NK2: Modified as commended.

(d) Before ~~loading~~ charging, thoroughly clean the holes and do not leave any dust or debris;

(1) Identification of Blasting workers

~~Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting Works from other workers.~~

Provide clear visible identification mark, uniforms or marked safety helmets to distinguish the Explosives engineer and shotfirer(s) engaged in Blasting Works from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 [*Blasting Safety Plan*] and 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operations shall not be permitted during charging of Explosives.

(b) Before charging, thoroughly clean the holes and do not leave

(1) Identification of Blasting workers

Provide clear visible identification mark, uniforms or marked safety helmets to distinguish the Explosives engineer and shotfirer(s) engaged in Blasting Works from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.5 [*Blasting Safety Plan*] and 7.6.11 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operations shall not be permitted during charging of Explosives.

(b) Before charging, thoroughly clean the holes and do not leave

(e) ~~Shock and friction which can cause accidental initiation of the charges such as below shall be avoided;~~ Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided;	any dust or debris; and	any dust or debris; and
	(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided:	(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided:
JC2: Simple expression recommended such as “Explosive shall be treated gently without giving strong friction or shock.”		
JC2: Description in (d) to (h) is incorrect. Please review the whole and make the description a little simpler in case, and take measures such as referring to BS. NK2: The following (d) to (h) were incorrectly given numbered. Correct ones are (i) to (v). Therefore, the above (c) is strange sentence as JC commented. NK modified the (c) and revised numbers of following sentences: (iv) is deleted as it is not at time of explosive charging.		
(i) the over-vigorous use of stemming rods to force explosives into a shot hole;	(i) the over-vigorous use of stemming rods to force explosives into a shot hole.	(i) the over-vigorous use of stemming rods to force explosives into a shot hole.
(ii) the use of drill rods or other metal tools in a shot hole containing explosives;	(ii) the use of drill rods or other metal tools in a shot hole containing explosives.	(ii) the use of drill rods or other metal tools in a shot hole containing explosives.
(iii) vehicles running over explosives and other hazards involving impact or concussion;	(iii) vehicles running over explosives and other hazards involving impact or concussion.	(iii) vehicles running over explosives and other hazards involving impact or concussion.
(iv) ~~rock, stone or similar material being projected from the blast, causing an accidental detonation of explosives, so that excess explosives should be removed from the blast site to a place of safety before blasting takes place; and~~		
(v) shock tube detonators being initiated when subjected to "snap, slap and shoot".	(iv) shock tube detonators being initiated when subjected to "snap, slap and shoot".	(iv) shock tube detonators being initiated when subjected to "snap, slap and shoot".
(f) ~~No other activity such as drilling shall be permitted in the vicinity, whilst loading;~~		
(g) ~~Before loading, thoroughly clean the holes and do not leave any dust or debris; and~~		
(h) ~~Unused Explosives shall be returned to the Explosives store.~~		
For other safety measures for loading work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.	For other safety measures for charging work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.	For other safety measures for charging work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.
(4) Handling Detonators	(4) Handling Detonators	(4) Handling Detonators
JC1: Same as (3) above, state the clause by deriving from BS 5607 10.4.3. NK1: Same as (3) above, leave as it is and referring to BS 5607 10.4.3 as well.		
(a) Measures for Blasting using electric detonators	(a) Measures for Blasting using electric detonators:	(a) Measures for Blasting using electric detonators:
JC1: Could it (“bus wire”) be a mis-translation? NK1: In OSHA and ACE, there is the definition of “Bus wire: an expendable wire used in parallel or series-in-parallel circuits to which are connected the leg wires of electric blasting caps.” BS 5607 10.4.3.2 b) specifies “All firing lines should be short-circuited” and 10.501 a) shotfiring cable. The bus wire is replaced with shotfiring cable.		
JC1 Please modify the sentence so as to mean that if a danger by stray electric current is predicted, electric detonators shall not be used. NK1: Regarding prohibition of using electric detonator due to stray electric current is stated in (iii) above. (v) is written mistakenly separating a part of (iv), “unless otherwise specified in the Contract” is moved to (iv), and (v) is deleted. NK: (vi)is deleted and (iv) is modified as specified in BS 5607 10.2 below. 10.2 Handling and charging of explosives When shotfirers are handling and charging explosives at the blast site, they should at all times avoid shock, friction and static electricity or induced radio waves from		

mobile phones or other electronic devices which can cause accidental initiation of the charges, such as d) the use of mobile phones or other electronic devices; ~~(i) Make sure electric Check if the bus wire is not cut or damaged, and check its electrical continuity.~~ ~~(ii) Check if there are no missing or previous wiring connections or wrong wiring connections.~~ ~~(iii) Make sure there are no stray electric currents when using electric detonators.~~ ~~(iv) Do not use electric detonators if there is any danger of electrical interference for example from radio frequency radiation near radio communication facility, radar, wireless telephone including mobile type.~~ ~~(v) Do not use electric detonators unless otherwise specified in the Contract.~~ ~~(vi) Prohibit bringing all mobile phones and radios from the Blasting areas.~~ ~~(vii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.~~ NK1: It is complicated, so modified clauses are shown below. (i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing; (ii) Check if ~~the bus wire is~~ shotfiring cables are not cut or damaged~~, its electrical continuity and short-circuited~~ JC2: Status of short-circuit is already mentioned in (i), thus the part should be deleted. NK2: Deleted. (iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage; (iv) ~~Check if the bus wire is all shotfiring cables are not cut or damaged, and check its electrical continuity.~~ JC2: (iv) is a duplication of (ii). NK2: Deleted. (v) Check if there are no missing or previous wiring connections ~~or wrong wiring connections.~~ or mis-connection with previous blast wires. JC2: What is “previous wiring connections”? NK2: The phrase “if there are previous wiring connections” means that “if the wire used for previous blasting is left and connected to the wiring this time. It is modified to “ mis-connection with previous blast wires.” (vi) Make sure there are no stray electric currents ~~when using electric detonators~~. JC2: This phrase is not necessary because (a) is for “Measures for Blasting using electric detonators.” NK2: Deleted as commented. (vii) Do not use electric detonators if there is any danger of	(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing. (ii) Check if shotfiring cables are not cut or damaged. (iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage. (iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires. (v) Make sure there are no stray electric currents. (vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-	(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing. (ii) Check if shotfiring cables are not cut or damaged. (iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage. (iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires. (v) Make sure there are no stray electric currents. (vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-

electrical interference for example from radio-frequency radiation near radio communication facility, radar~~, wireless telephone, mobile phones unless otherwise specified in the Contract~~.

JC2: If the purpose of this item is that electric detonators shall not be used in the exemplified circumstances, prohibition of wireless phones etc. is not necessary.
NK2: 7.6.10. Particular Safety Measures for Blasting Work (4) (a) (viii) specifies Prohibit bringing into the blasting areas any mobile phone unless it is guaranteed that it will not adversely affect the electric detonators. Delete as commented.

(viii) Install a lightning detector near the Blasting area, stop Blasting work when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition

(a) The connection between the shotfiring apparatus and ~~the bus wire~~ shotfiring cable shall be made just before ignition.

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast;

(c) The handle shall be removed from the shotfiring apparatus except when igniting; and

(d) ~~The shotfiring apparatus shall be properly stored according to the safety plan.~~

JC1: Isn't it (b) about ignition?
NK1: It is deemed important to prevent misuse and theft of shotfiring apparatus due to improper storage. Orders of (a) to (d) are changed.

JC2: As shotfiring apparatus included in explosives as a matter of definition, it is already covered by 7.6.7. Storage. Deleted.
NK2: Deleted as commented.

(6) Measures when Blasting near existing buildings and structures

Blasting near existing buildings or structures shall not be carried out unless specified in the Contract or instructed by the Engineer~~, in which case the Contractor shall comply with the specified or instructed requirements.~~

JC2: Isn't this included in the specification / instruction?
NK2: It is deemed natural that requirements are included in the specification/instruction by the Engineer. The underlined part is deleted.

7.6.11 Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting

(e) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the

frequency radiation near radio communication facility or radar.

(vii) Install a lightning detector near the Blasting area, stop Blasting Works when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators:

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition:

(a) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(c) The handle shall be removed from the shotfiring apparatus except when igniting.

I suggest that the following is not necessary as there are no requirements :

~~(5) Measures when Blasting near existing buildings and structures~~

~~Blasting near existing buildings or structures shall not be carried out unless specified in the Particular Safety Specification or instructed by the Engineer.~~

7.6.13 **Measures after Blasting**

(1) Confirmation of safety of Blasting area after Blasting:

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the

frequency radiation near radio communication facility or radar.

(vii) Install a lightning detector near the Blasting area, stop Blasting Works when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators:

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition:

(a) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(c) The handle shall be removed from the shotfiring apparatus except when igniting.

7.5.13 **Measures after Blasting**

(1) Confirmation of safety of Blasting area after Blasting:

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the

area and confirmed that it is safe to re-enter; and

(f) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

JC1: Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)
NK1: Taking into account the contents, modification is made as right.

JC1 : (e) Action such as (e) is not actually not made at the blasting site. Deleted.

JC1: (h) Is it possible?
NK1: modified them to the Contractor and within a week.

JC1:No need to specify (i) because 8.4.5(7) mentions about record (general).
NK: Deleted.

JC1: (j) ditto.
NK: Deleted.

~~If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the Blasting Safety plan and the following measures shall be adopted initially by the shotfirer:~~

(g) ~~Immediately remove the shotfiring apparatus such as the handle and the bus wire from the shotfiring apparatus;~~

(h) ~~Make short circuit or ground and completely isolate the bus wires;~~

(i) ~~Report to the Explosive Engineer for further instructions;~~

(j) ~~Prohibit anyone other than the shotfirer and other authorised personnel from entering the Blasting site. Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;~~

(k) ~~Clearly indicate the presence of misfired Explosives and install barriers and signs and prevent anyone other than the shotfirer and authorised person(s) from approaching to the Blasting site;~~

(l) ~~Take appropriate procedures to identify the cause of the misfire and to determine the handling of the misfired explosive;~~

(m) ~~No other work shall be permitted until treatment of the misfired Explosives is completed;~~

(n) ~~The Explosive Engineer shall notify the Engineer immediately after any misfire event;~~

(o) ~~The Shotfirer shall prepare records of misfired Explosives showing the date and time of the Blasting Works and the result of the subsequent treatment. The Explosive Engineer shall check and countersign the records; and~~

(p) ~~The Contractor shall submit the records to the Engineer immediately after the successful treatment of the misfire event.~~

NK1: It is complicated, so modified clauses are shown below.

area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosives shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

JC2: Terms of "Explosive" and "explosive" are both used in this section.
NK2: As "Explosive" is a defined word in 7.6.2. Thus, "Explosive" should be used in this section. However, it is questionable if it should be defined at all same as "Blasting". To MD: please review the above.

(a) Procedure of treatment of misfired Explosives

The following treatment procedure of misfires Explosive shall be taken:

(i) Immediate remedial action;

(ii) Delayed remedial action;

(iii) Further attempt at detonation; and

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

JC2: These four terms in (i) to (iv) cannot be understood well. Provisions are stated below for "immediate action" and "delayed action". What are the other two?

If provisions for treatment of misfire is necessary, it should be of simple contents.
NK2: (i) Immediate remedial action is specified in (b), (ii) Delayed remedial action and (iii)further attempt at detonation is in (c). (iv) Inspection to confirm complete is added this time.

The comment regarding "simple contents" is somewhat different from the following comment previously given by JICA.

"Please stipulate important items referring to BS5607 10.5 Misfire and in addition, specify to follow the requirements of BS. ex. re-firing, remove misfired explosives, procedure shown in flowchart in BS)" (Translation has been partially abbreviated.)

NK thinks that present provisions regarding the immediate remedial actions to take for misfire are concrete ones to be specified.
NK2: As above, additional sentences are added in right to meet the JC comments.

(b) Immediate remedial action

The following initial ~~remedial~~ actions shall be taken by the shotfirer:

(i) prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan;

(iii) disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together;

(iv) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found;

(v) make a further attempt to fire the shot; and

(vi) report to the explosive engineer for further instructions;

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives;

The following treatment procedure of misfired Explosives shall be taken:

(i) Immediate remedial action.

(ii) Delayed remedial action.

(iii) Further attempt at detonation.

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action;

The following initial actions shall be taken by the shotfirer:

(i) Prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan.

(iii) Disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together.

(iv) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found.

(v) Make a further attempt to fire the shot.

(vi) Report to the explosive engineer for further instructions.

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives;

The following treatment procedure of misfired Explosives shall be taken:

(i) Immediate remedial action.

(ii) Delayed remedial action.

(iii) Further attempt at detonation.

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action;

The following initial actions shall be taken by the shotfirer:

(i) Prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan.

(iii) Disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together.

(iv) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found.

(v) Make a further attempt to fire the shot.

(vi) Report to the explosive engineer for further instructions.

(vii) not collect any exposed explosives before further action is taken; (viii) not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire; and (ix) other actions specified in 10.5.4.1 [Initial actions]in BS5607. After the initial actions, the following initial remedial actions shall be taken by the shotfirer: (i) when safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and (ii) make a further attempt to fire the shot.	(vii) Do not collect any exposed explosives before further action is taken. (viii) Do not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire. (ix) Other actions specified in 10.5.4.1 [Initial actions]in BS5607. After the initial actions, the following initial remedial actions shall be taken by the shotfirer: (i) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and (ii) Make a further attempt to fire the shot.	(vii) Do not collect any exposed explosives before further action is taken. (viii) Do not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire. (ix) Other actions specified in 10.5.4.1 [Initial actions]in BS5607. After the initial actions, the following initial remedial actions shall be taken by the shotfirer: (i) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and (ii) Make a further attempt to fire the shot.
(c) Delayed remedial action and further attempt at detonation ~~After the immediate remedial action, the delayed remedial action and further attempt at detonation shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.~~ After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken. The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes. The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.	(c) Delayed remedial action and further attempt at detonation: (i) After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken. (ii) The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes. (iii) The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.	(c) Delayed remedial action and further attempt at detonation: (i) After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken. (ii) The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes. (iii) The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.
(d) Inspection to confirm complete detonation After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607. (e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; (f) ~~The Contractor shall notify the Engineer within a week after any misfire event.~~ The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions. JC2: modified (f) as above.	(d) Inspection to confirm complete detonation; After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607. (e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; and (f) The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions.	(d) Inspection to confirm complete detonation; After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607. (e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; and (f) The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 7: EXCAVATION WORKS

Japan International Cooperation Agency (JICA)

Note to JICA and NK:

It is my understanding that Chapters 1 to 6 are functional specifications that cover most risks as general and prevailing reference documents.

Chapters 7 to 10 (and later), are "trade" type documents for which most risks have already been identified and covered in Chapters 1 to 6 and they will therefore be necessarily brief except for notable works such as blasting.

I suggest that excessive cross reference and duplication should be avoided and only particular additional requirements be described in these later chapters.

Excavation therefore is mainly covered already in Chapters 1 to 6 so there are not so many additional items but manual excavation and blasting for example are definite additional requirements.

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 7: EXCAVATION WORKS

Table of Contents

7.1 GENERAL

7.1.1 Scope

Please note that this item is reformatted to be consistent with later Chapters.

The content of each Chapter are now correctly referred to as a heading, i,e, Excavation Works and also Blasting Works, which is a part of Excavation Works.

(1) This Chapter specifies the safety requirements for excavation works which include:

(a) Open-cut and all other types of surface excavation;

(b) Pits, trenches, basements and all other types of structural excavation;

(c) Excavation using all methods such as manual excavation and machine excavation;

(d) Excavation by Blasting (hereinafter referred to as "Blasting Works");

I suggest that the following is left in as it is as embankment filling and backfilling are an intrinsic part of the works in this chapter. If not to be covered by these rules where is it to be covered?

"Backfilling" has nothing to do with temporary excavations it is to excavation for permanent works whereby the contractor shall backfill working space and voids above foundations etc efficiently as soon as possible to ensure that openings are not left unsafe and open for excessive periods. It is also referred to in the later clause 7.2.1 (6).

(e) All associated embankment filling, backfilling and disposal; and

(f) Earthwork Support,

and which are hereinafter collectively referred to as "Excavation Works".

(2) Excavation in tunnelling is not included.

(3) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

~~7.1.2 Safety Plan and Instructions to Workers~~

~~(1) Prepare a safety plan describing the safety requirements for Excavation Works and Inform all relevant workers of the content and requirements.~~

~~(2) Plan the execution of all Excavation Works by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.~~

NK6/22: 7.1.2 is added as MD proposed to stipulate at 7.5.1 Monitoring Impact of Excavation Works on Other Properties.
The Contractor shall comply with the requirements of JSSS 6.1.3 [Monitoring Impact of Works on Other Properties].

7.1.2 Monitoring of Works and Surroundings

(1) The Contractor shall monitor the Excavation Works to demonstrate that they are performing safely to the designed limits and for the intended purpose.

(2) For more details, refer to JSSS 2.1.7 [Monitoring and Records].

7.2 PARTICULAR SAFETY MEASURES

7.2.1 General

(1) The Contractor shall plan all Excavation Works so that they can be executed in a safe and methodical manner.

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for choosing manual or machine excavation, selecting types of Contractor's Equipment, types of Temporary Works, Earthwork Support, spoil removal, storage and handling, controlling ground and surface water, forming embankments and cuttings and the like, in conformity with GC 4.10.

The following added wording to the above is not recommended:

"taking into account of relevant information provided by the Bidding document and subsequently obtained through the investigation by the Contractor."

The addition appears to have no connection with safety.

"Relevant information" meaning what and to whom?

"Subsequently" meaning what and when?

As "Contractor" is used rather than "Bidder" it follows that subsequently means after the contract has been awarded and therefore, that the Bid is to be based only upon the "relevant information" provided in the Bidding document.

This is not correct and it is a potentially risky change as it transfers the responsibility for describing all site conditions to the Employer via the bidding documents and ignores the Contractor's basic obligations.

The Contractor has a fundamental obligation to satisfy himself of conditions (taking account of cost and time) before he submits his Tender (Bid) and the full and relevant requirements are stated in GC 4.10.

Many claims are founded on interpretation of this clause and I do not recommend any change such as you have suggested, it is actually not necessary and may compromise interpretation of this basic clause.

Although reference is perhaps not vital, this is why I had included reference to GC 4.10 to emphasise that we were not changing the contract but this has been deleted

Also, TW now becomes Temporary Works as I advised in January

(3) Sloping sides and benching to sides of excavations shall comply with the technical requirements of OSHA Subpart P—Excavations §1926.652 Requirements for protective systems, (b) only, dependant on the dimensional constraints of the Site and the nature of the soil, hydraulic and geological conditions.

(4) The Contractor shall be responsible for preserving the structural integrity of all sides and excavations and shall provide whatever Earthwork Support may be necessary to achieve this, in accordance with the requirements of JSSS 6.2 [*Earthwork Support*]

The following added wording (which is any case duplicated with JSSS 6.2 1 (4)) to the above is not recommended:

"earthwork support for the excavation of depth exceeding 1.5m unless it is possible to excavate with an adequate and stable slope taking account of the soil condition"

As already advised I do not recommend any such change or the placing of any restriction on when support shall or shall not be provided, there is no need to do this when it is 100% the Contractor's risk anyway.

It to some extent follows OSHA but is actually not compliant with OSHA.

I had previously advised as follows:

> *Problem is that OSHA appears to restrict to a 1.51 m minimum depth, unless "examination of the ground by a competent person provides no indication of a potential cave-in." There is no definition of "competent person" nor do we suggest that it is necessary.*
>
> *We also recommend that no such minimum should be stated and that the Contractor shall be responsible no matter what the depth, no such minimum is stated in JSSS 7.2.*

I have now included the "Competent Person" in the definition of operation leader in Annex 1.1, but I still do not feel comfortable that such a loosely defined minimum be applied in a standard specification.

There may be a risk of accident and injury to workers due to collapse of sides e.g. the effect of the load and vibration from road traffic on trenches and pits in roads which are less than 1.5 metres deep, and also an effect on adjacent buildings, structures or Contractors Equipment. If not foreseen by the "competent person" this then creates a problem for the HSO.

I also note that later, examples of Earthwork Support measures have been added for sides less than 1.5 m deep so I suggest that this threshold is no longer required.

Further to the above however, I suggest that there should be no mention in this Chapter 7 of requirements for earthwork support as this is duplication of the common requirements in Section 6.2 and which will inevitably create ambiguity and confusion.

I have therefore deleted all reference to the 1.5 m threshold in Chapter 7 and sloping/benched sides and dealt with this entirely in Section 6.2.

NK6/22: The 6.2.1 stipulates as follows:

6.2 EARTHWORK SUPPORT
6.2.1 General
(4) The requirements for providing Earthwork Support may be waived by the HSO for the following excavations which have been inspected at the Site by him and judged by him to be safe, stable and free from any risk of movement or collapse:
(a) Excavation in rock; and
(b) Excavation less than 1.5 m deep.

We agreed not to specify here about 1.5 m deep in this Chapter.

~~(5) The Contractor shall execute excavation under dry condition by providing appropriate drainage to drain surface water and water contained in the ground and spring water at the Site.~~

I had deleted the above clause in the draft giving the following reason:

It is not only drainage that must be provided, the Contractor shall design and provide everything necessary. In any event this is already mentioned in JSSS 1.26.2 in a more comprehensive manner and need not be repeated more simplistically here.

I have edited the following clauses to make the wording consistent with the Contract and with JSSS 6.1 3 and 6.2.

(6) The Contractor shall execute all Excavation Works and associated filling, backfilling and Earthwork Support without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage by other properties and obtain the prior consent of the Engineer to

such measures before commencing relevant parts of the Excavation Works.

The original text of the above clause has been suggested to be revised by JICA/NK as follows:

The Contractor shall execute all Excavation Works and associated filling, backfilling and support work so that the criteria of allowable values specified in the Contract (see the Particular Safety Specification) or instructed by the Engineer to avoid adverse effects to surrounding areas and buildings, including existing foundations, structures, roads, paved areas or the like, by excavation are to be respected. In this regard, the Contractor shall take all necessary measures to prevent the occurrence of such adverse effects by designing and providing permanent or temporary supports and reinforcement before commencing Excavation Works.

I do not recommend that the above change be made for the following reasons:

The essential basis of the Contract (and the rule of Law in most countries) is that the Works shall be executed by the Contractor without causing any damage at all to neighbouring properties.

If any damage is caused then the Employer is open to claim for repairing such damage from adjacent owners and for which the contractor should be liable subject to the requirements of the contract.

FIDIC GC 17.1 (b) applies.

Insurance may also be compromised if not handled properly under GC 18.3.(d) (ii).

The added text to this clause is not necessary, it confuses any meaning and implies that there is some flexibility i.e. that some damage or "adverse effect" is acceptable if it falls within "allowable values" when as a common basis this is not correct.

If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,

I recommend that the default situation should be that the Contractor is instructed as a general rule via JSSS to set up and manage monitoring to ensure his compliance (i.e. that damage does not occur), This is in principle as the earlier draft of JSSS.

This will require further development of the contractor's monitoring requirements and I have drafted a new clause 7.5.3 to deal with this.

In any exceptional rare case for example on large projects in congested areas and where damage is likely and unavoidable then the Employer should already have consulted and agreed with the owners and residents that the Works can be executed in a manner that may cause some damage and has agreed that compensation will be paid for such damage in accordance with a scale of damage. However, I suggest that this should not be a norm or a usual situation and that JSSS or the User Guide should not imply that this is a common option and I suggest that it should be the exception rather than the norm. otherwise it will be misunderstood by some Executing Agencies that such damage may be allowable when actually it is isn't.

During our January 2020 discussion, I said I would research this further and requested JICA to provide examples of the reference documentation for the Hong Kong MTR.

I have briefly studied the information provided by JICA and consequently believe that this may have been wrongly interpreted. In reviewing I feel it is important to note that:

1) Damage is the responsibility of the Contractor and the Engineer has no authority to determine what damage is acceptable or not.

2) The Engineer is not part of the relationship between Site owner and adjacent owners and if any damage is caused to neighbouring property, the Engineer's opinion is not relevant, adjacent owners usually have a basic right of claim against the Employer.

JICA appear to consider that some damage to adjacent buildings, structures, railway, roads, footpaths slopes and utilities etc., is "allowable" within certain specified limits but I feel that this is not correct and not supportable under the HK MTR information provided.

It is apparent that:

1) No damage or deformation to buildings, paving and services, etc. is allowable

2) If any damage is caused, the Contractor shall stop the Works and shall then be responsible for proposing and implementing remedial measures.

I consider that monitoring of any movement is not for the purpose of judging whether damage is reasonable or not but is to predict whether any damage is likely to occur, in which case, it then in total becomes the contractor's responsibility to remedy.

Please note also that in the sample provided for the Hong Kong MTR, whilst sample monitoring ranges are provided, Clause 2.19 (3) on page 2/10, makes clear that this is for information only and that in any event, the Contractor must meet his obligations under the Contract:

"the Contractor shall satisfy himself that the specified criteria is adequate to fulfil his contractual obligations and shall take any additional measures necessary to avoid damage to property."

Pages 40 and 42 are missing from the provided copy of the HK MTR Conditions of Contract, therefore I cannot complete my review of the Contractor's obligations for care of the Works under Clause 22 of the Contract.

I do not in any event recommend the concept of the Employer or Engineer establishing measurement criteria as a general rule for predicting damage, as it is difficult to do and if wrong it could affect liability of the Employer and Engineer and even JICA if they are called upon to fund it.

This can be complex legal and contractual territory that I recommend should not be dealt with by JSSS as if it were a simple and common issue.

FIDIC GC 17.1 (b) applies and I suggest that it should not be compromised by the suggested addition to this clause.

NK6/22: We would like to specify this (6) as MD's proposed stipulation in accordance with GC and request JICA to review this again though JICA commented to include criteria of allowable values.

(7) If loose rocks, standing trees, etc. existing ~~outside the Site~~ above the excavation area ~~in the Site~~ may pose a danger to workers or construction equipment, take the following measures unless otherwise specified in the Contract;

(a) Consult with the Engineer about measures such as removal of loose rocks, installation of rockfall protection fences, etc.; and

(b) ~~Based on the consultation with the Engineer, propose safety measures including construction methods to the Engineer and~~ Take actions in accordance with the Engineer's instruction.

The above is difficult to understand, conditions outside the Site are not usually within the Scope of a Contract.

If such hazards exist and were apparent at or before Tender stage, then the neighbour is usually legally obliged to remove the risk at his own cost and should be requested to do so.

If the risk is created by the execution of the Permanent Works then this can mean that the Contractor has created the risk by his methods and it should be a part of the contractor's scope responsibility anyway.

Rather than concentrating upon the manner in which this is dealt with contractually, I suggest that JSSS should concentrate on safety i,e. by the HSO removing the risk and taking appropriate measures immediately.

I suggest as follows:

(8) If loose rock, boulders, trees and the like, are positioned above working areas and where there is any risk that these may pose a danger to workers, unless otherwise instructed by the Engineer, the HSO shall prohibit workers from entering the working areas and issue appropriate instructions including for example to:

(a) Provide protective overhead safety barriers or safety nets;

(b) Carefully remove loose rocks; and

(c) Provide (or improve existing) Earthwork Support to unstable areas~~;~~.

NK6/22: agreed to the above.

7.2.2 Safety Measures before Commencing Excavation Works

(1) The HSO shall inspect the Excavation Works area and surrounding areas before starting work each day and after adverse climatic conditions or earthquake as described in JSSS: 2.7 [*Adverse Weather Requirements*]. The inspection shall include the following areas and items:

In your draft for the above, "HSO" has been changed to "Contractor" which for reasons explained is not correct. I recommend that wherever an inspection is required for safety purposes it should state HSO as he is responsible. In practice he may delegate this internally e.g. to an operation leader but that is his choice.

NK6/22: agreed to the above (1) to specify the HSO because of the safety responsibilities of HSO.

(a) Potentially unsafe areas where there may be any risk of landslide;

(b) Loose rock or boulders which may be at risk of falling;

(c) Cracks in the Excavation Works area and the surrounding area;

(d) Changes in ground water level, surface or any spring water; and

(e) Deleterious effect due to freezing conditions.

(2) As a consequence of such inspections the HSO may prohibit the continuation of any affected work, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

(3) Install facilities such as stairs and ramps as means of access or egress from the excavation site in accordance with JSSS 6.4.4 [*Vertical Access*] ~~7.4.2 [Setting of Passage];~~

Please note that I have added a new subclause in JSSS Section 6.4 Vertical Access, covering steps, stairs and ramps

(4) Provide support or protection for the underground services appropriately in accordance with JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], and take measures, according to the situation, such as indicating clearly the location and precautions of the underground service and providing protective fences for the services.

(5) Prevent workers and construction equipment/transport vehicles from their falling at the excavation site, in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], install entry prevention facilities (fences, temporary enclosures, etc.), warning flags, and signs, etc..

I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)

~~(6) Take the following measures at the lower parts (bottom) of the excavation site when there is a risk of danger to third parties and workers, or damage to construction equipment, etc. by the fall of excavated soil/rock;~~

~~(a) Identify dangerous locations, install entry prevention facilities such as fences,~~

~~temporary enclosures, warning signs, etc. in accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*]; and~~

~~(b) Install protective fences that catch falling rocks, etc.~~

I suggest that the following are not now necessary as they are already covered by 7.2.1 (8)

~~(7) Risk prevention measures against falling rocks~~

~~(a) To protect workers from the dangers of falling of loose rocks and soils from the excavated surface, remove the loose rocks, etc. and take appropriate protective measures; and~~

~~(b) When there is a risk of falling of loose rocks/soils due to the excavation, take measures such as provision of earth retaining and protective net beforehand, and prohibiting workers from entering in the excavation site until the safety of the workers is confirmed.~~

NK6/22: confirmed.

7.2.3 Safety Measures during Excavation Works

During the Excavation Works, the Contractor shall:

(1) Not place excavated spoil, filling or Contractor's Equipment near the vertical edge of excavated surfaces.

(2) Stop the Excavation Works where ground collapse is possible during excavation, evacuate all Contractor's Personnel, implement all necessary safety measures, prohibit Contractor's Personnel from recommencing work until all safety measures have been taken.

(3) Backfill any temporary excavation area as soon as possible after the relevant work is completed.

The original clause had nothing to do with temporary excavations it is to excavation for permanent works whereby the contractor shall backfill working space and above foundations etc. efficiently as soon as possible to ensure that openings are not left open and unsafe for excessive periods.

I recommend that the original clause goes in.

NK6/22: confirmed.

(4) Backfill and compact excavated areas that require such backfill as soon as possible after the Permanent Works are completed.

(5) For places where open Excavation Works are performed, maintain the necessary illuminance to perform the work safely.

7.3. MANUAL EXCAVATION WORKS

7.3.1 General

During manual Excavation Works, the Contractor shall:

~~(1) Not permit any excavation without providing Earthwork Support unless otherwise permitted by the HSO in accordance with JSSS 6.2 [*Earthwork Support*].~~

The following added wording to the above is not recommended:

"depth exceeds 1.5m without providing Earthwork Support to all vertical surfaces as specified in 7.2.1 [General] (4). "

See above and previous notes, I do not recommend that the draft be changed in this way.

Please refer to my earlier notes; I do not recommend any reference here to the 1.5 m threshold and recommend that this is dealt with entirely in Section 6.2.

The original text of this clause (as edited above) has been transferred to 7.1 as a general item.

NK6/22: agreed as mentioned in 7.2.1 (4) not to specify 1.5 m limits.

~~(2) Not permit excavation of the vertical surface of the excavated area, or excavation of the ground under the foundation of existing structure~~

Above is edited as follows:

(3) Not undermine any excavation under and beyond the vertical face.

(4) Not excavate under existing foundations

(5) Maintain sufficient distance between workers.

(6) When breaking or removing loose rock, pay attention to the stability of the rock and the direction of its fall.

(7) When using a lever for removing rock, select equipment that has appropriate length and strength for the work.

The following clause has been added in the JICA draft:

All of the content (and more) is already included in Chapter 4 [Contractor's Equipment], it is not necessary to duplicate it here. Please confirm which is to be deleted, here or Chapter 4?

NK6/22: agreed to delete 7.4 Mechanical Excavation because the following provisions are mostly general ones and covered in Chapter 4.
Do we need to stipulate to refer to Chapter 4 for requirements of Mechanical Excavation as only manual excavation is specified?

~~**7.4. MECHANICAL EXCAVATION WORK**~~

7.4.1 General

The Contractor shall take the following measures for the safety of operators of excavating equipment (hereinafter referred to as "equipment") and workers engaged in the mechanical Excavation Works with the equipment:

(1) In accordance with JSSS 2.3 [*Prohibition of Entry-Dangerous Work*], prohibit workers from entering the places where workers are in danger due to the mechanical Excavation Works by placing notices of "No Entry" at easy-to-see locations, installing entry prevention facilities (fences, temporary enclosures, etc.) and placing Spotters.

As noted in the original draft, it is not good practice and there is no need to include such general cross reference to other sections. The referenced sections and chapters are of general application anyway.

Please refer to JSSS 1.4.9 (2) which explains this.

(2) Take the safety measures prescribed in JSSS Chapter 4 [*Contractor's Equipment*]

Cross reference is not necessary and references have changed.

(3) Ensure that the operators shall:

(a) Operate the equipment always paying careful attention to the position of workers near the working range;

(b) When moving the equipment backward, make sure that there are no workers behind and follow the instructions of the Spotters;

(c) After the work, not park the equipment on the slope where excavation is in progress or on the ground that has a possibility to collapse; and

(d) Make sure that the bucket of equipment shall not pass over the operator's seat of other equipment.

(4) Ensure that workers shall:

(a) Not enter under the bucket of equipment that is loading materials; and

(b) Keep away from dump trucks under loading or unloading materials.

The above and more is already included in Chapter 4 [Contractor's Equipment], why is it necessary to duplicate some of it here? I suggest that it is not necessary here.

7.5. TRENCHES, PITS AND OTHER TYPES OF STRUCTURAL EXCAVATION

In English international construction usage, "Trench excavation" is a classification of only one type of Excavation but there are many other accepted types which commonly include for example:

Pit excavation,

Basement excavation,

Excavation for deep piling

Oversite excavation, cuttings, reduce level excavation, etc etc

There is no great difference in the risks between collapse of a trench or collapse of a pit or basement excavation all are similar and the prescribed safety measures are the same so:

Why separate only "trench excavation"? and

What happens to the required measures for the other types?

To describe only trench excavation and ignore all others, looks unusual and appears incomplete.

Reference to OSHA is creating this problem as US and English usage are slightly different.

OSHA uses the phrase "Excavation and trenching" as if both are different. In English construction usage, "Excavation" alone is commonly used and the various types (e.g. trench, pit and basement excavation) will be understood to be covered by this term.

This is why 7.1.1 is all embracing.

The given definition of "Trench Excavation" in the draft is not necessary as the word "trench" is in common usage.

It is also not correct, Trench Excavation is not "excavation performed for laying gas pipes and water /sewage pipes, etc.". "Trench excavation" will also cover for example excavations for any linear structure or material such as :

strip foundations, ground beams, cables and ducts etc. etc.

There is not so much in this clause anyway but if considered necessary, I would suggest it would be better re-headed as Excavation Generally or even "Trenches, Pits and Other Excavations" as above.

NK6/22: agreed to change the title and specify as proposed above.

7.5.1 General

The Contractor shall take the following measures to prevent danger to workers due to the collapse of the excavation surface during ~~trench excavation~~ trenches, pits and other types of structural excavation..

NK6/22: Do we need to mention same as the title of this Section?

See notes above, the following definition is not sufficient or necessary.

~~Trench excavation means excavation performed for laying gas pipes and water /sewage pipes, etc. which depth is larger than its width. In general, excavation width is less than 4.6m (15feet).~~

~~(1) When performing trench excavation with depth of 1.5m or more, adequate and stable Earthwork Support shall be provided.; and~~

The above is not recommended as it conflicts with other clauses, please refer to earlier notes. It is deleted here and dealt with in Section 6.2

~~(2) For trench excavation with a depth of less than 1.5m, protective systems as shown below shall be installed, unless it is possible to excavate with an adequate and stable slope taking account of the soil condition.;~~

~~(a) Simple earth retaining (Trench box, Trench shield);~~

~~(b) Lightweight sheet pile earth retaining; and~~

~~(c) Aluminium hydraulic shoring, Timber shoring.~~

The above appears illogical as there are numerous statements that no support is required below 1.5 metre depth yet then this is provided which specifies requirements.

NK6/22: agreed as mentioned in 7.2.1 (4) not to specify 1.5 m limits.

I have not edited the added subclauses but suggest that they are deleted anyway.

7.5.2 Safety Measures during ~~Trench~~ Excavation

None of the following items are unique to trench excavation, all items apply to all types of excavation.

Also all of the following items are for Earthwork Support not Excavation and this would be better transferred to JSSS 6.2.4 to avoid duplication and ambiguity. I have already included relevant part of the following in 6.2.4 with suitable editing and this subclause can now be deleted.

Reference to "earth retaining systems" should be changed to "Earthwork Support".

(1) Materials and equipment to be used for Earthwork Support shall be appropriate for the width and depth of the excavation and free from damage or defects that might impair their proper function.

~~(2) Manufactured (prefabricated) materials for Earthwork Support shall be used in accordance with the instructions and recommendations given in the manual of the manufacturer.~~

No need already covered by JSSS 1.35

~~(3) Earthwork Support designed by the Contractor shall be installed in accordance with the design and construction procedure drawings.~~

There are no such drawings in JSSS and no meaning to this requirement. This is also all Contractor design.

NK6/22: Th Contractor will actually prepare such drawings to install Earthwork Support at the Site though JSSS does not mention about drawings in 1.37 Design and Management of Temporary Works. Japanese draft stipulates such drawings.
Now OK to delete (3).

~~(4) Earthwork Support with sufficient strength shall be provided to protect workers from collapse of the ground in and structures near the excavation site.~~

The above is not completely clear however it is already covered by 6.2.1 (2) above

(5) Workers shall not be allowed to enter any excavation ~~the trench~~ until Earthwork Support is installed prior to the work;

(6) Excavation to a level greater than 60cm below the bottom of the Earthwork Support shall not be allowed;

(7) If temporary removal of individual members of the Earthwork Support is necessary, safety measures shall be taken to ensure the safety of workers, such as installing temporary members to hold the loads imposed on the system;

(8) When removing Earthwork Support, the Contractor shall not allow anyone other than

the workers engaged in the removal work to enter the area and the vicinity; and

(9) The Contractor shall perform backfilling of any ~~trench~~ excavation in parallel with the removal of the Earthwork Support.

Please refer to the notes against Clause 7.2 (6) above.

I have added a comprehensive and common clause for contractor's monitoring of Excavation Works in JSSS 6.1.3 [*Temporary Inspection and Monitoring Systems*].

I think it should go here and not in Section 6.2 [Earthwork Support] as such settlement can be a result of excavation generally, including that caused by say water table lowering (e.g. well-point systems) and Earthwork Support, but not only for the Earthwork Support.

I ~~have added suitable mention in Section 6.2 so that this is coordinated.~~

~~7.5.3 Monitoring Impact of Excavation Works on Other Properties~~

~~The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].~~

NK6/22: As commented by JICA on Chapter 6 TW, the monitoring is moved to 2.1.7 [Monitoring and Records].
Instead of 7.5.1 above, we propose to specify at 7.1.2.

7.6. BLASTING WORKS

See above clause 7.1.1 where Blasting Works is defined. I have changed the following references accordingly:

7.6.1 Scope

(1) This Section specifies safety measures in connection with excavation in rock ~~open cut rock excavation~~ that cannot be undertaken using conventional excavation techniques.

The revised wording "open" or "open cut" are not correct or necessary, excavation in rock can apply to all types of excavation where rock can be encountered (e.g. trenches, pits and basements). Suggest that the original wording is correct.

The above definition is simple and clear but please advise if you need a other more detailed definition of "Rock"?

I suggest that the following is necessary:

(2) Blasting Works for tunnelling is not included in the scope of this Chapter. Any such work shall be performed in accordance with the Particular Safety Specification.

I suggest that also that some limitation shall be including in JSSS to restrict the use of blasting as it may otherwise assume that is an acceptable alternative to more expensive removal techniques.

I have therefore separated the clause, edited it and added further general requirements as follows:

7.6.2 General Blasting Requirements

(1) Blasting shall only be permitted to be performed by the Contractor:

(a) When it is safe to do so and when there is no risk of injury or damage being caused to persons or property within or outside the Site

(b) Where it specifically allowed or required by the Particular Safety Specification; and

(c) During the execution of the Works after the Contractor has received the Engineer's approval or instruction.

(2) Blasting when approved, shall only be permitted at times which have been predetermined and agreed with the Engineer and any relevant authority.

~~(3) The Blasting Works plan shall be described in the relevant Method Statement.~~

What does the above clause mean? The Blasting Safety Plan is described below. Please clarify?

NK6/22: Blasting works are made as a part of construction works consisting of clearing, excavation, concrete works, backfilling, etc. Method Statement will cover the whole parts of works, so above (3) stipulates the blasting work plan shall be a part of the relevant MS.

~~(4) This Section applies particularly to Blasting Works where there may be any risk of injury or damage to persons and property on adjacent areas due to the use of Explosives either within or outside the Site.~~

Ditto, why would the use of explosives be possible outside the Site? Please see above suggested added clause (3), it is assumed that this can be deleted please check.

NK6/22: It states the risk shall be not expected outside the Site by the flying rocks of the blasting in the Site. (1) (a) specifies same, so (4) can be deleted.

Noise: There appears to be no maximum criteria stated in the BS so I suggest the following:

7.6.3 Blasting Noise

Noise levels, measured in areas close to the Exclusion Zone and in areas accessible to other workers or the public shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB

Noise levels measured ~~in areas close to the Exclusion Zone and in areas accessible to other workers or the public~~ at the boundary of the Project area shall not exceed a sound pressure level of 85 dB and/or a peak sound level of 110 dB.

NK6/22: Japanese Noise Regulation Act stipulates noise of the specific construction works shall not exceed 85 dB at the boundary of the Project area.
NK agree to the MD's proposed level.

To MD, May I know your basis of a sound pressure level of 85 dB and/or a peak sound level of 110 dB

7.6.4 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Blasting**" means blowing-up or breaking apart solid rock with the use of Explosives.

(2) "**Explosives**" means any substance or mixture of substances that is manufactured to produce an explosive effect and which term includes any explosion explosive, Blasting agent and Blasting supplies such as detonators, cords and detonating equipment.

(3) "**Exclusion Zone**" means an area from which all unauthorised Contractor's Personnel, unauthorised Employer's Personnel and any other unauthorised persons or the general public are prohibited to enter due to the risk of their being affected by the Blasting Works. Unauthorised personnel in this context shall have the same meaning as that stated in Section 2.3 [*Prohibition of Entry – Dangerous Work*] Clause 2.3.1 (c).

7.6.5 Compliance Standards

Changed in 2.5 therefore for consistency to be changed everywhere;

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Section or relevant to the subject of this Section and which are not fully covered by JSSS, the Contractor shall take necessary measures for Blasting Works complying with the technical requirements specified in BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry.

The above standard wording has been changed (for the better) as a consequence of JICA comment on Chapter 1 as above and I suggest for consistency that the same is applicable and should be used here.

I also suggest that more reliance should be placed upon the use of the BS and less on trying to repeat or "improve" parts of the BS in JSSS. If anything some of the clauses in JSSS could be omittec wgere the BS is more stringent or more clear.

.See later notes on survey and monitoring

(2) The Contractor shall obtain the necessary permits, licenses or approvals for Blasting work and the handling and storage of Explosives associated therewith. The Employer, at the request of the Contractor, shall provide such reasonable assistance to allow the Contractor to obtain properly such permits, licenses or approvals.

Part deleted.

7.6.6 Personnel for Blasting Works

Please refer to the BS with regard to the selection and qualification of blasting contractors to perform the blasting works, it seems logical but is this to apply? It seems insufficient that a contractor with no experience or proven capability can employ two blasting staff and then be qualified to perform the works.

(1) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall assign the following personnel for Blasting Works:

(a) Explosives engineer; and

(b) Shotfirer(s).

What about other team members e.g. blasting supervisor (see BS), explosives storekeeper, drivers carrying explosives, security staff, spotters

NK6/22: JICA specified as above after discussion on our proposal based on BS, so no change is made at this stage.

(2) Responsibilities and requirement of personnel for Blasting Works:

NK6/22: JICA commented "Blasting Works" is not defined, so requested to change to "Blasting works". Do you define it?

(a) The Explosives engineer shall plan the Blasting Works, lead the Blasting Works at Site and perform the safety management of the Blasting Works; and

(b) Shotfirer(s) shall perform safekeeping, transportation and storage of Explosives, and perform Blasting Works and site safety management.

(3) Safety education and guidance

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that the Explosives engineer and shotfirer(s) have sufficient knowledge of and are able to comply with the following:

"personnel engaged in Blasting Works" means "all persons" so engaged. Why make this restrictive? Can state "all personnel involved.."?

What about other team members e.g. blasting supervisor, explosives storekeeper, drivers carrying explosives, security staff, spotters? All and more need to be made aware and this is only safety training. I suggest the original wording is wider.

NK6/22: JICA specified as above after discussion on our proposal based on BS, so no change is made at this stage.

(a) Nature of hazards associated with Blasting;

(b) Unsafe conditions and conduct in performing Blasting Works;

(c) Procedures for Blasting Works;

(d) Evacuation and return procedures for any evacuated workers and personnel;

Change not necessary but added anyway

(e) Safety measures when misfiring of Explosives occurs; and

(f) Emergency response *(actions)*.

7.6.7 Blasting Safety Plan

The Contractor shall prepare a Blasting Safety Plan describing all required safety measures for Blasting Works in addition to the items prescribed in JSSS 1.7 [*Contractor's Safety Plans*] and including the following:

(1) Risk analysis and countermeasures.

(2) Safety measures for transportation, safekeeping, use and disposal of Explosives.

(3) Safety measures for Contractor's Personnel, Employer's Personnel and any other persons, the general public, neighbouring residents and building owners on or adjacent to the Site and who may be affected by the Blasting Works (hereinafter collectively referred to as "persons affected by the Blasting Works" in this Section).

"Personnel" needs to be changes to "Persons"

Edited as above.

(4) Determination of Exclusion Zone.

(5) Identification of affected areas, buildings, structures and property.

(6) Environmental and health compliance requirements including vibration, noise, fire, and the like, required by Laws and the Contract.

(7) Environmental monitoring plan and methods to record the impact of Blasting on affected buildings, structures and property.

(8) Trial Blasting.

(9) Identification of the Explosives engineer and shotfirers to distinguish from other workers.

(10) Placement of Spotters.

(11) Method of notification of the start date and time of Blasting work and the serving of notice immediately before commencement of Blasting Works to other persons affected by the Blasting Works.

(12) Evacuation method of all personnel from the Exclusion Zone before Blasting.

(13) Warning system at the time of Blasting.

(14) Procedures and methods for dealing with misfired Explosives (The plan for the treatment procedures for misfired Explosives shall be prepared by reference to BS5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.5 Misfires.

(15) List of legal and administrative records.

7.6.8 Risk Prevention of Workers and Neighbouring Residents

(1) Notice of Blasting

~~The Contractor shall assist the Employer when so requested by the Employer in giving~~

~~briefings to neighbouring communities, residents and property owners by explaining the Blasting work scope, extent, duration, timing and safety measures and related information~~

The Contractor shall notify all persons affected by the Blasting Works. of the planned schedule and start dates and times for Blasting Works. Such information shall be updated as necessary, immediately before the Blasting Works commence.

(2) Risk Prevention Measures

The Contractor shall take all necessary measures to prevent any injury or damage to all persons affected by the Blasting Works.including the following:

(a) Prohibition of overcharging with Explosives more than that specified in the Method Statement prepared based upon the trial Blasting;

~~(b)~~ Prevention of scattering of flying rock and other debris ~~including for example the provision of sand, nets, steel plates, timber, and the like as mentioned in 12.7.6 [Blast protection] of BS 5607 and as prescribed in the Contract (if any);~~

As a basic rule I do not suggest giving any examples, the Contractor is already required to comply with BS 5607 so it is not necessary to give any further reference.

I disagree that the Employer shall determine the prevention measures of scattering of rocks as a common basis as he is employing and paying the contractor as a qualified technical expert to do this work.

I recommend that the original wording should not be changed, the given examples are not specific and any attempt to define scope may compromise the employer and even JICA in the future.

(c) Prevention of collapse of surrounding rocks or ground areas;

This is based upon the JICA/NK draft and I do understand why it is deleted.

It may not be overcharging it could be for other reasons e.g. incorrect drilling and blasting location in the wrong place or direction according to geology.

Blasting must be controlled and contained within the area required without damaging surrounding areas. Aside from the risk of damage to other property, The employer should not be required to pay for repair or reinstatement of surrounding areas where the contractor has failed to control his own operations.

I suggest that the above is not deleted

~~(d) Define all Blasting Works as Dangerous Work and take measures in accordance with Section 2.3 [*Prohibition of Entry – Dangerous Work*];~~

(e) Demarcate the Exclusion Zone for Blasting Works and take necessary measures to prohibit the ~~personnel~~ persons (?) affected by the Blasting works from entering the Exclusion Zone by a system of signs, signals and Spotters in accordance with 7.4.2 [Blast warning procedures] of BS BS5607 including the following:

The BS covers safety measures and more, is the following therefor necessary?

NK6/22: JICA wants JSSS to specify requirement and also concrete measures to guide the Contractor, so the following are left as original.

(i) Provide audible warning sirens to warn of impending, current and completed Blasting operations.

(ii) Place bulletin boards showing the Blasting time, siren code and other precautions at the boundary of the Dangerous Work area.

(f) Establish evacuation requirements, routes and assembly areas and inform all persons affected by the Blasting Works;

(g) Perform firing only after the Spotters have confirmed that all persons affected by the Blasting Works have been evacuated;

(h) Provide communication equipment between the shotfirer and the Spotter, maintain and test the equipment;

(i) Prohibit bringing into the Blasting areas any mobile phone that may affect adversely the electric detonator; and

(j) Unless otherwise specified in the Particular Safety Specification, perform Blasting Works only during the daytime.

7.6.9 Handling and Storing of Explosives

(1) Storage of Explosives

(a) The Explosive store to be constructed at the Site shall be a secure, substantial and fireproof building, environmentally controlled, locked, guarded and protected at all times and in accordance with the Laws of the Country;

(b) Appropriate numbers and types of personnel shall be assigned by the Contractor for safekeeping and security of the stored Explosives and any other materials;

(c) The Contractor shall maintain records of the types and quantities of all Explosives received and issued at the store, listing the date and time of receipt and issue and the names of all personnel concerned; and

(d) The Contractor shall submit the records to the Engineer when the Engineer requests.

For other storage requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.3 Storage.

JICA have commented as follows:

JC1: As Blasting is soul of safety specification, it seems better to specify all items as mentioned in BS 5607 (OSHA) if referred to those. In addition, advise to refer to the allowable values influenced to structures of 3rd parties specified in Hongkong MTR M&W.

Please note:

1) *The full HK blasting document contains no use or mention of the expression "allowable values" of any damage to "structures of 3rd parties"*

2) *The document includes criteria for measurement and recording but this does not state that any damage is allowable.*

3) *Similar to previous comments on Earthwork Support (see above), I suggest that the criteria is given to determine whether Blasting is likely to cause damage in which case the Blasting Works shall, stop and the contractor shall propose remedial measures before proceeding.*

4) *Pages 40 and 42 are missing from my copy of the HK MTR Conditions of Contract, therefore I cannot complete my review and give any final comments on the Contractor's basic obligation.*

I do recommend that any such reference and addition is correct or justified particularly for blasting.

My suggestion is the same as for Earthwork Support (see above notes) namely:

"If anything, it would be better to state as originally drafted namely as a common default the Contractor shall cause NO damage to surrounding areas and buildings, etc. etc.. when performing the Works, as this is the usual legal and contractual obligation of the Contractor.,

If there is a chance of damage occurring due to an unavoidable method of execution, then I recommend that the default situation should be that the Contractor is instructed via JSSS to set up and manage monitoring to ensure his compliance i.e. that damage does not occur, subject to receiving the consent of the Engineer.

Regarding the additional reference to BS 5607, the Contractor is already required to comply with this BS so it is not necessary and I do not recommend giving reference to further particular BS clauses in JSSS.

(2) Transportation of Explosives

For transportation requirements, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 9.4 Transport of Explosives on Site.

(3) Quantity of Explosives at the Blasting site

(a) ~~The quantity of Explosives to be transported from store to the Blasting site shall not greatly exceed the estimated quantity of consumption for that day;~~

(b) No ~~extra or surplus~~ Explosives shall be stored at the Blasting site; and

I suggest the above is better

(c) Explosives not used on the day shall be returned to the Explosives store.

Ditto

(4) Handling of Explosives

(a) Explosives shall be handled with extreme care ensuring that they are not hit, thrown or dropped;

(b) Containers for Explosives shall be solidly constructed from timber or non-conducting material and metals such as iron or foil must not be used on inner surfaces;

(c) Explosive and detonators shall be separately stored in lockable containers;

(d) The containers for Explosives shall protect against water ingress, impact damage; and

(e) Smoking, use of matches, lighters, flames, sparks etc. shall be prohibited in areas where Explosives are being transported, stored and handled, notice boards and warning signs shall be placed in suitable positions.

(5) Records of Blasting and Explosives

(a) The Shotfirer shall prepare daily work records showing the date and time of each Blasting operation, quantity of Explosives received, consumed, misfired and remaining, number of blast holes, charging method for the Blasting and treatment of misfired Explosives;

(b) The Explosives engineer shall check and countersign the Blasting Works records; and

(c) The Contractor shall submit the records to the Engineer when the Engineer requests.

(6) Notice to the Engineer

The Contractor shall notify the Engineer in writing as follows:

(a) Delivery of Explosives to the store and from the store to the Site, shall each be given to the Engineer by no later than noon on the day preceding the scheduled date of the arrival of Explosives at the store and the delivery to the Site;

(b) Notification of intended Blasting Works shall be given to the Engineer by no later than noon on the day preceding the scheduled date of the Blasting operation; and

(c) Notification of the schedule for the following week's Blasting shall be given to the Engineer by no later than Friday morning of the preceding week.

7.6.10 Trial Blasting

The Contractor shall perform trial Blasting in accordance with the Blasting Safety Plan provided in 7.6.7 [*Blasting Safety Plan*] for the following purposes, and modify the said Blasting Safety Plan according to the results of the trial Blasting:

(1) Confirm the characteristics of rock and topography at the Blasting site that will affect the Blasting operations.

(2) Confirm the suitability of the planned Blasting method, Explosives amount, and scattering prevention and other protection measures.

(3) Confirm the safety of all persons affected by the Blasting Works.

~~(4) Confirm that the vibration values of the Blasting does not exceed the allowable vibration value for existing buildings, structures and other property on or adjacent to the Site and which may be affected by the Blasting operations, as specified in the Contract or instructed by the Engineer.~~

Please refer to following clause 7.6.11 and as a consequence I suggest that the above is modified as follows:

(5) Confirm that the Contractor's criteria ~~is~~ are adequate for the purpose of JSSS エラー! 参照元が見つかりません。[*Monitoring Impact on Other Properties*].

The Contractor shall submit the trial Blasting reports with any consequent changes to the Blasting Safety Plan to the Engineer before proceeding with the Blasting Works.

7.6.11 Monitoring Impact of Blasting Works on Other Properties

The Contractor shall comply with the requirements of ~~6.1.3 [*Monitoring Impact of Works on Other Properties*].~~ 7.1.2 [Monitoring of Works and Surroundings].

NK6/22: The monitoring is specified in 2.1.7 following JICA comments, so monitoring is stipulated in 7.1.2 as noted above.

There are numerous references to the requirements for monitoring the impact of the Works on other properties so (as with Excavation) I have developed JSSS 6.1.3 to cover this as a Common Specification.

It is only necessary therefore to include the above cross reference here and the following can therefore be deleted.

~~*The above Original (as re-edited)*~~

~~(1) The Contractor shall monitor the vibration, settlement and all other potential effects of the Blasting Works to ascertain any effect upon buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities and the like on the Site or outside the Site (collectively referred to in this Section as "other properties") to ensure that no damage or weakening is caused to such other properties.~~

~~*JICA require the following re-wording to the original text of this clause:*~~

~~The Contractor shall monitor the vibrations caused by the Blasting operations in the affected areas, buildings, structures and properties identified in the Blasting Safety Plan to ensure that vibration damage or weakening caused by the Blasting operations will remain within the allowable values specified in the Contract or instructed by the Engineer.~~

7.6.12 Particular Safety Measures for Blasting Works

(1) Identification of Blasting workers

~~Provide armbands, uniforms or marked safety helmets to distinguish all workers engaged in Blasting Works from other workers.~~

Provide clear visible identification mark, uniforms or marked safety helmets to

distinguish the Explosives engineer and shotfirer(s) engaged in Blasting Works from other workers.

(2) Drilling Work

(a) No drilling shall be allowed in the hole formed for previous Blasting; and

(b) If misfired explosive is found during the drilling operation, the drilling shall be stopped and the misfired explosive shall be treated in accordance with the procedures planned in 7.6.7 [*Blasting Safety Plan*] and 7.6.13 [*Measures after Blasting*], (2) [*Treatment of misfired Explosives*].

(3) Explosives Charging

(a) Drilling operations shall not be permitted during charging of Explosives.

(b) Before charging, thoroughly clean the holes and do not leave any dust or debris; and

(c) Shock and friction such as the following, which can cause accidental initiation of the charges, shall be avoided:

(i) the over-vigorous use of stemming rods to force explosives into a shot hole.

(ii) the use of drill rods or other metal tools in a shot hole containing explosives.

(iii) vehicles running over explosives and other hazards involving impact or concussion.

(iv) shock tube detonators being initiated when subjected to "snap, slap and shoot".

For other safety measures for charging work, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10 Safety when using Explosives.

(4) Handling Detonators

(a) Measures for Blasting using electric detonators:

(i) Make sure electric detonator's leg wires shall be kept short-circuited until they are connected into the circuit for firing.

(ii) Check if shotfiring cables are not cut or damaged.

(iii) Make sure electric detonators shall be kept away from electric lighting supplies, power supplies and other electrical sources that may cause electric leakage.

(iv) Check if there are no missing or wrong wiring connections or mis-connection with previous blast wires.

(v) Make sure there are no stray electric currents.

(vi) Do not use electric detonators if there is any danger of electrical interference for example from radio-frequency radiation near radio communication facility or radar.

(vii) Install a lightning detector near the Blasting area, stop Blasting Works when there is a risk of lightning strike, and evacuate workers to a safe place.

For other safety matters for Blasting with electric detonator, the Contractor shall comply with BS 5607: Code of Practice for the Safe Use of Explosives in the Construction Industry, 10.4.3 Electric detonators.

(b) Measures for Blasting using non-electric detonators:

(i) Do not cut or damage the shock tube.

(ii) Before firing, check the connections visually and make sure that there are no missing or previous wiring connections or wrong wiring connections.

(5) Measures in Ignition:

(a) The connection between the shotfiring apparatus and shotfiring cable shall be made just before ignition;

(b) Ignition shall be made at a safe place isolated and protected according to the degree of the blast; and

(c) The handle shall be removed from the shotfiring apparatus except when igniting.

I suggest that the following is not necessary as there are no requirements :

~~(6) Measures when Blasting near existing buildings and structures~~

~~Blasting near existing buildings or structures shall not be carried out unless specified in the Particular Safety Specification or instructed by the Engineer.~~

7.6.13 Measures after Blasting

(1) Confirmation of safety of Blasting area after Blasting:

(a) No persons other than the shotfirer shall enter the Blasting site or its vicinity until ~~after~~ the shotfirer has inspected the area and confirmed that it is safe to re-enter; and

(b) The shotfirer shall inspect the area and surrounding area of the Blasting site to check that there is no danger of falling or collapsing of ground and rocks or misfired Explosives.

(2) Treatment of misfired Explosives

If, after ignition, the loaded Explosives did not explode, or if it is difficult to confirm the explosion, the misfired Explosive shall be treated in accordance with the treatment of misfired Explosives in the Blasting Safety Plan, and 10.5 [Misfires] of BS5607 including the following:

(a) Procedure of treatment of misfired Explosives;

The following treatment procedure of misfired Explosives shall be taken:

(i) Immediate remedial action.

(ii) Delayed remedial action.

(iii) Further attempt at detonation.

(iv) Inspection to confirm complete detonation.

The details of the above actions are stipulated in succeeding (b) to (d).

(b) Immediate remedial action;

The following initial actions shall be taken by the shotfirer:

(i) Prohibit anyone other than the shotfirer and other authorized personnel from entering the Blasting site.

(ii) Entry to the Blasting site shall only be permitted after the elapsed time from the occurrence of misfire as specified in the Blasting Safety Plan.

(iii) Disconnect from the shotfiring apparatus any removable handle or key and the shotfiring cable, and short-circuit or ground the bare wires together.

(iv) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found.

(v) Make a further attempt to fire the shot.

(vi) Report to the explosive engineer for further instructions.

(vii) Do not collect any exposed explosives before further action is taken.

(viii) Do not allow drilling or any other site work to be carried out in the vicinity of the misfire until the misfire has been remedied, unless this is directly involved in the treatment of the misfire.

(ix) Other actions specified in 10.5.4.1 [Initial actions]in BS5607.

After the initial actions, the following initial remedial actions shall be taken by the shotfirer:

(i) When safe to do so, examine the cable and connections for any defects, and remedy any defect so found; and

(ii) Make a further attempt to fire the shot.

(c) Delayed remedial action and further attempt at detonation:

(i) After the immediate remedial action, when necessary, the delayed remedial action and further attempt at detonation shall be taken.

(ii) The delayed remedial action and further attempt at detonation should be safe removal of the stemming to allow re-priming, or drilling and firing relieving holes placed so as to work away the rock surrounding the stemming and charge of the misfired shot holes.

(iii) The action and attempt shall be taken in accordance with the Blasting Safety Plan, and 10.5.4.2 [Written instructions], 10.5.4.3 [Attempts to re-fire], 10.5.4.4 [Drilling relieving holes] and 10.5.5 [Drilling relieving holes] in BS5607.

(d) Inspection to confirm complete detonation;

After further attempt at detonation, inspection shall be made to confirm complete detonation. If any non or partial detonation is found, remedial measures shall be taken according to Figure-1 Procedure to remedy misfires in 10.5.1 [General] in BS 5607.

(e) Take appropriate steps to prevent theft of Explosives and detonators or their initiation by an unauthorised person; and

(f) The Contractor shall promptly notify the Engineer of any misfire event and the remedial actions.

検討経緯書

8 Foundation Piling Works

JSSS in Japanese (R2-R1/ProFinal 1/7)	JSSS in English R0 (1/7)	JSSS in English (R1 1/9)
		9 Foundation Works 9.1 General 9.2 Safety Measures for Machines and Materials 9.2.1 Transportation of Machines and Materials 9.2.2 Assembly, Removal and Inspection of Machines 9.3 Safety Measures for Prefabricated Pile Foundation Works 9.4 Safety Measures for Cast-in-place Piling Works 9.4.1 General 9.4.2 All-Casing Method 9.4.3 Reverse Circulation Drilling Method 9.4.4 Earth Drill Method and Earth Auger Method 9.4.5 Concrete Placement Works 9.5 Safety Measures for Deep Foundation Works
9 基礎工事 **9.1 一般事項** (1) 本章では、既成杭基礎、現場打ち杭基礎、深礎を建設する作業を扱う。 (2) 本仕様書で使用する用語の定義は以下のとおりである。 (a) 既成杭基礎とは、既成コンクリート杭、鋼管杭、鋼矢板、木杭等を、機械により地盤中に打込み、埋込み等により設置した杭を使用して建設する基礎をいう。 (b) 現場打ち杭基礎とは、機械により地盤中に杭孔を掘削し、コンクリートを現場打ちして作製した杭を使用して建設する基礎をいう。 (c) 深礎とは、人又は小型の掘削機械が円形の立坑の中に入り、掘削、掘削土砂の排出、ライナープレート等の土留めの設置を行いながら、必要な深さまで掘り下げ、これにコンクリートを充填して建設する基礎をいう。 (3) 基礎工事に伴う機械・材料の運搬、機械の組み立て・撤去、杭打ち、杭コンクリート打設等の各作業において、本仕様書の下記各節に従い、必要な安全上の対策をとること。 (a) 本仕様書 2.1.4[閉鎖空間における安全措置]、2.1.6[作業環境の把握]、2.4[監視員、誘導員の配置] (b) 本仕様書 3.1[地下埋設物一般]、3.2[架空線等上空施設一般] (c) 本仕様書 4［機械一般］ (d) 本仕様書 5［運搬作業］ (e) 本仕様書 6［揚貨・玉掛け作業］ (f) ~~本仕様書 9.4.1［機械の据付作業］~~ (4) 既成杭の杭打ち作業、現場打ち杭の掘削作業、機械の据付け、組立て、移動及び解体の作業は、本仕様書 1.8[請負者の要員の適正配置]に従	**9 Foundation Works** **9.1 General** (1) This Chapter specify the safety requirements for the works on prefabricated pile foundation, cast-in-place pile foundation and deep foundation. (2) Definitions of terms used in this chapter are as follows. (a) Prefabricated pile foundation refers to the foundation on which precast concrete piles, steel pipe piles, steel sheet piles, wooden piles, etc. are driven or embedded into the ground using machinery. (b) Cast-in-place pile foundation refers to a foundation by excavating pile holes in the ground with a machine and casting concrete in place. (c) Deep foundation refers to a foundation that is excavated the inside of a circular shaft by workers or a small excavating machine, discharging excavated soil, installing a retaining liner plate, etc., digging down to the required depth, filling it with concrete to build as a foundation. (3) The Contractor shall take necessary safety measures in accordance with the following sections of this specification in each work such as transporting machines and materials, assembling and removing machines, pile driving, pile concrete placing, etc. accompanying foundation work. (a) JSSS 2.1.4［Further Requirements for Dangerous Work］, 2.1.6［Monitoring and Records］& 2.4［Spotters, Flagmen and The Like］ (b) JSSS 3.1［Underground Services］& 3.2［Overhead Services］ (c) JSSS Chapter 4［Contractor's Equipment］ (d) JSSS Chapter 5［Transportation Works］ (e) JSSS Chapter 6［Hoisting and Rigging Works］ (f) ~~JSSS 9.4.1［Equipment Installation Work］~~	**9 Foundation Works** **9.1 General** (1) This Chapter specifies the safety requirements for the works on prefabricated pile foundation, cast-in-place pile foundation and deep foundation. *To MD: Please see sketches and photos at last pages for deep foundation constructed for foundations of transmission lines in mountainous areas where heavy piling equipment cannot enter. I am not sure the naming of deep foundation is correct or not in English. This is not caisson foundation.* (2) Definitions of terms used in this Chapter are as follows. (a) Prefabricated pile foundation means the foundation constructed on precast concrete piles, steel pipe piles, steel sheet piles, wooden piles, etc. driven or embedded in the ground with machine. (b) Cast-in-place pile foundation means the foundation constructed on piles made by excavating pile holes in the ground with machine and casting concrete in the holes in place. (c) Deep foundation means the foundation constructed by the way of excavation of circular shaft in the ground by manpower and/or machine, discharging excavated materials, installing liner plates for retaining earth, digging down to the required depth, installing reinforcing bars, casting concrete to build as a foundation. (3) The Contractor shall take necessary safety measures specified in the following JSSS for each work such as transporting machines and materials, assembling and removing machines, pile driving, pile concrete placing, etc. for foundation works: (a) JSSS 2.1.4［Further Requirements for Dangerous Work］, 2.1.6［Monitoring and Records］ and 2.4［Spotters, Flagmen and The Like］;

い、作業主任を配置し、作業を直接指揮させること。	(4) In the case of pile driving works of prefabricated piles, excavating works of cast-in-place pile, works for machine installation, assembling, transportation and removing, an operation leader shall be assigned in accordance with JSSS 1.8[Proper Placement of Contractor's Personnel] to direct works.	(b) JSSS 3.1［Underground Services］& 3.2［Overhead Services］; (c) JSSS Chapter 4［Contractor's Equipment］; (d) JSSS Chapter 5［Transportation Works］; and (e) JSSS Chapter 6［Hoisting and Rigging Works］. *To MD: Chapter 5 may not exist according your mail on 1/7.* (4) An Operation Leader shall be assigned in accordance with JSSS 1.8 [Proper Placement of Contractor's Personnel] to directly lead works for installation, assembling, transportation and removing of machine, pile driving works of prefabricated piles, excavation works of cast-in-place piles.
9.2 機械・材料に関する安全措置 **9.2.1 機械・材料の運搬** 請負者は、杭打ち機械、杭等材料の運搬については、次の措置を講じなければならない。 (1) 本仕様書 5.4.2[運搬車両の運搬作業時の安全措置]に規定の措置を講じること。 (2) 重量物や長尺ものを公道上で運搬するときは、一般交通、第三者、運搬経路に隣接する構造物等に危険を及ぼさない道路を選定し、警察や道路管理者等の関係機関からの事前許可を得て、運搬作業を行うこと。 (3) 重量物や長尺ものを現場で運搬するときは、現場内の構造物、他の作業に危険を及ぼすことのない運搬経路を選定し、エンジニアの同意を得た上で運搬作業を行うこと。 (4) 杭材、ケーシング等の運搬はクレーンを使用すること。 (5) 杭打ち機械や杭孔掘削機で、杭材、ケーシングの運搬を行なわないこと。 **9.2.2 機械の組み立て・撤去・点検** 請負者は、機械の組み立て、撤去、点検については、次の措置を講じなければならない。 (1) 杭打ち作業に適するように地盤を整備すること。軟弱な地盤に据え付けるときは、必要に応じ、地盤の改良を行ったうえで機械の脚部又は架台の沈下、転倒を防止するため、敷鉄板、敷角等を使用すること。 (2) 機械を据付けた箇所は、常に排水をよくすること。 (3) 機械の製造業者のマニュアルに従って、組み立て・解体を行うこと (4) 本仕様書 4.2.1［建設機械の点検・整備］(2)[建設機械の日常点検]及び6.5.3［玉掛け作業時の安全措置］に従い、作業に使用する機械、機器等の現場搬入時の整備・点検、作業開始前点検を行うこと。不具合のある機械・機器等は使用しないこと。	**9.2 Safety Measures for Machinery and Material** **9.2.1 Transportation of Machinery and Material** The Contractor shall take the following measures for transporting pile driving machines, piles and other materials. (1) Take measures stipulated in JSSS 5.4.2[Safety Measures in Operations]. (2) When transporting heavy or long items on public roads, select roads that do not pose a danger to general traffic, third parties, structures adjacent to the transportation route, etc. Carry out transportation work with the prior permission of the relevant organizations. (3) When transporting heavy or long items within the site, select a transport route that does not pose a danger to structures on the site or other work, and carry out transportation work after obtaining the consent of the Engineer. (4) Use cranes to transport piles and casings. (5) The pile material and casing shall not be transported by a pile driving machine or a hole drilling machine. **9.2.2 Assembly, Removal and Inspection of Machinery** The Contractor shall take the following measures for the assembly, removal and inspection of the machinery on foundation works. (1) To prepare the ground suitable for pile driving work. When installing on soft ground, use an iron plate, floor angle, etc. to prevent sinking and over turning of the machine's legs or gantry after improving the ground as necessary. (2) Drain the area where the machine is installed. (3) Assemble and disassemble according to the machine manufacturer's manual. (4) In accordance with (2)[Daily Inspections and Check] on 4.2.1[Inspections and Maintenances of Construction Equipment] and 6.5.3[Safety Measures in Hoisting and Rigging Works], carry out inspection and maintenance of the machines and equipment for the work at the time of delivery to the site before starting the work. Defective machinery and equipment shall not be used.	**9.2 Safety Measures for Machines and Materials** **9.2.1 Transportation of Machines and Materials** The Contractor shall take the following measures for transporting pile driving machines, piles and other materials: (1) Take measures stipulated in JSSS 5 [Transportation Works], 5.4.2 [Safety Measures in Operations]; (2) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, etc. Carry out transportation work after obtained the prior permission of the relevant authorities such as police, road administrator; (3) When transporting heavy or long goods within the Site, select transport route on which the transportation does not pose danger to structures in the Site or other works, and carry out transportation after obtaining the consent of the Engineer; (4) Use cranes to transport prefabricated piles and casings for in-situ-piling works; and (5) Piles and casings shall not be transported by pile driving machines or hole drilling machines. **9.2.2 Assembly, Removal and Inspection of Machines** The Contractor shall take the following measures for the assembly, removal and inspection of the machines for the foundation works: (1) Prepare the ground suitable for the works before the installation or assembly of machines. When machines are installed on soft ground, improve the ground as necessary for the works and place steel plates, steel planking, etc. for machines and temporary piling stages on the ground to prevent their sinking or over turning; (2) Drain the area where the machine is installed; (3) Assemble and disassemble in accordance with the machine manufacturer's manual and instructions; and (4) In accordance with JSSS 4.2.1[Inspections and Maintenances of Construction Equipment], (2) [Daily Inspections and Check] and 6.5.3 [Safety Measures in Hoisting and Rigging Works], carry out inspection of the machines and equipment for the works at the time of delivery to the Site, and daily inspection and maintenance

		before starting the works. Defective machinery and equipment shall not be used.
9.3 既成杭基礎工事の安全措置 請負者は、既成杭基礎工事を行うとき、次の安全措置を講じなければならない。 (1) 杭材の吊込みを行うときは、吊込み用機械の特性に応じ、杭材が落下、転倒しないよう、玉掛け方法、玉掛け用具を選定すること。 (2) 吊り上げ・杭打ち作業を行っている近くは、当該作業員以外の作業員の立入禁止措置を取ること。 (3) 2m 以上の高所で作業を行うときは、本仕様書 2.5[墜落防止]を遵守すること。杭打ち機のリーダーに登るときには、親綱の設置等の墜落制止用器具を取り付けるものを設け、作業員に墜落制止器具を使用させること。 (4) ~~杭打ち機の巻上げ装置に荷重をかけたままで巻上げ装置を停止しておくときは、歯止め装置により歯止めを行い、止め金付きブレーキを用いて制動しておく等確実に停止しておくこと。~~*(NK: ウインチを想定した規定であるが、次の(5)で、荷重をかけたままにしないという規定と齟齬があることから(4)は削除します。)* (5) 杭打ち機の操作者は、吊り上げ装置に荷重をかけたまま運転位置を離れないこと。 (6) 強風時は、杭打ち機、クレーンのブームは倒したうえで、ワイヤー等でアンカー等へ緊結し、杭打ち機ややぐらはケーシングと連結する等により転倒防止を図ること。	**9.3 Safety Measures for Prefabricated Pile Foundation Works** The Contractor shall take the following safety measures when performing prefabricated pile foundation works. (1) When suspending piles, select a slinging method and slinging equipment according to the characteristics of the lifting machine so that the piles do not fall or fall. (2) Take measures to prohibit the entry of workers other than the workers involved in pile foundation works where lifting and pile driving work is being performed. (3) When working at a height of 2 m or more, follow the JSSS 2.5 [Fall Prevention]. When climbing the pile driver leader, provide equipment to attach fall prevention equipment such as installation of a master rope, and have workers use the fall prevention equipment. (4) ~~When leaving a hoisting device of a pile driving equipment, the pawl is stopped by the pawl device, securely stop it by applying latchets, brake with holdfast.~~ (5) The operator of the pile driving machinery shall not leave the operating position while applying a load to the lifting device. (6) When under strong wind, the boom of the pile driving machine and crane should be lowered, then tied to an anchor, etc. with a wire or the like, and the pile driver or drilling tower should be connected to the casing to prevent turnover.	**9.3 Safety Measures for Prefabricated Pile Foundation Works** The Contractor shall take the following safety measures when performing prefabricated pile foundation works: (1) When suspending piles, select proper rigging method and rigging equipment according to the characteristics of the lifting machine or pile driving machine so that the piles do not drop or fall; (2) Take measures to prohibit the entry of workers other than the workers engaged in pile foundation works in and near the place where lifting of piles and pile driving works are being performed; (3) When working at the height of 2 m or more, take measures in accordance with JSSS 2.5 [Fall Prevention]. When climbing the leader of pile driving machine, provide PFAS such as installation of a master rope, and make the workers use the PPE for PFRS. (4) The operator of the pile driving machine shall not leave the operating position while keeping the load on the lifting device. (5) When under strong wind, the boom of the pile driving machine and crane shall be lowered, then tied to an anchor, etc. with a wire or the like, and the drilling rig shall be connected to the casing to prevent its overturn.
9.4 場所打ち杭工事の安全措置 **9.4.1 一般事項** 本款では、オールケーシング工法、リバースサーキュレーション工法、アースドリル工法、アースオーガー工法で建設する場所打ち杭を建設する際の作業員の安全措置を規定する。その他の工法における安全措置に関しては、請負者は本款に準じて安全措置を講じなければならない。 **9.4.2 オールケーシング工法** 請負者は、オールケーシング工法による作業を行うときは、次の安全措置を講じなければならない。 (1) 掘削用のハンマーグラブの操作中は、作業員を掘削機に近寄らせないこと。その必要があるときは、ハンマーグラブがケーシング内に入り、停止した後に近づかせること。 (2) 作業員をケーシング内に入らせる必要があるときは、本仕様書 2.1.4[閉鎖空間における安全措置]に従い、危険のないことを確認すること。 (3) ケーシング打込み又は引抜き中は、当該作業員以外の者を機械又はやぐらに近づけさせないこと。危険な場所には立入禁止の柵等を設置するこ	**9.4 Safety Measures for Cast-in-place Piling Works** **9.4.1 General** This clause stipulates safety measures for workers when involving in casing type piling works, reverse circulation drilling works, earth drilling works & earth auger drilling works. For other piling works, the Contractor shall take safety measures for securing safety according to this clause. **9.4.2 All Casing Method** The Contractor shall take the following safety measures when performing all-casing method piling works. (1) Keep workers away from excavators while operating the hammer grab. If it is necessary for workers to approach, bring the hammer glove into the casing, stop, and then have them approach. (2) If workers need to enter the casing, confirm that there is no danger in accordance with 2.1.4 [Safety Measures in Confined Spaces]. (3) Keep anyone other than the workers involving in the casing works away from the machine or scaffold while driving or pulling out the casing. Fences, etc. should be installed in dangerous places. **9.4.3 Reverse Circulation Drilling Method** The Contractor shall take the following safety measures when performing	**9.4 Safety Measures for Cast-in-place Piling Works** **9.4.1 General** This Section stipulates the safety measures for workers engaged in all-casing method piling works, reverse circulation drilling method works, earth drilling method works and earth auger drilling method works. For other piling method works, the Contractor shall take safety measures to secure the safety referring to this Section. **9.4.2 All-Casing Method** The Contractor shall take the following safety measures when performing drilling works with all-casing method: (1) Keep the workers away from the hole excavation machine while operating its hammer grab. When it is necessary for the workers to access to the machine, put and keep the hammer grab in the casing and then have them access it. (2) When the workers need to enter the casing, confirm that there is no danger in accordance with 2.1.4 [Further Requirements for Dangerous Work]. (3) Keep anyone other than the workers engaged in the casing works away from the machine or rig while driving or pulling out the casing. Provide fences, etc. around the dangerous places.

と。 **9.4.3 リバースサーキュレーションドリル工法** 請負者は、リバースサーキュレーション工法による作業を行うとき、次の安全措置を講なければならない。 (1) ドリルのロッドの継ぎ足し又は撤去の作業中の作業員の手や指がはさまれ防止のため、機械の運転手への合図を行う者を配置すること。 (2) 坑内水位と泥水濃度の変動に注意を払い、逸水の挙動が認められる場合には作泥の準備をすること。 (3) 作泥・排泥ピットを設ける場合は、柵の設置など作業員の転落防止措置を講じること。 **9.4.4 アースドリル・アースオーガー工法** 請負者は、アースドリル工法、アースオーガー工法による作業を行うとき、次の安全措置を講じなければならない。 (1) アースドリルやアースオーガーの転倒防止のために、アースドリルのドリリングバケット内の掘削土砂、アースオーガーのオーガー上の掘削土砂の重量を考慮に入れて、これらの機械を運転すること。 (2) 作業員の危険防止するため、他の作業に従事する作業員を作業範囲に入らせないこと。 **9.4.5 コンクリート打設作業** 請負者は、コンクリート打設作業を行うとき、次の安全措置を講じなければならない。 (1) 鉄筋籠の製作は変形が生じないように製作し、鉄筋籠の接合は落下・脱落しないようにすること。 (2) 鉄筋籠、コンクリート打設トレミー管等の落下を防止するため、吊りバンドや吊り金具は、施工計画に定められた取付け・外し方法、作業順序によること。 (3) 鉄筋籠、トレミー管を取り扱う作業員の挟まれ防止のため、機械の運転手への合図を行う者を配置すること。	reverse circulation drilling works. (1) During the work of adding or removing the rod of the drill, take measures such as performing the work according to the signal of the Spotters so that the hands and fingers of the worker do not get caught. (2) Pay attention to fluctuations in underground water level and mud concentration, and prepare for mud cultivation if lost water behavior is observed. (3) When installing a mud pit or pit for mud discharge, take measures to prevent workers from falling, such as installing fences. **9.4.4 Earth Drill & Earth Auger Method** The Contractor shall take the following safety measures when performing earth drilling works or earth auger works. (1) In order to prevent turnover of earth drill equipment or earth auger equipment, operate these machines taking into account the weight of the excavated sediment in the drilling bucket or on the auger. (2) To prevent danger to workers, keep workers engaged in other works away from the working space for earth drill or earth auger works. **9.4.4 Concrete Placement Works** The Contractor shall take the following safety measures when performing concrete placement work. (1) Reinforced baskets shall be manufactured so that they will not deform and so as not to fall or drop off. (2) In order to prevent dropping of reinforced baskets, concrete casting trummy pipes, etc., suspending bands and metal fittings shall be in accordance with the installation / removal method and work order specified in the method statement. (3) Personnel who signal the operator of the machine shall be assigned to prevent the workers handling the reinforced baskets and tremie tubes from being pinched.	**9.4.3 Reverse Circulation Drilling Method** The Contractor shall take the following safety measures when performing reverse circulation drilling works: (1) During the work of adding or removing the rods of the drill, locate a Spotter to give signals to the operator of the drill machine so that the hands and fingers of the workers do not get caught in the work; (2) Pay attention to fluctuations in water level in the drilled hole and mud (bentonite solution) concentration level and prepare for mud creation if water loss behavior in the dilled hole is observed; and (3) When providing a mud creation pit or a mud discharge pit, take measures to prevent the workers from falling such as providing fences. **9.4.4 Earth Drill Method and Earth Auger Method** The Contractor shall take the following safety measures when performing earth drilling method works or earth auger method works: (1) To prevent overturn of earth drill equipment or earth auger equipment, operate these machines taking into account the weight of the excavated materials in the drilling bucket or on the auger; and (2) To prevent danger to workers, keep the workers other than those engaged in the works away from the working place for earth drill or earth auger works. **9.4.5 Concrete Placement Works** The Contractor shall take the following safety measures when performing concrete placement work in the drilled holes: (1) Reinforcing bars baskets shall be manufactured so that they will not deform, fall or drop off; (2) To prevent dropping of reinforcing bars baskets, concrete casting tremie pipes, etc., suspending bands and metal fittings shall be fixed in accordance with the installation/removal method and work order planned in the Method Statement; and (3) Locate a Spotter to give signals to the operator of the machine so that the hands and fingers of the worker do not get caught in the handling work of reinforcing bars baskets and tremie pipes.
9.5 深礎工事の安全措置 本節では深礎を建設する際の作業の安全措置事項について規定する。請負者は、深礎工の作業を行うとき、本仕様書 9.4.5[コンクリート打設作業]の措置及び次の措置を講じなければならない。 (1) 作業環境に関する措置 (a) 深礎内には作業員が昇降するための昇降設備を設けること。鉛直はしごによる昇降設備の場合、安全ブロックを設置したはしごとすること、又は背かごを設けたはしごとすること。背かごを設けたはしごの長さが 10m 以上のものには 5m 以内ごとに踏棚を設けること。鉛直はしごを含め、昇降用のはしごの上端は坑口の床、踏棚から 100cm 以上突出させること。	**9.5 Safety Measures for Deep Foundation Works** This section stipulates safety measures for deep foundation works. The Contractor shall take the measures stipulated in 9.4.5 [Concrete Placement Works] and the following measures. (1) Measures for work environment (a) Lift facility shall be provided in the deep foundation for workers to go up and down. In the case of vertical ladder lifting facility, use a ladder with a safety block or a ladder with a back cage. If the length of the ladder with the back cage is 10 m or more, a tread shelf should be provided every 5 m. The upper end of the ladder for raising and lowering, including the vertical ladder, must protrude more than 100 cm from the floor of the pit or the tread shelf.	**9.5 Safety Measures for Deep Foundation Works** This section stipulates the safety measures for deep foundation works. The Contractor shall take the measures stipulated in 9.4.5 [Concrete Placement Works] and the following measures: (1) Measures for work environment (a) Access facility shall be provided in the deep foundation work site (called as “shaft”)for the workers to go up and down. In the case of vertical ladder as access facility, provide a ladder with a safety block or a ladder with a back cage. When the length of the ladder with the back cage is 10 m or more, a landing place shall be provided at every 5 m. The upper end of ladders including the vertical ladder shall protrude more

(b) 坑内作業員と昇降中の土砂搬出用バケット等の機械との接触防止の措置を講じること。

(2) 作業の合図に関する措置

(a) 材料・機材の積み上げ・下ろし時の合図を定め、これを作業員に使用させること。

(b) 緊急時の合図及び、退避の方法をあらかじめ定め、作業員に周知しておくこと。

(3) 作業開始前の措置

(a) 本仕様書 2.1.4[閉鎖空間における安全措置]、2.1.6[作業環境の把握]に規定の措置を講じ、坑内環境の測定、換気による坑内環境の維持に努めること。

(b) 作業開始前に、掘削面の土質状況、ライナープレート等土留めの異常の有無を点検すること。

(4) 作業中の措置

(a) 坑内作業員が入坑中は、坑口に監視員を配置すること。

(b) 地下水位以下を掘進するときは、排水設備等を用い、湧水対策等を確立してから作業を進めること。

(c) 掘削時においては土質等の変化に常に留意し、作業中の掘削面や、深礎工の土留めに異常があった場合は作業を直ちに中断し、異常に対する適切な対策を講じ、異常が無いことを確認したうえで作業を再開すること。

(b) Measures shall be taken to prevent contact accidents between workers in the shaft and baskets of the sediment carrying equipment that are moving up and down.

(2) Measures for work signal

(a) Signals for stacking and unloading materials and equipment shall be determined and used by workers.

(b) Emergency cueing and evacuation methods shall be determined in advance and made known to workers.

(3) Measures before starting the work

(a) Take measures stipulated in 2.1.4 [Safety Measures in Confined Spaces] and 2.1.6 [Monitoring of Work Environment] in this specification, and maintain work environment in the shaft through ventilation and monitoring the working condition.

(b) Before starting the work, check the condition of the excavated soil surface and whether there is any abnormality in the retaining material such as the liner plate.

(4) Measures during the work

(a) While workers are in the shaft, spotters shall be allocated at the upper edge of the shaft.

(b) When excavating below the groundwater level, use drainage equipment and the like to secure countermeasures against spout of underground water before proceeding.

(c) At the time of excavation, always pay attention to changes in soil properties, etc. If any abnormality in identified on the excavated surface during work or earth retaining of the deep foundation work, immediately suspend the work and take appropriate measures against abnormalities. Check that there is no abnormality before resuming work.

than 100 cm from the floor of the entrance of the site or the landing places.

(b) Measures shall be taken to prevent collision accidents of the workers by transportation equipment such as the basket for excavated materials, etc. When they move up and down in the shaft.

(2) Measures for work signals

(a) Signals for transporting materials and equipment in the shaft shall be determined in advance and used by the workers.

(b) Signals and evacuation methods at emergency shall be determined in advance and made known to the workers.

(3) Measures before starting the work

(a) Take measures stipulated in JSSS 2.1.4 [Further Requirements for Dangerous Work] and 2.1.6 [Monitoring and Records], and maintain work environment in the shaft by ventilation and monitoring the working condition.

(b) Before starting the work, check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the earth retaining materials such as liner plates.

(4) Measures during the work

(a) While the workers are in the shaft, a Spotter shall be allocated at the upper edge of the shaft.

(b) When excavating below the groundwater level, provide drainage equipment and the like to secure countermeasures against spout of underground water before proceeding the excavation work.

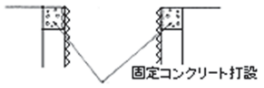
(c) At the time of excavation, always pay attention to changes in soil properties, etc. If any abnormality is identified on the excavated surface during work or earth retaining of the shaft, immediately stop the work and take appropriate measures against abnormalities. Resume the work after confirmation that there is no abnormality.

Explanation of Deep Foundation

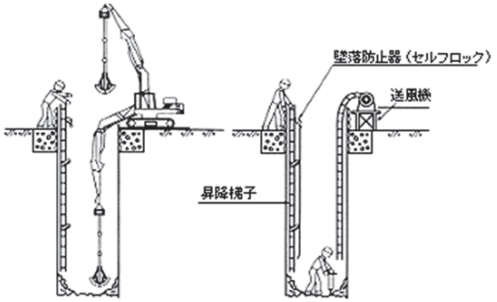
Construction Steps of Deep Foundation

1. Setting

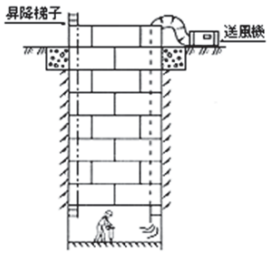
2 Concrete at the top of hole



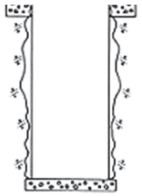
3 Excavation Manpower/Equipment



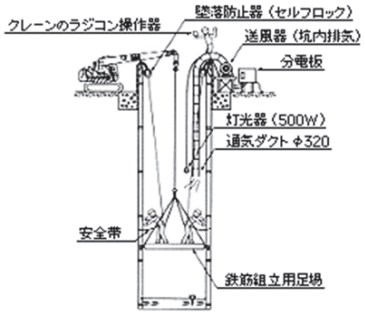
4 Earth retaining such as liner plates



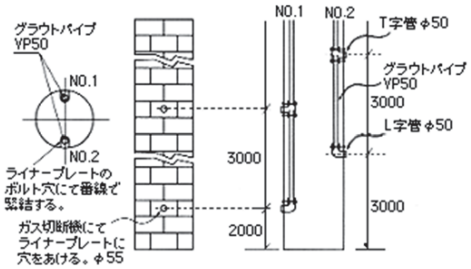
5 Concrete placing at bottom after Excavation



6 Placing re-bars cage



7 Installation of backfill grouting pipes



5 Concrete placing

9 基礎工事 **9.1 一般事項** (1) 本章では、既成杭基礎、現場打ち杭基礎、深礎を建設する作業を扱う。 →E 9.1.1 に規定済み。(英語版に“深礎”に係る記述なし) →MD 氏の国際的に「深礎」は現場打ちの一部とみなす意見に同意し、記述しない。 (2) 本仕様書で使用する用語の定義は以下のとおりである。 →規定なし。→理由：杭基礎工法は、既成杭(打設工法)と現場打工法の 2 種類でき規定すべき、と MD 氏提案。 →国際的に通用する用語を使用すれば定義不要と考え、定義は無しとする。 (a) 既成杭基礎とは、既成コンクリート杭、鋼管杭、鋼矢板、木杭等を、機械により地盤中に打込み、埋込み等により設置した杭を使用して建設する基礎をいう。 (b) 現場打ち杭基礎とは、機械により地盤中に杭孔を掘削し、コンクリートを現場打ちして作製した杭を使用して建設する基礎をいう。	**9 FOUDATION PILING WORKS** **9.1 GENERAL** **9.1.1 Scope** This Chapter specifies the safety requirements for Foundation Piling Works which shall include driven piling and insitu concrete piling.	**9 FOUDATION PILING WORKS** **9.1 GENERAL** **9.1.1 Scope** This Chapter specifies the safety requirements for Foundation Piling Works which shall include driven piling and insitu concrete piling.	**8 FOUDATION PILING WORKS** **8.1 GENERAL** **8.1.1 Scope** This Chapter specifies the safety requirements for Foundation Piling Works which shall include driven piling and insitu concrete piling.

(c) 深礎とは、人又は小型の掘削機械が円形の立坑の中に入り、掘削、掘削土砂の排出、ライナープレート等の土留めの設置を行いながら、必要な深さまで掘り下げ、これにコンクリートを充填して建設する基礎をいう。

(3) 基礎工事に伴う機械・材料の運搬、機械の組み立て・撤去、杭打ち、杭コンクリート打設等の各作業において、本仕様書の次の各節に従い、必要な安全上の対策をとること。

→規定なし。→理由：重複しての規定は不要である。

(a) 本仕様書 2.1.4[閉鎖空間における安全措置]、2.1.6[作業環境の把握]、2.4[監視員、誘導員の配置]

(b) 本仕様書 3.1[地下埋設物一般]、3.2[架空線等上空施設一般]

(c) 本仕様書 4[機械一般]

(d) 本仕様書 5[運搬作業]

(e) 本仕様書 6[揚貨・玉掛け作業]

(4) 既成杭の杭打ち作業、現場打ち杭の掘削作業、機械の据付け、組立て、移動及び解体の作業は、本仕様書 1.8[請負者の要員の適正配置]に従い、作業主任を配置し、作業を直接指揮させること。

→規定なし。→理由：次の 1.22 及び 4.3.1(10)で規定済みであるため、規定しない。9.2.1 危険な作業と指定していることから、作業主任の配置は自動的に行われる。

1. General
1.22 Dangerous Work
1.22.4. A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

4 CONTRACTOR'S EQUIPMENT
4.3 SAFETY REQUIREMENTS
4.3.1 General Safety Measures
(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's printed instructions.

9.2 機械・材料に関する安全措置

9.2.1 機械・材料の運搬

→下記(1)-(3))に対応する規定は無し。→Chap 4 Contractor's Equipment に重量物や長尺物の運搬等を追記していることから、第 4 章で以下の(1)-(3)を網羅しているかを別途確認する。

請負者は、杭打ち機械、杭等材料の運搬については、次の措置を講じなければならない。

(1) 本仕様書 5.4.2[運搬車両の運搬作業時の安全措置]に規定の措置を講じること。

(2) 重量物や長尺ものを公道上で運搬するときは、一般交通、第三者、運搬経路に隣接する構造物等

9.2 PARTICULAR SAFETY MEASURES FOR FOUNDATION PILING

9.2.1. General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary

9.2 PARTICULAR SAFETY MEASURES FOR FOUNDATION PILING

9.2.1. General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary

8.2 PARTICULAR SAFETY MEASURES FOR FOUNDATION PILING

8.2.1 General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary

に危険を及ぼさない道路を選定し、警察や道路管理者等の関係機関からの事前許可を得て、運搬作業を行うこと。

(3) 重量物や長尺ものを現場内で運搬するときは、現場内の構造物、他の作業に危険を及ぼすことのない運搬経路を選定し、エンジニアの同意を得た上で運搬作業を行うこと。

(4) 杭材、ケーシング等の運搬はクレーンを使用すること。

(5) 杭打ち機械や杭孔掘削機で、杭材、ケーシングの運搬を行なわいこと。

9.2.2 機械の組み立て・撤去・点検

→英語版で直接対応する規定無し。→理由 :No need to duplicate the first paragraph and the following two paragraphs are now added in Contractor's Equipment as a General Requirement. →下記に示す個々の対応とする。

請負者は、杭打ち機械の組み立て・撤去・点検については、次の措置を講じなければならない。

(1) 杭打ち作業に適するように地盤を整備すること。軟弱な地盤に据え付けるときは、必要に応じ、地盤の改良を行ったうえで機械の脚部又は架台の沈下、転倒を防止するため、敷鉄板、敷角等を使用すること。→E 4.3.4 (3)(a)に下記規定あり。

E 4.3.4 (3)(a):
The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hard standing or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times.

(2) 機械を据付けた箇所は、常に排水をよくすること。→E 4.3.1(1)(c)に下記規定あり。

(3) 機械の製造業者のマニュアルに従って、組み立て・解体を行うこと。
→規定なし。 E 4.3.1(10)に規定あり。→本章に規定しない。

(4) 本仕様書4.2.1[建設機械の点検・整備]及び6.5.3[玉掛け作業時の安全措置]に従い、作業に使用する機械、機器等の現場搬入時の整備・点検、作業開始前点検を行うこと。不具合のある機械・機器等は使用しないこと。
→規定なし。→第 4 章 Contractor's Equipment に規定があることから重複しては規定しない。

---

fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) Earthwork Support
In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for the maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support may be necessary to achieve this.

(4) The Contractor shall execute all Foundation Piling Works without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or

---

fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) Earthwork Support
In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for the maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support may be necessary to achieve this.

JC: 1) JSSS 7.2 ではカバーされていないのではないか。

Isn't it covered by JSSS 7.2?

NK: 1) In the latest JSSS draft of E 7.2 covers piling works as follows: Therefore it leaves as it is.

7.2.1 (2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation and the avoidance of any damage to property.

7.3.2 (6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

JC: 2) drilled pile あるいは slurry wall foundation においては slurry の比重や水位のコントロールを、請負者任せにはできないと考える。

In the case of drilled pile or slurry wall foundation, I think that control of the specific gravity and water level of the slurry cannot be left to the Contractor.

NK: 2) スラーリーの管理は施工計画・管理の一つであり、請負者の責任である。エンジニアは、請負者が提出した施工計画を把握している。異常が生じた場合はエンジニアへ報告する。そのため、追記は行っていない。

The Contractor is responsible for work method of piling operation. The Contractor shall design and manage the control of the specific gravity and water level of the slurry by his designer, checker and supervisor. The Engineer know the method from the Method Statement. When abnormal and dangerous case occurs, the Contractor shall inform the Engineer of it. Therefore, no addition to JSSS is made.

(4) The Contractor shall execute all Foundation Piling Works without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site ~~and unless otherwise~~

---

fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Contract, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) Earthwork Support
In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for the maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support may be necessary to achieve this.

(4) The Contractor shall execute all Foundation Piling Works without causing ~~any~~ damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site ~~and unless otherwise~~

	adjacent to the Site and unless otherwise specified in the Contract, the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by carrying out all Foundation Piling Works, designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Piling Works.	~~specified in the Contract,~~ the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by carrying out all Foundation Piling Works, designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved and obtain the prior consent of the Engineer before commencing Excavation Piling Works. JC: 本設杭施工に対する周囲に与える影響(振動、騒音、沈下)の許容量を見極めるのは発注者の責務である。その許容量と環境及び杭の設計条件から発注者自身で想定される工法を選定すべきである。 作業構台の基礎のような杭に対しては、請負者自身が Site Data と与えられた環境に対する許容量に適する工法の選択が求められる。 ここではそれらを分けて議論すべきである。 It is the responsibility of the Employer to determine the permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work. Based on the permissible amount, environment and pile design conditions, the Employer should select the assumed construction method. For piles such as elevated access structures, the Contractor is required to select a construction method that is appropriate for the Site Data and the given environmental capacity. We should keep this in mind. NK: "as specified", "in accordance with", "unless otherwise specified"の使用に関しまして、再検討のお願い。 一般的に、発注者が杭の種類・施工法を入札書に規定し、その施工についての詳細は請負者が計画し、施工します。 大規模な工事では、周囲への影響の許容値は発注者が規定すべきと考えますが、例えば市街地の狭い道路での下水管の敷設等における周辺の多くの建物への影響は、各建物毎に規定できるものでないため、原則悪影響がでないように施工することと規定すべきかと考えます。 そのため、"as specified", "in accordance with", "unless otherwise specified"の使用について、次のように考えてみました。 貴機構では、例えば許容値等は、発注者が規定すべきであること、及び発注者が請負者任せにしないために、発注者が Particular Safety Specification (PSS)に、許容値を規定し"as specified in PSS"又は"in accordance with PSS"を使い JSSS に規定し、User Guide で発注者に規定することをガイドされる方針です。 一方、NK は、発注者が規定する許容値がある場合はその規定に従い、無い場合は請負者が遵守すべき原則を規定する"unless otherwise specified in PSSS"を使用することを推奨致します。これは、発注者が PSS の中で規定することを無視したり、規定できない場合に、現場で請負者がとるべき措置を JSSS の中で規定しておく方が漏れのないスペックになると考えるためです。	~~specified in the Contract~~, in accordance with the Particular Safety Specification regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works. The Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by carrying out all Foundation Piling Works, designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like either on or adjacent to the Site as specified in the Particular Safety Specification and obtain the prior consent of the Engineer before commencing ~~Excavation~~ Foundation Piling Works.

	9.2.2. Safety Measures at Planning Stage The Contractor shall plan all Foundation Piling Works so that they are executed in a safe and methodical manner.	(尚、次の GC の周辺環境の影響に関する条項が参考になると考えております。 4.18 Protection of the Environment The Contractor shall take all reasonable steps to protect the environment (both on and off the Site) and to limit damage and nuisance to people and property resulting from pollution, noise and other results of his operations. The Contractor shall ensure that emissions, surface discharges and effluent from the Contractor's activities shall not exceed the values stated in the Specification or prescribed by applicable Laws. 再度、"as specified", "in accordance with", "unless otherwise specified"の使用に関しまして、ご検討よろしくお願いいたします。 **9.2.2. Safety Measures at Planning Stage** JC: 具体性が無い。つまり前項 9.2.1 General の要求を満たす施工機械の選定と、付随する環境順守規定対策のことと考える。ここの書きぶりに違和感を覚える。 →9.2.2 と 9.2.3 を統合することを検討ください。 This part is lack of concreteness. In other words, it is considered to be the selection of construction equipment that satisfies the requirements of the previous section 9.2.1 General and the accompanying environmental compliance regulations. Is there any room for improvement here? → Consider integrating 9.2.2 and 9.2.3. NK: Integrated 9.2.2 and 9.2.3 as 8.2.2 in right. The Contractor shall plan all Foundation Piling Works so that they are executed in a safe and methodical manner. JCD: 杭打ち作業は、クレーン作業、杭打ち作業、あるいは掘削運搬作業、等複数の作業により継続的に行われる。各作業あるいは全般を指揮する作業指揮者の配置や、各要素の作業に必要な専門職の配置確認が以降のいずれかに必要。 The pile driving operation is continuously performed by a plurality of operations such as a crane operation, a pile driving operation, and an excavation transportation operation. It is necessary to confirm the assignment of operation leaders who conduct each work or the whole and the assignment of professionals necessary for the work of each element in any of the following. NK: 杭打ち作業に限らず全ての作業が、段階毎に各種の作業を行う。そのため、杭打ち作業だけに作業指揮者の配置を特に規定せず、第 1 章で規定することが良いと考えます。現時点の第 1 章(Issue 7)は次のように規定しています。 1.18 Proper Placement of Contractor's Personnel 1.18.3.Labourers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations. 1.22 Dangerous Work 1.22.5.A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of	**8.2.2 Safety Measures Before Commencement** The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

9.3 既成杭基礎工事の安全措置

請負者は、既成杭基礎工事を行うとき、次の安全措置を講じなければならない。
→規定なし。追記不要。

(1) 杭材の吊込みを行うときは、吊込み用機械の特性に応じ、杭材が落下、転倒しないよう、玉掛け方法、玉掛け用具を選定すること。
→E 9.2.5 (1)に規定済み

(2) 吊り上げ・杭打ち作業を行っている近くは、当該作業員以外の者の立入禁止措置を講じること。
→E 9.2.5 (2)に規定済み

(3) 2m 以上の高所で作業を行うときは、本仕様書 2.5 [墜落防止]を遵守すること。杭打ち機のリーダーに登るときには、親綱の設置等の墜落制止用器具を取り付けるものを設け、作業員に墜落制止器具を使用させること。
→規定なし。→理由:E 4.3.1(3)で規定済みで重複記述の必要なし→杭打機特有であり追記する。

(4) 杭打ち機の巻上げ装置に荷重をかけたままで巻上げ装置を停止しておくときは、歯止め装置により歯止めを行い、止め金付きブレーキを用いて制動しておく等確実に停止しておくこと。
→規定なし。→理由:(5)に記述。

(5) 杭打ち機の操作者は、吊り上げ装置に荷重をかけたまま運転位置を離れないこと。
→規定なし。→理由:(4)及び(5)を英文で規定していない理由は Contractor's Equipment で規定済み。(3)は上述のとおりだが、(4)及び(5)は明示的には第 4 章で規定されていないと考えるため、当該箇所で規定する。

(6) 強風時は、杭打ち機、クレーンのブームは倒したうえで、ワイヤー等でアンカー等へ緊結し、杭打ち機ややぐらはケーシングと連結する等により転倒防止を図ること。
→規定なし。→理由: 2.7.3. Measures for Strong Wind and Storms で規定済み。→規定しない。

9.2.3. Safety Measures Before Commencement

(1) The HSO shall inspect the Foundation Piling Work working area and surrounding areas before starting the assembly and installation of the Contractor's Equipment for the Foundation Piling Works to ensure that:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

workers engaged upon Dangerous Work.
上記の理由で追記は行っておりません。
All works including piling works are executed with some stages by step by step. Allocation of Operation Leader (OL) shall be specified in Chapter 1 General but not especially in the piling works.
With the above reason, we don't add a clause for assignment of OL.

9.2.3. Safety Measures Before Commencement

(1) The ~~HSO~~ Contractor shall inspect for permit of the HSO the Foundation Piling Work working area and surrounding areas before starting the assembly and installation of the Contractor's Equipment for the Foundation Piling Works to ensure that:

JC: これが HSO の業務内容なのか疑問。Site Engineer が確認して HSO の了解を得る方が自然ではないか。その意味で the Contractor を主語にしてはどうか。
I wonder if this is the task of HSO. Wouldn't it be more natural for site engineers to check and get HSO's consent?
In that sense, why not put the Contractor as the subject in that sense?

NK: HSO は安全計画通りに現場担当者が現場の安全管理を行っているかを管理する立場とする規定していることから、HSO の作業開始の許可は不要と考えます。そのため、HSO を請負者に変更します。

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilizing, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.

JC: 前項(a)～(c)を確認して作業開始を許可する、とまとめられ

(1) The Contractor shall inspect the Foundation Piling Work working area and surrounding areas before starting the assembly and installation of the Contractor's Equipment for the Foundation Piling Works to ensure that:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.

		ないか。 Is it possible to integrate with checking the previous paragraphs (a) to (c) and permitting the start of work? NK: Modified as right.	
	9.2.4. Safety Measures for Transportation	**9.2.4. Safety Measures for Transportation on Site - Prohibition of Unintended Use** JC: 目的外使用の禁止。英語で同趣旨のサブタイトルを付けてください。 Prohibition of Unintended Use. Please add a subtitle with the same meaning in English. NK: add the subtitle as commented.	**8.2.3 Safety Measures for Transportation on Site - Prohibition of Use Other Than for Intended Purposes**
	Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines; in all cases the Contractor shall use cranes accompanied where necessary by trucks and flatbed trailers.	Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines; in all cases the Contractor shall use cranes accompanied where necessary by trucks and flatbed trailers. NK: The above sentence is modified for simple subscription.	Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.
	9.2.5. Safety Measures for Driven Foundation Piling Works (1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.	**9.2.5. Safety Measures for Driven Foundation Piling Works** (1) The Contractor shall select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped. JC: Inserted "The Contractor shall". NK: Modified as right to make specify measures clear..	**8.2.4 Safety Measures for Driven Foundation Piling Works** (1) The Contractor shall select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.
	(2) Keep all workers away from the direct working location when driving operations are taking place.	(2) The Contractor shall keep workers other than those directly engaged in the driving operations~~. Keep all workers~~ away from the direct working location when driving operations are taking place. JC: 杭打ち作業員・オペレータ以外の人払いの規定と考えるが、all workers でよいのか？また、9.2.6 項と共通した内容ではないのか It is considered that it is a rule to keep avoiding people other than workers who engage in piling works and operators from approaching. Is it ok to avoid all workers? In addition, isn't the content common with 9.2.6? JC: Inserted "The Contractor shall keep workers other than those directly engaged in the driving operations NK: Modified (2) as commented.	(2) The Contractor shall keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.
		NK: (3) is added for fall prevention from lead of piling driving machine as required for specific requirement for the lead.	(3) In addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION], when the worker works on the lead of pile driving machine, the Contractor shall provide facility to install lifelines on the lead and fix the PFAS and make the worker use the PFAS.

9.4 場所打ち杭工事の安全措置

9.4.1 一般事項

本款では、オールケーシング工法、リバースサーキュレーション工法、アースドリル工法、アースオーガー工法で建設する場所打ち杭を建設する際の作業員の安全措置を規定する。その他の工法における安全措置に関しては、請負者は本款に準じて安全措置を講じなければならない。

→E 9.2.6 冒頭部に対応する規定あり。(但し工法の具体名は記載なし。)

9.4.2 オールケーシング工法

~~請負者は、オールケーシング工法による作業を行うとき、次の安全措置を講じなければならない。~~

→規定なし。

→(NK の方針:標題で対象とする工法を明示しているので削除する。)

(1) 掘削用のハンマーグラブの操作中は、作業員を掘削機に近寄らせないこと。その必要があるときは、ハンマーグラブがケーシング内に入り、停止した後に近づかせること。

→E 9.2.6 (1)(a)に規定済み

(2) 作業員をケーシング内に入らせる必要があるときは、本仕様書 2.1.4[閉鎖空間における安全措置]に従い、危険のないことを確認すること。

→E 9.2.6 (1)(b)に規定済み

(3) ケーシング打込み又は引抜き中は、当該作業員以外の者を機械又はやぐらに近づけさせないこと。危険な場所には立入禁止の柵等を設置すること。

→規定なし。→理由: Piling work を次のように Dangerous work と規定している。 9.2.1.General (1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work. →追記しない。

9.4.3 リバースサーキュレーションドリル工法

~~請負者は、リバースサーキュレーション工法による作業を行うとき、次の安全措置を講じなければならない。~~

→規定なし。→標題で対象とする工法を明示しているので削除する。

(1) ドリルのロッドの継ぎ足し又は撤去の作業中の作業員の手や指のはさまれ防止のため、機械の運転手への合図を行う者を配置すること。

→E 9.2.6 (2)(a)に規定済み

(2) 坑内水位と泥水濃度の変動に注意を払い、逸水の挙動が認められる場合には作泥の準備をすること。**→E 9.2.6 (2)(b)に規定済み**

9.2.6. Safety Measures for Cast-in-place Piling Works

The following items specify example safety measures for workers engaged in various methods of Foundation Piling Works. For any other piling methods, the Contractor shall take appropriate safety measures including those referred to in the following requirements.

(1) Pile Excavation Works using All-Casing Piling Method.

(a) Keep all workers away from the pile excavation machine while installing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.4 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling

(a) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Pay attention to any fluctuation in water level in the drilled hole and the mud (bentonite solution) concentration level and prepare for addition or discharge of mud consequent to any fluctuation; and

9.2.6. Safety Measures for Cast-in-place Piling Works

The following items specify ~~example~~ safety measures for workers engaged in various methods of ~~Foundation Piling Works~~ Cast-in-place Piling Works mentioned below. For any other ~~piling~~ Cast-in-place Piling methods, the Contractor shall take appropriate safety measures including those referred to in the following requirements.

JC: deleted "example", "Foundation Piling Works "and "piling".
NK: Delete it as indicated. And suggest specific piling methods are to be added.

(1) Pile Excavation Works using All-Casing Piling Method.

(a) Keep all workers away from the pile excavation machine while installing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment, ensure that the hammer grab is secured in the casing; and

JC: 日本語版では 3 つ目の項目が付いていたはずです。MD 氏は General の部分と重複があるとして削除していますが、復活させてください。

In the Japanese version, there are 3 items, however Issue 6 has removed them because of duplication with the General part in Chapter 1. Please revive them.

NK: 和文 9.4.2 (3)は、右に追記しました。

The Japanese 9.4.2 (3) is specified by adding to (1) in right.

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.4 [*Further Requirements for Dangerous Work*].

JC: このようなケースは異常事態にしか想定されないため、滅多にないというニュアンスを出した文に更新してください。

Such case in (b) is only expected in abnormal situation, so please rephase it with nuance of abnormal situation.

NK:ケーシングに入る時は規定通りであり、特別に異常事態と記載する必要はないと考えます。規定のままとします。

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method

(a) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) ~~Pay attention to any fluctuation in water level~~ Keep head and density of slurry as planed in the drilled hole and the mud (bentonite solution) concentration level and prepare for addition or discharge of mud consequent to any fluctuation; and

8.2.5 Safety Measures for Cast-in-place Piling Works

The following items specify ~~example~~ safety measures for workers engaged in ~~various methods of Foundation Piling Works~~ Cast-in-place Piling Works mentioned below. For any other ~~piling~~ Cast-in-place Piling methods than specified below, the Contractor shall take appropriate safety measures including those referred to in the following requirements.

(1) Pile Excavation Works using All-Casing Piling Method.

(a) Keep ~~all~~ workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing, and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment during the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.4 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method

(a) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Keep water level and concentration level of slurry (bentonite solution) in the drilled hole as planned and prepare for addition or discharge of slurry consequent to any fluctuation; and

(3) 作泥・排泥ピットを設ける場合は、柵の設置など作業員の転落防止措置を講じること。
→E 9.2.6 (2)(c)に規定済み

9.4.4. アースドリル工法、アースオーダー工法

~~請負者は、アースドリル工法、アースオーガー工法による作業を行うとき、次の安全措置を講じなければならない。~~
→規定なし。→(NK の方針：標題で対象とする工法を明示しているので削除する。)
(1) アースドリルやアースオーガーの転倒防止のために、アースドリルのドリリングバケット内の掘削土砂、アースオーガーのオーガー上の掘削土砂の重量を考慮に入れて、これらの機械を運転すること。
→E 9.2.6 (3)(a)に規定済み
(2) アースドリルやアースオーガーの転倒、土砂の落下等による作業員への危険がある作業範囲には、作業員を入らせないこと。
→E 9.2.6 (3)(b)に定済み

9.4.5 コンクリート打設作業

請負者は、コンクリート打設作業を行うとき、次の安全措置を講じなければならない。
(1) 鉄筋籠の製作は変形が生じないように製作し、鉄筋籠の接合は落下・脱落しないようにすること。
→E 9.2.7 (1)に規定済み
(2) 鉄筋籠、コンクリート打設トレミー管等の落下を防止するため、吊りバンドや吊り金具は、施工計画に定められた取付け・外し方法、作業順序によること。
→E 9.2.7 (2)に規定済み
(3) 鉄筋籠、トレミー管を取り扱う作業員の挟まれ防止のため、機械の運転手への合図を行う者を配意すること。
→E 9.2.7 (3)に規定済み

9.5 深礎工の安全措置

本節では深礎を建設する際の作業の安全措置事項について規定する。請負者は、深礎工の作業をおこなうとき、本仕様書 9.4.5[コンクリート打設作業]の措置及び次の措置を講じなければならない。
→E 9.2.8 冒頭部に規定済み

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling
(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and
(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

9.2.7. Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform and slip or drop off the Hoisting Equipment.
(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment.
(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

9.2.8. Safety Measures for Deep Foundation Insitu Concrete Piling

This Section contains example safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

JC: Keep head and density of slurry as planned のような書きぶりが良い。
It is better to stipulate like “Keep head and density of slurry as planned”.
NK: Modified as commented.

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling
(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and
(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

9.2.7. Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform and slip or drop off the Hoisting Equipment.
(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment.
(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

9.2.8. Safety Measures for Deep Foundation Insitu Concrete Piling

JC: この英訳で「深礎」と一般的に通じるものでしょうか。
Can international readers understand this English term translated from "Sin-so" in Japanese?
NK: 深礎は次のように英語で表記されていると考えます。また、以下で通常人力掘削であると規定していますので通じると考えます。
We consider "Sin-so" in Japanese is “deep foundation as shown in Wikipedia and also JSSS specified as usually executed by manual excavation.

“A deep foundation is a type of foundation that transfers building loads to the earth. A pile or piling is a vertical structural element of a deep foundation, driven or drilled deep into the ground at the building site”.

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method
(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and
(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform and slip or drop off the Hoisting Equipment.
(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment.
(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for Deep Foundation Insitu Concrete Piling Works

This Section contains ~~example~~ safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

(1) 作業環境に関する措置

(a) 深礎内には作業員が昇降するための昇降設備を設けること。鉛直はしごによる昇降設備の場合、安全ブロックを設置したはしごとすること、又は背かごを設けたはしごとすること。背かごを設けたはしごの長さが 10m以上のものには 5m 以内ごとに踏棚を設けること。鉛直はしごを含め、昇降用のはしごの上端は坑口の床、踏棚から 100 ㎝以上突出させること。
→E 9.2.8(1)(a)～(d)に規定済み。OSHA Subpart X 1926.1053 を追記する。

(b) 坑内作業員と昇降中の土砂搬出用バケット等の機械との接触防止の措置を講じること。
→E 9.2.8(1)(f)に規定済み。

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m, a landing rest platform shall be provided every 5 m;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(a) The ladder safety system shall be designed to eliminate or reduce the possibility of a worker falling off the ladder and shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness.

(b) Workers shall be trained in the use.
For further information refer to:
https://www.osha.gov/Publications/OSHA3903.pdf

This Section contains ~~example~~ safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

JC(Mr. Ito): deleted “example”
NK: revised.

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m, ~~a landing rest platform shall be provided every 5 m~~;

JC: 重複していませんか？Isn’t it a duplicate expression?
NK: Deleted.

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(a) The ladder safety system shall be designed to eliminate or reduce the possibility of a worker falling off the ladder and shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness.

(b) Workers shall be trained in the use.
~~For further information refer to:~~
https://www.osha.gov/Publications/OSHA3903.pdf

JC: この言い方は二重の意味で中途半端です。

① この OSHA の publication に対して comply しろということなのか、これを参考にして安全対策を独自に施せということなのかがはっきりしません。

「OSHA や BS については引用するならば comply、但し無用な部分はエンジニアの同意があれば除外できる」という総則の定めには従う･･･ことになっていると思うので Comply

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m~~, a landing rest platform shall be provided every 5 m~~;

(d) Comply with the requirements provided in OSHA 1926.1053 Ladders other than specified in JSSS 8.2.7.

(e) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(f) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(g) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(a) The ladder safety system shall be designed to eliminate or reduce the possibility of a worker falling off the ladder and shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness.

(b) Workers shall be trained in the use.
~~For further information refer to:~~
~~https://www.osha.gov/Publications/OSHA3903.pdf~~

		でよいと思います。 ② この OSHA の文書にはいろいろなことが記述されており、comply する範囲を ladder system に限定した記述にするべきです。 (1) It is not clear whether the Contractor shall comply with the OSHA's publication or take safety measures by himself with reference to it. It is basic concept that in case to quote OSHA or BS, "comply" shall be used and inapplicable parts can be excepted if the Engineer agrees as stipulated in Chapter 1 General. Therefore, this clause van be "comply" but not "refer to". (2) This OSHA's publication includes various items, so it is necessary to limit items to be complied with for the ladder system. NK: (a) JSSS 2.5FALL PREVENTION では Fixed ladder について規定はないため、Ladder の安全措置について OSHA1926.1053 の条項の順守を(d)として追加します。 (b)は深礎での墜落のリスクは高いため、教育訓練は残しますが、OSHA Fact Sheet は、一般的な規定のため、特に遵守を本項で規定する必要はないため、削除致します。 (a) JSSS 2.5FALL PREVENTION does not specify about fixed ladder, so safety measures for ladders in OSHA1926.1053 is added as (d)/	
(2) 作業の合図に関する措置 (a) 材料・機材の積み上げ・下ろし時の合図を定め、これを作業員に使用させること。 →E 9.2.8(3)(a)に規定済み。 (b) 緊急時の合図及び、退避の方法をあらかじめ定め、作業員に周知しておくこと。 →E 9.2.8(3)(b)に規定済み。 (3) 作業開始前の措置 (a) 本仕様書 2.1.4[閉鎖空間における安全措置]、2.1.6[作業環境の把握]に規定の措置を講じ、坑内環境の測定、換気による坑内環境の維持に努めること。 →E 9.2.7(4)に規定済み。 (b) 作業開始前に、掘削面の土質状況、ライナープレート等土留めの異常の有無を点検すること。→E 9.2.8 (5)(a)に規定済み。 (4) 作業中の措置	(3) Communication and Signalling Measures (a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use; (b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and (c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications. (4) Environmental Measures (a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft; (b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and (c) Provide adequate temporary lighting (5) Measures before Commencing Work (a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining. (6) Measures during the work	(3) Communication and Signalling Measures (a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use; (b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and (c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications. (4) Environmental Measures (a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft; (b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and (c) Provide adequate temporary lighting (5) Measures before Commencing Work (a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining. 9.1. GENERAL	**8 FOUDATION PILING WORKS** **8.1 GENERAL** JC2: 「Chicago Method」の定義を General の中（8.1.2？）で以下の 2 のとおり記載してください。出典は1にあるとおりです。 Please stipulate the definition of "Chicago Method" in the General (8.1.2?) as mentioned in the following 2. The source of the term is 1. below. 1．深礎工法：Chicago (board) method:土木和英辞典近代図書 1. Deep foundation method: Chicago (board) method: Civil Engineering Japanese English dictionary, Kindai 2．Chicago caisson (Chicago well): A small cofferdam used in medium stiff clays lined with planks sunk to hard ground for pier foundations. The plank sheeting is held in place by steel rings wedged against the side. : CONSTRUCTION DICTIONARY : The National Association of Women in Construction NK2: Chicago Method に関し調べました。上記の情報の他に次の記述があります。 We studied Chicago Method and found the following information: (1) International Conference on Case Histories in Geotechnical Engineering の論文で、Chicago Hand-Dug Caisson がドリル掘削坑基礎の発展の元であると記述しています。 120 YEARS OF CAISSON FOUNDATIONS IN CHICAGO the origin of the modem Drilled Shaft Foundation, which has its evolutionary roots in the Chicago Hand-Dug Caisson (2) Dictionary Of Civil Engineering (USA, John S. Scott)は、Chicago caisson と Deep foundation を次のように記述しています(Chicago Method 無し)。Chicago caisson は Deep foundation の一種と考えています。	**8. FOUDATION PILING WORKS** **8.1 GENERAL**	**8. FOUDATION PILING WORKS** **8.1 GENERAL**

	https://books.google.co.jp/books?id=C7oIHQDDrxsC&pg=PA72&lpg=PA72&dq=Wiki+Chicago+caisson&source=bl&ots=lirG_aHP_d&sig=ACfU3U1WxQvUZIYSScGhwQGQRaHZuIdcbQ&hl=ja&sa=X&ved=2ahUKEwiL-fXsrYfpAhWUd94KHWaiAocQ6AEwBHoECAoQAQ#v=onepage&q&f=false Chicago caisson: A small cofferdam used in medium staff clays, of about 1.2 m dia. Lined with planks added in 1.5m lengths and sunk to hard ground for pier foundations. The vertical plank supporters are held in place by steel rings wedged against the sides. (JC で参照の1と同じ記述である。この cofferdam は仮締切の意味もあるが、ここでは caisson (large watertight chamber used for construction under water)の意味である。) Deep foundation: a foundation, usually on some type of pile or caisson, generally more than 3 m below ground. Deep foundations are often needed in conjunction with ground engineering work. (3) BS ISO 6707-1:2017 直接基礎と深い基礎(Deep foundation として piled foundation と caisson)が規定されています。 BS defines shallow and deep foundations. The latter consists piled foundation and caisson (4) Hongkong and Malaysia Report 1) Hong Kong Technical Guidance : hand-dug caissons http://www.devb.gov.hk/filemanager/technicalcirculars/en/upload/231/2/WB09941.pdf 2) Malaysia Design, Construction & Performance of Hand-Dug Caissons https://pdfs.semanticscholar.org/c4bd/2bc8985ffcd0b2ac7c7daa9659acaf9fbecb.pdf NK2: 基礎工法としての Chicago Method はインターネットで容易に検索できない。土木和英辞典に用語としてありますが、用語が古くまた国際的な用語とは考えられない。そのため、次を参考に基礎を Shallow foundation と Deep foundation と分け、深礎は Caisson の一つとして Hand dig caisson として規定することを提案します。 The Chicago Method as foundation type cannot be found in internet. It seems that the term is out of date and not international one. Types of Foundation for Buildings and their Uses https://theconstructor.org/geotechnical/foundation-types-and-uses/9237/ 1. Shallow foundation: ◦Individual footing or isolated footing ◦Combined footing ◦Strip foundation ◦Raft or mat foundation 2. Deep Foundation: ◦Pile foundation ◦Drilled Shafts or caissons NK2: Therefore, referring to the above information, we propose to consider the foundation consists of shallow and deep foundation and " deep foundation" used at present is replaced "hand dig caisson" as one of caisson.		
9.1.1. Scope This Chapter specifies the safety requirements for Foundation Piling Works which shall include driven piling and insitu concrete piling.	**8.1.1 Scope** This Chapter specifies the safety requirements for Foundation Piling Works which shall include driven piling and insitu concrete piling. JC2: Cast-in-place Piling Works 一般用語で混在するのは構わないが、一番最初ぐらいはタイトルに合わせたら？ "insitu concrete piling" and "Cast-in-place Piling Works" are mixed. They shall be consistent use. NK2: 上記指摘は MD 氏の issue 2 案にて変更されています。	**8.1.1 Scope** *As noted in Chapter 7 Excavation Works, this item is reformatted to be consistent with later Chapters.* *The content of each Chapter 7 to 10 are now correctly referred to as a heading, i,e. Excavation Works, Foundation Piling Works, etc.* (1) This Chapter specifies the safety requirements for piling works which include: (a) Driven Piling; (b) Cast in place Piling; and	**8.1.1 Scope** (1) This Chapter specifies the safety requirements for piling works which include: (a) Driven Piling; (b) Cast in place Piling; and

	The above has been by MD in last version.	(c) ~~Deep Foundation Piling,~~ Hand-Dug Caisson NK2: The "deep foundation piling" is replaced with "Hand-Dug Caisson" as explained. and which are hereinafter collectively referred to as "Foundation Piling Works". (2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS. Additional particular requirements are contained in this Chapter.	(c) ~~Deep Foundation Piling,~~ Hand-Dug Caisson and which are hereinafter collectively referred to as "Foundation Piling Works". (2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS. Additional particular requirements are contained in this Chapter.
9.2. PARTICULAR SAFETY MEASURES FOR FOUNDATION PILING **9.2.1. General** (1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Unless otherwise specified in the Contract, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10. (3) Earthwork Support In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for the maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support may be necessary to achieve this. JC1: 1) JSSS 7.2 ではカバーされていないのではないか。 Isn't it covered by JSSS 7.2? NK: 1) In the latest JSSS draft of E 7.2 covers piling works as follows: Therefore it leaves as it is. 7.2.1 (2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are	**8.2 PARTICULAR SAFETY MEASURES FOR FOUNDATION PILING** **8.2.1 General** (1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Unless otherwise specified in the Contract, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10. (3) Earthwork Support In accordance with JSSS 7.2 [*Earthwork Support*] the Contractor shall be responsible for the maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support may be necessary to achieve this.	**8.2 PARTICULAR SAFETY MEASURES** **8.2.1 General** (1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10. *Please note that the above reference to the Particular Safety Specification, is for the case where piling is engineer designed and specified or is to be performed by another specialist contractor.* ~~(3) Earthwork Support~~ *Above separate heading is not necessary* (3) In accordance with JSSS 6.2 [Earthwork Support] the Contractor shall be responsible for ~~the~~ maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.	**8.2 PARTICULAR SAFETY MEASURES** **8.2.1 General** (1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10. (3) In accordance with JSSS 6.2 [Earthwork Support] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

working in, under or adjacent to any excavation and the avoidance of any damage to property.
7.3.2 (6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.

JC: 2) drilled pile あるいは slurry wall foundation においては slurry の比重や水位のコントロールを、請負者任せにはできないと考える。

In the case of drilled pile or slurry wall foundation, I think that control of the specific gravity and water level of the slurry cannot be left to the Contractor.

NK: 2) スラーリーの管理は施工計画・管理の一つであり、請負者の責任である。エンジニアは、請負者が提出した施工計画を把握している。異常が生じた場合はエンジニアへ報告する。そのため、追記は行っていない。

The Contractor is responsible for work method of piling operation. The Contractor shall design and manage the control of the specific gravity and water level of the slurry by his designer, checker and supervisor. The Engineer know the method from the Method Statement. When abnormal and dangerous case occurs, the Contractor shall inform the Engineer of it.

Therefore, no addition to JSSS is made.

(4) The Contractor shall execute all Foundation Piling Works without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability, ~~any~~ existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site and unless otherwise specified in the Contract, in accordance with the Particular Safety Specification regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works. the Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by carrying out all Foundation Piling Works, designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like either on or adjacent to the Site as specified in the Particular Safety Specification and obtain the prior consent of the Engineer before commencing ~~Excavation~~ Foundation Piling Works.

JC: 本設杭施工に対する周囲に与える影響(振動、騒音、沈下)の許容量を見極めるのは発注者の責務である。その許容量と環境及び杭の設計条件から発注者自身で想定される工法を選定すべきである。

作業構台の基礎のような杭に対しては、請負者自身が Site Data と与えられた環境に対する許容量に適する工法の選択が求められる。ここではそれらを分けて議論すべきである。

It is the responsibility of the Employer to determine the

(4) The Contractor shall execute all Foundation Piling Works without causing ~~any~~ damage to or weakening of surrounding subsurface conditions or ground bearing capability, any existing foundations, structures, buildings, roads, paved areas or the like, either on or adjacent to the Site ~~and unless otherwise specified in the Contract~~, in accordance with the Particular Safety Specification or any other part of the Contract documens regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works.

The Contractor shall take all necessary measures to prevent the occurrence of such damage or weakening by carrying out all Foundation Piling Works, designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like either on or adjacent to the Site as specified in the Particular Safety Specification and obtain the prior consent of the Engineer before commencing ~~Excavation~~ Foundation Piling Works.

JC2: 3 行目の weakening について。工学的にこのような表現でよろしいものかどうか、MD 氏に確認願います。

"weakening" in the 3rd line on (4). Please check with MD if this is the correct wording from an engineering standpoint.

NK2: MD 氏へも確認します。周囲の地盤強度の低下 loss/degrade/reduce of subsurface ground strength 等か？

(4) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Piling Works.

I suggest that the above is correct as a separate statement in a standard safety specification.

Please also note that it is not "the responsibility of the Employer to determine the permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work."

Moreover, there are no standard "allowable values" for acceptable damage to third party properties. Please refer to comments on this in JSSS 7.2.1 (6)

The following is the second part of the original paragraph which I suggest is edited as shown:

(4) The Contractor shall execute all Piling Works without weakening (JC) any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening (JC) or ~~damage~~ to limit damage and nuisance to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Piling Works.

To MD: JC inquired if the wording of "weakening" above is appropriate in the meaning of sentences from the point of civil engineering. It is appreciated to review.

permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work.

Based on the permissible amount, environment and pile design conditions, the Employer should select the assumed construction method.

For piles such as elevated access structures, the Contractor is required to select a construction method that is appropriate for the Site Data and the given environmental capacity. We should keep this in mind.

NK1: Modified and added.

9.2.2. Safety Measures at Planning Stage

~~The Contractor shall plan all Foundation Piling Works so that they are executed in a safe and methodical manner.~~

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

We will ask MD to review the wording of weakening. It may be "loss/degrade/reduce of subsurface ground strength is suitable.

JC2: 7-8 行目の "and unless otherwise specified in the Contract"について。NK がこの復活を推奨。

"and unless otherwise specified in the Contract" in the 7th to 8th line on (4), NK recommend reviving the description.

NK2: We understand JC accepted our proposal, so we stipulate "unless otherwise specified in the Contract".

JC:(4) 10-13 行目の"regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works"について。このような悪影響に関するモニタリングについて以前別の章で議論しておりましたが、基礎工事もカバーされていましたでしょうか。されていなければ、モニタリングについての規定を追記願います。

Regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works" from the 10th to 13th line on (4), we have discussed monitoring for such adverse effects in the other Chapter earlier, but did it also cover foundation work? If not, please add a provision on monitoring.

NK2: 指摘箇所は MD 氏の Issue 2 では削除し、代わりに 8.2.8 でモニタリングを追記済み。

The commented part of description has been deleted by MD's Issue 2 and added 8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties.

JC: (4)13 行目の限定は不要。特に the は不要かと。

About "by the Foundation Piling Works." in the 13th line in (4). Not necessary for limiting by "the".

NK2: 指摘通り削除します。Issue 2 では当該部分は削除済み。

We will delete "the" as commented. This has been deleted in the issue 2.

JC: (4)16 行目の"weakening"について。発生は「防げない」ものもあるので、mitigate adverse effects も入れる必要あるのでは？"to limit damage and nuisance"等の表現も良いのでは？

"weakening" in the 16th line in (4). Since some phenomena are not "preventable", we need to include "mitigate adverse effects" as well. Like as "to limit damage and nuisance" seems to be also appropriate.

NK: ご指摘通り"mitigate adverse effects"を挿入します。

We will insert "mitigate adverse effects" as commented.

8.2.2 Safety Measures Before Commencement

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

(5) The Contractor shall execute all Foundation Piling Works without causing any damage to or weakening of surrounding subsurface conditions or ground bearing capability of any existing foundations, structures, buildings, roads, paved areas or the like, either on or outside the Site

I suggest that the above is correct as a separate statement of fact in a standard safety specification.

Please also note that it is not "the responsibility of the Employer to determine the permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work."

Moreover there are no standard "allowable values" for acceptable damage to third party properties. Please refer to comments on this in JSSS 7.2.1 (6)

The following is the second part of the original paragraph which I suggest is edited as shown:

(6) ~~and unless otherwise specified in the Particular Safety Specification.~~ The Contractor shall take all necessary measures to prevent the occurrence of any damage or weakening by ~~carrying out all Foundation Piling Works,~~ designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtain the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 Safety Measures at Planning Stage

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

Regarding the suggested change of HSO to Contractor in the following clause, please refer to my comments against JSSS 1.3 and 1.14:

(5) The Contractor shall execute all Foundation Piling Works without causing damage to or weakening (JC) of surrounding subsurface conditions or ground bearing capability of any existing foundations, structures, buildings, roads, paved areas or the like, either on or outside the Site

(6) The Contractor shall take all necessary measures to prevent the occurrence of any damage or weakening (JC) and mitigate adverse effects by designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtain the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 Safety Measures at Planning Stage

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

JC: 具体性が無い。つまり前項 9.2.1 General の要求を満たす施工機械の選定と、付随する環境順守規定対策のことと考える。ここの書きぶりに違和感を覚える。

→9.2.2 と 9.2.3 を統合することを検討ください。

This part is lack of concreteness. In other words, it is considered to be the selection of construction equipment that satisfies the requirements of the previous section 9.2.1 General and the accompanying environmental compliance regulations. Is there any room for improvement here?

→ Consider integrating 9.2.2 and 9.2.3.

NK: Integrated 9.2.2 and 9.2.3 as 8.2.2 in right.

JCD: 杭打ち作業は、クレーン作業、杭打ち作業、あるいは掘削運搬作業、等複数の作業により継続的に行われる。各作業あるいは全般を指揮する作業指揮者の配置や、各要素の作業に必要な専門職の配置確認が以降のいずれかに必要。

The pile driving operation is continuously performed by a plurality of operations such as a crane operation, a pile driving operation, and an excavation transportation operation. It is necessary to confirm the assignment of operation leaders who conduct each work or the whole and the assignment of professionals necessary for the work of each element in any of the following.

NK: 杭打ち作業に限らず全ての作業が、段階毎に各種の作業を行う。そのため、杭打ち作業だけに作業指揮者の配置を特に規定せず、第 1 章で規定することが良いと考えます。現時点の第 1 章（Issue 7）は次のように規定しています。

1.18 Proper Placement of Contractor's Personnel

1.18.3.Labourers and unskilled workers shall never be assigned to any work on Site on their own, all shall be assigned in groups and each work group must always include an Operation Leader to ensure compliance with the Contractor's safety regulations.

1.22 Dangerous Work

1.22.5.A specially trained Operation Leader shall always be assigned to work full-time with every worker or team of workers engaged upon Dangerous Work.

上記の理由で追記は行っておりません。

All works including piling works are executed with some stages by step by step. Allocation of Operation Leader (OL) shall be specified in Chapter 1 General but not especially in the piling works.

With the above reason, we don't add a clause for assignment of OL.

~~**9.2.3. Safety Measures Before Commencement**~~

(1) The ~~HSO~~[1] Contractor shall inspect the Foundation Piling Work working area and surrounding areas before starting the assembly and installation of the Contractor's Equipment for the Foundation Piling Works to ensure that:

(1) The Contractor shall inspect the Foundation Piling Work working area and surrounding areas before starting the assembly and installation of the Contractor's Equipment for the Foundation Piling Works to ensure that:

"….The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly."

And "For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend that we try to do it."

The HSO should remain responsible for maintaining safety at all times; if he delegates and who he delegates to and how they communicate, is his choice and responsibility.

Regarding the management of construction performance, quality, quantity and environmental compliance etc. etc. other persons are independently responsible.

I suggest that the Engineer has no duty to advise or direct the Contractor how to manage his internal affairs and I advise against trying to do this.

In terms of 8.2.(3) JSSS is for safety matters, so the HSO must inspect this and other works to assess that all is safe.

The construction staff must also inspect and give instructions etc. for other purposes but surely it is not within the scope of JSSS to advise on that.

Sometimes also, opinions will differ because interests are different, for example the HSO may not allow piling work to start if he perceives any risk to safety.

On the other hand a construction manager or site engineer may choose to take risks for example to speed up he start if work is running late.

If we state "the Contractor shall.." this unnecessarily introduces ambiguity to JSSS and I do advise against it.

I suggest that if any change is to be made (which I do not think necessary) it should however be in Chapter 1 which prevails.

All other chapters of JSSS would be better confined to safety and therefore generally refer to HSO.

(1) The HSO shall inspect the Foundation Piling Works working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's

(1) The HSO shall inspect the Foundation Piling Works working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of

[1] Refer to JSSS 1.10 [*Contractor's Health and Safety Officer at the Site*]

JC1: これが HSO の業務内容なのか疑問。Site Engineer が確認して HSO の了解を得る方が自然ではないか。その意味で the Contractor を主語にしてはどうか。

I wonder if this is the task of HSO. Wouldn't it be more natural for site engineers to check and get HSO's consent? In that sense, why not put the Contractor as the subject in that sense?

NK: HSO は安全計画通りに現場担当者が現場の安全管理を行っているかを管理する立場とする規定していることから、HSO の作業開始の許可は不要と考えます。そのため、HSO を請負者に変更します。

It is specified that HSO shall manage that the site staff execute the safety measures in accordance with the Safety Plan, so it seems not necessary of approval by the HSO before the commencement of work. The HSO is replaced with the Contractor.

(After submission of the above reply to JICA, I started preparing R2 for TW and found the above reply is not correct. I am preparing revised explanation to JICA.)

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) ~~As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.~~ After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.

JC: 前項(a)～(c)を確認して作業開始を許可する、とまとめられないか。

Is it possible to integrate with checking the previous paragraphs (a) to (c) and permitting the start of work?

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

JC2: (1)(a) 6-7 行目の"if necessary"について。重複ではないか？

About " if necessary" in the 6th to 7th line in (1)(a). Isn't it duplicated expression?

NK2: 指摘どおり、if necessary の前後で文意が重複しているが、具体的方策を示しており、残した方が良いと考えます。

There seems to be some duplicate meaning of sentences. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.

(2) After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.

JC: (2)は削除し次の表現で置き換えること。

Delete (2) and replace with the sentence below.

The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.

NK: 指摘通り変更します。will modify as commented.

Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

~~(2) As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.~~

The following additional wording is now already covered by the editing of the first paragraph above.

~~(3) After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.~~

the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

To MD, Please review the (a) from the view point of JC that the sentences are duplicated. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.

NK: Modified as above.

9.2.4. Safety Measures for Transportation on Site - Prohibition of Use Other Than for Intended Purposes

JC: 目的外使用の禁止。英語で同趣旨のサブタイトルを付けてください。

Prohibition of Unintended Use. Please add a subtitle with the same meaning in English.

NK: add the subtitle as commented.

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

NK: The above sentence is modified for simple subscription.

9.2.5. Safety Measures for Driven Foundation Piling Works

(1) The Contractor shall select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

JC: Inserted "The Contractor shall".

NK: Modified as right to make specify measures clear..

(2) ~~Keep all workers~~ The Contractor shall keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

JC: 杭打ち作業員・オペレータ以外の人払いの規定と考えるが、all workers でよいのか？また、9.2.6 項と共通した内容ではないのか

It is considered that it is a rule to keep avoiding people other than workers who engage in piling works and operators from approaching. Is it ok to avoid all workers? In addition, isn't the content common with 9.2.6?

JC: Inserted "The Contractor shall keep workers other than those directly engaged in the driving operations

NK: Modified (2) as commented.

(3) In addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION], when the worker works on the lead of pile driving machine, the Contractor shall provide facility to

8.2.3 Safety Measures for Transportation on Site - Prohibition of Use Other Than for Intended Purposes

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

JC2: 8.2.3 の見出しは、次に変更する。

Please revise the title as follows:

Safety Measures for Transportation on Site Prohibition of Unintended Use → "Safety Measures for Transportation on Site -Use of appropriate equipment and vehicle"

NK: 指摘通り変更.

Modify as commented.

8.2.4 Safety Measures for Driven Foundation Piling Works

(1) The Contractor shall select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles in accordance with (Quote here the appropriate provisions of Chapter 5), so that piles are mishandled or dropped.

JC: (1)5 行目の()の箇所へ 5 章の適切な規定を挿入すること。

For the position of ( ) in the 5th line on (1), insert the appropriate description of Chapter 5.

NK: Issue 3 では対象箇所の規定は削除済み。

The designated part has been deleted in Issue 3.

(2) The Contractor shall keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) In addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION], when the worker works on the lead of pile driving machine, the Contractor shall provide a facility to ~~install~~ lifelines ~~on the lead and~~ to fix the PFAS and make the worker use the PFAS.

JC: 少し変。日本語を正確に読めば Provide a facility to は不要なのがわかるかと。 親綱の設置等の墜落制止用器具を取り付けるものを設け、] 日本語は、命綱を設置するような施設を設置することを求めてはないし、そういうものを溶接してつけるようなことでもないのかと（safety block とか命綱とか使えということ） また、論理的にはリーダーに命綱を取り付ける必要もない（ついでに作業員単数なら命綱は普通1本）

8.2.3 Safety Measures for Transportation on Site - Prohibition of Use Other Than for Intended Purposes

Is above additional wording necessary? I have tried to make headings brief,

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Foundation Piling Works

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

8.2.3 Safety Measures for Transportation on Site – Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Foundation Piling Works

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION]

install lifelines on the lead and fix the PFAS and make the worker use the PFAS.

NK: (3) is added for fall prevention from lead of piling driving machine as required for specific requirement for the lead.

9.2.6. Safety Measures for Cast-in-place Piling Works

~~The following items specify example safety measures for workers engaged in various methods of Foundation Piling Works. For any other piling methods, the Contractor shall take appropriate safety measures including those referred to in the following requirements.~~

The following items specify ~~example~~ safety measures for workers engaged in ~~various methods of Foundation Piling Works~~ Cast-in-place Piling Works mentioned below. For any other ~~piling~~ Cast-in-place Piling methods than specified below, the Contractor shall take appropriate safety measures including those referred to in the following requirements.

JC: deleted "example", "Foundation Piling Works "and "piling".
NK: Delete it as indicated. And suggest specific piling methods are to be added.

(1) Pile Excavation Works using All-Casing Piling Method.

~~(a) Keep all workers away from the pile excavation machine while installing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment, ensure that the hammer grab is secured in the casing; and~~

Keep ~~all~~ workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing, and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment during the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

JC: 日本語版では 3 つ目の項目が付いていたはずです。MD 氏は General の部分と重複があるとして削除していますが、復活させてください。

In the Japanese version, there are 3 items, however Issue 6 has removed them because of duplication with the General part in Chapter 1. Please revive them.

NK: 和文 9.4.2 (3)は、右に追記しました。

provide a lifeline to fix PFAS が正しい。
JC2: That's not exactly right. If it is read correctly, it can be understood "provide a facility to" is not necessary. "provide a lifeline to fix PFAS" only is correct.
NK: 指摘通り修正。
We will modify it as commented. (3) is not included in Issue 2. We added it.

8.2.5 Safety Measures for Cast-in-place Piling Works

~~The following items specify safety measures for workers engaged in Cast-in-place Piling Works mentioned below. For any other Cast-in-place Piling methods than specified below, the Contractor shall take appropriate safety measures including those referred to in the following requirements.~~

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

JC: 黄色ハイライト部は削除し上記へ変更すること。
Replace the yellow highlighted part with the above sentences.
NK: 指摘通り変更。
Modify as directed and MD will review and edit them.

(1) Pile Excavation Works using All-Casing Piling Method.

(a) Keep ~~all~~ workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing, and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment during the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) In case ~~When~~ any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.4 [*Further Requirements for Dangerous Work*].

8.2.5 Safety Measures for Cast-in-place Piling Works

The following items specify example safety measures for workers engaged in Cast-in-place Piling Works. ~~For any other Cast-in-place Piling Works, the Contractor shall take appropriate safety measures including those referred to in the following requirements.~~

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

8.2.5 Safety Measures for Cast-in-place Piling Works

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

(1) Pile Excavation Works using All-Casing Piling Method.

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

The Japanese 9.4.2 (3) is specified by adding to (1) in right.

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.4 [*Further Requirements for Dangerous Work*].

JC: このようなケースは異常事態にしか想定されないため、滅多にないというニュアンスを出した文に更新してください。

Such case in (b) is only expected in abnormal situation, so please rephase it with nuance of abnormal situation.

NK:ケーシングに入る時は規定通りであり、特別に異常事態と記載する必要はないと考えます。規定のままとします。

Entering in casing is as specified, so not necessary to stipulate as abnormal condition. It is not modified.

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method

(a) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) ~~Pay attention to any fluctuation in water level in the drilled hole and the mud (bentonite solution) concentration level and prepare for addition or discharge of mud~~ Keep water level and concentration level of slurry (bentonite solution) in the drilled hole as planned and prepare for addition or discharge of slurry consequent to any fluctuation; and

JC: Keep head and density of slurry as planned のような書きぶりが良い。

It is better to stipulate like “Keep head and density of slurry as planned”.

NK: Modified as commented.

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method

(a) When adding or removing drill ~~length~~ rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Keep water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

JC2: (1)～(3)の赤文字表記は JICA による直接の更新。

Red letters in (1)-(3) are directly modified by JICA.

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(c) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(d) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(e) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(f) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(g) Keep workers other than those directly engaged in the drilling works away from the drill or auger.

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method.

(a) When adding or removing drill lengths, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger to prevent injury from splashing or falling of mud or earth from and collision by them .

9.2.7. Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform and slip or drop off the Hoisting Equipment.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

9.2.8. Safety Measures for Deep Foundation Insitu Concrete Piling Works

JC: この英訳で「深礎」と一般的に通じるものでしょうか。

Can international readers understand this English term translated from "Sin-so" in Japanese?

NK: 深礎は次のように英語で表記されていると考えます。また、以下で通常人力掘削であると規定していますので通じると考えます。

We consider "Sin-so" in Japanese is “deep foundation as shown in Wikipedia and also JSSS specified as usually executed by manual excavation.

JC2: (3)(b)について。一般的になりすぎて機械に近寄らないはあまり意味ない。ハザードとは何か？オーガーの場合は土砂の落下による危険がもともとの焦点で、その下に入らないことに意味があるので、その旨を明記してください。

For (3)(b), the expression "keep workers away from the drill or auger" doesn't make much meaning because it's general description. It needs what could be a hazard in this case. In the case of augers, falling earth/mud from the auger would be hazard. So please state that.

NK2: 追記します。Added the hazard referring to the comments.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off from the Hoisting Equipment.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

JC2: that reinforcement cages について。(1)にあるので、違いがわからなくなっている。(2)は強度のある吊り器具を提供・使用というより（それは当たり前）、籠の場合はどういう風に吊るか、トレミーならどう滑らないようにつるかということで、「決められた手順・吊り方で行う」というのが元文の主旨のはず。これだと(1)とあわせてごちゃごちゃで、鉄筋籠の重複もあり、どちらかを消し忘れたようにしか見えない。

About “that reinforcement cages”, it is stipulated both in (1) and (2), so it’s hard to tell the difference of (1) & (2). For (2), it should show how to install the reinforcement cages and how to hang the tremie so that it does not slip.

NK: (1)は鉄筋篭の設計、(2)は鉄筋籠とトレミー管の吊り作業について分けて規定します。

Separately stipulate (1) about cage and (2) hoisting cage and tremie.

8.2.7 Safety Measures for Deep Foundation Insitu Concrete Piling Works

This Section contains ~~example~~ safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

JC2: 深礎に適した径の規定があるはずですので、調べたうえで、可能であるならば具体的な数値を書き入れてください。

There is a provision for a suitable diameter for the deep foundation (hand dug piles), so please research and if

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform and slip or drop off the Hoisting Equipment.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for Deep Foundation Insitu Concrete Piling

This Section contains example safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

I suggest that you leave “example” as it is, it is intentional. It is a simple and brief way of stating that the following measures are not restrictive and that whatever else is necessary shall be provided by the contractor.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform. ~~and slip or drop off from the Hoisting Equipment.~~

(2) Provide secure rigging equipment and operate hoisting ~~slings and welded metal fixings~~ to ensure that reinforcement cages and tremie pipes ~~are secure and~~ do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for Hand-Dug Piling Works

This Section contains safety measures for ~~Deep Foundation Piling Works~~, hand-dug piling works which shall be a diameter of 2m or more, with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

"A deep foundation is a type of foundation that transfers building loads to the earth. A pile or piling is a vertical structural element of a deep foundation, driven or drilled deep into the ground at the building site".

This Section contains ~~example~~ safety measures for large diameter deep foundation piling works with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

JC: deleted "example"
NK: Revised.

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m, ~~a landing rest platform shall be provided every 5 m~~;

JC: 重複していませんか？Isn't it a duplicate expression?
NK: Deleted.

(d) Comply with the requirements provided in OSHA 1926.1053 Ladders other than specified in JSSS 8.2.7.

NK: added.

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the

possible, stipulate specific diameter.

NK2: MLIT 近畿地方整備局設計便覧「第 10 章基礎工」では、基礎杭の種類と杭径について下表のとおり掲載しています。

In the Road and Bridge Specifications, Kinki Regional Bureau, MLIT, Japan, specify the type and diameter of foundation piles as shown below. Diameter of Deep Foundation Piles is 2,000mm and more.

NK2: Because of workers' safe working circumstance and that small diameter has risk to the workers, Hand-Dug Piling pile of diameter of 2m or more is defined here

Table Pile Type and Applicable Diameter
表 杭種と杭径の使用範囲 (unit:mm)

杭 種 (Pile type)			Diam.杭径
既製杭 Precast piles	打込み・プレボーリング Driven and Pre-excavated piles	RC 杭 RC piles	300-600
		PHC 杭・SC 杭 PHC and SC piles	300-1,000
		鋼管杭 Steel pipe piles	400-
	中堀り		500-1,000
鋼管ソイルセメント杭 Steel pipe and soil cement piles		ソイルセメント柱径 Soil cement diam.	700-1,500
		鋼管径 Steel pipe	500-1,200
場所うちコンクリート杭 In-situ concrete piles			1,000-
深礎杭 Hand-Dug Pile			**2,000-**

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m, ~~a landing rest platform shall be provided every 5 m~~;

(d) Comply with the requirements provided in OSHA 1926.1053 Ladders other than specified in JSSS 8.2.7.

(e) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(f) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(g) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in JSSS 8.2.7;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in JSSS 8.2.7;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

bucket hoisting and descending operations.

(2) Ladder Safety System

(a) The ladder safety system shall be designed to eliminate or reduce the possibility of a worker falling off the ladder and shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness.

(b) Workers shall be trained in the use.

~~For further information refer to: https://www.osha.gov/Publications/OSHA3903.pdf~~

JC: この言い方は二重の意味で中途半端です。

① この OSHA の publication に対して comply しろということなのか、これを参考にして安全対策を独自に施せということなのかがはっきりしません。

「OSHA や BS については引用するならば comply、但し無用な部分はエンジニアの同意があれば除外できる」という総則の定めには従う・・・ことになっていると思うので Comply でよいと思います。

② この OSHA の文書にはいろいろなことが記述されており、comply する範囲を ladder system に限定した記述にするべきです。

(1) It is not clear whether the Contractor shall comply with the OSHA's publication or take safety measures by himself with reference to it.

It is basic concept that in case to quote OSHA or BS, "comply" shall be used and inapplicable parts can be excepted if the Engineer agrees as stipulated in Chapter 1 General. Therefore, this clause van be "comply" but not "refer to".

(2) This OSHA's publication includes various items, so it is necessary to limit items to be complied with for the ladder system.

NK: (a) JSSS 2.5FALL PREVENTION では Fixed ladder について規定はないため、Ladder の安全措置について OSHA1926.1053 の条項の順守を(d)として追加します。

(b)は深礎での墜落のリスクは高いため、教育訓練は残しますが、OSHA Fact Sheet は、一般的な規定のため、特に遵守を本項で規定する必要はないため、削除致します。

(a) JSSS 2.5FALL PREVENTION does not specify about fixed ladder, so safety measures for ladders in OSHA1926.1053 is added as (d).

(b) There is risk of fall in the deep foundation, so training is left. As the OSHA Fact Sheet describes general requirements, we think no need to especially stipulate to comply to the Sheet. Therefore, they are deleted.

(2) Ladder Safety System

(a) The ladder safety system shall be designed to eliminate or reduce the possibility of a worker falling off the ladder and shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness.

(b) Workers shall be trained in the use.

~~For further information refer to: https://www.osha.gov/Publications/OSHA3903.pdf~~

(3) Communication and Signalling Measures

(a) Signals for delivering materials and

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder.

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(3) Communication and Signalling Measures

(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall

(2) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder.

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(3) Communication and Signalling Measures

(a) Signals for delivering materials and equipment ~~to and down the shaft shall be~~

(3) Communication and Signalling Measures

(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(4) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(5) Measures before Commencing Work

(a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(6) Measures during the work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

~~(b) Stop the work, evacuate workers and provide remedial measures to deal with ground water particularly when under pressure, resume the work only after confirming that there is no further risk;~~

When excavating below the groundwater level, provide measures to drain the water in the shaft, and stop the work, evacuate workers in case abnormal water inflow in the shaft and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use;

JC2: (1)～(3)の赤文字表記は JICA による直接の更新。
Red letters in (1)-(3) are directly updated by JICA.

(b) Signals and evacuation methods during emergencies shall also be determined in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(4) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(5) Measures before Commencing Work

(a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(6) Measures during the work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) ~~When excavating below the groundwater level, provide measures to drain the water in the shaft.~~ Stop the work, evacuate workers in case abnormal water inflow in the shaft and resume the work only after taking countermeasures and confirming that there is no ~~risk due to~~ water seepage;

JC2: 黄色ハイライト箇所について。現場の水処理のためにこのような作業が想定されるかもしれませんが、ここは杭打ちの話なので不要です。
For the yellow highlight part, we assume you wrote this for be trained in their use;

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(4) Environmental Measures

8.1 GENERAL

JC2: 「Chicago Method」の定義を General の中 (8.1.2？) で以下の 2 のとおり記載してください。出典は1にあるとおりです。
Regarding Deep Foundation Insitu Concrete Piling please use the term of "Chicago Method" and stipulate the definition of "Chicago Method" in the General (8.1.2?) as mentioned in the following 2. The source of the term is 1. below.
1. 深礎工法：Chicago (board) method:土木和英辞典近代図書
1. Deep foundation method: Chicago (board) method: Civil Engineering Japanese English dictionary, Kindai
2. Chicago caisson (Chicago well): A small cofferdam used in medium stiff clays lined with planks sunk to hard ground for pier foundations. The plank sheeting is held in place by steel rings wedged against the side. : CONSTRUCTION DICTIONARY : The National Association of Women in Construction

NK2: Chicago Method に関し調べました。上記の情報の他に次の記述があります。
We studied Chicago Method and found the following information:

(1) International Conference on Case Histories in Geotechnical Engineering の論文で、Chicago Hand-Dug Caisson がドリル掘削坑基礎の発展の元であると記述しています。
120 YEARS OF CAISSON FOUNDATIONS IN CHICAGO
the origin of the modem Drilled Shaft Foundation, which has its evolutionary roots in the Chicago Hand-Dug Caisson
(2) Dictionary Of Civil Engineering (USA, John S. Scott)は、Chicago caisson と Deep foundation を次のように記述しています(Chicago Method 無し)。Chicago caisson は Deep foundation の一種と考えています。
https://books.google.co.jp/books?id=C7oIHQDDrxsC&pg=PA72&lpg=PA72&dq=Wiki+Chicago+caisson&source=bl&ots=lirG_aHP_d&sig=ACfU3U1WxQvUZIYSScGhwQGQRaHZuIdcbQ&hl=ja&sa=X&ved=2ahUKEwiL-fXsrYfpAhWUd94KHWaiAocQ6AEwBHoECAoQAQ#v=onepage&q&f=false
Chicago caisson: A small cofferdam used in medium staff clays, of about 1.2 m dia. Lined with planks added in 1.5m lengths and sunk to hard ground for pier foundations. The vertical plank supporters are held in place by steel rings wedged against the sides. (JC で参照の1と同じ記述である。この cofferdam は仮締切の意味もあるが、ここでは caisson (large

8.1 GENERAL

8.1.1 Scope

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) Hand-Dug Piling

and which are hereinafter collectively referred to as “Foundation Piling Works”.

In researching this briefly, there may be some difficulties in using this term, particularly “hand-dug”, for example in Hong Kong this was a traditional method of piling which was very unsafe and was therefore effectively banned in the mid 1990’s (see attachments).

Up to that time there were strict conditions imposed by some organisations on such manual works (see attachment).

8.3 GENERAL

8.1.2 Scope

(3) This Chapter specifies the safety requirements for piling works which include:

(d) Driven Piling;

(e) Cast in place Piling; and

(f) Hand-Dug Piling

and which are hereinafter collectively referred to as “Foundation Piling Works”.

(4) General requirements for example for Contractor’s Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.4 PARTICULAR SAFETY MEASURES

8.2.9 General

(7) Foundation Piling Works and all operations connected therewith

watertight chamber used for construction under water)の意味である。)
Deep foundation: a foundation, usually on some type of pile or caisson, generally more than 3 m below ground. Deep foundations are often needed in conjunction with ground engineering work.
(3) BS ISO 6707-1:2017
直接基礎と深い基礎(Deep foundation として piled foundation と caisson)が規定されています。
BS defines shallow and deep foundations. The latter consists piled foundation and caisson
(4) Hongkong and Malaysia Report
1) Hong Kong Technical Guidance : hand-dug caissons
http://www.devb.gov.hk/filemanager/technicalcirculars/en/upload/231/2/WB09941.pdf
2) Malaysia Design, Construction & Performance of Hand-Dug Caissons
https://pdfs.semanticscholar.org/c4bd/2bc8985ffcd0b2ac7c7daa9659acaf9fbecb.pdf

NK2: 基礎工法としての Chicago Method はインターネットで容易に検索できない。土木和英辞典に用語としてありますが、用語が古くまた国際的な用語とは考えられない。そのため、次を参考に基礎を Shallow foundation と Deep foundation と分け、深礎は Caisson の一つとして Hand dug caisson として規定することを提案します。
The Chicago Method as foundation type cannot be found in internet. It seems that the term is out of date and not international one.
Types of Foundation for Buildings and their Uses
https://theconstructor.org/geotechnical/foundation-types-and-uses/9237/
1. Shallow foundation: ◦Individual footing or isolated footing ◦Combined footing ◦Strip foundation ◦Raft or mat foundation
2. Deep Foundation: ◦Pile foundation ◦Drilled Shafts or caissons
NK2: Therefore, referring to the above information, we propose to consider the foundation consists of shallow and deep foundation and "Deep Foundation" used at present is replaced "Hand-Dug Caisson" as one of caisson.

8.1.1 Scope

As noted in Chapter 7 Excavation Works, this item is reformatted to be consistent with later Chapters.

The content of each Chapter 7 to 10 are now correctly referred to as a heading, i,e. Excavation Works, Foundation Piling Works, etc.

JC2: Cast-in-place Piling Works
一般用語で混在するのは構わないが、一番最初ぐらいはタイトルに合わせたら？
"insitu concrete piling" and "Cast-in-place Piling Works" are mixed. They shall be consistent use.
NK2: 上記指摘は MD 氏の issue 2 案にて変更されています。The above has been by MD in last version.

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) ~~Deep Foundation Piling,~~ Hand-Dug Caisson

NK2: The "deep foundation piling" is replaced with "Hand-Dug Caisson" as explained above.

and which are hereinafter collectively referred to as "Foundation Piling Works".

(2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

I suggest that this type of piling should not be commonly allowed except in exceptional cases and unless strict conditions are applied and complied with otherwise it may not be a safe method. This is not emphasised in JSSS at present and I think it should be. I have drafted some additional clauses for this is 8.2.7, please review and modify as you think fit.

As Piling is frequently Contractor Design (even under the Pink Book) it needs mention here and as it is permanent work and therefore basically Employer design it also requires appropriate mention in the User Guide. I will draft this

The pictures in the original JICA/NK draft were not solely "Hand-Dug". Although labour is shown and is necessary in the shaft, the excavation and removal is by clamshell not entirely by hand.

"Chicago Method" is not really an internationally accepted term.

This is not "Caisson Piling" as this is not work in a caisson, i.e. it is not relying upon air pressure to exclude water.

On balance I agree that "Hand-Dug Piling" is probably the most appropriate as this is understandable and descriptive of the basic method.

Please refer to the HK example which I have used as a basis and carefully review and revise as you think necessary:

8.2 PARTICULAR SAFETY MEASURES

8.2.1 General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(8) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(9) In accordance with JSSS 6.2 [*Earthwork Support*] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(10) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

(11) The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

(12) Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Foundation Piling Works.

Unless otherwise specified in the Particular Safety Specification, such measures shall include design by the Contractor and provision of permanent or temporary supports and reinforcing of such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtaining the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.10 Safety Measures Before Commencement

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.2 PARTICULAR SAFETY MEASURES

8.2.1 General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

Please note that the above reference to the Particular Safety Specification, is for the case where piling is engineer designed and specified or is to be performed by another specialist contractor.

~~(3) Earthwork Support~~

Above separate heading is not necessary

(3) In accordance with JSSS 6.2 [Earthwork Support] the Contractor shall be responsible for ~~the~~ maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening (JC) any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

JC2: weakening について。工学的にこのような表現でよろしいものかどうか、MD 氏に確認願います。
"weakening" in the 3rd line on (4). Please check with MD if this is the correct wording from an engineering standpoint.
NK2: MD 氏へ確認します。周囲の地盤強度の低下等か？
We will ask MD to review the wording of weakening. It may be "loss/degrade/reduce of subsurface ground strength is suitable.

(3) In accordance with JSSS 6.2 [*Earthwork Support*] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

Weakening" is the present participle, of the verb, "weaken" which generally means "to make or become weaker in physical strength".

"Weakening" is a correct and meaningful term in this sense and is an appropriate term for use in this document. "weak" or "weakened" ground caused by "weakening" for example may not be able to adequately support the weight of structures, thereby causing subsidence.

(5) The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

(6) Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Foundation Piling Works.

I do not recommend the re-insertion of the wording "unless otherwise specified in the Particular Safety Specification" in the above as this will not normally be a default. However, upon further study, the following paragraph (see below) will benefit from revision and should correctly include this wording. I have edited as shown.

"Weakening" as explained above is correct.

The use of the word "damage" is correct. It is a fundamental contractual obligation of the Contractor NOT to cause any damage in this sense and to change this to "limit", introduces unnecessary and inadvisable ambiguity and suggests that to some extent, damage is allowable.

(2) The HSO shall inspect the Foundation Piling Works' working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(d) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon;

(e) The area is clear of any obstructions; and

(f) The areas are properly drained and free from standing water.

If necessary, the Contractor shall improve the ground by stabilising, cleaning, draining, providing paving and/or placing steel decking and temporary piling and the like to provide a suitable, clean, dry and safe working area without causing any risk to the stability of Contractor's Equipment or materials.

8.2.11 Safety Measures for Transportation on Site - Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.12 Safety Measures for Driven Piling

The Contractor shall:

(4) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(5) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(6) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5 [*Fall Prevention*].

8.2.13 Safety Measures for Cast-in-place Piling

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

(4) Pile Excavation Works using All-Casing Piling Method:

To MD: JC inquired if the wording of "weakening" above is appropriate in the meaning of sentences from the point of civil engineering. It is appreciated to review

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening (JC) or ~~damage~~ to limit damage and nuisance to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Piling Works.

I suggest that the above is correct as a separate statement in a standard safety specification.

Please also note that it is not "the responsibility of the Employer to determine the permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work."

Moreover, there are no standard "allowable values" for acceptable damage to third party properties. Please refer to comments on this in JSSS 7.2.1 (6)

The following is the second part of the original paragraph which I suggest is edited as shown:

JC2: "regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works"について。このような悪影響に関するモニタリングについて以前別の章で議論しておりましたが、基礎工事もカバーされていましたでしょうか。されていなければ、モニタリングについての規定を追記願います。
Regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works", we have discussed monitoring for such adverse effects in the other Chapter earlier, but did it also cover foundation work? If not, please add a provision on monitoring.
NK2: 指摘箇所は MD 氏の Issue 2 では削除し、代わりに 8.2.8 でモニタリングを追記済み。
The commented part of description has been deleted by MD's Issue 2 and added 8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties.

JC: (4)の限定は不要。特に the は不要かと。
About "by the Foundation Piling Works." in (4). Not necessary for limiting by "the".
NK2: 指摘通り削除します。Issue 2 では当該部分は削除済み。
We will delete "the" as commented. This has been deleted in the issue 2.

JC: (4)の"weakening"について。発生は「防げない」ものもあるので、mitigate adverse effects も入れる必要あるのでは？"to limit damage and nuisance"等の表現も良いのでは？
"weakening" in (4). Since some phenomena are not "preventable", we need to include "mitigate adverse effects" as well. Like as "to limit damage and nuisance" seems to be also appropriate.
NK: ご指摘通り"mitigate adverse effects"を挿入します。
We will insert "mitigate adverse effects" as commented.

The introduction of the word "nuisance" likewise is not necessary as it has little or no meaning in relation to property.

To add "mitigate adverse effects" meaning reduce and not eliminate "any adverse effects" means that some adverse effect is acceptable. This is not recommendable and not contractually correct.

The use of the word "the" is correct as the term is now defined in JSSS 8.1.1 (1), however the term does require correction to the "Foundation Piling Works".

Unless otherwise specified in the Particular Safety Specification, such measures shall include design by the Contractor and provision of permanent or temporary supports and reinforcing of such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtaining the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 Safety Measures Before Commencement

The above heading as suggested in an earlier JICA draft, is more appropriate

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

(1) The HSO shall inspect the Foundation Piling Works' working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

If necessary, the Contractor shall improve the ground by stabilising, cleaning, draining, providing paving and/or placing steel decking and temporary piling and the like to provide a suitable, clean, dry and safe working area without causing any risk to the stability of Contractor's Equipment or materials.

Following your comment, I have redrafted the above.

(c) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(d) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(5) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(d) When adding or removing drill rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(e) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(f) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(6) Pile Excavation Works for Auger Piling Method:

(c) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(d) Keep workers other than those directly engaged in the drilling works, away from the drill or auger to prevent injury through splashing or falling of mud or earth or through contact with drill or auger.

8.2.14 Placement of Concrete

(4) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(5) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging

To MD: JC inquired if the wording of "weakening" above is appropriate in the meaning of sentences from the point of civil engineering. Please review the wording..

(5) ~~and unless otherwise specified in the Particular Safety Specification,~~ The Contractor shall take all necessary measures to prevent the occurrence of any damage or weakening (JC) and mitigate adverse effects by ~~carrying out all Foundation Piling Works,~~ designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtain the prior consent of the Engineer before commencing such Foundation Piling Works.

JC2: "and unless otherwise specified in the Contract"について。NK がこの復活を推奨。
"and unless otherwise specified in the Contract" in (4), NK recommend reviving the description.
NK2: We understand JC accepted our proposal, so we stipulate "unless otherwise specified in the Contract".

8.2.2 Safety Measures at Planning Stage

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

Regarding the suggested change of HSO to Contractor in the following clause, please refer to my comments against JSSS 1.3 and 1.14:

"…. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly."

And "For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend that we try to do it."

The HSO should remain responsible for maintaining safety at all times; if he delegates and who he delegates to and how they communicate, is his choice and responsibility.

The addition of the following is not necessary as it is already covered by the opening paragraph of this subclause and is therefore duplicated.

"The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished."

8.2.3 Safety Measures for Transportation on Site - Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Piling

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5 [*Fall Prevention*].

8.2.5 Safety Measures for Cast-in-place Piling

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling equipment and operate hoisting to ensure that reinforcement cages and tremie pipes do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(6) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.15 Safety Measures for Hand-Dug Piling

Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of the following subclauses (1) to (3):

(5) Hand-Dug Piling shall not normally be permitted in ground with unfavourable conditions such as:

(h) High ground water levels;

(i) Weak geological structure including the possible presence of voids or caverns;

(j) Reclamation, landfill or chemically-contaminated sites,

(k) Containing loose fill in depths exceeding 10 m;

(l) In areas with history of deep-seated ground movement;

(m) Close proximity to water or sewage tunnels; and

(n) Close proximity to shallow foundations.

(6) Hand-Dug Piling may for example be permitted in the following situations where there are no unfavourable conditions:

(d) Steeply-sloping sites with pile depths less than 25 m in depth in soil;

(e) Sites with difficult access or insufficient working room where it may be impractical or unsafe to use mechanical plant; and

(f) Where noise, vibration or damage may be caused by driven or bored piling and which must be avoided.

(7) Hand-Dug Piling shall:

(d) Be not less than 2 m diameter;

(e) Be not more than 25m deep; and.

(f) Have continuous shaft lining.

Regarding the management of construction performance, quality, quantity and environmental compliance etc. etc. other persons are independently responsible.

I suggest that the Engineer has no duty to advise or direct the Contractor how to manage his internal affairs and I advise against trying to do this.

In terms of 8.2.(3) JSSS is for safety matters, so the HSO must inspect this and other works to assess that all is safe.

The construction staff must also inspect and give instructions etc. for other purposes but surely it is not within the scope of JSSS to advise on that.

Sometimes also, opinions will differ because interests are different, for example the HSO may not allow piling work to start if he perceives any risk to safety.

On the other hand a construction manager or site engineer may choose to take risks for example to speed up he start if work is running late.

If we state "the Contractor shall.." this unnecessarily introduces ambiguity to JSSS and I do advise against it.

I suggest that if any change is to be made (which I do not think necessary) it should however be in Chapter 1 which prevails.

All other chapters of JSSS would be better confined to safety and therefore generally refer to HSO.

(1) The HSO shall inspect the Foundation Piling Works working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

JC2: (1)(a) 6-7 行目の"if necessary"について。重複ではないか？
About " if necessary" in the 6th to 7th line in (1)(a). Isn't it duplicated expression?
NK2: 指摘どおり、if necessary の前後で文意が重複しているが、具体的方策を示しており、残した方が良いと考えます。

Method:

(a) When adding or removing drill rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works, away from the drill or auger to prevent injury through splashing or falling of mud or earth or through contact with drill or auger.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and operate hoisting to ensure that reinforcement cages and tremie pipes do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for Hand-Dug Piling

See notes in JSSS 8.1.1 above regarding the heading.

(8) Access/Exit Facilities

The Contractor shall:

(g) Provide safe and efficient access, egress and emergency exit facilities in the shaft for workers;

(h) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(i) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in this subclause;

(j) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(k) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(l) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(6) Ladder Safety System

(c) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder; and

(d) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(7) Communication and Signalling Measures

(d) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;

(e) Signals for delivering materials and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use; and

(f) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all

There seems to be some duplicate meaning of sentences. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.
To MD, Please review the (a) from the view point of JC that the sentences are duplicated. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

~~(2) As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.~~

The following additional wording is now already covered by the editing of the first paragraph above.

~~(3) After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.~~

(2) The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.

JC: (2)は削除し次の表現で置き換えること。
Delete (2) and replace with the sentence below.
The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.
NK: 指摘通り変更します。will modify as commented.
To MD, though you deleted (3), JC want to leave it with some modification.

8.2.3 Safety Measures for Transportation ~~on Site – Prohibition of Use Other Than for Intended Purposes~~ Use of Appropriate Equipment and Vehicle

Is above additional wording necessary? I have tried to make headings brief,

JC2: 8.2.3 の見出しは、次に変更する。
Please revise the title as follows:
Safety Measures for Transportation on Site Prohibition of Unintended Use →
"Safety Measures for Transportation on Site -Use of appropriate equipment and vehicle"
NK: 指摘通り変更.
Modify as commented.
To MD, I think not necessary, but JICA want to revise as above.

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where

As noted in 8.1.1, I suggest that there is a need for JSSS (and User Guide) to include more stringent safety measures for Hand-Dug Piling, possibly to prevent the use of this type of piling if certain conditions exist and if certain measures cannot be provided.

I suggest therefore that something like the following could also be added (please review, edit and confirm:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of the following subclauses (1) to (3):

(1) Hand-Dug Piling shall not normally be permitted in ground with unfavourable conditions such as:

(a) High ground water levels;

(b) Weak geological structure including the possible presence of voids or caverns;

(c) Reclamation, landfill or chemically-contaminated sites;

(d) Containing loose fill in depths exceeding 10 m;

(e) In areas with history of deep-seated ground movement;

(f) Close proximity to water or sewage tunnels; and

(g) Close proximity to shallow foundations.

(2) Hand-Dug Piling may for example be permitted in the following situations where there are no unfavourable conditions:

(a) Steeply-sloping sites with pile depths less than 25 m in depth in soil;

(b) Sites with difficult access or insufficient working room where it may be impractical or unsafe to use mechanical plant; and

(c) Where noise, vibration or damage may be caused by driven or bored piling and which must be avoided.

(3) Hand-Dug Piling shall:

(a) Be not less than 2 m diameter;

(b) Be not more than 25m deep; and.

(c) Have continuous shaft lining.

(4) Access/Exit Facilities

communications.

(8) Environmental Measures

(d) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(e) Provide monitoring equipment, set up alarms and evacuate workers if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(f) Provide adequate temporary lighting

(9) Measures before Commencing Work

Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(10) Measures during Execution of the Work

(j) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(k) Minimise the depth of each stage of excavation;

(l) Avoid introducing new teams of workers or changing over teams until each stage of excavation is completed and temporary support or shaft lining has been installed;

(m) Provide immediate temporary support for the excavated faces prior to casting the liner;

(n) Providing reinforcement to the concrete liner;

(o) Providing drainage to each stage of excavation with relief wells, sumps and pumping as appropriate:

(p) Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming the safety of the Site and the effectiveness of the measures;

(q) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and

(r) Ensure nothing is dropped into the shaft that may injure

necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Foundation Piling Works

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION]

JC2: 少し変。日本語を正確に読めば Provide a facility to は不要なのがわかるかと。親綱の設置等の墜落制止用器具を取り付けるものを設け、] 日本語は、命綱を設置するような施設を設置することを求めてはないし、そういうものを溶接してつけるようなことでもないのかと（safety block とか命綱とか使えということ） また、論理的にはリーダーに命綱を取り付ける必要もない（ついでに作業員単数なら命綱は普通1本）
provide a lifeline to fix PFAS が正しい。

JC2: That's not exactly right. If it is read correctly, it can be understood “provide a facility to” is not necessary. “provide a lifeline to fix PFAS” only is correct.
NK: 指摘通り修正。
We will modify it as commented. (3) is not included in Issue 2. We added it.

8.2.5 Safety Measures for Cast-in-place Piling Works

~~The following items specify example safety measures for workers engaged in Cast-in-place Piling Works. For any other Cast-in-place Piling Works, the Contractor shall take appropriate safety measures including those referred to in the following requirements.~~

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

JC: 黄色ハイライト部は削除し上記へ変更すること。
Replace the yellow highlighted part with the above sentences.
NK: 指摘通り変更。Modify as directed and MD will review and edit them.

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being

The Contractor shall:

(a) Provide safe and efficient access, egress and emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in this subclause;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(1) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder; and

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(2) Communication and Signalling Measures

(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;

(b) Signals for delivering materials and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

workers.

8.2.16 Monitoring Impact of Foundation Piling Works on Other Properties

The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(a) When adding or removing drill ~~length~~ rods ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

JC: revised.

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

JC: revised.

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger to prevent injury from splashing or falling of mud or earth from and collision by them.

JC2: 一般的になりすぎて機械に近寄らないはあまり意味ない。ハザードとは何か？オーガーの場合は土砂の落下による危険がもともとの焦点で、その下に入らないことに意味があるので、その旨を明記してください。
The expression "keep workers away from the drill or auger" doesn't make much meaning because it's general description. It needs what could be a hazard in this case. In the case of augers, falling earth/mud from the auger would be hazard. So please state that.
NK2: 追記します。 Added the hazard referring to the comments.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform ~~and slip or drop off the~~

(3) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms and evacuate workers if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(4) Measures before Commencing Work

Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(5) Measures during Execution of the Work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) Minimise the depth of each stage of excavation;

(c) Avoid introducing new teams of workers or changing over teams until each stage of excavation is completed and temporary support or shaft lining has been installed;

(d) Provide immediate temporary support for the excavated faces prior to casting the liner;

(e) Providing reinforcement to the concrete liner;

(f) Providing drainage to each stage of excavation with relief wells, sumps and pumping as appropriate;

I suggest the addition of the above clauses based upon my further research

(g) Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming the safety of the Site and the effectiveness of the measures;

(h) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and

(i) Ensure nothing is dropped into the shaft that may injure

~~Hoisting Equipment~~.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and operate hoisting ~~slings and welded metal fixings~~ to ensure that reinforcement cages and tremie pipes ~~are secure and~~ do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

JC2: that reinforcement cages について。(1)にあるので、違いがわからなくなっている。(2)は強度のある吊り器具を提供・使用というより(それは当たり前)、籠の場合はどういう風に吊るか、トレミーならどう滑らないようにつるかということで、「決められた手順・吊り方で行う」というのが元文の主旨のはず。これだと(1)とあわせてごちゃごちゃで、鉄筋籠の重複もあり、どちらかを消し忘れたようにしか見えない。

About "that reinforcement cages", it is stipulated both in (1) and (2), so it's hard to tell the difference of (1) & (2). For (2), it should show how to install the reinforcement cages and how to hang the tremie so that it does not slip.

NK: (1)は鉄筋篭の設計、(2)は鉄筋籠とトレミー管の吊り作業について分けて規定します。

Separately stipulate (1) about cage and (2) hoisting cage and tremie.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for ~~Deep Foundation Insitu Concrete Piling~~ Hand-Dug Piling Works

This Section contains example safety measures for ~~Deep Foundation Piling Works~~, hand-dug piling works which shall be a diameter of 2m or more, with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

I suggest that you leave "example" as it is, it is intentional. It is a simple and brief way of stating that the following measures are not restrictive and that whatever else is necessary shall be provided by the contractor.

NK2: I agree to leave example.

JC2: 深礎に適した径の規定があるはずですので、調べたうえで可能であるならば具体的な数値を書き入れてください。

There is a provision for a suitable diameter for the deep foundation (hand dug piles), so please research and if possible, stipulate specific diameter.

NK2: MLIT 近畿地方整備局設計便覧「第 10 章基礎工」では、基礎杭の種類と杭径について下表のとおり掲載しています。

In the Road and Bridge Specifications, Kinki Regional Bureau, MLIT, Japan, specify the type and diameter of foundation piles as shown below. Diameter of Deep Foundation Piles is 2,000mm and more.

NK2: Because of workers' safe working circumstance and that small diameter has risk to the workers, Hand-Dug Piling pile of diameter of 2m or more is defined here.

Table Pile Type and Applicable Diameter 表 杭種と杭径の使用範囲

(unit:mm)

workers.

8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties

The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*].

I suggest the above is left here as it is a secondary item and the positioning is consistent now with 7.5.3 and 7.6.11.

杭 種 (Pile type)			Diam.杭径	
既製杭 Precast piles	打込み・ﾌﾟﾚﾎﾞｰﾘﾝｸﾞ Driven and Pre-excavated piles	RC 杭 RC piles	300-600	
		PHC 杭・SC 杭 PHC and SC piles	300-1,000	
		鋼管杭 Steel pipe piles	400-	
	中堀り		500-1,000	
鋼管ｿｲﾙｾﾒﾝﾄ杭 Steel pipe and soil cement piles		ｿｲﾙｾﾒﾝﾄ柱径 Soil cement diam.	700-1,500	
		鋼管径 Steel pipe	500-1,200	
場所うちｺﾝｸﾘｰﾄ杭 In-situ concrete piles			1,000-	
深礎杭 Hand-Dug Pile			**2,000-**	

出典:MLIT 近畿地方整備局 設計便覧「基礎工」

https://www.kkr.mlit.go.jp/plan/jigyousya/technical_information/consultant/binran/etsuran/qgl8vl0000005ecr-att/sekkei03_10.pdf

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in JSSS 8.2.7;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder.

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(3) Communication and Signalling Measures

(a) Signals for delivering materials and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be

trained in their use;

JC: revised.
To MD, please review this revision.

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(4) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Site Environment*]; and

(c) Provide adequate temporary lighting

(5) Measures before Commencing Work

(a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(6) Measures during the work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) ~~When excavating below the groundwater level, provide measures to drain water from the shaft,~~ Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming ~~that there is no risk due to~~ the safety of the site and the effectiveness of the measures;

JC2: 現場の水処理のためにこのような作業が想定されるかもしれませんが、ここは杭打ちの話なので不要です。
We assume you wrote this for on-site water treatment, but it's unnecessary because this clause is dealing with pile driving works.
NK2 削除します。 Deleted as commented.

JC2: there is no risk とは一般的に使わない言い方。現場の安全・対策の有効性・止水を確認した後などの別の言い方へ変更する。
"there is no risk" is not common way of expression. Modify it to another way of saying, such as "resume the work only after confirming the safety of the site, the

effectiveness of the measures, and the sealing of the water etc. NK2: 変更します。Modified as commented. (c) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and (d) Ensure nothing is dropped into the shaft that may injure workers. 8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*]. To MD, I wonder 8.2.8 Monitoring can be specified as 8.1.2. Please let me know your opinion.

8. FOUNDATION PILING WORKS **8.1 GENERAL** JC2:「Chicago Method」の定義を General の中(8.1.2？)で以下の 2 のとおり記載してください。出典は1にあるとおりです。 Regarding Deep Foundation Insitu Concrete Piling please use the term of "Chicago Method" and stipulate the definition of "Chicago Method" in the General (8.1.2?) as mentioned in the following 2. The source of the term is 1. below. 1. 深礎工法:Chicago (board) method:土木和英辞典近代図書 1. Deep foundation method: Chicago (board) method: Civil Engineering Japanese English dictionary, Kindai 2. Chicago caisson (Chicago well): A small cofferdam used in medium stiff clays lined with planks sunk to hard ground for pier foundations. The plank sheeting is held in place by steel rings wedged against the side. : CONSTRUCTION DICTIONARY : The National Association of Women in Construction NK2: Chicago Method に関し調べました。上記の情報の他に次の記述があります。 We studied Chicago Method and found the following information: (1) International Conference on Case Histories in Geotechnical Engineering の論文で、Chicago Hand-Dug Caisson がドリル掘削坑基礎の発展の元であると記述しています。 120 YEARS OF CAISSON FOUNDATIONS IN CHICAGO the origin of the modem Drilled Shaft Foundation, which has its evolutionary roots in the Chicago Hand-Dug Caisson (2) Dictionary Of Civil Engineering (USA, John S. Scott)は、Chicago caisson と Deep foundation を次のように記述しています(Chicago Method 無し)。Chicago caisson は Deep foundation の一種と考えています。 https://books.google.co.jp/books?id=C7oIHODDrxsC&pg=PA72&lpg=PA72&dq=Wiki+Chicago+caisson&source=bl&ots=lirG_aHP_d&sig=ACfU3U1WxQvUZlYSScGhwQGQRaHZuIdcbQ&hl=ja&sa=X&ved=2ahUKEwiL-fXsrYfpAhWUd94KHWaiAocQ6AEwBHoECAoQAQ#v=onepage&q&f=false Chicago caisson: A small cofferdam used in medium staff clays, of about 1.2 m dia. Lined with planks added in 1.5m lengths and sunk to hard ground for pier foundations. The vertical plank supporters are held in place by steel rings wedged against the sides. (JC で参照の1と同じ記述である。この cofferdam は仮締切の意味もあるが、ここでは caisson (large watertight chamber used for construction under water)の意味である。) Deep foundation: a foundation, usually on some type of pile or caisson, generally more than 3 m below ground. Deep foundations are often needed in conjunction with ground engineering work. (3) BS ISO 6707-1:2017 直接基礎と深い基礎(Deep foundation として piled foundation と caisson)が規定されています。 BS defines shallow and deep foundations. The latter consists piled foundation and caisson	**8. FOUNDATION PILING WORKS** **8.1 GENERAL**	**8. FOUNDATION PILING WORKS** **8.1 GENERAL**

(4) Hongkong and Malaysia Report
1) Hong Kong Technical Guidance : hand-dug caissons
http://www.devb.gov.hk/filemanager/technicalcirculars/en/upload/231/2/WB09941.pdf
2) Malaysia Design, Construction & Performance of Hand-Dug Caissons
https://pdfs.semanticscholar.org/c4bd/2bc8985ffcd0b2ac7c7daa9659acaf9fbecb.pdf

NK2: 基礎工法としての Chicago Method はインターネットで容易に検索できない。土木和英辞典に用語としてありますが、用語が古くまた国際的な用語とは考えられない。そのため、次を参考に基礎を Shallow foundation と Deep foundation と分け、深礎は Caisson の一つとして Hand dug caisson として規定することを提案します。
The Chicago Method as foundation type cannot be found in internet. It seems that the term is out of date and not international one.
Types of Foundation for Buildings and their Uses
https://theconstructor.org/geotechnical/foundation-types-and-uses/9237/
1. Shallow foundation: ◦Individual footing or isolated footing ◦Combined footing ◦Strip foundation ◦Raft or mat foundation
2. Deep Foundation: ◦Pile foundation ◦Drilled Shafts or caissons
NK2: Therefore, referring to the above information, we propose to consider the foundation consists of shallow and deep foundation and "Deep Foundation" used at present is replaced "Hand-Dug Caisson" as one of caisson.

8.1.1 Scope

As noted in Chapter 7 Excavation Works, this item is reformatted to be consistent with later Chapters.

The content of each Chapter 7 to 10 are now correctly referred to as a heading, i,e. Excavation Works, Foundation Piling Works, etc.

JC2: Cast-in-place Piling Works
一般用語で混在するのは構わないが、一番最初ぐらいはタイトルに合わせたら？
"insitu concrete piling" and "Cast-in-place Piling Works" are mixed. They shall be consistent use.
NK2: 上記指摘は MD 氏の issue 2 案にて変更されています。The above has been by MD in last version.

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) ~~Deep Foundation Piling,~~ Hand-Dug Caisson

NK2: The "deep foundation piling" is replaced with "Hand-Dug Caisson" as explained above.

and which are hereinafter collectively referred to as "Foundation Piling Works".

8.1.1 Scope

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) Hand-Dug Piling

and which are hereinafter collectively referred to as "Foundation Piling Works".

In researching this briefly, there may be some difficulties in using this term, particularly "hand-dug", for example in Hong Kong this was a traditional method of piling which was very unsafe and was therefore effectively banned in the mid 1990's (see attachments).

Up to that time there were strict conditions imposed by some organisations on such manual works (see attachment).

I suggest that this type of piling should not be commonly allowed except in exceptional cases and unless strict conditions are applied and complied with otherwise it may not be a safe method. This is not emphasised in JSSS at present and I think it should be. I have drafted some additional clauses for this is 8.2.7, please review and modify as you think fit.

As Piling is frequently Contractor Design (even under the Pink Book) it needs mention here and as it is permanent work and therefore basically Employer design it also requires appropriate mention in the User Guide. I will draft this

8.1.1 Scope

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) Hand-Dug Piling

and which are hereinafter collectively referred to as "Foundation Piling Works".

(2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.2 **PARTICULAR SAFETY MEASURES**

8.2.1 **General**

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

Please note that the above reference to the Particular Safety Specification, is for the case where piling is engineer designed and specified or is to be performed by another specialist contractor.

~~(3) Earthwork Support~~

Above separate heading is not necessary

(3) In accordance with JSSS 6.2 [Earthwork Support] the Contractor shall be responsible for ~~the~~ maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening (JC) any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

JC2: weakening について。工学的にこのような表現でよろしいものかどうか、MD 氏に確認願います。
"weakening" in the 3rd line on (4). Please check with MD if this is the correct

The pictures in the original JICA/NK draft were not solely "Hand-Dug". Although labour is shown and is necessary in the shaft, the excavation and removal is by clamshell not entirely by hand.

"Chicago Method" is not really an internationally accepted term.

This is not "Caisson Piling" as this is not work in a caisson, i.e. it is not relying upon air pressure to exclude water.

On balance I agree that "Hand-Dug Piling" is probably the most appropriate as this is understandable and descriptive of the basic method.

Please refer to the HK example which I have used as a basis and carefully review and revise as you think necessary:

NK6/23: understood.

(2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.2 **PARTICULAR SAFETY MEASURES**

8.2.1 **General**

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) In accordance with JSSS 6.2 [*Earthwork Support*] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

Weakening" is the present participle, of the verb, "weaken" which generally means "to make or become weaker in physical strength".

"Weakening" is a correct and meaningful term in this sense and is an appropriate term for use in this document. "weak" or "weakened" ground

(2) General requirements for example for Contractor's Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.2 **PARTICULAR SAFETY MEASURES**

8.2.1 **General**

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor's Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) In accordance with JSSS 6.2 [*Earthwork Support*] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

wording from an engineering standpoint.

NK2: MD 氏へ確認します。周囲の地盤強度の低下等か？
We will ask MD to review the wording of weakening. It may be "loss/degrade/reduce of subsurface ground strength is suitable.

To MD: JC inquired if the wording of "weakening" above is appropriate in the meaning of sentences from the point of civil engineering. It is appreciated to review

The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

The Contractor shall take all necessary measures to prevent the occurrence of any such weakening (JC) or ~~damage~~ to limit damage and nuisance to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Piling Works.

I suggest that the above is correct as a separate statement in a standard safety specification.

Please also note that it is not "the responsibility of the Employer to determine the permissible range of ambient effects (vibration, noise, settlement) caused by the Permanent Work."

Moreover, there are no standard "allowable values" for acceptable damage to third party properties. Please refer to comments on this in JSSS 7.2.1 (6)

The following is the second part of the original paragraph which I suggest is edited as shown:

JC2: "regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works"について。このような悪影響に関するモニタリングについて以前別の章で議論しておりましたが、基礎工事もカバーされていましたでしょうか。されていなければ、モニタリングについての規定を追記願います。
Regarding the allowable values of vibration, noise, settlement and other negative impacts to those by the Foundation Piling Works", we have discussed monitoring for such adverse effects in the other Chapter earlier, but did it also cover foundation work? If not, please add a provision on monitoring.

NK2: 指摘箇所は MD 氏の Issue 2 では削除し、代わりに 8.2.8 でモニタリングを追記済み。
The commented part of description has been deleted by MD's Issue 2 and added 8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties.

JC: (4)の限定は不要。特に the は不要かと。
About "by the Foundation Piling Works." in (4). Not necessary for limiting by "the".

NK2: 指摘通り削除します。Issue 2 では当該部分は削除済み。
We will delete "the" as commented. This has been deleted in the issue 2.

JC: (4)の"weakening"について。発生は「防げない」ものもあるので、mitigate adverse effects も入れる必要あるのでは？"to limit damage and nuisance"等の表現も良いのでは？
"weakening" in (4). Since some phenomena are not "preventable", we need to include "mitigate adverse effects" as well. Like as "to limit damage and nuisance" seems to be also appropriate.

NK: ご指摘通り"mitigate adverse effects"を挿入します。
We will insert "mitigate adverse effects" as commented.

To MD: JC inquired if the wording of "weakening" above is appropriate in the meaning of sentences from the point of civil engineering. Please review the wording.

(5) ~~and unless otherwise specified in the Particular Safety Specification,~~ The Contractor shall take all necessary measures to prevent the occurrence of any damage or weakening (JC) and *caused by "weakening" for example may not be able to adequately support the weight of structures, thereby causing subsidence.*

NK6/23: understood.

(5) The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

(6) Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Foundation Piling Works.

1) I do not recommend the re-insertion of the wording "unless otherwise specified in the Particular Safety Specification" in the above as this will not normally be a default. However, upon further study, the following paragraph (see below) will benefit from revision and should correctly include this wording. I have edited as shown.

2) "Weakening" as explained above is correct.

3) The use of the word "damage" is correct. It is a fundamental contractual obligation of the Contractor NOT to cause any damage in this sense and to change this to "limit", introduces unnecessary and inadvisable ambiguity and suggests that to some extent, damage is allowable.

4) The introduction of the word "nuisance" likewise is not necessary as it has little or no meaning in relation to property.

5) To add "mitigate adverse effects" meaning reduce and not eliminate "any adverse effects" means that some adverse effect is acceptable. This is not recommendable and not contractually correct.

6) The use of the word "the" is correct as the term is now defined in JSSS 8.1.1 (1), however the term does require correction to the "Foundation Piling Works".

NK6/23: already discussed in other Chapters, so we agreed the above comments:

Unless otherwise specified in the Particular Safety Specification, such measures shall include design by the Contractor and provision of permanent or temporary supports and reinforcing of such

(5) The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

(6) Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Foundation Piling Works.

(7) Unless otherwise specified in the Particular Safety Specification, such measures shall include design by the Contractor and provision of permanent or temporary supports and reinforcing of such

mitigate adverse effects by ~~carrying out all Foundation Piling Works,~~ designing and providing permanent or temporary supports and reinforcement to such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtain the prior consent of the Engineer before commencing such Foundation Piling Works.

JC2: "and unless otherwise specified in the Contract"について。NK がこの復活を推奨。
"and unless otherwise specified in the Contract" in (4), NK recommend reviving the description.

NK2: We understand JC accepted our proposal, so we stipulate "unless otherwise specified in the Contract".

8.2.2 **Safety Measures at Planning Stage**

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

Regarding the suggested change of HSO to Contractor in the following clause, please refer to my comments against JSSS 1.3 and 1.14:

"…. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly."

And "For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend that we try to do it."

The HSO should remain responsible for maintaining safety at all times; if he delegates and who he delegates to and how they communicate, is his choice and responsibility.

Regarding the management of construction performance, quality, quantity and environmental compliance etc. etc. other persons are independently responsible.

I suggest that the Engineer has no duty to advise or direct the Contractor how to manage his internal affairs and I advise against trying to do this.

In terms of 8.2.(3) JSSS is for safety matters, so the HSO must inspect this and other works to assess that all is safe.

The construction staff must also inspect and give instructions etc. for other purposes but surely it is not within the scope of JSSS to advise on that.

Sometimes also, opinions will differ because interests are different, for example the HSO may not allow piling work to start if he perceives any risk to safety.

On the other hand a construction manager or site engineer may choose to take risks for example to speed up he start if work is running late.

If we state "the Contractor shall.." this unnecessarily introduces ambiguity to JSSS and I do advise against it.

foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtaining the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 **Safety Measures Before Commencement**

The above heading as suggested in an earlier JICA draft, is more appropriate.

NK6/23: agreed.

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtaining the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 **Safety Measures Before Commencement**

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

I suggest that if any change is to be made (which I do not think necessary) it should however be in Chapter 1 which prevails.

All other chapters of JSSS would be better confined to safety and therefore generally refer to HSO.

(1) The HSO shall inspect the Foundation Piling Works working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon. If necessary the Contractor shall improve the ground as necessary by stabilising, paving and/or placing steel decking and temporary piling to provide a suitable surface without risk of Contractor's Equipment or materials, sinking or overturning;

JC2: (1)(a) 6-7 行目の"if necessary"について。重複ではないか？
About " if necessary" in the 6th to 7th line in (1)(a). Isn't it duplicated expression?
NK2: 指摘どおり、if necessary の前後で文意が重複しているが、具体的方策を示しており、残した方が良いと考えます。
There seems to be some duplicate meaning of sentences. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.
To MD, Please review the (a) from the view point of JC that the sentences are duplicated. Comparing (a) with (b) and (c), (a) stipulate measures in case more than (b) and (c). However, it is recommendable to specify concrete counter measures.

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

~~(2) As a consequence of such inspections the HSO prohibit the commencement and continuation of Foundation Piling Works, take necessary corrective measures and make any necessary amendment to the Safety Plan and instruct all Contractor's Personnel of the any revised safety measures before work is allowed to commence and continue in order to ensure their continued safety.~~

The following additional wording is now already covered by the editing of the first paragraph above.

~~(3) After ensure all above items (a) to (c) in the inspections, the HSO shall permit to commence and continue the Foundation Piling Works.~~

(2) The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.

JC: (2)は削除し次の表現で置き換えること。
Delete (2) and replace with the sentence below.
The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished.
NK: 指摘通り変更します。will modify as commented.
To MD, though you deleted (3), JC want to leave it with some modification.

(1) The HSO shall inspect the Foundation Piling Works' working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

If necessary, the Contractor shall improve the ground by stabilising, cleaning, draining, providing paving and/or placing steel decking and temporary piling and the like to provide a suitable, clean, dry and safe working area without causing any risk to the stability of Contractor's Equipment or materials.

Following your comment, I have redrafted the above.

The addition of the following is not necessary as it is already covered by the opening paragraph of this subclause and is therefore duplicated.

"The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished."

NK6/23: agreed to the above modification.

(1) The HSO shall inspect the Foundation Piling Works' working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

(2) If necessary, the Contractor shall improve the ground by stabilising, cleaning, draining, providing paving and/or placing steel decking and temporary piling and the like to provide a suitable, clean, dry and safe working area without causing any risk to the stability of Contractor's Equipment or materials.

8.2.3 Safety Measures for Transportation ~~on Site - Prohibition of Use Other Than for Intended Purposes~~ Use of Appropriate Equipment and Vehicle

Is above additional wording necessary? I have tried to make headings brief,

JC2: 8.2.3 の見出しは、次に変更する。
Please revise the title as follows:
Safety Measures for Transportation on Site Prohibition of Unintended Use → "Safety Measures for Transportation on Site -Use of appropriate equipment and vehicle"
NK: 指摘通り変更.
Modify as commented.
To MD, I think not necessary, but JICA want to revise as above.

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Foundation Piling Works

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5[FALL PREVENTION]

JC2: 少し変。日本語を正確に読めば Provide a facility to は不要なのがわかるかと。親綱の設置等の墜落制止用器具を取り付けるものを設け、] 日本語は、命綱を設置するような施設を設置することを求めてはないし、そういうものを溶接してつけるようなことでもないのかと（safety block とか命綱とか使えということ）また、論理的にはリーダーに命綱を取り付ける必要もない（ついでに作業員単数なら命綱は普通1本）
provide a lifeline to fix PFAS が正しい。

JC2: That's not exactly right. If it is read correctly, it can be understood "provide a facility to" is not necessary. "provide a lifeline to fix PFAS" only is correct.
NK: 指摘通り修正。
We will modify it as commented. (3) is not included in Issue 2. We added it.

8.2.5 Safety Measures for Cast-in-place Piling Works

~~The following items specify example safety measures for workers engaged in Cast-in-place Piling Works. For any other Cast-in-place Piling Works, the Contractor shall take appropriate safety measures including those referred to in the following requirements.~~

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

JC: 黄色ハイライト部は削除し上記へ変更すること。
Replace the yellow highlighted part with the above sentences.
NK: 指摘通り変更。Modify as directed and MD will review and edit them.

8.2.3 Safety Measures for Transportation on Site - Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Piling

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5 [*Fall Prevention*].

8.2.5 Safety Measures for Cast-in-place Piling

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

8.2.3 Safety Measures for Transportation on Site - Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Piling

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5 [*Fall Prevention*].

8.2.5 Safety Measures for Cast-in-place Piling

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(a) When adding or removing drill ~~length~~ rods ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

JC: revised.

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

JC: revised.

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works away from the drill or auger to prevent injury from splashing or falling of mud or earth from and collision by them.

JC2: 一般的になりすぎて機械に近寄らないはあまり意味ない。ハザードとは何か？オーガーの場合は土砂の落下による危険がもともとの焦点で、その下に入らないことに意味があるので、その旨を明記してください。
The expression "keep workers away from the drill or auger" doesn't make much meaning because it's general description. It needs what could be a hazard in this case. In the case of augers, falling earth/mud from the auger would be hazard. So please state that.

NK2: 追記します。 Added the hazard referring to the comments.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform ~~and slip or drop off the Hoisting Equipment~~.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and operate hoisting ~~slings and welded metal fixings~~ to ensure that

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(a) When adding or removing drill rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works, away from the drill or auger to prevent injury through splashing or falling of mud or earth or through contact with drill or auger.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(a) When adding or removing drill rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works, away from the drill or auger to prevent injury through splashing or falling of mud or earth or through contact with drill or auger.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and

reinforcement cages and tremie pipes ~~are secure and~~ do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

JC2: that reinforcement cages について。(1)にあるので、違いがわからなくなっている。(2)は強度のある吊り器具を提供・使用というより(それは当たり前)、籠の場合はどういう風に吊るか、トレミーならどう滑らないようにつるかとういことで、「決められた手順・吊り方で行う」というのが元文の主旨のはず。これだと(1)とあわせてごちゃごちゃで、鉄筋籠の重複もあり、どちらかを消し忘れたようにしか見えない。

About "that reinforcement cages", it is stipulated both in (1) and (2), so it's hard to tell the difference of (1) & (2). For (2), it should show how to install the reinforcement cages and how to hang the tremie so that it does not slip.

NK: (1)は鉄筋篭の設計、(2)は鉄筋籠とトレミー管の吊り作業について分けて規定します。

Separately stipulate (1) about cage and (2) hoisting cage and tremie.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 **Safety Measures for ~~Deep Foundation Insitu Concrete Piling~~ Hand-Dug Piling Works**

This Section contains example safety measures for ~~Deep Foundation Piling Works~~, hand-dug piling works which shall be a diameter of 2m or more, with continuous shaft lining, shaft access for workers, usually executed by manual excavation.

I suggest that you leave "example" as it is, it is intentional. It is a simple and brief way of stating that the following measures are not restrictive and that whatever else is necessary shall be provided by the contractor.

NK2: I agree to leave example.

JC2: 深礎に適した径の規定があるはずですので、調べたうえで可能であるならば具体的な数値を書き入れてください。

There is a provision for a suitable diameter for the deep foundation (hand dug piles), so please research and if possible, stipulate specific diameter.

NK2: MLIT 近畿地方整備局設計便覧「第 10 章基礎工」では、基礎杭の種類と杭径について下表のとおり掲載しています。

drop off the Hoisting Equipment. Provide secure rigging equipment and operate hoisting to ensure that reinforcement cages and tremie pipes do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 **Safety Measures for Hand-Dug Piling**

See notes in JSSS 8.1.1 above regarding the heading.

As noted in 8.1.1, I suggest that there is a need for JSSS (and User Guide) to include more stringent safety measures for Hand-Dug Piling, possibly to prevent the use of this type of piling if certain conditions exist and if certain measures cannot be provided.

I suggest therefore that something like the following could also be added (please review, edit and confirm:

NK6/23: 1) My understanding is that foundation pile types ad piling methods are basically specified in Bid Documents by the Employer. When cast-in-place Piling is specified, there is a possibility that pile construction method is option to select among All-Casing Piling Method, Reverse Circulation Bored Piling Method, Auger Piling Method, Hand-Dug Piling, etc.
2) JSSS will specify when the Contractor shall select piling method, he shall not select the Hand-Dug Piling method under the conditions below.
3) When the Hand-Dug Piling method is adopted by the Employer/Contractor, the Contractor shall take measures specified in JSSS.
4) The User Guide shall mention about the same conditions to select Hand-Dug Piling as mentioned in JSSS.
My draft is as follows:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of the following ~~subclauses~~ (1) to (3):

(1) Hand-Dug Piling shall not ~~normally~~ be ~~permitted~~ adopted by the Contractor in ground with unfavourable conditions such as:

(a) High ground water levels;

(b) Weak geological structure including the possible presence of voids or caverns;

(c) Reclamation, landfill or chemically-contaminated sites,

(d) Containing loose fill in depths exceeding 10 m;

operate hoisting to ensure that reinforcement cages and tremie pipes do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 **Safety Measures for Hand-Dug Piling**

Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of the following ~~subclauses~~ (1) to (3):

(1) Hand-Dug Piling shall not ~~normally~~ be ~~permitted~~ adopted by the Contractor in ground with unfavourable conditions such as:

(a) High ground water levels;

(b) Weak geological structure including the possible presence of voids or caverns;

(c) Reclamation, landfill or chemically-contaminated sites,

(d) Containing loose fill in depths exceeding 10 m;

(e) In areas with history of deep-seated ground movement;

In the Road and Bridge Specifications, Kinki Regional Bureau, MLIT, Japan, specify the type and diameter of foundation piles as shown below. Diameter of Deep Foundation Piles is 2,000mm and more.

NK2: Because of workers' safe working circumstance and that small diameter has risk to the workers, Hand-Dug Piling pile of diameter of 2m or more is defined here.

Table Pile Type and Applicable Diameter 表 杭種と杭径の使用範囲

(unit:mm)

杭 種 (Pile type)			Diam.杭径
既製杭 Precast piles	打込み・ﾌﾟﾚﾎﾞｰﾘﾝｸﾞ Driven and Pre-excavated piles	RC 杭 RC piles	300-600
		PHC 杭・SC 杭 PHC and SC piles	300-1,000
		鋼管杭 Steel pipe piles	400-
	中堀り		500-1,000
鋼管ｿｲﾙｾﾒﾝﾄ杭 Steel pipe and soil cement piles		ｿｲﾙｾﾒﾝﾄ柱径 Soil cement diam.	700-1,500
		鋼管径 Steel pipe	500-1,200
場所うちｺﾝｸﾘｰﾄ杭 In-situ concrete piles			1,000-
深礎杭 Hand-Dug Pile			**2,000-**

出典:MLIT 近畿地方整備局 設計便覧「基礎工」

https://www.kkr.mlit.go.jp/plan/jigyousya/technical_information/consultant/binran/etsuran/qgl8vl0000005ecr-att/sekkei03_10.pdf

(1) General Safety Measures

(a) Provide safe and efficient access/emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in JSSS 8.2.7;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(2) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder.

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(3) Communication and Signalling Measures

(a) Signals for delivering materials and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use;

JC: revised.
To MD, please review this revision.

(e) In areas with history of deep-seated ground movement;

(f) Close proximity to water or sewage tunnels; and

(g) Close proximity to shallow foundations.

(2) Hand-Dug Piling may for example be ~~permitted~~ adopted by the Contractor in the following situations where there are no unfavourable conditions:

(a) Steeply-sloping sites with pile depths less than 25 m in depth in soil;

(b) Sites with difficult access or insufficient working room where it may be impractical or unsafe to use mechanical plant; and

(c) Where noise, vibration or damage may be caused by driven or bored piling and which must be avoided.

(3) Hand-Dug Piling shall:

(a) Be not less than 2 m diameter;

(b) Be not more than 25m deep; and.

(c) Have continuous shaft lining.

(4) Access/Exit Facilities
The Contractor shall:

(a) Provide safe and efficient access, egress and emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in this subclause;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(5) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder; and

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(6) Communication and Signalling Measures

~~(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;~~

(a) Signals for delivering materials and equipment or

(f) Close proximity to water or sewage tunnels; and

(g) Close proximity to shallow foundations.

(2) Hand-Dug Piling may for example be ~~permitted~~ adopted by the Contractor in the following situations where there are no unfavourable conditions:

(a) Steeply-sloping sites with pile depths less than 25 m in depth in soil;

(b) Sites with difficult access or insufficient working room where it may be impractical or unsafe to use mechanical plant; and

(c) Where noise, vibration or damage may be caused by driven or bored piling and which must be avoided.

(3) Hand-Dug Piling shall:

(a) Be not less than 2 m diameter;

(b) Be not more than 25m deep; and.

(c) Have continuous shaft lining.

(4) Access/Exit Facilities
The Contractor shall:

(a) Provide safe and efficient access, egress and emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in this subclause;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(5) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder; and

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(6) Communication and Signalling Measures

~~(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;~~

(a) Signals for delivering materials and equipment or discharging

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(4) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Site Environment*]; and

(c) Provide adequate temporary lighting

(5) Measures before Commencing Work

(a) Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(6) Measures during the work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;.

(b) ~~When excavating below the groundwater level, provide measures to drain water from the shaft,~~ Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming ~~that there is no risk due to~~ the safety of the site and the effectiveness of the measures;

JC2: 現場の水処理のためにこのような作業が想定されるかもしれませんが、ここは杭打ちの話なので不要です。
We assume you wrote this for on-site water treatment, but it's unnecessary because this clause is dealing with pile driving works.

NK2 削除します。 Deleted as commented.

JC2: there is no risk とは一般的に使わない言い方。現場の安全・対策の有効性・止水を確認した後などの別の言い方へ変更する。
"there is no risk" is not common way of expression. Modify it to another way of saying, such as "resume the work only after confirming the safety of the site, the effectiveness of the measures, and the sealing of the water etc.

discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use;

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(7) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms and evacuate workers if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(8) Measures before Commencing Work

Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(9) Measures during Execution of the Work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) Minimise the depth of each stage of excavation;

(c) Avoid introducing new teams of workers or changing over teams until each stage of excavation is completed and temporary support or shaft lining has been installed;

(d) Provide immediate temporary support for the excavated faces prior to casting the liner;

(e) Providing reinforcement to the concrete liner;

(f) Providing drainage to each stage of excavation with relief wells, sumps and pumping as appropriate:

I suggest the addition of the above clauses based upon my further research.

(g) Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming the safety of the Site and the effectiveness of the measures:

excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use; ~~and~~

(b) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(c) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(7) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms and evacuate workers if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(8) Measures before Commencing Work

Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(9) Measures during Execution of the Work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) Minimise the depth of each stage of excavation;

(c) Avoid introducing new teams of workers or changing over teams until each stage of excavation is completed and temporary support or shaft lining has been installed;

(d) Provide immediate temporary support for the excavated faces prior to casting the liner;

(e) Providing reinforcement to the concrete liner;

(f) Providing drainage to each stage of excavation with relief wells, sumps and pumping as appropriate:

(g) Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming the safety of the Site and the effectiveness of the measures;

NK2: 変更します。Modified as commented. (c) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and (d) Ensure nothing is dropped into the shaft that may injure workers. 8.2.8 **Monitoring Impact of Foundation Piling Works on Other Properties** The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*]. To MD, I wonder 8.2.8 Monitoring can be specified as 8.1.2. Please let me know your opinion.	(h) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and (i) Ensure nothing is dropped into the shaft that may injure workers. 8.2.8 **Monitoring Impact of Foundation Piling Works on Other Properties** The Contractor shall comply with the requirements of JSSS 6.1.3 [*Monitoring Impact of Works on Other Properties*]. *I suggest the above is left here as it is a secondary item and the positioning is consistent now with 7.5.3 and 7.6.11.* NK6/23: As commented by JICA on Chapter 6 TW, the monitoring is moved to 2.1.7 [Monitoring and Records]. We propose to specify as follows: The Contractor shall comply with the requirements of JSSS 2.1.7 [Monitoring and Records].	(h) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and (i) Ensure nothing is dropped into the shaft that may injure workers. 8.2.8 **Monitoring Impact of Foundation Piling Works on Other Properties** The Contractor shall comply with the requirements of JSSS ~~6.1.3 [*Monitoring Impact of Works on Other Properties*].~~ 2.1.7 *[Monitoring and Records]*.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 8: FOUNDATION PILING WORKS

Japan International Cooperation Agency (JICA)

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 8: FOUNDATION PILING WORKS

Table of Contents

8.1 GENERAL

8.1.1 Scope

(1) This Chapter specifies the safety requirements for piling works which include:

(a) Driven Piling;

(b) Cast in place Piling; and

(c) Hand-Dug Piling

and which are hereinafter collectively referred to as “Foundation Piling Works”.

In researching this briefly, there may be some difficulties in using this term, particularly “hand-dug”, for example in Hong Kong this was a traditional method of piling which was very unsafe and was therefore effectively banned in the mid 1990’s (see attachments).

Up to that time there were strict conditions imposed by some organisations on such manual works (see attachment).

I suggest that this type of piling should not be commonly allowed except in exceptional cases and unless strict conditions are applied and complied with otherwise it may not be a safe method. This is not emphasised in JSSS at present and I think it should be. I have drafted some additional clauses for this is 8.2.7, please review and modify as you think fit.

As Piling is frequently Contractor Design (even under the Pink Book) it needs mention here and as it is permanent work and therefore basically Employer design it also requires appropriate mention in the User Guide. I will draft this

The pictures in the original JICA/NK draft were not solely “Hand-Dug”. Although labour is shown and is necessary in the shaft, the excavation and removal is by clamshell not entirely by hand.

“Chicago Method” is not really an internationally accepted term.

This is not “Caisson Piling” as this is not work in a caisson, i.e. it is not relying upon air pressure to exclude water.

On balance I agree that “Hand-Dug Piling” is probably the most appropriate as this is understandable and descriptive of the basic method.

Please refer to the HK example which I have used as a basis and carefully review and revise as you think necessary:

NK6/23: understood.

(2) General requirements for example for Contractor’s Equipment, Temporary Works and other related works all which apply to the work in this Chapter, are included in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

8.2 PARTICULAR SAFETY MEASURES

8.2.1 General

(1) Foundation Piling Works and all operations connected therewith shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Unless otherwise specified in the Particular Safety Specification, the Contractor shall be responsible for selecting methods of working and types of Contractor’s Equipment and Temporary Works suitable for the purpose in conformity with GC 4.10.

(3) In accordance with JSSS 6.2 [*Earthwork Support*] the Contractor shall be responsible for maintaining the structural integrity of the sides of all excavated or drilled pile excavations and shall provide whatever temporary or permanent Earthwork Support that may be necessary to achieve this.

(4) The Contractor shall execute all Piling Works without weakening any ground or causing any damage to any buildings, structures and other properties, paved areas, roads, footpaths, fences, railways, waterways, drainage, utilities or any other property on the Site or outside the Site (collectively referred to in this Chapter as "other properties").

Weakening" is the present participle, of the verb, "weaken" which generally means "to make or become weaker in physical strength".

"Weakening" is a correct and meaningful term in this sense and is an appropriate term for use in this document. "weak" or "weakened" ground caused by "weakening" for example may not be able to adequately support the weight of structures, thereby causing subsidence.

NK6/23: understood.

(5) The Contractor shall also ensure the safety of all persons, whilst they are working in, under or adjacent to any piling excavation on or outside the Site.

(6) Unless otherwise specified in the Particular Safety Specification, the Contractor shall take all necessary measures to prevent the occurrence of any such weakening or damage to other properties and obtain the prior consent of the Engineer to such measures before commencing relevant parts of the Foundation Piling Works.

I do not recommend the re-insertion of the wording "unless otherwise specified in the Particular Safety Specification" in the above as this will not normally be a default. However, upon further study, the following paragraph (see below) will benefit from revision and should correctly include this wording. I have edited as shown.

"Weakening" as explained above is correct.

The use of the word "damage" is correct. It is a fundamental contractual obligation of the Contractor NOT to cause any damage in this sense and to change this to "limit", introduces unnecessary and inadvisable ambiguity and suggests that to some extent, damage is allowable.

The introduction of the word "nuisance" likewise is not necessary as it has little or no meaning in relation to property.

To add "mitigate adverse effects" meaning reduce and not eliminate "any adverse effects" means that some adverse effect is acceptable. This is not recommendable and not contractually correct.

The use of the word "the" is correct as the term is now defined in JSSS 8.1.1 (1), however the term does require correction to the "Foundation Piling Works".

NK6/23: already discussed in other Chapters, so we agreed the above comments:

Unless otherwise specified in the Particular Safety Specification, such measures shall include design by the Contractor and provision of permanent or temporary supports and reinforcing of such foundations, structures, buildings, roads or paved areas or the like, either on or adjacent to the Site and obtaining the prior consent of the Engineer before commencing such Foundation Piling Works.

8.2.2 Safety Measures Before Commencement

The above heading as suggested in an earlier JICA draft, is more appropriate.

NK6/23: agreed.

The Contractor shall plan all Foundation Piling Works before commencement so that they are executed in a safe and methodical manner. The safety measures before commencement of the Works shall be as follows:

(1) The HSO shall inspect the Foundation Piling Works' working area and surrounding areas and ensure that all of the following is acceptable before allowing the Foundation Piling Works to commence:

(a) The ground is level and capable of supporting the loading of the Contractor's Equipment including any dynamic effect of the Foundation Piling Works and the load of any materials to be placed thereon;

(b) The area is clear of any obstructions; and

(c) The areas are properly drained and free from standing water.

If necessary, the Contractor shall improve the ground by stabilising, cleaning, draining, providing paving and/or placing steel decking and temporary piling and the like to provide a suitable, clean, dry and safe working area without causing any risk to the stability of Contractor's Equipment or materials.

Following your comment, I have redrafted the above.

The addition of the following is not necessary as it is already covered by the opening paragraph of this subclause and is therefore duplicated.

"The Contractor shall commence the Foundation Piling Works only after (a) to (c) above have been accomplished."

NK6/23: agreed to the above modification.

8.2.3 Safety Measures for Transportation on Site - Use of Appropriate Equipment and Vehicle

Piles and pile casings, liners, reinforcement cages and the like shall not be transported or relocated by use of pile driving or drilling machines. In all cases the Contractor shall use cranes accompanied or where necessary, trucks and flatbed trailers for the transportation or relocation.

8.2.4 Safety Measures for Driven Piling

The Contractor shall:

(1) Select correct rigging method and appropriate Rigging Equipment to suit the characteristics of the lifting or pile driving machine and the piles, so that piles are mishandled or dropped.

(2) Keep workers other than those directly engaged in the driving operations away from the direct working location when driving operations are taking place.

(3) Provide a lifeline to fix PFAS on the lead when the worker works on the lead of pile driving machine in addition to the fall prevention measures stipulated in JSSS 2.5 [*Fall Prevention*].

8.2.5 Safety Measures for Cast-in-place Piling

When any Cast-in-place Piling Works are adopted, the Contractor shall take appropriate safety measures taking account of features of different methods of work, in particular:

(1) Pile Excavation Works using All-Casing Piling Method:

(a) Keep workers other than those directly engaged in the piling operations away from the pile excavation machine while installing and removing the casing and operating the drop hammer grab. Before any worker is allowed to access the casing or equipment whilst the hammer grab is being operated, ensure that the hammer grab is secured in the casing; and

(b) When any worker needs to enter the casing, confirm that there is no danger in accordance with JSSS 2.1.5 [*Further Requirements for Dangerous Work*].

(2) Pile Excavation Works for Reverse Circulation Bored Piling Method:

(a) When adding or removing drill rods, ensure that a Spotter is present to signal the operator of the drilling machine so that the hands and fingers of workers do not get caught in the work;

(b) Maintain the water level and concentration level of slurry (bentonite solution) in the drilled hole as planned in the Method Statement and prepare for addition or discharge of slurry, consequent to any fluctuation; and

(c) When providing a mud creation pit or a mud discharge pit, take measures to prevent workers from falling into such pits by providing barriers and signage.

(3) Pile Excavation Works for Auger Piling Method:

(a) To prevent overturn of drilling or auger equipment, consider the weight of excavated material in the drilling bucket or on the auger during operation; and

(b) Keep workers other than those directly engaged in the drilling works, away from the drill or auger to prevent injury through splashing or falling of mud or earth or through contact with drill or auger.

8.2.6 Placement of Concrete

(1) Reinforcement cages shall be designed, manufactured and hoisted into place so that they do not deform.

(2) Provide secure rigging slings and welded metal fixings to ensure that reinforcement cages, tremie pipes are secure and do not slip or drop off the Hoisting Equipment. Provide secure rigging equipment and operate hoisting to ensure that reinforcement cages and tremie pipes do not slip or drop off from the Hoisting Equipment in accordance with the Method Statement and Safety Plan.

(3) When handling reinforcement cages and tremie pipes, ensure that a Spotter is present to signal the operator of the machine so that the hands and fingers of workers do not get caught in the work.

8.2.7 Safety Measures for Hand-Dug Piling

See notes in JSSS 8.1.1 above regarding the heading.

As noted in 8.1.1, I suggest that there is a need for JSSS (and User Guide) to include more stringent safety measures for Hand-Dug Piling, possibly to prevent the use of this type of piling if certain conditions exist and if certain measures cannot be provided.

I suggest therefore that something like the following could also be added (please review, edit and confirm:

NK6/23: 1) My understanding is that foundation pile types ad piling methods are basically specified in Bid Documents by the Employer. When cast-in-place Piling is specified, there is a possibility that pile construction method is option to select among All-Casing Piling Method, Reverse Circulation Bored Piling Method, Auger Piling Method, Hand-Dug Piling, etc.
2) JSSS will specify when the Contractor shall select piling method, he shall not select the Hand-Dug Piling method under the conditions below.
3) When the Hand-Dug Piling method is adopted by the Employer/Contractor, the Contractor shall take measures specified in JSSS.
4) The User Guide shall mention about the same conditions to select Hand-Dug Piling as mentioned in JSSS.
My draft is as follows:

Unless otherwise specified in the Particular Safety Specification, the Contractor shall comply with the requirements of the following ~~subclauses~~ (1) to (3):

(1) Hand-Dug Piling shall not ~~normally be permitted~~ be adopted by the Contractor in ground

with unfavourable conditions such as:

(a) High ground water levels;

(b) Weak geological structure including the possible presence of voids or caverns;

(c) Reclamation, landfill or chemically-contaminated sites,

(d) Containing loose fill in depths exceeding 10 m;

(e) In areas with history of deep-seated ground movement;

(f) Close proximity to water or sewage tunnels; and

(g) Close proximity to shallow foundations.

(2) Hand-Dug Piling may for example ~~be permitted~~ be adopted by the Contractor in the following situations where there are no unfavourable conditions:

(a) Steeply-sloping sites with pile depths less than 25 m in depth in soil;

(b) Sites with difficult access or insufficient working room where it may be impractical or unsafe to use mechanical plant; and

(c) Where noise, vibration or damage may be caused by driven or bored piling and which must be avoided.

(3) Hand-Dug Piling shall:

(a) Be not less than 2 m diameter;

(b) Be not more than 25m deep; and.

(c) Have continuous shaft lining.

(4) Access/Exit Facilities

The Contractor shall:

(a) Provide safe and efficient access, egress and emergency exit facilities in the shaft for workers;

(b) Provide vertical ladders, securely anchored to framework or shaft lining and complete with a ladder safety system;

(c) Provide a landing rest platform every 5 m, when the length of any ladder exceeds 10 m and otherwise comply with the requirements provided in OSHA 1926.1053 Ladders where such requirements exceed those specified in this subclause;

(d) Ensure that the upper end of vertical ladders projects at least 1m above the ground and any landing rest platforms;

(e) Provide appropriate and adequate pumps to remove all water from the base of the shafts; and

(f) Take measures to prevent any accidents involving workers with the spoil removal containers and any other equipment particularly throughout the bucket hoisting and descending operations.

(5) Ladder Safety System

(a) A ladder safety system shall be provided to eliminate the risk of injury to any worker falling off the ladder; and

(b) The ladder safety system shall comprise a carrier, safety sleeve, lanyard, connectors, and body harness and all workers shall be trained in its use.

(6) Communication and Signalling Measures

~~(a) Signals for delivering materials and equipment to and down the shaft shall be determined in advance and all workers shall be trained in their use;~~

(b) Signals for delivering materials and equipment or discharging excavated materials to and down or from the shaft shall be determined in advance and all workers shall be trained in their use;

(c) Signals and evacuation methods during emergencies shall also be determined in in advance and all workers shall be trained in their use with regular evacuation training; and

(d) Where considered necessary by the HSO handheld radios shall be provided to the Operation Leader working at the base of the shaft and a Spotter at the ground level for all communications.

(7) Environmental Measures

(a) Ensure a continuous, adequate and safe air supply to workers located at the bottom of the shaft;

(b) Provide monitoring equipment, set up alarms and evacuate workers if air quality deteriorates and keep records in accordance with JSSS 2.1. [*Work Environment*]; and

(c) Provide adequate temporary lighting

(8) Measures before Commencing Work

Check the condition of the excavated ground surface in the shaft and whether there is any abnormality in the shaft lining.

(9) Measures during Execution of the Work

(a) When workers are in the shaft, assign a Spotter at ground level and located within direct view at the upper edge of the shaft;

(b) Minimise the depth of each stage of excavation;

(c) Avoid introducing new teams of workers or changing over teams until each stage of excavation is completed and temporary support or shaft lining has been installed;

(d) Provide immediate temporary support for the excavated faces prior to casting the liner;

(e) Providing reinforcement to the concrete liner;

(f) Providing drainage to each stage of excavation with relief wells, sumps and pumping as appropriate:

I suggest the addition of the above clauses based upon my further research

(g) Stop the work and evacuate workers when abnormal water inflow occurs in the shaft and resume work only after taking countermeasures and confirming the safety of the Site and the effectiveness of the measures;

(h) Pay constant attention to any changes in soil types, properties, etc. and if any abnormality is identified at the excavated surface during work or in the shaft lining, immediately stop the work, evacuate workers and take appropriate remedial measures, resume the work only after confirming that there is no further risk; and

(i) Ensure nothing is dropped into the shaft that may injure workers.

8.2.8 Monitoring Impact of Foundation Piling Works on Other Properties

The Contractor shall comply with the requirements JSSS ~~6.1.3 [*Monitoring Impact of Works on*~~

~~*Other Properties].*~~ 2.1.7 *[Monitoring and Records]*.

I suggest the above is left here as it is a secondary item and the positioning is consistent now with 7.5.3 and 7.6.11.

NK6/23: As commented by JICA on Chapter 6 TW, the monitoring is moved to 2.1.7 [Monitoring and Records]. We propose to specify as follows:

10 コンクリート工事 **10.1 一般事項** 本章では、コンクリート工事の鉄筋・加工・組立、型枠及び型枠支保工の組立・使用・解体、コンクリート打設作業を扱う。 コンクリートの砕石製造・コンクリート練り混ぜ設備は、本仕様書 4[請負者の機器]4.3[建設設備]で扱う。 **10.2 計画における安全上の留意事項** 請負者は、コンクリート工事の計画にあたっては、次の措置を講じなければならない。 (1) 鉄筋、型枠、型枠支保工、コンクリート輸送管、コンクリートバケット、トレミー管、コンクリート内部振動機及び外部振動機等の資材の現場搬入は、本仕様書 5[運搬作業]に従って行うこと。 (2) 鉄筋、型枠、コンクリート等の資材の落下、投下、集積等による作業員及び第三者への危険の予防のため、仕様書 2.6[飛来落下の防止措置を遵守すること。 (3) 鉄筋の組立図には、必要に応じ鉄筋の組立時の強風による転倒・倒壊の防止のための鉄筋の仮支え、筋交い等の配置を含めること。 (4) 鉄筋、型枠、型枠支保工の作業にあたっては、必要に応じてこれらの組立・解体作業の手順を示す組立・解体図を作成し、それに従い作業を行うことを計画すること。なお、型枠及び型枠支保工の組立図には、型枠及び型枠支保工の解体作業の手順を含むこと。 (5) 型枠及び型枠支保工の転倒・崩壊の危険の防止のために、型枠及び型枠支保工に打設したコンクリートによる偏圧が作用しないようコンクリート	**10 Concrete Works** **10.1 General Requirement** This chapter specified the relate with concrete works, including cutting, bending and assembly of the reinforcing bars, and the assembly, use and dismantling of the formwork and its falsework. The crusher facilities for the quarry of concrete and the concrete batching plant are specified with JSSS 4 [Contractor's Equipment] 4.3 [Construction Facilities]. **10.2 Safety Measures in Planning** The Contractor shall take the following measures in planning of concrete works. (1) Carry out the transport of the equipment such as the reinforcing bars, the formwork, the falsework of the formwork, the concrete conveying pipe, the concrete bucket, the tremie pipe, the internal and external concrete vibrators, etc. the concrete vibrators complying with JSSS 5 [Transport]. (2) In order to prevent the workers and the third party from the risks of the fall, accumulation of the reinforcing bars, formwork, and the materials of the concrete, comply with JSSS 2.6[Falling Objects]. (3) The assembling drawing of the reinforcing bars should include the placement of the support and brace for the reinforcing bars if necessary, in order to prevent the reinforcing bars from falling and collapsing due to the strong wind in assembling. (4) Prepare the assembling and dismantling drawings which show the procedures for the assembly and dismantling of the reinforcing bars, formwork, and falsework of the formwork, then plan the work procedures complying with the drawing. The drawing of the formwork and the falsework of the formwork should include the procedures of dismantling.	**10 Concrete Works** **10.1 General Requirements** This Chapter specifies the safety of concrete works of cutting, bending and assembly of the reinforcing bars, and assembly, use and dismantling of the formwork and the falsework for concrete works. The manufacturing facilities of aggregates of concrete and the concrete batching plant are specified in JSSS 4 [Contractor's Equipment], 4.3 [Construction Facilities]. *To MD: For your reference, terms of reinforcing bars and reinforcement are shown in the last column.* **10.2 Safety Measures in Planning** The Contractor shall take the following measures in planning of concrete works: (1) Transport the Contractor's Equipment, Goods and materials of equipment, reinforcing bars, forms, falseworks, fresh concrete, pipes and hoses, concrete bucket, tremie pipes, vibrators, etc. for the concrete works comply with JSSS 4 [Contractor's Equipment]. (2) Prevent the workers and the third party from the risks of the fall of reinforcing bars, formworks, materials of concrete in the concrete works comply with JSSS 2.6[Falling Objects]. (3) Prepare assembling drawings of reinforcing bars including the placement of supports and braces to reinforce the reinforcing bars when necessary to prevent the reinforcing bars during assembly from falling and collapsing by strong wind during assembling. (4) Prepare assembling and dismantling drawings to show the procedures of the assembly of the reinforcing bars, formwork and falsework, and the dismantling of the formwork and falsework. (5) Plan the procedure of concrete placing including height and speed of

の打設順序、打設高さ及び打設速度を計画すること。 (6) 作業員の腰痛等の健康被害の防止のために、長尺鉄筋、型枠・型枠支保工の資材等の重量物を取扱う作業では、2 人以上で行う又は揚貨機械を使うこと等を計画すること。 **10.3 作業員への安全教育と指導、周知** 請負者は、コンクリート工事を行うにあたっては、作業員に対して次の措置を講じなければならない。 (1) 本仕様書 1.9(1)[教育訓練の実施]に規定する教育訓練に準じて、各作業の特性に応じて、作業員に対して教育訓練を実施すること。 (2) 機器を使用した作業を行うときには、本仕様書 4.1.2[各作業の作業員への周知]を遵守し、各作業の特性に応じた役割分担、作業内容、方法、手順、安全措置事項を作業員に周知すること。	(5) Plan the concrete pouring procedures, height and time of the concrete casting considering to the prevention of the unsymmetrical pressure due to the concrete in order to prevent the formwork and the falsework of the formwork from the falling and collapsing. (6) Plan that the handling of the long-size and heavy materials for the reinforcing bars, formwork and falsework should be conduct by more than 2 people or lifting equipment in order to prevent the health damages such as back pain of workers. **10.3 Safety Instruction for Workers** The Contractor shall take the following measures for the workers in the concrete works. (1) Conduct the instruction for the workers according to the characteristics of each work complying with the safety instructions specified with JSSS 4.1.5 [Safety Instructions] (2) When the works with the construction equipment are carried out, inform the workers of the sharing rolls, work contents, work procedures and safety measures according to the characteristics of each work complying with JSSS 4.1.2 [Instruction for Contractor's Personnel].	concrete placing to avoid the unsymmetrical concrete pressure to them larger than designed to prevent the formwork and falsework from their falling or collapsing. (6) Plan the handling of the long-size and/or heavy materials of the reinforcing bars, formwork and falsework by more than two (2) workers or lifting equipment to prevent the health damages such as back pain of workers. **10.3 Safety Instruction for Workers** The Contractor shall take the following measures for the safety of the workers in the concrete works: (1) Conduct the instruction for the workers according to the characteristics of each work complying with JSSS 4.1.5 [Safety Instructions], and (2) Inform the workers of their rolls, work contents, work procedures and safety measures when the works are carried out with the Contractor's Equipment complying with JSSS 4.1.2 [Instruction for Contractor's Personnel.
10.4 鉄筋作業 請負者は、鉄筋の加工、運搬、組立て作業を行うときは、次の措置を講じなければならない。 (1) 鉄筋加工作業 (a) 作業員の転倒等の危険を防止するために、鉄筋加工用の工具、鉄筋、加工の際に発生する端筋等は、整理、整頓しておくこと。鉄筋加工作業員以外の者が立ち入ると危険が及ぶ箇所には、本仕様書 2.3［立入禁止の措置］を遵守し、見やすい箇所に具体的な危険の内容とともに、立入禁止の表示、柵等を設置すること。 (b) 鉄筋加工作業を行うときには、本仕様書 4.1.5［機器の作業環境］を遵守し、作業場の照度の確保、機械への巻き込まれの防止、作業環境の整備、保護具の着用、火災予防、緊急事態発生時の対応、機械の異常発見時の対応等の措置を講じること。また、本仕様書 4.4.3[小型の定置機械の作業環境] を遵守し、挟まれ、巻き込まれ、及び飛来物による危険防止の措置を講じること。 (c) 鉄筋加工機械を使用して作業を行うときは、取扱者を定め本仕様書 4.4［定置機械］を遵守し、鉄筋加工機械の点検・整備を実施し、鉄筋加工機械の作業時の安全措置を講じること。 (d) 鉄筋の荷くずれによる作業員への危険の防止のために、鉄筋は結束する等の荷崩れしない方法で仮置きする等の措置を講じること。 (2) 鉄筋運搬作業 (a) 加工した鉄筋を作業床又は型枠等の上に仮置きするときは、仮置きする場所の最大上載荷重を守り、一箇所に集中して置かないこと。 (b) 鉄筋の吊り上げ、吊り下げ及び運搬作業を行うときには、本仕様書	**10.4 Reinforcing bars Works** The Contractor shall take the following measures for the cutting and bending, transport and assembly of the reinforcing bars. (1) Cutting and bending of the reinforcing bars (a) In order to prevent the worker from falling, keep the cutting and bending equipment of the reinforcing bars, reinforcing barss, and its trashes decluttered. In order to prevent anyone other than the workers cutting and bending the reinforcing bars from entering the site, install the fences and caution signs at locations easy to see that show the prohibition and its right reasons complying with JSSS 2.3 [Measures of No-entry]. (b) In the cutting and bending works of the reinforcing bars, take the measures such as the sufficient illuminance and the work environment, the use of the protector, the prevention from being caught in a rotating part of the equipment and fire, the abnormality, and the emergency complying with JSSS 4.1.6 [Work Environment] and take the measures such as the prevention from the danger due to being caught in a rotating part of the machine and hitting the flying materials complying with JSSS 4.4.3 [Work Environment of Construction Facilities]. (c) When the works with the manufacturing equipment for the reinforcing bars are carried out, appoint workers to use the equipment and carry out the maintenances and inspections of the manufacturing equipment for the reinforcing bars, and take the safety measures complying with JSSS 4.4 [Stationary Equipment] (d) In order to prevent from the danger due to the collapse the reinforcing bars, take the measures to place the reinforcing bars with the measures preventing the collapse such as tighten them by ropes.	**10.4 Reinforcing Bars Works** The Contractor shall take the following measures for the cutting, bending, transport and assembly of reinforcing bars: (1) Cutting and bending of reinforcing bars (a) Keep the equipment and tools, reinforcing bars and their trashes decluttered to prevent the workers from falling on them. Prevent anyone other than the workers for the cutting and bending of the reinforcing bars from entering the cutting and bending work site by installing the fences and caution signs at locations easy to see that show the prohibition and its concrete reasons complying with JSSS 2.3 [Measures of No-entry]. (b) Take the following measures: Sufficient illuminance, proper work environment complying with JSSS 4.1.6 [Work Environment], wearing of PPE, prevention being caught in rotating parts of the equipment and tools, and hit by the flying materials complying with JSSS 4.4.3 [Work Environment of Construction Facilities]. (c) Appoint the workers to work with the cutting and bending equipment and carry out the maintenance and inspection of the equipment, and take the safety measures complying with JSSS 4.4 [Stationary Equipment]. (d) Take the measures to store reinforcing bars to prevent their collapse such as tighten them by ropes. (2) Transport of reinforcing bars (a) Place the reinforcing bars on the floor or scaffolding, formwork, etc. so that their weight shall be smaller than the maximum allowable loading capacity, and prevent their concentrating on one place after their transportation. (b) Take the measures in addition to JSSS 6 [Hoisting and Rigging Works], 6.5[Hoisting and Rigging Works] to tighten the

6[揚貨・玉掛け作業] 6.5[玉掛け作業] を遵守した措置を講じること。運搬する鉄筋は確実に結束し、原則として水平吊りとすること。

(3) 鉄筋組立作業

(a) 鉄筋組立時には適切な足場を設けること。

(b) 作業員に組立てた鉄筋を移動のために登り降りさせないこと。組立てた鉄筋上を歩行するときは、踏み抜き、転倒を防止するために歩み板を敷く等により、作業通路を確保すること。

(c) 鉄筋を運搬するときは、原則として 2 本の玉掛けワイヤーロープによりバランスを取って玉掛すること。やむを得ず垂直吊りをするときは、鉄筋の抜け落ちを防止する措置を講じること。

(d) 組立図にもとづき、鉄筋の転倒・倒壊の防止のための仮支え、筋交い等を配置すること。風雨による鉄筋の転倒・倒壊のおそれがあるときは、組立て作業を中止すること。風雨の後は鉄筋の状態を検査し、異常があるときは作業を中止すること。

(e) やむをえない場合を除いて、上下作業は行ってはならない。

(f) 作業通路に面した鉄筋の端部には、作業員の突刺し、裂傷の危険防止のために、鉄筋防護キャップを設置する等の措置を講じること。

(2) Transport of the reinforcing bars

(a) In placing the reinforcing bars on the floor or the formwork, etc., comply with the maximum load capacity of them, and prevent from concentrating in one place.

(b) In transporting and lifting the reinforcing bars, take the measures specified with JSSS 6 [Hoisting and Rigging Works] 6.5[Hoisting and Rigging Works]. Tighten the reinforcing bars certainly and suspend the bar horizontally in principal.

(3) Assembly of the reinforcing bars

(a) Prepare the scaffold in assembling the reinforcing bars.

(b) Prohibit the workers from stepping and climbing up the assembled reinforcing bars. When the workers walk on the assembled reinforcing bars, ensure the service path to put the board because of the prevention from falling and treading on something sharp.

(c) When transporting the reinforcing bars, suspend the bar keeping the balance by two rigging wire ropes in principle. When suspending them vertically for unavoidable reason, take the measures to prevent from the reinforcing bars falling out.

(d) Place the support and brace for the reinforcing bars based on the assembling drawing, in order to prevent from falling and collapsing the reinforcing bars. When there is a risk for the falling and collapsing the reinforcing bars due to the wind and rain, suspend the assembly work. When it was bad weather, inspect the reinforcing bars and suspend the work if an abnormality.

(e) Prohibit the work at the site above or below another worker operating unless there is an unavoidable reason. revent.

(f) Take the protect measures such as installing the protect caps for the reinforcing bars faced to the service path in order to prevent the worker from piercing and tearing by the edge of the reinforcing bars.

reinforcing bars firmly and suspend the bars horizontally in principal in transporting and lifting them.

(3) Assembly of the reinforcing bars

(a) Prepare properly the scaffold for assembling the reinforcing bars.

(b) Prohibit the workers from climbing up and stepping down on the assembled reinforcing bars. When the workers walk on the assembled reinforcing bars, provide the service path by placing boards to prevent falling of workers and avoid treading of workers on something sharp.

(c) When transporting the reinforcing bars, suspend the bars keeping their balance by two rigging wire ropes in principle. When suspending them vertically by unavoidable reason, take the measures to prevent the reinforcing bars from falling out.

(d) Place the supports and braces for the reinforcing bars in accordance with the assembling drawings to prevent the reinforcing bars from falling and collapsing. When there is a risk of the falling and collapsing of the reinforcing bars by the wind and rain, stop the assembly work. After adverse weather, inspect the assembled reinforcing bars and stop the work when an abnormality is found.

(e) Prohibit the work at the site above or below the places where another worker is operating unless other measures are taken.

(f) Take the measures such as providing the protection caps on edges of the assembled reinforcing bars facing to the passageway to prevent the workers from pierced and torn by the edge of the reinforcing bars.

10.5 型枠及び型枠支保工作業

請負者は、型枠及び型枠支保工の組立て、解体の作業を行うときは、次の措置を講じなければならない。

(1) 型枠及び型枠支保工の設計のときには本仕様書 7.1.3[仮設工事の設計及び設計照査]を遵守し、設計すること。

(2) 型枠及び型枠支保工の施工のときには本仕様書 7.1.4[仮設工事の施工、使用、解体]を遵守し、施工すること。

(3) 型枠及び型枠支保工の組立、解体作業は、施工計画及び組立図に従い行うこと。

(4) 型枠及び型枠支保工の材料は、材料仕様書に記載の請負者が計画した品質の材料を使用するものとし、ひび割れ、変形又は腐食等のある不適切な材料を使用しないこと。

(5) 型枠及び型枠支保工の組立、解体作業を行うときには本仕様書 2.3[立入禁止の措置]を遵守し、当該作業に従事する者以外の立ち入りを禁止

10.5 Formwork and Falsework of the Formwork Works

The Contractor shall take the following measures in assembling and dismantling the formwork and the falsework of the formwork

(1) Comply with JSSS 7.1.3 [Method Statement and the Particular Safety Plan] in designing the formwork and the falsework of the formwork.

(2) Comply with JSSS 7.1.4 [Construction, Operation and Demolition of TW] in constructing the formwork and the falsework of the formwork.

(3) Comply with the execution scheme and the assembly drawing in conducting the assembly and dismantling for the formwork and falsework.

(4) The material of the formwork and falsework should be applied the material without the cracks and deformations of which quality is described in the material specification planned by the Contractor.

(5) When the assembly and dismantling works of the formwork and the

10.5 Formwork and Falsework

The Contractor shall take the following measures in assembling and dismantling the formwork and the falsework

(1) Comply with JSSS 7.1.3 [Method Statement and the Particular Safety Plan] in designing the formwork and the falsework.

(2) Comply with JSSS 7.1.4 [Construction, Operation and Demolition of TW] in constructing the formwork and the falsework.

(3) Comply with the Method Statement and the assembly drawings in conducting the assembly and dismantling of the formwork and falsework.

(4) The materials of the formwork and falsework shall be free from cracks and deformations, and quality specified in the design of the Contractor.

(5) When the assembly and dismantling works of the formwork and the falsework are carried out, prohibit anyone other than the relevant workers from entering to the Site for assembling and dismantling the

すること。 (6) 作業員の転倒防止のために、型枠及び型枠支保工の組立て前、及び解体後の材料は、整理整頓して仮置きすること。 (7) 型枠及び型枠支保工又はその材料を運搬するときは、それらの重量の確認や揚貨機械の作業半径の確認を行い、本仕様書 6.4.1[移動式クレーンの配置と据付]を遵守し、揚貨機械の転倒を防止すること。 (8) 大型型枠の作業では、突風や強風による型枠のあおられによる大型型枠の突然の動きによる作業員の挟まれを防止するため、挟まれの危険のある場所に作業員を立入らせないこと。 (9) 型枠パネルは水平にして仮置きすること。解体後の型枠材から露出した釘、針金等の突起物による作業員の踏抜き、裂傷等の危険の防止のために、解体後すみやかに突起物を取り除く、又は折り曲げる等の措置を講じること。 (10) 型枠支保工の組立、解体作業にあたっては、当作業に関する特別な教育を受講しかつ経験のある作業主任を配置し、作業を直接指揮させること。	falsework of the formwork are carried out, prohibit anyone other than the worker from entering to the site for assembling and dismantling the formwork and falsework complying with JSSS 2.3 [Measures of No-entry]. (6) In order to prevent the worker from falling, keep the materials of the formwork and falsework before assembling and after dismantling decluttered. (7) When the material of the formwork and falsework are transported, ensure the weight of the material and work diameter of the lifting equipment, and prevent the falling of the lifting equipment complying with JSSS 6.4.1 [Placements and Installations of Mobile Crane]. (8) When the large size of the formworks is used, in order to prevent the worker being caught in the formwork due to the sudden movement of the formwork by the strong wind, prohibit the worker from entering the area with the above risks. (9) Place the form panels for the formwork horizontally. After dismantling, in order to prevent the worker from the damage due to the outshoot such as the nails and wires which projected from the panels, take the measures such as the removal and bend of the outshoot, etc., immediately. (10) When the assembly and dismantling works of the falsework of the formwork are carried out, assign the Operation Leader who has experienced and learned the special education for the works, and let the Operation Leader instruct for assembling and dismantling of the falsework of the formwork.	formwork and falsework complying with JSSS 2.3 [Measures of No-entry]. (6) To prevent the workers from falling, keep the materials of the formwork and falsework before assembling and after dismantling decluttered. (7) When the materials of the formwork and falsework are transported, ensure the weight of the materials within the rated capacity of hoisting equipment, and prevent the falling of the lifting equipment complying with JSSS 6.4.1 [Placements and Installations of Mobile Crane]. (8) When the formwork of large size is hoisted, to prevent the workers from being struck by the formwork suddenly moved by the strong wind, prohibit the workers from entering the area where there is the risk of being hit and caught. (9) Place the form panels for the formwork horizontally on storing place. After its dismantling, to prevent the workers from the damage due to the protruding nails and wires on the panels and lumbers, take the measures such as the removal or bending immediately. (10) When the assembly and dismantling works of the falsework are carried out, assign the Operation Leader who has experience and trained for the works, and let the Operation Leader lead the assembling and dismantling of the falsework.
10.6 コンクリート工 **10.6.1 コンクリートポンプ** 請負者は、ブーム搭載型のポンプ車を含む移動式コンクリートポンプ（以下。「コンクリートポンプ車」という。）又は定置式コンクリートポンプを使用してコンクリートを打設するときには、次の措置を講じなければならない。 (1) ブーム搭載型ポンプ車の使用にあたっては、本仕様書 6.4.1[移動式クレーンの配置と据付]に準じ、コンクリートポンプ車の転倒を防止すること。 (2) コンクリートポンプ車のブーム先端のホースには、ホースの落下防止装置を設置すること。 (3) 移動式及び定置式コンクリートポンプの操作者とコンクリートの打設作業員間の確実な連絡のために、本仕様書 2.4[監視員、誘導員の配置]に従い誘導員の配置、無線電話等の装置の設置、一定の合図を定める等の措置を講じること。 (4) コンクリート輸送管及びホース（以下、「輸送管」という。）のコンクリートの吹出し口の直下、前面、シュートの前面、コンクリート運搬を行う一輪車の通路など、作業員に危険を及ぼすおそれのある場所は、立入禁止とすること。特に、ブーム先端のホースの暴れによる、作業員との接触に注意し、筒先前の立入を禁止すること。 (5) コンクリートポンプのホッパスクリーン上では作業を行わせないこと。ホッ	**10.6 Concrete Work** **10.6.1 Concrete Pump** The Contractor shall take the following measures for the concrete casting works by the mobile concrete pump included the vehicle with the concrete transport boom (Hereinafter, it is called "concrete pump vehicle".) and stationary concrete pump. (1) When the concrete pump vehicles with the booms are used, take the measures to prevent from falling them complying with JSSS 6.4.1 [Placements and Installations of Mobile Crane]. (2) Install the falling prevention device of the hose with the concrete pump vehicle at the edge of the boom. (3) Take the measures such as the placement the guider, the installation of the wireless phone, and setting the signal rules complying with JSSS 2.4 [Placement of Spotters and Flagmen] in order to ensure the communication between the worker operating the mobile and stationary concrete pumps and the worker casting the concrete. (4) Prohibit from entering the dangerous place such as the front and below of the outlet of the concrete conveying pipe and hose (Hereinafter, it is called "conveying pipe".), the front of the shoot, and the path of the monocycle for transporting the fresh concrete, etc. Especially, beware of the contact of the worker and the hose at the edge of the boom, and prohibit from entering the front of the hose. (5) Prohibit the worker from operating on the hopper screen of the	**10.6 Concrete Works** **10.6.1 Concrete Pumps** The Contractor shall take the following measures for the concrete placing works by the mobile concrete pumps including that with the concrete boom (Hereinafter, it is called "concrete pump vehicle".) and stationary concrete pump. (1) When the concrete pump vehicles with the booms are used, take the measures to prevent them from falling complying with JSSS 6.4.1 [Placements and Installations of Mobile Crane]. (2) Install the fall prevention device between the concrete transportation pipes and hose at the edge of the boom. *To MD: For your reference, please see the photos of pumps and in the last column.* *To MD: Please refer to the OSHA 30 hr training text: Concrete and Masonry Construction Lesson 16 Study Guide sent separately.* (3) Take the measures such as placement of the Spotter, provision of communication facility such as wireless phone, and setting signals complying with JSSS 2.4 [Placement of Spotters and Flagmen] to ensure the communication between the workers operating the concrete pumps and the workers placing concrete. (4) Prohibit the workers from entering the dangerous places in concrete placing work such as the place in front of and below the outlet of concrete conveying pipes and hoses to avoid the workers to be hit by pipe and horse rampaged, places in front of shoot and path of the concrete buggy.

パ内の撹拌羽根を停止してから、コンクリートに混入した異物を取り除くこと、また、ホッパ内の洗浄作業を行うこと。

(6) 輸送管の安全措置

(a) 輸送管の破裂による作業員への危険防止のため、その日の作業前に輸送管の点検を行い、異常がある場合は輸送作業を禁止すること。

(b) 輸送管のすり減りによる破裂を防止する為、輸送管のすり減りを定期的に確認すること。

(c) 輸送管は、接手金具を使用して確実に接続すること。

(d) 輸送管は、堅固な建設物に固定させる等により輸送管の脱落、振れ防止の措置を講ずること。

(e) 輸送管の内部を、洗浄ボールを用いて洗浄するときは、輸送管の先端部に洗浄ボールの飛出しによる作業員の危険を防止するための器具を取り付けること。

(7) 輸送管が閉そくしたときの処理

(a) 閉そくしたときの復旧手順を事前に決めておくこと。

(b) 輸送管の接続部を切り離すときは、コンクリートの吹出しを防止するため、輸送管の内部の圧力を減少させる措置を講ずること

10.6.2 コンクリートミキサー車

請負者は、コンクリートミキサー車をコンクリートの運搬及び打設に使用するときには、次の措置を講じなければならない。

(1) コンクリート運搬中のミキサー車の重心が高いことを考慮し、車の横転防止のために、運転者に走行中の車のバランス及び運転速度に注意させること。

(2) 作業員のドラムとの接触、ドラムへの巻き込まれの危険防止のため、回転中のコンクリートドラムの中をのぞかせないこと。

10.6.3 コンクリートバケット

請負者は、コンクリートバケットを使用してコンクリートを打設するときには、次の措置を講じなければならない。

(1) 本仕様書 10.6.1 [移動式・定置式コンクリートポンプ] (3)に準じ、コンクリートバケットの操作者とコンクリートの打設作業員間の確実な連絡のために、誘導員の配置等の措置を講じること。

(2) コンクリートバケットの移動は揚貨機械により行うこと。微調整を除き、コンクリートバケットの押引きを作業員に禁止すること。

(3) 運搬作業時のバケットの振れ防止を行い、吊荷の下には作業員を入らせないこと。

(4) バケットによるコンクリート打設作業の際、急激な開放によるバケットの反動を防止するためにコンクリートをゆっくり排出すること。

10.6.4 バイブレータ

concrete pump. After stopping the agitating blade on the hopper, remove the foreign matter from the concrete. Keep the inside of the hopper clean.

(6) Safety measures for the conveying pipe

(a) In order to prevent the worker from the danger due to the collapse of the conveying pipe, inspect the coveting pipe every day before the inspection, and prohibit from the operation if an abnormality.

(b) In order to prevent the collapse of the conveying pipes due to the abrasion, inspect them regularly.

(c) Connect the conveying pipes firmly by the fitting.

(d) Take the measures to prevent from falling and shaking the coveting pipe by fixing it to the solid structure.

(e) When cleaning the inside of the conveying pipe by the cleaning ball, install the device at the edge of the coveting pipe in order to prevent the worker from the danger due to rushing out the cleaning ball.

(7) Measures for the obstruction of the conveying pipe

(a) Decide the recovery procedure in advance.

(b) When separating the connection of the coveting pipes, take the measures to reduce the pressure in the conveying pipe to prevent from rushing out the concrete.

10.6.2 Concrete Mixer

The Contractor shall take the following measures for the concrete mixer in the transport and casting works of the concrete.

(1) Considering that the center of gravity of the concrete mixer loaded the fresh concrete is high, let the drivers beware of the balance and driving speed of the concrete mixer in order to prevent the falling them.

(2) In order to prevent the worker from the contact and being caught in the drum, prohibit from looking inside of the rotating concrete drums.

10.6.3 Concrete Bucket

The Contractor shall take the following measures for the concrete bucket in the casting works of the concrete.

(1) Take the measures such as the placement the guider, etc. in order to ensure the communication between the worker operating the concrete buckets and the worker casting the concrete complying with JSSS 10.6.1 [Concrete Pump] (3).

(2) The concrete bucket should be transported by the lifting equipment. The worker shall be prohibited from pushing and pulling the concrete bracket except for the adjustment.

(3) In the transport works, take the prevention measures to swing the buckets, and prohibit the worker from entering the below of suspended load.

(4) In the casting works by the concrete buckets, in order to prevent the reaction of the bucket due to the sudden discharge of the fresh concrete, discharge the concrete slowly.

(5) Prohibit the workers from working on the hopper screen of the concrete pump. Remove foreign materials in the concrete in the hopper and clean the hopper after stopping the agitating blade in the hopper of concrete pump.

(6) Safety measures for the concrete conveying pipes and hoses

(a) Inspect the pipes and hoses before concrete placing works on the day to prevent the workers from the danger due to the burst of the pipes and hoses, and stop the operation with pipes and horses if an abnormality is found.

(b) Inspect pipes and hoses regularly to prevent the burst of the pipes and hoses due to their abrasion.

(c) Joint the pipes and hoses firmly with their fittings.

(d) Take the measures for the pipes by being firmly fixed in place such as the firm structures to prevent the pipes from their fall and vibration.

(e) Install the cleaning ball receiving device at the edge of the pipes to prevent the workers from the danger of hit by the cleaning ball jumped out from the pipes when cleaning the inside of the pipes by cleaning ball.

MD: Please see the picture the last column.

(7) Measures for the clogging in the pipes

(a) Determine the recovery procedure in case of clogging in the pipes in advance.

(b) When opening the pressurized pipes, take the measures to remove the pressure in the pipes to prevent from splashing out concrete.

10.6.2 Concrete Mixer Vehicles

The Contractor shall take the following measures for the concrete mixer vehicle in the transport and placing works of the concrete.

(1) Considering the center of gravity of the concrete mixer vehicle loaded the fresh concrete is high, make the drivers be aware of the balance and driving speed of the concrete mixer vechicle to prevent its falling.

(2) In order to prevent the worker from the collision by and being caught in the mixing drum, prohibit from looking inside of the rotating concrete drums of the mixer.

10.6.3 Concrete Buckets

The Contractor shall take the following measures for the concrete bucket in the placing works of the concrete.

(1) Take the measures such as the placement the Spotter, etc. in order to ensure the communication between the workers operating the concrete buckets and the worker placing the concrete complying with JSSS 10.6.1 [Concrete Pump] (3).

(2) The concrete bucket shall be transported by the lifting equipment. The workers shall be prohibited from pushing and pulling the bracket except for the minor adjustment of location of bucket for discharging concrete.

(3) In the concrete transportation works, take the measures to prevent the bucket from swinging, and prohibit the workers from entering the

請負者は、バイブレータを使用してコンクリートを締固める場合、次の措置を講じなければならない。

(1) 電動のコンクリート内部振動機を使用するときは、4.5[電気機械器具]を遵守し感電防止の措置を講じること。

(2) 内部振動機及び手持ち型の外部振動機を使用するときは、振動による健康被害を予防するため、防振手袋を作業員に着用させること。

10.6.5 コンクリート打設作業

請負者は、コンクリート打設作業を行うときは、次の措置を講じなければならない。

(1) 型枠及び型枠支保工の点検

(a) 作業前に、型枠及び型枠支保工を点検し、不備な箇所は作業前に補修しておくこと。異常を認めた場合には、作業を中止すること。作業中に、型枠、型枠支保工及び型枠支保工の基礎に異常を認めた場合は、ただちに作業を中止し、作業員を退避させること。

(b) コンクリート打設中、シュート、輸送管等の状態を適宜点検し、異常がないことを確認すること。必要に応じ輸送管の接手金具の増締めを行うこと。異常が見つかった場合は、ただちに作業を中断すること。

(2) 施工計画に従い、打設したコンクリートによる想定外の偏圧が生じないよう打設作業を行うこと。

10.6.4 Concrete Vibrators

The Contractor shall take the following measures for the concrete vibrator in the compaction works of the concrete.

(1) Take the prevention measures for the electric shock in operating the electric concrete internal vibrator specified with JSSS 4.5 [Electric Construction Equipment].

(2) When the concrete internal vibrators or handy concrete external vibrators are used, let the workers wear the anti-vibration gloves in order to prevent the health damage due to the vibration.

10.6.5 Concrete Casting Work

The Contractor shall take the following measures for the concrete casting works.

(1) Inspection of the formwork and the falsework of the formwork

(c) Inspect the formwork and falsework and repair their defects before the operation. If there is an abnormality, prohibit from using them.
If there is an abnormality of the formwork, falsework and basement of the falsework in the casting works, suspend the operation immediately and evacuate the workers.

(d) When casting the concrete, inspect the condition of the shoot and conveying pipe, and retighten the fitting of the conveying pipe if necessary. If there is an abnormality, suspend the operation immediately.

(2) Conduct the concrete casting work complying with the execution method in order not to function the unsymmetrical pressure due to the casting concrete to the formwork and falsework.

places below bucket.

(4) In the discharging concrete from the bucket, to prevent the jump up of the bucket reacted to the sudden discharge of the concrete, discharge the concrete slowly.

10.6.4 Concrete Vibrators

The Contractor shall take the following measures for the concrete vibrators in the compaction works of the concrete.

(1) Take the measures to prevent the electric shock during operating the electric concrete internal vibrators in accordance with JSSS 4.5 [Electric Construction Equipment].

(2) When the concrete internal vibrators or portable concrete external vibrators are used, the workers shall wear the anti-vibration gloves to prevent the health damage due to the vibration.

10.6.5 Concrete Placing Works

The Contractor shall take the following measures for the concrete placing works.

(1) Inspection of the formwork and the falsework

(a) Inspect the formwork and falsework and repair their defects before the concrete placing works. When an abnormality is found, stop the works.
If there is an abnormality of the formwork, falsework and basement of the falsework in the placing works, stop the works immediately and evacuate the workers.

(b) During placing the concrete, inspect the condition of the pipes and shoot, and retighten the joints of the pipes when necessary. If an abnormality is found, stop the works immediately.

(2) Execute the concrete placing complying with the Method Statement to avoid the unsymmetrical pressure to the form and falsework more than designed.

Concrete convey pipes and hose.

扱う。→E 9.1.1(2) に規定済み

9.2 計画における安全上の留意事項

請負者は、コンクリート工事の計画にあたっては、次の措置を講じなければならない。

(1) 鉄筋、型枠、型枠支保工、コンクリート輸送管、コンクリートバケット、トレミー管、コンクリート内部振動機及び外部振動機等の資材の現場搬入は、本仕様書 5[運搬作業]に従って行うこと。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。

(2) 鉄筋、型枠、コンクリート等の資材の落下、投下、集積等による作業員及び第三者への危険の予防のため、仕様書 2.6[飛来落下の防止措置を遵守すること。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。

(3) 鉄筋の組立図には、必要に応じ鉄筋の組立時の強風による転倒・倒壊の防止のための鉄筋の仮支え、筋交い等の配置を含めること。→E 9.4.2 (2)に規定済み

(4) 鉄筋、型枠、型枠支保工の作業にあたっては、必要に応じてこれらの組立・解体作業の手順を示す組立・解体図を作成し、それに従い作業を行うことを計画すること。なお、型枠及び型枠支保工の組立図には、型枠及び型枠支保工の解体作業の手順を含むこと。→E 9.4.2 (2)に規定済み

(5) 型枠及び型枠支保工の転倒・崩壊の危険の防止のために、型枠及び型枠支保工に打設したコンクリートによる偏圧が作用しないようコンクリートの打設順序、打設高さ及び打設速度を計画すること。→E 9.2.1(2)に規定済み

(6) 作業員の腰痛等の健康被害の防止のために、長尺鉄筋、型枠・型枠支保工の資材等の重量物を取扱う作業では、2 人以上で行う又は揚貨機械を使うこと等を計画すること。→E 9.1.2(2) に規定済み

9.3 作業員への安全教育と指導、周知

請負者は、コンクリート工事を行うにあたっては、作業員に対して次の措置を講じなければならない。

(1) 本仕様書 1.9(1)[教育訓練の実施]に規定する教育訓練に準じて、各作業の特性に応じて、作業員に

(a) Insitu (poured or pumped) concrete;

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and hereinafter collectively referred to as "Concrete Works".

(2) General safety requirements, covering for example Contractor's Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2. Safety Plan and Instructions to Workers

(1) Prepare a safety plan describing the safety requirements for Concrete Works and inform all relevant Contractor's Personnel of the content and requirements.

(2) Plan the execution of all Concrete Works including handling of reinforcement and formwork panels by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.

9.2. PARTICULAR SAFETY MEASURES FOR INSITU CONCRETE WORK

The following safety requirements are additional to the general requirements described in other Chapters.

9.2.1. Safety Measures at Planning Stage

(a) Insitu (poured or pumped) concrete;

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and hereinafter collectively referred to as "Concrete Works".

(2) General safety requirements, covering for example Contractor's Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

(1) Prepare a safety plan describing the safety requirements for Concrete Works and inform ~~all relevant Contractor's Personnel~~ all workers engaging in the Concrete Works of the content and requirements. Such a safety plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy stuff, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number ow workers).

JC: all relevant personnel では定かではないので all workers engaging in the Concrete Works に。
Isn't "all relevant personnel" clearly understood? "all workers engaging in the Concrete Works" is more appropriate.

NK: Modified as commented.

(2) Plan the execution of all Concrete Works including handling of reinforcement and formwork panels by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.

9.2. PARTICULAR SAFETY MEASURES FOR INSITU CONCRETE WORK

The following safety requirements are additional to the general requirements described in other Chapters.

9.2.1 Safety Measures at Planning Stage

JC: 第三者に剥離剤がかかる可能性があるような場合は、その剥離剤は無害なものでなくてはならない、といったことが書かれている MTR 9.7 項 Release Agent (6)を規定すべき？

(a) Insitu (poured or pumped) concrete;

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and hereinafter collectively referred to as "Concrete Works".

(2) General safety requirements, covering for example Contractor's Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

(1) Prepare a safety plan describing the safety requirements for Concrete Works and inform all workers engaging in the Concrete Works of the content and requirements. Such a safety plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy stuff, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number ow workers)

(2) Plan the execution of all Concrete Works including handling of reinforcement and formwork panels by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.

9.2 PARTICULAR SAFETY MEASURES FOR INSITU CONCRETE WORK

The following safety requirements are additional to the general requirements described in other Chapters.

9.2.1. Safety Measures at Planning Stage

対して教育訓練を実施すること。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。

(2) 機器を使用した作業を行うときには、本仕様書4.1.2[各作業の作業員への周知]を遵守し、各作業の特性に応じた役割分担、作業内容、方法、手順、安全措置事項を作業員に周知すること。→E 9.1.2(1)に規定済み

9.6 コンクリート工

(1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner.

(2) The Contractor shall plan the method of insitu concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid any deformation, damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan.

9.2.2. Safety Measures During Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

It is suggested to stipulate "When release agent may splash on third parties, such agent shall be harmless one to human" such as specified in MTR 9.7 [Release Agent] (6)?

NK: 剥離剤は、GC 1.1.5.2 で定義の Goods の一つであり、これが第 3 者へ掛かる被害防止は、JSSS の 2.6 FALLING OBJECTS の 2.6.1.General の規定で網羅されると考える。この特別な措置は規定しないこととする。
Release Agent is one of Goods defined in GC 1.1.5.2 and measures for such splash on the third parties is specified in JSSS, 2.6 FALLING OBJECTS, 2.6.1.General
Therefore, it is not appropriate to stipulate too much in details. Leave as it is.

(1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner.

(2) The Contractor shall plan the method of insitu concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable construction tolerances specified in the contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan.

JC: deleted and added.

9.2.2 Safety Measures ~~during~~ for Concrete Placement

JC: changed.

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all ~~reinforcement,~~ formwork and falsework before ~~and during~~ concrete placement. Stop the works if any defect is discovered. ~~stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming~~.

JC: 鉄筋を見てもわからないのではないか。除外。
型枠全体が崩壊することがないようにプランニングされていることが前提なので、evacuation に関する記載は不要。その代わりに追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。
It may be able to find any defect by the inspection of

(1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner.

(2) The Contractor shall plan the method of insitu concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable construction tolerances specified in the contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan.

9.2.2. Safety Measures ~~during~~ for Concrete Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

		reinforcement. It is assumed that the entire formwork is planned so as not to collapse entirely, so it is not necessary to specify about evacuation. In stead of this phrases, please add a provision to (3) that additional materials for false works shall be on standby and used for reinforcing formworks in case of local deformation of the formwork. NK: 鉄筋の結束や支持が十分に行われない場等があることから、削除は不要と考えます。 ベトナム国のカントー橋のコンクリート打設作業中の事故は、型枠支保工、型枠、鉄筋の全体が崩壊した事故です。崩壊しないようにプランニングされていても、このような事故が発生しないように、打設前、及び打設中の点検し、不備がある場合は万一の重大事故のリスクを想定し、コンクリート打設の中止、作業員の撤去を行うべきと考えます。 そのため、本(1)は原文通りとすることを提案します。追加し補材の準備は(3)に追記します。 We consider the deletion of reinforcement is not necessary because there are sometimes improper fixing and supporting of re-bars. The collapse accident of Canto bridge in Vietnam occurred during concrete placing. The whole of falseworks, form works and reinforcement collapsed in the accident. Such accident occurred though planning was made to avoid collapse accident. In order to avoid such accident, inspection before and during concrete placing shall be made and specified. Therefore, (2) is left as it is. Addition to (3) will be made.	
	(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement to avoid any deformation, damage or collapse of formwork or falsework.	(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement. ~~to avoid any deformation, damage or collapse of formwork or falsework.~~ JC: deleted and added as commented to (1). 追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。 Added as commented in (2), please add to (3).	(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement. Some materials for falseworks shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.
	(4) The Contractor shall be aware of the following common hazards and shall take all necessary measures to avoid the risk of any consequential accident, injury or death: (a) Impalement by projecting and unguarded reinforcement: The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and (b) Impact and entanglement by materials or Contractor's Equipment: The Contractor shall take care in material handling and use of	~~(4) The Contractor shall be aware of the following common hazards and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:~~ ~~(a) Impalement by projecting and unguarded reinforcement~~; ~~The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and~~ ~~(b) Impact and entanglement by materials or Contractor's Equipment:~~ ~~The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout~~	

	Contractor's Equipment including the use of lockout/tagout procedures. (c) Exposure of silica dust and Portland cement: If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances]. (5) The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.	~~procedures.~~ ~~(c) Exposure of silica dust and Portland cement~~ ~~If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].~~ (5) ~~The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.~~ JC: common hazards というわりには列挙されている事象が特異な事象に限定されているように思います。(a)は 9.3.2 に既に入っています。(b)、(c)は削除してください。 特に(c)は fresh (wet) concrete の打設時の規定として適切ではないです。 These clauses seem special requirements for special issues. (a) is specified in 9.3.2. Please delete (b) and (c). It is not appropriate as requirement for placing of fresh (wet) concrete. NK: Deleted.	
9.6.1 コンクリートポンプ 請負者は、ブーム搭載型のポンプ車を含む移動式コンクリートポンプ(以下。「コンクリートポンプ車」という。)又は定置式コンクリートポンプを使用してコンクリートを打設するときには、次の措置を講じなければならない。 (1) ブーム搭載型ポンプ車の使用にあたっては、本仕様書 6.4.1[移動式クレーンの配置と据付]に準じ、コンクリートポンプ車の転倒を防止すること。→E 9.2.3(4)&(5)に規定済み (2) コンクリートポンプ車のブーム先端のホースには、ホースの落下防止装置を設置すること。→E 9.2.3(12)に規定済み (3) 移動式及び定置式コンクリートポンプの操作者とコンクリートの打設作業員間の確実な連絡のために、本仕様書 2.4[監視員、誘導員の配置]に従い誘導員の配置、無線電話等の装置の設置、一定の合図を定める等の措置を講じること。→E 9.2.3(6)に規定済み (4) コンクリート輸送管及びホース(以下、「輸送管」という。)のコンクリートの吹出し口の直下、前面、シュートの前面、コンクリート運搬を行う一輪車の通路など、作業員に危険を及ぼすおそれのある場所は、立入禁止とすること。特に、ブーム先端のホースの暴れによる、作業員との接触に注意し、筒先前の立入を禁止すること。→E 9.2.3(14)に NK 追加規定済み (5) コンクリートポンプのホッパスクリーン上では作業を行わせないこと。ホッパ内の撹拌羽根を停止してから、コンクリートに混入した異物を取り除くこと、また、ホッパ内の洗浄作業を行うこと。→E 9.2.3(13)に規	9.2.3. Safety Measures for Placement by Pumping The Contractor shall take the following safety measures for delivery of insitu concrete with the use of concrete pumps: (1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work. (2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the	9.2.3. 定済み	maximum pump pressure. (3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and: (a) Maintain a safe separation distance from any obstructions and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom; (b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances; (4) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and trucks or collapse of ground. (5) Fully extend outriggers and ensure stability of pumping equipment and trucks at all times. (6) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and mixer trucks and ensure there is a Spotter at the point of placement. (7) Never allow workers to stand between mixer trucks and pumps when trucks are reversing.	maximum pump pressure. (3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and: (a) Maintain a safe separation distance from any obstructions and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom; JC: 具体的にどのようなものでしょうか？ What does mean the word “obstruction” to be specific? NK: The “obstruction” means those items such as Contractor’s Equipment, buildings, etc. which may be hit by the pumping equipment. Added “(Contractor’s Equipment,, buildings, etc.)”. (b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances; (4) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and trucks or collapse of ground. (5) Fully extend outriggers and ensure stability of pumping equipment and trucks at all times. (6) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and mixer trucks and ensure there is a Spotter at the point of placement. (7) Never allow workers to stand between mixer trucks and pumps when trucks are reversing. JC: コンクリートミキサーのバックする時には Spotter を必ず配置することでは？ Doesn’t this mean that a spotter shall be placed when a truck mixer is moving backward.”? NK: Placement of Spotters is stipulated in (6). The purpose of (7) is to instruct workers strictly not to stand or walk into the back of the truck when it is moving backward. Leaved as it is.	maximum pump pressure. (3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and: (a) Maintain a safe separation distance from any obstructions (Contractor’s Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom; (b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances; (4) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and trucks or collapse of ground. (5) Fully extend outriggers and ensure stability of pumping equipment and trucks at all times. (6) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ~~mixer trucks~~ ready-mixed concrete trucks and ensure there is a Spotter at the point of placement. (7) Never allow workers to stand between ~~mixer trucks~~ ready-mixed concrete trucks and pumps when trucks are reversing.
(6) 輸送管の安全措置 (a) 輸送管の破裂による作業員への危険防止のため、その日の作業前に輸送管の点検を行い、異常がある場合は輸送作業を禁止すること。→E 9.2.3(1)に規定済み	(8) Take care to avoid the risk of any accident when moving the boom and ensure that workers are out of the path of the boom. (9) Never allow workers to open a pressurised	(8) Take care to avoid the risk of any accident when moving the boom and ensure that workers are out of the path of the boom. (9) Never allow workers to open a pressurised line to prevent concrete from splashing out.	(8) Take care to avoid the risk of any accident when moving the boom and ensure that workers are out of the path of the boom. (9) Never allow workers open a pressurised

(b) 輸送管のすり減りによる破裂を防止する為、輸送管のすり減りを定期的に確認すること。→E 9.2.3(2)に規定済み
(c) 輸送管は、接手金具を使用して確実に接続すること。→E 9.2.3(2)に規定済み
(d) 輸送管は、堅固な建設物に固定させる等により輸送管の脱落、振れ防止の措置を講ずること。→E 9.2.3(2)に規定済み
(e) 輸送管の内部を、洗浄ボールを用いて洗浄するときは、輸送管の先端部に洗浄ボールの飛出しによる作業員の危険を防止するための器具を取り付けること。→E 9.2.3(10)に規定済み

(7) 輸送管が閉そくしたときの処理
(a) 閉そくしたときの復旧手順を事前に決めておくこと。→E 9.2(9)に追記済み
(b) 輸送管の接続部を切り離すときは、コンクリートの吹出しを防止するため、輸送管の内部の圧力を減少させる措置を講ずること→E 9.2(9)に規定済み

9.6.2 コンクリートミキサー車

請負者は、コンクリートミキサー車をコンクリートの運搬及び打設に使用するときには、次の措置を講じなければならない。

(1) コンクリート運搬中のミキサー車の重心が高いことを考慮し、車の横転防止のために、運転者に走行中の車のバランス及び運転速度に注意させること。→E 9.2.4(1)に規定済み
(2) 作業員のドラムとの接触、ドラムへの巻き込まれの危険防止のため、回転中のコンクリートドラムの中をのぞかせないこと。→E 9.2.4(2) に規定済み

line to prevent concrete from splashing out. Pressurised line shall be opened in accordance with predetermined procedure.

(10) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged. *(Note: MD will review and edit this paragraph as NK added.)*

9.2.4. Safety Measures for Concrete Mixer Trucks

The Contractor shall take the following measures for the concrete mixer trucks in the transportation and delivery of insitu concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded mixer trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact

Pressurised line shall be opened in accordance with predetermined procedure.

JC: 英語では意味が取れない。
The meaning is hard to understand.
NK: 和文 9.6.1(7) (a) & (b)の規定です。
(9) is stipulated in Japanese version 9.6.1(7) (a) & (b).
BS 8407 stipulate as follows:
9.11 If a blockage occurs during the pour, the concrete pump operator should stop pumping immediately and instruct personnel to move to a safe position before attempting to remove the blockage.
9.12 If the concrete pump operator needs to open the delivery pipeline to clear a blockage, they should first release the pressure inside the delivery pipeline as much as possible, e.g. by reversing the pumping action. They have to treat the delivery pipeline as being pressurized at all times.
Appropriate and adequate hand and eye protection should be worn when opening the delivery pipeline.
Modified as right and will be reviewed by MD.

(10) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged.

9.2.4. Safety Measures for ~~Concrete Mixer~~ Ready-mixed Concrete Trucks

JC: concrete mixer truck の名称にやや違和感がある。concrete agitator truck と concrete mixer truck の2種類があることを認識したい。そのうえで delivery(transportation), discharge (to concrete pump)に係る安全を規定したい。別添の"Safety in ready mixed concrete industry"が参考になる。
NK: BS8476 uses the following terms:
8.5 concrete-delivery lorries
9.8 ready-mixed concrete truck
9.27 concrete-mixer lorries
Used the term "ready-mixed concrete truck" as commented.

concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure.

(10) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged.

9.2.4. Safety Measures for Ready-mixed Concrete Trucks

9.6.3 コンクリートバケット

請負者は、コンクリートバケットを使用してコンクリートを打設するときには、次の措置を講じなければならない。

(1) 本仕様書 10.6.1 [移動式・定置式コンクリートポンプ] (3)に準じ、コンクリートバケットの操作者とコンクリートの打設作業員間の確実な連絡のために、誘導員の配置等の措置を講じること。→E 9.2.5(1) に規定済み

(2) コンクリートバケットの移動は揚貨機械により行うこと。微調整を除き、コンクリートバケットの押引きを作業員に禁止すること。→E 9.2.5(2)に規定済み＆E 9.2.5(4)に追記済み。

(3) 運搬作業時のバケットの振れ防止を行い、吊荷の下には作業員を入らせないこと。→E 9.2.5(4)&(5)に規定済み

(4) バケットによるコンクリート打設作業の際、急激な開放によるバケットの反動を防止するためにコンクリートをゆっくり排出すること。→E 9.2.5 (6)に規定済み

9.6.4 バイブレータ

請負者は、バイブレータを使用してコンクリートを締固め

with and/or become entangled with the rotating drum and other moving parts of mixer trucks and that they are prevented from looking into the drum.

9.2.5. Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of insitu concrete:

(1) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and trucks and ensure there is a Spotter at the point of placement.

(2) Ensure that Hoisting and Rigging Equipment is suitable for the purpose and adequate for the load.

(3) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(4) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete.

(5) Prevent persons or workers from entering the places below bucket.

(6) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6. Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of

The Contractor shall take the following measures for the concrete mixer trucks in the transportation and delivery of ~~insitu~~ pre-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded mixer trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of mixer trucks and that they are prevented from looking into the drum.

9.2.5. Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of ~~insitu~~ concrete:

JC: deleted.

~~(1) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and trucks and ensure there is a Spotter at the point of placement.~~

~~(2) Ensure that Hoisting and Rigging Equipment is suitable for the purpose and adequate for the load.~~

JC: (1) & (2)はクレーン作業と同一ではないか？クレーン作業のところを引用する形で纏めてください。
Aren't clauses (1) & (2) same as provision for Crane Works? Please simplify it by referring to the relevant clause in Crane Works.
NK: As per the comment, clause (1) & (2) are combined and revised referring to 5.2.6. as right.

(3) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(4) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete.

(5) Prevent persons or workers from entering the places below bucket.

(6) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6. Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of insitu concrete:

The Contractor shall take the following measures for the ready-mixed concrete ~~mixer~~ trucks in the transportation and delivery of ~~insitu~~ ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ~~mixer~~ ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ~~mixer~~ ready-mixed concrete trucks and that they are prevented from looking into the drum.

9.2.5. Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of concrete:

(1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters;

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete.

(4) Prevent persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6. Safety Measures for use of Concrete Vibrators

る場合、次の措置を講じなければならない。→
(1) 電動のコンクリート内部振動機を使用するときは、4.5[電気機械器具]を遵守し感電防止の措置を講じること。→E 9.2.6(1) に規定済み
(2) 内部振動機及び手持ち型の外部振動機を使用するときは、振動による健康被害を予防するため、防振手袋を作業員に着用させること。→E 9.2.6(2) に規定済み

9.6.5 コンクリート打設作業

請負者は、コンクリート打設作業を行うときは、次の措置を講じなければならない。
(1) 型枠及び型枠支保工の点検
(a) 作業前に、型枠及び型枠支保工を点検し、不備な箇所は作業前に補修しておくこと。異常を認めた場合には、作業を中止すること。作業中に、型枠、型枠支保工及び型枠支保工の基礎に異常を認めた場合は、ただちに作業を中止し、作業員を退避させること。→E 9.2.2(2) に規定済み
(b) コンクリート打設中、シュート、輸送管等の状態を適宜点検し、異常がないことを確認すること。必要に応じ輸送管の接手金具を増締めを行うこと。異常が見つかった場合は、ただちに作業を中断すること。→E 9.2.3(1)に規定済み
(2) 施工計画に従い、打設したコンクリートによる想定外の偏圧が生じないよう打設作業を行うこと。→E 9.2.2(3) に規定済み

9.4 鉄筋作業

請負者は、鉄筋の加工、運搬、組立て作業を行うときは、次の措置を講じなければならない。
(1) 鉄筋加工作業
(a) 作業員の転倒等の危険を防止するために、鉄筋加工用の工具、鉄筋、加工の際に発生する端筋等は、整理、整頓しておくこと。→E 9.3.2(1)(b)&(c)に規定済み 鉄筋加工作業員以外の者が立ち入ると危険が及ぶ箇所には、本仕様書 2.3[立入禁止の措置]を遵守し、見やすい箇所に具体的な危険の内容とともに、立入禁止の表示、柵等を設置すること。→E 9.3.2(1)(a))に規定済み
(b) 鉄筋加工作業を行うときには、本仕様書 4.1.5[機器の作業環境]を遵守し、作業場の照度の確保、機械への巻き込まれの防止、作業環境の整備、保護具の着用、火災予防、緊急事態発生時の対応、機械の異常発見時の対応等の措置を講じること。また、本仕様書 4.4.3[小型の定置機械の作業環境] を遵守し、挟まれ、巻き込まれ、及び飛来物による危険防止の措置を講じること。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。
(c) 鉄筋加工機械を使用して作業を行うときは、取扱者を定め本仕様書 4.4[定置機械]を遵守し、鉄筋加工機械の点検・整備を実施し、鉄筋加工機械の作業時の安全措置を講じるこ

insitu concrete:

(1) Take all necessary measures to prevent electric shock.

(2) Ensure that workers are provided with and that they wear anti-vibration gloves.

9.3. REINFORCEMENT

9.3.1. Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and assembly drawings of reinforcement describing the method of, assembly and erection and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during cutting, bending, transporting and assembling of reinforcement:

(1) Take all necessary measures to prevent electric shock.

JC: (1)は日本語版どおり、「4.5 を順守し、感電防止の措置を講じること」といった趣旨の規定にしてください。
Please modify this clause with the meaning in Japanese draft such as “take measures for preventing electric shock accidents complying with JSSS 4.5”.

NK: added as commented.

(2) Ensure that workers are provided with and that they wear anti-vibration gloves.

9.3 REINFORCEMENT

9.3.1. Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and ~~assembly~~ fixing and placing drawings of reinforcement describing the method of ~~fabrication~~ cutting, bending, assembly and erection and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

JC: BS での表現に合わせました。
replaced with the expression in BS.
NK: replaced with terms in BS 8000-2-2 Workmanship on building sites - Part 2: Code of practice for concrete work - Section 2.2 Sitework with in situ and precast concrete.

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2. Safety Measures at Fabrication and ~~Assembly~~ Fixing and Placing Stage

JC: changed.

The Contractor shall take the following measures during cutting, bending, transporting and ~~assembling~~ fixing and placing of reinforcement:

The Contractor shall take the following measures when using concrete vibrators for compacting of insitu concrete:

(1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment].

(2) Ensure that workers are provided with and that they wear anti-vibration gloves.

9.5 REINFORCEMENT

9.3.1. Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing ~~and erection~~ and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2. Safety Measures at Fabrication and Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting and fixing and placing of reinforcement:

と。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。

(d) 鉄筋の荷くずれによる作業員への危険の防止のために、鉄筋は結束する等の荷崩れしない方法で仮置きする等の措置を講じること。→E 9.3.2(1)(c))に規定済み

(2) 鉄筋運搬作業

(a) 加工した鉄筋を作業床又は型枠等の上に仮置きするときは、仮置きする場所の最大上載荷重を守り、一箇所に集中して置かないこと。→E 9.3.2(2)(a)に規定済み

(b) 鉄筋の吊り上げ、吊り下げ及び運搬作業を行うときには、本仕様書 6[揚貨・玉掛け作業] 6.5[玉掛け作業] を遵守した措置を講じること。運搬する鉄筋は確実に結束し、原則として水平吊りとすること。→E 9.3.2(2)(b)に規定済み

(3) 鉄筋組立作業

(a) 鉄筋組立時には適切な足場を設けること。→E 9.3.2(3)(a)に規定済み

(b) 作業員に組立てた鉄筋を移動のために登り降りさせないこと。組立てた鉄筋上を歩行するときは、踏み抜き、転倒を防止するために歩み板を敷く等により、作業通路を確保すること。→E 9.3.2(3)(b)に規定済み

(c) 鉄筋を運搬するときは、原則として 2 本の玉掛けワイヤーロープによりバランスを取って玉掛すること。やむを得ず垂直吊りをするときは、鉄筋の抜け落ちを防止する措置を講じること。→E 9.3.2(2)(b)に規定済み

(d) 組立図にもとづき、鉄筋の転倒・倒壊の防止のための仮支え、筋交い等を配置すること。→E 9.3.2 (3)(c)に規定済み 風雨による鉄筋の転倒・倒壊のおそれがあるときは、組立て作業を中止すること。風雨の後は鉄筋の状態を検査し、異常があるときは作業を中止すること。→9.3.2(3)(d)に追記済み。

(e) やむをえない場合を除いて、上下作業は行ってはならない。→E 9.3.2(3)(e))に規定済み

(f) 作業通路に面した鉄筋の端部には、作業員の突刺し、裂傷の危険防止のために、鉄筋防護キャップを設置する等の措置を講じること。→E 9.3.2(3)(f)に規定済み

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle suspend reinforcement horizontally maintaining the balance by using two rigging slings or wire ropes; and

(c) When transporting to the working location use flatbed trailers, ensure that the trailer is of sufficient length to avoid any overhang; where exceptional lengths of reinforcement are being

JC: changed.

	(f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.	**9.4 FORMWORK (INCLUDING FALSEWORK)**	(f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.
9.5 型枠及び型枠支保工作業		9.4.1. General	

請負者は、型枠及び型枠支保工の組立て、解体の作業を行うときは、次の措置を講じなければならない。

(1) 型枠及び型枠支保工の設計のときには本仕様書7.1.3[仮設工事の設計及び設計照査]を遵守し、設計すること。→E 9.4.2(1)に規定済み

(2) 型枠及び型枠支保工の施工のときには本仕様書7.1.4[仮設工事の施工、使用、解体]を遵守し、施工すること。→E 9.4.2(1)に規定済み

(3) 型枠及び型枠支保工の組立、解体作業は、施工計画及び組立図に従い行うこと。→規定無し。理由：共通事項として 9.1.1(2)に規定済。→規定不要。

(4) 型枠及び型枠支保工の材料は、材料仕様書に記載の請負者が計画した品質の材料を使用するものとし、ひび割れ、変形又は腐食等のある不適切な材料を使用しないこと。E 9.4.3(4)に規定済み

(5) 型枠及び型枠支保工の組立、解体作業を行うときには本仕様書 2.3[立入禁止の措置]を遵守し、当該作業に従事する者以外の立ち入りを禁止すること。→E 9.4.3(1)に規定済み

(6) 作業員の転倒防止のために、型枠及び型枠支保工の組立て前、及び解体後の材料は、整理整頓して仮置きすること。→E 9.4.3(3)に規定済み

(7) 型枠及び型枠支保工又はその材料を運搬するときは、それらの重量の確認や揚貨機械の作業半径の確認を行い、本仕様書 6.4.1[移動式クレーンの配置と据付]を遵守し、揚貨機械の転倒を防止すること。→規定無し。理由：共通事項のため。→規定不要。

(8) 大型型枠の作業では、突風や強風による型枠のあおられによる大型型枠の突然の動きによる作業員の挟まれを防止するため、挟まれの危険のある場所に作業員を立入らせないこと。→E 9.4.3(6)に規定済み

(9) 型枠パネルは水平にして仮置きすること。解体後の型枠材から露出した釘、針金等の突起物による作業員の踏抜き、裂傷等の危険の防止のために、解体後すみやかに突起物を取り除く、又は折り曲げる等の措置を講じること。→E 9.4.4(2)&(3)に規定済み

(10) 型枠支保工の組立、解体作業にあたっては、当作業に関する特別な教育を受講しかつ経験のある作業主任を配置し、作業を直接指揮させること。→規定無し。理由：共通事項のため。→規定不要。

9.4. FORMWORK (INCLUDING FALSEWORK)

9.4.1. General

Any reference to “formwork” in this Section shall also be deemed to include reference to the associated falsework for that formwork.

9.4.2. Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3. Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided.

Any reference to “formwork” in this Section shall also be deemed to include reference to the associated falsework for that formwork.

9.4.2. Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3. Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided.

JC: “in known positions”が分かりません。
This phrase “in known positions” is not understandable.
NK: It means that equipment should be placed at or moved to the predetermined places.
Modified.

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3. Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment ~~in known positions,~~ at predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided.

	(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.	~~risk of collapse or fall by providing adequate restraints.~~ JC: (2)、(3)は両方とも整理整頓に関する概念なので、統合してください。例えば working area including storage area など。 Clause (2) & (3) are both regarding to concept of organizing work area, thus, unify them one clause by stating "working area including storage area." NK: As commented, added the phrase in (2) and delete (3).	
	(4) Ensure that the formwork is free from cracks, defects and deformation. Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers.	(4) Ensure that the formwork is free from cracks, defects and deformation. Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely ~~and that is does not cause any obstruction to the passage of other workers.~~ JC: 鉄筋コンクリートを支保することが優先されるべきで、他作業員の通行を考慮することは2次的規定で、逆に通行禁止措置が必要になる。 Supporting the reinforcing concrete shall be given priority. The consideration of obstruction of passage of workers is secondary requirement. Therefore, deleted. Reversely, prohibition of passage is necessary. NK: deleted as commented and modified to delete two "ensure".	(3) Ensure that the formwork is free from cracks, defects and deformation, ~~Ensure that~~ scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ~~ensure that~~ and the load is distributed safely.
	(5) Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.	(5) Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.	(4) Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.
	9.4.4. Safety Measures during Dismantling and Removal Stage	9.4.4. Safety Measures during Dismantling and Removal Stage	9.4.4. Safety Measures during Dismantling and Removal Stage
	(1) Unless otherwise specified, ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.	(1) ~~Unless otherwise specified, ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.~~ The formwork shall be dismantled in accordance with the relevant provision in the Contract. JC: Time for removal of falsework and formwork は specification に規定されているべきで、Engineer の確認があることが通常。従って HSO に関する明示的な記載は不要。 It is common practice to stipulate the time for removal of falsework and formwork requiring confirmation by the Engineer in the specification. It is not necessary to state about the HSO. NK: As commented, the clause (1) is modified.	(1) The formwork shall be dismantled in accordance with the relevant provision in the Contract.
	(2) After dismantling, stack formwork panels horizontally to avoid overturning being affected by strong wind or other loads; and	(2) After dismantling, stack formwork panels horizontally to avoid overturning being affected by strong wind or other loads; and JC: 日本語版 10.5 の(8)、(9)を纏めた規定のようですが、日本語原文から趣旨がずれているようです。 ついては、この(2)と(3)を統合させて、水平の仮置きおよび踏み抜き防止の趣旨となるように書き直してください。	(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is
	(3) The protruding nails, wires, projecting		

	members and splinters on the formwork dismantled shall be removed or bended to avoid injury to workers and other persons.	Clause (2) seems to be a provision combined 10.5 (8) & (9) together, however the requirement is deviated from the original one. Please express the requirement of placing the form materials horizontally and preventing accidents from protruding nails etc.by unifying (2) and (3). NK: Clause 10.5 (8), (9) in Japanese version stipulate different matters each other. Thus, it is better to modify (2) and (3) reflecting the concept of Japanese relevant clauses. Not only large formwork panels but also any form panels have risk to hit workers. Not specified for large panels. MD will review these sentences. (3) The protruding nails, wires, projecting members and splinters on the forms dismantled shall be removed or bended to avoid injury to workers and other persons.	suddenly moved by the strong wind. (3) After dismantling, the form panels shall be stacked horizontally to avoid overturning; and (4) The protruding nails, wires, projecting members and splinters on the forms dismantled shall be removed or bended to avoid injury to workers and other persons.

9.2 PARTICULAR SAFETY MEASURES FOR INSITU CONCRETE WORK The following safety requirements are additional to the general requirements described in other Chapters. 9.1.1. Safety Measures at Planning Stage (1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner. (2) The Contractor shall plan the method of insitu concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable construction tolerances specified in the contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. 9.1.2. Safety Measures ~~during~~ for Concrete Placement The Contractor shall: (1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.	**9.2 PARTICULAR SAFETY MEASURES FOR INSITU CONCRETE WORK** The following safety requirements are additional to the general requirements described in other Chapters. 9.2.1 Safety Measures at Planning Stage (1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner. (2) The Contractor shall plan the method of insitu concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable construction tolerances specified in the contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. JC2: 飛来・落下の項で主として想定しているのは、固形物による衝撃であり、剥離剤による皮膚の炎症等の化学的被害ではありません。追記願います。 The above is measures to avoid injuries by falling objects (solid ones) but not chemical injuries on skins or other parts of body by concrete form release agent. Please specify regarding prevention of damage due to use of release agent. NK: 作業員及び第三者に対する安全措置について右(3)のように追加します。 A new clause is added to specify measures for workers and the third parties when using concrete form release agents. コンクリート剥離剤を使用するときは、作業員に保護眼鏡、ゴム手袋等の個人用保護具を使用しなければならない。第三者に剥離剤がかかる可能性がある場合には、剥離剤の飛散を防ぐ対策を講じるとともに、必要に応じて立入禁止区域を設定し誘導員を配置しなければならない。 9.2.2 Safety Measures ~~during~~ for Concrete Placement The Contractor shall: (1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) The Contractor shall plan the method of cast-in-place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable ~~construction~~ tolerances specified in the Contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. (3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those person from entering the area. 9.2.2 Safety Measures for Concrete Placement The Contractor shall: (1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out

(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement. Some materials for falseworks shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

9.1.3. Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of insitu concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and:

(a) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

(b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances;

(4) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and trucks or collapse of ground.

repairs and reinspect before resuming.

(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement. ~~Some~~ Additional materials ~~for falseworks~~ shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation. (JC3&4))

JC3: 普通単に in accordance with といっており、ここだけ exact というのもおかしい。削除する。
In other places, the phrase of "in accordance with" is used, not "in exact accordance with". Please delete "exact".

NK: "exact" is deleted. Some deletion and change have ben made by JICA as right.

JC4: JC revised.

9.2.3 Safety Measures for ~~Placement by~~ Concrete Pumping

The Contractor shall take the following safety measures for delivery of insitu concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~. If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~ (JC5)

JC5: The latter half of clause (1) is deleted by JICA.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and:

(a) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom; (JC6)

~~(b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances;~~

JC6: この話は 3 章とは関係ないので独立させました。また、(b)は削除。
The sub-clause (a) is irrelevant to Chapter 3. Thus (a) becomes (3) as independent clause and sub-clause (b) is deleted.

NK: Modified as JICA commented.

(4) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and trucks or collapse of ground.

(5) Fully extend outriggers and ensure stability of pumping equipment

repairs and reinspect before resuming.

(3) Place the concrete in ~~exact~~ accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement. ~~Some~~ Additional materials ~~for falseworks~~ shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

9.2.3 Safety Measures for ~~Placement by~~ Concrete Pumping

The Contractor shall take the following safety measures for delivery of cast-in-place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

~~(b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances;~~

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(5) Fully extend outriggers and ensure stability of pumping equipment and trucks at all times.

(6) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ~~mixer trucks~~ ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(7) Never allow workers to stand between ~~mixer trucks~~ ready-mixed concrete trucks and pumps when trucks are reversing.

(8) Take care to avoid the risk of any accident when moving the boom and ensure that workers are out of the path of the boom.

(9) Never allow workers open a pressurised concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure.

(10) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged.

9.1.4. Safety Measures for Ready-mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete ~~mixer~~ trucks in the transportation and delivery of ~~insitu~~ ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ~~mixer~~ ready-mixed concrete trucks during delivery and discharge to maintain safety and trucks at all times.

(6) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ~~mixer trucks~~ ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(7) Never allow workers to stand between ready-mixed concrete trucks and pumps when trucks are reversing.

(8) ~~Take care to avoid the risk of any accident when moving the boom~~ and ensure that workers are out of the path of the boom. (JC7)

JC7: リスクは回避できないので、この部分の記述は不要です。左記のように変えてよいと思います。
As it is not possible to “avoid a risk”, this part is not necessary. Please change the sentence as right.

NK: Changed as JICA commented.

(9) Never allow workers open a pressurised concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure. (JC8)

JC8: 異常が発生したときの対処は下に記載があるので、この部分は削除します。(9)は右のように変更します。
Measures for occurrence of an abnormality are stated below. Clause (9) is changed as right.

NK: Changed as JICA commented.

(10) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects. (JC9)

JC9: 今時はエアで洗浄をするということはないので、削除させていただきます。
Nowadays, cleaning with compressed air is not used. Thus, this clause is deleted.

NK: Deleted as JICA commented.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged.

9.2.4 Safety Measures for Ready-mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of ~~insitu~~ ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when trucks are reversing.

(9) ~~Take care to avoid the risk of any accident when moving the boom and~~ Ensure that workers are out of the path of the boom when moving the boom.

(10) ~~Never allow workers open a pressurised concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure~~.
If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after release the pressure inside in accordance with predetermined procedure.

~~(11) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.~~

(12) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(13) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(14) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(15) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged.

9.2.4 Safety Measures for Ready-mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent

and prevent overturning. (2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ~~mixer~~ ready-mixed concrete trucks and that they are prevented from looking into the drum. 9.1.5. Safety Measures for use of Concrete Buckets The Contractor shall take the following measures when using concrete buckets for hoisting and placement of concrete: (1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters; (2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge. (3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete. (4) Prevent persons or workers from entering the places below bucket. (5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge. 9.1.6. Safety Measures for use of Concrete Vibrators The Contractor shall take the following measures when using concrete vibrators for compacting of insitu concrete: (1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment]. (2) Ensure that workers are provided with and that they wear anti-vibration gloves.	(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks ~~and that they are prevented from looking into the drum~~.(JC10) JC10: JICA deleted. 9.2.5 Safety Measures for use of Concrete Buckets The Contractor shall take the following measures when using concrete buckets for hoisting and placement of concrete: (1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters; (2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge. (3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete. (4) Prevent persons or workers from entering the places below bucket. (5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge. 9.2.6 Safety Measures for use of Concrete Vibrators The Contractor shall take the following measures when using concrete vibrators for compacting of insitu concrete: (1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment]. (2) Ensure that workers are provided with and that they wear anti-vibration gloves. (JC10) JC10: 振動による被害軽減にはなるけど、防止グローブだけつければ良いというものではないので「振動による健康被害を予防するため、」を一言入れた方が良いかも。(騒音とかと類似)騒音被害(JSSS2.1.4 (2) と横並びで、振動被害防止のため、という言葉を入れました。 A phrase “To prevent vibration damage to workers” is inserted to coincide with JSSS 2.1.4 (2). NK: Modified as JICA commented.	overturning. (2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks ~~and that they are prevented from looking into the drum~~. 9.2.5 Safety Measures for use of Concrete Buckets The Contractor shall take the following measures when using concrete buckets for hoisting and placement of concrete: (1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters; (2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge. (3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete. (4) Prevent persons or workers from entering the places below bucket. (5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge. 9.2.6 Safety Measures for use of Concrete Vibrators The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in-place concrete: (1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment]. (2) To prevent vibration damage to workers, provide workers with anti-vibration gloves and ensure that those gloves are properly used. ~~Ensure that workers are provided with and that they wear anti-vibration gloves~~.
9.3 REINFORCEMENT 9.3.1. Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing ~~and erection~~ and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. (2) Inform all relevant workers of the content of the Safety Plan,	**9.3 REINFORCEMENT** 9.3.1. Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. (2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.	**9.3 REINFORCEMENT** 9.3.1. Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. (2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

Method Statement and assembly drawings.

9.3.2. Safety Measures at Fabrication and Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting and fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle suspend reinforcement horizontally maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers, ensure that the trailer is of sufficient length to avoid any overhang; where exceptional lengths of reinforcement are being transported and overhang is unavoidable, ensure that the overhang complied with local regulations and provide appropriate warning signs and lighting to remove all risk of impact collision with other vehicles, persons and workers.

9.3.2. Safety Measures at Fabrication and Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting and fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints. (JC11)

JC11: JICA modified.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle suspend reinforcement horizontally maintaining the balance by using two rigging slings; and (JC12)

JC12: 意味がわかりません。わかるように修正願います。
The meaning of this sentence is not clear. Please modify it to become more understandable.

NK: 右のように修正しました。 Modified as right.

(c) When transporting to the working location use flatbed trailers, ensure that the trailer is of sufficient length to avoid any overhang; where exceptional lengths of reinforcement are being transported and overhang is unavoidable, ensure that the overhang complied with local regulations and provide appropriate warning signs and lighting to remove all risk of impact collision with other vehicles, persons and workers. (JC13)

JC13: トレーラーの長さを調整するのではなく、鉄筋の長さを調整するのだと思います。英語については適宜修正してください。
It wouldn't be right to adjust the length of trailer instead of length of reinforcing bars. Please modify the sub-clause.

NK: ODA の現場では、鉄筋は最大長 12m が一般的であり、このれらの鉄筋を設計に合わせて切断します。請負者は残余が出ないように工夫して鉄筋を切断します。トレーラー長に合わせて鉄筋を切断することはないため、長さ

9.3.2. Safety Measures at Fabrication and Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting and fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner ~~and ensure that there is no risk of~~ to prevent collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle ~~suspend reinforcement~~ hoist the bundle of reinforcing bars keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars; ~~where exceptional lengths of reinforcement are being transported and overhang is unavoidable, ensure that the overhang complied with local regulations and provide appropriate warning signs and lighting to remove all risk of impact collision with other vehicles, persons and workers. When transporting to the working location by trailers, adjust length of reinforcement so as to respect the local regulation in terms of overhanging.~~ Provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing: (a) Prepare proper temporary access to and support for the assembly of reinforcement and for fixing the reinforcement in position; (b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use; (c) Ensure that assembly is in exact accordance with the assembly drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse; (d) When there is a risk of the falling and collapsing of reinforcement under assembling by wind and rain, stop the assembly work. After strong wind and heavy rain, inspect the reinforcement under assembling and stop the assembling work when abnormality is found; (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [Working Above or Below Others]; and (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.	にあったトレーラーを調達することが運搬業者の責任と考えます。 日本の場合、次の規則があります。 *セミトレーラ連結車の車両制限令の長さの特例* *高速自動車国道　１６．５ｍ（積載する貨物が被けん引車の車体の前方又は後方にはみ出していないもの）* *指定道路、その他の道路…１２ｍ　（これを超える車両は、特殊車両通行許可が必要である。）* 運搬に関しては交通規則に従うと規定することで良いと考えますので、右のように変更致します。 At ODA sites, re-bars are 12 m generally in longest. The Contractor cuts the re-bars following the design but not depending on the length of trailer. The Contractor shall select trailer to transport depending on the length of re-bars. In Japan, trailers of 16.5 m without overhanging of goods can run highway and those of 12 m on public roads. It needs special permission on public roads in case longer than 12 m. The (d) specify not to be overhang and following the traffic regulations as right. (3) Fixing and Placing: (a) Prepare proper temporary access to and support for the assembly of reinforcement and for fixing the reinforcement in position; (b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use; (c) Ensure that assembly is in exact accordance with the assembly drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse; (d) When there is a risk of the falling and collapsing of reinforcement under assembling by wind and rain, stop the assembly work. After strong wind and heavy rain, inspect the reinforcement under assembling and stop the assembling work when abnormality is found; (JC14) JC14: 単数形の risk を使うかどうかも考えた方が良いかと It is better reconsider use of the word “a risk” in singular form. NK: JICA のコメントに従い右のように変更しました。 Changed as right in accordance with the suggestion by JICA To MD, please review this comment. (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [Working Above or Below Others]; and (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.	(3) Fixing and Placing: (a) Prepare proper temporary access to and support for the assembly of reinforcement and for fixing the reinforcement in position; (b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use; (c) Ensure that assembly is in exact accordance with the assembly drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse; (d) When there is ~~a risk~~ danger of the falling and collapsing of reinforcement under assembling by wind and rain, stop the assembly work. After strong wind and heavy rain, inspect the reinforcement under assembling and stop the assembling work when abnormality is found; (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [Working Above or Below Others]; and (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.
9.4 FORMWORK (INCLUDING FALSEWORK) 9.4.1. General Any reference to “formwork” in this Section shall also be deemed to include reference to the associated falsework for that formwork.	**9.4 FORMWORK (INCLUDING FALSEWORK)** 9.4.1 General Any reference to “formwork” in this Section shall also be deemed to include reference to the associated falsework for that formwork.	**9.4 FORMWORK (INCLUDING FALSEWORK)** 9.4.1 General Any reference to “formwork” in this Section shall also be deemed to include reference to the associated falsework for that formwork.

9.4.2. Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3. Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment ~~in known positions,~~ at predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided.

(3) Ensure that the formwork is free from cracks, defects and deformation, ~~Ensure that~~ scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ~~ensure that~~ and the load is distributed safely.

(4) Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.

9.4.2 Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment at predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided. (JC15)

JC15: 解体のところに入っていた事項ですが、組み立ての時にも必要な事項なので、文章を修正の上、こちらに移しました。(項目 9.4.4 (2)を 9.4.3 に(3)として移動。)
The new clause (3) is moved from 9.4.3 (2) because this should include the common safety measures at assembling stage.

NK: コメントに従い、移動、修正しました。
Th e clause is moved and the sentence is modified as commented by JICA.

(3) Ensure that the formwork is free from cracks, defects and deformation, scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ~~ensure that~~ and the load is distributed safely. (JC16)

JC16: Ensure that でつないでいく文が長くなるので、型枠に瑕疵がない、という部分を切り離しました。
As the sentence is too long, the part that formwork is free from defects is separated.

NK: コメントに従い、項目を 2 つに分割しました。
The clause is divided into two clauses as right (4) & (5).

(4) Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided. (JC17)

JC17: 強風がふいているときは型枠の資材のつり上げ作業をやめろというのが趣旨だ

9.4.2 Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment at predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a ~~separate~~ designated area ~~and ensure the area is safe and that the risk of workers falling or tripping is avoided~~.

(3) When assembling and ~~dismantling~~ disassembling the formwork, prohibit the workers from entering the area subject to risk of being hit or struck by the panel which is suddenly moved by strong wind.

(4) Ensure that the formwork is free from cracks, defects and deformation,

(5) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, and that the load is distributed evenly and within the allowable stress of formwork.

(6) ~~Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided~~.
When hoisting operation is carried out for largen sized formwork

	と思います。ですので、Ensure that formwork is restrained というのは関係ないと思います。また、システム型枠（system formwork）に関連する事象として記載することを検討ください。 Hoisting of formwork must be stopped when strong wind is blowing. Therefore, restraining formwork is not relevant in this case. Please consider to describe for a case of "System Formwork". NK: 右の(6)ように、大型パネルの吊り上げ作業には全ての必要な対策をとることとの表現に修正することを提案します。 When hoisting operation is carried out for largen sized formwork panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided	panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.
9.4.4. Safety Measures during Dismantling and Removal Stage	9.4.4 Safety Measures during Dismantling and Removal Stage (JC18)	9.4.4 Safety Measures during ~~Dismantling~~ Disassembling and Removal Stage
(1) The formwork shall be dismantled in accordance with the relevant provision in the Contract.	JC18: Dismantling は Disassembling に、他の箇所も同様に変えてください。 Please change the term "dismantle" to "disassemble" for other parts as well. NK: コメントし従い変更しました。 Changed as commented. (1) The formwork shall be dismantled in accordance with the relevant provision in the Contract.	(1) The formwork shall be ~~dismantled~~ disassembled in accordance with the relevant provision in the Contract.
(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is suddenly moved by the strong wind.	(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is suddenly moved by the strong wind. (JC19)	~~(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is suddenly moved by the strong wind.~~
	JC19: 項目(2)は 9.4.3 (3) に移動。文章を組立ても含めように修正。 Clause (2) is moved to 9.4.3 as (3). The sentence is modified so as to include assembling.	
(3) After dismantling, the form panels shall be stacked horizontally to avoid overturning; and	(3) After dismantling, the form panels shall be stacked horizontally to avoid overturning; and	(3) After ~~dismantling~~, disassembling the form panels shall be stacked horizontally to avoid overturning; and
(4) The protruding nails, wires, projecting members and splinters on the forms dismantled shall be removed or bended to avoid injury to workers and other persons.	(4) The protruding nails, wires, projecting members and splinters on the forms dismantled shall be removed or bended to avoid injury to workers and other persons.	(4) The protruding nails, wires, projecting members and splinters on the forms ~~dismantled~~ disassembled shall be removed or bended to avoid injury to workers and other persons.

CHAPTER 9 CONCRETE WORKS **9.1. GENERAL** 9.1.1. Scope (1) This Chapter specifies the safety requirements for Concrete Works which shall include: (a) ~~Insitu~~ Cast-in-place (poured or pumped) concrete; JC1: 8 章では Cast in place となっているので、統一してください。 The term “insitu” is not used in Chapter 8 but “cast-in-place”. It is necessary to determine which should be used. NK: “Cast-in-place” is more commonly used. Replaced all insitu with cast-in-place in this Chapter. (b) Reinforcement (reinforcing bar and fabric reinforcement); (c) Formwork (including associated falsework); and hereinafter collectively referred to as “Concrete Works”. (2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are	**CHAPTER 9 CONCRETE WORKS** **9.1 GENERAL** 9.1.1 Scope (1) This Chapter specifies the safety requirements for concrete works which include: (a) ~~In situ Concrete~~ Cast-in place (poured or pumped) concrete; *I have changed this throughout but please note that In-situ Concrete is an internationally accepted term and it is also defined in BS 6100 (in-situ concrete (01)6.4.20).* (b) Reinforcement (reinforcing bar and fabric reinforcement); (c) Formwork (including associated falsework); and which are hereinafter collectively referred to as “Concrete Works”. (2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are	**CHAPTER 9 CONCRETE WORKS** **9.1 GENERAL** 9.1.1 Scope (1) This Chapter specifies the safety requirements for concrete works which include: (a) Cast-in place (poured or pumped) concrete; (b) Reinforcement (reinforcing bar and fabric reinforcement); (c) Formwork (including associated falsework); and which are hereinafter collectively referred to as “Concrete Works”. (2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS. Additional particular requirements are contained in this Chapter.

described in other Chapters of JSSS. Additional particular requirements are contained in this Chapter. 9.1.2. Safety Plan and Instructions to Workers ~~(1) Prepare a safety plan describing the safety requirements for Concrete Works and inform all relevant Contractor's Personnel of the content and requirements.~~ Prepare a safety plan describing the safety requirements for Concrete Works and inform all workers engaging in the Concrete Works of the content and requirements. Such a safety plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy stuff, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number ~~ow~~ of workers) JC1: all relevant personnel では定かではないので all workers engaging in the Concrete Works に。 Isn't "all relevant personnel" clearly understood? "all workers engaging in the Concrete Works" is more appropriate. NK1: Modified as commented. (2) Plan the execution of all Concrete Works including handling of reinforcement and formwork panels by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.	described in other Chapters of JSSS. Additional particular requirements are contained in this Chapter. 9.1.2 Safety Plan and Instructions to Workers Prepare a Safety Plan describing the safety requirements for Concrete Works and inform all workers engaged in the Concrete Works of the content and requirements. The Safety Plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy items, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number of workers). *Revised as requested; edited*	9.1.2 Safety Plan and Instructions to Workers Prepare a Safety Plan describing the safety requirements for Concrete Works and inform all workers engaged in the Concrete Works of the content and requirements. The Safety Plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy items, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number of workers).
9.2. PARTICULAR SAFETY MEASURES FOR ~~INSITU~~ CAST-IN-PLACE CONCRETE WORK The following safety requirements are additional to the general requirements described in other Chapters. 9.2.1. Safety Measures at Planning Stage JC1: 第三者に剥離剤がかかる可能性があるような場合は、その剥離剤は無害なものでなくてはならない、といったことが書かれている MTR 9.7 項 Release Agent (6)を規定すべき？ It is suggested to stipulate "When release agent may splash on third parties, such agent shall be harmless one to human" such as specified in MTR 9.7 [Release Agent] (6)? NK: 剥離剤は、GC 1.1.5.2 で定義の Goods の一つであり、これが第 3 者へ掛かる被害防止は、JSSS の 2.6 FALLING OBJECTS の 2.6.1.General の規定で網羅されると考える。この特別な措置は規定しないこととする。 Release Agent is one of Goods defined in GC 1.1.5.2 and measures for such splash on the third parties is specified in JSSS, 2.6 FALLING OBJECTS, 2.6.1.General Therefore, it is not appropriate to stipulate too much in details. Leave as it is. (1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner. (2) The Contractor shall plan the method of ~~insitu~~ cast-in-place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable ~~construction~~ tolerances specified in the Contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. JC1: deleted and added.	**9.2 PARTICULAR SAFETY MEASURES FOR CAST-IN PLACE CONCRETE WORK** The following safety requirements are additional to the general requirements described in other Chapters. 9.2.1 Safety Measures at Planning Stage (1) The Contractor shall plan all Concrete Works so that they are executed in a safe and methodical manner. (2) The Contractor shall plan the method of cast-in place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid deformation beyond allowable tolerances specified in the Contract. any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. *Revised as requested; and edited. If this adjustment remains (which I do not recommend) "Contract" could be changed to "Particular Safety Specification" but this is still not correct.* *I do not agree with or recommend this change. It is not correct and not good practice to mention "allowable" tolerances for formwork and falsework deformation in this manner.* *Please note that the "tolerances" are usually specified for the finished permanent works (i.e. the concrete) dimensions, not the tolerances in the formwork and falsework during concrete pouring.* *The falsework is temporary work and therefore 100% contractor design responsibility, he also selects the formwork and falsework materials and designs*	**9.2 PARTICULAR SAFETY MEASURES FOR CAST-IN PLACE CONCRETE WORK** The following safety requirements are additional to the general requirements described in other Chapters. 9.2.1 Safety Measures at Planning Stage (1) The Contractor shall plan all Concrete Works so that they are executed in a safe and methodical manner. (2) The Contractor shall plan the method of cast-in place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid deformation beyond allowable tolerances specified in the Contract, any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. (3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those persons from entering the area.

JC2: 飛来・落下の項で主として想定しているのは、固形物による衝撃であり、剥離剤による皮膚の炎症等の化学的被害ではありません。追記願います。
The above is measures to avoid injuries by falling objects (solid ones) but not chemical injuries on skins or other parts of body by concrete form release agent. Please specify regarding prevention of damage due to use of release agent.

NK: 作業員及び第三者に対する安全措置について右(3)のように追加します。
コンクリート剥離剤を使用するときは、作業員に保護眼鏡、ゴム手袋等の個人用保護具を使用しなければならない。第三者に剥離剤がかかる可能性がある場合には、剥離剤の飛散を防ぐ対策を講じるとともに、必要に応じて立入禁止区域を設定し誘導員を配置しなければならない。
A new clause (3) is added to specify measures for workers and the third parties when using concrete form release agents.

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those person from entering the area.

9.2.2. Safety Measures ~~during~~ for Concrete Placement

JC1: revised.

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

JC1: 鉄筋を見てもわからないのではないか。除外。
型枠全体が崩壊することがないようにプランニングされていることが前提なので、evacuation に関する記載は不要。その代わりに追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。
It may be able to find any defect by the inspection of reinforcement. It is assumed that the entire formwork is planned so as not to collapse entirely, so it is not necessary to specify about evacuation. In stead of this phrases, please add a provision to (3) that additional materials for false works shall be on standby and used for reinforcing formworks in case of local deformation of the formwork.

NK: 鉄筋の結束や支持が十分に行われない場等があることから、削除は不要と考えます。
ベトナム国のカントー橋のコンクリート打設作業中の事故は、型枠支保工、型枠、鉄筋の全体が崩壊した事故です。崩壊しないようにプランニングされていても、このような事故が発生しないように、打設前、及び打設中の点検し、不備がある場合は万一の重大事故のリスクを想定し、コンクリート打設の中止、作業員の撤去を行うべきと考えます。
そのため、本(1)は原文通りとすることを提案します。追加し補材の準備は(3)に追記します。
We consider the deletion of reinforcement is not necessary because there are sometimes improper fixing and supporting of re-bars.
The collapse accident of Canto bridge in Vietnam occurred during concrete placing.

these temporary structures. He also chooses and controls the volumes, rates and methods of pouring so he is the only party that can design the formwork and falsework and decide if it is structurally capable of supporting his work.

Only the Contractor can decide what (if any) tolerances shall be included in his formwork and falsework design and usually his design should allow for deformation so that the finished concrete dimensions are correct.

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those persons from entering the area.

Revised as requested; edited.

However please note that this would be better included in measures for placement not measures at planning stage. I had also recommended protective footwear (rubber boots) as this is often necessary in developing countries.

9.2.2. Safety Measures for Concrete Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

~~(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement to avoid any deformation, damage or collapse of formwork or falsework.~~

(4) Place the concrete in accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement Additional materials shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

I have inserted your alternative clause above but I must state that I do not agree with it. This is a very important safety clause that should include very clear requirements and it should demand the contractor's total compliance.

The concrete pouring should be in "exact" accordance with the MS otherwise formwork and falsework design and construction (see 9.2.1 (2)) is wrong and the formwork and falsework could well fail. The use of the word "exact" is intentional to emphasise this.

The further deleted words change the original meaning and reduce the effectiveness.

The additional words, make it apparent that deformation is acceptable (which it isn't) and that additional "material" (whatever this may mean) is enough to

9.2.2. Safety Measures for Concrete Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

(3) Place the concrete in accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement Additional materials shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

The whole of falseworks, form works and reinforcement collapsed in the accident. Such accident occurred though planning was made to avoid collapse accident. In order to avoid such accident, inspection before and during concrete placing shall be made and specified.
Therefore, (2) is left as it is. Addition to (3) will be made.

(3) Place the concrete in ~~exact~~ accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement ~~to avoid any deformation, damage or collapse of formwork or falsework~~. ~~Some~~ Additional materials ~~for falseworks~~ shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

JC1: deleted and added as commented to (1).
追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。
Added as commented in (2), please add to (3).

JC3: 普通単に in accordance with といっており、ここだけ exact というのもおかしい。削除する。
In other places, the phrase of "in accordance with" is used, not "in exact accordance with". Please delete "exact".

NK: "exact" is deleted. Some deletion and change have ben made by JICA as right.

JC4: JC revised.

~~(4) The Contractor shall be aware of the following common hazards and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:~~

~~(a) Impalement by projecting and unguarded reinforcement:~~

~~The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and~~

~~(b) Impact and entanglement by materials or Contractor's Equipment:~~

~~The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout procedures.~~

~~(c) Exposure of silica dust and Portland cement:~~

~~If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].~~

~~(5) The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.~~

JC1: common hazards というわりには列挙されている事象が特異な事象に限定されているように思います。(a)は 9.3.2 に既に入っています。(b)、(c)は削除してください。
特に(c)は fresh (wet) concrete の打設時の規定として適切ではないです。
These clauses seem special requirements for special issues. (a) is specified in 9.3.2. Please delete (b) and (c).
It is not appropriate as requirement for placing of fresh (wet) concrete.

NK: Deleted.

solve the problem (which it is not). If further temporary props might be required, this does not give confidence in the adequacy of a contractor's design.

Please also refer to my notes against 9.2.1 (2) above.

~~(5) The Contractor shall be aware of the following common hazards and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:~~

~~(a) Impalement by projecting and unguarded reinforcement:~~

~~The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and~~

~~(b) Impact and entanglement by materials or Contractor's Equipment:~~

~~The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout procedures.~~

~~(c) Exposure of silica dust and Portland cement:~~

~~If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].~~

I have deleted the above as you have instructed.

~~The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.~~

I have deleted the above as you have instructed. However, surely this is where your added 9.2.1 (3) should be inserted?

9.2.3. Safety Measures for ~~Placement by~~ Concrete Pumping

JC1: 意味が分からない記述が多いです。具体的には幾つか例示しておきますので（コメント部分）ご参照ください。そのうえで、BS 8476:2007 (購入済み?) Code of practice for the safe use of concrete pumps を参照されながら必要項目を組み立ててください。
There are many statements that are hard to understand in this section. Please see those shown for examples in comments. Some practical examples to be Please reconstruct this section referring to BS 8467:2007 [Code of practice for the safe use of concrete pumps.

NK: BS 8407:2007 was purchased. Review and addition referring to the BS are made as below.

The Contractor shall take the following safety measures for delivery of ~~insitu~~ cast-in-place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

JC5: The latter half of clause (1) is deleted by JICA.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

~~(3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and:~~

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

~~(a) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;~~

JC1: 具体的にどのようなものでしょうか？
What does mean the word "obstruction" to be specific?

NK: The "obstruction" means those items such as Contractor's Equipment, buildings, etc. which may be hit by the pumping equipment.
Added "(Contractor's Equipment,, buildings, etc.)".

~~(b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances;~~

JC6: この話は 3 章とは関係ないので独立させました。また、(b)は削除。
The sub-clause (a) is irrelevant to Chapter 3. Thus (a) becomes (3) as independent clause and sub-clause (b) is deleted.

9.2.3. Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of cast-in place concrete with the use of concrete pumps:

~~(1)~~ Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

I have deleted the above as you have instructed.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

I have reversed these items as you have instructed and added the minor wording as shown.

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when ready-mixed concrete trucks are reversing.

(9) Ensure that workers are out of the path of the boom when moving the boom.

(10) If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after releasing the pressure inside in accordance with the predetermined procedure.

Revised as requested; and edited.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware of the method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting

9.2.3. Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of cast-in place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when ready-mixed concrete trucks are reversing.

(9) Ensure that workers are out of the path of the boom when moving the boom.

(10) If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after releasing the pressure inside in accordance with the predetermined procedure.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware of the method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected so that they do not fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering in front of and below the outlet of

NK: Modified as JICA commented.

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ~~mixer trucks~~ ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between mixer trucks and pumps when and ~~mixer trucks~~ ready-mixed concrete trucks are reversing.

JC1: コンクリートミキサーのバックする時には Spotter を必ず配置することでは？
Doesn't this mean that a spotter shall be placed when a truck mixer is moving backward."?

NK: Placement of Spotters is stipulated in (6). The purpose of (7) is to instruct workers strictly not to stand or walk into the back of the truck when it is moving backward. Leaved as it is.

(9) ~~Take care to avoid the risk of any accident when moving the boom and~~ Ensure that workers are out of the path of the boom when moving the boom.

8. JC7: リスクは回避できないので、この部分の記述は不要です。上記のように変えてよいと思います。
As it is not possible to "avoid a risk", this part is not necessary. Please change the sentence as above.

NK: Changed as JICA commented.

~~(10) Never allow workers to open a pressurised line to prevent concrete from splashing out. Pressurised line shall be opened in accordance with predetermined procedure.~~

~~Never allow workers open a pressurised concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure.~~

If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after release the pressure inside in accordance with predetermined procedure.

JC: 英語では意味が取れない。
The meaning is hard to understand.

NK: 和文 9.6.1(7) (a) & (b)の規定です。
(9) is stipulated in Japanese version 9.6.1(7) (a) & (b).
BS 8407 stipulate as follows:
9.11 If a blockage occurs during the pour, the concrete pump operator should stop pumping immediately and instruct personnel to move to a safe position before attempting to remove the blockage.
9.12 If the concrete pump operator needs to open the delivery pipeline to clear a blockage, they should first release the pressure inside the delivery pipeline as

pump booms are securely connected so that they do not fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering in front of and below the outlet of concrete pump delivery pipes and end hoses to prevent workers being struck by pipes or loose and flailing hoses.

NK please check the above, I have edited but am not completely sure of the full meaning of your added clause.

concrete pump delivery pipes and end hoses to prevent workers being struck by pipes or loose and flailing hoses.

much as possible, e.g. by reversing the pumping action. They have to treat the delivery pipeline as being pressurized at all times. Appropriate and adequate hand and eye protection should be worn when opening the delivery pipeline.
Modified as right and will be reviewed by MD.

JC8: 異常が発生したときの対処は下に記載があるので、この部分は削除します。(9)は右のように変更します。
Measures for occurrence of an abnormality are stated below. Clause (9) is changed as right.
NK: Changed as JICA commented.

~~(11) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.~~

JC9: 今時はエアで洗浄をするということはないので、削除させていただきます。
Nowadays, cleaning with compressed air is not used. Thus, this clause is deleted.
NK: Deleted as JICA commented.

(12) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(13) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(14) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(15) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged. *(Note: MD will review and edit this paragraph as NK added.)*

9.2.4. Safety Measures for ~~Concrete Mixer Trucks~~ Ready-mixed Concrete Trucks

JC1: concrete mixer truck の名称にやや違和感がある。concrete agitator truck と concrete mixer truck の2種類があることを認識したい。そのうえで delivery(transportation), discharge (to concrete pump)に係る安全を規定したい。別添の"Safety in ready mixed concrete industry"が参考になる。
It seems strange to use the term of concrete mixer truck. After acknowledged that there are two terms of concrete agitator truck and concrete mixer truck, safety measures shall be stipulated regarding delivery (transportation), discharge (to concrete pump). "Safety in ready mixed concrete industry" attached herewith can be referred to.
NK: BS8476 uses the following terms:
8.5 concrete-delivery lorries
9.8 ready-mixed concrete truck
9.27 concrete-mixer lorries
Used the term "ready-mixed concrete truck" as commented.

The Contractor shall take the following measures for the ready-mixed concrete ~~mixer~~ trucks in the transportation and delivery of ~~insitu~~ ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ~~mixer~~ ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become

9.2.4 Safety Measures for Ready-Mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of cast-in place concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks and that they are prevented from looking into the drum.

9.2.4 Safety Measures for Ready-Mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of cast-in place concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks and that they are prevented from looking into the drum.

entangled with the rotating drum and other moving parts of ~~mixer~~ ready-mixed concrete ~~t~~trucks~~. and that they are prevented from looking into the drum~~.

JC10: JICA deleted.

9.2.5. Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of ~~insitu~~ concrete:

JC1: deleted

~~(1) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and trucks and ensure there is a Spotter at the point of placement.~~

~~(2) Ensure that Hoisting and Rigging Equipment is suitable for the purpose and adequate for the load.~~

JC1: (1) & (2)はクレーン作業と同一ではないか？クレーン作業のところを引用する形で纏めてください。
Aren't clauses (1) & (2) same as provision for Crane Works? Please simplify it by referring to the relevant clause in Crane Works.

NK: As per the comment, clause (1) & (2) are combined and revised referring to 5.2.6. as below.

(1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters;

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete. *(Note: MD will review and edit this paragraph as NK added.)*

(4) Prevent persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6. Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of ~~insitu~~ cast-in-place concrete:

(1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment]..

JC1: (1)は日本語版どおり、「4.5 を順守し、感電防止の措置を講じること」といった趣旨の規定にしてください。
Please modify this clause with the meaning in Japanese draft such as "take measures for preventing electric shock accidents complying with JSSS 4.5".

NK: added as commented.

(2) ~~Ensure that workers are provided with and that they wear anti-vibration gloves.~~ To prevent vibration damage to workers, provide workers with anti-vibration gloves and ensure that those gloves are properly used.

JC10: 振動による被害軽減にはなるけど、防止グローブだけつければ良いというもので

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of cast-in place concrete:

(1) Comply with JSSS 5.2.6 [*General Safety Measures for Hoisting Operations*] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tools, signals and placement of Spotters.

Revised as requested; and edited.

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of the bucket for discharging concrete.

Revised as requested; and edited.

(4) Prevent any persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in place concrete:

(1) Take all necessary measures to prevent electric shock, complying with JSSS 4.3.12 [*Additional Requirements for Electric Powered Equipment*].

Revised as requested

(2) To prevent vibration injury to workers, provide anti-vibration gloves and ensure that they are properly used.

Revised as requested; and edited.

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of cast-in place concrete:

(1) Comply with JSSS 5.2.6 [*General Safety Measures for Hoisting Operations*] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tools, signals and placement of Spotters.

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of the bucket for discharging concrete.

(4) Prevent any persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in place concrete:

(1) Take all necessary measures to prevent electric shock, complying with JSSS 4.3.12 [*Additional Requirements for Electric Powered Equipment*].

(2) To prevent vibration injury to workers, provide anti-vibration gloves and ensure that they are properly used.

はないので「振動による健康被害を予防するため、」を一言入れた方が良いかも。 （騒音とかと類似）騒音被害（JSSS2.1.4 (2) と横並びで、振動被害防止のため、という言葉を入れました。 A phrase “To prevent vibration damage to workers” is inserted to coincide with JSSS 2.1.4 (2). NK: Modified as JICA commented.		
9.3. REINFORCEMENT 9.3.1 Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing ~~and erection~~ and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. JC1: BS での表現に合わせました。replaced with the expression in BS. NK: replaced with terms in BS 8000-2-2 Workmanship on building sites - Part 2: Code of practice for concrete work - Section 2.2 Sitework with in situ and precast concrete. (2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings. 9.3.2 Safety Measures at Fabrication and ~~Assembly~~ Fixing and Placing Stage JC1: changed. The Contractor shall take the following measures during cutting, bending, transporting and ~~assembling~~ fixing and placing of reinforcement: JC1: changed. (1) Cutting and Bending: (a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]; (b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and (c) Maintain stored reinforcement material in a safe and secure manner ~~and ensure that there is no risk of~~ to prevent collapse or fall by providing adequate restraints. JC11: JICA modified. (2) Transporting: (a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;	**9.3 REINFORCEMENT** 9.3.1 Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. (2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings. 9.3.2 Safety Measures at Fabrication and Fixing and Placing Stage The Contractor shall take the following measures during cutting, bending, transporting, fixing and placing of reinforcement: (1) Cutting and Bending: (a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]; (b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and (c) Maintain stored reinforcement material in a safe and secure manner and prevent collapse or fall by providing adequate restraints. (2) Transporting: (a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers; (b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;	**9.3 REINFORCEMENT** 9.3.1 Safety Measures at Planning Stage The Contractor shall: (1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse. (2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings. 9.3.2 Safety Measures at Fabrication and Fixing and Placing Stage The Contractor shall take the following measures during cutting, bending, transporting, fixing and placing of reinforcement: (1) Cutting and Bending: (a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]; (b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and (c) Maintain stored reinforcement material in a safe and secure manner and prevent collapse or fall by providing adequate restraints. (2) Transporting: (a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers; (b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle ~~suspend reinforcement~~ hoist the bundle of reinforcing bars keeping them horizontal and maintaining the balance by using two rigging slings ~~or wire ropes~~; and

JC1: changed.

JC12: 意味がわかりません。わかるように修正願います。
The meaning of this sentence is not clear. Please modify it to become more understandable.

NK: 上のように修正しました。 Modified as above.

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars; ~~where exceptional lengths of reinforcement are being transported and overhang is unavoidable, ensure that the overhang complied with local regulations and provide appropriate warning signs and lighting to remove all risk of impact collision with other vehicles, persons and workers. When transporting to the working location by trailers, adjust length of reinforcement so as to respect the local regulation in terms of overhanging.~~ Provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

JC13: トレーラーの長さを調整するのではなく、鉄筋の長さを調整するのだと思います。英語については適宜修正してください。
It wouldn't be right to adjust the length of trailer instead of length of reinforcing bars. Please modify the sub-clause.

NK: ODA の現場では、鉄筋は最大長 12m が一般的であり、これらの鉄筋を設計に合わせて切断します。請負者は残余が出ないように工夫して鉄筋を切断します。トレーラー長に合わせて鉄筋を切断することはないため、長さにあったトレーラーを調達することが運搬業者の責任と考えます。
日本の場合、次の規則があります。
セミトレーラ連結車の車両制限令の長さの特例
高速自動車国道 １６．５ｍ（積載する貨物が被けん引車の車体の前方又は後方にはみ出していないもの）
指定道路、その他の道路…１２ｍ （これを超える車両は、特殊車両通行許可が必要である。）
運搬に関しては交通規則に従うと規定することで良いと考えますので、右のように変更致します。
At ODA sites, re-bars are 12 m generally in longest. The Contractor cuts the re-bars following the design but not depending on the length of trailer. The Contractor shall select trailer to transport depending on the length of re-bars.
In Japan, trailers of 16.5 m without overhanging of goods can run highway and those of 12 m on public roads. It needs special permission on public roads in case longer than 12 m.
The (d) specify not to be overhang and following the traffic regulations as right.

(3) ~~Assembly~~ Fixing and Placing:

JC1: changed.

(a) Prepare proper temporary access to and support for the

In principle, hoist the bundle of reinforcing bars, keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars and provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing:

(a) Prepare proper temporary access to and support for fixing and placing reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that fixing and placing is in exact accordance with the fixing and placing drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is any danger of reinforcement falling or collapsing during fixing and placing in wind and rain, stop the fixing and placing work. After conditions improve, inspect the reinforcement and take measures to correct any abnormality before continuing with fixing and placing;

Your original draft used "assembly" but you have now changed this to "fixing and placing". I have therefore corrected the above accordingly

(e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [*Working Above or Below Others*]; and

(f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.

In principle, hoist the bundle of reinforcing bars, keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars and provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing:

(a) Prepare proper temporary access to and support for fixing and placing reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that fixing and placing is in exact accordance with the fixing and placing drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is any danger of reinforcement falling or collapsing during fixing and placing in wind and rain, stop the fixing and placing work. After conditions improve, inspect the reinforcement and take measures to correct any abnormality before continuing with fixing and placing;

(e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [*Working Above or Below Others*]; and

(f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.

assembly of reinforcement and for fixing the reinforcement in position; (b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use; (c) Ensure that assembly is in exact accordance with the assembly drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse; (d) When there is ~~a risk~~ danger of the falling and collapsing of reinforcement under assembling by wind and rain, stop the assembly work. After strong wind and heavy rain, inspect the reinforcement under assembling and stop the assembling work when abnormality is found; *(Note: MD will review and edit this paragraph as NK added.)* JC14: 単数形の risk を使うかどうかも考えた方が良いかと It is better reconsider use of the word "a risk" in singular form. NK: JICA のコメントに従い右のように変更しました。 Changed as right in accordance with the suggestion by JICA To MD, please review this comment. (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [Working Above or Below Others]; and JC1: Non native の人間には"work at levels"が通じない可能性が高いので、work at levels を annex で定義語として規定してください。そのうえで、2.6.5(2.6.6.)に上下作業の規定があるため、それをリファーする形で規定してください。 There is possibility that readers might not understand "work at levels". Please define the term in Annex. In addition, stipulate to refer to JSSS 2.6.5.(2.6.6) NK: Modified and added. (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.		
9.4. FORMWORK (INCLUDING FALSEWORK) 9.4.1. General Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork. 9.4.2. Safety Measures at Planning Stage The Contractor shall: (1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement	**9.4 FORMWORK (INCLUDING FALSEWORK)** 9.4.1 General Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork. 9.4.2 Safety Measures at Planning Stage The Contractor shall: (1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement	**9.4 FORMWORK (INCLUDING FALSEWORK)** 9.4.1 General Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork. 9.4.2 Safety Measures at Planning Stage The Contractor shall: (1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement

or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3. Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment ~~in known positions,~~ at predetermined places, prevent any fall or dropping of material, equipment and tools, offcuts to a ~~separate~~ designated area ~~and ensure the area is safe and that the risk of workers falling or tripping is avoided~~

(3) When assembling and ~~dismantling~~ disassembling the formwork, prohibit the workers from entering the area subject to risk of being hit or struck by the panel which is suddenly moved by strong wind.

JC1: "in known positions"が分かりません。
This phrase "in known positions" is not understandable.

NK: It means that equipment should be placed at or moved to the predetermined places. Modified.

JC15: 解体のところに入っていた事項ですが、組み立ての時にも必要な事項なので、文章を修正の上、こちらに移しました。(項目 9.4.4 (2)を 9.4.3 に(3)として移動。)
The new clause (3) is moved from 9.4.3 (2) because this should include the common safety measures at assembling stage.

NK: コメントに従い、移動、修正しました。
Th e clause is moved and the sentence is modified as commented by JICA.

~~(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.~~

JC1: (2)、(3)は両方とも整理整頓に関する概念なので、統合してください。例えば working area including storage area など。
Clause (2) & (3) are both regarding to concept of organizing work area, thus, unify them one clause by stating "working area including storage area."

NK: As commented, added the phrase in (2) and delete (3).

~~(4) Ensure that the formwork is free from cracks, defects and deformation, Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ensure that and the load is distributed safely. and that is does not cause any obstruction to the passage of other workers.~~

(g) Ensure that the formwork is free from cracks, defects and deformation;

(h) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of

or collapse.

I assume that "assembly" is acceptable here.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area and storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment in predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a designated area.

Revised as requested; and edited.

~~(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.~~

(4) Ensure that the formwork is free from cracks, defects and deformation.

(5) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, that the load is distributed evenly and within the allowable stress of formwork.

Revised as requested; and edited.

(6) During any hoisting operations, ensure that all necessary measures are taken to prevent formwork being affected by wind and that any risk of collision and consequent injury and damage is avoided.

Revised as requested; and edited, however please note:

The addition of "largen sized formwork" is not necessary and has no meaning anyway, even medium or small (however size is defined) should also be considered.

It is not correct to include "system formwork" as an example because this is not an example. The requirement applies to all types of formwork which may be affected by wind including purpose made plywood panels for example

or collapse.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area and storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment in predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a designated area.

(3) Ensure that the formwork is free from cracks, defects and deformation.

(4) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, that the load is distributed evenly and within the allowable stress of formwork.

(5) During any hoisting operations, ensure that all necessary measures are taken to prevent formwork being affected by wind and that any risk of collision and consequent injury and damage is avoided.

supporting the load, and that the load is distributed evenly and within the allowable stress of formwork;

JC1: 鉄筋コンクリートを支保することが優先されるべきで、他作業員の通行を考慮することは2次的規定で、逆に通行禁止措置が必要になる。
Supporting the reinforcing concrete shall be given priority. The consideration of obstruction of passage of workers is secondary requirement. Therefore, deleted. Reversely, prohibition of passage is necessary.

NK: deleted as commented and modified to delete two "ensure".

JC16: Ensure that でつないでいく文が長くなるので、型枠に瑕疵がない、という部分を切り離しました。
As the sentence is too long, the part that formwork is free from defects is separated.

NK: コメントに従い、項目を 2 つに分割しました。
The clause is divided into two clauses as right (4) & (5).

(i) ~~Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.~~ When hoisting operation is carried out for largen sized formwork panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.

JC17: 強風がふいているときは型枠の資材のつり上げ作業をやめろというのが趣旨だと思います。ですので、Ensure that formwork is restrained というのは関係ないと思います。また、システム型枠(system formwork)に関連する事象として記載することを検討ください。
Hoisting of formwork must be stopped when strong wind is blowing. Therefore, restraining formwork is not relevant in this case.
Please consider to describe for a case of "System Formwork".

NK: 右の(6)ように、大型パネルの吊り上げ作業には全ての必要な対策をとることとの表現に修正することを提案します。
When hoisting operation is carried out for largen sized formwork panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided

9.4.4. Safety Measures during ~~Dismantling~~ Disassembling and Removal Stage

JC18: Dismantling は Disassembling に、他の箇所も同様に変えてください。
Please change the term "dismantle" to "disassemble" for other parts as well.

NK: コメントし従い変更しました。 Changed as commented.

To MD: Please review this change because I think the term "dismantle" seems correct word than "disassemble" for this 9.4.4.

(1) ~~Unless otherwise specified, ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.~~ The formwork shall be ~~dismantled~~ disassembled in accordance with the relevant provision in the Contract.

JC1: Time for removal of falsework and formwork は specification に規定されているべきで、Engineer の確認があることが通常。従って HSO に関する明示的な記載は不要。
It is common practice to stipulate the time for removal of falsework and formwork requiring confirmation by the Engineer in the specification. It is not necessary to state about the HSO.

NK: As commented, the clause (1) is modified.

9.4.4 Safety Measures during Dismantling and Removal Stage

Please note that "dismantling" (as used in your original draft) is the correct word and in my opinion should not be changed. It is preferable in this sense to "disassembly".

(1) Ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.

The above requirement is very important for safety purposes and I do not recommend its deletion or amendment. A principle cause of structural collapse is when formwork is dismantled too early. This is often done with no consideration of safety and no involvement of the HSO but is frequently a consequence of speeding-up the work when it is running late.

Also the effect of concrete quality on time of strength achievement should be considered.

The text as I have originally suggested is correct and I do not recommend that it be replaced with your suggestion "The formwork shall be disassembled in accordance with the relevant provision in the Contract". This reduces or even

9.4.4 Safety Measures during Dismantling and Removal Stage

(1) Ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.

(2) After dismantling, stack formwork panels horizontally to avoid overturning due to strong wind or applied loadings; and

(3) Any protruding nails, wires, projecting members and splinters shall be removed or bent flat to avoid injury to workers and other persons.

~~(2) After dismantling, stack formwork panels horizontally to avoid overturning being affected by strong wind or other loads; and~~

~~(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is suddenly moved by the strong wind.~~

JC19: 項目(2)は 9.4.3 (3) に移動。文章を組立ても含めように修正。
Clause (2) is moved to 9.4.3 as (3). The sentence is modified so as to include assembling.

(3) After ~~dismantling~~ disassembling, the form panels shall be stacked horizontally to avoid overturning; and

JC1: 日本語版 10.5 の(8)、(9)を纏めた規定のようですが、日本語原文から趣旨がずれているようです。
ついては、この(2)と(3)を統合させて、水平の仮置きおよび踏み抜き防止の趣旨となるように書き直してください。
Clause (2) seems to be a provision combined 10.5 (8) & (9) together, however the requirement is deviated from the original one.
Please express the requirement of placing the form materials horizontally and preventing accidents from protruding nails etc.by unifying (2) and (3).

NK: Clause 10.5 (8), (9) in Japanese version stipulate different matters each other. Thus, it is better to modify (2) and (3) reflecting the concept of Japanese relevant clauses.
Not only large formwork panels but also any form panels have risk to hit workers. Not specified for large panels.

MD will review these sentences.

(4) The protruding nails, wires, projecting members and splinters on the formwork ~~dismantled~~ disassembled shall be removed or bended to avoid injury to workers and other persons.

negates the meaning of the original text.

I am aware that technical specifications commonly describe period for curing of concrete and indicative or minimum periods before dismantling formwork but this is Temporary Works for which the responsibility rests with the contractor irrespective of what may be stated there. It is not a duty or obligation of the Employer or Engineer to advise or instruct.

(2) After dismantling, stack formwork panels horizontally to avoid overturning due to strong wind or applied loadings; and

I suggest the above change

(3) Any protruding nails, wires, projecting members and splinters shall be removed or bent flat to avoid injury to workers and other persons.

JSSS in English R3 for Issue 2（2020/4/29）

JC1&2: JICA comment Issue 1 & R2, NK1 &2: NK Comment 1 to Issue1 & R2

9. CONCRETE WORKS

9.1 GENERAL

9.1.1 Scope

(1) This Chapter specifies the safety requirements for Concrete Works which shall include:

(a) ~~Insitu~~ Cast-in-place (poured or pumped) concrete;

JC1: 8 章では Cast in place となっているので、統一してください。
The term “insitu” is not used in Chapter 8 but “cast-in-place”. It is necessary to determine which should be used.

NK: “Cast-in-place” is more commonly used. Replaced all insitu with cast-in-place in this Chapter.

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and hereinafter collectively referred to as “Concrete Works”.

(2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

~~(1) Prepare a safety plan describing the safety requirements for Concrete Works and inform all relevant Contractor’s Personnel of the content and requirements.~~

JSSS in English Issue 3 (2020/5/4 by MD) With comments by MD

MD Comments NK6/23: Comments

9. CONCRETE WORKS

9.1 GENERAL

9.1.1 Scope

(1) This Chapter specifies the safety requirements for concrete works which include:

(a) ~~In situ Concrete~~ Cast-in place (poured or pumped) concrete;

I have changed this throughout but please note that In-situ Concrete is an internationally accepted term and it is also defined in BS 6100 (in-situ concrete (01)6.4.20).

NK6/23: understood.

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and which are hereinafter collectively referred to as “Concrete Works”.

(2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

JSSS in English R4 for Issue 3 DFR on Issue 2 of 2020/4/22 (2020/6/24)

NK: Comment and Revision

9. CONCRETE WORKS

9.1 GENERAL

9.1.1 Scope

(1) This Chapter specifies the safety requirements for concrete works which include:

(a) Cast-in place (poured or pumped) concrete;

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and which are hereinafter collectively referred to as “Concrete Works”.

(2) General safety requirements, covering for example Contractor’s Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

Prepare a safety plan describing the safety requirements for Concrete Works and inform all workers engaging in the Concrete Works of the content and requirements. Such a safety plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy stuff, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number ~~ow~~ of workers) JC1: all relevant personnel では定かではないので all workers engaging in the Concrete Works に。 Isn't "all relevant personnel" clearly understood? "all workers engaging in the Concrete Works" is more appropriate. NK1: Modified as commented. (2) Plan the execution of all Concrete Works including handling of reinforcement and formwork panels by using Contractor's Equipment and/or sufficient numbers of workers so that overloading and consequent back injury and other injury is avoided.	Prepare a Safety Plan describing the safety requirements for Concrete Works and inform all workers engaged in the Concrete Works of the content and requirements. The Safety Plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy items, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number of workers). *Revised as requested; edited.* NK6/23: confirmed the above and deletion of (2)..	Prepare a Safety Plan describing the safety requirements for Concrete Works and inform all workers engaged in the Concrete Works of the content and requirements. The Safety Plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy items, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number of workers).
9.2 PARTICULAR SAFETY MEASURES FOR ~~INSITU~~ CAST-IN-PLACE CONCRETE WORK The following safety requirements are additional to the general requirements described in other Chapters. **9.2.1 Safety Measures at Planning Stage** JC1: 第三者に剥離剤がかかる可能性があるような場合は、その剥離剤は無害なものでなくてはならない、といったことが書かれている MTR 9.7 項 Release Agent (6)を規定すべき？ It is suggested to stipulate "When release agent may splash on third parties, such agent shall be harmless one to human" such as specified in MTR 9.7 [Release Agent] (6)? NK: 剥離剤は、GC 1.1.5.2 で定義の Goods の一つであり、これが第 3 者へ掛かる被害防止は、JSSS の 2.6 FALLING OBJECTS の 2.6.1.General の規定で網羅されると考える。この特別な措置は規定しないこととする。 Release Agent is one of Goods defined in GC 1.1.5.2 and measures for such splash on the third parties is specified in JSSS, 2.6 FALLING OBJECTS, 2.6.1.General Therefore, it is not appropriate to stipulate too much in details. Leave as it is. (1) The Contractor shall plan all concrete work so that it can be executed in a safe and methodical manner. (2) The Contractor shall plan the method of ~~insitu~~ cast-in-place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid ~~any~~ deformation beyond allowable ~~construction~~ tolerances specified in the Contract damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. JC1: deleted and added. JC2: 飛来・落下の項で主として想定しているのは、固形物による衝撃であり、剥離剤による皮膚の炎症等の化学的被害ではありません。追記願います。 The above is measures to avoid injuries by falling objects (solid ones) but not chemical injuries on skins or other parts of body by concrete form release agent. Please specify regarding prevention of damage due to use of release agent. NK: 作業員及び第三者に対する安全措置について右(3)のように追加します。	**9.2 PARTICULAR SAFETY MEASURES FOR CAST-IN PLACE CONCRETE WORK** The following safety requirements are additional to the general requirements described in other Chapters. **9.2.1 Safety Measures at Planning Stage** (1) The Contractor shall plan all Concrete Works so that they are executed in a safe and methodical manner. (2) The Contractor shall plan the method of cast-in place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid deformation beyond allowable tolerances specified in the Contract, any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan. *Revised as requested; and edited. If this adjustment remains (which I do not recommend) "Contract" could be changed to "Particular Safety Specification" but this is still not correct.* *I do not agree with or recommend this change. It is not correct and not good practice to mention "allowable" tolerances for formwork and falsework deformation in this manner.*	**9.2 PARTICULAR SAFETY MEASURES FOR CAST-IN PLACE CONCRETE WORK** The following safety requirements are additional to the general requirements described in other Chapters. **9.2.1 Safety Measures at Planning Stage** (1) The Contractor shall plan all Concrete Works so that they are executed in a safe and methodical manner. (2) The Contractor shall plan the method of cast-in place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid deformation beyond ~~allowable~~ tolerances of concrete structure specified in the Contract, any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan.

コンクリート剥離剤を使用するときは、作業員に保護眼鏡、ゴム手袋等の個人用保護具を使用しなければならない。第三者に剥離剤がかかる可能性がある場合には、剥離剤の飛散を防ぐ対策を講じるとともに、必要に応じて立入禁止区域を設定し誘導員を配置しなければならない。
A new clause (3) is added to specify measures for workers and the third parties when using concrete form release agents.

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those person from entering the area.

9.2.2 Safety Measures ~~during~~ for Concrete Placement

JC1: revised.

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out

Please note that the "tolerances" are usually specified for the finished permanent works (i.e. the concrete) dimensions, not the tolerances in the formwork and falsework during concrete pouring.

The falsework is temporary work and therefore 100% contractor design responsibility, he also selects the formwork and falsework materials and designs these temporary structures. He also chooses and controls the volumes, rates and methods of pouring so he is the only party that can design the formwork and falsework and decide if it is structurally capable of supporting his work.

Only the Contractor can decide what (if any) tolerances shall be included in his formwork and falsework design and usually his design should allow for deformation so that the finished concrete dimensions are correct.

NK6/23: understood.
JICA want to specify to design form and false works to secure the tolerances of concrete structures specified in the Contract.
I proposed to revise it as shown right/above.

The example of Specification regarding concrete tolerance is shown below for discussion with JICA.

3.8.2. Dimensions
The tolerances of finished dimensions of concrete structures shall be as shown in following tables.

Item		*Tolerance (mm unless shown otherwise)*
(i) Footings		
Plan dimensions	*Formed footings and Plan dimensions pile caps*	*-15 to +50*
	Unformed footings (when approved by the Superintendent)	*0 to +150*
Thickness	*< 300 mm*	*-5 to +25*
	> 300 mm	*-10 to +50*
Top of footing or pile cap reduced level		*-25 to +25*

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those persons from entering the area.

Revised as requested; edited.

However please note that this would be better included in measures for placement not measures at planning stage. I had also recommended protective footwear (rubber boots) as this is often necessary in developing countries.

NK6/23: confirmed and noted.

9.2.2 Safety Measures for Concrete Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those persons from entering the area.

9.2.2 Safety Measures for Concrete Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

repairs and reinspect before resuming.

JC1: 鉄筋を見てもわからないのではないか。除外。

型枠全体が崩壊することがないようにプランニングされていることが前提なので、evacuation に関する記載は不要。その代わりに追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。

It may be able to find any defect by the inspection of reinforcement. It is assumed that the entire formwork is planned so as not to collapse entirely, so it is not necessary to specify about evacuation. In stead of this phrases, please add a provision to (3) that additional materials for false works shall be on standby and used for reinforcing formworks in case of local deformation of the formwork.

NK: 鉄筋の結束や支持が十分に行われない場等があることから、削除は不要と考えます。
ベトナム国のカントー橋のコンクリート打設作業中の事故は、型枠支保工、型枠、鉄筋の全体が崩壊した事故です。崩壊しないようにプランニングされていても、このような事故が発生しないように、打設前、及び打設中の点検し、不備がある場合は万一の重大事故のリスクを想定し、コンクリート打設の中止、作業員の撤去を行うべきと考えます。
そのため、本(1)は原文通りとすることを提案します。追加し補材の準備は(3)に追記します。
We consider the deletion of reinforcement is not necessary because there are sometimes improper fixing and supporting of re-bars.
The collapse accident of Canto bridge in Vietnam occurred during concrete placing. The whole of falseworks, form works and reinforcement collapsed in the accident. Such accident occurred though planning was made to avoid collapse accident. In order to avoid such accident, inspection before and during concrete placing shall be made and specified.
Therefore, (2) is left as it is. Addition to (3) will be made.

(3) Place the concrete in ~~exact~~ accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement ~~to avoid any deformation, damage or collapse of formwork or falsework~~. ~~Some~~ Additional materials ~~for falseworks~~ shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

JC1: deleted and added as commented to (1).
追加の支保材をスタンバイさせ、型枠の局所的な変形の際には補強するという規定を(3)に追記してください。
Added as commented in (2), please add to (3).

JC3: 普通単に in accordance with といっており、ここだけ exact というのもおかしい。削除する。
In other places, the phrase of “in accordance with” is used, not “in exact accordance with”. Please delete “exact”.

NK: “exact” is deleted. Some deletion and change have been made by JICA as right.

JC4: JC revised.

~~(4) The Contractor shall be aware of the following common hazards~~

repairs and reinspect before resuming.

~~(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement to avoid any deformation, damage or collapse of formwork or falsework.~~

(3) Place the concrete in accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement Additional materials shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

I have inserted your alternative clause above but I must state that I do not agree with it. This is a very important safety clause that should include very clear requirements and it should demand the contractor’s total compliance.

The concrete pouring should be in “exact” accordance with the MS otherwise formwork and falsework design and construction (see 9.2.1 (2)) is wrong and the formwork and falsework could well fail. The use of the word “exact” is intentional to emphasise this.

The further deleted words change the original meaning and reduce the effectiveness.

The additional words, make it apparent that deformation is acceptable (which it isn’t) and that additional “material” (whatever this may mean) is enough to solve the problem (which it is not). If further temporary props might be required, this does not give confidence in the adequacy of a contractor’s design.

Please also refer to my notes against 9.2.1 (2) above.

~~(4) The Contractor shall be aware of the following common hazards~~

(3) Place the concrete in accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement Additional materials shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:

(a) Impalement by projecting and unguarded reinforcement:

The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and

(b) Impact and entanglement by materials or Contractor's Equipment:

The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout procedures.

(c) Exposure of silica dust and Portland cement:

If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].

(5) The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.

JC1: common hazards というわりには列挙されている事象が特異な事象に限定されているように思います。(a)は 9.3.2 に既に入っています。(b)、(c)は削除してください。
特に(c)は fresh (wet) concrete の打設時の規定として適切ではないです。
These clauses seem special requirements for special issues. (a) is specified in 9.3.2. Please delete (b) and (c).
It is not appropriate as requirement for placing of fresh (wet) concrete.

NK: Deleted.

9.2.3 Safety Measures for ~~Placement by~~ Concrete Pumping

JC1: 意味が分からない記述が多いです。具体的には幾つか例示しておきますので(コメント部分)ご参照ください。そのうえで、BS 8476:2007 (購入済み?) Code of practice for the safe use of concrete pumps を参照されながら必要項目を組み立ててください。
There are many statements that are hard to understand in this section. Please see those shown for examples in comments. Some practical examples to be Please reconstruct this section referring to BS 8467:2007 [Code of practice for the safe use of concrete pumps.

NK: BS 8407:2007 was purchased. Review and addition referring to the BS are made as below.

The Contractor shall take the following safety measures for delivery of ~~insitu~~ cast-in-place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

JC5: The latter half of clause (1) is deleted by JICA.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of

and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:

(a) Impalement by projecting and unguarded reinforcement:

The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and

(b) Impact and entanglement by materials or Contractor's Equipment:

The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout procedures.

(c) Exposure of silica dust and Portland cement:

If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].

I have deleted the above as you have instructed.

The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.

I have deleted the above as you have instructed. However, surely this is where your added 9.2.1 (3) should be inserted?

NK6/23: We consider they are specified in 2.9 PPE AND FIRST AID.

9.2.3 Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of cast-in place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

I have deleted the above as you have instructed.

9.2.3 Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of cast-in place concrete with the use of concrete pumps:

(1) Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works.

(2) Ensure that all delivery pipes, end hoses and other system components

withstanding the maximum pump pressure.

~~(3) Comply with the requirements of JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*] and:~~

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

~~(a) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;~~

JC1: 具体的にどのようなものでしょうか？
What does mean the word "obstruction" to be specific?

NK: The "obstruction" means those items such as Contractor's Equipment, buildings, etc. which may be hit by the pumping equipment.
Added "(Contractor's Equipment,, buildings, etc.)".

~~(b) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances;~~

JC6: この話は 3 章とは関係ないので独立させました。また、(b)は削除。
The sub-clause (a) is irrelevant to Chapter 3. Thus (a) becomes (3) as independent clause and sub-clause (b) is deleted.

NK: Modified as JICA commented.

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ~~mixer trucks~~ ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between mixer trucks and pumps when and ~~mixer trucks~~ ready-mixed concrete trucks are reversing.

JC1: コンクリートミキサーのバックする時には Spotter を必ず配置することでは？
Doesn't this mean that a spotter shall be placed when a truck mixer is moving backward."?

NK: Placement of Spotters is stipulated in (6). The purpose of (7) is to instruct workers strictly not to stand or walk into the back of the truck when it is moving backward. Leaved as it is.

(9) ~~Take care to avoid the risk of any accident when moving the boom and~~ Ensure that workers are out of the path of the boom when moving the boom.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

I have reversed these items as you have instructed and added the minor wording as shown.

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when ready-mixed concrete trucks are reversing.

(9) Ensure that workers are out of the path of the boom when moving

are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment, buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when ready-mixed concrete trucks are reversing.

(9) Ensure that workers are out of the path of the boom when moving the boom.

8. JC7: リスクは回避できないので、この部分の記述は不要です。上記のように変えてよいと思います。
As it is not possible to “avoid a risk”, this part is not necessary. Please change the sentence as above.

NK: Changed as JICA commented.

~~(10) Never allow workers to open a pressurised line to prevent concrete from splashing out. Pressurised line shall be opened in accordance with predetermined procedure.~~

~~Never allow workers open a pressurised concrete delivery pipeline during delivery operation and at occurrence of a blockage in the pipeline to prevent concrete in the pipeline from splashing out. Pressurised line shall be opened after release the pressure inside the pipeline in accordance with predetermined procedure.~~

If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after release the pressure inside in accordance with predetermined procedure.

JC: 英語では意味が取れない。
The meaning is hard to understand.

NK: 和文 9.6.1(7) (a) & (b)の規定です。
(9) is stipulated in Japanese version 9.6.1(7) (a) & (b).
BS 8407 stipulate as follows:
9.11 If a blockage occurs during the pour, the concrete pump operator should stop pumping immediately and instruct personnel to move to a safe position before attempting to remove the blockage.
9.12 If the concrete pump operator needs to open the delivery pipeline to clear a blockage, they should first release the pressure inside the delivery pipeline as much as possible, e.g. by reversing the pumping action. They have to treat the delivery pipeline as being pressurized at all times. Appropriate and adequate hand and eye protection should be worn when opening the delivery pipeline.
Modified as right and will be reviewed by MD.

JC8: 異常が発生したときの対処は下に記載があるので、この部分は削除します。(9)は右のように変更します。
Measures for occurrence of an abnormality are stated below. Clause (9) is changed as right.

NK: Changed as JICA commented.

~~(11) When cleaning delivery pipes or end hoses with compressed air, ensure that a ball catcher is always provided to prevent the risk of any accident or injury for the ejected objects.~~

JC9: 今時はエアで洗浄をするということはないので、削除させていただきます。
Nowadays, cleaning with compressed air is not used. Thus, this clause is deleted.

NK: Deleted as JICA commented.

(12) Ensure that hoppers and chutes are securely fixed and that workers are aware method of operation and safe use.

(13) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected not to fall or become detached.

(14) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout

the boom.

(10) If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after releasing the pressure inside in accordance with the predetermined procedure.

Revised as requested; and edited.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware of the method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected so that they do not fall or become detached.

(10) If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after releasing the pressure inside in accordance with the predetermined procedure.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware of the method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected so that they do not fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only

procedures.

(15) Prohibit workers from entering places in front of and below the outlet of concrete pump delivery pipes and end hoses to avoid the workers to be hit by pipes and horse rampaged. *(Note: MD will review and edit this paragraph as NK added.)*

9.2.4 Safety Measures for ~~Concrete Mixer Trucks~~ Ready-mixed Concrete Trucks

JC1: concrete mixer truck の名称にやや違和感がある。concrete agitator truck と concrete mixer truck の2種類があることを認識したい。そのうえで delivery(transportation), discharge (to concrete pump)に係る安全を規定したい。別添の"Safety in ready mixed concrete industry"が参考になる。
It seems strange to use the term of concrete mixer truck. After acknowledged that there are two terms of concrete agitator truck and concrete mixer truck, safety measures shall be stipulated regarding delivery (transportation), discharge (to concrete pump). "Safety in ready mixed concrete industry" attached herewith can be referred to.

NK: BS8476 uses the following terms:
8.5 concrete-delivery lorries
9.8 ready-mixed concrete truck
9.27 concrete-mixer lorries
Used the term "ready-mixed concrete truck" as commented.

The Contractor shall take the following measures for the ready-mixed concrete ~~mixer~~ trucks in the transportation and delivery of ~~insitu~~ ready-mixed concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ~~mixer~~ ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ~~mixer~~ ready-mixed concrete ~~t~~rucks~~. and that they are prevented from looking into the drum~~.

JC10: JICA deleted.

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of ~~insitu~~ concrete:

JC1: deleted

~~(1) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and trucks and ensure there is a Spotter at the point of placement.~~

~~(2) Ensure that Hoisting and Rigging Equipment is suitable for the purpose and adequate for the load.~~

JC1: (1) & (2)はクレーン作業と同一ではないか？クレーン作業のところを引用する形で纏めてください。
Aren't clauses (1) & (2) same as provision for Crane Works? Please simplify it by referring to the relevant clause in Crane Works.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering in front of and below the outlet of concrete pump delivery pipes and end hoses to prevent workers being struck by pipes or ~~loose and~~ flailing hoses.

NK please check the above, I have edited but am not completely sure of the full meaning of your added clause.

NK6/23: modified.

9.2.4 Safety Measures for Ready-Mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of cast-in place concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks and that they are prevented from looking into the drum.

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of cast-in place concrete:

after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering in front of and below the outlet of concrete pump delivery pipes and end hoses to prevent workers being struck by pipes or ~~loose and~~ flailing hoses.

9.2.4 Safety Measures for Ready-Mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of cast-in place concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks and that they are prevented from looking into the drum.

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of cast-in place concrete:

NK: As per the comment, clause (1) & (2) are combined and revised referring to 5.2.6. as below.

(1) Comply with JSSS 5.2.6.[General Safety Measures for Hoisting Operations] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tool and signals, placement of Spotters;

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of bucket for discharging concrete. *(Note: MD will review and edit this paragraph as NK added.)*

(4) Prevent persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of ~~insitu~~ cast-in-place concrete:

(1) Take all necessary measures to prevent electric shock complying with JSSS 4.3.12 [Additional Requirements for Electric Powered Equipment]..

JC1: (1)は日本語版どおり、「4.5 を順守し、感電防止の措置を講じること」といった趣旨の規定にしてください。
Please modify this clause with the meaning in Japanese draft such as “take measures for preventing electric shock accidents complying with JSSS 4.5”.

NK: added as commented.

(2) ~~Ensure that workers are provided with and that they wear anti-vibration gloves.~~ To prevent vibration damage to workers, provide workers with anti-vibration gloves and ensure that those gloves are properly used.

JC10: 振動による被害軽減にはなるけど、防止グローブだけつければ良いというものではないので「振動による健康被害を予防するため、」を一言入れた方が良いかも。（騒音とかと類似）騒音被害（JSSS2.1.4 (2) と横並びで、振動被害防止のため、という言葉を入れました。
A phrase “To prevent vibration damage to workers” is inserted to coincide with JSSS 2.1.4 (2).

NK: Modified as JICA commented.

(1) Comply with JSSS 5.2.6 [*General Safety Measures for Hoisting Operations*] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tools, signals and placement of Spotters.

Revised as requested; and edited.

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of the bucket for discharging concrete.

Revised as requested; and edited.

(4) Prevent any persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in place concrete:

(1) Take all necessary measures to prevent electric shock, complying with JSSS 4.3.12 [*Additional Requirements for Electric Powered Equipment*].

Revised as requested

(2) To prevent vibration injury to workers, provide anti-vibration gloves and ensure that they are properly used.

Revised as requested; and edited.

(1) Comply with JSSS 5.2.6 [*General Safety Measures for Hoisting Operations*] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tools, signals and placement of Spotters.

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of the bucket for discharging concrete.

(4) Prevent any persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in place concrete:

(1) Take all necessary measures to prevent electric shock, complying with JSSS 4.3.12 [*Additional Requirements for Electric Powered Equipment*].

(2) To prevent vibration injury to workers, provide anti-vibration gloves and ensure that they are properly used.

9.3 REINFORCEMENT

9.3.1 Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing ~~and erection~~ and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or

9.3 REINFORCEMENT

9.3.1 Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

9.3 REINFORCEMENT

9.3.1 Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

collapse.

JC1: BS での表現に合わせました。replaced with the expression in BS.

NK: replaced with terms in BS 8000-2-2 Workmanship on building sites - Part 2: Code of practice for concrete work - Section 2.2 Sitework with in situ and precast concrete.

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2 Safety Measures at Fabrication and ~~Assembly~~ Fixing and Placing Stage

JC1: changed.

The Contractor shall take the following measures during cutting, bending, transporting and ~~assembling~~ fixing and placing of reinforcement:

JC1: changed.

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner ~~and ensure that there is no risk of~~ to prevent collapse or fall by providing adequate restraints.

JC11: JICA modified.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle ~~suspend reinforcement~~ hoist the bundle of reinforcing bars keeping them horizontal and maintaining the balance by using two rigging slings ~~or wire ropes~~; and

JC1: changed.

JC12: 意味がわかりません。わかるように修正願います。
The meaning of this sentence is not clear. Please modify it to become more understandable.

NK: 上のように修正しました。 Modified as above.

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2 Safety Measures at Fabrication, ~~and~~ Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting, fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and prevent collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle, hoist the bundle of reinforcing bars, keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2 Safety Measures at Fabrication, ~~and~~ Fixing and Placing Stage

The Contractor shall take the following measures during cutting, bending, transporting, fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and prevent collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle, hoist the bundle of reinforcing bars, keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars and provide

length to avoid any overhang of reinforcing bars; ~~where exceptional lengths of reinforcement are being transported and overhang is unavoidable~~, ~~ensure that the overhang complied with local regulations and provide appropriate warning signs and lighting to remove all risk of impact collision with other vehicles, persons and workers.~~ ~~When transporting to the working location by trailers, adjust length of reinforcement so as to respect the local regulation in terms of overhanging.~~ Provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

JC13: トレーラーの長さを調整するのではなく、鉄筋の長さを調整するのだと思います。英語については適宜修正してください。
It wouldn't be right to adjust the length of trailer instead of length of reinforcing bars. Please modify the sub-clause.

NK: ODA の現場では、鉄筋は最大長 12m が一般的であり、これらの鉄筋を設計に合わせて切断します。請負者は残余が出ないように工夫して鉄筋を切断します。トレーラー長に合わせて鉄筋を切断することはないため、長さにあったトレーラーを調達することが運搬業者の責任と考えます。
日本の場合、次の規則があります。
セミトレーラ連結車の車両制限令の長さの特例
高速自動車国道　１６．５ｍ（積載する貨物が被けん引車の車体の前方又は後方にはみ出していないもの）
指定道路、その他の道路…１２ｍ　（これを超える車両は、特殊車両通行許可が必要である。）
運搬に関しては交通規則に従うと規定することで良いと考えますので、右のように変更致します。
At ODA sites, re-bars are 12 m generally in longest. The Contractor cuts the re-bars following the design but not depending on the length of trailer. The Contractor shall select trailer to transport depending on the length of re-bars.
In Japan, trailers of 16.5 m without overhanging of goods can run highway and those of 12 m on public roads. It needs special permission on public roads in case longer than 12 m.
The (d) specify not to be overhang and following the traffic regulations as right.

(3) ~~Assembly~~ Fixing and Placing:

JC1: changed.

(a) Prepare proper temporary access to and support for the assembly of reinforcement and for fixing the reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that assembly is in exact accordance with the assembly drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is ~~a risk~~ danger of the falling and collapsing of reinforcement under assembling by wind and rain, stop the assembly work. After strong wind and heavy rain, inspect the reinforcement under assembling and stop the assembling

length to avoid any overhang of reinforcing bars and provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing:

(a) Prepare proper temporary access to and support for fixing and placing reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that fixing and placing is in exact accordance with the fixing and placing drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is any danger of reinforcement falling or collapsing during fixing and placing in wind and rain, stop the fixing and placing work. After conditions improve, inspect the reinforcement and take measures to correct any abnormality before continuing with fixing and placing;

appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing:

(a) Prepare proper temporary access to and support for fixing and placing reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that fixing and placing is in exact accordance with the fixing and placing drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is any danger of reinforcement falling or collapsing during fixing and placing in wind and rain, stop the fixing and placing work. After conditions improve, inspect the reinforcement and take measures to correct any abnormality before continuing with fixing and placing;

work when abnormality is found; *(Note: MD will review and edit this paragraph as NK added.)* JC14: 単数形の risk を使うかどうかも考えた方が良いかと It is better reconsider use of the word "a risk" in singular form. NK: JICA のコメントに従い右のように変更しました。 Changed as right in accordance with the suggestion by JICA To MD, please review this comment. (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [Working Above or Below Others]; and JC1: Non native の人間には"work at levels"が通じない可能性が高いので、work at levels を annex で定義語として規定してください。そのうえで、2.6.5(2.6.6.)に上下作業の規定があるため、それをリファーする形で規定してください。 There is possibility that readers might not understand "work at levels". Please define the term in Annex. In addition, stipulate to refer to JSSS 2.6.5.(2.6.6) NK: Modified and added. (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.	*Your original draft used "assembly" but you have now changed this to "fixing and placing". I have therefore corrected the above accordingly* (e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [*Working Above or Below Others*]; and (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.	(e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [*Working Above or Below Others*]; and (f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.
9.4 FORMWORK (INCLUDING FALSEWORK) **9.4.1 General** Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork. **9.4.2 Safety Measures at Planning Stage** The Contractor shall: (1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse. (3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings. **9.4.3 Safety Measures at Fabrication and Assembly Stage** The Contractor shall take the following measures during fabricating, transporting and assembling of formwork: (1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Maintain the working area including storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for	**9.4 FORMWORK (INCLUDING FALSEWORK)** **9.4.1 General** Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork. **9.4.2 Safety Measures at Planning Stage** The Contractor shall: (1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse. *I assume that "assembly" is acceptable here.* (3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings. **9.4.3 Safety Measures at Fabrication and Assembly Stage** The Contractor shall take the following measures during fabricating, transporting and assembling of formwork: (1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse. (3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings. **9.4.3 Safety Measures at Fabrication and Assembly Stage** The Contractor shall take the following measures during fabricating, transporting and assembling of formwork: (1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*]. (2) Maintain the working area and storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use,

immediate use, locate equipment ~~in known positions,~~ at predetermined places, prevent any fall or dropping of material, equipment and tools, offcuts to a ~~separate~~ designated area ~~and ensure the area is safe and that the risk of workers falling or tripping is avoided~~	locate equipment in predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a designated area. *Revised as requested; and edited.*	locate equipment in predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a designated area.
(3) When assembling and ~~dismantling~~ disassembling the formwork, prohibit the workers from entering the area subject to risk of being hit or struck by the panel which is suddenly moved by strong wind.		
JC1: “in known positions”が分かりません。 This phrase “in known positions” is not understandable. NK: It means that equipment should be placed at or moved to the predetermined places. Modified. JC15: 解体のところに入っていた事項ですが、組み立ての時にも必要な事項なので、文章を修正の上、こちらに移しました。(項目 9.4.4 (2)を 9.4.3 に(3)として移動。) The new clause (3) is moved from 9.4.3 (2) because this should include the common safety measures at assembling stage. NK: コメントに従い、移動、修正しました。 Th e clause is moved and the sentence is modified as commented by JICA.		
~~(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.~~	~~(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.~~	
JC1: (2)、(3)は両方とも整理整頓に関する概念なので、統合してください。例えば working area including storage area など。 Clause (2) & (3) are both regarding to concept of organizing work area, thus, unify them one clause by stating “working area including storage area.” NK: As commented, added the phrase in (2) and delete (3).		
~~(4) Ensure that the formwork is free from cracks, defects and deformation, Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, ensure that and the load is distributed safely. and that is does not cause any obstruction to the passage of other workers.~~		
(g) Ensure that the formwork is free from cracks, defects and deformation;	(4) Ensure that the formwork is free from cracks, defects and deformation.	(3) Ensure that the formwork is free from cracks, defects and deformation.
(h) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, and that the load is distributed evenly and within the allowable stress of formwork;	(5) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, that the load is distributed evenly and within the allowable stress of formwork. *Revised as requested; and edited.*	(4) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, that the load is distributed evenly and within the allowable stress of formwork.
JC1: 鉄筋コンクリートを支保することが優先されるべきで、他作業員の通行を考慮することは2次的規定で、逆に通行禁止措置が必要になる。 Supporting the reinforcing concrete shall be given priority. The consideration of obstruction of passage of workers is secondary requirement. Therefore, deleted. Reversely, prohibition of passage is necessary. NK: deleted as commented and modified to delete two “ensure”. JC16: Ensure that でつないでいく文が長くなるので、型枠に瑕疵がない、という部分を切り離しました。 As the sentence is too long, the part that formwork is free from defects is separated. NK: コメントに従い、項目を 2 つに分割しました。 The clause is divided into two clauses as right (4) & (5).		
(i) ~~Ensure that formwork is restrained during any Hoisting Operation to prevent being affected by wind and that any risk of collision and~~	(6) During any hoisting operations, ensure that all necessary measures are taken to prevent formwork being affected by wind and that any	(5) During any hoisting operations, ensure that all necessary measures are taken to prevent formwork being affected by wind and that any

~~consequent injury and damage is avoided~~. When hoisting operation is carried out for largen sized formwork panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided.

JC17: 強風がふいているときは型枠の資材のつり上げ作業をやめろというのが趣旨だと思います。ですので、Ensure that formwork is restrained というのは関係ないと思います。また、システム型枠(system formwork)に関連する事象として記載することを検討ください。
Hoisting of formwork must be stopped when strong wind is blowing. Therefore, restraining formwork is not relevant in this case.
Please consider to describe for a case of "System Formwork".

NK: 右の(6)ように、大型パネルの吊り上げ作業には全ての必要な対策をとることとの表現に修正することを提案します。
When hoisting operation is carried out for largen sized formwork panels such as system formwork, ensure that all necessary measures are taken to prevent being affected by wind and that any risk of collision and consequent injury and damage is avoided

9.4.4 Safety Measures during ~~Dismantling~~ Disassembling and Removal Stage

JC18: Dismantling は Disassembling に、他の箇所も同様に変えてください。
Please change the term "dismantle" to "disassemble" for other parts as well.

NK: コメントし従い変更しました。 Changed as commented.

To MD: Please review this change because I think the term "dismantle" seems correct word than "disassemble" for this 9.4.4.

(1) ~~Unless otherwise specified, ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.~~ The formwork shall be ~~dismantled~~ disassembled in accordance with the relevant provision in the Contract.

JC1: Time for removal of falsework and formwork は specification に規定されているべきで、Engineer の確認があることが通常。従って HSO に関する明示的な記載は不要。
It is common practice to stipulate the time for removal of falsework and formwork requiring confirmation by the Engineer in the specification. It is not necessary to state about the HSO.

NK: As commented, the clause (1) is modified.

~~(2) After dismantling, stack formwork panels horizontally to avoid overturning being affected by strong wind or other loads; and~~

~~(2) When the formwork panels are hoisted, prohibit the workers from entering the dangerous area to prevent the workers from being hit or struck by the panels which is suddenly moved by the strong wind.~~

JC19: 項目(2)は 9.4.3 (3) に移動。文章を組立ても含めように修正。
Clause (2) is moved to 9.4.3 as (3). The sentence is modified so as to include assembling.

(3) After ~~dismantling~~ disassembling, the form panels shall be stacked horizontally to avoid overturning; and

JC1: 日本語版 10.5 の(8)、(9)を纏めた規定のようですが、日本語原文から趣旨がずれているようです。
ついては、この(2)と(3)を統合させて、水平の仮置きおよび踏み抜き防止の趣旨となるように書き直してください。

risk of collision and consequent injury and damage is avoided.

Revised as requested; and edited, however please note:

The addition of "largen sized formwork" is not necessary and has no meaning anyway, even medium or small (however size is defined) should also be considered.

It is not correct to include "system formwork" as an example because this is not an example. The requirement applies to all types of formwork which may be affected by wind including purpose made plywood panels for example

NK6/23: agreed.

9.4.4 Safety Measures during Dismantling and Removal Stage

Please note that "dismantling" (as used in your original draft) is the correct word and in my opinion should not be changed. It is preferable in this sense to "disassembly".

NK6/23: agreed.

(1) Ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.

The above requirement is very important for safety purposes and I do not recommend its deletion or amendment. A principle cause of structural collapse is when formwork is dismantled too early. This is often done with no consideration of safety and no involvement of the HSO but is frequently a consequence of speeding-up the work when it is running late.

Also the effect of concrete quality on time of strength achievement should be considered.

The text as I have originally suggested is correct and I do not recommend that it be replaced with your suggestion "The formwork shall be disassembled in accordance with the relevant provision in the Contract". This reduces or even negates the meaning of the original text.

I am aware that technical specifications commonly describe period for curing of concrete and indicative or minimum periods before dismantling formwork but this is Temporary Works for which the responsibility rests with the contractor irrespective of what may be stated there. It is not a duty or obligation of the Employer or Engineer to advise or instruct.

NK6/23: agreed.

(2) After dismantling, stack formwork panels horizontally to avoid overturning due to strong wind or applied loadings; and

I suggest the above change

risk of collision and consequent injury and damage is avoided.

9.4.4 Safety Measures during Dismantling and Removal Stage

(1) Ensure that formwork is only dismantled when so instructed or approved in writing by the HSO.

(2) After dismantling, stack formwork panels horizontally to avoid overturning due to strong wind or applied loadings; and

Clause (2) seems to be a provision combined 10.5 (8) & (9) together, however the requirement is deviated from the original one. Please express the requirement of placing the form materials horizontally and preventing accidents from protruding nails etc.by unifying (2) and (3). NK: Clause 10.5 (8), (9) in Japanese version stipulate different matters each other. Thus, it is better to modify (2) and (3) reflecting the concept of Japanese relevant clauses. Not only large formwork panels but also any form panels have risk to hit workers. Not specified for large panels. MD will review these sentences. (4) The protruding nails, wires, projecting members and splinters on the formwork ~~dismantled~~ disassembled shall be removed or bended to avoid injury to workers and other persons.	(3) Any protruding nails, wires, projecting members and splinters shall be removed or bent flat to avoid injury to workers and other persons.	(3) Any protruding nails, wires, projecting members and splinters shall be removed or bent flat to avoid injury to workers and other persons.

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 9: CONCRETE WORKS

Japan International Cooperation Agency (JICA)

NK6/23 NK comments and revision of 6/24
Changes to or editing of previous Issue 2
(includes JICA/NK comments)
Query or comment

Note to JICA and NK:

It is my understanding that Chapters 1 to 6 are functional specifications that cover most risks as general and prevailing reference documents.

Chapters 7 to 10 (and later), are "trade" type documents for which most risks have already been identified and covered in Chapters 1 to 6 and they will therefore be necessarily brief.

I suggest that excessive cross reference and duplication should be avoided and only particular additional requirements be described in these later chapters.

I had suggested that "Concrete Works" should cover all items usually associated with this trade such as precast concrete, prestressing etc, however having drafted simple requirements, this is not required by JICA/NK.

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 9: CONCRETE WORKS

Table of Contents

9.1 GENERAL

9.1.1 Scope

(1) This Chapter specifies the safety requirements for concrete works which include:

(a) ~~In-situ Concrete~~ Cast-in place (poured or pumped) concrete;

I have changed this throughout but please note that In-situ Concrete is an internationally accepted term and it is also defined in BS 6100 (in-situ concrete (01)6.4.20).

(b) Reinforcement (reinforcing bar and fabric reinforcement);

(c) Formwork (including associated falsework);

and which are hereinafter collectively referred to as "Concrete Works".

(2) General safety requirements, covering for example Contractor's Equipment including stone crushing plants and screening equipment, concrete batching plants, Temporary Works and other related matters, all which apply to the work in this Chapter, are described in other Chapters of JSSS.

Additional particular requirements are contained in this Chapter.

9.1.2 Safety Plan and Instructions to Workers

Prepare a Safety Plan describing the safety requirements for Concrete Works and inform all workers engaged in the Concrete Works of the content and requirements. The Safety Plan shall pay due care to the workers' health matters (e.g. back injury) in relation to handling of reinforcement, formwork panels or other heavy items, and include necessary preventive measures (e.g. using appropriate Contractor's Equipment, assigning sufficient number of workers).

Revised as requested; edited

9.2 PARTICULAR SAFETY MEASURES FOR CAST-IN PLACE CONCRETE WORK

The following safety requirements are additional to the general requirements described in other Chapters.

9.2.1 Safety Measures at Planning Stage

(1) The Contractor shall plan all Concrete Works so that they are executed in a safe and methodical manner.

(2) The Contractor shall plan the method of cast-in place concrete placement and carry out the design and construction of formwork and falsework to take account of uneven and excessive impact force and different or asymmetrical loads, thicknesses and pressures in certain areas during concrete placement to avoid deformation beyond allowable tolerances specified in the Contract, any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan.

NK6/23: proposed to replace with "beyond ~~allowable~~ tolerances of concrete structure specified in the Contract, any damage or collapse of formwork or falsework and show all details in the Method Statement and Safety Plan."

Revised as requested; and edited. If this adjustment remains (which I do not recommend) "Contract" could be changed to "Particular Safety Specification" but this is still not correct.

I do not agree with or recommend this change. It is not correct and not good practice to mention "allowable" tolerances for formwork and falsework deformation in this manner.

Please note that the "tolerances" are usually specified for the finished permanent works (i.e. the concrete) dimensions, not the tolerances in the formwork and falsework during concrete pouring.

The falsework is temporary work and therefore 100% contractor design responsibility, he also selects the formwork and falsework materials and designs these temporary structures. He also chooses and controls the volumes, rates and methods of pouring so he is the only party that can design the formwork and falsework and decide if it is structurally capable of supporting his work.

Only the Contractor can decide what (if any) tolerances shall be included in his formwork and falsework design and usually his design should allow for deformation so that the finished concrete dimensions are correct.

NK6/23: understood the above explanation..
JICA want to specify to design form and false works to secure the tolerances of concrete structures specified in the Contract.
I proposed to revise it as shown above.

Please see B2 which mentions as follows:
The example of Specification regarding concrete tolerance is shown below for discussion with JICA.

(3) The Contractor shall provide PPE such as rubber gloves, face masks and goggles to the workers when spraying concrete form release agents to prevent chemical injury, and where there is a possibility that release agent may splash on the third parties, take measures such as establishing exclusion zone with temporary barriers and locate Spotters to prevent those persons from entering the area.

Revised as requested; edited.

However please note that this would be better included in measures for placement not measures at planning stage. I had also recommended protective footwear (rubber boots) as this is often necessary in developing countries.

9.2.2 Safety Measures for Placement

The Contractor shall:

(1) Designate concrete placement works (including all pumping and hoisting of concrete) as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Inspect all reinforcement, formwork and falsework before and during concrete placement. If any defect is discovered, stop the placement works and evacuate the workers immediately, carry out repairs and reinspect before resuming.

~~(3) Place the concrete in exact accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement to avoid any deformation, damage or collapse of formwork or falsework.~~

(4) Place the concrete in accordance with the Method Statement and avoid uneven and excessive impact force and different or asymmetrical thicknesses and pressures in certain areas during concrete placement Additional materials shall be stored at the concrete placing site for use to reinforce falseworks in case of occurrence of their local deformation.

I have inserted your alternative clause above but I must state that I do not agree with it. This is a very important safety clause that should include very clear requirements and it should demand the contractor's total compliance.

The concrete pouring should be in "exact" accordance with the MS otherwise formwork and falsework design and construction (see 9.2.1 (2)) is wrong and the formwork and falsework could well fail. The use of the word "exact" is intentional to emphasise this.

The further deleted words change the original meaning and reduce the effectiveness.

The additional words, make it apparent that deformation is acceptable (which it isn't) and that additional "material" (whatever this may mean) is enough to solve the problem (which it is not). If further temporary props might be required, this does not give confidence in the adequacy of a contractor's design.

Please also refer to my notes against 9.2.1 (2) above.

~~(5) The Contractor shall be aware of the following common hazards and shall take all necessary measures to avoid the risk of any consequential accident, injury or death:~~

~~(a) Impalement by projecting and unguarded reinforcement:~~

~~The Contractor shall protect all exposed ends by enclosing in protective caps and/or by bending reinforcement bars so that exposed ends are no longer upright and present no danger; and~~

~~(b) Impact and entanglement by materials or Contractor's Equipment:~~

~~The Contractor shall take care in material handling and use of Contractor's Equipment including the use of lockout/tagout procedures.~~

~~(c) Exposure of silica dust and Portland cement:~~

~~If prolonged and unavoidable exposure can be anticipated, the Contractor shall ensure that workers are provided with respirators and masks in accordance with JSSS 2.1[WORK ENVIRONMENT] [2.1.1 Hazardous Substances].~~

I have deleted the above as you have instructed.

~~The Contractor shall provide PPE such as safety helmets, work clothing, waterproof gloves, rubber boots, protective eye and face equipment as required.~~

I have deleted the above as you have instructed. However, surely this is where your added 9.2.1 (3) should be inserted?

9.2.3 Safety Measures for Placement by Pumping

The Contractor shall take the following safety measures for delivery of cast-in place concrete with the use of concrete pumps:

~~(1)~~ Inspect the condition of concrete pump delivery pipes, end hoses and all connections, ensure that they are free from defects and blockage, check that all joints and connections are secure and free from leakage before and during concrete placement works. ~~If any defect is discovered, stop the placement works and evacuate the workers immediately. Carry out repairs and reinspect before commencing or resuming work.~~

I have deleted the above as you have instructed.

(2) Ensure that all delivery pipes, end hoses and other system components are all correctly pressure rated and capable of withstanding the maximum pump pressure.

(3) Maintain a safe separation distance between the delivery pipe, end hose and boom and any existing Overhead Services as required by JSSS Chapter 3 [*Existing Underground, Concealed and Overhead Services*], Table 3.2.1: Safe Separation Distances.

(4) Maintain a safe separation distance from any obstructions (Contractor's Equipment,

buildings, etc.) and avoid any risk of hitting or touching any obstructions with the pumping equipment, delivery pipes, end hoses or boom;

I have reversed these items as you have instructed and added the minor wording as shown.

(5) Check the ground condition, ensure a firm, stable and horizontal working base at all times and position pumping equipment and ready-mixed concrete trucks at a safe distance from the edge of any excavations, drop or slope to protect against any slippage or fall of equipment and ready-mixed concrete trucks or collapse of ground.

(6) Fully extend outriggers and ensure stability of pumping equipment and ready-mixed concrete trucks at all times.

(7) Arrange proper communications and signals before starting the placement between workers, Spotters and operators of equipment and ready-mixed concrete trucks and ensure there is a Spotter at the point of placement.

(8) Never allow workers to stand between ready-mixed concrete trucks and pumps when ready-mixed concrete trucks are reversing.

(9) Ensure that workers are out of the path of the boom when moving the boom.

(10) If a blockage or clogging occurs inside the pipeline during the pour, stop pumping immediately and instruct workers to move to a safe position before attempting to remove the blockage or clogging. The pipeline shall be opened after releasing the pressure inside in accordance with the predetermined procedure.

Revised as requested; and edited.

(11) Ensure that hoppers and chutes are securely fixed and that workers are aware of the method of operation and safe use.

(12) Ensure that the delivery pipe and hose at the end of the concreting pump booms are securely connected so that they do not fall or become detached.

(13) Prohibit workers from working on the hopper screen of the concrete pump, remove obstructions and foreign materials in the hopper only after stopping the agitating blade and applying lockout/tagout procedures.

(14) Prohibit workers from entering in front of and below the outlet of concrete pump delivery pipes and end hoses to prevent workers being struck by pipes or ~~loose and~~ flailing hoses.

NK please check the above, I have edited but am not completely sure of the full meaning of your added clause.

NK6/23: modified.

9.2.4 Safety Measures for Ready-Mixed Concrete Trucks

The Contractor shall take the following measures for the ready-mixed concrete trucks in the transportation and delivery of cast-in place concrete.

(1) Ensure that drivers are aware of and take due account of the heavy load and high centre of gravity of loaded ready-mixed concrete trucks during delivery and discharge to maintain safety and prevent overturning.

(2) Ensure that workers do not come into contact with and/or become entangled with the rotating drum and other moving parts of ready-mixed concrete trucks and that they are prevented from looking into the drum.

9.2.5 Safety Measures for use of Concrete Buckets

The Contractor shall take the following measures when using concrete buckets for hoisting and placement of cast-in place concrete:

(1) Comply with JSSS 5.2.6 [*General Safety Measures for Hoisting Operations*] for selection of proper Hoisting Equipment and Rigging Equipment, arrangement of proper communication tools, signals and placement of Spotters.

Revised as requested; and edited.

(2) Ensure that the movable gate is locked before hoisting and is only operated by a skilled worker when it is opened for discharge.

(3) Take measures to stabilise the bucket during hoisting and prevent any uncontrolled swinging. Prohibit workers from pushing and pulling bracket except for minor adjustment of location of the bucket for discharging concrete.

Revised as requested; and edited.

(4) Prevent any persons or workers from entering the places below bucket.

(5) Discharge the concrete slowly and in a controlled manner to prevent the bucket from rebounding after discharge.

9.2.6 Safety Measures for use of Concrete Vibrators

The Contractor shall take the following measures when using concrete vibrators for compacting of cast-in place concrete:

(1) Take all necessary measures to prevent electric shock, complying with JSSS 4.3.12 [*Additional Requirements for Electric Powered Equipment*].

Revised as requested

(2) To prevent vibration injury to workers, provide anti-vibration gloves and ensure that they are properly used.

Revised as requested; and edited.

9.3 REINFORCEMENT

9.3.1 Safety Measures at Planning Stage

The Contractor shall:

(1) Prepare a Safety Plan, Method Statement and fixing and placing drawings of reinforcement describing the method of cutting, bending and fixing and showing the types and positioning of supports, ties and bracing necessary to support and rigidly secure the reinforcement and to prevent any movement or collapse.

(2) Inform all relevant workers of the content of the Safety Plan, Method Statement and assembly drawings.

9.3.2 Safety Measures at Fabrication, ~~and~~ Fixing and Placing Stage

NK6/23: modified.

The Contractor shall take the following measures during cutting, bending, transporting, fixing and placing of reinforcement:

(1) Cutting and Bending:

(a) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*];

(b) Maintain the working area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of

reinforcement for immediate use, locate equipment in known positions, prevent any fall or dropping of material, equipment and tools, remove offcuts to a separate area and ensure the area is safe and that the risk of workers falling or tripping is avoided; and

(c) Maintain stored reinforcement material in a safe and secure manner and prevent collapse or fall by providing adequate restraints.

(2) Transporting:

(a) Ensure that scaffolding and any other temporary structures on which reinforcement is to be temporarily placed is capable of supporting the load, ensure that the load is distributed safely and that is does not cause any obstruction to the passage of other workers;

(b) Ensure that reinforcing bar is lifted and suspended horizontally to prevent any slippage during Hoisting Operations and also that it is bundled safely and securely tied to prevent any reinforcing bars from sliding out;

In principle, hoist the bundle of reinforcing bars, keeping them horizontal and maintaining the balance by using two rigging slings; and

(c) When transporting to the working location use flatbed trailers or truck, ensure that the trailer or truck is of sufficient length to avoid any overhang of reinforcing bars and provide appropriate warning signs and lighting on reinforcing bars if necessary in accordance with the local regulations to avoid collision with other vehicles, persons and workers.

(3) Fixing and Placing:

(a) Prepare proper temporary access to and support for fixing and placing reinforcement in position;

(b) Prevent any risk of fall and also any distortion or weakening of reinforcement by prohibiting workers from standing, walking or climbing on such reinforcement and where necessary provide safe temporary boarded walkways for workers use;

(c) Ensure that fixing and placing is in exact accordance with the fixing and placing drawings and that the correct types and positioning of supports, ties and bracing is maintained to properly support and rigidly secure the reinforcement and prevent undue movement or collapse;

(d) When there is any danger of reinforcement falling or collapsing during fixing and placing in wind and rain, stop the fixing and placing work. After conditions improve, inspect the reinforcement and take measures to correct any abnormality before continuing with fixing and placing;

Your original draft used "assembly" but you have now changed this to "fixing and placing". I have therefore corrected the above accordingly

(e) Prohibit working concurrently at levels where any other worker is working underneath in accordance with JSSS 2.6.7 [*Working Above or Below Others*]; and

(f) Provide temporary protection caps to exposed ends of reinforcing bars to prevent injury to workers.

9.4 FORMWORK (INCLUDING FALSEWORK)

9.4.1 General

Any reference to "formwork" in this Section shall also be deemed to include reference to the associated falsework for that formwork.

9.4.2 Safety Measures at Planning Stage

The Contractor shall:

(1) Design the formwork and manage its provision, use and removal in accordance with JSSS 1.35 [*Design and Management of Temporary Works*] and the further requirements of JSSS Section 7.1 [*General Requirements of Temporary Works*].

(2) Prepare a Safety Plan, Method Statement and design drawings of formwork describing the method of fabrication, assembly, erection and removal and showing details of all materials, components, types and positioning of supports, ties and bracing necessary to create a rigid and secure temporary support structure for the concrete, reinforcement and workers and to prevent any movement or collapse.

I assume that "assembly" is acceptable here.

(3) Inform all relevant workers of the content of the Safety Plan, Method Statement and design drawings.

9.4.3 Safety Measures at Fabrication and Assembly Stage

The Contractor shall take the following measures during fabricating, transporting and assembling of formwork:

(1) Designate the work as Dangerous Work, enclose the immediate working area with temporary signs and fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) Maintain the working area and storage area in a safe, organised, uncluttered and clean condition at all times, avoid excessive storage by retaining sufficient quantities of material for immediate use, locate equipment in predetermined places, prevent any fall or dropping of material, equipment and tools, remove offcuts to a designated area.

Revised as requested; and edited.

~~(3) Maintain stored formwork material in a safe and secure manner and ensure that there is no risk of collapse or fall by providing adequate restraints.~~

(4) Ensure that the formwork is free from cracks, defects and deformation.

(5) Ensure that scaffolding and any other temporary structures on which formwork is to be temporarily placed is capable of supporting the load, that the load is distributed evenly and within the allowable stress of formwork.

Revised as requested; and edited.

(4) During any hoisting operations, ensure that all necessary measures are taken to prevent formwork being affected by wind and that any risk of collision and consequent injury and damage is avoided.

Revised as requested; and edited, however please note:

The addition of "largen sized formwork" is not necessary and has no meaning anyway, even medium or small (however size is defined) should also be considered.

It is not correct to include "system formwork" as an example because this is not an example. The requirement applies to all types of formwork which may be affected by wind including purpose made plywood panels for example

9.4.4 Safety Measures during Dismantling and Removal Stage

Please note that "dismantling" (as used in your original draft) is the correct word and in my opinion should not be changed. It is preferable in this sense to "disassembly".

(1) Ensure that formwork is only dismantled when so instructed or approved in writing by

the HSO.

The above requirement is very important for safety purposes and I do not recommend its deletion or amendment. A principle cause of structural collapse is when formwork is dismantled too early. This is often done with no consideration of safety and no involvement of the HSO but is frequently a consequence of speeding-up the work when it is running late.

Also the effect of concrete quality on time of strength achievement should be considered.

The text as I have originally suggested is correct and I do not recommend that it be replaced with your suggestion "The formwork shall be disassembled in accordance with the relevant provision in the Contract". This reduces or even negates the meaning of the original text.

I am aware that technical specifications commonly describe period for curing of concrete and indicative or minimum periods before dismantling formwork but this is Temporary Works for which the responsibility rests with the contractor irrespective of what may be stated there. It is not a duty or obligation of the Employer or Engineer to advise or instruct.

(2) After dismantling, stack formwork panels horizontally to avoid overturning due to strong wind or applied loadings; and

I suggest the above change

(3) Any protruding nails, wires, projecting members and splinters shall be removed or bent flat to avoid injury to workers and other persons.

目次

11 潜水作業

11.1 一般事項

(1) 本章では、他給気式潜水及び自給気式潜水による潜水作業を扱う。ただし、飽和潜水、混合ガス潜水については対象外とする。

(2) 用語の定義

(a) 他給気式潜水とは、空気圧縮機からの送気を受けて行う潜水をいう。

(b) 自給気式潜水とは、潜水士が携行するボンベからの給気を受けて行う潜水をいう。

(c) 潜水士(Diver)とは、当該国又は国際的な潜水資格を持ち潜水作業に従事する者をいう。

(3) 当該国の法律、本契約、本仕様書に規定がない事項は、OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations の規定のうち、混合ガス潜水を除く、他給気式潜水及び自給気式潜水に関する規定のみを遵守して、作業計画及び安全計画を作成し、安全措置を講じなくてはならない。

JSSS in English R0（1/30）

Contents

11 Diving Works

11.1 General Requirement

(1) This chapter specified the diving works by the surface-supplied air diving and scuba diving only, excluding Saturated diving and mixed-gas diving.

(2) Definitions of terms in JSSS are as follows.

(a) “Surface-supplied Air Diving” means the diving methods by the air supply from the air compressor on the diving support vessel.

(b) “Scuba Diving” means the diving methods by the air supply from the gas cylinder carried by the divers.

(c) “Diver” means the worker with the international diving licenses or the Countries.

(3) The Contractor shall prepare the safety plan and work plan, and take the safety measures complying with the item only for surface-supplied air diving and scuba diving in “OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations” for the item not specified in the contract, this specification and the law of the Countries.

JSSS in English R1 (1/31)

11 Diving Works

11 Diving Works

11.1 General Requirement

(1) This Chapter specifies the diving works of the surface-supplied air diving and SCUBA diving excluding saturated diving and mixed-gas diving.

(2) Definition of terms is as follows:

(a) “Surface-supplied air diving” means a diving mode in which the diver in the water is supplied from the dive location with compressed air for breathing.

(b) “SCUBA diving” means a diving mode independent of surface supply in which the diver uses open circuit self-contained underwater breathing apparatus.

(c) “Diver” means the worker working in water using underwater apparatus which supplies compressed breathing gas at the ambient pressure. The diver shall hold the diving license required by the Law ofthe Country or international one when no requirement in the Law.

(3) The Contractor shall prepare the meathod statement and safety plan, and take the safety measures for the diving works in accordance with the requirements for the surface-supplied air diving and SCUBA diving excluding mixed-gas diving specified in “OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations” for requirements other than specified in the Contract, JSSS and the Law of the Country.

11.2 潜水作業計画における安全上の留意事項

11.2.1 一般

請負者は、潜水作業の作業計画及び安全計画（以下、「計画」という。）の作成は次の事項に留意して作成しなければならない。

(1) 計画の作成に際し、潜水作業の専門知識・経験等のある潜水士の助言を受けること。

(2) 潜水作業の内容を理解し、伴う危険性を把握し、適切な作業船・補助設備・潜水士及び作業の支援員の計画を立てること。

(3) 当該作業の開始に当たり、潜水士を含む作業員・関係者に対する事前周知を行うこと。

11.2.2 潜水作業の計画

計画作成に当たり、次の情報を入手すること。

(1) 作業現場水域（河川、湖水、海域等）の情報

(a) 気象、海象、その他の情報

(i) 最寄りの既設観測所の観測資料

(ii) 霧及び雷の時期別発生状況

(iii) 作業水深と想定流速

(iv) 海底の土質・状況、爆発物、危険物、障害物等

(v) 河川流速と洪水波情報

(b) 現場周辺の一般船舶の交通制限措置、本契約及び契約以外の工事の状況

(2) 計画で網羅すべき事項

(a) 作業内容、潜水方式

(b) 計画する潜水作業に対する空気圧縮機の能力

(c) 潜水深度、潮流、水中視界、水温、海底状況等の作業環境

(d) 作業時期、潜水士・作業船の混在作業、作業に影響する船舶の航行状況

(e) 潜水作業班の要員構成、資格

(f) 指揮命令系統

(g) 作業中止基準

(h) 緊急時の措置、連絡体制、救急処置

(i) 救急治療施設及び医療体制

(j) 現場水域管理者とのコミュニケーション

11.2 Safety Measures for Diving Work Plan

11.2.1 General Requirement

The Contractor shall prepare the working plan and safety plan (called “diving work plan” as below) considering to the following items.

(1) Request the advice from the diver with the experiments and special knowledge for the diving work in planning of diving work.

(2) To be clarified the danger by understanding the work contents, and plan the work ship, equipment, diver and the assistant.

(3) Inform the worker including the diver, the assistant and all relative of the diving work plan.

11.2.2 Diving Work Plan

The Contractor shall collect the following information to prepare the diving work plan.

(1) Information of the work site (river, lake, sea area etc.)

(a) Seasonal and local information for weather and sea conditions

(i) Observed data at the nearest existing weather observatory

(ii) Occurrence conditions of the fog and lightning by periods, etc.

(iii) Water depth, the assumed current speed of the work site

(iv) Geotechnical condition of seabed, explosives, dangerous goods, and other obstacles, etc.

(v) River current speed, flood wave information

(b) Restriction of the maritime ship traffic at the site and the construction conditions of this Contract and the others.

(2) Items which should be specified with the diving work plan

(a) Work details, diving method, and diving measures

(b) Capacity of the air compressor for the planned diving work.

(c) Work environment such as diving depth, tide current, visibility of underwater, water temperature, and seabed conditions, etc.

(d) Work schedule, the works mixed of the divers and work vessels, maritime condition of the vessel affecting the diving work

(e) The licensed person and personnel composition of the diver team

(f) Command structure

(g) Suspension criteria of the diving work

(h) Measure in emergency, contact system and first aid

(i) Emergency medical institutes and medical care system

(j) Communication for the administrator of the water area at the site

11.2 Preparation of Method Statement and Safety Plan

11.2.1 General Requirements

The Contractor shall prepare the method statement and Safety Plan of the diving works taking into consideration the following requirements:

(1) Reflecting the advice of the diver who has the experience and special knowledge of the diving works;

(2) Planning of arrangement and works of the workboat, equipment, divers and assistants for the diving works after understanding of the work contents of the diving works and risks in the works; and

(3) Information and instructions to be given to the divers, assistants and other workers related with the diving works of the method and safety measures before start of the works.

11.2.2 Method Statement and Safety Plan

The Contractor shall collect the information and describe in the method statement and Safety Plan as mentioned below.

(1) Information of the diving work site

(a) Weather, sea state and other information

To MD: Please select proper term such as sea state, maritime condition, or other https://en.wikipedia.org/wiki/Sea_state

(i) Data observed at the weather stations near the Site;

(ii) Date of fog and lightning occurred by periods

(iii) Water depth, estimated current speed at the work site

(iv) Water level variation in flood at the work site

(v) Geotechnical conditions of the work site, explosives, Dangerous Goods and other obstacles

(b) Traffic restriction measures of the public/third parties' ships/boats at the Site

To MD: Please determine which term of ship, boat, vessel, other in sea or river shall be used

(c) Status of construction works near the diving work site in the Contract and by others.

(2) Items to be described

(a) Contents of the diving work and diving method;

(b) Capacity of the air compressor for the diving work;

(c) Work environment such as diving depth, tide current, river flow, visibility of underwater, water temperature, sea/riverbed conditions, etc.;

(d) Time schedule, the mixed works of the divers and workboats, traffic conditions of the ships/boats to affect the diving works;

(e) Personnel composition of the diving work team and required licenses for the work;

(f) Command line;

(g) Criteria to stop the diving work;

(h) Measures in emergency, communication system and first aid;

		(i) Emergency medical facilities and medical care system (j) Communication system with the administrator of the water area management at the Site.
11.3 要員の配置 (1) 請負者は、本仕様書 1.8[請負者の要員の適正配置]に従い、潜水作業には、作業の管理者、潜水士、作業の支援員を配置しなければならない。潜水作業の管理者と作業の支援員の業務及び責務は次である。 (a) 潜水士の資格を持つ者の中から、船上で全体の作業を管理及び指揮する潜水作業の管理者を配置し、以下の業務を行わせること。 (i) 潜水作業全般の統括業務と管理 (i) 潜水士、作業の支援員に対する作業の指揮 (ii) 潜水作業全般の安全管理並びに他の作業関係者との連絡・調整 (iii) 潜水作業に関する記録の作成と保管 (b) 次に示す潜水作業の支援に従事する作業の支援員を、潜水方法の特性に応じ必要な人数配置すること。 (i) 空気圧縮機を運転すること。 (ii) 潜水士への送気の調節を行うバルブ又はコックを操作すること。 (iii) 潜水士と連絡して、その者の潜降及び浮上を適正に行わせること。 (iv) 潜水士への送気の調節を行う送気員と連絡して、潜水士に必要な量の空気を送気させること。 (v) 送気設備の故障その他の事故により、潜水士に危険又は健康障害の生ずるおそれがあるとき、速やかに潜水士に連絡すること。 (vi) ヘルメット式潜水器を用いて行う潜水業務にあっては、潜降直前に当該潜水士のヘルメットがかぶと台に結合されているかどうかを確認すること。 (vii) 作業船との混在作業における作業船・潜水士間の連絡及び合図の伝達を行うこと。 (viii) 潜水士に命綱を用いる場合は、確認信号により潜水士の安全を確認すること。 (ix) 気泡により潜水士の安全を確認すること。 (2) 潜水士の健康管理は、本仕様書 1.8.1[要員の適正配置上の留意点]に規定の作業員の健康状態の管理に加えて、以下の潜水士の疾患及び健康状態に留意して行わなければならない。潜水作業で危険の	**11.3 Placement of the Workers** (1) The Contractor shall place the diving work manager, the diver, and the assistant complying with JSSS 1.8[Proper Placement of Contractor's Personnel]. The work contents and responsibilities of the diving work manager and the assistant are shown as follows. (a) Place the diving work manager which is assigned among the worker with the diving licenses to manage and instruct all works, and carry out the following works (i) Management and supervision for the diving works (ii) Instruction for the diving works to divers and assistant (iii) Safety management for the diving works and communication and coordination with other third parties (iv) Record and storage the report for the diving works (b) Place the necessary number of the assistant which carries out the following support works according to the characteristic of the diving method. (i) Operate the air compressors (ii) Control the valve and cock for the conditioning the breathing air (iii) Let the diver descent and ascent properly to communicate them (iv) Let the air suppliers operate air supply equipment properly to communicate them (v) Inform the diver immediately when there is a risk for the health damage due to the accidents of the air supply facilities. (vi) During the diving method with the standard diving helmet, confirm the connection between the helmet and the corselet before the diving works. (vii) Coordinate the work vessel and the diver when the work vessel and the diver operate in the same area. (viii) Ensure the safety for the diver by the signal when the diver use the lifeline (ix) Ensure the safety for the diver by the air bubble of breathing. (2) The Contractor shall carry out the health check for the divers considering to the following condition and disease addition to the health management specified with JSSS 1.8.1 [Proper Placement of Contractor's Personnel]. If there is a risk for the diving work due to the diver's health condition, the Contractor shall prohibit the diver from operating the diving work. (a) Disease of the respiratory system (b) Disease of the cardiovascular system	**11.3 Placement of the Workers** (1) The Contractor shall place the manager/supervisor, the diver, and the assistants for the diving work complying with JSSS 1.8[Proper Placement of Contractor's Personnel] as specified below. *To MD: We specified in Japanese JSSS to place a manager for the diving work whose work and responsibilities are as show below. Please determine manager or supervisor.* *For your rference: ACoP below specify supervisor.* *HSE Commercial diving projects offshore Diving at Work Regulations 1997* *Approved Code of Practice and guidance* *https://www.hse.gov.uk/pubns/books/l103.htm* (a) Place the manager/supervisor for the diving works which is assigned among the workers having the diving licenses to manage and instruct all works, and carry out the following duties: (i) Management and supervision of the diving works (ii) Instruction for the diving works to the divers and assistants (iii) Safety management in the diving works and communication and coordination with other third parties (iv) Recording and storage of the reports of the diving works (b) Place the necessary number of the assistants who execute the following supporting works according to the characteristic of the diving method. (i) Operate the air compressors; (ii) Control the valve for the supply of breathing air; (iii) Communicate with the diver so that the diver descent and ascents properly; (iv) Communicate with the assistant in charge to supply the air to the divers properly; (v) Inform the diver immediately when there is a risk of the health damage to the diver due to the accident of the air supply facilities and others. (vi) Inspect the connection between the helmet and the corselet (neck dam, breastplate, or corselet) of the diver before the start of diving works in case of the diving method with the diving helmet. *To MD: Please check which is to be used among neck dam, breastplate, or corselet.* *https://en.wikipedia.org/wiki/Diving_helmet* (vii) Coordinate the workboat and the diver when the workboat and the diver operate in the same area; (viii) Ensure the safety of the diver by receiving the

おそれがある疾患又は状態がある場合は、潜水士を潜水作業に従事させないこと。 (a) 呼吸器系疾患 (Respiratory system) (b) 循環器系疾患 (Cardiovascular system) (c) 神経系疾患(Nervous system) (d) 筋骨格系疾患(Musculoskeletal system) (e) 耳鼻咽喉系疾患 (Ear, nose, throat) (f) 視覚の状態（Vision） (g) 歯の状態(Dental health) (h) 内分泌系疾患（Endocrine system） (i) その他の潜水に影響のある疾患、健康項目	(c) Disease of the nervous system (d) Disease of the musculoskeletal system (e) Disease of the ear, nose, throat (f) Problem of the vision (g) Distress of the dental health (h) Disease of the endocrine system (i) The other item and disease which affects the diving work	signals from the diver when the diver uses the lifeline; and (ix) Ensure the safety of the diver by observing the air bubble of breathing of the diver. (2) The Contractor shall carry out the health check of the divers considering to the following condition and disease addition to the health management specified in JSSS 1.8.1 [Proper Placement of Contractor's Personnel]. If there is a risk to the diver in the diving work due to the diver's health condition, the Contractor shall prohibit the diver from engaging in the diving work. (a) Disease of the respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system; (b) Conditions of the vision and dental health (c) Other health conditions and disease which affects the diving work *To MD, The above (a) and (c) are selected from the following:* *HSE The medical examination and assessment of commercial divers (MA1) 59 and others* *https://www.hse.gov.uk/pubns/ma1.htm*
11.4 作業員への安全教育と指導、周知 請負者は、潜水作業の作業員に次の安全教育と指導、周知を行わなければならない。 (1) 本仕様書 4.1.4[安全教育と指導]に準じて、各作業の特性に応じて、作業員に対して教育訓練を実施すること。 (2) 本仕様書 4.1.2[各作業の作業員への周知]に準じて、各作業の特性に応じた役割分担、作業内容、方法、手順、安全措置事項を作業員に周知すること。	**11.4 Safety Instruction for the Worker** The Contractor shall carry out the following safety instruction and announcement to the workers. (1) Conduct the training for the worker according to the characteristic of the works complying with JSSS 4.1.4 [Safety Instructions]. (2) Inform the worker of the work contents, methods, procedures, sharing rolls and safety measures according to the characteristic of the works complying with JSSS 4.1.2 [Instruction for Contractor's Personnel].	**11.4 Safety Instruction to the Workers** The Contractor shall carry out the following safety instruction and training to the workers. (1) Conduct the training for the workers according to each duty in the diving works complying with JSSS 4.1.4 [Safety Instructions]. (2) Inform the workers of the work contents, methods, procedures, sharing rolls and safety measures according to each duty of the diving works complying with JSSS 4.1.2 [Instruction for Contractor's Personnel].
11.5 潜水設備・器具及び作業船 **11.5.1 潜水作業用の設備及び器具** 請負者は、OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations、§1910.430 Equipment.の規定を遵守し、潜水方式に応じて適切な設備及び器具を配置しなくてはならない。	**11.5 Diving Equipment and Diving Support Vessel** **11.5.1 Diving Equipment and Facility** The Contractor shall equip the diving equipment and facilities properly according to the diving methods complying with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations、§1910.430 Equipment.	**11.5 Diving Equipment and Diving Workboat** **11.5.1 Diving Equipment and Facility** The Contractor shall provide the diving equipment and facilities properly according to the diving methods in accordance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.
11.5.2 潜水作業船 請負者は、潜水作業のために次を遵守した潜水作業船を配置しなくてはならない。 (1) 堅牢で、かつ対波性及び復元性の高い構造であること、当該国の法律に基づく設備を有し、かつ作業現場に応じた大きさのものであること。 (2) 潜水士の乗降用のはしごが設置されていること。 (3) 雨よけ並びに日よけの覆を設置されていること。	**11.5.2 Diving boat and Patrol boat** The Contractor shall procure the diving boat complying with the following items. (1) Ensure that the work boat should be robust and resilience structure with the anti-wave structure, and equipped the facilities based on the law of the country, and be right sized according to the work site. (2) Ensure that the ladder for getting on the boat should be equipped (3) Ensure that the roof for the rain and sun protection should be equipped	**11.5.2 Diving Workboat** The Contractor shall arrange the diving workboat complying with the following requirements: (1) The workboat shall be robust, seaworthiness and stable and equipped the facilities following the Law of the Country, and be suitable size required according to the diving work site; (2) The ladders for the divers getting on and off the workboat are equipped; and

		(3) The roof for the rain and sunshade shall be provided on the workboat.
11.5.3 点検・整備 請負者は、保守管理のために、当該国の法律及び当該潜水設備・器具及び作業船の製造者のマニュアルの規定に従い、本仕様書 4.1.6[機器の点検・整備]に準じ、当該当該潜水作業に使用する潜水設備・器具及び作業船の日常点検表、定期点検表を作成し、点検、検査を実施しなければならない。 点検検査結果は、記録・保管し、エンジニアから要求がある場合は提示しなければならない。 整備が完了するまで、潜水設備・器具及び作業船は、使用してはならない。	**11.5.3 Inspections and Maintenances** The Contractor shall make the daily and periodic checklist of the work vessels, diving equipment and facilities comply with the manufacture's manual of these manufactures, the law of the country and JSSS 4.1.6 [Inspections and Maintenances] and conduct the following inspections and maintenances. The Contractor shall keep the inspection records and submit them if the Engineer requests to show them. The Contractor shall prohibit from using the diving equipment, facility and vessel until the maintenance will finish.	**11.5.3 Inspections and Maintenance** The Contractor shall prepare the daily and periodic checklist of the diving workboat, equipment, tools and facilities complying with the manufacture's manual and instructions, the Laws of the Country and JSSS 4.1.6 [Inspections and Maintenances] and conduct the inspections and maintenance. The Contractor shall keep the inspection records and submit them if the Engineer requests. The Contractor shall prohibit from using the diving workboat, equipment, tools and facilities until the maintenance is finished.
11.6 潜水作業の安全措置 **11.6.1 潜水作業前の安全措置** 請負者は、潜水作業の開始前に次の措置を講じなければならない。 (1) 作業員 (a) 作業の方法、手順、作業員の配置及び業務分担について打合せること。 (b) 潜水タイムテーブルの順守を指示すること。 (c) 作業場所の気象・海象の状況、障害物の有無及びその状況、その他注意すべき点について周知すること。 (d) 潜水士の健康状態を確認すること。 (2) 潜水設備・器具 潜水設備・器具の作業前点検を行い、不備がある場合は使用を禁止すること。 (3) 潜水作業船 (a) 作業前に点検を行い、不備がある場合は使用を禁止すること。 (b) 潜水作業船に潜水作業を表示する国際信号 A 旗板を掲げること。 (c) 潜水作業船は作業中に移動しないように確実にびょう泊すること。 (d) エンジンを停止すること。 (4) 潜水作業現場 (a) 潜水作業の区域を示す赤旗等を設置すること。 (b) 潜水作業現場には、3m 毎に水深を表示したさがり綱を設置すること。 (4) 潜水開始前の確認	**11.6 Safety Measures for Diving Works** **11.6.1 Measures before Diving Works** The Contractor shall take the following measures before the diving work. (1) Worker (a) Discuss the work methods, procedures, the placement of the worker and the work roll sharing (b) Instruct the worker to comply with the diving timetable (c) Inform the worker of the weather and maritime condition of the work site, obstacles and their conditions, and the other notices. (d) Conduct the health check for the diver (2) Diving equipment and tool Conduct the inspection of the diving equipment and tool before the operation and prohibit from using the item with the defect (3) Diving boat (a) Conduct the inspection before the operation and prohibit from using them with the defect (b) Indicate the International Maritime Signal Flag A which shows the diving work at the diving work vessel. (c) The diving boat shall be anchoring certainly. (d) Stop the engine during the diving work (4) Diving work site (a) Indicate the signs such as red flags which show the diving work site (b) Install the rope which shows the water depth each 3m at the diving work site. (5) Confirmation and notice before the diving (a) Carrying Tools for the diver	**11.6 Safety Measures for Diving Works** **11.6.1 Measures before Diving Works** The Contractor shall take the following measures before the diving work: (1) Workers (a) Discuss the work methods, procedures, placement of the workers and the work roll sharing; (b) Instruct the workers to comply with the diving timetable; (c) Inform the workers of the weather and maritime conditions at the site, obstacles and their conditions, and other notices to be attentioned; and (d) Conduct the health check of the divers. (2) Diving equipment and tools Conduct the inspection of the diving equipment and tools before the operation and prohibit from using them when the defect is found. (3) Diving workboat (a) Conduct the inspection of the diving workboat before its operation and prohibit from using it when the defect is found; (b) Rise the International Maritime Signal Flag A which shows the executing diving work on the diving workboat; (c) Moor the diving workboat to the sea bottom with an anchor certainly; and (d) Stop the engine during the diving work. (4) Diving work site (a) Provide the signs such as by red flags which show the diving work site; and (b) Install a downline which has depth indication marks of 3m intervals in the diving work site. *MD: downline is shown below:*

(a) 潜水士の携行品 (i) 他給気式潜水の場合：信号索、水中時計、水深計、通話装置、ナイフ （注：通話装置を携行する場合は信号索、水中時計、水深計を携行させないことができる。） (ii) 自給気式潜水の場合： 水中時計、水深計、ナイフ、救命胴衣又は浮力調整具、（携行可能な場合は通話装置） (b) 自給気式潜水の潜水士への当該作業に使用するボンベの現に有する給気能力 (c) 潜水士船のさがり綱の緊結状況 (d) 通話装置の稼働 (e) 船上作業員の救命胴衣の着用 (f) 監視船の配備状況（配備している場合） 上記の確認で不備又は異常がある場合は、作業を行わないこと。	(i) Surface-supplied air diving: signal halyard, diver's watch, water depth meter, diver's telephone devices (if the diver carry the telephone devices, it is not necessary to equip the signal halyard, diver's watch, water depth meter.) and knife (ii) Scuba diving: diver's watch, water depth meter, knife, life jacket or buoyancy adjuster (diver's telephone devices, if the diver can carry) (b) Inform the diver of the air supply capacity of the gas cylinder for the scuba diving. (c) Confirm the tighten condition of the rope of the diving work vessels (d) Operation condition of the telephone devices (e) Confirm that the worker on the vessel takes the life jackets. (f) Confirm the deployment condition of the patrol vessels (if the patrol vessel is chartered) If some defect or anything wrong are identified by the above confirmations, prohibit from diving.	https://en.wikipedia.org/wiki/Downline_(diving) (5) Check before the diving works (a) Tools to be carried by the divers (i) Tools for the surface-supplied air diving: signal halyard, diver's watch, water depth meter, telephone device and knife (Note: if the diver carries the telephone device, it is not necessary to take the signal halyard, diver's watch and water depth meter.) (ii) Tools for SCUBA diving: diver's watch, water depth meter, knife, life jacket or buoyancy adjuster, and diver's telephone device if available. (b) Inform the diver of the air supply capacity of the gas cylinder for the SCUBA diving; (c) Check the tightening status of the downline from the diving workboat to the diving work site; (d) Check operation status of the telephone device; (e) Check if the workers on the workboat wear the life jackets; and (f) Check the placement state of the patrol boat (when the patrol boat is placed). If defect or abnormality are identified by the above check, prohibit the diver from diving.
11.6.2 潜水作業中の安全措置 請負者は、潜水作業中は、次の安全措置を講じなければならない。 (1) 作業に無関係な船舶の潜水作業場所付近への接近を監視する専任の監視員を配置し、潜水作業場所付近に近づく船舶に対し、ハンドマイク、旗等により現場へ接近させないこと。 (2) 潜水士への措置 (a) 潜水作業の管理者及び作業の支援員がいないときは、潜水士に潜水作業を行わせないこと。 (b) 作業船の乗降には、乗降用はしごを使用させること。 (c) 潜降及び浮上するときは、さがり綱を使用させること。 (d) 有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。 (3) 気象・海象状況の変化を早期に把握し、計画で定めた作業中止基準に合致する状況となった場合は、直ちに作業を中止すること。 (4) 潜水士の作業時間の管理 (a) 潜水士の作業内容に応じた適切な休憩時間の取得や交代等の労務管理を行うこと。 (b) 各潜水士の潜水作業に要した時間、潜水作業内容、潜水回数、潜水深度等を記録すること。	**11.6.2 Safety Measures during Diving Work** The Contractor shall take the following safety measure during the diving work. (1) Place the spotter which shall monitor the approaching boat and vessels to the diving work site. Take the measures such as alerts for their boats and vessels which do not related in the diving work by the hand speaker and flags, etc. in order to prevent from approaching the diving work site. (2) Measures for the diver (a) Prohibit the diver from carrying out the diving work without the diving work manager and the assistant (b) Let the diver use the ladder for getting off the boat in diving works. (c) Let the diver use the rope for descending and ascending. (d) Communicate always with divers by the diver's telephone and the signal halyard. (3) Monitor the weather and maritime condition earlier, and if their conditions shall meet the suspension criteria, suspend the diving work (4) Time management for the diver (a) Conduct the work management such the divers take the suitable rest or shift for another worker according to their work conditions, etc. (b) Keep the record of the diving time, the work contents, the number of times of the diving work, and the working depth of each diver, etc.	**11.6.2 Safety Measures during Diving Works** The Contractor shall take the following safety measures during the diving works: (1) Place the Spotter on the diving workboat who shall watch the boat and ships approaching to the diving work site. Take the measures to alert the boats and ships unrelated with the diving works by the hand speaker and flags, etc. in order to prevent them from approaching to the diving work site. (2) Measures for the divers (a) Prohibit the divers from carrying out the diving work without the supervisor and the assistants for the diving works; (b) Make the divers use the ladders for getting off and on the workboat in the diving works; (c) Make the divers use the downline for descending and ascending; and (d) Communicate always with the divers through the wire or wireless diver's telephone or the signal halyard. (3) Grasp the change of weather and sea state early and if the change meets the work stop criteria, stop the diving work; (4) Time management for the diver (a) Conduct the work management so that the divers take the suitable rest or shift or be replaced with other divers according

		to their work conditions; and (b) Make the record of diving time, work contents, number of times of diving, and the working depth of each diver, etc.
11.7 緊急救護措置 請負者は、本仕様書 1.11［救急救護計画］に従い、潜水作業時の救急救護計画を作成しなければならない。 詳細な救急救護施設と医療要員に関する要求事項が、本契約の中で別途規定されている場合は、それを遵守しなければならない。 水深 10m 以上の場所において潜水作業を行うとき、又は水深 10m 以下の水深であっても減圧症等にかかるおそれのある作業を行うときは、本契約で別途規定する措置を講じなければならない。	**11.7 Medical Measures in Emergency** The contractor shall make the emergency medical plan in diving work complying with JSSS 1.11 [Emergency Response Plan]. If the contract specifies with the requirement for the detail of the emergency medical institutes and medical staff, the Contractor shall comply with the contract. When the divers carry out the work at more than 10 m depth or at the risk of the decompression sickness despite of less than 10 m depth, the Contractor shall take the measures specified with the Contract.	**11.7 Medical Measures in Emergency** The Contractor shall make the emergency medical plan for the diving works in accordance with JSSS 1.11 [Emergency Response Plan]. The Contractor shall comply with the requirements regarding the emergency medical facilities and medical staff for the diving works specified in the Contract. When the divers carry out the works in more than 10 m depth or there is risk of the decompression sickness in less than 10 m depth, the Contractor shall take the measures for treatment of decompression sickness specified in the Contract.
		To MD, please include the following in Annex 1.3 as the special requirements by the Employer to the Contractor: *(1) To select the medical facility which has operational decompression chamber and establish a system to transport and get treatment the diver of decompression sickness to and communicate with the medical facility in emergency, or* *(2) To provide a medical facility which has a decompression chamber in or near the diving work site and establish a communication system to get a doctor to lead the decompression treatment in case there is no medical facility for the decompression treatment near the Site.*

10.2　潜水作業計画における安全上の留意事項

10.2.1　一般

請負者は、潜水作業の作業計画及び安全計画（以下、「計画」という。）の作成は次の事項に留意して作成しなければならない。→E10.2 Dive Safety Plan に規定済み

(1) 計画の作成に際し、潜水作業の専門知識・経験等のある潜水士の助言を受けること。→E10.2.1(6)に規定済み、潜水士が作成することと規定。

(2) 潜水作業の内容を理解し、伴う危険性を把握し、適切な作業船・補助設備・潜水士及び作業の支援員

the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) "Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.

10.1.3. Compliance Standards

(1) The Contractor shall comply as a minimum with all of the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

10.2. DIVE SAFETY PLAN

10.2.1. General Content

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) "Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.

10.1.3. Compliance Standards

(1) The Contractor shall comply as a minimum with all of the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

JC: このスペックに書いていない基準については OSHA に従うという記述にしてください。（最後のページのコメントにあるとおり、減圧室に関する記述は OSHA では不十分に見え、HSE を参照することとしたため）
For the provisions which are not stipulated in this specification, please state that they shall comply with OSHA. (As mentioned in the comment in the last page, it seems that the statement of OSHA regarding decompression chamber is not sufficient, thus this chapter shall refer to HSE.)

NK: modified as commented.

10.2　DIVE SAFETY PLAN

10.2.1 General Content

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

~~(3) The Dive Safety Plan shall contain a copy of~~

the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) "Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.

10.1.3. Compliance Standards

(1) For provisions which are not stipulated in the JSSS, the Contractor shall comply ~~as a minimum~~ with ~~all of~~ the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

10.2　DIVE SAFETY PLAN

10.2.1 General Content

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

の計画を立てること。→E10.2.1(5)に規定済み (3) 当該作業の開始に当たり、潜水士を含む作業員・関係者に対する事前周知を行うこと。→E10.2.1(1)に規定済み	(3) The Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.	~~the OSHA standard and the Contractor's policies for implementing the requirements of this standard.~~ JC:意図が不明であることもあり、不要に思います。 The intention of this provision is unknown. This item is not necessary. NK: OSHA Subpart T, 1910.420 Safe practices manual stipulate "(b) Contents. (1) The safe practices manual shall contain a copy of this standard and the employer's policies for implementing the requirements of this standard." Item (3) is deleted as commented.	
10.2.2 潜水作業の計画 計画作成に当たり、次の情報を入手すること。→E10.2.2序文に規定済み (1) 作業現場水域(河川、湖水、海域等)の情報→E10.2.2(1)に規定済み (a) 気象、海象、その他の情報→E10.2.2(1)-(4)に規定済み (i) 最寄りの既設観測所の観測資料 (ii) 霧及び雷の時期別発生状況 (iii) 作業水深と想定流速 (iv) 海底の土質・状況、爆発物、危険物、障害物等 (v) 河川流速と洪水波情報 (b) 現場周辺の一般船舶の交通制限措置、→E10.2.2(5)に規定済み、本契約及び契約以外の工事の状況→規定なし。E10.2.2(3)に追記する。 (2) 計画で網羅すべき事項 (a) 作業内容、潜水方式→規定なし。E10.2.2(1)として追記する。 (b) 計画する潜水作業に対する空気圧縮機の能力→E10.2.2 に規定済み、潜水作業に関係する全機械の能力に変更する。 (c) 潜水深度、潮流、水中視界、水温、海底状況等の作業環境→E10.2.2 に規定済み (d) 作業時期、潜水士作業船の混在作業、作業に影響する船舶の航行状況→E10.2.3(2)に規定済み (e) 潜水作業班の要員構成、資格、→E10.2.3(3)に規定済み (f) 指揮命令系統→E10.2.3(3)に規定済み (g) 作業中止基準→規定なし。E10.2.2(4)として追記する。 (h) 緊急時の措置、連絡体制、救急処置→E10.2.3(4)に規定済み (i) 救急治療施設及び医療体制→E10.2.3(5)に規定済み (j) 現場水域管理者とのコミュニケーション→E10.2.3(6)に規定済み	(4) For each required diving operation and diving mode, the Dive Safety Plan shall include: (a) Safety procedures and checklists for each diving operation; (b) Assignments and responsibilities of each of the Dive Team members; (c) Equipment lists, procedures and checklists; (d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury; (e) Details of the workboat and all diving equipment, fuel and other consumables; (f) Equipment, tools, materials and consumables for the assigned work tasks;	(4) For each required diving operation and diving mode, the Dive Safety Plan shall include: JC: work stop criteria を入れておいた方が良いと思います。10.5.2(3)に突然出てきているので It is better to mention the work stop criteria here as it appears suddenly at 10.5.2 (3). NK: Though it is stipulated to establish the criteria for stopping the work in 10.2.2., Item (e) is added. (a) Safety procedures and checklists for each diving operation; (b) Assignments and responsibilities of each of the Dive Team members; (c) Equipment lists, procedures and checklists; JC: (e)及び(f)と重複感があります。違いがあるということであれば、分かるように明記してください。 The item (c) seems duplicated with (e) and (f). If there is difference and reasons to state, describe it so that the difference can be understood clearly. NK: OSHA Subpart T, 1910.420 Safe practices manual.の(a)から(d)を(3)に規定し、(e)以降を追記していました。(e) & (f)を(c)に含めます。 OSHA Subpart T, 1910.420 Safe practices manual.(a) to (d) is specified in (3) and other requirements are added to (3) as (e) to (i). Combined (e) and (f) in (c). (d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury; (e) Details of the workboat and all diving equipment, fuel, and other consumables; (f) Equipment, tools, materials and consumables for the assigned work tasks; (g) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation; (h) Information and instructions to be given to the Divers, support assistants and other workers related with the	(3) For each required diving operation and diving mode, the Dive Safety Plan shall include: (a) Safety procedures and checklists for each diving operation; (b) Assignments and responsibilities of each of the Dive Team members; (c) ~~Equipment l~~ Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables; (d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury; (e) Work stop criteria for change of the weather and marine conditions; ~~(e) Details of the workboat and all diving equipment, fuel, and other consumables;~~ ~~(f) Equipment, tools, materials and consumables for the assigned work tasks;~~ (f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation; (g) Information and instructions to be given to the Divers, support assistants

	(g) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation; (h) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and (i) Communication systems and procedures. (5) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to avoid such risks. (6) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall incorporate the advice of and be approved by the DPIC.	diving operations and the working methods and safety measures; and (i) Communication systems and procedures. (5) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to ~~avoid~~ mitigate such risks. JC: changed. (6) The Dive Safety Plan shall ~~be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall~~ incorporate the advice of DPIC or any other Contractor's personnel having relevant qualification and experience. ~~and be approved by the DPIC.~~ JC: これでは実際に潜る人が計画を作ることになる(Diver の定義を参照)。OSHA を見ると基本は DPIC が作ることになっていないか？ This sentence can be read that the diver himself will make the Dive Safety Plan. (Refer to the definition of Diver,) DPIC shall make the Plan basically if comply with the provisions of OSHA? JC: DPIC が自分でアドバイスして、自分で承認するという言い方はおかしい。 It seems strange that DPIC gives advice to and approves the Dive Safety Plan. NK: OSHA では、Safety Plan (Safety practice manual)を、雇用者(請負者)が作成するとのみ規定し、誰が作成するべきとは規定していません。 提案の(6)は、実際現場で潜るかに関係せず潜水士である者が、DPIC の助言を得て作成し、DPIC の承認を得ることを規定しています。 潜水作業という特殊な作業であることから、潜水士の作成、DPIC の review and approval 承認という手続きで、漏れや間違いのない品質の Safety Plan が確保できると考えます。 単なる潜水士ではなく、HSO が能力を認めた潜水士に作成することが規定されております。 一方、DPIC が作成しますと、review and approval の任務に HSO は専門家でないため不適であり、別途潜水専門家を任命する必要があります。 そのため、 DPIC の助言は削除した原案を推奨致します。 The OSHA stipulates only that The employer shall develop a safe practices manual (Safety Plan) but not mention who prepare it. The proposed (6) stipulates a diver shall prepare it . The diver is not restricted to a diver who actually engages in the diving work. The diver prepares it getting advice and DPIC approve it. Because the diving work is special work, by the preparation by the diver and review and approval by the DPIC, quality of SP which does not have missing/errors can be secured. The	and other workers related with the diving operations and the working methods and safety measures; and (h) Communication systems and procedures. (4) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to ~~avoid~~ mitigate such risks. (5) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall ~~incorporate the advice of and~~ be approved by the DPIC.

		diver is not normal diver but one HSO admits his ability. On the other hand, if DPIC prepare the SP, it is necessary to assign other professional person who is qualified for diving works because HSO cannot review and approve as normally he is not qualified for diving works. With reasons, NK propose to leave this (6) with deletion of " incorporate the advice of and". (7) The Dive Safety Plan shall be reviewed and approved by the HSO and submitted to the Engineer. JC: HSO による review & approval の後に Engineer に提出することにした方がよくないか？ Isn't it better that after review and approval of the Dive Safety Plan, then submit it to the Engineer? NK: DPIC が review and approval を(6)で規定していますが、最終的に HSO が承認することとし、下記の第 1 章 1.7.7 に規定の通り、作業開始前にエンジニアへ提出することが良いと考えます。第 1 章に規定されておりここでの提出の規定は不要と考えます。(6)には Further を追記します。 1.7.7.Commencement Stage Safety Plan (1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site, (6) stipulate DPIC shall review and approval the Safety Plan (SP), and HSO shall finally approve the SP. As JSSS 1.7.7. above has specified its submission, no need to specify it in (6).	(6) The Dive Safety Plan shall be further reviewed and approved by the HSO
	(7) The Dive Safety Plan shall be reviewed and approved by the HSO.		
	10.2.2. Climatic, Marine, Natural and Physical Conditions The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. The Contractor shall establish criteria to permit commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.	10.2.2. Climatic, Marine, Natural and Physical Conditions The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. The Contractor shall establish criteria to permit commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented. JC: permit to stop という言い方があるのでしょうか。 We wonder if there is expression of "permit to stop"? NK: 作業開始、継続、中止は DPIC が基準(criteria)に基づき現場で指示することから、請負者は基準を設定することへ変更します。 The commencement, continuation or stopping is directed in accordance with the criteria at the site, therefore this clause specifies only to establish the criteria as modified.	10.2.2. Climatic, Marine, Natural and Physical Conditions The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. The Contractor shall establish criteria ~~to permit~~ for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.
	The Contractor shall make exploratory dives to survey and establish conditions at the diving location. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following: (1) Climatic information and forecasting at the	The Contractor shall make exploratory dives to survey and establish conditions at the diving location. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following: (1) Climatic information and forecasting at the diving location:

	diving location: (a) Wind speed and direction; (b) Air temperature; (c) Surface visibility, fog, sea mist; (d) Likelihood and intensity of electrical storm; and (e) Weather forecasting. (2) Water/Marine Conditions (a) Sea state; wave height and direction; (b) Height and time of tides; (c) Water depths; (d) Water Temperatures; (e) Water currents, direction and speed; (f) Visibility at depths; and (g) Water level variation in rivers or lakes during flood periods. (3) Physical Conditions (a) Underwater cables and pipes; (b) Other artificial obstacles; (c) Geotechnical conditions affecting the work; and (d) UXO, Dangerous Goods and Hazardous Substances. (4) Natural Conditions (a) Natural obstructions; (b) Coral reef or other marine life to be protected; and (c) Danger from marine wildlife and precautions. (5) Surface Traffic (a) Surface traffic details, timings and restrictions, and (b) Danger, precautions and control of surface traffic. (6) Diving Works Area (a) Demarcation of diving location; and (b) Limits of working area. 10.2.3. Further Technical Detail in Dive Safety Plan In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including: (1) Equipment for the Dive Works of air	(a) Wind speed and direction; (b) Air temperature; (c) Surface visibility, fog, sea mist; (d) Likelihood and intensity of electrical storm; and (e) Weather forecasting. (2) Water/Marine Conditions (a) Sea state; wave height and direction; (b) Height and time of tides; (c) Water depths; (d) Water Temperatures; (e) Water currents, direction and speed; (f) Visibility at depths; and (g) Water level variation in rivers or lakes during flood periods. (3) Physical Conditions (a) Underwater cables and pipes; (b) Other artificial obstacles; (c) Geotechnical conditions affecting the work; and (d) UXO, Dangerous Goods and Hazardous Substances. (4) Natural Conditions (a) Natural obstructions; (b) Coral reef or other marine life to be protected; and (c) Danger from marine wildlife and precautions. (5) Surface Traffic (a) Surface traffic details, timings and restrictions, and (b) Danger, precautions and control of surface traffic. (6) Diving Works Area (a) Demarcation of diving location; and (b) Limits of working area. 10.2.3. Further Technical Detail in Dive Safety Plan In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including: (1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas	(a) Wind speed and direction; (b) Air temperature; (c) Surface visibility, fog, sea mist; (d) Likelihood and intensity of electrical storm; and (e) Weather forecasting. (2) Water/Marine Conditions (a) Sea state; wave height and direction; (b) Height and time of tides; (c) Water depths; (d) Water Temperatures; (e) Water currents, direction and speed; (f) Visibility at depths; and (g) Water level variation in rivers or lakes during flood periods. (3) Physical Conditions (a) Underwater cables and pipes; (b) Other artificial obstacles; (c) Geotechnical conditions affecting the work; and (d) UXO, Dangerous Goods and Hazardous Substances. (4) Natural Conditions (a) Natural obstructions; (b) Coral reef or other marine life to be protected; and (c) Danger from marine wildlife and precautions. (5) Surface Traffic (a) Surface traffic details, timings and restrictions, and (b) Danger, precautions and control of surface traffic. (6) Diving Works Area (a) Demarcation of diving location; and (b) Limits of working area. 10.2.3. Further Technical Detail in Dive Safety Plan In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including: (1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas

10.3　要員の配置

(1) 請負者は、本仕様書 1.8[請負者の要員の適正配置]に従い、潜水作業には、作業の管理者、潜水士、作業の支援員を配置しなければならない。潜水作業の管理者と作業の支援員の業務及び責務は次である。→規定なし。序文は不要であることから、規定しない。

(a) 潜水士の資格を持つ者の中から、船上で全体の作業を管理及び指揮する潜水作業の管理者を配置し、以下の業務を行わせること。
→E10.3.2 に Designated Person-in-Charge として規定済み

(i) 潜水作業全般の統括業務と管理
→E10.3.2(1)に規定済み

(ii) 潜水士、作業の支援員に対する作業の指揮→規定なし。E10.3.3(3)に追記する。

(iii) 潜水作業全般の安全管理、並びに他の作業関係者との連絡・調整→E10.3.3(2)に規定済み

(iv) 潜水作業に関する記録の作成と保管
→E10.3.3(6)&(7)に規定済み

(b) 次に示す潜水作業の支援に従事する作業の

compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.

(6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

10.3. PERSONNEL FOR DIVING OPERATIONS

10.3.1. Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving operations and emergency

cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.

(6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

10.3 PERSONNEL FOR DIVING OPERATIONS

10.3.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving operations and emergency procedures.

(4) All Dive Team members shall be trained in

cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.

(6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

10.3 **PERSONNEL FOR DIVING OPERATIONS**

10.3.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving operations and emergency procedures.

(4) All Dive Team members shall be trained in

支援員を、潜水方法の特性に応じ必要な人数配置すること。→E10.3.5 に規定済み

(i) 空気圧縮機を運転すること。→E10.3.5(1)に規定済み

(ii) 潜水士への送気の調節を行うバルブ又はコックを操作すること。→E10.3.5(2)に規定済み

(iii) 潜水士と連絡して、その者の潜降及び浮上を適正に行わせること。→E10.3.5(3)に規定済み

(iv) 潜水士への送気の調節を行う送気員と連絡して、潜水士に必要な量の空気を送気させること。→E10.3.5(4)に規定済み

(v) 送気設備の故障その他の事故により、潜水士に危険又は健康障害の生ずるおそれがあるとき、速やかに潜水士に連絡すること。→E10.3.5(5)に規定済み

(vi) ヘルメツト式潜水器を用いて行う潜水業務にあっては、潜降直前に当該潜水士のヘルメツトがかぶと台に結合されているかどうかを確認すること。→E10.3.5(6)に規定済み

(vii) 作業船との混在作業における作業船・潜水士間の連絡及び合図の伝達を行うこと。→E10.3.5(7)に規定済み

(viii) 潜水士に命綱を用いる場合は、確認信号により潜水士の安全を確認すること。→E10.3.5(8)に規定済み

(ix) 気泡により潜水士の安全を確認すること。→E10.3.5(9)に規定済み

(2) 潜水士の健康管理は、本仕様書 1.8.1[要員の適正配置上の留意点]に規定の作業員の健康状態の管理に加えて、以下の潜水士の疾患及び健康状態に留意して行わなければならない。潜水作業で危険のおそれがある疾患又は状態がある場合は、潜水士を潜水作業に従事させないこと。
→E10.3.6(1)&(3)に規定済み、下記は同(1)-(2)に規定済み。

(a) 呼吸器系疾患 (Respiratory system)
(b) 循環器系疾患 (Cardiovascular system)
(c) 神経系疾患(Nervous system)
(d) 筋骨格系疾患(Musculoskeletal system))
(e) 耳鼻咽喉系疾患 (Ear, nose, throat)
(f) 視覚の状態(Vision)
(g) 歯の状態(Dental health)
(h) 内分泌系疾患(Endocrine system
(i) その他の潜水に影響のある疾患、健康項目

procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.3.2. Designated Person-in-Charge (DPIC).

(1) The Contractor shall assign a DPIC to each diving operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location).

(5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

(7) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.

10.3.3. Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the diving operation;

(3) Issue instructions for the diving operation to the Dive Team;

cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.3.2 Designated Person-in-Charge (DPIC).

(1) The Contractor shall assign a DPIC to each diving operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location).

(5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

~~(7) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.~~

JC: 10.3.4 に入れるべき事項
This item should be in 10.3.4.
NK: Moved to 10.3.4.(4).

10.3.3 Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the diving operation;

(3) Issue instructions for the diving operation to the Dive Team;

cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.3.2 Designated Person-in-Charge (DPIC).

(1) The Contractor shall assign a DPIC to each diving operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location).

(5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

10.3.3 Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the diving operation;

(3) Issue instructions for the diving operation to the Dive Team;

	(4) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (5) Support the HSO with the health and safety management of the diving operations; (6) Ensure that all members of the Dive Team keep records; and (7) Collect or summarise records and submit to HSO. 10.3.4. Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member. (2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the Contractor and is likely to affect adversely the safety or health of a Dive Team member. 10.3.5. Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver	(4) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (5) Support the HSO with the health and safety management of the diving operations; (6) Ensure that all members of the Dive Team keep records; and (7) Collect or summarise records and submit to HSO. 10.3.4 Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member. (2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the Contractor and is likely to affect adversely the safety or health of a Dive Team member. JC: 趣旨が分からないので、non-native に分かるような記述に修正してください。 The meaning of this item is hard to understand. Please, modify the sentence so that non-native can easily understand. NK: Modified. MD will review this. NK: moved from 10.3.2 (7) to (4). 10.3.5 Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver	(4) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (5) Support the HSO with the health and safety management of the diving operations; (6) Ensure that all members of the Dive Team keep records; and (7) Collect or summarise records and submit to HSO. 10.3.4 Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member. (2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment. (4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present. 10.3.5 Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver descends and ascends properly.

	descends and ascends properly. (4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by receiving the signals from the Diver when the Diver is using the lifeline. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.	descends and ascends properly. (4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by receiving the signals from the Diver when the Diver is using the lifeline. JC: 音声が普通で、line signalling は一般的ではないようなので、改めて内容を確認願います。 OSHA に line signalling はなく、10.5.2(2)(d)を参照。 Communication is usually made verbally and line signalling is not used in common. Please, confirm if this item is appropriate. Refer to 10.5.2.(2)(d). NK: OSHA では、line signalling はスキューバダイビング以外では認められていない。よって本仕様書では、以降の節においても信号索は除外して規定する。 As stipulated in OSHA as below, line-pull signal shall not be used except for scuba diving. 29 CFR 1910.422(c) Communications. An operational two-way voice communication system is required for communications between each surface-supplied air diver or mixed-gas diver and a member of the dive team at the dive location or in the diving bell (if a diving bell is provided or required). Line-pull signals do not meet this requirement, except for the SCUBA-diving mode. A two-way voice communication system is required for communications between the diving bell and the dive location. Modified and deleted line pull signals in other clauses. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.	(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by maintaining communication with voice or video communication device. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.
10.4 作業員への安全教育と指導、周知 請負者は、潜水作業の作業員に次の安全教育と指導、周知を行わなければならない。 (1) 本仕様書 4.1.4[安全教育と指導]に準じて、各作業の特性に応じて、作業員に対して教育訓練を実施すること。→E10.2.1(1)に規定済み (2) 本仕様書 4.1.2[各作業の作業員への周知]に準じて、各作業の特性に応じた役割分担、作業内容、方法、手順、安全措置事項を作業員に周知すること。→E10.5.1(1)(a)-(d)に規定済み	10.3.6. Health Checks (1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties. (6) Should a Diver request termination during a dive, it may be necessary to prolong the

10.5 潜水設備・器具及び作業船

10.5.1 潜水作業用の設備及び器具

請負者は、OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations、§1910.430 Equipment. の規定を遵守し、潜水方式に応じて適切な設備及び器具を配置しなくてはならない。→E10.4.1 に規定済み

10.5.2 潜水作業船

請負者は、潜水作業のために次を遵守した潜水作業船を配置しなくてはならない。→E10.4.2(1)に規定済み

(1) 堅牢で、かつ対波性及び復元性の高い構造であること、当該国の法律に基づく設備を有し、かつ作業現場に応じた大きさのものであること。
→E10.4.2(1)(a)&(b)&(c)に規定済み

(2) 潜水士の乗降用のはしごが設置されていること。
→E10.4.2(1)(g)に規定済み

(3) 雨よけ並びに日よけの覆を設置されていること。
→E10.4.2(1)(h)に規定済み

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4. DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS,

10.4.1. Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2. Diving Workboats

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the diving operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS,

10.4.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2 Diving Workboats

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the diving operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or

10.5.3 点検・整備

請負者は、保守管理のために、当該国の法律及び当該潜水設備・器具及び作業船の製造者のマニュアルの規定に従い、本仕様書 4.1.6[機器の点検・整備]に準じ、当該当該潜水作業に使用する潜水設備・器具及び作業船の日常点検表、定期点検表を作成し、点検、検査を実施しなければならない。

点検検査結果は、記録・保管し、エンジニアから要求がある場合は提示しなければならない。

整備が完了するまで、潜水設備・器具及び作業船は、使用してはならない。→E10.4.3 に規定済み

10.6 潜水作業の安全措置

10.6.1 潜水作業前の安全措置→E10.5.1 に規定済み

請負者は、潜水作業の開始前に次の措置を講じなければならない。

(1) 作業員

(a) 作業の方法、手順、作業員の配置及び業務分担について打合せること。
→E10.5.1(1)(a)&(b)に規定済み

(b) 潜水タイムテーブルの順守を指示すること。
→E10.5.1(1)(c)に規定済み

(c) 作業場所の気象・海象の状況、障害物の有無及びその状況、その他注意すべき点について周知すること。→E10.5.1(d)に規定済み

(d) 潜水士の健康状態を確認すること。
→E10.5.1(e)に規定済み

(2) 潜水設備・器具

潜水設備・器具の作業前点検を行い、不備がある場合は使用を禁止すること。→E10.5.1(2)に規定済み

(3) 潜水作業船

(a) 作業前に点検を行い、不備がある場合は使用を禁止すること。→E10.5.1(3)(a)に規定済み

(b) 潜水作業船に潜水作業を表示する国際信号 A 旗板を掲げること。→E10.5.1(3)(c)に規定済

at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.4.3. Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.5. PARTICULAR SAFETY MEASURES

10.5.1. Measures before Diving operations

The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

recovering Divers who are in difficulty or have drifted away from position.

10.4.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.5 PARTICULAR SAFETY MEASURES

10.5.1. Measures before Diving operations

The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

JC: Moved from 10.5.1.(5)(d)

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and

have drifted away from position.

10.4.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.5 PARTICULAR SAFETY MEASURES

10.5.1. Measures before Diving operations

The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the

上記の確認で不備又は異常がある場合は、作業を行わないこと。→E10.5.1(5)に規定済み

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, signal halyard, communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the

lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, signal halyard communication device, torch, watch, water depth gauge, knife and the like.

JC: ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図（Line Signaling）するためのロープなので、英語でも halyard（揚げ綱）とは言わないかと。ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図（Line Signalling）するためのロープなので、英語でも halyard（揚げ綱）とは言わないかと。なお、信号索は現在あまり使われず、双方向通話可能な機器の利用が一般的かと思われ、信号索そのものをここであげる必要もないのでは？

"Signal halyard" is a rope for raising a flag. The term in Japanese means a rope for line signalling to communicate on board and in water. The line signalling is recently seldom used, it would not necessary to mention about it here.
As commented above, OSHA has no provision about line signalling, and video or voice communication is in the major stream. It is recommended to modify the phrase.

NK: As commented above and 10.3.5.(8), line signalling is not used. Deleted "signal halyard" and added "voice and video" for communication device.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the

seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, ~~signal halyard,~~ voice or video communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

	like. (b) Inform the Diver of the air supply capacity of the air tank(s) for SCUBA diving; (c) Check that the downline is secure and tight; (d) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and (e) Check that support assistant and crew on the workboat are wearing life jackets. If any defect is identified by the above checks, prohibit the dive operation from commencing.	like. ~~(b) Inform the Diver of the air supply capacity of the air tank(s) for SCUBA diving~~ JC: 「現に有する給気能力」current とか要らない？よく見るとこの上にある available air volume と重複。(これってダイバーが自身でチェックできるなら、こっちは不要では？) また、inform はおかしい→If any defect is identified by the above checks, prohibit the dive operation from commencing. "Air supply capacity" is a duplication of "available air volume" in (ii) above. And, "inform" is not proper. → If any defect is identified by the above checks, prohibit the dive operation from commencing. NK: (b)は削除、→の先の文章は本項の最後の文章であるが指示内容が不明のため、そのまま残します。です。 (b) is deleted. The comment to the Sentence marked by → is not clear, so no change to this sentence is made. (c) Check that the downline is secure and tight; (d) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and ~~(e) Check that support assistant and crew on the workboat are wearing life jackets.~~ JC: e)は少なくとも潜水器具じゃないので違うかと。 Item (e) is not diving equipment. NK: Considering the content, moved to 10.5.1.(1)(f). If any defect is identified by the above checks, prohibit the dive operation from commencing.	(b) Check that the downline is secure and tight; (c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and If any defect is identified by the above checks, prohibit the dive operation from commencing.
10.6.2 潜水作業中の安全措置→E10.5.2 に規定済み 請負者は、潜水作業中は、次の安全措置を講じなければならない。 (1) 作業に無関係な船舶の潜水作業場所付近への接近を監視する専任の監視員を配置し、潜水作業場所付近に近づく船舶に対し、ハンドマイク、旗等により現場へ接近させないこと。→E10.5.2(1)に規定済み (2) 潜水士への措置 (a) 潜水作業の管理者及び作業の支援員がいないときは、潜水士に潜水作業を行わせないこと。→E10.5.2(2)(a)に規定済み (b) 作業船の乗降には、乗降用はしごを使用させること。→E10.5.2(2)(b)に規定済み (c) 潜降及び浮上するときは、さがり綱を使用させること。→E10.5.2(2)(c)に規定済み (d) 有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。→E10.5.2(2)(d)に規定済み (3) 気象・海象状況の変化を早期に把握し、計画で定めた作業中止基準に合致する状況となった場合	10.5.2. Measures during Diving Operations The Contractor shall take the following safety measures during each diving operation: (1) A designated member of the workboat crew on the workboat shall observe the diving operation and workboat operation and look out for any other vessels that may approach the diving operation site. 水深 10m 以上の場所において潜水作業を行うとき、又は水深 10m 以下の水深であっても減圧症等にかかるおそれのある作業を行うときは、本契約で別途規定する措置を講じなければならない。→E10.6.1(1)&(2)に規定済み。ただし、規定内容が異なるため、追記する。

---

the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging.

(3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(4) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and

---

operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

JC: 通話装置必須なら、信号索不要では？(注:通話装置を携行する場合は信号索、水中時計、水深計を携行させないことができる。)和文 10.6.(2)(d)では、「有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。」となっているけど、信号索はもはや使わない前提で MD さん書き直していて、整合性がとれてないかと
If "voice or video communication" is a must, "line signalling" is unnecessary. It is stipulated in the Japanese draft 10.6.(2) (d) that when using voice communication device, it is not necessary to use signal line, underwater watch and hydro-barometer.
There is inconsistent between 10.3.5.(8) and 10.5.1(5) (a) (i) and the above (d) is inconsistent.

NK: 10.3.5.(8)で信号索を使用しない規定とした。上記(6)は変更なし。
10.3.5.(8) stipulated no line signaling is used in JSSS. No change of (d) above.

(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging.

(3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(4) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that

---

flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging.

(3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(4) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing;

wellbeing;

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

(c) Design shift times and patterns to preserve Divers' health and safety;

(d) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis.

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

10.6. DIVING ACCIDENT CONTROL PLAN

10.6.1. General

(1) The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*].

10.6.2. Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness in accordance with OSHA

there is no risk to his health and wellbeing;

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

(c) Design shift times and patterns to preserve Divers' health and safety;

(d) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis.

JC: 個々の Diver が記録を保管するのでしょうか。DPIC ではないでしょうか。
Each diver should keep record individually? Isn't it the duty of DPIC?

NK: OSHA では、下記のように具体的に誰が記録をとるかは規定していないが、雇用者が保管することを規定している。各ダイバーが自分の作業記録をとり(keep a record)、それを DPIC がまとめ、請負者が保管することが実際的であると考える。(DPIC は潜水作業期間のみ現場にいることから請負者が保管することが妥当と考えます。)右のように変更する。
OSHA 29 Subpart T 1910.440 Recordkeeping requirements.
(3) Records and documents required by this standard shall be retained by the employer for the following period:
The OSHA does not stipulate who prepare records but the Contractor shall retain the records. (d) is modified for practical way at the Site as right. (DPIC may be assigned at the site during the diving work, so the Contractor shall retain the records.)

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

10.6 DIVING ACCIDENT CONTROL PLAN

10.6.1. General

(1) The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*].

10.6.2. Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

~~(1) The Contractor shall make decompression chamber available to treat decompression sickness in accordance with OSHA the~~

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

(c) Design shift times and patterns to preserve Divers' health and safety;

(d) Ensure that each Diver ~~keeps~~ take an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records.

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

10.6. DIVING ACCIDENT CONTROL PLAN

10.6.1. General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*].

10.6.2. Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997,

	requirements by means of: (a) Contract with a medical facility having a suitable and operational decompression chamber and having established a system to transport any affected Divers to immediately receive suitable recompression and decompression treatment with specialist medical support; or (b) Provision of a temporary decompression chamber located at the Diving Works location of a type, specification and capacity to suit the diving operation together with medical support facilities and specialist medical	~~requirements of by means of:~~ JC: HSE の Commercial diving projects inland/inshore-Diving at Work Regulations1997 の 114-118（再圧室関連の条項）を参照して記述願います。 読み間違いかもしれませんが、OSHA の 1910.423(c)(1)を見ると、水深 50m を越えないと再圧室の現場での設置は必要ないように読めます。 それは不十分に思えるので、10m を基準として記述されている HSE を参照する必要があると考えています。 要するに水深と必要な搬送時間等を考慮し、現場での設置の要否を定めることにします。 Modify this part referring to Commercial diving projects inland/inshore-Diving at Work Regulations1997 of HSE (re. compression chamber) because the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m. It is not sufficient, so JC considers HSE shall be applied to JSSS. The necessity of compression chamber shall be determined based on the depth of diving and the time necessary for transporting the patient to nearest chamber available. NK: OSHA は再圧室の現場での必要性を、1910.424 と 425 に次のように規定して、30m 以上の潜水、又は深度に関係なく NDL（減圧の不要な潜水時間）を越えた潜水の場合に、再圧室の現場の設置を規定しています。（なお、1910.423 は再圧室の能力を規定しています。） §1910.424 SCUBA diving. (b) Limits. SCUBA diving shall not be conducted: (1) At depths deeper than 130 fsw(=40m);. (2) At depths deeper than 100 fsw(=30m) or outside the no-decompression limits (NDL) unless a decompression chamber is ready for use; §1910.425 Surface-supplied air diving. (b) Limits. (2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits (NDL) or deeper than 100 fsw(=30m). NK: OSHA は潜水深度と NDL での規定しています。一方、HSE は水中の減圧時間と潜水深度で規定しています。コメントのように 10m より浅い潜水も規定しており、HSE の順守と規定します。 Revised as commented to comply with HSE (a) ~~Contract with~~ Identify a medical facility having a suitable and operational decompression chamber and having established a system to transport any affected Divers to immediately receive suitable recompression and decompression treatment with specialist medical support; or (b) Provision of a temporary decompression chamber located at the Diving Works location of a type, specification and capacity to suit the diving operation together with medical	Availability of compression chambers, Clauses 114 to 118 by means of: (a) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (b) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression.

	support.	support facilities and specialist medical support. JC: Replaced by JC. NK: (a) and (b) are replaced with (a) to (c) as right following HSE.	This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents. If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work. If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (c) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work. The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used. The controls of a compression chamber shall only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The degree of supervision provided shall reflect the experience of the operator.
	(2) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities) and first-aid supplies. The rescue and safety equipment and first-aid supplies provided at the Diving Works location must be appropriate for the diving operations, approved by a physician and where necessary any medication shall be suitable for use under hyperbaric conditions.		(2) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first - aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the Diving Works location shall be appropriate for the diving operations, approved by a physician. When used in a decompression chamber or bell, the first aid kit shall be suitable for use under hyperbaric conditions.
	(3) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the Diving Works location.	(2) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities) and first-aid supplies. The rescue and safety equipment and first-aid supplies provided at the Diving Works location must be appropriate for the diving operations, approved by a physician and where necessary any medication shall be suitable for use under hyperbaric conditions. JC: OSHA1910.421 (c)だと first aid kit という記載ですが、これは薬物の使用のことでしょうか？高圧下での使用が薬物の使用に影響を与えるからこのような書き方になっているのでしょうか。OSHA のままの記述に戻した方が良いのではないでしょうか。 OSHA 1910.421 (c) is titled as “first aid supplies”. Does “medication” above means usage of medicines? Is “medication” used because of specifying use of medicines	

		under hyperbaric conditions which affects their use? Isn't it better to stipulate as "first aid kit" as mentioned in OSHA? NK: Medication は治療との意味で考える。OSHA では高圧の条件下では適切な救急用具を使用することのみ規定あり。"first aid kit"に変更する。 It is guessed that "medication" is used for treating someone with a medicine. The term is replaced with "first aid kit". (3) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the Diving Works location.	(3) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the Diving Works location.

(copy from OSHA)

OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations

§ 1910.424 SCUBA diving.

(a) General. Employers engaged in SCUBA diving shall comply with the following requirements, unless otherwise specified.

(b) Limits. SCUBA diving shall not be conducted:

(1) At depths deeper than 130 fsw(=40m);.

(2) At depths deeper than 100 fsw(=30m). or outside the no-decompression limits unless a decompression chamber is ready for use;

§ 1910.425 Surface-supplied air diving.

(a) General. Employers engaged in surface-supplied air diving shall comply with the following requirements, unless otherwise specified.

(b) Limits. (1) Surface-supplied air diving shall not be conducted at depths deeper than 190 fsw (=58m), except that dives with bottom times of 30 minutes or less may be conducted to depths of 220 fsw(=67m);.

(2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits or deeper than 100 fsw(=30m).

1910.423(c) Recompression capability. Decompression chambers provide the only effective therapy (i.e., recompression) for decompression sickness and arterial gas embolism. …

1910.423(c)(1). This provision requires the use of a decompression chamber capable of recompressing the diver at the surface to a minimum of 165 fsw (=50m, 6 ATA) at the dive location for: SCUBA dives deeper than 100 fsw (=30m); surface-supplied air dives deeper than 100 fsw but shallower than 220 fsw (=66m); mixed-gas dives shallower than 300 fsw (=90m); or diving outside the no-decompression limits shallower than 300 fsw.

(copy from HSE)

HSE Commercial diving projects inland/inshore-Diving at Work Regulations1997

114 The diving contractor has a responsibility to ensure the provision of facilities so that a diver can be recompressed in an emergency, should this be necessary. Treatment of DCI (Decompression illness) in a compression chamber should commence as soon as possible (subject to medical advice). The provision of a compression chamber should be in accordance with the decompression procedures selected as part of the diving project plan.

115 In addition, the following minimum standards should be applied:

(a) for dives that are shallower than 10 metres with planned in-water decompression not exceeding 20 minutes, the diving contractor should identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances should this be more than 6 hours travelling distance from the dive site;

(b) for dives between 10 and 50 metres with planned in-water decompression not exceeding 20 minutes, the diving contractor should assess the risk of DCI and likelihood of a diver requiring emergency recompression.

This should be based on the depth and duration of the planned dives. The assessment should also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents.

If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber should be provided for immediate use at the site of the diving project. If the assessment demonstrates relatively low risk of DCI, the diving contractor should identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances should this be more than 6 hours travelling distance from the dive site;

(c) for dives with planned in-water decompression stops greater than 20 minutes the diving contractor should provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving project.

The diver should be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.

The controls of a compression chamber should only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The degree of supervision provided should reflect the experience of the operator.

116 The diving project plan should demonstrate that in an emergency, where the compression chamber is not located on the site, a diver will be able to be transported and recompressed to ensure, so far as reasonably practicable, their safety.

If the diving project plan relies on the support of any emergency services, then that plan should be subject to continued assessment and take into account any factors which may affect such support (for example changing weather conditions).

117 If a situation arises where a diver may need hyperbaric treatment at a chamber provided by another chamber owner, then provision for this should be made in the diving project plan.

118 If the diving contractor is responsible for transporting the injured diver to a hospital or other place, their duty will continue until the diver is admitted to the hospital or other place.

Copy of OSHA

§1910.421 Pre-dive procedures.

(a) General. The employer shall comply with the following requirements prior to each diving operation, unless otherwise specified.

(b) Emergency aid. A list shall be kept at the dive location of the telephone or call numbers of the following:

(1) An operational decompression chamber (if not at the dive location);
(2) Accessible hospitals;
(3) Available physicians;
(4) Available means of transportation; and
(5) The nearest U.S. Coast Guard Rescue Coordination Center.

(c) First aid supplies.

(1) A first aid kit appropriate for the diving operation and approved by a physician shall be available at the dive location.
(2) When used in a decompression chamber or bell, the first aid kit shall be suitable for use under hyperbaric conditions.
(3) In addition to any other first aid supplies, an American Red Cross standard first aid handbook or equivalent, and a bag-type manual resuscitator with transparent mask and tubing shall be available at the dive location.

(d) Planning and assessment.

Planning of a diving operation shall include an assessment of the safety and health aspects of the following:

	JICA Comments 頂いたドラフトを改めて拝見すると、Plan について in advance of each diving operation で作成するものと記述があります(ドラフトの 10.1.2 (f))。 また特に 10.2.3 の Further Technical Details の内容をみると、例えば Time Schedule や Composition of Dive Team 等、正に一回一回のダイビングのための「手順書」に該当するものを強くイメージされていると理解しました。 これはダイビング作業全体に関して作成されるべき Safety Plan(for diving)ではなく、Procedure に該当するものであると判断し、Dive Safety Procedure と書き換えるようお願いする内容になっています。 ただ、それだけだと上位文書になる Safety Plan が存在せず、いきなり Procedure の話になってしまうので、まず ①1 章の総則を引用しながら Safety Plan について簡単に記述する(本当にごくごく簡単な記述でよいと思います)、 ②その Safety Plan を作成するにあたって・・・という文脈で 10.2.2 の自然条件調査について記述する、 ③最後に Procedure についてまとめて記述する、という順序で再整理をお願いしています。	JICA Comments We reviewed the R2. There is stipulation that the Plan shall be prepared in advance of each diving operation in the draft 10.1.2 (f). We guessed that NK prepared some kinds of stipulations for work procedure of each diving work from the stipulations of Further Technical Details in 10.2.3 for example Time Schedule, Composition of Dive Team, etc. We judged that these are not Safety Plan (for diving) to be prepared for overall diving works but stipulations for the Work Procedure. Therefore, our comments are to request NK to revise the Dive safety Plan to Dive Safety Procedure. However, it needs to specify Diving Safety Plan at first before Dive Safety Procedure as follows: 1) Specify simply about Dive Safety Plan referring to Chapter 1 General (really, we think, very simple stipulation is enough.). 2) Stipulate about the study of national conditions mentioned in 10.2.2 with pre-wording "when preparation of the Safety Plan,", and 3) At the end, stipulate all requirements about Procedure. We request NK to rearrange the stipulations as mentioned above.
10 DIVING WORK **10.1 GENERAL** 10.1.1 Scope This Chapter specifies the safety requirements for diving operations which	**10 DIVING WORK** **10.1 GENERAL** 10.1.1 Scope This Chapter specifies the safety requirements for diving operations which	**10 DIVING WORK** **10.1 GENERAL** 10.1.1 Scope This Chapter specifies the safety requirements for diving operations which

shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as “Diving Works”.

Saturation diving and mixed-gas diving are not included.

10.1.2 Definitions

(1) Definition of terms is as follows:

(a) “Surface-supplied air diving” means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) “SCUBA diving” means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) “Dive Team” means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) “Designated Person-in-Charge” or “DPIC” means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) “Dive Safety Plan” means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.

10.1.3 Compliance Standards

(1) For provisions which are not stipulated in the JSSS, the Contractor shall comply ~~as a minimum~~ with ~~all of~~ the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

---

shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as “Diving Works”.

Saturation diving and mixed-gas diving are not included.

10.1.2 Definitions

(1) Definition of terms is as follows:

(a) “Surface-supplied air diving” means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) “SCUBA diving” means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) “Dive Team” means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) “Designated Person-in-Charge” or “DPIC” means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team; (JC1)

JC1: Operation Leader とは異なることを是としても、Diving Work だけの人材なので(for diving works)を追記しました。

“Designated Person-in-Charge” may be one of Operation Leaders, but he is exclusively for diving work. Therefore, (for diving works) is added as right.

NK: Added.

(f) “Dive Safety Plan” means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC. (JC2)

JC2: Diving operation 全体にプランはほかにあるという前提で、ここでは個々の潜水作業についての手順書というイメージで書かれているものと理解しました。

Our understanding is that the Dive Safety Plan is defined as it specify the procedure of individual diving work on the premise that there is an overall safety dive plan. We modified as the right.

NK: Dive Safety Plan と Dive Safety Procedure の関係が明確になるように、(f)に Dive Safety Plan、(g)に Dive Safety Procedure の定義を追加します。メール(2020/4/24)のコメントに従い、10.2.1 に第 1 章との関係を追加しました。

To make clear the relation between Dive Safety Plan and Dive Safety Procedure, (f) Dive Safety Plan is modified and (g) Dive Safety Procedure is added.

Stipulations are added in 10.2.1 in accordance with the JICA mail (2020.4.24) to relate the Safety Procedure to the Safety Plan and Method Statement.

10.1.3 Compliance Standards

(1) For provisions which are not stipulated in the JSSS, the Contractor shall comply with the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving). (JC3)

JC3: これこそ、Unless otherwise specified in the Contract とすべき。

---

shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as “Diving Works”.

Saturation diving and mixed-gas diving are not included.

10.1.2 Definitions

(1) Definition of terms is as follows:

(a) “Surface-supplied air diving” means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) “SCUBA diving” means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) “Diver” means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) “Dive Team” means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) “Designated Person-in-Charge (for diving works) or “DPIC” means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) “Dive Safety Plan” means the safety plan for diving operation as a part of Safety Plan specified in JSSS 1.7 [Contractor’s Safety Plans] and is the basis of the Dive Safety Procedure;

(g) “Dive Safety ~~Plan~~ Procedure” means the safety ~~plan~~ procedure prepared in advance of each diving operation in which the nature, size and other details are specified ~~as described in JSSS 10.2 [Dive Safety Procedure]~~ . ~~and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC~~.

10.1.3 Compliance Standards

(1) ~~For provisions which are not stipulated in the JSSS~~ Unless otherwise specified in the Contract, the Contractor shall comply with the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

This phrase should be “Unless otherwise specified in the Contract.

NK: コメントに従い修正しました。Modified as commented.

10.2 DIVE SAFETY PLAN

10.2.1 General Content

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

(3) For each required diving operation and diving mode, the Dive Safety Plan shall include:

(a) Safety procedures and checklists for each diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) ~~Equipment l~~ Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of the weather and marine conditions;

~~(e) Details of the workboat and all diving equipment, fuel, and other consumables;~~

~~(f) Equipment, tools, materials and consumables for the assigned work tasks;~~

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

10.2 DIVE SAFETY PLAN (JC4)

JC4: 以下、全部 procedure にしておいてください。

Please replace all Dive Safety Plan with Dive Safety Procedure.

NK: Dive Safety Plan と Dive Safety Procedure の関係について 10.2.1 に規定し、その後 Dive Safety Procedure について規定します。タイトルを“DIVE SAFETY PLAN and DIVE SAFETY PROCEDURE”へ変更しました。

We will stipulate the relation between Dive Safety Plan and Dive Safety Procedure in 10.2.1 at first and do Dive Safety Procedure later.

The title of the section is changed to “DIVE SAFETY Plan and DIVE SAFETY PROCEDURE”.

10.2.1 General Content

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan. (JC5)

JC5: Safety Procedure はコントラクターがダイビングの知見を持った人の知見を用いて作成するという意味の記載にしてください。

Please, modify the description so that the safety procedure shall be created by the Contractor obtaining opinions of persons who have diving knowledges.

NK: コメントに従い、右のように変更しました。また、10.2.2 へのコメントを反映させるため、冒頭に Dive Safety Plan について記述し、Procedure との関係を明確にしました。

Modified in accordance with the comment as right. and in order to reflect the comment at 10.2.2, a paragraph is added to clarify the relationship between the Plan and Procedure.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

JC6: Clauses (3) and after (3) are separated from 10.2.1, and contents are independently described as 10.2.2 “Content” with some modification and deletion. (5) is moved from (4)

NK: Modified as commented.

(3) For each required diving operation and diving mode, the Dive Safety Plan shall include:

(a) Safety procedures and checklists for each diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of the weather and marine conditions;

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

(g) Information and instructions to be given to the Divers,

10.2 DIVE SAFETY PLAN AND DIVE SAFETY PROCEDURE

10.2.1 Preparation of Dive Safety Plan and Dive Safety Procedure

(1) The Contractor shall prepare the Dive Safety Plan as a part of Safety Plan specified in JSSS 1.7.6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary information for the Diving Work.

(2) The Contractor shall prepare the Dive Safety Procedure in advance of individual diving operation in addition to Method Statement specified in JSSS 1.9 [Contractor’s Method Statements] and the Diving Safety Plan.

(3) The Dive Safety Plan and the Dive Safety Procedure shall be prepared consulting Diver(s) for expert opinions who has the qualification and capability deemed sufficient by the HSO. They shall be incorporated the advice of and be approved by DPIC when prepared in the Works, and reviewed and approved by the HSO.

(4) The Contractor shall inform and if necessary further train and test all Dive Team members the content of the Dive Safety Plan and the Dive Safety Procedure.

(5) A copy of the Dive Safety Plan and the Dive Safety Procedure shall be made available at the dive location to each Dive Team member.

10.2.2 Dive Safety Plan

The Dive Safety Plan shall describe the Contractor’s plan regarding items related with the diving operation listed in Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan] and in accordance with the following:

(1) The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(g) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures.

(4) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to ~~avoid~~ mitigate such risks.

(5) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall ~~incorporate the advice of and~~ be approved by the DPIC.

(6) The Dive Safety Plan shall be further reviewed and approved by the HSO.

10.2.2 Climatic, Marine, Natural and Physical Conditions

The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan.

The Contractor shall establish criteria ~~to permit~~ for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(1) Climatic information and forecasting at the diving location:

(a) Wind speed and direction;

support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures. (JC7)

JC7: ここでいう Communication system とはダイバーとボート間のことなら、そう記載すべき。

If the “communication system” is for that between the diver and the boat, it shall be described so.

NK: ダイバーと作業船とのシステムということを追加します。

Added phrase that the system between the diver and the workboat.

(4) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to mitigate such risks. (JC8)

JC8: これは Safety Plan のレベルで行われることなので、Procedure では不要。

As this is to be done at the Safety Plan, therefore unnecessary to describe here.

NK: 10.2.1(2)に Dive Safety Plan で規定すべき事項として、(4) の事項を含んでいる Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan]にもとづくことと追記しました。

Contents of Dive Safety Plan including those mentioned (4) are specified in 10.2.1(2) in accordance with Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan].

(5) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall be approved by the DPIC. (JC9)

(6) The Dive Safety Plan shall be further reviewed and approved by the HSO (JC9)

JC9: The contents of clause (5) and (6) are included in 10.2.1 (1). Deleted here.

10.2.2 Climatic, Marine, Natural and Physical Conditions (JC10)

JC10: まず 10.2 として「1 章の総則に従って Safety Plan（Safety Procedure ではない）を作成する」と記述してください。そのうえで、この 10.2.2 の内容を続けてください。その次に Safety Procedure の話をまとめて書いてください。

10.2 specifies that firstly Safety Plan (not Safety Procedure) shall be prepared in accordance with Chapter 1, secondly specify the contents of 10.2.2, and after those, specifies the contents for Safety Procedure.

NK: 10.2.1 (1)に Dive Safety Plan について記述を加え、Dive Safety Procedure との関係を明確にしました。

An explanation is added in 10.2.1 (1) to clarify the relationship between Dive Safety Plan and Dive Safety Procedure.

The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan.

The Contractor shall establish criteria for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

(ii) Coral reef or other marine life to be protected; and

(iii) Danger from ~~marine~~ wildlife ~~and precautions~~.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

(2) The Dive Safety Plan shall describe the safety measures for the diving operations including the following:

(a) Safety procedures and checklists for ~~each~~ diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) Lists~~, procedures and checklists~~ of diving equipment, tools, PPE, materials, workboat, fuel and ~~other consumables~~ others necessary for ~~each~~ diving operation;

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of ~~the weather and marine conditions~~ the climatic, marine, natural and physical conditions;

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

(g) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures between the diver and

(b) Air temperature;

(c) Surface visibility, fog, sea mist;

(d) Likelihood and intensity of electrical storm; and

(e) Weather forecasting.

(2) Water/Marine Conditions

(a) Sea state; wave height and direction;

(b) Height and time of tides;

(c) Water depths;

(d) Water Temperatures;

(e) Water currents, direction and speed;

(f) Visibility at depths; and

(g) Water level variation in rivers or lakes during flood periods.

(3) Physical Conditions

(a) Underwater cables and pipes;

(b) Other artificial obstacles;

(c) Geotechnical conditions affecting the work; and

(d) UXO, Dangerous Goods and Hazardous Substances.

(4) Natural Conditions

(a) Natural obstructions;

(b) Coral reef or other marine life to be protected; and

(c) Danger from marine wildlife and precautions.

(5) Surface Traffic

(a) Surface traffic details, timings and restrictions, and

(b) Danger, precautions and control of surface traffic.

(6) Diving Works Area

(a) Demarcation of diving location; and

(b) Limits of working area.

10.2.3 Further Technical Detail in Dive Safety Plan

In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a

available sources and shall include for example the following:

(1) Climatic information and forecasting at the diving location:

(a) Wind speed and direction;

(b) Air temperature;

(c) Surface visibility, fog, sea mist;

(d) Likelihood and intensity of electrical storm; and

(e) Weather forecasting.

(2) Water/Marine Conditions

(a) Sea state; wave height and direction;

(b) Height and time of tides;

(c) Water depths;

(d) Water Temperatures;

(e) Water currents, direction and speed;

(f) Visibility at depths; and

(g) Water level variation in rivers or lakes during flood periods.

(3) Physical Conditions

(a) Underwater cables and pipes;

(b) Other artificial obstacles;

(c) Geotechnical conditions affecting the work; and

(d) UXO, Dangerous Goods and Hazardous Substances.

(4) Natural Conditions

(a) Natural obstructions;

(b) Coral reef or other marine life to be protected; and

(c) Danger from marine wildlife and precautions.

(5) Surface Traffic

(a) Surface traffic details, timings and restrictions, and

(b) Danger, precautions and control of surface traffic.

(6) Diving Works Area

(a) Demarcation of diving location; and

(b) Limits of working area.

10.2.3 Further Technical Detail in Dive Safety Plan

In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

the workboat.

(i) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support. Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(3) The Contractor shall establish criteria for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

(4) The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

10.2.3 Dive Safety Procedure

The Dive Safety Procedure shall describe the technical details for the individual diving operation including the following:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the decompression chamber or the address, contact details of an existing decompression chamber.

(6) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

decompression chamber at the Diving Works location together with medical support. (6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location. (7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.	(4) Communications, recovery and first aid measures in the event of an accident or emergency. (5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support. (6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location. (7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.	
10.3 PERSONNEL FOR DIVING OPERATIONS 10.3.1 Qualification of Diving Personnel Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following: (1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer. (2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner. (3) Each Dive Team member shall have experience and training in the following: (a) The use of tools, equipment and systems relevant to assigned tasks; (b) Techniques of the assigned diving mode; and (c) Diving operations and emergency procedures. (4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent. (5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology. (6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements. 10.3.2 Designated Person-in-Charge (DPIC) (1) The Contractor shall assign a DPIC to each diving operation. (2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.	**10.3 PERSONNEL FOR DIVING OPERATIONS** 10.3.1 Qualification of Diving Personnel Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following: (1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer. (2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner. (3) Each Dive Team member shall have experience and training in the following: (a) The use of tools, equipment and systems relevant to assigned tasks; (b) Techniques of the assigned diving mode; and (c) Diving operations and emergency procedures. (4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent. (5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology. (6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements. 10.3.2 Designated Person-in-Charge (DPIC) (JC11) JC11: 10.1.2.(e)のコメントのように(for diving works)を加える。 As commented to 10.1.2.(e), (for diving works) is added. MK: Added. (1) The Contractor shall assign a DPIC to each diving operation. (2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.	**10.3 PERSONNEL FOR DIVING OPERATIONS** 10.3.1 Qualification of Diving Personnel Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following: (1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and the Engineer. (2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner. (3) Each Dive Team member shall have experience and training in the following: (a) The use of tools, equipment and systems relevant to assigned tasks; (b) Techniques of the assigned diving mode; and (c) Diving operations and emergency procedures. (4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent. (5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology. (6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements. 10.3.2 Designated Person-in-Charge (for Diving Works) (DPIC) (1) The Contractor shall assign a DPIC to each diving operation. (2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team. (4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location). (5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties. (6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.	(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team. (4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location). (5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties. (6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.	(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team. (4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location). (5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties. (6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.
10.3.3 Duties of DPIC The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Manage the health and safety of the Dive Team; (2) Manage and supervise-the diving operation; (3) Issue instructions for the diving operation to the Dive Team; (4) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (5) Support the HSO with the health and safety management of the diving operations; (6) Ensure that all members of the Dive Team keep records; and (7) Collect or summarise records and submit to HSO.	10.3.3 Duties of DPIC (JC12) JC12: Operation Leader と変更する場合には、in addition to the provisions described in the Chapter 1 hereof とする？ If "DPIC" is replaced with "Operation leader", is it necessary to subscribe "in addition to the provisions described in the Chapter 1 hereof"? NK: DPIC は潜水という特殊な工事の場合であり、OSHA で使用されている用語であることから、Operation Leader に含める必要はないと思います。このままとします。 DPIC is used in JSSS only for diving works which are special works, and it is a term being used in OSHA. It is deemed that it is not necessarily included in Operation Leaders. Therefore, DPIC is left as it is.. The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Manage the health and safety of the Dive Team; (2) Manage and supervise-the diving operation; (3) Assignment of tasks to Diving Team members NK: 下記 10.3.4 (1)の対応参照。See the comment for 10.3.4 (1). (4) Issue instructions for the diving operation to the Dive Team; (5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (6) Support the HSO with the health and safety management of the diving operations; (7) Ensure that all members of the Dive Team keep records; and (8) Collect or summarise records and submit to HSO.	10.3.3 Duties of DPIC The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Manage the health and safety of the Dive Team; (2) Manage and supervise-the diving operation; (3) Assignment of tasks to Diving Team members; (4) Issue instructions for the diving operation to the Dive Team; (5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue; (6) Support the HSO with the health and safety management of the diving operations; (7) Ensure that all members of the Dive Team keep records; and (8) Collect or summarise records and submit to HSO.
10.3.4 Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member. (2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except	10.3.4 Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member. (JC13) JC13: 誰が Assign するのか。DPIC なら 10.3.3 に追記必要では？ Who will assign tasks to the Dive team members? If DPIC is the one, it should be	10.3.4 Diver Assignments. (1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment. (4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.	added in 10.3.3? NK: 役割の割り当ては DPIC の責務ですので、10.3.3 (3)にその旨を追加します。 Assignment of tasks to Diving Team members is one of important responsibilities of DPIC. Added as 10.3.3 (3). (2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment. (JC14) JC14: Revised by JC. NK: MD will review this revision. (4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.	(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures. (3) The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions for an excessive duration or any other condition which ~~is likely to affect adversely the safety or health of a Dive Team member that~~ may cause any physical impairment. (4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.
10.3.5 Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver descends and ascends properly. (4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by maintaining communication with voice or video communication device. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.	10.3.5 Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver descends and ascends properly. (4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (JC15) JC15: Revised by JC. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by maintaining communication with voice or video communication device. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.	10.3.5 Assistants and Duties of Dive Team The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner. All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following: (1) Operate the air compressors. (2) Control the valve for the surface supply of breathing air. (3) Communicate with the Diver so that the Diver descends and ascends properly. (4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver; (5) Inform the Diver immediately when there is any ~~risk~~ trouble due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards. (6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet. (7) Coordinate the position of the workboat and avoid any conflict with the diver. (8) Ensure the safety of the Diver by maintaining communication with voice or video communication device. (9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.
10.3.6 Health Checks (1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to	10.3.6 Health Checks (1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to	10.3.6 Health Checks (1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to

ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health

(d) Any other health conditions and disease which may affect the diving operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to any task assignment.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.4.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2 Diving Workboats

ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health

(d) Any other health conditions and disease which may affect the diving operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to any task assignment. (JC16)

JC16: Revised by JC.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.4.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2 Diving Workboats (JC17)

JC17: Contractor's Equipment の一部であるが、Chapter 4 の記載は作業船をイメージ

ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health

(d) Any other health conditions and disease which may affect the diving operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to ~~any task assignment~~ each diving operation.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.4.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2 Diving Workboats

(1) Workboats shall be: (a) Robust and seaworthy; (b) Stable in operation; (c) Suitable size, draft and shape to suit the diving operations; (d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required; (e) Equipped with marine lighting; (f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment; (g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and (h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain. (2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist. (3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position. 10.4.3 Inspections and Maintenance The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request. The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.	していないので Chapter 4 に追記が必要(たとえば作業船の名前を追記するなど)。 Workboat is one of the Contractor's Equipment, however, it is not specifically itemised in Chapter 4. It is necessary to describe workboat in Chapter 4. NK: コメントに従い、第 4 章 4.1.1 (5)に Workboat for diving works を追加します。 As commented, "Workboat for diving works" will be added to 4.11(5). (1) Workboats shall be: (a) Robust and seaworthy; (b) Stable in operation; (c) Suitable size, draft and shape to suit the diving operations; (d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required; (e) Equipped with marine lighting; (f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment; (g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and (h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain. (2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist. (3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position. 10.4.3 Inspections and Maintenance The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request. The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.	(1) Workboats shall be: (a) Robust and seaworthy; (b) Stable in operation; (c) Suitable size, draft and shape to suit the diving operations; (d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required; (e) Equipped with marine lighting; (f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment; (g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and (h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain. (2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist. (3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position. 10.4.3 Inspections and Maintenance The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request. The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.
10.5 PARTICULAR SAFETY MEASURES 10.5.1 Measures before Diving operations The Contractor shall take the following measures before commencement of any diving operation:	**10.5 PARTICULAR SAFETY MEASURES** 10.5.1 Measures before Diving operations The Contractor shall take the following measures before commencement of any diving operation:	**10.5 PARTICULAR SAFETY MEASURES** 10.5.1 Measures before Diving operations The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, ~~signal halyard,~~ voice or video communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the dive operation from commencing.

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(j) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, voice or video communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the dive operation from commencing.

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, voice or video communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the dive operation from commencing.

10.5.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each diving operation:

(1) A designated member of the workboat crew on the workboat shall ~~observe the diving operation and workboat operation and~~ look out for any other vessels that may approach the diving operation site.

The designated member shall alert any other vessels related or not related with the diving operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging.

(3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(4) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there

10.5.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each diving operation:

(1) A designated member of the workboat crew on the workboat shall look out for any other vessels that may approach the diving operation site.

The designated member shall alert any other vessels related or not related with the diving operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation; (JC18)

(c) Ensure that Divers use the downline for descending and ascending; (JC18)

(d) Maintain constant voice or video communication through the provided link; and

JC18：通常スキューバダイバーは入水時にはバックドロップすると思います。少なくとも(b)と(c)はスキューバのときに該当するか調べてください。

For scuba diving entering, backdrop method is used. Please, check if (b) and (c) can be applied for scuba diving.

NK: OSHA は次を規定しています。スキューバと区別はしていません。レジャーボートのように水面までの高さが低い場合は、後ろ向きに入水しますが、水面まで高さがある場合、はしご又は水中踏み台が必要です。Inwater stages を追記します。

29 CFR 1910.422 Procedures during dive
1. 29 CFR 1910.422(b) Water entry and exit. A means capable of supporting the diver (such as an inwater stage or ladder) while entering or exiting the water is required.

If it is a fixed structure, such as a ladder, it must extend below the water sufficiently to allow adequate diver access and support (a minimum of one meter is recommended). Portable ladders should be secured to maintain stability and to prevent pinch points.

The employer also must provide a means for assisting an injured diver from the water to the surface or into a diving bell (such as an inwater stage, stokes basket, or harness)

NK: OSHA は、潮流がある場所では索（line-tended）の使用を規定しています。OHSA に downline の規定はありませんが、Wikipidia に downline の下降上昇使用、潮流のある場所での潜水の深度のコントロール等に使用できるとの記述があります。

OSHA: 29 CFR 1910.424(b)(3) requires SCUBA divers to be line-tended against currents exceeding one (1) knot (1.689 feet per second, or about 17 feet per 10 seconds).

Wikipedia: https://en.wikipedia.org/wiki/Downline_(diving)

In underwater diving, a downline is a piece of substantial cordage running from a point at the surface to the underwater workplace, and kept under some tension. It can be used as a guideline for divers descending or ascending, for depth control in blue-water diving...

10.5.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each diving operation:

(1) A designated member of the workboat crew on the workboat shall look out for any other vessels that may approach the diving operation site.

The designated member shall alert any other vessels related or not related with the diving operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders or inwater stages for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

is no risk to his health and wellbeing; (b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods; (c) Design shift times and patterns to preserve Divers' health and safety; (d) Ensure that each Diver ~~keeps~~ take an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records. (e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.	*日本の高気圧作業安全衛生規則では、スキューバを区別せず潜水作業者を規定しています。* *(さがり綱) 第三十三条　事業者は、潜水業務を行なうときは、潜水作業者が潜降し、及び浮上するためのさがり綱を備え、これを潜水作業者に使用させなければならない。* *Japanese Ordinance on Safety and Health of Work under High Pressure* *https://www.jniosh.johas.go.jp/icpro/jicosh-old/japanese/country/japan/laws/03_rel/09_highpressure_reg/03c.html* *(Life Line) Article 33. When the employer has the said diving workers engage in diving operations, he shall provide a life line and make the said diving workers use it in descending and ascending.* JSSS は、日本の安全規則をベースにしており、(c)の規定は上記規則にもとづき、原文のままとします。 Because JSSS is based on Japanese regulation, (c) is left as it is as stipulated in Japanese Ordinance above. (e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging. (3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner; (4) Safety and Health Management of Diving Operations (a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing; (b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods; (JC19) JC19: Sufficient は言い過ぎでは？大勢の控えがいる訳がない。 "Sufficient" is too much to say. There shouldn't be many standby divers. NK:　節の意味は、長時間の水中作業を避けるために十分な数の潜水士と、必要な予備潜水士をそろえるという意味で、十分な数の予備潜水士という意味ではありませんが、誤解を生む可能性がありますので、コメントに従い修正します。 The meaning is that sufficient numbers of Divers shall be available to avoid excessive in-water period and necessary standby divers shall be provided. To avoid misunderstanding, the sufficient is replaced with suitable. To MD, please review this wording. (c) Design shift times and patterns to preserve Divers' health and safety; (d) Ensure that each Diver take an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records. (J20) JC20: JICA modifies. (e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's	(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging. (3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner; (4) Safety and Health Management of Diving Operations (a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing; (b) Ensure that ~~sufficient~~ suitable numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods; (c) Design shift times and patterns to preserve Divers' health and safety; (d) Ensure that each Diver takes an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and submit it to DPIC ~~that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records~~. (e) Ensure that the DPIC summarises such records and submits them to the HSO for review and keep them available for the Engineer's inspection.

	review and countersignature and made available for the Engineer's inspection. (JC21) JC21: JICA modifies.	~~Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.~~
10.6 DIVING ACCIDENT CONTROL PLAN 10.6.1 General The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*]. 10.6.2 Provisions by the Contractor The Contractor shall comply with following requirements prior to Diving Works. (1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of compression chambers, Clauses 114 to 118 by means of: (j) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (k) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression. This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents. If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work. If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (l) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work. The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.	**10.6 DIVING ACCIDENT CONTROL PLAN** JC22: JICA modifies. 10.6.1 General The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*]. 10.6.2 Provisions by the Contractor The Contractor shall comply with following requirements prior to Diving Works. (1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of compression chambers, Clauses 114 to 118 by means of: (a) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (b) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression. This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents. If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work. If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (c) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work. The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.	**10.6 DIVING ACCIDENT ~~CONTROL~~ RESPONSE PLAN** 10.6.1 General The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*]. 10.6.2 Provisions by the Contractor The Contractor shall comply with following requirements prior to Diving Works. (1) The Contractor shall make decompression chamber available to treat decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of decompression chambers, Clauses 114 to 118 by means of: (a) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site; (b) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression. This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents. If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work. JC: JICA Comments (2020/04/24)	**JC: JICA Comments (2020/04/24)**	
We reviewed the R2. There is stipulation that the Plan shall be prepared in advance of each diving operation in the draft 10.1.2 (f).	We reviewed the R2. There is stipulation that the Plan shall be prepared in advance of each diving operation in the draft 10.1.2 (f).	
We guessed that NK prepared some kinds of stipulations for work procedure of each diving work from the stipulations of Further Technical Details in 10.2.3 for	We guessed that NK prepared some kinds of stipulations for work procedure of each diving work from the stipulations of Further Technical Details in 10.2.3 for	

example Time Schedule, Composition of Dive Team, etc.

We judged that these are not Safety Plan (for diving) to be prepared for overall diving works but stipulations for the Work Procedure. Therefore, our comments are to request NK to revise the Dive safety Plan to Dive Safety Procedure.

However, it needs to specify Diving Safety Plan at first before Dive Safety Procedure as follows:

1) Specify simply about Dive Safety Plan referring to Chapter 1 General (really, we think, very simple stipulation is enough.).

2) Stipulate about the study of national conditions mentioned in 10.2.2 with pre-wording “when preparation of the Safety Plan,”, and

3) At the end, stipulate all requirements about Procedure.

We request NK to rearrange the stipulations as mentioned above.

NK: NK modified this Chapter based on the above comments.

3) At the end, stipulate all requirements about Procedure.

We request NK to rearrange the stipulations as mentioned above.

NK: NK modified this Chapter based on the above comments.

In my original draft I had inserted a definition for “Diving Project” which also defined “Diving Operations” and consequently safety plans could be understood to be relative to either. Unfortunately, “Diving Project” was deleted and all safety plan references were changed “Diving Operations which was not the best choice and I think that this has created the difficulty for JICA. It is important to define and segregate these two terms because they each demand a separate and different type of safety plan.

Operation stage dive safety plans are much more important for diving safety than the equivalent plan for work on land and far more numerous as they will actually be required before every single dive.

As I had explained previously, although OSHA does not clearly define “diving operation” or “diving project” it makes frequent reference to the former and single mention of the latter. In terms of JSSS requirements for safety plans therefore, I believe that if this is not defined and explained further, this will give rise to interpretation problems in the future confusing.

“Operations” (plural) therefore has implied meaning taken as each separate dive generally understood to be a part of a “diving project”.

HSE is more comprehensive on this subject by defining both and providing rules for both whereby a Diving Project is comprised of one or more diving operations.

I therefore again suggest that definitions for Diving Project and Diving Operation be put back into the definitions and that subsequent requirements should be written clearly for each.

I have now reinserted definitions for both of the above and with the benefit of more time for consideration, I have considerably simplified both.

Similar to all other types of Works, Safety plans are required separately for Diving Works each of the above in accordance with JSSS 1.7.3 as follows:

(1) Bid Stage Safety Plan (Outline Dive Safety Plan).

(2) Commencement Stage Safety Plan (Updated Dive Safety Plan)

(3) Particular Safety Plans (Individual safety plans for each Diving Operation

The required content of each of the above is now clearly and simply described in the text.

	Although not really necessary, the Outline Overall safety plan submitted for the Bid in accordance with JSSS Chapter 1 Annex 1.2 item (9), can be further clarified to specifically mention diving with additional phrasing such as: *"If the Works include any Diving Works, the Safety Plan shall include safety requirements for such works in accordance with JSSS Chapter 10 [Diving Works]."* ***I can add the above to the next draft of Chapter 1 if required.*** *I have put back in the definitions of Diving Project and Diving Operation in 10.1.1, edited/simplified them considerably significantly, and then redrafted 10.2.1 to make the correlation between Chapter 10 and Chapter 1 (1.1.3) and OSHA requirements clear.* *Safety Plans for each and every Diving Operation are very necessary because each Diving Operation is under different conditions (depth, current, visibility etc etc). Also, and maybe more importantly with repetitive dives the intensity and nature of previous Diving Operations and restricted surface time to release residual nitrogen can prevent some divers not being allowed to dive. If this is not managed properly then serious injury or death can result.* *I have edited the remainder of your draft to reflect the above basic consideration on the assumption that the above basis is accepted by you in principle and so that there is one document for further joint review.*	
10.1.1 Scope This Chapter specifies the safety requirements for diving operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included.	10.1.1 Scope This Chapter specifies the safety requirements for Diving Operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included.	10.1.1 Scope This Chapter specifies the safety requirements for Diving Operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included.
	I have suggested the use of Nitrox before for the reasons given below but still do not understand why JSSS does not include mixed gas diving with Nitrox (also called Enhanced Air Nitrogen and others). This is air with enhanced oxygen which can be mixed and bottled at the site with relatively simple equipment under properly controlled conditions and it is commonly used in commercial diving basically because it reduces the effects of decompression sickness and provides further benefits for commercial diving operations such as: • *Longer Bottom Times. Divers who use nitrox absorb less nitrogen, making them stay underwater for longer.* • *Less Fatigue* • *Longer Dive Times.* • *Shorter Surface Intervals therefore less risk with repetitive dives.* *It is useful for dives up to 120 fsw (EAN32) or around 110 fsw (EAN36)* *If so I suggest that the second paragraph above is changed to* Diving with Nitrox is included, diving with other mixed-gases is not included. Saturation diving is not included.	
10.1.2 Definitions (1) Definition of terms is as follows:	10.1.2 Definitions (1) The definition of terms for the purpose of this Chapter are as	10.1.2 Definitions (1) The definition of terms for the purpose of this Chapter are as

(a) "Surface-supplied air diving" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "SCUBA diving" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

JC: Operation Leader とは異なることを是としても、Diving Work だけの人材なので、このように追記しました。
"Designated Person-in-Charge" may be one of Operation Leaders, but he is exclusively for diving work. Therefore, supplemented as right.

(f) "Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.

JC: Diving operation 全体にプランはほかにあるという前提で、ここでは個々の潜水作業についての手順書というイメージで書かれているものと理解しました。
On the premise that there would be a plan for whole diving work, it is understood that this clause is describing about individual diving work.

NK:メール(2020/4/24)のコメントに従い、10.2.1 に第 1 章との関係を追加しました。
An expression is added in 10.2.1 in accordance with the JICA mail (2020.4.24) to relate the Safety Procedure to the Safety Plan and Method Statement.

follows:

(a) "Surface-supplied air diving" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "SCUBA diving" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers, support assistants and dive boat crew who are involved in any Diving Operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" ~~(for diving works)~~ or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

JC1: Operation Leader とは異なることを是としても、Diving Work だけの人材なので(for diving works)を追記しました。
"Designated Person-in-Charge" may be one of Operation Leaders, but he is exclusively for diving work. Therefore, (for diving works) is added as right.

NK: Added.

I think that the suggested addition is not necessary in view of the reworded first sentence of the subclause which is "for the purpose of this chapter i.e. Diving Works

Regarding deletion of the following, please refer to my notes and explanations on pages 1 and 2 and the revised clauses inserted below

(f) ~~"Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC. the safety plan for diving operation as a part of Safety Plan specified in JSSS 1.7 [Contractor's Safety Plans] and is the basis of the Dive Safety Procedure;~~

(g) ~~"Dive Safety Plan Procedure" means the safety plan procedure prepared in advance of each diving operation in which the nature, size and other details are specified as described in JSSS 10.2 [Dive Safety Procedure] , and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.~~

JC2: Diving operation 全体にプランはほかにあるという前提で、ここでは個々の潜水作業についての手順書というイメージで書かれているものと理解しました。
Our understanding is that the Dive Safety Plan is defined as it specify the procedure of individual diving work on the premise that there is an overall safety dive plan. We modified as the right.

NK: Dive Safety Plan と Dive Safety Procedure の関係が明確になるように、(f)に Dive Safety Plan、(g)に Dive Safety Procedure の定義を追加します。メール(2020/4/24)のコメントに従い、10.2.1 に第 1 章との関係を追加しました。

follows:

(a) "**Surface-supplied air diving**" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "**SCUBA diving**" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "**Diver**" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "**Dive Team**" means Divers, support assistants and dive boat crew who are involved in any Diving Operation, including the Designated Person-in-Charge;

(e) "**Designated Person-in-Charge**" or "**DPIC**" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(f) "**Diving Operation**" means one single diving activity for one Diver or a team of Divers commencing from the time when the first Diver enters the water and extending until the last Diver has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression.

(g) "**Diving Project**" means any activity, made up of one or more Diving Operations, commencing from the first Diving Operation and extending until the latest Diver in the last Diving Operation has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression; "Diving Project' is the term used for the overall diving job – whether it lasts two hours or two months, and it can be made up of one or more Diving Operation; and

(h) "**Dive Safety Plan**" means the Safety Plan prepared for Diving Works in accordance with JSSS 10.2 [*Dive Safety Plan*].

10.1.3 Compliance Standards

(1) For provisions which are not stipulated in the JSSS, the Contractor shall comply with the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

JC: これこそ、Unless otherwise specified in the Contract とすべき。
This phrase should be "Unless otherwise specified in the Contract.

NK: コメントに従い修正しました。
Modified as commented.

To make clear the relation between Dive Safety Plan and Dive Safety Procedure, (f) Dive Safety Plan is modified and (g) Dive Safety Procedure is added. Stipulations are added in 10.2.1 in accordance with the JICA mail (2020.4.24) to relate the Safety Procedure to the Safety Plan and Method Statement.

I understand the reason for the query but instead of the above, I suggest the reinsertion of the following definitions in accordance with my notes on page 1 and 2 above, followed later by clear, properly correlated and simple safety plan requirements for each:

(f) "**Diving Operation**" means one single diving activity for one Diver or a team of Divers commencing from the time when the first Diver enters the water and extending until the last Diver has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression.

The nature and size of any Diving Operation shall be such that it can be safely supervised by one person;

(g) "**Diving Project**" means any activity, made up of one or more Diving Operations, commencing from the first Diving Operation and extending until the latest Diver in the last Diving Operation has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression; "Diving Project' is the term used for the overall diving job – whether it lasts two hours or two months, and it can be made up of one or more Diving Operation; and

(h) "**Dive Safety Plan**" means the Safety Plan prepared for Diving Works in accordance with JSSS 10.2 [*Dive Safety Plan*].

All definitions shall be realigned in alphabetical order

10.1.3 Compliance Standards

(1) ~~For provisions which are not stipulated in the JSSS Unless otherwise specified in the Contract, the Contractor shall comply as a minimum with all of the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).~~

JC1: このスペックに書いていない基準については OSHA に従うという記述にしてください。(最後のページのコメントにあるとおり、減圧室に関する記述は OSHA では不十分に見え、HSE を参照することとしたため)
For the provisions which are not stipulated in this specification, please state that they shall comply with OSHA.
(As mentioned in the comment in the last page, it seems that the statement of OSHA regarding decompression chamber is not sufficient, thus this chapter shall refer to HSE.)

NK: modified as commented.

JC3: これこそ、Unless otherwise specified in the Contract とすべき。

10.1.3 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall take necessary measures for Diving Works complying with the technical requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

	This phrase should be “Unless otherwise specified in the Contract. NK: コメントに従い修正しました。Modified as commented. *I suggest the following wording which was requested earlier by JICA and is now used consistently in every other Chapter and Section where necessary:* *Please note that this is a standard description that basically means that whatever is written here in this Section or Chapter of JSSS has priority and prevails over the stated compliance standard which in this case is OSHA.* *If nothing was added in JSSS each Chapter could simply consist of one line stating “Comply with JSSS” which is obviously not be acceptable.* *This does mean that whatever is written in the detail of JSSS must be necessary, correct and completely clear as for these parts there should be no further reliance on OSHA for example as JSSS has superseded it.* *It also means that the clause for Compliance Standards must be exactly the same wording wherever it used otherwise different interpretations (e.g. of priority) may be necessary in different parts of JSSS which is not advisable.* By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall take necessary measures for Diving Works complying with the technical requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).	
10.2 DIVE SAFETY PLAN 10.2.1 General Content (1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan. JC: Safety Procedure はコントラクターがダイビングの知見を持った人の知見を用いて作成するという意味の記載にしてください。 Please, modify the description son that it means that the safety procedure shall be created by the Contractor applying opinions of persons who have diving knowledges. NK: コメントに従い、右のように修正しました。また、(2), (3), (4)を JICA の意見に従い追加しました。また、10.2.2 のコメントを反映させるため、冒頭に Dive Safety Plan について記述し、Procedure との関係を明確にしました。 Modified in accordance with the comment as right. Clause (2), (3) and (4) are added as suggested by JICA. The title of the section is changed to “DIVE SAFETY Plan and DIVE SAFETY PROCEDURE” and in order to reflect the comment at 10.2.2, a paragraph is added to clarify the relationship between the Plan and Procedure. (2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member. JC: Clause (3) and after are separated from 10.2.1 and contents are independently described as 10.2.2 “General Content” with some modification and deletion. (5)is move from (4)	**10.2 DIVE SAFETY PLANS ~~AND DIVE SAFETY PROCEDURE~~** ~~10.2.1 General Content~~ JC4: 以下、全部 procedure にしておいてください。 Please replace all Dive Safety Plan with Dive Safety Procedure. NK: Dive Safety Plan と Dive Safety Procedure の関係について 10.2.1 に規定し、その後 Dive Safety Procedure について規定します。タイトルを“DIVE SAFETY PLAN and DIVE SAFETY PROCEDURE”へ変更しました。 We will stipulate the relation between Dive Safety Plan and Dive Safety Procedure in 10.2.1 at first and do Dive Safety Procedure later. The title of the section is changed to “DIVE SAFETY Plan and DIVE SAFETY PROCEDURE”. To MD, the above JICA comments are different from those mentioned in 10.1, therefore NK modified this Chapter following the comments given in 10. To MD, 10.2 is modified by relocating the stipulations in last issue as below. Please review the following 10.2 referring the JICA comments and NK responses given below. *Regarding the above, I can understand JICA’s confusion over the various safety plans covering the Diving Project and the Diving Operations but I suggest this problem is created by the lack of definition and lack of description of what safety plans are required for reach.* *I have simply modified the earlier clause 10.1 and this now again defines what each of these are and all that now remains is to describe the content of the requisite safety plans for each.*	**10.2 DIVE SAFETY PLANS**

(3) For each required diving operation and diving mode, the Dive Safety Plan shall include:

(a) Safety procedures and checklists for each diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of the weather and marine conditions;

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

(g) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures.

JC: ここでいう Communication system とはダイバーとボート間のことなら、そう記載すべき。
If the "communication system" is for that between the diver and the boat, it shall be described so.

NK: ダイバーと作業船とのシステムということを追加します。
Add an expression that the system between the diver and the workboat.

(4) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to mitigate such risks.

JC: これは Safety Plan のレベルで行われることなので、Procedure では不要。
As this is to be done at the Safety Plan, therefore unnecessary to describe here.

NK: 重要な事項であるので、10.2.1 (5)に文章を修正して移動します。
As this clause includes important items to be made, it is moved to 10.2.1 (5) (in new construction) with some modification.

(5) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall be approved by the DPIC.

(6) The Dive Safety Plan shall be further reviewed and approved by the HSO

JC: The contents of clause (5) and (6) are included 10.2.1 (1). Deleted here.

10.2.2 Climatic, Marine, Natural and Physical Conditions

JC: まず 10.2 として「1 章の総則に従って Safety Plan（Safety Procedure ではない）を作成する」と記述してください。そのうえで、この 10.2.2 の内容を続けてください。その次に Safety Procedure の話をまとめて書いてください。
Firstly, describe that Safety Plan shall be prepared according to Chapter 1, add secondly continue the contents of 10.2.2. Thirdly, describe the contents of Safety Procedure.

I do not think it is necessary to introduce "Dive Safety Procedure" as a new additional topic to the Dive safety Plan as all components of this clause are actually parts of the Safety Plan as defined in Chapter 1 and referred to in JSSS 1.7.3. The last part to be submitted before each Diving Operation, is actually a Particular Safety Plan required by 1.7.3.

These are basically the same as safety plans for other Chapters, the Bid and commencement stage dive plans will include all general safety compliance matters and the particular dive safety plans are effectively the pre-dive planning, referred to in OSHA (29 CFR 1910.421(d) Planning and assessment). Particular Dive Safety Plane will not repeat the general information and will usually be largely checklist based but will be numerous as one is required before any diver enters the water to work.

To incorporate the theme of your comment, to tie this in with JSSS Chapter 1 and also to avoid future ambiguity by using or referring to the framework and terms used in the OSHA standard, I suggest that this entire clause is reworded as follows:

10.2.1 General Requirements for the Dive Safety Plans

(1) The Contractor shall prepare Dive Safety Plans as part of the Safety Plan for the Works in compliance with the requirements of with JSSS 1.7 [*Contractor's Safety Plans*].

(2) The submission requirements in accordance with JSSS 1.7.3 shall be as follows:

(a) The Bid Stage Safety Plan shall include the Outline Dive Safety Plan;

(b) The Commencement Stage Safety Plan shall include the Updated Dive Safety Plan; and

(c) The Particular Safety Plans shall include the individual Particular Dive Safety Plans to be submitted for and in advance of each Diving Operation.

10.2.2 Bid Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.6 [*Bid Stage Safety Plan*], the Bid Stage Dive Safety Plan shall include an outline plan indicating the Contractor's operational procedures for each diving mode to be used in the Works (referred to in OSHA as the "safe practices manual"). This shall be in sufficient detail to give an understanding of the Contractor's intentions regarding the diving safety procedures that the Contractor intends to implement.

(2) The Bid Stage Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.

Regarding the comment that this clause (b) be deleted, I do not recommend this.

It is a requirement of OSHA as stated already but as diving regulations vary around the world many divers will not be familiar with US domestic i.e. OSHA requirements, It is important that they are given the opportunity to study this document and check that their employer is complying particularly with regard to OSHA Under 29 CFR 1910.410(b)(1).

Also "the Contractor's policies for implementing the requirements of this standard" are an important requirement of OSHA and really should be provided as it is evidence of what the Contractor intends to do. This is

10.2.1 General Requirements for the Dive Safety Plans

(1) The Contractor shall prepare Dive Safety Plans as part of the Safety Plan for the Works in compliance with the requirements of with JSSS 1.7 [*Contractor's Safety Plans*].

(2) The submission requirements in accordance with JSSS 1.7.3 shall be as follows:

(a) The Bid Stage Safety Plan shall include the Outline Dive Safety Plan;

(b) The Commencement Stage Safety Plan shall include the Updated Dive Safety Plan; and

(c) The Particular Safety Plans shall include the individual Particular Dive Safety Plans to be submitted for and in advance of each Diving Operation.

10.2.2 Bid Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.6 [*Bid Stage Safety Plan*], the Bid Stage Dive Safety Plan shall include an outline plan indicating the Contractor's operational procedures for each diving mode to be used in the Works (referred to in OSHA as the "safe practices manual"). This shall be in sufficient detail to give an understanding of the Contractor's intentions regarding the diving safety procedures that the Contractor intends to implement.

(2) The Bid Stage Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.

NK: 10.2.1 (1)に Dive Safety Plan について記述を加え、Dive Safety Procedure との関係を明確にしました。
An explanation is added in 10.2.1 (1) to clarify the relationship between Dive Safety Plan and Dive Safety Procedure.

The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan.

The Contractor shall establish criteria for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(1) Climatic information and forecasting at the diving location:
  (a) Wind speed and direction;
  (b) Air temperature;
  (c) Surface visibility, fog, sea mist;
  (d) Likelihood and intensity of electrical storm; and
  (e) Weather forecasting.

(2) Water/Marine Conditions
  (a) Sea state; wave height and direction;
  (b) Height and time of tides;
  (c) Water depths;
  (d) Water Temperatures;
  (e) Water currents, direction and speed;
  (f) Visibility at depths; and
  (g) Water level variation in rivers or lakes during flood periods.

(3) Physical Conditions
  (a) Underwater cables and pipes;
  (b) Other artificial obstacles;
  (c) Geotechnical conditions affecting the work; and
  (d) UXO, Dangerous Goods and Hazardous Substances.

(4) Natural Conditions
  (a) Natural obstructions;
  (b) Coral reef or other marine life to be protected; and
  (c) Danger from marine wildlife and precautions.

(5) Surface Traffic
  (a) Surface traffic details, timings and restrictions, and
  (b) Danger, precautions and control of surface traffic.

(6) Diving Works Area

included in the Bid Stage Dive Safety plan in 10.2.1 above, as it can and should be evaluated at that stage. It is usually a fairly standard document and easy for any Diving Contractor to prepare.

10.2.3 Commencement Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.7 [*Commencement Stage Safety Plan*], the Commencement Stage Dive Safety Plan shall be a development of the Bid Stage Dive Safety Plan and shall include detailed safety procedures and standard checklists to apply to all Diving Operations, equipment procedures, and emergency procedures (at a minimum covering fire, equipment malfunction or failure, adverse environmental conditions and medical illness and injury).

(2) The HSO shall review the Commencement Stage Dive Safety Plan to determine if it is correct and compliant with the requirements of OSHA and JSSS.

(3) A copy of the Commencement Stage Dive Safety Plan together with a copy of the OSHA standard and the Contractor's policies for implementing the requirements of OSHA (from the Bid Stage Dive Plan) shall be made available at the dive location to each Dive Team member and explained to the Dive Team by the HSO and DPIC.

10.2.4 Particular Dive Safety Plans

(1) In compliance with JSSS 1.7.8 [*Particular Safety Plans*], the Particular Dive Safety Plans shall contain all further information specific to each Diving Operation not covered by the foregoing Bid Stage and Commencement Stage Dive Plans together with all supplemental information obtained during pre-dive planning and assessment, to collectively demonstrate the Contractor's compliance with the requirements OSHA and JSSS for each Diving Operation, including for example:

  (a) Safety procedures and checklists for each Diving Operation;

  (b) Name of each Dive Team member, buddy diver assignments, individual work assignment and responsibility and confirmation from the DPIC that they each comply with all diving health and safety requirements and are therefore approved to work on the Diving Operation;

  (c) The planned dive profile for each Diver showing their maximum bottom time and ascent rate with decompression stages and times and taking account of repetitive dives;

Please note that this may be different for each diver according to their accumulated repetitive diving record

  (d) Description of all diving equipment, diving gases and consumables, PPE, procedures for their use and signed checklists to confirm compliance;

  (e) Description of the workboat and workboat facilities, together with information on the location of the workboat in relation to the dive site, and procedures for the use and operation of the dive boat during Diving Operations, any surface hazards and any restriction in operation due to surface traffic conditions;

Please note that "surface traffic conditions" are actually covered by 10.3.1 below but have more significance if mentioned here also

10.2.3 Commencement Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.7 [*Commencement Stage Safety Plan*], the Commencement Stage Dive Safety Plan shall be a development of the Bid Stage Dive Safety Plan and shall include detailed safety procedures and standard checklists to apply to all Diving Operations, equipment procedures, and emergency procedures (at a minimum covering fire, equipment malfunction or failure, adverse environmental conditions and medical illness and injury).

(2) The HSO shall review the Commencement Stage Dive Safety Plan to determine if it is correct and compliant with the requirements of OSHA and JSSS.

(3) A copy of the Commencement Stage Dive Safety Plan together with a copy of the OSHA standard and the Contractor's policies for implementing the requirements of OSHA (from the Bid Stage Dive Plan) shall be made available at the dive location to each Dive Team member and explained to the Dive Team by the HSO and DPIC.

10.2.4 Particular Dive Safety Plans

(1) In compliance with JSSS 1.7.8 [*Particular Safety Plans*], the Particular Dive Safety Plans shall contain all further information specific to each Diving Operation not covered by the foregoing Bid Stage and Commencement Stage Dive Plans together with all supplemental information obtained during pre-dive planning and assessment, to collectively demonstrate the Contractor's compliance with the requirements OSHA and JSSS for each Diving Operation, including for example:

  (a) Safety procedures and checklists for each Diving Operation;

  (b) Name of each Dive Team member, buddy diver assignments, individual work assignment and responsibility and confirmation from the DPIC that they each comply with all diving health and safety requirements and are therefore approved to work on the Diving Operation;

  (c) The planned dive profile for each Diver showing their maximum bottom time and ascent rate with decompression stages and times and taking account of repetitive dives;

  (d) Description of all diving equipment, diving gases and consumables, PPE, procedures for their use and signed checklists to confirm compliance;

  (e) Description of the workboat and workboat facilities, together with information on the location of the workboat in relation to the dive site, and procedures for the use and operation of the dive boat during Diving Operations, any surface hazards and any restriction in operation due to surface traffic conditions;

  (f) Description of all other Contractor's Equipment, tools and consumables for the assigned work tasks, procedures for their use and checklists;

  (g) The climatic, marine, natural and physical conditions that are likely to be encountered during any Diving Operation and the

(a) Demarcation of diving location; and

(b) Limits of working area.

10.2.3 Further Technical Detail in Dive Safety Plan

In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.

(6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

(f) Description of all other Contractor's Equipment, tools and consumables for the assigned work tasks, procedures for their use and checklists;

(g) The climatic, marine, natural and physical conditions that are likely to be encountered during any Diving Operation and the procedures for commencement, continuation or stopping of any Diving Operation following any change in these conditions in accordance with JSSS 10.3 [*Climatic, Marine, Natural and Physical Conditions*];

(h) Communication systems and procedures for communications:

(i) between Divers;

(ii) between Divers and the workboat; and

(iii) Between the work boat and the relevant marine authorities.

(i) Any further information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;

(j) The Particular Dive Safety Plan shall be prepared by the DPIC or another Diver that that has the qualification, experience and capability deemed sufficient by the HSO;

(k) The Particular Dive Safety Plan shall be reviewed and approved by the HSO;

(l) The content of the Particular Dive Safety Plan shall be explained to all Dive Team members during the employee briefing by the HSO or DPIC in accordance with OSHA 29 CFR 1910.421(f));

(m) If considered necessary by either the HSO or DPIC, individual Dive Team members shall be given additional training and testing; and

I assume that the above is a suitable response to your revision of 10.2.2 (5)

(n) A copy of the Particular Dive Safety Plan shall be made available at the dive location to each Dive Team member.

The above aims to ensure compliance with OSHA _ D. 29 CFR 1910.420 Safe practices manual.

Please note that it is not necessary to cover recompression facilities and arrangements; these are part of the Commencement Stage Dive Plan and also referred to in a later clause.

Much or all of the following is replaced by the above, hence the deletions

~~(1) [6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary information for the Diving Work.~~

~~10.2.2 Preparation of Dive Safety Plan and Dive Safety Procedure~~

~~(2) The Contractor shall prepare the Dive Safety Plan as a part of Safety Plan specified in JSSS 1.7.6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary~~

procedures for commencement, continuation or stopping of any Diving Operation following any change in these conditions in accordance with JSSS 10.3 [*Climatic, Marine, Natural and Physical Conditions*];

(h) Communication systems and procedures for communications:

(i) between Divers;

(ii) between Divers and the workboat; and

(iii) Between the work boat and the relevant marine authorities.

(i) Any further information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;

(j) The Particular Dive Safety Plan shall be prepared by the DPIC or another Diver that that has the qualification, experience and capability deemed sufficient by the HSO;

(k) The Particular Dive Safety Plan shall be reviewed and approved by the HSO;

(l) The content of the Particular Dive Safety Plan shall be explained to all Dive Team members during the employee briefing by the HSO or DPIC in accordance with OSHA 29 CFR 1910.421(f));

(m) If considered necessary by either the HSO or DPIC, individual Dive Team members shall be given additional training and testing; and

(n) A copy of the Particular Dive Safety Plan shall be made available at the dive location to each Dive Team member.

information for the Diving Work.

JC5: Safety Procedure はコントラクターがダイビングの知見を持った人の知見を用いて作成するという意味の記載にしてください。
Please, modify the description so that the safety procedure shall be created by the Contractor obtaining opinions of persons who have diving knowledges.

NK: コメントに従い、上のように変更しました。また、10.2.2 へのコメントを反映させるため、冒頭に Dive Safety Plan について記述し、Procedure との関係を明確にしました。
Modified in accordance with the comment as above and in order to reflect the comment at 10.2.2, a paragraph is added to clarify the relationship between the Plan and Procedure.

(3) The Contractor shall prepare the Dive Safety Procedure in advance of individual diving operation in addition to Method Statement specified in JSSS 1.9 [Contractor's Method Statements] and the Diving Safety Plan.

(4) The Dive Safety Plan and the Dive Safety Procedure shall be prepared consulting Diver(s) for expert opinions who has the qualification and capability deemed sufficient by the HSO. They shall be incorporated the advice of and be approved by DPIC when prepared in the Works, and reviewed and approved by the HSO.

(5) The Contractor shall inform and if necessary further train and test all Dive Team members the content of the Dive Safety Plan and the Dive Safety Procedure.

(6) A copy of the Dive Safety Plan and the Dive Safety Procedure shall be made available at the dive location to each Dive Team member.

10.2.2 Dive Safety Plan

The Dive Safety Plan shall describe the Contractor's plan regarding items related with the Diving Operation listed in Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan] and in accordance with the following:

JC8: これは Safety Plan のレベルで行われることなので、Procedure では不要。
As this is to be done at the Safety Plan, therefore unnecessary to describe here.

NK: 10.2.1(2)に Dive Safety Plan で規定すべき事項として、(4) の事項を含んでいる Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan]にもとづくことと追記しました。
Contents of Dive Safety Plan including those mentioned (4) are specified in 10.2.1(2) in accordance with Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan].

(1) The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

JC10: まず 10.2 として「1 章の総則に従って Safety Plan（Safety Procedure ではない）を作成する」と記述してください。そのうえで、この 10.2.2 の内容を続けてください。その次に Safety Procedure の話をまとめて書いてください。
10.2 specifies that firstly Safety Plan (not Safety Procedure) shall be prepared in accordance with Chapter 1, secondly specify the contents of 10.2.2, and after those, specifies the contents for Safety Procedure.

NK: 10.2.1 (1)に Dive Safety Plan について記述を加え、Dive Safety Procedure との関係を明確にしました。
An explanation is added in 10.2.1 (1) to clarify the relationship between Dive Safety Plan and Dive Safety Procedure.

10.3 CLIMATIC, MARINE, NATURAL AND PHYSICAL CONDITIONS

10.3.1 General

I suggest that the above heading from my earlier draft is relevant and simplifies the structure, please can this be put back together with the following opening clauses, which I have reinserted below with suitable editing:

(1) The Contractor shall compile relevant information from statistical records, recent and current forecasts of conditions which may be encountered in support of the Particular Dive Safety Plan and shall establish criteria and controls for commencement, continuation or stopping of any Diving Operation due to such conditions.

(2) The Commencement Stage Dive Safety Plan shall describe how such criteria shall be applied and how such controls shall be implemented.

10.3.2 Information on Conditions for Particular Dive safety Plans

(1) Where necessary, the Contractor shall make exploratory dives to survey and establish all relevant conditions at the dive site such that all Particular Dive Safety Plans are based upon the best and most timely available information.

(2) Relevant information shall also be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

(ii) Coral reef or other marine life to be protected; and

10.3 CLIMATIC, MARINE, NATURAL AND PHYSICAL CONDITIONS

10.3.1 General

(1) The Contractor shall compile relevant information from statistical records, recent and current forecasts of conditions which may be encountered in support of the Particular Dive Safety Plan and shall establish criteria and controls for commencement, continuation or stopping of any Diving Operation due to such conditions.

(2) The Commencement Stage Dive Safety Plan shall describe how such criteria shall be applied and how such controls shall be implemented.

10.3.2 Information on Conditions for Particular Dive safety Plans

(1) Where necessary, the Contractor shall make exploratory dives to survey and establish all relevant conditions at the dive site such that all Particular Dive Safety Plans are based upon the best and most timely available information.

(2) Relevant information shall also be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

(ii) Coral reef or other marine life to be protected; and

(iii) Danger from ~~marine~~ wildlife and precautions to be taken.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

(2) ~~The Particular Dive Safety Plan shall describe the safety measures for the Diving Operations including the following:~~

(a) ~~Safety procedures and checklists for each Diving Operation;~~

(b) ~~Assignments and responsibilities of each of the Dive Team members;~~

(c) ~~Lists, procedures and checklists of diving equipment, tools, PPE, materials, workboat, fuel and other consumables others necessary for each Diving Operation;~~

(d) ~~Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;~~

(e) ~~Work stop criteria for change of the weather and marine conditions the climatic, marine, natural and physical conditions;~~

(f) ~~Scope of work for each Diver and all support assistants in the Dive Team throughout the Diving Operation;~~

(g) ~~Information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures; and~~

(h) ~~Communication systems and procedures between the diver and the workboat.~~

~~JC7: ここでいう Communication system とはダイバーとボート間のことなら、そう記載すべき。~~

~~6. If the "communication system" is for that between the diver and the boat, it shall be described so.~~

~~NK: ダイバーと作業船とのシステムということを追加します。~~

~~Added phrase that the system between the diver and the workboat.~~

(i) ~~Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support. Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.~~

(3) ~~The Contractor shall establish criteria for commencement, continuation or stopping of any Diving Operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.~~

(4) ~~The Contractor shall make exploratory dives to survey and establish conditions at the diving location.~~

(iii) Danger from marine wildlife and precautions to be taken.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

The above is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

~~10.2.4 Dive Safety Procedure~~

~~The Dive Safety Procedure shall describe the technical details for the individual Diving Operation including the following:~~

~~(1) Equipment for the Dive Works of air compressor system, breathing gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.~~

~~(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the Diving Operations.~~

~~(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.~~

~~(4) Communications, recovery and first aid measures in the event of an accident or emergency.~~

~~(5) Emergency medical facilities including the decompression chamber or the address, contact details of an existing decompression chamber.~~

~~(6) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.~~

The above is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

To MD, the sentences from below to before 10.3 are replaced with the above 10.2. Please review the above 10.2.

The following is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

(1) ~~The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.~~

(2) ~~A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.~~

~~(3) The Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.~~

JC1: 意図が不明であることもあり、不要に思います。
The intention of this provision is unknown. This item is not necessary.

NK: OSHA Subpart T, 1910.420 Safe practices manual stipulate "(b) Contents. (1) The safe practices manual shall contain a copy of this standard and the employer's policies for implementing the requirements of this standard."
Item (3) is deleted as commented.

The above clause (3) has been deleted in your comment and we do not recommend this as it is an OSHA stipulated requirement and an important aspect of for safety compliance purposes.

This is a requirement of OSHA as stated already but as diving regulations vary around the world many divers will not be familiar with US i.e. OSHA requirements, It is very important that they are given the opportunity to study this document and check that their employer is complying particularly with regard to OSHA Under 29 CFR 1910.410(b)(1).

Also "the Contractor's policies for implementing the requirements of this standard" are an important requirement of OSHA and really should be provided as it is evidence of what the Contractor intends to do. This is included in the Bid Stage Dive Safety plan in 10.2.1 above, as it can and should be evaluated at that stage . It is usually a fairly standard document and easy for any Diving Contractor to prepare.

The following is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

(3) ~~For each required Diving Operation and diving mode, the Dive Safety Plan shall include:~~

~~JC1: work stop criteria を入れておいた方が良いと思います。10.5.2(3)に突然出てきているので~~

~~7. It is better to mention the work stop criteria here as it appears suddenly at 10.5.2 (3).~~

~~NK: Though it is stipulated to establish the criteria for stopping the work in 10.2.2., Item (e) is added.~~

(a) ~~Safety procedures and checklists for each Diving Operation;~~

(b) ~~Assignments and responsibilities of each of the Dive Team members;~~

(c) ~~Equipment l Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;~~

~~JC1: (e)及び(f)と重複感があります。違いがあるということであれば、分かるように明記してください。~~

~~(3) The item (c) seems duplicated with (e) and (f). If there is difference and reasons to state, describe it so that the difference can be understood clearly.~~

~~NK: OSHA Subpart T, 1910.420 Safe practices manual.の(a)から(d)を（3）に規定し、(e)以降を追記していました。(e) & (f)を(e)に含めます。~~

~~OSHA Subpart T, 1910.420 Safe practices manual.(a) to (d) is specified in (3) and other requirements are added to (3) as (e) to (i). Combined (e) and (f) in (e).~~

(d) ~~Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;~~

(e) ~~Work stop criteria for change of the weather and marine conditions;~~

~~(e) Details of the workboat and all diving equipment, fuel and other consumables;~~

~~(f) Equipment, tools, materials and consumables for the assigned work tasks;~~

(f) ~~Scope of work for each Diver and all support assistants in the Dive Team throughout the Diving Operation;~~

(g) ~~Information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;~~

and

(h) Communication systems and procedures.

(4) The Dive Safety Plan shall analyse the tasks of the assigned Diving Operation, assess all risks involved and describe all measures to avoid mitigate such risks.

(5)

JC1: changed.

(6) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall incorporate the advice of and be approved by the DPIC.

JC1: これでは実際に潜る人が計画を作ることになる(Diver の定義を参照)。OSHA を見ると基本は DPIC が作ることになっていないか？
8. This sentence can be read that the diver himself will make the Dive Safety Plan. (Refer to the definition of Diver,) DPIC shall make the Plan basically if comply with the provisions of OSHA?

JC1: DPIC が自分でアドバイスして、自分で承認するという言い方はおかしい。
It seems strange that DPIC gives advice to and approves the Dive Safety Plan.

NK: OSHA では、Safety Plan (Safety practice manual)を、雇用者（請負者）が作成するとのみ規定し、誰が作成するべきとは規定していません。
提案の(6)は、実際現場で潜るかに関係せず潜水士である者が、DPIC の助言を得て作成し、DPIC の承認を得ることを規定しています。
潜水作業という特殊な作業であることから、潜水士の作成、DPIC の review and approval 承認という手続きで、漏れや間違いのない品質の Safety Plan が確保できると考えます。
単なる潜水士ではなく、HSO が能力を認めた潜水士に作成することが規定されております。
一方、DPIC が作成しますと、review and approval の任務に HSO は専門家でないため不適であり、別途潜水専門家を任命する必要があります。
そのため、DPIC の助言は削除した原案を推奨致します。
The OSHA stipulates only that the employer shall develop a safe practices manual (Safety Plan) but not mention who prepare it.
The proposed (6) stipulates a diver shall prepare it. The diver is not restricted to a diver who actually engages in the diving work. The diver prepares it getting advice and DPIC approve it.
Because the diving work is special work, by the preparation by the diver and review and approval by the DPIC, quality of SP which does not have missing/errors can be secured. The diver is not normal diver but one HSO admits his ability.
On the other hand, if DPIC prepare the SP, it is necessary to assign other professional person who is qualified for diving works because HSO cannot review and approve as normally he is not qualified for diving works.
With reasons, NK propose to leave this (6) with deletion of "incorporate the advice of and".

(7) The Dive Safety Plan shall be reviewed and approved by the HSO.

JC1: HSO による review & approval の後に Engineer に提出することにした方がよくないか？
Isn't it better that after review and approval of the Dive Safety Plan, then submit it to the Engineer?

NK: DPIC が review and approval を(6)で規定していますが、最終的に HSO が承認することとし、下記の第 1 章 1.7.7 に規定の通り、作業開始前にエンジニアへ提出することが良いと考えます。第 1 章に規定されておりここでの提出の規定は不要と考えます。(6)には Further を追記します。

1.7.7 Commencement Stage Safety Plan

(1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
(6) stipulate DPIC shall review and approval the Safety Plan (SP), and HSO shall finally approve the SP. As JSSS 1.7.7. above has specified its submission, no need to specify it in (6).

10.2.1 Climatic, Marine, Natural and Physical Conditions

The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan.

The Contractor shall establish criteria to permit for commencement, continuation or stopping of any Diving Operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

JC1: permit to stop という言い方があるのでしょうか。
We wonder if there is expression of "permit to stop"?

NK: 作業開始、継続、中止は DPIC が基準(criteria)に基づき現場で指示することから、請負者は基準を設定することへ変更します。
The commencement, continuation or stopping is directed in accordance with the criteria at the site, therefore this clause specifies only to establish the criteria as modified.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(1) Climatic information and forecasting at the diving location:
  (a) Wind speed and direction;
  (b) Air temperature;
  (c) Surface visibility, fog, sea mist;
  (d) Likelihood and intensity of electrical storm; and
  (e) Weather forecasting.
(2) Water/Marine Conditions
  (a) Sea state; wave height and direction;
  (b) Height and time of tides;
  (c) Water depths;
  (d) Water Temperatures;
  (e) Water currents, direction and speed;
  (f) Visibility at depths; and
  (g) Water level variation in rivers or lakes during flood periods.
(3) Physical Conditions
  (a) Underwater cables and pipes;
  (b) Other artificial obstacles;
  (c) Geotechnical conditions affecting the work; and
  (d) UXO, Dangerous Goods and Hazardous Substances.

(4) ~~Natural Conditions~~

(a) ~~Natural obstructions;~~

(b) ~~Coral reef or other marine life to be protected; and~~

(c) ~~Danger from marine wildlife and precautions.~~

(5) ~~Surface Traffic~~

(a) ~~Surface traffic details, timings and restrictions, and~~

(b) ~~Danger, precautions and control of surface traffic.~~

(6) ~~Diving Works Area~~

(a) ~~Demarcation of diving location; and~~

(b) ~~Limits of working area.~~

~~10.2.2 Further Technical Detail in Dive Safety Plan~~

~~In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:~~

(1) ~~Equipment for the Dive Works of air compressor system, breathing gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.~~

(2) ~~Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the Diving Operations.~~

(3) ~~Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.~~

(4) ~~Communications, recovery and first aid measures in the event of an accident or emergency.~~

(5) ~~Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.~~

(6) ~~Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*]~~ ~~the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.~~

(7) ~~Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.~~

10.3 PERSONNEL FOR DIVING OPERATION

10.3.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.3.2 Designated Person-in-Charge (DPIC)

JC: 10.1.2.(e)のコメントのように(for diving works)を加える。

(1) The Contractor shall assign a DPIC to each diving operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location).

(5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation which shall be approved by the HSO and Engineer.

JC: JICA added "the".

NK: MD will review necessity of this "the".¥

No need "the"

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving Operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (~~for Diving Works~~) (DPIC).

JC11: 10.1.2.(e)のコメントのように(for diving works)を加える。
As commented to 10.1.2.(e), (for diving works) is added.

MK: Added.

Not necessary: please refer to 10.1.2 Definitions

(1) The Contractor shall assign a DPIC to each Diving Operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the Diving Operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the Diving Operation at that location).

(5) The DPIC can be a Diver when qualified as a Diver, and when another Dive Team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties when the DPIC is a Diver in the water.

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation which shall be approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving Operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (DPIC).

(1) The Contractor shall assign a DPIC to each Diving Operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the Diving Operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the Diving Operation at that location).

(5) The DPIC can be a Diver when qualified as a Diver, and when another Dive Team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties when the DPIC is a Diver in the water.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

10.3.3 Duties of DPIC

JC: Operation Leader と変更する場合には、in addition to the provisions described in the Chapter 1 hereof とする？
If DPIC is changed, “in addition to the provisions described in the Chapter 1 hereof” should be added?

NK: DPIC は潜水という特殊な工事の場合であり、OSHA 等で使用されている用語であることから、Operation Leader に含める必要はないと思います。このままとします。
DPIC is for diving works which is not one of general construction works, and it is a term being used in OSHA etc. It is deemed that it is not necessarily included in Operation Leaders. No change.

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the diving operation;

(3) Assignment of tasks to Diving Team members

NK: 下記 10.3.4 (1)の対応参照。
See the comment for 10.3.4 (1).

(4) Issue instructions for the diving operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the diving operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect or summarise records and submit to HSO.

10.3.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

JC: 誰が Assign するのか。DPIC なら 10.3.3 に追記必要では？
Who will assign tasks to the Dive team members? If DPIC is the one, it should be added in 10.3.3?

NK: 役割の割り当ては当然 DPIC の責務ですので、10.3.3 (3)にその旨を追加します。
Assignment of tasks to Diving Team members is one of important responsibilities od DPIC. Added as 10.3.3 (3).

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member’s will, except

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

(7) ~~No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team present.~~

JC1: 10.3.4 に入れるべき事項
This item should be in 10.3.4.

NK: Moved to 10.3.4.(4).

The move is correct, no problem

10.4.3 Duties of DPIC

JC12: Operation Leader と変更する場合には、in addition to the provisions described in the Chapter 1 hereof とする？
If “DPIC” is replaced with “Operation leader”, is it necessary to subscribe “in addition to the provisions described in the Chapter 1 hereof”?

NK: DPIC は潜水という特殊な工事の場合であり、OSHA で使用されている用語であることから、Operation Leader に含める必要はないと思います。このままとします。
DPIC is used in JSSS only for diving works which are special works, and it is a term being used in OSHA. It is deemed that it is not necessarily included in Operation Leaders. Therefore, DPIC is left as it is.

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the Diving Operation;

(3) Assign tasks to Dive Team members;

(4) Issue instructions for the Diving Operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the Diving Operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect records, check, approve and submit to HSO.

Modified so consistent with 10.6.2 (5)

10.4.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

JC13: 誰が Assign するのか。DPIC なら 10.3.3 に追記必要では？
Who will assign tasks to the Dive team members? If DPIC is the one, it should be added in 10.3.3?

NK: 役割の割り当ては DPIC の責務ですので、10.3.3 (3)にその旨を追加します。
Assignment of tasks to Diving Team members is one of important responsibilities of DPIC. Added as 10.3.3 (3).

Added above already

(2) The Contractor shall not require a Dive Team member to be

10.4.3 Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the Diving Operation;

(3) Assign tasks to Dive Team members;

(4) Issue instructions for the Diving Operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the Diving Operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect records, check, approve and submit to HSO.

10.4.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member’s will, except when necessary to complete decompression or treatment procedures.

(3) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the employer and is likely to affect adversely the safety or health of a

when necessary to complete decompression or treatment procedures.

(3) The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment.

(4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.

10.3.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(3) Communicate with the Diver so that the Diver descends and ascends properly.

exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures.

(3) ~~The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the Contractor and is likely to affect adversely the safety or health of a Dive Team member.~~ ~~exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment.~~ The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions for an excessive duration or any other condition which ~~is likely to affect adversely the safety or health of a Dive Team member that~~ may cause any physical impairment.

JC1: 趣旨が分からないので、non-native に分かるような記述に修正してください。
The meaning of this item is hard to understand. Please, modify the sentence so that non-native can easily understand.

NK: Modified. MD will review this.

JC14: Revised by JC.

NK: MD will review this revision.

I am sorry but this is not my English, it is actually a direct copy from OSHA of their precise requirements which I had included (together with explanatory notes) in my original draft document.

Please refer to OSHA: Appendix I: Checklist for Commercial Diving Operations, 1910.410 QUALIFICATIONS OF DIVE TEAM. (b) Assignments

As these checklists are an important requirement and an integral form in OSHA, I do suggest that they are not changed.

On the assumption that this is acceptable I have I have deleted the amended clause and re-inserted the original.

(4) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the employer and is likely to affect adversely the safety or health of a Dive Team member.

(5) No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team are present.

NK1: moved from 10.3.2 (7) to (4).

Correct

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(3) Communicate with the Diver so that the Diver descends and ascends properly.

Dive Team member.

(4) No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team are present.

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(3) Communicate with the Diver so that the Diver descends and ascends properly.

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the diver.

(8) Ensure the safety of the Diver by maintaining communication with voice or video communication device.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.

10.3.6 Health Checks

(1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any risk ~~trouble~~ due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

JC15: Revised by JC.

I do not recommend this change.

The use of "risk" anticipates and is ahead of any "trouble".

The use of "trouble" means that it has already happened and information then is too late.

On the assumption that this is acceptable I have I have deleted the amendment.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of Diving Operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the Diver.

(8) Ensure the safety of the Diver ~~by receiving the signals from the Diver when the Diver is using the lifeline.~~ by maintaining communication with voice or video communication device.

JC1: 音声が普通で、line signalling は一般的ではないようなので、改めて内容を確認願います。
OSHA に line signalling はなく、10.5.2(2)(d)を参照。
Communication is usually made verbally and line signalling is not used in common. Please, confirm if this item is appropriate. Refer to 10.5.2.(2)(d).

NK: OSHA では、line signalling はスキューバダイビング以外では認められていない。よって本仕様書では、以降の節においても信号索は除外して規定する。
As stipulated in OSHA as below, line-pull signal shall not be used except for scuba diving.
29 CFR 1910.422(c) Communications.
An operational two-way voice communication system is required for communications between each surface-supplied air diver or mixed-gas diver and a member of the dive team at the dive location or in the diving bell (if a diving bell is provided or required). Line-pull signals do not meet this requirement, except for the SCUBA-diving mode. A two-way voice communication system is required for communications between the diving bell and the dive location.
Modified and deleted line pull signals in other clauses.

Your change is correct

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the Diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of Diving Operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the Diver.

(8) Ensure the safety of the Diver by maintaining communication with voice or video communication device.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the Diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous

system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health

(d) Any other health conditions and disease which may affect the diving operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to any task assignment.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

endocrine system;

(b) Vision;

(c) Dental health; and

(d) Any other health conditions and disease which may affect the Diving Operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC ~~must~~ shall inquire into each Diver's health prior to ~~any task assignment~~ each Diving Operation; and

J1C: この"must"は"shall"ではないか？
Isn't this "shall" instead of "must"?

NK: modified to make terms consistent as commented.

JC16: Revised by JC.

For clarity, I have referred to and used the text of OSHA Directive No. CPL 02-00-151 for 29 CFR Part 1910, Subpart T – Commercial Diving Operations. OSHA use "must" and also refer to "task assignment". Please refer to page 17 item 3.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

JC1: "ailment"は、通例軽い又は慢性の病気、不快の意であるが、ここにその意味で適切か？
Is "ailment" proper in this clause? (Ailment means slight or chronic disease/symptoms.)

NK: 「体調にわずかでも不調等があれば潜水作業させてはならない」の意味で、"sickness", "disease", "illness"等より"ailment"が適切と考える。そのままとする。
This means that the Contractor shall not require any Diver to dive when the Diver has any even slight physical problem. In this sense, "ailment" is more suitable than "sickness", "disease" or "illness". Left as it is.

"Ailment" is correct

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the Diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health; and

(d) Any other health conditions and disease which may affect the Diving Operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to each Diving Operation; and

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the Diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.4 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.4.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.4.2 Diving Workboats

JC: Contractor's Equipment の一部であるが、Chapter 4 の記載は作業船をイメージしていないので Chapter 4 に追記が必要（たとえば作業船の名前を追記するなど）。
Workboat is one of the Contractor's Equipment, however, it is not specifically itemised in Chapter 4. It is necessary to describe workboat in Chapter 4.

NK: コメントに従い、第 4 章 4.1.1 (6)に Workboat for diving works を追加します。
As commented, "Workboat for diving works" will be added to 4.11(6).

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the diving operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

Please note that your draft refers to OSHA which in turn refer to the US Navy Dive tables and there is no reference at all to personal dive computers which have actually completely changed and improved dive safety and productivity since their inception more than 30 years ago.

Dive tables are setup under the absolute safe assumption that the diver stayed at the maximum depth for the entire dive. The nitrogen absorption is calculated based on these parameters. Dive computers however record the actual time and depth of a scuba diver at all times and then calculate the nitrogen absorption based on these actual values. This higher level of accuracy results in longer dive times and shorter surface intervals which has major benefits in commercial diving.

A dive at 120 feet, based on US dive tables gives a maximum bottom time of for around 15 minutes on the assumption is that the whole dive is at 120 feet. A dive computer taking actual values into consideration and may give a bottom time of around 30 minutes.

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

10.5.2 Diving Workboats

JC17: Contractor's Equipment の一部であるが、Chapter 4 の記載は作業船をイメージしていないので Chapter 4 に追記が必要（たとえば作業船の名前を追記するなど）。
9. Workboat is one of the Contractor's Equipment, however, it is not specifically itemised in Chapter 4. It is necessary to describe workboat in Chapter 4.

NK: コメントに従い、第 4 章 4.1.1 (5)に Workboat for diving works を追加します。
As commented, "Workboat for diving works" will be added to 4.11(5).

There is no 4.11.5 in my copy but I think I have not yet seen the Issue 2 draft for this chapter yet?

I think that as diving workboats only apply to tis chapter, there may be no need to separately mention them in Chapter 3, all relevant requirements should e are here or in OSHA.

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the Diving Operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required;

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

10.5.2 Diving Workboats

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the Diving Operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.4.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.5 PARTICULAR SAFETY MEASURES

10.5.1 Measures before Diving operations

The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(a) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, voice or video communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video

10.6 PARTICULAR SAFETY MEASURES

10.6.1 Measures before Diving Operations

The Contractor shall take the following measures before commencement of any Diving Operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions;

(e) Conduct the health check; and

(f) Check that support assistants and crew on the workboat are wearing life jackets.

JC1: Moved from 10.5.1.(5)(d)

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during Diving Operation.

(4) Diving Operation site

(a) Provide signs including red flags, buoys and notices to demarcate the Diving Operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the Diving Operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, ~~signal halyard,~~ voice or video, communication device, torch, watch, water depth gauge, knife and the like.

JC1: ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図(Line Signaling)するためのロープなので、英語でも halyard(揚げ綱)とは言わないかと。ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図(Line Signalling)するためのロープなので、英語でも halyard(揚げ綱)とは言わないかと。なお、信号索は現在あまり使われず、双方向通話可能な機器の利用が一般的かと思われ、信号索そのものをここであげる必要もないのでは？

10.6 PARTICULAR SAFETY MEASURES

10.6.1 Measures before Diving Operations

The Contractor shall take the following measures before commencement of any Diving Operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions;

(e) Conduct the health check; and

(f) Check that support assistants and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during Diving Operation.

(4) Diving Operation site

(a) Provide signs including red flags, buoys and notices to demarcate the Diving Operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the Diving Operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, signal halyard, voice or video, communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least

communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the dive operation from commencing.

10.5.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each diving operation:

"Signal halyard" is a rope for raising a flag. The term in Japanese means a rope for line signalling to communicate on board and in water. The line signalling is recently seldom used, it would not necessary to mention about it here.
As commented above, OSHA has no provision about line signalling, and video or voice communication is in the major stream. It is recommended to modify the phrase.

NK: As commented above and 10.3.5.(8), line signalling is not used. Deleted "signal halyard" and added "voice and video" for communication device.

No problem

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

~~(b) Inform the Diver of the air supply capacity of the air tank(s) for SCUBA diving;~~

JC1:「現に有する給気能力」current とか要らない？よく見るとこの上にある available air volume と重複。(これってダイバーが自身でチェックできるなら、こっちは不要では？)
また、inform はおかしい→If any defect is identified by the above checks, prohibit the dive operation from commencing.
"Air supply capacity" is a duplication of "available air volume" in (ii) above. And, "inform" is not proper. → If any defect is identified by the above checks, prohibit the dive operation from commencing.

NK: (b)は削除、→の先の文章は本項の最後の文章であるが指示内容が不明のため、そのまま残します。です。
(b) is deleted. The comment to the Sentence marked by → is not clear, so no change to this sentence is made.

No problem

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

~~(c) Check that support assistant and crew on the workboat are wearing life jackets.~~

JC1: e)は少なくとも潜水器具じゃないので違うかと。
Item (e) is not diving equipment.
NK: Considering the content, moved to 10.5.1.(1)(f).

No problem

If any defect is identified by the above checks, prohibit the Diving Operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each Diving Operation:

(1) A designated member (or members) of the workboat crew shall assist the DPIC by observing the Diving Operation during SCUBA diving and inform the DPIC when divers are carried away by

between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the Diving Operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each Diving Operation:

(1) A designated member (or members) of the workboat crew shall assist the DPIC by observing the Diving Operation during SCUBA

(1) A designated member of the workboat crew on the workboat shall look out for any other vessels that may approach the diving operation site.

The designated member shall alert any other vessels related or not related with the diving operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

JC: 通常スキューバダイバーは入水時にはバックドロップすると思います。少なくとも(b)と(c)はスキューバのときに該当するか調べてください。
For scuba diving entering, backdrop method is used. Please, check if (b) and (c) can be applied for scuba diving.

NK: OSHA には次のような記述がありますが、スキューバの際の区別はしていないようです。レジャーボートのように水面までの高さが低い場合は、後ろ向きに入水しますが、高さがある場合にはやはりはしごを使うのではないでしょうか。また、船に戻るには、はしご若しくはステップは必須となります。
downline は safety line としての記述が下記にあります。以上よりこのままとします。
29 CFR 1910.422 Procedures during dive
1. 29 CFR 1910.422(b) Water entry and exit. A means capable of supporting the diver (such as an inwater stage or ladder) while entering or exiting the water is required. If it is a fixed structure, such as a ladder, it must extend below the water sufficiently to allow adequate diver access and support (a minimum of one meter is recommended). Portable ladders should be secured to maintain stability and to prevent pinch points. The employer also must provide a means for assisting an injured diver from the water to the surface or into a diving bell (such as an inwater stage, stokes basket, or harness)

29 CFR 1910.424(b)(3) requires SCUBA divers to be line-tended against currents exceeding one (1) knot (1.689 feet per second, or about 17 feet per 10 seconds).

currents and their location when they surface after their dive ascent.

(2) A designated member (or members) of the workboat crew on the workboat shall also keep a look-out for any other vessels that may approach the Diving Operation site.

JC1: ダイビングオペレーションは DPIC が主として見ているので不要。他の船を見ているのは別の人材であり、この規定はそれを主眼とした記述にすべき。
"Observe the diving operation" is unnecessary because the DPIC mainly supervises the operation. The personnel who looks out for other vessels must be the other designated member.
This item shall be written for this purpose.

NK: deleted as commented.

They should also observe the water and diving operations particularly in SCUBA dives in case currents carry divers away and they emerge at a distance from the dive boat. They usually work as a team, all helping the others and DPIC. In heavy water such assistance is vital.

As suggested by JICA, I have modified for this purpose.

The designated member(s) shall alert any other vessels related or not related with the Diving Operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the Diving Operation site.

(3) Measures for the Divers

(a) Prohibit the Dive Team from commencing any Diving Operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the Diving Operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

JC1: 通話装置必須なら、信号索不要では？(注:通話装置を携行する場合は信号索、水中時計、水深計を携行させないことができる。)和文 10.6.(2)(d)では、「有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。」となっているけど、信号索はもはや使わない前提で MD さん書き直していて、整合性がとれてないかと
If "voice or video communication" is a must, "line signalling" is unnecessary. It is stipulated in the Japanese draft 10.6.(2) (d) that when using voice communication device, it is not necessary to use signal line, underwater watch and hydro-barometer. There is inconsistent between 10.3.5.(8) and 10.5.1(5) (a) (i) and the above (d) is inconsistent.

NK: 10.3.5.(8)で信号索を使用しない規定とした。上記(6)は変更なし。
10.3.5.(8) stipulated no line signaling is used in JSSS.
No change of (d) above.

JC18 : 通常スキューバダイバーは入水時にはバックドロップすると思います。少なくとも(b)と(c)はスキューバのときに該当するか調べてください。
For scuba diving entering, backdrop method is used. Please, check if (b) and (c) can be applied for scuba diving.

NK: OSHA は次を規定しています。スキューバと区別はしていません。レジャーボートのように水面までの高さが低い場合は、後ろ向きに入水しますが、水面まで高さがある場合、はしご又は水中踏み台が必要です。Inwater stages

diving and inform the DPIC when divers are carried away by currents and their location when they surface after their dive ascent.

(2) A designated member (or members) of the workboat crew on the workboat shall also keep a look-out for any other vessels that may approach the Diving Operation site.

The designated member(s) shall alert any other vessels related or not related with the Diving Operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the Diving Operation site.

(3) Measures for the Divers

(a) Prohibit the Dive Team from commencing any Diving Operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the Diving Operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

(e) Ensure that the Divers constantly communicate with each other by hand signals and slate messaging.

(e) Ensue that the Divers constantly communicate with each other by hand signals and slate messaging.

(3) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the diving operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(4) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing;

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

JC: Sufficient は言い過ぎでは？大勢の控えがいる訳がない。
"Sufficient" is too much to say. There shouldn't be many standby divers.

NK: 節の意味は、長時間の水中作業を避けるために十分な数の潜水士と、必要な予備潜水士をそろえるという意味で、十分な数の予備潜水士という意味ではありませんが、誤解を生む可能性がありますので、コメントに従い修正します。
The meaning is that sufficient numbers of Divers shall be available to avoid excessive in-water period and necessary standby divers shall be provided. To avoid misunderstanding, the sentence is modified according to JICA comment as right.

(c) Design shift times and patterns to preserve Divers' health and safety;

(d) Ensure that each Diver take an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records.

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

を追記します。
29 CFR 1910.422 Procedures during dive
1. 29 CFR 1910.422(b) Water entry and exit. A means capable of supporting the diver (such as an inwater stage or ladder) while entering or exiting the water is required.
If it is a fixed structure, such as a ladder, it must extend below the water sufficiently to allow adequate diver access and support (a minimum of one meter is recommended). Portable ladders should be secured to maintain stability and to prevent pinch points.
The employer also must provide a means for assisting an injured diver from the water to the surface or into a diving bell (such as an inwater stage, stokes basket, or harness)

NK: OSHA は、潮流がある場所では索（line-tended）の使用を規定しています。OHSA に downline の規定はありませんが、Wikipidia に downline の下降上昇使用、潮流のある場所での潜水の深度のコントロール等に使用できるとの記述があります。
OSHA: 29 CFR 1910.424(b)(3) requires SCUBA divers to be line-tended against currents exceeding one (1) knot (1.689 feet per second, or about 17 feet per 10 seconds).
Wikipedia: https://en.wikipedia.org/wiki/Downline_(diving)
In underwater diving, a downline is a piece of substantial cordage running from a point at the surface to the underwater workplace, and kept under some tension. It can be used as a guideline for divers descending or ascending, for depth control in blue-water diving...
日本の高気圧作業安全衛生規則では、スキューバを区別せず潜水作業者を規定しています。
(さがり綱) 第三十三条　事業者は、潜水業務を行なうときは、潜水作業者が潜降し、及び浮上するためのさがり綱を備え、これを潜水作業者に使用させなければならない。
Japanese Ordinance on Safety and Health of Work under High Pressure
https://www.jniosh.johas.go.jp/icpro/jicosh-old/japanese/country/japan/laws/03_rel/09_highpressure_reg/03c.html
(Life Line) Article 33. When the employer has the said diving workers engage in diving operations, he shall provide a life line and make the said diving workers use it in descending and ascending.
JSSS は、日本の安全規則をベースにしており、(c)の規定は上記規則にもとづき、原文のままとします。
Because JSSS is based on Japanese regulation, (c) is left as it is as stipulated in Japanese Ordinance above.

OK no problem, this is not for communication it is very useful particularly for SCUBA divers when working in currents or getting through surface currents.

Also note that OSHA "29 CFR 1910.424(b)(3) requires SCUBA divers to be line-tended against currents exceeding one (1) knot (1.689 feet per second, or about 17 feet per 10 seconds)"

(e) Ensure that the Divers constantly communicate with each other by hand signals and slate messaging.

(4) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the Diving Operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(5) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there

(4) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the Diving Operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(5) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there

	is no risk to his health and wellbeing; (b) Ensure that sufficient ~~suitable~~ numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods; JC19: Sufficient は言い過ぎでは？大勢の控えがいる訳がない。 "Sufficient" is too much to say. There shouldn't be many standby divers. NK: 節の意味は、長時間の水中作業を避けるために十分な数の潜水士と、必要な予備潜水士をそろえるという意味で、十分な数の予備潜水士という意味ではありませんが、誤解を生む可能性がありますので、コメントに従い修正します。 The meaning is that sufficient numbers of Divers shall be available to avoid excessive in-water period and necessary standby divers shall be provided. To avoid misunderstanding, the sufficient is replaced with suitable. To MD, please review this wording. *"Suitable" is not correct, "sufficient" is correct and necessary for safety purposes.* *Balancing the numbers of available divers against work volume and time deadlines and any requirement for repetitive dives in commercial diving needs to be carefully managed otherwise diver safety is very much at risk.* *OSHA requires an available standby diver for SCUBA operation shall always be available, for all liveboating operations and other occasions.* *The Diving at Work Regulations 1997 (basis of HSE) is clear and under the duties of the diving contractor, requires that contractor's:* *"ensure that there are sufficient people with suitable competence to carry out safely and without risk to health … the diving project … " and also HSE under Regulation 6 Duties of diving contractors:* (f) there are sufficient personnel in the dive team to enable the diving project to be carried out safely (see 'Dive teams and associated working practice'); (c) ~~Design shift times and patterns to preserve Divers' health and safety;~~ (d) Arrange the number, times and duration, of every Diving Operation and all shift times and patterns, to preserve the health and safety of each Diver; *I suggest the above rewording of the original clause for greater clarity* *I have deleted the following amended clause for clarity and reinstated the original, please see explanation below* ~~(e) Ensure that each Diver keeps takes an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records submit it to DPIC.~~ JC1: 個々の Diver が記録を保管するのでしょうか。DPIC ではないでしょうか。 Each diver should keep record individually? Isn't it the duty of DPIC? NK: OSHA では、下記のように具体的に誰が記録をとるかは規定していないが、雇用者が保管することを規定している。各ダイバーが自分の作業記録をとり(keep a record)、それを DPIC がまとめ、請負者が保管することが実際的であると考える。(DPIC は潜水作業期間のみ現場にいることから請負者が	is no risk to his health and wellbeing; (b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods; (c) Arrange the number, times and duration, of every Diving Operation and all shift times and patterns, to preserve the health and safety of each Diver; (d) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised by the Diver with a record of the number of dives on a daily, weekly and monthly basis. (e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection. (f) Unless otherwise required by the Law, the Contractor shall retain all dive records for the periods specified in the OSHA 29 Subpart T 1910.440

保管することが妥当と考えます。)上のように変更する。

OSHA 29 Subpart T 1910.440 Recordkeeping requirements.
(3) Records and documents required by this standard shall be retained by the employer for the following period:
The OSHA does not stipulate who prepare records but the Contractor shall retain the records. (d) is modified for practical way at the Site as above.
(DPIC may be assigned at the site during the diving work, so the Contractor shall retain the records.)

JC20: JICA modifies.

~~(f) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection. Ensure that the DPIC summarises such records and submits them to the HSO for review and keep them available for the Engineer's inspection.~~

JC21: JICA modifies.

I suggest that the original text of the above two subclauses is correct and the revision is not recommended.

"Each diver should keep record individually? Isn't it the duty of DPIC?"

Diving is different to normal construction in that each diver will normally keep his own records and summaries usually on a standard sheet before and after each dive to ensure that it is prepared correctly and at the right time. Only the diver can immediately summarise the cumulative allowable bottom time and surface time between repetitive dives to determine for himself if it is safe to dive again on his next dive. Yes, this will be checked by the DPIC but whether he has the time to do this in a timely manner is not certain.

It is important to appreciate that to some extent the individual diver is responsible for his own safety and he can refuse to dive without penalty if he thinks it is unsafe to do so and will of course be immediately required to do so, he must therefore have immediately available information to support this and cannot wait for someone else to do this for him or compute/summarise this perhaps incorrectly. Rather than assuming what a DPIC might be able to do, I suggest that this is a very important consideration for safety.

"keeps" records is the correct wording.

Your point on retention of records is correct and important and whilst covered by OSHA this may vary in different countries I suggest the use of requisite period or similar.

(e) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised by the Diver with a record of the number of dives on a daily, weekly and monthly basis.

(f) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

(g) Unless otherwise required by the Law, the Contractor shall retain all dive records for the periods specified in the OSHA 29 Subpart T 1910.440

10.6 DIVING ACCIDENT CONTROL PLAN

10.6.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*].

10.6.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of compression chambers, Clauses 114 to 118 by means of:

(a) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;

(b) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression.

This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents.

If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work.

If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;

(c) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work.

The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.

10.7 DIVING ACCIDENT RESPONSE PLAN

JC22: JICA modifies.

Yes, the change in heading is better for consistency with JSSS 1.24 [Accident Response Plan] to which it relates.

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.24 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of decompression chambers, Clauses 114 to 118 by means of:

I suggest that the above change is not necessary and I do not recommend it for the following reasons.

This apparently simple change will have profound effects upon the remainder of this Chapter

I consider that the suggestion to use HSE is not based upon a correct interpretation of OSHA: meaning that the following JICA statement is not correct:

"the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m".

The criteria for providing a decompression chamber is NOT related only to dives in excess of 50m.

In any event the maximum depth of any dive is not the sole or even principle cause of decompression sickness or criteria for providing a chamber, it is any dive outside the no-decompression limits

A chamber must be available for any dive which is outside the no-decompression limits and these start at are 25 fsw.(7.62m).

OSHA actually requires that a "decompression chamber … be available at the dive location" for any dive which is outside the no-decompression limits up to 300 fsw quoted as follows:

1910.423(c)(1)

A decompression chamber capable of recompressing the diver at the surface to a minimum of 165 fsw (6 ATA) shall be available at the dive location for:

1910.423(c)(1)(i)

Surface-supplied air diving to depths deeper than 100 fsw and shallower than 220 fsw;

1910.423(c)(1)(ii)

Mixed gas diving shallower than 300 fsw; or

1910.423(c)(1)(iii)

Diving outside the no-decompression limits shallower than 300 fsw.

10.7 DIVING ACCIDENT RESPONSE PLAN

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.24 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) In accordance with the requirements of OSHA 1910.423(c) [*Recompression facility*], the Contractor shall make a decompression chamber available at the dive location to treat decompression sickness.

(2) The decompression chamber shall comply with the requirements of OSHA 1910.423(c) [*Recompression facility*].

(3) The Contractor shall also provide such medical support facilities as are necessary to ensure the health and safety of any members of the Dive Team that may require treatment for decompression sickness.

(4) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first-aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the dive location shall be appropriate for the diving works and approved by a physician. When used in a decompression chamber or bell, the first-aid kit and any medication shall be suitable for use under hyperbaric conditions.

(5) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the dive location.

The controls of a compression chamber shall only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The degree of supervision provided shall reflect the experience of the operator. (2) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first -aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the Diving Works location shall be appropriate for the diving operations, approved by a physician. When used in a decompression chamber or bell, the first aid kit shall be suitable for use under hyperbaric conditions. (3) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the Diving Works location.	*(underline added by me)* *And also refer to https://www.osha.gov/laws-regs/interlinking/standards/1910.423(c)(1)(iii)* ***Diving outside the NDL is the crucial part of this requirement (not maximum depth) and this is managed by compliance with the Decompression, repetitive, and no-decompression tables (as appropriate) which OSHA requires to be available at the dive location.*** *The OSHA commercial diving standard provides for the use of either the U.S. Navy Diving Tables or equivalent limits which the divers' employer can demonstrate to be equally effective.* *These tables are contained in the OSHA DIRECTIVE NUMBER: CPL 02-00-151 for 29 CFR Part 1910, Subpart T – Commercial Diving Operations, APPENDIX D: No-Decompression Limits and Repetitive-Group Designation Table for No-Decompression Air Dives* *"The information in this appendix (including the table on page D-3) was adapted from the U.S. Navy Diving Manual (Revision 6), Volume 2 ("Air Decompression"), Section 9-7 ("No- Decompression Limits and Repetitive Group Designators for No-Decompression Air Dives"). "* *The Appendix provides that any dive to 25 fsw or deeper that has a bottom time greater than the no-decompression limits provided in this table is a decompression dive, and must comply with the appropriate air decompression table.* *If a dive is outside this limit then OSHA requires that a decompression chamber be available.* *Please note that most decompression is achieved in the water with time-controlled ascent.* *Also:* *"Even though decompression is not required when diving within the no-decompression limits listed in the table, some nitrogen remains in the diver's tissues for up to 12 hours following an air dive. Consideration must be given to this residual nitrogen in the diver's tissues when calculating decompression for subsequent (i.e., repetitive) dives. "* *It is not correct to state that OSHA contains no requirements other than for dives over 50m.* *The US Navy requirements are used and accepted internationally as safe and they are not inferior to HSE for example.* *I do recommend therefore that there is no need to use any additional compliance standard for this part of Chapter 10. OSHA does cover this and if other standards are used here for any parts the this actually complicates the entire structure of Chapter 10 as:* *1) Different definitions will apply for different parts or items (e.g. OSHA - compression sickness, HSE compression illness)* *2) If HSE rules are applied to the provision and use of a decompression chamber in this item, the OSHA recommended (US Navy) dive tables and decompression tables will somehow need to be substituted by the HSE dive tables. This means effectively that OSHA does not apply.* *This will greatly complicate if not corrupt Chapter 10.* *In addition, OSHA is the prevailing standard for this chapter. OSHA defines this as "decompression sickness" not "decompression illness". Use of different*	

definitions in the same document is not really good practice

I suggest that reference to OSHA is therefore sufficient and that no change is necessary or recommended

I suggest the clauses should be simply as follows:

(1) In accordance with the requirements of OSHA 1910.423(c) [*Recompression facility*], the Contractor shall make a decompression chamber available at the dive location to treat decompression sickness.

(2) The decompression chamber shall comply with the requirements of OSHA 1910.423(c) [*Recompression facility*].

(3) The Contractor shall also provide such medical support facilities as are necessary to ensure the health and safety of any members of the Dive Team that may require treatment for decompression sickness.

JC1: HSE の Commercial diving projects inland/inshore-Diving at Work Regulations1997 の 114-118（再圧室関連の条項）を参照して記述願います。
読み間違いかもしれませんが、OSHA の 1910.423(c)(1)を見ると、水深 50m を越えないと再圧室の現場での設置は必要ないように読めます。それは不十分に思えるので、10m を基準として記述されている HSE を参照する必要があると考えています。
要するに水深と必要な搬送時間等を考慮し、現場での設置の要否を定めることにします。
Modify this part referring to Commercial diving projects inland/inshore-Diving at Work Regulations1997 of HSE (re. compression chamber) because the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m.
It is not sufficient, so JC considers HSE shall be applied to JSSS. The necessity of compression chamber shall be determined based on the depth of diving and the time necessary for transporting the patient to nearest chamber available.

NK: OSHA は再圧室の現場での必要性を、1910.424 と 425 に次のように規定して、30m 以上の潜水、又は深度に関係なく NDL（減圧の不要な潜水時間）を越えた潜水の場合に、再圧室の現場の設置を規定しています。（なお、1910.423 は再圧室の能力を規定しています。）

§1910.424 SCUBA diving.
(b) Limits. SCUBA diving shall not be conducted:
(1) At depths deeper than 130 fsw(=40m);.
(2) At depths deeper than 100 fsw(=30m) or outside the no-decompression limits (NDL) unless a decompression chamber is ready for use;
§1910.425 Surface-supplied air diving.
(b) Limits.
(2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits (NDL) or deeper than 100 fsw(=30m).

NK: OSHA は潜水深度と NDL での規定しています。一方、HSE は水中の減圧時間と潜水深度で規定しています。コメントのように 10m より浅い潜水も規定しており、HSE の順守と規定します。
Revised as commented to comply with HSE

(a) Contract with Identify a medical facility having a suitable and operational decompression chamber and having established a system to transport any affected Divers to immediately receive suitable recompression and decompression treatment with specialist medical support; or
(b) Provision of a temporary decompression chamber located at the Diving Works location of a type, specification and capacity to suit the Diving Operation together with medical support

facilities and specialist medical support.

JC1: Replaced by JC.
NK: (a) and (b) are replaced with (a) to (c) as right following HSE.

I do not suggest HSE be adopted for this part and therefore the addition of the following from HSE is not necessary or recommended as this is in conflict with OSHA.

IF however HSE is selected in place of OSHA, please advise and I will review revise Chapter 10 accordingly.

(a) ~~For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;~~

On ODA projects there is not likely to be any locally available chamber.

Should be 6 hours by road, flying is not allowable.

Please note that OSHA criteria is simple and unambiguous.

Depths and time limitations between OSHA (US Navy based Dive Table (see OSHA Appendix D)) and HSE are different. I suggest that these added clauses are incompatible with OSHA and that they will also confuse the criteria of whether a decompression facility is required or not.

(b) ~~for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression.~~

~~This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents.~~

~~If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work.~~

~~If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;~~

(c) ~~for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work.~~

~~The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.~~

~~The controls of a decompression chamber shall only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The~~

	~~degree of supervision provided shall reflect the experience of the operator.~~ JC1: OSHA1910.421 (c)だと first aid kit という記載ですが、これは薬物の使用のことでしょうか？高圧下での使用が薬物の使用に影響を与えるからこのような書き方になっているのでしょうか。OSHA のままの記述に戻した方が良いのではないでしょうか。 OSHA 1910.421 (c) is titled as “first aid supplies”. Does “medication” above means usage of medicines? Is “medication” used because of specifying use of medicines under hyperbaric conditions which affects their use? Isn’t it better to stipulate as “first aid kit” as mentioned in OSHA? NK: Medication は治療との意味で考える。OSHA では高圧の条件下では適切な救急用具を使用することのみ規定あり。 “first aid kit”に変更する。 It is guessed that “medication” is used for treating someone with a medicine. The term is replaced with “first aid kit”. *The following is edited to include NK/JICA requirements* (4) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first-aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the dive location shall be appropriate for the diving works and approved by a physician. When used in a decompression chamber or bell, the first-aid kit and any medication shall be suitable for use under hyperbaric conditions. (5) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the dive location.

10. DIVING WORK **10.8 GENERAL7** **JC: JICA Comments (2020/04/24)** We reviewed the R2. There is stipulation that the Plan shall be prepared in advance of each diving operation in the draft 10.1.2 (f). We guessed that NK prepared some kinds of stipulations for work procedure of each diving work from the stipulations of Further Technical Details in 10.2.3 for example Time Schedule, Composition of Dive Team, etc. We judged that these are not Safety Plan (for diving) to be prepared for overall diving works but stipulations for the Work Procedure. Therefore, our comments are to request NK to revise the Dive safety Plan to Dive Safety Procedure. However, it needs to specify Diving Safety Plan at first before Dive Safety Procedure as follows: 1) Specify simply about Dive Safety Plan referring to Chapter 1 General (really, we think, very simple stipulation is enough.).	**10. DIVING WORK** **10.1 GENERAL** **JC: JICA Comments (2020/04/24)** We reviewed the R2. There is stipulation that the Plan shall be prepared in advance of each diving operation in the draft 10.1.2 (f). We guessed that NK prepared some kinds of stipulations for work procedure of each diving work from the stipulations of Further Technical Details in 10.2.3 for example Time Schedule, Composition of Dive Team, etc. We judged that these are not Safety Plan (for diving) to be prepared for overall diving works but stipulations for the Work Procedure. Therefore, our comments are to request NK to revise the Dive safety Plan to Dive Safety Procedure. However, it needs to specify Diving Safety Plan at first before Dive Safety Procedure as follows: 1) Specify simply about Dive Safety Plan referring to Chapter 1 General (really, we think, very simple stipulation is enough.).	**10. DIVING WORK** **10.1 GENERAL**

2) Stipulate about the study of national conditions mentioned in 10.2.2 with pre-wording “when preparation of the Safety Plan,”, and

3) At the end, stipulate all requirements about Procedure.

We request NK to rearrange the stipulations as mentioned above.

NK: NK modified this Chapter based on the above comments.

2) Stipulate about the study of national conditions mentioned in 10.2.2 with pre-wording “when preparation of the Safety Plan,”, and

3) At the end, stipulate all requirements about Procedure.

We request NK to rearrange the stipulations as mentioned above.

NK: NK modified this Chapter based on the above comments.

In my original draft I had inserted a definition for “Diving Project” which also defined “Diving Operations” and consequently safety plans could be understood to be relative to either. Unfortunately, “Diving Project” was deleted and all safety plan references were changed “Diving Operations which was not the best choice and I think that this has created the difficulty for JICA. It is important to define and segregate these two terms because they each demand a separate and different type of safety plan.

Operation stage dive safety plans are much more important for diving safety than the equivalent plan for work on land and far more numerous as they will actually be required before every single dive.

As I had explained previously, although OSHA does not clearly define “diving operation” or “diving project” it makes frequent reference to the former and single mention of the latter. In terms of JSSS requirements for safety plans therefore, I believe that if this is not defined and explained further, this will give rise to interpretation problems in the future confusing.

“Operations” (plural) therefore has implied meaning taken as each separate dive generally understood to be a part of a “diving project”.

HSE is more comprehensive on this subject by defining both and providing rules for both whereby a Diving Project is comprised of one or more diving operations.

I therefore again suggest that definitions for Diving Project and Diving Operation be put back into the definitions and that subsequent requirements should be written clearly for each.

I have now reinserted definitions for both of the above and with the benefit of more time for consideration, I have considerably simplified both.

Similar to all other types of Works, Safety plans are required separately for Diving Works each of the above in accordance with JSSS 1.7.3 as follows:

(1) Bid Stage Safety Plan (Outline Dive Safety Plan).

(2) Commencement Stage Safety Plan (Updated Dive Safety Plan)

(3) Particular Safety Plans (Individual safety plans for each Diving Operation

The required content of each of the above is now clearly and simply described in the text.

Although not really necessary, the Outline Overall safety plan submitted for the Bid in accordance with JSSS Chapter 1 Annex 1.2 item (9), can be further clarified to specifically mention diving with additional phrasing such as:

“If the Works include any Diving Works, the Safety Plan shall include safety requirements for such works in accordance with JSSS Chapter 10 [Diving Works].”

I can add the above to the next draft of Chapter 1 if required.

I have put back in the definitions of Diving Project and Diving Operation in 10.1.1, edited/simplified them considerably significantly, and then redrafted

	10.2.1 to make the correlation between Chapter 10 and Chapter 1 (1.1.3) and OSHA requirements clear. *Safety Plans for each and every Diving Operation are very necessary because each Diving Operation is under different conditions (depth, current, visibility, etc.). Also, and maybe more importantly with repetitive dives the intensity and nature of previous Diving Operations and restricted surface time to release residual nitrogen can prevent some divers not being allowed to dive. If this is not managed properly then serious injury or death can result.* *I have edited the remainder of your draft to reflect the above basic consideration on the assumption that the above basis is accepted by you in principle and so that there is one document for further joint review.* NK6/21: Chapter 1 defines the Project in Annex as follows: *(10) "Project" means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.* I considered the Diving Project in the original draft implies that a Project to execute diving works by the Borrower. The Works include diving works as a part of construction works which may consist of machine excavation, dumping rocks by ships, concrete placing by machine, etc., and diving works by divers such as levelling of dumped rocks, placing of concrete blocks, welding works by hands of divers, etc. I proposed "diving operations" instead of "project" in last draft to avoid JICA's comment which I assumed JICA will have same opinion. Now I want to propose "Diving Project" defined in 10.1.2 (g) to change to "Diving Works" used in 10.1.1. This change will be understandable for me to avoid confusion between "the Project" and "the Diving Project". Please review the above.	
10.8.1 Scope This Chapter specifies the safety requirements for diving operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included.	**10.1.1 Scope** This Chapter specifies the safety requirements for Diving Operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included. *I have suggested the use of Nitrox before for the reasons given below but still do not understand why JSSS does not include mixed gas diving with Nitrox (also called Enhanced Air Nitrogen and others). This is air with enhanced oxygen which can be mixed and bottled at the site with relatively simple equipment under properly controlled conditions and it is commonly used in commercial diving basically because it reduces the effects of decompression sickness and provides further benefits for commercial diving operations such as:* • *Longer Bottom Times. Divers who use nitrox absorb less nitrogen, making them stay underwater for longer.* • *Less Fatigue* • *Longer Dive Times.* • *Shorter Surface Intervals therefore less risk with repetitive dives.* *It is useful for dives up to 120 fsw (EAN32) or around 110 fsw (EAN36)* *If so I suggest that the second paragraph above is changed to* Diving with Nitrox is included, diving with other mixed-gases is not	**10.1.1 Scope** This Chapter specifies the safety requirements for Diving Operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works". Saturation diving and mixed-gas diving are not included.

10.8.2 Definitions

(1) Definition of terms is as follows:

(a) "Surface-supplied air diving" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "SCUBA diving" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers and support assistants involved in a diving operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" (for diving works) or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

JC1: Operation Leader とは異なることを是としても、Diving Work だけの人材なので(for diving works)を追記しました。
"Designated Person-in-Charge" may be one of Operation Leaders, but he is exclusively for diving work. Therefore, (for diving works) is added as right.

NK: Added.

(f) "Dive Safety Plan" means ~~the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.~~ the safety plan for diving operation as a part of Safety Plan specified in JSSS 1.7 [Contractor's Safety Plans] and is the basis of the Dive Safety Procedure;

(g) "Dive Safety ~~Plan~~ Procedure" means the safety ~~plan~~ procedure prepared in advance of each diving operation in

included.

Saturation diving is not included.

NK6/21: We know mixed gas diving is actually executed in construction projects. JICA instructed us not to include in JSSS because saturation diving and mixed-gas diving methods is rare to adopt them and not common in the ODA projects though tunnel construction projects in deep sea such as the underwater subway system in the Bosporus Strait adopted them.)
(JC: ボスポラス地下鉄等、大深度海底トンネルの工事の際に使われるもの。一般的ではないので、対象外と整理します)。
We leave this as it is.

10.1.2 Definitions

(1) The definition of terms for the purpose of this Chapter are as follows:

(a) "Surface-supplied air diving" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "SCUBA diving" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "Diver" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "Dive Team" means Divers, support assistants and dive boat crew who are involved in any Diving Operation, including the Designated Person-in-Charge;

(e) "Designated Person-in-Charge" ~~(for diving works)~~ or "DPIC" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

JC1: Operation Leader とは異なることを是としても、Diving Work だけの人材なので(for diving works)を追記しました。
"Designated Person-in-Charge" may be one of Operation Leaders, but he is exclusively for diving work. Therefore, (for diving works) is added as right.

NK: Added.

I think that the suggested addition is not necessary in view of the reworded first sentence of the subclause which is "for the purpose of this chapter i.e. Diving Works

Regarding deletion of the following, please refer to my notes and explanations on pages 1 and 2 and the revised clauses inserted below.

NK6/21: agreed.

(f) ~~"Dive Safety Plan" means the safety plan prepared in advance of each diving operation and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC. the safety plan for diving operation as a part of Safety Plan specified in JSSS 1.7 [Contractor's Safety Plans] and is the basis of the Dive Safety Procedure;~~

(g) ~~"Dive Safety Plan Procedure" means the safety plan procedure prepared in advance of each diving operation in~~

10.1.2 Definitions

(1) The definition of terms for the purpose of this Chapter are as follows:

(a) "**Surface-supplied air diving**" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing;

(b) "**SCUBA diving**" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus;

(c) "**Diver**" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(d) "**Dive Team**" means Divers, support assistants and dive boat crew who are involved in any Diving Operation, including the Designated Person-in-Charge;

(e) "**Designated Person-in-Charge**" or "**DPIC**" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

which the nature, size and other details are specified ~~as described in JSSS~~ 10.2 [Dive Safety Procedure] . ~~and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.~~

JC2: Diving operation 全体にプランはほかにあるという前提で、ここでは個々の潜水作業についての手順書というイメージで書かれているものと理解しました。
Our understanding is that the Dive Safety Plan is defined as it specify the procedure of individual diving work on the premise that there is an overall safety dive plan. We modified as the right.

NK: Dive Safety Plan と Dive Safety Procedure の関係が明確になるように、(f)に Dive Safety Plan、(g)に Dive Safety Procedure の定義を追加します。メール(2020/4/24)のコメントに従い、10.2.1 に第 1 章との関係を追加しました。
To make clear the relation between Dive Safety Plan and Dive Safety Procedure, (f) Dive Safety Plan is modified and (g) Dive Safety Procedure is added. Stipulations are added in 10.2.1 in accordance with the JICA mail (2020.4.24) to relate the Safety Procedure to the Safety Plan and Method Statement.

10.8.3 Compliance Standards

(1) ~~For provisions which are not stipulated in the JSSS~~ Unless otherwise specified in the Contract, the Contractor shall comply ~~as a minimum~~ with ~~all of~~ the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-

~~which the nature, size and other details are specified as described in JSSS 10.2 [Dive Safety Procedure] . and the nature and size of any diving operation so identified shall be such that it can be safely supervised by one DPIC.~~

JC2: Diving operation 全体にプランはほかにあるという前提で、ここでは個々の潜水作業についての手順書というイメージで書かれているものと理解しました。
Our understanding is that the Dive Safety Plan is defined as it specify the procedure of individual diving work on the premise that there is an overall safety dive plan. We modified as the right.

NK: Dive Safety Plan と Dive Safety Procedure の関係が明確になるように、(f)に Dive Safety Plan、(g)に Dive Safety Procedure の定義を追加します。メール(2020/4/24)のコメントに従い、10.2.1 に第 1 章との関係を追加しました。
To make clear the relation between Dive Safety Plan and Dive Safety Procedure, (f) Dive Safety Plan is modified and (g) Dive Safety Procedure is added. Stipulations are added in 10.2.1 in accordance with the JICA mail (2020.4.24) to relate the Safety Procedure to the Safety Plan and Method Statement.

I understand the reason for the query but instead of the above, I suggest the reinsertion of the following definitions in accordance with my notes on page 1 and 2 above, followed later by clear, properly correlated and simple safety plan requirements for each:

(f) "**Diving Operation**" means one single diving activity for one Diver or a team of Divers commencing from the time when the first Diver enters the water and extending until the last Diver has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression.

The nature and size of any Diving Operation shall be such that it can be safely supervised by one person;

(g) "**Diving Project**" means any activity, made up of one or more Diving Operations, commencing from the first Diving Operation and extending until the latest Diver in the last Diving Operation has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression; "Diving Project' is the term used for the overall diving job – whether it lasts two hours or two months, and it can be made up of one or more Diving Operation; and

(h) "**Dive Safety Plan**" means the Safety Plan prepared for Diving Works in accordance with JSSS 10.2 [*Dive Safety Plan*].

All definitions shall be realigned in alphabetical order

NK6/22: As mentioned above, we propose to replace " Diving project" with "Diving Works". We submit the definition in DFR and wait JICA comments.

10.1.3 Compliance Standards

(1) ~~For provisions which are not stipulated in the JSSS Unless otherwise specified in the Contract, the Contractor shall comply as a minimum with all of the requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for~~

(f) "**Diving Operation**" means one single diving activity for one Diver or a team of Divers commencing from the time when the first Diver enters the water and extending until the last Diver has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression.

(g) "**Diving Project**" => **"Diving Works"** means any activity, made up of one or more Diving Operations, commencing from the first Diving Operation and extending until the latest Diver in the last Diving Operation has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression; "Diving Project' => "Diving Works" is the term used for the overall diving job – whether it lasts two hours or two months, and it can be made up of one or more Diving Operation; and

(h) "**Dive Safety Plan**" means the Safety Plan prepared for Diving Works in accordance with JSSS 10.2 [*Dive Safety Plan*].

10.1.3 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall take necessary

supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving). JC1: このスペックに書いていない基準については OSHA に従うという記述にしてください。(最後のページのコメントにあるとおり、減圧室に関する記述は OSHA では不十分に見え、HSE を参照することとしたため) For the provisions which are not stipulated in this specification, please state that they shall comply with OSHA. (As mentioned in the comment in the last page, it seems that the statement of OSHA regarding decompression chamber is not sufficient, thus this chapter shall refer to HSE.) NK: modified as commented. JC3: これこそ、Unless otherwise specified in the Contract とすべき。 This phrase should be "Unless otherwise specified in the Contract. NK: コメントに従い修正しました。Modified as commented.	~~surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).~~ JC1: このスペックに書いていない基準については OSHA に従うという記述にしてください。(最後のページのコメントにあるとおり、減圧室に関する記述は OSHA では不十分に見え、HSE を参照することとしたため) For the provisions which are not stipulated in this specification, please state that they shall comply with OSHA. (As mentioned in the comment in the last page, it seems that the statement of OSHA regarding decompression chamber is not sufficient, thus this chapter shall refer to HSE.) NK: modified as commented. JC3: これこそ、Unless otherwise specified in the Contract とすべき。 This phrase should be "Unless otherwise specified in the Contract. NK: コメントに従い修正しました。Modified as commented. *I suggest the following wording which was requested earlier by JICA and is now used consistently in every other Chapter and Section where necessary:* *Please note that this is a standard description that basically means that whatever is written here in this Section or Chapter of JSSS has priority and prevails over the stated compliance standard which in this case is OSHA.* *If nothing was added in JSSS each Chapter could simply consist of one line stating "Comply with JSSS" which is obviously not be acceptable.* *This does mean that whatever is written in the detail of JSSS must be necessary, correct and completely clear as for these parts there should be no further reliance on OSHA for example as JSSS has superseded it.* *It also means that the clause for Compliance Standards must be exactly the same wording wherever it used otherwise different interpretations (e.g. of priority) may be necessary in different parts of JSSS which is not advisable.* By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall take necessary measures for Diving Works complying with the technical requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving). NK6/22: We agreed to modify to make it standard description.	measures for Diving Works complying with the technical requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).
10.2 DIVE SAFETY PLAN AND DIVE SAFETY PROCEDURE ~~10.2.1 General Content~~ JC4: 以下、全部 procedure にしておいてください。 Please replace all Dive Safety Plan with Dive Safety Procedure. NK: Dive Safety Plan と Dive Safety Procedure の関係について 10.2.1 に規定し、その後 Dive Safety Procedure について規定します。タイトルを"DIVE SAFETY PLAN and DIVE SAFETY PROCEDURE"へ変更しました。 We will stipulate the relation between Dive Safety Plan and Dive Safety Procedure in 10.2.1 at first and do Dive Safety Procedure later. The title of the section is changed to "DIVE SAFETY Plan and DIVE SAFETY PROCEDURE". To MD, the above JICA comments are different from those mentioned in 10.1, therefore NK modified this Chapter following the comments given in 10.	**10.2 DIVE SAFETY PLANS AND DIVE SAFETY PROCEDURE** ~~10.2.1 General Content~~ JC4: 以下、全部 procedure にしておいてください。 Please replace all Dive Safety Plan with Dive Safety Procedure. NK: Dive Safety Plan と Dive Safety Procedure の関係について 10.2.1 に規定し、その後 Dive Safety Procedure について規定します。タイトルを"DIVE SAFETY PLAN and DIVE SAFETY PROCEDURE"へ変更しました。 We will stipulate the relation between Dive Safety Plan and Dive Safety Procedure in 10.2.1 at first and do Dive Safety Procedure later. The title of the section is changed to "DIVE SAFETY Plan and DIVE SAFETY PROCEDURE". To MD, the above JICA comments are different from those mentioned in 10.1, therefore NK modified this Chapter following the comments given in 10.	**10.2 DIVE SAFETY PLANS**

To MD, 10.2 is modified by relocating the stipulations in last issue as below. Please review the following 10.2 referring the JICA comments and NK responses given below.

10.2.1 Preparation of Dive Safety Plan and Dive Safety Procedure

(1) The Contractor shall prepare the Dive Safety Plan as a part of Safety Plan specified in JSSS 1.7.6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary information for the Diving Work.

JC5: Safety Procedure はコントラクターがダイビングの知見を持った人の知見を用いて作成するという意味の記載にしてください。
Please, modify the description so that the safety procedure shall be created by the Contractor obtaining opinions of persons who have diving knowledges.

NK: コメントに従い、上のように変更しました。また、10.2.2 へのコメントを反映させるため、冒頭に Dive Safety Plan について記述し、Procedure との関係を明確にしました。
Modified in accordance with the comment as above and in order to reflect the comment at 10.2.2, a paragraph is added to clarify the relationship between the Plan and Procedure.

(2) The Contractor shall prepare the Dive Safety Procedure in advance of individual diving operation in addition to Method Statement specified in JSSS 1.9 [Contractor's Method Statements] and the Diving Safety Plan.

(3) The Dive Safety Plan and the Dive Safety Procedure shall be prepared consulting Diver(s) for expert opinions who has the qualification and capability deemed sufficient by the HSO. They shall be incorporated the advice of and be approved by DPIC when prepared in the Works, and reviewed and approved by the HSO.

To MD, 10.2 is modified by relocating the stipulations in last issue as below. Please review the following 10.2 referring the JICA comments and NK responses given below.

Regarding the above, I can understand JICA's confusion over the various safety plans covering the Diving Project and the Diving Operations but I suggest this problem is created by the lack of definition and lack of description of what safety plans are required for reach.

I have simply modified the earlier clause 10.1 and this now again defines what each of these are and all that now remains is to describe the content of the requisite safety plans for each.

I do not think it is necessary to introduce "Dive Safety Procedure" as a new additional topic to the Dive safety Plan as all components of this clause are actually parts of the Safety Plan as defined in Chapter 1 and referred to in JSSS 1.7.3. The last part to be submitted before each Diving Operation, is actually a Particular Safety Plan required by 1.7.3.

These are basically the same as safety plans for other Chapters, the Bid and commencement stage dive plans will include all general safety compliance matters and the particular dive safety plans are effectively the pre-dive planning, referred to in OSHA (29 CFR 1910.421(d) Planning and assessment). Particular Dive Safety Plane will not repeat the general information and will usually be largely checklist based but will be numerous as one is required before any diver enters the water to work.

To incorporate the theme of your comment, to tie this in with JSSS Chapter 1 and also to avoid future ambiguity by using or referring to the framework and terms used in the OSHA standard, I suggest that this entire clause is reworded as follows:

10.2.1 General Requirements for the Dive Safety Plans

(1) The Contractor shall prepare Dive Safety Plans as part of the Safety Plan for the Works in compliance with the requirements of with JSSS 1.7 [*Contractor's Safety Plans*].

(2) The submission requirements in accordance with JSSS 1.7.3 shall be as follows:

(a) The Bid Stage Safety Plan shall include the Outline Dive Safety Plan;

(b) The Commencement Stage Safety Plan shall include the Updated Dive Safety Plan; and

(c) The Particular Safety Plans shall include the individual Particular Dive Safety Plans to be submitted for and in advance of each Diving Operation.

10.2.2 Bid Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.6 [*Bid Stage Safety Plan*], the Bid Stage Dive Safety Plan shall include an outline plan indicating the Contractor's operational procedures for each diving mode to be used in the Works (referred to in OSHA as the "safe practices manual"). This shall be in sufficient detail to give an understanding of the Contractor's intentions regarding the diving safety procedures that the Contractor intends to implement.

(2) The Bid Stage Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the

10.2.1 General Requirements for the Dive Safety Plans

(1) The Contractor shall prepare Dive Safety Plans as part of the Safety Plan for the Works in compliance with the requirements of with JSSS 1.7 [*Contractor's Safety Plans*].

(2) The submission requirements in accordance with JSSS 1.7.3 shall be as follows:

(a) The Bid Stage Safety Plan shall include the Outline Dive Safety Plan;

(b) The Commencement Stage Safety Plan shall include the Updated Dive Safety Plan; and

(c) The Particular Safety Plans shall include the individual Particular Dive Safety Plans to be submitted for and in advance of each Diving Operation.

10.2.2 Bid Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.6 [*Bid Stage Safety Plan*], the Bid Stage Dive Safety Plan shall include an outline plan indicating the Contractor's operational procedures for each diving mode to be used in the Works (referred to in OSHA as the "safe practices manual"). This shall be in sufficient detail to give an understanding of the Contractor's intentions regarding the diving safety procedures that the Contractor intends to implement.

(2) The Bid Stage Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the

(4) The Contractor shall inform and if necessary further train and test all Dive Team members the content of the Dive Safety Plan and the Dive Safety Procedure.

(5) A copy of the Dive Safety Plan and the Dive Safety Procedure shall be made available at the dive location to each Dive Team member.

10.2.2 Dive Safety Plan

The Dive Safety Plan shall describe the Contractor's plan regarding items related with the diving operation listed in Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan] and in accordance with the following:

JC8: これは Safety Plan のレベルで行われることなので、Procedure では不要。
As this is to be done at the Safety Plan, therefore unnecessary to describe here.

NK: 10.2.1(2)に Dive Safety Plan で規定すべき事項として、(4) の事項を含んでいる Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan]にもとづくことと追記しました。
Contents of Dive Safety Plan including those mentioned (4) are specified in 10.2.1(2) in accordance with Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan].

(2) The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

JC10: まず 10.2 として「1 章の総則に従って Safety Plan（Safety Procedure ではない）を作成する」と記述してください。そのうえで、この 10.2.2 の内容を続けてください。その次に Safety Procedure の話をまとめて書いてください。
10.2 specifies that firstly Safety Plan (not Safety Procedure) shall be prepared in accordance with Chapter 1, secondly specify the contents of 10.2.2, and after those, specifies the contents for Safety Procedure.

NK: 10.2.1 (1)に Dive Safety Plan について記述を加え、Dive Safety Procedure との関係を明確にしました。
An explanation is added in 10.2.1 (1) to clarify the relationship between Dive Safety Plan and Dive Safety Procedure.

(a) Climatic information and forecasting at the diving location:
- (i) Wind speed and direction;
- (ii) Air temperature;
- (iii) Surface visibility, fog, sea mist;
- (iv) Likelihood and intensity of electrical storm; and
- (v) Weather forecasting.

(b) Water/Marine Conditions
- (i) Sea state; wave height and direction;
- (ii) Height and time of tides;
- (iii) Water depths;
- (iv) Water Temperatures;
- (v) Water currents, direction and speed;
- (vi) Visibility at depths; and
- (vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions
- (i) Underwater cables and pipes;
- (ii) Wreckage and other artificial obstacles;
- (iii) Geotechnical conditions affecting the work; and
- (iv) UXO, Dangerous Goods and Hazardous Substances.

requirements of this standard.

Regarding the comment that this clause (b) be deleted, I do not recommend this.

It is a requirement of OSHA as stated already but as diving regulations vary around the world many divers will not be familiar with US domestic i.e. OSHA requirements, It is important that they are given the opportunity to study this document and check that their employer is complying particularly with regard to OSHA Under 29 CFR 1910.410(b)(1).

(b) Assignments. (1) Each dive team member shall be assigned tasks in accordance with the employee's experience or training, except that limited additional tasks may be assigned to an employee undergoing training provided that these tasks are performed under the direct supervision of an experienced dive team member.

Also "the Contractor's policies for implementing the requirements of this standard" are an important requirement of OSHA and really should be provided as it is evidence of what the Contractor intends to do. This is included in the Bid Stage Dive Safety plan in 10.2.1 above, as it can and should be evaluated at that stage. It is usually a fairly standard document and easy for any Diving Contractor to prepare.

10.2.3 Commencement Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.7 [*Commencement Stage Safety Plan*], the Commencement Stage Dive Safety Plan shall be a development of the Bid Stage Dive Safety Plan and shall include detailed safety procedures and standard checklists to apply to all Diving Operations, equipment procedures, and emergency procedures (at a minimum covering fire, equipment malfunction or failure, adverse environmental conditions and medical illness and injury).

(2) The HSO shall review the Commencement Stage Dive Safety Plan to determine if it is correct and compliant with the requirements of OSHA and JSSS.

(3) A copy of the Commencement Stage Dive Safety Plan together with a copy of the OSHA standard and the Contractor's policies for implementing the requirements of OSHA (from the Bid Stage Dive Plan) shall be made available at the dive location to each Dive Team member and explained to the Dive Team by the HSO and DPIC.

requirements of this standard.

10.2.3 Commencement Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.7 [*Commencement Stage Safety Plan*], the Commencement Stage Dive Safety Plan shall be a development of the Bid Stage Dive Safety Plan and shall include detailed safety procedures and standard checklists to apply to all Diving Operations, equipment procedures, and emergency procedures (at a minimum covering fire, equipment malfunction or failure, adverse environmental conditions and medical illness and injury).

(2) The HSO shall review the Commencement Stage Dive Safety Plan to determine if it is correct and compliant with the requirements of OSHA and JSSS.

(3) A copy of the Commencement Stage Dive Safety Plan together with a copy of the OSHA standard and the Contractor's policies for implementing the requirements of OSHA (from the Bid Stage Dive Plan) shall be made available at the dive location to each Dive Team member and explained to the Dive Team by the HSO and DPIC.

(d) Natural Conditions
  (i) Natural obstructions;
  (ii) Coral reef or other marine life to be protected; and
  (iii) Danger from ~~marine~~ wildlife ~~and precautions~~.

(e) Surface Traffic
  (i) Surface traffic details, timings and restrictions, and
  (ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area
  (i) Demarcation of diving location; and
  (ii) Limits of working area.

(3) The Dive Safety Plan shall describe the safety measures for the diving operations including the following:

(a) Safety procedures and checklists for ~~each~~ diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) Lists~~, procedures and checklists~~ of diving equipment, tools, PPE, materials, workboat, fuel and ~~other consumables~~ others necessary for ~~each~~ diving operation;

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of ~~the weather and marine conditions~~ the climatic, marine, natural and physical conditions;

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

(g) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures between the diver and the workboat.

JC7: ここでいう Communication system とはダイバーとボート間のことなら、そう記載すべき。
If the "communication system" is for that between the diver and the boat, it shall be described so.

NK: ダイバーと作業船とのシステムということを追加します。
Added phrase that the system between the diver and the workboat.

(i) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support. Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.

(4) The Contractor shall establish criteria for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

(5) The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

10.2.4 Particular Dive Safety Plans

(1) In compliance with JSSS 1.7.8 [*Particular Safety Plans*], the Particular Dive Safety Plans shall contain all further information specific to each Diving Operation not covered by the foregoing Bid Stage and Commencement Stage Dive Plans together with all supplemental information obtained during pre-dive planning and assessment, to collectively demonstrate the Contractor's compliance with the requirements OSHA and JSSS for each Diving Operation, including for example:

(a) Safety procedures and checklists for each Diving Operation;

(b) Name of each Dive Team member, buddy diver assignments, individual work assignment and responsibility and confirmation from the DPIC that they each comply with all diving health and safety requirements and are therefore approved to work on the Diving Operation;

(c) The planned dive profile for each Diver showing their maximum bottom time and ascent rate with decompression stages and times and taking account of repetitive dives;

Please note that this may be different for each diver according to their accumulated repetitive diving record

(d) Description of all diving equipment, diving gases and consumables, PPE, procedures for their use and signed checklists to confirm compliance;

(e) Description of the workboat and workboat facilities, together with information on the location of the workboat in relation to the dive site, and procedures for the use and operation of the dive boat during Diving Operations, any surface hazards and any restriction in operation due to surface traffic conditions;

Please note that "surface traffic conditions" are actually covered by 10.3.1 below but have more significance if mentioned here also

(f) Description of all other Contractor's Equipment, tools and consumables for the assigned work tasks, procedures for their use and checklists;

(g) The climatic, marine, natural and physical conditions that are likely to be encountered during any Diving Operation and the procedures for commencement, continuation or stopping of any Diving Operation following any change in these conditions in accordance with JSSS 10.3 [*Climatic, Marine, Natural and Physical Conditions*];

(h) Communication systems and procedures for communications:

(i) between Divers;

(ii) between Divers and the workboat; and

(iii) Between the work boat and the relevant marine authorities.

10.2.4 Particular Dive Safety Plans

(1) In compliance with JSSS 1.7.8 [*Particular Safety Plans*], the Particular Dive Safety Plans shall contain all further information specific to each Diving Operation not covered by the foregoing Bid Stage and Commencement Stage Dive Plans together with all supplemental information obtained during pre-dive planning and assessment, to collectively demonstrate the Contractor's compliance with the requirements OSHA and JSSS for each Diving Operation, including for example:

(a) Safety procedures and checklists for each Diving Operation;

(b) Name of each Dive Team member, buddy diver assignments, individual work assignment and responsibility and confirmation from the DPIC that they each comply with all diving health and safety requirements and are therefore approved to work on the Diving Operation;

(c) The planned dive profile for each Diver showing their maximum bottom time and ascent rate with decompression stages and times and taking account of repetitive dives;

(d) Description of all diving equipment, diving gases and consumables, PPE, procedures for their use and signed checklists to confirm compliance;

(e) Description of the workboat and workboat facilities, together with information on the location of the workboat in relation to the dive site, and procedures for the use and operation of the dive boat during Diving Operations, any surface hazards and any restriction in operation due to surface traffic conditions;

(f) Description of all other Contractor's Equipment, tools and consumables for the assigned work tasks, procedures for their use and checklists;

(g) The climatic, marine, natural and physical conditions that are likely to be encountered during any Diving Operation and the procedures for commencement, continuation or stopping of any Diving Operation following any change in these conditions in accordance with JSSS 10.3 [*Climatic, Marine, Natural and Physical Conditions*];

(h) Communication systems and procedures for communications:

(i) between Divers;

(ii) between Divers and the workboat; and

(iii) Between the work boat and the relevant marine authorities.

(i) Any further information and instructions to be given to the

10.2.3 Dive Safety Procedure

The Dive Safety Procedure shall describe the technical details for the individual diving operation including the following:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the decompression chamber or the address, contact details of an existing decompression chamber.

(6) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.

To MD, the sentences from below to before 10.3 are replaced with the above 10.2. Please review the above 10.2.

---

(1) The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.

(2) A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.

~~3) The Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.~~

JC1: 意図が不明であることもあり、不要に思います。
The intention of this provision is unknown. This item is not necessary.

NK: OSHA Subpart T, 1910.420 Safe practices manual stipulate "(b) Contents. (1) The safe practices manual shall contain a copy of this standard and the employer's policies for implementing the requirements of this standard."
Item (3) is deleted as commented.

(3) For each required diving operation and diving mode, the Dive Safety Plan shall include:

JC1: work stop criteria を入れておいた方が良いと思います。10.5.2(3)に突然出てきているので
It is better to mention the work stop criteria here as it appears suddenly at 10.5.2 (3).

(i) Any further information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;

(j) The Particular Dive Safety Plan shall be prepared by the DPIC or another Diver that that has the qualification, experience and capability deemed sufficient by the HSO;

(k) The Particular Dive Safety Plan shall be reviewed and approved by the HSO;

(l) The content of the Particular Dive Safety Plan shall be explained to all Dive Team members during the employee briefing by the HSO or DPIC in accordance with OSHA 29 CFR 1910.421(f));

(m) If considered necessary by either the HSO or DPIC, individual Dive Team members shall be given additional training and testing; and

I assume that the above is a suitable response to your revision of 10.2.2 (5).

(n) A copy of the Particular Dive Safety Plan shall be made available at the dive location to each Dive Team member.

The above aims to ensure compliance with OSHA _ D. 29 CFR 1910.420 Safe practices manual.

Please note that it is not necessary to cover recompression facilities and arrangements; these are part of the Commencement Stage Dive Plan and also referred to in a later clause.

Much or all of the following is replaced by the above, hence the deletions

~~(1) [6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary information for the Diving Work.~~

~~10.2.2 Preparation of Dive Safety Plan and Dive Safety Procedure~~

~~(2) The Contractor shall prepare the Dive Safety Plan as a part of Safety Plan specified in JSSS 1.7.6 [Bid Stage Safety Plan] or 1.7.7 [Commencement Stage Safety Plan], or 1.7.8 [Particular Safety Plans] as required depending on the development of necessary information for the Diving Work.~~

~~JC5: Safety Procedure はコントラクターがダイビングの知見を持った人の知見を用いて作成するという意味の記載にしてください。~~
~~Please, modify the description so that the safety procedure shall be created by the Contractor obtaining opinions of persons who have diving knowledges.~~

~~NK: コメントに従い、上のように変更しました。また、10.2.2 へのコメントを反映させるため、冒頭に Dive Safety Plan について記述し、Procedure との関係を明確にしました。~~
~~Modified in accordance with the comment as above and in order to reflect the comment at 10.2.2, a paragraph is added to clarify the relationship between the Plan and Procedure.~~

~~(3) The Contractor shall prepare the Dive Safety Procedure in advance of individual diving operation in addition to Method Statement specified in JSSS 1.9 [Contractor's Method Statements] and the Diving Safety Plan.~~

~~(4) The Dive Safety Plan and the Dive Safety Procedure shall be prepared consulting Diver(s) for expert opinions who has the qualification and capability deemed sufficient by the HSO. They~~

Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;

(j) The Particular Dive Safety Plan shall be prepared by the DPIC or another Diver that that has the qualification, experience and capability deemed sufficient by the HSO;

(k) The Particular Dive Safety Plan shall be reviewed and approved by the HSO;

(l) The content of the Particular Dive Safety Plan shall be explained to all Dive Team members during the employee briefing by the HSO or DPIC in accordance with OSHA 29 CFR 1910.421(f));

(m) If considered necessary by either the HSO or DPIC, individual Dive Team members shall be given additional training and testing; and

(n) A copy of the Particular Dive Safety Plan shall be made available at the dive location to each Dive Team member.

NK: Though it is stipulated to establish the criteria for stopping the work in 10.2.2., Item (e) is added.

(a) Safety procedures and checklists for each diving operation;

(b) Assignments and responsibilities of each of the Dive Team members;

(c) ~~Equipment~~ l Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;

JC1: (e)及び(f)と重複感があります。違いがあるということであれば、分かるように明記してください。
The item (c) seems duplicated with (e) and (f). If there is difference and reasons to state, describe it so that the difference can be understood clearly.

NK: OSHA Subpart T, 1910.420 Safe practices manual.の(a)から(d)を（3）に規定し、(e)以降を追記していました。(e) & (f)を(c)に含めます。
OSHA Subpart T, 1910.420 Safe practices manual.(a) to (d) is specified in (3) and other requirements are added to (3) as (e) to (i). Combined (e) and (f) in (c).

(d) Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;

(e) Work stop criteria for change of the weather and marine conditions;

~~(e) Details of the workboat and all diving equipment, fuel and other consumables;~~

~~(f) Equipment, tools, materials and consumables for the assigned work tasks;~~

(f) Scope of work for each Diver and all support assistants in the Dive Team throughout the diving operation;

(g) Information and instructions to be given to the Divers, support assistants and other workers related with the diving operations and the working methods and safety measures; and

(h) Communication systems and procedures.

(4) The Dive Safety Plan shall analyse the tasks of the assigned diving operation, assess all risks involved and describe all measures to ~~avoid~~ mitigate such risks.

JC1: changed.

(5) The Dive Safety Plan shall be prepared by a Diver that has the qualification, experience and capability deemed sufficient by the HSO and it shall ~~incorporate the advice of and~~ be approved by the DPIC.

JC1: これでは実際に潜る人が計画を作ることになる（Diver の定義を参照）。OSHA を見ると基本は DPIC が作ることになっていないか？
This sentence can be read that the diver himself will make the Dive Safety Plan. (Refer to the definition of Diver,) DPIC shall make the Plan basically if comply with the provisions of OSHA?

JC1: DPIC が自分でアドバイスして、自分で承認するという言い方はおかしい。
It seems strange that DPIC gives advice to and approves the Dive Safety Plan.

NK: OSHA では、Safety Plan (Safety practice manual)を、雇用者（請負者）が作成

~~shall be incorporated the advice of and be approved by DPIC when prepared in the Works, and reviewed and approved by the HSO.~~

~~(5) The Contractor shall inform and if necessary further train and test all Dive Team members the content of the Dive Safety Plan and the Dive Safety Procedure.~~

~~(6) A copy of the Dive Safety Plan and the Dive Safety Procedure shall be made available at the dive location to each Dive Team member.~~

~~10.2.2 Dive Safety Plan~~

~~The Dive Safety Plan shall describe the Contractor's plan regarding items related with the Diving Operation listed in Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan] and in accordance with the following:~~

~~JC8: これは Safety Plan のレベルで行われることなので、Procedure では不要。~~
~~As this is to be done at the Safety Plan, therefore unnecessary to describe here.~~

~~NK: 10.2.1(2)に Dive Safety Plan で規定すべき事項として、(4) の事項を含んでいる Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan]にもとづくことと追記しました。~~
~~Contents of Dive Safety Plan including those mentioned (4) are specified in 10.2.1(2) in accordance with Annex 1.2 of Chapter 1 [Content of Bid Stage Safety Plan].~~

するとのみ規定し、誰が作成するべきとは規定していません。
提案の(6)は、実際現場で潜るかに関係せず潜水士である者が、DPIC の助言を得て作成し、DPIC の承認を得ることを規定しています。
潜水作業という特殊な作業であることから、潜水士の作成、DPIC の review and approval 承認という手続きで、漏れや間違いのない品質の Safety Plan が確保できると考えます。
単なる潜水士ではなく、HSO が能力を認めた潜水士に作成することが規定されております。
一方、DPIC が作成しますと、review and approval の任務に HSO は専門家でないため不適であり、別途潜水専門家を任命する必要があります。
そのため、 DPIC の助言は削除した原案を推奨致します。
The OSHA stipulates only that The employer shall develop a safe practices manual (Safety Plan) but not mention who prepare it.
The proposed (6) stipulates a diver shall prepare it . The diver is not restricted to a diver who actually engages in the diving work. The diver prepares it getting advice and DPIC approve it.
Because the diving work is special work, by the preparation by the diver and review and approval by the DPIC, quality of SP which does not have missing/errors can be secured. The diver is not normal diver but one HSO admits his ability.
On the other hand, if DPIC prepare the SP, it is necessary to assign other professional person who is qualified for diving works because HSO cannot review and approve as normally he is not qualified for diving works.
With reasons, NK propose to leave this (6) with deletion of " incorporate the advice of and".

(6) The Dive Safety Plan shall be reviewed and approved by the HSO.

JC1: HSO による review & approval の後に Engineer に提出することにした方がよくないか？
Isn't it better that after review and approval of the Dive Safety Plan, then submit it to the Engineer?

NK: DPIC が review and approval を(6)で規定していますが、最終的に HSO が承認することとし、下記の第 1 章 1.7.7 に規定の通り、作業開始前にエンジニアへ提出することが良いと考えます。第 1 章に規定されておりここでの提出の規定は不要と考えます。(6)には Further を追記します。
1.7.7 Commencement Stage Safety Plan
(1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
(6) stipulate DPIC shall review and approval the Safety Plan (SP), and HSO shall finally approve the SP. As JSSS 1.7.7. above has specified its submission, no need to specify it in (6).

~~10.2.4. Climatic, Marine, Natural and Physical Conditions~~

The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan.

The Contractor shall establish criteria ~~to permit~~ for commencement, continuation or stopping of any diving operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

JC1: permit to stop という言い方があるのでしょうか。
We wonder if there is expression of "permit to stop"?

NK: 作業開始、継続、中止は DPIC が基準(criteria)に基づき現場で指示することから、請負者は基準を設定することへ変更します。

(3) ~~The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety Plan. Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:~~

~~JC10: まず 10.2 として「1 章の総則に従って Safety Plan（Safety Procedure ではない）を作成する」と記述してください。そのうえで、この 10.2.2 の内容を続けてください。その次に Safety Procedure の話をまとめて書いてください。~~
~~10.2 specifies that firstly Safety Plan (not Safety Procedure) shall be prepared in accordance with Chapter 1, secondly specify the contents of 10.2.2, and after those, specifies the contents for Safety Procedure.~~

~~NK: 10.2.1 (1)に Dive Safety Plan について記述を加え、Dive Safety Procedure との関係を明確にしました。~~

The commencement, continuation or stopping is directed in accordance with the criteria at the site, therefore this clause specifies only to establish the criteria as modified.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(1) Climatic information and forecasting at the diving location:
  (a) Wind speed and direction;
  (b) Air temperature;
  (c) Surface visibility, fog, sea mist;
  (d) Likelihood and intensity of electrical storm; and
  (e) Weather forecasting.

(2) Water/Marine Conditions
  (a) Sea state; wave height and direction;
  (b) Height and time of tides;
  (c) Water depths;
  (d) Water Temperatures;
  (e) Water currents, direction and speed;
  (f) Visibility at depths; and
  (g) Water level variation in rivers or lakes during flood periods.

(3) Physical Conditions
  (a) Underwater cables and pipes;
  (b) Other artificial obstacles;
  (c) Geotechnical conditions affecting the work; and
  (d) UXO, Dangerous Goods and Hazardous Substances.

(4) Natural Conditions
  (a) Natural obstructions;
  (b) Coral reef or other marine life to be protected; and
  (c) Danger from marine wildlife and precautions.

(5) Surface Traffic
  (a) Surface traffic details, timings and restrictions, and
  (b) Danger, precautions and control of surface traffic.

(6) Diving Works Area
  (a) Demarcation of diving location; and
  (b) Limits of working area.

~~10.2.5. Further Technical Detail in Dive Safety Plan~~

In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:

(1) Equipment for the Dive Works of air compressor system, breathing-gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the diving operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

(4) Communications, recovery and first aid measures in the event of an accident or emergency.

(5) Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.

~~An explanation is added in 10.2.1 (1) to clarify the relationship between Dive Safety Plan and Dive Safety Procedure.~~

(6) Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location. (7) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.		

10.3 CLIMATIC, MARINE, NATURAL AND PHYSICAL CONDITIONS

10.3.1 General

I suggest that the above heading from my earlier draft is relevant and simplifies the structure, please can this be put back together with the following opening clauses, which I have reinserted below with suitable editing:

(1) The Contractor shall compile relevant information from statistical records, recent and current forecasts of conditions which may be encountered in support of the Particular Dive Safety Plan and shall establish criteria and controls for commencement, continuation or stopping of any Diving Operation due to such conditions.

(2) The Commencement Stage Dive Safety Plan shall describe how such criteria shall be applied and how such controls shall be implemented.

10.3.2 Information on Conditions for Particular Dive safety Plans

(1) Where necessary, the Contractor shall make exploratory dives to survey and establish all relevant conditions at the dive site such that all Particular Dive Safety Plans are based upon the best and most timely available information.

(2) Relevant information shall also be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

10.3 CLIMATIC, MARINE, NATURAL AND PHYSICAL CONDITIONS

10.3.1 General

(1) The Contractor shall compile relevant information from statistical records, recent and current forecasts of conditions which may be encountered in support of the Particular Dive Safety Plan and shall establish criteria and controls for commencement, continuation or stopping of any Diving Operation due to such conditions.

(2) The Commencement Stage Dive Safety Plan shall describe how such criteria shall be applied and how such controls shall be implemented.

10.3.2 Information on Conditions for Particular Dive safety Plans

(1) Where necessary, the Contractor shall make exploratory dives to survey and establish all relevant conditions at the dive site such that all Particular Dive Safety Plans are based upon the best and most timely available information.

(2) Relevant information shall also be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

(ii) Coral reef or other marine life to be protected; and

(ii) Coral reef or other marine life to be protected; and

(iii) Danger from ~~marine~~ wildlife and precautions to be taken.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

(2) ~~The Particular Dive Safety Plan shall describe the safety measures for the Diving Operations including the following:~~

(a) ~~Safety procedures and checklists for each Diving Operation;~~

(b) ~~Assignments and responsibilities of each of the Dive Team members;~~

(c) ~~Lists, procedures and checklists of diving equipment, tools, PPE, materials, workboat, fuel and other consumables others necessary for each Diving Operation;~~

(d) ~~Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;~~

(e) ~~Work stop criteria for change of the weather and marine conditions the climatic, marine, natural and physical conditions;~~

(f) ~~Scope of work for each Diver and all support assistants in the Dive Team throughout the Diving Operation;~~

(g) ~~Information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures; and~~

(h) ~~Communication systems and procedures between the diver and the workboat.~~

~~JC7: ここでいうCommunication systemとはダイバーとボート間のことなら、そう記載すべき。~~

~~6. If the "communication system" is for that between the diver and the boat, it shall be described so.~~

~~NK: ダイバーと作業船とのシステムということを追加します。~~

~~Added phrase that the system between the diver and the workboat.~~

(i) ~~Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support. Or (alternatively and by reference to JSSS Section 10.6 [*Diving Accident Control Plan*] the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location.~~

(3) ~~The Contractor shall establish criteria for commencement, continuation or stopping of any Diving Operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.~~

(4) ~~The Contractor shall make exploratory dives to survey and establish conditions at the diving location.~~

The above is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1, 10.3.2.

NK: Where is (i) Emergency medical facilities specified?

~~10.2.4 Dive Safety Procedure~~

(iii) Danger from wildlife and precautions to be taken.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

~~The Dive Safety Procedure shall describe the technical details for the individual Diving Operation including the following:~~

~~(1) Equipment for the Dive Works of air compressor system, breathing gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.~~

~~(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the Diving Operations.~~

~~(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.~~

~~(4) Communications, recovery and first aid measures in the event of an accident or emergency.~~

~~(5) Emergency medical facilities including the decompression chamber or the address, contact details of an existing decompression chamber.~~

~~(6) Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.~~

The above is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

NK6/21: Is the Clause 10.2.1 correct?

To MD, the sentences from below to before 10.3 are replaced with the above 10.2. Please review the above 10.2.

The following is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

NK6/21: Is the Clause 10.2.1 correct?

(7) ~~The Contractor shall prepare a Dive Safety Plan for the Diving Works, inform and if necessary further train and test all Dive Team members in the content of the Plan.~~

(8) ~~A copy of the Dive Safety Plan shall be made available at the dive location to each Dive Team member.~~

~~(3) The Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.~~

JC1: 意図が不明であることもあり、不要に思います。
The intention of this provision is unknown. This item is not necessary.

NK: OSHA Subpart T, 1910.420 Safe practices manual stipulate "(b) Contents. (1) The safe practices manual shall contain a copy of this standard and the employer's policies for implementing the requirements of this standard."
Item (3) is deleted as commented.

The above clause (3) has been deleted in your comment and we do not recommend this as it is an OSHA stipulated requirement and an important aspect of for safety compliance purposes.

This is a requirement of OSHA as stated already but as diving regulations vary around the world many divers will not be familiar with US i.e. OSHA requirements, It is very important that they are given the opportunity to study this document and check that their employer is complying particularly with regard to OSHA Under 29 CFR 1910.410(b)(1).

Also "the Contractor's policies for implementing the requirements of this standard" are an important requirement of OSHA and really should be provided as it is evidence of what the Contractor intends to do. This is included in the Bid Stage Dive Safety plan in 10.2.1 above, as it can and should be evaluated at that

stage . It is usually a fairly standard document and easy for any Diving Contractor to prepare.

NK6/21: JSSS specify some safety measures shall be taken in accordance with OSHA however does not always specify to attach copy of OSHA in Safety Plan. Now this Chapter specifies that Dive Safety Plan shall include the copy of OSHA. It seems inconsistent. I understand provisions for diving is important. What is your opinion?

The following is not now necessary as relevant items (as edited where necessary to include your comments) are already covered by Clause 10.2.1

NK6/21: confirmed about (9).

(9) ~~For each required Diving Operation and diving mode, the Dive Safety Plan shall include:~~

~~JC1: work stop criteria を入れておいた方が良いと思います。10.5.2(3)に突然出てきているので~~

~~7. It is better to mention the work stop criteria here as it appears suddenly at 10.5.2 (3).~~

~~NK: Though it is stipulated to establish the criteria for stopping the work in 10.2.2., Item (e) is added.~~

(i) ~~Safety procedures and checklists for each Diving Operation;~~

(j) ~~Assignments and responsibilities of each of the Dive Team members;~~

(k) ~~Equipment l Lists, procedures and checklists of diving equipment, tools, materials, workboat, fuel and other consumables;~~

~~JC1: (e)及び(f)と重複感があります。違いがあるということであれば、分かるように明記してください。~~

(3) ~~The item (c) seems duplicated with (e) and (f). If there is difference and reasons to state, describe it so that the difference can be understood clearly.~~

~~NK: OSHA Subpart T, 1910.420 Safe practices manual.の(a)から(d)を（3）に規定し、(e)以降を追記していました。(e) & (f)を(c)に含めます。~~

~~OSHA Subpart T, 1910.420 Safe practices manual.(a) to (d) is specified in (3) and other requirements are added to (3) as (e) to (i). Combined (e) and (f) in (c).~~

(l) ~~Emergency procedures including for equipment failure, fire, adverse climatic, marine, natural and physical conditions, adverse environmental conditions, medical illness and injury;~~

(m) ~~Work stop criteria for change of the weather and marine conditions;~~

~~(e) Details of the workboat and all diving equipment, fuel and other consumables;~~

~~(f) Equipment, tools, materials and consumables for the assigned work tasks;~~

(n) ~~Scope of work for each Diver and all support assistants in the Dive Team throughout the Diving Operation;~~

(o) ~~Information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures; and~~

(p) ~~Communication systems and procedures.~~

(10) ~~The Dive Safety Plan shall analyse the tasks of the assigned Diving Operation, assess all risks involved and describe all measures to avoid mitigate such risks.~~

(11)

~~JC1: changed.~~

(12) ~~The Dive Safety Plan shall be prepared by a Diver that has the~~

qualification, experience and capability deemed sufficient by the HSO and it shall incorporate the advice of and be approved by the DPIC.

JC1: これでは実際に潜る人が計画を作ることになる(Diver の定義を参照)。OSHA を見ると基本は DPIC が作ることになっていないか？
8. This sentence can be read that the diver himself will make the Dive Safety Plan. (Refer to the definition of Diver,) DPIC shall make the Plan basically if comply with the provisions of OSHA?

JC1: DPIC が自分でアドバイスして、自分で承認するという言い方はおかしい。
It seems strange that DPIC gives advice to and approves the Dive Safety Plan.

NK: OSHA では、Safety Plan (Safety practice manual)を、雇用者（請負者）が作成するとのみ規定し、誰が作成するべきとは規定していません。
提案の(6)は、実際現場で潜るかに関係せず潜水士である者が、DPIC の助言を得て作成し、DPIC の承認を得ることを規定しています。
潜水作業という特殊な作業であることから、潜水士の作成、DPIC の review and approval 承認という手続きで、漏れや間違いのない品質の Safety Plan が確保できると考えます。
単なる潜水士ではなく、HSO が能力を認めた潜水士に作成することが規定されております。
一方、DPIC が作成しますと、review and approval の任務に HSO は専門家でないため不適であり、別途潜水専門家を任命する必要があります。
そのため、DPIC の助言は削除した原案を推奨致します。
The OSHA stipulates only that the employer shall develop a safe practices manual (Safety Plan) but not mention who prepare it.
The proposed (6) stipulates a diver shall prepare it. The diver is not restricted to a diver who actually engages in the diving work. The diver prepares it getting advice and DPIC approve it.
Because the diving work is special work, by the preparation by the diver and review and approval by the DPIC, quality of SP which does not have missing/errors can be secured. The diver is not normal diver but one HSO admits his ability.
On the other hand, if DPIC prepare the SP, it is necessary to assign other professional person who is qualified for diving works because HSO cannot review and approve as normally he is not qualified for diving works.
With reasons, NK propose to leave this (6) with deletion of "incorporate the advice of and".

(13) The Dive Safety Plan shall be reviewed and approved by the HSO.

JC1: HSO による review & approval の後に Engineer に提出することにした方がよくないか？
Isn't it better that after review and approval of the Dive Safety Plan, then submit it to the Engineer?

NK: DPIC が review and approval を(6)で規定していますが、最終的に HSO が承認することとし、下記の第 1 章 1.7.7 に規定の通り、作業開始前にエンジニアへ提出することが良いと考えます。第 1 章に規定されておりここでの提出の規定は不要と考えます。(6)には Further を追記します。
1.7.7 Commencement Stage Safety Plan
(1) This shall be submitted within twenty-eight (28) days after the Commencement Date and not less than twenty-eight (28) days before commencing any work at the Site,
(6) stipulate DPIC shall review and approval the Safety Plan (SP), and HSO shall finally approve the SP. As JSSS 1.7.7. above has specified its submission, no need to specify it in (6).

10.2.1 Climatic, Marine, Natural and Physical Conditions
The Contractor shall compile relevant information from statistical records, recent records and forecasts of conditions for the Dive Safety

Plan.

The Contractor shall establish criteria to permit for commencement, continuation or stopping of any Diving Operations due to the climatic, marine, natural and physical conditions. The Dive Safety Plan shall describe how such controls shall be implemented.

JC1: permit to stop という言い方があるのでしょうか。
We wonder if there is expression of "permit to stop"?

NK: 作業開始、継続、中止は DPIC が基準(criteria)に基づき現場で指示することから、請負者は基準を設定することへ変更します。
The commencement, continuation or stopping is directed in accordance with the criteria at the site, therefore this clause specifies only to establish the criteria as modified.

The Contractor shall make exploratory dives to survey and establish conditions at the diving location.

Relevant information shall be obtained by the Contractor from all available sources and shall include for example the following:

(7) Climatic information and forecasting at the diving location:
  (a) Wind speed and direction;
  (b) Air temperature;
  (c) Surface visibility, fog, sea mist;
  (d) Likelihood and intensity of electrical storm; and
  (e) Weather forecasting.

(8) Water/Marine Conditions
  (a) Sea state; wave height and direction;
  (b) Height and time of tides;
  (c) Water depths;
  (d) Water Temperatures;
  (e) Water currents, direction and speed;
  (f) Visibility at depths; and
  (g) Water level variation in rivers or lakes during flood periods.

(9) Physical Conditions
  (a) Underwater cables and pipes;
  (b) Other artificial obstacles;
  (c) Geotechnical conditions affecting the work; and
  (d) UXO, Dangerous Goods and Hazardous Substances.

(10) Natural Conditions
  (a) Natural obstructions;
  (b) Coral reef or other marine life to be protected; and
  (c) Danger from marine wildlife and precautions.

(11) Surface Traffic
  (a) Surface traffic details, timings and restrictions, and
  (b) Danger, precautions and control of surface traffic.

(12) Diving Works Area
  (a) Demarcation of diving location; and
  (b) Limits of working area.

10.2.2 Further Technical Detail in Dive Safety Plan

In addition to the above, the Contractor shall provide further technical detail in the Dive Safety Plan including:

(1) Equipment for the Dive Works of air compressor system, breathing gas supply hoses, buoyancy control, compressed gas cylinders, gauges and timekeeping devices, masks and helmets, etc.

(2) Time schedule, the various works of the Divers, support assistants and workboats, traffic conditions of the workboats and other marine craft that may affect the Diving Operations.

(3) Composition of the Dive Team, command structure, assigned tasks, required licenses for the work.

	(4) ~~Communications, recovery and first aid measures in the event of an accident or emergency.~~ (5) ~~Emergency medical facilities including the provision of a decompression chamber at the Diving Works location together with medical support.~~ (6) ~~Or (alternatively and by reference to ISSS Section 10.6 [*Diving Accident Control Plan*]~~ the address, contact details of an existing decompression chamber that the Contractor intends to use together with a description of the facilities, age and condition and location. (7) ~~Contact system between the Contractor/diving workboats and the authorities which manage the area around the diving works site at normal and emergency times.~~	

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation and as approved by the HSO and the Engineer.

JC: JICA added “the”.

NK: MD will review necessity of this “the”.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (for Diving Works) (DPIC).

JC11: 10.1.2.(e)のコメントのように(for diving works)を加える。
As commented to 10.1.2.(e), (for diving works) is added.

NK: Added.

(1) The Contractor shall assign a DPIC to each diving operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the diving operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the diving operation at that location).

(5) The DPIC can be a Diver when qualified as a diver, and when another dive-team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC’s duties.

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation which shall be approved by the HSO and Engineer.

JC: JICA added “the”.

NK: MD will review necessity of this “the”.¥

No need “the”.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving Operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (~~for Diving Works~~) (DPIC).

JC11: 10.1.2.(e)のコメントのように(for diving works)を加える。
As commented to 10.1.2.(e), (for diving works) is added.

MK: Added.

Not necessary: please refer to 10.1.2 Definitions

(1) The Contractor shall assign a DPIC to each Diving Operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the Diving Operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the Diving Operation at that location).

(5) The DPIC can be a Diver when qualified as a Diver, and when another Dive Team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC’s duties when the DPIC is a Diver in the water.

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation which shall be approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving Operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (DPIC)

(1) The Contractor shall assign a DPIC to each Diving Operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the Diving Operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the Diving Operation at that location).

(5) The DPIC can be a Diver when qualified as a Diver, and when another Dive Team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC’s duties when the DPIC is a Diver in the water.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

(7) ~~No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.~~

JC1: 10.3.4 に入れるべき事項
This item should be in 10.3.4.

NK: Moved to 10.3.4.(4).

10.4.3 Duties of DPIC

JC12: Operation Leader と変更する場合には、in addition to the provisions described in the Chapter 1 hereof とする？
If "DPIC" is replaced with "Operation leader", is it necessary to subscribe "in addition to the provisions described in the Chapter 1 hereof"?

NK: DPIC は潜水という特殊な工事の場合であり、OSHA で使用されている用語であることから、Operation Leader に含める必要はないと思います。このままとします。
DPIC is used in JSSS only for diving works which are special works, and it is a term being used in OSHA. It is deemed that it is not necessarily included in Operation Leaders. Therefore, DPIC is left as it is.

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the diving operation;

(3) Assignment of tasks to Diving Team members;

NK: 下記 10.3.4 (1)の対応参照。See the comment for 10.3.4 (1).

(4) Issue instructions for the diving operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the diving operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect or summarise records and submit to HSO.

10.4.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

JC13: 誰が Assign するのか。DPIC なら 10.3.3 に追記必要では？
Who will assign tasks to the Dive team members? If DPIC is the one, it should be added in 10.3.3?

NK: 役割の割り当ては DPIC の責務ですので、10.3.3 (3)にその旨を追加します。
Assignment of tasks to Diving Team members is one of important responsibilities of DPIC. Added as 10.3.3 (3).

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

(7) ~~No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team present.~~

JC1: 10.3.4 に入れるべき事項
This item should be in 10.3.4.

NK: Moved to 10.3.4.(4).

The move is correct, no problem

10.4.3 Duties of DPIC

JC12: Operation Leader と変更する場合には、in addition to the provisions described in the Chapter 1 hereof とする？
If "DPIC" is replaced with "Operation leader", is it necessary to subscribe "in addition to the provisions described in the Chapter 1 hereof"?

NK: DPIC は潜水という特殊な工事の場合であり、OSHA で使用されている用語であることから、Operation Leader に含める必要はないと思います。このままとします。
DPIC is used in JSSS only for diving works which are special works, and it is a term being used in OSHA. It is deemed that it is not necessarily included in Operation Leaders. Therefore, DPIC is left as it is.

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the Diving Operation;

(3) Assign tasks to Dive Team members;

(4) Issue instructions for the Diving Operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the Diving Operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect records, check, approve and submit to HSO.

Modified so consistent with 10.6.2 (5).

10.4.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

JC13: 誰が Assign するのか。DPIC なら 10.3.3 に追記必要では？
Who will assign tasks to the Dive team members? If DPIC is the one, it should be added in 10.3.3?

NK: 役割の割り当ては DPIC の責務ですので、10.3.3 (3)にその旨を追加します。
Assignment of tasks to Diving Team members is one of important responsibilities of DPIC. Added as 10.3.3 (3).

Added above already

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

10.4.3 Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the Diving Operation;

(3) Assign tasks to Dive Team members;

(4) Issue instructions for the Diving Operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the Diving Operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect records, check, approve and submit to HSO.

10.4.4 Diver Assignments

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures.

(3) ~~The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the Contractor and is likely to affect adversely the safety or health of a Dive Team member. exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment.~~ The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions for an excessive duration or any other condition which ~~is likely to affect adversely the safety or health of a Dive Team member that~~ may cause any physical impairment.

JC1: 趣旨が分からないので、non-native に分かるような記述に修正してください。
The meaning of this item is hard to understand. Please, modify the sentence so that non-native can easily understand.

NK: Modified. MD will review this.

JC14: Revised by JC.

NK: MD will review this revision.

(4) No Diver shall dive in any diving operation unless the DPIC and the complete Dive Team present.

NK1: moved from 10.3.2 (7) to (4).

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures.

(3) ~~The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the Contractor and is likely to affect adversely the safety or health of a Dive Team member. exposed to hyperbaric conditions or any other condition which is likely to affect adversely the safety or health of a Dive Team member that may cause any physical impairment.~~ The Contractor shall not permit a Dive Team member to dive or be exposed to hyperbaric conditions for an excessive duration or any other condition which ~~is likely to affect adversely the safety or health of a Dive Team member that~~ may cause any physical impairment.

JC1: 趣旨が分からないので、non-native に分かるような記述に修正してください。
The meaning of this item is hard to understand. Please, modify the sentence so that non-native can easily understand.

NK: Modified. MD will review this.

JC14: Revised by JC.

NK: MD will review this revision.

I am sorry but this is not my English, it is actually a direct copy from OSHA of their precise requirements which I had included (together with explanatory notes) in my original draft document.

Please refer to OSHA: Appendix I: Checklist for Commercial Diving Operations, 1910.410 QUALIFICATIONS OF DIVE TEAM. (b) Assignments

As these checklists are an important requirement and an integral form in OSHA, I do suggest that they are not changed.

On the assumption that this is acceptable I have deleted the amended clause and re-inserted the original.

NK6/21: Agreed the above "not changed.to".

(4) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the employer and is likely to affect adversely the safety or health of a Dive Team member.

(5) No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team are present.

NK1: moved from 10.3.2 (7) to (4).

Correct.

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures.

(3) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the ~~employer~~ Contractor and is likely to affect adversely the safety or health of a Dive Team member.

(4) No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team are present.

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(3) Communicate with the Diver so that the Diver descends and

(3) Communicate with the Diver so that the Diver descends and ascends properly.

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any ~~risk~~ trouble due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

JC15: Revised by JC.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of diving operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the diver.

(8) Ensure the safety of the Diver ~~by receiving the signals from the Diver when the Diver is using the lifeline.~~ by maintaining communication with voice or video communication device.

JC1: 音声が普通で、line signalling は一般的ではないようなので、改めて内容を確認願います。
OSHA に line signalling はなく、10.5.2(2)(d)を参照。
Communication is usually made verbally and line signalling is not used in common. Please, confirm if this item is appropriate. Refer to 10.5.2.(2)(d).

NK: OSHA では、line signalling はスキューバダイビング以外では認められていない。よって本仕様書では、以降の節においても信号索は除外して規定する。
As stipulated in OSHA as below, line-pull signal shall not be used except for scuba diving.
29 CFR 1910.422(c) Communications.
An operational two-way voice communication system is required for communications between each surface-supplied air diver or mixed-gas diver and a member of the dive team at the dive location or in the diving bell (if a diving bell is provided or required). Line-pull signals do not meet this requirement, except for the SCUBA-diving mode. A two-way voice communication system is required for communications between the diving bell and the dive location.
Modified and deleted line pull signals in other clauses.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.8.1 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(3) Communicate with the Diver so that the Diver descends and ascends properly.

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any risk ~~trouble~~ due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

JC15: Revised by JC.
I do not recommend this change.
The use of "risk" anticipates and is ahead of any "trouble".
The use of "trouble" means that it has already happened and information then is too late.
On the assumption that this is acceptable I have deleted the amendment.
NK6/21: agreed.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of Diving Operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the Diver.

(8) Ensure the safety of the Diver ~~by receiving the signals from the Diver when the Diver is using the lifeline.~~ by maintaining communication with voice or video communication device.

JC1: 音声が普通で、line signalling は一般的ではないようなので、改めて内容を確認願います。
OSHA に line signalling はなく、10.5.2(2)(d)を参照。
Communication is usually made verbally and line signalling is not used in common. Please, confirm if this item is appropriate. Refer to 10.5.2.(2)(d).

NK: OSHA では、line signalling はスキューバダイビング以外では認められていない。よって本仕様書では、以降の節においても信号索は除外して規定する。
As stipulated in OSHA as below, line-pull signal shall not be used except for scuba diving.
29 CFR 1910.422(c) Communications.
An operational two-way voice communication system is required for communications between each surface-supplied air diver or mixed-gas diver and a member of the dive team at the dive location or in the diving bell (if a diving bell is provided or required). Line-pull signals do not meet this requirement, except for the SCUBA-diving mode. A two-way voice communication system is required for communications between the diving bell and the dive location.
Modified and deleted line pull signals in other clauses.
Your change is correct.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the Diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

ascends properly.

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver;

(5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of Diving Operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the Diver.

(8) Ensure the safety of the Diver by maintaining communication with voice or video communication device.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the Diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health

(d) Any other health conditions and disease which may affect the diving operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC ~~must~~ shall inquire into each Diver's health prior to ~~any task assignment~~ each diving operation.

J1C: この"must"は"shall"ではないか？
Isn't this "shall" instead of "must"?

NK: modified to make terms consistent as commented.

JC16: Revised by JC.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

JC1: "ailment"は、通例軽い又は慢性の病気、不快の意であるが、ここにその意味で適切か？
Is "ailment" proper in this clause? (Ailment means slight or chronic disease/symptoms.)

NK: 「体調にわずかでも不調等があれば潜水作業させてはならない」の意味で、"sickness", "disease", "illness"等より"ailment"が適切と考える。そのままとする。
This means that the Contractor shall not require any Diver to dive when the Diver has any even slight physical problem. In this sense, "ailment" is more suitable than "sickness", "disease" or "illness". Left as it is.

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health; and

(d) Any other health conditions and disease which may affect the Diving Operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC ~~must~~ shall inquire into each Diver's health prior to ~~any task assignment~~ each Diving Operation; and

J1C: この"must"は"shall"ではないか？
Isn't this "shall" instead of "must"?

NK: modified to make terms consistent as commented.

JC16: Revised by JC.

For clarity, I have referred to and used the text of OSHA Directive No. CPL 02-00-151 for 29 CFR Part 1910, Subpart T – Commercial Diving Operations. OSHA use "must" and also refer to "task assignment". Please refer to page 17 item 3.

NK6/21: understood.

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

JC1: "ailment"は、通例軽い又は慢性の病気、不快の意であるが、ここにその意味で適切か？
Is "ailment" proper in this clause? (Ailment means slight or chronic disease/symptoms.)

NK: 「体調にわずかでも不調等があれば潜水作業させてはならない」の意味で、"sickness", "disease", "illness"等より"ailment"が適切と考える。そのままとする。
This means that the Contractor shall not require any Diver to dive when the Diver has any even slight physical problem. In this sense, "ailment" is more suitable than "sickness", "disease" or "illness". Left as it is.

"Ailment" is correct

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the Diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health; and

(d) Any other health conditions and disease which may affect the Diving Operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to each Diving Operation; and

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the Diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS,

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

10.5.2 Diving Workboats

JC17: Contractor's Equipment の一部であるが、Chapter 4 の記載は作業船をイメージしていないので Chapter 4 に追記が必要(たとえば作業船の名前を追記するなど)。
Workboat is one of the Contractor's Equipment, however, it is not specifically itemised in Chapter 4. It is necessary to describe workboat in Chapter 4.

NK: コメントに従い、第 4 章 4.1.1 (5)に Workboat for diving works を追加します。
As commented, "Workboat for diving works" will be added to 4.11(5).

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the diving operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

Please note that your draft refers to OSHA which in turn refer to the US Navy Dive tables and there is no reference at all to personal dive computers which have actually completely changed and improved dive safety and productivity since their inception more than 30 years ago.

Dive tables are setup under the absolute safe assumption that the diver stayed at the maximum depth for the entire dive. The nitrogen absorption is calculated based on these parameters. Dive computers however record the actual time and depth of a scuba diver at all times and then calculate the nitrogen absorption based on these actual values. This higher level of accuracy results in longer dive times and shorter surface intervals which has major benefits in commercial diving.

A dive at 120 feet, based on US dive tables gives a maximum bottom time of for around 15 minutes on the assumption is that the whole dive is at 120 feet. A dive computer taking actual values into consideration and may give a bottom time of around 30 minutes.

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

10.5.2 Diving Workboats

JC17: Contractor's Equipment の一部であるが、Chapter 4 の記載は作業船をイメージしていないので Chapter 4 に追記が必要(たとえば作業船の名前を追記するなど)。
9. Workboat is one of the Contractor's Equipment, however, it is not specifically itemised in Chapter 4. It is necessary to describe workboat in Chapter 4.

NK: コメントに従い、第 4 章 4.1.1 (5)に Workboat for diving works を追加します。
As commented, "Workboat for diving works" will be added to 4.11(5).

There is no 4.11.5 in my copy but I think I have not yet seen the Issue 2 draft for this chapter yet?

I think that as diving workboats only apply to this chapter, there may be no need to separately mention them in Chapter 3, all relevant requirements should be here or in OSHA.

NK: already included in 4.1.1 (5) (l).

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the Diving Operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

10.5.2 Diving Workboats

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the Diving Operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation

and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

and can provide emergency support if required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.6 PARTICULAR SAFETY MEASURES

10.6.1 Measures before Diving operations

The Contractor shall take the following measures before commencement of any diving operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions; and

(e) Conduct the health check.

(f) Check that support assistant and crew on the workboat are wearing life jackets.

JC1: Moved from 10.5.1.(5)(d)

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during diving operation.

(4) Diving operation site

(a) Provide signs including red flags, buoys and notices to demarcate the diving operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the diving operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, ~~signal halyard,~~ voice or video, communication device, torch, watch, water depth gauge, knife and the like.

JC1: ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図(Line Signaling)するためのロープなので、英語でも halyard(揚げ綱)とは言わないかと。ここでの信号索は、水上と水中でコミュニケーションするため引っ張って合図(Line Signalling)するためのロープなので、英語でも halyard(揚げ綱)とは言わないかと。なお、信号索は現在あまり使われず、双方向通話可能な機器の利用が一般的かと思われ、信号索そのものをここであげる必要もないのでは？

"Signal halyard" is a rope for raising a flag. The term in Japanese means a rope for

"Signal halyard" is a rope for raising a flag. The term in Japanese means a rope for

10.6 PARTICULAR SAFETY MEASURES

10.6.1 Measures before Diving Operations

The Contractor shall take the following measures before commencement of any Diving Operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions;

(e) Conduct the health check; and

(f) Check that support assistants and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during Diving Operation.

(4) Diving Operation site

(a) Provide signs including red flags, buoys and notices to demarcate the Diving Operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the Diving Operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, signal halyard, voice or video, communication device, torch, watch, water depth gauge, knife and the like.

line signalling to communicate on board and in water. The line signalling is recently seldom used, it would not necessary to mention about it here.
As commented above, OSHA has no provision about line signalling, and video or voice communication is in the major stream. It is recommended to modify the phrase.

NK: As commented above and 10.3.5.(8), line signalling is not used. Deleted "signal halyard" and added "voice and video" for communication device.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

~~(b) Inform the Diver of the air supply capacity of the air tank(s) for SCUBA diving;~~

JC1: 「現に有する給気能力」current とか要らない？よく見るとこの上にある available air volume と重複。(これってダイバーが自身でチェックできるなら、こっちは不要では？)
また、inform はおかしい→If any defect is identified by the above checks, prohibit the dive operation from commencing.
"Air supply capacity" is a duplication of "available air volume" in (ii) above. And, "inform" is not proper. → If any defect is identified by the above checks, prohibit the dive operation from commencing.

NK: (b)は削除、→の先の文章は本項の最後の文章であるが指示内容が不明のため、そのまま残します。です。
(b) is deleted. The comment to the Sentence marked by → is not clear, so no change to this sentence is made.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

~~(c) Check that support assistant and crew on the workboat are wearing life jackets.~~

JC1: e)は少なくとも潜水器具じゃないので違うかと。
Item (e) is not diving equipment.

NK: Considering the content, moved to 10.5.1.(1)(f).

If any defect is identified by the above checks, prohibit the dive operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each diving operation:

(1) A designated member of the workboat crew on the workboat shall ~~observe the diving operation and workboat operation and~~ workboat operation and look out for any other vessels that may approach the diving operation site.

JC1: ダイビングオペレーションは DPIC が主として見ているので不要。他の船を見ているのは別の人材であり、この規定はそれを主眼とした記述にすべき。
"Observe the diving operation" is unnecessary because the DPIC mainly supervises

line signalling to communicate on board and in water. The line signalling is recently seldom used, it would not necessary to mention about it here.
As commented above, OSHA has no provision about line signalling, and video or voice communication is in the major stream. It is recommended to modify the phrase.

NK: As commented above and 10.3.5.(8), line signalling is not used. Deleted "signal halyard" and added "voice and video" for communication device.

No problem

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

~~(b) Inform the Diver of the air supply capacity of the air tank(s) for SCUBA diving;~~

JC1: 「現に有する給気能力」current とか要らない？よく見るとこの上にある available air volume と重複。(これってダイバーが自身でチェックできるなら、こっちは不要では？)
また、inform はおかしい→If any defect is identified by the above checks, prohibit the dive operation from commencing.
"Air supply capacity" is a duplication of "available air volume" in (ii) above. And, "inform" is not proper. → If any defect is identified by the above checks, prohibit the dive operation from commencing.

NK: (b)は削除、→の先の文章は本項の最後の文章であるが指示内容が不明のため、そのまま残します。です。
(b) is deleted. The comment to the Sentence marked by → is not clear, so no change to this sentence is made.

No problem

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

~~(c) Check that support assistant and crew on the workboat are wearing life jackets.~~

JC1: e)は少なくとも潜水器具じゃないので違うかと。
Item (e) is not diving equipment.
NK: Considering the content, moved to 10.5.1.(1)(f).

No problem

If any defect is identified by the above checks, prohibit the Diving Operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each Diving Operation:

(1) A designated member (or members) of the workboat crew shall assist the DPIC by observing the Diving Operation during SCUBA diving and inform the DPIC when divers are carried away by currents and their location when they surface after their dive ascent.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the Diving Operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each Diving Operation:

(1) A designated member (or members) of the workboat crew shall assist the DPIC by observing the Diving Operation during SCUBA diving and inform the DPIC when divers are carried away by currents and their location when they surface after their dive ascent.

the operation. The personnel who looks out for other vessels must be the other designated member.
This item shall be written for this purpose.

NK: deleted as commented.

The designated member shall alert any other vessels related or not related with the diving operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the diving operation site.

(2) Measures for the Divers

(a) Prohibit the Dive Team from commencing any diving operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the diving operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

JC1: 通話装置必須なら、信号索不要では？(注:通話装置を携行する場合は信号索、水中時計、水深計を携行させないことができる。)和文 10.6.(2)(d)では、「有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。」となっているけど、信号索はもはや使わない前提で MD さん書き直していて、整合性がとれてないかと
If "voice or video communication" is a must, "line signalling" is unnecessary. It is stipulated in the Japanese draft 10.6.(2) (d) that when using voice communication device, it is not necessary to use signal line, underwater watch and hydro-barometer. There is inconsistent between 10.3.5.(8) and 10.5.1(5) (a) (i) and the above (d) is inconsistent.

NK: 10.3.5.(8)で信号索を使用しない規定とした。上記(6)は変更なし。
10.3.5.(8) stipulated no line signaling is used in JSSS.
No change of (d) above.

JC18：通常スキューバダイバーは入水時にはバックドロップすると思います。少なくとも(b)と(c)はスキューバのときに該当するか調べてください。
For scuba diving entering, backdrop method is used. Please, check if (b) and (c) can be applied for scuba diving.

NK: OSHA は次を規定しています。スキューバと区別はしていません。レジャーボートのように水面までの高さが低い場合は、後ろ向きに入水しますが、水面まで高さがある場合、はしご又は水中踏み台が必要です。Inwater stages を追記します。
29 CFR 1910.422 Procedures during dive
1. 29 CFR 1910.422(b) Water entry and exit. A means capable of supporting the

(2) A designated member (or members) of the workboat crew on the workboat shall also keep a look-out for any other vessels that may approach the Diving Operation site.

JC1: ダイビングオペレーションは DPIC が主として見ているので不要。他の船を見ているのは別の人材であり、この規定はそれを主眼とした記述にすべき。
"Observe the diving operation" is unnecessary because the DPIC mainly supervises the operation. The personnel who looks out for other vessels must be the other designated member.
This item shall be written for this purpose.

NK: deleted as commented.

They should also observe the water and diving operations particularly in SCUBA dives in case currents carry divers away and they emerge at a distance from the dive boat. They usually work as a team, all helping the others and DPIC. In heavy water such assistance is vital.

As suggested by JICA, I have modified for this purpose.

The designated member(s) shall alert any other vessels related or not related with the Diving Operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the Diving Operation site.

(3) Measures for the Divers

(a) Prohibit the Dive Team from commencing any Diving Operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the Diving Operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

JC1: 通話装置必須なら、信号索不要では？(注:通話装置を携行する場合は信号索、水中時計、水深計を携行させないことができる。)和文 10.6.(2)(d)では、「有線又は無線の通話装置、信号索等で、連絡員と常に連絡をとらせること。」となっているけど、信号索はもはや使わない前提で MD さん書き直していて、整合性がとれてないかと
If "voice or video communication" is a must, "line signalling" is unnecessary. It is stipulated in the Japanese draft 10.6.(2) (d) that when using voice communication device, it is not necessary to use signal line, underwater watch and hydro-barometer. There is inconsistent between 10.3.5.(8) and 10.5.1(5) (a) (i) and the above (d) is inconsistent.

NK: 10.3.5.(8)で信号索を使用しない規定とした。上記(6)は変更なし。
10.3.5.(8) stipulated no line signaling is used in JSSS.
No change of (d) above.

JC18：通常スキューバダイバーは入水時にはバックドロップすると思います。少なくとも(b)と(c)はスキューバのときに該当するか調べてください。

Japanese Ordinance on Safety and Health of Work under High Pressure
https://www.jniosh.johas.go.jp/icpro/jicosh-old/japanese/country/japan/laws/03_rel/09_highpressure_reg/03c.html
(Life Line) Article 33. When the employer has the said diving workers engage in diving operations, he shall provide a life line and make the said diving workers use it in descending and ascending.

JSSS は、日本の安全規則をベースにしており、(c)の規定は上記規則にもとづき、原文のままとします。
Because JSSS is based on Japanese regulation, (c) is left as it is as stipulated in Japanese Ordinance above.

OK no problem, this is not for communication it is very useful particularly for SCUBA divers when working in currents or getting through surface currents.

Also note that OSHA "29 CFR 1910.424(b)(3) requires SCUBA divers to be line-tended against currents exceeding one (1) knot (1.689 feet per second, or about 17 feet per 10 seconds)"

(e) Ensure that the Divers constantly communicate with each other by hand signals and slate messaging.

(4) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the Diving Operation and ensure that the Divers are removed from the water in a safe and controlled manner;

(5) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing;

(b) Ensure that ~~sufficient~~ suitable numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

JC19: Sufficient は言い過ぎでは？大勢の控えがいる訳がない。
"Sufficient" is too much to say. There shouldn't be many standby divers.

NK: 節の意味は、長時間の水中作業を避けるために十分な数の潜水士と、必要な予備潜水士をそろえるという意味で、十分な数の予備潜水士という意味ではありませんが、誤解を生む可能性がありますので、コメントに従い修正します。
The meaning is that sufficient numbers of Divers shall be available to avoid excessive in-water period and necessary standby divers shall be provided. To avoid misunderstanding, the sufficient is replaced with suitable.

To MD, please review this wording.

(c) Design shift times and patterns to preserve Divers' health and safety;

(d) Ensure that each Diver ~~keeps~~ takes an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and ~~that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records~~ submit it to DPIC.

JC1: 個々の Diver が記録を保管するのでしょうか。DPIC ではないでしょうか。
Each diver should keep record individually? Isn't it the duty of DPIC?

NK: OSHA では、下記のように具体的に誰が記録をとるかは規定していないが、雇用者が保管することを規定している。各ダイバーが自分の作業記録をとり(keep a record)、それを DPIC がまとめ、請負者が保管することが実際的であると考える。(DPIC は潜水作業期間のみ現場にいることから請負者が保管することが妥当と考えます。)上のように変更する。

(b) Ensure that sufficient ~~suitable~~ numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

JC19: Sufficient は言い過ぎでは？大勢の控えがいる訳がない。
"Sufficient" is too much to say. There shouldn't be many standby divers.

NK: 節の意味は、長時間の水中作業を避けるために十分な数の潜水士と、必要な予備潜水士をそろえるという意味で、十分な数の予備潜水士という意味ではありませんが、誤解を生む可能性がありますので、コメントに従い修正します。
The meaning is that sufficient numbers of Divers shall be available to avoid excessive in-water period and necessary standby divers shall be provided. To avoid misunderstanding, the sufficient is replaced with suitable.

To MD, please review this wording.

"Suitable" is not correct, "sufficient" is correct and necessary for safety purposes.

Balancing the numbers of available divers against work volume and time deadlines and any requirement for repetitive dives in commercial diving needs to be carefully managed otherwise diver safety is very much at risk.

OSHA requires an available standby diver for SCUBA operation shall always be available, for all liveboating operations and other occasions.

The Diving at Work Regulations 1997 (basis of HSE) is clear and under the duties of the diving contractor, requires that contractor's:

"ensure that there are sufficient people with suitable competence to carry out safely and without risk to health … the diving project … " and also HSE under Regulation 6 Duties of diving contractors:

(f) there are sufficient personnel in the dive team to enable the diving project to be carried out safely (see 'Dive teams and associated working practice');

NK: understood.

~~(c) Design shift times and patterns to preserve Divers' health and safety;~~

(c) Arrange the number, times and duration, of every Diving Operation and all shift times and patterns, to preserve the health and safety of each Diver;

I suggest the above rewording of the original clause for greater clarity

I have deleted the following amended clause for clarity and reinstated the original, please see explanation below

~~(e) Ensure that each Diver keeps takes an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised with a record of the number of dives on a daily, weekly and monthly basis by the DPIC, and the Contractor retain the records submit it to DPIC.~~

JC1: 個々の Diver が記録を保管するのでしょうか。DPIC ではないでしょうか。
Each diver should keep record individually? Isn't it the duty of DPIC?

NK: OSHA では、下記のように具体的に誰が記録をとるかは規定していないが、雇用者が保管することを規定している。各ダイバーが自分の作業記録をとり(keep a record)、それを DPIC がまとめ、請負者が保管することが実際的であると考える。(DPIC は潜水作業期間のみ現場にいることから請負者が保管することが妥当と考えます。)上のように変更する。

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

(c) Arrange the number, times and duration, of every Diving Operation and all shift times and patterns, to preserve the health and safety of each Diver;

OSHA 29 Subpart T 1910.440 Recordkeeping requirements.
(3) Records and documents required by this standard shall be retained by the employer for the following period:
The OSHA does not stipulate who prepare records but the Contractor shall retain the records. (d) is modified for practical way at the Site as above.
(DPIC may be assigned at the site during the diving work, so the Contractor shall retain the records.)

JC20: JICA modifies.

(e) ~~Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.~~ Ensure that the DPIC summarises such records and submits them to the HSO for review and keep them available for the Engineer's inspection.

JC21: JICA modifies.

OSHA 29 Subpart T 1910.440 Recordkeeping requirements.
(3) Records and documents required by this standard shall be retained by the employer for the following period:
The OSHA does not stipulate who prepare records but the Contractor shall retain the records. (d) is modified for practical way at the Site as above.
(DPIC may be assigned at the site during the diving work, so the Contractor shall retain the records.)

JC20: JICA modifies.

~~(f) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection. Ensure that the DPIC summarises such records and submits them to the HSO for review and keep them available for the Engineer's inspection.~~

JC21: JICA modifies.

I suggest that the original text of the above two subclauses is correct and the revision is not recommended.

"Each diver should keep record individually? Isn't it the duty of DPIC?"

Diving is different to normal construction in that each diver will normally keep his own records and summaries usually on a standard sheet before and after each dive to ensure that it is prepared correctly and at the right time. Only the diver can immediately summarise the cumulative allowable bottom time and surface time between repetitive dives to determine for himself if it is safe to dive again on his next dive. Yes, this will be checked by the DPIC but whether he has the time to do this in a timely manner is not certain.

It is important to appreciate that to some extent the individual diver is responsible for his own safety and he can refuse to dive without penalty if he thinks it is unsafe to do so and will of course be immediately required to do so, he must therefore have immediately available information to support this and cannot wait for someone else to do this for him or compute/summarise this perhaps incorrectly. Rather than assuming what a DPIC might be able to do, I suggest that this is a very important consideration for safety.

"keeps" records is the correct wording.

Your point on retention of records is correct and important and whilst covered by OSHA this may vary in different countries. I suggest the use of requisite period or similar.

(d) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised by the Diver with a record of the number of dives on a daily, weekly and monthly basis.

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

(f) Unless otherwise required by the Law, the Contractor shall retain all dive records for the periods specified in the OSHA 29 Subpart T 1910.440

NK: agreed.

(d) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised by the Diver with a record of the number of dives on a daily, weekly and monthly basis.

(e) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection.

(f) Unless otherwise required by the Law, the Contractor shall retain all dive records for the periods specified in the OSHA 29 Subpart T 1910.440

10.7 DIVING ACCIDENT ~~CONTROL~~ RESPONSE PLAN

JC22: JICA modifies.

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.21 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of decompression chambers, Clauses 114 to 118 by means of:

JC1: HSE の Commercial diving projects inland/inshore-Diving at Work Regulations1997 の 114-118（再圧室関連の条項）を参照して記述願います。
読み間違いかもしれませんが、OSHA の 1910.423(c)(1)を見ると、水深 50m を越えないと再圧室の現場での設置は必要ないように読めます。それは不十分に思えるので、10m を基準として記述されている HSE を参照する必要があると考えています。
要するに水深と必要な搬送時間等を考慮し、現場での設置の要否を定めることにします。
Modify this part referring to Commercial diving projects inland/inshore-Diving at Work Regulations1997 of HSE (re. compression chamber) because the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m.
It is not sufficient, so JC considers HSE shall be applied to JSSS. The necessity of compression chamber shall be determined based on the depth of diving and the time necessary for transporting the patient to nearest chamber available.

NK: OSHA は再圧室の現場での必要性を、1910.424 と 425 に次のように規定して、30m 以上の潜水、又は深度に関係なく NDL（減圧の不要な潜水時間）を越えた潜水の場合に、再圧室の現場の設置を規定しています。（なお、1910.423 は再圧室の能力を規定しています。）

§1910.424 SCUBA diving.
(b) Limits. SCUBA diving shall not be conducted:
(1) At depths deeper than 130 fsw(=40m);.
(2) At depths deeper than 100 fsw(=30m) or outside the no-decompression limits (NDL) unless a decompression chamber is ready for use;
§1910.425 Surface-supplied air diving.
(b) Limits.
(2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits (NDL) or deeper than 100 fsw(=30m).

NK: OSHA は潜水深度と NDL での規定しています。一方、HSE は水中の減圧時間と潜水深度で規定しています。コメントのように 10m より浅い潜水も規定しており、HSE の順守と規定します。
Revised as commented to comply with HSE

~~(a) Contract with Identify a medical facility having a suitable and operational decompression chamber and having established a system to transport any affected Divers to immediately receive suitable recompression and decompression treatment with specialist medical support; or~~

~~(b) Provision of a temporary decompression chamber located at the Diving Works location of a type, specification and capacity to suit~~

10.7 DIVING ACCIDENT RESPONSE PLAN

JC22: JICA modifies.

Yes, the change in heading is better for consistency with JSSS 1.24 [Accident Response Plan] to which it relates.

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.24 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) The Contractor shall make decompression chamber available to treat decompression sickness decompression illness (DCI) in accordance with the requirements of HSE Commercial diving projects inland/inshore, Diving at Work Regulations 1997, Availability of decompression chambers, Clauses 114 to 118 by means of:

I suggest that the above change is not necessary and I do not recommend it for the following reasons.

This apparently simple change will have profound effects upon the remainder of this Chapter

I consider that the suggestion to use HSE is not based upon a correct interpretation of OSHA: meaning that the following JICA statement is not correct:

"the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m".

The criteria for providing a decompression chamber is NOT related only to dives in excess of 50m.

In any event the maximum depth of any dive is not the sole or even principle cause of decompression sickness or criteria for providing a chamber, it is any dive outside the no-decompression limits

A chamber must be available for any dive which is outside the no-decompression limits and these start at are 25 fsw.(7.62m).

OSHA actually requires that a "decompression chamber be available at the dive location" for any dive which is outside the no-decompression limits up to 300 fsw quoted as follows:

1910.423(c)(1)

A decompression chamber capable of recompressing the diver at the surface to a minimum of 165 fsw (6 ATA) shall be available at the dive location for:

1910.423(c)(1)(i)

Surface-supplied air diving to depths deeper than 100 fsw and shallower than 220 fsw;

1910.423(c)(1)(ii)

Mixed gas diving shallower than 300 fsw; or

1910.423(c)(1)(iii)

Diving outside the no-decompression limits shallower than 300 fsw.

(underline added by me)

10.7 DIVING ACCIDENT RESPONSE PLAN

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.24 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) In accordance with the requirements of OSHA 1910.423(c) [*Recompression facility*], the Contractor shall make a decompression chamber available at the dive location to treat decompression sickness.

~~the diving operation together with medical support facilities and specialist medical support.~~

JC1: Replaced by JC.
NK: (a) and (b) are replaced with (a) to (c) as right following HSE.

(a) For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;

(b) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression.

This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents.

If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work.

If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;

(c) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work.

The diver shall be able to leave the water quickly and easily and be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used.

The controls of a decompression chamber shall only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The degree of supervision provided shall reflect the experience of the operator.

And also refer to https://www.osha.gov/laws-regs/interlinking/standards/1910.423(c)(1)(iii)
Diving outside the NDL is the crucial part of this requirement (not maximum depth) and this is managed by compliance with the Decompression, repetitive, and no-decompression tables (as appropriate) which OSHA requires to be available at the dive location.

The OSHA commercial diving standard provides for the use of either the U.S. Navy Diving Tables or equivalent limits which the divers' employer can demonstrate to be equally effective.

These tables are contained in the OSHA DIRECTIVE NUMBER: CPL 02-00-151 for 29 CFR Part 1910, Subpart T – Commercial Diving Operations, APPENDIX D: No-Decompression Limits and Repetitive-Group Designation Table for No-Decompression Air Dives

"The information in this appendix (including the table on page D-3) was adapted from the U.S. Navy Diving Manual (Revision 6), Volume 2 ("Air Decompression"), Section 9-7 ("No- Decompression Limits and Repetitive Group Designators for No-Decompression Air Dives"). "

The Appendix provides that any dive to 25 fsw or deeper that has a bottom time greater than the no-decompression limits provided in this table is a decompression dive, and must comply with the appropriate air decompression table.

If a dive is outside this limit then OSHA requires that a decompression chamber be available.

Please note that most decompression is achieved in the water with time-controlled ascent.

Also:

"Even though decompression is not required when diving within the no-decompression limits listed in the table, some nitrogen remains in the diver's tissues for up to 12 hours following an air dive. Consideration must be given to this residual nitrogen in the diver's tissues when calculating decompression for subsequent (i.e., repetitive) dives. "

It is not correct to state that OSHA contains no requirements other than for dives over 50m.

The US Navy requirements are used and accepted internationally as safe and they are not inferior to HSE for example.

I do recommend therefore that there is no need to use any additional compliance standard for this part of Chapter 10. OSHA does cover this and if other standards are used here for any parts the this actually complicates the entire structure of Chapter 10 as:

1) *Different definitions will apply for different parts or items (e.g. OSHA - compression sickness, HSE compression illness)*
2) *If HSE rules are applied to the provision and use of a decompression chamber in this item, the OSHA recommended (US Navy) dive tables and decompression tables will somehow need to be substituted by the HSE dive tables. This means effectively that OSHA does not apply.*

This will greatly complicate if not corrupt Chapter 10.

In addition, OSHA is the prevailing standard for this chapter. OSHA defines this as "decompression sickness" not "decompression illness". Use of different definitions in the same document is not really good practice

I suggest that reference to OSHA is therefore sufficient and that no change is necessary or recommended

NK6/21: agreed.

I suggest the clauses should be simply as follows:

NK6/21: agreed.

1) The original draft stipulate “unless otherwise stipulated, …” and User Guide mention the Employer’s requirements. Is it necessary to mention “unless …” in the Clause about decompression chamber?
2) Shall the bidder provide cost for the decompression chamber when the bidder judges there is risk of decompression sickness? If the Bidder does not judge there is risk, is the Bidder not necessary to provide the cost? There is difference between bidding price depending Bidders’ risk analysis whether there is risk of decompression sickness. How do you think this?

(1) In accordance with the requirements of OSHA 1910.423(c) [*Recompression facility*], the Contractor shall make a decompression chamber available at the dive location to treat decompression sickness.

(2) The decompression chamber shall comply with the requirements of OSHA 1910.423(c) [*Recompression facility*].

(3) The Contractor shall also provide such medical support facilities as are necessary to ensure the health and safety of any members of the Dive Team that may require treatment for decompression sickness.

JC1: HSE の Commercial diving projects inland/inshore-Diving at Work Regulations1997 の 114-118（再圧室関連の条項）を参照して記述願います。
読み間違いかもしれませんが、OSHA の 1910.423(c)(1)を見ると、水深 50m を越えないと再圧室の現場での設置は必要ないように読めます。それは不十分に思えるので、10m を基準として記述されている HSE を参照する必要があると考えています。
要するに水深と必要な搬送時間等を考慮し、現場での設置の要否を定めることにします。
Modify this part referring to Commercial diving projects inland/inshore-Diving at Work Regulations1997 of HSE (re. compression chamber) because the criteria for providing compression chamber of OSHA seems to be read that the compression chamber needs deeper than 50 m.
It is not sufficient, so JC considers HSE shall be applied to JSSS. The necessity of compression chamber shall be determined based on the depth of diving and the time necessary for transporting the patient to nearest chamber available.

NK: OSHA は再圧室の現場での必要性を、1910.424 と 425 に次のように規定して、30m 以上の潜水、又は深度に関係なく NDL（減圧の不要な潜水時間）を越えた潜水の場合に、再圧室の現場の設置を規定しています。（なお、1910.423 は再圧室の能力を規定しています。）

§1910.424 SCUBA diving.
(b) Limits. SCUBA diving shall not be conducted:
(1) At depths deeper than 130 fsw(=40m);.
(2) At depths deeper than 100 fsw(=30m) or outside the no-decompression limits (NDL) unless a decompression chamber is ready for use;
§1910.425 Surface-supplied air diving.
(b) Limits.
(2) A decompression chamber shall be ready for use at the dive location for any dive outside the no-decompression limits (NDL) or deeper than 100 fsw(=30m).

NK: OSHA は潜水深度と NDL での規定しています。一方、HSE は水中の減圧時間と潜水深度で規定しています。コメントのように 10m より浅い潜水も規定しており、HSE の順守と規定します。
Revised as commented to comply with HSE

(a) Contract with Identify a medical facility having a suitable and

(2) The decompression chamber shall comply with the requirements of OSHA 1910.423(c) [*Recompression facility*].

(3) The Contractor shall also provide such medical support facilities as are necessary to ensure the health and safety of any members of the Dive Team that may require treatment for decompression sickness.

operational decompression chamber and having established a system to transport any affected Divers to immediately receive suitable recompression and decompression treatment with specialist medical support; or

(b) Provision of a temporary decompression chamber located at the Diving Works location of a type, specification and capacity to suit the Diving Operation together with medical support facilities and specialist medical support.

JC1: Replaced by JC.
NK: (a) and (b) are replaced with (a) to (c) as right following HSE.

I do not suggest HSE be adopted for this part and therefore the addition of the following from HSE is not necessary or recommended as this is in conflict with OSHA.

If however HSE is selected in place of OSHA, please advise and I will review revise Chapter 10 accordingly.
NK6/21: Agreed to adopt OSHA. (We shall explain MD's explanation above to JICA.

(d) ~~For dives that are shallower than 10 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;~~

On ODA projects there is not likely to be any locally available chamber.

Should be 6 hours by road, flying is not allowable.

Please note that OSHA criteria is simple and unambiguous.

Depths and time limitations between OSHA (US Navy based Dive Table (see OSHA Appendix D)) and HSE are different. I suggest that these added clauses are incompatible with OSHA and that they will also confuse the criteria of whether a decompression facility is required or not.

(e) for dives between 10 and 50 m with planned in-water decompression not exceeding 20 minutes, the Contractor shall assess the risk of DCI and likelihood of a diver requiring emergency recompression.

This shall be based on the depth and duration of the planned dives. The assessment shall also consider factors which may increase the risk of DCI such as water temperature, type of work, and the number of dives/ascents.

If the assessment demonstrates a significant risk of DCI a suitable, operational, two-person, two-compartment chamber shall be provided for immediate use at the site of the diving work.

If the assessment demonstrates relatively low risk of DCI, the Contractor shall identify the nearest suitable operational two-person, two-compartment chamber. Under no circumstances this shall be more than 6 hours travelling distance from the dive site;

(f) for dives with planned in-water decompression stops greater than 20 minutes the Contractor shall provide a suitable, operational, two-person, two-compartment chamber for immediate use at the site of the diving work.

The diver shall be able to leave the water quickly and easily and

	be pressurised within the chamber to the appropriate recompression pressure as defined by the time in the decompression schedule being used. The controls of a decompression chamber shall only be operated by people competent to do so. Such competence will be achieved by a combination of training and experience. The degree of supervision provided shall reflect the experience of the operator.	
	JC1: OSHA1910.421 (c)だと first aid kit という記載ですが、これは薬物の使用のことでしょうか？高圧下での使用が薬物の使用に影響を与えるからこのような書き方になっているのでしょうか。OSHA のままの記述に戻した方が良いのではないでしょうか。 OSHA 1910.421 (c) is titled as “first aid supplies”. Does “medication” above means usage of medicines? Is “medication” used because of specifying use of medicines under hyperbaric conditions which affects their use? Isn’t it better to stipulate as “first aid kit” as mentioned in OSHA?	
(2) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first -aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the Diving Works location shall be appropriate for the diving operations, approved by a physician. When used in a decompression chamber or bell, the first aid kit shall be suitable for use under hyperbaric conditions.	NK: Medication は治療との意味で考える。OSHA では高圧の条件下では適切な救急用具を使用することのみ規定あり。 “first aid kit”に変更する。 It is guessed that “medication” is used for treating someone with a medicine. The term is replaced with “first aid kit”.	(4) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first-aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the dive location shall be appropriate for the diving works and approved by a physician. When used in a decompression chamber or bell, the first-aid kit and any medication shall be suitable for use under hyperbaric conditions.
JC1: OSHA1910.421 (c)だと first aid kit という記載ですが、これは薬物の使用のことでしょうか？高圧下での使用が薬物の使用に影響を与えるからこのような書き方になっているのでしょうか。OSHA のままの記述に戻した方が良いのではないでしょうか。 OSHA 1910.421 (c) is titled as “first aid supplies”. Does “medication” above means usage of medicines? Is “medication” used because of specifying use of medicines under hyperbaric conditions which affects their use? Isn’t it better to stipulate as “first aid kit” as mentioned in OSHA?	*The following is edited to include NK/JICA requirements*	
NK: Medication は治療との意味で考える。OSHA では高圧の条件下では適切な救急用具を使用することのみ規定あり。 “first aid kit”に変更する。 It is guessed that “medication” is used for treating someone with a medicine. The term is replaced with “first aid kit”. When used in a decompression chamber or bell, the first-aid kit and any medication shall be suitable for use under hyperbaric conditions.	
(3) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the Diving Works location.	(5) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the dive location.	(5) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the dive location.

NK6/21: comment and revision on 20200621

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 10: DIVING WORKS

Japan International Cooperation Agency (JICA)

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 10: DIVING WORKS

Table of Contents

10.1 GENERAL

10.1.1 Scope

This Chapter specifies the safety requirements for Diving Operations which shall include surface-supplied air diving and SCUBA diving and which are hereinafter collectively referred to as "Diving Works".

Saturation diving and mixed-gas diving are not included.

10.1.2 Definitions

(1) The definition of terms for the purpose of this Chapter are as follows:

(a) "**Designated Person-in-Charge**" or "**DPIC**" means a senior person who, through qualification, experience and capability is deemed by the HSO to be qualified to be in charge of all aspects of the diving operation including those affecting the safety and health of members of the Dive Team;

(b) "**Dive Team**" means Divers, support assistants and dive boat crew who are involved in any Diving Operation, including the Designated Person-in-Charge;

(c) "**Diver**" means a worker working in water using underwater breathing apparatus which supplies compressed breathing gas at the ambient pressure;

(f) "**Diving Operation**" means one single diving activity for one Diver or a team of Divers commencing from the time when the first Diver enters the water and extending until the last Diver has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression.

The nature and size of any Diving Operation shall be such that it can be safely supervised by one person;

(g) **"Diving Project' =>** **"Diving Works"** means any activity, made up of one or more Diving Operations, commencing from the first Diving Operation and extending until the latest Diver in the last Diving Operation has left the water, chamber or other environment in which the dive, or any part of the dive, took place and has completed any requisite decompression procedures, including, where it may be reasonably anticipated that this will be needed, any therapeutic recompression; "Diving Project' => "Diving Works" is the term used for the overall diving job – whether it lasts two hours or two months, and it can be made up of one or more Diving Operation;

NK6/21: Chapter 1 defines the Project in Annex as follows:

(10) "Project" means the particular Works and services to be implemented by the Borrower and described in the loan agreement, utilising the funds provided by JICA under the terms mutually agreed for that purpose.

I considered the Diving Project in the original draft implies that a Project to execute diving works by the Borrower.

The Works include diving works as a part of construction works which may consist of machine excavation, dumping rocks by ships, concrete placing by machine, etc., and diving works by divers such as levelling of dumped rocks, placing of concrete blocks, welding works by hands of divers, etc.

I proposed "diving operations" instead of "project" in last draft to avoid JICA's comment which I assumed JICA will have same opinion.

Now I want to propose "Diving Project" defined in 10.1.2 (g) to change to "Diving Works" used in 10.1.1. This change will be understandable for me to avoid confusion between "the Project" and "the Diving Project". Please review the above.

(h) "**Dive Safety Plan**" means the Safety Plan prepared for Diving Works in accordance with JSSS 10.2 [*Dive Safety Plans*];

(i) "**SCUBA diving**" means a diving mode independent of surface supply in which the Diver uses open circuit self-contained underwater breathing apparatus; and

(j) "**Surface-supplied air diving**" means a diving mode in which the Diver is supplied at the dive location with a piped supply of compressed air for breathing.

10.1.3 Compliance Standards

By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall take necessary measures for Diving Works complying with the technical requirements specified in OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations for surface-supplied air diving and SCUBA diving (excluding saturation and mixed-gas diving).

10.2 DIVE SAFETY PLANS

10.2.1 General Requirements for the Dive Safety Plans

(1) The Contractor shall prepare Dive Safety Plans as part of the Safety Plan for the Works in compliance with the requirements of with JSSS 1.7 [*Contractor's Safety Plans*].

(2) The submission requirements in accordance with JSSS 1.7.3 shall be as follows:

(a) The Bid Stage Safety Plan shall include the Outline Dive Safety Plan;

(b) The Commencement Stage Safety Plan shall include the Updated Dive Safety Plan; and

(c) The Particular Safety Plans shall include the individual Particular Dive Safety Plans to be submitted for and in advance of each Diving Operation.

10.2.2 Bid Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.6 [*Bid Stage Safety Plan*], the Bid Stage Dive Safety Plan shall include an outline plan indicating the Contractor's operational procedures for each diving mode to be used in the Works (referred to in OSHA as the "safe practices manual"). This shall be in sufficient detail to give an understanding of the Contractor's intentions regarding the diving safety procedures that the Contractor intends to implement.

(2) The Bid Stage Dive Safety Plan shall contain a copy of the OSHA standard and the Contractor's policies for implementing the requirements of this standard.

10.2.3 Commencement Stage Dive Safety Plan

(1) In compliance with JSSS 1.7.7 [*Commencement Stage Safety Plan*], the Commencement Stage Dive Safety Plan shall be a development of the Bid Stage Dive Safety Plan and shall include detailed safety procedures and standard checklists to apply to all Diving Operations, equipment procedures, and emergency procedures (at a minimum covering fire, equipment malfunction or failure, adverse environmental conditions and medical illness and injury).

(2) The HSO shall review the Commencement Stage Dive Safety Plan to determine if it is correct and compliant with the requirements of OSHA and JSSS.

(3) A copy of the Commencement Stage Dive Safety Plan together with a copy of the OSHA standard and the Contractor's policies for implementing the requirements of OSHA (from the Bid Stage Dive Plan) shall be made available at the dive location to each Dive Team member and explained to the Dive Team by the HSO and DPIC.

NK6/21: JSSS specify some safety measures shall be taken in accordance with OSHA however does not always specify to attach copy of OSHA in Safety Plan. Now this Chapter specifies that Dive

Safety Plan shall include the copy of OSHA. It seems inconsistent. I understand provisions for diving is important. What is your opinion?

10.2.4 Particular Dive Safety Plans

(1) In compliance with JSSS 1.7.8 [*Particular Safety Plans*], the Particular Dive Safety Plans shall contain all further information specific to each Diving Operation not covered by the foregoing Bid Stage and Commencement Stage Dive Plans together with all supplemental information obtained during pre-dive planning and assessment, to collectively demonstrate the Contractor's compliance with the requirements OSHA and JSSS for each Diving Operation, including for example:

(a) Safety procedures and checklists for each Diving Operation;

(b) Name of each Dive Team member, buddy diver assignments, individual work assignment and responsibility and confirmation from the DPIC that they each comply with all diving health and safety requirements and are therefore approved to work on the Diving Operation;

(c) The planned dive profile for each Diver showing their maximum bottom time and ascent rate with decompression stages and times and taking account of repetitive dives;

(d) Description of all diving equipment, diving gases and consumables, PPE, procedures for their use and signed checklists to confirm compliance;

(e) Description of the workboat and workboat facilities, together with information on the location of the workboat in relation to the dive site, and procedures for the use and operation of the dive boat during Diving Operations, any surface hazards and any restriction in operation due to surface traffic conditions;

(f) Description of all other Contractor's Equipment, tools and consumables for the assigned work tasks, procedures for their use and checklists;

(g) The climatic, marine, natural and physical conditions that are likely to be encountered during any Diving Operation and the procedures for commencement, continuation or stopping of any Diving Operation following any change in these conditions in accordance with JSSS 10.3 [*Climatic, Marine, Natural and Physical Conditions*];

(h) Communication systems and procedures for communications:

(i) between Divers;

(ii) between Divers and the workboat; and

(iii) Between the work boat and the relevant marine authorities.

(i) Any further information and instructions to be given to the Divers, support assistants and other workers related with the Diving Operations and the working methods and safety measures;

(j) The Particular Dive Safety Plan shall be prepared by the DPIC or another Diver that that has the qualification, experience and capability deemed sufficient by the HSO;

(k) The Particular Dive Safety Plan shall be reviewed and approved by the HSO;

(l) The content of the Particular Dive Safety Plan shall be explained to all Dive Team members during the employee briefing by the HSO or DPIC in accordance with OSHA 29 CFR 1910.421(f));

(m) If considered necessary by either the HSO or DPIC, individual Dive Team

members shall be given additional training and testing; and

(n) A copy of the Particular Dive Safety Plan shall be made available at the dive location to each Dive Team member.

10.3 CLIMATIC, MARINE, NATURAL AND PHYSICAL CONDITIONS

10.3.1 General

(1) The Contractor shall compile relevant information from statistical records, recent and current forecasts of conditions which may be encountered in support of the Particular Dive Safety Plan and shall establish criteria and controls for commencement, continuation or stopping of any Diving Operation due to such conditions.

(2) The Commencement Stage Dive Safety Plan shall describe how such criteria shall be applied and how such controls shall be implemented.

10.3.2 Information on Conditions for Particular Dive Safety Plans

(1) Where necessary, the Contractor shall make exploratory dives to survey and establish all relevant conditions at the dive site such that all Particular Dive Safety Plans are based upon the best and most timely available information.

(2) Relevant information shall also be obtained by the Contractor from all available sources and shall include for example the following:

(a) Climatic information and forecasting at the diving location:

(i) Wind speed and direction;

(ii) Air temperature;

(iii) Surface visibility, fog, sea mist;

(iv) Likelihood and intensity of electrical storm; and

(v) Weather forecasting.

(b) Water/Marine Conditions

(i) Sea state; wave height and direction;

(ii) Height and time of tides;

(iii) Water depths;

(iv) Water Temperatures;

(v) Water currents, direction and speed;

(vi) Visibility at depths; and

(vii) Water level variation in rivers or lakes during flood periods.

(c) Physical Conditions

(i) Underwater cables and pipes;

(ii) Wreckage and other artificial obstacles;

(iii) Geotechnical conditions affecting the work; and

(iv) UXO, Dangerous Goods and Hazardous Substances.

(d) Natural Conditions

(i) Natural obstructions;

(ii) Coral reef or other marine life to be protected; and

(iii) Danger from wildlife and precautions to be taken.

(e) Surface Traffic

(i) Surface traffic details, timings and restrictions, and

(ii) Danger, precautions and control of surface traffic.

(f) Diving Works Area

(i) Demarcation of diving location; and

(ii) Limits of working area.

10.4 PERSONNEL FOR DIVING OPERATIONS

10.4.1 Qualification of Diving Personnel

Qualification of the Dive Team members shall be in accordance with the specified OSHA requirements and shall for example include the following:

(1) Each Diver shall possess a valid commercial diving certification for the appropriate training level issued by an internationally recognised Diver competence assessment organisation which shall be approved by the HSO and Engineer.

(2) Each Dive Team member shall have the experience and training necessary to perform assigned tasks in a safe and healthful manner.

(3) Each Dive Team member shall have experience and training in the following:

(a) The use of tools, equipment and systems relevant to assigned tasks;

(b) Techniques of the assigned diving mode; and

(c) Diving Operations and emergency procedures.

(4) All Dive Team members shall be trained in cardiopulmonary resuscitation and first aid to a minimum standard of that recommended by the International Federation of Red Cross and Red Crescent Societies standard course or equivalent.

(5) Dive Team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.

(6) The qualifications of all Divers shall be checked and verified in accordance with the specified OSHA requirements.

10.4.2 Designated Person-in-Charge (DPIC).

(1) The Contractor shall assign a DPIC to each Diving Operation.

(2) The DPIC shall have experience in, and knowledge of all phases of the Diving Operation for which he is responsible.

(3) The DPIC shall be immediately responsible for the health and safety of the Dive Team.

(4) The DPIC shall be stationed at the dive location, and shall not be stationed at another dive location (i.e., the DPIC must be stationed at one dive location and be responsible only for the Diving Operation at that location).

(5) The DPIC can be a Diver when qualified as a Diver, and when another Dive Team member is available at the dive location who is trained and capable of performing the necessary functions of the DPIC's duties when the DPIC is a Diver in the water.

(6) The qualifications of the DPIC shall be checked and verified in accordance with the specified OSHA requirements.

10.4.3 Duties of DPIC

The DPIC shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Manage the health and safety of the Dive Team;

(2) Manage and supervise the Diving Operation;

(3) Assign tasks to Dive Team members;

(4) Issue instructions for the Diving Operation to the Dive Team;

(5) Issue instructions to temporarily stop work when the DPIC considers that it is not safe to continue;

(6) Support the HSO with the health and safety management of the Diving Operations;

(7) Ensure that all members of the Dive Team keep records; and

(8) Collect records, check, approve and submit to HSO.

10.4.4 Diver Assignments.

(1) Each Dive Team member shall be assigned tasks commensurate to the persons experience and training, except that limited additional tasks may be assigned to a Diver undergoing training provided that these tasks are performed under the direct supervision of an experienced Dive Team member.

(2) The Contractor shall not require a Dive Team member to be exposed to hyperbaric conditions against the member's will, except when necessary to complete decompression or treatment procedures.

(3) The Contractor shall not permit a Dive Team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the ~~employer~~ Contractor and is likely to affect adversely the safety or health of a Dive Team member.

(4) No Diver shall dive in any Diving Operation unless the DPIC and the complete Dive Team are present.

10.4.5 Assistants and Duties of Dive Team

The Contractor shall appoint such Divers and support assistants within each Dive Team as are considered necessary by the DPIC for the Dive Team to discharge its duties in a safe and competent manner.

All Dive Team support assistants shall have the duties and responsibilities required by the content of this Chapter and the specified OSHA requirements, including the following:

(1) Operate the air compressors.

(2) Control the valve for the surface supply of breathing air.

(3) Communicate with the Diver so that the Diver descends and ascends properly.

(4) Communicate to supply the air to the Diver properly between the assistants in charge to control the valve and to communicate with the Diver.

(5) Inform the Diver immediately when there is any risk due to a failure of air supply, weather change, sea condition changes, operations of other vessels and potential hazards.

(6) Inspect the connection between the helmet and the breastplate of the Diver before the start of Diving Operations when using a diving helmet.

(7) Coordinate the position of the workboat and avoid any conflict with the Diver.

(8) Ensure the safety of the Diver by maintaining communication with voice or video communication device.

(9) Ensure the safety of the Diver by observing the air bubble of breathing of the Diver.

10.4.6 Health Checks

(1) In addition to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*] and in compliance with the OSHA requirement for the Contractor to make himself fully aware, the Contractor shall carry out particular health checks on all Divers to ascertain that they are medically and physically fit to perform their duties.

(2) Such checks shall include for example checks for the existence of any illness or any deficiency in:

(a) The respiratory system, cardiovascular system, nervous system, musculoskeletal system, ear, nose and throat, and endocrine system;

(b) Vision;

(c) Dental health; and

(d) Any other health conditions and disease which may affect the Diving Operation.

(3) Any Diver that does not pass the above checks shall not be allowed to dive until the condition has improved and after further checks are successful.

(4) Additionally, and in accordance with the OSHA standard:

(a) The DPIC shall inquire into each Diver's health prior to each Diving Operation; and

(b) The Contractor shall advise all Divers of the procedures for reporting physical problems or adverse physiological effects during and after diving.

(5) Consistent with the above and the OSHA provisions, the Contractor shall not require any Diver to dive or otherwise work under hyperbaric conditions when the Diver:

(a) Has any ailment that is likely to adversely affect the safety or health of any member of the Dive Team;

(b) Lacks the necessary training or education; or

(c) Refuses to work under such hyperbaric conditions.

(6) Should a Diver request termination during a dive, it may be necessary to prolong the Diver's exposure to hyperbaric conditions to complete decompression or medical recompression treatment to avoid serious physical harm or death to the Diver.

10.5 DIVING EQUIPMENT, TOOLS, FACILITIES AND WORKBOATS,

10.5.1 Diving Equipment

(1) The Contractor shall provide workboats, diving equipment, work tools and other facilities fully in compliance with OSHA 29 CFR Part 1910, Subpart T – Commercial Diving Operations, §1910.430 Equipment.

(2) Workboats, diving equipment, work tools and other facilities are defined as Contractor's Equipment and shall therefore comply with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

10.5.2 Diving Workboats

(1) Workboats shall be:

(a) Robust and seaworthy;

(b) Stable in operation;

(c) Suitable size, draft and shape to suit the Diving Operations;

(d) Equipped with marine band radio and with a shore station that is attended at all time that the Workboat is in operation and can provide emergency support if

required;

(e) Equipped with marine lighting;

(f) Equipped with life jackets, first aid sets, distress flares and other necessary emergency equipment;

(g) Provided with secure and robust ladders or platforms for Divers to easily enter or exit the water; and

(h) Provided with a roof and cabin to protect the crew and Dive Team from heat, cold and rain.

(2) Workboats shall be provided with the means to assist an injured Diver from the water (such as an in-water platform, small boat or basket stretcher) or into a diving bell. The Contractor shall ensure that there are sufficient Dive Team members or additional Contractor's Personnel to assist.

(3) Unless otherwise specified the Contractor shall provide a separate small boat for rescue at the workboat, suitable for assisting and recovering Divers who are in difficulty or have drifted away from position.

10.5.3 Inspections and Maintenance

The Contractor shall comply with all requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] and ensure that workboats, equipment, tools and facilities are inspected, fully maintained and operational when mobilised to the Site and thereafter are inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

The Contractor shall keep the inspection and working records and make them available for the inspection of the Engineer upon request.

The Contractor shall prohibit use of workboats, equipment, tools and facilities until the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*] are fully complied with.

10.6 PARTICULAR SAFETY MEASURES

10.6.1 Measures before Diving Operations

The Contractor shall take the following measures before commencement of any Diving Operation:

(1) Dive Teams

(a) Discuss the diving methods and safety procedures,

(b) Discuss the work methods and procedures and the assignment and placing of the Divers and work task sharing;

(c) Advise of the diving timetable and required compliance;

(d) Inform of the climatic, marine, natural and physical conditions;

(e) Conduct the health check; and

(f) Check that support assistants and crew on the workboat are wearing life jackets.

(2) Equipment, work tools and other facilities

Inspect the equipment, work tools and other facilities, prohibit use when any defect or non-compliance is found, reinspect when a repair or replacement is completed.

(3) Diving workboats

(a) Inspect workboats and rescue boats;

(b) Display the international maritime diving signal flag and display signs and lights as necessary on the workboat;

(c) Securely anchor the workboat to the seabed; and

(d) Stop the engine during Diving Operation.

(4) Diving Operation site

(a) Provide signs including red flags, buoys and notices to demarcate the Diving Operation site; and

(b) Install a downline with depth indication marks at 3m intervals from the workboat to the sea bed at the Diving Operation site to act as a guideline for descending or ascending and as a guide for transfer of tools and equipment.

(5) Diving Equipment

(a) Check the diving equipment to be carried by the Divers;

(i) For surface-supplied air diving, check for example: air connections, compressed air supply, weight belt, voice or video, communication device, torch, watch, water depth gauge, knife and the like.

(ii) For SCUBA diving, check for example: first stage, second stage and spare regulators, available air volume, secondary air supply, buoyancy control device, weight belt, tank straps, air valve, communication device, watch, water depth gauge, knife and the like.

(b) Check that the downline is secure and tight;

(c) Ensure as a minimum, that a two-way voice or video communication link is set up and working between at least between a single selected working Diver and the DPIC at the surface control point; and

If any defect is identified by the above checks, prohibit the Diving Operation from commencing.

10.6.2 Measures during Diving Operations

The Contractor shall take the following safety measures during each Diving Operation:

(1) A designated member (or members) of the workboat crew shall assist the DPIC by observing the Diving Operation during SCUBA diving and inform the DPIC when divers are carried away by currents and their location when they surface after their dive ascent.

(2) A designated member (or members) of the workboat crew on the workboat shall also keep a look-out for any other vessels that may approach the Diving Operation site.

The designated member(s) shall alert any other vessels related or not related with the Diving Operations with requisite warning blasts from the workboat's siren, loudhailer, flares and/or flags, etc. in order to prevent them from approaching and entering the Diving Operation site.

(3) Measures for the Divers

(a) Prohibit the Dive Team from commencing any Diving Operation without the DPIC and the complete Dive Team present, ready and equipped;

(b) Ensure that the Divers use the ladders for entering and exiting the water for the Diving Operation;

(c) Ensure that Divers use the downline for descending and ascending;

(d) Maintain constant voice or video communication through the provided link; and

(e) Ensure that the Divers constantly communicate with each other by hand signals and slate messaging.

(4) Ensure the DPIC or a Dive Team member at the surface, constantly observe the weather and marine conditions and there is any change that meets the work stop criteria, or if the conditions are considered to be otherwise unsafe by the DPIC, immediately stop the Diving Operation and ensure that the Divers are removed from the water in a safe and controlled manner.

(5) Safety and Health Management of Diving Operations

(a) Manage the Diving Works for each Diver so the Diver takes sufficient and safe surface time between dives so that there is no risk to his health and wellbeing;

(b) Ensure that sufficient numbers of Divers and standby Divers are available to ensure that Divers are not in the water for excessive periods;

(c) Ensure that each Diver keeps an accurate record of his dive profile for every dive, showing overall time, bottom time and depth, decompression times and depths and that these are summarised by the Diver with a record of the number of dives on a daily, weekly and monthly basis;

(d) Ensure that the DPIC reviews and approves such records and that same are submitted by the DPIC to the HSO for the HSO's review and countersignature and made available for the Engineer's inspection; and

(e) Unless otherwise required by the Law, the Contractor shall retain all dive records for the periods specified in the OSHA 29 Subpart T 1910.440

10.7 DIVING ACCIDENT RESPONSE PLAN

10.7.1 General

The Contractor shall prepare an Accident Response Plan for the Diving Works in accordance with JSSS 1.24 [*Accident Response Plan*].

10.7.2 Provisions by the Contractor

The Contractor shall comply with following requirements prior to Diving Works.

(1) In accordance with the requirements of OSHA 1910.423(c) [*Recompression facility*], the Contractor shall make a decompression chamber available at the dive location to treat decompression sickness.

NK6/21: agreed to the above change. Can you reply to the following comments:
1) The original draft stipulate "unless otherwise stipulated, …" and User Guide mention the Employer's requirements. Is it necessary to mention "unless …" in the Clause about decompression chamber?
2) Shall the bidder provide cost for the decompression chamber when the bidder judges there is risk of decompression sickness? If the Bidder does not judge there is risk, is the Bidder not necessary to provide the cost? There is difference between bidding price depending Bidders' risk analysis whether there is risk of decompression sickness. How do you think this?

(2) The decompression chamber shall comply with the requirements of OSHA 1910.423(c) [*Recompression facility*].

(3) The Contractor shall also provide such medical support facilities as are necessary to ensure the health and safety of any members of the Dive Team that may require treatment for decompression sickness.

(4) In accordance with OSHA requirements the Contractor shall provide an emergency aid contact list, rescue and safety equipment (including decompression facilities), a first-aid kit and supplies. The rescue and safety equipment and first-aid kit and supplies provided at the dive location shall be appropriate for the diving works and approved by a physician. When used in a decompression chamber or bell, the first-aid kit and any medication shall

be suitable for use under hyperbaric conditions.

(5) The HSO and DPIC shall determine whether the emergency aid list is complete and is available to all Dive Team members and also determine whether the rescue and safety equipment (including decompression facilities) and first-aid kit are complete and available at the dive location.
