検討経緯書

4 Contractor's Equipment

JICA Standard Safety Specification Preparation Study
4 Contractor's Equipment (English Draft R1)

2019.11.28 Japanese Prov. Final
2019.12.5 NKDraft R0
2019.12.9 NKDraft R1

JSSS in Japanese （Provisional Final Draft R1 11/5）	JSSS in English R0（12/05）	JSSS in English R1（12/9）
4 請負者の機器 4.1 請負者の機器の一般的留意事項 4.1.1 一般事項 4.1.2 各作業の作業員への周知 4.1.3 機器の運転者、操作者、作業者 4.1.4 安全教育と指導 4.1.5 機器の作業環境 4.1.6 機器の点検・整備 4.1.7 機器の点検・整備作業時の安全措置 4.2 建設機械 4.2.1 建設機械の点検・整備 4.2.2 建設機械の作業環境 4.2.3 建設機械の運用時の安全措置 4.2.4 建設機械の用途外使用の制限 4.2.5 点検・整備作業時の安全措置 4.2.6 作業装置の装着等の作業時の安全措置 4.2.7 建設機械の搬送時の安全措置 4.2.8 リース建設機械の使用 4.3 建設設備 4.3.1 建設設備の点検・整備 4.3.2 建設設備の作業環境 4.3.3 建設設備の設置、組立、解体時の安全措置 4.3.4 建設設備の作業時の安全措置 4.3.5 点検・整備作業時の安全措置 4.4 定置機械 4.4.1 定置機械の点検・整備 4.4.2 大型の定置機械の設置、組立、解体時の安全措置 4.4.3 小型の定置機械の作業環境 4.4.4 定置機械の作業時の安全措置 4.5 電気機械器具 4.5.1 電気機械器具の点検・整備 4.5.2 電動機械器具の作業時の安全措置		**4 Contractor's Equipment** 4.1 General Requirements for Contractor's Equipment 4.1.1 General 4.1.2 Instruction for Contractor's Personnel 4.1.3 Operators and Drivers 4.1.4 Safety Instructions and Training 4.1.5 Work Environment 4.1.6 Inspection and Maintenance 4.1.7 Safety Measures at Inspection and Maintenance 4.2 Construction Equipment 4.2.1 Inspection and Maintenances of Construction Equipment 4.2.2 Work Environment for Construction Equipment 4.2.3 Safety Measures in Operation 4.2.4 Restriction to Operate Construction Equipment for Other Use 4.2.5 Safety Measures at Inspection and Maintenance 4.2.6 Safety Measures at Attaching and Removal of Work Devices 4.2.7 Safety Measures for Transportation of Construction Equipment 4.2.8 Use of Leased Construction Equipment 4.3 Construction Facilities 4.3.1 Inspection and Maintenance of Construction Facilities 4.3.2 Work Environment with Construction Facilities 4.3.3 Safety Measures for Installation, Assembly and Dismantling of Construction Facilities 4.3.4 Safety Measures for the Work with Construction Facilities 4.3.5 Safety Measures at Inspection and Maintenance 4.4 Stationary Equipment 4.4.1 Inspection and Maintenance of Stationary Equipment 4.4.2 Safety Measures for Installation, Assembly and Dismantling of Large Stationary Equipment 4.4.3 Work Environment for Small Stationary Equipment 4.4.4 Safety Measures for the Work with Stationary Equipment 4.5 Electric Power Equipment 4.5.1 Inspection and Maintenance of Electric Power Equipment 4.5.2 Safety Measures forWorks with Electric Power Equipment
4 請負者の機器 **4.1 請負者の機器の一般的留意事項** **4.1.1 一般事項** 本章では、請負者の機器のうち、以下の建設機械、建設設備、定置機械、電動機械器具、器具工具(以下、「機器」という。)を扱う。運搬機械、揚貨機械については、それぞれ本仕様書 5[運搬作業]、6[揚貨・玉掛け作業]で扱う。 (1) 用語の定義 本仕様書で使用する用語の定義は以下のとおりである。 (a) 建設機械とは、次の自走型建設機械をいう。 (i) ブルドーザー、トラクターショベル等の整地・運搬・積込み用機械 (ii) パワーショベル、クラムシェル等の掘削用機械 (iii) 杭打ち機、アースドリル等の基礎工事用機械 (iv) ローラー等の締め固め用機械 (v) コンクリートポンプ車等のコンクリート打設用機械 (vi) ブレーカー、コンクリート圧砕機、解体用つかみ機等の解体用機	**4 Contractor's Equipment** **4.1 General Requirements for Contractor's Equipment** **4.1.1 General** This Chapter specify the safety requirements for the following construction equipment, construction facilities, fixed equipment, electric power equipment, tools among the Contractor's Equipment. The transportation equipment and hoisting equipment are specified in JSSS 5[Transportation Works] and 6[Lifting and Sling Works]. (1) Definitions of Terms Definition of terms used in JSSS are as follows: (a) Construction heavy equipment means the following mobile equipment for construction: (i) Leveling, transporting and loading machines such as bulldozers and tractor excavators. (ii) Excavating machine such as power shovels and clamshells. (iii) Foundation construction machines such as pile drivers and earth drills.	**4 Contractor's Equipment** **4.1 General Requirements for Contractor's Equipment** **4.1.1 General** This Chapter specify the safety requirements for the following construction equipment, construction facilities, stationary equipment, electric power equipment, tools among the Contractor's Equipment. The transportation equipment and hoisting equipment are specified in JSSS 5[Transportation Works] and 6 [Lifting and Sling Works]. (1) Definitions of Terms Definition of terms used in JSSS are as follows: (a) Construction equipment means the following mobile equipment for construction: (i) Machine for leveling, loading, transporting such as bulldozers and tractor excavators; (ii) Excavating machine such as power shovels and clamshells; (iii) Foundation construction machine such as pilling machine, drilling rig machine and earth drill machine;

械 (b) 建設設備とは、次の建設用の設備をいう。 (i) コンクリート用の骨材を製造する砕石設備（crusher） (ii) コンクリート、アスファルトコンクリートを製造するコンクリート混合設備、アスファルトコンクリート混合設備(Concrete/asphalt concrete batching plant) (c) 定置機械とは、次に示す定置の機械をいう。 (i) 人又は資機材の運搬等を目的とした工事用エレベーター、建設用リフト等の大型の定置式の機械 (ii) 資材の切断・加工、コンクリート材料の混合、作業環境の維持等を目的とした鉄筋切断機、鉄筋加工機、木材加工機、グラインダー、ポータブルコンクリートミキサー、送風機等の小型の定置式の機械 (d) 電動機械器具とは、次の電動機を有する可搬式の機械又は器具をいう。 (i) ポンプ、小型のコンベヤ等の電動機械 (ii) ディスクグラインダー、ドリル、丸のこ、かんな等の電動器具 (e) 器具(equipment)及び工具(tool)とは、次のものをいう。 (i) ジャッキ、ウィンチ、レバーホイスト等の器具 (ii) 空気式ジャックハンマー、油圧式パイプ曲げ機、原動機付きチェーンソー等の動力工具 (iii) レンチ、ドリフトピン、のみ、手鋸、金槌等の手工具 請負者は、上記の(c)、(d)及び(e)の定置機械、器具及び工具について本節に規定のない事項は、OHSA Part 1926 Subpart N−Helicopters, Hoists, Elevators, and Conveyors、又は Subpart I−Tools−and and Power の規定に従わなければならない。	(iv) Roller and other compacting machines. (v) Concrete placement machines such as concrete pump trucks. (vi) Demolition machines such as breakers, concrete crushers, demolition grippers. (b) Construction facilities means the following facilities for construction. (i) Crushers manufacturing the aggregate for concrete (ii) Concrete/asphalt concrete batching plant (c) Stationary equipment means the following equipment. (i) Large stationary equipment such as elevators and lifts for transporting workers or equipment (ii) Small stationary equipment such as rebar cutting machines, rebar processing machines, wood processing machines, grinders, portable concrete mixers, blowers for cutting and processing materials, mixing concrete materials, and maintaining the work environment (d) Electric construction equipment means the following mobile equipment or tools with the electric motors. (i) Electric equipment such as pumps and small conveyors (ii) Electric tools such as disc grinders, drills, circular saws and planers (e) Equipment and tools mean the following items. (i) Equipment such as jacks, winches, lever hoists. (ii) Power tools such as pneumatic jack hammer, hydraulic pipe bending machine, prime mover chain saw (iii) Hand tools such as wrench, drift pin, chisel, hand saw, hammer. The Contractor shall comply with “OHSA Part1926 Subpart N-Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power” for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).	(iv) Compaction machine such as smooth wheeled roller, pneumatic roller and vibration roller; (v) Concrete machine such as concrete mixer truck, concrete agitator truck, concrete pump truck; and (vi) Demolition machine such as breakers, concrete crushers and demolition grippers. (b) Construction facilities mean the following facilities for construction: (i) Aggregate production facilities for concrete, asphalt concrete and others such consisting of crushers, sand mill screen, etc., and (ii) Concrete/asphalt concrete batching plant. (c) Stationary equipment means the following equipment: (i) Large stationary equipment such as elevators and lifts for transporting workers or Goods; and (ii) Small stationary equipment such as rebar cutting machines, rebar bending machines, wood processing machines, grinders, portable concrete mixers, air blowers for cutting and processing materials, mixing concrete materials, and maintaining the work environment, respectively. (d) Electric power equipment means the following mobile equipment or tools with the electric motors: (i) Electric equipment such as pumps and small conveyors (ii) Electric tools such as disc grinders, drills, circular saws and planers (e) Equipment and tools mean the following items: (i) Equipment such as jacks, winches, lever hoists. (ii) Power tools such as pneumatic jack hammer, hydraulic pipe bending machine, prime mover chain saw (iii) Hand tools such as wrench, drift pin, chisel, hand saw, hammer. The Contractor shall comply with “OHSA Part1926 Subpart N-Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power” for the equipment, tools and stationary equipment listed in the above (c), (d) and (e) regarding other measures than specified in this Chapter.
4.1.2 各作業の作業員への周知 請負者は、機器を用いて作業を行うときは、作業に必要な下記の安全上の措置について、本仕様書 1.3[安全衛生にかかわる計画書]に規定の事項に加え、必要に応じ作業員に説明しなければならない。 (1) 建設機械の作業 (a) 作業内容、作業方法、作業範囲 (b) 種類、能力及び台数 (c) 作業場所及び運行経路	**4.1.2 Instruction for Contractor’s Personnel** The Contractor shall instruct the following safety measures in addition to the items specified in JSSS 1.6 [Contractor’s Safety Plan] for Contractor’s Personnel as necessary in using the contractor’s equipment. (1) Works by construction equipment (a) Work descriptions, work method, working area (b) Type, capacity and number of equipment (c) Work place and operational route (d) Location where there is a risk of falling or rotating of	**4.1.2 Instruction for Contractor’s Personnel** The Contractor shall explain the following safety measures in addition to the items specified in JSSS 1.6 [Contractor’s Safety Plan] to the Contractor’s Personnel who works using the Contractor’s Equipment as necessary. (1) Works with construction equipment: (a) Work descriptions, work method, working area; (b) Type, capacity and number of construction equipment; (c) Work place and operational route of construction equipment;

(d) 建設機械の転倒又は転落の危険のある場所

(e) 高圧線、危険物貯蔵庫などの危険箇所と機械の移動・稼働制限範囲

(f) 立入禁止箇所の特定と注意標識、柵の設置場所

(g) 誘導者、監視員の配置場所

(h) 建設機械の運転者、操作者

(i) 建設機械に異常が発生したときの対処方法

(j) サイト隣地や公道における近隣住民・第三者への建設機械による危険性

(k) 振動、騒音、粉じん等の環境影響軽減措置

(2) 建設設備の作業

上記(1)のうち建設設備の作業に該当する項目に追加して、次の措置を当該作業の作業員に説明すること。

(a) 建設設備の種類、能力、使用上の制限事項

(b) 建設設備の操作又は建設設備を使用する作業に伴う危険

(c) 建設設備の操作者

(d) 建設設備に異常が発生したときの対処方法

(3) 定置機械の作業

上記(1)のうち定置機械の作業に該当する項目に追加して、次の措置を当該作業の作業員に説明すること。

(a) 定置機械の種類、能力、積載荷重、使用上の制限事項

(b) 定置機械の操作又は定置機械を使用する作業に伴う危険

(c) 定置機械の操作者

(d) 定置機械に異常が発生したときの対処方法

(4) 電気機械器具の作業

上記(1)のうち電気機械器具の作業に該当する項目に追加して、電気機械器具を使用した作業による作業員の感電を防止するため、次の措置を当該作業の作業員に説明すること。

(a) 電気機械器具の種類、性能、用途

(b) 電気機械器具による感電の危険性

(c) 電気機械器具の作業者

(d) 電気機械器具に異常が発生したときの対処方法

construction equipment

(e) Hazardous locations and the restricted areas of movement and operation such as high-voltage lines and dangerous goods storage

(f) Identification of restricted areas, caution signs, and fence

(g) Placement of flagmen and spotters

(h) Drivers and operators of each construction equipment

(i) Process of emergency case in construction equipment

(j) Danger to neighboring residents and third parties on adjacent sites and public roads by construction equipment.

(k) Environmental impact mitigation measures such as vibration, noise, and dust

(2) Works by construction facilities

The Contractor shall instruct the following measures for Contractor's personnel addition to the items applicable to the works by construction facilities in (1).

(a) Type, capacity and restrictions of construction facilities

(b) Risks for the operations by construction facilities

(c) Operators of construction facilities

(d) Process of abnormalities in construction facilities

(3) Works by stationary equipment

The Contractor shall instruct the following measures for Contractor's personnel addition to the items applicable to the works by stationary equipment in (1).

(a) Type, capacity and restrictions of stationary equipment

(b) Risks for the operations by stationary equipment

(c) Operators of stationary equipment

(d) Process of abnormalities in stationary equipment

(4) Works by electric construction equipment

The Contractor shall instruct the following measures for Contractor's personnel addition to the items applicable to the works by electric construction equipment in (1).

(a) Type, capacity and restrictions of electric construction equipment

(b) Risks for the operations by electric construction equipment

(c) Operators of electric construction equipment

(d) Process of abnormalities in electric construction equipment

(d) Location where there is a risk of fall or overturn of construction equipment;

(e) Hazardous locations and restricted areas of movement and operation for construction equipment such as high-voltage lines and dangerous goods storage;

(f) Identification of restricted areas, locations of caution signs and fences;

(g) Placement of Flagmen and Spotters;

(h) Names of drivers and operators of each construction equipment;

(i) Measures at the time of occurrence of abnormalities in construction equipment;

(j) Danger to neighboring residents and third parties on adjacent place of the Site and public roads by construction equipment; and

(k) Environmental impact mitigation measures against vibration, noise, dust, etc.

(2) Works with construction facilities:

The Contractor shall explain the following measures the Contractor's personnel in addition to the items in the above (1) applicable to the works with construction facilities.

(a) Type, capacity and restrictions of construction facilities;

(b) Risks in the operation with construction facilities;

(c) Names of operators of construction facilities; and

(d) Measures at the time of occurrence of abnormalities in construction facilities.

(3) Works by stationary equipment:

The Contractor shall explain the following measures the Contractor's personnel in addition to the items in the above (1) applicable to the works with stationary equipment.

(a) Type, capacity and restrictions of stationary equipment;

(b) Risks in the operation with stationary equipment;

(c) Names of operators of stationary equipment;

(d) Measures at the time of occurrence of abnormalities in stationary equipment; and

(4) Works by electric power equipment:

The Contractor shall explain the following measures the Contractor's personnel in addition to the items in the above (1) applicable to the works with electric power equipment.

(a) Type, capacity and restrictions of electric power equipment;

(b) Risks for the operations by electric power equipment;

(c) Names of workers of electric power equipment; and

(d) Measures at the time of occurrence of abnormalities in electric power equipment.

4.1.3 機器の運転者、操作者、作業者 請負者は、機器の運転者、操作者、作業者の配置に関して、次の措置を講じなければならない。 (1) 本仕様書 1.16[請負者の要員の適正配置]に従い、必要な資格・技能等を有する運転者、操作者又は作業者に、機器の運転、操作又は作業を行わせること。 (2) 運転者、操作者又は作業者の氏名を、当該建設機械、建設設備、定置機械に明示するとともに、当該運転者、操作者又は作業者以外の者に、運転、操作又は作業を禁止する旨を表示しなければならない。 (3) 本仕様書 1.16[要員の適正配置上の留意点]に従い、作業前の健康状態を確認し、当該機器の運転、操作又は作業に不適当な状態であると判断された運転者、操作者又は作業者を、当該作業に従事させてはならない。	**4.1.3 Operators and Drivers** The Contractor shall take the following measures for the arrangement of operators, drivers and workers. (1) The Contractor shall ensure that operators and drivers with necessary skills and qualifications handle construction equipment, complying with JSSS 1.16[Proper Placement of Contractor's Personnel]. (2) The Contractor shall place signs that show the name of operators and drivers with the prohibition of the operation by other operators and drivers on each contractor's equipment. (3) The Contractor shall implement the health check before the work and prohibit operators and drivers under the condition of unsuitable from operating contractor's equipment, complying with JSSS 1.16[Proper Placement of Contractor's Personnel].	**4.1.3 Operators and Drivers** The Contractor shall take the following measures for the placement of operators, drivers and workers: (1) The Contractor shall place operators and drivers with necessary skills and qualifications to operate construction equipment, complying with JSSS 1.16 [Proper Placement of Contractor's Personnel]. (2) The Contractor shall place signs that show the name of operators and drivers, and the prohibition of the operation by others than assigned operators and drivers of Contractor's Equipment. (3) The Contractor shall implement the health check before the work and prohibit operators and drivers under the condition of unsuitable from operating Contractor's Equipment, complying with JSSS 1.16[Proper Placement of Contractor's Personnel].
4.1.4 安全教育と指導 請負者は、機器の運転者、操作者又は作業者が当該作業に従事するまでに、本仕様書 1.36[教育訓練の実施]に規定する教育訓練に加えて、各機器の特性に応じて以下の項目について教育訓練を実施しなければならない。 (1) 当該機器の危険性、操作方法 (2) 安全・警報装置の機能・性能、操作方法、点検項目・点検方法 (3) 作業手順、運転開始の合図・連絡、日常点検 (4) 掃除・点検等の場合の運転停止、通電停止、起動装置施錠等の手順及び必要な措置 (5) 異常が発生したときの運転・操作・作業の停止と当該作業の担当者への報告 (6) 安全装置の取り外しの禁止	**4.1.4 Safety Instructions** The Contractor shall conduct the following trainings addition to trainings specified with JSSS 1.18[Skill Training] before operators and drivers operate. (1) Risks and operation method (2) Functions, performance operation methods, inspection items / methods of emergency alarm devices (3) Work procedure, signal / contact for starting the operation, daily inspection (4) Lockout and Tagout Procedures for shutting down operation, turning off the power, locking the starter and necessary measures for cleaning and inspection (5) Stop of the operation / work when an abnormality occurs and report to the person in charge (6) Prohibition from removing safety devices	**4.1.4 Safety Instructions and Training** The Contractor shall conduct the following trainings in addition to trainings specified in JSSS 1.18 [Skill Training] before operators and drivers engage in the work to operate the Contractor's equipment: (1) Risks and operation method; (2) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device; (3) Work procedure, signal and communication method at starting time of the operation, and daily inspection; (4) Lockout and Tagout Procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment; (5) Stop of the operation and work with the Contractor's equipment when an abnormality occurs and report to the person in charge; and (6) Prohibition from removing safety devices.
4.1.5 機器の作業環境 請負者は、機器の作業環境の確保のために、機器の特性に応じ必要な次の作業環境に関する措置を講じなければならない。 (1) 機器の作業による危険防止のため、作業箇所には十分な照度を確保すること。 (2) 機器への巻き込まれにより作業員に危険を及ぼすおそれのある機器を使用するときは、作業員の服装・頭髪等に関し、巻き込まれ防止の適切な措置を講ずること。 (3) 機器による粉じん、騒音、高温低温等から作業員を保護する措置を、本仕様書 2.1[適切な作業環境の整備]に従い講じること。措置を講じることが困難であるときは、作業員に保護具を着用させること。 (4) 運転に伴う加熱、発熱、漏電等による火災のおそれがある機器について	**4.1.5 Work Environment** The Contractor shall take the following measures for the work environment. (1) Ensure enough illuminance at the work site for the prevention of darkness of the danger during the operation (2) Take the appropriate measure to prevent the accidents regarding worker's clothes, hair, etc. in using the contractor's equipment which has a risk to workers due to being caught in a rotating part of the equipment. (3) Take measures to protect Contractor's Personnel from dust, noise, high temperature and low temperature by contractor's equipment in accordance with JSSS 2.1[WORK ENVIRONMENT]. If it is difficult to take measures, let Contractor's Personnel wear the personal protected equipment (4) Be equipped with fire extinguisher, etc. in accordance with JSSS	**4.1.5 Work Environment** The Contractor shall take the following measures for the work environment: (1) Ensure enough illuminance at the work site for the prevention of danger during the operation; (2) Take appropriate measure to prevent accidents related with worker's clothes, hair, etc. in the work using the Contractor's Equipment which has a risk to workers due to being caught in rotating part of the Contractor's Equipment; (3) Take measures to protect Contractor's Personnel from dust, noise, high temperature and low temperature by Contractor's Equipment in accordance with JSSS 2.1 [WORK ENVIRONMENT]. If it is difficult to take measures, make the Contractor's Personnel wear PPE; (4) Equip with fire extinguisher, etc. in accordance with JSSS 2.8 [FIRE

は、本仕様書 2.8[火災予防]に従い、消火器等を配備したうえで作業すること。 (5) 緊急事態発生時における連絡方法と応急処置の方法を、本仕様書 1.10[緊急事態対応計画及び緊急通報体制]及び 1.11[救急救護計画]に従い、運転者、操作者又は作業員が分かりやすい所に表示すること。 (6) 作業中に機器に異常が発見された場合には、運転者、操作者又は作業員に直ちに作業を中止させること。 (7) 当該機器の異常の原因の特定と修理を行うこと。	2.8[FIRE PREVENTION] for contractor's equipment that may cause a fire due to heating, heat generation, electric leakage, etc. during the operation (5) Indicate the method of communication and first aid in an emergency in an easy-to-understand location for operators and drivers in accordance with JSSS 1.21[Accident Response Plan] and 1.24[Emergency Response Plan]. (6) When a failure is found in contractor's equipment during the operation, to stop operator's and driver's operation immediately (7) Identify the failure and repair the contractor's equipment	PREVENTION] to the Contractor's Equipment in which has risk of fire due to its heating, heat generation, electric leakage, etc. during the operation; (5) Indicate the method of communication and first aid in an emergency on easy-to-see locations for operators and drivers in accordance with JSSS 1.21[Accident Response Plan] and 1.24 [Emergency Response Plan]; (6) When abnormalities are found in the Contractor's Equipment during the operation, stop operation immediately; and (7) Identify the cause of abnormalities and repair the Contractor's Equipment.
4.1.6 機器の点検・整備 請負者は、機器の点検、整備に関して次の事項を遵守し、使用する機器を良好な状態に維持しなければならない。 (1) 機器の保守管理のために、当該国の法律及び当該機器の製造者のマニュアルの規定に従い、本仕様書 4.2.1[建設機械の点検・整備]、4.3.1[建設設備の点検・整備]、4.4.1[定置機械の点検・整備]、4.5.1[電気機械器具の点検・整備]に規定する点検項目のうち、当該機器に該当する点検項目を網羅する日常点検表、定期点検表を準備し、次に規定する点検、検査を実施し、これを記録すること。 (2) 必要に応じて次に示す点検・検査を実施すること。(a) (d)及び(e)については機器の整備に必要な能力と経験を持った者に、(b)については建設設備、定置機械の専門家に、(c)については機器の運転者、操作者又は作業者に行わせること。 (a) 建設機械の搬入時の点検 (b) 建設設備、定置機械の設置時の試験 (c) 日常点検 (d) 定期点検 (e) 悪天候及び地震の点検 (3) 整備が完了するまで、機器を使用しないこと。 (4) 建設機械の搬入時の点検、建設設備、定置機械の設置時の試験結果は、エンジニアに提出すること。 (5) 日常点検及び定期点検は、点検結果を工事終了まで保管すること。また、点検結果は、月次の進捗報告書に含めること。 (6) 日常点検では次の措置を講じること。 (a) 作業開始前に日常点検を行うこと。 (b) 請負者が準備した点検表に基づき点検を行うこと。 (c) 点検の結果又は随時必要が認められた場合は整備を実施すること。 (d) 作業開始前の動作点検は、周辺に人がいないこと、障害物がないことを確認してから行うこと。	**4.1.6 Inspections and Maintenances** The Contractor shall keep contractor's equipment in good condition complying with the following items. (1) Make daily checklist and periodic checklist that cover check items applicable to the equipment specified in JSSS 4.2.1 [Inspections and Maintenances of Construction Equipment] and 4.3.1 [Inspections and Maintenances of Construction Facilities] and 4.4.1 [Inspections and Maintenances of Stationary Equipment] and 4.5.1 [Inspections and Maintenances of Electric Construction Equipment] and implement and record inspection and maintenance works. (2) Implement the following inspections and maintenances if necessary. For (a), (d) and (e), those who have the necessary skills and experience for equipment maintenance, for (b), construction and stationary equipment specialists, and for (c), equipment operator implement the inspections and maintenances. (a) Inspections in installation of construction equipment (b) Testing in installation of construction facilities and stationary equipment (c) Daily inspections and check (d) Periodical inspections (e) Inspection in bad weather and earthquake (3) Not use the equipment unless the maintenance will be finished. (4) Report the inspection status to the Engineer in installation of construction equipment, construction facilities and stationary equipment. (5) Keep the inspection record of daily and periodic inspections until the end of construction work. Include the inspection record in the monthly progress report. (6) Take the following measures in daily inspections (a) Implement the daily inspections before the operation (b) Use the checklist prepared by the Contractor (c) Implement the maintenance if necessary or due to the result of inspections. (d) Ensure that there are no obstacles and workers around in the operation check before the start of operations.	**4.1.6 Inspection and Maintenance** The Contractor shall maintain the Contractor's Equipment in good condition in accordance with the following measures: (1) Make daily and periodic checklists that cover the check items applicable to the Contractor's Equipment specified in JSSS 4.2.1 [Inspection and Maintenance of Construction Equipment] and 4.3.1 [Inspection and Maintenance of Construction Facilities] and 4.4.1 [Inspection and Maintenance of Stationary Equipment] and 4.5.1 [Inspection and Maintenance of Electric Power Equipment], implement and record the inspection and maintenance of the Contractor's Equipment. (2) Implement the following inspection and maintenance. These shall be made by persons who have the necessary skills and experience of equipment maintenance for (a), (d) and (e) below, specialists of construction and stationary equipment for (b), or equipment drivers/operators for (c): (a) Inspection of the construction equipment at the time when they are newly brought in at the site; (b) Testing of construction facilities and stationary equipment at the time when they are newly installed/fabricated at the site; (c) Daily inspection; (d) Periodic inspection; and (e) Inspection before commencement of operation of the Contractor's Equipment after adverse weather and earthquake according to the characteristics of the Contractor's Equipment. (3) Prohibit to use the Contractor's Equipment unless the maintenance is finished. (4) Report the inspection or test results of the Contractor's Equipment mentioned above (a) and (b) to the Engineer. (5) Keep the inspection record of daily and periodic inspection until the end of construction work and include the inspection records in the monthly progress report. (6) Take the following measures in daily inspection: (a) Implement the daily inspection before the operation; (b) Use the checklist prepared by the Contractor; (c) Implement the maintenance if necessary or due to the result of

(7) 定期点検では次の措置を講じること。 (a) 請負者が準備した点検表に基づき定期に点検を行うこと。 (b) 点検の結果、不具合、部品の損傷又は消耗箇所が認められた場合には、修理、交換を行い整備すること。 (8) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候及び地震後には、建設設備、定置機械及び悪天候及び地震時により影響を受ける機械は、日常点検に準じた点検及び製造者のマニュアルに規定の点検を行うこと。	(7) Take the following measures in periodic inspections (a) Use the checklist prepared by the Contractor (b) Repair and exchange the defective parts if the result of inspection shows that there is a defect, damage to a part, or wear. (8) Implement the inspection according to the daily inspection and check as specified in the manufacture's manual after the bad weather and earthquake complying with JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS], to the construction equipment, stationary equipment and the other equipment affected by bad weather and earthquake.	inspection; and (d) Ensure that there are no obstacles and workers around at the time of the operation check before the start of operations. (7) Take the following measures in periodic inspection (a) Use the checklist prepared by the Contractor; and (b) Repair and replace the defective parts when the result of inspection shows that there is defect, damage, or wear in parts of the Contractor's Equipment. (8) Implement the inspection as same as the daily inspection and check as specified in the manufacture's manual after the adverse weather or earthquake complying with JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS], of the construction equipment, stationary equipment and the other equipment affected by adverse weather or earthquake.
4.1.7 機器の点検・整備作業時の安全措置 請負者は、機器の点検、整備作業を行うときは、次の措置を講じなければならない。 (1) 機器の点検・整備作業を行うときは、当該機器の特性に応じ、機器の機能を完全に停止したうえで、点検・整備中の誤作動を防ぐために起動装置の施錠、起動装置に表示板を取り付ける、または監視人を配置する等（ロックアウト・タグアウトシステム）の措置を講じること (2) 点検・整備作業を行う場所に、関係者以外の立入りを禁止すること。 (3) 高所で点検・整備作業を行う場合には、本仕様書 2.5[墜落防止]に規定する措置。	**4.1.7 Safety Measures in Inspection and Maintenance** The Contractor shall take the following measures for safety in inspection and maintenance. (1) When performing inspections and maintenance work, stop the equipment functions completely and take measures based on the procedures of the lockout and tagout system to prevent malfunctions during inspection and maintenance. (2) Prohibit non- Contractors Personnel entering in the place where inspection and maintenance work is performed. (3) Measures specified in JSSS 2.6 [FALLING OBJECTS] when performing inspection and maintenance work at high places.	**4.1.7 Safety Measures at Inspection and Maintenance** The Contractor shall take the following measures for safety of workers engaging in the inspection and maintenance work. (1) When performing inspection and maintenance work, stop the equipment functions completely according to the characters of the Contractor's Equipment and take measures based on the procedures of the lockout and tagout system to prevent accidents during inspection and maintenance. The lockout and tagout system shall include lock of starting system and warning signs not to start the equipment on the starting system or provision of Spotter; (2) Prohibit persons other than workers appointed for the inspection or maintenance work entering in the place where inspection or maintenance work is performed; and (3) Take measures specified in JSSS 2.6 [FALLING OBJECTS] when performing inspection and maintenance work at high places.
4.2 建設機械 **4.2.1 建設機械の点検・整備** 請負者は本仕様書 4.1.7[機器の点検・整備]に従い、次の点検・整備を行わなければならない。 (1) 建設機械の搬入時の点検 建設機械の搬入時には次に従い点検を実施すること。 (a) 建設機械の点検・整備記録の確認を行なうこと。かかる点検・整備記録においては、次の(3)に規定する項目のうち、当該機械に該当する項目が含むこと。 (b) 建設機械の点検・整備記録がない又は不十分な場合は、上記(a)に準じて搬入時に点検・整備を行うこと。 (2) 建設機械の日常点検 日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。	**4.2 Construction Heavy Equipment** **4.2.1 Inspections and Maintenances of Construction Equipment** The Contractor shall conduct the following inspections and maintenances complying with JSSS 4.1.7 [Inspections and Maintenances]. (1) Inspections in Installations period Conduct the inspections as follows in installations (a) Ensure that the inspection and maintenance records include the item applicable each equipment specified in (3). (b) When the inspection and maintenance record is insufficient or nothing, implement the inspection and maintenance in installation according to above (a). (2) Daily inspections and check Conduct the inspections and check based on the check list included the following items prepared by the Contractor. (a) Well function of brakes, clutches, operating devices and working devices (b) Damages of wire ropes and chains	**4.2 Construction Equipment** **4.2.1 Inspection and Maintenances of Construction Equipment** The Contractor shall conduct the following inspection and maintenance of Construction Equipment complying with JSSS 4.1.6 [Inspection and Maintenances]. (1) Inspection at the time when Construction Equipment is newly brought in at the site: Conduct the inspection as follows at newly brought in at the site: (a) Ensure that the inspection and maintenance records include the items applicable each equipment specified in (3) below; (b) When the inspection and maintenance records are insufficient or not available, implement the inspection and maintenance at newly brought in at the site according to above (a); and (2) Daily inspection: Conduct the inspection based on the checklist included the following items prepared by the Contractor. (a) Abnormalities of brakes, clutches, operating devices and

(a) ブレーキ、クラッチ、操作装置及び作業装置の異常の有無 (b) ワイヤロープ及びチェーンの損傷の有無 (c) バケット等アタッチメントの損傷の有無 (3) 建設機械の定期点検 定期点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 圧縮圧力、弁すき間その他原動機 (b) クラッチ、トランスミッション、プロペラシャフト、デフアレンシャルその他動力伝達装置 (c) 起動輪、遊動輪、上下転輪、履帯、タイヤ、ホイールベアリングその他走行装置 (d) かじ取り車輪の左右の回転角度、ナックル、ロツド、アームその他操縦装置 (e) 制動能力、ブレーキドラム、ブレーキシユーその他ブレーキ (f) ブレード、ブーム、リンク機構、バケット、ワイヤロープその他の作業装置 (g) 油圧ポンプ、油圧モーター、シリンダー、安全弁その他油圧装置 (h) 電圧、電流その他電気系統 (i) 車体、操作装置、ヘッドガード、バツクストツパー、昇降装置、ロック装置、警報装置、方向指示器、燈火装置及び計器	(c) Damages of other attachment items such as buckets etc. (3) Periodic Inspections Conduct the periodic inspections based on the check list included the following items prepared by the Contractor. (a) Compression pressure, valve clearance and other motors (b) Clutch, transmission, propeller shaft, differential and other power transmission devices (c) Drive wheel, idling wheel, vertical trunk roller, a belt, a tire, a wheel bearing and other traveling devices. (d) Starter wheels, idle wheels, up and down wheels, crawler belts, tires, wheel bearings and other vehicle devices (e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other control devices (f) Brake capacity, brake drum, brake shoe and other brakes (g) Blades, booms, link mechanisms, buckets, wire ropes and other work equipment (h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other hydraulic equipment (i) Voltage, current and other electrical systems (j) Car body, operation device, head guard, back stopper such as cylinder, mechanical lock and, lifting device, lock device, alarm device, direction indicator, turn signals and instrument	working devices; (b) Damages of wire ropes and chains; and (c) Damages of other attachment such as buckets, etc. (3) Periodic Inspection: Conduct the periodic inspection based on the checklist included the following items prepared by the Contractor. (a) Compression pressure, valve clearance and other parts of a prime mover; (b) Clutch, transmission, propeller shaft, differential and other parts of power transmission devices; (c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearing and other parts of traveling devices; (d) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices; (e) Brake capacity, brake drum, brake shoe and other parts of brakes; (f) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment; (g) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment; (h) Voltage, amperage and other parts of electrical system; and (i) Body, operation device, head guard, back stopper, up and down access facility, locking devices, warning alarm device, direction indicator, lightning device and indicators.
4.2.2 建設機械の作業環境 請負者は、建設機械の作業環境の確保のために、本仕様書 4.1.5[機器の作業環境]に加えて、次の措置を講じなければならない。 架空電線の充電電路に建設機械が接触し、作業員に感電の危険が生じるおそれのあるときは、本仕様書 3.2[架空線等上空施設一般]に規定する措置を講じること。	**4.2.2 Work Environment for Construction Equipment** The Contractor shall take the following measures addition to JSSS 4.1.6 [Work Environment] to ensure the work environment for construction equipment. When there is considered the risk of an electric shock to the Contractor's Personnel as construction equipment come into contact with the electrical power line of the overhead wire, take measures as specified in JSSS 3.2[OVERHEAD SERVICES].	**4.2.2 Work Environment for Construction Equipment** The Contractor shall take the following measures in addition to JSSS 4.1.6 [Work Environment] to ensure the work environment with construction equipment. When there is risk of electric shock of the workers when the construction equipment contacts or works near charged circuits of overhead electrical power lines, take measures as specified in JSSS 3.2 [OVERHEAD SERVICES].
4.2.3 建設機械の運用時の安全措置 請負者は、建設機械の運用時の安全のために、次の措置を講じなければならない。 (1) 建設機械と作業員の接触の防止 (a) 運転中の建設機械に接触することにより作業員に危険が生ずるおそれのある箇所は、作業員の立入を禁止とする、または誘導者を配置し、その者に当該建設機械を誘導させること。 (b) 誘導者及び作業員に合図並びに誘導の方法や運転者の視認性に関し、誘導員及び作業員の理解を徹底させること。 (2) 建設機械で登坂、降坂を伴う作業を行うときは、運転者に次の措置を講じさせること。	**4.2.3 Safety Measures in Operation** The Contractor shall take the following measures for the safety in operation. (1) Prevent of collision of construction heavy equipment and Contractor's Personnel (a) Prevent Contractor's Personnel of entering where there are risks because of collision with operating construction equipment, or place flagmen which guide construction equipment (b) Disseminate a signal system, guidance methods and driver visibility to Flagmen and Contractor's Personnel (2) Let the operator and driver take the following measures in uphill and downhill by construction heavy equipment	**4.2.3 Safety Measures in Operation** The Contractor shall take the following measures for the safety in operation. (1) Prevent of collision with construction equipment and Contractor's Personnel (a) Prevent Contractor's Personnel of entering where there are risks of collision with operating construction equipment, or place Flagmen which guide construction equipment (b) Disseminate to Flagmen and workers signal system, guide method and driver's visibility of Flagmen *(To MD: This visibility means how much drivers can see/identify signals by flagmen.)* (2) Make the operators or drivers take the following measures on uphill and downhill when operating construction equipment

(a) 建設機械の登坂能力及び安定度を超えて走行しないこと。

(b) 建設機械の機種に応じた運転上遵守すべき事項を厳守すること。

(3) 作業場所の地形、地盤その他に異常を認めたときは、運転者に作業を中止させること。地盤その他の安全性が確認されるまで作業を再開させないこと。

(4) 建設機械の転倒・転落の対策

(a) 建設機械の転倒又は転落による運転者を含む作業員の危険を防止するため、建設機械の運行経路の路肩の崩壊を防止すること、地盤の不同沈下を防止すること、必要な幅員を保持すること等必要な措置を講じること。

(b) 路肩、のり肩、傾斜地等で、建設機械の転倒又は転落により作業員に危険が生ずるおそれのあるときは、誘導者を配置し、その者に当該建設機械を誘導させること。また、請負者は、当該建設機械の運転者に、誘導者が行う誘導に従わせること。

(c) 路肩、のり肩、傾斜地等で、建設機械の転倒又は転落により運転者に危険のおそれのある作業には転倒保護構造（ROPS）又は横転時保護構造（TOPS）の機械を使用し、かつ、シートベルトを備えた建設機械を使用させること。また、運転者にシートベルトを使用させること。

(5) 建設機械への落下物の対策

建設機械への落下物のおそれのある作業時の運転者の安全のため、落下物保護構造物（FOPS）のついた機械を使用すること。

(6) 建設機械のワイヤロープ

建設機械で使用するワイヤロープは、安全係数が６以上のものを使用すること。この安全係数は、ワイヤロープの切断荷重の値を当該ワイヤロープにかかる荷重の最大の値で除した値とする。

ワイヤロープが次の状態の場合には、交換したうえで切り捨てて廃棄する等の処理を講ずること。

(a) ワイヤロープ一よりの間において素線の数の十パーセント以上の素線が切断しているもの

(b) 直径の減少が公称径の七パーセントを超えるもの

(c) キンクしたもの(any kink in wire rope)

(d) 著しい形くずれ又は腐食があるもの

(7) 建設機械の運転者が運転位置から離れるときは、運転者に次の措置を講じさせること。

(a) 建設機械を地盤の良い平坦な場所に止めること。

(b) ~~各種建設機械には逸走防止をするための輪止めを携帯し、~~停止時には、逸走防止のために足回りに輪止め等を確実にすること。

(c) バケット等の作業装置を地面まで降ろすこと。

(d) 原動機を止め、ブレーキは完全に掛け、ブレーキペダルをロックする

(a) Prohibit operate beyond climbing ability and stability of construction equipment

(b) Comply with the precaution according to construction equipment

(3) When any abnormalities are observed in the topography, ground, etc. of the work place, stop the driver operating and resume work until the safety of the ground and others is confirmed.

(4) Measures of the falling construction equipment

(a) Take necessary measures such as preventing the collapse of the shoulder of the operation route and the uneven settlement of the ground, maintaining the necessary width for the safety of operators and Contractor's Personnel because of the falling construction heavy equipment.

(b) When there are risks for Contractor's Personnel because of the falling construction heavy equipment at road shoulders and slopes etc. place flagmen which guide construction equipment. In addition, the contractor shall let the operator of construction heavy equipment to comply with the instruction of flagmen.

(c) When there are risks for operators and drivers because of the falling Construction heavy equipment at road shoulders and slopes etc., use Construction heavy equipment with seatbelt and of Roll Over Protective Structure (ROPS) or Tip Over Protective Structure (TOPS) and let operators use the seatbelt in operation.

(5) Measures against falling objects onto Construction heavy equipment

Use machineries of Falling Object Protective Structure (FOPS) for the safety of operators by falling objects onto construction equipment

(6) Wire ropes of construction equipment

Use wire ropes whose safety factor is over 6 for construction equipment. This safety factor obtained by dividing the cutting load value of wire ropes by the maximum load applied to wire ropes.

When wire ropes are the following conditions, take measures such as discharging after the replacement.

(a) Regarding to a twine of wire rope, more than 10% of the number of strands are cut

(b) Diameter reduction exceeds 7% of nominal diameter

(c) Any kink in wire rope

(d) Significant deformation or corrosion

(7) When operators and drivers move from drivers' seat of construction equipment, let operators take the following measures.

(a) Park construction equipment on flat and stiff ground

(a) Prohibit to operate beyond climbing ability and stability of construction equipment; and

(b) Comply with the matters that the drivers/operators shall comply according to type and kind of construction equipment.

(3) When any abnormalities are observed of the topography, ground, etc. at the work place, stop operating of construction equipment until the safety of the ground and others is secured.

(4) Measures against falling of construction equipment

(a) Take measures such as preventing collapse of road shoulder on the operation route and uneven settlement of the ground, maintaining necessary width for the safety of drivers/operators and worker;

(b) When there are risks to workers by fall accident of construction equipment on road shoulders and slopes, etc., place Flagmen which guide construction equipment. In addition, the Contractor shall make the divers/operators of construction equipment to comply with the instruction of Flagmen; and

(c) When there are risks to divers/operators by fall accident of construction equipment on road shoulders and slopes etc., use construction equipment which is equipped seatbelts and Roll Over Protective Structure (ROPS) or Tip Over Protective Structure (TOPS) and make divers/operators use the seatbelts during time of operation.

(5) Measures against falling objects onto construction equipment

Use machineries of Falling Object Protective Structure (FOPS) for the safety of drivers/operators by falling objects onto construction equipment.

(6) Wire ropes of construction equipment

Use wire ropes whose safety factor is over 6 for construction equipment. This safety factor is obtained by dividing the breaking strength of wire ropes by the maximum load applied to wire ropes.

When wire ropes are in the following states, such wire ropes shall be replaced, made unusable or disposed.

(a) Regarding to a twine of wire rope, more than 10% of the number of strands are cut;

(b) Diameter reduction exceeds 7% of nominal diameter;

(c) Any kink in wire rope; and

(d) Significant deformation or corrosion

Note: To MD, There are same following sentences as above. Please rearrange these sentences.
6.5.2 (3)
(i) Those with one-tenth or more of the element wires are cut in one strand.
(ii) Those with the reduction ratio of a diameter due to wear-out, of which are exceeding 7% of the nominal diameter.
(iii) Those with kink.
(iv) Those with marked deformation or corrosion.

(7) When operators and drivers leave drivers' seat of construction

こと。 (e) 作業装置はロックし、キーをはずして所定の場所へ保管すること。 (8) 悪天候時の対策 本仕様書 2.7[悪天候及び地震時の対策]の措置に加えて、悪天候時には建設機械が不安定な状態になることを回避するために、次のような措置を講じること。 (a) 強風時には、リーダー・ブームを倒す又は機械・リーダー等をアンカー等で固定すること。 (b) 大雨時には、増水の恐れや地盤が不安定になる場所から退避すること。 (c) 降雪時には、除雪を行いスリップによる脱輪や逸脱を防止すること。	(b) Be equipped with a wedge stopper to prevent runaway, and make sure to secure the wedge stopper with each construction equipment when stopping. (c) Lowering a bucket or other work equipment to the ground. (d) Stop the prime mover, fully engage the brake, and lock the brake pedal. (e) Lock the work equipment and stored the key in place. (8) Measures in bad weather predictive In addition to the measures described in JSSS 2.7[ADVERSE WEATHER REQUIREMENTS], take the following measures in bad weather predictive for the prevention of the unstable situation of construction equipment (a) Before strong winds predictive, fold the leader boom or anchoring the machine / leader with anchors. (b) Before heavy rain predictive, evacuate from a place where there is a risk of flood or the ground becomes unstable. (c) After snowfall, in cleaning snow to prevent run-off and deviation of access road.	equipment, make drivers/operators take the following measures. (a) Park construction equipment on flat and stiff ground; (b) Place wedge stoppers below construction equipment to prevent runaway of construction equipment when (stopping) parking; (c) Lowering bucket or other work equipment to the ground. (d) Stop the prime mover, fully engage the brake, and lock the brake pedal; and (e) Lock the work equipment and store the starter key of construction equipment in the designated place. (8) Measures at the time of adverse weather In addition to the measures described in JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS], take the following measures in adverse weather for prevention of the state that the construction equipment becomes unstable. (a) Before strong winds, fold or put down the leader/boom on the ground or anchoring the machine/leader with anchors; (b) Before heavy rain, evacuate from the place where there is a risk of flood or the ground becomes unstable. (c) After snowfall, remove snow to prevent from going-off the shoulder of the road by slipping. *To MD: Names of leader boom are shown in Annex A of BS ISO 11886:2002.*
4.2.4 建設機械の用途外使用の制限 請負者は、建設機械を主たる用途以外に使用してはならない。作業の性質上やむを得ずパワーショベル等の建設機械を吊り上げ作業等の用途外で使用をする際には、以下の条件を満たさなければならない。 (1) アーム、バケット等の作業装置につり上げ用の器具を取り付けて使用するとき。 (2) アーム、バケット、~~玉掛用具が本仕様書[玉掛け用具]従い、~~フック、シャックル等の金具その他のつり上げ用の器具が、負荷させる荷重に応じた十分な強度を有するものであるとき。*(変更が間違いであった。)* (3) フック、シャックル等の金具その他のつり上げ用の器具に、外れ止め装置が使用され、器具からつり上げた荷が落下するおそれのないとき。 (4) フック、シャックル等の金具その他のつり上げ用の器具がアーム、バケット等の作業装置から外れるおそれのないとき。 (5) パワーショベル等の建設機械で吊り上げ作業に係わる運転者は、クレーン作業の免許(必要な場合)と教育を受けた者でなければならない。 荷のつり上げの作業以外の建設機械の用途外使用を行う場合には、作業員に危険を及ぼすおそれのない作業であることを確認したうえで行わなければならない。	**4.2.4 Restriction to Operate Construction Equipment for Other Use** The Contractor shall not operate construction equipment besides the main use. When construction equipment is operated for unavoidable reason such excavators are used for lifting work, the Contractor shall be satisfied with the following requirement. (1) Use a working device such as an arm or bucket attached to lifting equipment (2) Arms, bucket, hook, shackles and other metal fittings and other lifting equipment have sufficient strength in accordance with the load to be applied. (3) There are no risks of the falling of loads lifted from equipment such as hooks and shackles and other equipment for lifting by locking devices. (4) There are no risks that the lifting equipment such as a hook and shackles will be detached from the working equipment such as arms and a bucket. (5) Operators involved in lifting work with construction equipment such as excavators shall be licensed and trained for crane work. When construction equipment is operated for other use excluded the lifting work, ensure that there are no risks for Contractor's Personnel.	**4.2.4 Restriction to Operate Construction Equipment for Other Use** The Contractor shall not operate construction equipment other than the main purpose. When construction equipment shall be operated for unavoidable reason such as excavators are used for lifting work, the Contractor shall be satisfied with the following requirement: (1) Use Hoisting Equipment such as hook attached on working device of construction equipment such as arm or bucket; *(To MD, please see photo on the last page.)* (2) Arms, bucket, Hoisting Equipment, Rigging Equipment shall have enough strength to lift the loads as specified in JSSS 6.5.2 [Hoisting and Rigging Equipment]; (3) There is no risk of fall of loads lifted by the equipment with hooks, shackles and other devices for lifting; (4) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the construction equipment; (5) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for crane work; and When construction equipment is used for other purpose than lifting work, use it after ensuring that there is no risk to workers in the work.
4.2.5 点検・整備作業時の安全措置 請負者は、点検・整備作業時の安全確保のために、本仕様書 4.1.7[機器の	**4.2.5 Safety Measures in Inspection and Maintenance** The Contractor shall take the following measures in addition to JSSS 4.1.8 [Safety Measures in Inspection and Maintenance] for safety in inspection	**4.2.5 Safety Measures at Inspection and Maintenance** The Contractor shall take the following measures in addition to JSSS 4.1.8 [Safety Measures in Inspection and Maintenance] for safety at inspection

点検・整備作業時の安全措置］に加え、次の措置を講じなければならない。 (1) 平坦地に建設機械を停止させて点検・整備作業を行うこと。やむを得ず傾斜地で行う場合は、機械の足回りに歯止めをする等、逸走や転倒を防止する措置を講じること。 (2) 点検・整備作業を行う建設機械のアタッチメント等の作業装置は必ず地面に降させること。やむを得ずブレード、バケット等を上げ、その下で点検・整備作業を行う場合には、安全ブロックで支持するなどの降下防止策をとること。	and maintenance. (1) Perform inspection and maintenance work at flat ground. If it is unavoidable to take place on sloping terrain, take measures to prevent runaway and fall, such as wedge stopper to the wheals or crawlers of construction equipment. (2) Ensure that equipment such as attachments should be lowered to the ground. If it is unavoidable to raise the blade, bucket, etc., and implement inspection and maintenance works, take measures to prevent the descent, such as supporting it with safety blocks/shafts/wedges etc.	and maintenance; (1) Perform inspection and maintenance work for construction equipment at level ground. If it is unavoidable to take place on sloped ground, take measures to prevent run-away and fall such as placing wedge stoppers below wheels of construction equipment; and (2) Lower work equipment such as attachments to the ground at inspection and maintenance. If it is unavoidable to implement inspect or maintenance below the raised blade, bucket, etc., take measures to prevent the descent of attachments such as supporting it with safety blocks, etc.
4.2.6 作業装置の装着等の作業時の安全措置 請負者は、アタッチメント等、建設機械の作業装置の装着及び取りはずし作業では、次の措置を講じなければならない。 (1) アタッチメントの装着又は取り外しの作業を行うときは、アタッチメントが倒壊すること等による作業員の危険を防止するための措置をとること。 (2) 誤操作や当該作業員の挟まれ防止のために、当該作業の作業主任の合図に従い、当該作業員に作業を行わせること。	**4.2.6 Safety Measures in Attachment and Removal of Work Devices** The Contractor shall take the following measures in attachment and removal of work devices of construction equipment. (1) When equip or remove the heavy equipment attachment, take measures to prevent Contractor's Personnel from the danger due to the heavy equipment falling. (2) In order to prevent accidental operation and the Contractor 's Personnel being trapped, the Contractor's Personnel executes the work according to the signal of the person in charge of the work.	**4.2.6 Safety Measures at Attaching and Removal of Work Devices** The Contractor shall take the following measures in attaching *(To MD, please select suitable word from equipping, installation; furnishing; fitting; mounting)* and removal of work devices of construction equipment. (1) When equipping or removing attachment of the construction equipment, take measures to prevent workers from the danger by fall of attachments from the construction equipment; and (2) To prevent accidental mis-operation of the construction equipment and the workers being trapped, make workers do the attaching or removal work under the instruction of Operation Leader.
4.2.7 建設機械の搬送時の安全措置 (1) 建設機械の積込み・積卸し 請負者は、建設機械の積込み及び積卸しでは、次の措置を講じなければならない。 (a) 建設機械をトレーラ又はトラック等に積載して移送する場合は、登坂用具又は専用装置を備えた移送用の車両を使用すること。 (b) 積込み又は積卸しを行う場合は、支持力のある平坦な地盤で、作業に必要な広さのある場所を選定すること。 (c) 積込み又は積卸し作業時には、移送用車両は必ず駐車ブレーキを掛け、タイヤに輪止めをすること。 (d) 登坂用具は、積込み又は積卸しする機械重量に耐えられる強度、長さ及び幅を持ち、キャタピラや車輪の回転によって荷台からはずれないような、爪付きのもの又ははずれ止め装置の装備されたものを使用すること。 (e) 建設機械を道路の制限高さを超えないように積込みすること。 (2) 建設機械の積込後の固定等 請負者は、建設機械の積込後、次の措置を講じなければならない。 (a) 建設機械を荷台の所定位置で停止させ、駐車ブレーキを掛けること。 (b) 建設機械のバケット等はトレーラ等の床上に下ろし固定すること。 (c) 積込みの状態及び輪止め等固定の状態が適切であるかを確認する	**4.2.7 Safety Measures in Loading and Unloading of Construction heavy Equipment** (1) Loading and Unloading of construction heavy equipment The Contractor shall take the following measures in loading and unloading construction heavy equipment. (a) Use vehicles with climbing equipment or special equipment when construction heavy equipment is transported by trailers or tracks (b) Select a place with in sufficient space for work on a flat and stiff ground when loading and unloading (c) Ensure to set the parking brake on the trailer and wedge stopper to the wheels when loading and unloading. (d) Ensure that the climbing boards to the trailer have an enough strength, length and width that can withstand the weight of the construction equipment to be loaded or unloaded, and is equipped with a claw or a fixing device that does not come off the platform due to the slip of the caterpillar or wheels (e) Ensure that the height of construction heavy equipment with trailers do not exceed the maximum height of the road regulation of the country. (2) Fixing after Loading construction heavy equipment The Contractor shall take the following measures after loading construction heavy equipment on to the trailer. (a) Fix the construction heavy equipment at a suitable position on the platform of a trailer and apply the parking brake.	**4.2.7 Safety Measures for Transportation of Construction Equipment** (1) Loading and unloading of construction equipment The Contractor shall take the following measures of loading and unloading construction equipment to and from transportation equipment: (a) Use transportation equipment such as trailers or tracks equipped climbing equipment or special equipment for construction equipment; (b) Select place with enough space for work on level and stiff ground when loading and unloading; (c) Set parking brake of the transportation equipment and put wedge stoppers below its wheels when loading and unloading; (d) Ensure that the climbing equipment shall have enough strength, length and width that can withstand the weight of the construction equipment to be loaded or unloaded, and is equipped with claws or a fixing device so that they do not come off from cargo bed due to the movement of caterpillars or wheels; and (e) Ensure that the height of construction equipment on the transportation equipment do not exceed the maximum height stipulated in the Laws of the Country. (2) Fixing after loading construction equipment The Contractor shall take the following measures after loading construction equipment on the transportation equipment: (a) Fix the construction equipment at suitable position on the cargo bed of transportation equipment and set the parking brake of the

こと。	(b) Rest and fix the bucket of construction heavy equipment on the platform of a trailer. (c) Ensure whether the loading condition and the fixed state of wedge stopper to wheel are appropriate.	construction equipment; (b) Put down and fix the bucket of construction equipment on the cargo bed of transportation equipment; and (c) Inspect whether the loading condition and the fixing state by wedge stoppers below wheels of the construction equipment are appropriate on the transportation equipment.
4.2.8 リース建設機械の使用 (1) 請負者は、リース建設機械を使用する場合は、リース会社から、搬入時に以下の書面による報告を受理しなければならない。 (a) 当該建設機械にかかる点検整備状況にかかる記録 (b) 当該建設機械の能力、特性その他その使用上の注意すべき事項 (2) 請負者は、リース機械を使用する際には、次を行わなければならない。 (a) 搬入時に本仕様書 4.2.1［建設機械の点検・整備］の(3)[建設機械の定期点検]に規定する項目のうち、当該建設機械に該当する項目を含む点検・整備に関する記録を確認すること。確認できなかった場合、使用開始に先立ち同様の項目の点検・整備を実施すること。 (b) 不備のあるリース建設機械は使用しないこと。 (3) 請負者は、運転者付きのリース建設機械を使用する際には、次を行わなければならない。 (a) リース建設機械会社の要員を運転者または操作者に、本仕様書 4.1.4[安全教育と指導]に準じて教育を受けさせなければならない (b) 作業開始前に機体の保守点検記録、整備状況、安全装置の装備、その正常動作の点検整備状況を機械整備の担当に確認させること。 (c) 不備のある建設機械を使用させないこと。 (4) 請負者は、リース建設機械についても、本仕様書 4.1[請負者の機器の一般的留意事項]及び 4.2[建設機械]に規定された事項を遵守しなければならない。	**4.2.8 Use of Leasing Construction Heavy Equipment** (1) When the Contractor use leasing Construction heavy equipment, the Contractor shall receive the following report from the leasing company in beforehand. (a) Inspection and maintenance records for leasing construction heavy equipment (b) Capability and characteristic and other precautions for use of construction heavy equipment (2) When the Contractor use leasing construction heavy equipment, the Contractor shall take the following measures. (a) Check inspection and maintenance records including items applicable to the equipment specified in JSSS 4.2.1 (3) [Periodic Inspections]. If not confirmed, inspect and maintain the same items before the start of operations. (b) Prohibit use defective leasing construction heavy equipment (3) When the Contractor lease construction heavy equipment with operators and drivers from leasing companies, the Contractor shall take the following measures. (a) Let operators and drivers from leasing companies be trained according to JSSS 4.1.5[Safety Instructions] (b) Let the machinery maintenance worker confirm maintenance inspection records, maintenance status and safety equipment before the start of operations. (c) prohibit the driver from using defective leasing machines (4) The Contractor shall comply with the JSSS 4.1[General Requirements for Contractor's Equipment] and 4.2[Construction Equipment] for use of leasing construction heavy equipment.	**4.2.8 Use of Leased Construction Equipment** (1) When the Contractor use leased construction equipment, the Contractor shall receive the following report from the lease company in beforehand; (a) Inspection and maintenance records of leased construction equipment; (b) Capability, characteristic and other precautions for use of the construction equipment. (2) When the Contractor use leased construction equipment, the Contractor shall take the following measures. (a) Check inspection and maintenance records of the leased construction equipment including items applicable to the equipment specified in JSSS 4.2.1 (3) [Periodic Inspection]. When records are insufficient or not available, inspect and maintain the same items before the start of operations; and (b) Prohibit use defective leased construction equipment. (3) When the Contractor use leased construction equipment with operator or driver from lease company, the Contractor shall take the following measures: (a) Make operators and drivers from lease companies be trained according to JSSS 4.1.5 [Safety Instructions]; (b) Make his worker in charge of machinery maintenance inspect maintenance inspection records, maintenance status and safety equipment before the start of operations of leased construction equipment; and (c) Prohibit using defective leased construction equipment. (4) The Contractor shall comply with the JSSS 4.1 [General Requirements for Contractor's Equipment] and 4.2 [Construction Equipment] for use of leased construction equipment.
4.3 建設設備 **4.3.1 建設設備の点検・整備** 請負者は本仕様書 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。 (1) 建設設備の日常点検 日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 原動機及びプーリーの機能、非常停止装置の機能、原動機、回転軸、歯車、プーリー等の覆い、囲い等の異常の有無	**4.3 Construction Facilities** **4.3.1 Inspection and Maintenance of Construction Facilities** The Contractor shall perform the following inspection and maintenance in accordance with 4.1.6 [Inspection and Maintenance of Equipment]. (1) Daily Inspection of Construction Facilities In daily inspections, inspections should be performed based on the inspection table prepared by the Contractor including the following check points: (a) Functions of a prime mover and a pulley, functions of an emergency stop device, abnormalities in a cover, an enclosure, etc. of a prime mover, a rotating shaft, a gear, a pulley, etc.,	**4.3 Construction Facilities** **4.3.1 Inspection and Maintenance of Construction Facilities** The Contractor shall perform the following inspection and maintenance in accordance with 4.1.6 [Inspection and Maintenance]. (1) Daily Inspection of Construction Facilities Daily inspection shall be performed using the checklist prepared by the Contractor including the following check items: (a) Functions of prime mover, pulley, emergency stop device, abnormalities in cover, enclosure, etc. of prime mover, rotating shaft, gear, pulley, etc.;

(b) 異常な音、振動、臭気等 (c) 設備の清掃、給油の状況 (d) 設備周辺の整理、整頓 (2) 建設設備の定期点検 (3) 悪天候及び地震後の点検	(b) Abnormal sound, vibration, odor, etc., (c) Condition of cleaning and refuelling on facilities, and (d) Arrangement around the facilities. (2) Periodic Inspection of Construction Facilities (3) Inspection after adverse weather and earthquake	(b) Abnormal sound, vibration, smell, etc.; (c) State of cleaning and lubricating of facilities; and (d) State of sorting and setting-in-order around the facilities. (2) Periodic Inspection of Construction Facilities (3) Inspection after adverse weather and earthquake
4.3.2 建設設備の作業環境 請負者は、建設設備の作業に際しては、本仕様書 4.1.5[機器の作業環境]に加えて、次に示す安全上の措置を講じなければならない。 (1) 建設設備の出入口には，本仕様書 2.4[監視員・誘導員の配置]に従い、状況に応じて誘導員を配置すること。 (2) 次のときは、建設設備の機械一部又は全てに覆い又は囲い等を設けること。 (e) 機械の回転部等に挟まれ、巻き込まれることにより作業員に危険を及ぼすおそれのあるとき。 (f) 設備で取り扱う材料、コンクリート等が飛来することにより作業員に危険を及ぼすおそれのあるとき。 (3) 建設設備に通ずる場所及び建設設備内には、本仕様書 7.4[通路]に従い、作業者が使用するための安全な通路を設け、かつ、これを常時有効に保持すること。 (4) 作業員の埋没の危険のおそれがあるコンクリートの骨材のストックパイルには、立入りを禁止すること。	**4.3.2 Working Environment on Construction Facilities** The Contractor shall take the following safety measures in addition to this specification 4.1.5 [Work Environment on Equipment] when working on construction facilities. (1) In accordance with the specifications 2.4 [Allocation of Spotters / Flagmen] at the entrances and exits of construction facilities, flagmen should be allocated according to the situation. (2) In the following cases, provide a cover or enclosure for part or all of the machinery installed in the construction facility: (a) When there is a risk of danger to workers due to being caught in a rotating part of the machine, and (b) When materials, concrete, etc. handled by the facility may fly and cause danger to workers. (3) A safe passage for use by workers shall be provided in accordance with this specification 7.4 [Temporary Walkway] in the place aproaching to the construction facility and in the construction facility, and this shall be kept effective at all times. (4) Access to concrete aggregate stock piles with the risk of being buried by workers is prohibited.	**4.3.2 Work Environment with Construction Facilities** The Contractor shall take the following safety measures in addition to JSSS 4.1.5 [Work Environment] when working with construction facilities. (1) In accordance with JSSS 2.4 [Spotters, Flagmen and the like] at the entrances and exits of construction facilities, Spotters shall be allocated according to its situation; (2) In the following cases, provide covers or enclosure around parts or whole of the construction facilities; (a) When there is risk of danger to workers of being hit or caught into rotating parts of the construction facilities, and (b) When there is risk of danger to workers by flying or scattering of materials, concrete, etc. handled by the construction facilities. (3) Safe passage for use by workers shall be provided in accordance with JSSS 7.4 [Temporary Walkway] on the place accessing to and in the construction facilities, and always maintained effective. (4) Access of workers to concrete aggregate stock piles where there is risk of workers being buried shall be prohibited.
4.3.3 建設設備の設置、組立、解体時の安全措置 請負者は、建設設備の設置、組立、解体を行うときは、次の措置を講じなければならない。 (1) 建設設備の設置、組立、解体は、当該機設備の専門家の指揮のもとに行うこと。 (2) 建設設備の設計に従い、基礎の建設、据え付けを行うこと。 (3) 本仕様書 4.1.6[機器の点検・整備]に従い、建設設備の設置又は組立作業終了時には完成時試験を行うこと。	**4.3.3 Safety Measures for Installation, Assembly and Dismantling of Construction Facilities** The Contractor shall take the following measures when installing, assembling and dismantling construction facilities: (1) Installation, assembly, and dismantling of construction facilities should be carried out under the direction of the facility specialist, (2) To construct and install the foundation according to the design of the construction facilities, and (3) In accordance with this specification 4.1.6 [Inspection and Maintenance of Equipment], the completion test shall be conducted at the installation or after assembling of the construction facilities.	**4.3.3 Safety Measures for Installation, Assembly and Dismantling of Construction Facilities** The Contractor shall take the following measures for installing, assembling and dismantling of construction facilities: (1) Installation, assembly and dismantling of construction facilities shall be carried out under the direction of the facility specialist; (2) The foundation shall be constructed or installed according to the design of the construction facilities; and (3) In accordance with JSSS 4.1.6 [Inspection and Maintenance], the completion test shall be conducted at the completion of installation or assembling of the construction facilities.
4.3.4 建設設備の作業時の安全措置 請負者は、建設設備を使用して作業を行うときは、次の措置を講じなければならない。 (1) 建設設備の運転者又は操作者、保守点検の担当者の氏名を、建設設備の見やすい位置に掲示すること。 (2) 保守点検の担当者以外に、建設設備の覆い・囲いや安全装置を取り外	**4.3.4 Safety Measures in Working with Construction Facilities** The Contractor shall take the following measures when working with construction facilities: (1) Post the name of the operator of the construction facilities, or the person in charge of maintenance and inspection in an easy-to-see position on the facilities, (2) Except for the person in charge of maintenance and inspection, cover	**4.3.4 Safety Measures for the Work with Construction Facilities** The Contractor shall take the following measures when working with construction facilities; (1) Post the names of the operators of the construction facilities, or the person in charge of maintenance and inspection on easy-to-see positions on the facilities; (2) Other person than the person in charge of inspection and maintenance shall not remove the cover, enclosure and safety devices of the

し、又はその機能を失わせないこと。 (3) 建設設備の運転者、操作者又は作業員が、建設設備の音、振動、臭気、温度等に異常を認めた場合は、建設設備の使用を停止して、保守点検の担当者へ報告させること。 (4) 建設設備に異常を認めた場合、異常の原因の特定と修理等の対応を行い、建設設備の安全が確認されるまで、建設設備を使用しないこと。 (5) 部品の交換後は、直ちに正常な動作性を確認すること。 (6) 機械の運転を停止したときは、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]の(1)及び(2) の措置を講じ、上記の作業に従事する作業員以外の者が当該機械を運転することを防止すること。	/ enclosure and safety devices of the construction facilities must not be removed or its function shall not be lost, (3) If the operator or worker of the construction facility identifies an abnormality in the sound, vibration, odor, temperature, etc., stop using it and let him report to the person in charge of maintenance, (4) If any abnormality is identified in the construction facilities, do not use them until the cause of the abnormality is identified and repaired, and the safety of them is confirmed, (5) When replacing parts, check normal operation immediately, and (6) When the operation of the machine is stopped, take the measures (1) and (2) in 4.1.7 [Safety Measures for Inspection and Maintenance of Equipment], and prevent anyone other than the operators from using the machine.	construction facilities or make its function be lost; (3) When the operator or worker of the construction facility identifies abnormality in sound, vibration, smell, temperature, etc., the operator or worker shall stop using it and report it to the person in charge of maintenance; (4) If any abnormality is identified in the construction facilities, it shall not be used until the cause of the abnormality is identified and repaired, and its safety is secured; (5) When part of construction facilities is replaced, check immediately its normal operation; and (6) When the operation of the construction facilities is stopped, take the measures (1) and (2) in JSSS 4.1.7 [Safety Measures for Inspection and Maintenance], and prevent anyone other than the operators from using the machine.
4.3.5 点検・整備作業時の安全措置 請負者は、建設設備の点検・整備作業時の安全確保のために、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]に加え、次の措置を講じなければならない。 建設設備の掃除、給油、検査、修理又は調整の作業を行う場合において、作業員に危険を及ぼすおそれのあるときは、建設設備の運転を停止しなければならない。ただし、建設設備の運転中に作業を行わなければならない場合において、危険な箇所に覆いを設ける等の措置を講じたときは、この限りでない。	**4.3.5 Safety measures during inspection and maintenance work** The Contractor shall take the following measures in addition to 4.1.7 [Safety Measures during Equipment Inspection / Maintenance Work] in order to ensure safety during inspection / maintenance work of construction facilities. When cleaning, refueling, inspecting, repairing, or adjusting work for construction facilities, they must be shut down if there is a risk of danger to workers. Provided, however, that this shall not apply to cases where work must be performed during operation of the construction facilities and measures are taken such as providing a cover in a dangerous place.	**4.3.5 Safety Measures at Inspection and Maintenance** The Contractor shall take the following measures in addition to JSSS 4.1.7 [Safety Measures at Inspection and Maintenance] to ensure safety of the workers at the inspection and maintenance of the construction facilities. When the Contractor carries out the work of cleaning, lubricating, inspecting, repairing, or adjusting for construction facilities, the Contractor shall shut down the construction facilities when there is a risk with the work to the workers. The above will not apply to the case when work must be performed during operation of the construction facilities and measures such as providing covers on dangerous place are taken.
4.4 定置機械 **4.4.1 定置機械の点検・整備** 請負者は本仕様書 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。 (1) 定置機械の日常点検 日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 定置機械に共通する点検項目 (i) 安全装置の機能 (ii) 異常な音、振動、臭気等 (iii) 機械の清掃、給油(潤滑油)の状況 (iv) 機械周辺の整理、整頓 (b) 工事用エレベーター、建設用リフトに関する点検項目 (i) 運転者又は操作者の名前の標示 (ii) 最大積載荷重の明示 (iii) 機械の周辺の囲いの異常の有無 (iv) 搬器扉及び各階扉の異常の有無 (v) インターホンの異常の有無	**4.4 Fixed Equipment** **4.4.1 Inspection / Maintenance of Fixed Equipment** The Contractor shall perform the following inspection and maintenance in accordance with 4.1.6 [Inspection and Maintenance of Equipment] of this specification. (1) Daily Inspection of Fixed Equipment In daily inspections, inspections should be performed based on the inspection table prepared by the contractor including the following check points. (a) Check Points Common to Fixed Equipment (i) Function of safety device (ii) Abnormal sound, vibration, odor, etc. (iii) Condition of cleaning and refuelling on facilities (iv) Arrangement around the facilities (b) Check Points on Elevators and Lifts for Construction Works (i) Display the name of operators (ii) Display the maximum load capacity (iii) Abnormality of enclosures around equipment (iv) Abnormality on the door of carriers and doors on each floor	**4.4 Stationary Equipment** **4.4.1 Inspection and Maintenance of Stationary Equipment** The Contractor shall perform the following inspection and maintenance of stationary equipment in accordance with JSSS 4.1.6 [Inspection and Maintenance]. (1) Daily inspection of stationary equipment Daily inspection shall be performed using the checklist prepared by the Contractor including the following inspection items: (a) Inspection items common to the stationary equipment (i) Function of safety devices; (ii) Abnormal sound, vibration, smell, etc.; (iii) State of cleaning and lubricating of facilities; and (iv) State of sorting and setting-in-order around the facilities. (b) Inspection items of elevators and lifts for the Works (i) Post the names of operators (ii) Post the maximum load capacity (iii) Abnormality in enclosures around equipment (iv) Abnormality in the door of carriers and doors on each floor

(vi) 建設用リフトの場合、ブレーキ及びクラッチの異常の有無、日常点検可能な場所のワイヤロープが通っている箇所の摩耗、損傷の有無

(c) グラインダー、丸鋸等の回転部のある電気機械

(i) 回転部分の磨耗、損傷の有無

(ii) アースの状況

(2) 建設機械の定期点検

定期点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。

工事用エレベーター及び建設用リフトは一月以内ごとに一回、定期に、次の事項について検査を行うこと。ただし、一月をこえる期間使用しない工事用エレベーター、建設用リフトの当該使用しない期間においては、この限りでないが、その使用を再開する際は、次の事項について検査を行うこと。

(a) 工事用エレベーター

(i) ファイナルリミットスイッチ、非常止めその他の安全装置、ブレーキ及び制御装置の異常の有無

(ii) ワイヤロープの損傷の有無

(iii) ガイドレールの状態

(iv) 屋外に設置されているエレベーターにあっては、ガイロープを緊結している部分の異常の有無

(b) 建設用リフト

(i) ブレーキ及びクラッチの異常の有無

(ii) ウィンチの据え付けの状態

(iii) ワイヤロープの損傷の有無

(iv) ガイロープを緊結している部分の異常の有無

(v) 配線、開閉器及び制御装置の異常の有無

(vi) ガイドレールの状態

(v) Abnormality on the interphones

(vi) In the case of lifts for construction works, abnormalities in brakes and clutches, wear or damage of parts that can be inspected daily, where the wire rope passes.

(c) Electric Machines with Rotating Parts such as Grinders and Circular Saws

(i) Wear or damage of rotating parts

(ii) Grounding situation

(2) Periodic Inspection of Construction Machinery

Periodic inspections should be carried out based on the inspection table prepared by the Contractor including the following check points.

For elevators and lifts, the following items should be inspected once a month or less on a regular basis. However, this shall not apply during the period when elevators and lifts are not used for a period exceeding one month, but when resuming its use, the following matters shall be inspected.

(a) Elevators

(i) Abnormality of final limit switch, emergency stop and other safety devices, brakes and control devices

(ii) Wire rope damage

(iii) Guide rail condition

(iv) In the case of an elevator installed outdoors, whether or not there is an abnormality in the part where the guy rope is tied

(b) Lifts

(i) Abnormality of brakes and clutches

(ii) Abnormality of winch installation status

(iii) Wire rope damage

(iv) Abnormality in the part where the guy rope is tight

(v) Abnormality in wiring, switches and control devices

(vi) Abnormality in guiderails

(v) Abnormality in the interphones

(vi) Abnormalities in brakes and clutches, wear or damage of parts where wire rope passes, which can be inspected daily, of lifts for construction works.

(c) Electric machines with rotating parts such as grinders and circular saws

(i) Wear or damage of rotating parts; and

(ii) Grounding situation.

(2) Periodic inspection of stationary equipment

Periodic inspection shall be carried out using the checklist prepared by the Contractor including the following inspection items;

For elevators and lifts, the following items shall be inspected once a month or less on a regular basis. However, this shall not apply during the period when elevators and lifts are not used for period exceeding one month, but when resuming its use, the following items shall be inspected.

(a) Elevators

(i) Abnormality of final limit switch, emergency stop and other safety devices, brakes and control devices;

(ii) Wire rope damage;

(iii) Guide rail condition; and

(iv) For elevators installed outdoors, abnormality in the part where the guy ropes are tied.

(b) Lifts

(i) Abnormality of brakes and clutches;

(ii) Abnormality of installation of winches;

(iii) Damage in wire ropes;

(iv) Abnormality in the part where the guy rope is tight;

(v) Abnormality in wiring, switches and control devices; and

(vi) Abnormality in guiderails.

4.4.2 大型の定置機械の設置、組立、解体時の安全措置

請負者は、大型の定置機械の設置、組立、解体を行うときは、次の措置を講じなければならない。

(1) 定置機械の設置、組立、解体は、当該機械の専門家の指揮のもとに行うこと。

(2) 定置機械の設計に従い、必要に応じ基礎の建設、据え付けを行うこと。

(3) 本仕様書 4.1.6[機器の点検・整備]に従い、定置機械の設置又は組立作業終了時には完成時試験を行うこと。

4.4.2 Safety Measures for Installation, Assembly and Dismantling of Large Fixed Equipment

The Contractor shall take the following measures when installing, assembling and dismantling of large fixed equipment:

(1) Installation, assembly, and dismantling of fixed equipment shall be carried out under the direction of specialists of the equipment,

(2) Construct and build the foundation according to the design of the fixed equipment, and

(3) In accordance with 4.1.6 [Inspection and Maintenance of Equipment] of this specification, the completion test shall be conducted at the installation or after assembling of the fixed equipment.

4.4.2 Safety Measures for Installation, Assembly and Dismantling of Large Stationary Equipment

The Contractor shall take the following measures for installing, assembling and dismantling of large stationary equipment:

(1) Installation, assembly, and dismantling of large stationary equipment shall be carried out under the direction of specialists of the large stationary equipment,

(2) Construct and build the foundation when necessary according to the design of the large stationary equipment, and

(3) In accordance with JSSS 4.1.6 [Inspection and Maintenance], the completion test shall be conducted at the installation or after assembling of the large stationary equipment.

4.4.3 小型の定置機械の作業環境 請負者は、小型の定置機械を用いた作業に際しては、本仕様書 4.1.5[機器の作業環境]に加えて、次に示す安全上の措置を講じなければならない。 (1) 次のときは、機械一部又は全てに覆い又は囲い等を設けること。 (a) 機械の回転部等に挟まれ、巻き込まれることにより作業員に危険を及ぼすおそれのあるとき。 (b) 加工物等が切断し、又は欠損して飛来することにより作業員に危険を及ぼすおそれのあるとき。 (c) 切削屑が飛来すること等により作業員に危険を及ぼすおそれのあるとき。 (2) 丸のこ盤には、歯の接触予防装置等、作業員の危険を予防するための設備を設けること。	**4.4.3 Work Environment for Small Fixed Equipment** The Contractor shall take the following safety measures in addition to 4.1.5 [Working Environment Using Equipment] of this specification when working with small fixed equipment. (1) In the following cases, provide a cover or enclosure for part or all of the equipment. (a) When there is a risk of danger to workers due to being caught in a rotating part of the equipment. (b) When there is a risk of danger to workers due to work pieces being cut or missing and flying. (c) When there is a risk of danger to workers due to flying cutting waste. (2) The circular saw machine shall be equipped with equipment to prevent worker danger, such as a tooth contact prevention device.	**4.4.3 Work Environment for Small Stationary Equipment** The Contractor shall take the following safety measures in addition to JSSS 4.1.5 [Work Environment] when working with small stationary equipment; (1) In the following cases, provide covers or enclosure around parts or whole of the equipment; (a) When there is a risk of danger to workers by being hit by or caught into rotating parts, etc. of the equipment; (b) When there is a risk of danger to workers by flying of cut or broken workpiece, etc. from the equipment; and (c) When there is a risk of danger to workers due to scattering chips, etc. from the equipment. (2) Circular saw machines shall be equipped with devices to prevent worker danger, such as disc contact prevention device, etc. *To MD, The 4.1. General describes as follows:* *The Contractor shall comply with "OHSA Part1926 Subpart N- Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power" for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).* *Do you think if we shall specify Subpart I, §1926.304 Woodworking tools again to specify more details for saws in 4.4.3 (2)?*
4.4.4 定置機械の作業時の安全措置 請負者は、定置機械を操作して、又は使用して作業を行うときは、次の措置を講じなければならない。 (1) 大型及び小型定置機械に共通した措置 (a) 機械の保守点検の担当者の氏名を、機械の見やすい位置に掲示すること。 (b) 保守点検の担当者以外に、覆い・囲いや安全装置を取り外し、又はその機能を失わせないこと。 (c) 機械の操作者又は作業員が、機械の音、振動、臭気、温度等に異常を認めた場合は、機械の操作又は使用を停止して、保守点検の担当者へ報告させること。 (d) 機械に異常を認めた場合、異常の原因の特定と修理等の対応を行い、機械の安全が確認されるまで、機械の操作者又は作業員に機械を使用させないこと。 (2) 大型定置機械に関する措置 (a) 建設用リフト等を運転する場合、必要に応じ合図を行なう者を指名し、請負者が定めた一定の合図を無線通信、モニター等の手段を用いて、運転者に対して行なわせること。 (b) 地震時及び悪天候の場合には、製造者のマニュアルに従って点検・整備を行うこと。 (c) 各機械には、積載荷重、操作者氏名、資格名を、機械の見やすい	**4.4.4 Safety Measures for Working on Fixed Equipment** The Contractor shall take the following measures when operating or using the fixed equipment. (1) Measures Common to Large and Small Fixed Equipment. (a) Post the name of the person in charge of maintenance and inspection of the equipment in an easily visible position on them. (b) Other than the person in charge of maintenance and inspection, the cover / enclosure and safety devices must not be removed or their functions lost. (c) If an operator or worker of the equipment identifies an abnormality in the sound, vibration, odor, temperature, etc. of the equipment, stop the operation and report it to the person in charge of maintenance and inspection. (d) If an abnormality is found in the equipment, the cause of the abnormality must be identified and repaired, and the operator or worker should not be used until the machine safety is confirmed. (2) Safety Measures for Large Fixed Equipment (a) When operating a lift for construction, etc., appoint a person who performs a signal as necessary, and let the driver perform a certain signal determined by the Contractor by means of wireless communication, monitor, etc. about. (b) After the occurrence of an earthquake and adverse weather, check and maintain the equipment according to the manufacturer's manual. (c) Post the load capacity, operator's name, and the title of his	**4.4.4 Safety Measures for the Work with Stationary Equipment** The Contractor shall take the following measures when operating or using the stationary equipment. (1) Measures common to large and small stationary equipment (a) Post names of the person in charge of maintenance and inspection of the equipment on easy-to-see locations of the equipment; (b) Other person than the person in charge of inspection and maintenance shall not remove the cover, enclosure and safety devices of the equipment or make its function be lost (c) When the operator or worker of the equipment identifies an abnormality in sound, vibration, smell, temperature, etc., the operator or worker shall stop using it and report it to the person in charge of maintenance; (d) If any abnormality is identified in the equipment, it shall not be used until the cause of the abnormality is identified and repaired, and its safety is secured. (2) Safety Measures for large stationary equipment (a) When operating lifts for construction, etc., place Flagmen when necessary, and make operators operate with signals determined by the Contractor by means of wireless communication system, monitoring TV, etc.; (b) After the occurrence of earthquake or adverse weather, inspect and make maintenance the equipment according to its manufacturer's manual;

位置に掲示すること。 (d) 工事用エレベーター、建設用リフトを用いて作業を行なうときは、次に該当する場所に作業員を立ち入らせてはならない。 (i) 搬器の昇降によって作業員に危険が生ずるおそれのある箇所 (ii) 巻上げ用ワイヤロープの内角側で、当該ワイヤロープが通っているシーブ又はその取付け部の破損により、当該ワイヤロープが跳ねる、又は当該シーブ若しくはその取付具がの飛来することにより作業員に危険を生ずるおそれのある箇所 (e) 荷揚げ物の落下・飛散などの防止措置を講ずること。 (3) 小型定置機械に関する措置 (a) 機械のアタッチメントは、機械の製造者が推奨する規格のもの又はこれと同等の機能を有することを証明できるものを使用すること。 (b) 部品の交換後は、直ちに正常な動作性を確認すること。 (c) 機械の掃除、給油、検査、修理又は調整の作業を行う場合に際しては、機械の運転を停止すること。 (d) 機械の運転を停止したときは、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]の(1)及び(2)の措置を講じ、~~上記の~~点検・整備作業に従事する作業員以外の者が当該機械を運転することを防止すること。 (e) 研削といしについては製造者のマニュアルに従って使用すること。	qualification on each machine in an easily visible position. (d) When performing works using elevators and lifts, do not allow workers to enter the following locations. (i) Locations that may cause danger to workers due to lifting and lowering of the carrier (ii) Areas located inside angle of the hoisting wire rope where the wire rope may jump due to breakage of the sheave through which the wire rope passes or its mounting part, or locations that may cause danger to workers due to flying of sheave or its attachment. (e) Take preventive measures such as dropping / scattering of the cargo. (3) Safety Measures for Small Fixed Equipment (a) The attachment of equipment shall be of the standard recommended by the manufacturer or one that can be proved to have equivalent functions. (b) In case of having replaced parts, check the equipment to work properly immediately after it. (c) Stop operation when cleaning, refueling, inspection, repair or adjustment work for equipment. (d) When the equipment is stopped, take measures (1) and (2) in 4.1.7 [Safety Measures for Inspection and Maintenance of Equipment] of this specification and prevent anyone other than the workers engaged from operating the machine. (e) Use grinding wheels in accordance with the manufacturer's manual.	(c) Post the load capacity, operator's name and title at easy-see locations on the machine; (d) When performing works using elevators and lifts, do not allow workers to enter the following locations; (i) Locations that may cause danger to workers due to lifting and lowering of the carrier; and (ii) Areas located inside angle of hoisting wire rope where the wire rope may jump due to breakage of the sheave through which the wire rope passes or its mounting part, or locations that may cause danger to workers due to flying of sheave or its attachment; *To MD, please see Figure 1 in last page for (ii) above.* (e) Take preventive measures to avoid dropping or scattering of good transporting by the equipment. (3) Safety Measures for small stationary equipment (a) The attachment of equipment shall be of the standard and recommended ones by the manufacturer or that can be proved to have equivalent functions; (b) Immediately after replacement of parts, inspect the equipment to work properly; (c) Stop operation when cleaning, lubricating, inspection, repair or adjustment work for equipment; (d) When the operation of the equipment is stopped, take the measures (1) and (2) in JSSS 4.1.7 [Safety Measures for Inspection and Maintenance], and prevent anyone other than the workers engaged in the inspection and maintenance works; and (e) Work with grinding wheels in accordance with the manufacturer's manual.
4.5 電気機械器具 **4.5.1 電気機械器具の点検・整備** 請負者は本節 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。 (1) 日常点検 その日の電気機械器具の使用を開始する前に、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 本仕様書 4.5.2[電気機械器具の作業時の安全措置]の(1)(d)にもとづき設置された感電防止用漏電しや断装置 (b) 電気機械器具で接地をしたものの接地線の切断、接地極の浮上がり等の異常の有無 (c) 移動電線及びこれに附属する接続器具の被覆又は外装の損傷の有無 (2) 定期点検	**4.5 Electric Power Equipment** **4.5.1 Inspection and Maintenance of Electric Power Equipment** The Contractor shall perform the following inspection and maintenance in accordance with 4.1.6 [Inspection and Maintenance of Equipment] in this section. (1) Daily Inspection Before using of electrical power equipment on that day, carry out the inspection based on the inspection table prepared by the Contractor including the following check list. (a) Electric leakage prevention and disconnection device installed based on (1) (d) of this specification 4.5.2 [Safety Measures for Working of Electric Power Equipment] (b) Abnormality such as disconnection of grounding wire and lifting of grounding electrode, although grounded with an electric power equipment (c) Whether there is damage to the sheathing or exteriors of the movable wire and its connecting equipment (2) Periodical Inspection	**4.5 Electric Power Equipment** **4.5.1 Inspection and Maintenance of Electric Power Equipment** The Contractor shall perform the following inspection and maintenance of electric power equipment in accordance with JSSS 4.1.6 [Inspection and Maintenance]. (1) Daily Inspection Before use of electrical power equipment on the day, carry out the inspection using the checklist prepared by the Contractor including the following inspection items; (a) Earth Leakage Circuit Breaker (ELCB) installed in accordance with (1) (d) of JSSS 4.5.2 [Safety Measures for Work with Electric Power Equipment]; (b) Abnormality of grounding such as disconnection of grounding wire and grounding electrode located not in ground; and (c) Damage to sheathing or exteriors of movable wire and its connecting equipment. (2) Periodic Inspection

電動機械器具は、製造者の取扱説明書に従い、請負者が作成した点検表に基づき、定期点検を行うこと。	When conducting periodic inspections of electrical power equipment, carry out inspections in accordance with the instruction manuals for each equipment, and store the inspection results until the target work is finished.	Periodic inspection shall be carried out using the checklist prepared by the Contractor including the inspection items specified by the manual of its manufacturer.
4.5.2 電気機械器具の作業時の安全措置 請負者は、電気機械器具を使用した作業時の感電防止のために、次の措置を講じなければならない。 (1) 電気機械器具、開閉器、ケーブル、感電防止用漏電しや断装置 (a) 電気機械器具及び関連した器具・装置は、当該国の法律で規定されたものを使用すること、あるいは国際的な規格品を用いること。 (b) 電気機械器具用の開閉器は、カバー付きを使用し、金属製などの箱に収め、操作が容易な位置で湿気がない所に設置すること。開閉器・手元スイッチ等には、箱に危険を表わす色を塗る等の手段にて、感電に対する注意喚起を促すこと。 (c) 電気機械器具の電源用電線は、キャブタイヤケーブルを使用すること。 (d) 対地電圧が百五十ボルトをこえる電動機械器具、~~で、対地電圧が百五十ボルトをこえるもの~~又は~~水等~~導電性の高い液体等による湿潤~~している場所箇所、その他~~鉄板や~~上、~~鉄骨~~上、定盤(~~鉄製~~の作業~~テーブル~~)上等の導電性の高い場所~~でにおいて~~使用する~~器具もの~~については、~~漏電による~~感電~~の危険を~~防止~~するの~~ため、~~当該電動機械器具が接続される電路に、~~当該電路の定格に適合し、感度が良好~~であり~~、かつ動作性を確認した~~確実に作動する~~~~感電防止用漏電しや断装置を接続すること。 (e) 前項に規定する措置を講ずることが困難なときは、電気機械器具の金属製外わく、電動機の金属製外被等の金属部分を、接地して使用すること。 (2) 電気機械器具の作業による感電の危険又は誤操作による危険の防止のため、作業箇所には十分な照度を確保すること。 (3) ケーブル、電線の取り扱い 移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。 (4) 電気機械器具の修理・移動・保守 (a) 電気機械器具の修理や移動の作業は、電源を切断して行うこと。 (b) ヒューズの取り換え (i) ヒューズを鉄線・銅線等で代用しないこと。 (ii) ヒューズの取りかえは、指名した者に行わせること。 (5) 電気機械器具の使用禁止 次のいづれかの状態のときは、作業員に電気機械器具の使用を、禁止すること。	**4.5.2 Safety Measures on Electric Power Equipment** The Contractor shall take the following measures to prevent electric shock when performing works using electric power equipment. (1) Electric Power Equipment, Switches, Cables, Electrical Leakage Prevention and Disconnection Devices (a) Use electric power equipment and related equipment & devices shall be stipulated by the laws of the target country or use international standard products. (b) Use switches with covers for electrical power equipment, place them in a metal box, etc., and install them in a place where they are easy to operate and free from moisture. For switches and hand switches, call attention to electric shock by painting the box with a color that represents danger. (c) Use cabtyre cables as power cables for electrical power equipment. (d) For electric power equipment that have a ground voltage exceeding 150 volts, or equipment that is used in wet areas with highly conductive liquids, on steel plates, steel frames and iron tables, etc. For preventing electrical shocks, connect an electrical leakage prevention or disconnection device that conforms to the rating of the relevant circuit, has good sensitivity, and has confirmed operability. (e) When it is difficult to take the measures in the preceding paragraph, use metal exterior of electrical power equipment or metal outer casing of electric motor while grounding them. (2) Ensure sufficient illuminance at the work site to prevent danger of electric shock due to work of electrical power equipment or danger due to incorrect operation. (3) Handling of Cables and Wires Avoid hanging cables, electric wires, etc. directly on nails, reinforcing bars, or log scaffolding to protect the coating. (4) Repair, Movement and Maintenance of Electrical Power Equipment (a) Turn off the power before repairing or moving electrical power equipment. (b) Replacement of fuses (i) Avoid replacing the fuse with iron wire or copper wire (ii) Have the designated person replace the fuse (5) Prohibition of Use of Electric Power Equipment In any of the following conditions, the use of electric machinery is prohibited for workers. (a) The worker's body is wet, the worker is in a puddle, or touches the ground with the worker's bare feet	**4.5.2 Safety Measures forWorks with Electric Power Equipment** The Contractor shall take the following measures to prevent electric shock when performing works using electric power equipment. (1) Electric power equipment, switches, cables, ELCB (a) Use electric power equipment, equipment and devices such as switches, cables, ELCB in accordance with the Laws of the Country or internationally accepted standards; (b) Use switches with covers for electrical power equipment, place them in a metal box, etc., and install them in a place where they are easy to operate and free from moisture/wet. Prevent electric shock by painting boxes for switches and hand switches with color to show danger; (c) Use cabtyre cables for power cables for electrical power equipment; (d) When electric power equipment that have ground voltage exceeding 150 volts, or equipment that is used in wet areas with highly conductive liquids, on steel plates, steel frames and steel tables, etc., for preventing electrical shocks, provide ELCB in the circuit for electric power equipment. The ELCB shall conform to the rating of the relevant circuit, and be of good sensitivity and operability. *To MD,* *Please coordinate 7.7 Temporary Elect. Installations.* *Electric leakage prevention and disconnection device is important device.* (e) When it is difficult to provide ELCB specified in the above (d), metal exterior of electrical power equipment or metal outer casing of electric motor of electrical power equipment shall be grounded for use of electric power equipment. (2) Provide enough illuminance at the work site to prevent danger of electric shock to the workers due to work of electrical power equipment or danger due to incorrect operation. (3) Handling of electric cables and wires Avoid hanging electric cables, electric wires, etc. directly on nails, reinforcing bars, or logs in scaffolding to protect their coating. (4) Repair, movement and maintenance of electrical power equipment (a) Turn off the power before repairing, moving or making maintenance of electric power equipment; (b) Replacement of fuses (i) Prohibit replacing fuse with iron wire or copper wire; and (ii) Make the designated person replace the fuse. (5) Prohibition of use of electric power equipment Use of electric power equipment shall be prohibited to workers under any of the following situation;

(a) 作業員の身体が濡れている、作業員が水溜まりにいる、又は地面に作業員の素足で接触している状態 (b) 電気機械器具が濡れている状態 (6) ~~仮設電気設備又は~~電気機械器具の異常を発見したときは、直ちに電源を切断し、作業を中止すること。 (7) 電気機械器具を使用する作業員には、作業に適切な服、~~作業に必要な~~保護帽、安全靴等の保護具を着用させること。 (8) 感電事故が発生した場合は、~~感電事故が発生した~~当該電気機械器具の電源を切ること及び本仕様書 3.2.2[充電した架空線の近くでの工事の現場管理](6)に規定の感電事故発生時の対応に従い、処置を行うこと。	(b) Electric power equipment is wet (6) When any abnormality in temporary electrical equipment or electrical power equipment is identified, immediately turn off the power and stop the work. (7) Have workers who use electric power equipment wear appropriate working clothes, protective caps and safety shoes, etc. (8) When an electric shock occurs, turn off the power of the electrical power equipment and take measures in accordance with 3.2.2 [Site Management for Construction near Charged Circuit] (6).	(a) The worker's body is wet, the worker is in puddle, or the worker touches on ground with the worker's bare feet; and (b) Electric power equipment is wet. (6) When any abnormality in electric power equipment is identified, immediately turn off its power and stop the work. (7) Make workers who use electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes, etc. (8) When electric shock accident occurs, turn off the power of the electrical power equipment and take measures in accordance with 3.2.2 [Site Management for Construction near Charged Circuit] (6).

Terms
BS 6100 Part 6
12 76016 batching plant: plant (01) for mixing, storing and supplying measured quantities of concrete (01), asphalt (01) or aggregate (01)
12 76012 crushers: machine for reducing rock (03 23027) to small particles

For Using Earthmovers to Lift and Place Heavy Loads

Circular saw machines

https://www.isastur.com/external/seguridad/data/en/2/2_9_8.htm

8. Hazards resulting from the use of circular saws
Hazards:
·Projected particles.
·Electric shocks.
·Breakage of the disc.
·Cuts and amputations.
·Blows caused by objects.
·Abrasions and becoming trapped.
·Overstrain.
·Ambient noise.

Preventive measures:
·Circular saw machinery is to be equipped with the following protective elements: guard for the disc, cut-dividing blade, mechanism for pushing the part to cut and guide, guard for the pulley drive, watertight electric switch and earth, which must be incorporated in the power lead itself.

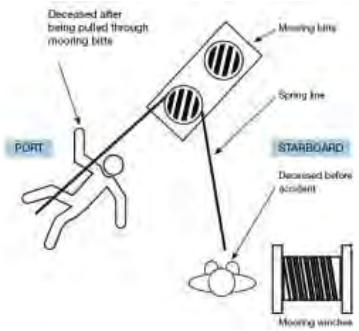
https://safety4sea.com/fatal-accident-mooring-operation-deck/
Fatal accident during mooring operation on deck
During mooring operation on board, a Hong Kong registered bulk carrier, a crew member was killed after being hit by a mooring rope, the HK Marine Department informs. The chief officer was the person in charge of the mooring operation at the forward station of the vessel, assisted by other crew members including one ordinary seaman (OS)



https://www.marineinsight.com/marine-safety/avoiding-death-traps-on-ships-understanding-dangers-of-mooring-operation/

2) Rope Bight
Mooring ropes are long and heavy ropes stored on board ships in coil form. When these ropes are under operation, they tend to form a coil or ring shape naturally known as rope bight.

Rope Bight
If a person involved in mooring operation comes under this rope bight, the pull of the rope can drag him over the ship or smash him in the hard deck over machines. Several injuries and deaths have been reported due to crew unaware of standing over bight and dragged by the rope.

The best ways to avoid accidents due to rope bight are:
•The crew must be aware of where he is standing while handling the ropes or when near them. It must be repeatedly made known to them that they should NEVER stand in the bight of a rope as the smallest error can cause them their life

•The supervisor must concentrate on others action and should not involve himself/herself in the operation as working hand. Being the officer in charge of the whole operation, the person must ensure that he oversees the safe mooring operation and carry out the Master's orders. There is absolutely no need, unless in a critical situation, for the officer to get involved with the handling of ropes as rather than helping the situation, it only further increases the risk

滑車内角側周辺　立ち入り禁止
*　ワイヤーロープの引っ掛かりなど予想しない荷重が作用する場合があります。*
*　一般的には巻き上げ機に過負荷制御機能があるケースは残念ながら少数です。*
*　従って、滑車が壊れワイヤーロープが跳ねることを前提にし、滑車の内角側周辺には立ち入らない作業計画をお立てください。*

5 運搬作業 **5.1 一般事項** (1) 本章では、運搬作業にかかわる運搬車両の運転者、補助員、監視員、誘導員(「運搬車両の作業員」という。)、運搬機械の操作者及び合図者、(「運搬機械の作業員」という。)、運搬車両・運搬機械の点検・整備を行う者「運搬車両・機械の整備の作業員」という。)の危険を防止するための措置について規定する。 (2) 本章では、現場(Site)内の運搬作業、異なる現場間での運搬作業、現場への又は現場から資機材を運搬する道路での運搬作業について規定する。 (3) 本仕様書で使用する用語の定義は以下のとおりである。 (a) 運搬車両とは、トラック、ダンプトラック、セミトレラー、タンクローリー等の物を運搬するための車両をいう。 (b) 運搬機械とは、ベルトコンベヤを利用して物を運搬するための定置の機械をいう。	**5 Transport** **5.1 General Requirement** (1) This chapter specified the safety requirements for the drivers, assistants, spotters and guiders of transportation vehicles (referred to as Contractor’s Personnel of transportation vehicles), operators, flagmen of transport equipment (referred to as Contractor’s Personnel of transport equipment), inspectors, mechanics of transportation vehicles and equipment (referred to as Contractor’s Personnel for the maintenance of transportation vehicles and equipment) by transport works. (2) This chapter specified the transport works of the materials in the site, between the deference sites and to/from the site. (3) Definitions of terms in JSSS are as follows. (a) “Transport Vehicle” means the vehicle for transporting materials such as tracks, dump tracks, tank lorries and semi-trailers, etc. (b) “Transport Equipment” means the fixed machine for transporting materials with belt conveyors.	**5 Transportation Works** **5.1 General Requirements** (1) This Chapter specifies the safety measures for the drivers, assistant drivers, Spotters, Flagmen and workers of transportation vehicles (hereinafter referred to as “workers for transportation vehicles), operators, Flagmen and workers of transportation equipment (“workers for transportation equipment)”, mechanics and workers for repair and maintenance of transportation vehicles and equipment (“workers for the maintenance”) in the transportation works. (2) This Chapter specifies the safety measures for transportation works of the Goods, Materials, etc. in and between the Site and on roads outside the Site. (3) Definitions of terms in JSSS are as follows. (a) “Transportation Vehicle” means the vehicle for transporting Goods, Materials, etc. such as tracks, dump tracks, tank lorries, semi-trailers, etc. (b) “Transportation Equipment” means the fixed machine for transporting materials such as belt conveyors (excluding those of portable and provided in the construction facilities.

5.2 運搬作業

5.2.1 作業員への周知

請負者は、運搬作業を行うときは、作業に必要な下記の安全上の措置について、必要に応じ当該作業員に説明しなければならない。

(1) 運搬車両の作業員
  (a) 運搬作業内容、作業方法、作業範囲
  (b) 運搬車両の作業場所及び運行経路
  (c) 運搬車両の転倒又は転落の危険のある場所
  (d) 高圧線、危険物貯蔵庫などの危険箇所と運搬車両の移動制限範囲
  (e) 作業員の立入禁止箇所及び運搬車両の進入禁止箇所の特定と注意標識、柵の設置場所
  (f) 運搬車両の作業場所周辺の安全通路
  (g) 誘導者、監視員の配置場所
  (h) 運搬車両・運搬機械に異常が発生したときの対処方法
  (i) サイト隣地や公道における近隣住民・第三者への運搬車両による交通事故防止措置
  (j) 運搬車両による振動、騒音、粉じん等の環境影響を軽減する措置
(2) 運搬機械の作業員
  (a) 運搬機械の~~作業場所~~危険性
  (b) 立入禁止箇所の特定と注意標識、柵の設置場所
  (c) 運搬機械内又はその周辺の安全通路
  (d) 運搬機械に異常が発生したときの対処方法
(3) 運搬車両・機械の整備の作業員
  点検・整備のときに、作業員におよぶおそれのある危険及び危険箇所

5.2.2 運搬車両・運搬機械の運転者及び操作者

請負者は、本仕様書 4.1.3[建設機械の運転者及び操作者]に準じ、運搬車両の運転者又は運搬機械の操作者の適正配置、氏名の運搬車両・運搬機械への明示、作業前の健康状態の確認を行わなければならない。

5.2.3 安全教育と指導

請負者は、本仕様書 4.1.4[安全教育と指導]に準じ、運搬車両・運搬機械の特性に応じて運搬車両の運転者、運転を補助する者（運転助手）、運搬機械の操作者へ、次の事項を含む教育を行わなければならない。

(1) 運搬車両の交通事故防止
  (a) 交通事故防止のための事項
    (i) 交通事故防止の運転ルール

5.2 Transport Works

5.2.1 Instruction for Contractor's Personnel

The Contractor shall instruct the following safety measures for Contractor's Personnel as necessary in transport works.

(1) Contractor's Personnel of transportation vehicles
  (a) Work contents, methods, ranges
  (b) Work places and service roads of transportation vehicles
  (c) The place with danger of the falling of transportation vehicles
  (d) Hazardous locations and the area of movement and operation restriction such as high-voltage lines and dangerous goods storage
  (e) Identification of restricted areas for common workers and transportation vehicles with caution signs, and fence.
  (f) Safety walkway surrounded the work places of transportation vehicles
  (g) Placements of flagmen and spotters.
  (h) Process of malfunction in transportation vehicles
  (i) Prevention measures of transportation vehicles' accidents to neighboring residents and third parties on adjacent sites and public roads.
  (j) Mitigation measures for effecting of environmental such as vibration, noise, and dust by transportation vehicles.
(2) Contractor's Personnel of transport equipment
  (a) Operation area of transport equipment
  (b) Identification of restricted areas, caution signs, and fence.
  (c) Safety walkway around and in the transport equipment
  (d) Process of malfunction in transport equipment
(3) Contractor's Personnel for the maintenance of transportation vehicles and equipment

  Dangers and restricted areas for Contractor's Personnel in inspections and maintenances.

5.2.2 Operators and Drivers of Transportation vehicles and Transport Equipment

The Contractor shall ensure the proper assignment of drivers of transportation vehicles and operators of transport equipment and indicate the name of operators and drivers on transportation vehicles and transport equipment, and to carry out the health check before the work. All requirements are complying with JSSS 4.1.4 [Operators and Drivers of Construction Machineries].

5.2.3 Safety Instructions

The Contractor shall conduct the following trainings for drivers and driving assistants of transportation vehicles and operators of transport equipment complying with JSSS 4.1.5 [Safety Instruction] according to the characteristic of transportation vehicles and transport equipment.

(1) Prevention of traffic accidents on transport vehicle

5.2 Transportation Works

5.2.1 Instruction to the Workers

The Contractor shall instruct the following safety measures for Contractor's Personnel as necessary in the transportation works.

(1) Workers of transportation vehicles
  (a) Work contents, methods, ranges;
  (b) Work places and route of transportation vehicles;
  (c) Places with danger of falling of transportation vehicles;
  (d) Hazardous locations and areas restricted of movement and operation due to such as high-voltage lines and dangerous Goods storage;
  (e) Identification of restricted areas for the workers and transportation vehicles and locations of caution signs and fences;
  (f) Safety walkways in and around the work places of transportation vehicles;
  (g) Placements of Spotters and Flagmen;
  (h) Measures when malfunction of transportation vehicles;
  (i) Prevention measures of traffic accident due to transportation vehicles to residents and third parties neighboring areas of the Site and public roads; and
  (j) Mitigation measures for avoiding effects to environment such as vibration, noise, dust, etc. by transportation vehicles.
(2) Workers of transportation equipment
  (a) Hazards of transportation equipment;
  (b) Identification of restricted areas for the workers and locations of caution signs and fences;
  (c) Safety walkway around and in the transportation equipment; and
  (d) Measures when malfunction of transportation equipment.
(3) Workers for maintenance

  Dangers and restricted areas for workers in inspection and maintenance works.

5.2.2 Drivers and Operators

The Contractor shall assign drivers of transportation vehicles and operators of transportation equipment, indicate the name of operators and drivers on easy-to-see locations of transportation vehicles and transportation equipment, and carry out the health check before the work in accordance with JSSS 4.1.3 [Operators and Drivers].

5.2.3 Safety Trainings and Instructions

The Contractor shall conduct the trainings and instructions on the following items for drivers and driving assistants of transportation vehicles and operators of transport equipment complying with JSSS 4.1.4 [Safety Instructions and Training] according to the characteristic of transportation vehicles and transport equipment.

(1) Prevention of traffic accidents with transportation vehicle

(ii) ~~公道での交通事故の多い第3者のバイクとの接触・衝突の事故防止のための運転方法~~

(iii) ~~公道で車両の前へ飛び出す住民、バイクとの接触・衝突の事故防止のための運転方法~~

(iv) 公道での住民、バイクとの接触・衝突の事故防止のための運転方法

(v) 追い越しするとき及び追い越されるときの交通事故防止のための運転方法

(vi) 凸凹や障害物のある道路での交通事故防止のための運転技術

(b) 車両整備不足による交通事故防止のために、車両の運転開始前の点検整備の徹底

(c) 当該運搬車両への乗車を許可されたもの以外の乗車の禁止の徹底

(2) 運搬機械の運転及び整備時の事故防止

(a) 運搬機械運転時の事故防止

(i) 運搬機械始動時の合図の徹底

(ii) 緊急時の停止方法の確認

(iii) ベルト上に乗ることの禁止

(b) 運搬機械の整備時の事故防止

(i) 運搬機械停止時の誤作動の防止のための措置の確認

(ii) 運搬機械の点検整備後の運転再開前の合図の徹底

(a) Items for prevention of traffic accidents

(i) Driving rules for prevention of traffic accidents

(ii) Driving methods to prevent accidents of contact and collision with motorcycles on the public roads

(iii) Driving methods to prevent accidents in overtaking and undertook

(iv) Driving methods to prevent accidents on the road with bumps and obstacles

(b) Inspections and maintenances before starting operation to prevent traffic accidents due to insufficient maintenance

(c) Prohibition of boarding other than those who permitted to board the transportation vehicles.

(2) Prevention of accidents in operations and maintenances of transport equipment

(a) Prevention of accidents in operations of transport equipment

(i) Implementation of signals/alarm in starting the transport equipment

(ii) Confirmation of the measure of emergency stop

(iii) Prohibition of boarding on the belt of the belt conveyors

(b) Prevention of accidents in maintenances of transport equipment

(i) Confirmation of the measures to prevent the malfunction when the transport equipment stops

(ii) Implementation of signals in restarting the transport equipment after the maintenances

(a) Items for prevention of traffic accidents

(i) Driving rules for prevention of traffic accidents;

(ii) Driving methods to prevent accidents of contact and collision with residents or motorcycles on roads;

(iii) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others; and

(iv) Driving methods to prevent accidents due to holes, bumps or obstacles on the road.

(b) Inspection and maintenance before starting operation to prevent traffic accidents due to insufficient maintenance

(c) Prohibition of boarding of other persons than those who permitted to ride *(board?)* on transportation vehicles.

(2) Prevention of accidents with transportation equipment

(a) Prevention of accidents in operation of transportation equipment

(i) Be thorough on alarm at starting the operation of transportation equipment

(ii) Confirmation of the measures of emergency stop

(iii) Prohibition of ride *(boarding?)* on the belts of the belt conveyors

(b) Prevention of accidents at inspection and maintenance

(i) Confirmation of measures to prevent mis-operation such as sudden start during the time of the transportation equipment is stopped; and

(ii) Be thorough on alarm when restarting the operation of the transportation equipment after inspection and maintenance.

5.3 運搬車両の点検・整備

5.3.1 運搬車両の搬入時の点検

請負者は、運搬車両の使用を開始するに当たり、搬入時の点検・整備記録の確認を、本仕様書4.2.1[建設機械の点検整備]に従って、行わなければならない。この点検には、本仕様書 5.3.2 に規定の点検項目を含まなければならない。

搬入時の点検に合格しない運搬車両は、現場内で使用してはならない。この運搬車両には、資機材供給者の車両等の工事事に必要な全ての運搬車両を含めなければならない。

点検結果の要約は進捗報告書で報告しなければならない。

5.3.2 運搬車両の点検・整備

請負者は、本仕様書 4.2.1[建設機械の点検整備]に規定の点検事項のうち当該運搬車両に適用すべき事項に加えて、次の日常点検、定期点検に規定の事項を含めた日常点検表、定期点検表を作成し、点検・整備を実施しなけれ

5.3 Inspections and Maintenance of Transportation vehicles

5.3.1 Inspections in Installation of Transportation vehicles

The Contractor shall ensure the inspection and maintenance records complying with JSSS 4.1.6 [Inspections in Installations] before starting the transportation vehicles during installation on the site. This inspection shall be included the items specified in JSSS 5.3.2.

The Contractor shall reject operating the transportation vehicles which do not pass the inspections. The transportation vehicles shall be included the all vehicles necessary for the construction works, such as the vehicles of equipment and materials suppliers.

5.3.2 Inspections and Maintenances of Transportation vehicles

The Contractor shall carry out the inspections and maintenances with the daily and periodic checklist included the following items of (1) daily inspections and (2) periodic inspections, addition to the items which are specified in JSSS4.1.7 [Maintenances] to be applied to the transportation vehicles.

5.3 Inspection and Maintenance of Transportation Vehicles

5.3.1 Inspection at Delivery

The Contractor shall inspect the inspection and maintenance records of the transportation vehicles complying with JSSS 4.2.1 [Inspection and Maintenance of Construction Equipment] before starting of use of transportation vehicles at delivery on the Site. This inspection shall be included the items specified in JSSS 5.3.2 below.

The Contractor shall reject operating the transportation vehicles which do not pass the inspection. The inspection at delivery shall be made on all transportation vehicles necessary for the Works including the vehicles of suppliers of Goods, etc.

The results of inspection and maintenance shall be kept and their summary shall be reported in the progress report.

5.3.2 Inspection and Maintenance

The Contractor shall prepare the daily and periodic checklists including the items of (1) daily inspection and (2) periodic inspection below, and carry out the inspection and maintenance applying JSSS 4.1.6 [Inspection and Maintenance] and JSSS 4.2.1 [Inspection and Maintenance of

ばならない。なお、運搬車両は点検・整備が完了するまで使用してはならない。また、点検結果の要約を進捗報告書で報告しなければならない。

(1) 日常点検

請負者は、運搬作業を行うときは、その日の作業を開始する前に、次の項目を含む点検表に基づく点検を行なうこと。

(a) 運搬車両の点検項目：制動装置及び操縦装置の機能、荷役装置及び油圧装置の機能、車輪の異常の有無、前照燈、尾燈、方向指示器及び警音器の機能

(b) 製造者のマニュアルに規定の作業前点検項目

(2) 定期点検

請負者は、本仕様書 4.1.9[定期点検]に従い、次の項目を含め定期に点検を行ない、必要に応じて整備を実施しなければならない。

(a) 製造者のマニュアルに規定の定期点検の項目

(b) ~~運搬車両の場合：~~当該国の法律で規定の緊急対応用の備品（例えば発煙筒、三角表示板、消火器等）の有無と使用期限の確認

5.3.3 運搬車両の点検・整備時の安全措置

荷台等の下での点検、整備等の作業を行う場合においては荷台等が不意に降下することによる作業員の危険を防止するため、安全支柱、安全ブロツク等を使用しなければならない。これらを使用していないときは、荷台等の下に作業員を立ち入らせてはならない。

(1) Daily Inspections

The Contractor shall carry out the daily inspections based on the checklist included the following items which is prepared by The Contractor complying with JSSS 4.1.8 [Daily Inspections] before starting the work.

(a) Inspection items of transportation vehicles : Functions of braking devices, control devices, cargo handling devices and hydraulic devices, malfunction of wheel system, function of headlights, taillights, direction indicators and horn.

(b) Inspection items before operation specified in the manufacture's manual

(2) Periodic inspections

The Contractor shall carry out the inspections included the following items complying with JSSS 4.1.9 [Periodic Inspections] and the maintenances as necessary.

(a) Periodic inspection items specified in the manufacture's manual

(b) Transportation vehicles: Emergency equipment such as smoke cylinders and fire extinguishers, etc. and to check their expiration date.

5.3.3 Safety Measures in Inspections and Maintenances of Transportation vehicles

The Contractor shall ensure to put the safety blocks or safety supports in order to prevent the open box bed descending unexpectedly in inspections and maintenances under the open box bed. When the Contractor do not put the safety blocks or safety supports, the Contractor shall prohibit Contractor's Personnel from entering under the open box bed.

Construction Equipment]. The results of inspection and maintenance shall be kept and their summary shall be reported in the progress report.

(1) Daily Inspection

The Contractor shall carry out the daily inspection using the checklist including the following items:

(a) Braking devices, control devices, cargo handling devices, hydraulic devices, wheel system, headlights, taillights, direction indicators and horn of the transportation vehicles; and

(b) Inspection items specified in the manufacturer's official instructions and recommendations of the transportation vehicles.

(2) Periodic inspections

The Contractor shall carry out the inspection using the checklist including the following items and maintenance as necessary.

(a) Periodic inspection items specified in the manufacturer's official instructions and recommendations of the transportation vehicles.; and

(b) Emergency kit such as red fusee, red warning triangle, fire extinguisher, etc. if required by the Laws of the Country and their expiration date.

5.3.3 Safety Measures at Inspection and Maintenance

The Contractor shall put safety blocks or safety supports to prevent cargo bed descending unexpectedly at the time of inspection and maintenance under cargo bed of vehicles. When the Contractor do not put the safety blocks or safety supports, the Contractor shall prohibit workers from entering under the cargo bed of vehicles.

5.4 運搬車両による運搬作業

5.4.1 運搬車両の作業環境

請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。

(1) 運行経路について必要な幅員を保持すること、地盤の不同沈下を防止すること、路肩の崩壊を防止すること、常に補修し安全に走行できるよう維持すること等必要な措置を講じること。

(2) 運行経路の必要と認められる箇所には、制限速度を示す標識を立て、カーブ、交差点、危険箇所（路肩、崖縁等）等には注意標識を立てること。

(3) 運搬車両の走路と歩行者の安全通路を明示し、走路が狭隘な（狭くゆとりがない）箇所には運搬車両用の退避所を設けること。

(4) 規模の大きな工事現場においては運搬専用道路を設け、なるべく一方通行として、必要に応じて適当な退避所を設けること。

(5) 夜間の運搬作業時には、運行経路の必要箇所に照明を施すこと。

5.4 Transport Works by Transportation vehicles

5.4.1 Work Environment

The Contractor shall take the following measures for the safety working condition in the sites in operating transportation vehicles.

(1) Take the necessary measures for the service road with well maintenance such as keeping sufficient road width, preventing from uneven settlement, and collapse of the road shoulders

(2) Put the signboards indicating speed limit at the necessary places on service road and put caution signboards on curves, intersections, dangerous places (road shoulders, cliff edges, etc.).

(3) Indicate the service roads of transportation vehicles and safety walk ways for Contractor's Personnel and set the passing area if the service road is narrow.

(4) In large construction site, set the exclusive transport service road which is one-way if possible, and the passing area if necessary.

(5) Place the sufficient lighting instruments at the necessary place along the service roads when the work operating at night

5.4 Transport Works by Transportation Vehicles

5.4.1 Work Environment

The Contractor shall take the following measures for the safety working environment in the Site for operation of transportation vehicles.

(1) Take measures for the transportation road such as keeping sufficient road width, preventing from uneven settlement on roadway and collapse of road shoulders;

(2) Put signboards indicating speed limit at the necessary places on roads and put caution signboards on curves, intersections, dangerous places (road shoulders, cliff edges, etc.);

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow;

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads; and

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

5.4.2 運搬車両の運搬作業時の安全措置

請負者は、運搬車両による運搬作業時の安全の確保のために、運搬車両の運搬作業を十分理解した作業主任に、施工計画にもとづき作業を直接指揮させるとともに、本仕様書 ~~4.1.10[運用時の安全措置]~~ 4.2.3[建設機械の運用時の安全措置]に準拠するとともに、次の措置を講じなければならない。

(1) 当該国の法令で認められている場合を除き、車両運行時には荷台を含め~~及び~~運転席（キャビン）以外の場所への~~請負者の要員~~いずれの者の搭乗を禁止すること。

(2) 次の作業又は場所で、請負者の要員及び運搬車両に危険が及ぶおそれがある場合は、本仕様書 2.4[監視員、誘導員の配置]に従い、誘導員を配置すること。

(a) 運搬車両に荷を積み卸しするとき

(b) 運搬車両が後進するとき

(c) 荷の積込場、土捨場、崖の縁、見通しのきかない場所、公道との交差部、他の作業箇所に近接する箇所

(3) 運搬車両の荷の積載に関する措置

(a) 運搬車両に積載重量を明示すること。

(b) 偏荷重が生じないように積載すること。

(c) 荷崩れ又は荷の落下による作業員又は第 3 者への危険を防止するため、荷にロープ又はシートを掛ける等必要な措置を講ずること。

(d) 建設機械の運搬のためトレーラに建設機械を積込む作業は、本仕様書 ~~4.3.1[建設機械の積込及び積卸し]~~4.2.7[建設機械の搬送時の安全措置]の規定を遵守すること。

(e) 荷の固定用の繊維ロープ、ワイヤロープの点検を行い、異常を認めたときは、ただちに取り換えること。

(4) 運転者が運転位置から離れる場合は、本仕様書 ~~4.1.10[運用時の安全措置]~~ 4.2.3［建設機械の運用時の安全措置］の(7)に準じた措置を講ずること。

5.4.2 Safety Measures in Operations

The Contractor shall let an Operation Leader for transport works by transportation vehicles direct the operation based on the construction plan and take the following measures addition to complying with JSSS 4.1.10 [Safety Measures in Operations] in order to ensure the safety in operation by transportation vehicles.

(1) Safety measures for Contractor's Personnel

Prohibit that Contractor's Personnel ride on the open box bed and out of cabin in operations unless permitted by the law of country.

(2) Placement of flagmen for transportation vehicles

Place flagmen's complying with JSSS 2.4 [Spotters, Flagmen and the Like] to be at risks for the Contractor's Personnel or transportation vehicles at the following works or places.

(a) Loading and unloading the materials from transportation vehicles

(b) Drive transportation vehicles backward

(c) Places close to other work places such as loading places, dumping sites, cliffs, blinding points and intersections with public roads.

(3) Measures related in loading materials on transportation vehicles

(a) Indicate the limitation of loading weight on transportation vehicles

(b) Load to prevent from uneven material loading

(c) Take the necessary measures such as tighten the materials by sling or covered by sheets to against falling and/or collapse the materials from the open box bed for prevent of the risks of Contractor's Personnel and third parties.

(d) In loading the construction heavy equipment on trailers, comply with JSSS 4.2.7 [Safety Measures for Transportation of Construction Equipment］.

(e) Inspect wire ropes and/or synthetic fiver ropes for fix the materials. If any abnormality is found, replace the wire ropes and/or synthetic fiver ropes immediately.

(4) Measures when drivers move out from the drivers' seat

Take the measures complying with (7) in JSSS 4.2.3 [Safety Measures in Operation] when drivers move out from the driver's seat.

5.4.2 Safety Measures in Operations

The Contractor shall place Operation Leader for transportation works with transportation vehicles to direct the operation in accordance with the Method Statement and take the following measures in addition to complying with JSSS 4.2.3 [Safety Measures in Operation] to ensure the safety in operation with transportation vehicles.

(1) Prohibit anybody ride on places including cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

(2) Place Flagmen complying with JSSS 2.4 [Spotters, Flagmen and the Like] at the following works or places in which there are risks to the workers or transportation vehicles:

(a) Loading on and unloading from transportation vehicles Goods, Materials, etc.

(b) Drive transportation vehicles backward; and

(c) Places such as dumping sites, cliffs, places where prospect is not clear and intersections with public roads.

(3) Measures related with loading on transportation vehicles

(a) Indicate the limitation of loading weight on transportation vehicles;

(b) Prevent materials on cargo bed from uneven loading;

(c) Take measures such as tighten the materials with sling or covered by sheets to avoid falling or collapse of the materials from the cargo bed for prevention of risks to workers and third parties;

(d) Comply with JSSS 4.2.7 [Safety Measures for Transportation of Construction Equipment］ for transportation of the construction equipment on transportation equipment; and

(e) Inspect wire ropes and/or synthetic fiver ropes for fix the materials. If any abnormality is found, replace the wire ropes and/or synthetic fiver ropes immediately.

(4) When drivers leave the driver's seat, take the measures complying with (7) in JSSS 4.2.3 [Safety Measures in Operation].

5.5 運搬機械の点検・整備

5.5.1 運搬機械の設置時の試験

請負者は、運搬機械の設置作業終了時には、当該国の規則及び~~に基づき、又は規則がない場合は~~当該機械の製造者のマニュアルに従い、作動試験等の完成時試験を行うこと。

5.5.2 運搬機械の点検・整備

請負者は、本仕様書 ~~4.1.7[建設機械の点検・整備]~~ 4.1.6[機器の点検・整備]

5.5 Inspections and Maintenance of Transport Equipment

5.5.1 Testing in Installations of Transport Equipment

The Contractor shall conduct completion inspections such as commencement of operation just after the installation based on the regulation of the country and if there are no regulations in the country that to conduct the manual by the manufacture of transport equipment.

5.5.2 Inspections and Maintenances of Transport Equipment

5.5 Inspections and Maintenance of Transportation Equipment

5.5.1 Testing at Installation of Transportation Equipment

The Contractor shall conduct completion inspection and operation test just after the installation in accordance with the Laws of the Country and the manufacturer's official instructions and recommendations of the transport equipment.

5.5.2 Inspections and Maintenances of Transportation Equipment

及び 4.4.1[定置機械の点検・整備]に準拠するとともに、以下の日常点検、定期点検に記載した事項も含んだ、運搬機械の日常点検表、定期点検表の作成と各点検を実施し、整備、点検記録を保管し、その要約を進捗報告書で報告しなければならない。

(1) 日常点検

請負者は、運搬作業を行うときは、その日の作業を開始する前に、本仕様書 4.1.8[日常点検]に従い、次の項目を含む~~運搬車両・運搬機械の請負者が準備した~~点検表に基づく日常点検を行なうこと。

(a) ~~運搬機械の点検項目：~~原動機及びプーリーの機能、逸走等防止装置の機能、非常停止装置の機能、原動機、回転軸、歯車、プーリー等の覆い、囲い等の異常の有無

(b) 製造者のマニュアルに規定の作業を開始する前の点検項目

(2) 定期点検

請負者は、本仕様書 4.1.9[定期点検]に従い、製造者のマニュアルに規定の定期点検の項目を含め、定期に点検を行ない、必要に応じて整備を実施しなければならない。

The Contractor shall carry out the inspections and maintenances with the daily and periodic checklist included the following items of (1) daily inspections and (2) periodic inspections, addition to the items which are specified in JSSS 4.1.7 [Maintenances] and inform the results of inspections and maintenances by progress report.

(1) Daily Inspections

The Contractor shall carry out the daily inspections based on the checklist which is prepared by The Contractor included the following items complying with JSSS 4.1.8 [Daily Inspections] before starting the work.

(a) Inspection items of transport equipment: Function of motors, pulleys, prevention devices such as runway, emergency stop devices and covering of motors, rotating shafts, gears and pulleys, etc.

(b) Inspection items before operation specified in the manufacture's manual

(2) Periodic inspections

The Contractor shall carry out the periodic inspections included the items specified in the manufacture's manual and the maintenances as necessary complying with JSSS 4.1.9 [Periodic Inspections]

The Contractor shall prepare the daily and periodic checklists including the items of (1) daily inspection and (2) periodic inspection below, and carry out the inspection and maintenance with. applying JSSS 4.1.6 [Inspection and Maintenance] and 4.4.1 [Inspection and Maintenance of Stationary Equipment]. The results of inspection and maintenance shall be kept and their summary shall be reported in the progress report.

(1) Daily Inspections

Daily inspection shall be made using the checklist including the following items：

(a) Function of motors, pulleys, prevention devices against for example runaway, emergency stop devices and covers of motors, rotating shafts, gears and pulleys, etc.; and

(b) Inspection items before operation specified by the manufacturer's official instructions and recommendations.

(2) Periodic inspection

The Contractor shall carry out the periodic inspection including the items specified by the manufacturer's official instructions and recommendations.

5.6 運搬機械による運搬作業

5.6.1 運搬機械の設置、組立、解体作業

請負者は、運搬機械を設置、組立、解体の作業を行うときは、次の措置を講じなければならない。

(1) 運搬機械の装置・設備

運搬機械には以下の装置を備えること。

(a) 非常停止装置（コンベヤには、連続した非常停止スイッチを設け、又は要所ごとに非常停止スイッチを設けること。）

(b) 起動を予告する警報装置

(c) 動力伝導部分、ベルト、プーリー、ローラー等の作業員がはさまれ又は巻き込まれるおそれのある部分の覆い又は囲い

(d) 荷等の落下を防止するための装置

(2) 運搬機械の設置、組立、解体作業

運搬機械の設置、組立、解体の作業は、当該機械の専門家の指揮のもとに行うこと。

5.6.2 運搬機械の運搬作業時の安全措置

請負者は、運搬機械を運転するときは、次の措置を講じなければならない。

(1) 運搬機械の取扱説明書を機械に備えつけて、使用条件を機械に表示すること。取扱説明書等に記載された使用目的以外及び使用条件以外で機械を使用しないこと。

5.6 Transport Works by Transport Equipment

5.6.1 Installations, Assembly and Dismantling

The Contractor shall take the following measures in installation, assembly and dismantling of transport equipment.

(1) Devices and facilities of transport equipment

Ensure to be equipped the following devices and facilities in transport equipment

(a) Emergency stop buttons of transport equipment (in case of the belt conveyor, place the emergency stop buttons for each necessary point)

(b) Warning alarm systems for start-up of transport equipment

(c) Covers and guards to prevent workers contact on power transmission gear of transport equipment such as belt, pulley, roller, etc.

(d) The devices to prevent the dropping material from the belt.

(2) Installations, assembly and dismantling of transport equipment

Carry out the installations, assembly and dismantling of transport equipment based on the instruction by the expert.

5.6.2 Safety Measures in Operation

The Contractor shall take the following measures in operation of transport equipment.

(1) Indicate the terms of use on transport equipment by equipped with the manuals. Prohibit from using transport equipment on conditions

5.6 Transport ion Works by Transport Equipment

5.6.1 Installations, Assembly and Dismantling

The Contractor shall take the following measures in installation, assembly and dismantling works of transportation equipment.

(1) Devices and facilities of transportation equipment

Equip the following devices and facilities in the transportation equipment:

(a) Emergency stop system of transportation equipment (in case of the belt conveyor, place the emergency stop buttons for each necessary point);

(b) Warning alarm system for start-up of transportation equipment;

(c) Covers and guards to prevent workers contact to power transmission parts of transportation equipment such as belt, pulley, roller, etc.; and

(d) Devices to prevent material dropping from belts of transportation equipment.

(2) Installation, assembly and dismantling of transportation equipment

Carry out the installation, assembly and dismantling of transportation equipment under the instruction of the experts for the transportation equipment.

5.6.2 Safety Measures in Operation

The Contractor shall take the following measures in operation of transportation equipment.

(1) Provide user's manual and indicate conditions of use of transportation equipment at places of easy-to-see on the

(2) 運転中のベルトコンベアのベルト上に作業員を搭乗させないこと。

(3) 運搬機械の始動時、非常停止又は事故停止後の再起動時には、運搬機械周辺や荷の安全を確認した上で、運搬機械の操作を行うこと。

5.6.3 運搬機械の作業後及び修理等時の安全措置

(1) 作業終了時には、機械の機能を完全に停止したうえで、施錠（ロックアウト）等の機械が作動しない措置、施錠できない場合には監視員（警備員）の配置等の誤作動防止の措置、及び作動禁止の掲示（タグアウト）等措置を講じること。

(2) 運搬機械の掃除、給油、検査、修理等の作業時に、労働者に危険を及ぼす恐れがあるときには、上記と同じ措置を講ずること。

other than the condition specified in the manuals and Prohibit that workers step on the belt of operating belt conveyors.

(2) To confirm the safety of loading materials and surrounding of transport equipment when in start-up and restart after emergency stop and accidents stop.

5.6.3 Safety Measures after Operation and in Repairment

(1) To take safety measures just after the operation, to lock the function of the transport equipment completely, then take the measures for prohibition of operation such as lock out, and/or the measures for prevention from the malfunction such as the placement the security guard and/or tug out, etc.

(2) Take the same measures as (1) in cleaning, inspections, repairments and refueling of transport equipment if there are the risks for the worker.

transportation equipment.

(2) Prohibit from using transportation equipment on other conditions than specified by the manufacturer's official instructions and recommendations.,

(3) Prohibit workers ride on the belts during operating time of belt conveyors, and

(4) Start of operation after confirmation of the safety of loading materials and surrounding state of transportation equipment after normal, emergency and accidental stops.

5.6.3 Safety Measures after Operation and at Maintenance

(1) Take safety measures after the daily operation as below:

(a) Completely stop of the whole function of the transportation equipment,

(b) Take the following Lockout/Tagout Procedures for prevention of operation by mis-operation:

(i) Lock out operation system and provide tags to indicate "Do Not Start" or similar language to indicate that the equipment is not to be operated, or

(ii) Placement of security guards when lock out cannot be made and provide tags same as above.

To MD, I wanted to say Lockout/Tagout Procedures as shown below: However, it cannot describe properly. Can you kindly rewrite above (1) referring the following:
OSHA §1926.702 Requirements for equipment and tools.
(j) Lockout/Tagout Procedures.
(1) No employee shall be permitted to perform maintenance or repair activity on equipment (such as compressors, mixers, screens or pumps used for concrete and masonry construction activities) where the inadvertent operation of the equipment could occur and cause injury, unless all potentially hazardous energy sources have been locked out and tagged.
(2) Tags shall read Do Not Start or similar language to indicate that the equipment is not to be operated.

(2) Take the same measures as above (1) at the time when cleaning, inspection, maintenance and lubricating of transportation equipment if there are risks to the workers.

To MD; fo your information:
We considered the Transportation Equipment in JSSS is large/long belt conveyors such as shown in the photos below:
Belt conveyors for concrete aggregates:

4 請負者の機器

4.1 請負者の機器の一般的留意事項

4.1.1 一般事項

本章では、請負者の機器のうち、以下の建設機械、建設設備、定置機械、電動機械器具、器具工具(以下、「機器」という。)を扱う。運搬機械、揚貨機械については、それぞれ本仕様書 5[運搬作業]、6[揚貨・玉掛け作業]で扱う。

(1) 用語の定義

本仕様書で使用する用語の定義は以下のとおりである。

4 CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].

(4) Operators and signallers

(a) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also;

(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.

4 CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*]. (JC1)

JC1: 必ず 6 章(5 章に変更)に含めるようにしてください。
Be sure to include it in section 6 (now section 5).

NK: 第 5 章に揚重、玉掛について十分規定済み。
Section 5 stipulates regarding hoisting and rigging in detail.

(4) Operators and signallers (JC2)

JC2: "Spotters"に修正してください。 Please change to "Spotters"

NK: Spotters は次項目の対応の通り削除しました。
"Spotters" is deleted as explained in the next clause.

(a) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also; (JC3)

JC3: この operator は小文字にされていますが、全体を通してこの使い方とするか否かについては章ごとの整合性の観点から検討してください。
This "operator" is used lower case. It should be considered whether it is proper to use lower case as a whole of JSSS.

NK: "operator"という用語は JSSS では定義していません。第 9 章等他章でも小文字で表現しております。このままとします。
The term "operator" in not defined in JSSS. In other Chapters such as Chapter 9 [Concrete Works], the word "operator" is used in lower case. Left as it is.

(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also. (JC4)

JC4: この Spotter については総則で定義されていますが、signaller を含めるという意図で敢えてこの記述としているのでしょうか。
This "Spotter" is defined in the Chapter1, [General], but is it meant to include signaller?

4 CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].

(4) ~~Operators and signallers~~ Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.

~~(a) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also;~~

~~(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.~~

(a) 建設機械とは、次の自走型建設機械をいう。
(i) ブルドーザー、トラクターショベル等の整地・運搬・積込み用機械
(ii) パワーショベル、クラムシェル等の掘削用機械
(iii) 杭打ち機、アースドリル等の基礎工事用機械
(iv) ローラー等の締め固め用機械
(v) コンクリートポンプ車等のコンクリート打設用機械
(vi) ブレーカー、コンクリート圧砕機、解体用つかみ機等の解体用機械

(b) 建設設備とは、次の建設用の設備をいう。
(i) コンクリート用の骨材を製造する砕石設備（crusher）
(ii) コンクリート、アスファルトコンクリートを製造するコンクリート混合設備、アスファルトコンクリート混合設備(Concrete/asphalt concrete batching plant)

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers;

(g) Mobile cranes and other hoisting equipment;

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Contractor's Equipment to, around and

NK: 総則の定義で"Spotter"は、下記のように定義しています。ここで繰り返す必要はないと考えます。(b)は削除し、(4)の構成を右のように修正します。

(24) "Spotter" means a member of the Contractor's Personnel who is generally responsible for warning other Contractor's and Employer's Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor's Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like].

Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.

Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.

As "Spotter" is defied in Chapter 1 as above, it is unnecessary to repeat here. Therefore, (b) is deleted and clause (4) is modified as right.

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as: (JC5)

JC5: この定義使った方がいいのでは？後述

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers;

(g) Mobile cranes and other hoisting equipment;

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

4.1.2 各作業の作業員への周知 請負者は、機器を用いて作業を行うときは、作業に必要な下記の安全上の措置について、本仕様書 1.3[安全衛生にかかわる計画書]に規定の事項に加え、必要に応じ作業員に説明しなければならない。 (1) 建設機械の作業	4.1.3 Instruction for Contractor's Personnel Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method	4.1.3 Instruction for Contractor's Personnel Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall	4.1.3 Instruction for Contractor's Personnel Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall

(a) 作業内容、作業方法、作業範囲
(b) 種類、能力及び台数
(c) 作業場所及び運行経路
(d) 建設機械の転倒又は転落の危険のある場所
(e) 高圧線、危険物貯蔵庫などの危険箇所と機械の移動・稼働制限範囲
(f) 立入禁止箇所の特定と注意標識、柵の設置場所
(g) 誘導者、監視員の配置場所
(h) 建設機械の運転者、操作者
(i) 建設機械に異常が発生したときの対処方法
(j) サイト隣地や公道における近隣住民・第三者への建設機械による危険性
(k) 振動、騒音、粉じん等の環境影響軽減措置

(2) 建設設備の作業
上記(1)のうち建設設備の作業に該当する項目に追加して、次の措置を当該作業の作業員に説明すること。
(a) 建設設備の種類、能力、使用上の制限事項
(b) 建設設備の操作又は建設設備を使用する作業に伴う危険
(c) 建設設備の操作者
(d) 建設設備に異常が発生したときの対処方法

(3) 定置機械の作業
上記(1)のうち定置機械の作業に該当する項目に追加して、次の措置を当該作業の作業員に説明すること。
(a) 定置機械の種類、能力、積載荷重、使用上の制限事項
(b) 定置機械の操作又は定置機械を使用する作業に伴う危険
(c) 定置機械の操作者
(d) 定置機械に異常が発生したときの対処方法

(4) 電気機械器具の作業
上記(1)のうち電気機械器具の作業に該当する項目に追加して、電気機械器具を使用した作業による作業員の感電を防止するため、次の措置を当該作業の作業員に説明すること。
(a) 電気機械器具の種類、性能、用途
(b) 電気機械器具による感電の危険性
(c) 電気機械器具の作業者
(d) 電気機械器具に異常が発生したときの対処方法

4.1.3 機器の運転者、操作者、作業者

請負者は、機器の運転者、操作者、作業者の配置に関して、次の措置を講じなければならない。

(1) 本仕様書 1.8[請負者の要員の適正配置]に従い、必要な資格・技能等を有する運転者、操作者又は作業者に、機器の運転、操作又は作業を行わせること。

(2) 運転者、操作者又は作業者の氏名を、当該建設機械、建設設備、定置機械に明示するとともに、当該運転者、操作者又は作業者以外の者に、運転、操作又は作業を禁止する旨を表示しなければならない。

(3) 本仕様書 1.8.1[要員の適正配置上の留意点]に従

Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Work places, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) The preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities, location and scope of Spotters.

(6) Environmental impact mitigation including required measures against vibration, noise, dust and the like.

(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.

(8) The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures for breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

(12) The name of the authorised operator for each unit of Contractor's Equipment.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Work places, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) The preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities, location and scope of Spotters.

(6) Environmental impact mitigation including required measures against vibration, noise, dust and the like.

(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.

(8) The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures for breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

(12) The name of the authorised operator for each unit of Contractor's Equipment.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's

include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Work places, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) The preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities, location and scope of Spotters.

(6) Environmental impact mitigation including required measures against vibration, noise, dust and the like.

(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.

(8) The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures for breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

(12) The name of the authorised operator for each unit of Contractor's Equipment.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's

い、作業前の健康状態を確認し、当該機器の運転、操作又は作業に不適当な状態であると判断された運転者、操作者又は作業者を、当該作業に従事させてはならない。

4.1.4 安全教育と指導

請負者は、機器の運転者、操作者又は作業者が当該作業に従事するまでに、本仕様書 1.9(1)[教育訓練の実施]に規定する教育訓練に加えて、各機器の特性に応じて以下の項目について教育訓練を実施しなければならない。

(1) 当該機器の危険性、操作方法
(2) 安全・警報装置の機能・性能、操作方法、点検項目・点検方法
(3) 作業手順、運転開始の合図・連絡、日常点検
(4) 掃除・点検等の場合の運転停止、通電停止、起動装置施錠等の手順及び必要な措置
(5) 異常が発生したときの運転・操作・作業の停止と当該作業の担当者への報告
(6) 安全装置の取り外しの禁止

4.1.5 機器の作業環境

請負者は、機器の作業環境の確保のために、機器の特性に応じ必要な次の作業環境に関する措置を講じなければならない。

(1) 機器の作業による危険防止のため、作業箇所には十分な照度を確保すること。
(2) 機器への巻き込まれにより作業員に危険を及ぼすおそれのある機器を使用するときは、作業員の服装・頭髪等に関し、巻き込まれ防止の適切な措置を講ずること。
(3) 機器による粉じん、騒音、高温低温等から作業員を保護する措置を、本仕様書 2.1[適切な作業環境の整備]に従い講じること。措置を講じることが困難であるときは、作業員に保護具を着用させること。
(4) 運転に伴う加熱、発熱、漏電等による火災のおそれがある機器については、本仕様書 2.8[火災予防]に従い、消火器等を配備したうえで作業すること。
(5) 緊急事態発生時における連絡方法と応急処置の方法を、本仕様書 1.10[緊急事態対応計画及び緊急通報体制]及び 1.11[救急救護計画]に従い、運転者、操作者又は作業員が分かりやすい所に表示すること。
(6) 作業中に機器に異常が発見された場合には、運転者、操作者又は作業員に直ちに作業を中止させること。
(7) 当該機器の異常の原因の特定と修理を行うこと。

4.1.4 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.17 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.

Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:

(1) Driving rules for prevention of traffic accidents;
(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;
(3) Driving methods to prevent accidents including contact and collision with other persons, cycles, motorcycles and other vehicles;
(4) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others;
(5) Driving methods to prevent accidents due to holes, bumps or obstacles on the road;
(6) Required inspection and maintenance before starting operation;
(7) Proper use of vehicles including behaviour and control of passengers, prevention of

Equipment.

4.1.4 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment. (JC8)

JC8: 1.19 に equipment に必要なトレーニングが追加される形で総則が修正されているということでしょうか。
Does this mean that 1.19 [Safety Training Generally] has been revised to accommodate the necessary training for equipment operators?

NK: 1.19 (Issue 7)は次のように安全衛生の教育訓練の義務、各分野に関する詳細は安全計画書に示すことを一般規定して規定しています。そのため、1.19 は原案通りと致します。
The 1.19 (Issue 7) stipulates the responsibility of H&S education and training as general requirement, and details to be described in the Safety Plan. Therefore, 1.19 is left as it is.

1.19 Safety Training Generally
1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including: (JC9)

(1) Driving rules for prevention of traffic accidents;
(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;
(3) Driving methods to prevent accidents including contact and collision with other persons, cycles, motorcycles and other vehicles;
(4) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others;
(5) Driving methods to prevent accidents due to holes, bumps or obstacles on the road;
(6) Required inspection and maintenance before starting operation;
(7) Proper use of vehicles including behaviour and control of passengers, prevention of

Equipment.

4.1.4 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.

The health and safety training shall be done to the personnel including the following items depending on the characteristics of the Contractor's Equipment with which the personnel will be engaged in works.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;
(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;
(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;
(4) Stop of the operation and work with the Contractor's equipment when an abnormality occurs and report to the person in charge; and
(5) Prohibition from removing safety devices; and
(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:

(1) Driving rules for prevention of traffic accidents;
(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;
(3) Driving methods to prevent accidents including contact and collision with other persons, cycles, motorcycles and other vehicles;
(4) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others;
(5) Driving methods to prevent accidents due to holes, bumps or obstacles on the road;
(6) Required inspection and maintenance before starting operation;

	and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.	overcrowding, overloading and unauthorised passengers. JC9: ここの transportation に関するトレーニングの内容がかなり詳細なので、この内容と 1.19 の記述のバランスが取れているかを確認のうえ調整願います。 The provisions of the training for "transportation" here are quite detailed, so please make sure that this is harmonized with the description of 1.19.? NK: 本款の(1)~(7)の項目は、特に事故が多い交通事故の防止に関する教育に注力して規定しています。 The items (1) ~ (7) in this clause is emphasized to focus on education and training for prevention of traffic accidents which is very important. NK: 技能のある者を雇用し、請負者が機器を使用した作業に従事させるとの前提で、機械の特性に応じて行うべき教育と指導すべき事項を前半の(1)~(6)に追記致します。 The items (1)~(6) for education and training to the worker who is employed as qualified, skilled and experienced person are added at the beginning of this clause as stipulated in Japanese draft.	(7) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.
	4.1.5 Qualification of Operators Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that	4.1.5 Qualification of Operators (JC10) Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that JC10: 内容は qualification のことではないようです。workmanship ではないでしょうか。 The content is not about the qualification. Isn't it about workmanship? NK: 資格だけの規定ではないので、提案された workmanship は、辞書では何かを作る技術とありますので、款名は Requirements to Operators ではいかがでしょうか？MD 氏へ相談します。 Because the content of this Clause is not only qualification, we propose the title of the clause to be "Requirements to Operators" as the "workmanship" proposed by JICA means the skill with which something was made or done in the dictionary.	4.1.5 Requirements to Operators Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that
	(1) Operators shall be fully aware of the following: (a) Work procedures, possible risks and operation methods; (b) The need to stop all work when any defect or abnormality is detected; (c) Not to remove, interfere with or	(1) Operators shall be fully aware of the following: (a) Work procedures, possible risks and operation methods; (b) The need to stop all work when any defect or abnormality is detected; (c) Not to remove, interfere with or override any safety devices; (JC11) JC11: ここだけ動詞形 Only (c) is the verb form. NK: 名詞とします。 Modified to noun form as right.	(1) Operators shall be fully aware of the following: (a) Work procedures, possible risks and operation methods; (b) The need to stop all work when any defect or abnormality is detected; (c) Prohibition of removing, interfering with or overriding any safety devices;

override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(2) In addition, operators shall:

(a) Safely and competently operate the Contractor's Equipment;

(b) Operate all safety devices including emergency alarm and stop devices; and

(c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

4.1.6 Signalling

(1) Signalling between operators and Spotters and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(2) Signallers shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for signallers to give direct visible and audible signals to the operator, other systems including hand-held radios or video cameras must be provided and

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(2) In addition, operators shall:

(a) Safely and competently operate the Contractor's Equipment;

(b) Operate all safety devices including emergency alarm and stop devices; and

(c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility and control or ensure that other qualified persons perform these operations. (JC12)

JC12: operators の責任？機械責任者の仕事では？要修正。
Isn't this the operator's responsibility but equipment supervisor?

NK: コメントの通り、これらは管理者の責務である。削除。
As commented, it is supervisor's duty to control these aspects. Deleted.

4.1.6 Signalling

(1) Signalling between operators and Spotters and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(2) Signallers shall be located in a safe place and where they can clearly see and be seen by the operator. (JC13)

JC13: 冒頭で Spotters に signallers も含まれる旨定義されているので、ここで signallers が出るのは違和感があります。以下、signallers が出てくる場合も同様です。
As the top of this section, it is defined that Spotter is deemed to include signaller, it seems strange to use "signaller" here.

NK: 4.1.1 (4) での signaller の定義は削除しました。
2.4 で次のように Signallers を含めた Spotters の責務を規定しています。そのため、本款では Signallers は、Spotters に変更します。
The definition of "Signaller" in 4.1.1 (4) is deleted.
2.4 is specified the duties of the Spotters including Signallers as below. Therefore, Signallers are replaced with Spotters in this Section.

2.4 SPOTTERS, FLAGMEN AND THE LIKE
2.4.1 Definitions
In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of Spotter or Flagman in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.
2.4.2 Duties

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(2) In addition, operators shall:

(a) Safely and competently operate the Contractor's Equipment;

(b) Operate all safety devices including emergency alarm and stop devices; and

(c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility. ~~and control or ensure that other qualified persons perform these operations.~~

4.1.6 Signalling

(1) Signalling between operators ~~and Spotters~~ and any associated workers shall only be carried out by the Spotters.

(2) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

4.1.6 機器の点検・整備 請負者は、機器の点検、整備に関して次の事項を遵守し、使用する機器を良好な状態に維持しなければならない。 (1) 機器の保守管理のために、当該国の法律及び当該機器の製造者のマニュアルの規定に従い、本仕様書 4.2.1[建設機械の点検・整備]、4.3.1[建設設備の点検・整備]、4.4.1[定置機械の点検・整備]、4.5.1[電気機械器具の点検・整備]に規定する点検項目のうち、当該機器に該当する点検項目を網羅する日常点検表、定期点検表を準備し、次に規定する点検、検査を実施し、これを記録すること。 (2) 必要に応じて次に示す点検・検査を実施すること。 (a) (d)及び(e)については機器の整備に必要な能力と経験を持った者に、(b)については建設設備、定置機械の専門家に、(c)については機器の運転者、操作者又は作業者に行わせること。 (a) 建設機械の搬入時の点検 (b) 建設設備、定置機械の設置時の試験 (c) 日常点検 (d) 定期点検	used. **4.2 INSPECTION, MAINTENANCE AND REPAIR** 4.2.1 Requirements Generally (1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. (2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the	*Duties include for example:* *(1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.* *(2) Giving appropriate guidance and signals during operation of Contractor's Equipment to prevent the equipment tipping, overturning or falling.* *(3) Giving appropriate guidance and signals to prevent Contractor's Personnel from being struck or pinned by Contractor's Equipment.* *(4)* Assisting drivers *of vehicles including trucks and operators of other Contractor's Equipment in positioning their vehicles particularly when manoeuvring.* (3) When it is not possible for signallers to give direct visible and audible signals to the operator, other systems including hand-held radios or video cameras must be provided and used. (JC14) JC14: 何故？Video Camera?? 監視カメラのことを言いたいのであれば別の表現が適切ではないでしょうか。 Why does it need to be a video camera? "Monitoring camera" would be better. NK：ビデオカメラとビデオモニターを組み合わせテレビ（ビデオ）電話のことを指していると考えます。OSHA の下記の記述を参考に、videotelephone への変更を提案します。 The term of video cameras means videophone system consisting of video camera and monitor. We propose to replace it with videophone. *§1926.1419 Signals—general requirements.* *(e) Suitability. The signals used (hand, voice, audible, or new), and means of transmitting the signals to the operator (such as direct line of sight, video, radio, etc.), must be appropriate for the site conditions.* *§1926.1420 Signals—radio, telephone or other electronic transmission of signals.* *(a) The device(s) used to transmit signals must be tested on site* **4.2 INSPECTION, MAINTENANCE AND REPAIR** 4.2.1 Requirements Generally (1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. (2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and	(3) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used. **4.2 INSPECTION, MAINTENANCE AND REPAIR** 4.2.1 Requirements Generally (1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation. (2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and

(e) 悪天候及び地震の点検

(3) 整備が完了するまで、機器を使用しないこと。

(4) 建設機械の搬入時の点検、建設設備、定置機械の設置時の試験結果は、エンジニアに提出すること。

(5) 日常点検及び定期点検は、点検結果を工事終了まで保管すること。また、点検結果は、月次の進捗報告書に含めること。

(6) 日常点検では次の措置を講じること

(a) 作業開始前に日常点検を行うこと。

(b) 請負者が準備した点検表に基づき点検を行うこと。

(c) 点検の結果又は随時必要が認められた場合は整備を実施すること。

(d) 作業開始前の動作点検は、周辺に人がいないこと、障害物がないことを確認してから行うこと。

(7) 定期点検では次の措置を講じること。

(a) 請負者が準備した点検表に基づき定期に点検を行うこと。

(b) 点検の結果、不具合、部品の損傷又は消耗箇所が認められた場合には、修理、交換を行い整備すること。

(8) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候及び地震後には、建設設備、定置機械及び悪天候及び地震時により影響を受ける機械は、日常点検に準じた点検及び製造者のマニュアルに規定の点検を行うこと。

4.1.7 機器の点検・整備作業時の安全措置

請負者は、機器の点検、整備作業を行うときは、次の措置を講じなければならない。

(1) 機器の点検・整備作業を行うときは、当該機器の特性に応じ、機器の機能を完全に停止したうえで、点検・整備中の誤作動を防ぐために起動装置の施錠、起動装置に表示板を取り付ける、または監視人を配置する等（ロックアウト・タグアウトシステム）の措置を講じること。

(2) 点検・整備作業を行う場所に、関係者以外の立入りを禁止すること。

(3) 高所で点検・整備作業を行う場合には、本仕様書 2.5[墜落防止]に規定する措置。

4.2 建設機械

4.2.1 建設機械の点検・整備

請負者は本仕様書 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。

(1) 建設機械の搬入時の点検

建設機械の搬入時には次に従い点検を実施すること。

(a) 建設機械の点検・整備記録の確認を行なうこと。かかる点検・整備記録においては、次の(3)に規定する項目のうち、当該機械に該当

manufacturer's official maintenance and repair manual.

(3) Inspection at the time when Contractor's Equipment is mobilised to the Site and before commencement of operation, for which the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;

(b) Ensure as a minimum that the daily and periodical check items listed below in this Sub Clause, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when may be required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is

repair manual.

(3) Inspection at the time when Contractor's Equipment is mobilised to the Site and before commencement of operation, for which the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, (JC15) safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;

JC15: 何のことを指しているのかが分かりません。
This "all inspection and maintenance covers," is not understandable.

NK: MD 氏に記述の見直しと変更を依頼します。
We will ask MD to review and modify this sentence referring to the items separated in (a).

(b) Ensure as a minimum that the daily and periodical check items listed below in this Sub Clause, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when may be required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment. (JC16)

JC16: 上記(b), (c), (d)の記録をエンジニアが求めた場合の提出義務を追記しては？
Obligation of submittal of the record in (b), (c) and (d) should be added.

NK: (c)でエンジニアによる閲覧が保証されているので、提出義務は必要ないと考えます。
As inspection of all records by the Engineer is stipulated in (c), it is deemed that stipulating submittal of inspection and maintenance records to the Engineer is not necessary.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. ~~The Engineer may refuse to accept delivery to the Site and instruct the Contractor to remove from the Site of any Contractor's Equipment that is not in this condition.~~

repair manual.

(3) Inspection at the time when Contractor's Equipment is mobilised to the Site and before commencement of operation, for which the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning,
- ~~all inspection and maintenance covers,~~
- safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and
- ~~that~~ all such units of equipment are in the condition required by the Contract;

To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

(b) Ensure as a minimum that the daily and periodical check items listed below in this Sub Clause, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when may be required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site ~~and~~

する項目が含むこと。 (b) 建設機械の点検・整備記録がない又は不十分な場合は、上記(a)に準じて搬入時に点検・整備を行うこと。 (2) 建設機械の日常点検 日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) ブレーキ、クラッチ、操作装置及び作業装置の異常の有無 (b) ワイヤロープ及びチェーンの損傷の有無 (c) バケット等アタッチメントの損傷の有無 (3) 建設機械の定期点検 定期点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 圧縮圧力、弁すき間その他原動機 (b) クラッチ、トランスミッション、プロペラシャフト、デフアレンシャルその他動力伝達装置 (c) 起動輪、遊動輪、上下転輪、履帯、タイヤ、ホイールベアリングその他走行装置 (d) かじ取り車輪の左右の回転角度、ナックル、ロツド、アームその他操縦装置 (e) 制動能力、ブレーキドラム、ブレーキシユーその他ブレーキ (f) ブレード、ブーム、リンク機構、バケット、ワイヤロープその他の作業装置 (g) 油圧ポンプ、油圧モーター、シリンダー、安全弁その他油圧装置 (h) 電圧、電流その他電気系統 (i) 車体、操作装置、ヘッドガード、バツクストツパー、昇降装置、ロック装置、警報装置、方向指示器、燈火装置及び計器	mobilised to the Site. The Engineer may refuse to accept delivery to the Site and instruct the Contractor to remove from the Site of any Contractor's Equipment that is not in this condition. (4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures; (b) Abnormal sounds, vibrations or smell; (c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like; (d) Lights and indicators; (e) Brakes, clutches, steering and operating devices and working devices; (f) Cables, slings, ropes and chains; (g) Protective covers are adequately provided over all rotating or moving parts; (h) Attachments and tools such as buckets,	(JC17) JC17: 分かりにくい、かつ前文が満たされれば OK ということで削除します。 This part is difficult to understand and when the requirement in the first sentence is fulfilled, the second sentence is unnecessary. Deleted. NK: In stead of deletion of the sentence, we propose to modify to make clear the Engineer's action (4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JC18) JC18: (c)以下は建設機械に関係するものが中心であって、4.1.1 の(6)以下で列挙されているすべての機械の点検項目として網羅できているでしょうか。していないのであれば、例示としての記述が適切ではないでしょうか。 または、「製造者のマニュアルに従った点検項目」といった形での記述が考えられます。 Do the inspection items in (c) to (k) which are mainly for construction equipment, cover all inspection items enumerated in 4.1.1 (6), etc. If not, it may be appropriate to describe as examples. Or a description such as "inspection items in accordance with the manufacturer's manual" may works. NK: 列挙した項目のみでは不足する可能性があります。製造者のマニュアルを引用する項目(l)を追加します。 There is a possibility that the lists cannot cover all items. Added the item (l) regarding the items stipulated in the manufacturer's official maintenance and repair manual. (a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures; (b) Abnormal sounds, vibrations or smell; (c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like; (d) Lights and indicators; (e) Brakes, clutches, steering and operating devices and working devices; (f) Cables, slings, ropes and chains; (g) Protective covers are adequately provided over all rotating or moving parts; (h) Attachments and tools such as buckets, grabs, etc.	~~instruct the Contractor to remove from the Site of~~ any Contractor's Equipment ~~that is not in this condition.~~ which does not meet the requirements stipulated in the Contract. (4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures; (b) Abnormal sounds, vibrations or smell; (c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like; (d) Lights and indicators; (e) Brakes, clutches, steering and operating devices and working devices; (f) Cables, slings, ropes and chains; (g) Protective covers are adequately provided over all rotating or moving parts; (h) Attachments and tools such as buckets, grabs, etc.

	grabs, etc. (i) Cleanliness of each unit or item of Contractor's Equipment; and (j) Cleanliness of each working area and removal of obstructions. (k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated.	(i) Cleanliness of each unit or item of Contractor's Equipment; and (j) Cleanliness of each working area and removal of obstructions. (k) Emergency kits (JC18)such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated. JC18a: この項目だけ機械のメンテナンスの話ではないので、たとえば 4.3.7 に移動されてはいかがでしょうか。 This(k) only is not item for maintenance, so it is suggested to move this to 4.3.7(?). NK: It is better to specify this in daily inspection items to make the Contractor's attention and check to items, so it is left here. NK: Added (i) to specify the items stipulated by the manufacturer.	(i) Cleanliness of each unit or item of Contractor's Equipment; and (j) Cleanliness of each working area and removal of obstructions. (k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated. (l) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.
	(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit; (b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices; (c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices; (d) Springs, shock absorbers and other parts of suspension devices; (e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices; (f) Brake capacity, brake drum, brake shoe and other parts of braking systems; (g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;	(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JC19) JC19: (4)のコメントに同じ。Same comment as (4). NK: (4)と同様に(k)を追加。Same as (4), added (k). (a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit; (b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices; (c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices; (d) Springs, shock absorbers and other parts of suspension devices; (e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices; (f) Brake capacity, brake drum, brake shoe and other parts of braking systems; (g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment; (h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of	(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit; (b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices; (c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices; (d) Springs, shock absorbers and other parts of suspension devices; (e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices; (f) Brake capacity, brake drum, brake shoe and other parts of braking systems; (g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment; (h) Hydraulic pump, hydraulic motor,

4.2.2 **建設機械の作業環境**

請負者は、建設機械の作業環境の確保のために、本仕様書 4.1.5[機器の作業環境]に加えて、次の措置を講じなければならない。

架空電線の充電電路に建設機械が接触し、作業員に感電の危険が生じるおそれのあるときは、本仕様書 3.2[架空線等上空施設一般]に規定する措置を講じること。

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators and lightning devices.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators and lightning devices.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to

cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators and lightning devices.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to

4.2.3 建設機械の運用時の安全措置

請負者は、建設機械の運用時の安全のために、次の措置を講じなければならない。

(1) 建設機械と作業員の接触の防止

(a) 運転中の建設機械に接触することにより作業員に危険が生ずるおそれのある箇所は、作業員の立入を禁止とする、または誘導者を配置し、その者に当該建設機械を誘導させること。

(b) 誘導者及び作業員に合図並びに誘導の方法や運転者の視認性に関し、誘導員及び作業員の理解を徹底させること。

(2) 建設機械で登坂、降坂を伴う作業を行うときは、運転者に次の措置を講じさせること。

(a) 建設機械の登坂能力及び安定度を超えて走行しないこと。

(b) 建設機械の機種に応じた運転上遵守すべき事項を厳守すること。

(3) 作業場所の地形、地盤その他に異常を認めたときは、運転者に作業を中止させること。地盤その他の安全性が確認されるまで作業を再開させないこと。

(4) 建設機械の転倒・転落の対策

(c) 建設機械の転倒又は転落による運転者を含む作業員の危険を防止するため、建設機械の運行経路の路肩の崩壊を防止すること、地盤の不同沈下を防止すること、必要な幅員を保持すること等必要な措置を講じること。

(d) 路肩、のり肩、傾斜地等で、建設機械の転倒又は転落により作業員に危険が生ずるおそれのあるときは、誘導者を配置し、その者に当該建設機械を誘導させること。また、請負者は、当該建設機械の運転者に、誘導者が行う誘導に従わせること。

(e) 路肩、のり肩、傾斜地等で、建設機械の転倒又は転落により運転者に危険のおそれのある作業には転倒保護構造（ROPS）又は横転時保護構造（TOPS）の機械を使用し、かつ、シートベルトを備えた建設機械を使用させること。また、運転者にシートベルトを使用させること。

(4) 建設機械への落下物の対策

建設機械への落下物のおそれのある作業時の運転者の安全のため、落下物保護構造物（FOPS）のついた機械を使用すること。

(5) 建設機械のワイヤーロープ

建設機械で使用するワイヤーロープは、安全係数が6 以上のものを使用すること。この安全係数は、ワイヤロープの切断荷重の値を当該ワイヤロープにかかる荷重の最大の値で除した値とする。

ワイヤーロープが次の状態の場合には、交換したうえで切り捨てて廃棄する等の処理を講ずること。

(a) ワイヤロープ一よりの間において素線の数の十パーセント以上の素線が切断しているもの

(b) 直径の減少が公称径の七パーセントを超えるもの

(c) キンクしたもの(any kink in wire rope)

(d) 著しい形くずれ又は腐食があるもの

perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like all as necessary to prevent any risk of injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. Inspection platforms and ladders on cranes and the like shall be fitted with cages. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like all as necessary to prevent any risk of injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ (JC20) When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

JC20: (3)はクレーンを強くイメージして書いていると思われるので、クレーンである旨記載願います。そのうえで必要であるならば後述の additional requirement に記載ください。もしくは 6 章。
This clause seems to be written imaging the case of cranes. Therefore, it should be described clearly as regarding crane. If necessary, stipulate it in the additional requirement later or in Chapter 6.

NK: 本項目は特にクレーンに注目しているものではなく、建設機械一般の点検時の安全について規定しているものです。クレーンについて記述している “Inspection platforms and ladders on cranes and the like shall be fitted with cages.”の文は、特に必要ないので削除します。
This clause is not highlighting to cranes, rather those requirements in (3) are general for various construction equipment except for the sentence “Inspection platforms and ladders on cranes and the like shall be fitted with cages.”
The sentence is deleted.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

~~(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and~~

perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like all as necessary to prevent any risk of injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(6) 建設機械の運転者が運転位置から離れるときは、運転者に次の措置を講じさせること。
(a) 建設機械を地盤の良い平坦な場所に止めること。
(b) 停止時には、逸走防止のために足回りに輪止め等を確実にすること。
(c) バケット等の作業装置を地面まで降ろすこと。
(d) 原動機を止め、ブレーキは完全に掛け、ブレーキペダルをロックすること。
(e) 作業装置はロックし、キーをはずして所定の場所へ保管すること。

(7) 悪天候時の対策

本仕様書 2.7[悪天候及び地震時の対策]の措置に加えて、悪天候時には建設機械が不安定な状態になることを回避するために、次のような措置を講じること。
(a) 強風時には、リーダー・ブームを倒す又は機械・リーダー等をアンカー等で固定すること。
(b) 大雨時には、増水の恐れや地盤が不安定になる場所から退避すること。
(c) 降雪時には、除雪を行いスリップによる脱輪や逸脱を防止すること。

4.2.4 建設機械の用途外使用の制限

請負者は、建設機械を主たる用途以外に使用してはならない。作業の性質上やむを得ずパワーショベル等の建設機械を吊り上げ作業等の用途外で使用をする際には、以下の条件を満たさなければならない。

(1) アーム、バケット等の作業装置につり上げ用の器具を取り付けて使用するとき。

(2) アーム、バケット、フック、シャックル等の金具その他のつり上げ用の器具が、負荷させる荷重に応じた十分な強度を有するものであるとき。

(3) フック、シャックル等の金具その他のつり上げ用の器具に、外れ止め装置が使用され、器具からつり上げた荷が落下するおそれのないとき。

(4) フック、シャックル等の金具その他のつり上げ用の器具がアーム、バケット等の作業装置から外れるおそれのないとき。

(5) パワーショベル等の建設機械で吊り上げ作業に係わる運転者は、クレーン作業の免許(必要場合)と教育を受けた者でなければならない。

荷のつり上げの作業以外の建設機械の用途外使用を行う場合には、作業員に危険を及ぼすおそれのない作業であることを確認したうえで行わなければならない。

4.2.5 点検・整備作業時の安全措置

請負者は、点検・整備作業時の安全確保のために、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]に加え、次の措置を講じなければならない。

(1) 平坦地に建設機械を停止させて点検・整備作業を

(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and consequent injury.

(6) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities that are necessary to ensure safety and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(7) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(8) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO who shall be contacted in the event of breakdown or fault.

(9) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.

~~consequent injury.~~ (JC20a)

JC20a: コンクリート・骨材プラント特有の問題を一般化すると唐突感。equipment と関係ないと思われるため削除してください。
Particular requirements related with concrete/crushing plants are specified in general requirements for equipment. It seems strange, so please delete (5).

NK: Deleted.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (JC21) and such other facilities that are necessary to ensure safety and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

JC21: 本当？→全部には備え付けないものと考えますので、必要なものに備え付けるという旨に記述を修正願います。
Really? Fire extinguishing equipment would not be provided all Equipment. Please modify the stipulation to provide it when necessary.

NK: We will modify it referring to the following clause of OSHA:
1926.601 Motor vehicles.
(14) All vehicles in use shall be checked … These requirements also apply to equipment such as …, fire extinguishers, etc., where such equipment is necessary.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO who shall be contacted in the event of breakdown or fault.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.

(9) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities ~~that are necessary to ensure safety~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO who shall be contacted in the event of breakdown or fault.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.

行うこと。やむを得ず傾斜地で行う場合は、機械の足回りに歯止めをする等、逸走や転倒を防止する措置を講じること。

(2) 点検・整備作業を行う建設機械のアタッチメント等の作業装置は必ず地面に降させること。やむを得ずブレード、バケット等を上げ、その下で点検・整備作業を行う場合には、安全ブロックで支持するなどの降下防止策をとること。

4.2.6 作業装置の装着等の作業時の安全措置

請負者は、アタッチメント等、建設機械の作業装置の装着及び取りはずし作業では、次の措置を講じなければならない。

(1) アタッチメントの装着又は取り外しの作業を行うときは、アタッチメントが倒壊すること等による作業員の危険を防止するための措置をとること。

(2) 誤操作や当該作業員の挟まれ防止のために、当該作業の作業主任の合図に従い、当該作業員に作業を行わせること。

4.2.7 建設機械の搬送時の安全措置

(1) 建設機械の積込み・積卸し

請負者は、建設機械の積込み及び積卸しでは、次の措置を講じなければならない。

(a) 建設機械をトレーラ又はトラック等に積載して移送する場合は、登坂用具又は専用装置を備えた移送用の車両を使用すること。

(b) 積込み又は積卸しを行う場合は、支持力のある平坦な地盤で、作業に必要な広さのある場所を選定すること。

(c) 積込み又は積卸し作業時には、移送用車両は必ず駐車ブレーキを掛け、タイヤに輪止めをすること。

(d) 登坂用具は、積込み又は積卸しする機械重量に耐えられる強度、長さ及び幅を持ち、キャタピラや車輪の回転によって荷台からはずれないような、爪付きのもの又ははずれ止め装置の装備されたものを使用すること。

(e) 建設機械を道路の制限高さを超えないように積込みすること。

(2) 建設機械の積込後の固定等

請負者は、建設機械の積込後、次の措置を講じなければならない。

(a) 建設機械を荷台の所定位置で停止させ、駐車ブレーキを掛けること。

(b) 建設機械のバケット等はトレーラ等の床上に下ろし固定すること。

(c) 積込みの状態及び輪止め等固定の状態が適切であるかを確認すること。

4.2.8 リース建設機械の使用

(1) 請負者は、リース建設機械を使用する場合は、リース会社から、搬入時に以下の書面による報告を受理しなければならない。

(a) 当該建設機械にかかる点検整備状況にかかる記録

(b) 当該建設機械の能力、特性その他その使用上の注

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

4.3.2 Transportation to and Removal from Site

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

4.3.3 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas at risk.

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and

equipment, personnel and goods elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

~~4.3.2 Transportation to and Removal from Site~~ (JC22)

~~(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

~~(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

JC22: 4.3.4 の operation のところに入れてください。
Please move these (1) and (2) to 4.3.4 [Safety Measures During Operation].

NK: 4.3.7 (1) & (2)に移動しました。章番号を繰り上げます。
Moved to 4.3.7 (1) & (2) and Clause Nos are changed.

4.3.3 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas at risk.

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(9) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

~~4.3.2 Transportation to and Removal from Site~~

~~(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

~~(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas at risk.

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and

意すべき事項

(2) 請負者は、リース機械を使用する際には、次を行わなければならない。

(a) 搬入時に本仕様書 4.2.1[建設機械の点検・整備]の(3)[建設機械の定期点検]に規定する項目のうち、当該建設機械に該当する項目を含む点検・整備に関する記録を確認すること。確認できなかった場合、使用開始に先立ち同様の項目の点検・整備を実施すること。

(b) 不備のあるリース建設機械は使用しないこと。

(3) 請負者は、運転者付きのリース建設機械を使用する際には、次を行わなければならない。

(a) リース建設機械会社の要員を運転者または操作者に、本仕様書 4.1.4[安全教育と指導]に準じて教育を受けさせなければならない

(b) 作業開始前に機体の保守点検記録、整備状況、安全装置の装備、その正常動作の点検整備状況を機械整備の担当に確認させること。

(c) 不備のある建設機械を使用させないこと。

(4) 請負者は、リース建設機械についても、本仕様書 4.1[請負者の機器の一般的留意事項]及び 4.2[建設機械]に規定された事項を遵守しなければならない。

4.3 建設設備

4.3.1 建設設備の点検・整備

請負者は本仕様書 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。

(1) 建設設備の日常点検

日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。

(a) 原動機及びプーリーの機能、非常停止装置の機能、原動機、回転軸、歯車、プーリー等の覆い、囲い等の異常の有無

(b) 異常な音、振動、臭気等

(c) 設備の清掃、給油の状況

(d) 設備周辺の整理、整頓

(2) 建設設備の定期点検

(3) 悪天候及び地震後の点検

4.3.2 建設設備の作業環境

請負者は、建設設備の作業に際しては、本仕様書 4.1.5[機器の作業環境]に加えて、次に示す安全上の措置を講じなければならない。

(1) 建設設備の出入口には，本仕様書 2.4[監視員・誘導員の配置]に従い、状況に応じて誘導員を配置すること。

(2) 次のときは、建設設備の機械一部又は全てに覆い又は囲い等を設けること。

(a) 機械の回転部等に挟まれ、巻き込まれることにより作業員に危険を及ぼすおそれのあるとき。

maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.4 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.4 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, (JC23) all work involving the use of Contractor's Equipment shall be designated as Dangerous Work (JC24) and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JC23: エンジニアではなく？
Shouldn't this be the Engineer?

NK: JC24 のコメントとおり、Contractor's Equipment の範囲が広いのためと現場の条件によっては、立入禁止措置がとれない場合もあります。その場合の判断は HSO が責任をもって行うものと考えます。
Because Contractor's Equipment are various types from heavy equipment to tools and small equipment, and depending on the site conditions, it may not be possible to take entry prevention measures. In such a case, the HSO is the one who has to make judgment and decision. Left as is.

JC24: Contractor's Equipment の範囲が広いので、すべてを Dangerous Work とするのは間違いではないでしょうか。したがって、「Contractor's Equipment を用いる場合で unless it is not practicable な場合にはフェンスを設置する」という趣旨の文を記載願います。
It is not appropriate to designated all works as "Dangerous Work" because Contractor's Equipment includes various types. Please, stipulate such that When using Contractor's Equipment, unless it is not practicable, shall enclose the working area.

NK: Contractor's Equipment を用いる仕事は危険な作業とする原則を規定し、ただし、HSO が許可した場合は、危険な作業から除外できると、原案は規定しています。現場に判断を任せず、原則を規定することが事故

maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [Prohibition of Entry - Dangerous Work].

(b) 設備で取り扱う材料、コンクリート等が飛来することにより作業員に危険を及ぼすおそれのあるとき。

(3) 建設設備に通ずる場所及び建設設備内には、本仕様書 7.4[通路]に従い、作業者が使用するための安全な通路を設け、かつ、これを常時有効に保持すること。

(4) 作業員の埋没の危険のおそれがあるコンクリートの骨材のストックパイルには、立入りを禁止すること。

4.3.3 建設設備の設置、組立、解体時の安全措置

請負者は、建設設備の設置、組立、解体を行うときは、次の措置を講じなければならない。

(1) 建設設備の設置、組立、解体は、当該機設備の専門家の指揮のもとに行うこと。

(2) 建設設備の設計に従い、基礎の建設、据え付けを行うこと。

(3) 本仕様書 4.1.6[機器の点検・整備]に従い、建設設備の設置又は組立作業終了時には完成時試験を行うこと。

4.3.4 建設設備の作業時の安全措置

請負者は、建設設備を使用して作業を行うときは、次の措置を講じなければならない。

(1) 建設設備の運転者又は操作者、保守点検の担当者の氏名を、建設設備の見やすい位置に掲示すること。

(2) 保守点検の担当者以外に、建設設備の覆い・囲いや安全装置を取り外し、又はその機能を失わせないこと。

(3) 建設設備の運転者、操作者又は作業員が、建設設備の音、振動、臭気、温度等に異常を認めた場合は、建設設備の使用を停止して、保守点検の担当者へ報告させること。

(4) 建設設備に異常を認めた場合、異常の原因の特定と修理等の対応を行い、建設設備の安全が確認されるまで、建設設備を使用しないこと。

(5) 部品の交換後は、直ちに正常な動作性を確認すること。

(6) 機械の運転を停止したときは、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]の(1)及び(2)の措置を講じ、上記の作業に従事する作業員以外の者が当該機械を運転することを防止すること。

4.3.5 点検・整備作業時の安全措置

請負者は、建設設備の点検・整備作業時の安全確保のために、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]に加え、次の措置を講じなければならない。

建設設備の掃除、給油、検査、修理又は調整の作業を行う場合において、作業員に危険を及ぼすおそれのあるときは、建設設備の運転を停止しなければならない。ただし、建設設備の運転中に作業を行わなければなら

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, dangerous areas, areas where the operator's view is not clear and intersections with public roads.

(e) All Contractor's Equipment is equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover,

の防止上必要と考えますので、原案通りとします。
This clause specify that the principle is the work using Contractor's Equipment shall be Dangerous Work, and the work which the HSO permits as not Dangerous Work.
This does not leave the judgement to the Contractor. The principle stipulation is important to prevent accident with Contractor's Equipment.
Therefore, (2) is left as it is.

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, dangerous areas, areas where the operator's view is not clear and intersections with public roads.

(e) All Contractor's Equipment is equipped with seatbelts or safety harnesses (JC25) and that such seatbelts and harnesses are used;

JC25: 建設機械だけを意味してはいないので、それは違うのでは？mobile equipment として記述するか、主語はこのままにして適切に範囲を絞るような表現をするか（(f)のような書き方）、いずれかで適切に書き換えをお願いします。
This is not correct because Contractor's Equipment includes various equipment including construction equipment. Please modify the stipulation by using "mobile equipment" or applying a phrase such as "where there is any risk, etc."

NK: 追記しました。Added as commented.

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure"

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, dangerous areas, areas where the operator's view is not clear and intersections with public roads.

(e) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's

ない場合において、危険な箇所に覆いを設ける等の措置を講じたときは、この限りでない。 **4.4 定置機械** **4.4.1 定置機械の点検・整備** 請負者は本仕様書 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。 (1) 定置機械の日常点検 日常点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 (a) 定置機械に共通する点検項目 (i) 安全装置の機能 異常な音、振動、臭気等 機械の清掃、給油の状況 機械周辺の整理、整頓 (b) 工事用エレベーター、建設用リフトに関する点検項目 (i) 運転者又は操作者の名前の標示 最大積載荷重の明示 機械の周辺の囲いの異常の有無 搬器扉及び各階扉の異常の有無 インターホンの異常の有無 建設用リフトの場合、ブレーキ及びクラッチの異常の有無、日常点検可能な場所のワイヤロープが通っている箇所の摩耗、損傷の有無 (c) グラインダー、丸鋸等の回転部のある電気機械 (i) 回転部分の磨耗、損傷の有無 (ii) アースの状況 (2) 建設機械の定期点検 定期点検では、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。 工事用エレベーター及び建設用リフトは一月以内ごとに一回、定期に、次の事項について検査を行うこと。ただし、一月をこえる期間使用しない工事用エレベーター、建設用リフトの当該使用しない期間においては、この限りでないが、その使用を再開する際は、次の事項について検査を行うこと。 (a) 工事用エレベーター (i) ファイナルリミットスイッチ、非常止めその他の安全装置、ブレーキ及び制御装置の異常の有無 ワイヤロープの損傷の有無 ガイドレールの状態 屋外に設置されているエレベーターにあっては、ガイロープを緊結している部分の異常の有無 (b) 建設用リフト (i) ブレーキ及びクラッチの異常の有無 ウィンチの据え付けの状態	slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS); (g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS); (h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when reversing; (i) Operators shall ensure that excavator buckets never pass over the operator's seat of the other Contractor's Equipment; and (j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials. (k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country. 4.3.5 Safety Measures When Equipment Is Not in Use (1) When Contractor's Equipment is not in use, the Contractor shall ensure that operators: (a) Park on surfaces which are level, sound, safe and suitable to support the equipment; (b) Securely chock all wheels to prevent any movement; (c) Lower attachments (buckets and blades etc.) to the ground; (d) Stop and isolate the functions completely, fully engage brakes and	(ROPS); (g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS); (h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when reversing; (JC25) (i) Operators shall ensure that excavator buckets never pass over the operator's seat of the other Contractor's Equipment; and (JC25) JC25: ★ (comment is not shown.) 4.4.2 大型の定置機械の設置、組立、解体時の安全措置

請負者は、大型の定置機械の設置、組立、解体を行うときは、次の措置を講じなければならない。

(1) 定置機械の設置、組立、解体は、当該機械の専門家の指揮のもとに行うこと。

(2) 定置機械の設計に従い、必要に応じ基礎の建設、据え付けを行うこと。

(3) 本仕様書 4.1.6[機器の点検・整備]に従い、定置機械の設置又は組立作業終了時には完成時試験を行うこと。

4.4.3 小型の定置機械の作業環境

請負者は、小型の定置機械を用いた作業に際しては、本仕様書 4.1.5[機器の作業環境]に加えて、次に示す安全上の措置を講じなければならない。

(1) 次のときは、機械一部又は全てに覆い又は囲い等を設けること。
(a) 機械の回転部等に挟まれ、巻き込まれることにより作業員に危険を及ぼすおそれのあるとき。
(b) 加工物等が切断し、又は欠損して飛来することにより作業員に危険を及ぼすおそれのあるとき。
(c) 切削屑が飛来すること等により作業員に危険を及ぼすおそれのあるとき。

(2) 丸のこ盤には、歯の接触予防装置等、作業員の危険を予防するための設備を設けること。

4.4.4 定置機械の作業時の安全措置

請負者は、定置機械を操作して、又は使用して作業を行うときは、次の措置を講じなければならない。

(1) 大型及び小型定置機械に共通した措置
(a) 機械の保守点検の担当者の氏名を、機械の見やすい位置に掲示すること。
(b) 保守点検の担当者以外に、覆い・囲いや安全装置を取り外し、又はその機能を失わせないこと。
(c) 機械の操作者又は作業員が、機械の音、振動、臭気、温度等に異常を認めた場合は、機械の操作又は使用を停止して、保守点検の担当者へ報告させること。
(d) 機械に異常を認めた場合、異常の原因の特定と修理等の対応を行い、機械の安全が確認されるまで、機械の操作者又は作業員に機械を使用させないこと。

(2) 大型定置機械に関する措置
(a) 建設用リフト等を運転する場合、必要に応じ合図を行なう者を指名し、請負者が定めた一定の合図を無線通信、モニター等の手段を用

lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.6 Safety Measures During Connection of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

(1) Prevent any risk due to movement or fall of attachments.

(2) Prevent accidental movement or operation causing persons to be trapped.

4.3.7 Safety Measures During Loading and Transporting

(1) Select and use trailers, ramps, tracks and climbing equipment or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.6 Safety Measures During Connection of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

(1) Prevent any risk due to movement or fall of attachments.

(2) Prevent accidental movement or operation causing persons to be trapped.

4.3.7 Safety Measures During Loading and Transporting (JC27)

JC27: タイトル要修正。場合によっては要分割・統合。
・Contractor's Equipment を運ぶときの話
・Contractor's Equipment で材料等を運ぶときの話
・Contractor's Equipment でその他のことをする場合の話
が混在しています。
Contractor's Equipment で輸送・荷卸しする時ではなくて、Contractor's Equipment を輸送・荷卸しする時なので、このタイトルは Loading and Transporting of Contractor's Equipment では.でないと、ここで勘違いして？？？になる
It is necessary to modify the title or divide/merge contents, because the contents are mixed with transporting equipment, transporting materials with equipment and others.

NK: 本章の題を [Safety Measures during Loading and Transporting of Contractor's Equipment]に変更し、新たに 4.3.7 [Safety Measures during Loading and Transporting of Materials]を加え、その中に 4.3.2 (1), (2)及び本章の材料等の運搬に係わる(9), (13), (14)を移動しました。
Changed the title to [Safety Measures during Loading and Transporting of Contractor's Equipment], and added a new Clause 4.3.7 [Safety Measures during Loading and Transporting of Materials], which contains measures for transporting materials from 4.3.2 (1) & (2) and 4.3.7 (9), (13) and 14.

(1) Select and use trailers, ramps, tracks and climbing equipment or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and loading and unloading areas which have sufficient space and

etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connection of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

(1) Prevent any risk due to movement or fall of attachments.

(2) Prevent accidental movement or operation causing persons to be trapped.

4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment

(1) Select and use trailers, ramps, tracks and climbing equipment or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and loading and unloading

いて、運転者に対して行なわせること。

(b) 地震時及び悪天候の場合には、製造者のマニュアルに従って点検・整備を行うこと。

(c) 各機械には、積載荷重、操作者氏名、資格名を、機械の見やすい位置に掲示すること。

(d) 工事用エレベーター、建設用リフトを用いて作業を行なうときは、次に該当する場所に作業員を立ち入らせてはならない。

(i) 搬器の昇降によって作業員に危険が生ずるおそれのある箇所

巻上げ用ワイヤロープの内角側で、当該ワイヤロープが通っているシーブ又はその取付け部の破損により、当該ワイヤロープがはね、又は当該シーブ若しくはその取付具が飛来することにより作業員に危険を生ずるおそれのある箇所

(e) 荷揚げ物の落下・飛散などの防止措置を講ずること。

(3) 小型定置機械に関する措置

(a) 機械のアタッチメントは、機械の製造者が推奨する規格のもの又はこれと同等の機能を有することを証明できるものを使用すること。

(b) 部品の交換後は、直ちに正常な動作性を確認すること。

(c) 機械の掃除、給油、検査、修理又は調整の作業を行う場合に際しては、機械の運転を停止すること。

(d) 機械の運転を停止したときは、本仕様書 4.1.7[機器の点検・整備作業時の安全措置]の(1)及び(2)の措置を講じ、点検・整備作業に従事する作業員以外の者が当該機械を運転することを防止すること。

(e) 研削といしについては製造者のマニュアルに従って使用すること。

4.5 電気機械器具

4.5.1 電気機械器具の点検・整備

請負者は本節 4.1.6[機器の点検・整備]に従い、次の点検・整備を行わなければならない。

(1) 電気機械器具の日常点検

その日の電気機械器具の使用を開始する前に、次の点検項目を含む請負者が準備した点検表に基づき点検を行うこと。

(a) 本仕様書 4.5.2[電気機械器具の作業時の安全措置]の(1)(d)にもとづき設置された感電防止用漏電しや断装置

(b) 電気機械器具で接地をしたものの接地線の切断、接地極の浮上がり等の異常の有無

(c) 移動電線及びこれに附属する接続器具の被覆又は外装の損傷の有無

(2) 定期点検

電動機械器具は、製造者の取扱説明書に従い、請負者が作成した点検表に基づき、定期点検を行うこと。

(2) Select location and loading and unloading areas which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all trailer wheels to prevent any movement.

(4) Stop and isolate the functions of trailer and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that suitable load limit, height, speed limit and any other required signage is applied to the trailer.

(9) Ensure that materials are loaded evenly.

(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(11) Place any attachments on the trailer and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation to ensure that there is no slackening.

(13) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(14) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all trailer wheels to prevent any movement.

(4) Stop and isolate the functions of trailer and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that <u>suitable</u> (JC28)load limit, height, speed limit and any other required signage is applied to the trailer.

JC28: suitable で良いか確認ください。「定められた」といった概念の言葉が入るべきではないでしょうか。
Please check if it is proper to use "suitable" here. It should mean the concept of such as "legally determined."

NK: トレーラの積載荷重の表示のため"authorized maximum loading capacity" に変更します。
Modified to "authorized maximum loading capacity".

(9) ~~Ensure that materials are loaded evenly.~~ (JC28a)

(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(11) Place any attachments on the trailer and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation to ensure that there is no slackening.

(13) ~~Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;~~(JC28a)

(14) ~~Inspect slings for securing transported materials and if any abnormality is found, replace immediately~~.(JC28a)

JC28a: Contractor's Equipment で輸送することを言っているならあり、Contractor's Equipment を輸送するなら無し
(9)も(14)もそうで、安易に組み替えた感じあり。

NK: (9), (13) and (14) are deleted here and moved to 4.3.7.

areas which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all trailer wheels to prevent any movement.

(4) Stop and isolate the functions of trailer and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer.

(9) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(10) Place any attachments on the trailer and securely tie down.

(11) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

4.3.7 Safety Measures During Loading and Transporting

4.5.2 **電気機械器具の作業時の安全措置** 請負者は、電動機械器具を使用した作業時の感電防止のために、次の措置を講じなければならない。 (1) 電気機械器具、開閉器、ケーブル、感電防止用漏電しや断装置 (a) 電動機械器具及び関連した器具・装置は、当該国の法律で規定されたもの、あるいは国際的な規格品を用いること。 (b) 電気機械器具用の開閉器は、カバー付きを使用し、金属製などの箱に収め、操作が容易な位置で湿気がない所に設置すること。開閉器・手元スイッチ等には、箱に危険を表わす色を塗る等の手段にて、感電に対する注意喚起を促すこと。 (c) 電気機械器具の電源用電線は、キャブタイヤケーブルを使用すること。 (d) 電動機械器具で、対地電圧が 150 ボルトをこえるもの又は水等導電性の高い液体によって湿潤している場所その他鉄板上、鉄骨上、定盤(鉄製の作業テーブル)上等導電性の高い場所において使用するものについては、漏電による感電の危険を防止するため、当該電気機械器具が接続される電路に、当該電路の定格に適合し、感度が良好であり、かつ、確実に作動する感電防止用漏電しや断装置を接続すること。 (e) 前項に規定する措置を講ずることが困難なときは、電気機械器具の金属製外わく、電動機の金属製外被等の金属部分を、接地して使用すること。 (2) 電気機械器具の作業による感電の危険又は誤操作による危険の防止のため、作業箇所には十分な照度を確保すること。 (3) ケーブル、電線の取り扱い 移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。 (4) 電気機械器具の修理・移動・保守 (a) 電気機械器具の修理や移動の作業は、電源を切断して行うこと。 (b) ヒューズの取り換え (i) ヒューズを鉄線・銅線等で代用しないこと。 ヒューズの取りかえは、指名した者に行わせること。 (5) 電気機械器具の使用禁止 次のいづれかの状態のときは、作業員に電気機械器具の使用を、禁止すること。 (a) 作業員の身体が濡れている、作業員が水溜まりにいる、又は地面に作業員の素足で接触している状態 (b) 電気機械器具が濡れている状態 (6) 電気機械器具の異常を発見したときは、直ちに電源を切断し、作業を中止すること。 (7) 電気機械器具を使用する作業員には、作業に適切な服、保護帽、安全靴等の保護具を着用させる	4.3.8 Access Roads (1) Take measures for ensuring that access roads are of suitable construction, of sufficient	4.3.8 ~~Access Roads~~ (JC29) JC29: 違和感あり、この上でも混乱しているので輸送車両等の Additional Requirements for か輸送時の安全措置でまとめた方が良いかと。4.3.2 も改めてみると中途半端な感じ。 There is confusion, so it is better to specify requirements in Additional Requirements for transporting equipment or Safety measures during transportation. 4.3.2 seems something imperfect. “Access Roads”はサイトの外をイメージさせますが、記述の内容はサイト内のことであるように思います。タイトルを適切に変更したうえで(transportation in the Site など)、すなおに理解できるようにしてください。場合によっては 2 章に移動させることも検討してください(risk control in the site という見出しを新たに作ってそこに入れるなど) “Access Roads” would give an impression that means roads outside of the site, whereas the contents are regarding the roads inside of the site. Please, change the title properly such as “Transportation in the Site” to make the clause easier to understand. If necessary, consider to move this to Chapter 2 making new clause, for example [Risk Control in the Site]. NK: タイトルを Roads in the Site に変更しました。 The title is changed to [Roads in the Site]. (1) Take measures for ensuring that access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse. (2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections,	of Materials (1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements. (2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements. (3) Ensure that materials are loaded evenly (4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties; (5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately. 4.3.8 ~~Access Roads~~ Roads in the Site (1) Take measures for ensuring that ~~access~~ roads in the Site are of suitable construction, ~~of~~ sufficient width, free from potholes,

こと。 (8) 感電事故が発生した場合は、当該電気機械器具の電源を切ること及び本仕様書 3.2.2[充電した架空線の近くでの工事の現場管理](6)に規定の感電事故発生時の対応に従い、処置を行うこと。 **5 運搬作業** **5.1 一般事項** (1) 本章では、運搬作業にかかわる運搬車両の運転者、補助員、監視員、誘導員(「運搬車両の作業員」という。)、運搬機械の操作者及び合図者、(「運搬機械の作業員」という。)、運搬車両・運搬機械の点検・整備を行う者「運搬車両・機械の整備の作業員」という。)の危険を防止するための措置について規定する。 (2) 本章では、現場(Site)内の運搬作業、異なる現場間での運搬作業、現場への又は現場から資機材を運搬する道路での運搬作業について規定する。 (3) 本仕様書で使用する用語の定義は以下のとおりである。 (a) 運搬車両とは、トラック、ダンプトラック、セミトレラー、タンクローリー等の物を運搬するための車両をいう。 (b) 運搬機械とは、ベルトコンベヤを利用して物を運搬するための定置の機械をいう。 **5.2 運搬作業** **5.2.1 作業員への周知** 請負者は、運搬作業を行うときは、作業に必要な下記の安全上の措置について、必要に応じ当該作業員に説明しなければならない。 (1) 運搬車両の作業員 (a) 運搬作業内容、作業方法、作業範囲 (b) 運搬車両の作業場所及び運行経路 (c) 運搬車両の転倒又は転落の危険のある場所 (d) 高圧線、危険物貯蔵庫などの危険箇所と運搬車両の移動制限範囲 (e) 作業員の立入禁止箇所及び運搬車両の進入禁止箇所の特定と注意標識、柵の設置場所 (f) 運搬車両の作業場所周辺の安全通路 (g) 誘導者、監視員の配置場所 (h) 運搬車両・運搬機械に異常が発生したときの対処方法 (i) サイト隣地や公道における近隣住民・第三者への運搬車両による交通事故防止措置 (j) 運搬車両による振動、騒音、粉じん等の環境影響を軽減する措置 (2) 運搬機械の作業員 (a) 運搬機械の作業場所 (b) 立入禁止箇所の特定と注意標識、柵の設置場所 (c) 運搬機械内又はその周辺の安全通路 (d) 運搬機械に異常が発生したときの対処方法 (e) 運搬車両・機械の整備の作業員	width, free from potholes, uneven settlement and collapse. (2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.). (3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow. (4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads. (5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night. 4.3.9 Additional Requirements for Static Equipment (1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer. (2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.	dangerous places and the like (road shoulders, cliff edges.). (3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow. (f)　点検・整備のときに、作業員におよぶおそれのある危険及び危険箇所

5.2.2　運搬車両・運搬機械の運転者及び操作者

請負者は、本仕様書 4.1.4[建設機械の運転者及び操作者]に準じ、運搬車両の運転者又は運搬機械の操作者の適正配置、氏名の運搬車両・運搬機械への明示、作業前の健康状態の確認を行わなければならない。

5.2.3　安全教育と指導

請負者は、本仕様書 4.1.5[安全教育と指導]に準じ、運搬車両・運搬機械の特性に応じて運搬車両の運転者、運転を補助する者（運転助手）、運搬機械の操作者へ、次の事項を含む教育を行わなければならない。

(1)　運搬車両の交通事故防止

(g)　交通事故防止のための事項

(i)　交通事故防止の運転ルール
公道での交通事故の多い第 3 者のバイクとの接触・衝突の事故防止のための運転方法
公道で車両の前へ飛び出す住民、バイクとの接触・衝突の事故防止のための運転方法
追い越しするとき及び追い越されるときの交通事故防止のための運転方法
凸凹や障害物のある道路での交通事故防止のための運転技術

(a)　車両整備不足による交通事故防止のために、車両の運転開始前の点検整備の徹底

(b)　当該運搬車両への乗車を許可されたもの以外の乗車の禁止の徹底

(2)　運搬機械の運転及び整備時の事故防止

(a)　運搬機械運転時の事故防止

(i)　運搬機械始動時の合図の徹底
緊急時の停止方法の確認
ベルト上に乗ることの禁止

(b)　運搬機械の整備時の事故防止

(i)　運搬機械停止時の誤作動の防止のための措置の確認
運搬機械の点検整備後の運転再開前の合図の徹底

5.3　運搬車両の点検・整備

5.3.1　運搬車両の搬入時の点検

請負者は、運搬車両の使用を開始するに当たり、搬入時の点検・整備記録の確認を、本仕様書 4.1.6[搬入時の点検]に従って、行わなければならない。この点検には、本仕様書 5.3.2 に規定の点検項目を含まなければならない。

搬入時の点検に合格しない運搬車両は、現場内で使用してはならない。この運搬車両には、資機材供給者の車両等の工事事に必要な全ての運搬車両を含めな

4.3.10　Additional Requirements for Personnel and Goods Elevators and Material Conveyors

(1)　General Requirements

The Contractor shall post the maximum load capacity and any restrictions on the use

(2)　The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a)　Defects or operational faults in elevator enclosures, doors, guide-rails and runners;

(b)　Defects or operational faults in emergency stop and alarm systems;

(c)　Defects or operational faults in power, lighting and control systems;

(d)　Defects or operational faults with interphone systems;

(e)　Defects or operational faults in brakes, clutches; and

(f)　Defects or operational faults of sheaves and pulleys.

(3)　The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a)　Defects or operational faults in supporting cables and wire ropes; and

専門業者による組み立て、起動予告ブザー、連続装置設置(連続した非常停止スイッチ)、コンベア搭乗禁止とか削除されているので、復活させてください。エレベーターとコンベアを一緒にするか否かも要検討。
Please add the provisions of installation under the instruction of the experts, warning alarm system for start-up, emergency stop buttons for each necessary point and prohibition of riding on conveyor, etc. stipulated in Japanese version. Please consider whether requirements for elevators and conveyers shall be specified together or separately.

NK: 追記・別々に規定しました。(組立てに関しては 4.3.1(9)に規定済です。)
Added and separately specified. (Installation under instruction by expert is specified in 4.3.1(9).) Provisions for conveyors are stipulated referring to OSHA 1926.555 Conveyors.

(1)　General Requirements

The Contractor shall post the maximum load capacity and any restrictions on the use

(2)　The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a)　Defects or operational faults in elevator enclosures, doors, guide-rails and runners;

(b)　Defects or operational faults in emergency stop and alarm systems;

(c)　Defects or operational faults in power, lighting and control systems;

(d)　Defects or operational faults with interphone systems;

(e)　Defects or operational faults in brakes, clutches; and

(f)　Defects or operational faults of sheaves and pulleys.

(3)　The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a)　Defects or operational faults in supporting cables and wire ropes; and

Elevators and Material Conveyors

(1)　General

(a)　The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a)　~~The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(b)　The Contractor shall post the maximum load capacity and any restrictions on the use.

(2)　Personnel and Goods Elevators

(a)　Additional daily inspection items

(i)　Defects or operational faults in elevator enclosures, doors, guide-rails and runners;

(ii)　Defects or operational faults in emergency stop and alarm systems;

(iii)　Defects or operational faults in power, lighting and control systems;

(iv)　Defects or operational faults with interphone systems;

(v)　Defects or operational faults in brakes, clutches; and

(vi)　Defects or operational faults of sheaves and pulleys.

(b)　Additional periodical inspection items

(i)　Defects or operational faults in daily inspection items;

(ii)　Defects or operational faults in ~~supporting cables and~~ wire ropes;

(iii)　Defects or operational faults in winch and its foundation; and

ければならない。

5.3.2 運搬車両の点検・整備

請負者は、本仕様書4.1.7[建設機械の点検・整備]に規定の点検事項のうち当該運搬車両に適用すべき事項に加えて、次の日常点検、定期点検に規定の事項を含めた日常点検表、定期点検表を作成し、点検・整備を実施しなければならない。なお、運搬車両は点検・整備が完了するまで使用してはならない。また、点検状況は進捗報告書で報告しなければならない。

(1) 日常点検

請負者は、運搬作業を行うときは、その日の作業を開始する前に、次の項目を含む点検表に基づく点検を行なうこと。

(a) 運搬車両の点検項目：制動装置及び操縦装置の機能、荷役装置及び油圧装置の機能、車輪の異常の有無、前照燈、尾燈、方向指示器及び警音器の機能

(b) 製造者のマニュアルに規定の作業前点検項目

(2) 定期点検

請負者は、本仕様書 4.1.9[定期点検]に従い、次の項目を含め定期に点検を行ない、必要に応じて整備を実施しなければならない。

(a) 製造者のマニュアルに規定の定期点検の項目

(b) 運搬車両の場合：発煙筒、消火器等の緊急対応用の備品の有無と使用期限

5.3.3 運搬車両の点検・整備時の安全措置

荷台等の下での点検、整備等の作業を行う場合においては荷台等が不意に降下することによる作業員の危険を防止するため、安全支柱、安全ブロック等を使用しなければならない。これらを使用していないときは、荷台等の下に作業員を立ち入らせてはならない。

5.4 運搬車両による運搬作業

5.4.1 運搬車両の作業環境

請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。

(1) 運行経路について必要な幅員を保持すること、地盤の不同沈下を防止すること、路肩の崩壊を防止すること、常に補修し安全に走行できるよう維持すること等必要な措置を講じること。

(2) 運行経路の必要と認められる箇所には、制限速度を示す標識を立て、カーブ、交差点、危険箇所（路肩、崖縁等）等には注意標識を立てること。

(3) 運搬車両の走路と歩行者の安全通路を明示し、走路が狭隘な（狭くゆとりがない）箇所には運搬車両用の退避所を設けること。

(4) 規模の大きな工事現場においては運搬専用道路を設け、なるべく一方通行として、必要に応じて適当な退避所を設けること。

before any further operation of the Contractor's Equipment is permitted:

(a) Defects or operational faults in supporting cables and wire ropes; and

(b) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.

(b) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.

(iv) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.

(3) Belt Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to protect workers required to work below the conveyors.

(v) Riding of workers on the moving belts of the belt conveyors shall be prohibited.

(b) Additional daily inspection items

(i) Defects or operational faults in prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) Defects or operational faults in guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items; and

~~(1) General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use.~~

~~(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted.~~

(5) 夜間の運搬作業時には、運行経路の必要箇所に照明を施すこと。

5.4.2 運搬車両の運搬作業時の安全措置

請負者は、運搬車両による運搬作業時の安全の確保のために、運搬車両の運搬作業を十分理解した作業主任に、施工計画にもとづき作業を直接指揮させるとともに、本仕様書 4.1.10[運用時の安全措置]に準拠するとともに、次の措置を講じなければならない。

(1) 作業員への安全措置

当該国の法令で認められている場合を除き、車両運行時には荷台及び運転席(キャビン)以外の場所への請負者の要員の搭乗を禁止すること。

(2) 運搬車両のための誘導員の配置

次の作業又は場所で、請負者の要員及び運搬車両に危険が及ぶおそれがある場合は、本仕様書 2.4[誘導員の配置]に従い、誘導員を配置すること。

(a) 運搬車両に荷を積み卸しするとき

(b) 運搬車両が後進するとき

(c) 荷の積込場、土捨場、崖の縁、見通しのきかない場所、公道との交差部、他の作業箇所に近接する箇所

(3) 運搬車両の荷の積載に関する措置

(a) 運搬車両に積載重量を明示すること。

(b) 偏荷重が生じないように積載すること。

(c) 荷崩れ又は荷の落下による作業員又は第 3 者への危険を防止するため、荷にロープ又はシートを掛ける等必要な措置を講ずること。

(d) 建設機械の運搬のためトレーラに建設機械を積込む作業は、本仕様書 4.3.1[建設機械の積込及び積卸し]の規定を遵守すること。

(e) 荷の固定用の繊維ロープ、ワイヤロープの点検を行い、異常を認めたときは、ただちに取り換えること。

(4) 運転者が運転位置から離れる場合の措置

運転者が運転位置から離れる場合は、本仕様書 4.1.10[運用時の安全措置]の(7)に準じた措置を講ずること。

5.5 運搬機械の点検・整備

5.5.1 運搬機械の設置時の試験

請負者は、運搬機械の設置作業終了時には、当該国の規則に基づき、又は規則がない場合は当該機械の製造者のマニュアルに従い、作動試験等の完成時試験を行うこと。

5.5.2 運搬機械の点検・整備

請負者は、本仕様書 4.1.7[建設機械の点検・整備]に従うとともに、以下の日常点検、定期点検に記載した事項も含んだ、運搬機械の日常点検表、定期点検表の作成と各点検を実施し整備、点検状況を進捗報告書で報告を行わなければならない。

(1) 日常点検

請負者は、運搬作業を行うときは、その日の作業を

4.3.11 Additional Requirements for Tools, Tackle and Small Equipment

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.

(3) All equipment shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

4.3.11 Additional Requirements for Tools, Tackle and Small Equipment

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.

(3) All equipment shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no

~~(a) Defects or operational faults in elevator enclosures, doors, guide-rails and runners;~~

~~(b) Defects or operational faults in emergency stop and alarm systems;~~

~~(c) Defects or operational faults in power, lighting and control systems;~~

~~(d) Defects or operational faults with interphone systems;~~

~~(e) Defects or operational faults in brakes, clutches; and~~

~~(f) Defects or operational faults of sheaves and pulleys.~~

~~(3) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(a) Defects or operational faults in supporting cables and wire ropes; and~~

~~(b) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

4.3.11 Additional Requirements for Tools, Tackle and Small Equipment

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.

(3) All equipment shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is

開始する前に、本仕様書 4.1.8[日常点検]に従い、次の項目を含む運搬車両・運搬機械の請負者が準備した点検表に基づく日常点検を行なうこと。

(a) 運搬機械の点検項目：原動機及びプーリーの機能、逸走等防止装置の機能、非常停止装置の機能、原動機、回転軸、歯車、プーリー等の覆い、囲い等の異常の有無

(b) 製造者のマニュアルに規定の作業を開始する前の点検項目

(2) 定期点検

請負者は、本仕様書 4.1.9[定期点検]に従い、製造者のマニュアルに規定の定期点検の項目を含め、定期に点検を行ない、必要に応じて整備を実施しなければならない。

5.6 運搬機械による運搬作業

5.6.1 運搬機械の設置、組立、解体作業

請負者は、運搬機械を設置、組立、解体の作業を行うときは、次の措置を講じなければならない。

(1) 運搬機械の装置・設備

運搬機械には以下の装置を備えること。

(a) 非常停止装置（コンベヤには、連続した非常停止スイッチを設け、又は要所ごとに非常停止スイッチを設けること。）

(b) 起動を予告する警報装置

(c) 動力伝導部分、ベルト、プーリー、ローラー等の作業員がはさまれ又は巻き込まれるおそれのある部分の覆い又は囲い

(d) 荷等の落下を防止するための装置

(2) 運搬機械の設置、組立、解体作業

運搬機械の設置、組立、解体の作業は、当該機械の専門家の指揮のもとに行うこと。

5.6.2 運搬機械の運搬作業時の安全措置

請負者は、運搬機械を運転するときは、次の措置を講じなければならない。

(1) 運搬機械の取扱説明書を機械に備えつけて、使用条件を機械に表示すること。取扱説明書等に記載された使用目的以外及び使用条件以外で機械を使用しないこと。運転中のベルトコンベアのベルト上に作業員を搭乗させないこと。

(2) 運搬機械の始動時、非常停止又は事故停止後の再起動時には、運搬機械周辺や荷の安全を確認した上で、運搬機械の操作を行うこと。

5.6.3 運搬機械の作業後及び修理等時の安全措置

(1) 作業終了時には、機械の機能を完全に停止したうえで、施錠（ロックアウト）等の機械が作動しない措置、施錠できない場合には監視員（警備員）の配置等の誤作動防止の措置、及び作動禁止の掲示（タグアウト）等措置を講じること。

(2) 運搬機械の掃除、給油、検査、修理等の作業時に、労働者に危険を及ぼす恐れがあるときには、

(a) All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(2) The Contractor shall comply with the following additional safety requirements:

(a) Use metal-clad weatherproof switches with covers, securely fixed in accessible and dry places;

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars or scaffolding tubes to prevent damage to the insulation and protective covering.

---

defects or operational faults;

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(2) The Contractor shall comply with the following additional safety requirements:

(a) Use metal-clad weatherproof switches with covers, securely fixed in accessible and dry places; (JC32)

JC32: metalclad 形式に限定され他のタイプを排除することになりませんか。用語の意味を再度確認してください。これに限定するということでしょうか。途上国の現場で見たことがない気がします。
Doesn't it limit only to the metal clad type and eliminate other types? Please reconfirm the meaning of the term of metal clad. Does it mean to limit metal-clad? I feel I have not seen this in the developing countries.
https://www.google.co.jp/search?q=metalclad&source=lnms&tbm=isch&sa=X&ved=2ahUKEwi9jc-hm6rnAhVQw4sBHSlXCx8Q_AUoAXoECA4QAw&biw=1567&bih=748#spf=1580349127635

NK: 和文の規定を参考に変更します。
Modified referring to Japanese version "Use switches with covers for electrical power equipment, place them in a metal box, etc."

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars or scaffolding tubes (JC33) to prevent damage to the insulation and protective covering.

JC33: 日本語の丸太足場を鋼管に替えているようですが、妥当性を再度確認願います（scaffolding tubes は削除でも良い）。
←被覆材保護のために摩擦係数の大きい丸太足場にひ

---

permitted:

(a) All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(2) The Contractor shall comply with the following additional safety requirements:

(a) Use, ~~metal-clad~~ weatherproof switches with covers, securely fixed in accessible and dry places;

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars ~~or scaffolding tubes~~ and the like to prevent damage to the insulation and

上記と同じ措置を講ずること。		っかけないように、というのが原文の意味ではなかったのですか。(以下、日本語版) 移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。 It looks that log scaffolding has been changed to scaffolding tubes. Please, check its compatibility. Wasn't the original concept that the cables and wires shall not be hanged on log scaffoldings of large friction factor in order to prevent damage to the insulation? NK: コメントに従い、"scaffolding tubes"を削除しました。 As commented, "scaffolding tubes" is deleted and "and the like" is added.. (g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water and not wearing rubber soled insulated footwear or when the electric power equipment is wet; (k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO; (l) Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; (JC34) and JC34: electric power equipment の定義と照らし合わせて適切でしょうか。 Is this clause appropriate against the definition of electric power equipment? NK: 4.1.1.(8)で持ち運びできる電動機械もしくは工具と定義しています。これらを使用する場合に当然適した保護具を使用することが求められます。器具により必要な保護具も変わりますので右のように修正します。 Electric power equipment is defined in 4.1.1 (8) that electric power equipment means portable electric powered mobile equipment or tools. When using these, it is necessary to use appropriate protective equipment which vary according to the type of equipment. The clause is modified. (m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and	protective covering.
	(g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water and not wearing rubber soled insulated footwear or when the electric power equipment is wet; (k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO; (l) Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and		(g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water and not wearing rubber soled insulated footwear or when the electric power equipment is wet; (k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO; (l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor of at least 6, obtained by dividing the breaking strength by the maximum applied load for each type.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor of at least 6, (JC35) obtained by dividing the breaking strength by the maximum applied load for each type.

JC35: マニュファクチャーズレコメンデーションに従う旨の記載に代えてください。(ワイヤーロープやスリングは現場では作らず専門業者から調達することを想定)
Please change this part as to comply with the recommendation by the manufacturer. (It is assumed that wire ropes and slings shall not be fabricated at the site but procured from the vendors.)

NK: コメントに従い、右のように修正しました。
As commented, the clause is changed as right.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures ~~of at least 6~~, obtained by dividing the breaking strength by the maximum applied load for each type.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's

	If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions and in any event within the designed operating capacity of the equipment. Under these circumstances the Contractor shall take account of the following: (1) Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment. (2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts. (3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation. (4) Check the working area and improve the ground surface as necessary to ensure the	instructions (JC36) and in any event within the designed operating capacity of the equipment. JC36: 用途外使用の際の使用方法に関する書面でのマニュアルを本当にメーカーが出している事例があるのでしょうか。具体例を複数確認して提示願います。ないようであれば、この記述は修正が必要です。 Is there really any example that manufacturer of equipment issues written manual which contains usage for the purpose other than that of intended? Please, present at least examples for such usage. If there is no such example, the description has to be changed. NK: 下記サイトに用途外使用に関する情報がありましたが、あくまで安衛法の基づいた注意書に過ぎません。 There is one site in Japan that explains use of equipment for purpose other than one for which it is designed, however it is only points to care based on the Occupational Safety and Health Regulations of Japan. the clause is change to comply with the Law. https://www.taiyokenki.co.jp/rental/tidbits/post_13.html In USA, there is the following information how to use lifting by excavator following the manufacturer's Excavator Lift Capacity Chart : https://www.forconstructionpros.com/equipment/earthmoving/backhoe-loaders/article/11416879/interpret-the-surprises-in-your-backhoes-lift-chart-to-place-big-loads-safely http://zoskin.praysafeconsulting.com/excavator-lift-capacity-chart/tips-for-using-earthmoving-equipment-for-lifting-equipment.html Additional stipulation is added regarding the regulation and confirmation by the HSO. Under these circumstances the Contractor shall take account of the following: (1) Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment. (2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts. (3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation. (4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment. (5) Ensure that manufacturer's genuine	Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer. If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions and in any event within the designed operating capacity of the equipment. When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting: (1) Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used; (2) Arms, bucket, Rigging Equipment have enough strength to lift the load; (3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the construction equipment; (4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and (5) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work. Under these circumstances the Contractor shall take account of the following: (1) Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment. (2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts. (3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the

	stability of the equipment. (5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used. (6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place. (7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load. (8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation. (9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways. (10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground. **4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT** 4.6.1 Requirements Generally (1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary*	specialised accessories such as lifting hooks etc. are provided and used.(JC37) JC37: 本節は用途外使用を規定しています。用途外使用をするための genuine accessories というのが存在するのでしょうか。 Is there any "genuine accessory" for purpose other than one for which it is designed? NK: バケットに取り付けるフックなどは、重機のメーカーではなく、部品メーカーが多種の製品を製造しています。純正となると、バケットに収納できる特殊フックしかないようです。本項目は削除します。 Accessories such as hooks for lifting are produced by suppliers not by the equipment manufacturer. A hook as a genuine accessory was found only in a special type bucket which can store the hook when it is not in use. This clause is deleted. (6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place. (7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load. (8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation. (9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways. (10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground. **4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT** 4.6.1 Requirements Generally (1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*]. (2) The Contractor shall ensure that the hire/lease	equipment and have informed the HSO of this and obtained his permission before commencing the operation. (4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment. ~~(5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used.~~ (6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place. (7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load. (8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation. (9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways. (10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground. **4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT** 4.6.1 Requirements Generally (1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS

	Works, Safety Equipment and Personal Protective Equipment]. (2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before the Contractor's Equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer: (a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like. (3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works. (4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS. Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees. **4.7 TEMPORARY FUELLING FACILITIES** 4.7.1 Requirements Generally	companies have performed all necessary inspection, maintenance and repair works before the Contractor's Equipment .(JC38) is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer: JC38: この表現でいい？ 例えば Rental or Lease equipment の方が素直に読めますがいかがでしょうか。そのうえで 4.6 内での表現を統一してください。 Is this a proper expression? It would be better to use, for example, "rental and lease equipment". And please unify the expression in 4.6. NK: (2)及び(3)で使用されている" the Contractor's Equipment" は単に "equipment" で明確に意味が通じるので、"equipment"に変更します。 The term "the Contractor's Equipment" used in (2) & (3) can be replaced simply with "equipment", by which the meaning of this clause become clearer. (a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like. (3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works. (4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS. Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees. **4.7 TEMPORARY FUELLING FACILITIES** 4.7.1 Requirements Generally (1) Unless otherwise specified in the Contract, the Contractor shall design and construct	1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*]. (2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before ~~the Contractor's Equipment~~ the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer: (a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like. (3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow ~~this Contractor's Equipment~~ this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works. (4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS. Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

	(1) Unless otherwise specified in the Contract, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer. (2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. (3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer. (4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time. (5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.	temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer. (2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. 4. CONTRACTOR'S EQUIPMENT **4.1 GENERAL REQUIREMENTS** **4.1.1 Scope** (1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs. (2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons that are on	**4. CONTRACTOR'S EQUIPMENT** **4.1 GENERAL REQUIREMENTS (JC1)** JC1: 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。 (Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operatorの指名や責任者の掲示など)) Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions. (There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.) NK: We will review and modify provisions as commented. **4.1.1 Scope** (1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs. (2) The requirements of this Chapter shall apply to Contractor's	**4. CONTRACTOR'S EQUIPMENT** **4.1 GENERAL REQUIREMENTS** **4.1.1 Scope** (1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs. (2) The requirements of this Chapter shall apply to Contractor's

the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.	Personnel, Employer's Personnel and any other persons (JC 2) that are on the Site, adjacent to the Site (JC3) and other places (if any) where works are being executed ~~and who may be affected by such work~~.(JC4) JC2: この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel") There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel"). NK: Modified as commented. JC3: "who are on or adjacent to the Site and any other places where…でいいのでは can this be "who are on or adjacent to the Site and any other places where…"? NK: Modified as commented. JC4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。 The sentences connection is not good and this is not requirement for persons to be affected. NK: Modified as commented.	Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.
(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].	(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].	(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].
(4) ~~Operators and signallers~~ Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. ~~(a) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also;~~ ~~(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.~~	(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JC5) JC5: 少しシンプルに。 is synonymous with "driver"の方が MDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。 Please make phrases simple a little. The phrase of "is synonymous with "driver"" is one used in FIDIC MDB version and normal. When all JSSS Chapters are submitted, please adjust all document to use this phrase. NK: FIDIC MDB uses this as follows: *1.2 Interpretation (e)the word "tender" is synonymous with "bid", and "tenderer" with "bidder" and the words "tender documents" with "bidding documents* 日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。 (4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。 別の Spotter でも次のように同様に規定しています。 *(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.* 上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。 The operators include pilots, etc. The drivers include engine driver, motorman, etc. The (3) states "operator" includes "driver" but not that "operator" is synonymous with "driver". The same expression is made for the Spotter as below. *(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.* With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary. To MD: Please review NK reply above.	(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.
(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as: (a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers,	(5) Mobile equipment includes wheeled or tracked, self-propelled construction machinery such as: (a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders	(5) Mobile equipment includes wheeled or tracked, self-propelled construction machinery such as: (a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders

graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers;

(g) Mobile cranes and other hoisting equipment;

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Contractor's Equipment and materials to, around and from the Site.

(k) Workboat for diving works

(6) Static equipment includes powered stationary equipment such as:

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants.

(c) Tower cranes, derrick cranes;

(d) Personnel and Goods Elevators; and

(e) Material conveyors.

(f) Air compressors.

---

and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines;(JC6)

JC6: equipment に修正. Revise to equipment.
NK: JICA has commented same in Chap. 6 TW that "replace machine with equipment?"
BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Following the BS, Boring machine is left as it is.

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers; (JC7)

JC7: Asphalt finisher も入れてほしい。Please add Asphalt finisher.
NK: Added.

(g) Mobile cranes and other hoisting equipment (JC8);

JC8: Mobile ではない。This is not mobile equipment.
NK: Mobile means able to be moved from one place to another. It seems there are other hoisting equipment than mobile cranes, however NK cannot show examples so far. Deleted it..

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Contractor's Equipment and materials to, around and from the Site.

(k) Workboat for diving works

(l) TBM (Slurry and EPB) (JC9)

JC9: JICA added. EPB: Earth pressure balance type TBM
NK: TBM is added but Slurry and EPB are not because they are too detail to be referred to.

(6) Static equipment includes powered stationary equipment such as:

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants.

(c) Tower cranes, derrick cranes;

(d) Personnel and Goods Elevators; (JC10) and

JC10: 今更かも知れませんが。 Personnel and Goods Elevator は単純に Elevator ではダメなんでしたっけ？特段問題なければこれでよいと思います。
Is there any reasons to stipulate Personnel and Goods Elevator in stead of Elevator? If no special reason, Elevator can be use.
NK: 日本の安衛則に準じて分けていました。まとめて良いと考えます。
We specified it following Japanese regulation. They can be Elevator.

(e) Material conveyors.

(f) Air compressors.(JC11)

JC11: Engine Generator も追加しましょう。Submersible pump, engine pump も加えたい。 Please add Engine Generator, Submersible pump, engine pump

---

and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers, asphalt finisher;

(g) Mobile cranes;

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Contractor's Equipment and materials to, around and from the Site.

(k) Workboat for diving works

(l) Tunnel Boring Machine (TBM) .

(6) Static equipment includes powered stationary equipment such as:

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants.

(c) Tower cranes, derrick cranes;

(d) Elevators;

(e) Material conveyors;

(f) Air compressors, engine generator, submersible pump, engine pump; and

(g) Reinforcement, cutting and bending machines.

(7) Small equipment, tools and tackle (tools and tackle are collectively

(7) Tools, tackle and small equipment such as:

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Reinforcement, cutting and bending machines;

(d) Pipe bending machines;

(e) Pneumatic drills, hammers, breakers, compactors and compressors;

(f) Wood processing equipment;

(g) Independent concrete mixers;

(h) Air extract or blowing equipment for improving the working area environment;

(i) Pneumatic power tools such as jack hammers, drills,

(j) Engine driven chain saws;

(k) Hand operated equipment such as jacks, winches, lever hoists; and

(l) Hand tools such as wrenches, chisels, and saw, picks, hammers.

(8) Electric powered equipment means portable electric powered mobile equipment or tools.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the *HSE Provision and Use of Work Equipment Regulations 1998 (PUWER).*

(2) In accordance with these regulations, together with JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and*

NK: Added.

(7) Small equipment, tools and tackle (JC46) such as:

JC46: (JICA comment to 4.3.11) これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".

NK: Defied "Tools" in (7) here.

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) ~~Reinforcement, cutting and bending machines;~~ (JC12)

JC12: これらは tool, tackle and small equipment としては大きすぎるのでは →(6)に移動してください。
Please move these to (6) as they are too large as tool, tackle and small equipment.

NK: Moved to (6)(g)

(d) Pipe bending machines;

(e) ~~Pneumatic~~ drills, hammers, breakers, compactors and compressors;

(f) Wood processing equipment;

(g) Independent concrete mixers;

(h) Air extract or blowing equipment for improving the working area environment;

(i) ~~Pneumatic power tools such as~~, Jack hammers and drills, (JC13)

(j) ~~Engine driven~~ Chain saws; (JC13)

JC13: 電動も含まれるようにして下記の(8)は削除しています。
Modified to include electric power equipment and deleted (8) below.

NK: Modified.

(k) Hand operated equipment such as jacks, winches, lever hoists; and

(l) Hand tools such as wrenches, chisels, and saw, picks, hammers.

.

(8) ~~Electric powered equipment means portable electric powered mobile equipment or tools.~~ (JC14)

JC14: JICA deleted related with JC12.

NK: Deleted.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the *HSE Provision and Use of Work Equipment Regulations 1998 (PUWER).*(JC15)

JC15: 正式に言えば、"The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK "では？法令の内容は一般的なので harmful ではないと思える。
Is the official title "The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations is general ones, so not harmful.

NK: Modified as commented.

(2) In accordance with these regulations, together with JSSS 1.34

referred to "Tools" in this Chapter") such as:

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyors

(d) Pipe bending machines;

(e) Drills, hammers, breakers, compactors and compressors;

(f) Wood processing equipment;

(g) Independent concrete mixers;

(h) Air extract or blowing equipment for improving the working area environment;

(i) Jack hammers and drills;

(j) Chain saws;

(k) Hand operated equipment such as jacks, winches, lever hoists; and

(l) Hand tools such as wrenches, chisels, and saw, picks, hammers.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the *Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.*

(2) In accordance with these regulations, together with JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and*

Personal Protective Equipment] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Work places, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) The preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities, location and scope of Spotters.

(6) Environmental impact mitigation including required measures against vibration, noise, dust and the like.

[*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Workplaces, ~~area limits and~~ (JC16) operational routes, restricted areas, locations of caution signs and fences.

JC16: Workplace の boundary という意味でつかわれているのであれば、workplace に含まれているので不要と考えます。
If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary.
NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted
To MD, please review this comment.

(4) ~~The~~ Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities, location (JC17) and ~~scope~~ role of Spotters.

JC17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。
The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5.
4.1.5 (1)Operators shall be fully aware of the following:
(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and
NK: Modified as commented and added referring 4.1.5.

(6) Environmental impact mitigation (JC18) including required measures against vibration, noise, dust and the like.

JC18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any)

Personal Protective Equipment] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) ~~Workplaces.~~ Operational routes, restricted areas, locations of caution signs and fences.

(4) Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities and roles of and location(s) for Spotters and the communication and signalling requirements including equipment to be used

(6) Environmental impact to third parties and workers including required measures against vibration, noise, dust and the like.

	including required mitigation measures …”ですよね？ “Environmental impact effects including required mitigation measures against …”では？ It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated “Hazardous working conditions (if any) including required mitigation measures …” Is this “Environmental impact effects including required mitigation measures against …”？ NK: This can be read for both environment impact to third parties and working environment in the Site. Modified to make clear. To MD, please review the comment and modify (6).	
(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.	(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place. (JC19) JC19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・“Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”??? This sentence cannot be really understood. The connection of matters listed in English are not understandable. Is this “Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”? NK: Modified referring to the comment. To MD, please review the comment and modify (7).	(7) Safety measures for the environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas ~~or areas~~ where Dangerous Work is taking place.
(8) The potential danger to other Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor’s Equipment is to be used and who may be affected by the use of Contractor’s Equipment and the required measures to avoid any risk accident or injury.	(8) The potential danger to ~~other~~ Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor’s Equipment is to be used and (JC20) who may be affected by the use of Contractor’s Equipment and the required measures to avoid any ~~risk~~ accident or injury. JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as “Concerned Personnel”) There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as “Concerned Personnel”). NK: Modified as commented.	(8) Potential danger to Concerned Personnel who may be affected by the use of Contractor’s Equipment and the required measures to avoid any ~~risk~~ accident or injury.
(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning. (10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage. (11) Measures for breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance. (12) The name of the authorised operator for each unit of Contractor’s Equipment.	(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning. (10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage. (11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance. (12) The name of the authorised operator for each unit of Contractor’s Equipment. (JC21) JC21 (=JC1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。 (Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operatorの指名や責任者の掲示など)) Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.	(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning. (10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage. (11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance. (12) ~~The~~ name of the authorised operator for each unit of Contractor’s Equipment, when authorised operator is necessary to be assigned.

(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: Modified as commented.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.4 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.

The health and safety training shall be done to the personnel including the following items depending on the characteristics of the Contractor's Equipment with which the personnel will be engaged in works.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation and work with the Contractor's equipment when an abnormality occurs and report to the person in charge; and

(5) Prohibition from removing safety devices; and

(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:

(1) Driving rules for prevention of traffic accidents;

(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(3) Driving methods to prevent accidents including contact and collision with other persons, cycles, motorcycles and other

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.4 Safety Training

The Contractor shall provide the Contractor's personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.

The health and safety training shall be ~~done~~ provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment ~~with which the personnel will be engaged in works.~~(JC22)

JC22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation ~~and work with~~ of the Contractor's Equipment when an abnormality occurs and report to the person in charge;~~ and~~

(5) Prohibition ~~from~~ of removing safety devices; and

(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, (JC23) ~~a~~lso include ~~prevention of traffic accidents on and off the Site for example including~~: (JC24)

JC23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.
JC 24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

(7) Particular safety training for transportation equipment operators for the purpose of prevention of traffic accidents on and off the Site including:

(a) Driving rules ~~for prevention of traffic accidents~~ in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to ~~prevent accidents including~~ contact and collision with other persons, cycles, motorcycles and other

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.4 Safety Training

The Contractor shall provide the Contractor's personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.

The health and safety training shall be ~~done~~ provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment ~~with which the personnel will be engaged in works.~~

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation ~~and work with~~ of the Contractor's Equipment when an abnormality occurs and report to the person in charge;~~ and~~

(5) Prohibition ~~from~~ of removing safety devices; and

(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, ~~also~~ include ~~prevention of traffic accidents on and off the Site for example including~~:

(7) Particular safety training for transportation equipment operators for the purpose of prevention of traffic accidents on and off the Site including:

(a) Driving rules ~~for prevention of traffic accidents~~ in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to ~~prevent accidents including~~ contact and collision with other persons, cycles, motorcycles and other

vehicles;

(4) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others;

(5) Driving methods to prevent accidents due to holes, bumps or obstacles on the road;

(6) Required inspection and maintenance before starting operation;

(7) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.5 Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that

(1) Operators shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Prohibition of removing, interfering with or overriding any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(2) In addition, operators shall:

(a) Safely and competently operate the Contractor's Equipment;

(b) Operate all safety devices including emergency alarm and stop devices; and

(c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility. ~~and control or ensure that other qualified persons perform these operations.~~

4.1.6 Signalling

(1) Signalling between operators ~~and Spotters~~ and any associated workers shall only be carried out by the Spotters.

(2) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used.

---

vehicles;

(d) Driving methods to properly ~~prevent accidents in~~ overtake ~~ing~~ other vehicles and to be undertaken by others

(e) Driving methods ~~to prevent accidents due to~~ when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation;

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.5 Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures ~~possible risks~~ hazards and operation methods;

(b) The need to stop ~~all work~~ the operation when any defect or abnormality is detected;

(c) ~~Prohibition of removing, interfering with or overriding any safety devices;~~ (JC25)

JC25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and

(e) The procedures in case of emergency.

(3) ~~In addition,~~ Operators shall:

(a) ~~Safely and competently operate the Contractor's Equipment;~~

(b) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and

(c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility.~~.~~

4.1.6 Signalling

(1) Signalling between operators and any associated workers shall only be carried out by the Spotters.

(2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used.

---

vehicles;

(d) Driving methods to properly ~~prevent accidents in~~ overtake ~~ing~~ other vehicles and to be undertaken by others

(e) Driving methods ~~to prevent accidents due to~~ when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation;

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.5 Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and

(d) The procedures in case of emergency.

(3) Operators shall:

(a) Keep all safety devices including emergency alarm and stop devices activated; and

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility.~~.~~

4.1.6 Signalling

(1) Signalling between operators and any associated workers shall only be carried out by the Spotters.

(2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used.

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and repair manual.

(3) Inspection at the time when Contractor's Equipment is mobilised to the Site and before commencement of operation, for which the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning,
- all inspection and maintenance covers,
- safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and
- ~~that~~ all such units of equipment are in the condition required by the Contract;

To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

(b) Ensure as a minimum that the daily and periodical check items listed below in this Sub Clause, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when may be required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective* Equipment] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment, taking account of the characteristics, capability and condition of the Contractor's Equipment, and in compliance with the manufacturer's official maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JC26) the Contractor shall:

JC26: 文として完結していないので修正しました。The sentence is not completed, so modified.
NK: Modified as commented.

(a) Inspect all units of Contractor's Equipment to ensure that

(i) all components are installed and functioning,

~~• all inspection and maintenance covers,~~

(ii) safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and

(iii) ~~that~~ all such units of equipment are in ~~the condition required by the Contract~~ proper condition ; (JC27)

JC27: "契約"が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment? Can it be "proper condition"?
NK: Modified as commented.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JC28), have already been inspected and recorded;

JC28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JC29) required in compliance with JSSS; and

JC29: 不要。Unnecessary.
NK: Deleted.

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective* Equipment] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment, taking account of the characteristics, capability and condition of the Contractor's Equipment, and in compliance with the manufacturer's official maintenance and repair manual.

(3) When mobilizing Contractor's Equipment to the Site and before commencement of operation,

(a) Inspect all units of Contractor's Equipment to ensure that

(i) all components are installed and functioning,

(ii) safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and

(iii) ~~that~~ all such units of equipment are in proper condition;

(b) Ensure as a minimum that the daily and periodical check items, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully

Engineer may refuse to accept delivery to the Site ~~and instruct the Contractor to remove from the Site of~~ any Contractor's Equipment ~~that is not in this condition.~~ which does not meet the requirements stipulated in the Contract.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment; and

(j) Cleanliness of each working area and removal of obstructions.

(k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated.

(l) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(d) Springs, shock absorbers and other parts of suspension

compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment; and

(j) Cleanliness of each working area and removal of obstructions.

(k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated.

(l) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(d) Springs, shock absorbers and other parts of suspension devices;

compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment; and

(j) Cleanliness of each working area and removal of obstructions.

(k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated.

(l) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(d) Springs, shock absorbers and other parts of suspension devices;

devices;

(e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(f) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators and lightning devices.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

(e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(f) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tires' air pressure and lightning devices.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately and report to the person in charge;

(2) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers (JC30) ; and

JC30: オペレーターが不調の原因まで identify できるのでしょうか。また修理の主語がオペレーターになっていますがこれでよいのか？4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されている。
Can operator identify causes? Is it correct that the main actor of repair is operator? The 4.1.4(4) stipulate *that Stop of the operation and work with of the Contractor's Equipment when an abnormality occurs and report to the person in charge;*

NK: Modified as commented.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

(e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(f) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tires' air pressure and lightning devices.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately and report to the person in charge;

(2) Necessary repair shall be provided by qualified mechanics, electricians or engineers; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like all as necessary to prevent any risk of injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities ~~that are necessary to ensure safety~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO who shall be contacted in the event of breakdown or fault.

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like, ~~all~~ as necessary to prevent ~~any risk of~~ injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(6) ~~Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.~~ (JC31)

JC31: 機械の safety requirement ではない。It is not the safety requirements for the Equipment.

NK: 機械を使っての作業場所に救急用具を設置することは、機械の安全措置ではないですが、作業員の安全措置ですので、このまま残します。
This clause is not safety requirement for Equipment but for workers in the working area with Equipment. Therefore this as left as it is.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO (JC32) or a person in charge who shall be contacted in the event of breakdown or fault.

JC32: 4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されているので、併記しておきます。
4.1.4(4) stipulate operator shall stop operation and inform person in charge of event of breakdown or fault, so added the person in charge.

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like, as necessary to prevent injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact of the HSO or a person in charge who shall be contacted in the event of breakdown or fault.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.

(9) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

~~4.3.2 Transportation to and Removal from Site~~

~~(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

~~(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas at risk.

(1) Perform inspection and maintenance work wherever possible on a

NK: Modified.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access~~. and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.~~ (JC33)

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

JC33: 無関係な人間にアクセスを禁じるのは防護装置に悪さをさせないためだけではないし、関係者が防護装置に悪さをするかもしれない。従って、無関係者のアクセス禁止と防護装置の維持の話に分ける。
The prohibition of other persons from accessing to equipment is for avoiding them doing bad to protective device. On the other hand, there is possibility that workers related with the work do bad to the protective device. Therefore, the (8) is divided to two for(8) prohibition of other persons to access to equipment and (9) keeping the protective device function.

NK: Modified as commented.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, ~~personnel and goods~~ (JC34) elevators and (JC35)the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

JC34: 削除。単に elevators でいいのでは。
Deleted. It can be "elevators".

NK: Modified.

JC35: Is it "or".

NK: We think "and" can be left.

To MD, please advise to use "or" or "and".

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas ~~at risk~~.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access.

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, ~~personnel and goods~~ elevators and the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's written instructions.

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas ~~at risk~~.

(1) Perform inspection and maintenance work wherever possible on a

level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [Prohibition of Entry - Dangerous Work].

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, dangerous areas, areas where the operator's view is not clear and intersections with public roads.

(e) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [Prohibition of Entry - Dangerous Work].

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, ~~areas~~ where the operator's view is not clear and intersections with public roads.

To MD, please review the above deletion of areas is correct.

(e) Where there is any risk of turnover, slippage, collapse or fall,

level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [Prohibition of Entry - Dangerous Work].

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, ~~areas~~ where the operator's view is not clear and intersections with public roads.

(e) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of the other Contractor's Equipment; and

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.3 Safety Measures When ~~Equipment~~ Mobile Equipment Is Not in Use

(1) When ~~Contractor's Equipment~~ mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connection of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of ~~the other~~ another Contractor's Equipment nearby; and

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connection of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:(JC36)

JC36: こうした事態が発生するのを防ぐために具体的な記述を記載してください。
・安定したフレームにアタッチメントをおいて着脱する。
・エンジンを切る
その他、4.3.4 の(1)で参考になるようなことを具体的に記述してください。
Please stipulate concrete measures to avoid occurrence of accident mentioned in 81) and (2) for example,
- connecting and removing attachments which are located on stable frames,
- Put off engine
- Other concrete measures referring to 4.3.4 (1).

NK: added in (1) and (2).

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of ~~the other~~ another Contractor's Equipment nearby; and

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:(JC36)

(1) Prevent any risk due to movement or fall of attachments.

(2) Prevent accidental movement or operation causing persons to be trapped.

4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment

(1) Select and use trailers, ramps, tracks and climbing equipment or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and loading and unloading areas which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all trailer wheels to prevent any movement.

(4) Stop and isolate the functions of trailer and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer.

(9) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(10) Place any attachments on the trailer and securely tie down.

(11) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(1) Prevent any ~~risk~~ accident due to movement or fall of attachments.

(2) Prevent accidental movement or operation causing persons to be trapped.

4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment (JC37)

JC37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。

(1) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailer/track ~~wheels~~ to prevent any movement.

NK: Added "during loading of Contactor's Equipment.

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

(5) Ensure trailers/tracks are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) ~~Ensure that all lights, brakes, steering and safety devices of the trailer/track working properly.~~ (JC38)

JC38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？
Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported?

NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order.
This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting

(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer/track.

(9) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(10) Place any attachments on the trailer/track and securely tie down.

(11) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or ground, and

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment not to move as mentioned in JSSS 4.3.4 (1) (a), (b) and (d), stop engine.

4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment

(1) Select and use trailers, tracks, their accessary and/or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailer/track to prevent any movement during loading of Contactor's Equipment.

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

(5) Ensure trailers/tracks are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits.

(7) Ensure that authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer/track.

(8) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(9) Place any attachments on the trailer/track and securely tie down.

(10) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

4.3.8 ~~Access Roads~~ Roads in the Site

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic (JC39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JC40) permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

JC39: general traffic?
To MD: Please review this change to public traffic.

JC40: Prior は後に before があるから不要。
"Prior" is not necessary as there is "before".
NK: Deleted as comented.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

4.3.8 ~~Roads~~ Temporary Motor Way in the Site (JC40)

JC40: 仮設で作られる機械専用通路のことと理解していますが、英語の正しさについては MD 氏に確認願います。
We understood this Clause is for exclusive use roads temporary constrcuted.
Please ask MD to confirm the title and content.
NK: 和文では次のように作業環境と規定していました。

5.4.1 運搬車両の作業環境
請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。
(1) 運行経路について必要な幅員を保持すること、…。
(2) 運行経路の必要と認められる箇所には、制限速度を示す標識…。
(3) 運搬車両の走路と歩行者の安全通路を明示し、…。
(4) 規模の大きな工事現場においては運搬専用道路を設け、…。
(5) 夜間の運搬作業時には、…。

Site 外の公道の安全措置は道路管理者が行うべきことのため、和文（案）を参考に、現場内の運搬道路の安全措置とタイトルを変更することを提案します。
Japanese JSSS stipulate as follows:
5.4 Transport Works by Transportation Vehicles
5.4.1 Work Environment
The Contractor shall take the following measures for the safety working environment in the Site for operation of transportation vehicles.
(1) Take measures for the transportation road …;
(2) Put signboards indicating speed limit …;
(3) Separate roads for vehicles and walkways…;
(4) In large construction site, provide exclusive transport roads …; and
(5) Provide sufficient lighting facilities …;.

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to public traffic, third parties, structures adjacent to the transportation route, obtain all necessary permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

4.3.8 Temporary Transporting Roads in the Site

(1) Take measures for ensuring that ~~access~~ roads in the Site are of suitable construction, ~~of~~ sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

Safety measures in public roads out side of the Site shall be taken by the road authority.

NK: We propose to revise the title to Safety Measures for Temporary Transporting Roads in the Site referring to Japanese JSSS.
To MD, please review the title.

(1) Take measures for ensuring that ~~access~~ roads in the Site (JC41)are of suitable construction, ~~of~~ sufficient width, free from potholes, uneven settlement and collapse.

JC41: 同上。Ditto
NK: Ditto.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with solid surface (paved, graded or compacted as appropriate) , screens(JC42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

JC42: What is screen?
NK: It means fence screen such as shown in the photo below.

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(1) Take measures for ensuring that Temporary Transporting Roads in the Site are of suitable construction, sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with solid surface (paved, graded or compacted as appropriate) , screens(JC42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors

(1) General

(a) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(b) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

(a) Additional daily inspection items

(i) Defects or operational faults in elevator enclosures, doors, guide-rails and runners;

(ii) Defects or operational faults in emergency stop and alarm systems;

(iii) Defects or operational faults in power, lighting and control systems;

(iv) Defects or operational faults with interphone systems;

(v) Defects or operational faults in brakes, clutches; and

(vi) Defects or operational faults of sheaves and pulleys.

(b) Additional periodical inspection items

(i) Defects or operational faults in daily inspection items;

(ii) Defects or operational faults in ~~supporting cables and~~ wire ropes;

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors (JC43)

JC43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.
NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

(1) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual). The Contractor shall also carry out any maintenance and repair, and obtain re-certification of the HSO for further operation;

(c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(d) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators (JC44)

JC44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。
Please modify (b) (c) and (3) as below.
NK: Modified.

(a) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners;

(ii) ~~Defects or operational faults in~~ emergency stop and alarm systems;

(iii) ~~Defects or operational faults in~~ power, lighting and control systems;

(iv) ~~Defects or operational faults with~~ interphone systems;

(v) ~~Defects or operational faults in~~ brakes, clutches; and

(vi) ~~Defects or operational faults of~~ sheaves and pulleys.

(b) Additional periodical inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ daily inspection items;

(ii) ~~Defects or operational faults in~~ wire ropes;

(iii) ~~Defects or operational faults in~~ winch and its foundation;

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors

(1) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual). The Contractor shall also carry out any maintenance and repair, and obtain re-certification of the HSO for further operation;

(c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(d) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

(a) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) elevator enclosures, doors, guide-rails and runners;

(ii) emergency stop and alarm systems;

(iii) power, lighting and control systems;

(iv) interphone systems;

(v) brakes, clutches; and

(vi) sheaves and pulleys.

(b) Additional periodical inspection items shall include to check defects or operational faults with respect to:

(i) daily inspection items;

(ii) ropes;

(iii) winch and its foundation; and

(iii) Defects or operational faults in winch and its foundation; and

(iv) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.

(3) Belt Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to protect workers required to work below the conveyors.

(v) Riding of workers on the moving belts of the belt conveyors shall be prohibited.

(b) Additional daily inspection items

(i) Defects or operational faults in prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) Defects or operational faults in guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items; and

~~(1) General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use.~~

~~(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(a) Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

~~(b) Defects or operational faults in emergency stop and alarm systems;~~

~~(c) Defects or operational faults in power, lighting and control systems;~~

~~(d) Defects or operational faults with interphone systems;~~

~~(e) Defects or operational faults in brakes, clutches; and~~

and

(iv) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(3) ~~Belt~~ Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed .

(v) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) ~~Defects or operational faults in~~ guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items; ~~and~~(JC45)

JC45: There is no sentence after "and".
NK: Deleted.

~~(4) General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use.~~

~~(5) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(g) Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

~~(h) Defects or operational faults in emergency stop and alarm systems;~~

~~(i) Defects or operational faults in power, lighting and control systems;~~

~~(j) Defects or operational faults with interphone systems;~~

(iv) supporting structures, guy ropes, fixings and anchors.

(3) Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to prevent fall of the materials being conveyed.

(v) Riding of workers on the moving belts shall be prohibited.

(b) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items.)

~~(f) Defects or operational faults of sheaves and pulleys.~~

~~(3) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(a) Defects or operational faults in supporting cables and wire ropes; and~~

~~(b) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

4.3.11 Additional Requirements for Tools, Tackle and Small Equipment

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.

(3) All equipment shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

~~(k) Defects or operational faults in brakes, clutches; and~~

~~(l) Defects or operational faults of sheaves and pulleys.~~

~~(6) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(c) Defects or operational faults in supporting cables and wire ropes; and~~

~~(d) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

4.3.11 Additional Requirements for Small Equipment, Tools and Tackle (JC46)

JC46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".
NK: Defined "Tools2 in 4.1.1 (7) above.

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO ~~the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.~~ (JC47)

JC47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。
あくまでも理想論。僻地では無理 " as much as possible"を加えてみては
It is few for agents to repair them, so it is replaced with competent persons approved by the HSO.
It is ideal for agent to repair them, so how about to add "as much as possible".
NK: Modified as commented.

(3) All equipment (JC48), tools and tackle shall be tested by competent persons after any repair or replacement of parts, before such equipment is put back into use.

JC48: マイナーなものなので、re-certified まではしないと思います。
It may not be re-certified because they are minor equipment.
NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

4.3.12 Additional Requirements for Electric Powered Equipment (JC49) other than small equipment and tools

JC49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。
It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools.
NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows:
(8) Electric powered equipment means portable electric powered mobile equipment or tools.
The (8) was deleted by JICA comment JC13 and 14.
NK: Definition is added in (1) below.

(1) Electric powered equipment specified in 4.3.12 is portable electric powered mobile equipment or tools among small equipment and Tools listed in 4.1.1 (7).

4.3.11 Additional Requirements for Small Equipment and Tools

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO.

(3) All small equipment and Tools shall be tested by competent persons after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) Electric powered equipment specified in 4.3.12 is portable electric powered mobile equipment or tools among small equipment and

(1) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(2) The Contractor shall comply with the following additional safety requirements:

(a) Use, ~~metal-clad~~ weatherproof switches with covers, securely fixed in accessible and dry places;

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars ~~or scaffolding tubes~~ and the like to prevent damage to the insulation and protective covering.

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JC50)

JC50: 表現の横並びをとるとこのようになるのではないか？
(2)(d)では ELCB なるものは必須ではない記述になっている
The sentence will be as modified to make same listing style below.
(2) (d) stipulates ELCB is not compulsory.
NK: Modified as commented.

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use weatherproof switches (JC51) with covers, securely fixed in accessible and dry places;

JC51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？
We propose to specify anti-explosion type, if needed.
NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないため、追記しないことと致します。
参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html
Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars and the like to prevent damage to the insulation and protective covering.

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing

Tools listed in 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any;

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use weatherproof switches with covers, securely fixed in accessible and dry places;

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.

(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars and the like to prevent damage to the insulation and protective covering.

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water and not wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures ~~of at least 6~~, obtained by dividing the breaking strength by the maximum applied load for each type.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in

fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water ~~and not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures , obtained by dividing the breaking strength by the maximum applied load for each type.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions and in any event~~

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water without wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures , obtained by dividing the breaking strength by the maximum applied load for each type.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

accordance with the manufacturer's written instructions and in any event within the designed operating capacity of the equipment.

When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:

(1) Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load;

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the construction equipment;

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and

(5) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work.

Under these circumstances the Contractor shall take account of the following:

(1) Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.

(2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.

(3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before

~~within the designed operating capacity of the equipment.~~ (JC52)

JC52: 製造者が目的外使用の書面でのインストラクションを出していることが想定できないので、いらないのではないでしょうか？
It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary?
NK: Agreed to delete.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's written instructions, and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(1) ~~Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used~~; Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket);

JC53: 下記の例示は全て掘削機械を揚貨のために用いる時の事項とみました。それであれば、修文案ような記述に修正した方がよいと思います.
The following examples are all lifting use of excavators, so the (1) above is better to revised as revised above.
NK: Modified as commented.

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load;

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction~~ equipment;

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and

(5) ~~Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work.~~ (JC54)

JC54: 揚貨作業をする時に揚貨の資格が必要であることは、揚貨の章に記述があるはず。不要。
The necessity of license is specified in the Chapter for lifting, so not necessary mention (5).
NK: Deleted.

~~Under these circumstances the Contractor shall take account of the following:~~ (JC55)

JC55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要.
It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging.
NK: Deleted.

(1) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~

(2) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~

(3) ~~Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed~~

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's written instructions, and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket);

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load;

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the equipment;

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and

commencing the operation.

(4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

~~(5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used.~~

(6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.

(10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before ~~the Contractor's Equipment~~ the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow ~~this Contractor's Equipment~~ this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

~~the HSO of this and obtained his permission before commencing the operation.~~

~~(4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.~~

~~(5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used.~~

~~(6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.~~

~~(7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.~~

~~(8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.~~

~~(9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

~~(10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(n) Inspection and maintenance records;

(o) Operation, repair and maintenance manuals; and

(p) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS.

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.1 Requirements Generally

(1) Unless otherwise specified in the Contract, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

To MD, please review JICA comments and show us the source of these requirements.

(6) The Contractor is reminded of the requirements of JSSS 1.23 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.

---

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.1 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JC56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JC57)

JC56: "shall"じゃなく"may"ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify "shall" but "may" because fuelling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

JC57: 法令上の許可が必要な場合は取得することを追記が必要と思量。
It is necessary to specify for the Contractor to get permission in accordance with the Law of the Country when necessary.
NK: Added.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

---

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.1 Requirements Generally

(1) The Contractor ~~shall~~ may design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

(6) The Contractor is reminded of the requirements of JSSS 1.23 [*Fire*

	(6) The Contractor is reminded of the requirements of JSSS 1.23 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.	*Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.

4. CONTRACTOR'S EQUIPMENT **GENERAL REQUIREMENTS (JCB1)** JC1: 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現に	**4.** **4.1 GENERAL REQUIREMENTS** (JCB1) JC1: 全体を通して、特に Tools についてはすべての要求事項が適用されるわけでは	**4. GENERAL REQUIREMENTS** 4.1.3 Scope (7) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static

なるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: We will review and modify provisions as commented.

11.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(1) ~~The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JCB2) that are on the Site, adjacent to the Site (JCB3) and other places (if any) where works are being executed and who may be affected by such work. (JCB4):~~ The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.

JCB2: この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")
There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").
NK: Modified as commented.

JCB3: "who are on or adjacent to the Site and any other places where…でいいのでは can this be "who are on or adjacent to the Site and any other places where…"?
NK: Modified as commented.

JCB4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。
The sentences connection is not good and this is not requirement for persons to be affected.
NK: Modified as commented.

(2) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].(JCA1)

JCA1: 必ず 6 章(5 章に変更)に含めるようにしてください。
Be sure to include it in section 6 (now section 5).
NK: 第 5 章に揚重、玉掛について十分規定済み。
Section 5 stipulates regarding hoisting and rigging in detail.

~~*Not sure that the following is necessary, coordinate later*~~

~~(3) For additional requirements for transportation, refer to JSSS 5.0 [Transportation].~~

(4) ~~Operators and signallers~~ (JCA2) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JCB5)

ないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: We will review and modify provisions as commented.

The specification is for general application and designed to apply to all types of project, and all types of equipment including various tools such as hand tools and hand operated tools including pneumatic drills etc., so the coverage needs to be as broad as possible to capture all types and give general rules. There is no need to be specific when something does not apply to any particular type, I suggest that the important aim is to make sure that all types and requirements are covered.

Contractor's Equipment is an all-embracing term, defined as such in the Contract.

4.1.3 Scope

(4) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, ~~tools, tackle and~~ small equipment, tools and electric power equipment as further described in the following paragraphs.

I suggest for clarity it is better to delete "tackle" as it is not such a common international term, it may have different meaning and there is little difference to tools. Also so that it is consistent with 4.3.10

~~(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JCB2) that are on the Site, adjacent to the Site (JCB3) and other places (if any) where works are being executed and who may be affected by such work. (JCB4):~~ The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.

JCB2: この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")
There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").
NK: Modified as commented.

JCB3: "who are on or adjacent to the Site and any other places where…でいいのでは can this be "who are on or adjacent to the Site and any other places where…"?
NK: Modified as commented.

JCB4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。
The sentences connection is not good and this is not requirement for persons to be affected.
NK: Modified as commented.

The suggested new definition has been used in only one other location (4.1.4 (8)) and I suggest that such a definition applicable to one item in this chapter only, is therefore not really necessary.

equipment, small equipment, tools and electric power equipment as further described in the following paragraphs.

(8) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.

(9) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].

(10) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.

(11) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(y) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(z) Excavators such as backhoes, face shovels, power shovels;

(aa) Loaders such as payloaders and face shovels;

(bb) Dump trucks for removal or importation of spoil;

(cc) Specialist foundation equipment such as pile driving and boring equipment;

(dd) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers, asphalt finishers;

(ee) Mobile cranes;

(ff) Piling equipment

(gg) Concreting equipment such as ready-mixed concrete trucks and pump trucks;

(hh) Demolition equipment such as breakers, concrete crushers and demolition grippers;

(ii) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Goods to, around and from the Site;

(jj) Workboat for diving works; and

JCA2: “Spotters”に修正してください。 Please change to “Spotters”
NK: Spotters は次項目の対応の通り削除しました。
“Spotters” is deleted as explained in the next clause.

(a) ~~Any reference to “operator” in this Chapter and elsewhere in JSSS shall be deemed to include “driver” also;~~(JCA3)

JCA3: この operator は小文字にされていますが、全体を通してこの使い方とするか否かについては章ごとの整合性の観点から検討してください。
This "operator" is used lower case. It should be considered whether it is proper to use lower case as a whole of JSSS.
NK: “operator”という用語は JSSS では定義していません。第 9 章等他章でも小文字で表現しております。このままとします。
The term “operator” in not defined in JSSS. In other Chapters such as Chapter 9 [Concrete Works], the word “operator” is used in lower case. Left as it is.

(b) ~~Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.~~ (JCA4)

JCA4: この Spotter については総則で定義されていますが、signaller を含めるという意図で敢えてこの記述としているのでしょうか。
This “Spotter” is defined in the Chapter1, [General], but is it meant to include signaller?
NK: 総則の定義で”Spotter”は、下記のように定義しています。ここで繰り返す必要はないと考えます。(b)は削除し、(4)の構成を右のように修正します。
(24) “Spotter” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor’s Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like].
Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
Any reference to a “Spotter” in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
As “Spotter” is defied in Chapter 1 as above, it is unnecessary to repeat here.
Therefore, (b) is deleted and clause (4) is modified as right.

JCB5: 少しシンプルに。 is synonymous with “driver”の方が MDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。
Please make phrases simple a little. The phrase of “is synonymous with “driver”” is one used in FIDIC MDB version and normal.
When all JSSS Chapters are submitted, please adjust all document to use this phrase.
NK: FIDIC MDB uses this as follows:
1.2 Interpretation (e)the word “tender” is synonymous with “bid”, and “tenderer” with “bidder” and the words “tender documents” with “bidding documents
日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。
(4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。
別の Spotter でも次のように同様に規定しています。
(b) Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.

The reference to “other persons” in this sense is however used in one other instance in 4.3.4 in a slightly different way.

I understand the point but suggest it is better to slightly modify the text of your above suggested clause as follows, and modify or delete the two later references, which I have now done

(5) The Contractor shall ensure the safety of all Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor’s Equipment in operation, standby or storage or when such equipment is being maintained or transported.

See also change in 4.1.4 (8) and deletion of 4.3.4

(6) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].

JCA1: 必ず 6 章(5 章に変更)に含めるようにしてください。
Be sure to include it in section 6 (now section 5).
NK: 第 5 章に揚重、玉掛について十分規定済み。
Section 5 stipulates regarding hoisting and rigging in detail.

(9) ~~Operators and signallers~~ (JCA2) Any reference to “operator” in this Chapter and elsewhere in JSSS shall be deemed to include “driver” also. (JCB5)

JCA2: “Spotters”に修正してください。 Please change to “Spotters”
NK: Spotters は次項目の対応の通り削除しました。
“Spotters” is deleted as explained in the next clause.

(c) ~~Any reference to “operator” in this Chapter and elsewhere in JSSS shall be deemed to include “driver” also;~~(JCA3)

JCA3: この operator は小文字にされていますが、全体を通してこの使い方とするか否かについては章ごとの整合性の観点から検討してください。
This "operator" is used lower case. It should be considered whether it is proper to use lower case as a whole of JSSS.
NK: “operator”という用語は JSSS では定義していません。第 9 章等他章でも小文字で表現しております。このままとします。
The term “operator” in not defined in JSSS. In other Chapters such as Chapter 9 [Concrete Works], the word “operator” is used in lower case. Left as it is.

No change is necessary

(d) ~~Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.~~ (JCA4)

JCA4: この Spotter については総則で定義されていますが、signaller を含めるという意図で敢えてこの記述としているのでしょうか。
This “Spotter” is defined in the Chapter1, [General], but is it meant to include signaller?
NK: 総則の定義で”Spotter”は、下記のように定義しています。ここで繰り返す必要はないと考えます。(b)は削除し、(4)の構成を右のように修正します。
(24) “Spotter” means a member of the Contractor’s Personnel who is generally responsible for warning other Contractor’s and Employer’s Personnel and other persons and keeping them away from working operations and areas, for assisting

(kk) Tunnel Boring Machine (TBM).

(14) Static equipment includes powered stationary equipment such as:

(o) Stone crushing plants and screening equipment;

(p) Concrete and asphalt concrete batching plants;

(q) Tower cranes, derrick cranes;

(r) Elevators;

(s) Material conveyors;

(t) Air compressors;

(u) Engine Generators, submersible pumps and engine pumps; and

(v) Reinforcement, cutting and bending machines.

(15) Small equipment and tools such as:

(aa) Hand steered vibrating rollers;

(bb) Plate compactors and vibratory rammers;

(cc) Portable conveyors;

(dd) Pipe bending machines;

(ee) Drills, hammers, breakers, compactors and compressors;

(ff) Wood processing equipment;

(gg) Independent concrete mixers;

(hh) Air extract or blowing equipment for improving the working area environment;

(ii) Jack hammers, drills;

(jj) Chain saws;

(kk) Hand operated equipment such as jacks, winches, lever hoists; and

(ll) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

4.1.4 Compliance Standards

(5) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment

上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。
The operators include pilots, etc. The drivers include engine driver, motorman, etc.
The (3) states "operator" includes "driver" but not that "operator" is synonymous with "driver".
The same expression is made for the Spotter as below.
(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.
With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary.

To MD: Please review NK reply above.

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines; (JCB6)

JCB6: equipment に修正. Revise to equipment.
NK: JICA has commented same in Chap. 6 TW that "replace machine with equipment?"
BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Following the BS, Boring machine is left as it is.
To MD, please review my answer above.

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers; (JCB7) asphalt finisher;

JCB7: Asphalt finisher も入れてほしい。Please add Asphalt finisher.
NK: Added.

(g) Mobile cranes ~~and other hoisting equipment~~ (JCB8);

JCB8: Mobile ではない。This is not mobile equipment.
NK: Mobile means able to be moved from one place to another. It seems there are other hoisting equipment than mobile cranes, however NK cannot show examples so far. Deleted it..

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for *drivers of trucks and operators of other Contractor's Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like].*
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
As "Spotter" is defied in Chapter 1 as above, it is unnecessary to repeat here.
Therefore, (b) is deleted and clause (4) is modified as right.

The clause can now be deleted

JCB5: 少しシンプルに。 is synonymous with "driver"の方が MDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。
Please make phrases simple a little. The phrase of "is synonymous with "driver"" is one used in FIDIC MDB version and normal.
When all JSSS Chapters are submitted, please adjust all document to use this phrase.
NK: FIDIC MDB uses this as follows:
1.2 Interpretation (e)the word "tender" is synonymous with "bid", and "tenderer" with "bidder" and the words "tender documents" with "bidding documents
日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。
(4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。
別の Spotter でも次のように同様に規定しています。
(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.
上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。
The operators include pilots, etc. The drivers include engine driver, motorman, etc.
The (3) states "operator" includes "driver" but not that "operator" is synonymous with "driver".
The same expression is made for the Spotter as below.
(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.
With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary.

To MD: Please review NK reply above.

I think that there is no need to change this wording; it is now consistently used throughout the various chapters of JSSS. It is simple and more understandable than "synonymous" and will not require dictionary reference by many readers as may not be the case with FIDIC.

The need for definition is a partial consequence of your original draft which uses diverse expressions.

(10) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(m) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

Regulations

(6) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(k) Suitable and fit for the purpose for which it is intended;

(l) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(m) Used only by people who have received adequate information, instruction and training;

(n) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(o) Used for the designed and intended purpose.

4.1.5 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(3) Safety instructions and recommendations.

(4) Operation, maintenance and repair manual

The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.

4.1.6 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

transporting Contractor's Equipment (JCA6) and materials to, around and from the Site.

(k) Workboat for diving works

(l) Tunnel Boring Machine (TBM) . (JCB9)

JCA6: 運ぶものは equipment だけではないため、"& materials"を挿入してください。
"Material" should be added because only equipment are not transported.
NK: コメントの通り追加しました。
"Material" is added as commented.
NK: By the comments on Chap 10 Diving Works, (k) Workboat is added.

JCB9: JICA added. EPB: Earth pressure balance type TBM
NK: TBM is added but Slurry and EPB are not because they are too detail to be referred to.

(6) Static equipment includes powered stationary equipment such as: (JCA7)

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants.

(c) Tower cranes, derrick cranes;

(d) ~~Personnel and Goods~~ Elevators; (JC10) and

JCB10: 今更かも知れませんが。 Personnel and Goods Elevator は単純に Elevator ではダメなんでしたっけ？特段問題なければこれでよいと思います。
Is there any reasons to stipulate Personnel and Goods Elevator in stead of Elevator? If no special reason, Elevator can be use.
NK: 日本の安衛則に準じて分けていました。まとめて良いと考えます。
We specified it following Japanese regulation. They can be Elevator.

(e) Material conveyors.

(f) Air compressors. .(JCB11)

JCA7: エアコンプレッサーを追加してください。
Please add air compressors.
NK: (f)にエアコンプレッサーを追加しました。
Air compressor is added as (f).

JCB11: Engine Generator も追加しましょう。Submersible pump, engine pump も加えたい。 Please add Engine Generator, Submersible pump, engine pump
NK: Added.

(7) ~~Tools, tackle(JCB46) and small equipment such as:~~ Small equipment, tools and tackle (tools and tackle are collectively referred to "Tools" in this Chapter") such as:

JCB46: (JICA comment to 4.3.11) これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".
NK: Defied "Tools" in (7) here.

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyors

(n) Excavators such as backhoes, face shovels, power shovels;

(o) Loaders such as payloaders and face shovels;

(p) Dump trucks for removal or importation of spoil;

(q) Specialist foundation equipment such as pile driving and boring machines; (JCB6)

JCB6: equipment に修正. Revise to equipment.
NK: JICA has commented same in Chap. 6 TW that "replace machine with equipment?"
BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Following the BS, Boring machine is left as it is.
To MD, please review my answer above.

It doesn't really matter as both meanings are clear and understandable, however I understood that the rule was generally to use BS 8081.

(r) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers; (JCB7) asphalt finisher;

JCB7: Asphalt finisher も入れてほしい。Please add Asphalt finisher.
NK: Added.

No comment

(s) Mobile cranes ~~and other hoisting equipment~~ (JCB8);

JCB8: Mobile ではない。This is not mobile equipment.
NK: Mobile means able to be moved from one place to another. It seems there are other hoisting equipment than mobile cranes, however NK cannot show examples so far. Deleted it..

Mobile gantries, mobile "A" frame cranes, piling equipment; otherwise no comment

(t) Concreting equipment such as ~~concrete mixer trucks~~ ready-mixed concrete trucks, ~~agitator trucks,~~ pump trucks;

In Chapter 8, the comment required concrete mixer trucks and agitator trucks to be replaced by "ready-mixed concrete truck". This therefore requires change here.

(u) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(v) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Goods to, around and from the Site.

JCA6: 運ぶものは equipment だけではないため、"& materials"を挿入してください。
"Material" should be added because only equipment are not transported.
NK: コメントの通り追加しました。
"Material" is added as commented.

I suggest that this is changed to "Goods" which is defined in FIDIC and is more inclusive

(w) Workboat for diving works

(28) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(29) Types, capacities and numbers of units.

(30) Workplaces, area limits and operational routes, restricted areas, locations of caution signs and fences.

(31) Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(32) Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

(33) Environmental impact including required measures for workers and any other persons against vibration, noise, dust and the like.

(34) Safety measures for the environmental conditions in the working area, any nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, operational areas or areas where Dangerous Work is taking place.

(35) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury.

(36) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(37) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(38) Measures to be taken in case of breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

(39) Name of the authorised operator for each unit of Contractor's Equipment when authorised operator is necessary to be assigned.

(40) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.7 Safety Training

(3) The Contractor shall provide the Contractor's Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training*

(d) ~~Reinforcement, cutting and bending machines;~~ (JCB12)

JCB12: これらは tool, tackle and small equipment としては大きすぎるのでは →(6)に移動してください。
Please move these to (6) as they are too large as tool, tackle and small equipment.
NK: Moved to (6)(g)

(e) Pipe bending machines;

(f) ~~Pneumatic~~ drills, hammers, breakers, compactors and compressors;

(g) Wood processing equipment;

(h) Independent concrete mixers;

(i) Air extract or blowing equipment for improving the working area environment;

(j) ~~Pneumatic power tools such as~~ jack hammers, drills, (JCB13)

(k) ~~Engine driven~~ chain saws; (JCB13)

JCB13: 電動も含まれるようにして下記の(8)は削除しています。
Modified to include electric power equipment and deleted (8) below.
NK: Modified.

(l) Hand operated equipment such as jacks, winches, lever hoists; and

(m) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

(8) ~~Electric powered equipment means portable electric powered mobile equipment or tools such as: (JCA7a) (JCB14)~~

(a) ~~Pumps and small conveyors;~~

(b) ~~Angle grinders, drills, circular saws and planers.~~

JCA7a: 特に(8)にも電動の equipment が多数含まれているので、独立させておく必要があるでしょうか。
Is it necessary to independently define as (8) contains lots of electric power equipment?
NK: It is left as it is without (a) and (b)because it needs to specify requirements for portable electric powered mobile equipment or tools.

JCB14: JICA deleted related with JCB12.
NK: Deleted.

11.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of ~~*the HSE Provision and Use of Work Equipment Regulations 1998 (PUWER).*~~ (JCB15) the *Provision and Use of Work Equipment*

NK: By the comments on Chap 10 Diving Works, (k) Workboat is added.

No need because no requirements are stated here but otherwise no comment

(x) Tunnel Boring Machine (TBM) . (JCB9)

JCB9: JICA added. EPB: Earth pressure balance type TBM
NK: TBM is added but Slurry and EPB are not because they are too detail to be referred to.

I understood that Tunnelling was not part of the scope of JSSS and this is confirmed in the Index in Chapter one

Please note that there are although it may be listed here, there are no particular requirements included in this chapter and it is possible that some requirements here may be incompatible with this equipment. I suggest add this later in future issues as stated in the Overall Document Index of Chapter 1, against future Chapter 17?

(11) Static equipment includes powered stationary equipment such as: (JCA7)

(g) Stone crushing plants and screening equipment;

(h) Concrete and asphalt concrete batching plants;

(i) Tower cranes, derrick cranes;

(j) ~~Personnel and Goods~~ Elevators; (JC10)

JCB10: 今更かも知れませんが。 Personnel and Goods Elevator は単純に Elevator ではダメなんでしたっけ？特段問題なければこれでよいと思います。
Is there any reasons to stipulate Personnel and Goods Elevator in stead of Elevator? If no special reason, Elevator can be use.
NK: 日本の安衛則に準じて分けていました。まとめて良いと考えます。
We specified it following Japanese regulation. They can be Elevator.

I had specified because they are two different types usually with slightly different separate descriptions (material hoists or lifts) but I have no comment.

(k) Material conveyors;

(l) Air compressors;(JCB11)

JCA7: エアコンプレッサーを追加してください。
Please add air compressors.
NK: (f)にエアコンプレッサーを追加しました。
Air compressor is added as (f).

No comment

JCB11: Engine Generator も追加しましょう。Submersible pump, engine pump も加えたい。 Please add Engine Generator, Submersible pump, engine pump
NK: Added.

Where? Suggest simply as follows:

(m) Engine Generators, submersible pumps and engine pumps; and

Generally] taking account of the characteristics of the particular types of Contractor's Equipment and including:

(g) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(h) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(i) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(j) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(k) Prohibit removal or isolation of safety devices; and

(l) Risks during operation of the Contractor's Equipment.

(4) Particular safety training for transportation equipment operators shall be for the purpose of preventing of traffic accidents on and off the Site and shall include:

(h) Driving rules in general;

(i) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(j) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(k) Driving methods to properly overtake other vehicles and to be undertaken by others;

(l) Driving methods when encountering holes, bumps or obstacles on the road;

(m) Required inspection and maintenance before starting operation; and

(n) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.8 Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are

Regulations 1998 (PUWER), HSE Guidance in UK.

JCB15: 正式に言えば、“The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK “では？法令の内容は一般的なので harmful ではないと思える。
Is the official title “The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations is general ones, so not harmful.
NK: Modified as commented.

Please refer to potential copyright requirements

(2) In accordance with these regulations, together with JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

11.1.3 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(n) Reinforcement, cutting and bending machines.

Above is moved here from below as instructed

~~(7) Tools, tackle(JCB46) and small equipment such as:~~ Small equipment, tools and tackle (tools and tackle are collectively referred to “Tools” in this Chapter”) such as:

JCB46: (JICA comment to 4.3.11) これらを総称して Tools でいいのでは. Tools and Tackle can be called as “Tools”.
NK: Defied “Tools” in (7) here.

I suggest there is no need for a separate definition, if in doubt just delete “tackle”.

See notes above in 4.1.1 (1)

“Tools” perhaps are generally hand-held, please see examples of hand tools already given in (7) (m) below.

Suggest as follows:

(12) Small equipment and tools such as:

(n) Hand steered vibrating rollers;

(o) Plate compactors and vibratory rammers;

(p) Portable conveyors;

What exactly do you mean by “portable conveyors”? Hand portable? All conveyors are to some extent “portable” meaning “mobile”; this is not really clear.

(q) ~~Reinforcement, cutting and bending machines;~~ (JCB12)

JCB12: これらは tool, tackle and small equipment としては大きすぎるのでは →(6)に移動してください。
Please move these to (6) as they are too large as tool, tackle and small equipment.
NK: Moved to (6)(g)

See above (6) (h)

(r) Pipe bending machines;

(s) ~~Pneumatic~~ drills, hammers, breakers, compactors and compressors;

(t) Wood processing equipment;

(u) Independent concrete mixers;

(v) Air extract or blowing equipment for improving the working area environment;

(w) ~~Pneumatic power tools such as~~ jack hammers, drills, (JCB13)

(x) ~~Engine driven~~ chain saws; (JCB13)

JCB13: 電動も含まれるようにして下記の(8)は削除しています。
Modified to include electric power equipment and deleted (8) below.
NK: Modified.

appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

(7) Operators shall safely and competently operate the Contractor's Equipment.

(8) Operators shall be fully aware of the following:

(i) Work procedures, hazards and operation methods;

(j) The need to stop the operation when any defect or abnormality is detected;

(k) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and

(l) The procedures in case of emergency.

(9) Operators shall:

(e) Keep all safety devices including emergency alarm and stop devices activated; and

(f) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

4.1.9 Signalling

(7) Signalling between operators and any associated workers shall only be carried out by designated personnel.

(8) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(9) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.3 Requirements Generally

(15) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected,

(3) ~~Workplaces, area limits and~~ (JCB16) operational routes, restricted areas, locations of caution signs and fences.

JCB16: Workplace の boundary という意味でつかわれているのであれば、workplace に含まれているので不要と考えます。
If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary.
NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted
To MD, please review this comment.

(4) ~~The~~ preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) ~~Identities, location (JCB17) and scope of Spotters.~~ Identities and roles of and location(s) for Spotters and the communication and signalling requirements including equipment to be used

JCB17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。
The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5.
4.1.5 (1)Operators shall be fully aware of the following:
(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and
NK: Modified as commented and added referring 4.1.5.

(6) ~~Environmental impact mitigation~~ (JCB18) Environmental impact to third parties and workers including required measures against vibration, noise, dust and the like.

JCB18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any) including required mitigation measures …"ですよね？
"Environmental impact effects including required mitigation measures against …"では？
It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated "Hazardous working conditions (if any) including required mitigation measures …"
Is this "Environmental impact effects including required mitigation measures against …"？
NK: This can be read for both environment impact to third parties and working environment in the Site.
Modified to make clear.
To MD, please review the comment and modify (6).

(7) ~~Safety measures for Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place. (JCB19)~~ Safety measures for the environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas ~~or areas~~ where Dangerous Work is taking place.

No comment

(y) Hand operated equipment such as jacks, winches, lever hoists; and

(z) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

(13) ~~Electric powered equipment means portable electric powered mobile equipment or tools such as: (JCA7a) (JCB14)~~

(c) ~~Pumps and small conveyors;~~

(d) ~~Angle grinders, drills, circular saws and planers.~~

JCA7a: 特に(8)にも電動の equipment が多数含まれているので、独立させておく必要があるでしょうか。
Is it necessary to independently define as (8) contains lots of electric power equipment?
NK: It is left as it is without (a) and (b)because it needs to specify requirements for portable electric powered mobile equipment or tools.

JCB14: JICA deleted related with JCB12.
NK: Deleted.

4.1.4 Compliance Standards

(3) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

JCB15: 正式に言えば、"The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK "では？法令の内容は一般的なので harmful ではないと思える。
Is the official title "The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations is general ones, so not harmful.
NK: Modified as commented.

See above

Please refer to potential copyright requirements

(4) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(f) Suitable and fit for the purpose for which it is intended;

(g) Safe for use, maintained in a safe condition and inspected to maintained and repaired before the commencement of the first and of all subsequent days of operation.

(16) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(17) When mobilising Contractor's Equipment to the Site and before commencement of operation, the Contractor shall:

(c) Inspect all units of Contractor's Equipment to ensure that

(xxxvi)all components are installed and functioning; and

(xxxvii) adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

(h) Ensure as a minimum that the daily and periodical check items have already been inspected and recorded;

(i) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when required in compliance with JSSS; and

(j) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

(18) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(y) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and

JCB19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・“Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”???

This sentence cannot be really understood. The connection of matters listed in English are not understandable.
Is this “Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”?
NK: Modified referring to the comment.
To MD, please review the comment and modify (7).

(8) ~~The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

~~The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JCB20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

Potential danger to Concerned Personnel who may be affected by the use of Contractor's Equipment and the required measures to avoid any ~~risk~~ accident or injury.

JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as “Concerned Personnel”)
There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as “Concerned Personnel”).
NK: Modified as commented.

(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance..

(12) ~~The~~ name of the authorised operator for each unit of Contractor's Equipment. (JCB21) when authorised operator is necessary to be assigned.

JCB21 (=JCB1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。

ensure it is correctly installed and used and does not subsequently deteriorate;

(h) Used only by people who have received adequate information, instruction and training;

(i) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(j) Used for the designed and intended purpose.

4.1.5 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual

The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.

I suggest the addition of the above clause to your draft.

4.1.6 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(14) ~~The~~ Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(15) Types, capacities and numbers of units.

(16) ~~Workplaces,~~ ~~area limits and~~ (JCB16) operational routes, restricted areas, locations of caution signs and fences.

JCB16: Workplace の boundary という意味でつかわれているのであれば、workplace

enclosures;

(z) Abnormal sounds, vibrations or smell;

(aa) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(bb) Lights and indicators;

(cc) Brakes, clutches, steering and operating devices and working devices;

(dd) Cables, slings, ropes and chains;

(ee) Protective covers are adequately provided over all rotating or moving parts;

(ff) Attachments and tools such as buckets, grabs and the like;

(gg) Cleanliness of each unit or item of Contractor's Equipment;

(hh) Cleanliness of each working area and removal of obstructions;

(ii) Availability of emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated; and

(jj) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(19) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(w) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(x) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(y) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(z) Springs, shock absorbers and other parts of suspension

(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: Modified as commented.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

11.1.4 Safety Training

The Contractor shall provide the Contractor's personnel with health and safety training in accordance with JSSS 1.17 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment. (JCA8)

JCA8: 1.19 に equipment に必要なトレーニングが追加される形で総則が修正されているということでしょうか。
Does this mean that 1.19 [Safety Training Generally] has been revised to accommodate the necessary training for equipment operators?
NK: 1.19 (Issue 7)は次のように安全衛生の教育訓練の義務、各分野に関する詳細は安全計画書に示すことを一般規定して規定しています。そのため、1.19 は原案通りと致します。
The 1.19 (Issue 7) stipulates the responsibility of H&S education and training as general requirement, and details to be described in the Safety Plan. Therefore, 1.19 is left as it is.

1.19 Safety Training Generally
1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

The health and safety training shall be ~~done~~ provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment ~~with which the personnel will be engaged in works~~. (JCB22)

JCB22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation ~~and work with~~ of the Contractor's equipment when an abnormality occurs and report to the person in charge; ~~and~~

(5) Prohibition ~~from~~ of removing safety devices; and

(6) Risks during operation of the Contractor's Equipment.

に含まれているので不要と考えます。
If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary.
NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted
To MD, please review this comment.

Draft states "work places"
I recommend to maintain the original wording, it is clear and unambiguous.

(17) ~~The~~ Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(18) ~~Identities, location (JCB17) and scope of Spotters.~~ Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

JCB17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。
The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5.
4.1.5 (1)Operators shall be fully aware of the following:
(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and
NK: Modified as commented and added referring 4.1.5.

(19) ~~Environmental impact mitigation (JCB18) Environmental impact to third parties and workers including required measures against vibration, noise, dust and the like.~~

JCB18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any) including required mitigation measures …"ですよね？
"Environmental impact effects including required mitigation measures against …"では？
It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated "Hazardous working conditions (if any) including required mitigation measures …"
Is this "Environmental impact effects including required mitigation measures against …"？
NK: This can be read for both environment impact to third parties and working environment in the Site.
Modified to make clear.
To MD, please review the comment and modify (6).

Modify as follows:

(20) Environmental impact including required measures for workers and third parties against vibration, noise, dust and the like.

(21) ~~Safety measures for Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place. (JCB19)~~ Safety measures for the devices;

(aa) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(bb) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(cc) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(dd) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(ee) Voltage, amperage and relevant performance and components of electrical systems;

(ff) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tyre air pressures and lightning devices; and

(gg) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(20) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(21) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.33 [*Health and Safety Records*].

4.2.4 Defects and Repair During Operation

(7) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(8) Necessary repair shall be provided by qualified mechanics, electricians or engineers.

(9) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment*

Imported from Transportation

~~Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:~~

(JCA9) (JCB23)

Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, ~~also~~ include ~~prevention of traffic accidents on and off the Site for example including~~:

JCB23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.

JCB24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

(1) Driving rules ~~for prevention of traffic accidents~~ in general;~~:~~

(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(3) Driving methods to ~~prevent accidents including~~ contact and collision with other persons, cycles, motorcycles and other vehicles;

(4) Driving methods to properly ~~prevent accidents in~~ overtake ~~ing~~ other vehicles and to be undertaken by others;

(5) Driving methods ~~to prevent accidents due to~~ when encountering holes, bumps or obstacles on the road;

(6) Required inspection and maintenance before starting operation;

(7) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

JCA9: ここの transportation に関するトレーニングの内容がかなり詳細なので、この内容と 1.19 の記述のバランスが取れているかを確認のうえ調整願います。
The provisions of the training for "transportation" here are quite detailed, so please make sure that this is harmonized with the description of 1.19.?
NK: 本款の(1)~(7)の項目は、特に事故が多い交通事故の防止に関する教育に注力して規定しています。
The items (1) ~ (7) in this clause is emphasized to focus on education and training for prevention of traffic accidents which is very important.
NK: 技能のある者を雇用し、請負者が機器を使用した作業に従事させるとの前提で、機械の特性に応じて行うべき教育と指導すべき事項を前半の(1)~(6)に追記致します。

environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas ~~or areas~~ where Dangerous Work is taking place.

JCB19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・"Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place."???

This sentence cannot be really understood. The connection of matters listed in English are not understandable.
Is this "Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place."?
NK: Modified referring to the comment.
To MD, please review the comment and modify (7).

Please read conjointly; with the heading paragraph of this clause. The Contractor shall include details of the above in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such work. This clause lists information to be provided for environmental conditions and I suggest that no change to the original wording is necessary

~~9 The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

~~The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JCB20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

~~Potential danger to Concerned Personnel who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")
There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").
NK: Modified as commented.

Please refer to notes and suggested new clause in 4.1.1.

A new definition is not necessary but I do agree that rewording the above could be beneficial and suggest the simplest solution is as follows:

(22) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury.

(23) Any potential hazards in the use of Contractor's Equipment

and PPP].

4.3 SAFETY REQUIREMENTS

4.3.3 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(22) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(23) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like as necessary to prevent injury to personnel from equipment or parts of equipment, where:

(e) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(f) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(24) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(25) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(26) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (where such equipment is necessary) and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and in fire safety procedures.–

(27) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid

The items (1)~(6) for education and training to the worker who is employed as qualified, skilled and experienced person are added at the beginning of this clause as stipulated in Japanese draft.

11.1.5 ~~Qualification of Operators~~ (JCA10) Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

JCA10: 内容は qualification のことではないようです。workmanship ではないでしょうか。
The content is not about the qualification. Isn't it about workmanship?
NK: 資格だけの規定ではないので、提案された workmanship は、辞書では何かを作る技術とありますので、款名は Requirements to Operators ではいかがでしょうか？MD 氏へ相談します。
Because the content of this Clause is not only qualification, we propose the title of the clause to be "Requirements to Operators" as the "workmanship" proposed by JICA means the skill with which something was made or done in the dictionary.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, ~~possible risks~~ hazards and operation methods;

(b) The need to stop ~~all work~~ the operation when any defect or abnormality is detected;

~~(c) Not to remove, interfere with or override any safety devices; (JCA11) Prohibition of removing, interfering with or overriding any safety devices;~~ (JCB25)

JCA11: ここだけ動詞形 Only (c) is the verb form.
NK: 名詞とします。 Modified to noun form as right.

JCB25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and

(d) The procedures in case of emergency.

(3) ~~In addition,~~ operators shall:

~~(a) Safely and competently operate the Contractor's Equipment;~~

(a) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and

including those which may create a risk of falling or overturning.

(24) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(25) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

No comment

(26) ~~The~~ Name of the authorised operator for each unit of Contractor's Equipment. (JCB21) when authorised operator is necessary to be assigned.

JCB21 (=JCB1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: Modified as commented.

No comment

(27) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.7 Safety Training

(1) The Contractor shall provide the Contractor's Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment and including:

Because of your insertion and changes below, the above clause needs to be renumbered as (1) and the added clauses numbered as (a) etc. and the wording"and incluyded is added

JCA8: 1.19 に equipment に必要なトレーニングが追加される形で総則が修正されているということでしょうか。
Does this mean that 1.19 [Safety Training Generally] has been revised to accommodate the necessary training for equipment operators?
NK: 1.19 (Issue 7)は次のように安全衛生の教育訓練の義務、各分野に関する詳細は安全計画書に示すことを一般規定して規定しています。そのため、1.19 は原案通りと致します。
The 1.19 (Issue 7) stipulates the responsibility of H&S education and training as general requirement, and details to be described in the Safety Plan. Therefore, 1.19 is left as it is.

equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(28) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO or a person in charge who shall be contacted in the event of breakdown or fault.

(29) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access.

(30) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

(31) Ensure that installation, assembly, testing commissioning, operation and dismantling of all Contractor's Equipment is carried out under the direction of an Operation Leader, appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and in accordance with the manufacturer's operation, maintenance and repair manual.

4.3.4 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas.

(15) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(16) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(17) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility ~~and control or ensure that other qualified persons perform these operations~~. (JCA12)

JCA12: operators の責任？機械責任者の仕事では？要修正。
Isn't this the operator's responsibility but equipment supervisor?
NK: コメントの通り、これらは管理者の責務である。削除。
As commented, it is supervisor's duty to control these aspects. Deleted.

11.1.6 Signalling

(1) Signalling between operators ~~and Spotters~~ and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(2) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (JCA13)

JCA13: 冒頭で Spotters に signallers も含まれる旨定義されているので、ここで signallers が出るのは違和感があります。以下、signallers が出てくる場合も同様です。
As the top of this section, it is defined that Spotter is deemed to include signaller, it seems strange to use "signaller" here.
NK: 4.1.1 (4) での signaller の定義は削除しました。
2.4 で次のように Signallers を含めた Spotters の責務を規定しています。そのため、本款では Signallers は、Spotters に変更します。
The definition of "Signaller" in 4.1.1 (4) is deleted.
2.4 is specified the duties of the Spotters including Signallers as below. Therefore, Signallers are replaced with Spotters in this Section.

2.4 SPOTTERS, FLAGMEN AND THE LIKE
2.4.1 Definitions
In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of Spotter or Flagman in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.
2.4.2 Duties
Duties include for example:
(1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.
(2) Giving appropriate guidance and signals during operation of Contractor's Equipment to prevent the equipment tipping, overturning or falling.
(3) Giving appropriate guidance and signals to prevent Contractor's Personnel from being struck or pinned by Contractor's Equipment.
(4) Assisting drivers of vehicles including trucks and operators of other Contractor's Equipment in positioning their vehicles particularly when manoeuvring.

(3) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used.. (JCA14)

JCA14: 何故？Video Camera?? 監視カメラのことを言いたいのであれば別の表現が適切ではないでしょうか。
Why does it need to be a video camera? "Monitoring camera" would be better.
NK : ビデオカメラとビデオモニターを組み合わせテレビ（ビデオ)電話のことを

1.19 Safety Training Generally
1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.
1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

~~The health and safety training shall be provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment. (JCB22)~~

JCB22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

I do not understand the above comment but assume that the above added clause is not necessary because of duplication, I have therefore deleted

Where is the following transferred from?

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

~~Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:~~ (JCA9) (JCB23)

(2) Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, including:

JCB23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.

Modification is OK

JCB24: この下のナンバリングが変ではないでしょうか。

(18) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(19) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(20) Assign a Spotter.

(21) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.5 Safety Measures During Operation

(4) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(5) The Contractor shall also ensure that:

(x) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(y) No Contractor's Equipment is operating beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(z) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(aa) Spotters are always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, in dangerous areas or when the operator's view is not clear and at intersections with public roads;

(bb) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with seatbelts or safety

指していると考えます。OSHA の下記の記述を参考に、videotelephone への変更を提案します。
The term of video cameras means videophone system consisting of video camera and monitor. We propose to replace it with videophone.

§1926.1419 Signals—general requirements.
(e) Suitability. The signals used (hand, voice, audible, or new), and means of transmitting the signals to the operator (such as direct line of sight, video, radio, etc.), must be appropriate for the site conditions.
§1926.1420 Signals—radio, telephone or other electronic transmission of signals.
(a) The device(s) used to transmit signals must be tested on site

11.2 INSPECTION, MAINTENANCE AND REPAIR

11.2.3 Requirements Generally

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JCB26) the Contractor shall:

JCB26: 文として完結していないので修正しました。The sentence is not completed, so modified.
NK: Modified as commented.

~~(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, (JCA15) safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;~~

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning,
- ~~all inspection and maintenance covers,~~
- safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and

Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

Numbering requires correcting above and below because of your additional text.

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

JCA9: ここの transportation に関するトレーニングの内容がかなり詳細なので、この内容と 1.19 の記述のバランスが取れているかを確認のうえ調整願います。
The provisions of the training for "transportation" here are quite detailed, so please make sure that this is harmonized with the description of 1.19.?
NK: 本款の(1)~(7)の項目は、特に事故が多い交通事故の防止に関する教育に注力して規定しています。
The items (1) ~ (7) in this clause is emphasized to focus on education and training for prevention of traffic accidents which is very important.
NK: 技能のある者を雇用し、請負者が機器を使用した作業に従事させるとの前提で、機械の特性に応じて行うべき教育と指導すべき事項を前半の(1)~(6)に追記致します。
The items (1)~(6) for education and training to the worker who is employed as qualified, skilled and experienced person are added at the beginning of this clause as stipulated in Japanese draft.

4.1.8 ~~Qualification of Operators~~ Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

JCA10: 内容は qualification のことではないようです。workmanship ではないでしょうか。
The content is not about the qualification. Isn't it about workmanship?
NK: 資格だけの規定ではないので、提案された workmanship は、辞書では何かを作る技術とありますので、款名は Requirements to Operators ではいかがでしょうか？MD 氏へ相談します。

harnesses and that such seatbelts and harnesses are used;

(cc) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with a "Roll-Over Protective Structure" (ROPS);

(dd) Where there is any risk of injury to operators due to falling objects Contractor's Equipment is equipped with a "Falling Object Protective Structure" (FOPS);

(ee) Operators are aware that they shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(ff) Operators of excavating equipment are aware that excavator buckets shall never pass over the operator's seat of Contractor's Equipment;

(gg) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

(hh) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.6 Safety Measures When Mobile Equipment Is Not in Use

(5) When mobile equipment is not in use, the Contractor shall ensure that operators:

(k) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(l) Securely chock all wheels to prevent any movement;

(m) Lower attachments (buckets and blades etc.) to the ground;

(n) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(o) Lock the equipment and store the starter key in the designated place.

(6) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.7 Safety Measures During Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and

- ~~that~~ all such units of equipment are in ~~the condition required by the Contract~~ proper condition ~~required by the Contract~~; (JCB27)

JCA15: 何のことを指しているのかが分かりません。
This "all inspection and maintenance covers," is not understandable.
NK: MD 氏に記述の見直しと変更を依頼します。
We will ask MD to review and modify this sentence referring to the items separated in (a).
To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

JCB27: "契約"が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment? Can it be "proper condition"?
NK: Modified as commented.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JCB28) have already been inspected and recorded;

JCB28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JCB29)required in compliance with JSSS; and

JCB29: 不要。Unnecessary.
NK: Deleted.

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment. (JCA16)

JCA16: 上記(b), (c), (d)の記録をエンジニアが求めた場合の提出義務を追記しては？
Obligation of submittal of the record in (b), (c) and (d) should be added.
NK: (c)でエンジニアによる閲覧が保証されているので、提出義務は必要ないと考えます。
As inspection of all records by the Engineer is stipulated in (c), it is deemed that stipulating submittal of inspection and maintenance records to the Engineer is not necessary.

~~In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor's Equipment that is not in this condition.~~ (JCA17)

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's

Because the content of this Clause is not only qualification, we propose the title of the clause to be "Requirements to Operators" as the "workmanship" proposed by JICA means the skill with which something was made or done in the dictionary.

(4) Operators shall safely and competently operate the Contractor's Equipment.

No comment

(5) Operators shall be fully aware of the following:

(e) Work procedures, hazards and operation methods;

(f) The need to stop the operation when any defect or abnormality is detected;

~~(e) Not to remove, interfere with or override any safety devices; (JCA11) Prohibition of removing, interfering with or overriding any safety devices;~~ (JCB25)

JCA11: ここだけ動詞形 Only (e) is the verb form.
NK: 名詞とします。 Modified to noun form as right.

JCB25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

(g) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and

(h) The procedures in case of emergency.

(6) ~~In addition,~~ Operators shall:

~~(a) Safely and competently operate the Contractor's Equipment;~~

(c) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and

(d) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility ~~and control or ensure that other qualified persons perform these operations~~. (JCA12)

JCA12: operators の責任？機械責任者の仕事では？要修正。
Isn't this the operator's responsibility but equipment supervisor?
NK: コメントの通り、これらは管理者の責務である。削除。
As commented, it is supervisor's duty to control these aspects. Deleted.

Do not agree. The supervisor (whoever he is) may be responsible for managing servicing and maintenance but the operator is the primary person, he should not start or continue to use any equipment that he knows requires repair, service or maintenance.

4.1.9 Signalling

(4) Signalling between operators ~~and Spotters~~ and any associated

removing attachments (buckets, blades etc.) to Contractor's Equipment:

(5) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground.

(6) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.

4.3.8 Safety Measures During Loading and Transporting of Contractor's Equipment

(17) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(18) Select location and areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(19) Securely chock all wheels of trailers to prevent any movement.

(20) Stop and isolate the functions of trailers and load and fully engage brakes.

(21) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(22) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits.

(23) Ensure that all lights, brakes, steering and safety devices are working properly.

(24) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

(25) Ensure that trailers are loaded evenly.

(26) Ensure that Contractor's Equipment loaded onto trailers is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any movement during transit.

(27) Place any attachments on trailers and securely tie down.

(28) Inspect the tie-down tensioning, before and at intervals during

Equipment which does not meet the requirements stipulated in the Contract.

JCA17: 分かりにくい、かつ前文が満たされれば OK ということで削除します。
This part is difficult to understand and when the requirement in the first sentence is fulfilled, the second sentence is unnecessary. Deleted.
NK: In stead of deletion of the sentence, we propose to modify to make clear the Engineer's action

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA18)

JCA18: (c)以下は建設機械に関係するものが中心であって、4.1.1 の(6)以下で列挙されているすべての機械の点検項目として網羅できているでしょうか。していないのであれば、例示としての記述が適切ではないでしょうか。
または、「製造者のマニュアルに従った点検項目」といった形での記述が考えられます。
Do the inspection items in (c) to (k) which are mainly for construction equipment, cover all inspection items enumerated in 4.1.1 (6), etc. If not, it may be appropriate to describe as examples.
Or a description such as "inspection items in accordance with the manufacturer's manual" may works.
NK: 列挙した項目のみでは不足する可能性があります。製造者のマニュアルを引用する項目(l)を追加します。
There is a possibility that the lists cannot cover all items. Added the item (l) regarding the items stipulated in the manufacturer's official maintenance and repair manual.

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment;

workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(5) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (JCA13)

JCA13: 冒頭で Spotters に signallers も含まれる旨定義されているので、ここで signallers が出るのは違和感があります。以下、signallers が出てくる場合も同様です。
As the top of this section, it is defined that Spotter is deemed to include signaller, it seems strange to use "signaller" here.
NK: 4.1.1 (4) での signaller の定義は削除しました。
2.4 で次のように Signallers を含めた Spotters の責務を規定しています。そのため、本款では Signallers は、Spotters に変更します。
The definition of "Signaller" in 4.1.1 (4) is deleted.
2.4 is specified the duties of the Spotters including Signallers as below. Therefore, Signallers are replaced with Spotters in this Section.

2.4 SPOTTERS, FLAGMEN AND THE LIKE
2.4.1 Definitions
In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of Spotter or Flagman in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.
2.4.2 Duties
Duties include for example:
(1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.
(2) Giving appropriate guidance and signals during operation of Contractor's Equipment to prevent the equipment tipping, overturning or falling.
(3) Giving appropriate guidance and signals to prevent Contractor's Personnel from being struck or pinned by Contractor's Equipment.
(4) Assisting drivers of vehicles including trucks and operators of other Contractor's Equipment in positioning their vehicles particularly when manoeuvring.

No comment

(6) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used..(JCA14)

JCA14: 何故？Video Camera?? 監視カメラのことを言いたいのであれば別の表現が適切ではないでしょうか。
Why does it need to be a video camera? "Monitoring camera" would be better.
NK : ビデオカメラとビデオモニターを組み合わせテレビ（ビデオ)電話のことを指していると考えます。OSHA の下記の記述を参考に、videotelephone への変更を提案します。
The term of video cameras means videophone system consisting of video camera and monitor. We propose to replace it with videophone.
§1926.1419 Signals—general requirements.
(e) Suitability. The signals used (hand, voice, audible, or new), and means of transmitting the signals to the operator (such as direct line of sight, video, radio, etc.), must be appropriate for the site conditions.
§1926.1420 Signals—radio, telephone or other electronic transmission of signals.
(a) The device(s) used to transmit signals must be tested on site

It can also mean video reversing camera however no comment

transportation of Contractor's Equipment to ensure that there is no slackening.

(29) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.

4.3.9 Safety Measures During Loading and Transporting of Goods

(2) When transporting heavy or long Goods on public roads, select roads on which the transportation does not pose danger to other traffic, third parties, structures adjacent to the transportation route, obtain all necessary permission from the relevant authorities including police and road authority before commencement of transportation and comply with all requirements.

(3) When transporting heavy or long mateerial Goods within the Site, select suitable routes where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO before commencement of the transportation and comply with all requirements.

(4) Ensure that Goods are loaded evenly.

(5) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties.

(6) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

4.3.10 Site Access Roads

(11) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(12) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(13) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(14) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(15) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.11 Additional Requirements for Static Equipment

(5) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be

and

(j) Cleanliness of each working area and removal of obstructions.

Imported from Transportation

(k) Availability of emergency kits (JC18a)such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated.

(l) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

JCA18a: この項目だけ機械のメンテナンスの話ではないので、たとえば 4.3.7 に移動されてはいかがでしょうか。
This(k) only is not item for maintenance, so it is suggested to move this to 4.3.7(?).
NK: It is better to specify this in daily inspection items to make the Contractor's attention and check to items, so it is left here.
NK: Added (l) to specify the items stipulated by the manufacturer.

(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA19)

JCA19: (4)のコメントに同じ。Same comment as (4).
NK: (4)と同様に(k)を追加。Same as (4), added (k).

(a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(d) Springs, shock absorbers and other parts of suspension devices;

(e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(f) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(g) Blades, booms, link mechanisms, buckets, wire ropes and

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.3 Requirements Generally

(8) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(9) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(10) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JCB26) the Contractor shall:

JCB26: 文として完結していないので修正しました。The sentence is not completed, so modified.
NK: Modified as commented.

No comment

~~(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, (JCA15) safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;~~

(b) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning; and
- adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

JCA15: 何のことを指しているのかが分かりません。
This "all inspection and maintenance covers," is not understandable.

NK: MD 氏に記述の見直しと変更を依頼します。

suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(6) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.12 Additional Requirements for Personnel and Goods Elevators and Material Conveyors

(1) General

(i) The requirements for material conveyors stipulated in this clause does not apply to portable conveyors.

(j) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [*Inspection, Maintenance And Repair*], 4.2.1 [*Requirements Generally*], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(k) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

(a) Additional daily inspection items shall include checking for defects or operational faults with the following:

(xxxviii) Elevator enclosures, doors, guide-rails and runners;

(xxxix) Emergency stop and alarm systems;

(xl) Power, lighting and control systems;

(xli) Interphone systems;

(xlii) Brakes, clutches; and

(xliii) Sheaves and pulleys.

(b) Additional periodical inspection items shall include checking for defects or operational faults with the following:

other parts of work equipment;

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems; and

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tires' air pressure and lightning devices.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

11.2.4 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers (JCB30) ; and

JCB30: オペレーターが不調の原因まで identify できるのでしょうか。また修理の主語がオペレーターになっていますがこれでよいのか？4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されている。
Can operator identify causes? Is it correct that the main actor of repair is operator? The 4.1.4(4) stipulate *that Stop of the operation and work with of the Contractor's Equipment when an abnormality occurs and report to the person in charge;*
NK: Modified as commented.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS

We will ask MD to review and modify this sentence referring to the items separated in (a).
To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

"Covers" is from your draft and it is a usual and common term for inspection and maintenance covers that are usually screwed in position to allow access for inspection and maintenance. Equipment is not safe if these are missing which is frequently the case.

Otherwise no comment, edited as instructed

JCB27: "契約"が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment? Can it be "proper condition"?
NK: Modified as commented.

(e) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JCB28) have already been inspected and recorded;

JCB28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

No comment

(f) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JCB29)required in compliance with JSSS; and

JCB29: 不要。Unnecessary.
NK: Deleted.

No comment

(g) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment. (JCA16)

JCA16: 上記(b), (c), (d)の記録をエンジニアが求めた場合の提出義務を追記しては？
Obligation of submittal of the record in (b), (c) and (d) should be added.
NK: (c)でエンジニアによる閲覧が保証されているので、提出義務は必要ないと考えます。
As inspection of all records by the Engineer is stipulated in (c), it is deemed that stipulating submittal of inspection and maintenance records to the Engineer is not necessary.

~~In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of~~

(xliv) Daily inspection items;

(xlv) Wire ropes;

(xlvi) Winch and its foundation; and

(xlvii) Supporting structures, guy ropes, fixings and anchors.

(3) Material Conveyors

(a) Additonal safety measures:

(xlviii) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(xlix) Means for stopping the motor or engine shall be provided at the motor or engine location;

(l) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position;

(li) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to prevent fall of the materials being conveyed; and

(lii) Riding of workers on the moving belts shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(liii) Overrun and reverse run prevention devices;

(liv) Emergency stop switches; and

(lv) Guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items.

4.3.13 Additional Requirements for Small Equipment and Tools

(7) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(8) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer's genuine or recommended spare parts.

(9) All small equipment and tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.14 Additional Requirements for Electric Powered Equipment

(7) Electric powered equipment specified in this clause shall include portable electric powered mobile equipment or tools and shall form

1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

11.3 SAFETY REQUIREMENTS

11.3.3 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like ~~all~~ as necessary to prevent ~~any risk of~~ injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

JCA20: (3)はクレーンを強くイメージして書いていると思われるので、クレーンである旨記載願います。そのうえで必要であるならば後述の additional requirement に記載ください。もしくは 6 章。
This clause seems to be written imaging the case of cranes. Therefore, it should be described clearly as regarding crane. If necessary, stipulate it in the additional requirement later or in Chapter 6.
NK: 本項目は特にクレーンに注目しているものではなく、建設機械一般の点検時の安全について規定しているものです。クレーンについて記述している“Inspection platforms and ladders on cranes and the like shall be fitted with cages.”の文は、特に必要ないので削除します。
This clause is not highlighting to cranes, rather those requirements in (3) are general for various construction equipment except for the sentence “Inspection platforms and ladders on cranes and the like shall be fitted with cages.”

~~any Contractor's Equipment that is not in this condition.~~ (JCA17)

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

JCA17: 分かりにくい、かつ前文が満たされれば OK ということで削除します。
This part is difficult to understand and when the requirement in the first sentence is fulfilled, the second sentence is unnecessary. Deleted.
NK: In stead of deletion of the sentence, we propose to modify to make clear the Engineer's action

No further comment

(11) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA18)

JCA18: (c)以下は建設機械に関係するものが中心であって、4.1.1 の(6)以下で列挙されているすべての機械の点検項目として網羅できているでしょうか。していないのであれば、例示としての記述が適切ではないでしょうか。
または、「製造者のマニュアルに従った点検項目」といった形での記述が考えられます。
Do the inspection items in (c) to (k) which are mainly for construction equipment, cover all inspection items enumerated in 4.1.1 (6), etc. If not, it may be appropriate to describe as examples.
Or a description such as “inspection items in accordance with the manufacturer's manual” may works.
NK: 列挙した項目のみでは不足する可能性があります。製造者のマニュアルを引用する項目(l)を追加します。
There is a possibility that the lists cannot cover all items. Added the item (l) regarding the items stipulated in the manufacturer's official maintenance and repair manual.

(m) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(n) Abnormal sounds, vibrations or smell;

(o) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(p) Lights and indicators;

(q) Brakes, clutches, steering and operating devices and working devices;

a part of the small equipment and tools listed in JSSS 4.1.1 (7).

(8) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(i) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes;

(j) Damage to insulation and protective coverings of all wires and cables including flexible cables; and

(k) Damage to plugs, sockets, transformers and all wiring fittings and appliances.

(9) The Contractor shall comply with the following additional safety requirements:

(aa) Use waterproof switches and socket outlets with covers, securely fixed and located in accessible and dry places;

(bb) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(cc) Use rubber cabtyre cables for all electrical power equipment;

(dd) Wherever possible provide an ELCB or RCD in the electrical supply to each item of electrical equipment;

(ee) If for any reason, an ELCB or RCD cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;

(ff) Avoid hanging electric cables and wires directly on nails, reinforcement or scaffolding and the like to prevent damage to the insulation and protective covering;

(gg) Turn off the power before repairing, moving or maintaining electric power equipment;

(hh) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(ii) Ensure that fuses are replaced by an authorised person;

The sentence is deleted.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

~~(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and consequent injury.~~ (JCA20a)

JCA20a: コンクリート・骨材プラント特有の問題を一般化すると唐突感。equipment と関係ないと思われるため削除してください。
Particular requirements related with concrete/crushing plants are specified in general requirements for equipment. It seems strange, so please delete (5).
NK: Deleted.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (JCA21) and such other facilities ~~that are necessary to ensure safety~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

JCA21: 本当？→全部には備え付けないものと考えますので、必要なものに備え付けるという旨に記述を修正願います。
Really? Fire extinguishing equipment would not be provided all Equipment. Please modify the stipulation to provide it when necessary.
NK: We will modify it referring to the following clause of OSHA:
1926.601 Motor vehicles.
(14) All vehicles in use shall be checked … These requirements also apply to equipment such as …, fire extinguishers, etc., where such equipment is necessary.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures. (JCB31)

JCB31: 機械の safety requirement ではない。It is not the safety requirements for the Equipment.
NK: 機械を使っての作業場所に救急用具を設置することは、機械の安全措置ではないですが、作業員の安全措置ですので、このまま残します。
This clause is not safety requirement for Equipment but for workers in the working area with Equipment. Therefore this as left as it is.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO (JCB32) or a person in charge who shall be contacted in the event of breakdown or fault.

JC32: 4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されているので、併記しておきます。

(r) Cables, slings, ropes and chains;

(s) Protective covers are adequately provided over all rotating or moving parts;

(t) Attachments and tools such as buckets, grabs and the like;

(u) Cleanliness of each unit or item of Contractor's Equipment;

(v) Cleanliness of each working area and removal of obstructions;

(w) Availability of emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated; and

JCA18a: この項目だけ機械のメンテナンスの話ではないので、たとえば 4.3.7 に移動されてはいかがでしょうか。
This(k) only is not item for maintenance, so it is suggested to move this to 4.3.7(?).
NK: It is better to specify this in daily inspection items to make the Contractor's attention and check to items, so it is left here.

(x) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

NK: Added (l) to specify the items stipulated by the manufacturer.
Edited

(12) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA19)

JCA19: (4)のコメントに同じ。Same comment as (4).
NK: (4)と同様に(k)を追加。Same as (4), added (k).

(l) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(m) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(n) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(o) Springs, shock absorbers and other parts of suspension

(jj) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or is not wearing rubber soled insulated footwear or when the electric power equipment is wet;

(kk) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(ll) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(mm) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.15 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(7) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(8) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(9) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.3 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.

(3) Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO.

(4) Requirements for Ropes, slings and chains shall be as specified in

4.1.4(4) stipulate operator shall stop operation and inform person in charge of event of breakdown or fault, so added the person in charge.
NK: Modified.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access ~~. and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.~~ (JCB33).

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

JCB33: 無関係な人間にアクセスを禁じるのは防護装置に悪さをさせないためだけではないし、関係者が防護装置に悪さをするかもしれない。従って、無関係者のアクセス禁止と防護装置の維持の話に分ける。
The prohibition of other persons from accessing to equipment is for avoiding them doing bad to protective device. On the other hand, there is possibility that workers related with the work do bad to the protective device. Therefore, the (8) is divided to two for(8) prohibition of other persons to access to equipment and (9) keeping the protective device function.
NK: Modified as commented.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, ~~personnel and goods~~ (JCB34) elevators and or (JCB35) the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's printed instructions.

JCB34: 削除。単に elevators でいいのでは。
Deleted. It can be "elevators".
NK: Modified.

JCB35: Is it "or".
NK: We think "and" can be left.
To MD, please advise to use "or" or "and".

Following is imported from Foundation Piling:

11.3.4 ~~Transportation to and Removal from Site~~(JCA22)

(1) ~~When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities~~

devices;

(p) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(q) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(r) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(s) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(t) Voltage, amperage and relevant performance and components of electrical systems;

(u) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tyre air pressures and lightning devices; and

(v) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(13) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(14) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.33 [*Health and Safety Records*].

4.2.4 Defects and Repair During Operation

(4) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(5) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers.

JCB30: オペレーターが不調の原因まで identify できるのでしょうか。また修理の主語がオペレーターになっていますがこれでよいのか？4.1.4(4)では不調の場合は

JSSS 5.4 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.3 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, the HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load.

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the equipment.

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site.

(5) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.

(6) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.

(7) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

(8) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights

~~including police, road authority before commencement of transportation and comply with all requirements.~~

(2) ~~When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

Imported from Transportation:

JCA22: 4.3.4 の operation のところに入れてください。
Please move these (1) and (2) to 4.3.4 [Safety Measures During Operation].
NK: 4.3.7 (1) & (2)に移動しました。章番号を繰り上げます。
Moved to 4.3.7 (1) & (2) and Clause Nos are changed.

11.3.5 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas ~~at risk.~~

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

Imported from Transportation:

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection

ストップして person in charge に報告することが想定されている。
Can operator identify causes? Is it correct that the main actor of repair is operator?
The 4.1.4(4) stipulate *that Stop of the operation and work with of the Contractor's Equipment when an abnormality occurs and report to the person in charge;*
NK: Modified as commented.

(6) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPP*].

4.3 SAFETY REQUIREMENTS

4.3.3 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(11) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(12) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like ~~all~~ as necessary to prevent ~~any risk of~~ injury to personnel from equipment or parts of equipment, where:

(c) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(d) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(13) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

JCA20: (3)はクレーンを強くイメージして書いていると思われるので、クレーンである旨記載願います。そのうえで必要であるならば後述の additional requirement に記

are in place.

(9) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(10) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(11) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on, not sideways.

(12) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.3 Requirements Generally

(9) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(10) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before the Contractor's Equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(g) Inspection and maintenance records;

(h) Operation, repair and maintenance manuals; and

(i) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(11) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if

and maintenance area.

11.3.6 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, (JCA23) all work involving the use of Contractor's Equipment shall be designated as Dangerous Work (JCA24) and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JCA23: エンジニアではなく？
Shouldn't this be the Engineer?
NK: JC24 のコメントとおり、Contractor's Equipment の範囲が広いのためと現場の条件によっては、立入禁止措置がとれない場合もあります。その場合の判断は HSO が責任をもって行うものと考えます。
Because Contractor's Equipment are various types from heavy equipment to tools and small equipment, and depending on the site conditions, it may not be possible to take entry prevention measures. In such a case, the HSO is the one who has to make judgment and decision. Left as is.

JCA24: Contractor's Equipment の範囲が広いので、すべてを Dangerous Work とするのは間違いではないでしょうか。したがって、「Contractor's Equipment を用いる場合で unless it is not practicable な場合にはフェンスを設置する」という趣旨の文を記載願います。
It is not appropriate to designated all works as "Dangerous Work" because Contractor's Equipment includes various types. Please, stipulate such that When using Contractor's Equipment, unless it is not practicable, shall enclose the working area.
NK: Contractor's Equipment を用いる仕事は危険な作業とする原則を規定し、ただし、HSO が許可した場合は、危険な作業から除外できると、原案は規定しています。現場に判断を任せず、原則を規定することが事故の防止上必要と考えますので、原案通りとします。
This clause specify that the principle is the work using Contractor's Equipment shall be Dangerous Work, and the work which the HSO permits as not Dangerous Work.
This does not leave the judgement to the Contractor. The principle stipulation is important to prevent accident with Contractor's Equipment.
Therefore, (2) is left as it is.

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

載ください。もしくは 6 章。
This clause seems to be written imaging the case of cranes. Therefore, it should be described clearly as regarding crane. If necessary, stipulate it in the additional requirement later or in Chapter 6.
NK: 本項目は特にクレーンに注目しているものではなく、建設機械一般の点検時の安全について規定しているものです。クレーンについて記述している "Inspection platforms and ladders on cranes and the like shall be fitted with cages." の文は、特に必要ないので削除します。
This clause is not highlighting to cranes, rather those requirements in (3) are general for various construction equipment except for the sentence "Inspection platforms and ladders on cranes and the like shall be fitted with cages."
The sentence is deleted.

No comment

(14) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

~~(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and consequent injury.~~ (JCA20a)

JCA20a: コンクリート・骨材プラント特有の問題を一般化すると唐突感。equipment と関係ないと思われるため削除してください。
Particular requirements related with concrete/crushing plants are specified in general requirements for equipment. It seems strange, so please delete (5).
NK: Deleted.

No comment

(15) ~~Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (JCA21) and such other facilities that are necessary to ensure safety where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.~~

JCA21: 本当？→全部には備え付けないものと考えますので、必要なものに備え付けるという旨に記述を修正願います。
Really? Fire extinguishing equipment would not be provided all Equipment.
Please modify the stipulation to provide it when necessary.
NK: We will modify it referring to the following clause of OSHA:
1926.601 Motor vehicles.
(14) All vehicles in use shall be checked … These requirements also apply to equipment such as …, fire extinguishers, etc., where such equipment is necessary.

The original text was fine.

Your added text is edited as follows:

(16) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment ~~and~~

complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(12) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS.

(13) Operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.3 Requirements Generally

(13) Unless otherwise specified in the Particular Safety Specification, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(14) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(15) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(16) The Contractor must ensure that the temporary fuel storage and

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

Imported from Transportation (above also):

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, ~~areas~~ where the operator's view is not clear and a intersections with public roads.

To MD, please review the above deletion of areas is correct.

(e) Where there is any risk of turnover, slippage, collapse or fall, ~~All~~ Contractor's Equipment ~~is~~ shall be equipped with seatbelts or safety harnesses (JCA25) and that such seatbelts and harnesses are used;

JCA25: 建設機械だけを意味してはいないので、それは違うのでは？mobile equipment として記述するか、主語はこのままにして適切に範囲を絞るような表現をするか((f)のような書き方)、いずれかで適切に書き換えをお願いします。
This is not correct because Contractor's Equipment includes various equipment including construction equipment. Please modify the stipulation by using "mobile equipment" or applying a phrase such as "where there is any risk, etc."
NK: 追記しました。Added as commented.

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing; (JCA25a)

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of ~~other~~ Contractor's Equipment; and (JCA25a)

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading ~~such other facilities~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and in fire safety procedures.

(17) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures. (JCB31)

JCB31: 機械の safety requirement ではない。It is not the safety requirements for the Equipment.
NK: 機械を使っての作業場所に救急用具を設置することは、機械の安全措置ではないですが、作業員の安全措置ですので、このまま残します。
This clause is not safety requirement for Equipment but for workers in the working area with Equipment. Therefore this as left as it is.

(18) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO (JCB32) or a person in charge who shall be contacted in the event of breakdown or fault.

JC32: 4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されているので、併記しておきます。
4.1.4(4) stipulate operator shall stop operation and inform person in charge of event of breakdown or fault, so added the person in charge.
NK: Modified.

No comment

(19) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access ~~. and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.~~ (JCB33).

(20) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

JCB33: 無関係な人間にアクセスを禁じるのは防護装置に悪さをさせないためだけではないし、関係者が防護装置に悪さをするかもしれない。従って、無関係者のアクセス禁止と防護装置の維持の話に分ける。
The prohibition of other persons from accessing to equipment is for avoiding them doing bad to protective device. On the other hand, there is possibility that workers related with the work do bad to the protective device. Therefore, the (8) is divided to two for(8) prohibition of other persons to access to equipment and (9) keeping the protective device function.

dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(17) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

(18) The Contractor is reminded of the requirements of JSSS 2.8 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.

or unloading materials.

JCA25a: (comment is not shown.)
NK: A phrase is added to clarify the kind of operators.
Imported from Transportation:

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.2 ~~Safety Measures When Equipment Is Not In Use~~ (JCA26) Safety Measures When ~~Equipment~~ Mobile Equipment Is Not in Use

JCA26: Contractor's Equipment とするか mobile とするか
Please consider to change it to "Contractor's Equipment" or "mobile"?
NK: 内容が移動機械のものであるため"Mobile Equipment"に修正しました。下の(1)も同様。
As the provisions are regarding to mobile equipment, modified to "Mobile Equipment". (1) below also is modified.

(1) When ~~Contractor's Equipment~~ mobile equipment (JCA26a) is not in use, the Contractor shall ensure that operators:

JCA26a: この辺りも建設機械に特化した記述かと
This is also stipulation particularly for construction equipment.
NK: Modified to mobile equipment.

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

11.3.7 Safety Measures During ~~Connection~~ Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (JCB36)

JCB36: こうした事態が発生するのを防ぐために具体的な記述を記載してください。
・安定したフレームにアタッチメントをおいて着脱する。
・エンジンを切る
その他、4.3.4 の(1)で参考になるようなことを具体的に記述してください。
Please stipulate concrete measures to avoid occurrence of accident mentioned in 81) and (2) for example,

NK: Modified as commented.

No comment

~~(11) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods (JCB34) elevators and or (JCB35) the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's printed instructions.~~

JCB34: 削除。単に elevators でいいのでは。
Deleted. It can be "elevators".
NK: Modified.

JCB35: Is it "or".
NK: We think "and" can be left.
To MD, please advise to use "or" or "and".

I suggest editing in total as follows:

(21) Ensure that installation, assembly, testing commissioning, operation and dismantling of all Contractor's Equipment is carried out under the direction of an Operation Leader, appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and in accordance with the manufacturer's operation, maintenance and repair manual.

Following is imported from Foundation Piling:

~~4.3.2 Transportation to and Removal from Site~~(JCA22)

~~(3) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

~~(4) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

JCA22: 4.3.4 の operation のところに入れてください。
Please move these (1) and (2) to 4.3.4 [Safety Measures During Operation].
NK: 4.3.7 (1) & (2)に移動しました。章番号を繰り上げます。

- connecting and removing attachments which are located on stable frames,
- Put off engine
- Other concrete measures referring to 4.3.4 (1).

NK: added in (1) and (2).

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or ground, and

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment not to move as mentioned in JSSS 4.3.4 (1) (a), (b) and (d), stop engine.

11.3.8 Safety Measures During Loading and Transporting (JCA27) of Contactor's Equipment (JCB37)

JCA27: タイトル要修正。場合によっては要分割・統合。
・Contractor's Equipment を運ぶときの話
・Contractor's Equipment で材料等を運ぶときの話
・Contractor's Equipment でその他のことをする場合の話
が混在しています。
Contractor's Equipment で輸送・荷卸しする時ではなくて、Contractor's Equipment を輸送・荷卸しする時なので、このタイトルは Loading and Transporting of Contractor's Equipment では.でないと、ここで勘違いして？？？になる
It is necessary to modify the title or divide/merge contents, because the contents are mixed with transporting equipment, transporting materials with equipment and others.

NK: 本章の題を[Safety Measures during Loading and Transporting of Contractor's Equipment]に変更し、新たに 4.3.7 [Safety Measures during Loading and Transporting of Materials]を加え、その中に 4.3.2 (1), (2)及び本章の材料等の運搬に係わる(9), (13), (14)を移動しました。
Changed the title to [Safety Measures during Loading and Transporting of Contractor's Equipment], and added a new Clause 4.3.7 [Safety Measures during Loading and Transporting of Materials], which contains measures for transporting materials from 4.3.2 (1) & (2) and 4.3.7 (9), (13) and 14.

JCB37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。
4.3.6 stipulates loadinga nd transporting. It is starange such as (3) if it is in transporting time.

NK: Review and revise if any strange.

Some added measure imported from Transportation

(1) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

To MD, may we know this track is truck. It seems JICA misunderstood and revised to trailer/track. If misunderstood the original shall be used.

(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

Moved to 4.3.7 (1) & (2) and Clause Nos are changed.

No comment

4.3.4 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas ~~at risk.~~

(8) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(9) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(10) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(11) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(12) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(13) Assign a Spotter.

(14) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.5 Safety Measures During Operation

(1) ~~The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.~~

The above is similar to and partial duplication of 4.1.1 and can be deleted if 4.1.1 is reworded slightly, which I have done.

(2) Unless otherwise specifically permitted by the HSO, (JCA23) all work involving the use of Contractor's Equipment shall be designated as Dangerous Work (JCA24) and the Contractor shall

(3) Securely chock all wheels of trailer/track ~~wheels~~ to prevent any movement during loading of Contactor's Equipment.

NK: Added "during loading of Contactor's Equipment".

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

(5) Ensure trailers/track are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits.

(7) ~~Ensure that all lights, brakes, steering and safety devices are working properly.~~ - (JCB38)

JCB38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？
Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported?
NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order.
This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting

(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity (JCA28) load limit, height, speed limit and any other required signage is applied to the trailer/track.

JCA28: suitable で良いか確認ください。「定められた」といった概念の言葉が入るべきではないでしょうか。
Please check if it is proper to use "suitable" here. It should mean the concept of such as "legally determined."
NK: トレーラの積載荷重の表示のため"authorized maximum loading capacity" に変更します。
Modified to "authorized maximum loading capacity".

(9) ~~Ensure that materials are loaded evenly.~~ (JCA28a)

(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(11) Place any attachments on the trailer/track. and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(13) ~~Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;~~ (JCA28a)

enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JCA23: エンジニアではなく？
Shouldn't this be the Engineer?
NK: JC24 のコメントとおり、Contractor's Equipment の範囲が広いのためと現場の条件によっては、立入禁止措置がとれない場合もあります。その場合の判断は HSO が責任をもって行うものと考えます。
Because Contractor's Equipment are various types from heavy equipment to tools and small equipment, and depending on the site conditions, it may not be possible to take entry prevention measures. In such a case, the HSO is the one who has to make judgment and decision. Left as is.

JCA24: Contractor's Equipment の範囲が広いので、すべてを Dangerous Work とするのは間違いではないでしょうか。したがって、「Contractor's Equipment を用いる場合で unless it is not practicable な場合にはフェンスを設置する」という趣旨の文を記載願います。
It is not appropriate to designated all works as "Dangerous Work" because Contractor's Equipment includes various types. Please, stipulate such that When using Contractor's Equipment, unless it is not practicable, shall enclose the working area.
NK: Contractor's Equipment を用いる仕事は危険な作業とする原則を規定し、ただし、HSO が許可した場合は、危険な作業から除外できると、原案は規定しています。現場に判断を任せず、原則を規定することが事故の防止上必要と考えますので、原案通りとします。
This clause specify that the principle is the work using Contractor's Equipment shall be Dangerous Work, and the work which the HSO permits as not Dangerous Work.
This does not leave the judgement to the Contractor. The principle stipulation is important to prevent accident with Contractor's Equipment.
Therefore, (2) is left as it is.

No further comment

(3) The Contractor shall also ensure that:

(l) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(m) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(n) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(o) ~~Spotters shall always be provided to enable precise~~

(14) ~~Inspect slings for securing transported materials and if any abnormality is found, replace immediately.~~ (JCA28a)

JCA28a: Contractor's Equipment で輸送することを言っているならあり、Contractor's Equipment を輸送するなら無し
(9)も(14)もそうで、安易に組み替えた感じあり。
NK: (9), (13) and (14) are deleted here and moved to 4.3.7.

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to ~~general~~ public traffic (JCB39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JCB40), permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

JCB39: general traffic?
To MD: Please review this change to public traffic.

JCB40: Prior は後に before があるから不要。
"Prior" is not necessary as there is "before".
NK: Deleted as comented.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

Imported from Transportation (above also):

11.3.9 ~~Access Roads (JCA29) Roads in the Site~~ (JCB40) Temporary Transporting Roads in the Site

JCA29: 違和感あり、この上でも混乱しているので輸送車両等の Additional Requirements for か輸送時の安全措置でまとめた方が良いかと。4.3.2 も改めてみると中途半端な感じ。
There is confusion, so it is better to specify requirements in Additional Requirements for transporting equipment or Safety measures during transportation. 4.3.2 seems something imperfect.
"Access Roads"はサイトの外をイメージさせますが、記述の内容はサイト内のことであるように思います。タイトルを適切に変更したうえで(transportation in the Site など)、すなおに理解できるようにしてください。場合によっては 2 章に移動させることも検討してください(risk control in the site という見出しを新たに作ってそこに入れるなど)
"Access Roads" would give an impression that means roads outside of the site, whereas the contents are regarding the roads inside of the site.
Please, change the title properly such as "Transportation in the Site" to make the clause easier to understand. If necessary, consider to move this to Chapter 2 making new clause, for example [Risk Control in the Site].

~~movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, areas where the operator's view is not clear and at intersections with public roads.~~

To MD, please review the above deletion of areas is correct.

I suggest editing as follows:

(p) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, in dangerous areas or when the operator's view is not clear and at intersections with public roads;

(q) Where there is any risk of turnover, slippage, collapse or fall, ~~All~~ Contractor's Equipment ~~is~~ shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

JCA25: 建設機械だけを意味してはいないので、それは違うのでは？mobile equipment として記述するか、主語はこのままにして適切に範囲を絞るような表現をするか((f)のような書き方)、いずれかで適切に書き換えをお願いします。
This is not correct because Contractor's Equipment includes various equipment including construction equipment. Please modify the stipulation by using "mobile equipment" or applying a phrase such as "where there is any risk, etc."
NK: 追記しました。Added as commented.

No comment

(r) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(s) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(t) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(u) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of Contractor's Equipment;

(v) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

JCA25a: (comment is not shown.)

NK: タイトルを Roads in the Site に変更しました。
The title is changed to [Roads in the Site].

JCB40: 仮設で作られる機械専用通路のことと理解していますが、英語の正しさについては MD 氏に確認願います。
We understood this Clause is for exclusive use roads temporary constrcuted.
Please ask MD to confirm the title and content.
NK: 和文では次のように作業環境と規定していました。
5.4.1 運搬車両の作業環境
請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。
(1) 運行経路について必要な幅員を保持すること、…。
(2) 運行経路の必要と認められる箇所には、制限速度を示す標識…。
(3) 運搬車両の走路と歩行者の安全通路を明示し、…。
(4) 規模の大きな工事現場においては運搬専用道路を設け、…。
(5) 夜間の運搬作業時には、…。
Site 外の公道の安全措置は道路管理者が行うべきことのため、和文（案）を参考に、現場内の運搬道路の安全措置とタイトルを変更することを提案します。
Japanese JSSS stipulate as follows:
5.4 Transport Works by Transportation Vehicles
5.4.1 Work Environment
The Contractor shall take the following measures for the safety working environment in the Site for operation of transportation vehicles.
(1) Take measures for the transportation road …;
(2) Put signboards indicating speed limit …;
(3) Separate roads for vehicles and walkways…;
(4) In large construction site, provide exclusive transport roads …; and
(5) Provide sufficient lighting facilities …;.
Safety measures in public roads out side of the Site shall be taken by the road authority.
NK: We propose to revise the title to Safety Measures for Temporary Transporting Roads in the Site referring to Japanese JSSS.
To MD, please review the title.

(1) Take measures for ensuring that ~~access roads in the Site~~ (JCB41) Temporary Transporting Roads in the Site are of suitable construction, ~~of~~ sufficient width, free from potholes, uneven settlement and collapse.

JCB41: 同上。Ditto
NK: Ditto.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the

NK: A phrase is added to clarify the kind of operators.

No comment

(w) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.6 ~~Safety Measures When Equipment Is Not In Use~~ Safety Measures When ~~Equipment~~ Mobile Equipment Is Not in Use

JCA26: Contractor's Equipment とするか mobile とするか
Please consider to change it to "Contractor's Equipment" or "mobile"?
NK: 内容が移動機械のものであるため"Mobile Equipment"に修正しました。下の(1)も同様。
As the provisions are regarding to mobile equipment, modified to "Mobile Equipment". (1) below also is modified.

(3) When ~~Contractor's Equipment~~ mobile equipment is not in use, the Contractor shall ensure that operators:

JCA26a: この辺りも建設機械に特化した記述かと
This is also stipulation particularly for construction equipment.
NK: Modified to mobile equipment.

No comment

(f) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(g) Securely chock all wheels to prevent any movement;

(h) Lower attachments (buckets and blades etc.) to the ground;

(i) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(j) Lock the equipment and store the starter key in the designated place.

(4) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.7 Safety Measures During ~~Connection~~ Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (JCB36)

JCB36: こうした事態が発生するのを防ぐために具体的な記述を記載してください。
・安定したフレームにアタッチメントをおいて着脱する。
・エンジンを切る
その他、4.3.4 の(1)で参考になるようなことを具体的に記述してください。

roads when work operating in night.

11.3.10 Additional Requirements for Static Equipment (JCA30)

JCA30: 骨材プラント、コンクリートプラント、アスファルトプラントなどを明示してもいい。
It is better to exemplify such as aggregate plant, concrete plant, etc.?
NK: 定置機械については 4.1.1 (6)で例示しているので、ここでの改めての例示は不要と考えます。
Static equipment are exemplified in 4.1.1 (6). Thus, it is not necessary to mention again here.

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens(JCB42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

JC42: What is screen?
NK: It means fence screen such as shown in the photo below.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

11.3.11 Additional Requirements for Personnel and Goods Elevators and Material Conveyors(JCA31) (JCB43)

JCA31: 定置機械にまとめた模様。
専門業者による組み立て、起動予告ブザー、連続装置設置(連続した非常停止スイッチ)、コンベア搭乗禁止とか削除されているので、復活させてください。エレベーターとコンベアを一緒にするか否かも要検討。
Please add the provisions of installation under the instruction of the experts, warning alarm system for start-up, emergency stop buttons for each necessary
Please stipulate concrete measures to avoid occurrence of accident mentioned in 81) and (2) for example,
- connecting and removing attachments which are located on stable frames,
- Put off engine
- Other concrete measures referring to 4.3.4 (1).

NK: added in (1) and (2).

(3) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground.

(4) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.

4.3.8 Safety Measures During Loading and Transporting of Contractor's Equipment

JCA27: タイトル要修正。場合によっては要分割・統合。
・Contractor's Equipment を運ぶときの話
・Contractor's Equipment で材料等を運ぶときの話
・Contractor's Equipment でその他のことをする場合の話
が混在しています。
Contractor's Equipment で輸送・荷卸しする時ではなくて、Contractor's Equipment を輸送・荷卸しする時なので、このタイトルは Loading and Transporting of Contractor's Equipment では.でないと、ここで勘違いして？？？になる
It is necessary to modify the title or divide/merge contents, because the contents are mixed with transporting equipment, transporting materials with equipment and others.
NK: 本章の題を[Safety Measures during Loading and Transporting of Contractor's Equipment]に変更し、新たに 4.3.7 [Safety Measures during Loading and Transporting of Materials]を加え、その中に 4.3.2 (1), (2)及び本章の材料等の運搬に係わる(9), (13), (14)を移動しました。
Changed the title to [Safety Measures during Loading and Transporting of Contractor's Equipment], and added a new Clause 4.3.7 [Safety Measures during Loading and Transporting of Materials], which contains measures for transporting materials from 4.3.2 (1) & (2) and 4.3.7 (9), (13) and 14.

JCB37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。
4.3.6 stipulates loadinga nd transporting. It is starange such as (3) if it is in transporting time.
NK: Review and revise if any strange.

(15) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

To MD, may we know this track is truck. It seems JICA misunderstood and revised to trailer/track. If misunderstood the original shall be used.

This is from your original transportation draft which stated – "Use vehicles with climbing equipment or special equipment when construction heavy equipment is transported by trailers or tracks".

It is correct as it was i.e. not "trucks" it is "tracks" and so is "ramps". This clause

point and prohibition of riding on conveyor, etc. stipulated in Japanese version. Please consider whether requirements for elevators and conveyers shall be specified together or separately.

NK: 追記・別々に規定しました。(組立てに関しては 4.3.1(9)に規定済です。)
Added and separately specified. (Installation under instruction by expert is specified in 4.3.1(9).) Provisions for conveyors are stipulated referring to OSHA 1926.555 Conveyors.

JCB43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.

NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

(1) ~~General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use.~~

(2) ~~The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(a) ~~Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

(b) ~~Defects or operational faults in emergency stop and alarm systems;~~

(c) ~~Defects or operational faults in power, lighting and control systems;~~

(d) ~~Defects or operational faults with interphone systems;~~

(e) ~~Defects or operational faults in brakes, clutches; and~~

(f) ~~Defects or operational faults of sheaves and pulleys.~~

(3) ~~The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(a) ~~Defects or operational faults in supporting cables and wire ropes; and~~

refers to selecting trailers and for getting equipment onto the trailers although "ramps" is more understandable than tracks.

I suggest minor editing as follows:

(1) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailer/~~track~~ ~~wheels~~ to prevent any movement ~~during loading of Contractor's Equipment.~~

NK: Added "during loading of Contactor's Equipment".

OK but no need to add as the clause heading describes this already

No need "track"

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

No need "track"

(5) Ensure trailers/track are equipped with tie down devices to allow secure fixing of load.

No need "track"

(6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits.

(7) ~~Ensure that all lights, brakes, steering and safety devices are working properly~~. - (JCB38)

JCB38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？
Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported?

NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order.
This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting

Yes, I think it is necessary as trailers are very often old, not road-worthy, unsafe and commonly without operating electrics or lights or even brakes. I also suggest that it should stay here as it should be checked anyway when the Contractor's Equipment has been loaded.

(b) ~~Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

(7) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

(b) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(c) ~~The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted.~~

(d) The Contractor shall post the maximum load capacity and any restrictions on the use.

(8) Personnel and Goods Elevators (JCB44)

JCB44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。
Please modify (b) (c) and (3) as below.
NK: Modified.

(a) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners;

(ii) ~~Defects or operational faults in~~ emergency stop and alarm systems;

(iii) ~~Defects or operational faults in~~ power, lighting and control systems;

(iv) ~~Defects or operational faults with~~ interphone systems;

(v) ~~Defects or operational faults in~~ brakes, clutches; and

(vi) ~~Defects or operational faults of~~ sheaves and pulleys.

(b) Additional periodical inspection items shall include to check defects or operational faults with respect to:

(vii) ~~Defects or operational faults in~~ daily inspection items;

(viii) ~~Defects or operational faults in~~ wire ropes;

(ix) ~~Defects or operational faults in~~ winch and its foundation; and

(x) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(9) ~~Belt~~ Material Conveyors

Local law seems often to cover tractors but not detachable trailers

(8) ~~Ensure that suitable load limit authorized maximum loading capacity~~ (JCA28) ~~load limit, height, speed limit and any other required signage is applied to the trailer~~/~~track.~~

JCA28: suitable で良いか確認ください。「定められた」といった概念の言葉が入るべきではないでしょうか。
Please check if it is proper to use "suitable" here. It should mean the concept of such as "legally determined."
NK: トレーラの積載荷重の表示のため"authorized maximum loading capacity" に変更します。
Modified to "authorized maximum loading capacity".

I suggest edit as follows:

(8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

(9) ~~Ensure that materials are loaded evenly.~~ (JCA28a)

No problem to transfer above but suggest that the following modified clause is included here also:

(10) Ensure that trailers are loaded evenly.

(11) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any movement during transit.

(12) Place any attachments on the trailer/~~track.~~ and securely tie down.

No need "track"

(13) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

No comment (but no need)

(14) ~~Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;~~ (JCA28a)

(15) ~~Inspect slings for securing transported materials and if any abnormality is found, replace immediately.~~ (JCA28a)

No problem to transfer above but suggest that the following modified clause is

(a) Additonal safety measures

(xi) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(xii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(xiii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(xiv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed .

(xv) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include to check defects or operational faults with respect to:

(xvi) ~~Defects or operational faults in~~ prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(xvii) ~~Defects or operational faults in~~ guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items~~; and~~ (JCB45)

JCB45: There is no sentence after "and".
NK: Deleted.

With regard to the following, please refer to Compliance standards above and can we discuss further:

To MD, The 4.1. General describes as follows:

The Contractor shall comply with "OHSA Part1926 Subpart N- Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power" for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).

I do not think that this is necessary:

Do you think if we shall specify Subpart I, §1926.304 Woodworking tools again to specify more details for saws in 4.4.3 (2)?

11.3.12 Additional Requirements for ~~Tools, Tackle and~~ (JCB46)Small Equipment and Tools

JCB46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".
NK: Defined "Tools2 in 4.1.1 (7) above.

included here also:

(16) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.

JCA28a: Contractor's Equipment で輸送することを言っているならあり、Contractor's Equipment を輸送するなら無し
(9)も(14)もそうで、安易に組み替えた感じあり。
NK: (9), (13) and (14) are deleted here and moved to 4.3.7.

No problem

4.3.8 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to ~~general~~ public traffic (JCB39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JCB40), permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

JCB39: general traffic?
To MD: Please review this change to public traffic.

Change is not necessary and has little or no meaning.

This is transportation on "public roads" anyway (which does have meaning) and any traffic thereon is covered by "general"

JCB40: Prior は後に before があるから不要。
"Prior" is not necessary as there is "before".
NK: Deleted as comented.

Agreed

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO ~~Engineer~~ before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties.

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

I think that the above should correctly be changed from Engineer to HSO. Contractor is responsible for all such arrangements.

4.3.7 ~~Access Roads (JCA29)~~ ~~Roads in the Site~~ ~~(JCB40)~~ Temporary Transporting Roads in the Site

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO. ~~the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.~~ (JCB47)

JCB47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。
あくまでも理想論。僻地では無理 " as much as possible"を加えてみては
It is few for agents to repair them, so it is replaced with competent persons approved by the HSO.
It is ideal for agent to repair them, so how about to add "as much as possible".
NK: Modified as commented.

(3) All small equipment (JCB48) and Tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

JCB48: マイナーなものなので、re-certified まではしないと思います。
It may not be re-certified because they are minor equipment.
NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

11.3.13 Additional Requirements for Electric Powered Equipment (JCB49)

JCB49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。
It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools.
NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows:
(8) Electric powered equipment means portable electric powered mobile equipment or tools.
The (8) was deleted by JICA comment JC13 and 14.
NK: Definition is added in (1) below.

(1) Electric powered equipment specified in 4.3.12 is portable electric powered mobile equipment or tools among small equipment and Tools listed in 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JCB50)

4.3.9 Site Access Roads

See notes below

JCA29: 違和感あり、この上でも混乱しているので輸送車両等の Additional Requirements for か輸送時の安全措置でまとめた方が良いかと。4.3.2 も改めてみると中途半端な感じ。
There is confusion, so it is better to specify requirements in Additional Requirements for transporting equipment or Safety measures during transportation. 4.3.2 seems something imperfect.
"Access Roads"はサイトの外をイメージさせますが、記述の内容はサイト内のことであるように思います。タイトルを適切に変更したうえで(transportation in the Site など)、すなおに理解できるようにしてください。場合によっては 2 章に移動させることも検討してください(risk control in the site という見出しを新たに作ってそこに入れるなど)
"Access Roads" would give an impression that means roads outside of the site, whereas the contents are regarding the roads inside of the site.
Please, change the title properly such as "Transportation in the Site" to make the clause easier to understand. If necessary, consider to move this to Chapter 2 making new clause, for example [Risk Control in the Site].
NK: タイトルを Roads in the Site に変更しました。
The title is changed to [Roads in the Site].

JCB40: 仮設で作られる機械専用通路のことと理解していますが、英語の正しさについては MD 氏に確認願います。
We understood this Clause is for exclusive use roads temporary constrcuted.
Please ask MD to confirm the title and content.
NK: 和文では次のように作業環境と規定していました。
5.4.1 運搬車両の作業環境
請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。
(1) 運行経路について必要な幅員を保持すること、…。
(2) 運行経路の必要と認められる箇所には、制限速度を示す標識…。
(3) 運搬車両の走路と歩行者の安全通路を明示し、…。
(4) 規模の大きな工事現場においては運搬専用道路を設け、…。
(5) 夜間の運搬作業時には、…。
Site 外の公道の安全措置は道路管理者が行うべきことのため、和文（案）を参考に、現場内の運搬道路の安全措置とタイトルを変更することを提案します。
Japanese JSSS stipulate as follows:
5.4 Transport Works by Transportation Vehicles
5.4.1 Work Environment
The Contractor shall take the following measures for the safety working environment in the Site for operation of transportation vehicles.
(1) Take measures for the transportation road …;
(2) Put signboards indicating speed limit …;
(3) Separate roads for vehicles and walkways…;
(4) In large construction site, provide exclusive transport roads …; and
(5) Provide sufficient lighting facilities …;.
Safety measures in public roads out side of the Site shall be taken by the road authority.
NK: We propose to revise the title to Safety Measures for Temporary Transporting Roads in the Site referring to Japanese JSSS.
To MD, please review the title.

"Access Roads" is the correct title and is the correct expression to use.

An "access road" is not specific as you suggest it is any road which enables traffic

JCB50: 表現の横並びをとるとこのようになるのではないか？
(2)(d)では ELCB なるものは必須ではない記述になっている
The sentence will be as modified to make same listing style below.
(2) (d) stipulates ELCB is not compulsory.
NK: Modified as commented.

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use ~~metal clad~~ weatherproof switches (JCB51) with covers, securely fixed in accessible and dry places; (JCA32)

JCA32: metalclad 形式に限定され他のタイプを排除することになりませんか。用語の意味を再度確認してください。これに限定するということでしょうか。途上国の現場で見たことがない気がします。
Doesn't it limit only to the metal clad type and eliminate other types? Please reconfirm the meaning of the term of metal clad. Does it mean to limit metal-clad? I feel I have not seen this in the developing countries.
https://www.google.co.jp/search?q=metalclad&source=lnms&tbm=isch&sa=X&ved=2ahUKEwi9jc-hm6rnAhVQw4sBHSlXCx8Q_AUoAXoECA4QAw&biw=1567&bih=748#spf=1580349127635
NK: 和文の規定を参考に変更します。
Modified referring to Japanese version "Use switches with covers for electrical power equipment, place them in a metal box, etc."

JCB51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？
We propose to specify anti-explosion type, if needed.
NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないため、追記しないことと致します。
参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html
Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all

to reach (access) a particular place or area. It is a common and correct expression for use in construction.

It is an expression that needs to be general also and may actually cover roads outside the Site also as these are still within the Contractor's responsibility. FIDIC refers to "access routes" outside the site (which are still the contractor's responsibility) generally meaning routes over existing roads. The use of "access roads" does not conflict with FIDIC or with any other part of JSSS.

Your statement that the road authority shall take "safety measures in public roads out side of the site" is not completely correct within the context of this clause and is not necessary.

Also, these are not just "temporary roads", they may also be:

Permanent existing roads within the Site (outside is covered by FIDIC)

New permanent roads within the Site to be constructed under the contract.

Semi-completed new permanent roads within the Site

Temporary roads, temporary routes or tracks.

Dirt roads or tracks

As there is obviously some lack of clarity or misunderstanding, and whilst there is no real need for any change to the original text of this clause I suggest changing it to "Site Access Roads".

There is no need to change any of the content of the clause.

~~(1) Take measures for ensuring that access roads in the Site (JCB41) Temporary Transporting Roads in the Site are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.~~

JCB41: 同上。Ditto
NK: Ditto.

See above, ntes:

(6) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(7) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(8) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

grounded.–

To MD,

Please coordinate 7.7 Temporary Elect. Installations.

MD reply: is this part necessary? It seems that it is better covered by 7.7

Electric leakage prevention and disconnection device is important device.

*MD - Yes I am aware of that but please note that **ELCB** is the old name and refers to voltage operated devices that may no longer be available, it is advised these are replaced if found.*

***RCD** is specified in Chapter 7.7, please advise what you want to use??*

(f) Avoid hanging electric cables and wires directly on nails, reinforcing ~~or scaffolding tubes~~ and the like (JCA33) to prevent damage to the insulation and protective covering.

JCA33: 日本語の丸太足場を鋼管に替えているようですが、妥当性を再度確認願います(scaffolding tubes は削除でも良い)。
←被覆材保護のために摩擦係数の大きい丸太足場にひっかけないように、というのが原文の意味ではなかったのですか。(以下、日本語版)
移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。
It looks that log scaffolding has been changed to scaffolding tubes. Please, check its compatibility. Wasn't the original concept that the cables and wires shall not be hanged on log scaffoldings of large friction factor in order to prevent damage to the insulation?
NK: コメントに従い、"scaffolding tubes"を削除しました。
As commented, "scaffolding tubes" is deleted and "and the like" is added..

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or ~~is not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault ~~or abnormality~~ is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) ~~Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and~~ (JCA34) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes,

(9) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(10) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.10 Additional Requirements for Static Equipment

(JCA30)

JCA30: 骨材プラント、コンクリートプラント、アスファルトプラントなどを明示してもいい。
It is better to exemplify such as aggregate plant, concrete plant, etc.?
NK: 定置機械については 4.1.1 (6)で例示しているので、ここでの改めての例示は不要と考えます。
Static equipment are exemplified in 4.1.1 (6). Thus, it is not necessary to mention again here.

(3) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens(JCB42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

JC42: What is screen?
NK: It means fence screen such as shown in the photo below.

(4) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

No comment, no change necessary

4.3.11 Additional Requirements for Personnel and Goods Elevators and Material

protective helmets, safety shoes, eye and face protection, ear protection; and

JCA34: electric power equipment の定義と照らし合わせて適切でしょうか。
Is this clause appropriate against the definition of electric power equipment?
NK: 4.1.1.(8)で持ち運びできる電動機械もしくは工具と定義しています。これらを使用する場合に当然適した保護具を使用することが求められます。器具により必要な保護具も変わりますので右のように修正します。
Electric power equipment is defined in 4.1.1 (8) that electric power equipment means portable electric powered mobile equipment or tools. When using these, it is necessary to use appropriate protective equipment which vary according to the type of equipment. The clause is modified.

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

11.3.14 Additional Safety Measures during Adverse Weather ここから

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

11.4 ROPES, SLINGS AND CHAINS

11.4.3 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have safety factor recommended by the manufactures ~~of at least 6~~, (JCA35), obtained by dividing the breaking strength by the maximum applied load for each type.

JCA35: マニュファクチャーズレコメンデーションに従う旨の記載に代えてください。(ワイヤーロープやスリングは現場では作らず専門業者から調達することを想定)
Please change this part as to comply with the recommendation by the manufacturer. (It is assumed that wire ropes and slings shall not be fabricated at the site but procured from the vendors.)
NK: コメントに従い、右のように修正しました。

Conveyors

JCA31: 定置機械にまとめた模様。
専門業者による組み立て、起動予告ブザー、連続装置設置(連続した非常停止スイッチ)、コンベア搭乗禁止とか削除されているので、復活させてください。エレベーターとコンベアを一緒にするか否かも要検討。
Please add the provisions of installation under the instruction of the experts, warning alarm system for start-up, emergency stop buttons for each necessary point and prohibition of riding on conveyor, etc. stipulated in Japanese version. Please consider whether requirements for elevators and conveyers shall be specified together or separately.
NK: 追記・別々に規定しました。(組立てに関しては 4.3.1(9)に規定済です。)
Added and separately specified. (Installation under instruction by expert is specified in 4.3.1(9).) Provisions for conveyors are stipulated referring to OSHA 1926.555 Conveyors.

JCB43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.
NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

What exactly do you mean by "portable conveyors" for use in construction?

Why are they so different in a safety sense to any other type of temporary mobile conveyor?

~~(4) General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use~~

~~(5) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(g) Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

~~(h) Defects or operational faults in emergency stop and alarm systems;~~

~~(i) Defects or operational faults in power, lighting and control systems;~~

~~(j) Defects or operational faults with interphone systems;~~

~~(k) Defects or operational faults in brakes, clutches; and~~

As commented, the clause is changed as right.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

11.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

11.5.3 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions (JCA36) and in any event within the designed operating capacity of the equipment.~~

(JCB52)

JCA36: 用途外使用の際の使用方法に関する書面でのマニュアルを本当にメーカーが出している事例があるのでしょうか。具体例を複数確認して提示願います。ないようであれば、この記述は修正が必要です。
Is there really any example that manufacturer of equipment issues written manual which contains usage for the purpose other than that of intended?
Please, present at least examples for such usage. If there is no such example, the description has to be changed.
NK: 下記サイトに用途外使用に関する情報がありましたが、あくまで安衛法の基づいた注意書に過ぎません。
There is one site in Japan that explains use of equipment for purpose other than one for which it is designed, however it is only points to care based on the Occupational Safety and Health Regulations of Japan.
the clause is change to comply with the Law.
https://www.taiyokenki.co.jp/rental/tidbits/post_13.html
In USA, there is the following information how to use lifting by excavator following the manufacturer's Excavator Lift Capacity Chart :
https://www.forconstructionpros.com/equipment/earthmoving/backhoe-loaders/article/11416879/interpret-the-surprises-in-your-backhoes-lift-chart-to-place-big-loads-safely
http://zoskin.praysafeconsulting.com/excavator-lift-capacity-chart/tips-for-using-earthmoving-equipment-for-lifting-equipment.html
Additional stipulation is added regarding the regulation and confirmation by the HSO.

JCB52: 製造者が目的外使用の書面でのインストラクションを出していることが想定できないので、いらないのではないでしょうか？
It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary?
NK: Agreed to delete.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's written instructions, and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(10) Rigging Equipment such as hook is attached on an appropriate part

~~(l) Defects or operational faults of sheaves and pulleys.~~

~~(6) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

~~(c) Defects or operational faults in supporting cables and wire ropes; and~~

~~(d) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

(16) General

(e) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

Why not? What are the requirements for "portable conveyors" and where are they specified?

(f) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

~~(g) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(h) The Contractor shall post the maximum load capacity and any restrictions on the use.

(17) Personnel and Goods Elevators

JCB44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。
Please modify (b) (c) and (3) as below.
NK: Modified.

(c) Additional daily inspection items shall include checking for defects or operational faults with the following:

(xviii) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners;

(xix) ~~Defects or operational faults in~~ emergency stop and alarm systems;

(xx) ~~Defects or operational faults in~~ power, lighting and control systems;

of the excavation equipment (e.g. arm or bucket);

~~When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:~~

(11) ~~Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;~~

(12) Arms, bucket, Rigging Equipment have enough strength to lift the load;

(13) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction~~ equipment;

(14) The lifting capacity for alternative use is confirmed by loading tests at the Site; and

(15) ~~Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work.~~ (JCB54)

JCB54: 揚貨作業をする時に揚貨の資格が必要であることは、揚貨の章に記述があるはず。不要。
The necessity of license is specified in the Chapter for lifting, so not necessary mention (5).
NK: Deleted.

~~Under these circumstances the Contractor shall take account of the following:~~ (JCB55)

JCB55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要.
It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging.
NK: Deleted.

(1) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~

(2) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~

(3) ~~Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.~~

(4) ~~Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.~~

(5) ~~Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used.~~ .(JCA37)

(xxi) ~~Defects or operational faults with~~ interphone systems;

(xxii) ~~Defects or operational faults in~~ brakes, clutches; and

(xxiii) ~~Defects or operational faults of~~ sheaves and pulleys.

(d) Additional periodical inspection items shall include checking for defects or operational faults with the following:

(xxiv) ~~Defects or operational faults in~~ daily inspection items;

(xxv) ~~Defects or operational faults in~~ wire ropes;

(xxvi) ~~Defects or operational faults in~~ winch and its foundation; and

(xxvii) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(18) ~~Belt~~ Material Conveyors

(d) Additonal safety measures

(xxviii) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(xxix) Means for stopping the motor or engine shall be provided at the motor or engine location;

(xxx) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position;

(xxxi) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed; and

(xxxii) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(e) Additional daily inspection items shall include checking for defects or operational faults with the following:

(xxxiii) ~~Defects or operational faults in~~ overrun and reverse run prevention devices; ~~against uncontrolled run and reverse run;~~

(xxxiv) emergency stop switches; and

(xxxv) ~~Defects or operational faults in~~ guards.

(f) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items. ~~and~~ (JCB45)

JCB45: There is no sentence after "and".
NK: Deleted.

I have deleted the following notes from the last draft as they are no longer

JCA37: 本節は用途外使用を規定しています。用途外使用をするための genuine accessories というのが存在するのでしょうか。
Is there any “genuine accessory” for purpose other than one for which it is designed?
NK: バケットに取り付けるフックなどは、重機のメーカーではなく、部品メーカーが多種の製品を製造しています。純正となると、バケットに収納できる特殊フックしかないようです。本項目は削除します。
Accessories such as hooks for lifting are produced by suppliers not by the equipment manufacturer. A hook as a genuine accessory was found only in a special type bucket which can store the hook when it is not in use. This clause is deleted.

~~(6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.~~

~~(7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.~~

~~(8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.~~

~~(9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

~~(10) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

11.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

11.6.3 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works

applicable:

~~*With regard to the following, please refer to Compliance standards above and can we discuss further:*~~

~~*To MD, The 4.1. General describes as follows:*~~

~~*The Contractor shall comply with "OHSA Part1926 Subpart N- Helicopters, Hoists, Elevators, and Conveyors, and Subpart I Tools and and Power" for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).*~~

~~*I do not think that this is necessary:*~~

~~*Do you think if we shall specify Subpart I, §1926.304 Woodworking tools again to specify more details for saws in 4.4.3 (2)?*~~

4.3.12 Additional Requirements for ~~Tools, Tackle and~~ Small Equipment and Tools

JCB46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as “Tools”.
NK: Defined “Tools2 in 4.1.1 (7) above.

See 4.1.1 and 4.1.1 (7), this change is fine.

(4) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO. ~~the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.~~ (JCB47)

JCB47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。
あくまでも理想論。僻地では無理 “ as much as possible”を加えてみては
It is few for agents to repair them, so it is replaced with competent persons approved by the HSO.
It is ideal for agent to repair them, so how about to add “as much as possible”.
NK: Modified as commented.

Change to repair agents may be OK however it now ignores any mention of the use of genuine spare parts which I suggest is important even though it may not always be followed! I suggest the following be added in place of the above

(5) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer's genuine or recommended spare parts.

(6) All small equipment (JCB48) and Tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement

before ~~the Contractor's Equipment~~ .(JCA38) the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

JCA38: この表現でいい？ 例えば Rental or Lease equipment の方が素直に読めますがいかがでしょうか。そのうえで 4.6 内での表現を統一してください。

Is this a proper expression? It would be better to use, for example, "rental and lease equipment". And please unify the expression in 4.6.

NK: (2)及び(3)で使用されている" the Contractor's Equipment"は単に"equipment"で明確に意味が通じるので、"equipment"に変更します。

The term "the Contractor's Equipment" used in (2) & (3) can be replaced simply with "equipment", by which the meaning of this clause become clearer.

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this ~~Contractor's Equipment~~ equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

11.7 TEMPORARY FUELLING FACILITIES

11.7.3 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JCB56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and

of parts, before such equipment is put back into use.

JCB48: マイナーなものなので、re-certified まではしないと思います。

It may not be re-certified because they are minor equipment.

NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

This is OK

4.3.13 Additional Requirements for Electric Powered Equipment

(JCB49)

JCB49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。

It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools.

NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows:

(8) Electric powered equipment means portable electric powered mobile equipment or tools.

The (8) was deleted by JICA comment JC13 and 14.

NK: Definition is added in (1) below.

(4) Electric powered equipment specified in 4.3.12 ~shall include portable electric powered mobile equipment or tools and shall comprise a part of the small equipment and tools listed in 4.1.1 (7).

(5) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(e) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JCB50)

JCB50: 表現の横並びをとるとこのようになるのではないか？

(2)(d)では ELCB なるものは必須ではない記述になっている

The sentence will be as modified to make same listing style below.

(2) (d) stipulates ELCB is not compulsory.

NK: Modified as commented.

Note to NK:

I strongly recommend that this entire subclause be reviewed from the electrical safety perspective by your professional electrical specialist.

I had also previously requested that this part be coordinated with JSSS 6.7 Temporary Electrical Installations but this does not appear to have happened and I again repeat this request as the two sections are not currently coordinated from

dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JCB57)

JCB56: “shall”じゃなく”may”ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify “shall” but “may” because fuelling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

JCB57: 法令上の許可が必要な場合は取得することを追記が必要と思量。
It is necessary to specify for the Contractor to get permission in accordance with the Law of the Country when necessary.
NK: Added.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures.(JCA39, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

JCA39: 単純に英語の意味がわからない
bund: A secondary enclosure, typically consisting of a wall or berm, which surrounds a tank or fluid-handling mechanism, intended to contain any spills or leaks.
ex.) Plant room floors are generally bunded and/or waterproofed to contain any leaks or spillages of liquids and fluids from faulty tanks, plant or pipe work.

the electrical safety aspect.

I suggest that the above reference to ELCB (unless changed to RCD) should not be changed, and preferably 3(d) and 3(e) below should be changed as for safety purposes as either ELCB, RCD or other safety measures are essential.

The fact that many JICA works are being executed in developing countries in my opinion should not in any way affect the specified level of safety in JSSS.

(f) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes;

(g) Damage to insulation and protective coverings of all wires and cables including flexible cables; and

(h) Damage to plugs, sockets, transformers and all wiring fittings and appliances.

(6) The Contractor shall comply with the following additional safety requirements:

(n) Use ~~metal clad~~ waterproof ~~weatherproof~~ switches and socket outlets with covers, securely fixed and located in accessible and dry places;

JCA32: metalclad 形式に限定され他のタイプを排除することになりませんか。用語の意味を再度確認してください。これに限定するということでしょうか。途上国の現場で見たことがない気がします。
Doesn’t it limit only to the metal clad type and eliminate other types? Please reconfirm the meaning of the term of metal clad. Does it mean to limit metal-clad? I feel I have not seen this in the developing countries.
https://www.google.co.jp/search?q=metalclad&source=lnms&tbm=isch&sa=X&ved=2ahUKEwi9jc-hm6rnAhVQw4sBHSlXCx8Q_AUoAXoECA4QAw&biw=1567&bih=748#spf=1580349127635
NK: 和文の規定を参考に変更します。
Modified referring to Japanese version “Use switches with covers for electrical power equipment, place them in a metal box, etc.”

JCB51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？
We propose to specify anti-explosion type, if needed.
NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないため、追記しないことと致します。
参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html
Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.

No comment, however “metal clad switches” are an understandable construction term for metal faced heavy duty fittings commonly used for external and temporary works.

Maybe also change “weatherproof” to “waterproof”

NK: 貯蔵タンクの燃料流出防止のために、2 重タンク又は流出防止壁の設置を規定していると解釈します。MD 氏に表現の再検討及び出典の提示を依頼します。
We will transfer the above comment and request to make it easy to understand and show the source of these requirements.

(6) The Contractor is reminded of the requirements of JSSS 1.23 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.

NK please can you provide a reference standard for storage tanks.

Please also advise of regulations that should apply and any further technical requirements.

We will edit and develop.

Please refer to my recommendation above regarding review by electrical specialist

(o) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(p) Use rubber cabtyre cables for all electrical power equipment;

(q) Wherever possible provide an ELCB's to each item of electrical equipment;

(r) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;

Please refer to my recommendation above regarding review by electrical specialist and coordinate (d) and (e) above.

ELCB or RCD?

Previous issue MD notes:

Please coordinate 7.7 Temporary Elect. Installations.

MD reply: is this part necessary? It seems that it is better covered by 7.7 (6.7)

Electric leakage prevention and disconnection device is important device.

*MD - Yes I am aware of that but please note that **ELCB** is the old name and refers to voltage operated devices that may no longer be available, it is advised these are replaced if found.*

***RCD** is specified in Chapter 7.7, please advise what you want to use??*

(s) Avoid hanging electric cables and wires directly on nails, reinforcement ~~or scaffolding tubes~~ and the like to prevent damage to the insulation and protective covering;

JCA33: 日本語の丸太足場を鋼管に替えているようですが、妥当性を再度確認願います(scaffolding tubes は削除でも良い)。
←被覆材保護のために摩擦係数の大きい丸太足場にひっかけないように、というのが原文の意味ではなかったのですか。(以下、日本語版)
移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。
It looks that log scaffolding has been changed to scaffolding tubes. Please, check its compatibility. Wasn't the original concept that the cables and wires shall not be hanged on log scaffoldings of large friction factor in order to prevent damage to the insulation?
NK: コメントに従い、"scaffolding tubes"を削除しました。
As commented, "scaffolding tubes" is deleted and "and the like" is added..

"Log scaffolding" has no meaning, scaffolding has meaning.

(t) Turn off the power before repairing, moving or maintaining

electric power equipment;

(u) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(v) Ensure that fuses are replaced by an authorised person;

(w) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or ~~is not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;

Your change is not grammatically correct, the original wording is correct.

(x) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(y) ~~Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and~~ (JCA34) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

JCA34: electric power equipment の定義と照らし合わせて適切でしょうか。
Is this clause appropriate against the definition of electric power equipment?
NK: 4.1.1.(8)で持ち運びできる電動機械もしくは工具と定義しています。これらを使用する場合に当然適した保護具を使用することが求められます。器具により必要な保護具も変わりますので右のように修正します。
Electric power equipment is defined in 4.1.1 (8) that electric power equipment means portable electric powered mobile equipment or tools. When using these, it is necessary to use appropriate protective equipment which vary according to the type of equipment. The clause is modified.

I think it is relevant

(z) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.14 Additional Safety Measures during Adverse Weather

ここから

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a

stable and secure state by taking all necessary measures including:

(4) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(5) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(6) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.3 Requirements Generally

(4) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have safety factor recommended by the manufactures ~~of at least 6~~, (JCA35), obtained by dividing the breaking strength by the maximum applied load for each type.

JCA35: マニュファクチャーズレコメンデーションに従う旨の記載に代えてください。(ワイヤーロープやスリングは現場では作らず専門業者から調達することを想定)
Please change this part as to comply with the recommendation by the manufacturer. (It is assumed that wire ropes and slings shall not be fabricated at the site but procured from the vendors.)
NK: コメントに従い、右のように修正しました。
As commented, the clause is changed as right.

I suggest that no extensive change is necessary here as all is specified in JSSS 5.4 as referenced below.

If you require this change, I suggest as follows:

(5) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.

(6) Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO.

(7) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.3 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other

purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions (JCA36) and in any event within the designed operating capacity of the equipment.~~ (JCB52)

JCA36: 用途外使用の際の使用方法に関する書面でのマニュアルを本当にメーカーが出している事例があるのでしょうか。具体例を複数確認して提示願います。ないようであれば、この記述は修正が必要です。
Is there really any example that manufacturer of equipment issues written manual which contains usage for the purpose other than that of intended?
Please, present at least examples for such usage. If there is no such example, the description has to be changed.
NK: 下記サイトに用途外使用に関する情報がありましたが、あくまで安衛法の基づいた注意書に過ぎません。
There is one site in Japan that explains use of equipment for purpose other than one for which it is designed, however it is only points to care based on the Occupational Safety and Health Regulations of Japan.
the clause is change to comply with the Law.
https://www.taiyokenki.co.jp/rental/tidbits/post_13.html
In USA, there is the following information how to use lifting by excavator following the manufacturer's Excavator Lift Capacity Chart :
https://www.forconstructionpros.com/equipment/earthmoving/backhoe-loaders/article/11416879/interpret-the-surprises-in-your-backhoes-lift-chart-to-place-big-loads-safely
http://zoskin.praysafeconsulting.com/excavator-lift-capacity-chart/tips-for-using-earthmoving-equipment-for-lifting-equipment.html
Additional stipulation is added regarding the regulation and confirmation by the HSO.

JCB52: 製造者が目的外使用の書面でのインストラクションを出していることが想定できないので、いらないのではないでしょうか？
It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary?
NK: Agreed to delete.

Using bucket excavators for example for hoisting lighter loads (e.g. steel pipes and drainage components) is a common and convenient practice. It is recognised as such by manufacturers and their equipment is designed for this.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(19) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

~~When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:~~

(20) ~~Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;~~

(21) Arms, bucket, Rigging Equipment have enough strength to lift the load.

(22) Arms, bucket, Rigging Equipment have enough strength to lift the load.

(23) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction e~~quipment.

(24) The lifting capacity for alternative use is confirmed by loading tests at the Site.

(25) ~~Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work. (JCB54)~~

JCB54: 揚貨作業をする時に揚貨の資格が必要であることは、揚貨の章に記述があるはず。不要。
The necessity of license is specified in the Chapter for lifting, so not necessary mention (5).
NK: Deleted.

~~Under these circumstances the Contractor shall take account of the following:~~ (JCB55)

JCB55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要.
It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging.
NK: Deleted.

I think that this should remain, it is a secondary usage for example of an excavating machine for lifting light loads. It is not likely that the operator will be trained as a rigger and the following clauses are recommended to be included.

(11) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~

(12) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~

(13) ~~Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.~~

(14) ~~Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.~~

(15) ~~Ensure that manufacturer's genuine specialised accessories such as~~

~~lifting hooks etc. are provided and used.~~ .(JCA37)

JCA37: 本節は用途外使用を規定しています。用途外使用をするための genuine accessories というのが存在するのでしょうか。
Is there any “genuine accessory” for purpose other than one for which it is designed?

NK: バケットに取り付けるフックなどは、重機のメーカーではなく、部品メーカーが多種の製品を製造しています。純正となると、バケットに収納できる特殊フックしかないようです。本項目は削除します。
Accessories such as hooks for lifting are produced by suppliers not by the equipment manufacturer. A hook as a genuine accessory was found only in a special type bucket which can store the hook when it is not in use. This clause is deleted.

Lifting hook are common however excavators can hoist light loads e.g. drainage pipes, using the bucket and slings without hooks and are designed for this. I suggest that these clauses should remain as they are likely to apply.

(16) ~~Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.~~

(17) ~~Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.~~

(18) ~~Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.~~

(19) ~~Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

(20) ~~If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.3 Requirements Generally

(5) Contractor’s Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor’s own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35

[*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(6) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before ~~the Contractor's Equipment~~ .(JCA38) the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

JCA38: この表現でいい？ 例えば Rental or Lease equipment の方が素直に読めますがいかがでしょうか。そのうえで 4.6 内での表現を統一してください。

Is this a proper expression? It would be better to use, for example, "rental and lease equipment". And please unify the expression in 4.6.

NK: (2)及び(3)で使用されている" the Contractor's Equipment"は単に"equipment"で明確に意味が通じるので、"equipment"に変更します。

The term "the Contractor's Equipment" used in (2) & (3) can be replaced simply with "equipment", by which the meaning of this clause become clearer.

There is nothing wrong with the original wording, it is "Contractor's Equipment" as defined in the Contract whether rented, leased or owned.

"equipment" in this usage, should only follow in a sentence which already contains the term "Contractor's Equipment" and is therefore connected in meaning.

The changed wording introduces unnecessary duplication "equipment" and "equipment".

(d) Inspection and maintenance records;

(e) Operation, repair and maintenance manuals; and

(f) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(7) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this ~~Contractor's Equipment~~ equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

The suggested change is correct nor necessary

(8) Operators from hire/lease companies are by definition Contractor's

Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

The suggested change is not correct nor necessary

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.3 Requirements Generally

(7) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JCB56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JCB57)

JCB56: "shall"じゃなく"may"ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify "shall" but "may" because fuelling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

The comment is understood but generally it will not apply on JICA projects and is not a recommended basis for a safety specification.

In the majority of cases, mobile Contractor's Equipment will not be registered or insured for use on public roads and fuel for such equipment (together with fuel for static equipment and all other site equipment) will usually need to be brought safely to the Site and safely stored and dispensed for Site use.

Also, with normal high consumption requirements (and even for tax and duty reasons), fuel is usually delivered to the Site and stored separately.

It is dangerous to obtain and transport and dispense manually in frequent and small quantities.

It is not necessary to state that the Contractor must obtain "necessary permission required by the Law of the Country"; the Contractor must in any event comply with the Law under GC 1.4 and such permission, etc., would be an automatic requirement.

Fuel storage at Site will usually be required on most JICA projects and proper safety control is essential.

I have already included a clause in the latest issue of the User Guide to cover this and suggest therefore that no change is necessary to the original text.

JCB57: 法令上の許可が必要な場合は取得することを追記が必要と思量。
It is necessary to specify for the Contractor to get permission in accordance with the Law of the Country when necessary.
NK: Added.

Not necessary see note above.

(8) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(9) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(10) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(11) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures.(JCA39, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

JCA39: 単純に英語の意味がわからない
bund: A secondary enclosure, typically consisting of a wall or berm, which surrounds a tank or fluid-handling mechanism, intended to contain any spills or leaks.
ex.) Plant room floors are generally bunded and/or waterproofed to contain any leaks or spillages of liquids and fluids from faulty tanks, plant or pipe work.

NK: 貯蔵タンクの燃料流出防止のために、2 重タンク又は流出防止壁の設置を規定していると解釈します。MD 氏に表現の再検討及び出典の提示を依頼し

	ます。 We will transfer the above comment and request to make it easy to understand and show the source of these requirements. *Note to NK, what does your comment mean? Are you adding a description?* *A "bunded" tank is either a jacketed tank or a tank in an enclosure with bunds or walls and meaning is clear. I think no change is necessary.* (12)The Contractor is reminded of the requirements of JSSS 2.8 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas. *NK in the previous draft I had requested your assistance to fins a reference standard for fuel storage tanks, please advise if you have found one.* *Previous note:* *NK please can you provide a reference standard for storage tanks.* *Please also advise of regulations that should apply and any further technical requirements.* *We will edit and develop.*

(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)	**4. CONTRACTOR'S EQUIPMENT** **4.1 GENERAL REQUIREMENTS** (JCB1) JC1: 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。 (Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など)) Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.	**4. CONTRACTOR'S EQUIPMENT** **4.1 GENERAL REQUIREMENTS**

NK: We will review and modify provisions as commented.

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JCB2) that are on the Site, adjacent to the Site (JCB3) and other places (if any) where works are being executed and who may be affected by such work. (JCB4): The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.

JCB2: この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")
There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").
NK: Modified as commented.

JCB3: "who are on or adjacent to the Site and any other places where…でいいのでは can this be "who are on or adjacent to the Site and any other places where…"?
NK: Modified as commented.

JCB4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。
The sentences connection is not good and this is not requirement for persons to be affected.
NK: Modified as commented.

(3) For additional requirements for hoisting, rigging and cranes, refer to ISSS 6.0 [*Hoisting and Rigging*].(JCA1)

JCA1: 必ず 6 章(5 章に変更)に含めるようにしてください。
Be sure to include it in section 6 (now section 5).
NK: 第 5 章に揚重、玉掛について十分規定済み。
Section 5 stipulates regarding hoisting and rigging in detail.

~~*Not sure that the following is necessary, coordinate later*~~

(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: We will review and modify provisions as commented.

The specification is for general application and designed to apply to all types of project, and all types of equipment including various tools such as hand tools and hand operated tools including pneumatic drills etc., so the coverage needs to be as broad as possible to capture all types and give general rules. There is no need to be specific when something does not apply to any particular type, I suggest that the important aim is to make sure that all types and requirements are covered.

Contractor's Equipment is an all-embracing term, defined as such in the Contract.

NK: Understood.

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, ~~tools, tackle and~~ small equipment, tools and electric power equipment as further described in the following paragraphs.

I suggest for clarity it is better to delete "tackle" as it is not such a common international term, it may have different meaning and there is little difference to tools. Also so that it is consistent with 4.3.10

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JCB2) that are on the Site, adjacent to the Site (JCB3) and other places (if any) where works are being executed and who may be affected by such work. (JCB4):

(3) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.

JCB2: この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")
There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").
NK: Modified as commented.

JCB3: "who are on or adjacent to the Site and any other places where…でいいのでは can this be "who are on or adjacent to the Site and any other places where…"?
NK: Modified as commented.

JCB4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。
The sentences connection is not good and this is not requirement for persons to be affected.
NK: Modified as commented.

The suggested new definition has been used in only one other location (4.1.4 (8)) and I suggest that such a definition applicable to one item in this chapter only, is therefore not really necessary.

The reference to "other persons" in this sense is however used in one other instance in 4.3.4 in a slightly different way.

I understand the point but suggest it is better to slightly modify the text of your above suggested clause as follows, and modify or delete the two later references, which I have now done

(2) The Contractor shall ensure the safety of all Contractor's

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, small equipment, tools and electric power equipment as further described in the following paragraphs.

(4) ~~For additional requirements for transportation, refer to JSSS 5.0 [Transportation].~~

(5) ~~Operators and signallers~~ (JCA2) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JCB5)

JCA2: "Spotters"に修正してください。 Please change to "Spotters"
NK: Spotters は次項目の対応の通り削除しました。
"Spotters" is deleted as explained in the next clause.

(a) ~~Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also;~~(JCA3)

JCA3: この operator は小文字にされていますが、全体を通してこの使い方とするか否かについては章ごとの整合性の観点から検討してください。
This "operator" is used lower case. It should be considered whether it is proper to use lower case as a whole of JSSS.
NK: "operator"という用語は JSSS では定義していません。第 9 章等他章でも小文字で表現しております。このままとします。
The term "operator" in not defined in JSSS. In other Chapters such as Chapter 9 [Concrete Works], the word "operator" is used in lower case. Left as it is.

(b) ~~Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.~~ (JCA4)

JCA4: この Spotter については総則で定義されていますが、signaller を含めるという意図で敢えてこの記述としているのでしょうか。
This "Spotter" is defined in the Chapter1, [General], but is it meant to include signaller?
NK: 総則の定義で"Spotter"は、下記のように定義しています。ここで繰り返す必要はないと考えます。(b)は削除し、(4)の構成を右のように修正します。
(24) "Spotter" means a member of the Contractor's Personnel who is generally responsible for warning other Contractor's and Employer's Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor's Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like].
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.

Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.

See also change in 4.1.4 (8) and deletion of 4.3.4

(4) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].

JCA1: 必ず 6 章(5 章に変更)に含めるようにしてください。
Be sure to include it in section 6 (now section 5).
NK: 第 5 章に揚重、玉掛について十分規定済み。
Section 5 stipulates regarding hoisting and rigging in detail.

(5) ~~Operators and signallers~~ (JCA2) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JCB5)

JCA2: "Spotters"に修正してください。 Please change to "Spotters"
NK: Spotters は次項目の対応の通り削除しました。
"Spotters" is deleted as explained in the next clause.

(a) ~~Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also;~~(JCA3)

JCA3: この operator は小文字にされていますが、全体を通してこの使い方とするか否かについては章ごとの整合性の観点から検討してください。
This "operator" is used lower case. It should be considered whether it is proper to use lower case as a whole of JSSS.
NK: "operator"という用語は JSSS では定義していません。第 9 章等他章でも小文字で表現しております。このままとします。
The term "operator" in not defined in JSSS. In other Chapters such as Chapter 9 [Concrete Works], the word "operator" is used in lower case. Left as it is.

No change is necessary

(b) ~~Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.~~ (JCA4)

JCA4: この Spotter については総則で定義されていますが、signaller を含めるという意図で敢えてこの記述としているのでしょうか。
This "Spotter" is defined in the Chapter1, [General], but is it meant to include signaller?
NK: 総則の定義で"Spotter"は、下記のように定義しています。ここで繰り返す必要はないと考えます。(b)は削除し、(4)の構成を右のように修正します。
(24) "Spotter" means a member of the Contractor's Personnel who is generally responsible for warning other Contractor's and Employer's Personnel and other persons and keeping them away from working operations and areas, for assisting drivers of trucks and operators of other Contractor's Equipment in positioning their vehicles and equipment particularly when reversing, positioning or hoisting, and such further duties as are assigned to them in JSSS Section 2.4 [Spotters Flagmen and the Like].
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
Any reference to a "Spotter" in JSSS shall also be deemed to include a reference to a banksman, flagman or signaller.
As "Spotter" is defied in Chapter 1 as above, it is unnecessary to repeat here.
Therefore, (b) is deleted and clause (4) is modified as right.

(2) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.

(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].

(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.

As “Spotter” is defied in Chapter 1 as above, it is unnecessary to repeat here.
Therefore, (b) is deleted and clause (4) is modified as right.

JCB5: 少しシンプルに。 is synonymous with “driver”の方が MDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。
Please make phrases simple a little. The phrase of “is synonymous with “driver”” is one used in FIDIC MDB version and normal.
When all JSSS Chapters are submitted, please adjust all document to use this phrase.

NK: FIDIC MDB uses this as follows:
1.2 Interpretation (e)the word “tender” is synonymous with “bid”, and “tenderer” with “bidder” and the words “tender documents” with “bidding documents
日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。
(4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。
別の Spotter でも次のように同様に規定しています。
(b) Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.
上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。
The operators include pilots, etc. The drivers include engine driver, motorman, etc.
The (3) states “operator” includes “driver” but not that “operator” is synonymous with “driver”.
The same expression is made for the Spotter as below.
(b) Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.
With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary.

To MD: Please review NK reply above.

(6) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

The clause can now be deleted

NK: confirmed.

JCB5: 少しシンプルに。 is synonymous with “driver”の方が MDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。
Please make phrases simple a little. The phrase of “is synonymous with “driver”” is one used in FIDIC MDB version and normal.
When all JSSS Chapters are submitted, please adjust all document to use this phrase.

NK: FIDIC MDB uses this as follows:
1.2 Interpretation (e)the word “tender” is synonymous with “bid”, and “tenderer” with “bidder” and the words “tender documents” with “bidding documents
日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。
(4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。
別の Spotter でも次のように同様に規定しています。
(b) Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.
上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。
The operators include pilots, etc. The drivers include engine driver, motorman, etc.
The (3) states “operator” includes “driver” but not that “operator” is synonymous with “driver”.
The same expression is made for the Spotter as below.
(b) Any reference to “Spotter” in this Chapter shall be deemed to include “flagman” and “signaller” also.
With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary.

To MD: Please review NK reply above.

I think that there is no need to change this wording; it is now consistently used throughout the various chapters of JSSS. It is simple and more understandable than “synonymous” and will not require dictionary reference by many readers as may not be the case with FIDIC.

The need for definition is a partial consequence of your original draft which uses diverse expressions.

NK: agreed.

(6) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines; (JCB6)

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring machines; (JCB6)

JCB6: equipment に修正. Revise to equipment.
NK: JICA has commented same in Chap. 6 TW that “replace machine with equipment?”
BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Following the BS, Boring machine is left as it is.
To MD, please review my answer above.

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers; (JCB7) asphalt finisher;

JCB7: Asphalt finisher も入れてほしい。Please add Asphalt finisher.
NK: Added.

(g) Mobile cranes ~~and other hoisting equipment~~ (JCB8);

JCB8: Mobile ではない。This is not mobile equipment.
NK: Mobile means able to be moved from one place to another. It seems there are other hoisting equipment than mobile cranes, however NK cannot show examples so far. Deleted it..

(h) Concreting equipment such as concrete mixer trucks, agitator trucks, pump trucks;

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor’s Personnel and trucks and trailers for transporting Contractor’s Equipment (JCA6) and materials to, around and from the Site.

(k) Workboat for diving works

JCB6: equipment に修正. Revise to equipment.
NK: JICA has commented same in Chap. 6 TW that “replace machine with equipment?”
BS 8081 Code of practice for grouted anchors use the terms as follows:
Machine: drilling machine, Equipment: mixers, pumps.
Following the BS, Boring machine is left as it is.
To MD, please review my answer above.

It doesn’t really matter as both meanings are clear and understandable, however I understood that the rule was generally to use BS 8081.

NK: agreed to use equipment as JICA requested.

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers; (JCB7) asphalt finisher;

JCB7: Asphalt finisher も入れてほしい。Please add Asphalt finisher.
NK: Added.

No comment

(g) Mobile cranes ~~and other hoisting equipment~~ (JCB8);

JCB8: Mobile ではない。This is not mobile equipment.
NK: Mobile means able to be moved from one place to another. It seems there are other hoisting equipment than mobile cranes, however NK cannot show examples so far. Deleted it..

Mobile gantries, mobile “A” frame cranes, piling equipment; otherwise no comment

(h) Concreting equipment such as ~~concrete mixer trucks~~ ready-mixed concrete trucks, ~~agitator trucks,~~ pump trucks;

In Chapter 8, the comment required concrete mixer trucks and agitator trucks to be replaced by “ready-mixed concrete truck”. This therefore requires change here.

NK: Agreed.

(i) Demolition equipment such as breakers, concrete crushers and demolition grippers; and

(j) Transportation Equipment, such as cars and buses for Contractor’s Personnel and trucks and trailers for transporting Goods to, around and from the Site.

JCA6: 運ぶものは equipment だけではないため、”& materials“を挿入してください。
“Material” should be added because only equipment is not transported.
NK: コメントの通り追加しました。
“Material” is added as commented.

I suggest that this is changed to “Goods” which is defined in FIDIC and is more inclusive.

NK: Agreed.

(k) Workboat for diving works
NK: By the comments on Chap 10 Diving Works, (k) Workboat is added.

No need because no requirements are stated here but otherwise no comment

(l) Tunnel Boring Machine (TBM) . (JCB9)

boring equipment;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers, asphalt finishers;

(g) Mobile cranes;

(h) Piling equipment

(i) Concreting equipment such as ready-mixed concrete trucks and pump trucks;

(j) Demolition equipment such as breakers, concrete crushers and demolition grippers;

(k) Transportation Equipment, such as cars and buses for Contractor’s Personnel and trucks and trailers for transporting Goods to, around and from the Site;

(l) Workboat for diving works; and

(l) Tunnel Boring Machine (TBM) . (JCB9)

JCA6: 運ぶものは equipment だけではないため、”& materials“を挿入してください。
“Material” should be added because only equipment is not transported.
NK: コメントの通り追加しました。
“Material” is added as commented.
NK: By the comments on Chap 10 Diving Works, (k) Workboat is added.

JCB9: JICA added. EPB: Earth pressure balance type TBM
NK: TBM is added but Slurry and EPB are not because they are too detail to be referred to.

(7) Static equipment includes powered stationary equipment such as: (JCA7)

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants.

(c) Tower cranes, derrick cranes;

(d) ~~Personnel and Goods~~ Elevators; (JC10) and

JCB10: 今更かも知れませんが。 Personnel and Goods Elevator は単純に Elevator ではダメなんでしたっけ？特段問題なければこれでよいと思います。
Are there any reasons to stipulate Personnel and Goods Elevator instead of Elevator? If no special reason, Elevator can be use.
NK: 日本の安衛則に準じて分けていました。まとめて良いと考えます。
We specified it following Japanese regulation. They can be Elevator.

(e) Material conveyors.

(f) Air compressors. .(JCB11)

JCA7: エアコンプレッサーを追加してください。
Please add air compressors.
NK: (f)にエアコンプレッサーを追加しました。
Air compressor is added as (f).

JCB11: Engine Generator も追加しましょう。Submersible pump, engine pump も加えたい。 Please add Engine Generator, Submersible pump, engine pump
NK: Added.

JCB9: JICA added. EPB: Earth pressure balance type TBM
NK: TBM is added but Slurry and EPB are not because they are too detail to be referred to.

I understood that Tunnelling was not part of the scope of JSSS and this is confirmed in the Index in Chapter one.

Please note that there are although it may be listed here, there are no particular requirements included in this chapter and it is possible that some requirements here may be incompatible with this equipment. I suggest adding this later in future issues as stated in the Overall Document Index of Chapter 1, against future Chapter 17?.

NK: understood. We added with note ‘to be added when Spec for tunnel is prepared.”

(7) Static equipment includes powered stationary equipment such as: (JCA7)

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants;

(c) Tower cranes, derrick cranes;

(d) ~~Personnel and Goods~~ Elevators; (JC10)

JCB10: 今更かも知れませんが。 Personnel and Goods Elevator は単純に Elevator ではダメなんでしたっけ？特段問題なければこれでよいと思います。
Are there any reasons to stipulate Personnel and Goods Elevator instead of Elevator? If no special reason, Elevator can be use.
NK: 日本の安衛則に準じて分けていました。まとめて良いと考えます。
We specified it following Japanese regulation. They can be Elevator.

I had specified because they are two different types usually with slightly different separate descriptions (material hoists or lifts) but I have no comment.

NK: confirmed.

(e) Material conveyors;

(f) Air compressors;(JCB11)

JCA7: エアコンプレッサーを追加してください。
Please add air compressors.
NK: (f)にエアコンプレッサーを追加しました。
Air compressor is added as (f).

No comment

NK: confirmed.

JCB11: Engine Generator も追加しましょう。Submersible pump, engine pump も加えたい。 Please add Engine Generator, Submersible pump, engine pump
NK: Added.

Where? Suggest simply as follows:

NK: confirmed.

(g) Engine Generators, submersible pumps and engine pumps; and

(h) Reinforcement, cutting and bending machines.

(m) Tunnel Boring Machine (TBM). (Note: TBM will be added in the Specification for Tunnel in future.)

(6) Static equipment includes powered stationary equipment such as:

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants;

(c) Tower cranes, derrick cranes;

(d) Elevators;

(e) Material conveyors;

(f) Air compressors;

(g) Engine Generators, submersible pumps and engine pumps; and

(8) ~~Tools, tackle(JCB46) – and small equipment such as:~~ Small equipment, tools and tackle (tools and tackle are collectively referred to "Tools" in this Chapter") such as:

JCB46: (JICA comment to 4.3.11) これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".
NK: Defied "Tools" in (7) here.

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyor

(d) ~~Reinforcement, cutting and bending machines;~~ (JCB12)

JCB12: これらは tool, tackle and small equipment としては大きすぎるのでは →(6)に移動してください。
Please move these to (6) as they are too large as tool, tackle and small equipment.
NK: Moved to (6)(g)

(e) Pipe bending machines;

(f) ~~Pneumatic~~ drills, hammers, breakers, compactors and compressors;

(g) Wood processing equipment;

(h) Independent concrete mixers;

(i) Air extract or blowing equipment for improving the working

Above is moved here from below as instructed

NK: confirmed.

~~(7) Tools, tackle(JCB46) – and small equipment such as:~~ Small equipment, tools and tackle (tools and tackle are collectively referred to "Tools" in this Chapter") such as:

JCB46: (JICA comment to 4.3.11) これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools".
NK: Defied "Tools" in (7) here.

I suggest there is no need for a separate definition, if in doubt just delete "tackle".

See notes above in 4.1.1 (1)

"Tools" perhaps are generally hand-held, please see examples of hand tools already given in (7) (m) below.

Suggest as follows:

(8) Small equipment and tools such as:

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyors;

What exactly do you mean by "portable conveyors"? Hand portable? All conveyors are to some extent "portable" meaning "mobile"; this is not really clear.

NK: Both portable and movable conveyors are used as shown website:
https://www.google.co.jp/search?q=portable+movable+beltconveyor&tbm=isch&hl=ja&chips=q:portable+movable+beltconveyor&hl=ja&ved=2ahUKEwj3s6-D44zqAhVK6JQKHVX3BPIQ3VZ6BAgBEBU&biw=1228&bih=693
This (6) is for small equipment, so portable can be used.

(d) ~~Reinforcement, cutting and bending machines;~~ (JCB12)

JCB12: これらは tool, tackle and small equipment としては大きすぎるのでは →(6)に移動してください。
Please move these to (6) as they are too large as tool, tackle and small equipment.
NK: Moved to (6)(g)

See above (6) (h).

NK: confirmed.

(e) Pipe bending machines;

(f) ~~Pneumatic~~ drills, hammers, breakers, compactors and compressors;

(g) Wood processing equipment;

(h) Independent concrete mixers;

(i) Air extract or blowing equipment for improving the working area environment;

(j) ~~Pneumatic power tools such as~~ jack hammers, drills, (JCB13)

(h) Reinforcement, cutting and bending machines.

(7) Small equipment and tools such as:

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyors;

(d) Pipe bending machines;

(e) Drills, hammers, breakers, compactors and compressors;

(f) Wood processing equipment;

(g) Independent concrete mixers;

(h) Air extract or blowing equipment for improving the working area environment;

(i) Jack hammers, drills;

area environment;

(j) ~~Pneumatic power tools such as~~ jack hammers, drills, (JCB13)

(k) ~~Engine driven~~ chain saws; (JCB13)

JCB13: 電動も含まれるようにして下記の(8)は削除しています。
Modified to include electric power equipment and deleted (8) below.
NK: Modified.

(l) Hand operated equipment such as jacks, winches, lever hoists; and

(m) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

(9) ~~Electric powered equipment means portable electric powered mobile equipment or tools such as: (JCA7a) (JCB14)~~

(a) ~~Pumps and small conveyors;~~

(b) ~~Angle grinders, drills, circular saws and planers.~~

JCA7a: 特に(8)にも電動の equipment が多数含まれているので、独立させておく必要があるでしょうか。
Is it necessary to independently define as (8) contains lots of electric power equipment?
NK: It is left as it is without (a) and (b)because it needs to specify requirements for portable electric powered mobile equipment or tools.

JCB14: JICA deleted related with JCB12.
NK: Deleted.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of ~~*the HSE Provision and Use of Work Equipment Regulations 1998 (PUWER).*~~ (JCB15) the *Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK*.

JCB15: 正式に言えば、“The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK“では？法令の内容は一般的なので harmful ではないと思える。
Is the official title “The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations are general ones, so not harmful.
NK: Modified as commented.
Please refer to potential copyright requirements.

(2) In accordance with these regulations, together with JSSS 1.34

(k) ~~Engine driven~~ chain saws; (JCB13)

JCB13: 電動も含まれるようにして下記の(8)は削除しています。
Modified to include electric power equipment and deleted (8) below.
NK: Modified.

No comment.

NK: confirmed.

(l) Hand operated equipment such as jacks, winches, lever hoists; and

(m) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

(9) ~~Electric powered equipment means portable electric powered mobile equipment or tools such as: (JCA7a) (JCB14)~~

(c) ~~Pumps and small conveyors;~~

(d) ~~Angle grinders, drills, circular saws and planers.~~

JCA7a: 特に(8)にも電動の equipment が多数含まれているので、独立させておく必要があるでしょうか。
Is it necessary to independently define as (8) contains lots of electric power equipment?
NK: It is left as it is without (a) and (b)because it needs to specify requirements for portable electric powered mobile equipment or tools.

JCB14: JICA deleted related with JCB12.
NK: Deleted.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

JCB15: 正式に言えば、“The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK“では？法令の内容は一般的なので harmful ではないと思える。
Is the official title “The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations are general ones, so not harmful.
NK: Modified as commented.
Please refer to potential copyright requirements.

See above.

NK: Clean copy is different from the above. Is it necessary to add “1998 (PUWER), HSE Guidance in UK”?

(2) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment

(j) Chain saws;

(k) Hand operated equipment such as jacks, winches, lever hoists; and

(l) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

(2) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and*

[*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual

The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.

I suggest the addition of the above clause to your draft.

NK: Agreed as the instructions and manuals are specified at some provisions in the JSSS.

4.1.4 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) ~~The~~ Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

PPE] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual.

The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.

4.1.4 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) Scope of work, locations and areas, work methods, dimensions, levels

(1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) ~~Workplaces,~~ ~~area limits and~~ (JCB16) operational routes, restricted areas, locations of caution signs and fences.

JCB16: Workplace の boundary という意味でつかわれているのであれば、workplace に含まれているので不要と考えます。
If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary.
NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted
To MD, please review this comment.

(4) ~~The~~ preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) ~~Identities, location~~ ~~(JCB17)~~ ~~and scope of Spotters.~~ Identities and roles of and location(s) for Spotters and the communication and signalling requirements including equipment to be used

JCB17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。
The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5.
4.1.5 (1)Operators shall be fully aware of the following:
(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and
NK: Modified as commented and added referring 4.1.5.

(6) ~~Environmental impact mitigation~~ (JCB18) Environmental impact to third parties and workers including required measures against vibration, noise, dust and the like.

JCB18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any) including required mitigation measures …"ですよね？
"Environmental impact effects including required mitigation measures against …"では？
It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated "Hazardous working conditions (if any) including required mitigation measures …"
Is this "Environmental impact effects including required mitigation measures against …"？
NK: This can be read for both environment impact to third parties and working environment in the Site.
Modified to make clear.
To MD, please review the comment and modify (6).

(2) Types, capacities and numbers of units.

(3) ~~Workplaces,~~ ~~area limits and~~ (JCB16) operational routes, restricted areas, locations of caution signs and fences.

JCB16: Workplace の boundary という意味でつかわれているのであれば、workplace に含まれているので不要と考えます。
If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary.
NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted
To MD, please review this comment.

Draft states "work places"

I recommend to maintain the original wording, it is clear and unambiguous.

NK: Agreed.

(4) ~~The~~ Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) ~~Identities, location~~ ~~(JCB17)~~ ~~and scope of Spotters.~~ Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

JCB17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。
The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5.
4.1.5 (1)Operators shall be fully aware of the following:
(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and
NK: Modified as commented and added referring 4.1.5.

(6) ~~Environmental impact mitigation~~ ~~(JCB18)~~ ~~Environmental impact to third parties and workers~~ ~~including required measures against vibration, noise, dust and the like.~~

JCB18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any) including required mitigation measures …"ですよね？
"Environmental impact effects including required mitigation measures against …"では？
It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated "Hazardous working conditions (if any) including required mitigation measures …"
Is this "Environmental impact effects including required mitigation measures against …"？
NK: This can be read for both environment impact to third parties and working environment in the Site.
Modified to make clear.
To MD, please review the comment and modify (6).

Modify as follows:

(6) Environmental impact including required measures for workers and any other persons against vibration, noise, dust and the like.

and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Workplaces, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

(6) Environmental impact including required measures for workers and any other persons against vibration, noise, dust and the like.

(7) ~~Safety measures for Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.~~ (JCB19) Safety measures for the environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas ~~or areas~~ where Dangerous Work is taking place.

JCB19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・“Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”???

This sentence cannot be really understood. The connection of matters listed in English are not understandable.
Is this “Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”?
NK: Modified referring to the comment.
To MD, please review the comment and modify (7).

(8) ~~The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JCB20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

Potential danger to Concerned Personnel who may be affected by the use of Contractor's Equipment and the required measures to avoid any ~~risk~~ accident or injury.

JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as “Concerned Personnel”)

third parties against vibration, noise, dust and the like.

NK: confirmed.

(7) ~~Safety measures for Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.~~ (JCB19) Safety measures for the environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas ~~or areas~~ where Dangerous Work is taking place.

JCB19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・“Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”???

This sentence cannot be really understood. The connection of matters listed in English are not understandable.
Is this “Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place.”?
NK: Modified referring to the comment.
To MD, please review the comment and modify (7).

Please read conjointly; with the heading paragraph of this clause. The Contractor shall include details of the above in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such work. This clause lists information to be provided for environmental conditions and I suggest that no change to the original wording is necessary.

NK: understood.

(8) ~~The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~

The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JCB20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

Potential danger to Concerned Personnel who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.

JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as “Concerned Personnel”)
There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as “Concerned Personnel”).
NK: Modified as commented.

Please refer to notes and suggested new clause in 4.1.1.

(7) Safety measures for the environmental conditions in the working area, any nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, operational areas or areas where Dangerous Work is taking place.

(8) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury.

There are same phrases in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as “Concerned Personnel”).
NK: Modified as commented.

(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance..

(12) ~~The~~ name of the authorised operator for each unit of Contractor’s Equipment. (JCB21) when authorised operator is necessary to be assigned.

JCB21 (=JCB1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: Modified as commented.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor’s Equipment.

4.1.4 Safety Training

The Contractor shall provide the Contractor’s personnel with health and safety training in accordance with JSSS 1.17 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor’s Equipment. (JCA8)

A new definition is not necessary but I do agree that rewording the above could be beneficial and suggest the simplest solution is as follows:

(9) Potential danger to any persons who may be affected by the use of Contractor’s Equipment and the required measures to avoid any accident or injury.

NK: Confirmed.

(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance.

No comment.

(12) ~~The~~ Name of the authorised operator for each unit of Contractor’s Equipment. (JCB21) when authorised operator is necessary to be assigned.

JCB21 (=JCB1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)
NK: Modified as commented.

No comment.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor’s Equipment.

4.1.5 Safety Training

(1) The Contractor shall provide the Contractor’s Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor’s Equipment and including:

Because of your insertion and changes below, the above clause needs to be renumbered as (1) and the added clauses numbered as (a) etc. and the wording” and included is added

NK: Confirmed.

(9) Any potential hazards in the use of Contractor’s Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor’s Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures to be taken in case of breakdown, defect or fault in Contractor’s Equipment including location of areas for inspection and maintenance.

(12) Name of the authorised operator for each unit of Contractor’s Equipment when authorised operator is necessary to be assigned.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor’s Equipment.

4.1.5 Safety Training

(1) The Contractor shall provide the Contractor’s Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor’s Equipment and including:

JCA8: 1.19 に equipment に必要なトレーニングが追加される形で総則が修正されているということでしょうか。
Does this mean that 1.19 [Safety Training Generally] has been revised to accommodate the necessary training for equipment operators?
NK: 1.19 (Issue 7)は次のように安全衛生の教育訓練の義務、各分野に関する詳細は安全計画書に示すことを一般規定して規定しています。そのため、1.19 は原案通りと致します。
The 1.19 (Issue 7) stipulates the responsibility of H&S education and training as general requirement, and details to be described in the Safety Plan. Therefore, 1.19 is left as it is.

1.19 Safety Training Generally

1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

The health and safety training shall be ~~done~~ provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment ~~with which the personnel will be engaged in works~~. (JCB22)

JCB22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation ~~and work with~~ of the Contractor's equipment when an abnormality occurs and report to the person in charge; ~~and~~

(5) Prohibition ~~from~~ of removing safety devices; and

(6) Risks during operation of the Contractor's Equipment.

Imported from Transportation.

~~Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:~~ (JCA9) (JCB23)

Particular safety training for transportation equipment operators shall for

JCA8: 1.19 に equipment に必要なトレーニングが追加される形で総則が修正されているということでしょうか。
Does this mean that 1.19 [Safety Training Generally] has been revised to accommodate the necessary training for equipment operators?
NK: 1.19 (Issue 7)は次のように安全衛生の教育訓練の義務、各分野に関する詳細は安全計画書に示すことを一般規定して規定しています。そのため、1.19 は原案通りと致します。
The 1.19 (Issue 7) stipulates the responsibility of H&S education and training as general requirement, and details to be described in the Safety Plan. Therefore, 1.19 is left as it is.

1.19 Safety Training Generally

1.19.1 The Contractor shall conduct health and safety education and training for all the Contractor's Personnel.

1.19.2 The Contractor shall describe in the Safety Plan the outline of the health and safety training plans describing participants, time, teaching materials, policy for selecting trainers, etc. In addition, the Contractor shall submit full details of all health and safety training to the Engineer for information before the start of any training.

~~The health and safety training shall be provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment. (JCB22)~~

JCB22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

I do not understand the above comment but assume that the above added clause is not necessary because of duplication, I have therefore deleted.

Where is the following transferred from?

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

~~Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:~~ (JCA9) (JCB23)

(2) Particular safety training for transportation equipment operators

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

(2) Particular safety training for transportation equipment operators shall be for the purpose of preventing of traffic accidents on and off the Site and shall include:

the purpose of prevention of traffic accidents on and off the Site, ~~also~~ include ~~prevention of traffic accidents on and off the Site for example including~~:

JCB23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.

JCB24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

(1) Driving rules ~~for prevention of traffic accidents~~ in general;

(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(3) Driving methods to ~~prevent accidents including~~ contact and collision with other persons, cycles, motorcycles and other vehicles;

(4) Driving methods to properly ~~prevent accidents in~~ overtake ~~ing~~ other vehicles and to be undertaken by others;

(5) Driving methods ~~to prevent accidents due to~~ when encountering holes, bumps or obstacles on the road;

(6) Required inspection and maintenance before starting operation;

(7) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

JCA9: ここの transportation に関するトレーニングの内容がかなり詳細なので、この内容と 1.19 の記述のバランスが取れているかを確認のうえ調整願います。
The provisions of the training for “transportation” here are quite detailed, so please make sure that this is harmonized with the description of 1.19.?
NK: 本款の(1)~(7)の項目は、特に事故が多い交通事故の防止に関する教育に注力して規定しています。
The items (1) ~ (7) in this clause is emphasized to focus on education and training for prevention of traffic accidents which is very important.
NK: 技能のある者を雇用し、請負者が機器を使用した作業に従事させるとの前提で、機械の特性に応じて行うべき教育と指導すべき事項を前半の(1)~(6)に追記致します。
The items (1)~(6) for education and training to the worker who is employed as qualified, skilled and experienced person are added at the beginning of this clause as stipulated in Japanese draft.

4.1.5 ~~Qualification of Operators~~ (JCA10) Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of*

shall for the purpose of prevention of traffic accidents on and off the Site, including:

JCB23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.

Modification is OK

JCB24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

Numbering requires correcting above and below because of your additional text.

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

JCA9: ここの transportation に関するトレーニングの内容がかなり詳細なので、この内容と 1.19 の記述のバランスが取れているかを確認のうえ調整願います。
The provisions of the training for “transportation” here are quite detailed, so please make sure that this is harmonized with the description of 1.19.?
NK: 本款の(1)~(7)の項目は、特に事故が多い交通事故の防止に関する教育に注力して規定しています。
The items (1) ~ (7) in this clause is emphasized to focus on education and training for prevention of traffic accidents which is very important.
NK: 技能のある者を雇用し、請負者が機器を使用した作業に従事させるとの前提で、機械の特性に応じて行うべき教育と指導すべき事項を前半の(1)~(6)に追記致します。
The items (1)~(6) for education and training to the worker who is employed as qualified, skilled and experienced person are added at the beginning of this clause as stipulated in Japanese draft.

4.1.6 ~~Qualification of Operators~~ Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of*

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.6 Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are

Contractor's Personnel], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

JCA10: 内容は qualification のことではないようです。workmanship ではないでしょうか。
The content is not about the qualification. Isn't it about workmanship?
NK: 資格だけの規定ではないので、提案された workmanship は、辞書では何かを作る技術とありますので、款名は Requirements to Operators ではいかがでしょうか？MD 氏へ相談します。
Because the content of this Clause is not only qualification, we propose the title of the clause to be "Requirements to Operators" as the "workmanship" proposed by JICA means the skill with which something was made or done in the dictionary.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, ~~possible risks~~ hazards and operation methods;

(b) The need to stop ~~all work~~ the operation when any defect or abnormality is detected;

~~(c) Not to remove, interfere with or override any safety devices; (JCA11) Prohibition of removing, interfering with or overriding any safety devices;~~ (JCB25)

JCA11: ここだけ動詞形 Only (c) is the verb form.
NK: 名詞とします。 Modified to noun form as right.

JCB25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and

(d) The procedures in case of emergency.

(3) ~~In addition,~~ operators shall:

~~(a) Safely and competently operate the Contractor's Equipment;~~

(a) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility ~~and control or ensure that other qualified persons perform these operations~~. (JCA12)

JCA12: operators の責任？機械責任者の仕事では？要修正。

Contractor's Personnel], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

JCA10: 内容は qualification のことではないようです。workmanship ではないでしょうか。
The content is not about the qualification. Isn't it about workmanship?
NK: 資格だけの規定ではないので、提案された workmanship は、辞書では何かを作る技術とありますので、款名は Requirements to Operators ではいかがでしょうか？MD 氏へ相談します。
Because the content of this Clause is not only qualification, we propose the title of the clause to be "Requirements to Operators" as the "workmanship" proposed by JICA means the skill with which something was made or done in the dictionary.

(1) Operators shall safely and competently operate the Contractor's Equipment.

No comment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

~~(c) Not to remove, interfere with or override any safety devices; (JCA11) Prohibition of removing, interfering with or overriding any safety devices;~~ (JCB25)

JCA11: ここだけ動詞形 Only (c) is the verb form.
NK: 名詞とします。 Modified to noun form as right.

JCB25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and

(d) The procedures in case of emergency.

(3) ~~In addition,~~ Operators shall:

~~(a) Safely and competently operate the Contractor's Equipment;~~

(a) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility ~~and control or ensure that other qualified persons perform these operations~~. (JCA12)

JCA12: operators の責任？機械責任者の仕事では？要修正。

appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and

(d) The procedures in case of emergency.

(3) Operators shall:

(a) Keep all safety devices including emergency alarm and stop devices activated; and

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility. ~~and control or ensure that other qualified persons perform these operations~~.

(c) Ensure that other qualified persons safely operate Contractor's Equipment.

Isn't this the operator's responsibility but equipment supervisor?
NK: コメントの通り、これらは管理者の責務である。削除。
As commented, it is supervisor's duty to control these aspects. Deleted.

4.1.6 Signalling

(1) Signalling between operators ~~and Spotters~~ and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(2) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (JCA13)

JCA13: 冒頭で Spotters に signallers も含まれる旨定義されているので、ここで signallers が出るのは違和感があります。以下、signallers が出てくる場合も同様です。
As the top of this section, it is defined that Spotter is deemed to include signaller, it seems strange to use "signaller" here.
NK: 4.1.1 (4) での signaller の定義は削除しました。
2.4 で次のように Signallers を含めた Spotters の責務を規定しています。そのため、本款では Signallers は、Spotters に変更します。
The definition of "Signaller" in 4.1.1 (4) is deleted.
2.4 is specified the duties of the Spotters including Signallers as below. Therefore, Signallers are replaced with Spotters in this Section.

2.4 SPOTTERS, FLAGMEN AND THE LIKE
2.4.1 Definitions
In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of Spotter or Flagman in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.
2.4.2 Duties
Duties include for example:
(1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.
(2) Giving appropriate guidance and signals during operation of Contractor's Equipment to prevent the equipment tipping, overturning or falling.
(3) Giving appropriate guidance and signals to prevent Contractor's Personnel from being struck or pinned by Contractor's Equipment.
(4) Assisting drivers of vehicles including trucks and operators of other Contractor's Equipment in positioning their vehicles particularly when manoeuvring.

(3) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used.. (JCA14)

JCA14: 何故？Video Camera?? 監視カメラのことを言いたいのであれば別の表現が適切ではないでしょうか。

Isn't this the operator's responsibility but equipment supervisor?
NK: コメントの通り、これらは管理者の責務である。削除。
As commented, it is supervisor's duty to control these aspects. Deleted.

Do not agree. The supervisor (whoever he is) may be responsible for managing servicing and maintenance but the operator is the primary person, he should not start or continue to use any equipment that he knows requires repair, service or maintenance.

NK6/19: the last paragraph "that other qualified persons perform these operations" is difficult to understand. Does it mean Operators shall control performing each other's operation?
NK propose as follows: (c)Ensure that other qualified persons safely operate Contractor's Equipment.

4.1.7 Signalling

(1) Signalling between operators ~~and Spotters~~ and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers).

(2) ~~Signallers~~ Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (JCA13)

JCA13: 冒頭で Spotters に signallers も含まれる旨定義されているので、ここで signallers が出るのは違和感があります。以下、signallers が出てくる場合も同様です。
As the top of this section, it is defined that Spotter is deemed to include signaller, it seems strange to use "signaller" here.
NK: 4.1.1 (4) での signaller の定義は削除しました。
2.4 で次のように Signallers を含めた Spotters の責務を規定しています。そのため、本款では Signallers は、Spotters に変更します。
The definition of "Signaller" in 4.1.1 (4) is deleted.
2.4 is specified the duties of the Spotters including Signallers as below. Therefore, Signallers are replaced with Spotters in this Section.

2.4 SPOTTERS, FLAGMEN AND THE LIKE
2.4.1 Definitions
In accordance with the definition provided in JSSS Annex1.1 [Definitions and Abbreviations], a reference to either of Spotter or Flagman in JSSS shall be deemed to include a reference to the other or both and therefore references in this Chapter are to Spotters, which shall be deemed to include both.
2.4.2 Duties
Duties include for example:
(1) Preventing unauthorised personnel from entering areas where Dangerous Work is being carried out.
(2) Giving appropriate guidance and signals during operation of Contractor's Equipment to prevent the equipment tipping, overturning or falling.
(3) Giving appropriate guidance and signals to prevent Contractor's Personnel from being struck or pinned by Contractor's Equipment.
(4) Assisting drivers of vehicles including trucks and operators of other Contractor's Equipment in positioning their vehicles particularly when manoeuvring.

No comment.

(3) When it is not possible for ~~Signallers~~ Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or ~~video cameras~~ videophone must be provided and used..(JCA14)

JCA14: 何故？Video Camera?? 監視カメラのことを言いたいのであれば別の表現が適切ではないでしょうか。
Why does it need to be a video camera? "Monitoring camera" would be better.
NK : ビデオカメラとビデオモニターを組み合わせテレビ（ビデオ)電話のことを

4.1.7 Signalling

(1) Signalling between operators and any associated workers shall only be carried out by designated personnel.

(2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and

Why does it need to be a video camera? “Monitoring camera” would be better.

NK : ビデオカメラとビデオモニターを組み合わせテレビ（ビデオ)電話のことを指していると考えます。OSHA の下記の記述を参考に、videotelephone への変更を提案します。

The term of video cameras means videophone system consisting of video camera and monitor. We propose to replace it with videophone.

§1926.1419 Signals—general requirements.

(e) Suitability. The signals used (hand, voice, audible, or new), and means of transmitting the signals to the operator (such as direct line of sight, video, radio, etc.), must be appropriate for the site conditions.

§1926.1420 Signals—radio, telephone or other electronic transmission of signals.

(a) The device(s) used to transmit signals must be tested on site

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JCB26) the Contractor shall:

JCB26: 文として完結していないので修正しました。The sentence is not completed, so modified.

NK: Modified as commented.

~~(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, (JCA15) safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;~~

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning,

指していると考えます。OSHA の下記の記述を参考に、videotelephone への変更を提案します。

The term of video cameras means videophone system consisting of video camera and monitor. We propose to replace it with videophone.

§1926.1419 Signals—general requirements.

(e) Suitability. The signals used (hand, voice, audible, or new), and means of transmitting the signals to the operator (such as direct line of sight, video, radio, etc.), must be appropriate for the site conditions.

§1926.1420 Signals—radio, telephone or other electronic transmission of signals.

(a) The device(s) used to transmit signals must be tested on site

It can also mean video reversing camera however no comment.

NK: confirmed.

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JCB26) the Contractor shall:

JCB26: 文として完結していないので修正しました。The sentence is not completed, so modified.

NK: Modified as commented.

No comment

~~(a) Inspect all units of Contractor's Equipment to ensure that all components are installed and functioning, all inspection and maintenance covers, (JCA15) safety guards to prevent contact with moving parts, and the like are in place, adequate and fit for purpose, securely fixed and that all such units of equipment are in the condition required by the Contract;~~

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning; and

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(3) When mobilising Contractor's Equipment to the Site and before commencement of operation, the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that

(i) all components are installed and functioning; and

(ii) adequate covers and safety guards (to prevent contact with

- all inspection and maintenance covers,
- safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and
- that all such units of equipment are in the condition required by the Contract proper condition required by the Contract; (JCB27)

JCA15: 何のことを指しているのかが分かりません。
This “all inspection and maintenance covers,” is not understandable.
NK: MD 氏に記述の見直しと変更を依頼します。
We will ask MD to review and modify this sentence referring to the items separated in (a).
To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

JCB27: “契約”が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment? Can it be “proper condition”?
NK: Modified as commented.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JCB28) have already been inspected and recorded;

JCB28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JCB29)required in compliance with JSSS; and

JCB29: 不要。Unnecessary.
NK: Deleted.

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor’s Equipment. (JCA16)

JCA16: 上記(b), (c), (d)の記録をエンジニアが求めた場合の提出義務を追記しては？
Obligation of submittal of the record in (b), (c) and (d) should be added.
NK: (c)でエンジニアによる閲覧が保証されているので、提出義務は必要ないと考えます。
As inspection of all records by the Engineer is stipulated in (c), it is deemed that stipulating submittal of inspection and maintenance records to the Engineer is not necessary.

~~In relation with the above, it should be noted that Contractor’s Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of~~

- adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

JCA15: 何のことを指しているのかが分かりません。
This “all inspection and maintenance covers,” is not understandable.
NK: MD 氏に記述の見直しと変更を依頼します。
We will ask MD to review and modify this sentence referring to the items separated in (a).
To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

“Covers” is from your draft and it is a usual and common term for inspection and maintenance covers that are usually screwed in position to allow access for inspection and maintenance. Equipment is not safe if these are missing which is frequently the case.

Otherwise no comment, edited as instructed.

NK: confirmed.

JCB27: “契約”が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment? Can it be “proper condition”?
NK: Modified as commented.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JCB28) have already been inspected and recorded;

JCB28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

No comment

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JCB29)required in compliance with JSSS; and

JCB29: 不要。Unnecessary.
NK: Deleted.

No comment.

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor’s Equipment. (JCA16)

JCA16: 上記(b), (c), (d)の記録をエンジニアが求めた場合の提出義務を追記しては？
Obligation of submittal of the record in (b), (c) and (d) should be added.
NK: (c)でエンジニアによる閲覧が保証されているので、提出義務は必要ないと考えます。
As inspection of all records by the Engineer is stipulated in (c), it is deemed that stipulating submittal of inspection and maintenance records to the Engineer is not necessary.

~~In relation with the above, it should be noted that Contractor’s Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site and other than initial assembly and set up, no repair or maintenance is expected. The Engineer may refuse to accept delivery to the Site of any Contractor’s Equipment that is not in this condition.~~ (JCA17)

moving parts) are provided and securely fixed.

(b) Ensure as a minimum that the daily and periodical check items have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor’s Equipment.

In relation with the above, it should be noted that Contractor’s

~~any Contractor's Equipment that is not in this condition.~~ (JCA17)

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

JCA17: 分かりにくい、かつ前文が満たされれば OK ということで削除します。
This part is difficult to understand and when the requirement in the first sentence is fulfilled, the second sentence is unnecessary. Deleted.
NK: Instead of deletion of the sentence, we propose to modify to make clear the Engineer's action.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA18)

JCA18: (c)以下は建設機械に関係するものが中心であって、4.1.1 の(6)以下で列挙されているすべての機械の点検項目として網羅できているでしょうか。していないのであれば、例示としての記述が適切ではないでしょうか。
または、「製造者のマニュアルに従った点検項目」といった形での記述が考えられます。
Do the inspection items in (c) to (k) which are mainly for construction equipment, cover all inspection items enumerated in 4.1.1 (6), etc. If not, it may be appropriate to describe as examples.
Or a description such as "inspection items in accordance with the manufacturer's manual" may works.
NK: 列挙した項目のみでは不足する可能性があります。製造者のマニュアルを引用する項目(l)を追加します。
There is a possibility that the lists cannot cover all items. Added the item (l) regarding the items stipulated in the manufacturer's official maintenance and repair manual.

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment;

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

JCA17: 分かりにくい、かつ前文が満たされれば OK ということで削除します。
This part is difficult to understand and when the requirement in the first sentence is fulfilled, the second sentence is unnecessary. Deleted.
NK: Instead of deletion of the sentence, we propose to modify to make clear the Engineer's action

No further comment.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (JCA18)

(k) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(k) For other items not covered here, the inspection items stipulated in the manufacturer's official maintenance and repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers (JCB30) ; and

JCB30: オペレーターが不調の原因まで identify できるのでしょうか。また修理の主語がオペレーターになっていますがこれでよいのか？4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されている。
Can operator identify causes? Is it correct that the main actor of repair is operator? The 4.1.4(4) stipulate *that Stop of the operation and work with of the Contractor's Equipment when an abnormality occurs and report to the person in charge;*
NK: Modified as commented.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like ~~all~~ as necessary to prevent ~~any risk of~~ injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating

manual.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.33 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(2) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers.

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like as necessary to prevent injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating

equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

JCA20: (3)はクレーンを強くイメージして書いていると思われるので、クレーンである旨記載願います。そのうえで必要であるならば後述の additional requirement に記載ください。もしくは 6 章。
This clause seems to be written imaging the case of cranes. Therefore, it should be described clearly as regarding crane. If necessary, stipulate it in the additional requirement later or in Chapter 6.
NK: 本項目は特にクレーンに注目しているものではなく、建設機械一般の点検時の安全について規定しているものです。クレーンについて記述している“Inspection platforms and ladders on cranes and the like shall be fitted with cages.”の文は、特に必要ないので削除します。
This clause is not highlighting to cranes, rather those requirements in (3) are general for various construction equipment except for the sentence “Inspection platforms and ladders on cranes and the like shall be fitted with cages.”
The sentence is deleted.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

~~(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and consequent injury.~~ (JCA20a)

JCA20a: コンクリート・骨材プラント特有の問題を一般化すると唐突感。equipment と関係ないと思われるため削除してください。
Particular requirements related with concrete/crushing plants are specified in general requirements for equipment. It seems strange, so please delete (5).
NK: Deleted.

parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. ~~Inspection platforms and ladders on cranes and the like shall be fitted with cages.~~ When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

JCA20: (3)はクレーンを強くイメージして書いていると思われるので、クレーンである旨記載願います。そのうえで必要であるならば後述の additional requirement に記載ください。もしくは 6 章。
This clause seems to be written imaging the case of cranes. Therefore, it should be described clearly as regarding crane. If necessary, stipulate it in the additional requirement later or in Chapter 6.
NK: 本項目は特にクレーンに注目しているものではなく、建設機械一般の点検時の安全について規定しているものです。クレーンについて記述している“Inspection platforms and ladders on cranes and the like shall be fitted with cages.”の文は、特に必要ないので削除します。
This clause is not highlighting to cranes, rather those requirements in (3) are general for various construction equipment except for the sentence “Inspection platforms and ladders on cranes and the like shall be fitted with cages.”
The sentence is deleted.

No comment.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

~~(5) Prohibit all personnel from accessing spoil heaps, stone, aggregate, sand and other material stock pile areas where there is any risk of material slippage and consequent injury.~~ (JCA20a)

JCA20a: コンクリート・骨材プラント特有の問題を一般化すると唐突感。equipment と関係ないと思われるため削除してください。
Particular requirements related with concrete/crushing plants are specified in general requirements for equipment. It seems strange, so please delete (5).
NK: Deleted.

No comment.

(5) ~~Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (JCA21) and such other facilities that are necessary to ensure safety where such equipment is necessary and ensure that all operators and~~

parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (JCA21) and such other facilities ~~that are necessary to ensure safety~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

JCA21: 本当？→全部には備え付けないものと考えますので、必要なものに備え付けるという旨に記述を修正願います。
Really? Fire extinguishing equipment would not be provided all Equipment.
Please modify the stipulation to provide it when necessary.
NK: We will modify it referring to the following clause of OSHA:
1926.601 Motor vehicles.
(14) All vehicles in use shall be checked … These requirements also apply to equipment such as …, fire extinguishers, etc., where such equipment is necessary.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures. (JCB31)

JCB31: 機械の safety requirement ではない。It is not the safety requirements for the Equipment.
NK: 機械を使っての作業場所に救急用具を設置することは、機械の安全措置ではないですが、作業員の安全措置ですので、このまま残します。
This clause is not safety requirement for Equipment but for workers in the working area with Equipment. Therefore, this is left as it is.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO (JCB32) or a person in charge who shall be contacted in the event of breakdown or fault.

JC32: 4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されているので、併記しておきます。
4.1.4(4) stipulate operator shall stop operation and inform person in charge of event of breakdown or fault, so added the person in charge.
NK: Modified.

~~other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.~~

JCA21: 本当？→全部には備え付けないものと考えますので、必要なものに備え付けるという旨に記述を修正願います。
Really? Fire extinguishing equipment would not be provided all Equipment.

NK: We will modify it referring to the following clause of OSHA:
1926.601 Motor vehicles.
(14) All vehicles in use shall be checked … These requirements also apply to equipment such as …, fire extinguishers, etc., where such equipment is necessary.
The original text was fine.
Your added text is edited as follows:

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment ~~and such other facilities~~ where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and in fire safety procedures.–

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures. (JCB31)

JCB31: 機械の safety requirement ではない。It is not the safety requirements for the Equipment.
NK: 機械を使っての作業場所に救急用具を設置することは、機械の安全措置ではないですが、作業員の安全措置ですので、このまま残します。
This clause is not safety requirement for Equipment but for workers in the working area with Equipment. Therefore, this is left as it is.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO (JCB32) or a person in charge who shall be contacted in the event of breakdown or fault.

JC32: 4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されているので、併記しておきます。
4.1.4(4) stipulate operator shall stop operation and inform person in charge of event of breakdown or fault, so added the person in charge.
NK: Modified.

No comment.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access ~~. and prevent them from disabling any features and tampering with or removing any~~

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (where such equipment is necessary) and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and in fire safety procedures.–

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO or a person in charge who shall be contacted in the event of breakdown or fault.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access ~~, and prevent them from disabling any features and tampering with or removing any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.~~ (JCB33).

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

JCB33: 無関係な人間にアクセスを禁じるのは防護装置に悪さをさせないためだけではないし、関係者が防護装置に悪さをするかもしれない。従って、無関係者のアクセス禁止と防護装置の維持の話に分ける。
The prohibition of other persons from accessing to equipment is for avoiding them doing bad to protective device. On the other hand, there is possibility that workers related with the work do bad to the protective device. Therefore, the (8) is divided to two for(8) prohibition of other persons to access to equipment and (9) keeping the protective device function.
NK: Modified as commented.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, ~~personnel and goods~~ (JCB34) elevators and or (JCB35) the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's printed instructions.

JCB34: 削除。単に elevators でいいのでは。
Deleted. It can be "elevators".
NK: Modified.

JCB35: Is it "or".
NK: We think "and" can be left.
To MD, please advise to use "or" or "and".

~~inspection and maintenance covers, safety guards to prevent contact with moving parts and the like.~~ (JCB33).

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

JCB33: 無関係な人間にアクセスを禁じるのは防護装置に悪さをさせないためだけではないし、関係者が防護装置に悪さをするかもしれない。従って、無関係者のアクセス禁止と防護装置の維持の話に分ける。
The prohibition of other persons from accessing to equipment is for avoiding them doing bad to protective device. NK: Modified as commented.

No comment

~~(11) Ensure that installation, assembly, testing commissioning, operation and dismantling of all major equipment including static equipment, personnel and goods (JCB34) elevators and or (JCB35) the like, is carried out under the direction of an Operation Leader appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and strictly in accordance with the manufacturer's printed instructions.~~

JCB34: 削除。単に elevators でいいのでは。
Deleted. It can be "elevators".
NK: Modified.

JCB35: Is it "or".
NK: We think "and" can be left.
To MD, please advise to use "or" or "and".

I suggest editing in total as follows:

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all Contractor's Equipment is carried out under the direction of an Operation Leader, appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and in accordance with the manufacturer's operation, maintenance and repair manual.

NK: confirmed.

Following is imported from Foundation Piling:

~~**4.3.2 Transportation to and Removal from Site**~~**(JCA22)**

~~(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route,~~

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all Contractor's Equipment is carried out under the direction of an Operation Leader, appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and in accordance with the manufacturer's operation, maintenance and repair manual.

Following is imported from Foundation Piling:

4.3.2 ~~Transportation to and Removal from Site~~(JCA22)

(1) ~~When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

(2) ~~When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

Imported from Transportation:

JCA22: 4.3.4 の operation のところに入れてください。
Please move these (1) and (2) to 4.3.4 [Safety Measures During Operation].
NK: 4.3.7 (1) & (2)に移動しました。章番号を繰り上げます。
Moved to 4.3.7 (1) & (2) and Clause Nos are changed.

4.3.3 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas ~~at risk.~~

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

Imported from Transportation:

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

~~obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.~~

(2) ~~When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.~~

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall prohibit any inspection or maintenance personnel or other workers from entering the areas.

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.4 Safety Measures During Operation

(1) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

(2) Unless otherwise specifically permitted by the HSO, (JCA23) all work involving the use of Contractor's Equipment shall be designated as Dangerous Work (JCA24) and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JCA23: エンジニアではなく？
Shouldn't this be the Engineer?

NK: JC24 のコメントとおり、Contractor's Equipment の範囲が広いのためと現場の条件によっては、立入禁止措置がとれない場合もあります。その場合の判断は HSO が責任をもって行うものと考えます。
Because Contractor's Equipment are various types from heavy equipment to tools and small equipment, and depending on the site conditions, it may not be possible to take entry prevention measures. In such a case, the HSO is the one who has to make judgment and decision. Left as is.

JCA24: Contractor's Equipment の範囲が広いので、すべてを Dangerous Work とするのは間違いではないでしょうか。したがって、「Contractor's Equipment を用いる場合で unless it is not practicable な場合にはフェンスを設置する」という趣旨の文を記載願います。
It is not appropriate to designated all works as "Dangerous Work" because Contractor's Equipment includes various types. Please, stipulate such that When using Contractor's Equipment, unless it is not practicable, shall enclose the working area.

NK: Contractor's Equipment を用いる仕事は危険な作業とする原則を規定し、ただし、HSO が許可した場合は、危険な作業から除外できると、原案は規定しています。現場に判断を任せず、原則を規定することが事故の防止上必要と考えますので、原案通りとします。
This clause specify that the principle is the work using Contractor's Equipment shall be Dangerous Work, and the work which the HSO permits as not Dangerous Work.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) ~~The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.~~

The above is similar to and partial duplication of 4.1.1 and can be deleted if 4.1.1 is reworded slightly, which I have done.

(2) Unless otherwise specifically permitted by the HSO, (JCA23) all work involving the use of Contractor's Equipment shall be designated as Dangerous Work (JCA24) and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

JCA23: エンジニアではなく？
Shouldn't this be the Engineer?

NK: JC24 のコメントとおり、Contractor's Equipment の範囲が広いのためと現場の条件によっては、立入禁止措置がとれない場合もあります。その場合の判断は HSO が責任をもって行うものと考えます。
Because Contractor's Equipment are various types from heavy equipment to tools and small equipment, and depending on the site conditions, it may not be possible to take entry prevention measures. In such a case, the HSO is the one who has to make judgment and decision. Left as is.

JCA24: Contractor's Equipment の範囲が広いので、すべてを Dangerous Work とするのは間違いではないでしょうか。したがって、「Contractor's Equipment を用いる場合で unless it is not practicable な場合にはフェンスを設置する」という趣旨の文を記載願います。
It is not appropriate to designated all works as "Dangerous Work" because Contractor's Equipment includes various types. Please, stipulate such that When using Contractor's Equipment, unless it is not practicable, shall enclose the working area.

NK: Contractor's Equipment を用いる仕事は危険な作業とする原則を規定し、ただし、HSO が許可した場合は、危険な作業から除外できると、原案は規定しています。現場に判断を任せず、原則を規定することが事故の防止上必要と考えますので、原案通りを提案します。
This clause specify that the principle is the work using Contractor's Equipment shall be Dangerous Work, and the work which the HSO permits as not Dangerous Work.
This does not leave the judgement to the Contractor. The principle stipulation is important to prevent accident with Contractor's Equipment.
Therefore, NK propose (2) is left as it is.

No further comment.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) The Contractor shall also ensure that:

This does not leave the judgement to the Contractor. The principle stipulation is important to prevent accident with Contractor's Equipment.
Therefore, (2) is left as it is.

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

Imported from Transportation (above also):

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, ~~areas~~ where the operator's view is not clear and an intersection with public roads.

To MD, please review the above deletion of areas is correct.

(e) Where there is any risk of turnover, slippage, collapse or fall, ~~All~~ Contractor's Equipment ~~is~~ shall be equipped with seatbelts or safety harnesses (JCA25) and that such seatbelts and harnesses are used;

JCA25: 建設機械だけを意味してはいないので、それは違うのでは？mobile equipment として記述するか、主語はこのままにして適切に範囲を絞るような表現をするか((f)のような書き方)、いずれかで適切に書き換えをお願いします。
This is not correct because Contractor's Equipment includes various equipment including construction equipment. Please modify the stipulation by using "mobile equipment" or applying a phrase such as "where there is any risk, etc."
NK: 追記しました。Added as commented.

(3) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment shall be allowed to operate beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) ~~Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, being at dangerous areas, areas where the operator's view is not clear and at intersections with public roads.~~

To MD, please review the above deletion of areas is correct.

I suggest editing as follows:

(d) Spotters shall always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, in dangerous areas or when the operator's view is not clear and at intersections with public roads;

(e) Where there is any risk of turnover, slippage, collapse or fall, ~~All~~ Contractor's Equipment ~~is~~ shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

JCA25: 建設機械だけを意味してはいないので、それは違うのでは？mobile equipment として記述するか、主語はこのままにして適切に範囲を絞るような表現をするか((f)のような書き方)、いずれかで適切に書き換えをお願いします。
This is not correct because Contractor's Equipment includes various equipment including construction equipment. Please modify the stipulation by using "mobile equipment" or applying a phrase such as "where there is any risk, etc."
NK: 追記しました。Added as commented.

No comment.

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment is operating beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters are always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, in dangerous areas or when the operator's view is not clear and at intersections with public roads;

(e) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with a "Roll-Over Protective Structure" (ROPS);

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing; (JCA25a)

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of ~~other~~ Contractor's Equipment; and (JCA25a)

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

JCA25a: (comment is not shown.)
NK: A phrase is added to clarify the kind of operators.

Imported from Transportation:

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.2 ~~Safety Measures When Equipment Is Not In Use~~ (JCA26) Safety Measures When ~~Equipment~~ Mobile Equipment Is Not in Use

JCA26: Contractor's Equipment とするか mobile とするか
Please consider to change it to "Contractor's Equipment" or "mobile"?
NK: 内容が移動機械のものであるため"Mobile Equipment"に修正しました。下の(1)も同様。
As the provisions are regarding to mobile equipment, modified to "Mobile Equipment". (1) below also is modified.

(1) When ~~Contractor's Equipment~~ mobile equipment (JCA26a) is not in use, the Contractor shall ensure that operators:

JCA26a: この辺りも建設機械に特化した記述かと
This is also stipulation particularly for construction equipment.
NK: Modified to mobile equipment.

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of Contractor's Equipment;

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

JCA25a: (comment is not shown.)
NK: A phrase is added to clarify the kind of operators.

No comment.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 ~~Safety Measures When Equipment Is Not In Use~~ Safety Measures When ~~Equipment~~ Mobile Equipment Is Not in Use

JCA26: Contractor's Equipment とするか mobile とするか
Please consider to change it to "Contractor's Equipment" or "mobile"?
NK: 内容が移動機械のものであるため"Mobile Equipment"に修正しました。下の(1)も同様。
As the provisions are regarding to mobile equipment, modified to "Mobile Equipment". (1) below also is modified.

(1) When ~~Contractor's Equipment~~ mobile equipment is not in use, the Contractor shall ensure that operators:

JCA26a: この辺りも建設機械に特化した記述かと
This is also stipulation particularly for construction equipment.
NK: Modified to mobile equipment.

No comment

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment is equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators are aware that they shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment are aware that excavator buckets shall never pass over the operator's seat of Contractor's Equipment;

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During ~~Connection~~ Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (JCB36)

JCB36: こうした事態が発生するのを防ぐために具体的な記述を記載してください。
・安定したフレームにアタッチメントをおいて着脱する。
・エンジンを切る
その他、4.3.4 の(1)で参考になるようなことを具体的に記述してください。
Please stipulate concrete measures to avoid occurrence of accident mentioned in 81) and (2) for example,
- connecting and removing attachments which are located on stable frames,
- Put off engine
- Other concrete measures referring to 4.3.4 (1).

NK: added in (1) and (2).

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or ground, and

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment not to move as mentioned in JSSS 4.3.4 (1) (a), (b) and (d), stop engine.

4.3.6 Safety Measures During Loading and Transporting (JCA27) of Contactor's Equipment (JCB37)

JCA27: タイトル要修正。場合によっては要分割・統合。

NK: added in (1) and (2).

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground.

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.

4.3.6 Safety Measures During Loading and Transporting of Contractor's Equipment

JCA27: タイトル要修正。場合によっては要分割・統合。
・Contractor's Equipment を運ぶときの話
・Contractor's Equipment で材料等を運ぶときの話
・Contractor's Equipment でその他のことをする場合の話
が混在しています。
Contractor's Equipment で輸送・荷卸しする時ではなくて、Contractor's Equipment を輸送・荷卸しする時なので、このタイトルは Loading and Transporting of Contractor's Equipment では.でないと、ここで勘違いして？？？になる
It is necessary to modify the title or divide/merge contents, because the contents are mixed with transporting equipment, transporting materials with equipment and others.

NK: 本章の題を[Safety Measures during Loading and Transporting of Contractor's Equipment]に変更し、新たに 4.3.7 [Safety Measures during Loading and Transporting of Materials]を加え、その中に 4.3.2 (1), (2)及び本章の材料等の運搬に係わる(9), (13), (14)を移動しました。
Changed the title to [Safety Measures during Loading and Transporting of Contractor's Equipment], and added a new Clause 4.3.7 [Safety Measures during

designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground.

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.

4.3.6 Safety Measures During Loading and Transporting of Contractor's Equipment

others.

NK: 本章の題を[Safety Measures during Loading and Transporting of Contractor's Equipment]に変更し、新たに 4.3.7 [Safety Measures during Loading and Transporting of Materials]を加え、その中に 4.3.2 (1), (2)及び本章の材料等の運搬に係わる(9), (13), (14)を移動しました。
Changed the title to [Safety Measures during Loading and Transporting of Contractor's Equipment], and added a new Clause 4.3.7 [Safety Measures during Loading and Transporting of Materials], which contains measures for transporting materials from 4.3.2 (1) & (2) and 4.3.7 (9), (13) and 14.

JCB37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。
4.3.6 stipulates loadinga nd transporting. It is starange such as (3) if it is in transporting time.

NK: Review and revise if any strange.

Some added measure imported from Transportation

(1) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

To MD, may we know this track is truck. It seems JICA misunderstood and revised to trailer/track. If misunderstood the original shall be used.

(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailer/track ~~wheels~~ to prevent any movement during loading of Contactor's Equipment.

NK: Added "during loading of Contactor's Equipment".

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

Loading and Transporting of Materials], which contains measures for transporting materials from 4.3.2 (1) & (2) and 4.3.7 (9), (13) and 14.

JCB37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。
4.3.6 stipulates loadinga nd transporting. It is starange such as (3) if it is in transporting time.

NK: Review and revise if any strange.

(1) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

To MD, may we know this track is truck. It seems JICA misunderstood and revised to trailer/track. If misunderstood the original shall be used.

This is from your original transportation draft which stated – "Use vehicles with climbing equipment or special equipment when construction heavy equipment is transported by trailers or tracks".

It is correct as it was i.e. not "trucks" it is "tracks" and so is "ramps". This clause refers to selecting trailers and for getting equipment onto the trailers although "ramps" is more understandable than tracks.

I suggest minor editing as follows:

(1) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailer/~~track~~ ~~wheels~~ to prevent any movement ~~during loading of Contractor's Equipment.~~

NK: Added "during loading of Contactor's Equipment".

OK but no need to add as the clause heading describes this already

No need "track"

(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.

No need "track"

(5) Ensure trailers/track are equipped with tie down devices to allow secure fixing of load.

No need "track"

(6) Ensure that the weight and height of the loaded Contractor's

(1) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailers to prevent any movement.

(4) Stop and isolate the functions of trailers and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's

(5) Ensure trailers/track are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits.

(7) ~~Ensure that all lights, brakes, steering and safety devices are working properly.~~ - (JCB38)

JCB38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？
Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported?
NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order.
This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting

(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity (JCA28) load limit, height, speed limit and any other required signage is applied to the trailer/track.

JCA28: suitable で良いか確認ください。「定められた」といった概念の言葉が入るべきではないでしょうか。
Please check if it is proper to use "suitable" here. It should mean the concept of such as "legally determined."
NK: トレーラの積載荷重の表示のため"authorized maximum loading capacity" に変更します。
Modified to "authorized maximum loading capacity".

(9) ~~Ensure that materials are loaded evenly.~~ (JCA28a)

Equipment does do not exceed actually required or legal limits.

(7) ~~Ensure that all lights, brakes, steering and safety devices are working properly.~~ - (JCB38)

JCB38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？
Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported?
NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order.
This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting

Yes, I think it is necessary as trailers are very often old, not road-worthy, unsafe and commonly without operating electrics or lights or even brakes. I also suggest that it should stay here as it should be checked anyway when the Contractor's Equipment has been loaded.

Local law seems often to cover tractors but not detachable trailers

~~(8) Ensure that suitable load limit authorized maximum loading capacity (JCA28) load limit, height, speed limit and any other required signage is applied to the trailer/track.~~

JCA28: suitable で良いか確認ください。「定められた」といった概念の言葉が入るべきではないでしょうか。
Please check if it is proper to use "suitable" here. It should mean the concept of such as "legally determined."
NK: トレーラの積載荷重の表示のため"authorized maximum loading capacity" に変更します。
Modified to "authorized maximum loading capacity".

I suggest edit as follows:

(8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

NK: confirmed.

(9) ~~Ensure that materials are loaded evenly.~~ (JCA28a)

No problem to transfer above but suggest that the following modified clause is included here also:

(9) Ensure that trailers are loaded evenly.

NK: confirmed.

(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any

Equipment does do not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

(9) Ensure that trailers are loaded evenly.

(10) Ensure that Contractor's Equipment loaded onto trailers is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to

(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.

(11) Place any attachments on the trailer/track. and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(13) ~~Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;~~ (JCA28a)

(14) ~~Inspect slings for securing transported materials and if any abnormality is found, replace immediately.~~ (JCA28a)

JCA28a: Contractor's Equipment で輸送することを言っているならあり、Contractor's Equipment を輸送するなら無し
(9)も(14)もそうで、安易に組み替えた感じあり。
NK: (9), (13) and (14) are deleted here and moved to 4.3.7.

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to ~~general~~ public traffic (JCB39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JCB40), permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

JCB39: general traffic?
To MD: Please review this change to public traffic.

JCB40: Prior は後に before があるから不要。
"Prior" is not necessary as there is "before".

movement during transit.

(11) Place any attachments on the trailer/~~track.~~ and securely tie down.

No need "track"

(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

No comment (but no need)

(13) ~~Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;~~ (JCA28a)

(14) ~~Inspect slings for securing transported materials and if any abnormality is found, replace immediately.~~ (JCA28a)

No problem to transfer above but suggest that the following modified clause is included here also:

(13) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.

JCA28a: Contractor's Equipment で輸送することを言っているならあり、Contractor's Equipment を輸送するなら無し
(9)も(14)もそうで、安易に組み替えた感じあり。
NK: (9), (13) and (14) are deleted here and moved to 4.3.7.

No problem.

4.3.7 Safety Measures During Loading and Transporting of Materials

(1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to ~~general~~ public traffic (JCB39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JCB40), permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.

JCB39: general traffic?
To MD: Please review this change to public traffic.

Change is not necessary and has little or no meaning.

This is transportation on "public roads" anyway (which does have meaning) and any traffic thereon is covered by "general"

JCB40: Prior は後に before があるから不要。
"Prior" is not necessary as there is "before".
NK: Deleted as comented.

prevent any movement during transit.

(11) Place any attachments on trailers and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(13) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.

4.3.7 Safety Measures During Loading and Transporting of Goods

(1) When transporting heavy or long Goods on public roads, select roads on which the transportation does not pose danger to other traffic, third parties, structures adjacent to the transportation route, obtain all necessary permission from the relevant authorities including police and road authority before commencement of transportation and comply with all requirements.

NK: Deleted as comented.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

Imported from Transportation (above also):

4.3.7 ~~Access Roads (JCA29) Roads in the Site~~ (JCB40) Temporary Transporting Roads in the Site

JCA29: 違和感あり、この上でも混乱しているので輸送車両等の Additional Requirements for か輸送時の安全措置でまとめた方が良いかと。4.3.2 も改めてみると中途半端な感じ。
There is confusion, so it is better to specify requirements in Additional Requirements for transporting equipment or Safety measures during transportation. 4.3.2 seems something imperfect.
“Access Roads”はサイトの外をイメージさせますが、記述の内容はサイト内のことであるように思います。タイトルを適切に変更したうえで(transportation in the Site など)、すなおに理解できるようにしてください。場合によっては 2 章に移動させることも検討してください(risk control in the site という見出しを新たに作ってそこに入れるなど)
“Access Roads” would give an impression that means roads outside of the site, whereas the contents are regarding the roads inside of the site.
Please, change the title properly such as “Transportation in the Site” to make the clause easier to understand. If necessary, consider to move this to Chapter 2 making new clause, for example [Risk Control in the Site].
NK: タイトルを Roads in the Site に変更しました。
The title is changed to [Roads in the Site].

JCB40: 仮設で作られる機械専用通路のことと理解していますが、英語の正しさについては MD 氏に確認願います。
We understood this Clause is for exclusive use roads temporary constrcuted.
Please ask MD to confirm the title and content.
NK: 和文では次のように作業環境と規定していました。
5.4.1 運搬車両の作業環境

Agreed.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO ~~Engineer~~ before commencement of the transportation and comply with all requirements.

(3) Ensure that materials are loaded evenly

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties;

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

I think that the above should correctly be changed from Engineer to HSO.
Contractor is responsible for all such arrangements.

NK: agreed.

4.3.8 ~~Access Roads (JCA29) Roads in the Site~~ (JCB40) Temporary Transporting Roads in the Site

4.3.7 Site Access Roads

See notes below

JCA29: 違和感あり、この上でも混乱しているので輸送車両等の Additional Requirements for か輸送時の安全措置でまとめた方が良いかと。4.3.2 も改めてみると中途半端な感じ。
There is confusion, so it is better to specify requirements in Additional Requirements for transporting equipment or Safety measures during transportation. 4.3.2 seems something imperfect.
“Access Roads”はサイトの外をイメージさせますが、記述の内容はサイト内のことであるように思います。タイトルを適切に変更したうえで(transportation in the Site など)、すなおに理解できるようにしてください。場合によっては 2 章に移動させることも検討してください(risk control in the site という見出しを新たに作ってそこに入れるなど)

Safety measures in public roads out side of the Site shall be taken by the road authority.
NK: We propose to revise the title to Safety Measures for Temporary Transporting Roads in the Site referring to Japanese JSSS.
To MD, please review the title.

"Access Roads" is the correct title and is the correct expression to use.

An "access road" is not specific as you suggest it is any road which enables traffic to reach (access) a particular place or area. It is a common and correct expression for use in construction.

It is an expression that needs to be general also and may actually cover roads outside the Site also as these are still within the Contractor's responsibility. FIDIC refers to "access routes" outside the site (which are still the contractor's responsibility) generally meaning routes over existing roads. The use of "access roads" does not conflict with FIDIC or with any other part of JSSS.

Your statement that the road authority shall take "safety measures in public roads outside of the site" is not completely correct within the context of this clause and is not necessary.

Also, these are not just "temporary roads", they may also be:

Permanent existing roads within the Site (outside is covered by FIDIC)

New permanent roads within the Site to be constructed under the contract.

Semi-completed new permanent roads within the Site

Temporary roads, temporary routes or tracks.

Dirt roads or tracks

As there is obviously some lack of clarity or misunderstanding, and whilst there is no real need for any change to the original text of this clause I suggest changing it to "Site Access Roads".

There is no need to change any of the content of the clause.
NK: understood above.

~~(1) Take measures for ensuring that access roads in the Site (JCB41) Temporary Transporting Roads in the Site are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.~~

JCB41: 同上。Ditto
NK: Ditto.

Temporary Transporting Roads in the Site are of suitable construction, ~~of~~ sufficient width, free from potholes, uneven settlement and collapse.

JCB41: 同上。Ditto
NK: Ditto.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment (JCA30)

JCA30: 骨材プラント、コンクリートプラント、アスファルトプラントなどを明示してもいい。
It is better to exemplify such as aggregate plant, concrete plant, etc.?
NK: 定置機械については 4.1.1 (6)で例示しているので、ここでの改めての例示は不要と考えます。
Static equipment is exemplified in 4.1.1 (6). Thus, it is not necessary to mention again here.

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens(JCB42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

JC42: What is screen?
NK: It means fence screen such as shown in the photo below.

See above, notes:

(2) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(3) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(4) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(5) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(6) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment (JCA30)

JCA30: 骨材プラント、コンクリートプラント、アスファルトプラントなどを明示してもいい。
It is better to exemplify such as aggregate plant, concrete plant, etc.?
NK: 定置機械については 4.1.1 (6)で例示しているので、ここでの改めての例示は不要と考えます。
Static equipment is exemplified in 4.1.1 (6). Thus, it is not necessary to mention again here.

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens(JCB42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

JC42: What is screen?
NK: It means fence screen such as shown in the photo below.

(1) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(5) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors(JCA31) (JCB43)

JCA31: 定置機械にまとめた模様。
専門業者による組み立て、起動予告ブザー、連続装置設置(連続した非常停止スイッチ)、コンベア搭乗禁止とか削除されているので、復活させてください。エレベーターとコンベアを一緒にするか否かも要検討。
Please add the provisions of installation under the instruction of the experts, warning alarm system for start-up, emergency stop buttons for each necessary point and prohibition of riding on conveyor, etc. stipulated in Japanese version. Please consider whether requirements for elevators and conveyers shall be specified together or separately.
NK: 追記・別々に規定しました。(組立てに関しては 4.3.1(9)に規定済です。)
Added and separately specified. (Installation under instruction by expert is specified in 4.3.1(9).) Provisions for conveyors are stipulated referring to OSHA 1926.555 Conveyors.

JCB43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.
NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

(1) ~~General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use~~

(2) ~~The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's~~

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

No comment, no change necessary.

4.3.10 Additional Requirements for Personnel and Goods Elevators and ~~Material~~ Conveyors

JCA31: 定置機械にまとめた模様。
専門業者による組み立て、起動予告ブザー、連続装置設置(連続した非常停止スイッチ)、コンベア搭乗禁止とか削除されているので、復活させてください。エレベーターとコンベアを一緒にするか否かも要検討。
Please add the provisions of installation under the instruction of the experts, warning alarm system for start-up, emergency stop buttons for each necessary point and prohibition of riding on conveyor, etc. stipulated in Japanese version. Please consider whether requirements for elevators and conveyers shall be specified together or separately.
NK: 追記・別々に規定しました。(組立てに関しては 4.3.1(9)に規定済です。)
Added and separately specified. (Installation under instruction by expert is specified in 4.3.1(9).) Provisions for static material conveyors are stipulated in (4) (a) referring to OSHA 1926.555 Conveyors.

JCB43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.
NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

What exactly do you mean by "portable conveyors" for use in construction?

Why are they so different in a safety sense to any other type of temporary mobile conveyor?
NK6/19: 安衛則 151 条 77～83 はコンベヤーについて規定しているが、固定と移動式の区別はしていない。これらの安全要求事項に違いがないため、JCB43 のコメントへの対応は、Portable conveyor も含む規定を提案します。
NK6/19: Japanese regulation stipulate for conveyors without separating portable and static (fixed) conveyors. The safety requirements are almost same.
We will specify for both conveyors.

(1) ~~General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use~~

(2) ~~The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification~~

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and ~~Material~~ Conveyors

~~Equipment is permitted:~~

(a) ~~Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

(b) ~~Defects or operational faults in emergency stop and alarm systems;~~

(c) ~~Defects or operational faults in power, lighting and control systems;~~

(d) ~~Defects or operational faults with interphone systems;~~

(e) ~~Defects or operational faults in brakes, clutches; and~~

(f) ~~Defects or operational faults of sheaves and pulleys.~~

(3) ~~The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(a) ~~Defects or operational faults in supporting cables and wire ropes; and~~

(b) ~~Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

(1) General

(a) The requirements for material conveyors stipulated in 4.3.10 does not apply to portable conveyors.

(b) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain

~~of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(g) ~~Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~

(h) ~~Defects or operational faults in emergency stop and alarm systems;~~

(i) ~~Defects or operational faults in power, lighting and control systems;~~

(j) ~~Defects or operational faults with interphone systems;~~

(k) ~~Defects or operational faults in brakes, clutches; and~~

(l) ~~Defects or operational faults of sheaves and pulleys.~~

(3) ~~The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~

(c) ~~Defects or operational faults in supporting cables and wire ropes; and~~

(d) ~~Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~

(1) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

Why not? What are the requirements for "portable conveyors" and where are they specified?

NK6/19: We will specify for both conveyors here.

(b) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the

(1) General

(a) The requirements for ~~material~~ conveyors stipulated ~~in this clause does not~~ apply to portable and material conveyors.

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [*Inspection, Maintenance And Repair*], 4.2.1 [*Requirements Generally*], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(d) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators (JCB44)

JCB44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。
Please modify (b) (c) and (3) as below.
NK: Modified.

(a) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners;

(ii) ~~Defects or operational faults in~~ emergency stop and alarm systems;

(iii) ~~Defects or operational faults in~~ power, lighting and control systems;

(iv) Defects or operational faults with interphone systems;

(v) Defects or operational faults in brakes, clutches; and

(vi) Defects or operational faults of sheaves and pulleys.

(b) Additional periodical inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ daily inspection items;

(ii) Defects or operational faults in wire ropes;

(iii) Defects or operational faults in winch and its foundation; and

(iv) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(3) ~~Belt~~ Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or “on”

Contractor's Equipment is permitted:

(d) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

JCB44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。
Please modify (b) (c) and (3) as below.
NK: Modified.

(a) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners;

(ii) ~~Defects or operational faults in~~ emergency stop and alarm systems;

(iii) ~~Defects or operational faults in~~ power, lighting and control systems;

(iv) Defects or operational faults with interphone systems;

(v) Defects or operational faults in brakes, clutches; and

(vi) Defects or operational faults of sheaves and pulleys.

(b) Additional periodical inspection items shall include checking for defects or operational faults with the following:

(i) Defects or operational faults in daily inspection items;

(ii) Defects or operational faults in wire ropes;

(iii) Defects or operational faults in winch and its foundation; and

(iv) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(3) ~~Belt~~ Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location;

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or “on” position;

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent

(c) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

(a) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) Elevator enclosures, doors, guide-rails and runners;

(ii) Emergency stop and alarm systems;

(iii) Power, lighting and control systems;

(iv) Interphone systems;

(v) Brakes, clutches; and

(vi) Sheaves and pulleys.

(b) Additional periodical inspection items shall include checking for defects or operational faults with the following:

(i) Daily inspection items;

(ii) Wire ropes;

(iii) Winch and its foundation; and

(iv) Supporting structures, guy ropes, fixings and anchors.

(3) ~~Material~~ Conveyors

(a) Additonal safety measures:

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location;

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or “on” position;

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to prevent fall of the materials being conveyed; and

position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed .

(v) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) Defects or operational faults in guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items~~; and~~ (JCB45)

JCB45: There is no sentence after “and”.
NK: Deleted.

With regard to the following, please refer to Compliance standards above and can we discuss further:

To MD, The 4.1. General describes as follows:

The Contractor shall comply with “OHSA Part1926 Subpart N- Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power” for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).

I do not think that this is necessary:

Do you think if we shall specify Subpart I, §1926.304 Woodworking tools again to specify more details for saws in 4.4.3 (2)?

4.3.11 Additional Requirements for ~~Tools, Tackle and~~ (JCB46)Small Equipment and Tools

JCB46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as “Tools”.
NK: Defined “Tools2 in 4.1.1 (7) above.

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO. ~~the manufacturers recommended repair agents and using the~~ fall of the materials being conveyed; and

(v) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) ~~Defects or operational faults in~~ overrun and reverse run prevention devices; against uncontrolled run and reverse run,

(ii) emergency stop switches; and

(iii) Defects or operational faults in guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items. ~~and~~ (JCB45)

JCB45: There is no sentence after “and”.
NK: Deleted.

I have deleted the following notes from the last draft as they are no longer applicable:

~~*With regard to the following, please refer to Compliance standards above and can we discuss further:*~~

~~*To MD, The 4.1. General describes as follows:*~~

~~*The Contractor shall comply with “OHSA Part1926 Subpart N- Helicopters, Hoists, Elevators, and Conveyors, and Subpart I-Tools-and and Power” for the equipment, tools and stationary equipment which are not specified in (c), (d) and (e).*~~

~~*I do not think that this is necessary:*~~

~~*Do you think if we shall specify Subpart I, §1926.304 Woodworking tools again to specify more details for saws in 4.4.3 (2)?*~~

4.3.11 Additional Requirements for ~~Tools, Tackle and~~ Small Equipment and Tools

JCB46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as “Tools”.
NK: Defined “Tools2 in 4.1.1 (7) above.
See 4.1.1 and 4.1.1 (7), this change is fine.
NK: confirmed.

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO. ~~the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.~~ (JCB47)

JCB47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。
あくまでも理想論。僻地では無理 “ as much as possible”を加えてみては

(v) Riding of workers on the moving belts shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) Overrun and reverse run prevention devices;

(ii) Emergency stop switches; and

(iii) Guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items.

4.3.11 Additional Requirements for Small Equipment and Tools

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer’s genuine or recommended spare parts.

~~manufacturers genuine or recommended spare parts.~~ (JCB47)

JCB47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。
あくまでも理想論。僻地では無理“as much as possible”を加えてみては
It is few for agents to repair them, so it is replaced with competent persons approved by the HSO.
It is ideal for agent to repair them, so how about to add “as much as possible”.
NK: Modified as commented.

(3) All small equipment (JCB48) and Tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

JCB48: マイナーなものなので、re-certified まではしないと思います。
It may not be re-certified because they are minor equipment.
NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

4.3.12 Additional Requirements for Electric Powered Equipment (JCB49)

JCB49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。
It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools.
NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows:
(8) Electric powered equipment means portable electric powered mobile equipment or tools.
The (8) was deleted by JICA comment JC13 and 14.
NK: Definition is added in (1) below.

(1) Electric powered equipment specified in 4.3.12 is portable electric powered mobile equipment or tools among small equipment and Tools listed in 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted:

It is few for agents to repair them, so it is replaced with competent persons approved by the HSO.
It is ideal for agent to repair them, so how about to add “as much as possible”.
NK: Modified as commented.

Change to repair agents may be OK however it now ignores any mention of the use of genuine spare parts which I suggest is important even though it may not always be followed! I suggest the following be added in place of the above.

(2) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer’s genuine or recommended spare parts.

NK: agreed.

(2) All small equipment (JCB48) and Tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

JCB48: マイナーなものなので、re-certified まではしないと思います。
It may not be re-certified because they are minor equipment.
NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

This is OK.

4.3.12 Additional Requirements for Electric Powered Equipment (JCB49)

JCB49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。
It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools.
NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows:
(8) Electric powered equipment means portable electric powered mobile equipment or tools.
The (8) was deleted by JICA comment JC13 and 14.
NK: Definition is added in (1) below.

(1) Electric powered equipment specified in 4.3.12 ~~shall include portable electric powered mobile equipment or tools and shall comprise a part of the small equipment and tools listed in 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted:

(a) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any;

(3) All small equipment and tools shall be tested ~~and re-certified~~ by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) Electric powered equipment specified in this clause shall include portable electric powered mobile equipment or tools and shall form a part of the small equipment and tools listed in JSSS 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted:

(a) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JCB50)

JCB50: 表現の横並びをとるとこのようになるのではないか？
(2)(d)では ELCB なるものは必須ではない記述になっている
The sentence will be as modified to make same listing style below.
(2) (d) stipulates ELCB is not compulsory.
NK: Modified as commented.

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use ~~metal clad~~ weatherproof switches (JCB51) with covers, securely fixed in accessible and dry places; (JCA32)

JCA32: metalclad 形式に限定され他のタイプを排除することになりませんか。用語の意味を再度確認してください。これに限定するということでしょうか。途上国の現場で見たことがない気がします。
Doesn't it limit only to the metal clad type and eliminate other types? Please reconfirm the meaning of the term of metal clad. Does it mean to limit metal-clad? I feel I have not seen this in the developing countries.
https://www.google.co.jp/search?q=metalclad&source=lnms&tbm=isch&sa=X&ved=2ahUKEwi9jc-hm6rnAhVQw4sBHSlXCx8Q_AUoAXoECA4QAw&biw=1567&bih=748#spf=1580349127635
NK: 和文の規定を参考に変更します。

(JCB50)

JCB50: 表現の横並びをとるとこのようになるのではないか？
(2)(d)では ELCB なるものは必須ではない記述になっている
The sentence will be as modified to make same listing style below.
(2) (d) stipulates ELCB is not compulsory.
NK: Modified as commented.

Note to NK:

I strongly recommend that this entire subclause be reviewed from the electrical safety perspective by your professional electrical specialist.

I had also previously requested that this part be coordinated with JSSS 6.7 Temporary Electrical Installations but this does not appear to have happened and I again repeat this request as the two sections are not currently coordinated from the electrical safety aspect.

I suggest that the above reference to ELCB (unless changed to RCD) should not be changed, and preferably 3(d) and 3(e) below should be changed as for safety purposes as either ELCB, RCD or other safety measures are essential.

The fact that many JICA works are being executed in developing countries in my opinion should not in any way affect the specified level of safety in JSSS.

NK6/19: NK will request NK electrical expert after submission of DFR.

(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes;

(c) Damage to insulation and protective coverings of all wires and cables including flexible cables; and

(d) Damage to plugs, sockets, transformers and all wiring fittings and appliances.

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use ~~metal clad~~ waterproof ~~weatherproof~~ switches and socket outlets with covers, securely fixed and located in accessible and dry places;

JCA32: metalclad 形式に限定され他のタイプを排除することになりませんか。用語の意味を再度確認してください。これに限定するということでしょうか。途上国の現場で見たことがない気がします。
Doesn't it limit only to the metal clad type and eliminate other types? Please reconfirm the meaning of the term of metal clad. Does it mean to limit metal-clad? I feel I have not seen this in the developing countries.
https://www.google.co.jp/search?q=metalclad&source=lnms&tbm=isch&sa=X&ved=2ahUKEwi9jc-hm6rnAhVQw4sBHSlXCx8Q_AUoAXoECA4QAw&biw=1567&bih=748#spf=1580349127635
NK: 和文の規定を参考に変更します。
Modified referring to Japanese version "Use switches with covers for electrical power equipment, place them in a metal box, etc."

JCB51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？
We propose to specify anti-explosion type, if needed.
NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないた

(a) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes;

(b) Damage to insulation and protective coverings of all wires and cables including flexible cables; and

(c) Damage to plugs, sockets, transformers and all wiring fittings and appliances.

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use waterproof switches and socket outlets with covers, securely fixed and located in accessible and dry places;

Modified referring to Japanese version “Use switches with covers for electrical power equipment, place them in a metal box, etc.”

JCB51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？
We propose to specify anti-explosion type, if needed.

NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないため、追記しないことと致します。
参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html
Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB’s to each item of electrical equipment.

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.–

To MD,

Please coordinate 7.7 Temporary Elect. Installations.

MD reply: is this part necessary? It seems that it is better covered by 7.7

Electric leakage prevention and disconnection device is important device.

*MD - Yes I am aware of that but please note that **ELCB** is the old name and refers to voltage operated devices that may no longer be available, it is advised these are replaced if found.*

***RCD** is specified in Chapter 7.7, please advise what you want to use??*

(f) Avoid hanging electric cables and wires directly on nails, reinforcing ~~or scaffolding tubes~~ and the like (JCA33) to prevent damage to the insulation and protective covering.

JCA33: 日本語の丸太足場を鋼管に替えているようですが、妥当性を再度確認願います（scaffolding tubes は削除でも良い）。
←被覆材保護のために摩擦係数の大きい丸太足場にひっかけないように、というのが原文の意味ではなかったのですか。(以下、日本語版)
移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄
め、追記しないことと致します。

参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html
Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.

No comment, however “metal clad switches” are an understandable construction term for metal faced heavy duty fittings commonly used for external and temporary works.

Maybe also change “weatherproof” to “waterproof”

Please refer to my recommendation above regarding review by electrical specialist.

NK: confirmed.

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB’s to each item of electrical equipment;

(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;

Please refer to my recommendation above regarding review by electrical specialist and coordinate (d) and (e) above.

ELCB or RCD?

Previous issue MD notes:

Please coordinate 7.7 Temporary Elect. Installations.

MD reply: is this part necessary? It seems that it is better covered by 7.7 (6.7)

Electric leakage prevention and disconnection device is important device.

*MD - Yes I am aware of that but please note that **ELCB** is the old name and refers to voltage operated devices that may no longer be available, it is advised these are replaced if found.*

***RCD** is specified in Chapter 7.7, please advise what you want to use??*

NK6/19: NK will ask NK expert these provisions after submission of DFR.

(f) Avoid hanging electric cables and wires directly on nails, reinforcement ~~or scaffolding tubes~~ and the like to prevent damage to the insulation and protective covering;

JCA33: 日本語の丸太足場を鋼管に替えているようですが、妥当性を再度確認願います（scaffolding tubes は削除でも良い）。
←被覆材保護のために摩擦係数の大きい丸太足場にひっかけないように、というのが原文の意味ではなかったのですか。(以下、日本語版)
移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB (Earth Leakage Circuit Breakers) or RCD (Current Sensing Devices) in the electrical supply to each item of electrical equipment; (Note to JICA: NK will consult these provisions regarding ELCB and RCD with NK electrical engineers again.)

(e) If for any reason, an ELCB or RCD cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;

(f) Avoid hanging electric cables and wires directly on nails, reinforcement or scaffolding and the like to prevent damage to the insulation and protective covering;

移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。
It looks that log scaffolding has been changed to scaffolding tubes. Please, check its compatibility. Wasn't the original concept that the cables and wires shall not be hanged on log scaffoldings of large friction factor in order to prevent damage to the insulation?
NK: コメントに従い、"scaffolding tubes"を削除しました。
As commented, "scaffolding tubes" is deleted and "and the like" is added..

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or ~~is not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault ~~or abnormality~~ is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) ~~Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and~~ (JCA34) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

JCA34: electric power equipment の定義と照らし合わせて適切でしょうか。
Is this clause appropriate against the definition of electric power equipment?
NK: 4.1.1.(8)で持ち運びできる電動機械もしくは工具と定義しています。これらを使用する場合に当然適した保護具を使用することが求められます。器具により必要な保護具も変わりますので右のように修正します。
Electric power equipment is defined in 4.1.1 (8) that electric power equipment means portable electric powered mobile equipment or tools. When using these, it is necessary to use appropriate protective equipment which vary according to the type of equipment. The clause is modified.

移動して使用するケーブル、電線等は、被覆材の保護のため、直接、釘や鉄筋・丸太足場等に掛けないこと。
It looks that log scaffolding has been changed to scaffolding tubes. Please, check its compatibility. Wasn't the original concept that the cables and wires shall not be hanged on log scaffoldings of large friction factor in order to prevent damage to the insulation?
NK: コメントに従い、"scaffolding tubes"を削除しました。
As commented, "scaffolding tubes" is deleted and "and the like" is added..

"Log scaffolding" has no meaning, scaffolding has meaning.

NK: agreed.

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or ~~is not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;

Your change is not grammatically correct, the original wording is correct.

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) ~~Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and~~ (JCA34) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

JCA34: electric power equipment の定義と照らし合わせて適切でしょうか。
Is this clause appropriate against the definition of electric power equipment?
NK: 4.1.1.(8)で持ち運びできる電動機械もしくは工具と定義しています。これらを使用する場合に当然適した保護具を使用することが求められます。器具により必要な保護具も変わりますので右のように修正します。
Electric power equipment is defined in 4.1.1 (8) that electric power equipment means portable electric powered mobile equipment or tools. When using these, it is necessary to use appropriate protective equipment which vary according to the type of equipment. The clause is modified.

I think it is relevant.

NK: confirmed.

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or is not wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have safety factor recommended by the manufactures ~~of at least 6~~, (JCA35), obtained by dividing the breaking strength by the maximum applied load for each type.

JCA35: マニュファクチャーズレコメンデーションに従う旨の記載に代えてください。(ワイヤーロープやスリングは現場では作らず専門業者から調達することを想定)
Please change this part as to comply with the recommendation by the manufacturer. (It is assumed that wire ropes and slings shall not be fabricated at the site but procured from the vendors.)

NK: コメントに従い、右のように修正しました。
As commented, the clause is changed as right.

measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have safety factor recommended by the manufactures ~~of at least 6~~, (JCA35), obtained by dividing the breaking strength by the maximum applied load for each type.

JCA35: マニュファクチャーズレコメンデーションに従う旨の記載に代えてください。(ワイヤーロープやスリングは現場では作らず専門業者から調達することを想定)
Please change this part as to comply with the recommendation by the manufacturer. (It is assumed that wire ropes and slings shall not be fabricated at the site but procured from the vendors.)

NK: コメントに従い、右のように修正しました。
As commented, the clause is changed as right.

I suggest that no extensive change is necessary here as all is specified in JSSS 5.4 as referenced below.

If you require this change, I suggest as follows:

(2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.

NK: agreed.

(2) Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO.

NK: (2) wire ropes cannot be fabricated at the site. Eye splices of rope can be made at the site. I think (2) is not necessary to additionally specified.

measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.

(3) ~~Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO.~~

To MD, (2) wire ropes cannot be fabricated at the site. Eye splices of rope can be made at the site. I think (2) is not necessary to be additionally specified.

(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions (JCA36) and in any event within the designed operating capacity of the equipment.~~ (JCB52)

JCA36: 用途外使用の際の使用方法に関する書面でのマニュアルを本当にメーカーが出している事例があるのでしょうか。具体例を複数確認して提示願います。ないようであれば、この記述は修正が必要です。
Is there really any example that manufacturer of equipment issues written manual which contains usage for the purpose other than that of intended?
Please, present at least examples for such usage. If there is no such example, the description has to be changed.

NK: 下記サイトに用途外使用に関する情報がありましたが、あくまで安衛法の基づいた注意書に過ぎません。
There is one site in Japan that explains use of equipment for purpose other than one for which it is designed, however it is only points to care based on the Occupational Safety and Health Regulations of Japan.
the clause is change to comply with the Law.
https://www.taiyokenki.co.jp/rental/tidbits/post_13.html
In USA, there is the following information how to use lifting by excavator following the manufacturer's Excavator Lift Capacity Chart :
https://www.forconstructionpros.com/equipment/earthmoving/backhoe-loaders/article/11416879/interpret-the-surprises-in-your-backhoes-lift-chart-to-place-big-loads-safely
http://zoskin.praysafeconsulting.com/excavator-lift-capacity-chart/tips-for-using-earthmoving-equipment-for-lifting-equipment.html
Additional stipulation is added regarding the regulation and confirmation by the HSO.

JCB52: 製造者が目的外使用の書面でのインストラクションを出していることが想定できないので、いらないのではないでしょうか？
It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary?

NK: Agreed to delete.

(3) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions (JCA36) and in any event within the designed operating capacity of the equipment.~~ (JCB52)

It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary.

NK: Agreed to delete.

Using bucket excavators for example for hoisting lighter loads (e.g. steel pipes and drainage components) is a common and convenient practice. It is recognised as such by manufacturers and their equipment is designed for this.

NK: We cannot find any such official document from manufacture in websites, so I gave up to specify as original sentences

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects.

(4) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's written instructions, and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket);

~~When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:~~

(2) Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;

(3) Arms, bucket, Rigging Equipment have enough strength to lift the load;

(4) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction~~ equipment;

(5) The lifting capacity for alternative use is confirmed by loading tests at the Site; and

(6) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work. (JCB54)

JCB54: 揚貨作業をする時に揚貨の資格が必要であることは、揚貨の章に記述があるはず。不要。
The necessity of license is specified in the Chapter for lifting, so not necessary mention (5).
NK: Deleted.

~~Under these circumstances the Contractor shall take account of the following:~~ (JCB55)

JCB55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要.
It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging.
NK: Deleted.

(1) ~~Ensure the Contractor's Equipment can safely handle the load~~

In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

~~When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:~~

~~Under these circumstances the Contractor shall take account of the following:~~ (JCB55)

JCB55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要.
It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging.
NK: Deleted.

I think that this should remain, it is a secondary usage for example of an excavating machine for lifting light loads. It is not likely that the operator will be trained as a rigger and the following clauses are recommended to be included.

NK6/19: The operator needs licence or training certificate for hoisting work depending hoisting capacity with excavator as secondary usage in Japanese regulation. Therefore, JICA comments' is correct, however it is recommendable to specify here.

(1) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~

(2) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~

(3) ~~Ensure that operators have accurately determined the total weight~~

and repair manual and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, the HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load.

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the equipment.

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site.

(5) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow

without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.

(2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.

(3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.

(4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

(5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used. .(JCA37)

JCA37: 本節は用途外使用を規定しています。用途外使用をするための genuine accessories というのが存在するのでしょうか。
Is there any "genuine accessory" for purpose other than one for which it is designed?

NK: バケットに取り付けるフックなどは、重機のメーカーではなく、部品メーカーが多種の製品を製造しています。純正となると、バケットに収納できる特殊フックしかないようです。本項目は削除します。
Accessories such as hooks for lifting are produced by suppliers not by the equipment manufacturer. A hook as a genuine accessory was found only in a special type bucket which can store the hook when it is not in use. This clause is deleted.

(6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.

(4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

(5) Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used. .(JCA37)

JCA37: 本節は用途外使用を規定しています。用途外使用をするための genuine accessories というのが存在するのでしょうか。
Is there any "genuine accessory" for purpose other than one for which it is designed?

NK: バケットに取り付けるフックなどは、重機のメーカーではなく、部品メーカーが多種の製品を製造しています。純正となると、バケットに収納できる特殊フックしかないようです。本項目は削除します。
Accessories such as hooks for lifting are produced by suppliers not by the equipment manufacturer. A hook as a genuine accessory was found only in a special type bucket which can store the hook when it is not in use. This clause is deleted.

Lifting hook are common however excavators can hoist light loads e.g. drainage pipes, using the bucket and slings without hooks and are designed for this. I suggest that these clauses should remain as they are likely to apply.

NK6/19: Many accidents have occurred in the lifting works with excavators in Japan. To attention to the Contractor, the following is recommended to specify as proposed by MD.

(6) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(7) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(8) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(9) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.

the manufacturer's written instructions and load charts.

(6) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.

(7) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

(8) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(9) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(10) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(11) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as

~~stationed clear of the lift area yet visible to the operator throughout the operation.~~

(9) ~~Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

(10) ~~If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before ~~the Contractor's Equipment~~ .(JCA38) the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

JCA38: この表現でいい？ 例えば Rental or Lease equipment の方が素直に読めますがいかがでしょうか。そのうえで 4.6 内での表現を統一してください。
Is this a proper expression? It would be better to use, for example, "rental and lease equipment". And please unify the expression in 4.6.
NK: (2)及び(3)で使用されている" the Contractor's Equipment"は単に"equipment"で明確に意味が通じるので、"equipment"に変更します。
The term "the Contractor's Equipment" used in (2) & (3) can be replaced simply with "equipment", by which the meaning of this clause become clearer.

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(10) ~~If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before ~~the Contractor's Equipment~~ .(JCA38) the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

JCA38: この表現でいい？ 例えば Rental or Lease equipment の方が素直に読めますがいかがでしょうか。そのうえで 4.6 内での表現を統一してください。
Is this a proper expression? It would be better to use, for example, "rental and lease equipment". And please unify the expression in 4.6.
NK: (2)及び(3)で使用されている" the Contractor's Equipment"は単に"equipment"で明確に意味が通じるので、"equipment"に変更します。
The term "the Contractor's Equipment" used in (2) & (3) can be replaced simply with "equipment", by which the meaning of this clause become clearer.

There is nothing wrong with the original wording, it is "Contractor's Equipment" as defined in the Contract whether rented, leased or owned.

"equipment" in this usage, should only follow in a sentence which already contains the term "Contractor's Equipment" and is therefore connected in meaning.

The changed wording introduces unnecessary duplication "equipment" and "equipment".

NK: agreed.

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not

possible and position the equipment to hoist and lower end on, not sideways.

(12) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works before the Contractor's Equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this ~~Contractor's Equipment~~ equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JCB56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JCB57)

JCB56: "shall"じゃなく"may"ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify "shall" but "may" because fueling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

JCB57: 法令上の許可が必要な場合は取得することを追記が必要と思量。
It is necessary to specify for the Contractor to get permission in accordance with

allow this ~~Contractor's Equipment~~ equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

The suggested change is correct nor necessary.

NK: as revised by MD.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS.

The suggested change is not correct nor necessary.

NK: (5) is correct expression..

Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JCB56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JCB57)

JCB56: "shall"じゃなく"may"ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify "shall" but "may" because fueling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

The comment is understood but generally it will not apply on JICA projects and is not a recommended basis for a safety specification.

In the majority of cases, mobile Contractor's Equipment will not be registered or insured for use on public roads and fuel for such equipment (together with fuel for static equipment and all other site equipment) will usually need to be brought safely to the Site and safely stored and dispensed for Site use.

Also, with normal high consumption requirements (and even for tax and duty reasons), fuel is usually delivered to the Site and stored separately.

It is dangerous to obtain and transport and dispense manually in frequent and

complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS.

(5) Operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

the Law of the Country when necessary. NK: Added. (2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. (3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer. (4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.	*small quantities.* *It is not necessary to state that the Contractor must obtain "necessary permission required by the Law of the Country"; the Contractor must in any event comply with the Law under GC 1.4 and such permission, etc., would be an automatic requirement.* *Fuel storage at Site will usually be required on most JICA projects and proper safety control is essential.* *I have already included a clause in the latest issue of the User Guide to cover this and suggest therefore that no change is necessary to the original text.* JCB57: 法令上の許可が必要な場合は取得することを追記が必要と思量。 It is necessary to specify for the Contractor to get permission in accordance with the Law of the Country when necessary. NK: Added. *Not necessary see note above.* NK6/19: considering small projects agreed to leave as original provision. (2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. (3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer. (4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time. (5) <u>All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures.</u>(JCA39), such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems. JCA39: 単純に英語の意味がわからない	(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 4: CONTRACTOR'S EQUIPMENT

Japan International Cooperation Agency (JICA)

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 4: CONTRACTOR'S EQUIPMENT

Table of Contents

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, small equipment, tools and electric power equipment as further described in the following paragraphs.

(2) The Contractor shall ensure the safety of all Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.

(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].

(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.

(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

(a) Surface excavation and spoil movement equipment for bulk excavation, grading and levelling, such as bulldozers, graders and tractor excavators;

(b) Excavators such as backhoes, face shovels, power shovels;

(c) Loaders such as payloaders and face shovels;

(d) Dump trucks for removal or importation of spoil;

(e) Specialist foundation equipment such as pile driving and boring equipment;

(f) Compaction and surface treatment equipment such as smooth or sheepsfoot rollers, pneumatic and vibration rollers, asphalt finishers;

(g) Mobile cranes;

(h) Piling equipment

(i) Concreting equipment such as ready-mixed concrete trucks and pump trucks;

(j) Demolition equipment such as breakers, concrete crushers and demolition grippers;

(k) Transportation Equipment, such as cars and buses for Contractor's Personnel and trucks and trailers for transporting Goods to, around and from the Site;

(l) Workboat for diving works; and

(m) Tunnel Boring Machine (TBM). (To JICA, Note: TBM will be added in the Specification for Tunnel in future.)

(4) Static equipment includes powered stationary equipment such as:

(a) Stone crushing plants and screening equipment;

(b) Concrete and asphalt concrete batching plants;

(c) Tower cranes, derrick cranes;

(d) Elevators;

(e) Material conveyors;

(f) Air compressors;

(g) Engine Generators, submersible pumps and engine pumps; and

(h) Reinforcement, cutting and bending machines.

(5) Small equipment and tools such as:

(a) Hand steered vibrating rollers;

(b) Plate compactors and vibratory rammers;

(c) Portable conveyors;

(d) Pipe bending machines;

(e) Drills, hammers, breakers, compactors and compressors;

(f) Wood processing equipment;

(g) Independent concrete mixers;

(h) Air extract or blowing equipment for improving the working area environment;

(i) Jack hammers, drills;

(j) Chain saws;

(k) Hand operated equipment such as jacks, winches, lever hoists; and

(l) Hand tools such as wrenches, chisels, hand saw, picks, hammers.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

NK: Is "1998 (PUWER), HSE Guidance in UK" missing or intentionally deleted?

(2) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual

The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.

4.1.4 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:

(1) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved.

(2) Types, capacities and numbers of units.

(3) Workplaces, area limits and operational routes, restricted areas, locations of caution signs and fences.

(4) Preservation of safe access, walkways and footpaths around the working areas and transportation areas.

(5) Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

(6) Environmental impact including required measures for workers and any other persons against vibration, noise, dust and the like.

(7) Safety measures for the environmental conditions in the working area, any nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, operational areas or areas where Dangerous Work is taking place.

(8) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury.

(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.

(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.

(11) Measures to be taken in case of breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.

(12) Name of the authorised operator for each unit of Contractor's Equipment when authorised operator is necessary to be assigned.

(13) The name and contact of the HSO to inform when there is any requirement for inspection, maintenance and repair of Contractor's Equipment.

4.1.5 Safety Training

(1) The Contractor shall provide the Contractor's Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment and including:

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

(2) Particular safety training for transportation equipment operators shall be for the purpose of preventing of traffic accidents on and off the Site and shall include:

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.6 Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and

(d) The procedures in case of emergency.

(3) Operators shall:

(a) Keep all safety devices including emergency alarm and stop devices activated; and

(b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility and control ~~or ensure that other qualified persons perform these operations.~~

(c) Ensure that other qualified persons safely operate Contractor's Equipment.

NK: NK6/19: the last paragraph "that other qualified persons perform these operations" is difficult to understand.
Does it mean Operators shall control the performing each other's operation?
NK propose as follows: (c)Ensure that other qualified persons safely operate Contractor's Equipment.

4.1.7 Signalling

(1) Signalling between operators and any associated workers shall only be carried out by designated personnel.

(2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator.

(3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and

4.2 INSPECTION, MAINTENANCE AND REPAIR

4.2.1 Requirements Generally

(1) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(3) When mobilising Contractor's Equipment to the Site and before commencement of operation, the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that

(i) all components are installed and functioning; and

(ii) adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

(b) Ensure as a minimum that the daily and periodical check items have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs and the like;

(i) Cleanliness of each unit or item of Contractor's Equipment;

(j) Cleanliness of each working area and removal of obstructions;

(k) Availability of emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the Country with the testing and expiration date clearly indicated; and

(l) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit;

(b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices;

(c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices;

(d) Springs, shock absorbers and other parts of suspension devices;

(e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices;

(f) Brake capacity, brake drum, brake shoe and other parts of braking systems;

(g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment;

(h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment;

(i) Voltage, amperage and relevant performance and components of electrical systems;

(j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tyre air pressures and lightning devices; and

(k) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.33 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(2) Necessary repair shall be provided by qualified mechanics, electricians or engineers.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety*

Equipment and PPP].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like as necessary to prevent injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cab and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment (where such equipment is necessary) and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and in fire safety procedures.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

(7) Post a label clearly showing the name of the operator on each unit of Contractor's Equipment together with the name and contact number of the HSO or a person in charge who shall be contacted in the event of breakdown or fault.

(8) Ensure that only the authorised operating, inspection and maintenance personnel access the mechanical, electrical and other components and systems of the Contractor's Equipment and prohibit all other persons from such access.

(9) Ensure that any inspection and maintenance covers, safety guards to prevent contact with moving parts and the like are not disabled, tampered with or removed except for repair, maintenance or any other justifiable reason.

(10) Ensure that installation, assembly, testing commissioning, operation and dismantling of all Contractor's Equipment is carried out under the direction of an Operation Leader, appropriately qualified, skilled and experienced in such activities for the particular type and capacity of equipment and in accordance with the manufacturer's operation, maintenance and repair manual.

4.3.2 Safety Measures During Cleaning, Inspection and Maintenance

The Contractor shall take the following measures for safety of Contractor's Personnel during cleaning, inspection and maintenance. Until such measures are taken, the Contractor shall

prohibit any inspection or maintenance personnel or other workers from entering the areas.

(1) Perform inspection and maintenance work wherever possible on a level surface. Where unavoidable ensure that wheels are securely chocked to prevent any movement of equipment.

(2) Provide safety blocks or supports under cargo bed of vehicles to prevent them descending unexpectedly during inspection and maintenance.

(3) Lower attachments (buckets and blades etc.) to the ground during any inspection and maintenance. Where unavoidable ensure that attachments are securely supported to prevent any fall or downward movement.

(4) Stop and isolate the functions completely, establish and implement lockout and tagout procedures to prevent accidents during inspection and maintenance. The lockout and tagout system shall fully isolate the starting system.

(5) Post warning signs to prohibit start-up or use of any Contractor's Equipment during inspection and maintenance.

(6) Assign a Spotter.

(7) Ensure that only authorised personnel have access to the inspection and maintenance area.

4.3.3 Safety Measures During Operation

(1) Unless otherwise specifically permitted by the HSO, all work involving the use of Contractor's Equipment shall be designated as Dangerous Work and the Contractor shall enclose the working area with temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry - Dangerous Work*].

(2) The Contractor shall also ensure that:

(a) All operators are able to clearly see and communicate effectively with Spotters and other relevant persons;

(b) No Contractor's Equipment is operating beyond the capacity or operational limits officially prescribed by the equipment manufacturer;

(c) The surfaces upon which the Contractor's Equipment is working, and any adjacent surfaces and areas over which access is required, are sound, safe and suitable to support the equipment and the Contractor shall provide any temporary foundations, hardstanding or other surfaces, sleepers or steel plates as are necessary to ensure safety and stability of the equipment at all times;

(d) Spotters are always be provided to enable precise movement and positioning of Contractor's Equipment, particularly when reversing, loading and unloading, in dangerous areas or when the operator's view is not clear and at intersections with public roads;

(e) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment is equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators are aware that they shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment are aware that excavator buckets shall never pass over the operator's seat of Contractor's Equipment;

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connecting and Removing of Attachments

The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:

(1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground.

(2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.

4.3.6 Safety Measures During Loading and Transporting of Contractor's Equipment

(1) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.

(2) Select location and areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.

(3) Securely chock all wheels of trailers to prevent any movement.

(4) Stop and isolate the functions of trailers and load and fully engage brakes.

(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.

(6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits.

(7) Ensure that all lights, brakes, steering and safety devices are working properly.

(8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

(9) Ensure that trailers are loaded evenly.

(10) Ensure that Contractor's Equipment loaded onto trailers is braked, wedged, securely

locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any movement during transit.

(11) Place any attachments on trailers and securely tie down.

(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.

(13) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.

4.3.7 Safety Measures During Loading and Transporting of Goods

(1) When transporting heavy or long Goods on public roads, select roads on which the transportation does not pose danger to other traffic, third parties, structures adjacent to the transportation route, obtain all necessary permission from the relevant authorities including police and road authority before commencement of transportation and comply with all requirements.

(2) When transporting heavy or long mateerial Goods within the Site, select suitable routes where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO before commencement of the transportation and comply with all requirements.

(3) Ensure that Goods are loaded evenly.

(4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties.

(5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.

4.3.8 Site Access Roads

(1) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(5) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed

of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and ~~Material~~ Conveyors

NK6/19: Japanese regulation stipulate for conveyors without separating portable and static (fixed) conveyors. The safety requirements are almost same. We will specify for both conveyors. Therefore, the "Material" is deleted.

(1) General

(a) The requirements for ~~material~~ conveyors stipulated ~~in this clause does not~~ apply to portable and material conveyors.

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [*Inspection, Maintenance And Repair*], 4.2.1 [*Requirements Generally*], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(c) The Contractor shall post the maximum load capacity and any restrictions on the use.

(2) Personnel and Goods Elevators

(a) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) Elevator enclosures, doors, guide-rails and runners;

(ii) Emergency stop and alarm systems;

(iii) Power, lighting and control systems;

(iv) Interphone systems;

(v) Brakes, clutches; and

(vi) Sheaves and pulleys.

(b) Additional periodical inspection items shall include checking for defects or operational faults with the following:

(i) Daily inspection items;

(ii) Wire ropes;

(iii) Winch and its foundation; and

(iv) Supporting structures, guy ropes, fixings and anchors.

(3) ~~Material~~ Conveyors

(a) Additonal safety measures:

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location;

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position;

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to prevent fall of the materials being conveyed; and

(v) Riding of workers on the moving belts shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) Overrun and reverse run prevention devices;

(ii) Emergency stop switches; and

(iii) Guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items.

4.3.11 Additional Requirements for Small Equipment and Tools

(1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(2) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer's genuine or recommended spare parts.

(3) All small equipment and tools shall be tested ~~and re-certified~~ by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.

NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.

4.3.12 Additional Requirements for Electric Powered Equipment

(1) Electric powered equipment specified in this clause shall include portable electric powered mobile equipment or tools and shall form a part of the small equipment and tools listed in JSSS 4.1.1 (7).

(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes;

(b) Damage to insulation and protective coverings of all wires and cables including flexible cables; and

(c) Damage to plugs, sockets, transformers and all wiring fittings and appliances.

(3) The Contractor shall comply with the following additional safety requirements:

(a) Use waterproof switches and socket outlets with covers, securely fixed and located in accessible and dry places;

(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(c) Use rubber cabtyre cables for all electrical power equipment;

(d) Wherever possible provide an ELCB (Earth Leakage Circuit Breakers) or RCD (Current Sensing Devices) in the electrical supply to each item of electrical equipment; Note to JICA: NK will consult these provisions regarding ELCB and RCD with NK electrical engineers again.)

NK: added.

(e) If for any reason, an ELCB or RCD cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;

(f) Avoid hanging electric cables and wires directly on nails, reinforcement or scaffolding and the like to prevent damage to the insulation and protective covering;

(g) Turn off the power before repairing, moving or maintaining electric power equipment;

(h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire;

(i) Ensure that fuses are replaced by an authorised person;

(j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or is not wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.

(3) ~~Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO.~~

NK: (2) wire ropes cannot be fabricated at the site. Eye splices of rope can be made at the site. I think (2) is not necessary to be additionally specified.

(4) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].

4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT

4.5.1 Requirements Generally

The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.

Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects.

In particular, when equipment for excavation is to be used for lifting, the HSO shall confirm:

(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

(2) Arms, bucket, Rigging Equipment have enough strength to lift the load.

(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the equipment.

(4) The lifting capacity for alternative use is confirmed by loading tests at the Site.

(5) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.

(6) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.

(7) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.

(8) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(9) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(10) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(11) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on, not sideways.

(12) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary

inspection, maintenance and repair works before the Contractor's Equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:

(a) Inspection and maintenance records;

(b) Operation, repair and maintenance manuals; and

(c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.

(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.

(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS.

(5) Operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.1 Requirements Generally

(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time.

(5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems.

(6) The Contractor is reminded of the requirements of JSSS 2.8 [*Fire Prevention*] and will

be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.

NK in the previous draft I had requested your assistance to find a reference standard for fuel storage tanks, please advise if you have found one.

Previous note:

NK please can you provide a reference standard for storage tanks.

Please also advise of regulations that should apply and any further technical requirements.

We will edit and develop.

NK: sorry I cannot find it as requested.

4. CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where works are being executed and who may be affected by such work.

4. CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1 GENERAL REQUIREMENTS (JC1)

JC1: 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。
(Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など))
Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions.
(There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.)

NK: We will review and modify provisions as commented.

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, tools, tackle and small equipment and electric power equipment as further described in the following paragraphs.

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JC 2) that are on the Site, adjacent to the Site (JC3) and other places (if any) where works are being executed ~~and who may be affected by such work~~.(JC4)

JC2: この Chapter で三箇所出てくるようなのでまとめましょう。
(in this Chapter called as "Concerned Personnel")
There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel").

NK: Modified as commented.

JC3: "who are on or adjacent to the Site and any other places where…でいいのでは
can this be "who are on or adjacent to the Site and any other places where…"?

NK: Modified as commented.

JC4: 英語のつながりが悪いし、影響を受ける人に対する requirement ではないので削除します。
The sentences connection is not good and this is not requirement for persons to be affected.

NK: Modified as commented.

4. CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

NK: We will review and modify provisions as commented.

The specification is for general application and designed to apply to all types of project, and all types of equipment including various tools such as hand tools and hand operated tools including pneumatic drills etc., so the coverage needs to be as broad as possible to capture all types and give general rules. There is no need to be specific when something does not apply to any particular type, I suggest that the important aim is to make sure that all types and requirements are covered.

Contractor's Equipment is an all-embracing term, defined as such in the Contract.

NK: Understood.

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, ~~tools, tackle and~~ small equipment, tools and electric power equipment as further described in the following paragraphs.

I suggest for clarity it is better to delete "tackle" as it is not such a common international term, it may have different meaning and there is little difference to tools. Also so that it is consistent with 4.3.10

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (JCB2) that are on the Site, adjacent to the Site (JCB3) and other places (if any) where works are being executed and who may be affected by such work. (JCB4):

(2) The requirements of this Chapter shall apply to Contractor's Personnel, Employer's Personnel and any other persons (in this Chapter called as "Concerned Personnel") who are on or adjacent to the Site and any other places where and other places (if any) where works are being executed.

NK: Modified as commented.

The suggested new definition has been used in only one other location (4.1.4 (8)) and I suggest that such a definition applicable to one item in this chapter only, is therefore not really necessary.

The reference to "other persons" in this sense is however used in one other instance in 4.3.4 in a slightly different way.

I understand the point but suggest it is better to slightly modify the text of your above suggested clause as follows, and modify or delete the two later references, which I have now done

(2) The Contractor shall ensure the safety of all

4. CONTRACTOR'S EQUIPMENT

4.1 GENERAL REQUIREMENTS

4.1.1 Scope

(1) This Chapter specifies the safety requirements for Contractor's Equipment which shall include mobile equipment, static equipment, small equipment, tools and electric power equipment as further described in the following paragraphs.

(2) The Contractor shall ensure the safety of all

		Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.	Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places where they may be affected by Contractor's Equipment in operation, standby or storage or when such equipment is being maintained or transported.
		See also change in 4.1.4 (8) and deletion of 4.3.4	
(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].	(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 6.0 [*Hoisting and Rigging*].	(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].	(3) For additional requirements for hoisting, rigging and cranes, refer to JSSS 5 [*Hoisting and Rigging*].
(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.	(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JC5)	(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also. (JCB5)	(4) Any reference to "operator" in this Chapter and elsewhere in JSSS shall be deemed to include "driver" also.
	JC5: 少しシンプルに。 is synonymous with "driver"の方がMDB 版の表現でもありますし、それが通常だと思います。全体のバージョンで出していただく際に、synonymous の表現に合わせて全体を調整してください。 Please make phrases simple a little. The phrase of "is synonymous with "driver"" is one used in FIDIC MDB version and normal. When all JSSS Chapters are submitted, please adjust all document to use this phrase. NK: FIDIC MDB uses this as follows: *1.2 Interpretation (e)the word "tender" is synonymous with "bid", and "tenderer" with "bidder" and the words "tender documents" with "bidding documents* 日本語では、Operator は操作者、操縦者、Driver は運転手、運転士、運転者、機関士が類義語辞典に記載があります。 (4)では、Operator の用語にはに Driver も含まれると規定し、これは、Operator と Driver が synonymous（同義語）との規定ではなく、他の呼び名の機械を操作・運転する者がいることと示しています。 別の Spotter でも次のように同様に規定しています。 *(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.* 上記の理由で(4)はこのままとします。同様の文章があればそれを見直し、必要があれば変更します。 The operators include pilots, etc. The drivers include engine driver, motorman, etc. The (3) states "operator" includes "driver" but not that "operator" is synonymous with "driver". The same expression is made for the Spotter as below. *(b) Any reference to "Spotter" in this Chapter shall be deemed to include "flagman" and "signaller" also.* With the above reason, the (4) is not modified. Other sentences as above will be reviewed and modified when necessary.	JCB5: To MD: Please review NK reply above. *I think that there is no need to change this wording; it is now consistently used throughout the various chapters of JSSS. It is simple and more understandable than "synonymous" and will not require dictionary reference by many readers as may not be the case with FIDIC.* *The need for definition is a partial consequence of your original draft which uses diverse expressions.* NK: agreed.	
(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:	To MD: Please review NK reply above. (5) Mobile equipment includes wheeled or tracked, self-propelled construction machinery such as:	(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:	(5) Mobile equipment including wheeled or tracked, self-propelled construction machinery such as:

electric powered mobile equipment or tools.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the HSE Provision and Use of Work Equipment Regulations 1998 (PUWER).

(2) In accordance with these regulations, together with JSSS 1.34 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

~~electric powered mobile equipment or tools.~~ (JC14)

JC14: JICA deleted related with JC12.
NK: Deleted.

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the *HSE Provision and Use of Work Equipment Regulations 1998 (PUWER)*.(JC15)

JC15: 正式に言えば、"The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK "では？法令の内容は一般的なので harmful ではないと思える。
Is the official title "The Provision and Use of Work Equipment Regulations 1998 (PUWER) under the HSE regulations in UK? It is considered that the regulations is general ones, so not harmful.
NK: Modified as commented.

(2) In accordance with these regulations, together with JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

~~electric powered mobile equipment or tools such as:~~ ~~(JCA7a) (JCB14)~~

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

NK: Modified as commented.

Please refer to potential copyright requirements.

See above.

NK: Clean copy is different from the above. Is it necessary to add "1998 (PUWER), HSE Guidance in UK"?

(2) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual

4.1.2 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], the Contractor shall comply with the requirements of this Chapter, read jointly with and including the further technical requirements of the Provision and Use of Work Equipment Regulations 1998 (PUWER), HSE Guidance in UK.

(2) In accordance with these regulations, together with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the Contractor shall ensure that all Contractor's Equipment provided for use upon the Works is:

(a) Suitable and fit for the purpose for which it is intended;

(b) Safe for use, maintained in a safe condition and inspected to ensure it is correctly installed and used and does not subsequently deteriorate;

(c) Used only by people who have received adequate information, instruction and training;

(d) Accompanied by suitable health and safety measures, such as protective devices and controls. These shall include emergency stop devices, adequate means of isolation from sources of energy, clearly visible markings and warning devices; and

(e) Used for the designed and intended purpose.

4.1.3 Manufacturer's Documentation

The Contractor shall obtain a copy of the following official Manufacturer's documentation for all units of Contractor's Equipment:

(1) Safety instructions and recommendations.

(2) Operation, maintenance and repair manual.

		The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment. *I suggest the addition of the above clause to your draft.* NK: Agreed as the instructions and manuals are specified at some provisions in the JSSS.	The Contractor shall inform all Contractor's Personnel of the content of same, provide further safety training as necessary and ensure full compliance by all Contractor's Personnel with such instructions and recommendations to assist in enforcing the safe use of Contractor's Equipment.
4.1.3 Instruction for Contractor's Personnel Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including: (1) The scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved. (2) Types, capacities and numbers of units. (3) Work places, area limits and operational routes, restricted areas, locations of caution signs and fences.	**4.1.3 Instruction for Contractor's Personnel** Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including: (1) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved. (2) Types, capacities and numbers of units. (3) Workplaces, ~~area limits and~~ (JC16) operational routes, restricted areas, locations of caution signs and fences. JC16: Workplace の boundary という意味でつかわれているのであれば、workplace に含まれているので不要と考えます。 If the above workplace is used as meaning of boundary, it is not necessary because workplace include its boundary. NK: The term of workplaces is used to mean workplaces where the Contractor's Equipment is used. Because of it is same as locations and areas stipulated in (1) above, deleted To MD, please review this comment.	**4.1.4 Instruction for Contractor's Personnel** Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.8 [*Contractor's Method Statements*] and JSSS 1.15.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including: (1) ~~The~~ Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved. (2) Types, capacities and numbers of units. (3) ~~Workplaces, area limits and~~ (JCB16) operational routes, restricted areas, locations of caution signs and fences. To MD, please review this comment. *Draft states "work places"* *I recommend to maintain the original wording, it is clear and unambiguous.* NK: Agreed.	**4.1.4 Instruction for Contractor's Personnel** Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including: (1) Scope of work, locations and areas, work methods, dimensions, levels and quantities to be achieved. (2) Types, capacities and numbers of units. (3) Workplaces, area limits and operational routes, restricted areas, locations of caution signs and fences.
(4) The preservation of safe access, walkways and footpaths around the working areas and transportation areas. (5) Identities, location and scope of Spotters.	(4) ~~The~~ Preservation of safe access, walkways and footpaths around the working areas and transportation areas. (5) Identities, location (JC17) and ~~scope~~ role of Spotters. JC17: 4.1.5 の(1)の(d)では The identity of and location(s)となっているので 4.1.5 の表現に統一してください。 The 4.1.5 (1) (d) stipulate "The identity of and location(s). Please make (5) consistent expression same as 4.1.5. *4.1.5 (1)Operators shall be fully aware of the following:* *(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and* NK: Modified as commented and added referring 4.1.5.	(4) ~~The~~ Preservation of safe access, walkways and footpaths around the working areas and transportation areas. (5) ~~Identities, location (JCB17) and scope of Spotters.~~ Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used. ~~(6) Environmental impact mitigation (JCB18)~~	(4) Preservation of safe access, walkways and footpaths around the working areas and transportation areas. (5) Identities and roles of and location(s) for Spotters and the communication and signalling requirements, including equipment to be used.

(6) Environmental impact mitigation including required measures against vibration, noise, dust and the like.	(6) Environmental impact mitigation (JC18) including required measures against vibration, noise, dust and the like. JC18: これは環境のことを言っているのか、作業環境のことを示しているのか分からない。(多分作業環境のこと) であれば"Hazardous working conditions (if any) including required mitigation measures …"ですよね？ "Environmental impact effects including required mitigation measures against …"では？ It is not clear for which environment or working environment this (5) stipulates. If this is for working environment, is this to be stipulated "Hazardous working conditions (if any) including required mitigation measures …" Is this "Environmental impact effects including required mitigation measures against …"？ NK: This can be read for both environment impact to third parties and working environment in the Site. Modified to make clear. To MD, please review the comment and modify (6).	~~Environmental impact to third parties and workers including required measures against vibration, noise, dust and the like.~~ To MD, please review the comment and modify (6). *Modify as follows:* (6) Environmental impact including required measures for workers and third parties against vibration, noise, dust and the like. NK: confirmed.	(6) Environmental impact including required measures for workers and any other persons against vibration, noise, dust and the like.
(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.	(7) Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place. (JC19) JC19: ここの部分は本当によく分からない。英語として羅列されている事項のつながりが・・・"Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place."??? This sentence cannot be really understood. The connection of matters listed in English are not understandable. Is this "Safety requirements of working near the storage of Dangerous Goods or Hazardous Substances or the areas where Dangerous Work is taking place."? NK: Modified referring to the comment. To MD, please review the comment and modify (7).	(7) ~~Environmental conditions in the working area, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where Dangerous Work is taking place.~~ (JCB19) Safety measures for the environmental conditions in the working area and nearby areas for storage of Dangerous Goods or Hazardous Substances, in Hazardous Areas, and in operational areas or areas where Dangerous Work is taking place. NK: Modified referring to the comment. To MD, please review the comment and modify (7). *Please read conjointly; with the heading paragraph of this clause. The Contractor shall include details of the above in the Method Statement and Safety Plan for works involving the use of Contractor's Equipment and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such work. This clause lists information to be provided for environmental conditions and I suggest that no change to the original wording is necessary.* NK: understood.	(7) Safety measures for the environmental conditions in the working area, any nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, operational areas or areas where Dangerous Work is taking place.
(8) The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.	(8) The potential danger to ~~other~~ Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JC20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any ~~risk~~ accident or injury. JC20 (= JC2): この Chapter で三箇所出てくるようなのでまとめましょう。(in this Chapter called as "Concerned Personnel")	~~(8) The potential danger to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where Contractor's Equipment is to be used and (JCB20) who may be affected by the use of Contractor's Equipment and the required measures to avoid any risk accident or injury.~~ NK: Modified as commented. *Please refer to notes and suggested new clause in 4.1.1.* *A new definition is not necessary but I do agree that rewording the above could be beneficial and suggest the simplest solution is as follows:*	

	There are same phrase in 3 locations in this Chapter, therefore it is better to define as (in this Chapter called as "Concerned Personnel"). NK: Modified as commented.	(8) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury. NK: Confirmed.	(8) Potential danger to any persons who may be affected by the use of Contractor's Equipment and the required measures to avoid any accident or injury.
(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.	(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.	(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.	(9) Any potential hazards in the use of Contractor's Equipment including those which may create a risk of falling or overturning.
(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.	(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.	(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.	(10) Restrictions to the movement and operation of Contractor's Equipment such as existing structures, foundations, surfaces, underground or overhead services and dangerous goods storage.
(11) Measures for breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.	(11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.	(11) Measures to be taken in case of ~~for~~ breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance. *No comment.*	(11) Measures to be taken in case of breakdown, defect or fault in Contractor's Equipment including location of areas for inspection and maintenance.
(12) The name of the authorised operator for each unit of Contractor's Equipment.	(12) The name of the authorised operator for each unit of Contractor's Equipment. (JC21) JC21 (=JC1): 全体を通して、特に Tools についてはすべての要求事項が適用されるわけではないと思います。したがって、適用除外される可能性を上手に書き分ける表現になるよう工夫していただけますでしょうか。 (Tools(器具工具)について 適用されない箇所が多くあるため。(例:Operator の指名や責任者の掲示など)) Whole Provisions in this Chapter may not apply all to Tools, so please devise to stipulate possibility of exemption of some provisions. (There are many provisions which will not apply to Tools for example, appointment of Operator, post of a label showing the name.) NK: Modified as commented.	(12) ~~The~~ Name of the authorised operator for each unit of Contractor's Equipment. (JCB21) when authorised operator is necessary to be assigned. 4.1.4 Safety Training	**4.1.4 Safety Training**	**4.1.5 Safety Training**	**4.1.5 Safety Training**
The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.	The Contractor shall provide the Contractor's personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment.	(1) The Contractor shall provide the Contractor's Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment and including: *Because of your insertion and changes below, the above clause needs to be renumbered as (1) and the added clauses numbered as (a) etc. and the wording" and included is added* NK: Confirmed.	(1) The Contractor shall provide the Contractor's Personnel with health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*] taking account of the characteristics of the particular types of Contractor's Equipment and including:

The health and safety training shall be done to the personnel including the following items depending on the characteristics of the Contractor's Equipment with which the personnel will be engaged in works.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation and work with the Contractor's equipment when an abnormality occurs and report to the person in charge; and

(5) Prohibition from removing safety devices; and

(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:

The health and safety training shall be ~~done~~ provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment ~~with which the personnel will be engaged in works.~~(JC22)

JC22: この部分は蛇足なので削除。This phrase is superfluity.
NK: Deleted.

(1) Functions, performance, operation methods, inspection items, inspection method of safety device and emergency alarm device;

(2) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(3) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's equipment;

(4) Stop of the operation ~~and work with~~ of the Contractor's Equipment when an abnormality occurs and report to the person in charge;~~ and~~

(5) Prohibition ~~from~~ of removing safety devices; and

(6) Risks during operation of the Contractor's Equipment..

Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, (JC23) ~~also~~ include ~~prevention of traffic accidents on and off the Site for example including~~: (JC24)

JC23: 冒頭に交通事故の防止という言葉が入り、具体例においていちいち言わないように修正しています.
Phrase of prevention of traffic accidents is added to avoid necessity to stipulate repeatedly stipulate in each example.
NK: Modified.

JC 24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?
NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

(7) Particular safety training for transportation equipment operators for the purpose of prevention of traffic accidents on and off the Site including:

~~The health and safety training shall be provided to the personnel including the following items depending on the characteristics of the Contractor's Equipment. (JCB22)~~

NK: Deleted.

I do not understand the above comment but assume that the above added clause is not necessary because of duplication, I have therefore deleted.

Where is the following transferred from?

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

~~Particular safety training for transportation operators shall also include prevention of traffic accidents on and off the Site for example including:~~ (JCB23)

(2) Particular safety training for transportation equipment operators shall for the purpose of prevention of traffic accidents on and off the Site, including:

NK: Modified.

Modification is OK

JCB24: この下のナンバリングが変ではないでしょうか。
Is numbering below strange?

(a) Functions, performance, operation methods, inspection items, inspection method of safety and emergency alarm devices;

(b) Work procedure, signal and communication method at starting time of the operation, and daily inspection;

(c) Lockout and tagout procedures for shutting down operation, turning off the power, locking the starter and necessary measures for the time of cleaning and inspection of the Contractor's Equipment;

(d) Stop of the operation of the Contractor's Equipment when an abnormality occurs and report to the person in charge;

(e) Prohibit removal or isolation of safety devices; and

(f) Risks during operation of the Contractor's Equipment.

(2) Particular safety training for transportation equipment operators shall be for the purpose of preventing of traffic accidents on and off the Site and shall include:

(1) Driving rules for prevention of traffic accidents;

(2) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(3) Driving methods to prevent accidents including contact and collision with other persons, cycles, motorcycles and other vehicles;

(4) Driving methods to prevent accidents in overtaking other vehicles and undertaken by others;

(5) Driving methods to prevent accidents due to holes, bumps or obstacles on the road;

(6) Required inspection and maintenance before starting operation;

(7) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.5 Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that

(1) Operators shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Prohibition of removing, interfering with or overriding any safety devices;

(a) Driving rules ~~for prevention of traffic accidents~~ in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to ~~prevent accidents including~~ contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly ~~prevent accidents in~~ overtake ~~ing~~ other vehicles and to be undertaken by others

(e) Driving methods ~~to prevent accidents due to~~ when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation;

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.5 Requirements to Operators

Further to the requirements of JSSS 1.16 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO. The Contractor shall also ensure that

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures ~~possible risks~~ hazards and operation methods;

(b) The need to stop ~~all work~~ the operation when any defect or abnormality is detected;

(c) ~~Prohibition of removing, interfering with or overriding any safety devices;~~ (JC25)

JC25: 4.1.4 (5)に同じことが記載されているので削除します。
Deleted as same is stipulated in 4.1.4 (5).
NK: Deleted.

NK: Modified to that the above sentence is numbered as (7) and the clauses below are numbered (a) to (g).

Numbering requires correcting above and below because of your additional text.

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.6 ~~Qualification of Operators~~ Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

~~(c) Not to remove, interfere with or override any safety devices;~~ (JCA11) ~~Prohibition of removing, interfering with or overriding any safety devices;~~ (JCB25)

(a) Driving rules in general;

(b) Compliance with speed limits, signs, alcohol use, drugs and all other requirements the Laws of the Country;

(c) Driving methods to contact and collision with other persons, cycles, motorcycles and other vehicles;

(d) Driving methods to properly overtake other vehicles and to be undertaken by others;

(e) Driving methods when encountering holes, bumps or obstacles on the road;

(f) Required inspection and maintenance before starting operation; and

(g) Proper use of vehicles including behaviour and control of passengers, prevention of overcrowding, overloading and unauthorised passengers.

4.1.6 Requirements for Operators

Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators are appropriately qualified, skilled and experienced in operation of the Contractor's Equipment to which they are assigned and duly certified as such by the HSO.

(1) Operators shall safely and competently operate the Contractor's Equipment.

(2) Operators shall be fully aware of the following:

(a) Work procedures, hazards and operation methods;

(b) The need to stop the operation when any defect or abnormality is detected;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and (e) The procedures in case of emergency. (2) In addition, operators shall: (a) Safely and competently operate the Contractor's Equipment; (b) Operate all safety devices including emergency alarm and stop devices; and (c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility.	(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and (e) The procedures in case of emergency. (3) ~~In addition,~~ Operators shall: (a) ~~Safely and competently operate the Contractor's Equipment;~~ (b) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and (c) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility.~~-~~	(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used ~~and signals~~; and (d) The procedures in case of emergency. (3) ~~In addition,~~ Operators shall: ~~(a) Safely and competently operate the Contractor's Equipment;~~ (a) ~~Operate~~ Keep all safety devices including emergency alarm and stop devices activated; and (b) Inspect, clean, service and maintain the unit of Contractor's Equipment under their responsibility ~~and control or ensure that other qualified persons perform these operations~~. (JCA12) *Do not agree. The supervisor (whoever he is) may be responsible for managing servicing and maintenance but the operator is the primary person, he should not start or continue to use any equipment that he knows requires repair, service or maintenance.* NK6/19: the last paragraph "that other qualified persons perform these operations" is difficult to understand. Does it mean Operators shall control performing each other's operation? NK propose as follows: (c)Ensure that other qualified persons safely operate Contractor's Equipment.	(c) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used; and (d) The procedures in case of emergency. (3) Operators shall: (a) Keep all safety devices including emergency alarm and stop devices activated; (b) Keep their assigned unit clean and carry out regular inspections prescribed by the Contractor before start of operation; and (c) Ensure that the Contractor's maintenance personnel are made aware of any apparent defect or maintenance requirements and that such personnel have performed any required repair or maintenance before the start of operation.
4.1.6 Signalling (1) Signalling between operators and any associated workers shall only be carried out by the Spotters. (2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used.	**4.1.6 Signalling** (1) Signalling between operators and any associated workers shall only be carried out by the Spotters. (2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used.	**4.1.7 Signalling** (1) Signalling between operators and any associated workers shall only be carried out by designated personnel (hereinafter referred to as signallers). (2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used. *It can also mean video reversing camera however no comment.* NK: confirmed.	**4.1.7 Signalling** (1) Signalling between operators and any associated workers shall only be carried out by designated personnel. (2) Spotters shall be located in a safe place and where they can clearly see and be seen by the operator. (3) When it is not possible for Spotters to give direct visible and audible signals to the operator, other systems including hand-held radios or videophone must be provided and used.
4.2 INSPECTION, MAINTENANCE AND REPAIR **4.2.1 Requirements Generally** (1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective*	**4.2 INSPECTION, MAINTENANCE AND REPAIR** **4.2.4 Requirements Generally** (1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective* Equipment] the HSO shall ensure that all	**4.2 INSPECTION, MAINTENANCE AND REPAIR** **4.2.1 Requirements Generally** (1) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is	**4.2 INSPECTION, MAINTENANCE AND REPAIR** **4.2.1 Requirements Generally** (1) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational

Equipment] the HSO shall ensure that all Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official maintenance and repair manual.

(3) Inspection at the time when Contractor's Equipment is mobilised to the Site and before commencement of operation, for which the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning,
- safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and
- that all such units of equipment are in the condition required by the Contract;

(b) Ensure as a minimum that the daily and periodical check items listed below in this Sub Clause, have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when may be required in compliance with JSSS; and

Contractor's Equipment is inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment, taking account of the characteristics, capability and condition of the Contractor's Equipment, and in compliance with the manufacturer's official maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JC26) the Contractor shall:

JC26: 文として完結していないので修正しました。The sentence is not completed, so modified.
NK: Modified as commented.

(a) Inspect all units of Contractor's Equipment to ensure that

(i) all components are installed and functioning,

~~• all inspection and maintenance covers,~~

(ii) safety guards to prevent contact with moving parts and the like are in place, adequate and fit for purpose, securely fixed, and

(iii) ~~that~~ all such units of equipment are in ~~the condition required by the Contract~~ proper condition ; (JC27)

JC27: "契約"が機械の状況について要求するのか？in proper condition で良いのでは.
Dose the Contract request the conditions of equipment?
Can it be "proper condition"?
NK: Modified as commented.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JC28), have already been inspected and recorded;

JC28: 何を指すのか？不要ではないか。What do they mean? Is it necessary?
NK: Deleted as commented.

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JC29) required in compliance with JSSS; and

inspected, fully maintained and operational when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(3) ~~Inspection at the time when Contractor's Equipment is mobilised~~ When mobilizing Contractor's Equipment to the Site and before commencement of operation, ~~for which~~ (JCB26) the Contractor shall:
NK: Modified as commented.

No comment

(a) Inspect all units of Contractor's Equipment to ensure that

- all components are installed and functioning; and
- adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

To MD: Please review the JICA comment and NK proposal above and make the items above to one sentence.

"Covers" is from your draft and it is a usual and common term for inspection and maintenance covers that are usually screwed in position to allow access for inspection and maintenance. Equipment is not safe if these are missing which is frequently the case.

Otherwise no comment, edited as instructed.

NK: confirmed.

(b) Ensure as a minimum that the daily and periodical check items ~~listed below in this Sub Clause~~ (JCB28) have already been inspected and recorded;
NK: Deleted as commented.

No comment

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when ~~may be~~ (JCB29)required in compliance with JSSS; and

when it is mobilised to the Site. Thereafter all Contractor's Equipment shall be inspected, maintained and repaired before the commencement of the first and of all subsequent days of operation.

(2) Inspections shall include all items necessary to ensure the safe performance of the Contractor's Equipment including the following examples and any further requirements due to the characteristics, capability and condition of the Contractor's Equipment and in compliance with the manufacturer's official operation, maintenance and repair manual.

(3) When mobilising Contractor's Equipment to the Site and before commencement of operation, the Contractor shall:

(a) Inspect all units of Contractor's Equipment to ensure that:

(i) all components are installed and functioning; and

(ii) adequate covers and safety guards (to prevent contact with moving parts) are provided and securely fixed.

(b) Ensure as a minimum that the daily and periodical check items have already been inspected and recorded;

(c) Ensure that all inspection and maintenance records are available for inspection by the Engineer if and when required in compliance with JSSS; and

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. The Engineer may refuse to accept delivery to the Site any Contractor's Equipment which does not meet the requirements stipulated in the Contract.

(4) The Contractor shall undertake the following daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:

(a) Operating condition of engine, gearbox(s), drive shafts, pulleys and main components, emergency stop and safety devices, any defects or abnormalities in covers, doors and enclosures;

(b) Abnormal sounds, vibrations or smell;

(c) Leaks, levels and condition of lubricants, coolant, hydraulic fluid levels, and the like;

(d) Lights and indicators;

(e) Brakes, clutches, steering and operating devices and working devices;

(f) Cables, slings, ropes and chains;

(g) Protective covers are adequately provided over all rotating or moving parts;

(h) Attachments and tools such as buckets, grabs, etc.

(i) Cleanliness of each unit or item of Contractor's Equipment; and

(j) Cleanliness of each working area and removal of obstructions.

(k) Emergency kits such as warning flares and triangles, fire extinguisher, first aid kit and the like, as required by the Laws of the

JC29: 不要。Unnecessary.
NK: Deleted.

(d) If any inspection and maintenance records are incomplete or not available, the Contractor shall carry out inspections and maintenance to ensure that a full and acceptable record is available for all units of Contractor's Equipment.

In relation with the above, it should be noted that Contractor's Equipment shall be in a working and safe condition and fully compliant with the Contract when it is mobilised to the Site. (5) The Contractor shall undertake the following periodic inspection items, (at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair, and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (a) Engine compression pressure, valve clearance and other relevant parts of prime energy unit; (b) Gearbox, clutch, transmission, propeller shaft, differential and other parts of power transmission devices; (c) Drive wheels, idling wheels, vertical trunk rollers, belts, tires, wheel bearings and other parts of traveling devices; (d) Springs, shock absorbers and other parts of suspension devices; (e) Left and right rotation angle of steering wheel, knuckle, rod, arm and other parts of control devices; (f) Brake capacity, brake drum, brake shoe and other parts of braking systems; (g) Blades, booms, link mechanisms, buckets, wire ropes and other parts of work equipment; (h) Hydraulic pump, hydraulic motor, cylinder, safety valve and other parts of hydraulic equipment; (i) Voltage, amperage and relevant performance and components of electrical systems; (j) Body, operating devices, head guards, back stoppers, access doors, protective covers, ladders and steps, locking devices, warning alarm devices, direction indicators, tyre air pressures and lightning devices; and (k) Any additional inspection items stipulated in the manufacturer's official operation, maintenance and repair manual.

repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately;

(2) The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to

repair manual shall be applied.

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

4.2.5 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately and report to the person in charge;

(2) ~~The operator shall then identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the Contractor's Equipment manufacturer; and~~ Necessary repair shall be provided by qualified mechanics, electricians or engineers (JC30) ; and

JC30: オペレーターが不調の原因まで identify できるのでしょうか。また修理の主語がオペレーターになっていますがこれでよいのか？4.1.4(4)では不調の場合はストップして person in charge に報告することが想定されている。
Can operator identify causes? Is it correct that the main actor of repair is operator? The 4.1.4(4) stipulate *that Stop of the operation and work with of the Contractor's Equipment when an abnormality occurs and report to the person in charge;*

NK: Modified as commented.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.33 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(2) Necessary repair shall be provided by qualified mechanics, electricians or engineers.(JC30)

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPP*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to

(6) Operation of any unit of Contractor's Equipment shall not be allowed to commence until the HSO has certified that it is safe to do so.

(7) The Contractor shall prepare standard checklists for all inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.32 [*Health and Safety Records*].

4.2.2 Defects and Repair During Operation

(1) If an operator notices any defect or abnormality in the Contractor's Equipment during operation (such as abnormal noise, temperature, smell, etc.) the operator shall stop the operation immediately.

(2) Necessary repair shall be provided by qualified mechanics, electricians or engineers.

(3) The HSO shall ensure that no further operation shall resume unless the above has been complied with and the Contractor's Equipment has been re-inspected by him and certified in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPP*].

4.3 SAFETY REQUIREMENTS

4.3.1 General Safety Measures

In addition to other safety and health requirements of JSSS, the Contractor shall:

(1) Ensure that there is sufficient lighting to

perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like all as necessary to prevent any risk of injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

(3) Ensure that Contractor's Equipment is equipped with suitable ladders and steps for access to the operating cabin and also to all other levels and components to permit inspection, assembly, maintenance and repair of the equipment. When any Contractor's Personnel need to work at a height of 2 m or more, the Contractor shall take suitable measures in accordance with JSSS 2.5 [*Fall Prevention*], including the provision and use by all Contractor's Personnel of guide ropes and PFAS.

(4) Prohibit personnel other than operators, workers and other authorised personnel from entering the place where Contractor's Equipment is in use for the Works.

(5) Ensure that each unit of Contractor's Equipment is provided with appropriate numbers and types of fire extinguishing equipment and such other facilities where such equipment is necessary and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and fire safety procedures.

(6) Ensure that each working area where Contractor's Equipment is in use, is provided with appropriate numbers and types of first-aid equipment and such other facilities that are necessary to ensure safety and treat accidents and ensure that all operators and other Contractor's Personnel are trained in the use of such equipment and first-aid procedures.

---

perform all work safely and provide artificial lighting where necessary.

(2) Ensure that Contractor's Equipment is equipped with suitable protective safety devices such as covers, screens, guards, contact prevention devices, auto-stop devices, enclosures, barriers and the like, ~~all~~ as necessary to prevent ~~any risk of~~ injury to personnel from equipment or parts of equipment, where:

(a) There may be any risk of persons being hit by, caught or injured or entangled in any ropes, cables, sheaves, moving or rotating parts; and

(b) There may be any risk of persons being hit by flying debris, offcuts, or the like produced by the equipment.

slippage, collapse or fall, Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of the other Contractor's Equipment; and

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

slippage, collapse or fall, Contractor's Equipment shall be equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of ~~the other~~ another Contractor's Equipment nearby; and

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials.

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment shall be equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment shall be equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment shall ensure that excavator buckets never pass over the operator's seat of Contractor's Equipment;

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

Equipment is equipped with seatbelts or safety harnesses and that such seatbelts and harnesses are used;

(f) Where there is any risk of turnover, slippage, collapse or fall, Contractor's Equipment is equipped with a "Roll-Over Protective Structure" (ROPS);

(g) Where there is any risk of injury to operators due to falling objects Contractor's Equipment is equipped with a "Falling Object Protective Structure" (FOPS);

(h) Operators are aware that they shall pay careful and constant attention to the position of any workers near to the operating area and particularly when mobile equipment is reversing;

(i) Operators of excavating equipment are aware that excavator buckets shall never pass over the operator's seat of Contractor's Equipment;

(j) Workers shall not enter under a bucket which is loading material and shall keep away from dump trucks when loading or unloading materials; and

(k) No person shall ride on trucks, trailers or cargo bed other than cabin of vehicles unless permitted by the Law of the Country.

4.3.4 Safety Measures When Mobile Equipment Is Not in Use

(1) When mobile equipment is not in use, the Contractor shall ensure that operators:

(a) Park on surfaces which are level, sound, safe and suitable to support the equipment;

(b) Securely chock all wheels to prevent any movement;

(c) Lower attachments (buckets and blades etc.) to the ground;

(d) Stop and isolate the functions completely, fully engage brakes and lock the brake pedal; and

(e) Lock the equipment and store the starter key in the designated place.

(2) The Contractor shall prohibit all persons other than authorised personnel from entering the area where Contractor's Equipment is parked.

4.3.5 Safety Measures During Connection of Attachments The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (1) Prevent any risk due to movement or fall of attachments. (2) Prevent accidental movement or operation causing persons to be trapped.	**4.3.5 Safety Measures During Connection of Attachments** The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment:(JC36) JC36: こうした事態が発生するのを防ぐために具体的な記述を記載してください。 ・安定したフレームにアタッチメントをおいて着脱する。 ・エンジンを切る その他、4.3.4 の(1)で参考になるようなことを具体的に記述してください。 Please stipulate concrete measures to avoid occurrence of accident mentioned in 81) and (2) for example, - connecting and removing attachments which are located on stable frames, - Put off engine - Other concrete measures referring to 4.3.4 (1). NK: added in (1) and (2). (1) Prevent any ~~risk~~ accident due to movement or fall of attachments. (2) Prevent accidental movement or operation causing persons to be trapped.	**4.3.5 Safety Measures During Connecting and Removing of Attachments** The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (JCB36) (1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground. (2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.	**4.3.5 Safety Measures During Connecting and Removing of Attachments** The Contractor shall take the following measures when connecting and removing attachments (buckets, blades etc.) to Contractor's Equipment: (1) Prevent any accident due to movement or fall of attachments by taking safety measures for example, connecting and removing attachments after locating them on stable and sound frames or on the ground. (2) Prevent accidental movement or operation causing persons to be trapped attachments by taking safety measures for example, parking of the Contractor's Equipment such that it cannot move (as mentioned in JSSS 4.3.4 (1) (a), (b) and (d)) and stop the engine.
4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment (1) Select and use trailers, ramps, tracks and climbing equipment or other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.	**4.3.6 Safety Measures during Loading and Transporting of Contactor's Equipment (JC37)** JC37: 4.3.6 では積み上げ・積み下ろし作業を論じている。輸送時のこととしてみると、おかしなことがある((3)とか)。 (1) Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.	**4.3.6 Safety Measures During Loading and Transporting of Contractor's Equipment** ~~(1)~~ Select and use trailers, ~~ramps~~, tracks, their accessary and/or ~~climbing equipment or~~ other equipment which is suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended. To MD, may we know this track is truck. It seems JICA misunderstood and revised to trailer/track. If misunderstood the original shall be used. *This is from your original transportation draft which stated – "Use vehicles with climbing equipment or special equipment when construction heavy equipment is transported by trailers or tracks".* *It is correct as it was i.e. not "trucks" it is "tracks" and so is "ramps". This clause refers to selecting trailers and for getting equipment onto the trailers although "ramps" is more understandable than tracks.*	**4.3.6 Safety Measures During Loading and Transporting of Contractor's Equipment**

		I suggest minor editing as follows:	(1) Select and use trailers with associated ramps, other loading equipment and restraints which are suitable for the particular type, size and weight of the Contractor's Equipment and fit for the purpose for which they are intended.
(2) Select location and loading and unloading areas which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.	(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.	(2) Select location and ~~loading and unloading~~ areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.	(2) Select location and areas for loading and unloading which have sufficient space and surfaces which are level, sound, safe and suitable to support all of the equipment.
(3) Securely chock all trailer wheels to prevent any movement.	(3) Securely chock all wheels of trailer/track ~~wheels~~ to prevent any movement. NK: Added "during loading of Contactor's Equipment.	(3) Securely chock all wheels of trailer/~~track wheels~~ to prevent any movement ~~during loading of Contractor's Equipment.~~ NK: Added "during loading of Contactor's Equipment".	(3) Securely chock all wheels of trailers to prevent any movement.
(4) Stop and isolate the functions of trailer and load and fully engage brakes.	(4) Stop and isolate the functions of trailer/track and load and fully engage brakes.	*OK but no need to add as the clause heading describes this already No need "track"* (4) Stop and isolate the functions of trailer/track and load and fully engage brakes.	(4) Stop and isolate the functions of trailers and load and fully engage brakes.
(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.	(5) Ensure trailers/tracks are equipped with tie down devices to allow secure fixing of load.	*No need "track"* (5) Ensure trailers/track are equipped with tie down devices to allow secure fixing of load.	(5) Ensure trailers are equipped with tie down devices to allow secure fixing of load.
(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits. (7) Ensure that all lights, brakes, steering and safety devices are working properly.	(6) Ensure that the weight and height of the loaded Contractor's Equipment does not exceed actually required or legal limits. (7) ~~Ensure that all lights, brakes, steering and safety devices of the trailer/track working properly.~~ (JC38) JC38: これ、必要でしょうか？単に運ばれている時の話ですし、故障したから運ばれる場合もあるのでは？ Is (7) necessary? This is only for time of transporting equipment. May there be a case that Contactor's Equipment of out of order is transported? NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order. This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting.	*No need "track"* (6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits. (7) Ensure that all lights, brakes, steering and safety devices are working properly. . (JCB38) NK: (7) specifies for trailer/track to transport Contactor's Equipment but not the Equipment of out of order. This (7) will be deleted because the (7) is provisions for Safety Measures during Loading and Transporting *Yes, I think it is necessary as trailers are very often old, not road-worthy, unsafe and commonly without operating electrics or lights or even brakes. I also suggest that it should stay here as it should be checked anyway when the Contractor's Equipment has been loaded.*	(6) Ensure that the weight and height of the loaded Contractor's Equipment does do not exceed actually required or legal limits. (7) Ensure that all lights, brakes, steering and safety devices are working properly.
(8) Ensure that authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer.	(8) Ensure that ~~suitable load limit~~ authorized maximum loading capacity, height, speed limit and any other required signage is applied to the trailer/track.	*Local law seems often to cover tractors but not detachable trailers* ~~(8) Ensure that suitable load limit authorized maximum loading capacity (JCA28) load limit, height, speed limit and any other required signage is applied to the trailer/track.~~ *I suggest edit as follows:* (8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.	(8) Ensure that suitable, clear and legally compliant signage is attached to the trailer visibly indicating the maximum safe loading capacity, height of load, width, speed limits and any other restrictions or required information.

		~~(9) Ensure that materials are loaded evenly.~~ (JCA28a) *No problem to transfer above but suggest that the following modified clause is included here also:* (9) Ensure that trailers are loaded evenly.	(9) Ensure that trailers are loaded evenly.
(9) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.	(9) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains or other fixings and tensioned to prevent any movement during transit.	(10) Ensure that Contractor's Equipment is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any movement during transit.	(10) Ensure that Contractor's Equipment loaded onto trailers is braked, wedged, securely locked in position and tied to the trailer with adequately sized chains, slings and other fixings and tensioned to prevent any movement during transit.
(10) Place any attachments on the trailer and securely tie down.	(10) Place any attachments on the trailer/track and securely tie down.	(11) Place any attachments on the trailer/~~track.~~ and securely tie down. *No need "track"*	(11) Place any attachments on trailers and securely tie down.
(11) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.	(11) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.	(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening. *No comment (but no need)*	(12) Inspect the tie-down tensioning, before and at intervals during transportation of Contractor's Equipment to ensure that there is no slackening.
		~~(10) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.~~ (JCA28a) *No problem to transfer above but suggest that the following modified clause is included here also:* (13) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.	(13) Inspect chains, slings and other fixings for securing transported Contractor's Equipment and if any abnormality is found, replace immediately.
4.3.7 Safety Measures During Loading and Transporting of Materials (1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic, third parties, structures adjacent to the transportation route, obtain all necessary prior permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements.	**4.3.7 Safety Measures During Loading and Transporting of Materials** (1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to general traffic (JC39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JC40) permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements. JC39: general traffic? To MD: Please review this change to public traffic. JC40: Prior は後に before があるから不要。 "Prior" is not necessary as there is "before". NK: Deleted as comented.	**4.3.7 Safety Measures During Loading and Transporting of Materials** (1) When transporting heavy or long goods on public roads, select roads on which the transportation does not pose danger to ~~general~~ public traffic (JCB39), third parties, structures adjacent to the transportation route, obtain all necessary ~~prior~~ (JCB40), ~~–~~permission from the relevant authorities including police, road authority before commencement of transportation and comply with all requirements. To MD: Please review this change to public traffic. *Change is not necessary and has little or no meaning.* *This is transportation on "public roads" anyway (which does have meaning) and any traffic thereon is covered by "general"* NK: Deleted as comented.	**4.3.7 Safety Measures During Loading and Transporting of Goods** (1) When transporting heavy or long Goods on public roads, select roads on which the transportation does not pose danger to other traffic, third parties, structures adjacent to the transportation route, obtain all necessary permission from the relevant authorities including police and road authority before commencement of transportation and comply with all requirements.

(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements. (3) Ensure that materials are loaded evenly (4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties; (5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.]	(2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the Engineer before commencement of the transportation and comply with all requirements. (3) Ensure that materials are loaded evenly (4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties; (5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.	*Agreed.* (2) When transporting heavy or long goods within the Site, select suitable route where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO ~~Engineer~~ before commencement of the transportation and comply with all requirements. (3) Ensure that materials are loaded evenly (4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties; (5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately. *I think that the above should correctly be changed from Engineer to HSO. Contractor is responsible for all such arrangements.* NK: agreed.	(2) When transporting heavy or long mateerial Goods within the Site, select suitable routes where the transportation does not pose danger to existing permanent or temporary buildings or structures or other works and obtain the consent of the HSO before commencement of the transportation and comply with all requirements. (3) Ensure that Goods are loaded evenly. (4) Secure all loads with adequate and tensioned slings and cover with protective sheets, to avoid any fall or collapse of the conveyed articles and prevent any risk to workers and third parties. (5) Inspect slings for securing transported materials and if any abnormality is found, replace immediately.
4.3.8 Roads in the Site	**4.3.8 ~~Roads~~ Temporary Motor Way in the Site (JC40)** JC40: 仮設で作られる機械専用通路のことと理解していますが、英語の正しさについては MD 氏に確認願います。 We understood this Clause is for exclusive use roads temporary constrcuted. Please ask MD to confirm the title and content. NK: 和文では次のように作業環境と規定していました。 *5.4.1 運搬車両の作業環境* *請負者は、運搬車両を用いた作業を行う場合には、運搬作業における現場内での安全な作業環境を確保するために、次の措置を講じなければならない。* *(1) 運行経路について必要な幅員を保持すること、…。* *(2) 運行経路の必要と認められる箇所には、制限速度を示す標識…。* *(3) 運搬車両の走路と歩行者の安全通路を明示し、…。* *(4) 規模の大きな工事現場においては運搬専用道路を設け、…。* *(5) 夜間の運搬作業時には、…。* Site 外の公道の安全措置は道路管理者が行うべきことのため、和文（案）を参考に、現場内の運搬道路の安全措置とタイトルを変更することを提案します。 Japanese JSSS stipulate as follows: *5.4 Transport Works by Transportation Vehicles* *5.4.1 Work Environment* *The Contractor shall take the following measures for the safety working environment in the Site for operation of transportation vehicles.* *(1) Take measures for the transportation road …;*	**4.3.8 ~~Access Roads (JCA29)~~ ~~Roads in the Site~~ ~~(JCB40)~~ Temporary Transporting Roads in the Site** To MD, please review the title. *"Access Roads" is the correct title and is the correct expression to use.* *An "access road" is not specific as you suggest it is any road which enables traffic to reach (access) a particular place or area. It is a common and correct expression for use in construction.* *It is an expression that needs to be general also and may actually cover roads outside the Site also as these are still within the Contractor's responsibility. FIDIC refers to "access routes" outside the site (which are still the contractor's responsibility) generally meaning routes over existing roads. The use of "access roads" does not conflict with FIDIC or with any other part of JSSS.* *Your statement that the road authority shall take "safety measures in public roads outside of the site" is not completely correct within the context of this clause and is not necessary.* *Also, these are not just "temporary roads", they may also be:* *Permanent existing roads within the Site (outside is covered by FIDIC)* *New permanent roads within the Site to be constructed under the contract.* *Semi-completed new permanent roads within the Site*	**4.3.8 Site Access Roads**

(1) Take measures for ensuring that ~~access~~ roads in the Site are of suitable construction, ~~of~~ sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

---

(2) Put signboards indicating speed limit …;
(3) Separate roads for vehicles and walkways…;
(4) In large construction site, provide exclusive transport roads …; and
(5) Provide sufficient lighting facilities …;.
Safety measures in public roads out side of the Site shall be taken by the road authority.

NK: We propose to revise the title to Safety Measures for Temporary Transporting Roads in the Site referring to Japanese JSSS.

To MD, please review the title.

(1) Take measures for ensuring that access roads in the Site (JC41)are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

JC41: 同上。Ditto

NK: Ditto.

(2) rovide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction site, provide exclusive transport roads which are one-way if possible, and passing areas at narrow roads.

(5) Provide sufficient lighting facilities at necessary places along the roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with solid surface (paved, graded or compacted as appropriate) , screens(JC42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

JC42: What is screen?

NK: It means fence screen such as shown in the photo below.

Temporary roads, temporary routes or tracks.

Dirt roads or tracks

As there is obviously some lack of clarity or misunderstanding, and whilst there is no real need for any change to the original text of this clause I suggest changing it to "Site Access Roads".

There is no need to change any of the content of the clause.

NK: understood above.

~~(1) Take measures for ensuring that access roads in the Site (JCB41) Temporary Transporting Roads in the Site are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.~~

(1) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(5) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens(JCB42), fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

---

(1) Take measures for ensuring that Site access roads are of suitable construction, of sufficient width, free from potholes, uneven settlement and collapse.

(2) Provide signs indicating height and weight restrictions, bends, speed limits, intersections, dangerous places and the like (road shoulders, cliff edges.).

(3) Separate roads for vehicles and walkways for workers and provide passing area for vehicles at places where the road is narrow.

(4) In large construction sites, provide exclusive transport roads which are one-way if possible and provide passing areas on narrow roads.

(5) Provide sufficient lighting facilities at necessary places along roads when work operating in night.

4.3.9 Additional Requirements for Static Equipment

(1) The Contractor shall design and construct suitable foundations and support structures for static equipment with paved surfaces, screens, fencing and associated facilities for storage of material and product and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended. Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors

(1) General

(a) The Contractor shall undertake the daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further

Unless otherwise stated in the Contract, all such foundations, support structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works.

All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and Material Conveyors (JC43)

JC43: ポータブルコンベヤーと違うことをどこかで記載する必要があるのでは。このスペックはポータブルコンベヤーには適用しない。
It is necessary to describe that the material conveyors does not include portable conveyors in JSSS, and the provisions for the material conveyors does not apply to the portable conveyors.

NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

(1) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [INSPECTION, MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official maintenance and repair manual).

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

No comment, no change necessary.

4.3.10 Additional Requirements for Personnel and Goods Elevators and ~~Material~~ Conveyors

NK: Portable conveyors is added in 4.1.1 Scope (7) (c) and specified in (1) below as commneted.

What exactly do you mean by "portable conveyors" for use in construction?

Why are they so different in a safety sense to any other type of temporary mobile conveyor?

NK6/19: 安衛則 151 条 77～83 はコンベヤーについて規定しているが、固定と移動式の区別はしていない。これらの安全要求事項に違いがないため、JCB43 のコメントへの対応は、Portable conveyor も含む規定を提案します。

NK6/19: Japanese regulation stipulate for conveyors without separating portable and static (fixed) conveyors. The safety requirements are almost same.
We will specify for both conveyors.

(1) General

(a) The requirements for material conveyors stipulated in t4.3.10 does not apply to portable conveyors.

Why not? What are the requirements for "portable conveyors" and where are they specified?

NK6/19: We will specify for both conveyors here.

(b) The Contractor shall undertake the ~~following additional~~ daily and periodical inspection ~~items~~ in addition to the items stipulated in JSSS 4.2 [INSPECTION,

(2) Unless otherwise stated in the Contract, all remaining aggregate, rock, cement, bitumen and the like used by or processed with the static equipment shall be removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer.

4.3.10 Additional Requirements for Personnel and Goods Elevators and Conveyors

(1) General

(a) The requirements for conveyors stipulated in this clause apply to portable and material conveyors;

(b) The Contractor shall undertake the daily and periodical inspection in addition to the items stipulated in JSSS 4.2 [Inspection, Maintenance And Repair], JSSS 4.2.1 [Requirements Generally], (4) and (5) (or

operation of the Contractor's Equipment is permitted: (b) The Contractor shall post the maximum load capacity and any restrictions on the use. (2) Personnel and Goods Elevators (a) Additional daily inspection items (i) Defects or operational faults in elevator enclosures, doors, guide-rails and runners; (ii) Defects or operational faults in emergency stop and alarm systems; (iii) Defects or operational faults in power, lighting and control systems; (iv) Defects or operational faults with interphone systems; (v) Defects or operational faults in brakes, clutches; and (vi) Defects or operational faults of sheaves and pulleys. (b) Additional periodical inspection items (i) Defects or operational faults in daily inspection items; (ii) Defects or operational faults in wire ropes; (iii) Defects or operational faults in winch and its foundation; and (iv) Defects or operational faults in supporting structures, guy ropes, fixings and anchors. (3) Belt Conveyors (a) Additonal safety measures	The Contractor shall also carry out any maintenance and repair, and obtain re-certification of the HSO for further operation; (c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (d) The Contractor shall post the maximum load capacity and any restrictions on the use. (2) Personnel and Goods Elevators (JC44) JC44: 以下のように、(b)、(c)も同様に直してください。(3)も同様。 Please modify (b) (c) and (3) as below. NK: Modified. (a) Additional daily inspection items shall include to check defects or operational faults with respect to: (i) ~~Defects or operational faults in~~ elevator enclosures, doors, guide-rails and runners; (ii) ~~Defects or operational faults in~~ emergency stop and alarm systems; (iii) ~~Defects or operational faults in~~ power, lighting and control systems; (iv) ~~Defects or operational faults with~~ interphone systems; (v) ~~Defects or operational faults in~~ brakes, clutches; and (vi) ~~Defects or operational faults of~~ sheaves and pulleys. (b) Additional periodical inspection items shall include to check defects or operational faults with respect to: (i) ~~Defects or operational faults in~~ daily inspection items; (ii) ~~Defects or operational faults in~~ wire ropes; (iii) ~~Defects or operational faults in~~ winch	MAINTENANCE AND REPAIR], 4.2.1 [Requirements Generally], (4) and (5) as specified below, (or at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (c) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted: (d) The Contractor shall post the maximum load capacity and any restrictions on the use. (2) Personnel and Goods Elevators(JC44) (a) Additional daily inspection items shall include checking for defects or operational faults with the following: ~~(i) Defects or operational fa~~ (i) ~~ults in~~ elevator enclosures, doors, guide-rails and runners; (ii) ~~Defects or operational faults in~~ emergency stop and alarm systems; (iii) ~~Defects or operational faults in~~ power, lighting and control systems; (iv) Defects or operational faults with interphone systems; (v) Defects or operational faults in brakes, clutches; and (vi) Defects or operational faults of sheaves and pulleys. (b) Additional periodical inspection items shall include checking for defects or operational faults with the following: (i) Defects or operational faults in daily inspection items; (ii) Defects or operational faults in wire ropes; (iii) Defects or operational faults in winch and its foundation; and (iv) ~~Defects or operational faults in~~	at intervals required by the manufacturer's official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted; and (c) The Contractor shall post the maximum load capacity and any restrictions on the use. (2) Personnel and Goods Elevators (a) Additional daily inspection items shall include checking for defects or operational faults with the following: (i) Elevator enclosures, doors, guide-rails and runners; (ii) Emergency stop and alarm systems; (iii) Power, lighting and control systems; (iv) Interphone systems; (v) Brakes, clutches; and (vi) Sheaves and pulleys. (b) Additional periodical inspection items shall include checking for defects or operational faults with the following: (i) Daily inspection items; (ii) Wire ropes; (iii) Winch and its foundation; and (iv) Supporting structures, guy ropes, fixings and anchors.

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to protect workers required to work below the conveyors.

(v) Riding of workers on the moving belts of the belt conveyors shall be prohibited.

(b) Additional daily inspection items

(i) Defects or operational faults in prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) Defects or operational faults in guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items; and

and its foundation; and

(iv) ~~Defects or operational faults in~~ supporting structures, guy ropes, fixings and anchors.

(3) ~~Belt~~ Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor.

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location.

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position.

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed .

(v) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include to check defects or operational faults with respect to:

(i) ~~Defects or operational faults in~~ prevention devices against uncontrolled run and reverse run, and emergency stop switches; and

(ii) ~~Defects or operational faults in~~ guards.

(c) Additional periodical inspection items

Defects or operational faults in daily inspection items; ~~and~~(JC45)

JC45: There is no sentence after "and".
NK: Deleted.

~~(1) General Requirements~~

~~The Contractor shall post the maximum load capacity and any restrictions on the use.~~

~~(2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer's official maintenance and repair manual),~~

supporting structures, guy ropes, fixings and anchors.

(3) ~~Belt~~ Material Conveyors

(a) Additonal safety measures

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location;

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position;

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided ~~to protect workers required to work below the conveyors~~ to prevent fall of the materials being conveyed; and

(v) Riding of workers on the moving belts ~~of the belt conveyors~~ shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) ~~Defects or operational faults in~~ overrun and reverse run prevention devices; against uncontrolled run and reverse run,

(ii) emergency stop switches; and

(iii) Defects or operational faults in guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items. ~~and~~ (JCB45)

(3) Conveyors

(a) Additonal safety measures:

(i) Conveyor systems shall be equipped with an audible warning signal to be sounded immediately before starting up the conveyor;

(ii) Means for stopping the motor or engine shall be provided at the motor or engine location;

(iii) Emergency stop switches shall be provided and be arranged so that the conveyor cannot be started again until the actuating stop switch has been reset to running or "on" position;

(iv) Where a conveyor passes over work areas, roads and walkways, suitable guards shall be provided to prevent fall of the materials being conveyed; and

(v) Riding of workers on the moving belts shall be prohibited.

(b) Additional daily inspection items shall include checking for defects or operational faults with the following:

(i) Overrun and reverse run prevention devices;

(ii) Emergency stop switches; and

(iii) Guards.

(c) Additional periodical inspection items, shall include for checking for defects or operational faults with daily inspection items.

	~~carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~ ~~(a) Defects or operational faults in elevator enclosures, doors, guide rails and runners;~~ ~~(b) Defects or operational faults in emergency stop and alarm systems;~~ ~~(c) Defects or operational faults in power, lighting and control systems;~~ ~~(d) Defects or operational faults with interphone systems;~~ ~~(e) Defects or operational faults in brakes, clutches; and~~ ~~(f) Defects or operational faults of sheaves and pulleys.~~ ~~(3) The Contractor shall undertake the following additional periodical inspection items, (at intervals required by the manufacturer's official maintenance and repair manual), carry out any necessary maintenance and repair, and obtain re-certification of the HSO before any further operation of the Contractor's Equipment is permitted:~~ ~~(a) Defects or operational faults in supporting cables and wire ropes; and~~ ~~(b) Defects or operational faults in supporting structures, guy ropes, fixings and anchors.~~		
4.3.11 Additional Requirements for Tools, Tackle and Small Equipment (1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected. (2) Any repairs shall be carried out by the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.	**4.3.11 Additional Requirements for Small Equipment, Tools and Tackle** (JC46) JC46: これらを総称して Tools でいいのでは. Tools and Tackle can be called as "Tools". NK: Defined "Tools2 in 4.1.1 (7) above. (1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected. (2) Any repairs shall be carried out by competent persons approved by the HSO ~~the manufacturers recommended repair agents and using the manufacturers genuine or recommended spare parts.~~ (JC47) JC47: Tools の修理に代理店を使うことはレアー。所謂 competent person が HSO に指名されたものであればいいとしたい。 あくまでも理想論。僻地では無理 " as much as possible" を加えてみては	**4.3.11 Additional Requirements for ~~Tools, Tackle and~~ Small Equipment and Tools** NK: Defined "Tools2 in 4.1.1 (7) above. *See 4.1.1 and 4.1.1 (7), this change is fine.* (1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected. ~~(2) Any repairs shall be carried out by competent persons approved by the HSO.~~	**4.3.11 Additional Requirements for Small Equipment and Tools** (1) Accessories and attachments shall be the standard types obtained from or recommended by the manufacturer of the equipment to which they are connected.

(3) All equipment shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.	It is few for agents to repair them, so it is replaced with competent persons approved by the HSO. It is ideal for agent to repair them, so how about to add “as much as possible”. NK: Modified as commented. (3) All equipment (JC48), tools and tackle shall be tested by competent persons after any repair or replacement of parts, before such equipment is put back into use. JC48: マイナーなものなので、re-certified まではしないと思います。 It may not be re-certified because they are minor equipment. NK: We would like to stipulate test before use to avoid injury of workers but not request to be certified. Therefore, it is left with modification as it is.	NK: Modified as commented. *Change to repair agents may be OK however it now ignores any mention of the use of genuine spare parts which I suggest is important even though it may not always be followed! I suggest the following be added in place of the above.* (2) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer’s genuine or recommended spare parts. NK: agreed. (3) All small equipment (JCB48) and Tools shall be tested and re-certified by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use. *This is OK.*	(2) Any repairs shall be carried out by competent persons approved by the HSO and using the manufacturer’s genuine or recommended spare parts. (3) All small equipment and tools shall be tested by the HSO as safe for use after any repair or replacement of parts, before such equipment is put back into use.
4.3.12 Additional Requirements for Electric Powered Equipment	**4.3.12 Additional Requirements for Electric Powered Equipment (JC49) other than small equipment and tools** JC49: ここで規定する電動機械は何かを明確にしないと混乱してしまう。ポータブルのものや Tool の類は含まれないと理解しました。 It is confused because it is not clear what are Electric Powered Equipment. We undestood it does not include portable equipment and tools. NK: The Electric Powered Equipment was defiend in 4.1.1 (8) in last draft R2 as follows: *(8) Electric powered equipment means portable electric powered mobile equipment or tools.* The (8) was deleted by JICA comment JC13 and 14. NK: Definition is added in (1) below.	**4.3.12 Additional Requirements for Electric Powered Equipment (JCB49)**	**4.3.12 Additional Requirements for Electric Powered Equipment**
(1) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted: (a) All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects	(1) Electric powered equipment specified in 4.3.12 is portable electric powered mobile equipment or tools among small equipment and Tools listed in 4.1.1 (7). (2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted: (a) ~~All equipment is provided with Earth Leakage Circuit Breakers (ELCB) and that these are working properly with no defects or operational faults;~~ Defects or	(1) Electric powered equipment specified in 4.3.12 shall include portable electric powered mobile equipment or tools and shall comprise a part of the small equipment and tools listed in 4.1.1 (7). (2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted: ~~(a) Defects or operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JCB50)~~ NK: Modified as commented. (NK deleted this (a) and specified	(1) Electric powered equipment specified in this clause shall include portable electric powered mobile equipment or tools and shall form a part of the small equipment and tools listed in JSSS 0 (7). (2) The Contractor shall undertake the following additional daily inspection items, (or at intervals required by the manufacturer’s official operation, maintenance and repair manual), carry out any necessary maintenance and repair and when necessary obtain re-certification of the HSO before any further operation of the Contractor’s Equipment is permitted:

or operational faults;	operational faults of Earth Leakage Circuit Breakers (ELCB), if any; (JC50) JC50: 表現の横並びをとるとこのようになるのではないか？ (2)(d)では ELCB なるものは必須ではない記述になっている The sentence will be as modified to make same listing style below. (2) (d) stipulates ELCB is not compulsory. NK: Modified as commented.	in (3) (d)). *Note to NK:* *I strongly recommend that this entire subclause be reviewed from the electrical safety perspective by your professional electrical specialist.* *I had also previously requested that this part be coordinated with JSSS 6.7 Temporary Electrical Installations but this does not appear to have happened and I again repeat this request as the two sections are not currently coordinated from the electrical safety aspect.* *I suggest that the above reference to ELCB (unless changed to RCD) should not be changed, and preferably 3(d) and 3(e) below should be changed as for safety purposes as either ELCB, RCD or other safety measures are essential.* *The fact that many JICA works are being executed in developing countries in my opinion should not in any way affect the specified level of safety in JSSS.* NK6/19: NK will request NK electrical expert after submission of DFR.	
(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and (c) Damage to insulation and protective coverings of all wires and cables including flexible cables (d) Damage to plugs, sockets, transformers and all wiring fittings and appliances (2) The Contractor shall comply with the following additional safety requirements: (a) Use weatherproof switches with covers, securely fixed in accessible and dry places;	(b) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; and (c) Damage to insulation and protective coverings of all wires and cables including flexible cables (d) Damage to plugs, sockets, transformers and all wiring fittings and appliances (3) The Contractor shall comply with the following additional safety requirements: (a) Use weatherproof switches (JC51) with covers, securely fixed in accessible and dry places; JC51: 防爆タイプ(anti-explosion, if needed)が必要な場合も記載しては？ We propose to specify anti-explosion type, if needed. NK: 防爆タイプの電動器具の配置が必要な場所は、可燃性のガスなどを取り扱っている工場などです。ODA 対象の工事現場では一般的な規定ではないため、追記しないことと致します。 参照：https://www.mars-tohken.co.jp/solution/model/detail/explosion-proof.html Anti-exposition type equipment shall be provided at places such as factory to handle flammable gas. It is not general requirement in ODA construction sites, so not added it.	(a) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; (b) Damage to insulation and protective coverings of all wires and cables including flexible cables; and (c) Damage to plugs, sockets, transformers and all wiring fittings and appliances. (3) The Contractor shall comply with the following additional safety requirements: (a) Use ~~metal clad~~ waterproof ~~weatherproof~~ switches and socket outlets with covers, securely fixed and located in accessible and dry places; *No comment, however "metal clad switches" are an understandable construction term for metal faced heavy duty fittings commonly used for external and temporary works.* *Maybe also change "weatherproof" to "waterproof"* *Please refer to my recommendation above regarding review by electrical specialist.*	(a) Defects or operational faults with grounding such as disconnection of grounding wire and insecure fixing of grounding electrodes; (b) Damage to insulation and protective coverings of all wires and cables including flexible cables; and (c) Damage to plugs, sockets, transformers and all wiring fittings and appliances. (3) The Contractor shall comply with the following additional safety requirements: (a) Use waterproof switches and socket outlets with covers, securely fixed and located in accessible and dry places;
(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings; (c) Use rubber cabtyre cables for all electrical power equipment;	(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings; (c) Use rubber cabtyre cables for all electrical power equipment;	(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings; (c) Use rubber cabtyre cables for all electrical power equipment;	(b) Label and paint electrical power and switch boxes with warning signs and coloured hazard markings;

(d) Wherever possible provide an ELCB's to each item of electrical equipment.	(d) Wherever possible provide an ELCB's to each item of electrical equipment.	(d) Wherever possible provide an ELCB's to each item of electrical equipment;	(c) Use rubber cabtyre cables for all electrical power equipment; (d) Wherever possible provide an ELCB (Earth Leakage Circuit Breaker) or RCD (Current Sensing Device) in the electrical supply to each item of electrical equipment;
(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.	(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded.	(e) If for any reason, an ELCB cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded; *Please refer to my recommendation above regarding review by electrical specialist and coordinate (d) and (e) above.* *ELCB or RCD?* *Previous issue MD notes:* *Please coordinate 7.7 Temporary Elect. Installations.* *MD reply: is this part necessary? It seems that it is better covered by 7.7 (6.7)* *Electric leakage prevention and disconnection device is important device.* *MD - Yes I am aware of that but please note that **ELCB** is the old name and refers to voltage operated devices that may no longer be available, it is advised these are replaced if found.* ***RCD** is specified in Chapter 7.7, please advise what you want to use??* NK6/19: NK will ask NK expert these provisions after submission of DFR.	(e) If for any reason, an ELCB or RCD cannot be provided, ensure that the metal exterior of the electrical power supply, metal outer casing of electric motors and the electrical equipment are all grounded;
(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars and the like to prevent damage to the insulation and protective covering. (g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water and not wearing rubber soled insulated footwear or when the electric power equipment is wet;	(f) Avoid hanging electric cables and wires directly on nails, reinforcing bars and the like to prevent damage to the insulation and protective covering. (g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water ~~and not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet;	(f) Avoid hanging electric cables and wires directly on nails, reinforcement ~~or scaffolding tubes~~ and the like to prevent damage to the insulation and protective covering; *"Log scaffolding" has no meaning, scaffolding has meaning.* (g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or ~~is not~~ without wearing rubber soled insulated footwear or when the electric power equipment is wet; *Your change is not grammatically correct, the original*	(f) Avoid hanging electric cables and wires directly on nails, reinforcement or scaffolding and the like to prevent damage to the insulation and protective covering; (g) Turn off the power before repairing, moving or maintaining electric power equipment; (h) Replace fuses with correct type and rating, prohibit replacing fuses with a higher rating or with iron or copper wire; (i) Ensure that fuses are replaced by an authorised person; (j) Prevent any use of electric power equipment from use in the rain, or when the user is wet, standing in water or is not wearing rubber soled insulated footwear or when the electric power equipment is wet;

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.4 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures, obtained by dividing the breaking strength by the maximum applied load for each type.

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.21 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.4 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(2) Wire ropes, slings and chains shall have a safety factor recommended by the manufactures , obtained by dividing the breaking strength by the maximum applied

---

wording is correct.

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) ~~Ensure that workers using electric power equipment wear appropriate PPE such as working clothes, protective helmets, safety shoes; and~~ (JCA34) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

I think it is relevant.

NK: confirmed.

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.1 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

~~(2)~~ Wire ropes, slings and chains shall have safety factor recommended by the manufactures ~~of at least 6~~, (JCA35), obtained by dividing the breaking strength by the maximum applied load for each type.

(k) When any operational fault is identified immediately turn off the power, unplug and stop using the equipment and advise (or hand to) the HSO;

(l) Ensure that workers using electric power equipment wear appropriate PPE suitable for the electric power equipment in use such as working clothes, protective helmets, safety shoes, eye and face protection, ear protection; and

(m) When electric shock accident occurs, unplug and stop using the equipment and advise (or hand to) the HSO and take measures in accordance with JSSS 1.24 [*Accident Response Plan*].

4.3.13 Additional Safety Measures during Adverse Weather

Further to the requirements of JSSS 2.7 [*Adverse Weather Requirements*], the Contractor shall ensure that Contractor's Equipment is parked in a stable and secure state by taking all necessary measures including:

(1) Dropping the jib, boom, arm and attachments to ground level and securing where necessary with adequate anchors and chains.

(2) If heavy rain and flooding can be anticipated, moving Contractor's Equipment to higher ground or to places where there is no risk of instability.

(3) Removing snow or ice.

4.4 ROPES, SLINGS AND CHAINS

4.4.4 Requirements Generally

(1) The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

	load for each type.	As commented, the clause is changed as right. *I suggest that no extensive change is necessary here as all is specified in JSSS 5.4 as referenced below.* *If you require this change, I suggest as follows:* (2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type. NK: agreed. (3) Wire ropes and slings shall not be fabricated at the Site but shall be obtained only from sources approved by the HSO. NK: (2) wire ropes cannot be fabricated at the site. Eye splices of rope can be made at the site. I think (2) is not necessary to additionally specified.	(2) The safety factor for wire ropes, slings and chains shall be as recommended by the manufacturer of each type.
(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].	(3) Requirements for Ropes, slings and chains shall be as required under JSSS 6.5 [*Rigging Equipment*].	(4) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].	(3) Requirements for Ropes, slings and chains shall be as specified in JSSS 5.4 [*Rigging Equipment*].
4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT	**4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT**	**4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT**	**4.5 ALTERNATIVE USE OF CONTRACTOR'S EQUIPMENT**
4.5.1 Requirements Generally	**4.5.4 Requirements Generally**	**4.5.1 Requirements Generally**	**4.5.1 Requirements Generally**
The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.	The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.	The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.	The Contractor shall not use Contractor's Equipment for any other purpose than the purpose for which it is designed and other than the purpose recommended by the manufacturer.
If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions and in any event within the designed operating capacity of the equipment.	~~If the manufacturer allows alternative use (for example bucket excavators used for lifting operations) then such alternative use shall be strictly in accordance with the manufacturer's written instructions and in any event within the designed operating capacity of the equipment.~~ (JC52) JC52: 製造者が目的外使用の書面でのインストラクションを出していることが想定できないので、いらないのではないでしょうか？ It cannot be considered that manufacturers issue instructions in writing for alternative use of equipment, therefore is this sentence not necessary? NK: Agreed to delete.	NK: Agreed to delete. *Using bucket excavators for example for hoisting lighter loads (e.g. steel pipes and drainage components) is a common and convenient practice. It is recognised as such by manufacturers and their equipment is designed for this.*	
When the manufacturer's written instructions and the Laws of the Country regarding alternative use, the safety of alternative use shall be approved by the HSO by checking for example the following items for lifting:	Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's written instructions, and subject to HSO's approval after reviewing all the safety aspects. In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:	Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects. In particular, when equipment for excavation is to be used for lifting, HSO shall confirm:	Use of Contractor's Equipment for any other purpose than the originally intended purpose are allowed only if it is not prohibited by either of the Law the Country and the manufacturer's official operation, maintenance and repair manual and subject to HSO's approval after reviewing all the safety aspects. In particular, when equipment for excavation is to be used for lifting, the HSO shall confirm:
(1) Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;	(1) ~~Rigging Equipment such as hook attached on construction equipment such as arm or bucket are used;~~ Rigging Equipment such as hook is	(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).	(1) Rigging Equipment such as hook is attached on an appropriate part of the excavation equipment (e.g. arm or bucket).

	attached on an appropriate part of the excavation equipment (e.g. arm or bucket); JC53: 下記の例示は全て掘削機械を揚貨のために用いる時の事項とみました。それであれば、修文案ような記述に修正した方がよいと思います. The following examples are all lifting use of excavators, so the (1) above is better to revised as revised above. NK: Modified as commented.		
(2) Arms, bucket, Rigging Equipment have enough strength to lift the load;	(2) Arms, bucket, Rigging Equipment have enough strength to lift the load;	(2) Arms, bucket, Rigging Equipment have enough strength to lift the load.	(2) Arms, bucket, Rigging Equipment have enough strength to lift the load.
(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the construction equipment;	(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction~~ equipment;	(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the ~~construction e~~quipment.	(3) There is no risk that the lifting devices such as hook and shackles will be detached from arm or bucket of the equipment.
(4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and	(4) The lifting capacity for alternative use is confirmed by loading tests at the Site; and	(4) The lifting capacity for alternative use is confirmed by loading tests at the Site.	(4) The lifting capacity for alternative use is confirmed by loading tests at the Site.
(5) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work.	(5) ~~Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work.~~ (JC54) JC54: 揚貨作業をする時に揚貨の資格が必要であることは、揚貨の章に記述があるはず。不要。 The necessity of license is specified in the Chapter for lifting, so not necessary mention (5). NK: Deleted.	(5) Operators engaged in lifting work with construction equipment such as excavators shall be licensed when necessary and trained for lifting work. (JCB54)	
Under these circumstances the Contractor shall take account of the following:	~~Under these circumstances the Contractor shall take account of the following:~~ (JC55) JC55: 用途外使用に対してこれほど詳細な注意書が必要ではないと思います。揚貨に必要なことは揚貨のところに書いてあるはずです。不要. It is not necessary to specify in so details as bellow because requirement for hoisting works are specified in chapter 5Hoisting and Rigging. NK: Deleted.	~~Under these circumstances the Contractor shall take account of the following:~~ (JCB55) NK: Deleted. *I think that this should remain, it is a secondary usage for example of an excavating machine for lifting light loads. It is not likely that the operator will be trained as a rigger and the following clauses are recommended to be included.* NK6/19: The operator needs licence or training certificate for hoisting work depending hoisting capacity with excavator as secondary usage in Japanese regulation. Therefore, JICA comments' is correct, however it is recommendable to specify here.	
(1) Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.	(1) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~	(1) ~~Ensure the Contractor's Equipment can safely handle the load without creating instability, tipping or loss of control and avoiding the resultant risk of injury or damage or stress to the equipment.~~	
(2) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.	(2) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~	(2) ~~Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.~~	(5) Ensure that operators understand the equipment capability, are properly trained in the alternative use, are fully aware of and follow the manufacturer's written instructions and load charts.
(3) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.	(3) ~~Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.~~	(3) ~~Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.~~	(6) Ensure that operators have accurately determined the total weight of the load, taking account of the weight of any attachments, the reach and angle and configuration of the equipment and have informed the HSO of this and obtained his permission before commencing the operation.
(4) Check the working area and improve the ground surface as necessary to ensure the stability of the equipment.	(4) ~~Check the working area and improve the ground surface as necessary to ensure the~~	(4) ~~Check the working area and improve the ground surface as necessary to ensure the~~	(7) Check the working area and improve the ground
(5) Ensure that the equipment is stable, if provided			

lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(6) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(7) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(8) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.

(9) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary

~~stability of the equipment.~~

(5) ~~Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.~~

(6) ~~Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.~~

(7) ~~Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.~~

(8) ~~Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

(9) ~~If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.4 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.34 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].

(2) The Contractor shall ensure that the hire/lease

~~stability of the equipment.~~

(5) ~~Ensure that manufacturer's genuine specialised accessories such as lifting hooks etc. are provided and used.~~ .(JCA37)

Lifting hook are common however excavators can hoist light loads e.g. drainage pipes, using the bucket and slings without hooks and are designed for this. I suggest that these clauses should remain as they are likely to apply.

NK6/19: Many accidents have occurred in the lifting works with excavators in Japan. To attention to the Contractor, the following is recommended to specify as proposed by MD.

(6) ~~Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.~~

(7) ~~Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.~~

(8) ~~Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.~~

(9) ~~Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on not sideways.~~

(10) ~~If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.~~

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.1 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary

surface as necessary to ensure the stability of the equipment.

(8) Ensure that the equipment is stable, if provided lower stabilisers, if the equipment is equipped with a blade, lower the blade to the ground for added stability and ensure that necessary counterweights are in place.

(9) Check the rigging to ensure it is appropriate to the use and rated to handle the load. Inspect it before each use for any signs of damage or wear, and make sure it is properly secured to the machine and load.

(10) Ensure that the area is clear of any unnecessary personnel, Spotters should be the only individuals in the immediate area, and should be stationed clear of the lift area yet visible to the operator throughout the operation.

(11) Lift the load slowly, keep the lifting point directly over the centre of the load, keep the load as close to the machine and the ground as possible and position the equipment to hoist and lower end on, not sideways.

(12) If there are any signs of instability or loss of control of the machine or load, discontinue the lift and lower the load to the ground.

4.6 HIRED/LEASED CONTRACTOR'S EQUIPMENT

4.6.4 Requirements Generally

(1) Contractor's Equipment from hire or lease companies shall comply with all of the requirements of the Contract and JSSS as if it were the Contractor's own property, in particular the Contractor shall ensure compliance with the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*].

(2) The Contractor shall ensure that the hire/lease companies have performed all necessary inspection, maintenance and repair works

inspection, maintenance and repair works before the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:	companies have performed all necessary inspection, maintenance and repair works before the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:	inspection, maintenance and repair works before ~~the Contractor's Equipment~~.(JCA38) the equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer: *There is nothing wrong with the original wording, it is "Contractor's Equipment" as defined in the Contract whether rented, leased or owned.* *"equipment" in this usage, should only follow in a sentence which already contains the term "Contractor's Equipment" and is therefore connected in meaning.* *The changed wording introduces unnecessary duplication "equipment" and "equipment".* NK: agreed.	before the Contractor's Equipment is mobilised to the Site and that the following is provided with the equipment to the Contractor upon mobilisation and is available for the inspection of the Engineer:
(a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.	(a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.	(a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.	(a) Inspection and maintenance records; (b) Operation, repair and maintenance manuals; and (c) Spare and replacement parts, tools, maintenance equipment, lubricants, filters, hydraulic fluids and the like.
(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.	(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.	(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this ~~Contractor's Equipment~~ equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works. *The suggested change is correct nor necessary.* NK: as revised by MD.	(3) The Contractor shall double-check to ensure that the inspection and maintenance has been carried out and if the Contractor has any doubt over the adequacy of such inspection or maintenance or if complete records are not made available, the Contractor shall not allow this Contractor's Equipment to be used upon the Works. The Contractor shall inspect and carry out full maintenance and repair on such equipment in compliance with the requirements of this Chapter before it is certified for use by the HSO and used upon the Works.
(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS. Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.	(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS. (4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they ~~are~~ were employed by the Contractor, in terms of compliance with the Contract and JSSS. *The suggested change is not correct nor necessary.* Such operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.	(4) Operators from hire/lease companies are by definition Contractor's Personnel and they shall be treated as if they are employed by the Contractor, in terms of compliance with the Contract and JSSS. (5) Operators shall be tested and certified by the HSO, shall receive safety training and shall perform all inspection, maintenance and other requirements fully in compliance with JSSS, in the same way as the Contractor's own employees.

4.7 TEMPORARY FUELLING FACILITIES

4.7.1 Requirements Generally

(1) Unless otherwise specified in the Contract, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and containment structures, paved surfaces, fencing,

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JC56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JC57)

JC56: "shall"じゃなく"may"ぐらいでは？町中で station が近い場合には不要なはず。
It is not necessary to specify "shall" but "may" because fuelling facilities are not necessary where there are fuel stations in town or near the Site.
NK: Modified.

JC57: 法令上の許可が必要な場合は取得することを追記が必要と思量。
It is necessary to specify for the Contractor to get permission in accordance with the Law of the Country when necessary.
NK: Added.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) ~~Unless otherwise specified in the Contract,~~ the Contractor ~~shall~~ may (JCB56) design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment after obtaining necessary permission required by the Law of the Country, if any. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.(JCB57)

NK: Modified.

The comment is understood but generally it will not apply on JICA projects and is not a recommended basis for a safety specification.

In the majority of cases, mobile Contractor's Equipment will not be registered or insured for use on public roads and fuel for such equipment (together with fuel for static equipment and all other site equipment) will usually need to be brought safely to the Site and safely stored and dispensed for Site use.

Also, with normal high consumption requirements (and even for tax and duty reasons), fuel is usually delivered to the Site and stored separately.

It is dangerous to obtain and transport and dispense manually in frequent and small quantities.

It is not necessary to state that the Contractor must obtain "necessary permission required by the Law of the Country"; the Contractor must in any event comply with the Law under GC 1.4 and such permission, etc., would be an automatic requirement.

Fuel storage at Site will usually be required on most JICA projects and proper safety control is essential.

I have already included a clause in the latest issue of the User Guide to cover this and suggest therefore that no change is necessary to the original text.

NK: Added.

Not necessary see note above.

NK6/19: considering small projects agreed to leave as original provision.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and

4.7 TEMPORARY FUELLING FACILITIES

4.7.4 Requirements Generally

(1) Unless otherwise specified in the Particular Safety Specification, the Contractor shall design and construct temporary fuel storage and dispensing facilities at the Site for the use of Contractor's Equipment. These facilities shall be substantial and secure and capable of storing and dispensing fuel in a safe and environmentally acceptable manner all to the approval of the Engineer.

(2) The facility shall include storage tanks, suitable foundations, support or containment structures, protective bund walls as necessary, paved surfaces, screens, fencing and associated facilities for storage of separate fuels and lubricants and for offices, access and the like all of which shall be suitable and fit for the purpose for which they are intended.

(3) Unless otherwise specified in the Contract, all such tanks, foundations, support and

screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. All areas shall be backfilled, restored to a safe and suitable condition, cleaned and landscaped, all to the approval of the Engineer. (4) The Contractor must ensure that the temporary fuel storage and dispensing facility is operated and occupied at all time only by authorised personnel and that all unauthorised personnel are prohibited from entering such areas at all times. The Contractor shall be particularly careful and provide measures to prevent any unauthorised access, tampering, damage and theft at any time. (5) All storage tanks shall be bunded either as jacketed tanks or by providing bunded enclosures, such that in the event of a catastrophic failure, the tank contents will be safely contained and shall not be allowed to run freely or enter the surface or ground water systems. (6) The Contractor is reminded of the requirements of JSSS 1.23 [*Fire Prevention*] and will be required to provide a comprehensive and a high standard of fire protection in fuel storage areas.	containment structures, paved surfaces, fencing, screens and associated facilities shall be demolished and removed and disposed of safely and in an environmentally acceptable manner by the Contractor on completion and taking over of the Works. 6 揚貨・玉掛け作業 **6. 1 一般事項** (1) 本節では、揚貨作業及び玉掛け作業にかかる揚貨機械の転倒、崩壊、吊り荷の落下等による作業員の危険を防止するための措置について規定する。 (2) 本仕様書で使用する用語の定義は次である。 (a) 揚貨機械とは、動力によって荷をつり上げ、移動することを目的とするものをいう。 (b) 定格荷重（Rated capacity）とは、揚貨機械の製造者が規定した揚貨作業の条件（機械の構造、半径、ブームの長さ及び他の使用上の要素等）に応じて、この製造者が許可した最大の揚貨荷重をいう。 (c) 玉掛け作業(hoisting and rigging)とは、揚貨機械により、つり荷をつり具でつるために玉掛け用具を使用して行う準備、荷のつり上げ、つり荷の移動及びつり荷を所定の位置に置くまでの作業をいう。 (d) 玉掛け作業員(rigger)とは、玉掛け作業に関する十分な知識及び作業能力を有し、作業チームの作業員を適切に指揮・統率する能力があると請負者が認めるもの(competent person)とし、本仕様書 1.9.2 (2)[特に危険又は有害な作業へ配置予定の者への教育]で定めた教育を終了した作業員をいう。	**6 Hoisting and Rigging Works** **6.1 General** (1) This chapter specified the safety measure for the falling, collapse of lifting equipment and fail of suspended object in hoisting work and rigging work. (2) Definitions of words and expressions in JSSS are as follows. (a) "Lifting Equipment" means machines in order to hoist and transport object by motive power. (b) "Rated Capacity" means the maximum suspended load approved by the manufacture depending on the use condition of Lifting equipment (structures of machines, the length of boom, and the other factor for use) specified by the manufacture. (c) "Hoisting and Rigging" means the work procedure including preparation of suspended loads, hoisting and transport loads, and, placing the load by Lifting equipment using the rigging tool. (d) "Rigger" means the competent person who is certified by the Contractor to have sufficient knowledge, work ability regarding hoisting and rigging works, and the ability to properly direct and lead the workers of the work team, and has completed the education specified by JSSS 1.18[Skill Training]. (e) "Hoisting Tool" means the tool for suspended object such as hooks, etc. which is equipped with Lifting equipment and cannot be removed as normal operation.	**6 Hoisting and Rigging Works** **6.1 General** (1) This Chapter specify the safety measures to avoid risk to the workers by falling or collapse of Lifting Equipment and drop of suspended loads in Hoisting and Rigging works. (2) Definitions of terms are as follows. (a) "Lifting Equipment" means machines such as cranes and mobile cranes by which suspended loads can be raised, lowered, and moved horizontally. (b) "Rated Capacity" means the maximum hoisting load approved by the manufacture of Lifting Equipment depending on the structures of equipment, use conditions such as angle and length of boom and other factors in use of Lifting Equipment specified by the manufacture. (c) "Hoisting and Rigging" means the work procedure including preparation of rigging loads, hoisting and transport loads, and, placing the loads by Lifting Equipment using the Rigging Equipment. (d) "Rigger" means the competent person who is certified by the Contractor to have sufficient knowledge, work ability regarding Hoisting and Rigging works, and the ability to properly direct

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
(e) つり具(Hoisting Tool ~~Lifting equipment~~)とは、揚貨機械に付属して装備され、取外しできないフック等のつり上げ用具をいう。 (f) 玉掛け用具(rigging tool)とは、つり荷をつり具でつるためのロープ、チェーン、ベルト、シャックル、リング、クランプ、ハッカー等をいう。	(f) “Rigging Tool” means the equipment which are ropes, chains, belts, shackles, rings, clamps and, hackers, etc, for suspended object by the lifting tool.	and lead the workers of the work team, and has completed the education specified in JSSS 1.18[Skill Training]. *(To MD, it needs to revise (d) for the rigger referring to the Chapter 1.)* (e) “Hoisting Equipment” means the equipment to suspended loads such as hooks, etc. which is equipped with Lifting Equipment and cannot be removed in normal operation. (f) “Rigging Equipment” means the equipment which are ropes, chains, belts, shackles, rings, clamps, hackers, etc. to suspend loads by the Hoisting Equipment.
6.2 揚貨作業 **6.2.1 作業員への周知** 請負者は、揚貨機械を用いて揚貨作業を行うときは、作業に必要な下記の安全上の措置について、必要に応じ作業員に説明しなければならない。 (1) 揚貨機械による作業内容、作業方法、作業範囲 (2) 揚貨機械の種類、定格荷重等の能力 (3) 玉掛け用具の種類、許容荷重 (4) 揚貨作業の場所 (5) 高圧線、危険物貯蔵庫などの危険箇所とつり荷の移動・稼働制限範囲 (6) 立入禁止箇所の特定と注意標識、柵の設置場所 (7) 揚貨作業周辺の安全な通路 (8) 誘導者、監視員の配置場所 (9) 揚貨機械の運転者又は操作者、玉掛け作業員 (10) 揚貨機械に異常が発生したときの対処方法 (11) 現場の隣地や公道における近隣住民・第三者への~~揚貨機械~~　揚貨作業による危険性	**6.2 Hoisting Works** **6.2.1 General Instruction for Authorized Contractor’s Personnel** The Contractor shall instruct the following safety measures for Authorized Contractor’s Personnel as necessary when the lifting work with Lifting Equipment shall be executed. (1) Work contents, method, range by Lifting Equipment. (2) Type and capacity such as rated capacity of Lifting Equipment. (3) Allowable loads and type of Rigging Tool. (4) Work places of hoisting work. (5) Hazardous locations and the area of movement and operation restriction such as high-voltage lines and dangerous goods storage. (6) Identification of restricted areas, caution signs, and fence. (7) Safety passage surrounded the place of hoisting work. (8) The position of flagmen and watchman. (9) Operator, driver of Lifting equipment and rigger. (10) Procedure of emergency in Lifting equipment. (11) Danger of hoisting work to neighboring residents and third parties on adjacent sites and public roads.	**6.2 Hoisting Works** **6.2.1 Instruction for Contractor’s Personnel** The Contractor shall make the following safety measures to the workers as needed when the lifting work with Lifting Equipment is executed: (1) Work contents, method, area by Lifting Equipment, (2) Type and capacity such as Rated Capacity of Lifting Equipment, (3) Allowable loads and type of Rigging Equipment, (4) Work places of hoisting work, (5) Hazardous locations and the area of movement and operation restriction such as high-voltage lines and dangerous goods storage, (6) Identification of restricted areas, caution signs, and fence, (7) Safety passage around the place of hoisting work, (8) Location of Spotter and Flagmen, (9) Operator, driver of Lifting Equipment and rigger, (10) Procedure in case of emergency of Lifting Equipment, and (11) Danger of hoisting work to neighboring residents and third parties on adjacent sites and public roads.
6.2.2 揚貨機械の運転者及び操作者 請負者は、本仕様書4.1.4[建設機械の運転者及び操作者]に準じ、揚貨機械の運転者又は操作者の適正配置、運転者又は操作者の氏名の揚貨機械への明示、作業前の健康状態の確認等を行わなければならない。 **6.2.3 安全教育と指導** 請負者は、本仕様書~~4.1.5~~4.1.4[安全教育と指導]に準じ、また揚貨機械の特性に応じて揚貨機械の運転者又は操作者、揚貨作業に従事する作業員への教育を行わなければならない。 **6.2.4 揚貨機械の搬入時の点検**	**6.2.2 Operators and Drivers of Lifting Equipment** The Contractor shall ensure the proper placement of operators and drivers of Lifting equipment, the installation of signs that show the name of operators and drivers on Lifting equipment, and the implement the health check before the work complying with JSSS4.1.3[Operators and Drivers]. **6.2.3 Safety Instructions** The Contractor shall conduct the trainings for Authorized Contractor’s Personnel engaging hoisting works, operators, and drivers of Lifting equipment complying with JSSS4.1.5[Safety Instruction] and the characteristic of Lifting equipment.	**6.2.2 Operators and Drivers of Lifting Equipment** The Contractor shall properly assign operators and drivers of Lifting Equipment and post name of operator or driver on Lifting Equipment, and implement the health check before the work in accordance with JSSS 4.1.3[Operators and Drivers]. *(To MD, this reference Clause shall be changed later.)* **6.2.3 Safety Education and Training** The Contractor shall conduct education and training to the operators and drivers of Lifting Equipment, and workers engaging in hoisting works, complying with JSSS 4.1.4[Safety education and training] according to the characteristics of the Lifting Equipment.

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
請負者は、揚貨機械の搬入時の点検は、本仕様書~~4.1.6~~4.2.1(1)に準じ、行わなければならない。この点検には、本仕様書6.2.2（1）及び(2)に規定の項目を含まなければならない。	**6.2.4 Inspections in Installation and Assembly** The Contractor shall inspect Lifting equipment in installation complying with JSSS4.1.6 [Inspections in Installations]. This inspection shall be included the items specified in JSSS6.2.2(1) and (2).	**6.2.4 Inspections at Installation or Assignment of Lifting Equipment** The Contractor shall inspect Lifting Equipment at its installation or assignment time complying with JSSS 4.2.1 (1) [Inspections at Installation or Assignment of Equipment]. This inspection shall be included the items specified in JSSS 6.2.5 (1) and (2).
6. 2. 5 揚貨機械の点検・整備 請負者は、本仕様書4.1.7[建設機械の点検・整備]に準じ、揚貨機械の日常点検表、定期点検表の作成、次の日常及び定期点検と整備、エンジニアへの点検状況の報告を行わなければならない。揚貨機械の組立時完了時は日常点検及び定期点検の項目をすべて点検しなければならない。 (1) 日常点検 請負者は、本仕様書4.1.8[日常点検]に準じて揚貨機械の日常点検、整備を、運転者又は操作者に揚貨機械の始業前に、請負者が準備した点検表に基づき行わせなければならない。この点検表には、揚貨機械の種類に応じて次の点検項目を含まなくてはならない。 (a) 巻過防止装置の機能 (b) ブレーキ、クラツチ及びコントローラーの機能 (c) ランウエイの上又はトロリが横行するレールの状態 (d) ワイヤロープが通っている箇所の状態 (e) ワイヤーロープの状態 (2) 定期点検 請負者は、本仕様書4.1.9[定期点検]に準じて、揚貨機械の定期点検、整備を行わなければならない。この点検には、揚貨機械の種類に応じて次の点検を含まなくてはならない。 (a) 巻過防止装置、過負荷防止装置その他の安全装置、警報装置、ブレーキ及びクラツチの異常の有無 (b) ワイヤロープ及びつりチエーンの損傷の有無 (c) フック等のつり具の損傷の有無 (d) ウインチの据付けの状態の異常の有無 (e) 配線、配電盤及びコントローラーの異常の有無	**6.2.5 Maintenance** The Contractor shall carry out making the daily and periodic checklist of Lifting equipment, the just before operation of Lifting equipment, the Contractor shall carry out the daily and periodic checklist and maintenance and, the report of results of inspections to the Engineer complying with JSSS4.1.7 [Maintenances]. (1) Daily Inspections The Contractor shall let operators and drivers carry out the daily inspection and maintenance of Lifting equipment complying with JSSS4.1.8 [Daily Inspections] before starting the work based on the checklist prepared by The Contractor. This checklist shall be included the following items depending on the type of Lifting equipment. (a) Functions of overwind prevention devices (b) Functions of brakes, clutches and controllers (c) Conditions of rail for trolley and run-way (d) Conditions of parts through the wire ropes (e) Conditions of wire ropes (2) Periodic Inspections The Contractor shall carry out the periodic inspections and maintenances of Lifting equipment complying with JSSS4.1.9 [Periodic Inspections]. This inspection shall be included the following items depending on the type of Lifting equipment. (a) Condition of overwind prevention devices, overload prevention devices, the other safety devices, brakes, and clutches (b) Condition of wire ropes and hanging chain (c) Condition of lifting equipment such as hooks (d) Condition of conditions of placement of winches (e) Condition of electric wire, switchboard and, controller	**6.2.5 Inspections and Maintenance** The Contractor shall prepare checklists for daily and periodic check of Lifting Equipment, carry out check Lifting Equipment just before operation of Lifting Equipment and periodic check and maintenance, and report results of inspections complying with JSSS 4.1.6[Inspections and Maintenance]. (1) Daily Inspections The Contractor shall make operators or drivers carry out the daily inspection and maintenance of Lifting Equipment complying with JSSS 4.2.1(2)[Daily Inspections] before starting the work based on the checklist prepared by The Contractor. This checklist shall be included the following items according to the characteristics of Lifting Equipment. (a) Functions of over-winding prevention devices (b) Functions of brakes, clutches and controllers (c) Conditions of rails for trolley and run-way (d) Conditions of parts such as pulley where wire ropes pass (e) Conditions of wire ropes (2) Periodic Inspections The Contractor shall carry out periodic inspections and maintenance of Lifting Equipment complying with JSSS 4.2.1(3)[Periodic Inspections]. The inspection shall include the following items according to the characteristics of Lifting Equipment. (a) Condition of over-winding prevention devices, overload prevention devices, other safety devices, brakes, and clutches (b) Condition of wire ropes and hanging chain (c) Condition of Lifting Equipment such as hooks (d) Condition of conditions of placement of winches (e) Condition of electric wire, switchboard and controller
6. 2. 6 揚貨機械の運用時の安全措置 請負者は、本仕様書4.1.10[運用時の安全措置]に準じ、揚貨機械と作業員の接触の防止、揚貨機械の安全対策を行うとともに、次の措置を講じなければならない。 (1) つり荷及び玉掛け用具の重量、作業範囲、作業半径・角度等の条件に見合った揚貨能力を持つ機械を選定すること。 (2) 運転者及び玉掛け作業員が、揚貨機械の種類や作業状態に応じた定格荷重を常時知ることができよう定格荷重を、揚貨機械の適切な位置に表示すること。 (3) 運転者及び玉掛け作業員に、つり荷及び玉掛け用具の合計重量が、定	**6.2.6 Safety Measures in Operation** The Contractor shall take the following measures complying with JSSS 4.1.10 [Safety Measures in Operation] as well as the prevention the accidents between Lifting equipment and Authorized Contractor's Personnel. (1) Selections of the machines with enough Rated capacity satisfied with the work conditions such as the weight of suspended loads and hoisting and rigging tool, work area, the radius and angle of the booms, etc. (2) Display the rated capacity depending on the type of Lifting equipment and work conditions at the appropriate place of Lifting equipment as drivers and riggers could know rated capacity any time. (3) Let drivers and riggers confirm whether the weight of loads and hoisting	**6.2.6 Safety Measures in Operation** The Contractor shall take safety measures to avoid collision to workers by Lifting Equipment and those for Lifting Equipment complying with JSSS 4.2.3 [Safety Measures in Operation] and take the following measures. (1) Select Lifting Equipment which has lifting capacity and functions to meet work conditions/requirements such as weight of suspended loads, hoisting and Rigging Equipment, work area, radius and angle of booms, etc. (2) Display Rated Capacity of the Lifting Equipment depending on the type of Lifting Equipment and work conditions at the appropriate place of Lifting equipment so that drivers/operators and riggers can know Rated Capacity any time.

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
格荷重以下であることを確認させること。 (4) 揚貨作業中は、揚貨機械の安全装置を常時作動させること。 (5) 立入りの禁止 本仕様書2.3[立入禁止の措置]に従い、次の立入禁止の措置を講じること。 (a) 揚貨作業中は、つり荷の直下のほか、つり荷の移動範囲内で、つり荷の落下による危険のある場所への作業員の立入りを禁止すること。 (b) ワイヤロープが通っているシーブ又はその取付け部の破損により、当該ワイヤロープがはね、又は当該シーブ若しくはその取付具が飛来することによる作業員の危険を防止するため、当該ワイヤロープの内角側への作業員の立入りを禁止すること。 (c) 立入りを禁止した場所には、看板、標識等を設置し、作業員に立入禁止を周知すること。 (6) 合図 (a) 本仕様書 2.4.2[合図、信号等の統一]に従い、合図者を任命し運転者又は操作者と合図者に決められた合図で作業させること。 (b) 合図者に、つり荷がよく見え、運転者又は操作者からもよく見える安全な位置で、かつ作業範囲外に位置して合図を行なわせること。 (c) やむを得ず運転者又は操作者から見えない位置で合図する場合には、無線等で確実に合図が伝わる方法をとらせること。 (7) 玉掛け作業 (a) 本仕様書 6.4[玉掛け作業]にもとづき、玉掛け作業をおこなうこと。 (b) 揚貨機体の安定、吊り荷の重心、玉掛けの状態を確認すること。 (8) 荷の吊り上げ作業 (a) 荷を吊り上げるとき、つり具がつり荷の重心の真上にあることを確認すること。 (b) 荷の吊り上げを開始するとき、吊り上げ面から 30 ㎝吊り上げた状態でつり荷を一旦停止し、つり荷の安定を確認すること。 (c) 旋回を行うとき、旋回範囲内に人や障害物がないことを確認すること。 (d) つり荷を安全な高さまで吊り上げた後、静かに旋回すること。 (e) 常にブームの先端の動きやつり荷の状態に注意すること。 (f) 荷下しは一気に着床させず、着床直前に一旦停止し、着床場所の状態や荷の位置を確認した後、静かに下すこと。 (9) 運転者又は操作者は、荷を吊り上げたままで運転席を離れないこと。 (10) 作業中の揚貨機械の異常に関する措置 (a) 運転者又は操作者は、作業中に機械に異常音、発熱、臭気、異常	and rigging tool is less than the rated capacity. (4) Activate the safety devices of Lifting equipment every time in lifting works. (5) Prohibition of entry The Contractor shall prohibit Authorized Contractor's Personnel from entering the place under the listing loads complying with JSSS 2.3[Restricted Area]. (a) In Hoisting work, prohibit Authorized Contractor's Personnel from entering the place under the suspended loads, moving ranges of them and, the place where there are risks by falling the suspended loads. (b) In order to prevent the accident for Authorized Contractor's Personnel because the damaged sheaves or its attachments hit Authorized Contractor's Personnel due to bouncing wire ropes, prohibit Authorized Contractor's Personnel from entering in inner corner side of the wire ropes. (c) Instruct Authorized Contractor's Personnel of the restricted area by installing the fences and signboards, etc. (6) Signals (a) Appoint signalmen and ensure that all Contractor's Personnel understand and comply with the signals complying with JSSS 2.4.2[Unifying Signals]. (b) Ensure that signalmen stand at the place where signalmen can look suspended loads and, operators and drivers also can look signalmen and out of the work area. (c) When signalmen stand the place where operators and drivers cannot look them for unavoidable reason, ensure the signal can be transmitted securely by radio talk devices etc. (7) Hoisting and Rigging works (a) Carry out hoisting and rigging works based on JSSS 6.4[Hoisting and Rigging Works]. (b) Confirm the condition of the stability of Lifting equipment, center of gravity if suspended loads and, hoisting and rigging. (8) Hoisting Works (a) Ensure that lifting tools are above the center of gravity of listing loads. (b) In starting the lifting the loads, suspend them 30 cm from ground and, ensure the stability. (c) Ensure that there are no person and objects within the turning area when the Lifting equipment turns. (d) After suspended loads up to the safety height, turn the boom gently. (e) Always pay attention to the edge of boom, the condition of suspended loads. (f) In unloading the loads, stop once before landing and check the condition of the landing place and loads, and then lower it gently. (9) Operators and drives shall not leave the driving seats during operation	(3) make drivers/operators and riggers confirm whether the total weight of loads and Hoisting and Rigging Equipment is less than the Rated Capacity. (4) Activate the safety devices of Lifting Equipment at any operation time of lifting works. (5) Prohibition of entry The Contractor shall take the following prohibition measures of Contractor's Personnel from entering hoisting work site complying with JSSS 2.3[Prohibition of Entry-Dangerous Work]. (a) Prohibit workers from entering the place under the suspended loads and place where there are risks by falling of the suspended loads during time of hoisting work. (b) Prohibit workers from entering the place of inside corner of ropes to avoid workers being hit by bounced wire ropes, broken sheaves or its attachments. (*To MD, please see reference and sketch at the end of pages.)* (c) Instruct workers not to enter the restricted area by installing the notice signboards, etc. (6) Signals (a) Appoint Flagman and make drivers or operators work with the signals between them in accordance with JSSS 2.4.5[Signals]. (b) Make Flagman stand at and give signals from the safe place out of the hoisting work area where Flagman can see suspended loads well and operator or driver also can easily see Flagman well, too. (c) When Flagman stand the place where operator or driver cannot see him with unavoidable reason, take measures to transmit signals certainly by radio devices, etc. (7) Rigging works (a) Carry out rigging works in accordance with JSSS 6.5[Hoisting and Rigging Works]. (b) Check the stability of Lifting Equipment, center of gravity of suspended loads and, conditions of rigging. (8) Hoisting Works (a) Check if the lifting tools are above the center of gravity of suspended loads. (b) At starting to lift the loads, stop them at 30 cm from ground for trial lifting and, check tits stability. (c) Check if no person and objects within the turning area when the Lifting Equipment turns. (d) After lifting loads up to the safe height, turn the boom gently. (e) Always pay attention to the edge of boom and the condition of

2019.12.02 JSSS in Japanese（Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
動作等が認められたときは、直ちに作業を中止すること。 (b) 機械の異常作動の原因を調べ、必要な修理を行うこと。 (c) 機械の正常動作を確認した後でなければ、作業を再開しないこと。 (11) 揚貨機械で使用するワイヤロープが、本仕様書 4.1.10(6)[建設機械のワイヤロープ]の(a)から(d)に規定のいずれかの状態のときは、交換したうえで切り捨て等の措置を講ずること。 (12) 本仕様書 2.7[悪天候及び地震時の対策]及び 4.1.10(8)[悪天候時の対策]の措置に加えて、悪天候時には揚貨機械が不安定な状態になることを回避するために、次のような措置を講じること。 (a) 悪天候時には、ジブを倒す又はマスト等をアンカー等で固定すること。 (b) 悪天候及び地震の後に作業を行なうときは、作業前に本仕様書 6.2.2[揚貨機械の点検・整備]に規定の日常点検表及び定期点検表にもとづき、揚貨機械の各部分の点検を行なうこと。 (13) 揚貨機械の目的外使用の禁止 (a) 作業員の運搬や作業員をつり上げて作業をしないこと。 (b) 作業の性質上やむを得ない場合又は安全な作業の遂行上必要な場合は、揚貨機械のつり具に専用のとう乗設備を設けて、次の全ての措置を講じて、作業員の運搬又はつり上げての作業をおこなうこと。 (i) 揚貨機械に使用するワイヤロープは、荷重に対して安全係数が 10 以上であること。 (ii) とう乗設備の転位及び脱落を防止する措置をとること。 (iii) 作業員に墜落制止用器具等を使用させること。 (iv) とう乗設備ととう乗者との総重量の 1.3 倍に相当する重量に 500 kgを加えた値が、当該揚貨機械の定格荷重をこえないこと。 (v) とう乗設備を下降させるときは、動力下降の方法をとること。	(10) Measures regarding abnormalities in Lifting equipment during operation (a) When operators and driver find an abnormality in Lifting equipment such as abnormal sound, fever, odor and, abnormal operation during the operation, stop working immediately (b) Identify the reason of abnormalities and, make necessary repairs. (c) Unless confirming the lifting equipment is functioning properly, no resume the lifting works. (11) Take the measures such as cut the wire and discharging after the replacement when wire ropes used for Lifting equipment are in any of the condition specified in (a) to (d) of JSSS 4.1.10(6) [Wire ropes of construction machineries] (12) Take the following measures additional to the measures described in [Adverse Weather Requirements] and 4.1.10(8) [Measures in bad weather] in order to avoid that lifting equipment become unstable in bad weather. (a) During the bad weather, lean the jib or fix the mast with an anchor. (b) In starting the work after the bad weather and earthquake, carry out the inspections for each part of lifting equipment before the operation based on the daily and periodic checklist specified in JSSS 6.1.6[Maintenance]. (13) Restrict of operate of lifting equipment for other use (a) No use the lifting equipment to transport Authorized Contractor's Personnel and hang Authorized Contractor's Personnel. (b) For unavoidable reasons or as necessary for safety work procedures, take the following measures, and then use the lifting equipment attached with dedicated gondola to transport Authorized Contractor's Personnel and hang Authorized Contractor's Personnel. (i) Safety factor of wire rope used for Lifting equipment against loads is more than 10. (ii) Take the measures for the prevention from the turning and falling of gondolas. (iii) Let Authorized Contractor's Personnel use the falling prevention devices. (iv) The weight of 1.3 times the total weight of gondolas and passengers plus 500 kg is less than the rated capacity of the Lifting equipment. (i) In landing gondolas, make the gondolas landing by power.	suspended loads. (f) At unloading the loads, stop once before landing and check the condition of the landing place and loads, and then lower it gently. (9) Operator or driver shall not leave the driving/operation seat during operation. (10) Measures against abnormalities in Lifting Equipment during operation (a) When operators or drivers notices abnormality in Lifting Equipment such as abnormal noise, temperature, smell, etc. during the lifting operation, stop work immediately. (b) Identify the cause of abnormalities and make necessary repairs. (c) Unless confirming the Lifting Equipment is functioning properly, not resume the lifting work. (11) Take measures such as cutting wire and so on not to use it again after the replacement of wire rope when wire rope used for Lifting Equipment is in any of the condition specified in JSSS 4.2.3[safety Measures in Operation of Construction Equipment], (6) [Wire ropes of Construction Equipment]. (12) Take the following measures additionally to the measures specified in JSSS 2.7 [Adverse Weather Requirements] and 4.2.3 (8)[Measures in Adverse Weather] to avoid Lifting Equipment become unstable in adverse weather. (a) During the adverse weather, lean the jib or fix mast and others with anchor. (b) At starting the hoisting work after the adverse weather, inspect each part of Lifting Equipment using the daily and periodic checklist specified in JSSS 6.2.5[Inspections and Maintenance]. (13) Prohibition of operation of Lifting Equipment for other use (a) Neither use the Lifting Equipment to transport Contractor's Personnel nor hang Contractor's Personnel for work. (b) For unavoidable reason or necessary for safety work procedures, take the following measures, and then use the Lifting Equipment attached with dedicated gondola to transport Contractor's Personnel or hang Contractor's Personnel for work. (i) Safety factor of wire rope to be used for Lifting Equipment against loads is 10 or more, (ii) Take the measures for the prevention from the turning and falling of gondola, (iii) Make Contractor's Personnel use the PFAS, (iv) 1.3 times of total weight of gondola and workers plus 500 kg shall not exceed the Rated Capacity of the Lifting Equipment, and

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
		(v) The lowering the gondola shall be made by power. *(not free drop).*
6.3 クレーン **6.3.1 設置・組立・解体** 請負者は、クレーンの設置・組立・解体を行うときは、次の措置を講じなければならない。 (1) クレーンの設置、組立、解体は、クレーンの専門家の指揮のもとに行うこと。 (2) クレーンの設置場所を調査し、障害物がある場合は、適切な設置方法を検討すること。 (3) 走行レーンがあるクレーンの場合は、走行する範囲の状況を調査し、安全を確保すること。 (4) クレーンの設計に従い、基礎の建設、据え付けを行うこと。 (5) クレーンの据付後又は組立後、当該国の規則に基づき、又は規則がない場合はクレーンの製造者のマニュアルに従い、組立時検査、荷重試験及び安定度試験を実施すること。 (6) ~~クレーンの組立後の点検は、本仕様書 6.2.2[揚貨機械の点検・整備]の規定に従い行うこと。~~ *(NK：(5)と(6)は重複していることから、上の(5)に又は組立後を追記し、組立後の点検を削除した。)*	**6.3 Crane Works** **6.3.1 Installation, Assembly and Dismantling** The Contractor shall take the following measures in installation, assembly and dismantling cranes or derricks. (1) Conduct the installation, assembly and dismantling cranes under the instruction of cranes specialist. (2) Investigate the installation location of cranes and consider the appropriate installation method when there are some obstacles. (3) In using the cranes with driving lane, investigate the driving range and ensure the safety. (4) Construct and install the foundation complying with the design of cranes. (5) Based on the regulation of the country or manual by the manufacture of cranes, conduct completion inspection, load test and stability test after the installation. (6) Carry out the inspections after assembly of cranes complying with JSSS6.2.2[Operators and Drivers of Lifting Equipment].	**6.3 Crane Works** **6.3.1 Installation, Assembly and Dismantling** The Contractor shall take the following measures in installation, assembly and dismantling works of cranes: (1) Conduct the installation, assembly and dismantling works of cranes under the instruction of cranes specialist, (2) Investigate the location to install crane and plan the appropriate installation method of the crane when there are some obstacles, (3) Investigate the operation area and ensure the safety of the crane which run on crane rails, (4) Construct crane foundation and install the crane complying with the design of crane, and (5) Conduct completion inspection, load test and stability test of the crane after the installation or assembly in accordance with the Laws of the Country or manual of the manufacture of crane in case of no Laws of the Country.
6.3.2 運転と操作 請負者は、クレーンによる揚貨作業を行うときは、本仕様書~~6.1.7~~6.2.6[揚貨機械の運用時の安全措置]の措置を講じるとともに、本仕様書~~6.1.3~~6.2.2[揚貨機械の運転者及び操作者]に従い、クレーンの運転者又は操作者の氏名を、クレーンの運転席又は操作盤に掲示すること。	**6.3.2 Operations** The Contractor shall display the name of operators or drivers of cranes on drivers' seats or the operation board complying with JSSS 6.1.3[Operators and Drivers of Lifting Equipment] and take the measures described in JSSS 6.1.7 [Safety Measures in Operation] when the Contractor shall carry out the hoisting works by cranes or derricks.	**6.3.2 Operations** The Contractor shall post the name of operators or drivers of cranes on drivers' seats or the operation board complying with JSSS 6.2.2[Operators and Drivers of Lifting Equipment] and take the measures described in JSSS 6.2.6[Safety Measures in Operation] when the Contractor carry out the hoisting works by cranes.
6.4 移動式クレーン作業 本仕様書6.16.2[揚貨作業]の規定に加え、移動式クレーンを用いる場合には次の措置を講じなければならない。 **6.4.1 移動式クレーンの配置と据付** 請負者は、移動式クレーンの配置及び据付を行うときは、次の措置を講じなければならない。	**6.4 Mobile Crane Works** The Contractor shall take the following measures when the mobile crane shall be operated additional to the regulations specified in JSSS 6.1［Lifting Work］. **6.4.1 Placements and Installations of Mobile Crane** The Contractor shall take the following measures when the mobile crane shall be placed and installed.	**6.4 Mobile Crane Works** The Contractor shall take the following measures in addition to the measures specified in JSSS 6.2[Lifting Work] for mobile cranes works. **6.4.1 Placements and Installations of Mobile Crane** The Contractor shall take the following measures for the placement or installation of the mobile crane:
(1) 移動式クレーンの作業範囲内に障害物がない位置に据え付けること。障害物がある場合は、障害物を回避する適切な作業方法を計画し、操作者、合図者に実施させること。	(1) Place at the place where there are no obstacles within the operation range of mobile cranes. When there are obstacles, plan the appropriate operation to avoid the obstacles and let operators, and signalmen comply this plan.	(1) Locate mobile crane at the place where there are no obstacles within the operation range of mobile crane. When there are obstacles, plan the appropriate operation to avoid the obstacles and make operators, Spotter and Flagman comply with this plan,

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
(2) 移動式クレーンは、十分な支持力のある場所に設置すること。 (3) 移動式クレーンが転倒するおそれがある場所を特定し、地盤が軟弱な場所、埋設物その他地下に存する工作物が損壊するおそれがある場所においては、移動式クレーンの転倒を防止するために必要な広さ及び強度を有する鉄板等が敷設したうえで作業を行うこと。 (4) 移動式クレーンのアウトリガーと地盤との間には、鉄板等の敷板を敷設し、アウトリガーの沈下を防止すること。	(2) Place at sufficient stiff ground (3) Investigate the risk of falling of mobile cranes. When there is such a risk because the ground is soft or underground installations and manufactured one shall be damaged, place the steel plate with necessary width and strength to operate mobile cranes (4) Place the floor board in order to prevent from the subsidence of outriggers between the ground and outriggers of mobile cranes.	(2) Place mobile crane on the ground which has sufficient bearing capacity for the mobile crane, (3) Investigate the risk of fall or overturn of mobile cranes. When there is a risk of fall or overturn of the mobile crane as the ground is weak or collapse occurs in the ground due to that underground utilities is broken by the mobile crane, place steel plates with necessary width and strength to avoid fall or overturn of the mobile crane for operation of the mobile crane, (4) Place outrigger pads of steel and the like in order to prevent from the subsidence of outriggers between the ground and outriggers of mobile crane,
(5) アウトリガーを有する移動式クレーン又は拡幅式のクローラを有する移動式クレーンを用いて作業を行うときは、当該アウトリガー又はクローラを最大限に張り出すこと。ただし、アウトリガー又はクローラを最大限に張り出すことができない場合には、当該移動式クレーンに掛ける荷重が当該移動式クレーンのアウトリガー又はクローラの張り出し幅に応じた定格荷重を下回ることが確実に見込まれる事を確認して作業をすること。	(6) In operation by using mobile cranes with outriggers or crawlers of extension type, overhang the outriggers or crawlers as long as possible. When the outriggers or crawlers cannot be overhung maximum, ensure that the loads on the mobile cranes is less than the rated capacity accordance with the overhang length of outriggers and crawlers.	(5) When mobile crane with outriggers or extension type crawlers is operated, extend the outriggers or crawlers to maximum position, (6) When the outriggers or crawlers cannot be extended to the maximum position, ensure that the loads on the mobile cranes is less than the Rated Capacity of the crane depending on the extension length of outriggers or crawlers, and
(7) 移動式クレーンを用いて作業を行うときは、クレーンの運転者及び hoisting and rigging をする者が当該クレーンの定格荷重を常時知ることができるよう、表示その他の措置を講じること。運転者及び hoisting and rigging をする者に作業の開始前に定格荷重、旋回範囲の制限を確認させ、作業中はこれらを厳守させること。	(7) Display the rated capacity or take the other measures as drivers and riggers could know rated capacity of the mobile crane any time. Ensure that drivers and riggers confirm the rated capacity and turning limit before the operation and comply with them.	(7) Post or take other measures to show the Rated Capacity of the mobile crane so that drivers and riggers can always know the Rated Capacity of the mobile crane. Ensure to make drivers and riggers confirm the Rated Capacity and operation limit (area, angle, distance and height) of the mobile crane before the start of operation and make them comply with them.
6. 4. 2 運転と操作 請負者は、移動式クレーンの運転と操作をする場合は、本仕様書6.1.7[揚貨機械の運用時の安全措置]の該当する措置を講じるとともに、次の措置を講じなければならない。	**6.4.2 Operations** The Contractor shall take the following measures additional to the measures described in JSSS 6.1.7 [Safety Measures in Operation] in operating mobile cranes.	**6.4.2 Operations** The Contractor shall take the following measures for operating mobile cranes in addition to the measures specified in JSSS 6.2.6[Safety Measures in Operation].
(1) 本仕様書 ~~6.1.3~~6.2.2[揚貨機械の運転者及び操作者]に従い、移動式クレーンの運転者の氏名を、クレーンの運転席の外側に掲示すること。 (2) 運転者に移動式クレーンに装備されている過負荷防止装置に、ブームの作業状態とアウトリガーの設置状態を正確にセットさせ、過負荷防止装置を作動させること。 (3) 運転者に、作業開始後一定時間を経過したところで、一旦作業を停止し、アウトリガー又はクローラの状態を点検し、異常があれば作業を中断させること。	(1) Display the name of operators or drivers of mobile cranes on outside of drivers' seats complying with JSSS 6.1.3[Operators and Drivers of Lifting Equipment]. (2) Activate the over load prevention devices of mobile cranes and let drivers carry out the setting the operation condition of booms and the installation condition of outrigger accurately. (3) Ensure that drivers stop the operation once and inspect the outrigger and crawler when a certain time has passed since the start of works, and prohibit the operation if there is an abnormality.	(1) Post names of operators or drivers of mobile cranes on outside of drivers' seats complying with JSSS 6.2.2[Operators and Drivers of Lifting Equipment]. (2) Activate the over-load prevention device of mobile cranes and make drivers input accurately operation condition of booms and outriggers. (3) Make drivers stop the operation once after at a certain time has passed since the start of works and inspect the condition of outriggers or crawlers, and prohibit to continue the operation when there is abnormality in them.

2019.12.02 JSSS in Japanese （Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
6.4.3 作業終了後の措置 請負者は、移動式クレーンの作業終了時には、運転手に次の措置を講じさせなければならない。	**6.4.3 After the Operation** The Contractor shall let drivers take the following measures mobile crane after the operation.	**6.4.3 After the Operation** The Contractor shall make drivers take the following measures for mobile cranes after the hoisting operation:
(1) つり具を安全な位置に固定させること。 (2) 走行する場合は、事前に次の事項を行うこと。 (a) 各部の固定ピン等を取り付けること。 (b) 旋回ブレーキ、ウインチドラムをロックすること。 (c) クレーン操作関係のスイッチは全て切り(off)にすること。	(1) Hoist the lifting tools at safety position and fix it. (2) Take the following measures before in driving (a) Attach the fixed pin on each part. (b) Lock the Swivel brake, winch drum (c) Turn off all switch related to the operation of cranes	(1) Fix the Hoisting Equipment at safety position, (2) Take the following measures before driving of mobile cranes: (a) Attach fixing pin on each part, (b) Lock brake of turning device and winch drum, and (c) Turn off all switches related with operation of cranes.
6.5 玉掛け作業 **6.5.1 玉掛け作業員** 請負者は、玉掛け作業員以外のものに、玉掛け作業を行わせてはならない。 **6.5.2 玉掛け用具** 請負者は、玉掛け用具の破断等による揚貨作業での作業員の危険を防止するため、次の玉掛け用具に関する規定を遵守しなければならない。	**6.5 Hoisting and Rigging Works** **6.5.3 Rigger** The Contractor shall prohibit other worker than rigger from engaging hoisting and rigging works. **6.5.4 Hoisting and Rigging Tool** The Contractor shall comply the following regulations related to hoisting and rigging tool in order to prevent the danger for Authorized Contractor's Personnel due to the fracture of equipment, etc.	**6.5 Hoisting and Rigging Works** **6.5.1 Rigger** The Contractor shall prohibit other worker than Rigger from engaging in Hoisting and Rigging works. **6.5.2 Hoisting and Rigging Equipment** The Contractor shall take the following measures to prevent the danger for workers by the failure of Rigging Equipment, etc. in the hoisting works:
(1) 玉掛け用具は、製造者と最大使用荷重（Working Limit Load）が確認できるものであることとし、現場で請負者が作成したものは用いてはならない (2) 製造者が定めた用途及び最大使用荷重に従い適切に使用すること。 (3) 次のいずれかの状態の玉掛け用具は使用してはならない。使用できない状態の玉掛け用具は、切断廃棄等の処分を行うこと。 (a) ワイヤロープの場合 (i) 一よりの間で素線数の 10%以上の素線の断線があるもの (ii) 直径の減少が公称径の 7%を越えるもの (iii) キンクがあるもの (iv) 著しい形くずれ又は腐食があるもの (b) つりチェーンの場合 (i) 伸びが、当該つりチエーンが製造されたときの長さの 5%をこえるもの (v) リンクの断面の直径の減少が、当該つりチエーンが製造されたときの当該リンクの断面の直径の 10%をこえるもの (vi) き裂があるもの (c) フック、シャックルの場合 (i) 変形しているもの (vii) き裂があるもの	(1) Ensure that the manufactures and working limit load of hoisting and rigging tool can be confirmed and prohibit using the equipment which the Contractor made at construction site. (2) Use the hoisting and rigging tool complying with the working limit load and usage specified with the manufactures. (3) No use hoisting and rigging tool which is the following conditions, and discharge hoisting and rigging tool which cannot be used. (a) Wire rope (i) Regarding to a twine of wire rope, more than 10% of the number of strands are cut (ii) Diameter reduction exceeds 7% of nominal diameter (iii) Any kink in wire rope (iv) Significant deformation or corrosion (b) Hanging chain (i) The Stretch is more than 5 % the length at the time of manufacture. (ii) The diameter of cross section of link decreases 10 % of the diameter at the time of manufacture. (iii) Cracked (c) Hook, shackle	(1) Rigging Equipment shall be those that the manufacture and working limit load of Rigging Equipment can be confirmed on them. Use of Rigging Equipment made at the Site by the Contractor shall be prohibited, (2) Rigging Equipment shall be used complying with the working limit load and as specified by its manufacture, (3) Rigging Equipment under the following conditions shall not be used, and such Rigging Equipment shall be made unusable or disposed: (a) Wire ropes (i) Those with one-tenth or more of the element wires are cut in one strand. (ii) Those with the reduction ratio of a diameter due to wear-out, of which are exceeding 7% of the nominal diameter. (iii) Those with kink. (iv) Those with marked deformation or corrosion. *Alternative: OSHA§1926.250 General requirements for storage. Wire rope shall not be used if, in any length of eight diameters, the total number of visible broken wires exceeds 10 percent of the total number of wires, or if the rope shows other signs of excessive wear, corrosion, or defect.* (b) Hanging chain (i) The stretch is longer than 5 % of the length at the time of manufactured.

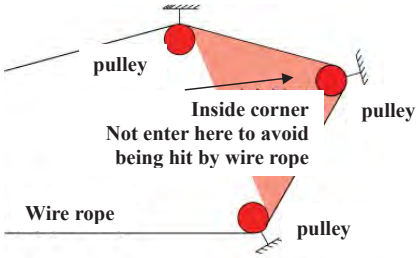
2019.12.02 JSSS in Japanese（Provisional Final Draft 11/5）&	SSS in English R0（11/13）	JSSS in English R1（12/02） 6.1-6.5
(d) 繊維ロープの場合 (i) ストランドが切断しているもの (viii)著しい損傷又は腐食があるもの	(i) Deformation (ii) Cracked (d) Synthetic fiver rope (i) Broken or cut strand (ix) Significant deformation or corrosion	(ii) The diameter of cross section of link decreases 10 % of the diameter at the time of manufactured. (iii) Cracked. *Alternative: OSHA§1926.250 General requirements for storage. Whenever wear at any point of any chain link exceeds that shown in Table H-1 —MAXIMUM ALLOWABLE WEAR AT ANY POINT OF LINK, the assembly shall be removed from service.* (c) Hook, shackle (i) Deformation (ii) Cracked (d) Synthetic fiver rope (i) Broken or cut strand (ii) Significant damage or corrosion
6. 5. 3 玉掛け作業時の安全措置 請負者は、玉掛け作業を行うときは、つり荷の落下、衝突による作業員の危険を防止するため次の措置を講じなければならない。 (1) 玉掛け用ワイヤロープの月例点検を明確にするため、月毎に異なる色のビニールテープ等で、玉掛け用ワイヤロープの見やすい位置に、ワイヤロープ点検済の色分け表示をすること。 (2) 作業を開始する前に使用する玉掛け用具の異常の有無について点検を行なうこと。 (3) 異常のある玉掛け用具は、切断廃棄等の処分をすること。 (4) 揚貨物の重量・形状に応じて適格な玉掛け具を選定して使用すること。 (5) 荷のつり上げ時に、玉掛けワイヤロープがつり具又は吊り荷の表面で滑らないように、適切な吊り角度、あて物の位置、玉掛け等の方法を選定すること。 (6) つり荷の重心位置を定めて、その真上で吊り上げること。 (7) クランプ等の小物やパイプ類などの滑りやすいものを吊り上げる場合は、適切な玉掛け方法によりつり荷の落下防止をすること。 (8) 荷を吊る際は、介錯ロープを吊り荷の端部に取り付け、吊り荷の移動の作業を行うこと。 (9) 玉掛け用具は、雨や粉じん等が防げる保管場所へ整理して保管すること。	**6.5.3 Safety Measures in Hoisting and Rigging Works** The Contractor shall take the following measures in order to prevent the danger for Authorized Contractor's Personnel due to the falling and contact of suspended loads, etc. in hoisting and rigging works. (1) In order to ensure that the monthly inspection for wire ropes was completed, attach the vinyl tapes whose colors vary by month to an easy-to-see positions of wire ropes. (2) Carry out the inspection of hoisting and rigging tool before the work. (3) If the hoisting and rigging tool is defective, cut down and discharge them. (4) Select and use hoisting and rigging tool depending on the weight and shape of suspended loads. (5) Apply the appropriate methods such as hanging angles and the position of the frame, in lifting works in order not to slip off the wire rope from lifting tools and the surface of suspended loads. (6) Carry out the suspended loads after deciding the center of gravity (7) In lifting the slippery objects such as pipes and the small object such as clamps, prevent from dropping off by selecting appropriate hoisting and rigging methods. (8) In transport the suspended loads, attach the assistance rope at the edge of suspended loads. (9) Store the hoisting and rigging tool at the storage location specified in the Contractor preventing from the rain and dust.	**6.5.3 Safety Measures in Hoisting and Rigging Works** The Contractor shall take the following measures to prevent the danger for workers due to the falling and contact of suspended loads, etc. in Hoisting and Rigging works. (1) Attach vinyl tapes, etc. which colors vary by month at easy-to-see positions of wire rope to make clear that the monthly inspection for wire ropes is completed, (2) Inspect Rigging Equipment before start of works, (3) Make unusable and destroy defective Rigging Equipment, (4) Select and use suitable Rigging Equipment depending on the weight and shape of loads, (5) Apply appropriate method of hanging angles, position of rigging pad, etc., in lifting works to avoid slipping off the wire rope from lifting tools and the surface of loads, *(To MD, Rigging pads: I cannot find proper name of these shown in the photos in the last page.)* (6) Hoist loads at the center of gravity of loads, (7) For lifting slippery goods such as pipes, small goods such as clamps, prevent from dropping them by selecting appropriate rigging methods. (8) In transporting loads, attach a guide rope at the edge of loads. (9) Store the Rigging Equipment in order in the storage which can prevent them from wet by rain and dust.

Terms
BS 6100-12:2008
12 36007 jib crane crane (01) that has a luffing jib (12 36018) pivoted at a low level (01)
12 36008 derrick crane mast crane crane (01) that consists of a mast (03 51007) capable of rotation, with a luffing jib (12 36018) pivoted from its foot
12 36009 scotch derrick crane derrick crane (12 36008) with bracing (01) to hold the top of the mast (03 51007) in position
12 36010 guy-derrick crane derrick crane (12 36008) with guys (03 52011) holding the top of the mast (03 51007) in position
12 36011 tower crane crane (01) that consists of a lattice tower (03 51006) of steel with a jib (12 36017) mounted on the top
12 36012 climbing crane tower crane (12 36011) supported by the building (01) or structure (01) within which it stands, and raised as the height (01) of the building (01) or structure (01) increases
12 36013 self-erecting tower crane tower crane (12 36011) that can be erected without using another crane (01)
12 36014 overhead travelling crane crane (01) that consists of one or two girders (01) mounted on travelling end carriages; the hoist (12 36026) or chain block (12 36037) traverses the girder (01)
12 36015 portal gantry crane crane (01) that consists of a girder (01) supported on legs running on rails (04 22051); a trolley and hoist (12 36026) or chain block (12 36037) traverses the girder (01)
12 36016 scaffold hoist small jib crane (12 36007) for mounting on a vertical scaffold tube (12 36047)
12 36017 jib component (01) of a crane (01) giving it reach and/or height (01) and from which the load (01) is suspended

BS ISO 6707-1:2017
3.5.3.17 crane
machine that incorporates an elevated structural member (3.3.1.3) beneath which suspended loads can be raised, lowered, and moved horizontally

(Reference) Dangerous place in rope works; Not enter inside corner of ropes to avoid being hit by wire rope

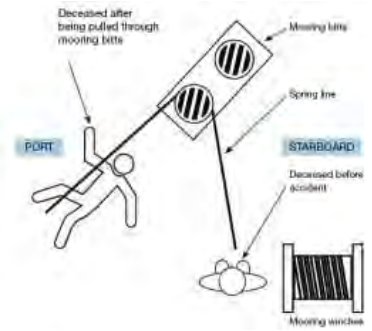
https://safety4sea.com/fatal-accident-mooring-operation-deck/



Fatal accident during mooring operation on deck

During mooring operation on board a Hong Kong registered bulk carrier, a crew member was killed after **being hit by a mooring rope,** the HK Marine Department informs. The chief officer was the person in charge of the mooring operation at the forward station of the vessel, assisted by other crew members including one ordinary seaman (OS)

滑車内角側周辺　立ち入り禁止
ワイヤーロープの引っ掛かりなど予想しない荷重が作用する場合があります。
一般的には巻き上げ機に過負荷制御機能があるケースは残念ながら少数です。
従って、滑車が壊れワイヤーロープが跳ねることを前提にし、滑車の内角側周辺には立ち入らない作業計画をお立てください。



https://www.marineinsight.com/marine-safety/avoiding-death-traps-on-ships-understanding-dangers-of-mooring-operation/
2) Rope Bight
Mooring ropes are long and heavy ropes stored on board ships in coil form. When these ropes are under operation, they tend to form a coil or ring shape naturally known as rope bight.
Rope Bight
If a person involved in mooring operation comes under this rope bight, the pull of the rope can drag him over the ship or smash him in the hard deck over machines. Several injuries and deaths have been reported due to crew unaware of standing over bight and dragged by the rope.
The best ways to avoid accidents due to rope bight are:
•The crew must be aware of where he is standing while handling the ropes or when near them. It must be repeatedly made known to them that they should NEVER stand in the bight of a rope as the smallest error can cause them their life

•The supervisor must concentrate on others action and should not involve himself/herself in the operation as working hand. Being the officer in charge of the whole operation, the person must ensure that he oversees the safe mooring operation and carry out the Master's orders. There is absolutely no need, unless in a critical situation, for the officer to get involved with the handling of ropes as rather than helping the situation, it only further increases the risk

2019.11.05 Japanese Final
2019.12.02 NK Draft Eng. R1
2019.12.12 NK Issue 1
2019.12.26 JICA Comment
2020.3.23 NK Eng. R2

JSSS in Japanese (2019/11/05)	JSSS in English Issue 1（2019/12/12）	JICA Comments (2019/12/26) JC: JICA Comments in blue letters on sentence and in yellow NK: NK actions	JSSS in English R2 for Issue 2（2020/3/23） Words in red color are added or modified ones from the last version.
		全体についてのコメント 1. 揚貨・玉掛け作業のリスクを想定して記載することが必要だが、総花的な記載になっている。下記などを念頭した記載である必要がある。 ・重量物を扱う ・揚貨機械の不整備・Rigging の損傷および消耗 ・不適切な玉掛 ・資格のないものの玉掛け、信号 ・バックホーなどによる揚貨 2. 機械一般では機械の整備が一つのテーマだったはず。それが適用されるのか。或いは別途記載するか必用。 3. スリング・アクセサリーなどの絵、クレーンのシグナルの絵、揚貨作業の作業場の囲いなどの絵があってもいいのでは。 4. 玉掛の掛け方も通常ははいっているのでは。例 BS EN13414" Steel wire rope slings – Safety" JC: Comment as a whole of the section. 1. It is necessary to describe in the section about the risk of hoisting and sling works, however, the draft seems to be mentioning general requirements only. It should be described concretely considering following matters. ・ Handling heavy objects ・ Insufficient maintenance of hoisting equipment, damage and wear of rigging ・ Improper slinging ・ Sling and signal by unqualified personnel ・ Hoisting using unsuitable equipment such as a backhoe 2. Maintenance of equipment should have been one of the themes for "Equipment in General (Chapter 4?)". Will it be mentioned here or in another part? 3. Figures of sling accessories, signal for crane work and enclosure of the lifting work area might be inserted in the section. 4. Sling methods are generally described. For example, BS EN 13414 "Steel wire rope slings – Safety" NK: 1. JSSS covers the comments except hoisting by backhoe because it is specified in 4.5.1 (1) & (5) as general. The comment will be refelected in 4.5.1. NK: 2. Maintenance is specifird in 5.2.5 Inspection of Hoisting Equipment and Rigging Equipment. Some addition is made as commented. NK: 3. Figures requested to be included are not attached because NK considers JSSS is specification to specify safety measures to be taken by the Contractor and the Conrtractor shall take various measures and study methods by	**5 HOISTING AND RIGGING** **5.1 GENERAL REQUIREMENTS** 5.1.1 Scope 5.1.2 Definitions 5.1.3 Compliance Standards **5.2 HOISTING OPERATIONS** 5.2.1 Instruction for Contractor's Personnel 5.2.2 Operators 5.2.3 Riggers 5.2.4 Safety Education and Training 5.2.5 Inspection of Hoisting Equipment and Rigging Equipment 5.2.6 General Safety Measures for Hoisting Operations **5.3 HOISTING EQUIPMENT - CRANES** 5.3.1 Planning, Installation and Removal 5.3.2 Additional Requirements for Mobile Cranes **5.4 RIGGING EQUIPMENT** 5.4.1 Hoisting and Rigging Equipment 5.4.2 Further Safety Requirements for Rigging

		themselves. NK: 4. Sling methods shall be selected to meet JSSS requirements to safely hoist loads. BS EN 13414 “Steel wire rope slings – Safety is added in 5.4.2 Further Safety Requirements for Rigging (4).	
5 揚貨・玉掛け作業 **5.1 一般事項** (1) 本節では、揚貨作業及び玉掛け作業にかかる揚貨機械の転倒、崩壊、吊り荷の落下等による作業員の危険を防止するための措置について規定する。 (2) 本仕様書で使用する用語の定義は次である。 (a) 揚貨機械とは、動力によって荷をつり上げ、移動することを目的とするものをいう。**→E6.1.2 (1)で規定済み** (b) 定格荷重（Rated capacity）とは、揚貨機械の製造者が規定した揚貨作業の条件（機械の構造、半径、ブームの長さ及び他の使用上の要素等）に応じて、この製造者が許可した最大の揚貨荷重をいう。**→E6.1.2 (3)で規定済み** (c) 玉掛け作業(hoisting and rigging)とは、揚貨機械により、つり荷をつり具でつるために玉掛け用具を使用して行う準備、荷のつり上げ、つり荷の移動及びつり荷を所定の位置に置くまでの作業をいう。**→規定なし** (d) 玉掛け作業員(rigger)とは、玉掛け作業に関する十分な知識及び作業能力を有し、作業チームの作業員を適切に指揮・統率する能力があると請負者が認めるもの(competent person)とし、本仕様書 1.9.2 (2)[特に危険又は有害な作業へ配置予定の者への教育]で定めた教育を終了した作業員をいう。**→E6.1.2 (6)で規定済み** (e) つり具(lifting equipment)とは、揚貨機械に付属して装備され、取外しできないフック等のつり上げ用具をいう。**→規定なし** (f) 玉掛け用具(rigging equipment)とは、つり荷をつり具でつるためのロープ、チェーン、ベルト、シャックル、リング、クランプ、ハッカー等をいう。**→E6.1.2 (2)で規定済み**	**5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings. **5.1.2 Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) “**Hoisting Equipment**” means Contractor’s Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned. (2) “**Rigging Equipment**” means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned. (3) “**Rated Capacity**” means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as officially recommended by the manufacturer. (4) “**Recommended Safe Working Load**” means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.	**5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings. **5.1.2 Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) “**Hoisting Equipment**” means Contractor’s Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned. (2) “**Rigging Equipment**” means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned. (3) “**Rated Capacity**” means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as officially recommended by the manufacturer. (4) “**Recommended Safe Working Load**” means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer. JC: Rated Capacity は揚重機、Recommended Safe Working Load は吊具に対してというのは理解できるが、定義なしに文脈で記載されるとわかりにくい。Rated Hoisting Capacity と Maximum Rigging Working Load とか名称変更したほう	**5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings. **5.1.2 Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) “**Hoisting Equipment**” means Contractor’s Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned. (2) “**Rigging Equipment**” means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned. (3) “**Rated Capacity**” means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as officially recommended by the manufacturer. (4) “**Recommended Safe Working Load**” means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

		が良い。 It is understandable that the word of “Rated Capacity” is used for lifting equipment and “Recommended Safe Working Load” for sling. However, it is a little difficult to understand if they are used without defining them. It is recommended to change the wording such that “Rated Hoisting Capacity” and “Maximum Rigging Working Load” respectively. NK:“Rated Capacity” is defined in OSHA as follows: Subpart CC-Cranes and Derricks in Construction, 1926.1401 Definitions. Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use. NK propse to use the same term in JSSS as defined in OSHA so that readers of JSSS can easily understand “Rated Capacity”. NK:“Recommended Safe Working Load” is useed in OSHA as follows: Subpart H-Materials Handling, Storage, Use, and Disposal, 1926.251 Rigging equipment for material handling. (a) General. (2) Employers must ensure that rigging equipment: (i) Has permanently affixed and legible identification markings as prescribed by the manufacturer that indicate the recommended safe working load;(ii) Not be loaded in excess of its recommended safe working load as prescribed on the identification markings by the manufacturer; and NK propse to use the same term in JSSS as used in OSHA so that readers of JSSS can easily understand “Recommended Safe Working Load”.	
	(5) “**Total Load**” means either the Rated Capacity or the “Recommended Safe Working Load”, neither of which shall be exceeded. (6) “**Rigger**” means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor’s Personnel*].	(5) “**Total Load**” means either the Rated Capacity or the “Recommended Safe Working Load”, neither of which shall be exceeded. (6) “**Rigger**” means a competent person who is certified by the HSO as suitable for assignment on ~~Hoisting Operations~~ Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor’s Personnel*]. NK:OSHA used “rigger” as follows: Subpart CC—Cranes and Derricks in Construction 1926.1404 Assembly/Disassembly—general requirements (applies to all assembly and disassembly operations). (r) Rigging. (1) The rigging work is done by a qualified rigger. OSHA Fact Sheet mentions as follows: https://www.osha.gov/Publications/cranes-qualified-rigger-factsheet.html Employers must use qualified riggers during hoisting activities for assembly and disassembly work (1926.1404(r)(1)). Rigging work is a part of hoisting activities. NK ask if MD which is suitable term.	(5) “**Total Load**” means either the Rated Capacity or the “Recommended Safe Working Load”, neither of which shall be exceeded. (6) “**Rigger**” means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor’s Personnel*].

5.2 揚貨作業

5.2.1 作業員への周知

請負者は、揚貨機械を用いて揚貨作業を行うときは、作業に必要な下記の安全上の措置について、必要に応じ作業員に説明しなければならない。→E6.2.1 (1)(a)/(b)

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart CC- Cranes and Derricks in Construction; Section 1413 – Wire Rope Inspection and Section 1414 – Wire Rope Selection and installation criteria;

(b) OSHA PART 1926.753-Safety and Health Regulations for Construction, Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) OSHA Information Booklet on Sling safety, ref OSHA 3072, 1996 (revised) concerning the Use of Slings (composed of chains, wire rope fiber rope and synthetic web), Safe Lifting Practices and Maintenance of Slings.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards:

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart CC- Cranes and Derricks in Construction; Section 1413 – Wire Rope Inspection and Section 1414 – Wire Rope Selection and installation criteria;

(b) OSHA PART 1926.753-Safety and Health Regulations for Construction, Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) OSHA Information Booklet on Sling safety, ref OSHA 3072, 1996 (revised) concerning the Use of Slings (composed of chains, wire rope fiber rope and synthetic web), Safe Lifting Practices and Maintenance of Slings.

JC: 妥当性は要検討

Validity of clauses should be re-examined. (5.1.3 (1))

NK: (c) is available in internet but information booklet, not regulation, so it is deleted.
https://www.scribd.com/document/28664578/OSHA-3072-Sling-Safety

For reference: There is Guidance on safe safe sling use issued by OSHA below.

https://www.osha.gov/dsg/guidance/slings/index.html

NK: Addition of 1926.251Rigging equipment for material handling., Subpart H - Materials Handling, Storage, Use, is made as (a) and order of present (a) and (b) is changed to (b) and (c)

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R - Steel Erection; Section 1926.753 Hoisting and rigging.

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria;

5.2 HOISTING OPERATIONS

5.2.3 安全教育と指導

請負者は、本仕様書 4.1.5[安全教育と指導]に準じ、ま

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;

(i) Any limitations of Hosting Equipment; and

(j) Disconnecting techniques used to complete the task.

(3) Organisation

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(c) The communication and signalling requirements (equipment to be used and standard signals); and

(d) The procedures in case of emergency.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all Hoisting Operations and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 afety Education and Training

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;

(i) Any limitations of Hosting Equipment; and

(j) Disconnecting techniques used to complete the task.

(3) Organisation

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(c) The communication and signalling requirements (equipment to be used and standard signals); and

(d) The procedures in case of emergency.

JC: この意味は？organization 以外の話も含まれているので、タイトルを再考ください。

What is the meaning of this "Organisation"? Actually, this clause includes matters other than organisation. Please re-consider the title.

NK: Modified as right.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all ~~Hoisting Operations~~ rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;

(i) Any limitations of Hosting Equipment; and

(j) Disconnecting techniques used to complete the task.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(4) The communication and signalling requirements (equipment to be used and standard signals); and

(5) The procedures in case of emergency.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety

た揚貨機械の特性に応じて揚貨機械の運転者又は操作者、揚貨作業に従事する作業員への教育を行わなければならない。**→E6.2.4 で規定済み**

5.2.4 揚貨機械の搬入時の点検

請負者は、揚貨機械の搬入時の点検は、本仕様書4.1.6[搬入時の点検]に準じ、行わなければならない。この点検には、本仕様書 6.2.2(1)及び(2)に規定の項目を含まなければならない。**→E6.2.5 (1)で規定済み**（before the commencement of the first and of all subsequent Hoisting Operations.としている）

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(2) Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Over-winding prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

[*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

JC: 搬入時の点検について触れるようにしてください（その時点で怪しい機械を持ち込ませないということが大事）。

Please refer to inspection at the time of bringing in. (It is important to prohibit to bring defective equipment into the Site.)

NK: The inspection at mobilizing of Contractor's equipmnet at the site is specified in JSSS 4.2.1 (3). Duplicate specifying is avoided here. Inspection at the time of mobilization is added as (1) in 5.2.5 as right.

JC: ・4 章をリファーするよう追記ください。

・なぜ定期点検を消したのか意図を確認したく。

Please add to refer to Chapter 4. Would like to know the intention of deleting the periodic inspection.

NK: As same as the above, periodic inspection is specified in JSSS 4.2.1 (5). Periodic inspection is added as shown right in (4).

(1) Further to the requirements of JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(2) Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Over-winding prevention devices;

NK: over-loading prevention devices is added.

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspeection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] and JSSS 4.2 [Inspeection, Maintenance and Repair], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Over-winding prevention devices, and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying

			with JSSS 4.2.1 [Requirement Generally] (5) and include the following items: (a) Condition of over-winding prevention devices, overload prevention devices, other safety devices, brakes, and clutches; (b) Condition of wire ropes and hanging chains; (c) Condition of Lifting Equipment such as hooks; (d) Condition of placement of winches; and (e) Condition of electric wire, switchboard and controller.
	(3) No Hoisting Operation shall be allowed to commence until the HSO has certified that it is safe to do so.	(3) No Hoisting Operation shall be allowed to commence until the HSO has certified that it is safe to do so. JC: HSO が certify するのがじっさい実務的と考えられない。 It is not practical for the HSO to certify for hoisting operations. ((5) & (6) right: numbers are changed in accordance with addition of (2) and (4)) Inspection is argued here. So better to redraft as follows. "No Hoisting Equipment or Rigging Equipment shall not put in operation unless they are inspected in accordance with JSSS 4.1.7-4.1.9 and it is ensured that they are safe to be used." NK: Clause (5) is changed as right in accordance with JICA's comment.	(5) No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.
	(4) The Contractor shall prepare standard checklists for the above regular inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].	(4) The Contractor shall prepare standard checklists for the above regular inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*]. JC: Ditto (It is not practical for the HSO to certify for hoisting operations.) NK: In (4), the HSO shall manage the inspection and maintenance in accordance with the Safety Plan and instruct improvement if the person in charge does not follow the the Safety Plan. (4) is modified as (5) in right.	(6) The Contractor shall prepare standard checklists for the above regular and periodic inspections and the HSO shall ensure that these are recorded check, repair and maintenance results, complied with and signed by the person in charge of check and maintenance and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].
5.2.6 揚貨機械の運用時の安全措置 請負者は、本仕様書 4.1.10[運用時の安全措置]に準じ、揚貨機械と作業員の接触の防止、揚貨機械の安全対策を行うとともに、次の措置を講じなければならない。 (1) つり荷及び玉掛け用具の重量、作業範囲、作業半径・角度等の条件に見合った揚貨能力を持つ機械を選定すること。**→E6.2.6 (1)(3)(4)で規定済み** (2) 運転者及び玉掛け作業員が、揚貨機械の種類や作業状態に応じた定格荷重を常時知ることができよう定格荷重を、揚貨機械の適切な位置に表示すること。**→E6.2.6 (2)で規定済み** (3) 運転者及び玉掛け作業員に、つり荷及び玉掛け用具の合計重量が、定格荷重以下であることを確認させること。**→E6.2.6 (5)で規定済み**	**5.2.6 General Safety Measures for Hoisting Operations** The Contractor shall: (1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc. (2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and	**5.2.6 General Safety Measures for Hoisting Operations** The Contractor shall: (1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc. (2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times. (3) Select Rigging Equipment with Recommended Safe Working Load suitable for the Hoisting Operation.	**5.2.6 General Safety Measures for Hoisting Operations** The Contractor shall: (1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc. (2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times. (3) Select Rigging Equipment with Recommended Safe Working Load suitable

(4) 揚貨作業中は、揚貨機械の安全装置を常時作動させること。**→E6.2.6 (6)で規定済み**

(5) 立入りの禁止

本仕様書2.3[立入禁止の措置]に従い、次の立入禁止の措置を講じること。

(a) 揚貨作業中は、つり荷の直下のほか、つり荷の移動範囲内で、つり荷の落下による危険のある場所への作業員の立入りを禁止すること。**→E6.2.6 (7)で規定済み**

(b) ワイヤロープが通っているシーブ又はその取付け部の破損により、当該ワイヤロープがはね、又は当該シーブ若しくはその取付具が飛来することによる作業員の危険を防止するため、当該ワイヤロープの内角側への作業員の立入りを禁止すること。**→E6.2.6 (7)で規定済み**

(c) 立入りを禁止した場所には、看板、標識等を設置し、作業員に立入禁止を周知すること。**→E6.2.6 (7)で規定済み**

(6) 合図

(a) 本仕様書 2.4.2[合図、信号等の統一]に従い、合図者を任命し運転者又は操作者と合図者に決められた合図で作業させること。**→E6.2.6 (8)(a)で規定済み**

(b) 合図者に、つり荷がよく見え、運転者又は操作者からもよく見える安全な位置で、かつ作業範囲外に位置して合図を行なわせること。**→E6.2.6 (8)(b)で規定済み**

(c) やむを得ず運転者又は操作者から見えない位置で合図する場合には、無線等で確実に合図が伝わる方法をとらせること。**→E6.2.6 (8)(c)で規定済み**

Riggers are fully aware at all times.

(3) Select Rigging Equipment with Recommended Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall be particularly aware and take all measures to prevent any risk of injury to persons arising from the Hoisting Operation but outside the immediate working area, due to tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios must be provided and used; and

(d) Spotters shall be used only to keep any unauthorised personnel away from the working area.

---

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall ~~be particularly aware and~~ take ~~all~~ measures to ~~prevent~~ keep any unauthorised personnel off from any area subject to any risk of injury ~~to persons~~ arising from the Hoisting Operation ~~but outside the immediate working area~~, due to tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

JC: modified.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

JC: modified.

(d) Spotters shall be used only to keep any unauthorised personnel away from the working area.

JC: Spotter と合図者は別に規定して、合図者は合図に専従することを書かなければならないのではないか？

---

for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall ~~be particularly aware and~~ take ~~all~~ measures to ~~prevent~~ keep any unauthorised personnel off from any area subject to any risk of injury ~~to persons~~ arising from the Hoisting Operation ~~but outside the immediate working area~~, due to tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(7) 玉掛け作業
(a) 本仕様書 6.4[玉掛け作業]にもとづき、玉掛け作業をおこなうこと。**→規定なし（重複）**
(b) 揚貨機体の安定、吊り荷の重心、玉掛けの状態を確認すること。**→規定なし（重複）**
(8) 荷の吊り上げ作業
(a) 荷を吊り上げるとき、つり具がつり荷の重心の真上にあることを確認すること。**→E6.2.6 (9)(a)で規定済み**
(b) 荷の吊り上げを開始するとき、吊り上げ面から30 ㎝吊り上げた状態でつり荷を一旦停止し、つり荷の安定を確認すること。**→E6.2.6 (9)(b)で規定済み**
(c) 旋回を行うとき、旋回範囲内に人や障害物がないことを確認すること。**→E6.2.6 (9)(c)で規定済み**
(d) つり荷を安全な高さまで吊り上げた後、静かに旋回すること。**→E6.2.6 (9)(d)で規定済み**
(e) 常にブームの先端の動きやつり荷の状態に注意すること。**→E6.2.6 (9)(e)で規定済み**
(f) 荷下しは一気に着床させず、着床直前に一旦停止し、着床場所の状態や荷の位置を確認した後、静かに下すこと。**→E6.2.6 (9)(f)で規定済み**
(9) 運転者又は操作者は、荷を吊り上げたままで運転席を離れないこと。**→E6.2.6 (10)で規定済み**
(10) 作業中の揚貨機械の異常に関する措置
(a) 運転者又は操作者は、作業中に機械に異常音、発熱、臭気、異常動作等が認められたときは、直ちに作業を中止すること。**→E6.2.6 (11)(a)で規定済み**
(b) 機械の異常作動の原因を調べ、必要な修理を行うこと。**→E6.2.6 (11)(b)で規定済み**
(c) 機械の正常動作を確認した後でなければ、作業を再開しないこと。**→E6.2.6 (11)(c)で規定済み**

(9) During Hoisting Operations:
(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;
(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;
(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;
(d) After hoisting loads up to the safe height, adjust the boom gently;
(e) Always pay attention to the edge of boom and the condition of suspended loads; and
(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation
(a) If operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;
(b) The operator shall then identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

Should spotter and signallers be stipulated separately, and the signallers be described that he shall dedicate to the signal?

NK: As provided in (8) (a)~(c), the Riggers (signallers) carry only signalling and rigging. (d) is modified as right to clarify that Spotters are placed to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:
(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;
(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;
(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;
(d) After hoisting loads up to the safe height, adjust the boom gently;
(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and
(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators ~~shall~~ leave their seat or leave the controls while Hoisting Operations are in progress.

JC: modified.

(11) Defects with Hoisting Equipment during operation
(a) Ensure that, if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;
(b) ~~The operator shall then~~ Identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and
(c) ~~The HSO shall ensure that no Hoisting Operation shall resume unless the above has been complied with and the~~

(9) During Hoisting Operations:
(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;
(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;
(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;
(d) After hoisting loads up to the safe height, adjust the boom gently;
(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and
(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators ~~shall~~ never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation
(a) Ensure that, if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;
(b) ~~The operator shall then~~ Identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and
(c) Ensure that the repaired Hoisting Equipment shall not be put in operation

(11) 揚貨機械で使用するワイヤロープが、本仕様書 4.1.10(6)[建設機械のワイヤロープ]の(a)から(d)に規定のいずれかの状態のときは、交換したうえで切り捨て等の措置を講ずること。

(12) 本仕様書 2.7[悪天候及び地震時の対策]及び 4.1.10(8)[悪天候時の対策]の措置に加えて、悪天候時には揚貨機械が不安定な状態になることを回避するために、次のような措置を講じること。**→E6.2.6 (13)(a)/(b)で規定済み。**

(a) 悪天候時には、ジブを倒す又はマスト等をアンカー等で固定すること**→E6.2.6 (13)(c)で規定済み。**

(b) 悪天候及び地震の後に作業を行なうときは、作業前に本仕様書 6.2.2[揚貨機械の点検・整備]に規定の日常点検表及び定期点検表にもとづき、揚貨機械の各部分の点検を行なうこと。**→規定なし(追記済み)**

(13) 揚貨機械の目的外使用の禁止

(c) The HSO shall ensure that no Hoisting Operation shall resume unless the above has been complied with and the Hoisting Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment.*

(12) Condition of Ropes, Slings and Chains

The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

(a) The Contractor shall ensure that Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured when not in use to prevent any instability or collapse.

(14) Prohibition of Use

~~Hoisting Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment.*~~ Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO in accordance with JSSS 6.2.5.

JC: 6.2.5 のコメントを参照して適宜修正ください。特に、HSO が permission to use を出すことが現実的とも思えません。

Please modify this part referring to the comment for 5.2.5. Especially, it is not realistic for the HSO to give "permission to use".

NK: The HSO is ultimately responsible for the safety of the Hoisting Equipment, too. As considering the realistic condition at the Site, (c) is modified as right. As 5.2.5 has been modified, referring to 5.2.5 is deleted.

(12) Condition of Ropes, Slings and Chains

The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

(a) The Contractor shall ensure that Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured when not in use to prevent any instability or collapse.

JC: 長期間使用しない場合の措置と、悪天候時の措置が混ざっていて混乱しているのではないでしょうか。

Isn't it confusing that measures for long periods of non-use and measures for bad weather are mixed? (5.2.6 (13) (a)~(c))

NK: (a) to (c) are revised for countermeasures to secure Hoisting Equipment during adverse climatic conditions.

A general sentence is added for (13), and (d) is added from Japanese draft for safety inspection before resuming work.

(14) Prohibition of Use

Hoisting Equipment shall never be used for transporting or hoisting Contractor's Personnel.

unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

The Contractor shall take the following measures in addition to JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS]:

(a) The Contractor shall ensure that Hoisting Equipment is left in a safe condition when ~~not in use and particularly if~~ adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured ~~when not in use~~ to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

(14) Prohibition of Use of Hoisting Equipment

Hoisting Equipment shall never be used for transporting or hoisting Contractor's Personnel unless the following all measures

(a) 作業員の運搬や作業員をつり上げて作業をしないこと。→E6.2.6 (13)(a)で規定済み

(b) 作業の性質上やむを得ない場合又は安全な作業の遂行上必要な場合は、揚貨機械のつり具に専用のとう乗設備を設けて、次の全ての措置を講じて、作業員の運搬又はつり上げての作業をおこなうこと。→規定なし（以下、英文においては作業員の搭乗を認めない。）右のように追記済み）

(i) 揚貨機械に使用するワイヤロープは、荷重に対して安全係数が 10 以上であること。→規定なし

(ii) とう乗設備の転位及び脱落を防止する措置をとること。→規定なし

(iii) 作業員に墜落制止用器具等を使用させること。→規定なし

(iv) とう乗設備ととう乗者との総重量の 1.3 倍に相当する重量に500kgを加えた値が、当該揚貨機械の定格荷重をこえないこと。→規定なし

(v) とう乗設備を下降させるときは、動力下降の方法をとること。→規定なし

5.3 クレーン

5.3.1 設置・組立・解体

請負者は、クレーンの設置・組立・解体を行うときは、次の措置を講じなければならない。

(1) クレーンの設置、組立、解体は、クレーンの専門家の指揮のもとに行うこと。→E6.3.1 前文で規定済み

(2) クレーンの設置場所を調査し、障害物がある場合は、適切な設置方法を検討すること。→E6.3.1 (1)で規定済み

(3) 走行レーンがあるクレーンの場合は、走行する範囲の状況を調査し、安全を確保すること。→E6.3.1 (2)で規定済み

(4) クレーンの設計に従い、基礎の建設、据え付けを行うこと。→E6.3.1 (3)で規定済み

(5) クレーンの据付後、当該国の規則に基づき、又は規則がない場合はクレーンの製造者のマニュアルに従い、組立時検査、荷重試験及び安定度試験を実施すること。→E6.3.1 (4)で規定済み

(6) クレーンの組立後の点検は、本仕様書 6.2.2[揚貨機械の点検・整備]の規定に従い行うこと。→規定なし(4 章で共通事項として規定済)

5.3.2 運転と操作

請負者は、クレーンによる揚貨作業を行うときは、本仕様書 6.1.7[揚貨機械の運用時の安全措置]の措置を講じるとともに、本仕様書 6.1.3[揚貨機械の運転者及び操作者]に従い、クレーンの運転者又は操作者の氏名を、クレーンの運転席又は操作盤に掲示すること。

5.4 移動式クレーン

本仕様書 6.1[揚貨作業]の規定に加え、移動式クレーンを用いる場合には次の措置を講じなければならない。

5.4.1 移動式クレーンの配置と据付

請負者は、移動式クレーンの配置及び据付を行うとき

Hoisting Equipment shall never be used for transporting or hoisting Contractor's Personnel.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) to select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official

---

JC: 日本語版にある、やむを得ず目的外使用する際の対処が消えている。日本語版の 6.2.6 の(13)揚貨機械の目的外使用の禁止の書き方を復活させてください。

Measures for hoisting Personnel by unavoidable reason which was in the Japanese draft are deleted. Reinstate the manner of writing for the stipulation of 5.2.6 (13) of Japanese version.

NK: In English version, hoisting personnel is simply prohibit without exception. (14) is replaced with provisions in Japanese version as right:

NK: Sentences of (14) in English will be review and edited by MD.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) ~~to~~ and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.

5.3.2 Additional Requirements for Mobile cranes

---

are taken for the case of existing unavoidable reason or essential for safe work procedures:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load of the total of 1.3 times of total weight of gondola and workers plus 500 kg shall not exceed the Rated Capacity of the Hoisting Equipment

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of Contractor's Personnel in the gondora shall be ensured.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) ~~to~~ and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.

は、次の措置を講じなければならない。

(1) 移動式クレーンの作業範囲内に障害物がない位置に据え付けること。障害物がある場合は、障害物を回避する適切な作業方法を計画し、操作者、合図者に実施させること。→E6.3.2 (1)/(2)で規定済み

(2) 移動式クレーンは、十分な支持力のある場所に設置すること。→E6.3.2 (3)で規定済み

(3) 移動式クレーンが転倒するおそれがある場所を特定し、地盤が軟弱な場所、埋設物その他地下に存する工作物が損壊するおそれがある場所においては、移動式クレーンの転倒を防止するために必要な広さ及び強度を有する鉄板等を敷設したうえで作業を行うこと。→E6.3.2 (3)で規定済み

(4) 移動式クレーンのアウトリガーと地盤との間には、鉄板等の敷板を敷設し、アウトリガーの沈下を防止すること。→E6.3.2 (4)で規定済み

(5) アウトリガーを有する移動式クレーン又は拡幅式のクローラを有する移動式クレーンを用いて作業を行うときは、当該アウトリガー又はクローラを最大限に張り出すこと。ただし、アウトリガー又はクローラを最大限に張り出すことができない場合には、当該移動式クレーンに掛ける荷重が当該移動式クレーンのアウトリガー又はクローラの張り出し幅に応じた定格荷重を下回ることが確実に見込まれる事を確認して作業をすること。→E6.3.2 (5)/(6)で規定済み

(6) 移動式クレーンを用いて作業を行うときは、クレーンの運転者及び玉掛けをする者が当該クレーンの定格荷重を常時知ることができるよう、表示その他の措置を講じること。運転者及び玉掛けをする者に作業の開始前に定格荷重、旋回範囲の制限を確認させ、作業中はこれらを厳守させること。→E6.3.2 (7)で規定済み

5.4.2 運転と操作

請負者は、移動式クレーンの運転と操作をする場合は、本仕様書 6.1.7[揚貨機械の運用時の安全措置]の該当する措置を講じるとともに、次の措置を講じなければならない。

(1) 本仕様書 6.1.3[揚貨機械の運転者及び操作者]に従い、移動式クレーンの運転者の氏名を、クレーンの運転席の外側に掲示すること。→規定なし(4.3.1(8)で規定)

(2) 運転者に移動式クレーンに装備されている過負荷防止装置に、ブームの作業状態とアウトリガーの設置状態を正確にセットさせ、過負荷防止装置を作動させること。→規定なし(4.3.7で一部規定) 要追加

(3) 運転者に、作業開始後一定時間を経過したところで、一旦作業を停止し、アウトリガー又はクローラの状態を点検し、異常があれば作業を中断させること。→E6.3.2 (8)で規定済み

5.4.3 作業終了後の措置

請負者は、移動式クレーンの作業終了時には、運転手に次の措置を講じさせなければならない。

(1) つり具を安全な位置に固定させること。→E6.3.2 (9)(a)で規定済み

instructions and recommendations.

5.3.2 Additional Requirements for Mobile cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(9) After the Hoisting Operation and before demobilising

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

NK: Japanese version 5.4.2 (2) is added as (8) in right because this is specific requirement for mobile crane.

(8) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation ~~and before demobilising~~

JICA: 必要？ 言葉が強くありませんか。完全撤収の意味だとおかしいと思います。

Is this phrase necessary? The expression of the word “demobilising” is too strong that may mean complete

5.3.2 Additional Requirements for Mobile Cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation ~~and before demobilising~~

(a) When the mobile crane is not driven, fix the hooks of crane at the safe

(2) 走行する場合は、事前に次の事項を行うこと。
(a) 各部の固定ピン等を取り付けること。**→E6.3.2 (9)(b)で規定済み**
(b) 旋回ブレーキ、ウインチドラムをロックすること。**→E6.3.2 (9)(c)で規定済み**
(c) クレーン操作関係のスイッチは全て切り(off)にすること。**→E6.3.2 (9)(d)で規定済み**

5.5 玉掛け作業

5.5.1 玉掛け作業員

請負者は、玉掛け作業員以外のものに、玉掛け作業を行わせてはならない。

5.5.2 玉掛け用具

請負者は、玉掛け用具の破断等による揚貨作業での作業員の危険を防止するため、次の玉掛け用具に関する規定を遵守しなければならない。

(1) 玉掛け用具は、製造者と最大使用荷重（Working Limit Load）が確認できるものであることとし、現場で請負者が作成したものは用いてはならない **→E6.4.1 (1)/(2)で規定済み**
(2) 製造者が定めた用途及び最大使用荷重に従い適切に使用すること。**→E6.4.1 (3)(b)で規定済み**
(3) 次のいずれかの状態の玉掛け用具は使用してはならない。使用できない状態の玉掛け用具は、切断廃棄等の処分を行うこと。
(a) ワイヤロープの場合
(i) 一よりの間で素線数の 10%以上の素線の断線があるもの **→E6.4.1 (4)(a)(i)で規定済み**
(ii) 直径の減少が公称径の 7%を越えるもの **→E6.4.1 (4)(a)(ii)で規定済み**
(iii) キンクがあるもの **→E6.4.1 (4)(a)(iii)で規定済み**
(iv) 著しい形くずれ又は腐食があるもの **→E6.4.1 (4)(a)(iv)で規定済み**
(b) つりチェーンの場合
(i) 伸びが、当該つりチエーンが製造されたときの長さの 5%をこえるもの **→E6.4.1 (4)(b)(i)で規定済み**
(ii) リンクの断面の直径の減少が、当該つりチエーンが製造されたときの当該リンクの断面の直径の 10%をこえ

(a) Set the Crane in the safe position;
(b) Attach fixing pin on each part;
(c) Lock the brake of the turning device and winch drum; and
(d) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.

(2) The Contractor shall be prohibited from making his own Rigging Equipment at Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's official instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(a) Set the Crane in the safe position;
(b) Attach fixing pin on each part;
(c) Lock the brake of the turning device and winch drum; and
(d) Turn off all switches related with operation of cranes.

JC: 日本語版では走行する場合の事前対応事項でしたが、走行時のものと分けないのであればこの表現はおかしいのではないでしょうか。

These were measures before the equipment drives in Japanese draft. Is these proper if not separating measures "before" and "during" driving?

NK: In order to separate measures to take before driving, these are modified as right.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.

(2) The Contractor shall be prohibited from making his own Rigging Equipment at Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's official instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7%

removal of the equipment form the Site.

NK: Deleted.

(a) Set the Crane in the safe position;
(b) Attach fixing pin on each part;
(c) Lock the brake of the turning device and winch drum; and
(d) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.

(2) The Contractor shall be prohibited from making his own Rigging Equipment at Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's official instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Lock the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.

(2) The Contractor shall be prohibited from making his own Rigging Equipment at Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's official instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

るもの →E6.4.1 (4)(b)(ii)で規定済み

(ii) 著しい損傷又は腐食があるもの →E6.4.1 (4)(d)(ii)で規定済み

5.5.3 玉掛け作業時の安全措置

請負者は、玉掛け作業を行うときは、つり荷の落下、衝突による作業員の危険を防止するため次の措置を講じなければならない。→E6.4.2 で規定済み

(1) 玉掛け用ワイヤロープの月例点検を明確にするため、月毎に異なる色のビニールテープ等で、玉掛け用ワイヤロープの見やすい位置に、ワイヤロープ点検済の色分け表示をすること。→E6.4.2 (1)で規定済み

(2) 作業を開始する前に使用する玉掛け用具の異常の有無について点検を行なうこと。→E6.4.2 (2)で規定済み

(3) 異常のある玉掛け用具は、切断廃棄等の処分をすること。→E6.4.2 (3)で規定済み

(4) 揚貨物の重量・形状に応じて適格な玉掛け具を選定して使用すること。→E6.4.2 (4)で規定済み

(5) 荷のつり上げ時に、玉掛けワイヤロープがつり具又は吊り荷の表面で滑らないように、適切な吊り角度、あて物の位置、玉掛け等の方法を選定すること。→E6.4.2 (5)で規定済み

(6) つり荷の重心位置を定めて、その真上で吊り上げること。→E6.4.2 (6)で規定済み

(7) クランプ等の小物やパイプ類などの滑りやすいものを吊り上げる場合は、適切な玉掛け方法によりつり荷の落下防止をすること。→規定なし((4)で規定)

(8) 荷を吊る際は、介錯ロープを吊り荷の端部に取り付け、吊り荷の移動の作業を行うこと。→E6.4.2 (7)で規定済み

(9) 玉掛け用具は、雨や粉じん等が防げる保管場所へ

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall comply fully with the requirements of the standards noted in JSSS 5.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Remove any unusable or defective Rigging Equipment from service, tag as such and destroy or remove from the Site.

(4) Select and use suitable Rigging Equipment depending on the weight and shape of loads.

(5) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip.

(6) Hoist loads at or above the centre of gravity.

(7) Attach guide ropes to the hoisted loads to

of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

5.1 GENERAL REQUIREMENTS **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings. **5.1.2 Definitions** Definitions of terms for the purpose of this Chapter are as follows. (1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned. (2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned.	**5.1 GENERAL REQUIREMENTS GENERAL REQUIREMENTS** **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings. **5.1.2 Definitions** Definitions of terms for the purpose of this Chapter are as follows. (2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. ~~which,~~ when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned. MD: Please check if "which" can be deleted.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as officially recommended by the manufacturer.

(4) **ecommended Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

(5) "**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as ~~officially recommended~~ permitted by the manufacturer.

JC: OSHA1926.1401 の言い方に合わせました。また(4)の Safe Working Load については、OSHA は recommended としていますが、permitted で平仄を合わせました。

OSHA Subpart CC—Cranes and Derricks in Construction§1926.1401Definitions.
Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use.

The term is coincided with the expression in OSHA 1926.1401 to "permitted". As for "Safe Working Load" in (4), in OSHA "recommended" is used, but it is also changed to permitted" to accommodate with "permitted" in '(3).

NK: コメントに従い変更しました。Changed as commented.

JC: 5.2.5 に定義がない Lifting Equipment が残ってますが、小文字のそれが「揚貨機械」を表していますので、そこは記載ぶりを変更ください。
なお、日本のようにつり具=(フック)、その下が玉掛具という定義には、見た限り OSHA や豪州ではなってないと思いますので、その点も英文作成の際にはご留意下さい。
(要すれば、それらでは日本の定格荷重と違い rated capacity にはフックを含む。必要あれば BS 他でも確認の上、理解を共通化の上、和文と英文に齟齬がないようして下さい)
あるクレーン会社の説明書きの例:Rated Capacities include the mass of hooks, blocks, slings and auxiliary lifting devices. Their mass must be subtracted, from the listed Rated Capacity, to determine the equivalent net load.

There is "Lifting Equipment" in 5.25 (4) (c) which is not defined. Please modify the stipulation as "lifting equipment" is used to mean Hoisting Equipment.

In Japan, there is definition that lifting equipment means hook and rigging equipment means equipment below hook. On the other hand, there is no such definition in OSHA and Australia. Please keep in mind this.

(In short, the rated capacity used in OSHA and Australia includes weight of hook, which is excluded in Japan. If necessary, please check the definition in BS and make meaning of the rated capacity standardize.)

For example, a barouche of a crane company mentions: Rated Capacities include the mass of hooks, blocks, slings and auxiliary lifting devices. Their mass must be subtracted, from the listed Rated Capacity, to determine the equivalent net load.

NK: BS 61007-7:20108 defines as follows:
07 32022 lift rated load load (01) that a lift (01) has been built to carry and for which normal operation is guaranteed by the vendor

HSE Approved Code of Practice and guidance, Safe use of lifting equipment, Lifting Operations and Lifting Equipment Regulations 1998
Cranes 133 The crane used should be adequate and suitable for the task, have a freefall capability lock-out and should be equipped with appropriate devices such as a hoisting limiter, lowering limiter, rated capacity indicator and rated capacity limiter.

NK: UK では、Rated capacity の定義は HSE の ACOP にはなく、BS の規定のみです。和文は英文をもとに後日作成しますので、齟齬は無くなります。
In UK, there is no definition of rated capacity in HSE ACOP but BS 6100 is as above. JSSS in Japanese will be prepared by translating that in English, so there is no discrepancy between them.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as permitted by the manufacturer.

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as permitted by the manufacturer.

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R - Steel Erection; Section 1926.753 Hoisting and rigging.

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria;

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS

(4) "~~**Recommended**~~ **Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as permitted by the manufacturer.

~~(5) "**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

JC: Total Load を使用している箇所は一か所(5.2.1)に限定される。文脈からすれば、Rated Capacity は機械に対して、Recommended Safe Working Load は吊具に対して使用しているようなので、Total Load を使用しない記載とするのは容易、且つその方が分かり易い。従って削除します。

The term "Total Load" is only once used in 5.2.1. "Rated Capacity" is used for equipment and "Recommended Safe Working Load" is used for rigging. Therefore, it seems that there is no problem to delete "Total Load" by modified stipulation. Deleted.

NK: "Total Load" is deleted.

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R - Steel Erection; Section 1926.753 Hoisting and rigging.

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 - Wire - Rope Selection and installation criteria;

JC12/26: 妥当性は要検討

Validity of clauses should be re-examined. (5.1.3 (1))

JC3/31: OSHA の引用部分の妥当性の確認をお願いしているのであって、Validity の確認をお願いしているわけではありません。

JC did not request to confirm the validity of OSHA requirements in (a) to (c) above but appropriateness to specify in JSSS.

NK: 内容を検討致しまして、上記のように変更しておりました。

Appropriateness of the clauses were examined and (c) is deleted and (a) is added.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's*

(5) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [JSSS - Laws and Reference Standards], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling;

(b) Subpart R - Steel Erection; Section 1926.753 Hoisting and rigging (Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally); and

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 - Wire Rope - Selection and installation criteria.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [Contractor's Safety Plan], JSSS

1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated therewith of all requirements before the commencement of any such operations, including:	*Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated ~~therewith of all requirements~~ with Hoisting Operation before the commencement of any such operations, including: JC: all requirements of what? というのが必ずしも明らかではありません。修文案をMD 氏に示して判断を仰いでください。 "all requirement" is not necessarily clear. Please, ask Mr. MD to review modified sentence by JC. NK: MD will review it.	1.7 [Contractor's Method Statements] and JSSS 1.13.2 [Contractor's Safety Management Activities], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with Hoisting Operation before the commencement of any such operations, including:
(1) Scope and Hoisting Operation Area	(1) Scope, Area and Risk of the Hoisting Operation ~~Area~~ JC: 内容に合わせるための変更 The title is changed to coincide with the contents.	(1) Scope, Area and Risk of the Hoisting Operation
(a) The scope of the required Hoisting Operation, the Total Load, nature of Goods to be hoisted, location, required methods and safety arrangements;	(a) The scope of the required Hoisting Operation, ~~the Total Load~~, the Rated Capacity, Safe Working Load nature of Goods to be hoisted, location, required methods and safety arrangements;; JC: 5.1.2(5)に対するコメント参照 Please refer to the comment to 5.1.2(5).	(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;
(b) The Hoisting Operation area limits;	(b) The Hoisting Operation area limits; JC: ここに 5.3.1(1)に記載の内容のような ground conditions について追記しておいてください Please add description regarding ground conditions such as in 5.3.1 (1). NK: Added as (c).	(b) The Hoisting Operation area limits; (c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.
(c) The environmental conditions, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where other Dangerous Work is taking place;	(c) The working environment~~al conditions,~~ of the nearby areas to which particular attention should be paid（e.g. ~~for~~ storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services） ~~where other Dangerous Work is taking place~~; JC: 日本語版の趣旨は、揚貨作業で万が一のことが発生した場合に、重大な影響が発生する周辺環境ということだと思います。その趣旨に沿い、日本語版にもある高圧線の概念も入れて修正してみました。Dangerous Work は必ずしもここでは必要ないと思います（例えば、近隣で Confined space の作業をやることが必ずしもこれに該当しない）。 The point of this clause of the Japanese draft is that if any accident and the like occurs in hoisting operation and it would cause serious effects on nearby environment. Thus, overhead services are added which is in the Japanese draft. On the other hand, it is deemed that it is not necessary to state regarding Dangerous Works in this clause. (For example, a work in Confined Space near the hoisting operation is not applicable.) NK: Modified by JC.	(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);
(d) The preservation of safe access, Walkways, and footpaths around the Hoisting Operations working area; and.	(d) The preservation of safe access, Walkways, and footpaths around the Hoisting Operations working area; and. JC: 2 章でいう Passageway ではないですか。用語を再確認してください。 Isn't the term "Walkways" same as "the Passageway" in Chapter 2? Please, recheck the terms. NK: 第 2 章(Issue 3)は "Walkways"と"the Passageway"を定義しています。 Chapter 2 (Issue 3) defines as follows: 2.5.7.Temporary Access Around the Site	(e) The preservation of safe access, Walkways/Passageways, and footpaths around the Hoisting Operations working area; and

	"Walkways" mean pedestrian footpaths at ground level or ramped for the use of Contractor's Personnel. "Passageways" are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.	
	NK: modified as right.	
(e)	(e) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.	(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.
(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.		
(2) Hoisting Operation and Rigging Requirements	(2) Hoisting Operation and Rigging Requirements	(2) Hoisting Operation and Rigging Requirements
(a) The Rated Capacity of Hoisting Equipment and type to be used;	(a) ~~The Rated Capacity of Hoisting Equipment and type to be used;~~ The type of Hoisting Equipment to be used and its Rated Capacity;	(a) The type of Hoisting Equipment to be used and its Rated Capacity;
	JC: type に応じて Rated Capacity が決まるので、順番を入れ替えました。 As the Rated Capacity is determined as per the type, the order is changed.	
	NK: Changed as JC modified.	
(b) The Recommended Safe Working Load and type(s) of Rigging Equipment to be used;	(b) ~~The Recommended Safe Working Load and type(s) of Rigging Equipment to be used;~~ The type(s) of Rigging Equipment to be used and their Safe Working Load;	(b) The type(s) of Rigging Equipment to be used and their Safe Working Load;
(c) Hazards associated with the Hoisting Operation;	(c) Hazards associated with the Hoisting Operation;	(c) Hazards associated with the Hoisting Operation;
(d) Role and responsibility of the operator and each Rigger;	(d) Role and responsibility of the operator and Rigger;	(d) Role and responsibility of the operator and Rigger;
(e) Establishing targets for the day;	~~(e) Establishing targets for the day;~~	
	JC: 安全スペックにはふさわしくない。削除。 This clause is not proper for a safety specification. Delete.	
	NK: Deleted as commented.	
(f) Weight of Goods being hoisted;	(f) Weight of Goods being hoisted;	(e) Weight of Goods being hoisted;
(g) The shapes and characteristics of Goods being hoisted;	(g) The shapes and characteristics of Goods being hoisted;	(f) The shapes and characteristics of Goods being hoisted;
(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;	(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;	(g) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;
(i) Any limitations of Hosting Equipment; and	(i) Any limitations of Hosting Equipment; and	
	JC: 今更ながら何を言っているのかよくわからない。Rated Capacity とかの話であれば既に記述しているので削除してください。 It is not clear what the meaning of this clause is. If it is about "Rated Capacity" or else, delete the clause because it has been stated before.	
	NK: This clause is quite vague and not useful for safety. Deleted.	
(j) Disconnecting techniques used to complete the task.	(j) Disconnecting techniques used to complete the task.	(i) ~~Disconnecting techniques used to complete the task~~.
	JC: 玉掛に関するハンドリングの話は、確かにここまで出てきていないので、記述することは正しいと思いますが、玉掛を外すときだけではなく、取り付ける時のことも記述されるべきです。また用語ですが、Disconnect ではなく、Remove (Removal)の方がよくないでしょうか。また「取り付ける」は米国の Department of Energy で出版した、Hoisting and Rigging Manual（PNNL-18129 で URL 検索すればでてきます）では hitched or rigged という表現で出てくるようです。いずれにせよ、この辺りの用語の使い方は MD 氏に確認してもらってください。 As there has been no provision about slinging regarding rigging so far, it would be right to describe about it here. However, it is necessary to mention not only "disconnecting" but also "connecting".	

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(4) The communication and signalling requirements (equipment to be used and standard signals); and

(5) The procedures in case of emergency.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] and JSSS 4.2 [Inspection, Maintenance and Repair],

As for the term, "remove" is more appropriate to use than "disconnect". In addition, Hoisting and Rigging Manual (PNNL-1829) by Department of Energy of USA uses an expression "hitched or rigged".

Anyway, please ask Mr. MD to confirm how to use these terms.

NK: (j) is specified as mentioned in OSHA guide sheet, Rigging Process
https://www.osha.gov/dts/maritime/sltc/ships/rigging/rigging_process.html
The following are topics that should be discussed with workers prior to beginning rigging operations:
Disconnecting techniques used to complete the task.
MD to confirm the usage of terms.
However, as the requirements for rigging are provided in 5.4.1 and 5.4.2, NK thinks that it is not necessary to mention about disconnecting here.
Deleted tentatively.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(4) The communication and signalling requirements (equipment to be used and standard signals); and

(5) The procedures in case of emergency.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] and JSSS 4.2 [Inspection, Maintenance and Repair], the HSO shall ensure that all Hoisting Equipment and all Rigging

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(4) The communication and signalling requirements (equipment to be used and standard signals); and

(5) The procedures in case of emergency.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [Safety Training Generally]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.35 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment] and JSSS 4.2 [Inspection, Maintenance and Repair],

the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Over-winding prevention devices, and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying with JSSS 4.2.1 [Requirement Generally] (5) and include the following items:

(a) Condition of over-winding prevention devices, overload prevention devices, other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of Lifting Equipment such as hooks;

Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Over-winding prevention devices, and over-load prevention devices;

JC: Anti-two blocking devices が一般的との指摘がありましたので、確認してください。
There is a pointing out that “Anti-two blocking devices” is more common than “Over-winding prevention devices”. Need to be confirmed.

NK: “Over-winding prevention devices”は主として日本で使われており、米国にもこの名称で特許登録されているケースがあります。しかし、指摘の通り海外では“Anti-two blocking devices”が一般的とみられます。NK としては、多くの日本製クレーンが多数使われていることから右のように併記することを提案します。
It is found that “Over-winding prevention devices” is used in mainly Japan. This is also patented in USA with this name. However, as pointed out it is more common to use “Anti-two blocking devices”. Thus, NK proposes to use both terms equally considering that many hoisting equipment manufactured in Japan are used in overseas construction works.

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runways;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying with JSSS 4.2.1 [Requirement Generally] (5) and include the following items:

(a) Condition of over-winding prevention devices, overload prevention devices, other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of Lifting Equipment such as hooks;

JC: 5.1.2 へのコメント:5.2.5 に定義がない Lifting Equipment が残ってますが、小文字のそれが「揚貨機械」を表していますので、そこは記載ぶりを変更ください。
There is “Lifting Equipment” in 5.25 (4) (c) which is not defined. Please modify the stipulation as “lifting equipment” is used to mean Hoisting Equipment.

NK: UK では、Lifting Operations and Lifting Equipment Regulations 1998 のように、Lifting Equipment は JSSS の Hoisting Equipment を示しています。クレーン則では、つり具はフツク、グラブバケツト等としています。磁力又は陰圧により吸着させるつり具とも記述しています。混乱を避けるため Lifting Equipment を使用せず、(c)は Hoisting Equipment のフックへ変更します。
Lifting Equipment is used in Lifting Operations and Lifting Equipment Regulations, 1998 in UK. It is same meaning as Hoisting Equipment in JSSS. In Japanese Crane Regulations, lifting equipment are such as hooks, grab bucket,

the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices), and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runways;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying with JSSS 4.2.1 [Requirement Generally] (5) and include the following items:

(a) Condition of anti-two blocking devices (over-winding prevention devices), overload prevention devices, other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of ~~Lifting Equipment such as~~ hooks of the Hoisting Equipment’s;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(5) No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.

(6) The Contractor shall prepare standard checklists for the above regular and periodic inspections and the HSO shall ensure that these are recorded check, repair and maintenance results, complied with and signed by the person in charge of check and maintenance and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].

5.2.6 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Recommended Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as “Dangerous Work”, enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

magnet or negative pressure lifting equipment. To avoid confusion, JSSS does not use Lifting Equipment and (c) is modified as right.

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(5) No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.

(6) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections are to be recorded and ~~the HSO shall ensure that these are recorded check, repair and maintenance results, complied with and signed by the person in charge of check and maintenance and~~ kept ~~as a record~~ in accordance with JSSS 1.31 [*Health and Safety Records*].

JC: 記録をつけ保管するのは Hoisting に従事する責任者がやればよいと思います。HSO はその記録に対して必要に応じてアクセスし、必要な権限を行使する、と考えるならば、左記の修正案の通りとし、あえて HSO をここで出さなくてもよいとおもいます。
It is appropriate for the person in charge of hoisting operations to make records and keep them. HSO can access the records as necessary and exercise his authorities. Modified as above.

NK: JC 案に従い変更しました。
Modified as JC commented.

5.2.6 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with ~~Recommended~~ Safe Working Load suitable for the Hoisting Operation.

JC: 5.1.2.(4)の修正に従い修正する。
JC modified in accordance with change in 5.1.2 (4).

NK: 右の通り変更しました。
Modified as JC commented.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as “Dangerous Work”, enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(5) No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.

(6) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections are to be recorded and kept in accordance with JSSS 1.31 [Health and Safety Records].

5.2.6 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as “Dangerous Work”, enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [Prohibition of Entry – Dangerous Work].

The Contractor shall ~~be particularly aware and~~ take ~~all~~ measures to ~~prevent~~ keep any unauthorised personnel off from any area subject to any risk of injury ~~to persons~~ arising from the Hoisting Operation ~~but outside the immediate working area~~, due to tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators ~~shall~~ never leave their seat or leave the controls while Hoisting Operations are in progress.

The Contractor shall take measures to keep any ~~unauthorised~~ personnel off from any area subject to any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

JC: 危険がある場所には誰も入ってはいけないということのはずです（authorised personnel ならつり荷の直下に入ってもよい、ということにはならない）
日本語版である「つり荷の落下の危険のある場所には入らせない」という一番重要な要素が抜けていたので付け足しました。

It should be that nobody can enter the place where there is danger. (It does not mean that authorized personnel can enter under the load.
The most important point has been missing in the original clause of Japanese draft that prohibition of entering where there is a risk of fall of hoisted good is reinstated.

NK: Changed as JC commented and modified as right.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation:

The Contractor shall keep any personnel off from any area subject to risk of injury arising from the Hoisting Operation due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation:

(11) Defects with Hoisting Equipment during operation

(a) Ensure that, if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) ~~The operator shall then~~ Identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

The Contractor shall ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

The Contractor shall take the following measures in addition to JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS]:

(a) The Contractor shall ensure that Hoisting Equipment is left in a safe condition when ~~not in use and particularly if~~ adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured ~~when not in use~~ to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

(14) Prohibition of Use of Hoisting Equipment

Hoisting Equipment shall never be used for transporting or hoisting Contractor's Personnel unless the following all measures are taken for the case of existing unavoidable reason or essential for safe work procedures:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load of the total of 1.3 times of total weight of gondola and workers plus 500 kg shall not exceed the Rated Capacity of the Hoisting Equipment

(a) Ensure that, if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

~~The Contractor shall~~ Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

~~The Contractor shall~~ Take the following measures in addition to JSSS 2.7 [Adverse Weather Requirements]:

(a) ~~The Contractor shall ensure that~~ Hoisting Equipment is left in a safe condition when adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

(14) Prohibition of Inadequate Use of Hoisting Equipment

JC: 目的外
The expression that means "any other purpose other than designed or originally intended" was lacking. Added "Inadequate".

NK: JC の指摘通り修正しました。
The title is changed as JC modified.

Hoisting Equipment shall ~~never~~ not be used for transporting or hoisting Contractor's Personnel. Such inadequate use of Hoisting Equipment is exceptionally allowed in case ~~unless the following all measures are taken for the case of existing~~ it is justified by unavoidable reason and the following all measures are taken; ~~or essential for safe work procedures;~~

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load ~~of the total of~~ (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

(a) Ensure that, if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [Adverse Weather Requirements]:

(a) Hoisting Equipment is left in a safe condition when adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

(14) Prohibition of Inadequate Use of Hoisting Equipment

Hoisting Equipment shall not be used for transporting or hoisting Contractor's Personnel. Such inadequate use of Hoisting Equipment is exceptionally allowed in case it is justified by unavoidable reason and the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of Contractor's Personnel in the gondora shall be ensured.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) ~~to~~ and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.

5.3.2 Additional Requirements for Mobile Cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of ~~Contractor's Personnel~~ the workers in the gondola shall be ensured.

JC: (c)と平仄をあわせる. Make same as (c).

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes

Capacity of the Hoisting Equipment

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of the workers in the gondola shall be ensured.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [Contractor's Equipment])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.

5.3.2 Additional Requirements for Mobile Cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes

to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation ~~and before demobilising~~

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Lock the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.

(2) The Contractor shall be prohibited from making his own Rigging Equipment at Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) ~~Lock~~ Apply the brake of the turning device and winch drum; and

JC: Lock the brake というのは日本語英語だと思います。
"Lock the brake" is a Japanese English expression.

NK: Modified as commented.

(iii) Turn off all switches related with operation of cranes

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as ~~the name of the manufacturer, date of manufacture,~~ the ~~Recommended~~ Safe Working Load, etc.

JC: pertinent information として、最終点検日、点検結果が何時まで有効かを記述してください。製造業者名は日本語版では入っていましたが、再考して不要と思います。
Please, add "date of the latest inspection" and "validated date of inspection result" as the pertinent information. Although in Japanese draft, "the name of the manufacturer" was included, as a result of re-consideration it was judged unnecessary.

NK: The clause is modified as per JC comment as right.

(2) The Contractor shall ~~be prohibited from making his own Rigging Equipment~~ use Rigging equipment fabricated by reputable manufacturers and shall not make or repair by himself at the Site.

JC: こういう言い方の方がよくないでしょうか？
Isn't this expression more appropriate in this case?

NK: The clause is modified as JC suggested.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the Safe Working Load, date of the latest inspection, expiration date, etc.

(2) The Contractor shall use Rigging equipment fabricated by reputable manufacturers and shall not make or repair by himself at the Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment];

(c) In full compliance with the manufacturer's official instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS エラー！参照元が見つかりません。 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(i) With kink or deformation.

(ii) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply ~~fully~~ with the requirements of the standards noted in JSSS エラー！参照元が見つかりません。 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's ~~official~~ instructions and recommendations.

JC: "official"は不要と思います。
"official" is not necessary.
NK: Deleted.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 6.1.3 [Compliance Standards] including (but not limited to) the following conditions:

(a) Wire ropes

(j) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(j) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS エラー！参照元が見つかりません。 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of ~~loads~~ Goods.

JC: つり荷のことは前の方で Goods と呼んでいます。
"Goods" is used in this chapter for hoisting load.
NK: Changed to "Goods" as commented.

(4) Apply appropriate set up, provide fittings and accessories including

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's instructions and recommendations.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 6.1.3 [Compliance Standards] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 6.1.3 [Compliance Standards] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(4) Apply appropriate set up, provide fittings and accessories including

(3) Select and use suitable Rigging Equipment depending on the weight and shape of loads. (4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings. (5) Hoist loads at or above the centre of gravity. (6) Attach guide ropes to the hoisted loads to assist with positioning. (7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.	clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings. 6.4.2 Further Safety Requirements for Rigging		
JICA Comments (2019/12/26) JC: Comment as a whole of the section. 1. It is necessary to describe in the section about the risk of hoisting and sling works, however, the draft seems to be mentioning general requirements only. It should be described concretely considering following matters. ・ Handling heavy objects ・ Insufficient maintenance of hoisting equipment, damage and wear of rigging ・ Improper slinging ・ Sling and signal by unqualified personnel ・ Hoisting using unsuitable equipment such as a backhoe 2. Maintenance of equipment should have been one of the themes for "Equipment in General (Chapter 4?)". Will it be mentioned here or in another part? 3. Figures of sling accessories, signal for crane work and enclosure of the lifting work area might be inserted in the section. 4. Sling methods are generally described. For example, BS EN 13414 "Steel wire rope slings – Safety" NK: 1. JSSS covers the comments except hoisting by backhoe because it is specified in 4.5.1 (1) & (5) as general. The comment will be reflected in 4.5.1.		

NK: 2. Maintenance is specified in 5.2.5 Inspection of Hoisting Equipment and Rigging Equipment. Some addition is made as commented.

NK: 3. Figures requested to be included are not attached because NK considers JSSS is specification to specify safety measures to be taken by the Contractor and the Conrtractor shall take various measures and study methods by themselves.

NK: 4. Sling methods shall be selected to meet JSSS requirements to safely hoist loads. BS EN 13414 "Steel wire rope slings – Safety is added in 5.4.2 Further Safety Requirements for Rigging (4).

6.1 GENERAL REQUIREMENTS

6.1.1. Scope

This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings.

6.1.2. Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. ~~which,~~ when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned.

MD: Please check if "which" can be deleted.

(3) "**Rated Capacity**" means the maximum hoisting load for each type

5.1 GENERAL REQUIREMENTS

5.1.1 Scope

~~This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] including associated Hoisting Equipment and Rigging Equipment, all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings.~~

We have simplified the above clause to:

1) remove text that is covered by the contract

2) line it up more closely with the definition in Annex 1.1

3) specified the coverage more clearly so that it can be referred to as "Hoisting and Rigging".

We have/will change this consistently in all chapters in subsequent editing

(1) This Chapter specifies the safety requirements for Hoisting and Rigging Works which shall include:

(a) Hoisting Operations;

(b) Hoisting Equipment; and

(c) Rigging Equipment.

and hereinafter collectively referred to as "Hoisting and Rigging".

(2) General requirements for Contractor's Equipment for Hoisting and Rigging (including cranes) are included in JSSS 4.0 [*Contractor's Equipment*].

Additional particular requirements are contained in this Chapter.

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows:

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment, permit loads to be hoisted or lowered, and positioned.

"Which" is correct as above.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially permitted by the manufacturer.

5.1 GENERAL REQUIREMENTS

5.1.1 Scope

(1) This Chapter specifies the safety requirements for Hoisting and Rigging Works which shall include:

(d) Hoisting Operations;

(e) Hoisting Equipment; and

(f) Rigging Equipment.

and hereinafter collectively referred to as "Hoisting and Rigging".

(2) General requirements for Contractor's Equipment for Hoisting and Rigging (including cranes) are included in JSSS 4.0 [*Contractor's Equipment*].

Additional particular requirements are contained in this Chapter.

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows:

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment, permit loads to be hoisted or lowered, and positioned.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially permitted by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other

of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as ~~officially recommended~~ permitted by the manufacturer.

JC2: The term is coincided with the expression in OSHA 1926.1401 to "permitted". As for "Safe Working Load" in (4), in OSHA "recommended" is used, but it is also changed to permitted" to accommodate with "permitted" in '(3).

OSHA Subpart CC—Cranes and Derricks in Construction§1926.1401Definitions.

Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use.

NK2: Changed as commented.

JC2: There is "Lifting Equipment" in 5.25 (4) (c) which is not defined. Please modify the stipulation as "lifting equipment" is used to mean Hoisting Equipment.

In Japan, there is definition that lifting equipment means hook and rigging equipment means equipment below hook. On the other hand, there is no such definition in OSHA and Australia. Please keep in mind this.

(In short, the rated capacity used in OSHA and Australia includes weight of hook, which is excluded in Japan. If necessary, please check the definition in BS and make meaning of the rated capacity standardize.)

For example, a barouche of a crane company mentions: Rated Capacities include the mass of hooks, blocks, slings and auxiliary lifting devices. Their mass must be subtracted, from the listed Rated Capacity, to determine the equivalent net load.

NK2: BS 61007-7:20108 defines as follows:
07 32022 lift rated load: load (01) that a lift (01) has been built to carry and for which normal operation is guaranteed by the vendor

HSE Approved Code of Practice and guidance, Safe use of lifting equipment, Lifting Operations and Lifting Equipment Regulations 1998
Cranes 133 The crane used should be adequate and suitable for the task, have a freefall capability lock-out and should be equipped with appropriate devices such as a hoisting limiter, lowering limiter, rated capacity indicator and rated capacity limiter.

NK2: In UK, there is no definition of rated capacity in HSE ACOP but BS 6100 is as above. JSSS in Japanese will be prepared by translating that in English, so there is no discrepancy between them.

(4) "~~**Recommended** **Safe Working Load**~~" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

JC1:It is understandable that the word of "Rated Capacity" is used for lifting equipment and "Recommended Safe Working Load" for sling. However, it is a little difficult to understand if they are used without defining them.

It is recommended to change the wording such that "Rated Hoisting Capacity" and "Maximum Rigging Working Load" respectively.

NK1: "Rated Capacity" is defined in OSHA as follows:

Subpart CC-Cranes and Derricks in Construction, 1926.1401 Definitions.

Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use.

NK propse to use the same term in JSSS as defined in OSHA so that readers of JSSS can easily understand "Rated Capacity".

NK1:"Recommended Safe Working Load" is used in OSHA as follows:

This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as permitted by the manufacturer.

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

"Recommended" can be deleted from above

~~(5) "**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment to Hoisting and Rigging under this Chapter in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].

I suggest editing as above

factors as permitted by the manufacturer.

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

(5) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment to Hoisting and Rigging under this Chapter in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].

Subpart H-Materials Handling, Storage, Use, and Disposal, 1926.251 Rigging equipment for material handling. (a) General. (2) Employers must ensure that rigging equipment: (i) Has permanently affixed and legible identification markings as prescribed by the manufacturer that indicate the recommended safe working load;(ii) Not be loaded in excess of its recommended safe working load as prescribed on the identification markings by the manufacturer; and

NK propose to use the same term in JSSS as used in OSHA so that readers of JSSS can easily understand "Recommended Safe Working Load".

JC2: Deleted "Recommended"

(5) ~~"**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

JC2:The term "Total Load" is only once used in 5.2.1. "Rated Capacity" is used for equipment and "Recommended Safe Working Load" is used for rigging. Therefore, it seems that there is no problem to delete "Total Load" by modified stipulation. Deleted.

NK2: "Total Load" is deleted.

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

NK: OSHA used "rigger" as follows:

Subpart CC—Cranes and Derricks in Construction

1926.1404 Assembly/Disassembly—general requirements (applies to all assembly and disassembly operations).

(r) Rigging. (1) The rigging work is done by a qualified rigger.

OSHA Fact Sheet mentions as follows:

https://www.osha.gov/Publications/cranes-qualified-rigger-factsheet.html

Employers must use qualified riggers during hoisting activities for assembly and disassembly work (1926.1404(r)(1)).

Rigging work is a part of hoisting activities. NK ask if MD which suitable term is.

6.1.3. Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction::

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

~~(b) OSHA PART 1926 Safety and Health Regulations for Construction, Subpart CC Cranes and Derricks in Construction; Section 1413 Wire Rope Inspection and Section 1414 Wire Rope Selection and installation criteria;~~

(c) ~~OSHA PART 1926.753 Safety and Health Regulations for Construction,~~ Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria.

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria.

(a) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria;

~~(d) OSHA Information Booklet on Sling safety, ref OSHA 3072, 1996 (revised) concerning the Use of Slings (composed of chains, wire rope fiber rope and synthetic web), Safe Lifting Practices and Maintenance of Slings.~~

JC1: Validity of clauses should be re-examined. (5.1.3 (1))

NK1: (c) is available in internet but information booklet, not regulation, so it is deleted.
https://www.scribd.com/document/28664578/OSHA-3072-Sling-Safety

For reference: There is Guidance on safe safe sling use issued by OSHA below.

https://www.osha.gov/dsg/guidance/slings/index.html

NK1: Addition of 1926.251Rigging equipment for material handling., Subpart H - Materials Handling, Storage, Use, is made as (a) and order of present (a) and (b) is changed to (b) and (c)

JC2: JC1 did not request to confirm the validity of OSHA requirements in (a) to (c) above but appropriateness to specify in JSSS.

NK2: Appropriateness of the clauses were examined and (c) is deleted and (a) is added.

6.2 HOISTING OPERATIONS

6.2.1. Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated ~~therewith of all requirements~~ with Hoisting Operation before the commencement of any such operations, including:

JC1: As it is impossible to inform "all Contractor's Personnel", it is better to limit to workers involved rigging/hoisting operation.

NK1: The "all" means that all personnel who are working in hoisting operations as mentioned "associated therewith of all requirements", therefore, no change is made. If necessary, NK ask MD to modify this phrase.

JC2: "all requirement" is not necessarily clear. Please, ask Mr. MD to review modified sentence by JC.

NK2: MD will review it.

(1) Scope ~~and Hoisting Operation Area~~, Area and Risk of the Hoisting Operation

JC2: The title is changed to coincide with the contents.

(a) The scope of the required Hoisting Operation, ~~the Total Load~~, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

JC2: Please refer to the comment to 5.1.2(5).

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

JC2: Please add description regarding ground conditions such as in 5.3.1 (1).

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with such Hoisting Operations of these requirements before the commencement of any such operations, including:

(1) Scope, Area and Risk of the Hoisting Operation

(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.;

(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

(e) The preservation of safe access, Walkways, Passageways and footpaths around the Hoisting Operations working area; and

(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with such Hoisting Operations of these requirements before the commencement of any such operations, including:

(1) Scope, Area and Risk of the Hoisting Operation

(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.;

(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

(e) The preservation of safe access, Walkways, Passageways and footpaths around the Hoisting Operations working area; and

(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

(2) Hoisting Operation and Rigging Requirements

(a) The type of Hoisting Equipment to be used and its Rated

NK2: Added as (c).

(d) ~~The environmental conditions, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where other Dangerous Work is taking place;~~ The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

JC2 The point of this clause of the Japanese draft is that if any accident and the like occurs in hoisting operation and it would cause serious effects on nearby environment. Thus, overhead services are added which is in the Japanese draft. On the other hand, it is deemed that it is not necessary to state regarding Dangerous Works in this clause. (For example, a work in Confined Space near the hoisting operation is not applicable.)

NK2: Modified by JC.

(e) The preservation of safe access, Walkways/Passageways, and footpaths around the Hoisting Operations working area; and

JC2: Isn't the term "Walkways" same as "the Passageway" in Chapter 2? Please, recheck the terms.

NK2: Chapter 2 (Issue 3) defines as follows:

2.5.7. Temporary Access Around the Site

"Walkways" mean pedestrian footpaths at ground level or ramped for the use of Contractor's Personnel.

"Passageways" are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.

NK: modified a sabove.

(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

(2) Hoisting Operation and Rigging Requirements

(a) ~~The Rated Capacity of Hoisting Equipment and type to be used;~~ The type of Hoisting Equipment to be used and its Rated Capacity;

JC2: As the Rated Capacity is determined as per the type, the order is changed.

NK2: Changed as JC modified.

(b) The Recommended Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;

(2) Hoisting Operation and Rigging Requirements

(a) The type of Hoisting Equipment to be used and its Rated Capacity;

(b) The ~~Recommended~~ Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment; and

~~(i) Any limitations of Hosting Equipment; and~~

This can be deleted as you suggest.

(j) Connecting and disconnecting techniques.

I suggest this is included as above, which is simply altered.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The name of the authorised operator for each unit of Hoisting Equipment.

(c) The identity of and location(s) for Spotters;

Above is changed to be consistent with the definition

(d) The communication and signalling requirements (equipment to be used and standard signals); and

(e) The procedures in case of emergency.

Capacity;

(b) The Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment; and

(i) Connecting and disconnecting techniques.

(3) Identification of Personnel

(f) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(g) The name of the authorised operator for each unit of Hoisting Equipment.

(h) The identity of and location(s) for Spotters;

(i) The communication and signalling requirements (equipment to be used and standard signals); and

(j) The procedures in case of emergency.

~~(i) Any limitations of Hosting Equipment; and~~

JC2: It is not clear what the meaning of this clause is. If it is about "Rated Capacity" or else, please delete the clause because it has been stated before.

NK2: This clause is quite vague and not useful for safety. Deleted.

~~(j) Disconnecting techniques used to complete the task.~~

JC2: As there has been no provision about slinging regarding rigging so far, it would be right to describe about it here. However, it is necessary to mention not only "disconnecting" but also "connecting".

As for the term, "remove" is more appropriate to use than "disconnect". In addition, Hoisting and Rigging Manual (PNNL-1829) by Department of Energy of USA uses an expression "hitched or rigged".

Anyway, please ask Mr. MD to confirm how to use these terms.

NK2: (j) is specified as mentioned in OSHA guide sheet, Rigging Process
https://www.osha.gov/dts/maritime/sltc/ships/rigging/rigging_process.html
The following are topics that should be discussed with workers prior to beginning rigging operations:
Disconnecting techniques used to complete the task.
MD to confirm the usage of terms.
However, as the requirements for rigging are provided in 5.4.1 and 5.4.2, NK thinks that it is not necessary to mention about disconnecting here.
Deleted tentatively.

(3) ~~Organisation~~ Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(c) The communication and signalling requirements (equipment to be used and standard signals); and

(d) The procedures in case of emergency.

JC1: What is the meaning of this "Organisation"? Actually, this clause includes matters other than organisation. Please re-consider the title.

NK1: Modified as above.

6.2.2. Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

6.2.3. Riggers

(1) The Contractor shall assign only Riggers for all ~~Hoisting Operations~~ rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.2 Operators and Riggers Generally

I have changed the above heading and combined the content as these re largely common requirements for both

No need for the following duplication:

~~(a) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as "operators") of Hoisting Equipment in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].~~

Added for consistency with Chapter 4:

(1) The Contractor shall place signs on each unit of Hoisting Equipment showing the name of each authorised operator and clearly prohibiting all unauthorised persons from using, handling, operating or sitting at the controls of that equipment unit.

Following is added for consistency with Chapter 5

(2) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators and Riggers are appropriately qualified, skilled and experienced in

5.2.2 Operators and Riggers Generally

(1) The Contractor shall place signs on each unit of Hoisting Equipment showing the name of each authorised operator and clearly prohibiting all unauthorised persons from using, handling, operating or sitting at the controls of that equipment unit.

(2) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators and Riggers are appropriately qualified, skilled and experienced in operation of the Hoisting Equipment to which they are assigned and duly certified as such by the HSO.

(3) Operators and Riggers shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Not to remove, interfere with or override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

operation of the Hoisting Equipment to which they are assigned and duly certified as such by the HSO.

(3) Operators and Riggers shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Not to remove, interfere with or override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(4) In addition, operators shall:

(a) Safely and competently operate the Hoisting Equipment;

(b) Operate all safety devices including emergency alarm and stop devices;

(c) Inspect, clean, service and maintain the unit of Hoisting Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

(5) The Contractor shall assign only Riggers for Hoisting Operations and shall prohibit other workers from any involvement.

(6) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

6.2.4. Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.3 Safety Training

Heading and content is amended as reference does not separately mention "education", which is not therefore necessary

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.3 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

6.2.5. Inspection of Hoisting Equipment and Rigging Equipment

JC1: Please refer to inspection at the time of bringing in. (It is important to prohibit to bring defective equipment into the Site.)

NK1: The inspection at mobilizing of Contractor's equipment at the site is specified in JSSS 4.2.1 (3). Duplicate specifying is avoided here. Inspection at the time of mobilization is added as (1) in 5.2.5 as above.

JC1: Please add to refer to Chapter 4. Would like to know the intention of deleting the periodic inspection.

NK1: As same as the above, periodic inspection is specified in JSSS 4.2.1 (5). Periodic inspection is added as shown right in (4).

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.3~~3~~5 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] and JSSS 4.2 [Inspection, Maintenance and Repair], the HSO shall ensure that all Hoisting Equipment and all

5.2.4 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [*Inspection, Maintenance and Repair*], to ensure that the equipment is free from defect and suitable for the planned Hoisting Operation.

I suggest that cross reference should be to the general sub-clause rather than the particular sub-sub-clause so as to provide wider reference and to assist with future coordination.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and JSSS 4.2 [*Inspection, Maintenance and Repair*], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

Rather than cross referencing to the sub-sub-clause above, just delete the separate number which makes it a separate paragraph of the same number

Inspections shall include all items necessary to ensure the safe

(e) The procedures in case of emergency.

(4) In addition, operators shall:

(a) Safely and competently operate the Hoisting Equipment;

(b) Operate all safety devices including emergency alarm and stop devices;

(c) Inspect, clean, service and maintain the unit of Hoisting Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

(5) The Contractor shall assign only Riggers for Hoisting Operations and shall prohibit other workers from any involvement.

(6) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.3 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.4 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [*Inspection, Maintenance and Repair*], to ensure that the equipment is free from defect and suitable for the planned Hoisting Operation.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and JSSS 4.2 [*Inspection, Maintenance and Repair*], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention

Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices) ~~Over-winding prevention devices;~~ and over-load prevention devices;

NK1: over-loading prevention devices is added.

JC2: There is a pointing out that "Anti-two blocking devices" is more common than "Over-winding prevention devices". Need to be confirmed.

NK: It is found that "Over-winding prevention devices" is used in mainly Japan. This is also patented in USA with this name. However, as pointed out it is more common to use "Anti-two blocking devices". Thus, NK proposes to use both terms equally considering that many hoisting equipment manufactured in Japan are used in overseas construction works.

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying with JSSS 4.2.1 [Requirement Generally] (5) and include the following items:

(a) Condition of over-winding prevention devices, ~~overload prevention devices~~ anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of ~~Lifting Equipment such as hooks;~~ hooks of the Hoisting Equipment's;

JC2: There is "Lifting Equipment" in 5.25 (4) (c) which is not defined. Please modify the stipulation as "lifting equipment" is used to mean Hoisting Equipment.

NK2: Lifting Equipment is used in Lifting Operations and Lifting Equipment Regulations, 1998 in UK. It is same meaning as Hoisting Equipment in JSSS. In Japanese Crane Regulations, lifting equipment are such as hooks, grab bucket, magnet or negative pressure lifting equipment. To avoid confusion, JSSS does not use Lifting Equipment and (c) is modified as above.

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(5) ~~No Hoisting Operation shall be allowed to commence until the HSO has certified that it is safe to do so.~~ No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.

JC1: It is not practical for the HSO to certify for hoisting operations. ((5) & (6) right:

performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices) and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(3) Periodic inspection shall be made complying with JSSS 4.2 [*Inspection, Maintenance and Repair*] and include the following items:

(a) Condition of over-winding prevention devices, anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of the Hoisting Equipment's;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(4) No Hoisting Equipment or Rigging Equipment shall be put into operation unless it has been inspected in accordance with the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*], and it is ensured that it is safe to be used.

Above is included as suggested and edited.

(5) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections shall be recorded and kept in accordance with JSSS 1.33 [*Health and Safety Records*].

devices) and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(3) Periodic inspection shall be made complying with JSSS 4.2 [*Inspection, Maintenance and Repair*] and include the following items:

(a) Condition of over-winding prevention devices, anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of the Hoisting Equipment's;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(4) No Hoisting Equipment or Rigging Equipment shall be put into operation unless it has been inspected in accordance with the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*], and it is ensured that it is safe to be used.

(5) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections shall be recorded and kept in accordance with JSSS 1.33 [*Health and Safety Records*].

numbers are changed in accordance with addition of (2) and (4))

Inspection is argued here. So better to redraft as follows.

"No Hoisting Equipment or Rigging Equipment shall not put in operation unless they are inspected in accordance with JSSS 4.1.7-4.1.9 and it is ensured that they are safe to be used."

NK1: Clause (5) is changed as above in accordance with JICA's comment.

(6) ~~The Contractor shall prepare standard checklists for the above regular and periodic inspections and the HSO shall ensure that these are recorded check, repair and maintenance results, complied with and signed by the person in charge of check and maintenance inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].~~ The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections are to be recorded and kept in accordance with JSSS 1.31 [Health and Safety Records].

JC1: Ditto (It is not practical for the HSO to certify for hoisting operations.)

NK1: In (4), the HSO shall manage the inspection and maintenance in accordance with the Safety Plan and instruct improvement if the person in charge does not follow the Safety Plan. (4) is modified as (5) in right.

JC2: It is appropriate for the person in charge of hoisting operations to make records and keep them. HSO can access the records as necessary and exercise his authorities. Modified as above.

NK2: Modified as JC commented.

6.2.6. General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with ~~Recommended~~ Safe Working Load suitable for the Hoisting Operation.

JC2: modified in accordance with change in 5.1.2 (4).

NK: Modified as JC commented.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

5.2.5 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall take measures to keep any unauthorised

5.2.5 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall take measures to keep any unauthorised

The Contractor shall ~~be particularly aware and~~ take ~~all~~ measures to ~~prevent~~ keep any unauthorised personnel off from any area subject to any risk of injury ~~to persons~~ arising from the Hoisting Operation ~~but outside the immediate working area~~, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

JC1: modified.

JC2: It should be that nobody can enter the place where there is danger. (It does not mean that authorized personnel can enter under the load.
The most important point has been missing in the original clause of Japanese draft that prohibition of entering where there is a risk of fall of hoisted good is reinstated.

NK2: Changed as JC commented and modified as above.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

JC1: modified.

(d) In addition, Spotters shall be placed and ~~Spotters shall be~~ used only to keep any unauthorised personnel away from the working area.

JC1: Should spotter and signallers be stipulated separately, and the signallers be described that he shall dedicate to the signal?

NK1: As provided in (8) (a)-(c), the Riggers (signallers) carry only signalling and rigging. (d) is modified as above to clarify that Spotters are placed to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and

personnel away from any area where there is any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand-held radios or other communication tool as approved by HSO must be provided and used; and

I suggest edit as above

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to any movement of the boom and the condition of suspended loads; and

I suggest edit as above

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

personnel away from any area where there is any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand-held radios or other communication tool as approved by HSO must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to any movement of the boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

then continue to lower gently.

(10) Ensure that the operators ~~Operators shall~~ never leave their seat or leave the controls while Hoisting Operations are in progress.

JC1: modified.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that, If operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) ~~The operator shall then~~ identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) ~~The HSO shall ensure that no Hoisting Operation shall resume unless the above has been complied with and the Hoisting Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*.~~ Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

JC1: Please modify this part referring to the comment for 5.2.5. Especially, it is not realistic for the HSO to give "permission to use".

NK1: The HSO is ultimately responsible for the safety of the Hoisting Equipment, too. As considering the realistic condition at the Site, (c) is modified as above. As 5.2.5 has been modified, referring to 5.2.5 is deleted.

(12) Condition of Ropes, Slings and Chains

~~The Contractor shall~~ ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

~~The Contractor shall~~ take the following measures in addition to JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS]:

(a) ~~The Contractor shall ensure that~~ Hoisting Equipment is left in a safe condition when ~~not in use and particularly if~~ adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured ~~when not in use~~ to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

JC1: Isn't it confusing that measures for long periods of non-use and measures for bad weather are mixed? (5.2.6 (13) (a)~(c))

NK1: (a) to (c) are revised for countermeasures to secure Hoisting Equipment during adverse climatic conditions.

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [*Adverse Weather Requirements*]:

(a) Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming any Hoisting Operation after any adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 5.2.4 [*Inspection of Hoisting Equipment and Rigging Equipment*].

(14) Use of Hoisting Equipment for Contractor's Personnel

As a general rule, Hoisting Equipment shall not be used for transporting or hoisting Contractor's Personnel.

In exceptional circumstances and if so approved by the HSO, use of Hoisting Equipment may be allowed when the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

(d) Wires and ropes of Hoisting Equipment shall have a safety factor of at least 10 against the assumed load;

(e) Lowering the gondola shall be by powered system which prevents any free drop; and

(f) Use of PFAS of any Contractor's Personnel in the gondola shall be ensured.

Please check editing of above

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [*Adverse Weather Requirements*]:

(a) Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming any Hoisting Operation after any adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 5.2.4 [*Inspection of Hoisting Equipment and Rigging Equipment*].

(14) Use of Hoisting Equipment for Contractor's Personnel

As a general rule, Hoisting Equipment shall not be used for transporting or hoisting Contractor's Personnel.

In exceptional circumstances and if so approved by the HSO, use of Hoisting Equipment may be allowed when the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

(d) Wires and ropes of Hoisting Equipment shall have a safety factor of at least 10 against the assumed load;

(e) Lowering the gondola shall be by powered system which prevents any free drop; and

(f) Use of PFAS of any Contractor's Personnel in the gondola shall be ensured.

A general sentence is added for (13), and (d) is added from Japanese draft for safety inspection before resuming work.

(14) Prohibition of Inadequate Use of Hoisting Equipment

JC2: The expression that means "any other purpose other than designed or originally intended" was lacking. Added "Inadequate".

NK2: The title is changed as JC modified.

~~Hoisting Equipment shall never be used for transporting or hoisting Contractor's Personnel unless the following all measures are taken for the case of existing unavoidable reason or essential for safe work procedures.~~

Hoisting Equipment shall not be used for transporting or hoisting Contractor's Personnel. Such inadequate use of Hoisting Equipment is exceptionally allowed in case it is justified by unavoidable reason and the following all measures are taken:

JC: modified.

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) ~~The assumed load of the total of 1.3 times of total weight of gondola and workers plus 500 kg shall not exceed the Rated Capacity of the Hoisting Equipment.~~ The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

JC: modified.

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of ~~Contractor's Personnel~~ the workers in the gondora shall be ensured.

JC1: Measures for hoisting Personnel by unavoidable reason which was in the Japanese draft are deleted. Reinstate the manner of writing for the stipulation of 5.2.6 (13) of Japanese version.

NK1: In English version, hoisting personnel is simply prohibited without exception. (14) is replaced with provisions in Japanese version as above:

NK1: Sentences of (14) in English will be review and edited by MD.

JC2: Make same as (c).

6.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

6.3.1. Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) ~~to~~ and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) that shall select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) that shall select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc. (2) Investigate the working area and ensure the safety of the crane and any crane rails. (3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations. (4) Conduct completion inspection, load test and stability test of the crane. (5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.	(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc. (2) Investigate the working area and ensure the safety of the crane and any crane rails. (3) Design and construct crane foundation, assemble and install the crane with proper structural design and in compliance with the manufacturer's written instructions. (4) Conduct completion inspection, load test and stability test of the crane. (5) Dismantle and remove and transport cranes in a planned and systematic manner in compliance with the manufacturer's written instructions.	removal of cranes. The Contractor's specialist shall: (1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc. (2) Investigate the working area and ensure the safety of the crane and any crane rails. (3) Design and construct crane foundation, assemble and install the crane with proper structural design and in compliance with the manufacturer's written instructions. (4) Conduct completion inspection, load test and stability test of the crane. (5) Dismantle and remove and transport cranes in a planned and systematic manner in compliance with the manufacturer's written instructions.
6.3.2. Additional Requirements for Mobile Cranes (1) Position mobile cranes where there are no obstacles within the operation range. (2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan. (3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation. (4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding. (5) Fully extend outriggers or extension type crawlers to the maximum position. (6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers. (7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers. (8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers. NK1: Japanese version 5.4.2 (2) is added as (8) in right because this is specific requirement for mobile crane. (9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO. (10) After the Hoisting Operation ~~and before demobilising~~ JC1: Is this phrase necessary? The expression of the word "demobilising" is too strong that may mean complete removal of the equipment form the Site. NK: Deleted.	5.3.2 Additional Requirements for Mobile cranes (1) Position mobile cranes where there are no obstacles within the operation range. (2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan. (3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation. (4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding. (5) Fully extend outriggers or extension type crawlers to the maximum position. (6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers. (7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers. (8) Activate the over-load prevention device of mobile cranes and accurately input the operational conditions of booms and outriggers. (9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO. (10) After the Hoisting Operation: (a) When the mobile crane is not driven, fix the hooks of crane at the safe position; (b) When the mobile crane is driven, take the following measures before driving:	5.3.2 Additional Requirements for Mobile cranes (1) Position mobile cranes where there are no obstacles within the operation range. (2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan. (3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation. (4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding. (5) Fully extend outriggers or extension type crawlers to the maximum position. (6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers. (7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers. (8) Activate the over-load prevention device of mobile cranes and accurately input the operational conditions of booms and outriggers. (9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO. (10) After the Hoisting Operation: (a) When the mobile crane is not driven, fix the hooks of crane at the safe position; (b) When the mobile crane is driven, take the following

(a) ~~Set the Crane in the safe position;~~

(b) ~~Attach fixing pin on each part;~~

(c) ~~Lock the brake of the turning device and winch drum; and~~

(d) ~~Turn off all switches related with operation of cranes.~~

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) ~~Lock~~ Apply the brake of the turning device and winch drum; and

JC2: "Lock the brake" is a Japanese English expression.

NK2: Modified as commented.

(iii) Turn off all switches related with operation of cranes.

JC1: These were measures before the equipment drives in Japanese draft. Is these proper if not separating measures "before" and "during" driving?

NK2: In order to separate measures to take before driving, these are modified as above.

6.4 RIGGING EQUIPMENT

6.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as ~~the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.~~ the Safe Working Load, date of the latest inspection, expiration date, etc.

JC2: Please, add "date of the latest inspection" and "validated date of inspection result" as the pertinent information. Although in Japanese draft, "the name of the manufacturer" was included, as a result of re-consideration it was judged unnecessary.

NK2: The clause is modified as per JC comment as above.

(1) ~~The Contractor shall be prohibited from making his own Rigging Equipment at Site.~~ The Contractor shall use Rigging equipment fabricated by reputable manufacturers and shall not make or repair by himself at the Site.

JC2: Isn't this expression more appropriate in this case?

NK2: The clause is modified as JC suggested.

(2) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer's ~~official~~ instructions and recommendations.

JC2:"official" is not necessary.

NKs: Deleted.

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Safe Working Load, date of the latest inspection, expiration date, etc.

I suggest edit as above and leaving in reference to manufacturer

(2) The Contractor shall obtain Rigging Equipment from reputable manufacturers approved by the HSO and shall not make or repair his own Rigging Equipment at the Site.

Ditto

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*];

(b) Within the ~~Recommended~~ Safe Working Load; and

(c) In compliance with the manufacturer's written instructions.

Ditto

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 6.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

measures before driving:

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Safe Working Load, date of the latest inspection, expiration date, etc.

(2) The Contractor shall obtain Rigging Equipment from reputable manufacturers approved by the HSO and shall not make or repair his own Rigging Equipment at the Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*];

(b) Within the Safe Working Load; and

(c) In compliance with the manufacturer's written instructions.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 6.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(3) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 6.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

6.5.1. Further Safety Requirements for Rigging

The Contractor shall fully comply ~~fully~~ with the requirements of the standards noted in JSSS 6.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

JC1: modified.

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) ~~Remove any unusable or defective Rigging Equipment from service, tag as such and destroy or remove from the Site.~~

JC1: Isn't this a duplication of 5.5.1 (4)?

NK1: This (3) is duplication. Deleted.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of ~~loads~~ Goods.

JC2: "Goods" is used in this chapter for hoisting load.

NK2: Changed to "Goods" as commented.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

(7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 6.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 6.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings. JC1: 4. Sling methods are generally described. For example, BS EN 13414 “Steel wire rope slings – Safety” NK1: Tentatively add BS to (4) above. (5) Hoist loads at or above the centre of gravity. (6) Attach guide ropes to the hoisted loads to assist with positioning. (7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.		(7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

5. HOISTING AND RIGGING **5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] and associated rigging requirements all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings.	**5. HOISTING AND RIGGING** **5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** ~~This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] including associated Hoisting Equipment and Rigging Equipment, all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings.~~ *We have simplified the above clause to:* *1) remove text that is covered by the contract* *2) line it up more closely with the definition in Annex 1.1* *3) specified the coverage more clearly so that it can be referred to as "Hoisting and Rigging".* *We have/will change this consistently in all chapters in subsequent editing* (1) This Chapter specifies the safety requirements for Hoisting and Rigging Works which shall include: (a) Hoisting Operations; (b) Hoisting Equipment; and (c) Rigging Equipment. and hereinafter collectively referred to as "Hoisting and Rigging". (2) General requirements for Contractor's Equipment for Hoisting and Rigging (including cranes) are included in JSSS 4.0 [*Contractor's*	**5. HOISTING AND RIGGING** **5.1 GENERAL REQUIREMENTS** **5.1.1 Scope** (1) This Chapter specifies the safety requirements for Hoisting and Rigging Works which shall include: (a) Hoisting Operations; (b) Hoisting Equipment; and (c) Rigging Equipment. and hereinafter collectively referred to as "Hoisting and Rigging".	**6.**

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows.

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. ~~which,~~ when used with Hoisting Equipment permits loads to be hoisted or lowered and positioned.

MD: Please check if "which" can be deleted.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially recommended by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as ~~officially recommended~~ permitted by the manufacturer.

JC2: The term is coincided with the expression in OSHA 1926.1401 to "permitted". As for "Safe Working Load" in (4), in OSHA "recommended" is used, but it is also changed to permitted" to accommodate with "permitted" in '(3).

OSHA Subpart CC—Cranes and Derricks in Construction§1926.1401Definitions.

Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use.

NK2: Changed as commented.

JC2: There is "Lifting Equipment" in 5.25 (4) (c) which is not defined. Please modify the stipulation as "lifting equipment" is used to mean Hoisting Equipment.

In Japan, there is definition that lifting equipment means hook and rigging equipment means equipment below hook. On the other hand, there is no such definition in OSHA and Australia. Please keep in mind this.

(In short, the rated capacity used in OSHA and Australia includes weight of hook, which is excluded in Japan. If necessary, please check the definition in BS and make meaning of the rated capacity standardize.)

For example, a barouche of a crane company mentions: Rated Capacities include the mass of hooks, blocks, slings and auxiliary lifting devices. Their mass must be subtracted, from the listed Rated Capacity, to determine the equivalent net load.

NK2: BS 61007-7:20108 defines as follows:
07 32022 lift rated load load (01) that a lift (01) has been built to carry and for which normal operation is guaranteed by the vendor

HSE Approved Code of Practice and guidance, Safe use of lifting equipment, Lifting Operations and Lifting Equipment Regulations 1998
Cranes 133 The crane used should be adequate and suitable for the task, have a freefall capability lock-out and should be equipped with appropriate devices such as a hoisting limiter, lowering limiter, rated capacity indicator and rated capacity limiter.

NK2: In UK, there is no definition of rated capacity in HSE ACOP but BS 6100 is as

Equipment].

Additional particular requirements are contained in this Chapter.

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows:

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which, when used with Hoisting Equipment, permit loads to be hoisted or lowered, and positioned.

"Which" is correct as above.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially permitted by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as permitted by the manufacturer.

(2) General requirements for Contractor's Equipment for Hoisting and Rigging (including cranes) are included in JSSS 4.~~0~~ [*Contractor's Equipment*].

Additional particular requirements are contained in this Chapter.

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows:

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which~~, when~~ used with Hoisting Equipment, permit loads to be hoisted or lowered, and positioned.

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially permitted by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as permitted by the manufacturer.

above. JSSS in Japanese will be prepared by translating that in English, so there is no discrepancy between them.

(4) "~~**Recommended** ~~**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

JC1:It is understandable that the word of "Rated Capacity" is used for lifting equipment and "Recommended Safe Working Load" for sling. However, it is a little difficult to understand if they are used without defining them.

It is recommended to change the wording such that "Rated Hoisting Capacity" and "Maximum Rigging Working Load" respectively.

NK1:"Rated Capacity" is defined in OSHA as follows:

Subpart CC-Cranes and Derricks in Construction, 1926.1401 Definitions.

Rated capacity means the maximum working load permitted by the manufacturer under specified working conditions. Such working conditions typically include a specific combination of factors such as equipment configuration, radii, boom length, and other parameters of use.

NK propose to use the same term in JSSS as defined in OSHA so that readers of JSSS can easily understand "Rated Capacity".

NK1:"Recommended Safe Working Load" is used in OSHA as follows:

Subpart H-Materials Handling, Storage, Use, and Disposal, 1926.251 Rigging equipment for material handling. (a) General. (2) Employers must ensure that rigging equipment: (i) Has permanently affixed and legible identification markings as prescribed by the manufacturer that indicate the recommended safe working load;(ii) Not be loaded in excess of its recommended safe working load as prescribed on the identification markings by the manufacturer; and

NK propose to use the same term in JSSS as used in OSHA so that readers of JSSS can easily understand "Recommended Safe Working Load".

JC2: Deleted "Recommended"

(5) ~~"**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

JC2:The term "Total Load" is only once used in 5.2.1. "Rated Capacity" is used for equipment and "Recommended Safe Working Load" is used for rigging. Therefore, it seems that there is no problem to delete "Total Load" by modified stipulation. Deleted.

NK2: "Total Load" is deleted.

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment on Hoisting Operations/Rigging under this Section in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

NK:OSHA used "rigger" as follows:

Subpart CC—Cranes and Derricks in Construction

1926.1404 Assembly/Disassembly—general requirements (applies to all assembly and disassembly operations).

(r) Rigging. (1) The rigging work is done by a qualified rigger.

OSHA Fact Sheet mentions as follows:

https://www.osha.gov/Publications/cranes-qualified-rigger-factsheet.html

Employers must use qualified riggers during hoisting activities for assembly and disassembly work (1926.1404(r)(1)).

Rigging work is a part of hoisting activities. NK ask if MD which suitable term is.

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

"Recommended" can be deleted from above

~~(5) "**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment to Hoisting and Rigging under this Chapter in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].

I suggest editing as above

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

(5) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment to Hoisting and Rigging under this Chapter in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*JSSS - Laws and Reference Standards*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction::

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

~~(b) OSHA PART 1926 Safety and Health Regulations for Construction, Subpart CC – Cranes and Derricks in Construction; Section 1413 – Wire Rope Inspection and Section 1414 – Wire Rope Selection and installation criteria;~~

(c) ~~OSHA PART 1926.753 Safety and Health Regulations for Construction,~~ Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(a) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria;

~~(d) OSHA Information Booklet on Sling safety, ref OSHA 3072, 1996 (revised) concerning the Use of Slings (composed of chains, wire rope fiber rope and synthetic web), Safe Lifting Practices and Maintenance of Slings.~~

JC1: Validity of clauses should be re-examined. (5.1.3 (1))
NK1: (c) is available in internet but information booklet, not regulation, so it is deleted.
https://www.scribd.com/document/28664578/OSHA-3072-Sling-Safety
For reference: There is Guidance on safe safe sling use issued by OSHA below.
https://www.osha.gov/dsg/guidance/slings/index.html
NK1: Addition of 1926.251Rigging equipment for material handling., Subpart H - Materials Handling, Storage, Use, is made as (a) and order of present (a) and (b) is changed to (b) and (c)

JC2: JC1 did not request to confirm the validity of OSHA requirements in (a) to (c) above but appropriateness to specify in JSSS.

NK2: Appropriateness of the clauses were examined and (c) is deleted and (a) is added.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.6 [*Contractor's Safety Plan*], JSSS 1.7 [*Contractor's Method Statements*] and JSSS 1.13.2 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated ~~therewith of all requirements~~ with Hoisting Operation before the commencement of any such operations, including:

JC1: As it is impossible to inform "all Contractor's Personnel", it is better to limit to workers involved rigging/hoisting operation.

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with such Hoisting Operations of these requirements before the commencement of any such operations, including:

5.1.3 Compliance Standards

(6) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with such Hoisting Operations of these requirements before the commencement of any such operations, including:

NK1: The “all” means that all personnel who are working in hoisting operations as mentioned “associated therewith of all requirements”, therefore, no change is made. If necessary, NK ask MD to modify this phrase.

JC2: “all requirement” is not necessarily clear. Please, ask Mr. MD to review modified sentence by JC.

NK2: MD will review it.

(1) Scope ~~and Hoisting Operation Area~~, Area and Risk of the Hoisting Operation

JC2: The title is changed to coincide with the contents.

(a) The scope of the required Hoisting Operation, ~~the Total Load~~, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

JC2: Please refer to the comment to 5.1.2(5).

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

JC2: Please add description regarding ground conditions such as in 5.3.1 (1).

NK2: Added as (c).

(d) ~~The environmental conditions, nearby areas for storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas or areas where other Dangerous Work is taking place;~~ The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

JC2 The point of this clause of the Japanese draft is that if any accident and the like occurs in hoisting operation and it would cause serious effects on nearby environment. Thus, overhead services are added which is in the Japanese draft. On the other hand, it is deemed that it is not necessary to state regarding Dangerous Works in this clause. (For example, a work in Confined Space near the hoisting operation is not applicable.)

NK2: Modified by JC.

(e) The preservation of safe access, Walkways/Passageways, and footpaths around the Hoisting Operations working area; and

JC2: Isn’t the term “Walkways” same as “the Passageway” in Chapter 2? Please, recheck the terms.

NK2: Chapter 2 (Issue 3) defines as follows:

2.5.7.Temporary Access Around the Site

“Walkways” mean pedestrian footpaths at ground level or ramped for the use of Contractor’s Personnel.

“Passageways” are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.

NK: modified a sabove.

(f) The potential danger of Hoisting Operations to other Contractor’s Personnel, Employer’s Personnel and any other

(1) Scope, Area and Risk of the Hoisting Operation

(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.;

(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

(e) The preservation of safe access, Walkways, Passageways and footpaths around the Hoisting Operations working area; and

(f) The potential danger of Hoisting Operations to other Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

(1) Scope, Area and Risk of the Hoisting Operation

(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.;

(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

(e) The preservation of safe access, ~~, W~~ and walkways, ~~Passageways and footpaths~~ around the Hoisting Operations working area; and

NK: Please review the above based on the last modification in 6.4 WALKWAYS, LADDERS AND STEPLADDERS

(f) The potential danger of Hoisting Operations to other Contractor’s Personnel, Employer’s Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

(2) Hoisting Operation and Rigging Requirements

(a) ~~The Rated Capacity of Hoisting Equipment and type to be used;~~ The type of Hoisting Equipment to be used and its Rated Capacity;

JC2: As the Rated Capacity is determined as per the type, the order is changed.

NK2: Changed as JC modified.

(b) The Recommended Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment;

~~(i) Any limitations of Hosting Equipment; and~~

JC2: It is not clear what the meaning of this clause is. If it is about "Rated Capacity" or else, please delete the clause because it has been stated before.

NK2: This clause is quite vague and not useful for safety. Deleted.

~~(j) Disconnecting techniques used to complete the task.~~

JC2: As there has been no provision about slinging regarding rigging so far, it would be right to describe about it here. However, it is necessary to mention not only "disconnecting" but also "connecting".

As for the term, "remove" is more appropriate to use than "disconnect". In addition, Hoisting and Rigging Manual (PNNL-1829) by Department of Energy of USA uses an expression "hitched or rigged".

Anyway, please ask Mr. MD to confirm how to use these terms.

NK2: (j) is specified as mentioned in OSHA guide sheet, Rigging Process
https://www.osha.gov/dts/maritime/sltc/ships/rigging/rigging_process.html
The following are topics that should be discussed with workers prior to beginning rigging operations:
Disconnecting techniques used to complete the task.
MD to confirm the usage of terms.
However, as the requirements for rigging are provided in 5.4.1 and 5.4.2, NK thinks that it is not necessary to mention about disconnecting here.
Deleted tentatively.

(3) ~~Organisation~~ Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The identity of and location(s) for Signallers;

(c) The communication and signalling requirements (equipment

(2) Hoisting Operation and Rigging Requirements

(a) The type of Hoisting Equipment to be used and its Rated Capacity;

(b) The ~~Recommended~~ Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment; and

~~(i) Any limitations of Hosting Equipment; and~~

This can be deleted as you suggest.

(j) Connecting and disconnecting techniques.

I suggest this is included as above, which is simply altered.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The name of the authorised operator for each unit of Hoisting Equipment.

(c) The identity of and location(s) for Spotters;

Above is changed to be consistent with the definition

(d) The communication and signalling requirements (equipment

(2) Hoisting Operation and Rigging Requirements

(a) The type of Hoisting Equipment to be used and its Rated Capacity;

(b) The Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment; and

(i) Connecting and disconnecting techniques.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The name of the authorised operator for each unit of Hoisting Equipment.

(c) The identity of and location(s) for Spotters;

(d) The communication and signalling requirements (equipment to be used and standard signals); and

to be used and standard signals); and

(d) The procedures in case of emergency.

JC1: What is the meaning of this "Organisation"? Actually, this clause includes matters other than organisation. Please re-consider the title.

NK1: Modified as above.

5.2.2 Operators

(1) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.16 [*Proper Placement of Contractor's Personnel*].

(2) The name of the assigned operator shall be posted on each unit of Hoisting Equipment.

5.2.3 Riggers

(1) The Contractor shall assign only Riggers for all ~~Hoisting Operations~~ rigging and shall prohibit other workers from any involvement.

(2) The Contractor shall select and assign Riggers in accordance with JSSS 1.16 [Proper Placement of Contractor's Personnel].

(3) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

to be used and standard signals); and

(e) The procedures in case of emergency.

5.2.2 Operators and Riggers Generally

I have changed the above heading and combined the content as these re largely common requirements for both

No need for the following duplication:

~~(a) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as 'operators") of Hoisting Equipment in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].~~

Added for consistency with Chapter 4:

(1) The Contractor shall place signs on each unit of Hoisting Equipment showing the name of each authorised operator and clearly prohibiting all unauthorised persons from using, handling, operating or sitting at the controls of that equipment unit.

Following is added for consistency with Chapter 5

(2) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators and Riggers are appropriately qualified, skilled and experienced in operation of the Hoisting Equipment to which they are assigned and duly certified as such by the HSO.

(3) Operators and Riggers shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Not to remove, interfere with or override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(4) In addition, operators shall:

(a) Safely and competently operate the Hoisting Equipment;

(b) Operate all safety devices including emergency alarm and stop devices;

(c) Inspect, clean, service and maintain the unit of Hoisting Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

(5) The Contractor shall assign only Riggers for Hoisting Operations and shall prohibit other workers from any involvement.

(6) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

(e) The procedures in case of emergency.

5.2.2 Operators and Riggers Generally

(1) The Contractor shall place signs on each unit of Hoisting Equipment showing the name of each authorised operator and clearly prohibiting all unauthorised persons from using, handling, operating or sitting at the controls of that equipment unit.

(2) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators and Riggers are appropriately qualified, skilled and experienced in operation of the Hoisting Equipment to which they are assigned and duly certified as such by the HSO.

(3) Operators and Riggers shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Not to remove, interfere with or override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(4) In addition, operators shall:

(a) Safely and competently operate the Hoisting Equipment;

(b) Operate all safety devices including emergency alarm and stop devices;

(c) Inspect, clean, service and maintain the unit of Hoisting Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

NK: Please refer to the comment on 4.1.6 (3) (b) copied below.
JCA12: Isn't this the operator's responsibility but equipment supervisor?
NK: As commented, it is supervisor's duty to control these aspects. Deleted.
MD: Do not agree. The supervisor (whoever he is) may be responsible for managing servicing and maintenance but the operator is the primary person, he should not start or continue to use any equipment that he knows requires repair, service or maintenance.
NK6/19: the last paragraph "that other qualified persons perform these operations" is difficult to understand. Does it mean Operators shall control performing each other's operation?
NK propose as follows: to add (c)/(d) Ensure that other qualified persons safely operate Contractor's Equipment.

(5) The Contractor shall assign only Riggers for Hoisting Operations and shall prohibit other workers from any involvement.

(6) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.4 Safety Education and Training

The Contractor shall provide health and safety education and training in accordance with JSSS 1.17 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.5 Inspection of Hoisting Equipment and Rigging Equipment

JC1: Please refer to inspection at the time of bringing in. (It is important to prohibit to bring defective equipment into the Site.)

NK1: The inspection at mobilizing of Contractor's equipment at the site is specified in JSSS 4.2.1 (3). Duplicate specifying is avoided here. Inspection at the time of mobilization is added as (1) in 5.2.5 as above.

JC1: Please add to refer to Chapter 4. Would like to know the intention of deleting the periodic inspection.

NK1: As same as the above, periodic inspection is specified in JSSS 4.2.1 (5). Periodic inspection is added as shown right in (4).

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [Inspection, Maintenance and Repair], 4.2.1 [Requirement Generally] (3) to ensure that the equipment is free from defect and suitable for the hoisting operation planned.

(2) Further to the requirements of JSSS 1.3~~3~~5 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*] and JSSS 4.2 [Inspection, Maintenance and Repair], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

(3) Inspections mentioned in (2) above shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices)~~Over winding prevention devices;~~ and over-load prevention devices;

NK1: over-loading prevention devices is added.

JC2: There is a pointing out that "Anti-two blocking devices" is more common than "Over-winding prevention devices". Need to be confirmed.

NK: It is found that "Over-winding prevention devices" is used in mainly Japan. This is also patented in USA with this name. However, as pointed out it is more common to use "Anti-two blocking devices". Thus, NK proposes to use both terms equally considering that many hoisting equipment manufactured in Japan are used in overseas construction works.

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

5.2.3 Safety Training

Heading and content is amended as reference does not separately mention "education", which is not therefore necessary

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.4 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [*Inspection, Maintenance and Repair*], to ensure that the equipment is free from defect and suitable for the planned Hoisting Operation.

I suggest that cross reference should be to the general sub-clause rather than the particular sub-sub-clause so as to provide wider reference and to assist with future coordination.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and JSSS 4.2 [*Inspection, Maintenance and Repair*], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

Rather than cross referencing to the sub-sub-clause above, just delete the separate number which makes it a separate paragraph of the same number

Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices) and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

5.2.3 Safety Training

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.4 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [*Inspection, Maintenance and Repair*], to ensure that the equipment is free from defect and suitable for the planned Hoisting Operation.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and JSSS 4.2 [*Inspection, Maintenance and Repair*], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices) and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(4) Periodic inspection shall be made complying with JSSS 4.2.1 [Requirement Generally] (5) and include the following items:

(a) Condition of over-winding prevention devices, ~~overload prevention devices~~ anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of ~~Lifting Equipment such as hooks;~~ hooks of the Hoisting Equipment's;

JC2: There is "Lifting Equipment" in 5.25 (4) (c) which is not defined. Please modify the stipulation as "lifting equipment" is used to mean Hoisting Equipment.

NK2: Lifting Equipment is used in Lifting Operations and Lifting Equipment Regulations, 1998 in UK. It is same meaning as Hoisting Equipment in JSSS. In Japanese Crane Regulations, lifting equipment are such as hooks, grab bucket, magnet or negative pressure lifting equipment. To avoid confusion, JSSS does not use Lifting Equipment and (c) is modified as above.

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(5) ~~No Hoisting Operation shall be allowed to commence until the HSO has certified that it is safe to do so.~~ No Hoisting Equipment or Rigging Equipment shall put in operation unless they are inspected in accordance with JSSS 4.2.1 and it is ensured that they are safe to be used.

JC1: It is not practical for the HSO to certify for hoisting operations. ((5) & (6) right: numbers are changed in accordance with addition of (2) and (4))

Inspection is argued here. So better to redraft as follows.

"No Hoisting Equipment or Rigging Equipment shall not put in operation unless they are inspected in accordance with JSSS 4.1.7-4.1.9 and it is ensured that they are safe to be used."

NK1: Clause (5) is changed as above in accordance with JICA's comment.

(6) ~~The Contractor shall prepare standard checklists for the above regular and periodic inspections and the HSO shall ensure that these are recorded check, repair and maintenance results, complied with and signed by the person in charge of check and maintenance inspections and the HSO shall ensure that these are complied with, completed and signed and kept as a record in accordance with JSSS 1.31 [*Health and Safety Records*].~~ The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections are to be recorded and kept in accordance with JSSS 1.31 [Health and Safety Records].

JC1: Ditto (It is not practical for the HSO to certify for hoisting operations.)

NK1: In (4), the HSO shall manage the inspection and maintenance in accordance with the Safety Plan and instruct improvement if the person in charge does not follow the Safety Plan. (4) is modified as (5) in right.

JC2: It is appropriate for the person in charge of hoisting operations to make records and keep them. HSO can access the records as necessary and exercise his authorities. Modified as above.

NK2: Modified as JC commented.

(3) Periodic inspection shall be made complying with JSSS 4.2 [*Inspection, Maintenance and Repair*] and include the following items:

(a) Condition of over-winding prevention devices, anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of the Hoisting Equipment's;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(4) No Hoisting Equipment or Rigging Equipment shall be put into operation unless it has been inspected in accordance with the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*], and it is ensured that it is safe to be used.

Above is included as suggested and edited.

(5) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections shall be recorded and kept in accordance with JSSS 1.33 [*Health and Safety Records*].

(3) Periodic inspection shall be made complying with JSSS 4.2 [*Inspection, Maintenance and Repair*] and include the following items:

(a) Condition of over-winding prevention devices, anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of the Hoisting Equipment's;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(4) No Hoisting Equipment or Rigging Equipment shall be put into operation unless it has been inspected in accordance with the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*], and it is ensured that it is safe to be used.

(5) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections shall be recorded and kept in accordance with JSSS 1.33 [*Health and Safety Records*].

5.2.6 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with ~~Recommended~~ Safe Working Load suitable for the Hoisting Operation.

JC2: modified in accordance with change in 5.1.2 (4).
NK: Modified as JC commented.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Recommended Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall ~~be particularly aware and~~ take ~~all~~ measures to ~~prevent~~ keep any unauthorised personnel off from any area subject to any risk of injury ~~to persons~~ arising from the Hoisting Operation ~~but outside the immediate working area~~, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

JC1: modified.

JC2: It should be that nobody can enter the place where there is danger. (It does not mean that authorized personnel can enter under the load.
The most important point has been missing in the original clause of Japanese draft that prohibition of entering where there is a risk of fall of hoisted good is reinstated.

NK2: Changed as JC commented and modified as above.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

5.2.5 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall take measures to keep any unauthorised personnel away from any area where there is any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

5.2.5 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall take measures to keep any unauthorised personnel away from any area where there is any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand held radios or any other suitable communication tool must be provided and used; and

JC1: modified.

(d) In addition, Spotters shall be placed and ~~Spotters shall be~~ used only to keep any unauthorised personnel away from the working area.

JC1: Should spotter and signallers be stipulated separately, and the signallers be described that he shall dedicate to the signal?

NK1: As provided in (8) (a)-(c), the Riggers (signallers) carry only signalling and rigging. (d) is modified as above to clarify that Spotters are placed to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to move of the edge of boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that the operators ~~Operators shall~~ never leave their seat or leave the controls while Hoisting Operations are in progress.

JC1: modified.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that, If operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) ~~The operator shall then~~ identify the cause of defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) ~~The HSO shall ensure that no Hoisting Operation shall resume unless the above has been complied with and the Hoisting Equipment has been re-inspected by him and certified in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*.~~ Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

JC1: Please modify this part referring to the comment for 5.2.5. Especially, it is not

(c) When it is not possible for signallers to give direct visible signals to the operator, hand-held radios or other communication tool as approved by HSO must be provided and used; and

I suggest edit as above

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to any movement of the boom and the condition of suspended loads; and

I suggest edit as above

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(c) When it is not possible for signallers to give direct visible signals to the operator, hand-held radios or other communication tool as approved by HSO must be provided and used; and

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to any movement of the boom and the condition of suspended loads; and

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

realistic for the HSO to give “permission to use”.

NK1: The HSO is ultimately responsible for the safety of the Hoisting Equipment, too. As considering the realistic condition at the Site, (c) is modified as above. As 5.2.5 has been modified, referring to 5.2.5 is deleted.

(12) Condition of Ropes, Slings and Chains

~~The Contractor shall~~ ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

~~The Contractor shall~~ take the following measures in addition to JSSS 2.7 [ADVERSE WEATHER REQUIREMENTS]:

(a) ~~The Contractor shall ensure that~~ Hoisting Equipment is left in a safe condition when ~~not in use and particularly if~~ adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured ~~when not in use~~ to prevent any instability or collapse.

(d) Before resuming hoisting work after the adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 6.2.5 [Inspection of Hoisting Equipment and Rigging Equipment].

JC1: Isn’t it confusing that measures for long periods of non-use and measures for bad weather are mixed? (5.2.6 (13) (a)~(c))

NK1: (a) to (c) are revised for countermeasures to secure Hoisting Equipment during adverse climatic conditions.

A general sentence is added for (13), and (d) is added from Japanese draft for safety inspection before resuming work.

(14) Prohibition of Inadequate Use of Hoisting Equipment

JC2: The expression that means “any other purpose other than designed or originally intended” was lacking. Added “Inadequate”.

NK2: The title is changed as JC modified.

~~Hoisting Equipment shall never be used for transporting or hoisting Contractor’s Personnel unless the following all measures are taken for the case of existing unavoidable reason or essential for safe work procedures:.~~

Hoisting Equipment shall not be used for transporting or hoisting Contractor’s Personnel. Such inadequate use of Hoisting Equipment is exceptionally allowed in case it is justified by unavoidable reason and the following all measures are taken:

JC: modified.

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) ~~The assumed load of the total of 1.3 times of total weight of gondola and workers plus 500 kg shall not exceed the Rated Capacity of the Hoisting Equipment~~ The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [*Adverse Weather Requirements*]:

(a) Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming any Hoisting Operation after any adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 5.2.4 [*Inspection of Hoisting Equipment and Rigging Equipment*].

(14) Use of Hoisting Equipment for Contractor’s Personnel

As a general rule, Hoisting Equipment shall not be used for transporting or hoisting Contractor’s Personnel.

In exceptional circumstances and if so approved by the HSO, use of Hoisting Equipment may be allowed when the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [*Adverse Weather Requirements*]:

(a) Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming any Hoisting Operation after any adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 5.2.4 [*Inspection of Hoisting Equipment and Rigging Equipment*].

(14) Use of Hoisting Equipment for Contractor’s Personnel

As a general rule, Hoisting Equipment shall not be used for transporting or hoisting Contractor’s Personnel.

In exceptional circumstances and if so approved by the HSO, use of Hoisting Equipment may be allowed when the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

JC: modified.

(d) Wires ropes of Hoisting Equipment shall be of safety factor of 10 or more against loads;

(e) Lowering the gondola shall be made by power (prohibit free drop); and

(f) Use of PFAS of ~~Contractor's Personnel~~ the workers in the gondora shall be ensured.

JC1: Measures for hoisting Personnel by unavoidable reason which was in the Japanese draft are deleted. Reinstate the manner of writing for the stipulation of 5.2.6 (13) of Japanese version.

NK1: In English version, hoisting personnel is simply prohibit without exception. (14) is replaced with provisions in Japanese version as above:

NK1: Sentences of (14) in English will be review and edited by MD.

JC2: Make same as (c).

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) ~~to~~ and select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in full compliance with the manufacturer's official instructions and recommendations.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in full compliance with the manufacturer's official instructions and recommendations.

5.3.2 Additional Requirements for Mobile cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground

(d) Wires and ropes of Hoisting Equipment shall have a safety factor of at least 10 against the assumed load;

(e) Lowering the gondola shall be by powered system which prevents any free drop; and

(f) Use of PFAS of any Contractor's Personnel in the gondola shall be ensured.

Please check editing of above

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) that shall select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in compliance with the manufacturer's written instructions.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in compliance with the manufacturer's written instructions.

5.3.2 Additional Requirements for Mobile cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness

(d) Wire ropes of Hoisting Equipment shall have a safety factor of at least 10 against the assumed load;

NK: Wire ropes shall be used for hoisting Personnel.

(e) Lowering the gondola shall be by powered system which prevents any free drop; and

(f) Use of PFAS of any Contractor's Personnel in the gondola shall be ensured.

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) that shall select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in compliance with the manufacturer's written instructions.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in compliance with the manufacturer's written instructions.

5.3.2 Additional Requirements for Mobile cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness

services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile crane and input accurately operation conditions of booms and outriggers.

NK1: Japanese version 5.4.2 (2) is added as (8) in right because this is specific requirement for mobile crane.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation ~~and before demobilising~~

JC1: Is this phrase necessary? The expression of the word "demobilising" is too strong that may mean complete removal of the equipment form the Site.

NK: Deleted.

(a) ~~Set the Crane in the safe position;~~

(b) ~~Attach fixing pin on each part;~~

(c) ~~Lock the brake of the turning device and winch drum; and~~

(d) ~~Turn off all switches related with operation of cranes.~~

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) ~~Lock~~ Apply the brake of the turning device and winch drum; and

JC2: "Lock the brake" is a Japanese English expression.

NK2: Modified as commented.

(iii) Turn off all switches related with operation of cranes.

JC1: These were measures before the equipment drives in Japanese draft. Is these proper if not separating measures "before" and "during" driving?

NK2: In order to separate measures to take before driving, these are modified as above.

and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile cranes and accurately input the operational conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation:

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile cranes and accurately input the operational conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation:

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as ~~the name of the manufacturer, date of manufacture, the Recommended Safe Working Load, etc.~~ the Safe Working Load, date of the latest inspection, expiration date, etc.

JC2: Please, add “date of the latest inspection” and “validated date of inspection result” as the pertinent information. Although in Japanese draft, “the name of the manufacturer” was included, as a result of re-consideration it was judged unnecessary.

NK2: The clause is modified as per JC comment as above.

(2) ~~The Contractor shall be prohibited from making his own Rigging Equipment at Site.~~ The Contractor shall use Rigging equipment fabricated by reputable manufacturers and shall not make or repair by himself at the Site.

JC2: Isn’t this expression more appropriate in this case?

NK2: The clause is modified as JC suggested.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.33 [*Contractor’s Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*];

(b) Within the Recommended Safe Working Load; and

(c) In full compliance with the manufacturer’s ~~official~~ instructions and recommendations.

JC2:“official” is not necessary.

NKs: Deleted.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Safe Working Load, date of the latest inspection, expiration date, etc.

I suggest edit as above and leaving in reference to manufacturer

(2) The Contractor shall obtain Rigging Equipment from reputable manufacturers approved by the HSO and shall not make or repair his own Rigging Equipment at the Site.

Ditto

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.35 [*Contractor’s Equipment, Temporary Works, Safety Equipment and PPE*];

(b) Within the ~~Recommended~~ Safe Working Load; and

(c) In compliance with the manufacturer’s written instructions.

Ditto。

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Safe Working Load, date of the latest inspection, expiration date, etc.

(2) The Contractor shall obtain Rigging Equipment from reputable manufacturers approved by the HSO and shall not make or repair his own Rigging Equipment at the Site.

(3) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.35 [*Contractor’s Equipment, Temporary Works, Safety Equipment and PPE*];

(b) Within the Safe Working Load; and

(c) In compliance with the manufacturer’s written instructions.

(4) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(5) Wire ropes

(a) Where one-tenth or more of the element wires are broken or cut in any one strand.

(b) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(c) With kink or deformation.

(d) With excessive wear, corrosion or defect.

(6) Chains

(a) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(b) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(c) With excessive wear, cracks, corrosion or defect.

(7) Hooks, shackles

(a) Signs of deformation.

(b) With excessive wear, cracks, corrosion or defect.

(8) Synthetic fibre ropes or slings

(a) Broken or cut strands.

(b) With excessive wear or defect.

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply ~~fully~~ with the requirements of the standards noted in JSSS 5.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

JC1: modified.

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) ~~Remove any unusable or defective Rigging Equipment from service, tag as such and destroy or remove from the Site.~~

JC1: Isn't this a duplication of 5.5.1 (4)?

NK1: This (3) is duplication. Deleted.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of ~~loads~~ Goods.

Jc2: "Goods" is used in this chapter for hoisting load.

NK2: Changed to "Goods" as commented.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

JC1: 4. Sling methods are generally described. For example, BS EN 13414 "Steel wire rope slings – Safety"

NK1: Tentatively add BS to (4) above.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

(7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 5.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

(7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 5.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(4) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(5) Hoist loads at or above the centre of gravity.

(6) Attach guide ropes to the hoisted loads to assist with positioning.

(7) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

notes

JICA STANDARD SAFETY SPECIFICATION FOR PROJECT IMPLEMENTATION UNDER JAPANESE ODA

CHAPTER 5: HOISTING AND RIGGING

Japan International Cooperation Agency (JICA)

JICA STANDARD SAFETY SPECIFICATION (JSSS)
CHAPTER 5: HOISTING AND RIGGING

Table of Contents

5.1 GENERAL REQUIREMENTS

5.1.1 Scope

~~This Chapter contains examples of required safety measures for Hoisting Operations as defined in JSSS Annex 1.1 [*Definitions and Abbreviations*] including associated Hoisting Equipment and Rigging Equipment, all as necessary to avoid risk of injury, death or damage to Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations including neighbouring residents and other persons and property on adjacent areas, public roads and footpaths or buildings.~~

We have simplified the above clause to:

1) remove text that is covered by the contract

2) line it up more closely with the definition in Annex 1.1

3) specified the coverage more clearly so that it can be referred to as "Hoisting and Rigging".

We have/will change this consistently in all chapters in subsequent editing

(1) This Chapter specifies the safety requirements for Hoisting and Rigging Works which shall include:

(a) Hoisting Operations;

(b) Hoisting Equipment; and

(c) Rigging Equipment.

and hereinafter collectively referred to as "Hoisting and Rigging".

(2) General requirements for Contractor's Equipment for Hoisting and Rigging (including cranes) are included in JSSS 4.0 [*Contractor's Equipment*].

Additional particular requirements are contained in this Chapter.

5.1.2 Definitions

Definitions of terms for the purpose of this Chapter are as follows:

(1) "**Hoisting Equipment**" means Contractor's Equipment such as cranes, hoists, chain-blocks, pulleys and the like which constitute the prime mover which, when used with Rigging Equipment, permits loads to be hoisted or lowered and positioned.

(2) "**Rigging Equipment**" means the ropes, webbing, chains and slings together with all associated accessories such as hooks, hoisting points, shackles, etc. which~~, when~~ used with Hoisting Equipment, permit loads to be hoisted or lowered, and positioned.

"Which" is correct as above.

NK: modified "which"

(3) "**Rated Capacity**" means the maximum hoisting load for each type of Hoisting Equipment as officially permitted by the manufacturer. This will vary according to configuration of Hoisting Equipment and conditions of use such as length and angle of boom and other factors as permitted by the manufacturer.

(4) "**Safe Working Load**" means the maximum safe working load for each type, size and capacity of Rigging Equipment as officially recommended by the manufacturer.

"Recommended" can be deleted from above

~~(5) "**Total Load**" means either the Rated Capacity or the "Recommended Safe Working Load", neither of which shall be exceeded.~~

(6) "**Rigger**" means a competent person who is certified by the HSO as suitable for assignment to Hoisting and Rigging under this Chapter in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].

I suggest editing as above

5.1.3 Compliance Standards

(1) By reference to JSSS 1.4 [*Compliance with JSSS and Other Regulations*], for any items in this Chapter or relevant to the subject of this Chapter and which are not fully covered by JSSS, the Contractor shall comply with the technical requirements of the following standards in OSHA PART 1926 - Safety and Health Regulations for Construction:

(a) Subpart H - Materials Handling, Storage, Use, and Disposal; Section 1926.251 Rigging equipment for material handling,

(b) Subpart R- Steel Erection; Hoisting and rigging;

(Whilst this standard is related to Steel Erection, JSSS requires these technical requirements to apply to Hoisting Operations and associated rigging requirements in construction works generally)

(c) Subpart CC - Cranes and Derricks in Construction; Section 1926.1413 Wire Rope - Inspection and Section 1926.1414 – Wire Rope - Selection and installation criteria.

5.2 HOISTING OPERATIONS

5.2.1 Instruction for Contractor's Personnel

Further to the requirements of JSSS 1.7 [*Contractor's Safety Plans*], JSSS 1.9 [*Contractor's Method Statements*] and JSSS 1.15 [*Contractor's Safety Management Activities*], the Contractor shall include details of the following in the Method Statement and Safety Plan for Hoisting Operations and shall fully inform all Contractor's Personnel associated with such Hoisting Operations of these requirements before the commencement of any such operations, including:

(1) Scope, Area and Risk of the Hoisting Operation

(a) The scope of the required Hoisting Operation, the Rated Capacity, Safe Working Load, nature of Goods to be hoisted, location, required methods and safety arrangements;

(b) The Hoisting Operation area limits;

(c) Requirements on the ground conditions for installation, appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.;

(d) The working environment of the nearby areas to which particular attention should be paid (e.g. storage of Dangerous Goods or Hazardous Substances, Hazardous Areas, Operational Areas, or Overhead Services);

(e) The preservation of safe access, ~~W~~ and walkways , ~~Passageways and footpaths~~ around the Hoisting Operations working area; and

NK: Please review the above based on the last modification in 6.4 WALKWAYS, LADDERS AND STEPLADDERS

(f) The potential danger of Hoisting Operations to other Contractor's Personnel, Employer's Personnel and any other persons that are on the Site, adjacent to the Site and other places (if any) where the Works are being executed and who may be affected by such operations.

(2) Hoisting Operation and Rigging Requirements

(a) The type of Hoisting Equipment to be used and its Rated Capacity;

(b) The ~~Recommended~~ Safe Working Load and type(s) of Rigging Equipment to be used;

(c) Hazards associated with the Hoisting Operation;

(d) Role and responsibility of the operator and each Rigger;

(e) Establishing targets for the day;

(f) Weight of Goods being hoisted;

(g) The shapes and characteristics of Goods being hoisted;

(h) The presence of any obstructions or Overhead Services and consequent restrictions on the movement and operation of Hoisting Equipment; and

~~(i) Any limitations of Hosting Equipment; and~~

This can be deleted as you suggest.

(j) Connecting and disconnecting techniques.

I suggest this is included as above, which is simply altered.

(3) Identification of Personnel

(a) The identity of operators, Riggers and any other workers associated with the Hoisting Operation;

(b) The name of the authorised operator for each unit of Hoisting Equipment.

(c) The identity of and location(s) for Spotters;

Above is changed to be consistent with the definition

(d) The communication and signalling requirements (equipment to be used and standard signals); and

(e) The procedures in case of emergency.

5.2.2 Operators and Riggers Generally

I have changed the above heading and combined the content as these re largely common requirements for both

No need for the following duplication:

~~(a) The Contractor shall select and assign operators and drivers (hereinafter referred to collectively as "operators") of Hoisting Equipment in accordance with JSSS 1.18 [*Proper Placement of Contractor's Personnel*].~~

Added for consistency with Chapter 4:

(1) The Contractor shall place signs on each unit of Hoisting Equipment showing the name of each authorised operator and clearly prohibiting all unauthorised persons from using, handling, operating or sitting at the controls of that equipment unit.

Following is added for consistency with Chapter 5

(2) Further to the requirements of JSSS 1.18 [*Proper Placement of Contractor's Personnel*], the Contractor shall ensure that operators and Riggers are appropriately qualified, skilled and experienced in operation of the Hoisting Equipment to which they are assigned and duly certified as such by the HSO.

(3) Operators and Riggers shall be fully aware of the following:

(a) Work procedures, possible risks and operation methods;

(b) The need to stop all work when any defect or abnormality is detected;

(c) Not to remove, interfere with or override any safety devices;

(d) The identity of and location(s) for Spotters and the communication and signalling requirements including equipment to be used and signals; and

(e) The procedures in case of emergency.

(4) In addition, operators shall:

(a) Safely and competently operate the Hoisting Equipment;

(b) Operate all safety devices including emergency alarm and stop devices;

(c) Inspect, clean, service and maintain the unit of Hoisting Equipment under their responsibility and control or ensure that other qualified persons perform these operations.

NK: Please refer to the comment on 4.1.6 (3) (b) copied below.

JCA12: Isn't this the operator's responsibility but equipment supervisor?
NK: As commented, it is supervisor's duty to control these aspects. Deleted.
MD: Do not agree. The supervisor (whoever he is) may be responsible for managing servicing and maintenance but the operator is the primary person, he should not start or continue to use any equipment that he knows requires repair, service or maintenance.
NK6/19: the last paragraph "that other qualified persons perform these operations" is difficult to understand. Does it mean Operators shall control performing each other's operation?
NK propose as follows: to add (c)/(d) Ensure that other qualified persons safely operate Contractor's Equipment.

(5) The Contractor shall assign only Riggers for Hoisting Operations and shall prohibit other workers from any involvement.

(6) The names of all assigned Riggers shall be posted prominently in the working area of the Hoisting Operation.

5.2.3 Safety Training

Heading and content is amended as reference does not separately mention "education", which is not therefore necessary

The Contractor shall provide health and safety training in accordance with JSSS 1.19 [*Safety Training Generally*]. taking account of the characteristics of the Hoisting Operations, Hoisting Equipment and Rigging Equipment.

5.2.4 Inspection of Hoisting Equipment and Rigging Equipment

(1) When the Hoisting Equipment is mobilised to the Site, the Contractor shall inspect the equipment complying with JSSS 4.2 [*Inspection, Maintenance and Repair*], to ensure that the equipment is free from defect and suitable for the planned Hoisting Operation.

I suggest that cross reference should be to the general sub-clause rather than the particular sub-sub-clause so as to provide wider reference and to assist with future coordination.

(2) Further to the requirements of JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*] and JSSS 4.2 [*Inspection, Maintenance and Repair*], the HSO shall ensure that all Hoisting Equipment and all Rigging Equipment is inspected and maintained when it is at the location of operation before the commencement of the first and of all subsequent Hoisting Operations.

Rather than cross referencing to the sub-sub-clause above, just delete the separate number which makes it a separate paragraph of the same number

Inspections shall include all items necessary to ensure the safe performance of the Hoisting Operations including the following examples and any further requirements due to the characteristics of the Hoisting Operation and the capability and condition of the Hoisting Equipment and Rigging Equipment including condition and performance of:

(a) Anti-two blocking devices (over-winding prevention devices) and over-load prevention devices;

(b) Other safety devices including brakes, clutches and controllers;

(c) Rails for trolley and runway;

(d) Hooks, sheaves, blocks, pulleys and the like;

(e) Cables, ropes and the like; and

(f) Rigging Equipment.

(3) Periodic inspection shall be made complying with JSSS 4.2 [*Inspection, Maintenance and Repair*] and include the following items:

(a) Condition of over-winding prevention devices, anti-two blocking devices (over-winding prevention devices), other safety devices, brakes, and clutches;

(b) Condition of wire ropes and hanging chains;

(c) Condition of the Hoisting Equipment's;

(d) Condition of placement of winches; and

(e) Condition of electric wire, switchboard and controller.

(4) No Hoisting Equipment or Rigging Equipment shall be put into operation unless it has been inspected in accordance with the requirements of JSSS 4.2 [*Inspection, Maintenance and Repair*], and it is ensured that it is safe to be used.

Above is included as suggested and edited.

(5) The Contractor shall prepare standard checklists for the above regular and periodic inspections. The results of these inspections shall be recorded and kept in accordance with JSSS 1.33 [*Health and Safety Records*].

5.2.5 General Safety Measures for Hoisting Operations

The Contractor shall:

(1) Select Hoisting Equipment which has a Rated Capacity and function compatible with the work conditions and requirements, including loads, surface conditions, access, working area, radius and angle of boom, etc.

(2) Clearly display the Rated Capacity of the Hoisting Equipment so that all operators and Riggers are fully aware at all times.

(3) Select Rigging Equipment with Safe Working Load suitable for the Hoisting Operation.

(4) Select Rigging Equipment compatible with the purpose, work conditions and requirements.

(5) Ensure that operators and Riggers confirm that the load on the Rigging Equipment is less than the Safe Working Load.

(6) Activate all safety devices of Hoisting Equipment throughout the entire operation time(s) of any Hoisting Operations.

(7) Prohibition of entry

Designate all Hoisting Operations as "Dangerous Work", enclose the entire working area which is subject to any risk by providing temporary fences or barriers, prevent entry of

any unauthorised personnel and take all such further measures that are required by JSSS 2.3 [*Prohibition of Entry – Dangerous Work*].

The Contractor shall take measures to keep any unauthorised personnel away from any area where there is any risk of injury arising from the Hoisting Operation, due to fall of hoisted Goods, tangling, snagging, rebound of broken ropes or cables, broken sheaves, droppage and the like.

(8) Signalling

(a) Signalling between operators, Riggers and any associated workers regarding the Hoisting and Rigging Operations, shall only be carried out by Riggers, (hereinafter referred to as signallers);

(b) Signallers shall be located in a safe place outside the immediate area where the Rigging and Hoisting Operations are taking place, but in a location where they can clearly see suspended loads and can also see the operator and also be seen by such personnel;

(c) When it is not possible for signallers to give direct visible signals to the operator, hand-held radios or other communication tool as approved by HSO must be provided and used; and

I suggest edit as above

(d) In addition, Spotters shall be placed and used only to keep any unauthorised personnel away from the working area.

(9) During Hoisting Operations:

(a) Check if the hoisting points, hooks and the like are positioned above the centre of gravity of the load to be hoisted;

(b) At commencement of all Hoisting Operations, stop the hoist at 30 cm from hoisting level, to check stability and ensure that all is in order before proceeding;

(c) Ensure that there are no persons and objects within the turning area when the Hoisting Equipment turns;

(d) After hoisting loads up to the safe height, adjust the boom gently;

(e) Always pay attention to any movement of the boom and the condition of suspended loads; and

I suggest edit as above

(f) When unloading or detaching loads, stop once before landing and check the condition of the landing place and the load and then continue to lower gently.

(10) Ensure that Operators shall never leave their seat or leave the controls while Hoisting Operations are in progress.

(11) Defects with Hoisting Equipment during operation

(a) Ensure that if operators notice any defect or abnormality in the Hoisting Equipment during Hoisting Operations (such as abnormal noise, temperature, smell, etc.) the operator shall stop the Hoisting Operation immediately;

(b) Identify the cause of the defect or abnormality and make necessary repairs by using authorised and qualified specialist mechanics, electricians or representative technical engineers authorised by the hoisting Equipment manufacturer; and

(c) Ensure that the repaired Hoisting Equipment shall not be put in operation unless certified by the HSO.

(12) Condition of Ropes, Slings and Chains

Ensure that untested, uncertified, broken, damaged, deformed or defective ropes, chains or slings shall not be used.

(13) Adverse Weather

Take the following measures in addition to JSSS 2.7 [*Adverse Weather Requirements*]:

(a) Hoisting Equipment is left in a safe condition when not in use and particularly if adverse climatic conditions can be anticipated;

(b) All anchors, outriggers and supports are secure and adequate to fix and support the Hoisting Equipment in position during any adverse climatic conditions; and

(c) Booms and jibs shall be secured to prevent any instability or collapse.

(d) Before resuming any Hoisting Operation after any adverse weather, inspect Hoisting Equipment using the daily and periodic checklists specified in JSSS 5.2.4 [*Inspection of Hoisting Equipment and Rigging Equipment*].

(14) Use of Hoisting Equipment for Contractor's Personnel

As a general rule, Hoisting Equipment shall not be used for transporting or hoisting Contractor's Personnel.

In exceptional circumstances and if so approved by the HSO, use of Hoisting Equipment may be allowed when the following all measures are taken:

(a) Dedicated gondola for transporting or hoisting shall be provided;

(b) Prevention measures shall be taken to avoid turning and falling of gondola;

(c) The assumed load (i.e. 1.3 times of total weight of gondola and workers on board plus 500 kg) shall not exceed the Rated Capacity of the Hoisting Equipment;

(d) ~~Wires and ropes~~ Wire ropes of Hoisting Equipment shall have a safety factor of at least 10 against the assumed load;

NK: Wire ropes shall be used for hoisting Personnel.

(e) Lowering the gondola shall be by powered system which prevents any free drop; and

(f) Use of PFAS of any Contractor's Personnel in the gondola shall be ensured.

Please check editing of above

5.3 HOISTING EQUIPMENT - CRANES

(Refer also to JSSS Chapter 4 [*Contractor's Equipment*])

5.3.1 Planning, Installation and Removal

Unless otherwise approved by the HSO, the Contractor shall employ an appropriately qualified, skilled and experienced crane specialist(s) that shall select the required type and capacity of crane, plan the Hoisting Operation including mobilising, assembly, erection, use, dismantling and removal of cranes. The Contractor's specialist shall:

(1) Investigate the location and position for installation, plan the appropriate installation method taking account of all Hoisting Operation requirements, site and working conditions, location of obstacles, etc.

(2) Investigate the working area and ensure the safety of the crane and any crane rails.

(3) Design and construct crane foundation, assemble and install the crane with proper structural design and in compliance with the manufacturer's written instructions.

(4) Conduct completion inspection, load test and stability test of the crane.

(5) Dismantle and remove and transport cranes in a planned and systematic manner in compliance with the manufacturer's written instructions.

5.3.2 Additional Requirements for Mobile cranes

(1) Position mobile cranes where there are no obstacles within the operation range.

(2) Where obstacles exist, plan the appropriate operation to avoid the obstacles and ensure that operators and signallers comply with this plan.

(3) Ensue that ground has sufficient and even bearing capacity to avoid all risk of the crane subsiding and overturning. Where necessary or where there is any risk of damaging surface paving or underground services, provide temporary steel plates of suitable size, thickness and to support the crane and avoid any risk of overturning during operation.

(4) Provide steel plate load-spreader pads to support outriggers and prevent them from subsiding.

(5) Fully extend outriggers or extension type crawlers to the maximum position.

(6) When the outriggers or crawlers cannot be extended to the maximum position, adjust the Rated Capacity of the mobile cranes to suit lower capacity commensurate to the actual extension length of outriggers or crawlers.

(7) Ensure that the actual Rated Capacity of the mobile crane is clearly shown and also advised to operators and Riggers.

(8) Activate the over-load prevention device of mobile cranes and accurately input the operational conditions of booms and outriggers.

(9) Cease the Hoisting Operation from time to time and check upon the condition of the outriggers or crawlers, implement adequate remedial measures if there is any subsidence and prohibit continuation of the Hoisting Operation until the crane has been re-inspected and certified as safe by the HSO.

(10) After the Hoisting Operation:

(a) When the mobile crane is not driven, fix the hooks of crane at the safe position;

(b) When the mobile crane is driven, take the following measures before driving:

(i) Attach fixing pin on each part;

(ii) Apply the brake of the turning device and winch drum; and

(iii) Turn off all switches related with operation of cranes.

5.4 RIGGING EQUIPMENT

5.4.1 Hoisting and Rigging Equipment

(1) All items of Rigging Equipment shall be labelled to show all pertinent information, such as the name of the manufacturer, date of manufacture, the Safe Working Load, date of the latest inspection, expiration date, etc.

I suggest edit as above and leaving in reference to manufacturer

(1) The Contractor shall obtain Rigging Equipment from reputable manufacturers approved by the HSO and shall not make or repair his own Rigging Equipment at the Site.

Ditto

(2) Rigging Equipment shall only be used:

(a) When certified as safe to use by the HSO in accordance with JSSS 1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and PPE*];

(b) Within the ~~Recommended~~ Safe Working Load; and

(c) In compliance with the manufacturer's written instructions.

Ditto

(3) Rigging Equipment shall be removed from service, tagged as such and destroyed or removed from the Site, where required by the standards noted in JSSS 5.1.3 [*Compliance Standards*] including (but not limited to) the following conditions:

(a) Wire ropes

(i) Where one-tenth or more of the element wires are broken or cut in any one strand.

(ii) Where the reduction ratio of diameter due to use, exceeds 7% of the original nominal diameter at the date of manufacture.

(iii) With kink or deformation.

(iv) With excessive wear, corrosion or defect.

(b) Chains

(i) Where elongation due to use exceeds 5% of the original nominal length at the date of manufacture.

(ii) Where the diameter of links has reduced by more than 10 % since the date of manufacture.

(iii) With excessive wear, cracks, corrosion or defect.

(c) Hooks, shackles

(i) Signs of deformation.

(ii) With excessive wear, cracks, corrosion or defect.

(d) Synthetic fibre ropes or slings

(i) Broken or cut strands.

(ii) With excessive wear or defect.

5.4.2 Further Safety Requirements for Rigging

The Contractor shall fully comply with the requirements of the standards noted in JSSS 5.1.3 [*Compliance Standards*] including taking the following measures to prevent the risk of injury:

(1) Attach colour-coded self-adhesive vinyl tape and labels for slings visibly indicating the month of inspection and whether suitable for use.

(2) Inspect all Rigging Equipment before start of works.

(3) Select and use suitable Rigging Equipment depending on the weight and shape of Goods.

(3) Apply appropriate set up, provide fittings and accessories including clips and friction pads during Hoisting Works to ensure that the hoisted load (including bundled loads) are secure and will not move or slip, for example, cable-laid slings referred to BS EN 13414-3 Steel wire rope slings – Safety, Part 3: Grommets and cable-laid slings.

(4) Hoist loads at or above the centre of gravity.

(5) Attach guide ropes to the hoisted loads to assist with positioning.

(6) Securely store and protect Rigging Equipment to maintain in good condition and to prevent damage from rain, dust or contamination.

7 仮設工事 **7.1 一般事項** **7.1.1 仮設工事の留意点** (1) 全ての仮設構造物に関する設計、施工、使用及び解体を本仕様書に従って実施しなければならない。 ただし、請負者がリスクアセスメントにもとづき申請し、エンジニアが認めたものは、本仕様書で規定する要求事項の一部の規定を除外することができる。 (2) 請負者は仮設構造物の設計、施工、使用および解体に関する管理体制及び手法(procedural control)を定め、作業計画書又は安全衛生詳細計画書に記述しなければならない。かかる計画書は仮設構造物の種類に応じて、関連の本設工事にかかる両計画書に含めることでもよい。	**7 Temporary Works** **7.1 General** **7.1.1 General Requirement** (1) The Contractor shall execute design of the all Temporary Works (TW) in accordance with JSSS ~~7.1.3~~ other than specified in the Contract separately from JSSS. (2) The Contractor shall determine procedural control method of the management of design, construction and operation, and demolition of the TW and describe it in the Method Statement (MS) and the Particular Safety Plan (PSP). These MS and PSP may be included in those for construction of Main Works related with the TW. (3) The Contractor shall apply JSSS 7.1[General] to structures of TW for construction of the Main Works such as earth retaining structures, coffering, scaffoldings, platforms specified in JSSS and other structures such as concrete formwork supports, temporary bridge, temporary pier and so on.	**7 Temporary Works** **7.1 General** **7.1.1 General Requirement** (1) The Contractor shall execute design, construction, operation and demolition of the all Temporary Works (TW) in accordance with JSSS other than specified in the Contract separately from JSSS. When the Contractor requests the Engineer exemption of application of JSSS based on the results of risk assessment of Temporary Work and the Engineer agrees to the requests, a/some part(s) of JSSS may be exempted to apply to the TW. (2) The Contractor shall determine procedural control organization and method of the management of design, construction and operation, and demolition of the TW and describe it in the Method Statement (MS) and the Particular Safety Plan (PSP). These MS and PSP may be included in those for construction of Permanent Works related with the TW.
7.1.2 作業計画書及び安全衛生詳細計画書の作成 請負者は、本仕様書 1.3[安全衛生にかかわる計画書]に従い、次に規定する仮設工事又は仮設構造物（以下、本款では「仮設工事」という。）の作業計画書及び安全衛生詳細計画書（以下、本款では「計画書」という。）を、作成しなければならない。 (1) 計画書を作成しなければならない仮設工事 (a) 足場（つり足場、張出し足場以外の足場にあっては、高さが 5m 以上の構造のものに限る）の組立て、使用及び解体作業 (b) 型枠支保工の組立て、使用及び解体作業 (c) 明り掘削の高さ又は深さが 2m 以上である地山の掘削作業 (d) 土留め工（掘削の深さが 1.5mを超える場合には、原則として施工）の組立て、使用及び解体作業 (e) 上部構造の高さが 5m以上又は支間が 30m以上の橋梁の建設のための仮設工事 (f) 構造部材の高さが 5m 以上の構造物の建設のための仮設工事。なお、木造建築物は軒高が 5m 以上。 (g) 本契約で別途定める仮設工事及びエンジニアが指定する仮設工事 (3) 計画書の一部として作成すべき書類 仮設工事のリスクアセスメントにもとづき、仮設工事のリスクの程度に応じて次表に示す書類及びエンジアが指示する書類を、計画書の一部として作	**7.1.2 Method Statement (MS) and the Particular Safety Plan (PSP)** The Contractor shall ~~submit the Engineer~~ the MS and PSP (hereunder Plans) in accordance with JSSS 1.3[Plan for Safety and Health] for the following TW or temporary structures (hereunder TW): ~~(1) TWs depending on risk glade~~ ~~To execute risk analysis in accordance with JSSS 1.3.4[PSP](3) for TW except TW such as the following which the Contractor considers can be surely constructed without risk:~~ ~~(a) Temporary structures such as scaffoldings, falsework (concrete form supports) and platforms not higher than 2m which has no risk of failure or collapse,~~ ~~(b) Temporary excavation not deeper or higher than 1.5 m which has no risk of collapse of excavation surface or fall of ground material, and~~ ~~(c) TW which the Engineer give consent to the Contractor's opinion of TW's safety~~ ~~The Contractor shall include the following document specified in (3) below in the Plans depending of risk grade:~~ ~~(a) Low risk TW: Document A~~ ~~(b) Middle risk TW: Document B~~ ~~(c) High risk TW: Document C~~	**7.1.2 Method Statement (MS) and the Particular Safety Plan (PSP)** The Contractor shall prepare the MS and PSP (hereunder Plans) in accordance with JSSS 1.3[Plan for Safety and Health] for the following TW or temporary structures (hereunder called as TW): (1) TWs for which Plans shall be mandatory prepared (a) Erection, use and demolition of scaffolds with a height of 5 m or more, suspension scaffolds and outrigger scaffolds, (b) Erection, use and demolition of falseworks (concrete form supports), (c) Open excavation of 2m in height or depth, or more, (d) Erection, use and demolition of earth retaining and support system (in principle, the system shall be provided where excavation depth is 1.5 m or more.), (e) Temporary Works for construction of bridge which upper structure height is 5 m or more or span length is 30 m or more, (f) Temporary Works for construction of structure which structural member height is of 5m or more (in case construction of wooden building, eave height is of 5m or more), and (g) Temporary Works specified in the Contract separately from JSSS or instructed by the Engineer.

~~(2) TWs mandatory to submit Plans~~

~~The Contractor shall submit Plans of the following TWs regardless of the above (1). The Plans shall include the document specified in (3) below in the Plans depending of risk grade.~~

~~(a) Falsework (concrete form supports) which height is equal to or higher than 3.5 m,~~

~~(b) Scaffolding which height is equal to or higher than 10 m, suspension scaffoldings and outrigger scaffoldings, and~~

~~(c) TW specified in the Contract separately from the JSSS.~~

~~(3) Document to be submitted in Plans~~

~~The document to be submitted in Plans specified in above (1) and (2) is as follows:~~

~~(a) Document A consisting of risk assessment, design drawings, materials specification design check records and design quality assurance records which is specified in GC 4.9 [Quality Assurance],~~

~~(b) Document B consisting of risk assessment, design report and design calculations, design drawings, assembly drawings, materials specification design check records and design quality assurance records, and~~

~~(c) Document C consisting of risk assessment, design report and design calculations, design drawings, assembly drawings, materials specification, design check records, design quality assurance records, and monitoring plan.~~

~~(4) When the Engineer request the Contractor to submit documents for review of the safety other than above (a) and (b), the Contractor shall comply with it.~~

(2) Document to be included in Plans

The Contractor shall prepare document given in the following table depending on the risk grade evaluated by risk assessment of the Temporary Woks and that instructed by the Engineer. The document shall be included in the Plans.

*4 Drawings to show method/procedure/sequence of construction of Temporary Works.

7.1.3 仮設工事の設計及び設計照査

請負者は、本契約で別途に定めがない限り、次の規定を遵守し、仮設工事の設計及び設計照査を行わなければならない。

(1) 仮設工事の設計手順

請負者は仮設工事の設計及び安全に関する十分な知識と経験を持つ者（competent person）に設計を行わせなければならない。また、仮設工事の設計者とは異なる要員で、仮設工事にかかる設計の難易度に照らし合わせて十分な知識と経験を持つ者（competent person）に設計の照査をさせなければならない。

簡易な仮設工事でエンジニアから同意を得られる場合を除き、設計照査を行う者は、当該仮設工事に関する設計に関与していない者でなければならない。

(2) 仮設工事の設計

7.1.3 Method Statement (MS) and the Particular Safety Plan (PSP)

The Contractor shall make design and design check of TW in accordance with the following requirements other than specified in the Contract separately from JSSS.

(1) Design procedure of TW

The Contractor shall make the competent person (designer), who has sufficient knowledge and experience, design TW and another competent person (design checker) design check of TW. The design checker shall be different person from the designer depending difficulty of design of TW.

Except in case the Engineer concur to TW is simple, the design checker shall be person has no relation with the design of TW.

(2) Design procedure of TW

The designer shall make design report, design calculations, design

7.1.3 Method Statement (MS) and the Particular Safety Plan (PSP)

The Contractor shall make design and design check of TW in accordance with the following requirements other than specified in the Contract separately from JSSS.

(1) Design procedure of TW

The Contractor shall make the competent person (designer), who has sufficient knowledge and experience, design TW and another competent person (design checker) design check of TW. The design checker shall be different person from the designer depending difficulty of design of TW.

Except in case the Engineer concur to TW is simple, the design checker shall be person has no relation with the design of TW.

(2) Design procedure of TW

The designer shall make design report, design calculations, design

7 仮設工事 **7.2 土留め工** **7.2.1 一般事項** (1) 本節で使用する用語の定義は以下のとおりである。 (a) 土留め工とは、明り掘削を行う場合に、周辺の地山の崩壊を防ぐことを目的として設けられる仮設構造物をいい、土留め壁と土留め支保工からなる。 (b) 土留め壁は、親杭横矢板壁、 鋼矢板壁、鋼管矢板壁、柱列式連続地中壁、地中連続壁等をいう。 (c) 土留め支保工は、腹起し、切りばり、火打ち、中間杭等からなる切りばり支保工、グラウンドアンカー支保工等をいう。 (2) 土質に見合った勾配を保って掘削できる場合を除き、掘削の深さが 1.5m を超える場合には、原則として、土留め工を施すものとする。	**7 Temporary Works** **7.2 Earth Retaining Works** **7.2.1 General** (1) The following words in this Section shall have the definitions stated: (a) Earth retaining works mean works to construct temporary structures consisting of earth retaining wall with/without support to avoid failure of the open-ground excavated for construction of Permanent Structures. (b) Earth retaining wall is such wall as soldier piles and lagging wall, steel sheet piles wall, steel pipe piles wall, contiguous bored piling wall, underground continuous wall. (c) Earth retaining support is such the shore strut type retaining support consisting of such as waling, strut, corner angle and intermediate pile and the retaining support with ground anchors etc. (2) The Contractor shall provide earth retaining for the excavation equal to or deeper than 1.5 m in principle other than the case that excavation can be made with safe slopes depending on the soil conditions.	**7 Temporary Works** **7.2 Earth Retaining Works** **7.2.1 General** (1) The following terms in this Section shall have the definitions stated: (a) Earth retaining works mean works to construct temporary structures consisting of earth retaining wall with/without support to avoid failure of the open-ground excavated for construction of Permanent Structures. (b) Earth retaining wall is such wall as soldier piles and lagging wall, steel sheet piles wall, steel pipe piles wall, contiguous bored piling wall, underground continuous wall. (c) Earth retaining support is such the shore strut type retaining support consisting of such as waling, strut, corner angle and intermediate pile and the retaining support with ground anchors etc. (2) The Contractor shall provide earth retaining for the excavation equal to or deeper than 1.5 m in principle other than the case that excavation can be made with safe slopes depending on the soil conditions.
7.2.2 計画及び設計時の留意事項 請負者は、土留め工の計画及び設計に当たり、次の事項に留意しなければな	**7.2.2 Point to Consider in Planning and Designing** The Contractor shall pay attention to the following matters when planning and	**7.2.2 Plan and Design of Earth Retaining Works** The Contractor shall take into account to the following when plan and design of

らない。

(1) 設置する箇所の地山の地質、地層、土質、き裂、含水量、湧水、地下水及び埋設物等の状態に応じた土留め工の設置を計画すること。

(2) 隣接する建築物への影響（地盤沈下、地下水位の変異等）については、本契約で別途定める規定を遵守し必要な対策を講じること。

(3) 土留め工周辺の土質に応じてボイリング、ヒービングに対する掘削の安全性を、設計時に確認すること。

(4) 土留め工の設計では、設計書、設計計算書、設計図（注）、~~組立図、材料仕様書~~、施工手順図（注）、モニタリング計画を作成すること。~~組立図には、矢板、中間杭、腹おこし、切りばり、グラウンドアンカー等の部材の配置、寸法及び材質並びに取付けの時期及び順序が示されなければならない。~~

注： 本仕様書 7.1.2［作業計画書及び安全衛生詳細計画書の作成］の(3)［計画書の一部として作成すべき書類］の下記の注 2 及び 3 である。

注 2:仮設工事で使用する材料の仕様及び主要寸法を含む仮設工事の平面図、横断図、縦断図等の設計図面(Design drawings)。

注 3:施工の手順を示す図面（Construction procedure/sequence/method drawings）

(5) 土留め工の設計書には、本仕様書 7.2.3 に示すモニタリング計画を含めること。

designing earth retaining works.

(1) Plan the earth retaining works according to the geology, strata, soil, cracks, water content, spring water, groundwater, buried objects, etc.

(2) Regarding the influence on adjacent buildings (land subsidence, groundwater level variation, etc.), take the necessary measures in accordance with the provisions stipulated separately in this Contract.

(3) Confirm the safety of excavation against boiling and heaving at the time of design according to the nature of soil around the earth retaining work.

(4) For the design of earth retaining works, prepare a design document, a design calculation document, design drawings, assembly drawings, material specifications, and a monitoring plan. The assembly drawings must show the arrangement, dimensions and materials of the members such as sheet piles, intermediate piles, waling, struts, ground anchors, and the timing and sequence of those installation.

(5) The design document of the earth retaining work shall include the monitoring plan shown in 7.2.3 of this Specification.

earth retaining works.

(1) To plan earth retaining works according to the conditions of geology, strata, soil, cracks, water content, water spring, groundwater, underground objects, etc. at and around the Site.

(2) To plan necessary measures to avoid influence by the earth retaining works to adjacent buildings and ground such as buildings/ground displacement, groundwater level change, etc., in accordance with the provisions stipulated in the Contract.

(3) To confirm the safety of excavation in the earth retaining works against boiling (*1) and heaving at the time of design according to the conditions of soil in and around the earth retaining works.

For MD, (*1) *BS 6100-3:2007*

03 25001 boiling displacement of soil (01) at the base of an excavation (01) or adjacent to the toe of an embankment (01) caused by pressure of water

(4) To make design and calculation reports, design drawings (*1), construction procedure(/sequence/method) drawings (*2) and monitoring plan in the design of earth retaining works.

(5) The design document of the earth retaining work shall include the monitoring plan shown in 7.2.3 of this Specification.

Note:
Definition of *1 and *2 is given as follows in JSSS 7.1.2［Method Statement (MS) and the Particular Safety Plan (PSP)], (2)[Document to be included in Plans].

*1 Design drawings mean drawings to show design of Temporary Works including plans, cross and longitudinal sections, specifications and main dimensions of materials to be used.

*2 Construction procedure drawings mean drawings to show method/procedure/sequence of construction of Temporary Works.

7.2.3 モニタリング計画

請負者は、施工中の土留め工の安全を確保し、周辺の地盤や建物等への影響をすみやかに察知するために、変位や挙動の目視点検及び計器計測によるモニタリング計画を、次に従い作成し、土留め工を管理しなければならない。

このモニタリング計画には、下記に示すモニタリングの実施方法について具体的に記述しなければならない。

以下の赤字の文章は後日削除
英訳時注意
（英文作成時に、MD 氏へ問合わせと変更必要事項）
JC: エンジニアが仮設の設計に関与しないという前提の下で、モニタリングだけ関与させるのが適当なのか判断しかねるため、MD 氏とも相談のうえ修文をお願いできますでしょうか。(他方、モニタリングにエンジニアを関与させるとなった場合、エンジニアが登場するのはこの目視点検のところからではなく、7.2.3 の冒頭文ではないかと考えます)

(1) モニタリングの実施

(a) 目視点検

目視点検の対象及び項目は、次表及び土留め工の特性に応じたものとし、それらを含む点検表を作成し、毎日点検すること。

7.2.3 Monitoring Plan

The Contractor shall create a monitoring plan in order to ensure the safety of the earth retaining work during construction and promptly detect any influence on the surrounding ground and buildings for managing the earth retaining work, by visual inspection of the displacement and behavior and measurement with the instrument as follows.

(1) Implementation of Monitoring

(a) Visual Inspection

Visual inspection shall be made daily based on the inspection checklist created for the objects and items in accordance with the following table and the characteristics of the earth retaining work.

Inspection Objects	Inspection Items
Earth Retaining Wall	Twisting of top end and vertical displacement of wall Crack, deflection, swelling of wall Water leak, sediment run-off from wall Gap of joint
Earth Retaining Support	Deflection, twist of waling Sink, floating up, twist of intermediate pile Vertical / horizontal displacement, twist of strut Gap of joint or crossing part, breakage, loosening

7.2.3 Monitoring Plan

The Contractor shall make a monitoring plan in order to ensure the safety of the earth retaining works during construction and promptly detect any influence to the adjacent buildings and ground by the construction of earth retaining works.

The monitoring shall be made with visual inspection and instrument measurement of displacement and behavior of the earth retaining works, adjacent buildings and ground. The monitoring plan shall be specifically prepared following the method of monitoring specified below.

Question to MD from JICA,
The Engineer is not involved in the design of TW.
Is the Engineer not involved in the planning of monitoring, too?
If the Engineer should be involved in the planning, please modify the description in 7.2.3.
Thank you.

(1) Implementation of monitoring

(a) Visual inspection

The Contractor shall prepare the inspection checklist of the visual inspection for the inspection objects and items shown in the table below

点検対象	点検項目
土留め壁	壁体天端の蛇行や上下方向の変位 壁体の亀裂、たわみ、はらみ出し 壁体からの漏水、土砂流出 接手部のずれ
土留め支保工	腹起しのたわみ、ねじれ 中間杭の沈下、浮き上がり、ねじれ 切ばりの上下・水平方向の変位、ねじれ 接手、交差部のずれ、ボルトの破損やゆるみ
周辺地盤	舗装面・地表面の亀裂、陥没 敷石・縁石の目地の開き
掘削底面	底面からの湧水、噴砂、 底面のふくれ上がり、湧水の濁り
周辺構造物	構造物の亀裂、傾斜
土留め工内の地下埋設物	埋設物の変位、埋設物の接続部のずれ

(b) 計器計測

(i) 別途契約書で定めがある場合はそれに従い、定めがない場合については、次表を参照のうえ、計器計測の計画を作成すること。

計測対象	計測項目
土留め壁	土留め壁の変位、土留め壁の応力、土留め壁に作用する土圧、水圧
土留め支保工	切ばりの軸力又は土留めアンカーの軸力
掘削底面	掘削底面の変位、水圧、湧水量
周辺地盤	周辺地盤の変位、地下水位
周辺構造物	構造物の変位
地下埋設物	地下埋設物の変位

(ii) 計器及び計測方法は計測の目的に合ったものを選定すること。

(iii) 計測位置は、その計測目的に合致し、安全管理上必要と思われる箇所で、土留め工設置期間を通じて連続的に観測が可能な箇所とし、必要な数とすること。

(2) モニタリングに基づく管理

(a) 目視点検による管理

目視点検で異常が見つかったときは、以下(b)の計器計測結果との照合、計測方法の見直し、あるいは緊急的な対策の実施等、異常の程度に応じ、必要な対策を実施すること。

(b) 計器計測による管理

本契約で別途に計器計測項目の管理値の定めがあるときはそれを基に、定めがない場合は設計上で許容された変位・応力等を基に管理限界値をまず設定し、必要に応じ、以下に示すような段階的な管理値を定めること。

計測値が各管理値に達した場合は、その管理値に応じた対策を実施すること。

(i) 一次管理値（観測の強化と二次管理値以上の値に達した場合の対策方法の検討・準備を開始する基準値）

(ii) 二次管理値（作業をいったん中断し、対策を開始する基準値）

(iii) 管理限界値（直ちに作業を中止し、作業員の立ち入りを禁止し、施工方法の見直しを含めた抜本的な対策を行う基準値）

	of bolts
Neighboring Ground	Cracks, cave-in of pavement / ground surface Open joint of paving stone / curve stone
Excavated Bottom	Spring water, sand boil from excavated bottom Heaving of excavated bottom, muddiness of spring water
Neighboring Structures	Crack, tilting of structures
Underground Installations within Earth Retaining Work	Displacement of underground utility, gap of joint

(b) Instrument Measurement

(i) Unless there is a separate provision in the Contract, create a measurement plan referring to the following table.

Measurement Objects	Measurement I
Earth Retaining Wall	Displacement, stress of retaining wall Earth pressure and water pressure acting
Earth Retaining Support	Axial force of strut / ground anchor
Neighboring Ground	Displacement of neighboring ground, gro
Excavated Bottom	Displacement of excavated bottom Water pressure of spring water, water infl
Neighboring Structures	Displacement of structure
Underground Installations	Displacement of underground utility

(ii) Select the instruments and measurement methods that suit the purpose of the measurement.

(iii) The number of measurement points shall be determined to match the purpose and be deemed necessary for safety management. The points of measurement shall be those possible for continuous observation throughout the earth retaining work installation period.

(2) Management Based on Monitoring

(a) Management by Visual Inspection

If an abnormality is found by visual inspection, the necessary measures shall be taken in accordance with the degree of abnormality, such as verification with the instrument measurement results in (b) below, review of the measurement method, or implementation of urgent countermeasures.

(b) Management by Instrument Measurement

Unless there is a stipulated set of control values for instrument measurement items in the Contract, determine control limit values based on the allowable displacement / stress in the design first, then the following stepwise control values shall be established as necessary.

When the measured value reaches each control value, implement measures according to the control value.

(i) Primary control value (reference value to start strengthening of observation and preparing countermeasures to be taken when the measurement value reaches the secondary control value)

(ii) Secondary control value (reference value to suspend work and start countermeasures)

(iii) Control limit value (reference value to stop work immediately, prohibit entry of workers, and take radical measures including review of construction method)

and depending on the characteristics of the earth retaining work.

The Contractor shall carry out the visual inspection daily using the inspection checklist.

Inspection Objects	Inspection Items
Earth Retaining Wall	Meander/horizontal displacement and vertical displacement of top of wall Crack, deflection and swelling of wall Water leakage, mud inflow through wall Gap of joint of walls
Earth Retaining Support	Deflection, twist of waling Settlement, floating up (displacement?), twist of intermediate pile Vertical / horizontal displacement, twist of strut Gap of joint or crossing part, breakage, loosening of bolts
Base of Excavation	Spring of water, sand boiling in the base Heaving of the base, muddiness of spring water
Neighboring/adjacent Ground	Cracks, cave-in/subsidence of pavement / ground surface Opening of joints of paving stone / curve stone
Neighboring/adjacent Structures	Crack, tilting/inclining of structures
Underground Utilities in Earth Retaining Work	Displacement, gap of joint of underground utility

(b) Instrument Measurement

(i) The Contractor shall prepare monitoring plan with instrument measurement in accordance with the provisions in the Contract. In case of no provision in the Contract, the monitoring plan shall be prepared referring to the following table.

Measurement Objects	Measurement Items
Earth Retaining Wall	Displacement, stress of retaining wall Earth pressure and water pressure acting on retaining wall
Earth Retaining Support	Axial force of strut / ground anchor
Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
Neighboring/adjacent Ground	Displacement of neighboring/adjacent ground, ground water level
Neighboring Structures	Displacement of structures
Underground Utilities in Earth Retaining Work	Displacement of underground utilities

(ii) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement.

(iii) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of earth retaining works are provided.

(2) Management based on Monitoring

(a) Management by Visual Inspection

When the Contractor finds abnormality by visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, such as verification of visual inspection results with the instrument measurement results in (b) below, review of the measurement

		method, or implementation of urgent countermeasures. (b) Management by Instrument Measurement Unless the Contract specifies control values for instrument measurement items, the Contractor shall determine control limit values based on the allowable displacement / stress in the design at first, then the following stepwise control values shall be established as necessary. When the measured value reaches each control value, the Contractor shall implement measures according to the control value. (i) Primary control value (reference value to start strengthening of observation and preparing countermeasures to be taken when the measurement value reaches the secondary control value) (ii) Secondary control value (reference value to suspend work and commence to take countermeasures) (iii) Control limit value (reference value to stop work immediately, prohibit entry of workers, and take radical measures including review of construction method)
7.2.4 土留め工の施工時の安全管理上の措置 請負者は、土留め工の作業時には、下記の安全管理上の措置を講じなければならない。 (1) 土留め工の設計条件、設計内容等を十分理解した作業主任に作業を直接指揮させること。 (2) 上記 7.2.2(4)の材料仕様書に請負者が計画した品質の材料を使用するものとし、ひび割れ、変形又は腐食等のある不適切な材料を使用してはならない。 (3) 土留め工の組立ては、~~組立図~~施工手順図に示された順序に基づいて行うこと。~~組立図~~施工手順図と異なる施工を行う場合は、安全性の確認を行ったうえで、作業計画書を変更すること。 (4) 建設機械・揚貨機械を用いて土留め壁又は土留め支保工を施工する場合は、~~本仕様書 4.1.1[建設機械作業の一般的留意事項]~~ 本仕様書4[機械・器具・工具]、6[揚貨・玉掛作業]に規定の措置を講じること。 (5) 新たな掘削等の施工段階に進む前には、先の掘削における所定の部材が定められた位置に取り付けられていること及び土留め工が安定していることを確認すること。 (6) 土留め板は、掘削後すみやかに掘削面との間に隙間のないようにはめ込み、隙間が出来た時は、裏込め、くさび等で隙間の無いように固定すること。 (7) 土留め板の背面より漏水がある場合は、土砂の流出を防ぐ措置を講ずること。	**7.2.4 Safety Management Measures for Earth Retaining Works** The Contractor shall take the following safety management measures for earth retaining works. (1) Assign an Operation Leader who fully understands the design conditions and design details of the earth retaining work for supervising the work directly. (2) Use material of the quality planned by the Contractor in the material specifications described in 7.2.2 (4) above, and inappropriate materials with cracks, deformation or corrosion shall not be used. (3) Assemble the earth retaining work based on the procedure shown in the assembly drawing. When performing construction different from the assembly drawing, change the method statement after confirming safety. (4) When constructing an earth retaining wall or an earth retaining support using construction equipment, take the measures specified in 4.14.1 [General Notes on Construction Equipment Work] in this Specification. (5) Before proceeding to a new stage of excavation, make sure that the planned members for the previous stage are installed at the specified positions and that the earth retaining work is stable. (6) Immediately after excavation, mount laggings avoiding gap between laggings and the excavation surface. If any gap is found, fix the lagging with no gap by back filling or wedges. (7) If there is water leakage from the back of the lagging, take measures to prevent sediment outflow.	**7.2.4 Safety Management of Earth Retaining Works** The Contractor shall take the following safety management measures for earth retaining works. (1) Assign an Operation Leader who fully understands the design conditions and design details of the earth retaining works to directly lead the work. (2) Use material of the quality planned by the Contractor in the material specifications described in 7.2.2 (4) above, and inappropriate materials with cracks, deformation or corrosion shall not be used. (3) Construct the earth retaining work in accordance with the procedure shown in the construction procedure drawings. When the Contractor constructs the earth retaining work with the different procedure from shown in the construction procedure drawings, the Contractor shall confirm the safety of revised procedure and revise the method statement of the earth retaining work. (4) When constructing earth retaining walls or earth retaining supports using construction equipment, take the safety measures specified in JSSS 4[Contractor's Equipment] and 6[Lifting and Sling Works]. *(To MD, when we prepare Japanese JSSS, this seems good to specify these to avoid accident in the work. However, now I feel why we specify specially specify these Chapters though other safety measures are necessary and already specified in JSSS. Please revise this as well as other clauses.))* (5) Before proceeding to a new stage of excavation, make sure that the planned members for the previous stage are installed at the specified positions and the earth retaining work is stable. (6) Immediately after excavation, install laggings to avoid gaps between laggings and excavation surfaces. When any gap exists, fix the lagging to avoid gap by back filling or wedges. (7) When there is water leakage thorough laggings from excavated ground, take measures to prevent mud inflow to avoid collapse of ground.
7.2.5 切りばり支保工の作業での安全上の措置 請負者は、切りばり支保工の作業にあたっては、次の安全上の措置を講じなければならない。 (1) 切りばり及び腹おこしは、脱落を防止するため、矢板、杭等に確実に取り	**7.2.5 Safety Measures of Shore Strut Support Works** The Contractor shall take following safety measures in performing shore strut support works. (1) Be sure to install the strut and waling securely to sheet piles, soldier piles etc. to prevent falling off.	**7.2.5 Safety Measures of Waling and Strut Support Works** The Contractor shall take following safety measures in construct waling and strut support works. (1) Waling and struts shall be tightly installed on sheet piles, soldier piles etc. to prevent falling off of waling/struts.

付けること。 (2) 圧縮材（火打ちを除く）の継手は突合せ継手とし、部材全体が一つの直線となるようにすること。木材を圧縮材として用いる場合は、2 個以上の添え物を用いて真すぐに継ぐこと。火打ちの接手は、次の(3)に規定の接合によることとすること。 （ https://books.google.co.jp/books?id=4dpvBgAAQBAJ&pg=PA236&lpg=PA236&dq=%E5%9C%A7%E7%B8%AE%E6%9D%90%EF%BC%88%E7%81%AB%E6%89%93%E3%81%A1%E3%82%92%E9%99%A4%E3%81%8F%EF%BC%89%E3%81%AE%E7%B6%99%E6%89%8B&source=bl&ots=q10aHuZA5J&sig=ACfU3U3z9zTl9SyJl6I0Qg1PyvqGlL8mYQ&hl=ja&sa=X&ved=2ahUKEwiky6yDifDlAhXSFIgKHdXBDDwQ6AEwBHoECAcQAQ#v=onepage&q=%E5%9C%A7%E7%B8%AE%E6%9D%90%EF%BC%88%E7%81%AB%E6%89%93%E3%81%A1%E3%82%92%E9%99%A4%E3%81%8F%EF%BC%89%E3%81%AE%E7%B6%99%E6%89%8B&f=false） (3) 切りばり又は火打ちの接続部及び切りばりと切りばりとの交さ部は、当て板をあててボルトにより緊結し、溶接により接合する等の方法により堅固なものとすること。 (4) 中間杭を備えた土留め支保工にあっては、切りばりを当該中間杭に確実に取り付けること。 (5) 切りばりを土留め工の部材以外の建築物の柱等で支持する場合にあっては、当該支持物は、これにかかる荷重に耐えうるものとすること。 (6) 土留め壁と腹おこしの隙間は充填を行うこと。また、腹おこしと切りばりの接合部はスチフナー等で補強を行うこと。	(2) The joint of the compressive members (excluding corner angle) shall be a butt joint to make the entire member straight. When using wood as compressive members, connect them straight using two or more doubling plates. (3) The connection part of the strut or corner angle as well as the crossing part of two struts shall be made strong by using a backing plate and bolts, and welding them together. (4) For the earth retaining supports with intermediate piles, attach the struts to the intermediate pile securely. (5) When supporting the strut with a pillar of the building etc. other than the members of the earth retaining work, the support shall be able to withstand the load applied to it. (6) The gap between the earth retaining wall and the waling shall be filled. Also, the connection part of the strut and waling shall be reinforced with stiffeners.	(2) Compressive members (excluding diagonal struct) shall be joined by butt joint and be as entire member straight. When using wood as compressive members, they shall be jointed straightly using two or more doubling plates. diagonal struct shall be jointed as specified in (3) below. (3) Connection parts of struts or diagonal struct, crossing parts of two struts shall be made strong by using backing plate and bolts, and welding them together. (4) For earth retaining work with intermediate piles, fix struts on intermediate piles rigidly. (5) When fixing struts on pillars of the building, etc. other than members of earth retaining work, the support shall be able to withstand the load transmitted to them from struts. (6) Gap between earth retaining wall and waling shall be filled. (7) Connection parts of struts and waling shall be reinforced with stiffeners.
7.2.6 グラウンドアンカー工の作業での安全上の措置 請負者は、グラウンドアンカー工の作業にあたっては、次の安全上の措置を講じなければならない。 (1) ボーリングマシンの組立て、解体、変更又は移動の作業、ボーリングマシンによる削孔作業、アンカー（テンドン）鋼材の緊張作業、グラウト材の注入等の作業を行うときは、作業の方法、手順、安全上の措置を定め、これらを作業者に周知し、かつ、作業主任の直接の指揮の下に作業を行うこと。 (2) ボーリングマシンの操作は、指定の者以外の者にさせないこと。 (3) アンカー（テンドン）鋼材の緊張作業中、鋼材の破断等による作業員の危険を防止するため、緊張ジャッキの後方を立ち入り禁止とする等の安全措置を講じること。 (4) グラウト材の注入作業の前に、圧送ホース及び継ぎ手の破損の有無を点検すること。 (5) 作業に必要な安全帽、保護メガネ、手袋、安全靴等の保護具を、作業員に着用させること。	**7.2.6 Safety Measures of Ground Anchor Works** The Contractor shall take following safety measures in performing ground anchor works. (1) When assembling, disassembling, changing or moving a boring machine, drilling with a boring machine, tensioning an anchor tension steel (anchor tend (2) on) and grouting etc., establish method and procedure of the work and perform the work under the direct supervision of the Operation Leader. (3) Do not allow anyone other than the designated personnel to operate the boring machine. (4) Take safety measures such as prohibiting access to the rear of the tension jack to prevent the danger of workers due to breaking of the anchor (tendon) steel during tensioning. (5) Before grout injection, check for any damage in the pressure hose and joint. (6) Have the workers wear protective equipment such as safety helmets, protective glasses, gloves and safety shoes required for the work.	**7.2.6 Safety Measures of Ground Anchor Works** The Contractor shall take following safety measures in performing ground anchor works. (1) To determine work method and procedure, safety measures of the work of assembling, disassembling, changing or moving boring machine, drilling with boring machine, tensioning anchor steel (tendon) and grouting etc. (2) To perform the work under the direct lead of the Operation Leader. (3) Not to allow anyone other than the designated personnel to operate the boring machine. (4) To take safety measures such as prohibiting access to the rear of the tension jack to prevent the danger of workers by breaking of the anchor steel (tendon) during tensioning. (5) To check for any damage in the grout ~~pressures~~ hoses and joints before grout injection work. (6) To have the workers wear PPE such as safety helmets, protective glasses, gloves and safety shoes required for the work.
7.2.7 悪天候及び地震時の点検 請負者は、本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候又は地震後には、土留め工の作業に関して次の措置を講じなければならない。 (1) 土留め工又は土留め工内の作業を開始する前には、7.2.3（1）(a)[目視点検によるモニタリング]に規定の目視による点検及び同(b)[計器計測によるモニタリング]による計測値のチェックを行うこと。 (2) 土留め工に異常を認めたときは、直ちに補強し、又は補修すること。	**7.2.7 Inspection at Adverse Weather and Earthquake** The Contractor shall take the following measures for the earth retaining works after adverse weather or earthquake specified in 2.7 [Measures against Adverse Weather and Earthquake] in this Specification. (1) Before starting work on or within the earth retaining work, perform the visual inspection specified in 7.2.3 (1) (a) [Visual Inspection] and check the measured value as specified in (b) [Instrument Measurement]. (2) If any abnormality is found in the earth retaining work, immediately reinforce or repair it.	**7.2.7 Inspection at Adverse Weather and Earthquake** The Contractor shall take the following measures for the earth retaining works after adverse weather or earthquake specified in JSSS 2.7 [Adverse Weather Requirement]. (1) Before starting the work on or in the earth retaining work, perform the visual inspection specified in JSSS 7.2.3 (1) (a) [Visual Inspection] and check the measured values specified in (b) [Instrument Measurement]. (2) When any abnormality is found in the earth retaining work, immediately reinforce or repair it.
7.2.8 土砂及び器材等の置き方 (1) 土留め支保工の肩の部分に掘り出した土砂又は器材等を置く場合には、	**7.2.8 Placing Earth and Sand, Equipment** (1) When placing earth and sand excavated or equipment on the ground near the	**7.2.8 Placing Excavated Materials and Equipment** (1) When placing earth and sand excavated or equipment on the ground near the

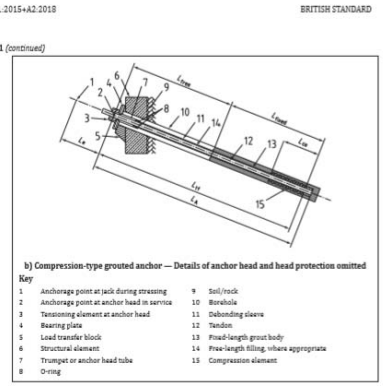
3.1.28 tendon part of a ground ancho



https://www.foundationrepairservices.com/blog/what-you-should-know-about-soldier-piles/

A soldier pile is a common retaining wall strategy in which H-shaped steel beams (“piles”) are drilled deep into the earth at regular intervals — usually 2 to 4 yards apart. In between each vertical pile, horizontal supports fill the gap, helping to spread the load. Known as “lagging walls,” these horizontal supports are most often made from precast concrete panels, steel girders or pressure-treated timber.

7　仮設工事	**7　Temporary Works**	**7　Temporary Works**
7.3　仮締切工	**7.3　Cofferdams**	**7.3　Cofferdams**
7.3.1　一般事項	**7.3.1　General**	**7.3.1　General**
仮締切工とは、現場内へ外部から入り込む水を遮断するために設置する仮設構造物をいい、本節では、土堤、ケーソン、一重鋼矢板、二重鋼矢板、切梁式鋼矢板等を扱う。	Cofferdam means temporary structures that are installed to prevent water intrusion from outside of the work spaces. In this section, earth dykes, caissons, single steel sheet piles, double steel sheet piles, and steel beam piles are stipulated.	Cofferdams means temporary structures that are constructed to prevent water intrusion from outside into the work site. This Section stipulates cofferdams such as earth dykes, caissons, single steel sheet piles, double steel sheet piles, and steel beam piles.
7.3.2　計画及び設計時の留意事項	**7.3.2　Points to Consider in Planning and Designing**	**7.3.2　Plan and Design of Cofferdams**
請負者は、仮締切工の計画及び設計に当たり、本仕様書「7.2 土留め工」の	The Contractor shall comply with 7.2.2 [Points to Consider in Planning and	The Contractor shall comply with JSSS 7.2 [Earth Retaining Works], 7.2.2 [Plan

JSSS in Japanese （Provisional Final Draft R1 11/12）	JSSS in English R0（11/13）	JSSS in English R1（11/17）
7.2.2[計画及び設計時の留意事項]に準拠するとともに、次の事項に留意しなければならない。 (1) Site Data に示される気象、海象、地震等のデータを十分考慮すること。 (2) 河川流量、水位、潮位、波高、余裕高、地震荷重、想定される外力等の設計条件について契約書の別の定めに従うこと。 (3) 既設堤防の開削を行い設置する仮締切の天端の高さは、施工期間中に想定される最大水量に耐えうるものにする。 (4) 既設堤防に接続して仮締切工を設定する場合で河積の減少が予想される場合においては、既設堤防の接続部の法面保護、接続部からの漏水、吸出し防止工を検討する。対策工については、別途契約書で定めがある場合はそれに従い、定めがない場合はエンジニアの指示に従うこと。 (5) 切ばりで支保する仮締切工では、洪水、波浪等により切ばり、腹起し等の取付部がゆるまないよう堅固な構造とすること。 (6) 浸水等の緊急時に備え、仮締切工からの避難のためにはしご、階段等の 2 つ以上の避難路を設置すること、及び救命浮器、救命胴衣、救命浮輪、ロープ等の救命用具の設置場所を計画すること。	Designing] of 7.2 [Earth Retaining Works], and pay attention to the following points when planning and designing cofferdams. (1) Consider the data of weather, sea conditions, earthquakes, etc. shown in Site Data. (2) Follow the other rules attached to the contract for design conditions such as river flow, water level, tide level, wave height, margin, seismic load, and assumed external force. (3) When excavating existing embankment to install cofferdam, design the top height of the cofferdam to withstand the maximum water volume expected during the construction period. (4) When a decrease of cross section area of river is expected in the process of cofferdam design that is planned to connect to the existing embankment, countermeasures for slope protection around the connecting area, water leakage from the connecting part, and suction prevention works have to be considered. Regarding countermeasures, if there is relevant provisions in the contract, follow that, otherwise follow the Engineer's instructions. (5) When designing cofferdam supported by cut beams, it should be considered with a solid structure so that the mounting parts such as cut beams and wailings will not loosen due to floods, waves, etc. (6) For preparing emergencies such as flooding, install two or more evacuation routes using ladders, stairs, etc. for evacuation from cofferdams. Also, plan where to install life-saving equipment such as lifebuoys, lifejackets, lifebuoys, and ropes.	and Design of Earth Retaining Works] and take into account to the following for the plan and design of the cofferdams. (1) To plan cofferdams taking into consideration the data of weather, maritime weather (meteorology?), earthquakes, etc. given in the Site Data. (2) To plan and design in accordance with the design conditions such as river discharge, river water level, tide level, wave height, freeboard, seismic load and other estimated external loads given in the Contract. (3) To plan the design level of the top of the cofferdam to withstand the maximum discharge expected during the construction period when the cofferdam is constructed by excavating in existing levee (flood bank). (4) In case decrease of river cross section area is expected by the construction of cofferdam connected with existing levee, measures for the levee shall be planned such as slope protection around the connecting parts of levee, and measures against water leakage/suction of soil through the connecting parts. The measures shall be planned in accordance with those given in the Contract, otherwise as instructed by the Engineer. (5) To design cofferdams supported by struts to be rigid structure so that jointed parts between struts, walings and others will not be loosened by floods, waves, etc. (6) To provide two or more evacuation ways in cofferdams by means of such as ladders, stairs, etc. to evacuate from cofferdams flooded. (7) To plan to provide places to install life-saving equipment such as buoyant apparatus, lifejackets, lifebuoy rings, and ropes.
7.3.3 モニタリング計画 請負者は、施工中の仮締切工の安全を確保し、周辺の地盤、既設構造物等への影響をすみやかに察知するために、変位や挙動の目視点検及び計器計測によるモニタリング計画を作成し、仮締切工を管理しなければならない。 モニタリング計画で計画すべきモニタリングの実施及びモニタリングにもとづく管理については、本仕様書「7.2 土留め工」の 7.2.3[モニタリング計画]に準拠して計画しなければならない。 モニタリング計画の点検項目及び計測項目は、7.2.3(1)及び(2)に規定の項目に準拠するとともに、仮締切工及び掘削底面の遮水に関する項目を含まなくてはならない。	**7.3.3 Monitoring Plan** The Contractor shall prepare a plan for visual inspection of displacement and dynamic state and instruments monitoring to secure the safety of cofferdam during its construction so as to immediately detect the influence on the surrounding ground and existing structures. Monitoring and management shall be planned in accordance with 7.2.3 [Monitoring Plan] of 7.2[Earth Retaining Works]. The inspection and measurement items in the monitoring plan shall conform to the items specified in 7.2.3 (1) and (2), and shall include items related to cofferdam and water shielding at the bottom of the excavation.	**7.3.3 Monitoring Plan** The Contractor shall make a monitoring plan in order to ensure the safety of the cofferdams during construction and promptly detect any influence to the adjacent buildings and ground by the construction of cofferdams. The monitoring and management shall be made with visual inspection and instrument measurement of displacement and behavior of the cofferdams, adjacent buildings and ground as stipulated in JSSS 7.2[Earth Retaining Works], 7.2.3 [Monitoring Plan]. The inspection and measurement items in the monitoring plan shall conform to the items specified in 7.2.3 (1) and (2), and shall include items related to cofferdams and seepage control work (water shielding) at the bottom of excavation.
7.3.4 仮締切工の施工時及び使用時の安全管理上の措置 請負者は、仮締切工の施工及び仮締切工の中での作業を安全に行うために、本仕様書 7.2.4[土留め工の施工時の安全管理上の措置]に準拠した安全管理の措置及び下記の措置を講じなければならない。 (1) 仮締切工の切ばり支保工の作業にあたっては、本仕様書 7.2.5[切りばり支保工の作業での安全上の措置]に準拠した安全上の措置を講じること。 (2) 異常事態時の連絡方法、避難方法、避難路、避難場所等の注事事項を、仮締切工の入口、仮締切工の中の作業場所等の請負者の要員が容易に認知できる見やすい場所に掲示すること。 (3) 一般の船舶等が航行する場所では、契約書の別の定めに従い、一般船	**7.3.4 Safety Management Measures during Construction and Operation of Cofferdam** The Contractor shall conduct safety management in accordance with 7.2.4 [Safety Management Measures for Earth Retaining Works] in order to secure the safe work condition for cofferdam construction or works in it. And the following measures shall be taken. (1) When carrying out the beam support work of cofferdam, safety measures shall be taken in accordance with 7.2.5 [Safety Measures of Shore Strut Support works]. (2) Post notices such as communication way, evacuation method, route and area in case of abnormal situation at easy-to-see places by the contractor's personnel such as the entrance of cofferdam and at the work space in it. (3) In places where ordinary ships navigate, take measures to prevent	**7.3.4 Safety Management of Cofferdams** The Contractor shall take the safety management measures for the cofferdams as stipulated in JSSS 7.2.4[Safety Management of Earth Retaining Works] in order to secure the safety at the time of construction and operation of cofferdams and construction works of Permanent Works in the cofferdams. The following measures shall be included in the safety management measures. (1) Safety measures in accordance with 7.2.5 [Safety Measures of Waling and Strut Support Works] for the waling and strut support work of cofferdam, (2) Post of notices such as emergency communication route, evacuation method, route and area in case of emergency at places where the Contractor's Personnel can easily see such as the entrance of cofferdams and the work places in cofferdams.

JSSS in Japanese （Provisional Final Draft R1 11/12）	JSSS in English R0（11/13）	JSSS in English R1（11/17）
船等との衝突や接触を防止するための措置を講じること。また、夜間や濃霧時の船舶等の仮締切工への衝突を防止するために、警告灯等を配置するなどの措置を講じること。 (4) 仮締切工からの異常な漏水又は仮締切工の内側の地盤からの異常な湧水がある場合は、作業員を避難させ、安全を確認したうえで、補強等の安全対策を講じた後でなければ、仮締切工内の作業を行わないこと。	collisions and accidental contact with ordinary ships, etc., in accordance with other provisions in the contract. In addition, measures such as placing warning lights shall be taken to prevent collisions with cofferdams by ships at night or during heavy fog. (4) When there is abnormal water leakage from cofferdam or spring water from the ground inside the cofferdam, evacuate the workers, and work shall not be resumed without taking safety measures such as reinforcement to ensure safety.	(3) Measures to prevent collisions with third parties' ships in places where third parties' ships navigate in accordance with stipulation in the Contract. (4) Measures such as placing warning lights to prevent collisions with cofferdams by ships at night or during heavy fog. (5) Evacuation of the workers working in the cofferdams when there is abnormal water leakage through cofferdams or spring water from the ground in the cofferdams. (6) Safety measures to resume works in cofferdams such as reinforcement of cofferdams to ensure safety of cofferdams and workers after above (5). The work in cofferdams shall not be resumed without taking the said safety measures.
7.3.5 悪天候及び地震時の点検 請負者は、悪天候及び地震時には、本仕様書 7.2.7[悪天候及び地震時の点検]に準拠した安全上の措置を講じなければならない。	**7.3.5 Inspection at Adverse Weather and Earthquake** The Contractor shall take safety measures in accordance with this specification 7.2.7 [Inspection at Adverse Weather and Earthquake] in adverse weather and earthquake.	**7.3.5 Inspection at Adverse Weather and Earthquake** The Contractor shall take safety measures in accordance with JSSS 7.2.7 [Inspection at Adverse Weather and Earthquake] at the time of adverse weather or earthquake. To MD, The JSSS Chapter 7 in Japanese is prepared to refer to Section 2.7 in Japanese. As Chapter 2 in English is prepared differently from JSSS in Japanese, Please modify Chapter 7 in accordance with the JSSS in English.
7.3.6 急激な水位上昇時の安全措置 請負者は、洪水、高潮、津波等による急激な水位上昇による仮締切工の破壊、仮締切工からの漏水や越流水による仮締切工内の浸水等の危険に備え、次の措置を講じなければならない。 (1) 緊急事態対応計画の作成と訓練 本仕様書 1.10[緊急事態対応計画及び緊急通報体制]の策定に当たっては、急激な水位上昇を対象にした緊急事態対応計画を作成すること。また、本仕様書 1.10 (3)に規定する訓練を行うこと。 (2) 情報の収集と対応 (a) 本仕様書 2.7.2[悪天候及び地震に備えた準備と点検]にもとづき、日ごろから急激な水位上昇等の緊急時に備えた準備と点検を行うこと。緊急時の準備には、情報の伝達手段・退避場所・避難ルートについて予め定め、請負者の要員に周知することを含めること。 (b) 本仕様書 2.7.3[気象及び地震情報の収集と対応]に準じて、気象、洪水、海象、津波、仮締切工箇所及び周辺の水位等の情報の収集と対応を行うこと。情報の収集に当たっては、発注者からの協力を得て普段から情報をもつ関係者から直接情報を得られるようにすること。 (3) 作業の中止 請負者は、急激な水位上昇のおそれがある場合には、次の措置を講じること。 (a) 急激な水位上昇が予想される場合は、緊急事態対応計画に従い、作業中止、安全な場所への退避、緊急通報体制の確認を含めた対応の準備を行うこと。	**7.3.6 Safety Measures for Sudden Water Level Rise** The Contractor shall take the following measures in preparation for the dangers of cofferdam due to sudden rise in water level by flood, storm surge, tsunami, etc., leakage from the cofferdam, and inundation in the cofferdam by overflow of water. (1) Preparation and training of emergency response plan When drawing up this JSSS 1.10 [Emergency Response Plan and Emergency Reporting System], an emergency response plan for sudden water level rise shall be worked out. In addition, training specified in 1.10 (3) shall be carried out. (2) Information collection and response (a) In accordance with 2.7.2 [Preparations and Inspections for Adverse Weather and Earthquakes], preparations and inspections for emergencies such as sudden rises in water levels shall be carried out on a daily basis. Preparation for emergencies shall include information transmission means, evacuation sites, and evacuation routes, and all these information shall be notified to the contractor's personnel. (b) In accordance with 2.7.3 [Collecting and Responding to Meteorological and Earthquake Information], collect information on weather, floods, sea conditions, tsunamis, surrounding condition of cofferdams, and surrounding water levels etc. and respond to it as needed. When collecting information, obtain cooperation from the Employer so that information can be obtained from relevant parties. (3) Suspension of works The Contractor shall take the following measures when there is a risk of a sudden rise in water level. (a) If a sudden rise in water level is anticipated, prepare for response according to the emergency response plan, including determination of	**7.3.6 Safety Measures for Sudden Water Level Rise** The Contractor shall take the following measures to prepare for the danger to workers in the cofferdams due to sudden rise in water level by flood, storm surge (high tide), tsunami, etc., leakage from the cofferdams and inundation in the cofferdams by overflow over cofferdams. (1) Preparation and training of emergency response plan When preparing JSSS 1.10 [Emergency Response Plan and Emergency Reporting System], an emergency response plan for sudden water level rise shall be prepared. In addition, training specified in 1.10 (3) shall be carried out. (2) Information collection and response (a) In accordance with 2.7.2 [Preparations and Inspections for Adverse Weather and Earthquakes], preparation and inspection for sudden rises in water levels shall be carried out regularly (*on a daily basis, on a day-to-day basis* ?). The preparation for emergency shall include decision of information transmission means, evacuation routes and evacuation places, and notice of all information related with the emergency to the Contractor's personnel. (b) In accordance with 2.7.3 [Collecting and Responding to Meteorological and Earthquake Information], collection of information about weather, floods, marine weather, tsunamis, water levels around or at cofferdams, and actions for the collected information. When collecting information, the Contractor may obtain cooperation from the Employer so that information can be obtained from relevant parties. (3) Suspension of works The Contractor shall take the following measures when there is risk of sudden rise in water level.

JSSS in Japanese（Provisional Final Draft R1 11/12）	JSSS in English R0（11/13）	JSSS in English R1（11/17）
(b) 仮締切工の設計洪水水位に近づいたとき、危険のおそれのある急激な水位の上昇と判断する時、又は水位の上昇による仮締切工の異常が発見されたときは、ただちに作業を中止し、作業員を安全な場所へ退避させること。 (c) 作業を再開する前には、仮締切工の異常の有無を、エンジニアとともに確認すること。異常が認められたときは直ちに補修すること。	works suspension, instructions for evacuation to safe areas, and confirmation of the emergency information transmission system. (b) When the water level approaches the design flood level of a cofferdam, when a sudden rise in water level that may cause danger is observed, or when an abnormality in the cofferdam due to the rising water level is identified, suspend works immediately and evacuate workers to a safe place. (c) Before resuming works, check with the Engineer for abnormalities in the cofferdams. If any abnormalities are identified, repair them immediately.	(a) To prepare for actions according to the emergency response plan when sudden rise in water level is anticipated. The preparation shall include determination of works suspension, instructions to workers to evacuate to safe areas, and confirmation of the emergency information transmission system. (b) To suspend works immediately and evacuate workers to a safe place, when the water level is reaching to the design flood level of cofferdams, when sudden rise in water level is judged to cause danger to cofferdams and workers, or when an abnormality in the cofferdam due to the rising water level is identified. (c) To check with the Engineer for abnormalities in the cofferdams before resuming works. If any abnormalities of cofferdams are identified, repair them immediately.

Specification in Japanese （Provisional Final Version R0）	English Translation（Provisional Final Version 4）-1	English Translation（Provisional Final Version 4）-2 By SS
7.4 通路 **7.4.1 一般** (1) この節では、作業場に通ずる場所及び作業場内に設置する作業者が移動のために使用する通路、架設通路、移動はしご、脚立、非常口、避難通路について規定する。 (2) 請負者は、作業場に通ずる場所及び作業場内に、通路を設ける場合は、本仕様書 1.3.4「安全衛生詳細計画書」(1)の安全衛生詳細計画書に記載すべき事項に、次の事項を追加して、安全衛生詳細計画書を作成しなければならない。 (a) 通路の設置場所、設置期間 (b) 架設通路の構造・材質及び主要寸法（高さ及び長さがそれぞれ 10m 以上のものに限る） (c) 通路と建設機械の作業場所との分離 (d) 通路と車両の運行経路の分離	**7.4 Temporary Passage** **7.4.1 General** (1) In this section, it defines the place that accesses to the work place and the passages used by the workers installed in the work place, the construction passage, the movable ladder, the stepladder, the emergency exit, and the evacuation passage. (2) When the Contractor installs a passage in the place that accesses to the workplace and in the workplace, the Contractor shall comply with the items to be described in the detailed health and safety plan of this specification 1.3.4 “Detailed health and safety plan” (1). The following items should be added to create a detailed health and safety plan. (a) Location and period for setting up the passage (b) Structure, material, and main dimensions of the temporary passage (limited to a height and length of 10m or more each) (c) Separation of temporary passage and working place of construction machines (d) Separation of temporary passage and route of the vehicles	**7.4 Temporary Walkway** **7.4.1 General** (1) This Section specifies safety measures for workers to access to, move around and evacuate from the workplaces such as walkways, bridge type walkways, movable ladders, stepladders, emergency exit and evacuation passage. (2) The Contractor shall prepare the Safety Plan including the following items in addition to the items specified in JSSS 1.3.4 (1): (a) Location and available period of walkways provided, (b) Plans and sections, structure type, materials and main dimensions of bridge type walkways (which height and length are10m or more) (c) Separation of walkways from places where construction machines are moving, and (d) Separation of walkways from places where vehicles are running.
7.4.2 通路の設定 請負者は、通路の設置について、次に示す措置を講じなければならない。 (1) 作業場に通ずる場所及び作業場内には、作業者が使用するための次の措置を講じた安全な通路を設け、かつ、これを常時有効に保持すること。 (2) 前項(1)の通路で主要なものには、これを保持するため、通路であることを示す表示を行うこと。 (3) 通路には、正常の通行を妨げない程度に、採光又は照明の方法を講じること。ただし、常時通行の用に供しない地下室等で通行する作業者に、適当な照明具を所持させるときは、この限りでない。 (4) 通路は、用途に応じた幅とすること。 (5) 通路には、通行する者の視界を妨げる障害物を置いてはならない。 (6) 通路面は、つまずき、すべり、踏抜等の危険のない状態に保持すること。	**7.4.2 Setting Up Temporary Passage** The Contractor shall take all necessary measures to set up temporary passage including for example: (1) Providing safe passage in the place that accesses to the workplace and in the workplace with the following measures for workers to use and maintain it at all times. (2) Marking to indicate that it is a passage to maintain on the main passage stipulated in the paragraph (1). (3) Taking measures for lighting or lighting in the passage to the extent that normal passing is not hindered. Provided, however, that this shall not apply when workers passing in a basement or the like that are not used for regular passing possess appropriate lighting equipment. (4) Ensuring the width on the passage according to its purposes. (5) Leaving no obstacles on the passage that might obstacle the visibility of the workers to pass through. (6) Keeping the surface of the passage in a state where there is no danger such as tripping, slipping or stepping over.	**7.4.1 General** The Contractor shall take the following measures regarding temporary walkways: (1) To provide places leading to workplaces and ins the workplaces with safe walkways for workers, and maintain the said walkways effectively at all times, (2) To make the main ones of the walkways have signs indicating they are walkways in order to maintain their effectiveness, (3) To provide walkways with measures of lighting or illumination to the extent that they may not stand in the way of normal passage. However, this shall not apply to basements and others normally not used for passage, when passing workers are provided with an appropriate illumination tool, (4) To make walkways with sufficient widths corresponding to the purpose of use, (5) Not to place obstacles on walkways, and (6) To maintain the surface of the walkways in a condition that causes no stumbling, slips, treading on a prick, etc. (7) To provide temporary bridge type walkways with the followings: (a) To be of sound structure

(7) 架設通路は次に定めるものとすること。
(a) 丈夫な構造とすること。
(b) 勾配は 30° 以下とすること。ただし、階段を設けたもの又は高さが 2m 未満で丈夫な手すりを設けたものはこの限りでない。
(c) 勾配が 15° を超えるものには、踏桟その他のすべり止めを設けること。
(d) 墜落の危険のある箇所には、本仕様書 2.5.2［通路からの墜落防止措置］の(2)［架設通路］に規定した措置を講じること。
(8) 請負者は、高さ又は深さが 50cm を超える段差がある場所に通路を設ける場合には、作業員が安全に通行するための階段又ははしごを設置すること。
(9) 請負者は、高さ又は深さが 1.5m を超える箇所で作業を行うときは、作業員が安全に昇降するための設備を設けること。ただし、安全に昇降するための設備が設けられない場合は、施工法の変更等により、対応措置を講じること。

(7) The temporary passage shall be set up in the following manner.
(a) To be of sound structure
(b) To be at maximum 30° gradient. However, this does not apply to those provided with stairs or those provided with a handrail to be a sound structure at a height of less than 2m.
(c) Installing tread piers and other slip-proof measures where gradient of the passage is over 15° .
(d) Taking necessary measures for the places where there is a risk of falling specified in (2)[Temporary Passage] in 2.5.2[Falling Prevention Measures from Temporary Passage].
(8) The Contractor shall install a stair or ladder for workers to use in a safe manner when a passage is set up in the place where the height or depth exceeds 50cm.
(9) When the Contractor carries out work at a location where the height or depth exceeds 1.5m, the Contractor shall provide facilities for ascending and descending safely. However, if they are not provided, take measures by examining changes in construction methods.

(b) To make the gradient 30 degrees or less. However, this shall not apply to those equipped with stairs, or those of height of less than 2 m and equipped with sound handrails.
(c) For those having the slope exceeding 15 degrees, to provide step pieces or other slide-proof measures,
(d) To provide necessary measures in accordance with in 2.5.2[Falling Prevention Measures from Temporary Passage] (2)[Temporary Passage] at places where there is a risk of falling of workers.
(8) To provides stair or ladder for workers to safely move at places which height or depth difference exceeds 50cm.
(9) When carrying out a work at a place having a height or a depth exceeding 1.5 m, to provide facilities that enable the worker engaging in the work to go up and down safely. In case that such facilities to ascend or descend safely cannot be provided, to take other measures by the alternative construction method.

7.4.3 移動はしご、脚立

(1) 移動はしご
請負者は、作業員が移動はしごを使用して移動する必要のある場合は、次の措置を講じなければならない。
(a) 次に定めるところに適合した移動はしごを使用させること。
(i) 丈夫な構造とすること。
(ii) 材料は、著しい損傷、腐食等がないものであること。
(iii) 幅は、30cm 以上であること。
(iv) 踏み桟は、25 cm から 35cm の間隔で、且つ、等間隔であること。
(b) すべり止め装置の取付け及び転位を防止するために次のいずれかの措置等を講じること。
(i) はしごの上方を建築物に取付ける。
(i) 他の作業員がはしごの下方を支える。
(c) はしごの使用時には次の措置等を講じること。
(i) 据え付け角度は L（水平長）: H（高さ）は 1:4（75.5 度）とする。
(ii) はしごの上部の床からの突き出しは 100cm 以上とする。
(d) 移動はしごを継ないで使用することを禁止する。

(2) 脚立
請負者は、脚立を使って作業員に移動させるときは、次に定めるところに適合した脚立を使用させなければならない。

7.4.3 Movable Ladder and Stepladder

(1) Movable Ladder
The Contractor shall take the following measures if workers use movable ladders.
(a) Enforcing workers to use movable ladders specified in the following:
(i) To be of sound structure.
(ii) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition.
(iii) To be at least 30cm wide.
(iv) To have slip-proof steps with the interval of 25cm to 35cm and evenly spaced.
(b) Taking any of the following measures to install anti-slip device and prevent dislocation of the ladder:
(i) Fixing the top of the ladder to the building.
(ii) Having another worker support the lower part of the ladder.
(c) Taking the following measures when using a movable ladder:
(i) Installation angle should be L (horizontal length): H (height) = 1: 4 (75.5 degrees).
(ii) Ensuring the protrusion of the ladder above the floor should be at least 100cm.
(d) Prohibiting use of more than one movable ladder by connecting them:

(2) Stepladder

7.4.3 Movable Ladders and Stepladders

(1) Movable Ladders
The Contractor shall take the following measures when workers use movable ladders for their moving.
(a) Movable ladders shall meet the following requirements:
(i) To be of sound structure.
(ii) To be made of materials without damage, corrosion, etc.
(iii) To have the width of 30 cm or wider.
(iv) To have steps with the interval of 25cm to 35cm and evenly spaced.
(b) To take any of the following measures to prevent dislocation of ladder
(i) To fix the top of the ladder to the building.
(ii) To have another worker support the lower part of the ladder.
(c) To take the following measures when using movable ladder:
(i) To have the angle made by the foot and the floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees).
(ii) To have the top of ladder be at least 100cm over the landing floor
(d) To prohibit to use of more than one movable ladder by connecting them:
(2) Stepladders
The Contractor shall take the following measures when workers use stepladders for their moving.
(a) To be of sound structure.
(b) To be made of materials without damage, corrosion, etc.

(a) 丈夫な構造とすること。 (b) 材料は、著しい損傷、腐食等がないものであること。 (c) 脚と水平面との角度を 75° 以下とし、かつ、折りたたみ式のものにあっては、脚と水平面との角度を確実に保つための金具等を備えるものであること。	The Contractor shall have workers use stepladders in accordance with the following when workers use them to move. (a) To be of sound structure. (b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition. (c) The angle between the front rail and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor.	(c) To have the angle made by the foot and the floor of 75 degrees or less, and for folding stepladders, to be equipped with fittings, etc., to keep the angle made by the foot and the floor secure.
7.4.4 非常口、避難通路 請負者は、常時使用しない避難用の出入口、通路及び避難用器具については、避難用である旨の表示をし、かつ、容易に利用できるように保持しておかなければならない。	**7.4.4 Emergency Exit and Evacuation Passage** The Contractor shall indicate that the doorway, passage, and evacuation equipment for evacuation that is not used at all times are for evacuation use and shall maintain them to be used easily as necessary.	**7.4.4 Emergency Exit and Evacuation Passage** The Contractor shall provide indications to emergency exits, emergency walkways or evacuation tools that are not used regularly showing that such exits, etc., are for emergency use, and maintain such exits, etc., in a readily available condition.
7.4.5 点検 請負者は、作業場に通ずる場所及び作業場内に設定した通路及び仮設通路が安全な状態に維持されているか否か、また資材の劣化等により通路としての機能に不具合が生じていないか、定期的に点検しなければならない。	**7.4.5 Inspection** The Contractor shall regularly check whether the place that accesses to the workplace, the passage set in the workplace and the temporary passage are maintained in a safe state, and that the function as the passage is not defective due to deterioration of materials.	**7.4.5 Inspection** The Contractor shall regularly check whether accesses to workplaces, walkways provided on workplaces and bridge type walkways are maintained to be safe and functioned and their materials are not deteriorated.
Ladder To take the following measures when using movable ladder: (i) To have the angle made by the foot and the floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees). (ii) To have the top of ladder be at least 100cm over the landing floor  	Reference Bridge type walkway  図39-2 架設通路の固定方法	

2019.9.10 Japanese Final Draft
2019.10.4 10.21 NK drafted
2019.11.25 NK R1(Same as R0)

Specification in Japanese （Provisional Final Version R0）(9/10)	English Translation（Provisional Final Version 4）-1(10/4)	English Translation（Provisional Final Version 4）-2 (10/21 11/25) By SS
7.4 通路 **7.4.1 一般** (1) この節では、作業場に通ずる場所及び作業場内に設置する作業者が移動のために使用する通路、架設通路、移動はしご、脚立、非常口、避難通路について規定する。 (2) 請負者は、作業場に通ずる場所及び作業場内に、通路を設ける場合は、本仕様書 1.3.4「安全衛生詳細計画書」(1)の安全衛生詳細計画書に記載すべき事項に、次の事項を追加して、安全衛生詳細計画書を作成しなければならない。 (a) 通路の設置場所、設置期間 (b) 架設通路の構造・材質及び主要寸法（高さ及び長さがそれぞれ 10m 以上のものに限る） (c) 通路と建設機械の作業場所との分離 (d) 通路と車両の運行経路の分離	**7.4 Temporary Passage** **7.4.1 General** (1) In this section, it defines the place that accesses to the work place and the passages used by the workers installed in the work place, the construction passage, the movable ladder, the stepladder, the emergency exit, and the evacuation passage. (2) When the Contractor installs a passage in the place that accesses to the workplace and in the workplace, the Contractor shall comply with the items to be described in the detailed health and safety plan of this specification 1.3.4 “Detailed health and safety plan” (1). The following items should be added to create a detailed health and safety plan. (a) Location and period for setting up the passage (b) Structure, material, and main dimensions of the temporary passage (limited to a height and length of 10m or more each) (c) Separation of temporary passage and working place of construction machines (d) Separation of temporary passage and route of the vehicles	**7.4 Temporary Walkway** **7.4.1 General** (1) This Section specifies safety measures for workers to access to, move around and evacuate from the workplaces such as walkways, bridge type walkways, movable ladders, stepladders, emergency exit and evacuation passage. (2) The Contractor shall prepare the Safety Plan including the following items in addition to the items specified in JSSS 1.3.4 (1): (a) Location and available period of walkways provided, (b) Plans and sections, structure type, materials and main dimensions of bridge type walkways (which height and length are10m or more) (c) Separation of walkways from places where construction machines are moving, and (d) Separation of walkways from places where vehicles are running.
7.4.2 通路の設定 請負者は、通路の設置について、次に示す措置を講じなければならない。 (1) 作業場に通ずる場所及び作業場内には、作業者が使用するための次の措置を講じた安全な通路を設け、かつ、これを常時有効に保持すること。 (2) 前項(1)の通路で主要なものには、これを保持するため、通路であることを示す表示を行うこと。 (3) 通路には、正常の通行を妨げない程度に、採光又は照明の方法を講じること。ただし、常時通行の用に供しない地下室等で通行する作業者に、適当な照明具を所持させるときは、この限りでない。 (4) 通路は、用途に応じた幅とすること。 (5) 通路には、通行する者の視界を妨げる障害物を置いてはならない。	**7.4.2 Setting Up Temporary Passage** The Contractor shall take all necessary measures to set up temporary passage including for example: (1) Providing safe passage in the place that accesses to the workplace and in the workplace with the following measures for workers to use and maintain it at all times. (2) Marking to indicate that it is a passage to maintain on the main passage stipulated in the paragraph (1). (3) Taking measures for lighting or lighting in the passage to the extent that normal passing is not hindered. Provided, however, that this shall not apply when workers passing in a basement or the like that are not used for regular passing possess appropriate lighting equipment. (4) Ensuring the width on the passage according to its purposes. (5) Leaving no obstacles on the passage that might obstacle the visibility of the workers to pass through.	**7.4.1 General** The Contractor shall take the following measures regarding temporary walkways: (1) To provide places leading to workplaces and ins the workplaces with safe walkways for workers, and maintain the said walkways effectively at all times, (2) To make the main ones of the walkways have signs indicating they are walkways in order to maintain their effectiveness, (3) To provide walkways with measures of lighting or illumination to the extent that they may not stand in the way of normal passage. However, this shall not apply to basements and others normally not used for passage, when passing workers are provided with an appropriate illumination tool, (4) To make walkways with sufficient widths corresponding to the purpose of use, (5) Not to place obstacles on walkways, and (6) To maintain the surface of the walkways in a condition that causes no stumbling, slips, treading on a prick, etc. (7) To provide temporary bridge type walkways with the followings:

(6) 通路面は、つまずき、すべり、踏抜等の危険のない状態に保持すること。

(7) 架設通路は次に定めるものとすること。

(a) 丈夫な構造とすること。

(b) 勾配は 30° 以下とすること。ただし、階段を設けたもの又は高さが 2m 未満で丈夫な手すりを設けたものはこの限りでない。

(c) 勾配が 15° を超えるものには、踏桟その他のすべり止めを設けること。

(d) 墜落の危険のある箇所には、本仕様書 2.5.2［通路からの墜落防止措置］の(2)［架設通路］に規定した措置を講じること。

(8) 請負者は、高さ又は深さが 50cm を超える段差がある場所に通路を設ける場合には、作業員が安全に通行するための階段又ははしごを設置すること。

(9) 請負者は、高さ又は深さが 1.5m を超える箇所で作業を行うときは、作業員が安全に昇降するための設備を設けること。ただし、安全に昇降するための設備が設けられない場合は、施工法の変更等により、対応措置を講じること。

(6) Keeping the surface of the passage in a state where there is no danger such as tripping, slipping or stepping over.

(7) The temporary passage shall be set up in the following manner.

(a) To be of sound structure

(b) To be at maximum 30° gradient. However, this does not apply to those provided with stairs or those provided with a handrail to be a sound structure at a height of less than 2m.

(c) Installing tread piers and other slip-proof measures where gradient of the passage is over 15° .

(d) Taking necessary measures for the places where there is a risk of falling specified in (2)[Temporary Passage] in 2.5.2[Falling Prevention Measures from Temporary Passage].

(8) The Contractor shall install a stair or ladder for workers to use in a safe manner when a passage is set up in the place where the height or depth exceeds 50cm.

(9) When the Contractor carries out work at a location where the height or depth exceeds 1.5m, the Contractor shall provide facilities for ascending and descending safely. However, if they are not provided, take measures by examining changes in construction methods.

(a) To be of sound structure

(b) To make the gradient 30 degrees or less. However, this shall not apply to those equipped with stairs, or those of height of less than 2 m and equipped with sound handrails.

(c) For those having the slope exceeding 15 degrees, to provide step pieces or other slide-proof measures,

(d) To provide necessary measures in accordance with in 2.5.2[Falling Prevention Measures from Temporary Passage] (2)[Temporary Passage] at places where there is a risk of falling of workers.

(8) To provides stair or ladder for workers to safely move at places which height or depth difference exceeds 50cm.

(9) When carrying out a work at a place having a height or a depth exceeding 1.5 m, to provide facilities that enable the worker engaging in the work to go up and down safely. In case that such facilities to ascend or descend safely cannot be provided, to take other measures by the alternative construction method.

7.4.3 移動はしご、脚立

(1) 移動はしご

請負者は、作業員が移動はしごを使用して移動する必要のある場合は、次の措置を講じなければならない。

(a) 次に定めるところに適合した移動はしごを使用させること。

(i) 丈夫な構造とすること。

(ii) 材料は、著しい損傷、腐食等がないものであること。

(iii) 幅は、30cm 以上であること。

(iv) 踏み桟は、25 cm から 35cm の間隔で、且つ、等間隔であること。

(b) すべり止め装置の取付け及び転位を防止するために次のいずれかの措置等を講じること。

(i) はしごの上方を建築物に取付ける。

(i) 他の作業員がはしごの下方を支える。

(c) はしごの使用時には次の措置等を講じること。

(i) 据え付け角度は L（水平長）: H（高さ）は 1 : 4（75.5 度）とする。

(ii) はしごの上部の床からの突き出しは 100cm 以上とする。

(d) 移動はしごを継ないで使用することを禁止する。

(2) 脚立

7.4.3 Movable Ladder and Stepladder

(1) Movable Ladder

The Contractor shall take the following measures if workers use movable ladders.

(a) Enforcing workers to use movable ladders specified in the following:

(i) To be of sound structure.

(ii) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition.

(iii) To be at least 30cm wide.

(iv) To have slip-proof steps with the interval of 25cm to 35cm and evenly spaced.

(b) Taking any of the following measures to install anti-slip device and prevent dislocation of the ladder:

(i) Fixing the top of the ladder to the building.

(ii) Having another worker support the lower part of the ladder.

(c) Taking the following measures when using a movable ladder:

(i) Installation angle should be L (horizontal length): H (height) = 1: 4 (75.5 degrees).

(ii) Ensuring the protrusion of the ladder above the floor should be at least 100cm.

(d) Prohibiting use of more than one movable ladder by connecting them:

7.4.3 Movable Ladders and Stepladders

(1) Movable Ladders

The Contractor shall take the following measures when workers use movable ladders for their moving.

(a) Movable ladders shall meet the following requirements:

(i) To be of sound structure.

(ii) To be made of materials without damage, corrosion, etc.

(iii) To have the width of 30 cm or wider.

(iv) To have steps with the interval of 25cm to 35cm and evenly spaced.

(b) To take any of the following measures to prevent dislocation of ladder

(i) To fix the top of the ladder to the building.

(ii) To have another worker support the lower part of the ladder.

(c) To take the following measures when using movable ladder:

(i) To have the angle made by the foot and the floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees).

(ii) To have the top of ladder be at least 100cm over the landing floor

(d) To prohibit to use of more than one movable ladder by connecting them:

(2) Stepladders

The Contractor shall take the following measures when workers use stepladders for their moving.

(a) To be of sound structure.

請負者は、脚立を使って作業員に移動させるときは、次に定めるところに適合した脚立を使用させなければならない。 (a) 丈夫な構造とすること。 (b) 材料は、著しい損傷、腐食等がないものであること。 (c) 脚と水平面との角度を 75° 以下とし、かつ、折りたたみ式のものにあっては、脚と水平面との角度を確実に保つための金具等を備えるものであること。	(2) Stepladder The Contractor shall have workers use stepladders in accordance with the following when workers use them to move. (a) To be of sound structure. (b) Without visible signs of defect, damage, corrosion, and shall otherwise in safe condition. (c) The angle between the front rail and the floor shall not exceed 75 degrees and for folding stepladders they shall be equipped with a lock (such as a spreader with lock) to secure the angle made by the front rail and the floor.	(b) To be made of materials without damage, corrosion, etc. (c) To have the angle made by the foot and the floor of 75 degrees or less, and for folding stepladders, to be equipped with fittings, etc., to keep the angle made by the foot and the floor secure.
7.4.4 非常口、避難通路 請負者は、常時使用しない避難用の出入口、通路及び避難用器具については、避難用である旨の表示をし、かつ、容易に利用できるように保持しておかなければならない。	**7.4.4 Emergency Exit and Evacuation Passage** The Contractor shall indicate that the doorway, passage, and evacuation equipment for evacuation that is not used at all times are for evacuation use and shall maintain them to be used easily as necessary.	**7.4.4 Emergency Exit and Evacuation Passage** The Contractor shall provide indications to emergency exits, emergency walkways or evacuation tools that are not used regularly showing that such exits, etc., are for emergency use, and maintain such exits, etc., in a readily available condition.
7.4.5 点検 請負者は、作業場に通ずる場所及び作業場内に設定した通路及び仮設通路が安全な状態に維持されているか否か、また資材の劣化等により通路としての機能に不具合が生じていないか、定期的に点検しなければならない。	**7.4.5 Inspection** The Contractor shall regularly check whether the place that accesses to the workplace, the passage set in the workplace and the temporary passage are maintained in a safe state, and that the function as the passage is not defective due to deterioration of materials.	**7.4.5 Inspection** The Contractor shall regularly check whether accesses to workplaces, walkways provided on workplaces and bridge type walkways are maintained to be safe and functioned and their materials are not deteriorated.
Ladder To take the following measures when using movable ladder: (i) To have the angle made by the foot and the floor of L (horizontal length): H (height) = 1: 4 (75.5 degrees). (ii) To have the top of ladder be at least 100cm over the landing floor  	Reference Bridge type walkway  図39-2 架設通路の固定方法	

Specification in Japanese （Provisional Final 10/23）	English Translation（Draft R0 11/5）	
7.5 足場 **7.5.1 一般事項** (1) 足場とは作業のために設ける作業床及びそれを支持するものからなる仮設物のうち、作業構台を除くものをいう。 (2) 本節では鋼管足場、つり足場、移動式足場について、以下に規定する。 (3) 請負者は、足場からの墜落防止に対しては、本仕様書 2.5［墜落防止］、足場・作業床での作業に際して物体の飛来又は落下により工事関係者に危険を及ぼすおそれのある場合は、2.6［飛来落下の防止措置］に拠る規定に、各々従わねばならない。 (4) 請負者は、足場の安全事項についての当該国の法律及び本仕様書のいずれにも規定が無い事項は、次に示すいずれかの基準における規定を遵守しなければならない。 (a) 米国 OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds 及び ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design (b) 英国 BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design (5) 足場の計画、設計は、その上で行う作業に従事する作業員、作業員が使用する道具等の重量を勘案した上載荷重を考慮し、本章 7.1.3[仮設構造物の設計及び設計照査]に基づき計画、設計すること。	**7.5 Scaffolding** **7.5.1 General** (1) “Scaffold” means a temporary structure consisting of a working floor provided for work and a support for it, excluding the work platform. (2) In this section, steel pipe scaffolds, suspension scaffolds and mobile scaffolds are defined as follows. (3) The Controator shall comply with the provisions in accordance with 2.5[Fall Prevention] for prevention of fall accidents, and 2.6[Prevention Measurs for Flying or Falling Objects] for the case a worker may be in danger due to flying or falling objects when working on a scaffold or a working floor. (4) The Contractor shall comply with the provisions in any of the following standards for matters that are not stipulated in either the target country's laws or safety specifications for the scaffolding. (a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds and ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA. (b) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK. (5) The planning and design of the scaffolding shall be carried out in accordance with 7.1.3 [Design and Verification of Temporary Structures] with taken into account the loading weight of the workers engaged in the work and tools used by the workers etc.	
7.5.2 鋼管足場 請負者は、次を遵守して計画、設計を行わなければならない。 (1) 鋼管で構成される足場（以下、「鋼管足場」という。）については、次に示す措置を講じること。 (a) 足場（脚輪を取り付けた移動式足場を除く。）の脚部には、足場の滑動又は沈下を防止するため、ベース金具を用い、かつ、敷板、敷角等を用い、根がらみを設けること。 (b) 鋼管の接続部又は交差部は、これに適合した金具を用いて、確実に接続し、又は緊結させること。 (c) 筋かいで補強すること。 (d) 鋼管足場の種類に応じ、風荷重等も考慮したうえで、足場の安定性を維持するために必要な壁つなぎ又は控えを設けること。	**7.5.2 Steel Pipe Scaffolding** The Contractor shall plan and design in accordance with the following. (1) For scaffolds composed of steel pipes, hereinafter refered to as steel pipe scaffolds, the following measures shall be taken: (a) For the leg of scaffolding (excluding mobile scaffolds with casters), to take measures such as providing bridge batten of foot posts with base fittings, and plankings, square timbers, etc., in order to prevent the scaffolds from sliding or settling, (b) Joint or fasten the jointing portions or crossing portions of steel pipes securely with suitable fittings, (c) Reinforce the scaffolding with bracings, (d) Depending on the type of steel pipe scaffolding, consider the wind load,	

	etc., and provide ties to walls or stays necessary to maintain the stability of the scaffolding.	
7.5.3 つり足場 請負者は、つり足場（ゴンドラのつり足場を除く。以下本節において同じ。）については、次の措置を講じなければならない。 (1) 作業床の最大積載荷重は、つりワイヤロープ及びつり鋼線の安全係数が 10 以上、つり鎖及びつりフックの安全係数が 5 以上並びにつり鋼帯並びにつり足場の下部及び上部の支点の安全係数が鋼材にあっては 2.5 以上、木材にあっては 5 以上となるように定めること。 (2) 次のいずれかに該当する材料を使用しないこと。 (a) つりワイヤロープ (i) ワイヤロープ一よりの間において素線（フィラ線を除く。以下同じ。）の数の 10%以上の素線が切断しているもの (ii) 直径の減少が公称径の 7%を超えるもの (iii) キンクしたもの (iv) 著しい形崩れ又は腐食があるもの (b) つり鎖 (i) 伸びが、つり鎖が製造されたときの長さの 5%を超えるもの (ii) リンクの断面の直径の減少が、当該つり鎖が製造されたときの当該リンクの断面の直径の 10%を超えるもの (iii) 亀裂があるもの (c) つり鋼線及びつり鋼帯 著しい損傷、変形又は腐食のあるもの (3) つり足場の設置時の措置 (a) 作業床は、幅を 40cm 以上とし、かつ、隙間がないようにすること。 (b) 床材は、転位し、又は脱落しないように、足場桁等に取り付けること。 (c) 足場桁、作業床等に控えを設ける等動揺又は転位を防止すること。 (4) 作業上の禁止事項 つり足場の上で、脚立、はしご等を用いて作業員に作業させないこと。	**7.5.3 Hanging Scaffolds** The Contractor shall take the following measures for hanging scaffolds (excluding gondola suspension scaffolds; the same applies hereinafter). (1) The maximum loading capacity of the working floor shall be so determined as to ensure the safety coefficient of 10 or more for hanging wire ropes and hanging steel wires, the safety coefficient of 5 or more for hanging chains and hanging hooks, and the safety coefficient of hanging steel bands and of fulcrums at the bottom and top of the hanging scaffoldings of 2.5 for steels and 5 or more for timber. (2) Do not use any of the folloeing materials. (a) Hanging wire ropes (i) Those with 10% or more of element wires (excluding filler wires) of which are cut in one strand of wire ropes. (ii) Those with reduction ratio of a diameter exceeding 7% of the nominal diameter (iii) Those with kink (iv) Those with marked deformation or corrosion (b) Hanging chains (i) Those with the elongation exceeding 5% of the original length at the time of manufacture. (ii) Those with a reduction ratio of a diameter of links of the said hanging chains exceeding 10% of the original diameter of the said links at the time of manufacture. (iii) Those with cracks (c) Hanging steel wires and hanging steel belts Those with marked damage or corrosion (3) Measures when setting up the scaffolding (a) The working floor to be with width of 40 cm or more, and without clearance between floor boards. (b) Fasten the floor materials to the scaffolding girder etc., in order to prevent them from displacing or coming off. (c) Take measures in order to prevent movement or displacement such as providing of stays to the scaffolding girders, working floors, etc. (4) Prohibited work Do not allow workers to work on the scaffolding using stepladders, ladders, etc.	
7.5.4 移動式足場 請負者は、移動式足場については、次の措置を講じなければならない。	**7.5.4 Mobile Scaffolds** The Contractor shall take the following measures for mobile scaffolds:	

(1) 移動式足場の選定

(a) 対象とする作業に適した、高さ、幅、長さの移動式足場を用いること。

(a) 移動式足場は、英国基準 BS EN1004 Mobile access and working towers made of Prefabricated elements に適合するもの、又はエンジニアが同等以上と認めたものを使用すること。

(2) 組立てに際しての留意事項

(a) 購入した移動式足場の場合、製造業者が作成する筋交いの必要性や安全に組立てできる高さ等を含む組立て手順を説明するマニュアルに従い、組立てに関し十分な知識と経験を持つ者（competent person）に組立てを行わせること。

(b) 組立てに際しては、建わく等の接続部は、使用中容易に離脱しないように確実に結合すること。

(3) 移動式足場の移動に関して次を遵守すること。

(a) 移動させるときは、路面の凹凸障害物等による転倒を防止するためあらかじめ、路面の状態を確認すること。

(b) 移動は、すべての脚輪のブレーキを解除した後に行うこと。

(c) 作業員や物を移動式足場に乗せた状態で移動させないこと。

(d) 送電線や上空に障害物がないことを確認すること。

(e) 移動中の動線およびその付近に、移動作業に従事する作業員以外の者を立ち入らせないこと。

(4) 移動式足場の定置（作業箇所において使用できる状態にすることをいう。）に関して次を遵守すること

(a) 作業員が無理のない姿勢で作業を行うため、移動式足場は、作業箇所に近接したところに定置させること。

(b) 脚輪のブレーキは、移動中を除き、常に作動させておくこと。ブレーキを作動させるときは、その効き具合を確認すること。又は、歯止め等で脚輪を確実に固定することとし、足場の一部を堅固な建設物に固定させること。

(c) 凹凸又は傾斜が著しい場所では移動式足場を使用してはならない。

(d) アウトリガーを有する移動式足場を定着したときは、アウトリガーの取付け状態、接地状態等について異常のないことを確認すること。

(5) 用途外の使用禁止

次の移動式足場の用途外の使用を禁止すること。

(a) 材料の吊り上げや物体の投下用のシュートの支えとして使用すること。

(b) シート（布）で覆うこと（sheeting）や強風にさらす目的に使用すること。

(c) グリットブラスト（防食研磨）又はウォータージェット用に使用すること。

(d) 作業床を、移動はしご、脚立、架台（trestles）等の支持台（support）と

(1) Selection of mobile scaffolds

(a) Use mobile scaffolds of height, width, and length that are suitable for the intended work.

(b) Use mobile scaffolds that comply with BS EN1004 Mobile access and working towers made of Pre-fabricated elements or that the engineer has admitted as equivalent or better.

(2) Precautions for assembly

(a) In the case of purchased mobile scaffolds, have a person who has sufficient knowledge and experience in assembly: competent person assemble according to the manual explaining the assembly procedure including the necessity of bracing created by the manufacturer and the height that can be safely assembled, etc.

(b) When assembling, connecting points on the building flame should be securely connected so that they are not easily detached during use.

(3) Observe the following points regarding movement of mobile scaffolds:

(a) Check the condition of the road surface in advance to prevent it from overturning due to irregularities or obstacles,

(b) Move after releasing the brakes on all the casters,

(c) Don’t move it in the situation workers or objects are on mobile scaffolds,

(d) Make sure that there are no obstacles in the transmission line or in the overhead space, and

(e) Don’t allow anyone other than workers engaged in moving work to enter on the flow line of a moving scaffolds and its vicinity.

(4) Comply with the following points regarding the placement of mobile scaffolds: referring to the condition of being able to be used at the work site:

(a) Mobile scaffolds shall be placed in close proximity to the work position so that workers can work in a safe posture,

(b) The brakes for the casters have to be activated at all times except during movement. When operating the brake, check its effectiveness beforehand. Or, fix the casters securely with pawls, etc., and fix a part of the scaffold to a firm structure,

(c) Mobile scaffolds shall not be used where there are significant irregularities orslopes, and

(d) When a mobile scaffold with outriggers is placed, make sure that there are no abnormalities in the outrigger mounting and grounding conditions.

(5) Prohibition of use for other purposes

Prohibit the use of mobile scaffolds for purposes other than the following:

(a) Use as a support for lifting materials or dropping objects,

(b) To be used for the purpose of covering with sheet (cloth) or exposing to strong wind,

して使用すること。	(c) Use for grit blasting or water jet, and (d) Use the working floor as a support for moving ladders, stepladders, trestles, etc.	
7.5.5 標識類の表示 請負者は、作業床の最大積載荷重及び足場の点検・維持管理の責任者名を、足場の見やすい箇所に表示しなければならない。	**7.5.5 Display of Signs** The Contractor shall display the maximum load capacity of the working floor and the name of the person in charge of inspection and maintenance of the scaffold in an easily visible location on the scaffold.	
7.5.6 組立、変更及び解体 請負者は、足場の組立、変更又は解体の作業を行うときは、次の措置を講じなければならない。 (1) 足場の組立て、解体又は変更の作業を行うときは、特定の作業の作業主任を任命し、作業を直接指揮させること。 (2) 作業の時期、範囲及び順序を、作業員に作業前に周知すること。 (3) 作業に際しては、作業員以外の者へ危害が及ばないよう、本仕様書 2.3[立入禁止の措置]に従い、柵・囲い等の設置により作業区域を明示したうえで、作業員以外の者の立入りを禁止すること。さらに、必要に応じて監視員を配置し、上記の立入禁止を徹底すること。 (4) 高さが 2m 以上の構造の足場の場合、足場材の緊結、取りはずし、受渡し等の作業には幅 40cm 以上の足場板を設けること。 (5) 上記(4)の作業には、墜落制止用器具を安全に取り付けるための設備等を設け、かつ、作業員に墜落制止用器具を使用させること。 (6) 高さ 2m 以上の箇所での作業及びスレート等の屋根の上での作業においては、次の作業床を設置すること。 (a) 床材は十分な強度を有するものを使用すること。また、幅は 40cm 以上とし、床材間のすき間は 3cm 以下とし、床材と建地との隙間は、12cm 未満とすること。床材は、転位又は脱落しないよう支持物に 2 箇所以上取り付けること (b) 床材を作業に応じて移動させる場合は、3 箇所以上の支持物にかけ、支点からの突出部の長さは 10cm 以上とし、かつ足場板長の 18 分の 1 以下とすること。また、足場板を長手方法に重ねるときは支点上で重ね、その重ねた部分の長さは 20cm 以上とすること。 (7) 足場の材料については、著しい損傷、変形又は腐食のないものを使用すること。木材については、強度上の著しい欠点となる割れ、虫食い、節等がなく、かつ、木皮を取り除いたものを使用すること。 (8) 落下による危険が生じるおそれがある場合、材料、器具、工具等の上げ下ろし時には、作業員につり網、つり袋を使用させること。 (9) 作業のため物体が落下することにより、作業員に危険を及ぼすおそれのあるときは、本仕様書 2.6[飛来落下の防止措置]の措置を講じるこ	**7.5.6 Assembly, Alteration and Dismantlement** The Contractor shall take the following measures when assembling, altering or dismantling of the scaffold: (1) When assembling, dismantling or alteing scaffolds, appoint an operation leader of specific work and direct the work, (2) Inform workers of the timing, scope and sequence of work before commencing the works, (3) In order to avoid danger to personnel other than workers, the work area shall be clearly specified by installing fences and enclosures in accordance with 2.3[Dangerous and Hazardous Area], and entry of persons other than workers shall be prohibited. In addition, surveillance personnel should be allocated as necessary to ensure that the above entry is prohibited, (4) For scaffolds with a height of 2m or more, when carrying out works of fastening, removing or handling over materials for scaffoldings, provide scaffolding boards having a width of 40 cm or more, (5) For the work of (4) above, install equipment to attach personal fall arrest system safely and have workers use it, (6) The following working floors shall be installed when working at locations with a height of 2m or more and working on roofs such as slate, (a) Use flooring with sufficient strength. And, the width of flooring shall be of 40cm or more, the clearance between flooring shall be of 3 cm or less, and the clearance between flooring and stanfards shall be of less than 12cm. Attach two or more floorings to the support to prevent dislocation or dropping. (b) When moving flooring material according to work, deliver to 3 or more supports, the length of projection from the fulcrums to be of 10cm or more, and is one-eighteenth of the length of the said scaffolding boards or less. When stacking the scaffolding plate in the longitudinal direction, stack it on the fulcrum, and length of the overlapped part shall be 20cm or more. (7) Use scaffolding material without marked damage, deformation or corrosion.	

と。 (10) 架空線等に近接して作業を行う場合には、本仕様書 3.2[架空線等上空施設一般] の措置を講じること。 (11) 悪天候のため、作業の実施について危険が予想されるときは、本仕様書 2.7[悪天候及び地震時の対策]の規定に従い、作業を中止すること。	For wood material, use it that has no cracks, worms, knots, etc., which are significant defects in strength, and from which the bark has been removed, (8) When there is a risk of falling, workers should be allowed to use a hanging net and a hanging bag when raising and lowering materials, instruments and tools, (9) Take measures in accordance with 2.6 [Prevention Measurs for Flying or Falling Objects] for the case when there is a risk of danger to workers due to falling objects during work, (10) Take measures in accordance with 3.2[Overhead Lines] for the case when working near overhead lines, etc., and (11) When dangers are expected in the performance of work, stop the work in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes].	
7.5.7 点検 請負者は、足場の組立、変更又は解体作業時、組立完成時、足場を使用する作業開始前、荒天及び中震後の作業開始前における点検について、次の措置を講じなければならない。 (1) 足場の組立完成時には、足場の組立等作業主任に、設計図通りの組立てであることを点検させ、設計図通りでない場合は手直しすること。 (2) 足場における作業を行うときは、その日の作業の開始前に、作業を行う箇所に設けた交差筋交い、さん、幅木、手摺及び中さん等の足場用墜落防止設備の取り外し及び脱落の有無について点検を行ない、異常を認めたときは直ちに補修を行うこと。 (3) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候若しくは地震又は足場の組立て、一部解体若しくは変更の後において、足場における作業を行うときは、作業開始前に、次の事項について点検を行ない、異常を認めたときは直ちに補修を行うこと。 (a) 床材の損傷、取付け及び掛渡しの状態 (b) 建地、布、腕木等の緊結部、接続部及び取付部の緩みの状態 (c) 緊結材及び緊結金具の損傷及び腐食の状態 (d) 足場用墜落防止設備の取り外し及び脱落の有無 (e) 幅木等の取付状態及び取り外しの有無 (f) 脚部の沈下及び滑動の状態(つり足場を除く) (g) 筋かい、控え、壁つなぎ等の補強材の取付状態及び取り外しの有無 (h) 建地、布及び腕木の損傷の有無 (i) 突りょうとつり索との取付部の状態及びつり装置の歯止めの機能 (4) 請負者は、上の(3)の規定に従い点検を行ったときは、次の事項を記録し、足場を使用する作業を行う仕事が終了するまでの間、これを保存すること。 (a) 点検の結果 (b) 点検の結果に基づいて行った補修等の措置を講じた場合は、措置	**7.5.7 Checkup** The Contractor shall take the following measures at the time of assembling, altering or dismantling of scaffolds, at the assembly completion, before the work using the scaffold, and the time of restart of work after the stormy weather and the medium earthquake. (1) When scaffolds assembly is completed, have the operation leader for scaffolds assembly check that the assembly is in accordance with the design drawing. And, if not, have him to direct to correct it. (2) When working on a scaffold, before the start of work, check the existence of removal and coming off of fall prevention equipment such as crossing, toe boards, handrails and middle bar etc., fix it right away when abnormalities are identified. (3) When the work is performed on the scaffolds after the bad weather or earthquake in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes], or after the assembly, partial disassembly or modification of the scaffolds, the following points shall be checked out before the commencement of the work, and if any abnormalities are identified, correct it immediately: (a) Condition of damage, mounting and placing of floor materials, (b) Condition of loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, etc., (c) Condition of damage and corrosion of clamping materials and clamps, (d) Existence of removal and coming off of fall prevention equipment for scaffolds, (e) Condition of mounting and existence of removal of toe boards, (f) Condition of settling and sliding of foot portions (Excluding suspension scaffolding), (g) Condition of mounting and existence of removal of diagonal bracings, stays, ties to wall and other reinforcement materials,	

の内容	(h) Existence of damage of standards, ledgers and brackets, and (i) Condition of the mounting portion of projected girders and lifting cables, and the function of lifting devices. (4) When a contractor performs an inspection in accordance with the provisions of (3) above, the contractor shall record the following items and store them until the work that uses the scaffolding is completed: (a) Results of checkup, and (b) When measures such as repairs based on the results of the checkup are taken, the details of the measures.	
7.5.8 高所作業車を用いての作業の際の留意点 請負者は、高所作業車を用いて作業を行うときは、次の措置を講じなければならない。 (1) 作業主任 特定の作業の作業主任を任命し、作業を直接指揮させること。 (2) 高所作業車の設置、運転 (a) 高所作業車を作業場所に設置するときは、高所作業車の転倒又は転落による労働者の危険を防止するため、アウトリガーを完全に張出させること。また地盤の沈下防止対策をとること。 (b) 本仕様書 2.3[立入禁止の措置]に従い、作業区画を設置し、立入禁止措置を講じること。 (c) 高所作業車の製造者が定める運転に関する注意事項を作業員に遵守させること。 (d) 安全装置がある場合は、故意に機械の安全装置を解除させないこと。 (e) 請負者は、高所作業車を走行させるときは、次の措置を講じること。 (i) 作業床を所定の最低降下位置まで下げてから走行する。 (ii) 作業床において走行操作をしない車両の場合は、作業床に作業員を載せたまま走行してはならない。 (iii) 作業床において走行操作をする車両の場合は、平たん・堅固でない場所を走行してはならない。 (iv) 上記以外で、作業床において走行操作をしない車両の場合で、平坦で堅固な場所において作業床に作業員を載せたまま高所作業車を走行させるときは、次の措置を講じなければならない。 • 誘導者を配置し、その者に高所作業車を誘導させること。 • 一定の合図を定め、誘導者に当該合図を行わせること。 • あらかじめ、作業時における当該高所作業車の作業床の高さ及びブームの長さ等に応じた高所作業車の適正な制限速度を定め、それにより運転者に運転させること。	**7.5.8 Precautions for the Work with A Vehicle for Work at Height** The Contractor shall take the following measures when using a vehicle for work at height. (1) Operations leader Appoint an operation leader for a specific work and direct the work. (2) Placement and operation of a vehicle for work at height (a) When placing a vehicle for work at height in the work place, take necessary measures of projecting an outrigger and of preventing uneven settling of the ground in order to prevent workers from dangers due to overturning or falling of the said vehicle, etc. (b) In accordance with 2.3[Dangerous and Hazardous Area], specify work sections and take measures to prevent entry. (c) Ensure that workers comply with the driving precautions set by the manufacturer of the vehicle for work at height. (d) If there is a safety device, do not deliberately release the safety device of the machine. (e) The Contractor shall take the following measures when driving a vehicle for work at height: (i) Drive after lowering the working floor to the specified minimum descent position; (ii) In the case of a vehicle that are not operated on the working floor, the said vehivle shall not be driven with a worker on the working floor. (iii) In the case of a vehicle that are operated on the working floor, the said vehicle shall not be driven on non-level or non-firm places. (iv) Other than the above, in the case of a vehicle that are not operated on the working floor, the following measures shall be taken when driving the said vehicle in a level and firm place with a worker on the working floor: • Arrange a guide, and have the said person guide a vehicle for work at height,	

(f) 運転者が走行のため運転位置から離れる場合は、当該運転者に次の措置を講じさせること。

(i) 作業床に作業員が乗って作業を行っていない及び作業を行おうとしていない場合

- 作業床を最低降下位置に置かせること。
- 原動機を止め、かつ、停止の状態を保持するためのブレーキ(駐車ブレーキ)を確実にかける等の高所作業車の逸走を防止する措置をとらせること。

(ii) 作業床に作業員が乗って作業を行い、又は行おうとしている場合、当該高所作業車の停止の状態を保持するためのブレーキを確実にかける等の措置を講じさせること。

(iii) 高所作業車を用いて作業を行うときは、乗車席及び作業床以外の箇所に作業員を乗せてはならない。

(iv) 高所作業車を、その製造者が規定した制限荷重(高所作業車の構造及び材料に応じて、作業床に人又は荷を乗せて上昇させることができる最大の荷重。)を超えて使用させてはならない。

(3) 作業床の操作

作業床以外の箇所で作業床を操作するときは、作業床上の作業員と作業床以外の箇所で作業床を操作する者との間の連絡を確実にするため、本仕様書 2.4.2[合図の統一]に従い一定の合図を定め、当該合図を行う者を指名してその者に合図を行わせること。

(4) 作業床での作業

請負者は、高所作業車の作業床で作業を行う作業員の安全のために、次の措置を講じること。

(a) 作業員には、墜落制止用器具、保護帽等の保護具を使用させること。

(b) 作業床から現場の鉄骨などへの乗り移り、手摺りに足を掛け手作業する等の危険な行動を、作業員に禁じること。

(c) 本仕様書 2.7[悪天候及び地震時の対策]に従い悪天候のときは 2m 以上の高所作業を中止させなければならない。

(5) 高所作業車の点検、修理

(a) 本仕様書 4.1.6[搬入時の確認]、4.1.7[建設機械の点検・整備]、4.1.8[日常点検]、4.1.9[定期点検]に従い、高所作業車の点検を行うこと。

(b) 高所作業車の修理、作業床の装着又は取り外しの作業は、本仕様書 4.2.2[点検・修理作業時の安全確保]及び 4.2.3[アタッチメント等作業装置の装着及び取りはずし作業]に従い行うこと。

(6) 用途以外の使用禁止

高所作業車を、荷の吊り上げ等の当該高所作業車の主たる用途以外に

- Set fixed signals and have the guide set forth in the preceding item give the signals, and
- Set an appropriate working speed limit for the vehicle for work at height in advance corresponding to the height of the working floor and the length of the boom, etc. of the said vehicle for work at height, and have the operator operate the vehicle by them.

(f) Have the operator shall take the following measures when leaving the operatinbg position:

(i) When a worker is not working on the working floor or is not going to work,

- Put the working floor in the lowest position
- Stop a prime mover and take measures of setting the brake securely to keep the machine in stopped condition: parking brake, etc., in order to prevent a vehicle for work at height from breaking into a run.

(ii) If a worker is working on the working floor or is about to work, make sure to apply a brake to ensure that the work vehicle at high altitude is stopped,

(iii) When using a vehicle for work at height, workers shall not be boarded on other than the passenger seat and working floor, and

(iv) A vehicle for work at height must not be used beyond the limit load: maximum load that can be lifted by a person or load on the working floor, depending on the structure and material of the veicle specified by the manufacturer.

(3) Working floor operation

When operating the working floor at a place other than the working floor, in order to ensure communication between the worker on the working floor and the person operating the working floor at a place other than the working floor, establish a certain signal and designate persons who exchange signale and have them signal in accordance with 2.4.2[Unifying Signals].

(4) Work on the working floor

The Contractor shall take the following measures to ensure the safety of workers working on the working floor of a vehicle for work at height:

(a) Have workers use protective equipment such as fall prevention equipment and protective caps,

(b) Prohibit workers from performing dangerous actions such as transferring from the working floor to a steel frame at the work site, placing a foot on the handrail, and performing manual work, and

(c) When the weather is bad, stop work at a height of 2m or more in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes].

(5) Checkup and repair of a vehicle for work at height

使用してはならない。	(a) Carry out checkup on a vehicle for work at height in accordance with 4.1.6[Check at Delivery], 4.1.7[Checkup and Maintenance of Construction Machine], 4.1.8[Daily Checkup], and 4.1.9[Periodical Checkup] (b) Repair work of a vehicle for work at height, installation/removal of working floor shall be carried out following 4.2.2[Ensuring Safety during Checkup and Repair Work] and 4.2.3[Installation and Removal Work of Work Equipment such as Attachments]. (6) Prohibition of use for other purposes A vehicle for work at height must not be used for purposes other than the original use of the vehicle, such as lifting a load.	
7.5.9 脚立を用いての作業の際の留意事項 請負者は、脚立を用いての作業に際しては、次を遵守しなくてはならない。 (1) 脚立を用いての作業は、高さ 2m 以上は不可。2m 以上の高さの作業の場合は足場を組む等の他の措置をとること。 (2) 踏み面は、作業を安全に行なうため必要な面積を有すること。 (3) 開き止め金具は確実にロックすること。 (4) 脚立が安定しない場所には設置しない。 (5) 出入口やドアの前では使用しない。 (6) 天板に乗って、又は天板を跨いで作業をさせないこと。 (7) 脚立の上で作業する時は、天板を含め上から 3 段目以下の踏みさんに乗り作業をさせること。 (8) 脚立の上で作業する時は、3 点以上の支持によること。 (9) 上向き作業をしないこと。 (10) 踏みさん上に足場板をかけて作業を行う場合は、次を遵守すること。 (a) 脚立の中心線間の間隔は 1.8m 以下、足場板の幅は 40cm 以上とし、重ね長さは 20cm 以上として、3 以上の支持物にかけ渡すこと。 (b) 足場板の支点からの突出部の長さは 10cm 以上とし、かつ、作業員が当該突出部に足を掛けるおそれのない場合を除き、足場板の長さの 1/18 以下とすること。 (c) 足場板は丈夫なものを使用し、著しい損傷、変形または腐食のあるものを使用してはならない。	**7.5.9 Precautions for Steppladder Work** The Contractor shall comply with the following when working with the stepladder. (1) When working with a stepladder, a height of 2m or more is not possible. In the case of work more than 2m, take other measures such as building a scaffold. (2) The tread of the stepladder must have the necessary dimension for safe work. (3) Secure the locking clasp securely. (4) Do not install a stepladder in a place where is unstable. (5) Do not use in front of doorways or doors. (6) Do not step on or straddle the top plate to work. (7) When working on a stepladder, get on the step 3 and below from the top, including the top board. (8) When working on a stepladder, support at least three points. (9) Do not work in an upward position. (10) The following shall be complied with when performing work with a scaffolding board on the treads. (a) The distance between the center lines of the stepladders shall be 1.8m or less, the width of the scaffolding board shall be 40cm or more, and the overlap length shall be 20cm or more. (b) The length of projection of scaffolding boards from the fulcrums to be of 10 cm or more, and is one-eighteenth of the length of the said scaffolding boards or less, excluding when there is no possibility that workers will step on the said projections. (c) Use scaffolding boards with sound structure, without marked damage, deformation or corrosion.

7.5 足場

7.5.1 一般事項

(1) 足場とは作業のために設ける作業床及びそれを支持するものからなる仮設物のうち、作業構台を除くものをいう。

(2) 本節では鋼管足場、つり足場、移動式足場について、以下に規定する。

(3) 請負者は、足場からの墜落防止に対しては、本仕様書 2.5[墜落防止]、足場・作業床での作業に際して物体の飛来又は落下により工事関係者に危険を及ぼすおそれのある場合は、2.6[飛来落下の防止措置]に拠る規定に、各々従わねばならない。

(4) 請負者は、足場の安全事項についての当該国の法律及び本仕様書のいずれにも規定が無い事項は、次に示すいずれかの基準における規定を遵守しなければならない。

(a) 米国 OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds 及び ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design

(b) 英国 BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design

(5) 足場の計画、設計は、その上で行う作業に従事する作業員、作業員が使用する道具等の重量を勘案した上載荷重を考慮し、本章 7.1.3[仮設構造物の設計及び設計照査]に基づき計画、設計すること。

7.5 Scaffolding

7.5.1 General

(1) "Scaffold" means a temporary structure consisting of a working floor provided for work and a support for it, excluding the work platform.

(2) In this section, steel pipe scaffolds, suspension scaffolds and mobile scaffolds are defined as follows.

(3) The Controator shall comply with the provisions in accordance with 2.5[Fall Prevention] for prevention of fall accidents, and 2.6[Prevention Measurs for Flying or Falling Objects] for the case a worker may be in danger due to flying or falling objects when working on a scaffold or a working floor.

(4) The Contractor shall comply with the provisions in any of the following standards for matters that are not stipulated in either the target country's laws or safety specifications for the scaffolding.

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds and ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA.

(b) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

(5) The planning and design of the scaffolding shall be carried out in accordance with 7.1.3 [Design and Verification of Temporary Structures] with taken into account the loading weight of the workers engaged in the work and tools used by the workers etc.

7.5 Scaffolds

7.5.1 General

(1) "Scaffold" means temporary structure to provide access for workers to construction works and work place. It consits of work floor and supports. It does not include work platform subscribed in JSSS 8[Work Stages].

(2) This section subscribes steel pipe scaffolds, suspension scaffolds (interior hung scaffold?), mobile scaffolds, mobile elevating work platforms and stepplader work.

(3) The Controator shall comply with the provisions in JSSS 2.5[Fall Prevention] for prevention of fall accidents and 2.6[Falling Objects] for the danger to workers by flying or falling objects when working on scaffolds or working floor.

(4) The Contractor shall comply with the provisions in any of the following standards for matters that are not stipulated in the Laws and JSSS regarding scaffold.

(a) OSHA PART 1926-Safety and Health Regulations for Construction, Subpart L-Scaffolds and ANSI/ASSP A10.8 – 2019 Scaffolding Safety Requirements equipment - Part 1: Scaffolds - Performance requirements and general design, USA.

(b) BS EN12811-1:2003 Temporary works equipment - Part 1: Scaffolds - Performance requirements and general design, UK.

(5) The planning and design of scaffolds shall be made in accordance with 7.1.3 [Design and Verification of Temporary Works] taking

		into account loads of weight of the workers, materials, tools, etc. to be placed on scaffolds, etc. *(To MD, are they called "Good" in GC?)*
7.5.2 鋼管足場 請負者は、次を遵守して計画、設計を行わなければならない。 (1) 鋼管で構成される足場(以下、「鋼管足場」という。)については、次に示す措置を講じること。 (a) 足場(脚輪を取り付けた移動式足場を除く。)の脚部には、足場の滑動又は沈下を防止するため、ベース金具を用い、かつ、敷板、敷角等を用い、根がらみを設けること。 (b) 鋼管の接続部又は交差部は、これに適合した金具を用いて、確実に接続し、又は緊結させること。 (c) 筋かいで補強すること。 (d) 鋼管足場の種類に応じ、風荷重等も考慮したうえで、足場の安定性を維持するために必要な壁つなぎ又は控えを設けること。	**7.5.2 Steel Pipe Scaffolding** The Contractor shall plan and design in accordance with the following. (1) For scaffolds composed of steel pipes, hereinafter refered to as steel pipe scaffolds, the following measures shall be taken: (a) For the leg of scaffolding (excluding mobile scaffolds with casters), to take measures such as providing bridge batten of foot posts with base fittings, and plankings, square timbers, etc., in order to prevent the scaffolds from sliding or settling, (b) Joint or fasten the jointing portions or crossing portions of steel pipes securely with suitable fittings, (c) Reinforce the scaffolding with bracings, (d) Depending on the type of steel pipe scaffolding, consider the wind load, etc., and provide ties to walls or stays necessary to maintain the stability of the scaffolding.	**7.5.2 Steel Pipe Scaffolds** The Contractor shall plan and design in accordance with the following. (2) For scaffolds composed of steel pipes, hereinafter refered to as steel pipe scaffolds, the following measures shall be taken: (a) At the leg of scaffolds (excluding mobile scaffolds with casters), provide measures to prevent the scaffolds from sliding or settling such as mud sill, base plates or others, (b) Joint or fasten joints or crossing portions of steel pipes tightly with suitable fittings, (c) Reinforce the scaffolds with bracings, (d) Depending on the type of steel pipe scaffolds, apply wind load, etc. and provide ties to walls or stays necessary to maintain the stability of the scaffolds.
7.5.3 つり足場 請負者は、つり足場(ゴンドラのつり足場を除く。以下本節において同じ。)については、次の措置を講じなければならない。 (1) 作業床の最大積載荷重は、つりワイヤロープ及びつり鋼線の安全係数が 10 以上、つり鎖及びつりフックの安全係数が 5 以上並びにつり鋼帯並びにつり足場の下部及び上部の支点の安全係数が鋼材にあっては 2.5 以上、木材にあっては 5 以上となるように定めること。 (2) 次のいずれかに該当する材料を使用しないこと。 (a) つりワイヤロープ (i) ワイヤロープ一よりの間において素線(フィラ線を除く。以下同じ。)の数の 10%以上の素線が切断しているもの (ii) 直径の減少が公称径の 7%を超えるもの (iii) キンクしたもの (iv) 著しい形崩れ又は腐食があるもの (b) つり鎖 (i) 伸びが、つり鎖が製造されたときの長さの 5%を超えるもの (ii) リンクの断面の直径の減少が、当該つり鎖が製造されたときの当該リンクの断面の直径の 10%を超えるもの (iii) 亀裂があるもの (c) つり鋼線及びつり鋼帯 著しい損傷、変形又は腐食のあるもの	**7.5.3 Hanging Scaffolds** The Contractor shall take the following measures for hanging scaffolds (excluding gondola suspension scaffolds; the same applies hereinafter). (1) The maximum loading capacity of the working floor shall be so determined as to ensure the safety coefficient of 10 or more for hanging wire ropes and hanging steel wires, the safety coefficient of 5 or more for hanging chains and hanging hooks, and the safety coefficient of hanging steel bands and of fulcrums at the bottom and top of the hanging scaffoldings of 2.5 for steels and 5 or more for timber. (2) Do not use any of the folloeing materials. (a) Hanging wire ropes (i) Those with 10% or more of element wires (excluding filler wires) of which are cut in one strand of wire ropes. (ii) Those with reduction ratio of a diameter exceeding 7% of the nominal diameter (iii) Those with kink (iv) Those with marked deformation or corrosion (b) Hanging chains (i) Those with the elongation exceeding 5% of the original length at the time of manufacture. (ii) Those with a reduction ratio of a diameter of links of the said hanging chains exceeding 10% of the original diameter of the	**7.5.3 Interior Hung (Suspended) Scaffolds** The Contractor shall take the following measures for interior hung scaffolds (excluding gondola suspended scaffolds; the same applies hereinafter). (1) The maximum loading capacity of the working floor shall be determined to ensure the safety factor of 10 or more for hanging wire ropes and hanging steel wires, 5 or more for hanging chains and hanging hooks, 2.5 or more for hanging steel bands and fulcrums at the bottom and top of the hanging scaffolds and 5 or more for timber. (2) Do not use any of the folloeing materials. (a) Hanging wire ropes (i) Those with 10% or more of element wires (excluding filler wires) of which are cut in one strand of wire ropes. (ii) Those with reduction ratio of a diameter exceeding 7% of the nominal diameter (iii) Those with kink (iv) Those with remarkable deformation or corrosion (b) Hanging chains (v) Those with the elongation exceeding 5% of the original length at the time of manufactured. (vi) Those with reduction of diameter of links of hanging

(3) つり足場の設置時の措置 (a) 作業床は、幅を 40cm 以上とし、かつ、隙間がないようにすること。 (b) 床材は、転位し、又は脱落しないように、足場桁等に取り付けること。 (c) 足場桁、作業床等に控えを設ける等動揺又は転位を防止すること。 (4) 作業上の禁止事項 つり足場の上で、脚立、はしご等を用いて作業員に作業させないこと。	said links at the time of manufacture. (iii) Those with cracks (c) Hanging steel wires and hanging steel belts Those with marked damage or corrosion (3) Measures when setting up the scaffolding (a) The working floor to be with width of 40 cm or more, and without clearance between floor boards. (b) Fasten the floor materials to the scaffolding girder etc., in order to prevent them from displacing or coming off. (c) Take measures in order to prevent movement or displacement such as providing of stays to the scaffolding girders, working floors, etc. (4) Prohibited work Do not allow workers to work on the scaffolding using stepladders, ladders, etc.	chains exceeding 10% of the original diameter at the time of manufactured. (vii) Those with cracks (c) Hanging steel wires and hanging steel belts Those with remarkable damage or corrosion (3) Measures when constructing scaffolds (a) Provide working floor of width of 40 cm or more, and without spaces between floor boards (planks). (b) Fasten the floor materials (planks) to the scaffold girder etc., to prevent them from displacing or coming off. (c) Take measures such as providing of stays to the scaffold girders, working floors, etc. to prevent movement or displacement (4) Prohibited work Work shall be prohibited using stepladders, ladders, etc. on the scaffolds.
7.5.4 移動式足場 請負者は、移動式足場については、次の措置を講じなければならない。 (1) 移動式足場の選定 (a) 対象とする作業に適した、高さ、幅、長さの移動式足場を用いること。 (a) 移動式足場は、英国基準 BS EN1004 Mobile access and working towers made of Prefabricated elements に適合するもの、又はエンジニアが同等以上と認めたものを使用すること。 (2) 組立てに際しての留意事項 (a) 購入した移動式足場の場合、製造業者が作成する筋交いの必要性や安全に組立てできる高さ等を含む組立て手順を説明するマニュアルに従い、組立てに関し十分な知識と経験を持つ者（competent person）に組立てを行わせること。 (b) 組立てに際しては、建わく等の接続部は、使用中容易に離脱しないように確実に結合すること。 (3) 移動式足場の移動に関して次を遵守すること。 (a) 移動させるときは、路面の凹凸障害物等による転倒を防止するためあらかじめ、路面の状態を確認すること。 (b) 移動は、すべての脚輪のブレーキを解除した後に行うこと。 (c) 作業員や物を移動式足場に乗せた状態で移動させないこと。 (d) 送電線や上空に障害物がないことを確認すること。 (e) 移動中の動線およびその付近に、移動作業に従事する作業員以外の者を立ち入らせないこと。	**7.5.4 Mobile Scaffolds** The Contractor shall take the following measures for mobile scaffolds: (1) Selection of mobile scaffolds (a) Use mobile scaffolds of height, width, and length that are suitable for the intended work. (b) Use mobile scaffolds that comply with BS EN1004 Mobile access and working towers made of Pre-fabricated elements or that the engineer has admitted as equivalent or better. (2) Precautions for assembly (a) In the case of purchased mobile scaffolds, have a person who has sufficient knowledge and experience in assembly: competent person assemble according to the manual explaining the assembly procedure including the necessity of bracing created by the manufacturer and the height that can be safely assembled, etc. (b) When assembling, connecting points on the building flame should be securely connected so that they are not easily detached during use. (3) Observe the following points regarding movement of mobile scaffolds: (a) Check the condition of the road surface in advance to prevent it from overturning due to irregularities or obstacles, (b) Move after releasing the brakes on all the casters, (c) Don’t move it in the situation workers or objects are on mobile scaffolds, (d) Make sure that there are no obstacles in the transmission line or in	**7.5.4 Mobile Scaffolds** The Contractor shall take the following measures for mobile scaffolds: (1) Selection of mobile scaffolds (a) Select mobile scaffolds of height, width, and length that are suitable for the work. (b) Select mobile scaffolds that comply with BS EN1004 Mobile access and working towers made of Pre-fabricated elements or the standards which is accepted by the Engineer as equivalent or better. (2) Safety measures at assembly of mobile scaffolds (a) Competent worker who has sufficient knowledge and experience in assembly of scaffolds shall assemble purchased (prefablicated) mobile scaffolds in accordance with the manual of the manufacturer directing the assembly procedure including the necessity of bracing and the height that can be safely assembled, etc. (b) When assembling, connecting points of flames shall be tightly fixeded so that they are not easily detached during use. (3) Safety measures at moving of mobile scaffolds (a) Check the condition of the surface of work floor in advance to prevent mobile scaffolds from overturning due to its irregularities or obstacles, (b) Move mobile scaffolds after releasing (put-off) brakes of all the casters, (c) Not move mobile scaffolds in the situation that workers or

(4) 移動式足場の定置（作業箇所において使用できる状態にすることをいう。）に関して次を遵守すること (a) 作業員が無理のない姿勢で作業を行うため、移動式足場は、作業箇所に近接したところに定置させること。 (b) 脚輪のブレーキは、移動中を除き、常に作動させておくこと。ブレーキを作動させるときは、その効き具合を確認すること。又は、歯止め等で脚輪を確実に固定することとし、足場の一部を堅固な建設物に固定させること。 (c) 凹凸又は傾斜が著しい場所では移動式足場を使用してはならない。 (d) アウトリガーを有する移動式足場を定着したときは、アウトリガーの取付け状態、接地状態等について異常のないことを確認すること。 (5) 用途外の使用禁止 次の移動式足場の用途外の使用を禁止すること。 (a) 材料の吊り上げや物体の投下用のシュートの支えとして使用すること。 (b) シート（布）で覆うこと（sheeting）や強風にさらす目的に使用すること。 (c) グリットブラスト（防食研磨）又はウォータージェット用に使用すること。 (d) 作業床を、移動はしご、脚立、架台（trestles）等の支持台（support）として使用すること。	the overhead space, and (e) Don't allow anyone other than workers engaged in moving work to enter on the flow line of a moving scaffolds and its vicinity. (4) Comply with the following points regarding the placement of mobile scaffolds: referring to the condition of being able to be used at the work site: (a) Mobile scaffolds shall be placed in close proximity to the work position so that workers can work in a safe posture, (b) The brakes for the casters have to be activated at all times except during movement. When operating the brake, check its effectiveness beforehand. Or, fix the casters securely with pawls, etc., and fix a part of the scaffold to a firm structure, (c) Mobile scaffolds shall not be used where there are significant irregularities orslopes, and (d) When a mobile scaffold with outriggers is placed, make sure that there are no abnormalities in the outrigger mounting and grounding conditions. (5) Prohibition of use for other purposes Prohibit the use of mobile scaffolds for purposes other than the following: (a) Use as a support for lifting materials or dropping objects, (b) To be used for the purpose of covering with sheet (cloth) or exposing to strong wind, (c) Use for grit blasting or water jet, and (d) Use the working floor as a support for moving ladders, stepladders, trestles, etc.	objects are on mobile scaffolds, (d) Make no obstacles in the moving areas or in the overhead space, and (e) Not allow anyone other than workers engaged in moving work to enter the moving areas of the moving scaffolds and its vicinity. (4) Comply with the following points regarding the placement of mobile scaffolds (Placement means action to make mobile scaffolds be in the condition that scaffolds is able to be used at the work site.) (a) Mobile scaffolds shall be placed in close proximity (at nearest place) to the work place so that workers can work in a safe posture, (b) The brakes for the casters shall be activated at all times except during movement. When operating the brake, check its effectiveness beforehand. Alternatively, fix the casters securely with pawls, etc., and fix a part of the scaffolds to a firm structure, (c) Mobile scaffolds shall not be used where there are significant irregularities or slopes, and (d) When mobile scaffolds with outriggers is placed, make sure that there are no abnormalities in the outrigger mounting and grounding conditions. (5) Prohibition of use for other purposes The use of mobile scaffolds shall be prohibited for the following purposes: (a) Use as a support for lifting materials or dropping objects, (b) Use for the purpose of covering with sheet (cloth) or exposing to strong wind, (c) Use for work of grit blasting or water jet (to avoid horizontal reaction force to the scaffolds by the work), and (d) Use as floor to support mobile ladders, stepladders, trestles, etc.
7.5.5 標識類の表示 請負者は、作業床の最大積載荷重及び足場の点検・維持管理の責任者名を、足場の見やすい箇所に表示しなければならない。	**7.5.5 Display of Signs** The Contractor shall display the maximum load capacity of the working floor and the name of the person in charge of inspection and maintenance of the scaffold in an easily visible location on the scaffold.	**7.5.5 Display on scaffolds** The Contractor shall post the maximum load capacity of the working floor and the name of the person in charge of inspection and maintenance of the scaffold in easy-to-see places on the scaffolds.
7.5.6 組立、変更及び解体 請負者は、足場の組立、変更又は解体の作業を行うときは、次の措置を講じなければならない。 (1) 足場の組立て、解体又は変更の作業を行うときは、特定の作業の作業主任を任命し、作業を直接指揮させること。	**7.5.6 Assembly, Alteration and Dismantlement** The Contractor shall take the following measures when assembling, altering or dismantling of the scaffold: (1) When assembling, dismantling or alteing scaffolds, appoint an operation leader of specific work and direct the work,	**7.5.6 Assembly, Alteration and Dismantlement** The Contractor shall take the following measures when assembling, altering or dismantling of the scaffolds: (1) When assembling, altering or dismantling scaffolds, appoint an Operation Leader to directly lead the work,

(2) 作業の時期、範囲及び順序を、作業員に作業前に周知すること。

(3) 作業に際しては、作業員以外の者へ危害が及ばないよう、本仕様書 2.3[立入禁止の措置]に従い、柵・囲い等の設置により作業区域を明示したうえで、作業員以外の者の立入りを禁止すること。さらに、必要に応じて監視員を配置し、上記の立入禁止を徹底すること。

(4) 高さが 2m 以上の構造の足場の場合、足場材の緊結、取りはずし、受渡し等の作業には幅 40cm 以上の足場板を設けること。

(5) 上記(4)の作業には、墜落制止用器具を安全に取り付けるための設備等を設け、かつ、作業員に墜落制止用器具を使用させること。

(6) 高さ 2m 以上の箇所での作業及びスレート等の屋根の上での作業においては、次の作業床を設置すること。

(a) 床材は十分な強度を有するものを使用すること。また、幅は 40cm 以上とし、床材間のすき間は 3cm 以下とし、床材と建地との隙間は、12cm 未満とすること。床材は、転位又は脱落しないよう支持物に 2 箇所以上取り付けること

(b) 床材を作業に応じて移動させる場合は、3 箇所以上の支持物にかけ、支点からの突出部の長さは 10cm 以上とし、かつ足場板長の 18 分の 1 以下とすること。また、足場板を長手方法に重ねるときは支点上で重ね、その重ねた部分の長さは 20cm 以上とすること。

(7) 足場の材料については、著しい損傷、変形又は腐食のないものを使用すること。木材については、強度上の著しい欠点となる割れ、虫食い、節等がなく、かつ、木皮を取り除いたものを使用すること。

(8) 落下による危険が生じるおそれがある場合、材料、器具、工具等の上げ下ろし時には、作業員につり網、つり袋を使用させること。

(9) 作業のため物体が落下することにより、作業員に危険を及ぼすおそれのあるときは、本仕様書 2.6[飛来落下の防止措置]の措置を講じること。

(10) 架空線等に近接して作業を行う場合には、本仕様書 3.2[架空線等上空施設一般] の措置を講じること。

(11) 悪天候のため、作業の実施について危険が予想されるときは、本仕様書 2.7[悪天候及び地震時の対策]の規定に従い、作業を中止すること。

(2) Inform workers of the timing, scope and sequence of work before commencing the works,

(3) In order to avoid danger to personnel other than workers, the work area shall be clearly specified by installing fences and enclosures in accordance with 2.3[Dangerous and Hazardous Area], and entry of persons other than workers shall be prohibited. In addition, surveillance personnel should be allocated as necessary to ensure that the above entry is prohibited,

(4) For scaffolds with a height of 2m or more, when carrying out works of fastening, removing or handling over materials for scaffoldings, provide scaffolding boards having a width of 40 cm or more,

(5) For the work of (4) above, install equipment to attach personal fall arrest system safely and have workers use it,

(6) The following working floors shall be installed when working at locations with a height of 2m or more and working on roofs such as slate,

(a) Use flooring with sufficient strength. And, the width of flooring shall be of 40cm or more, the clearance between flooring shall be of 3 cm or less, and the clearance between flooring and stanfards shall be of less than 12cm. Attach two or more floorings to the support to prevent dislocation or dropping.

(b) When moving flooring material according to work, deliver to 3 or more supports, the length of projection from the fulcrums to be of 10cm or more, and is one-eighteenth of the length of the said scaffolding boards or less. When stacking the scaffolding plate in the longitudinal direction, stack it on the fulcrum, and length of the overlapped part shall be 20cm or more.

(7) Use scaffolding material without marked damage, deformation or corrosion. For wood material, use it that has no cracks, worms, knots, etc., which are significant defects in strength, and from which the bark has been removed,

(8) When there is a risk of falling, workers should be allowed to use a hanging net and a hanging bag when raising and lowering materials, instruments and tools,

(9) Take measures in accordance with 2.6 [Prevention Measurs for Flying or Falling Objects] for the case when there is a risk of danger to workers due to falling objects during work,

(10) Take measures in accordance with 3.2[Overhead Lines] for the case when working near overhead lines, etc., and

(11) When dangers are expected in the performance of work, stop the work in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes].

(2) Inform workers of the timing, scope and sequence of work before commencing the works,

(3) In order to avoid danger to personnel other than workers, the work area shall be clearly specified by installing fences and enclosures in accordance with 2.3[Prohibition of Entry - Dangerous Work], and entry of persons other than workers shall be prohibited. In addition, Spotters shall be allocated as necessary to ensure that the above entry is prohibited,

(4) For scaffolds with a height of 2m or more, when carrying out works of fastening, removing or handling over materials for scaffoldings, provide planks having a width of 40 cm or more,

(5) For the work of (4) above, provide facilities to connect PFAS safely and have workers use it,

(6) The following working floors shall be provideded when working at locations with a height of 2m or more and working on roofs such as slate,

(a) Use planks with sufficient strength. The width of working floors shall be of 40cm or more. The clearance between planks shall be of 3 cm or less, and the clearance between floors and standards shall be of less than 12cm. Floors shall be fixed at two or more locations to the support to prevent dislocation or dropping.

(b) When moving floor materials according to work, put them on three (3) or more supports, the length of projection from the fulcrums to be of 10cm or more, and is one-eighteenth of the length of the said scaffolding boards or less. When stacking the scaffolds plate in the longitudinal direction, stack it on the fulcrum, and length of the overlapped part shall be 20cm or more. (*To MD, please refer to the figures at last page.)*

(7) Use scaffolds material without remarkable damage, deformation or corrosion. For wood material, use it that has no cracks, worms, knots, etc., which are significant defects in strength, and from which the bark has been removed,

(8) When there is a risk of falling, workers shall use a hanging net and a hanging bag when lfting and lowering materials, instruments and tools,

(9) Take measures in accordance with 2.6 [Falling Objects] for the case when there is a risk of danger to workers due to falling objects during work,

(10) Take measures in accordance with 3.2[Overhead Services] for the case when working near overhead lines, etc., and

(11) When dangers are expected in the work under adverse weather, stop the work in accordance with 2.7[Adversse Weather Requirements].

7.5.7 点検 請負者は、足場の組立、変更又は解体作業時、組立完成時、足場を使用する作業開始前、荒天及び中震後の作業開始前における点検について、次の措置を講じなければならない。 (1) 足場の組立完成時には、足場の組立等作業主任に、設計図通りの組立てであることを点検させ、設計図通りでない場合は手直しすること。 (2) 足場における作業を行うときは、その日の作業の開始前に、作業を行う箇所に設けた交差筋交い、さん、幅木、手摺及び中さん等の足場用墜落防止設備の取り外し及び脱落の有無について点検を行ない、異常を認めたときは直ちに補修を行うこと。 (3) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候若しくは地震又は足場の組立て、一部解体若しくは変更の後において、足場における作業を行うときは、作業開始前に、次の事項について点検を行ない、異常を認めたときは直ちに補修を行うこと。 (a) 床材の損傷、取付け及び掛渡しの状態 (b) 建地、布、腕木等の緊結部、接続部及び取付部の緩みの状態 (c) 緊結材及び緊結金具の損傷及び腐食の状態 (d) 足場用墜落防止設備の取り外し及び脱落の有無 (e) 幅木等の取付状態及び取り外しの有無 (f) 脚部の沈下及び滑動の状態(つり足場を除く) (g) 筋かい、控え、壁つなぎ等の補強材の取付状態及び取り外しの有無 (h) 建地、布及び腕木の損傷の有無 (i) ~~突りょうとつり索との取付部の状態及びつり装置の歯止めの機能~~ (NK: (i)はゴンドラ作業の規定であり、JSSS では対象としていないため、削除します。) (4) 請負者は、上の(3)の規定に従い点検を行ったときは、次の事項を記録し、足場を使用する作業を行う仕事が終了するまでの間、これを保存すること。 (a) 点検の結果 (b) 点検の結果に基づいて行った補修等の措置を講じた場合は、措置の内容	**7.5.7 Checkup** The Contractor shall take the following measures at the time of assembling, altering or dismantling of scaffolds, at the assembly completion, before the work using the scaffold, and the time of restart of work after the stormy weather and the medium earthquake. (1) When scaffolds assembly is completed, have the operation leader for scaffolds assembly check that the assembly is in accordance with the design drawing. And, if not, have him to direct to correct it. (2) When working on a scaffold, before the start of work, check the existence of removal and coming off of fall prevention equipment such as crossing, toe boards, handrails and middle bar etc., fix it right away when abnormalities are identified. (3) When the work is performed on the scaffolds after the bad weather or earthquake in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes], or after the assembly, partial disassembly or modification of the scaffolds, the following points shall be checked out before the commencement of the work, and if any abnormalities are identified, correct it immediately: (a) Condition of damage, mounting and placing of floor materials, (b) Condition of loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, etc., (c) Condition of damage and corrosion of clamping materials and clamps, (d) Existence of removal and coming off of fall prevention equipment for scaffolds, (e) Condition of mounting and existence of removal of toe boards, (f) Condition of settling and sliding of foot portions (Excluding suspension scaffolding), (g) Condition of mounting and existence of removal of diagonal bracings, stays, ties to wall and other reinforcement materials, (h) Existence of damage of standards, ledgers and brackets, and (i) ~~Condition of the mounting portion of projected girders and lifting cables, and the function of lifting devices.~~ (4) When a contractor performs an inspection in accordance with the provisions of (3) above, the contractor shall record the following items and store them until the work that uses the scaffolding is completed: (a) Results of checkup, and (b) When measures such as repairs based on the results of the checkup are taken, the details of the measures.	**7.5.7 Inspection and Maintenace** The Contractor shall take the following measures at the time of assembling, altering or dismantling of scaffolds, at the assembly completion, before the work using the scaffold, and before the time of restart of work after the adverse weather and earthquake. (1) When scaffolds assembly is completed, make Operation Leader for scaffolds assembly check if the assembly is made in accordance with the design drawings. When not, correct it to meet the design drawings. (2) When work on a scaffold, before the start of work, check if the fall prevention facilities such as crossing, toe boards, handrails and middle bar etc. are removed or fell off (lost), fix it right away when abnormalities are identified (3) When the work resumes on the scaffolds after the adverse weather or earthquake in accordance with 2.7[adverse Weather], or after the assembly, altering or partial dismantle of the scaffolds, the following items shall be checked before the commencement of the work, and if any abnormalities are identified, correct it immediately. (a) Condition of damage, fixing and laying of floor materials, (b) Condition of loosening at the fastening, connecting and mounting, portions of standards, ledgers, brackets, etc., (c) Condition of damage and corrosion of clamping materials and clamps, (d) Existence of removal and fell off (lost) of fall prevention facilities in scaffolds, (e) Condition of mounting and existence of removal of toe boards, (f) Condition of settling and sliding of foot portions (Excluding suspension scaffolds), (g) Condition of mounting and existence of removal of diagonal bracings, stays, ties to wall and other reinforcement materials, (h) Existence of damage of standards, ledgers and transoms, and (4) When the Contractor inspects scaffolds in accordance with the provisions of (3) above, the Contractor shall record the following items and keep them until the work that uses the scaffolds is completed: (a) Results of cinspection, and (b) When measures such as repairs based on the results of the inspection are taken, the details of the measures.
7.5.8 高所作業車を用いての作業の際の留意点 請負者は、高所作業車を用いて作業を行うときは、次の措置を講じなければならない。	**7.5.8 Precautions for the Work with A Vehicle for Work at Height** The Contractor shall take the following measures when using a vehicle for work at height.	**7.5.8 Safety Measures for the Work with Mobile Elevating Work Platforms** The Contractor shall take the following measures when using mobile

(1) 作業主任

特定の作業の作業主任を任命し、作業を直接指揮させること。

(2) 高所作業車の設置、運転

(a) 高所作業車を作業場所に設置するときは、高所作業車の転倒又は転落による労働者の危険を防止するため、アウトリガーを完全に張出させること。また地盤の沈下防止対策をとること。

(b) 本仕様書 2.3[立入禁止の措置]に従い、作業区画を設置し、立入禁止措置を講じること。

(c) 高所作業車の製造者が定める運転に関する注意事項を作業員に遵守させること。

(d) 安全装置がある場合は、故意に機械の安全装置を解除させないこと。

(e) 請負者は、高所作業車を走行させるときは、次の措置を講じること。

(i) 作業床を所定の最低降下位置まで下げてから走行する。

(ii) 作業床において走行操作をしない車両の場合は、作業床に作業員を載せたまま走行してはならない。

(iii) 作業床において走行操作をする車両の場合は、平たん・堅固でない場所を走行してはならない。

(iv) 上記以外で、作業床において走行操作をしない車両の場合で、平坦で堅固な場所において作業床に作業員を載せたまま高所作業車を走行させるときは、次の措置を講じなければならない。

- 誘導者を配置し、その者に高所作業車を誘導させること。
- 一定の合図を定め、誘導者に当該合図を行わせること。
- あらかじめ、作業時における当該高所作業車の作業床の高さ及びブームの長さ等に応じた高所作業車の適正な制限速度を定め、それにより運転者に運転させること。

(f) 運転者が走行のため運転位置から離れる場合は、当該運転者に次の措置を講じさせること。

(i) 作業床に作業員が乗って作業を行っていない及び作業を行おうとしていない場合

- 作業床を最低降下位置に置かせること。
- 原動機を止め、かつ、停止の状態を保持するためのブレーキ(駐車ブレーキ)を確実にかける等の高所作業車の逸走を防止する措置をとらせること。

(ii) 作業床に作業員が乗って作業を行い、又は行おうとしている場合、当該高所作業車の停止の状態を保持するためのブレーキを確実にかける等の措置を講じさせること。

(iii) 高所作業車を用いて作業を行うときは、乗車席及び作業床以外の箇所に作業員を乗せてはならない。

(1) Operations leader

Appoint an operation leader for a specific work and direct the work.

(2) Placement and operation of a vehicle for work at height

(a) When placing a vehicle for work at height in the work place, take necessary measures of projecting an outrigger and of preventing uneven settling of the ground in order to prevent workers from dangers due to overturning or falling of the said vehicle, etc.

(b) In accordance with 2.3[Dangerous and Hazardous Area], specify work sections and take measures to prevent entry.

(c) Ensure that workers comply with the driving precautions set by the manufacturer of the vehicle for work at height.

(d) If there is a safety device, do not deliberately release the safety device of the machine.

(e) The Contractor shall take the following measures when driving a vehicle for work at height:

(i) Drive after lowering the working floor to the specified minimum descent position;

(ii) In the case of a vehicle that are not operated on the working floor, the said vehivle shall not be driven with a worker on the working floor.

(iii) In the case of a vehicle that are operated on the working floor, the said vehicle shall not be driven on non-level or non-firm places.

(iv) Other than the above, in the case of a vehicle that are not operated on the working floor, the following measures shall be taken when driving the said vehicle in a level and firm place with a worker on the working floor:

- Arrange a guide, and have the said person guide a vehicle for work at height,
- Set fixed signals and have the guide set forth in the preceding item give the signals, and
- Set an appropriate working speed limit for the vehicle for work at height in advance corresponding to the height of the working floor and the length of the boom, etc. of the said vehicle for work at height, and have the operator operate the vehicle by them.

(f) Have the operator shall take the following measures when leaving the operatinbg position:

(i) When a worker is not working on the working floor or is not going to work,

- Put the working floor in the lowest position
- Stop a prime mover and take measures of setting the brake securely to keep the machine in stopped condition: parking brake, etc., in order to prevent a vehicle for work at height from breaking into a run.

elevating work platforms at height.

(1) Operation Leader

Appoint an Operation Leader for the work with mobile elevating work platform.

(2) Placement and operation of mobile elevating work platform

(a) When placing mobile elevating work platform on the work site, take necessary measures such as extending fully outriggers and preventing uneven settling of the ground in order to prevent workers from dangers due to its overturning of or falling of wokers from it.

(b) In accordance with 2.3[Prohibition of Entry - Dangerous Work], specify work areas and take measures to prevent entry of workers other than workers for the work.

(c) Ensure that workers comply with the operation instructions given in the manual by the manufacturer of the mobile elevating work platform.

(d) Not deliberately release (switch off) the safety device of the mobile elevating work platform if there is a safety device.

(e) The Contractor shall take the following measures when driving mobile elevating work platform:

(i) Drive after lowering the working platform to the specified lowest descent position;

(ii) In the case of the mobile elevating work platform that is not operated on the working floor, the mobile elevating work platform shall not be driven with a worker on the working floor.

(iii) In the case of the mobile elevating work platform that is operated on the working floor, the mobile elevating work platform shall not be driven on not-level or not-firm places.

(iv) Other than the above, in the case of the mobile elevating work platform that is not operated on the working floor, the following measures shall be taken when driving the said the mobile elevating work platform on level place and firm place with worker on the working floor:

- Place Spotter to guide the mobile elevating work platform in accordance with JSSS 2.4 [Sptters, Flagmen and the Like],
- Determine signals as mentioned in JSSS 2.4.5[Signals], and
- Determine appropriate working speed limit for the mobile elevating work platform in advance according to the height of the working floor and the length of the boom, etc. of the mobile elevating work platform, and have the operator moves the

(iv) 高所作業車を、その製造者が規定した制限荷重（高所作業車の構造及び材料に応じて、作業床に人又は荷を乗せて上昇させることができる最大の荷重。）を超えて使用させてはならない。

(3) 作業床の操作

作業床以外の箇所で作業床を操作するときは、作業床上の作業員と作業床以外の箇所で作業床を操作する者との間の連絡を確実にするため、本仕様書 2.4.2［合図の統一］に従い一定の合図を定め、当該合図を行う者を指名してその者に合図を行わせること。

(4) 作業床での作業

請負者は、高所作業車の作業床で作業を行う作業員の安全のために、次の措置を講じること。

(a) 作業員には、墜落制止用器具、保護帽等の保護具を使用させること。

(b) 作業床から現場の鉄骨などへの乗り移り、手摺りに足を掛け手作業する等の危険な行動を、作業員に禁じること。

(c) 本仕様書 2.7[悪天候及び地震時の対策]に従い悪天候のときは 2m 以上の高所作業を中止させなければならない。

(5) 高所作業車の点検、修理

(a) 本仕様書 4.1.6[搬入時の確認]、4.1.7[建設機械の点検・整備]、4.1.8[日常点検]、4.1.9[定期点検]に従い、高所作業車の点検を行うこと。

(b) 高所作業車の修理、作業床の装着又は取り外しの作業は、本仕様書 4.2.2[点検・修理作業時の安全確保]及び 4.2.3[アタッチメント等作業装置の装着及び取りはずし作業]に従い行うこと。

(6) 用途以外の使用禁止

高所作業車を、荷の吊り上げ等の当該高所作業車の主たる用途以外に使用してはならない。

(ii) If a worker is working on the working floor or is about to work, make sure to apply a brake to ensure that the work vehicle at high altitude is stopped,

(iii) When using a vehicle for work at height, workers shall not be boarded on other than the passenger seat and working floor, and

(iv) A vehicle for work at height must not be used beyond the limit load: maximum load that can be lifted by a person or load on the working floor, depending on the structure and material of the veicle specified by the manufacturer.

(3) Working floor operation

When operating the working floor at a place other than the working floor, in order to ensure communication between the worker on the working floor and the person operating the working floor at a place other than the working floor, establish a certain signal and designate persons who exchange signale and have them signal in accordance with 2.4.2[Unifying Signals].

(4) Work on the working floor

The Contractor shall take the following measures to ensure the safety of workers working on the working floor of a vehicle for work at height:

(a) Have workers use protective equipment such as fall prevention equipment and protective caps,

(b) Prohibit workers from performing dangerous actions such as transferring from the working floor to a steel frame at the work site, placing a foot on the handrail, and performing manual work, and

(c) When the weather is bad, stop work at a height of 2m or more in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes].

(5) Checkup and repair of a vehicle for work at height

(a) Carry out checkup on a vehicle for work at height in accordance with 4.1.6[Check at Delivery], 4.1.7[Checkup and Maintenance of Construction Machine], 4.1.8[Daily Checkup], and 4.1.9[Periodical Checkup]

(b) Repair work of a vehicle for work at height, installation/removal of working floor shall be carried out following 4.2.2[Ensuring Safety during Checkup and Repair Work] and 4.2.3[Installation and Removal Work of Work Equipment such as Attachments].

(6) Prohibition of use for other purposes

A vehicle for work at height must not be used for purposes other than the original use of the vehicle, such as lifting a load.

mobile elevating work platform at the speed lower than the limit speed.

(f) Have the operator shall take the following measures when leaving the operatinbg position:

(i) When worker(s) is not working on the working floor or is not going to work,

- Put the working floor in the lowest position
- Stop prime engine/motor
- Take measures such as applying the parking brake securely to keep the mobile elevating work platform in stopped condition.

(ii) If a worker is working on the working floor or is about to work, make sure to apply brake to the mobile elevating work platform being stopped,

(iii) When using the mobile elevating work platform, workers shall not be boarded on other than the passenger seat and working floor, and

(iv) Mobile elevating work platform shall not be used beyond the limit load specified by the its manufacturer.

(3) Working floor operation

When operating the working floor at a place other than the working floor, to ensure communication between the worker on the working floor and the person operating the working floor at a place other than the working floor.

Establish certain signals and locate Sptter in accordance with JSSS 2.4 [Sptters, Flagmen and the Like].

(4) Work on the working floor

The Contractor shall take the following measures to ensure the safety of workers working on the working floor of the mobile elevating work platform:

(a) Have workers use PPE such as PFRS and safety helmets,

(b) Prohibit workers from take dangerous actions such as moving from the working floor to a steel frame at the work site and carry out manual work placing worker's foot on the handrail, and

(c) Stop work at a height of 2m or more in case of adverse weather in accordance with 2.7[Adverse Weather Requirements].

(5) Inspect and maintenance of mobile elevating work platform

(a) Carry out inspection of mobile elevating work platform in accordance with 4.1.5[Inspection and Maintenace] and 4.2.1 [Inspection and maintenace], *(To MD, these reference clauses Nos and titles are tentative.)*

(b) Repair work of mobile elevating work platform and installation/removal of its working floor shall be carried out

		following 4.2.5[Safety Measures during Inspection and Maintenace Work] and 4.2.6[Safety measures at Installation and Removal Work of Attachments, etc.]. (6) Prohibition of use for other purposes Mobile elevating work platforms shall not be used for purposes other than the original use of the mobile elevating work platforms, such as lifting a load.
7.5.9 脚立を用いての作業の際の留意事項 請負者は、脚立を用いての作業に際しては、次を遵守しなくてはならない。 (1) 脚立を用いての作業は、高さ 2m 以上は不可。2m 以上の高さの作業の場合は足場を組む等の他の措置をとること。 (2) 踏み面は、作業を安全に行なうため必要な面積を有すること。 (3) 開き止め金具は確実にロックすること。 (4) 脚立が安定しない場所には設置しない。 (5) 出入口やドアの前では使用しない。 (6) 天板に乗って、又は天板を跨いで作業をさせないこと。 (7) 脚立の上で作業する時は、天板を含め上から 3 段目以下の踏みさんに乗り作業をさせること。 (8) 脚立の上で作業する時は、3 点以上の支持によること。 (9) 上向き作業をしないこと。 (10) 踏みさん上に足場板をかけて作業を行う場合は、次を遵守すること。 (a) 脚立の中心線間の間隔は 1.8m 以下、足場板の幅は 40cm 以上とし、重ね長さは 20cm 以上として、3 以上の支持物にかけ渡すこと。 (b) 足場板の支点からの突出部の長さは 10cm 以上とし、かつ、作業員が当該突出部に足を掛けるおそれのない場合を除き、足場板の長さの 1/18 以下とすること。 (c) 足場板は丈夫なものを使用し、著しい損傷、変形または腐食のあるものを使用してはならない。	**7.5.9 Precautions for Steppladder Work** The Contractor shall comply with the following when working with the stepladder. (1) When working with a stepladder, a height of 2m or more is not possible. In the case of work more than 2m, take other measures such as building a scaffold. (2) The tread of the stepladder must have the necessary dimension for safe work. (3) Secure the locking clasp securely. (4) Do not install a stepladder in a place where is unstable. (5) Do not use in front of doorways or doors. (6) Do not step on or straddle the top plate to work. (7) When working on a stepladder, get on the step 3 and below from the top, including the top board. (8) When working on a stepladder, support at least three points. (9) Do not work in an upward position. (10) The following shall be complied with when performing work with a scaffolding board on the treads. (a) The distance between the center lines of the stepladders shall be 1.8m or less, the width of the scaffolding board shall be 40cm or more, and the overlap length shall be 20cm or more. (b) The length of projection of scaffolding boards from the fulcrums to be of 10 cm or more, and is one-eighteenth of the length of the said scaffolding boards or less, excluding when there is no possibility that workers will step on the said projections. (c) Use scaffolding boards with sound structure, without marked damage, deformation or corrosion.	**7.5.9 Safety measure for Steppladder Work** The Contractor shall comply with the following when working with the stepladder. (1) Work using with a stepladder at a height of 2m or more shall be prohibited. Take other measures for the work at a height of 2m or more such as constructing of scaffolds. (2) The tread of the stepladder shall have the necessary area for safe work. (3) Lock clasps securely. (4) Not put a stepladder in unstable place. (5) Not use stepladder in front of exit/entrance or doors. (6) Not step on or straddle the top plate of stepladder to work. (7) When working on stepladder, get on the third step or below from the top including the top board. (8) When working on stepladder, support the workers body at least three points. (9) Not work in upward position. (10) The following measures shall be taken when working with a scaffold boards on its steps. (*To MD, please refer to the figures at last page.)* (a) The distance between the center lines of the stepladders shall be 1.8m or less, the width of the scaffold boards shall be 40cm or more, and the overlap length shall be 20cm or more. (b) The length of projection of scaffold boards from the fulcrums (steps) to be of 10 cm or more, and is one-eighteenth of the length of the said scaffold boards or less, excluding when there is no possibility that workers will step on the said projections. (c) Scaffold boards shall be of sound ones without remarkable damage, deformation or corrosion.

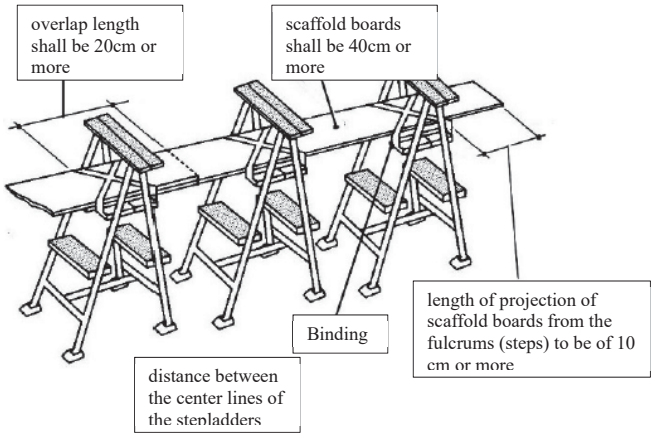
Explanation for 7.5.9(10)



JICA Standard Safety Specification Preparation Study
7.6 Working Platform (English Draft R1)

2019.10.23 Japanese Prov. Final
2019.11.5 Japanese Prov. FinalR1
2019.11.5 NK Draft R0
2019.11.25 NK Draft R1

JSSS in Japanese （Provisional Final Draft R1 11/5）	JSSS in English R0（11/5）	JSSS in English R1（11/25）
7.6 作業構台 **7.6.1 一般事項** (1) 作業構台の定義 作業構台とは、仮設の支柱及び作業床等により構成する設備で、下記(2)の用途で使用されるものをいう。 (2) 作業構台の用途 作業構台は、作業場所が狭い場所、水面上、急傾斜面上等に位置するため、作業に必要な場所を確保できない場合に仮設として設置するもので、工事用の建設機械や運搬機械の通行や作業、仮設プラント等の設置や運転、工事用車両の通行や駐車、資機材等の運搬や仮置き等を用途とするものである。	**7.6 Working Platform** **7.6.1 General** (1) Definition of working platform Working platform means temporary facilities composed of temporary columns and working floors, etc., and is used for the purposes shown in (2) below. (2) Intended use of working platform The working platform is installed as a temporary work space when it is narrow, or on the water surface, or on a steeply inclined surface, etc. so as not to secure the necessary space to work. It is used for traffic and work of construction or transport machines, installation and operation of temporary plants, traffic and parking of vehicles and temporary storage of materials and equipment.	**7.6 Working Platform** **7.6.1 General** (1) Definition of working platform Working platform means temporary facilities composed of temporary columns and working floors, etc., and is used for the purposes shown in (2) below. (2) Purpose of working platform The working platforms are temporarily constructed to provide work spaces at places such as on narrow place, in water, on steeply inclined place. They are used for transportation for and work places of construction equipment, installation and operation of temporary plants, traffic and parking of vehicles and temporary storing places of construction materials and equipment. *To MD: Please see the attached sketch and photos of working plantform. Please specify proper English terms.*
7.6.2 作業構台の設計・組立・解体 (1) 作業構台の設計 下記事項を考慮し、本章 7.1.3[仮設構造物の設計及び設計照査]にもとづき計画、設計すること。 (a) 使用機械、車両等の重量を勘案した上載荷重 (b) 支柱の滑動・沈下 (c) 7.6.4[作業構台の点検]のために必要な設備 作業構台の設計を変更するときは、本章 7.1.3[仮設工事の設計及び設計照査]の規定に従って設計変更を行うこと、また、作業計画書を変更すること。 (2) 作業構台の組立、解体 請負者は、作業構台の組立及び解体時には、次の措置を講じなければならない。 (a) 組立又は解体の作業の安全措置 (i) 本仕様書 2.3[立入禁止の措置]の(1)の規定に従い、当該作業者以外の者の立入りを禁止する措置 (ii) 本仕様書 2.4[監視員、誘導員の配置]に規定の監視員、誘導員の配置、合図の統一の措置 (iii) 本仕様書 2.6[飛来落下の防止措置]に規定の物体の飛来落下の防止の措置	**7.6.2 Design, Assembly and Dismantling of Working Platform** (1) Design of working platform In consideration of the following points, plan and design based on 7.1.3 [Design and Verification of Temporary Structures]. (a) Load considering the weight of machines and vehicles (b) Sliding and sinking of struts (c) Equipment required for 7.6.4[Checkup of Working Platform] When changing the design of the working platform, perform a design change in accordance with 7.1.3 [Design and Verification of Temporary Work] and carry it out. Also, change the particular method statement. (2) Assembly and dismantling of working platform The Contractor shall take the following measures when assembling and dismantling the working platform. (a) Safety measures for assembly or dismantling work (i) Measures to prohibit entry of persons other than the worker in accordance with (1) of 2.3 [Dangerous and Hazardous Area] (ii) Measures targeted at placement of spotters and flagmen, and unifying signals as specified in 2.4 [Spotters and Flagmen]	**7.6.2 Design, Assembly and Dismantling of Working Platform** (1) Design of working platform The Contractor shall plan and design working platform in accordance with JSSS 7.1.3 [Design and Verification of Temporary Structures] taking account the following points: (a) Loads of the weight of construction equipment and vehicles, (b) Safety against sliding and sinking of pillars (standards), and (c) Facility required in JSSS 7.6.4[Inspection of Working Platform]. When revising the design of the working platform, the Contractor shall carry out design revision in accordance with 7.1.3 [Design and Verification of Temporary Work] and revise the Method Statement. (2) Assembly and dismantling of working platform The Contractor shall take the following measures when assembling and dismantling the working platform. (a) Safety measures for assembly or dismantling work (i) Prohibition of entry of anybody other than the workers for the working platform in accordance with JSSS of 2.3[Prohibition of Entry - Dangerous Work], (ii) Placement of spotters and flagmen, and unifying signals as specified in 2.4 [Spotters, flagmen and the like],

(iv) 本仕様書 6[揚貨・玉掛け作業]に規定の揚貨作業時の安全措置 (b) 作業範囲、時期及び順序についての周知 組立又は解体の作業時期、範囲及び順序を当該作業に従事する作業員に周知すること。また、作業は施工計画に忠実に行わなければならないことを周知すること。 (3) 作業員の墜落防止の措置 作業員の墜落のおそれのある箇所には手摺、柵等の墜落防止用の設備を設けること。詳細は 2.5.3[足場・作業床からの墜落防止措置]、2.5.4[作業床端、開口部からの墜落防止措置]の規定に従うこと。 (4) 車両の転落防止の措置 作業構台から車両の転落の危険のおそれのある箇所には、転落防止のため、十分な強度を有する地覆・車止めを設置し、取付・固定は確実に行うこと。 (5) 悪天候時の対応 悪天候のため、組立・解体作業の実施について危険が予想されるときは、本仕様書 2.7[悪天候及び地震時の対策]の規定に従い、作業を中止すること。	(iii) Measures to prevent flying and falling of objects as specified in 2.6[Measures to Prevent Flying and Falling] (iv) Safety measures for lifting work as specified in 6 [Lifting and Slinging Work] (b) Inform work area, timing and order of workers Inform the workers of the timing of assembly or dismantling work, scope and order. In addition, have workers recognize that the work must be done faithfully to the method statement. (3) Measures to prevent workers from falling Fall prevention equipment such as handrails and fences shall be installed at locations with the risk of falling of workers. For detailed provisions, take measures as specified in 2.5.3 [Measures for Preventing Falls from Scaffoldings and Working Floors] and 2.5.4 [Measures for Preventing Falls from the End of Working Floors and Openings]. (4) Measures to prevent vehicle from rolling down In areas where there is a risk of rolling down of vehicles from working platforms, a ground cover and car stopper with sufficient strength should be installed to prevent the vehicle from rolling down, and mounting and fixing have to be secured. (5) Response in bad weather If there is a risk of assembly/disassembly work due to bad weather, the work has to be stopped in accordance with 2.7 [Countermeasures under Bad Weather and Earthquakes].	(iii) Prevention of falling of objects as specified in 2.6[Falling Objects], and (iv) Safety measures for lifting work as specified in JSSS 6 [Lifting and Slinging Work]. (b) Information of work place, timing and procedure to workers The Contractor shall inform the workers for the assembly or dismantling work of the work place, scope, timing and procedure of assembly or dismantling work. In addition, have workers recognize that the work must be done in accordance with the Method Statement. (3) Measures to prevent workers from falling The Contractor shall provide fall prevention equipment such as handrails and fences at locations where there is the risk of falling of workers. The measures shall be taken in accordance with as specified in 2.5[Fall Prevention]. (4) Measures to prevent vehicle from falling The Contractor shall provide and fix rigidly wheel guard or car stopper of sufficient strength to prevent vehicles from falling at places where there is a risk of falling of vehicles from working platform. *To MD: Please specify proper English terms for wheel guard or car stopper. I attach figures below for your reference.* (5) Measures in adverse weather When there is a risk of assembly/disassembly work due to adverse weather, the work shall be stopped in accordance with 2.7 [Adverse Weather Requirements].
7.6.3 作業構台の使用 請負者は、作業構台における安全を確保するため、次の措置を講じなければならない。 (1) 作業構台の最大上載荷重を、パネル、ボード等を利用して見やすい位置に掲示したうえで、当該荷重を超える車両、建設機械等を進入させないこと。 (2) 作業員の通行のために、本仕様 7.4.2[通路の設定]に従い、通路を設定すること。 (3) 建設機械等と作業員との接触防止のため、本仕様書 4.1.2[各作業の作業員への周知]、4.1.10[運用時の安全措置]に従い、必要な措置を講じること。 (4) 作業員の建設機械等との接触の危険防止のために、資材運搬車両の経路、資材仮置場の位置、重機の配置等を、作業員に作業前に認識させること。	**7.6.3 Use of Working Platform** The Contractor shall take the following measures to ensure safety of work on the working platform. (1) Post the maximum load of the working platform at a position where it can be easily seen using panels, boards, etc., and do not allow vehicles, construction machines, etc. exceeding the capacity to enter. (2) For passage of workers, set the passage in accordance with this JSSS 7.4.2 [Setting up Temporary Passage]. (3) In order to prevent contact accidents between construction machinery and workers, take necessary measures in accordance with 4.1.2 [Inform Workers of Each Work] and 4.1.10 [Safety Measures during Operation]. (4) To prevent contact accidents between machinery and workers, let workers know the transport route of machinery, location of material storage and operation points of heavy machinery before the commencement of the work.	**7.6.3 Use of Working Platform** The Contractor shall take the following measures to ensure safety of work on the working platform. (1) Post the maximum loading capacity of the working platform in easy-to-see places using panels, boards, etc., (2) Not allow vehicles, construction machines, etc. exceeding the maximum loading capacity of the working platform, (3) Provide the walkways in accordance with this JSSS 7.4.2, [Measures for Temporary Walkways], (4) To prevent collision accidents by construction equipment to workers, take following measures: (a) Measures in accordance with 4.1.2 [Inform Workers of Each Work] and 4.1.10 [Safety Measures during Operation], and (b) Make workers know the moving route of transportation and construction equipment, location of material storage and

		operation places of construction equipment before the commencement of the work.
7.6.4 作業構台の点検 請負者は、作業構台で作業を行うときは、次に示す点検を行い、異常を認めたときは直ちに補修しなければならない。次の(2)に規定の点検の点検結果及び補修の記録は、作業が終了するまで保管しなければならない。 (1) 作業開始前の点検 その日の作業を開始する前に、作業を行う箇所に設けた手すり、中桟及び床材等の取り外し及び脱落の有無の点検を行うこと。 (5) 本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候及び地震の発生後、作業構台の組立て、一部解体又は変更の後において、作業構台における作業を行うときは、作業開始前に、次の事項について点検を行い、異常を認めたときは直ちに補修を行うこと。 (a) 支柱の滑動及び沈下の状態 (b) 床材の損傷、取付け及び掛渡しの状態 (c) 支柱、はり、筋かい等の緊結部、接続部及び取付部の緩みの状態 (d) 緊結材及び緊結金具の損傷及び腐食の状態 (e) 水平つなぎ、筋かい等の補強材の取付状態及び取り外しの有無	**7.6.4 Checkup of Working Platform** The Contractor shall carry out the following checkup when operation in performed on the platform, and shall immediately repair when any abnormalities are identified. The results of checkup and repair records specified in the following (2) shall be kept until the work is completed. (1) Checkup before the commencement of the work Before starting the work on that day, check the existence of removal and coming off of handrails, middle rails and flooring, etc. that are installed at working space. (6) When the work is performed on the working platform after the bad weather or an occurrence of earthquake in accordance with 2.7[Coutermeasures under Bad Weather and Earthquakes], or after the assembly, partial disassembly or modification of the platform, the following points shall be checked out before the commencement of the work, and if any abnormalities are identified, correct it immediately. (a) Condition of sliding and sinking of struts. (b) Condition of damage, mounting and placing of floor materials. (c) Condition of loosening at the fastening, connecting and mounting portions of struts, beams, braces, etc., (d) Condition of damage and corrosion of clamping materials and clamps. (e) Condition of mounting and existence of removal of horizontal tethers, diagonal bracings, and other reinforcement materials.	**7.6.4 Inspection and Maintenance of Working Platform** The Contractor shall carry out the following inspection when operation is made on the platform and immediately repair when any abnormalities are identified. The results of inspection and maintenance records specified in the following (2) shall be kept until the work is completed. (1) Inspection before the commencement of the work Before commencing the work on the day, inspect abnormalities such as removal and falling of handrails, middle rails and flooring, etc. installed at working place. (2) When the work is being commenced on the working platform after the adverse weather or earthquake in accordance with 2.7[Adverse Weather Requirements], or after the assembly, partial disassembly or modification of the platform, the following items shall be inspected before the commencement of the work, and if any abnormalities are identified, correct it immediately. (a) Condition of sliding and sinking of pillars (standards), (b) Condition of damage, fixing and placing of floor materials, (c) Condition of loosening at the fastening, connecting and fixing portions of pillars, beams, braces, etc., and (d) Condition of damage and corrosion of clamping materials and clamps. (e) Condition of mounting and existence of removal of horizontal member (transom), diagonal bracings, and other reinforcement materials. *To MD: I cannot find proper names of frame/working platform in English. Please specify proper English terms. I attach figures below for your reference.*

To Mike san,

We are specfifying the safety for the Work Stage / Working Platform such as shown in the photos below: Please determine proper title of this section in English.

2019.10.25 Japanese Prov. Final
2019.11.5 NK Draft R0
2019.11.26 NK Draft R1

Specification in Japanese（Provisional Final 10/25）	English Translation（Draft R0 11/5）	English Translation（Draft R1 11/26）
7.8 仮設電気設備 **7.8.1 一般事項** (1) 本節では、仮設電気設備の設置、移転、撤去、修理等の作業の安全について規定する。 (2) 本節では、電圧が 600V 以下又は当該国で規定の低圧の仮設電気設備に関して規定する。 (3) 本節で使用する用語の定義は次である。 (a) 仮設電気設備とは、請負者が工事のために現場内に設置する受電設備、変電設備、発電設備、配電設備等の仮設の設備をいう。 (b) 配電設備とは、受電設備又は発電設備から各作業場へ配電するための電線、ケーブル、配電盤、分電盤、開閉器等の設備をいう。 (4) 請負者は、仮設電気設備に関し、本節で規定のない事項は当該国の法律又は電力供給を受ける電力会社の規定を遵守しなければならない。	**7.8 Temporary Electric Equipment/Power facility** **7.8.1 General** (1) In this section, safety of work such as installation, relocation, removal and repair of temporary electrical equipment is defined. (2) In this section, temporary electrical equipment with a voltage of 600V or less or low voltage specified in the country concerned are defined. (3) Definitions of terms used in this section are as follows. (a) Temporary electrical equipment refers to temporary equipment such as power receiving equipment, substation equipment, power generation equipment, power distribution equipment, etc. installed on site by the Contractor. (b) Distribution facilities refer to facilities such as electric wires and cables for distributing power from receiving or generating facilities to each workplace. (4) The Contractor shall comply with the laws of the target country or the provisions of the electric power company that receives the power supply for matters not stipulated in this section regarding temporary electric equipment.	**7.8 Temporary Electric Power Facilities** **7.8.1 General** (1) This Section prescribe safety measures for the work of installation, relocation, removal and repair of temporary electric power facilities. (2) The temporary electric power facilities prescribed in this Section are those of voltage of 600V or less or those defined as low voltage facilities in the Country. (3) Definitions of terms used in this section are as follows. (a) Temporary electric facilities are those such as power receiving equipment, transformers, power generation equipment, power distribution facilities, etc. installed and operated for the Works by the Contractor on the Site. (b) Distribution facilities are those such as electric wires, cables, switchboards, distribution panels and switches for distributing power from power receiving facility or generating equipment to each work site. (4) The Contractor shall comply with the Laws or the regulations of the power company which supply power to the Contractor, regarding temporary electric power facilities not stipulated in this Section.
7.8.2 作業計画と作業員への周知 (1) 請負者は、本仕様書 1.3[安全衛生にかかわる計画書]に規定の事項に加え、次の事項を加えた作業計画書及び安全衛生詳細計画書を作成しなければならない。 (a) 当該工事で適用する当該国の電気関係の法律及び電力供給を受ける電力会社の規定 (b) 電線、ケーブルの規格と電圧 (c) 電線、ケーブルの防護工 (d) 電気系統図 (2) 請負者は、仮設電気設備の設置、移転、撤去、修理等の作業を行うときは、作業員の感電を防止するため次の事項を含めた安全上の措置について、必要に応じ作業員へ周知しなければならない。 (a) 作業場所、作業内容、作業方法 (b) 感電の危険のある作業、場所 (c) 感電防止のための措置	**7.8.2 Work Plan and Announcement to Workers** (1) The Contractor shall prepare a particular method statement and a particular health and safety plan with the following items in addition to the items specified in this JSSS 1.3 [Plan for Health and Safety]. (a) Electricity laws in the country and regulations of the power company that receives the power supply (b) Specification and voltages for electric wires and cables (c) Electric wire and cable protective work (d) Electrical diagram (2) The Contractor shall inform safety measures including the following as necessary to prevent electric shock of workers when performing installation, relocation, removal, repair, etc. of temporary electrical equipment. (a) Work location, contents of work, work method (b) Work or place where there is a risk of electric shock	**7.8.2 Work Plan and Information to Workers** (1) The Contractor shall prepare Method Statement and Safety Plan covering the following items in addition to the items specified in JSSS 1.3 [Plan for Health and Safety]. (a) Laws and regulations of the power company which supply power to the Contractor, (b) Standards and voltages of electric wires and cables, (c) Protective work for electric wires and cables, and (d) Electric diagram. (2) The Contractor shall inform workers of safety measures including the following items as necessary to prevent electric shock when performing installation, relocation, removal, repair, etc. of temporary electric facilities: (a) Work location, contents of work, work method (b) Work or place where there is a risk of electric shock

	(c) Measures to prevent electric shock	(c) Measures to prevent electric shock
7.8.3 設置と管理 (1) 請負者は、本仕様書 1.8[請負者の要員の適正配置]に従い、必要な資格を有し、電気に関する十分な知識と経験を持つ者（competent person）に、仮設電気設備の設置と管理をさせなければならない。 (2) 請負者は、仮設電気設備の管理の担当者の氏名を、当該仮設電気設備に明示するとともに、当該担当者以外の操作を禁止する旨を表示しなければならない。	**7.8.3 Installation and Management** (1) The Contractor shall have a competent person who has the necessary qualifications with sufficient knowledge and experience in electricity in accordance with this JSSS 1.8 [Proper arrangement of contractor personnel] install and manage temporary electric equipment. (2) The Contractor shall clearly indicate the name of the person in charge of managing the temporary electric equipment and indicate that operations other than the person in charge are prohibited on it.	**7.8.3 Installation and Management** (1) The Contractor shall allocate a competent person who has the necessary qualifications with sufficient knowledge and experience in electricity in accordance with this JSSS 1.8 [Proper arrangement of contractor personnel] to the wok of installation and management of temporary electric facilities. (2) The Contractor shall post the name of the person in charge of managing the temporary electric facilities and prohibition of operation by other than the person in charge.
7.8.4 点検・検査 (1) 仮設電気設備の点検・整備 請負者は、仮設電気設備の点検、整備に関して次の事項を遵守し、仮設電気設備の保守管理を行わなければならない。 (a) 日常点検 柵・囲い等の付帯施設の状況の確認も含めた仮設電気設備の日常点検表を準備し、点検・検査を行い、その結果を記録すること。 (b) 定期点検 仮設電気設備の絶縁抵抗値の測定、過電流・地絡等に対する保護装置の機能確認を含む定期点検表を準備し、点検・検査を行い、その結果を記録すること。 (c) 整備・補修 点検の結果、必要が認められた場合は、整備を実施すること。また、整備、補修が完了するまで仮設電気設備を使用しないこと。 (2) 点検の担当者及び報告 請負者は、仮設電気設備の日常点検及び定期点検は、仮設電気設備の管理の担当者に行わせ、点検結果を工事終了まで保管しなければならない。また、点検結果は、毎月作成する進捗報告書に含めなくてはならない。 (3) 悪天候及び地震時の点検 悪天候及び地震時の点検は、本仕様書 2.7[悪天候及び地震時の対策]に従い行なわなければならない。	**7.8.4 Checkup and Inspection** (1) Checkup and inspection of temporary electric equipment The Contractor shall comply with the following points regarding the checkup and maintenance of the temporary electric equipment, and perform maintenance management for it. (a) Daily checkup Prepare a daily checkup table with the purpose of checking the status of subsidiary facilities such as fences and enclosures, carry out checkup and inspections, and record the results. (b) Periodical checkup Prepare a periodic checkup table with the purpose of measuring the insulation resistance value of temporary electric equipment and checking the function of the protective device against overcurrent, ground fault, etc., carry out checkup and inspections, and record the results. (c) Maintenance and repair As a result of inspection, perform maintenance, if necessary. Do not use temporary electric equipment until maintenance and repairs are completed. (2) Person in charge of checkup and reporting The Contractor shall have the person in charge of the temporary electric equipment manage the daily and periodic checkup and keep its results until the completion of the construction. In addition, the results must be included in the progress report to be prepared each month. (3) Checkup in bad weather and earthquake Inspections in bad weather and earthquakes must be performed in accordance with 2.7 [Coutermeasures under Bad Weather and Earthquakes].	**7.8.4 Inspection and Maintenance** (1) Inspection of temporary electric facilities The Contractor shall inspect and maintain the temporary electric facilities as specified below. (a) Daily inspection Prepare daily inspection check list of the temporary electric facilities including the status of subsidiary facilities such as fences and enclosures, inspect them daily and record the inspection results. (b) Periodical inspection Prepare periodical inspection checklist including measuring the insulation resistance value of temporary electric facilities and the function of the protective device against overcurrent, ground fault, etc., inspect them periodically and record the inspection results. (c) Maintenance and repair As a result of inspection, make maintenance of temporary electric facilities, if necessary. Temporary electric facilities shall not be operated until maintenance and repairs are completed. (4) Person in charge of inspection and reporting The Contractor shall allocate the person in charge of daily and periodical inspection, maintenance and reporting of the temporary electric facilities until the completion of the Works. In addition, the results shall be included in the Monthly Progress Report. (5) Inspection after adverse weather and earthquake Inspections after adverse weather and earthquake shall be carried out in accordance with 2.7 [Adverse Weather Requirements].

7.8.5 作業時の安全措置

請負者は、仮設電気設備の設置、移転、撤去、修理等の作業に際して、次に示す安全措置を講じなければならない。

(1) 材料及び器具

仮設電気設備の設備、材料及び器具は、当該国の法律で規定、あるいは電力供給を受ける電力会社の指定する規格品を用いなければならない。

(2) 配線工事

(a) 電線と仮設の構造物、通行車両等との間隔は、適正に保つよう配線工事を行うこと。

(b) (a)において適正な間隔が保てない場合は、絶縁防護管で電線を防護すること。

(c) 作業の支障とならない箇所に配線すること。

(d) 配線ケーブルを作業床に配線する場合は露出させてはならない。

(3) 配電盤・分電盤・開閉器

(a) 配電盤・分電盤・開閉器は防水構造で金属製の施錠可能な箱を用い、アースを行うこと。

(b) 配電盤・分電盤のヒューズ及びしゃ断器は、負荷容量に適合したものであること。

(4) 受電設備、変電設備には、柵・囲い等を施すとともに、危険標示を行い、出入口は施錠すること。

(5) アース

(a) 仮設電気設備は、漏電による感電の危険防止のため、各設備に必要なアースを行うこと。

(b) アース電極は、銅又は鋼等の導電性の高いものであること。

(6) 仮設電気設備の移設、修理の作業

(a) 移設や修理の作業は、通電を停止して行い、絶縁用防具の装着の確認、検電を行った後に行うこと。

(b) 作業中又は作業を終了した場合において、仮設電気設備に通電しようとするときは、あらかじめ、当該作業に従事する作業員に感電の危険が生ずるおそれのないことを確認した後でなければ、通電してはならない。

(7) 仮設電気設備の設置、移設、修理の作業が終了したときは、検査を行ったのち設備を使用すること。

7.8.5 Safety Measures during Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric equipment.

(1) Material and instruments

Temporary electric equipment equipment, materials and equipment shall be specified by the laws of the country concerned or specified by the power company receiving the power supply.

(2) Wiring work

(a) Carry out wiring work so that the distance between the electric wires and temporary structures, passing vehicles, etc. is kept appropriate.

(b) If an appropriate interval cannot be maintained in (a), protect the wire with an insulated protective tube.

(c) Wiring in a place that does not interfere with work.

(d) Wiring cables must not be exposed when wiring to the working floor.

(3) Switchboard, distribution panel and switch

(a) Switchboard, distribution panel and switch have to be grounded using a waterproof metal box that can be locked.

(b) Use fuses and circuit breakers of switchboard and distribution panel that are suitable for the load capacity of power.

(4) The power receiving equipment and substation equipment shall be fenced, enclosed, etc., and shall be labeled with danger, and the doorway have to be locked.

(5) Grounding

(a) Temporary electric facilities shall be grounded as necessary for each facility to prevent the risk of electric shock due to electrical leakage.

(b) Material of the ground electrode shall be highly conductive such as copper or steel.

(6) Relocation and repair work of temporary electric equipment

(a) Relocation and repair work have to be performed after turning off the power, confirming that the protective equipment for insulation is installed, and performing voltage detection.

(b) When attempting to energize temporary electric equipment during or after work, it must be confirmed in advance that there is no risk of electric shock for workers engaged in the work.

(7) When the installation, relocation, and repair work for temporary electric equipment is completed, use the equipment after inspection.

7.8.5 Safety Measures during the Work

The Contractor shall take the following safety measures when installing, moving, removing, repairing temporary electric facilities.

(1) Materials and instruments

Materials, equipment and tools of the temporary electric facilities shall standard ones to meet the specifications of the Laws or specified by the power company to supply power to the Contractor.

(2) Wiring work

(a) Carry out wiring work so that the safety distance between the electric wires and temporary structures, passing vehicles, etc. shall be kept appropriately.

(b) If an appropriate distance in (a) cannot be maintained, protect the electric wires with insulated protective tubes.

(c) Make wiring in place where it does not interfere with other works.

(d) Electrical cables shall not be exposed when wiring on the working floor.

(3) Switchboard, distribution panel and switch

(a) Switchboard, distribution panel and switch shall be installed in the waterproofed and lockable metal box which is grounded.

(b) Fuses and circuit breakers of switchboard and distribution panel shall be suitable for the load capacity of power.

(4) The power receiving equipment and substation equipment shall be fenced or enclosed. Their places shall be posted with danger sign and locked.

(5) Grounding (earthing)

(a) Temporary electric facilities shall be grounded as necessary for each facility to prevent the risk of electric shock due to electrical leakage.

(b) Material of the grounding electrode shall be highly conductive such as copper or steel.

(6) Relocation and repair work of temporary electric facilities

(a) Relocation and repair work shall be performed after turning off the power, confirmation that the protective equipment for insulation is installed and no electricity measured by electricity detection.

(b) When energizing temporary electric facilities during or after the work, it shall be confirmed in advance that there is no risk of electric shock for workers engaged in the work.

		(7) When the installation, relocation, or repair work of temporary electric facilities is completed, the facilities shall be operated after inspection of the facilities.

JSSS in Japanese (Provisional Final Draft 10/24)	English Translation (R1 10/31) by Mr. Ito	English Translation (R1 11/1) by NK
7.9 電気溶接・ガス切断作業 **7.9.1 一般事項** 本節では、アーク溶接作業（以下、「電気溶接」という。）及びアセチレンガス、プロパンガス等のガス切断作業（以下、「ガス切断」という。）の安全について規定する。	**7.9 Electric Welding and Gas Cutting Work** **7.9.1 General** This section stipulates safe work methods for arc welding (hereinafter referred to as “electric welding”) and gas cutting (hereinafter referred to as “gas cutting”) by acetylene gas or propane gas.	**7.9 Electric Welding and Gas Cutting Work** **7.9.1 General** This Section stipulates safety measures required for arc welding (hereinafter referred to as “electric welding”) and gas cutting with acetylene gas or propane gas (hereinafter referred to as “gas cutting”).
7.9.2 電気溶接作業 請負者は、電気溶接作業を行うに当たっては、次の措置を講じなければならない。 (1) 使用前点検について、次の項目を点検し、異常を認めた時は直ちに、補修又は取り換えること。 (a) 自動電撃防止装置が正常に作動すること (b) 溶接機のフレームにアースを取り付けたものであること (c) アース線の取付け状態 (d) 溶接機のケーブルの被覆に損傷がないこと (e) 溶接棒ホルダ、アースクランプの絶縁防護部分及びケーブルの接続部に損傷がないこと (f) 溶接機及び溶接器具の製造者の作成したマニュアルに規定の使用前点検項目 (2) 溶接作業時の措置 (a) 迷走電流の発生を防止するため、帰線側ケーブルの接続は母材（溶接物）の溶接作業箇所に近接させること (b) ケーブルを使用し、鉄筋棒等の代替品を使用しないこと (c) 作業を中断するときは、溶接棒を溶接棒ホルダから外し、溶接機の電源を切ること (d) 感電事故防止のため、雨天時には屋外での作業を中止すること、及び溶接機が濡れない措置を講じること (e) 周囲の作業員が、電気溶接の作業中に電撃を感じた場合は、その原因の特定を行い、電撃の原因の除去が完了するまでの間、溶接作業は中止すること (f) 溶接作業の作業員には、遮光シールド、保護手袋等の保護具を使用させること (g) 他の作業員には、肉眼でアークを見ないよう指導すること (3) 溶接機及び溶接器具の定期点検 (a) 溶接機及び溶接器具は、4.1.7[建設機械の点検・整備]及び4.1.9[定期点検]に準拠して定期点検を行うこと	**7.9.2 Electric Welding** The Contractor shall take the following measures when performing the electric welding work. (1) For check up before use of electric welding equipment, check the following points and immediately repair or replace when any abnormality is identified: (a) The automatic voltage reducing device operates normally, (b) The welder frame must be grounded, (c) Ground conductor is installed properly, (d) There is no damage to the cable sheath of the welder, (e) There is no damage to the welding rod holder, the insulation protection part of the earth clamp and the connection part of the cable, and (f) Pre-use inspection items specified in the manual prepared by the manufacturer of the welding machine and welding equipment. (2) Measures during welding work (a) To prevent the occurrence of stray currents, the return cable should be allocated close to the welding work location of the base material (welded product). (b) Use cables and do not use substitutes such as reinforcing bars. (c) When interrupting welding work, remove the welding rod from the welding rod holder and turn off the welding machine. (d) To prevent electric shocks, avoid working outdoors in the rain and take measures to prevent the welding machine from getting wet. (e) When workers working around feel electric shock during welding work, identify the cause and stop the welding work until removal of the cause of electric shock is completed. (f) Have workers use protective equipment such as shading shields and protective gloves. (g) Instruct workers not to see arcs emitted by other workers’ work with the naked eye.	**7.9.2 Electric Welding Work** The Contractor shall take the following measures for the electric welding work. (1) The following items of electric welding equipment shall be inspected before start of electric welding work, and immediately repair or replace shall be made when any abnormality is identified. (a) Is automatic preventer of electric shock properly functioning? (b) Is frame of welding machine grounded? (c) Is grounding conductor installed properly? (d) Is no damage to welding cables of the welding machine? (e) Is no damage to electrode holder, insulation of earth clamp or connection parts of cables? (f) Is there any abnormal in pre-use inspection items specified in the manual prepared by the manufacturer of welding machine and welding equipment? (2) Measures during welding work (a) To prevent the occurrence of stray currents, the earth cable shall be fixed with earth clamp closely to the welding place of work piece. (b) Use cables and do not use substitutes such as reinforcing bars. (c) When suspending welding work, remove electrode from electrode holder and turn off the welding machine. (d) To prevent electric shocks, stop working outdoors in the rain and take measures to prevent the welding machine from getting wet. (e) When worker(s) working around welding work place feel electric shock during welding work, identify the cause and stop the welding work until removal of the cause of electric shock. (f) Welding worker shall wear PPE such as shading shield and protective gloves. (g) Instruct workers not to directly see arcs with their naked eyes. (3) Periodical inspection of welding machines and welding equipment

(b) 電撃防止装置は、6 月以内ごとに 1 回の頻度で定期点検を行うこと	(3) Periodical check up of welding machines and welding equipment of welding machines and welding equipment. (a) Welding machine and welding equipment should be regularly inspected in accordance with 4.1.7[Check up and Maintenance of Construction Machine] and 4.1.9[Periodical Check]. (b) The voltage reducing device should be regularly inspected once every six months.	(a) Welding machine and welding equipment shall be periodically inspected in accordance with 4.1.7[Inspection and Maintenance of Construction Machine] and 4.1.9[Periodical Inspection]. (b) The automatic preventer of electric shock shall be regularly inspected within half a year.
7.9.3 ガス切断作業 請負者はガス切断作業を行うに当たっては、次の措置を講じなければならない。 (1) 使用前点検について、次の項目を点検し、異常を認めた時は直ちに、補修又は取り換えること。 (a) 逆火防止装置が付いていること (b) ガス容器、調整器、逆火防止装置(安全器)、ホースバンド、ホース、吹管、火口等に損傷がないこと (c) ガス容器の調整器、口金は随時検査を受けたものであること (4) ガス切断器具の取り扱い ガス切断器具を取扱う作業員に、次のことを周知、徹底させること。 (a) ガス等のホース及び吹管については、損傷、摩耗等によるガス等の漏えいのおそれがないものを使用すること (b) 吹管は丁寧に取扱い、点火したまま放置しないこと、吹管を床や通路上に置かないこと。 (c) 点火状態で圧力調整器を操作しないこと (d) ガス等のホースと吹管及びガス等のホース相互の接続箇所については、ホースバンド、ホースクリツプ等の締付具を用いて確実に締付けを行なうこと (e) 火口が過熱すると逆火を起こしやすくなるため、長時間作業する時は、時々作業を中断し 酸素を僅かに出しながら水中に漬けて冷却すること (f) 作業を終了または中断する時は、必ず容器バルブを完全に閉め、調整器のガスを完全に抜くこと (5) ガス容器の取り扱い ガス容器を取扱う作業員に、次のことを周知、徹底させること。 (a) ガス容器は次の場所に置かないこと (i) 通風又は換気の不十分な場所 (ii) 火気を使用する場所及びその附近 (iii) 火薬類、危険物その他の爆発性若しくは発火性の物又は多量の易燃性の物を製造し、又は取り扱う場所及びその附近 (b) 取扱いは丁寧に行い、投げる等で衝撃を与えないこと (c) 高温の作業環境下では、容器を遮光し、直射日光に晒さない等、容	**7.9.3 Gas Cutting Work** The Contractor shall take the following measures when carrying out gas cutting. (1) For check up before use of gas cutting equipment, check the following points and immediately repair or replace when any abnormality is identified: (a) A backfire prevention device is attached, (b) No damage to gas containers, regulators, backfire prevention devices (safety devices), hose bands, hoses, blow pipes, tip nozzles, etc., and (c) Gas container regulators and caps must be inspected from time to time. (2) Handling of gas cutting equipment Make sure that the workers who handle gas-cutting tools know the following: (a) Use gas hoses and blow pipes that do not have the risk of gas leakage due to damage or wear, (b) Handle the blowpipe carefully, do not leave it ignited, and do not place the blowpipe on the floor or passage, (c) Do not operate the pressure regulator in the ignition state, (d) The gas hose and the blow pipe and the gas hose connection point should be securely tightened with a fastener such as a hose band or hose clip, (e) If tip nozzle overheats, a backfire is likely to occur. When working for a long time, interrupt the work from time to time and submerge it in water while cooling it slightly, and (f) When finishing or interrupting work, be sure to completely close the container valve and vent the regulator completely. (3) Handling of gas containers Make sure that workers who handle gas containers are aware of the following: (a) Do not place gas containers in the following places, (i) Location in which it is iinsufficient ventilation (ii) Places where fire is used and nearby	**7.9.3 Gas Cutting Work** The Contractor shall take the following measures for gas cutting work. (1) The following items of gas cutting equipment shall be inspected before start of gas cutting work, and immediately repair or replace shall be made when any abnormality is identified. (a) Is backfire prevention device installed? (b) Is no damage to gas containers, regulators, backfire prevention device, hose bands, hoses, blow pipes, tip nozzles, etc.? (c) Have gas container regulators and caps been inspected periodically? (2) Handling of gas cutting equipment Workers who handle gas-cutting tools shall have the following knowledge: (a) Use gas hoses and blow pipes that do not have the risk of gas leakage due to damaged or worn, (b) Handle the blowpipe carefully, do not leave it with fire-on, and do not place the blowpipe on floor or walkway, (c) Do not operate pressure regulators in fire-on, (d) The connection between gas hoses and between blow pipe and hoses shall be securely tightened with a fastener such as hose band or hose clip, (e) When tip nozzle is overheated, backfire is likely to occur. When working for a long time, interrupt the work from time to time and submerge it in water for cooling it discharging slightly oxygen, and (f) When finishing or interrupting work, completely close the container valves and vent gas in regulators completely. (3) Handling of gas containers Training shall be made to the workers who handle gas containers to have the following knowledge: (a) Do not place gas containers in the following places, (i) Place of insufficient ventilation (ii) Place or nearby where fire is used

器が高温にならない措置を講じること (d) 転倒の恐れがないよう保持すること (e) 運搬する際は、容器にキャップを施すこと (f) 溶解アセチレンの容器は立てて置くこと (g) ガス容器は、電気装置のアース線の付近に置かないこと (h) 容器には、充空の表示を行い、使用前又は使用中と、それ以外の容器との区別を常時明らかにすること (i) 凍結のおそれがあるときは、雨濡れや湿気の多いところにガス容器を置かないこと。口金や減圧弁が凍った時は温湯を使用して融解し、直接火気を使用しないこと (6) 切断作業時の措置 (a) 屋内の作業場所等では換気を行うこと (b) ガス切断装置のガス漏れの点検を行う場合は、石けん水を使用する等の安全な方法により行い、火気は使用しないこと (c) 作業を行う場所の近くには適当な消火設備又は消火器を備えておき、必要な時に直ちに使用できるよう常に維持すること (d) 使用する際は、容器の口金に付着している油類、塵埃を除去すること (e) 点火及び消化は、酸素供給バルブを閉じて行うこと (f) 当該作業の作業員には保護眼鏡及び保護手袋を着用させること。 (7) ガス切断作業装置の定期点検 ガス切断作業装置は、4.1.7[建設機械の点検・整備]及び 4.1.9[定期点検]に準拠して定期点検を行うこと。	(iii) Locations near and where explosives, hazardous materials, other explosive or ignitable materials, or large quantities of flammable materials are manufactured or handled. (b) Handle with care and do not give a shock by throwing etc., (c) Under high temperature work environment, take measures to prevent the container from becoming hot, such as shielding the container and not exposing it to direct sunlight, (d) Hold so that there is no risk of falling, (e) Cap containers when transporting, (f) Dissolved acetylene containers should be placed upright, (g) Do not place gas containers in the vicinity of electrical equipment ground conductor, (h) The container shall be marked as full, and the distinction between other containers before and during use shall be made clear at all times, and (i) When there is a risk of freezing, do not place the gas container in a wet or humid place. When the base or pressure reducing valve freezes, melt with hot water and do not use direct fire. (4) Measures for cutting work (a) Ventilate indoor work places (b) When checking for gas leakage from the gas cutting device, use a soapy water or other safe method and do not use fire. (c) Proper fire extinguishing equipment or fire extinguishers should be provided near the place where work is performed, and always maintained so that it can be used immediately when necessary. (d) When using, remove oil and dust adhering to the container cap. (e) Ignition and digestion should be performed with the oxygen supply valve closed. (f) Ensure that protective workers wear protective glasses and gloves. (5) Periodic inspection of gas cutting equipment The gas cutting work device shall be periodically inspected in accordance with 4.1.7 [Check up and Maintenance of Construction Machine] and 4.1.9 [Periodical Check].	(iii) Locations near and where explosives, hazardous materials, ignitable materials, or large quantities of flammable materials are manufactured or handled. (b) Handle gas containers with care and do not give a shock by throwing, etc., (c) Take measures to prevent gas containers from becoming hot under high temperature environment, such as shielding the container and not exposing it to direct sunlight, (d) Hold so that there is no risk of falling, (e) Cap containers when transporting, (f) Place dissolved acetylene containers upright, (g) Not place gas containers in the vicinity of grounding conductor of electrical equipment, (h) Gas containers shall be marked full or empty, and the distinction between other containers before and during use shall be made clearly, and (i) When there is a risk of freezing, not place the gas container in a wet or humid place. When valve of cylinder or pressure reducing valve freezes, melt them with hot water and not use direct fire. (4) Safety measures for gas cutting work (a) Ventilate indoor work place (b) When checking for gas leakage from the gas cutting equipment, use a soapy water or other safe method and not use fire. (c) Proper fire extinguishing equipment or fire extinguishers shall be provided near the place where work is performed, and always maintained so that it can be used immediately when necessary. (d) Remove oil and dust adhering to the valve of container. (e) Ignition and digestion shall be made under condition that oxygen supply valve is closed. (f) Gas cutting worker shall wear PPE such as protective glasses and gloves. (5) Periodical inspection of gas cutting equipment The gas cutting work equipment shall be periodically inspected in accordance with 4.1.7 [Inspection and Maintenance of Construction Machine] and 4.1.9 [Periodical Inspection].
7.9.4 電気溶接、ガス切断作業における火災予防 請負者は、電気溶接、ガス切断作業による火災の予防のために、次の措置を講じなければならない。 (1) 可燃・引火物又は爆発性の材料を入れたことのある容器を溶接又は	**7.9.4 Fire Prevention in Electric Welding and Gas Cutting Work** The Contractor shall take the following measures to prevent fires caused by electric welding and gas cutting work: (1) When welding or cutting containers that have been filled with flammable /	**7.9.4 Fire Prevention in Electric Welding and Gas Cutting Work** The Contractor shall take the following measures to prevent fires caused by electric welding and gas cutting work: (1) When electric welding or gas cutting work is made on/in container that

切断するときは、容器を洗浄してから作業すること。 (2) 溶接・切断等の作業は、可能な場合には火災に対して安全な場所に移動して行うこと。移動できない場合は、火災の危険性のあるものを移動するか、火花等に対する適切な防護措置を講じること。 (3) 可燃・引火性塗料が使用されている場所、あるいは可燃・引火物がある場所及びほこりが堆積し火災の危険のある場所では溶接・切断等の作業をしないこと。 (4) 溶接、切断作業場所には、適切な消火器を設置し、必要な時に直ちに使用できるよう常に維持すること。 (5) 溶接・切断作業が、壁、床、天井及びその近辺で行われる場所において、溶接・切断の火花が壁、床、天井に入り、又はこれらに溶接・切断の熱が伝わることにより火災の危険性がある場合には、監視員を配置すること。	flammable materials or explosive materials, the containers must be cleaned before starting work, (2) When possible, work such as welding and cutting should be carried out to a place where there is no risk of fire. If not possible to move it, move it at risk of fire or take appropriate protective measures against sparks, (3) Do not conduct welding, cutting, etc. in places where flammable or flammable paint is used, places where flammable or flammable materials are present, and where dust accumulates and there is a risk of fire, (4) Install appropriate fire extinguishers at the welding and cutting work places and always maintain them immediately when necessary, and (5) Danger of fire due to welding / cutting sparks entering walls, floors, ceilings or where heat of welding / cutting is transmitted to them in places where welding / cutting operations are performed on or near walls, floors, ceilings If there is, place surveillance personnel.	was filled with combustible material, inflammables or explosive materials and emptied them, the container shall be cleaned before starting work, (2) Welding or cutting work shall be carried out at place where there is no risk of fire. When work at place on which there are materials/goods of risk of fire by the work, remove them from the work place, or take appropriate protective measures against sparks or heat from the work, (3) Welding or cutting work shall not be conducted at places of risk of fire, such as where combustible or inflammables paint is used, combustible materials or inflammables are present, or dust accumulates, (4) Appropriate kind and quantities of fire extinguisher are provided at welding or cutting work place and always maintained to be able to be used immediately when necessary, and (5) Watchman(s) shall be provided at welding or cutting work place such as walls, floors, ceilings or near these when there is risk of fire by the heat transmitted or sparks of welding or cutting getting into walls, floors, ceilings and so on.

7 仮設工事 **7.1 一般事項** **7.1.1 仮設工事の留意点** (1) 全ての仮設構造物に関する設計、施工、使用及び解体を本仕様書に従って実施しなければならない。ただし、請負者がリスクアセスメントにもとづき申請し、エンジニアが認めたものは、本仕様書で規定する要求事項の一部の規定を除外することができる。 (2) 請負者は仮設構造物の設計、施工、使用および解体に関する管理体制及び手法(procedural control)を定め、作業計画書又は安全衛生詳細計画書に記述しなければならない。かかる計画書は仮設構造物の種類に応じて、関連の本設工事にかかる両計画書に含めることでもよい。	**7 TEMPORARY WORKS** **7.1 GENERAL REQUIREMENTS** This Section 7.1 applies to all TW included in JSSS Chapter 7. **7.1.1 Design and Provision of TW Generally** Unless otherwise stated in the Contract, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all TW as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*], 1.35 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the Contract requirements for TW and:	**7 TEMPORARY WORKS** JC1O: もう少し、用語、内容、英語での表現を精査しないと議論の土台にならないように思います。 The terms, content, and English expressions need to be scrutinized a bit more to be discussed. JC1: Revised taking into consideration the comment above. **7.1 GENERAL REQUIREMENTS** This Section 7.1 applies to all TW included in JSSS Chapter 7. **7.1.1 Design and Provision of TW Generally** Unless otherwise stated in the Contract, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all TW as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*], 1.35 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the Contract requirements for TW and: JC1D: Contract requirements の内容が明確でない、あるいは意図的に省略されたとき、すべてコントラクターに委ねることにならないか。 When the contents of the Contract requirements are not clear or intentionally omitted, I wonder if responsibilities will be left to the Contractor? NK1: Contract requirements は、JSSS 以外の契約の中の他の規定を意味しています。 請負者任せになることへの懸念に関し、次のように考えます。 “as specified in the Contract/Special Safety Specification” と規定し、JSSS に最低限の要求事項を規定しない場合、コメントとおりの意図的省略が懸念されます。 “unless otherwise stated in the Contract/Special Safety Specification”と記述し、JSSS に請負者への最低限の要求事項を規定することで、請負者任せにしないことになります。 本款では、(1)から(6)に請負者の要求事項を規定しておりますので、本文はこのままとします。 The Contract requirements mean other requirements stipulated other than JSSS. We respond to the comments that the if responsibilities will be left to the Contractor. In case JSSS stipulates “as specified in the Contract/Special Safety Specification” and does not specify minimum requirements in JSSS, there is worry that the Employer intentionally omitto specify the requirements.	**6. TEMPORARY WORKS** **6.1 GENERAL REQUIREMENTS** This Section 7.1 applies to all TW included in JSSS Chapter 7. **6.1.1 Design and Provision of TW Generally** Unless otherwise stated in the Contract, the Contractor shall take all necessary measures for the study, design, management, provision, safe use and safe removal of all TW as necessary to safely and systematically execute the Permanent Works and in accordance with JSSS ~~1.33~~1.35 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*], ~~1.35~~1.37 [*Design and Management of Temporary Works*] and the specified standards. The Contractor shall comply with the Contract requirements for TW and:

7.1.2 作業計画書及び安全衛生詳細計画書の作成

請負者は、本仕様書 1.3[安全衛生にかかわる計画書]に従い、次に規定する仮設工事又は仮設構造物(以下、本款では「仮設工事」という。)の作業計画書及び安全衛生詳細計画書(以下、本款では「計画書」という。)を、作成しなければならない。

(1) 計画書を作成しなければならない仮設工事

(1) Provide TW which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].
(2) Manage the design, use and removal of TW fully in accordance with JSSS 1.35 [*Design and Management of Temporary Works*].
(3) Maintain and repair all TW when in use to ensure the continued optimal and safe performance.
(4) Monitor all TW when in use and any affected PW, existing buildings, structures, ground or surfaces that may be affected by the TW through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the TW are performing safely, to the designed limits and intended purpose.
(5) The Contractor shall establish procedures whereby:
  (a) No unauthorised modification of TW is allowed.
  (b) No unauthorised use of TW is allowed.
  (c) The HSO shall inspect all TW upon completion of erection and certify and label them as "Safe for Use" before any use is allowed.

It can be avoided by the JSSS stipulate "unless otherwise stated in the Contract/Special Safety Specification" and minimum requirements to the Contractor.
With above reasons, we leaeve the phrase as it is.

(1) Provide TW which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].
(2) Manage the design, use and removal of TW fully in accordance with JSSS 1.35 [*Design and Management of Temporary Works*].
(3) Maintain and repair all TW when in use to ensure the continued optimal and safe performance.
(4) Monitor all TW when in use and any affected PW, existing buildings, structures, ground or surfaces that may be affected by the TW through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the TW are performing safely, to the designed limits and intended purpose.
(5) The Contractor shall establish procedures whereby:
  (a) No unauthorised modification of TW is allowed.
  (b) No unauthorised use of TW is allowed.
  (c) The HSO shall inspect all TW upon completion of erection and certify and label them as "Safe for Use" before any use is allowed.

JC1O: HSO が仮設構造をチェックして certify する。TW の撤去時期を確認して certify するようになっている。
HSO の役割は safety Plan に準拠して施工されているかを確認することではないかと思料。
これでは全く HSO が現場の作業手順に忙殺され全体を見ることが出来なくならないか。
(This comment in English is recorded in MM below.)

MM: Sub-Clause 7.1.1 (5)

JICA: The current sentence states that the HSO will check the temporary structure to certify it, and confirm when the TW will be removed and certify it also. I think that the role of HSO is to mainly confirm that the construction is being performed in accordance with the safety plan. Wouldn't the present stipulation mean that the HSO would be very busy to killing his time only to check work procedure and not be able to see the whole thing?

NK: HSO should always be ultimately responsible as the leader really of the Contractor's safety team with support duties delegated as necessary.

This is described in Chapter 1.10.1 and has been discussed

Result: Discussed in relation to Chapter 1.10.1 and resolved, no

(1) Provide TW which are fit for the purpose for which they are intended and fully in accordance with the JSSS 1.33 [*Contractor's Equipment, Temporary Works, Safety Equipment and Personal Protective Equipment*].
(2) Manage the design, use and removal of TW fully in accordance with JSSS 1.35 [*Design and Management of Temporary Works*].
(3) Maintain and repair all TW when in use to ensure the continued optimal and safe performance.
(4) Monitor all TW when in use and any affected PW, existing buildings, structures, ground or surfaces that may be affected by the TW through regular inspection and (where necessary and specified) with relevant instrumentation to ensure that the TW are performing safely, to the designed limits and intended purpose.
(5) The Contractor shall establish procedures whereby:
  (a) No unauthorised modification of TW is allowed.
  (b) No unauthorised use of TW is allowed.
  (c) The HSO shall inspect all TW upon completion of erection and certify and label them as "Safe for Use" before any use is allowed.

(a) 足場（つり足場、張出し足場以外の足場にあっては、高さが 5m 以上の構造のものに限る）の組立て、使用及び解体作業
(b) 型枠支保工の組立て、使用及び解体作業
(c) 明り掘削の高さ又は深さが 2m 以上である地山の掘削作業
(d) 土留め工（掘削の深さが 1.5mを超える場合には、原則として施工）の組立て、使用及び解体作業
(e) 上部構造の高さが 5m以上又は支間が 30m 以上の橋梁の建設のための仮設工事
(f) 構造部材の高さが5m以上の構造物の建設のための仮設工事。なお、木造建築物は軒高が5m 以上。
(g) 本契約で別途定める仮設工事及びエンジニアが指定する仮設工事

(2) 計画書の一部として作成すべき書類

仮設工事のリスクアセスメントにもとづき、仮設工事のリスクの程度に応じて次表に示す書類及びエンジアが指示する書類を、計画書の一部として作成すること。

No	書類(注 1)	リスクの程度		
		低い	中程度	高い
1	リスクアセスメント	✔	✔	✔
2	設計照査の記録	✔	✔	✔
3	品質保証書(注 2)	✔	✔	✔
4	設計図(注 3)	✔	✔	✔
5	施工手順図(注 4)	–	✔	✔

注記：

注 1：✔のある書類は、計画書の一部として作成すべき書類。

注 2:GC4.9 に規定の品質保証システムにもとづく、設計の品質を保証する書類。

注 3:仮設工事で使用する材料の仕様及び主要寸法を含む仮設工事の平面図、横断図、縦断図等の設計図面(Design drawings)。

注 4：施工の手順を示す図面（Construction procedure/sequence/method drawings）

7.1.3 仮設工事の設計及び設計照査

請負者は、本契約で別途に定めがない限り、次の規定を遵守し、仮設工事の設計及び設計照査を行わなければならない。

(1) 仮設工事の設計手順

請負者は仮設工事の設計及び安全に関する十分な知識と経験を持つ者（competent person）に設計を行わせなければならない。また、仮設工事の設計者とは異なる要員で、仮設工事にかかる設計の難易度に照らし合わせて十分な知識と経験を持つ者（competent person）に設計の照査をさせなければならない。

(d) The HSO shall regularly inspect TW and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as “Not Safe for Use” and prevent access to the TW until repaired and re-inspected.
(e) The HSO inspects TW upon the completion of the required PW and before TW are dismantled, demolished and removed accompanied by the TWS and TWC as appropriate, and certifies that the PW are completed and the TW can be removed.

change required.

Chapter 1, 1.10 (Issue 6) stipulate as follows:
1.10 HSO - Scope of Duties
1.10.1 The HSO shall devote his full time and attention to maintaining health and safety upon the Works and protecting against accidents.

Chapter 1 (Issue 7)
1.12.3. Supporting Staff
(1)The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
1.13 HSO - Scope of Duties and Authority
1.13.1. ditto
1.13.2.The particular scope of duties and authority of the HSO shall cover (but shall not be limited to) the following:
(1)Health and Safety Management Work:
(c)Regular (daily) inspections of the Works at the Site to ensure the Contractor’s compliance with the Safety Plan, Instructions and other measures;

NK1: HSO は安全に全責任を負う
安全のための点検方法に次が想定される。
(1) (NK 案) HSO 及び HSO の補助員（HSO が作業主任等に権限委譲）が、安全計画に従い点検を、直接行う。
(2) (JC 案) 現場担当や作業主任等が、安全計画に従い点検する。HSO は、現場の安全点検の遂行を管理する。
これらの長短所は以下である。
(1)の場合、全ての点検の責任が HSO にあり、安全上不備がある場合、改善や修理、作業開始の中止等が即時に行える利点がある。現場の HSO の補助員は、2 つの指揮系統（工区責任者等と HSO）に属することとなることから、事前の調整が重要である。
(2)の場合、安全の責任は、現場担当や作業主任等の点検を行うもの又は工区責任者等となる。この場合、現場進捗や費用管理と安全管理は相反する。そのため、進捗や費用が優先され、安全が次となる。HSO からの指示は、PM、工区責任者、現場担当や作業主任の流れとなり、即時の安全対策ができない。
NK1: HSO に安全の責任があることを明確にし、JSSS に規定の安全管理を遂行させるために、下の(d)-(f)へのコメントへの回答の通り、原案通りを提案します。

(d) The HSO shall regularly inspect TW and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as “Not Safe for Use” and prevent access to the TW until repaired and re-inspected.
(e) The HSO inspects TW upon the completion of the required PW and before TW are dismantled, demolished and removed accompanied by the TWS and TWC as appropriate, and certifies that the PW are completed and the TW can be removed.

(d) The HSO shall regularly inspect TW and certify and label them appropriately to ensure the continuous safe use or, in the event that faults are discovered, certify them as “Not Safe for Use” and prevent access to the TW until repaired and re-inspected.
(e) The HSO inspects TW upon the completion of the required PW and before TW are dismantled, demolished and removed accompanied by the ~~TWS and TWC~~ the Contractor’s Temporary Works specialist staff specified in JSSS 1.37.12 as appropriate, and certifies that

簡易な仮設工事でエンジニアから同意を得られる場合を除き、設計照査を行う者は、当該仮設工事に関する設計に関与していない者でなければならない。

(2) 仮設工事の設計

仮設工事の設計者は、仮設工事にかかる設計書、設計計算書、構造図、組立図、モニタリング計画を作成しなければならない。

仮設工事の設計者は、本款(4)に示す設計基準に基づき、必要に応じ以下の事項を考慮して設計を行わなければならない。

(h) 本設工事の設計、仕様書
(i) 地盤条件等の Site Data、アクセス、周辺環境等の現場での施工条件
(j) 本設工事の工程
(k) 仮設工事のために用いる機械及び材料、仮設工事の段取り
(l) 本設工事の荷重
(m) 仮設工事が本設工事に与える荷重

(3) 仮設工事の設計照査

設計照査を行う者は、設計の適切性、正確性、設計要求事項への遵守の観点から設計照査を行わなくてはならない。

(4) 仮設工事の設計基準

仮設工事の設計では、本契約で別途に定めがない限り、以下の基準に準拠しなければならない。なお、基準は、契約の基準日時点での最新のものでなくてはならない。但し、請負者が適用する基準を別途提案し、エンジニアがこれに同意した場合には、この限りではない。

(n) BS 5975 Code of practice for temporary works procedures and the permissible stress design of falsework
(o) BS 6031 Code of practice for earthworks
(p) BS 8002 Code of practice for earth retaining structures
(q) BS 8002 Code of practice for earth retaining structures
(r) BS 8004 Code of practice for foundations
(s) BS 8081 Code of Practice for grouted anchors
(t) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design
(u) BS EN 12812 Falsework. Performance requirements and general design
(v) BS EN 1993 (all parts) Eurocode 1. Basis of structural design
(w) BS EN 1992 (all parts) Eurocode 2. Design of concrete structures
(x) BS EN 1993 (all parts) Eurocode 3. Design of steel structures
(y) BS EN 1997-1 Eurocode 7. Geotechnical design. General rules

7.1.4 仮設工事の施工、使用、解体

請負者は仮設工事の施工、使用、解体にあたり、次の措置を取らなければならない。

(f) The HSO inspects after removal of the TW to ensure that removal has been completed properly and that no part of the TW remains, that any rectification of the PW is completed and all is left in safe order and condition.

(f) The HSO inspects after removal of the TW to ensure that removal has been completed properly and that no part of the TW remains, that any rectification of the PW is completed and all is left in safe order and condition.

JC1I: From (c)-(f). Should it be HSO? Attention should be paid to harmony with BS5975(in particular 11.2.3 and 11.3.3 of BS5975).

NK1:安全に関する責任は HSO にあり、HSO は全ての作業、仮設物の安全を確認する責務があります。第 1 章では次のように規定しています。1.37 Design and Management of Temporary Works の BS5975 の規定内容に従い(c)-(f)は変更します。

1.12.3. Supporting Staff

(1) The Contractor shall also appoint such further supporting personnel as the HSO may from time to time deem necessary or as may be instructed by the Engineer, to permit the HSO to perform his duties.
(2) Such further supporting personnel may include Operation Leaders and/or other senior specialist and qualified Contractor's Personnel.

(In this section, supporting staff are TWC and).

Comments of MD is copied below:

I refer to my comments against JSSS 1.3 and 1.14:

"…. The position and authority of the HSO for the health safety on the Works should not be compromised. Who he requires assistance from is really his choice and it is dependent upon many factors such as the contractor's organisation, who is available, the general experience, capability and skill level of workers. We or the Engineer should have no interest in who he delegates support to providing the HSO does his job properly."

and "For further understanding, the Contractor's Representative has similar in fact heavier responsibilities but we (nor FIDIC) consider defining which of his staff do what to support him, I do not recommend that we try to do it."

The HSO should remain responsible for maintaining safety at all times; if he delegates and who he delegates to and how they communicate, is his choice and responsibility.

Regarding the management of construction performance, quality, quantity and environmental compliance etc. etc. other persons are independently responsible.

I suggest that the Engineer has no duty to advise or direct the Contractor how to manage his internal affairs and I advise against trying to do this.

In terms of 8.2.(3) JSSS is for safety matters, so the HSO must inspect this and other works to assess that all is safe.

The construction staff must also inspect and give instructions etc for other purposes but surely it is not within the scope of JSSS to advise on that.

Sometimes also, opinions will differ because interests are different, for example the HSO may not allow piling work to start if he perceives any risk to safety.

On the other hand a construction manager or site engineer may choose to take risks for example to speed up the start if work

the PW are completed and the TW can be removed.

(f) The HSO inspects after removal of the TW to ensure that removal has been completed properly and that no part of the TW remains, that any rectification of the PW is completed and all is left in safe order and condition.

(1) 設計及び作業計画書に示される手順に忠実に施工すること。
(2) 施工終了後の検査手順を定め、検査に合格した仮設工事のみ使用に供すること。
(3) 安全な使用を確保するため、使用中に必要なモニタリング、維持管理を行うこと。
(4) あらかじめ設計でその解体や変更が認められている場合を除き、使用中に変更を加えないこと。
(5) 本設工事を支持する目的で使用に供される仮設工事の場合、本設工事が十分な強度と安定性をもって自立することを確認してから、仮設工事にかかる荷重を外すこと。
(6) 仮設工事の解体は作業計画書においてあらかじめ定められた手順に従って行うこと。

(6) Safety Plan for TW
The Contractor shall include details of all TW in the Safety Plan to be submitted in accordance with JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*].

7.1.2 Method Statements

Refer to JSSS 1.7 [*Contractor's Method Statements*].

7.1.3 Inspection and Monitoring of TW

(1) The Contractor shall prepare a Monitoring Plan as a part of the Method Statement, for the purpose of demonstrating that the particular TW are performing safely, to the designed limits and for the intended purpose.
(2) Monitoring shall be accomplished through regular inspection, measurement and survey.
(3) Where TW are providing structural support to the Permanent Works or to existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like that may be affected or potentially affected by the performance of the TW, and unless otherwise stated in the Contract, the Contractor shall

is running late.
If we state, "the Contractor shall.." this unnecessarily introduces ambiguity to JSSS and I do advise against it.
I suggest that if any change is to be made (which I do not think necessary) it should however be in Chapter 1 which prevails.
All other chapters of JSSS would be better confined to safety and therefore generally refer to HSO.

(6) Safety Plan for TW
The Contractor shall include details of all TW in the Safety Plan to be submitted in accordance with JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*].

7.1.2 Method Statements

Refer to JSSS 1.7 [*Contractor's Method Statements*].

7.1.3 Inspection and Monitoring of TW

JC1D: モニタリングの要求項目と許容値は契約図書に規定されるべきもので、請負者はそれらを満足する具体的な計画を立て、エンジニアにその同意を求め施工する手順になる。ここの書きぶりは、計測項目やその許容値まで請負者に委ねる様に理解される。強い違和感がある。
Requirements on monitoring and permissible values should be specified in the contract documents, following that, the Contractor shall prepare a concrete plan to get concent by the Engineer and proceed to construction. Present description seems the measurement item and its allowable value are left to the Contractor's discretion. I feel strong sense of discomfort.
NK: 特別な要求事項は Particular Safety Specification(PSS)に規定します。JSSS では請負者が遵守すべき最低限の事項を規定することと致します。unless other wise specified in the PSSS,… という規定でコメントに対応し変更します。
Special requirements will be specified in Particular Safety Specification(PSS). JSSS specify minimum requirements to be taken by the Contractor. The comments above will be taken in to consideration by specifying "unless other wise specified in the PSSS,…" and modifying the description below.

(1) The Contractor shall prepare a Monitoring Plan as a part of the Method Statement, for the purpose of demonstrating that the particular TW are performing safely, to the designed limits and for the intended purpose.
(2) Monitoring shall be accomplished through regular inspection, measurement and survey.
(3) Where TW are providing structural support to the Permanent Works or to existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like that may be affected or potentially affected by the performance of the TW, and unless otherwise stated in the Contract, the Contractor shall

(6) Safety Plan for TW
The Contractor shall include details of all TW in the Safety Plan to be submitted in accordance with JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*].

6.1.2 Method Statements

Refer to JSSS 1.7 [*Contractor's Method Statements*].

6.1.3 Inspection and Monitoring of TW

(1) The Contractor shall prepare a Monitoring Plan as a part of the Method Statement, for the purpose of demonstrating that the particular TW are performing safely, to the designed limits and for the intended purpose.
(2) Monitoring shall be accomplished through regular inspection, measurement and survey.
(3) Where TW are providing structural support to the Permanent Works or to existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like that may be affected or potentially affected by the performance of the TW, and unless otherwise stated in the ~~Contract~~ Particular Safety Specification, the Contractor shall provide and install an instrumentation and recording

	provide and install an instrumentation and recording system that will provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the TW.	provide and install an instrumentation and recording system that will provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the TW. JC1: For "unless otherwise stated in the Contract". ???? NK1: The phrases after "unless otherwise stated in the Contract" specifies the minimum requirements for which the Contractor shall take action. User Guide will describe the Employer shall specify his requirements regarding instrumentation and recording system.	system that will provide comprehensive, accurate and contemporary or live data with records, showing the performance characteristics of the TW.
	(4) Requirements for instrumentation systems shall be as follows:	(4) Requirements for instrumentation systems shall be as follows: ~~JC1D: 契約図書において指示されるものではないか。コントラクターの裁量に委ねているように読めないか~~ ~~(The above in English is recorded in MM below.)~~ ~~MM:~~ ~~JICA: Isn't that specified in the Contract Document series? At present, the description is left to the Contractor's discretion. Is it no problem?~~ ~~NK: We will change the documents so that Employer specifies his requirements for instrumentation and monitoring of property outside the Site and Engineer's involvement with instrumentation and monitoring of Contractor's work within the Site.~~ ~~Result: NK approach agreed, Date san will provide hard copy of example.~~	(4) Unless otherwise stated in the Particular Safety Specification regarding the instruments and measurement methods, locations and structures, and numbers of measurement points, requirements for instrumentation systems shall be as follows:
	(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement; (b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of earth retaining works are provided; (c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor; (d) The HSO, TWC and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued complaint and safe performance of all TW; and	(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement; (b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of earth retaining works are provided; (c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor; (d) The HSO, TWC and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued complaint and safe performance of all TW; and JC1I: 削除すべき。To delete "TWC". NK: deleted.	(a) The Contractor shall select instruments and measurement methods that meet the purpose of the measurement; (b) The Contractor shall determine locations and numbers of measurement points which meet the purpose of measurement and need for safety management. The locations of measurement shall be where measurement can be continuously made throughout the period of earth retaining works are provided; (c) The instrumentation shall be regularly calibrated and protected against damage by the Contractor; (d) The HSO~~, TWC~~ and other relevant Contractor's Personnel shall monitor the data and take all necessary corrective action consequent to such monitoring to ensure the continued complaint and safe performance of all TW; and
	(e) The Engineer shall be invited to attend	(e) The Engineer shall be invited to attend	(e) The Engineer shall be invited to attend

	the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.8 [*Engineer's Safety Representative*], JSSS 1.9 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.14 [*Joint Site Safety Inspections*]. (5) Management based on Monitoring and Inspection (a) Management by Visual Inspection If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures. (b) Management by Instrument Measurement	the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.8 [*Engineer's Safety Representative*], JSSS 1.9 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.14 [*Joint Site Safety Inspections*]. (5) Management based on Monitoring and Inspection JC1J: 計器計測をするものは発注者が関わるべきもの Annex1.3 で指定のものについては…といった書き方にする。(This comment is recorded below.) MM: JC: As for measurement using instruments, the Employer should be involved. Thus, change the description to "What is specified in Annex 1.3 ...". NK: NK stated the Employer will be, this will be specified. Result: See above (a) Management by Visual Inspection If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures. (b) Management by Instrument Measurement JCO: やはり、計器によって計測をする仮設構造物は少なく、重要仮設であることが殆どなので、エンジニアの役割を記載したい。コントラクターが計測計画を作成しエンジニアに提出し、計測ウォーニングレベルを協議の上で設定するのがいいのでは。 There are few temporary structures which monitoring shall be made with instruments, and most of them are important temporary structures, so I want to stipulate the role of the Engineer in JSSS. My suggestion is as follows; The Contractor shall prepare the monitoring plan, submit it to the Engineer, and set the warning monitoring level by consulting with the Engineer.	the inspections and data collection to ensure the Contractor's compliance in accordance JSSS 1.8 [*Engineer's Safety Representative*], JSSS 1.9 [*Safety Compliance Instructions from the Engineer*] and JSSS 1.14 [*Joint Site Safety Inspections*]. (5) Management based on Monitoring and Inspection (a) Management by Visual Inspection If and when the Contractor finds any abnormality through visual inspection, the Contractor shall take necessary measures in accordance with the degree of abnormality, including verification of inspection results through measurement, survey or added instrumentation and the implementation of urgent countermeasures. (b) Management by Instrument Measurement
	Unless otherwise stated in the Contract, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established as necessary. (i) Primary control value: Increase the incidence and degree of care over inspections and commence preparing	JC1D: 契約図書に、計測すべき対象構造物・計測方法と許容計測値が規定されるべき。 The contract documents shall stipulate the structures to be monitored, the measurement method, and the allowable measurement values. MM: Sub-Clause 7.1.3 (5) (b) Management by Instrument Measurement JICA:1) Involvement of Engineer and 2) The contract documents should stipulate the target structure to be measured, the measurement method, and the allowable measurement values.	

		countermeasures which will be implemented if and when the measurement value reaches the secondary control value. (ii) Secondary control value: Suspend work and implement the countermeasures. (iii) Control limit value Stop work immediately, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure and review construction method. When the measured value reaches each of the above control values, the Contractor shall implement the measures stated.	NK: Documents will be studied and if necessary changes made to include appropriate reference. Changes must be carefully worded to avoid any effect to the Contractor's basic responsibility under the Contract otherwise JICA may have a liability JICA: The Engineer should be involved in the review process. NK: Yes, see above but it needs careful wording to avoid any effect on the contractor's liability otherwise JICA may have a liability (Same answer applies to the many references to this subject) Result: See above JICA: If the affected third-party structures and affected areas are included, shouldn't the Engineer (or the Employer in some cases) be strongly involved? NK: Yes, see above, will be added to documents (in user guide). Result: See above Unless otherwise stated in the ~~Contract~~, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established as necessary. (i) Primary control value: Increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value. (ii) Secondary control value: Suspend work and implement the countermeasures. (iii) Control limit value Stop work immediately, prohibit entry of any unauthorised persons to the affected area(s), take radical measures to prevent failure and review construction method. JC1D: 影響を与えた第三者の構造物・affected area も含むとすると、エンジニア(場合によっては発注者)が強く関与すべきではないか。 If the affected third-parties' structures and affected areas are included, shall the Engineer (or the Employer in some cases) be strongly involved? NK1:計測値の報告を追加で規定します。 Reporting of measured is added as right. JC1D: review においてもエンジニアが関与すべき。 Engineers should be involved in the review.	Unless otherwise stated in the ~~Contract~~ Particular Safety Specification, regarding the allowable measurement, control values and control limit values, the Contractor shall determine control limit values based initially upon the allowable displacement or stress in the design, then the following stepwise control values shall be established as necessary. (i) Primary control value: Increase the incidence and degree of care over inspections and commence preparing countermeasures which will be implemented if and when the measurement value reaches the secondary control value. (ii) Secondary control value: Suspend work and implement the countermeasures. (iii) Control limit value Stop work immediately, prohibit entry of any unauthorised persons to the affected area(s) and structure(s), take radical measures to prevent failure and review construction method. The Contractor shall submit the measured values of (i) weekly or as agreed by the Engineer and those of (ii) and (iii) immediately after measured to the Engineer. When the measured value reaches each of the above control values, the

	7.1.4 Compliance Standards (1) By reference to JSSS 1.35 [*Design and Management of Temporary Works*] the Contractor shall comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (2) In relation to TW, the Contractor shall also comply with: (a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design; (b) BS EN 12812 Falsework. Performance requirements and general design; and (c) Such other standards that are referred to in particular parts of JSSS. (3) Where strength and durability are essential for the performance of TW and where no other suitable standards exist in respect of TW, the Contractor shall comply with the relevant parts of the following standards: *Refer to above notes particularly the following repeated here:* *Unless the stated design standards show standards of related TW they should not be included here otherwise this will be "over-specified" and the specification will perhaps be abused for example by engineers demanding new materials when they are not necessary.* *Are these following standards necessary? I have included the above new preamble but feel that the following should be deleted, they are not TW or applicable to TW:*	NK1: added as right. When the measured value reaches each of the above control values, the Contractor shall implement the measures stated. **7.1.4 Compliance Standards** (1) By reference to JSSS 1.35 [*Design and Management of Temporary Works*] the Contractor shall comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (2) In relation to TW, the Contractor shall also comply with: (a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design; (b) BS EN 12812 Falsework. Performance requirements and general design; and (c) Such other standards that are referred to in particular parts of JSSS. (3) Where strength and durability are essential for the performance of TW and where no other suitable standards exist in respect of TW, the Contractor shall comply with the relevant parts of the following standards: MM: Sub-Clause 7.1.4 Compliance standards MD note: Please refer to the earlier full draft and kindly advise of which standards are NOT to apply. Result: JICA and NK will discuss and advise MD accordingly JC1I: ここをどうする？ How does this part these (2) and (3) be dealt with? JC1D: BS 8002 において temporary retaining wall (TRW)設計を除外するとは規定されていないように読めます。 さらに、TRW は市街地の土木作業においては、隣接した第三者の構造物（建築、土木構造物）を含む土質基礎部分をサポートすることも容易に想定され、この時 BS 5975 でカバーしきれるものでしょうか？ BS 8002 が参照する BS EN 1990-2002 の Geotechnical Category の概念も重要になるのではないでしょうか。 また、場内電気配線／機器も仮設設計に属するものとすると、BS 5975 では対応していません。ご検討ください。 以上のような視点で記載された standards の必要性においても検討されたい。 BS 8002 seems tht it does not stipulate that the design of Temporary Retaining Wall (TRW) is excluded. In addition, it may be necessary to support the soil including adjacent third-parties' structure foundations (buildings, civil structures) in urban areas. In this case, is it sufficient to refer only to BS 5975? As an example, the	Contractor shall implement the measures stated and report to the Engineer. The Contractor shall submit the revised Method Statement including the reviewed construction method to the Engineer. **7.1.4 Compliance Standards** (1) By reference to JSSS 1.35 [*Design and Management of Temporary Works*] the Contractor shall comply with BS5975: 2019 Code of Practice for Temporary Works Procedures and the Permissible Stress Design of Falsework. (2) In relation to TW, the Contractor shall also comply with: (a) BS EN 12811-1 Temporary works equipment-Part 1: Scaffolds - Performance requirements and general design; (b) BS EN 12812 Falsework. Performance requirements and general design; and (c) Such other standards that are referred to in particular parts of JSSS. ~~(3) Where strength and durability are essential for the performance of TW and where no other suitable standards exist in respect of TW, the Contractor shall comply with the relevant parts of the following standards~~ When the Contractor design TW with design standards other than specified in the JSSS and the Particular Safety Specification, the Contractor shall propose internationally acceptable design standards to be applied for TW design to the Engineer for his consent.

(a) BS 6031 Code of practice for earthworks;
(b) BS 8002 Code of practice for earth retaining structures;
(c) BS 8002 Code of practice for earth retaining structures;
(d) BS 8004 Code of practice for foundations;
(e) BS 8081 Code of Practice for grouted anchors;
(f) BS EN 1993 (all parts) Eurocode 1. Basis of structural design;
(g) BS EN 1992 (all parts) Eurocode 2. Design of concrete structures;
(h) BS EN 1993 (all parts) Eurocode 3. Design of steel structures; and
(i) BS EN 1997-1 Eurocode 7. Geotechnical design. General rules.

concept of the Geotechnical Category of BS EN 1997 referred to by BS 8002 may also be important.

In addition, BS 5975 does not specify electrical wiring / equipment in the Site which are a part of TW design. Please study these. From the view points above, please reconsider the appropriateness of the standards listed.

NK: Main purpose of JSSS is to specify measures for safety. There are so many standards for the design of various kinds of TW. The Contractor shall propose internationally acceptable design standards to be applied for TW design to the Engineer for his consent. (Reference clause is JSSS 1.4.1.)

1.4.1. Specified Standards and Regulations:

(1) Any reference standard or regulation specified in JSSS may be substituted with an equivalent alternative which, unless stated otherwise, shall mean that an alternative is acceptable but only after the Contractor has submitted a formal request with supporting particulars to the Engineer and has obtained the consent of the Engineer who shall give such consent only if, in his opinion, the alternative is internationally acceptable and that it provides an equivalent or higher standard than the standard or regulation specified.

(2) Where JSSS refers to the standards and regulations of other countries, such reference is only to the technical requirements contained in such standards and regulations and not to the related laws or legal enforceability of any of those other countries.

~~(a) BS 6031 Code of practice for earthworks;~~
~~(b) BS 8002 Code of practice for earth retaining structures;~~
~~(c) BS 8002 Code of practice for earth retaining structures;~~
~~(d) BS 8004 Code of practice for foundations;~~
~~(e) BS 8081 Code of Practice for grouted anchors;~~
~~(f) BS EN 1993 (all parts) Eurocode 1. Basis of structural design;~~
~~(g) BS EN 1992 (all parts) Eurocode 2. Design of concrete structures;~~
~~(h) BS EN 1993 (all parts) Eurocode 3. Design of steel structures; and~~
~~(i) BS EN 1997-1 Eurocode 7. Geotechnical design. General rules.~~

JC1O: 殆どの Standard は本設構造の設計に関連する内容なので削除してもいい。
Most Standards above are related to the design of the main structure and may be deleted.
NK: Deleted.

7.1.5 Specialist Temporary Works

(1) Specialist TW (including systems or components thereof) such as types of Earthwork Support, Cofferdams and the like shall be executed by qualified specialist Contractors or Subcontractors that are

~~**7.1.5 Specialist Temporary Works**~~

JC1I: Is this Clause necessary?
NK1: This clause is deleted

appropriately and especially skilled and experienced with the particular type of TW, using qualified, skilled and experienced personnel with appropriate types and quantities of specialist equipment.

(2) If the Contractor for the Works is not required to be such a qualified specialist then at Design or Bidding Stage, the Implementing Agency should take measures to procure qualified specialist Subcontractors and then specify or instruct that the work be carried out by nominating such Subcontractors in accordance with GC 5. [*Nominated Subcontractors*] against a Provisional Sum to be included in the Bidding Documents for that purpose.

(3) If not and unless otherwise stated or named in the Contract, the Contractor should be required to appoint a qualified and specialist Subcontractor, qualification criteria shall be given in the Bidding Document and prior Engineer's consent shall be obtained in accordance with GC 4.4 [*Subcontractors*] for any Subcontractor that meets such criteria.

because the TW shall be designed and constructed under the responsibility of the Contractor unless otherwise specified to use specialist TW in the Contract, and we don't know the project adopted "specialist contractors" and "nominated contractor" for TW.

MM: Sub-Clause 7.1.5 Specialist Temporary Works
JICA: Necessary or not?
NK: It is intended to cover specialist ground and temporary works.
Please let me know if required or not
Result: Delete not Required

~~(1) Specialist TW (including systems or components thereof) such as types of Earthwork Support, Cofferdams and the like shall be executed by qualified specialist Contractors or Subcontractors that are appropriately and especially skilled and experienced with the particular type of TW, using qualified, skilled and experienced personnel with appropriate types and quantities of specialist equipment.~~

~~(2) If the Contractor for the Works is not required to be such a qualified specialist then at Design or Bidding Stage, the Implementing Agency should take measures to procure qualified specialist Subcontractors and then specify or instruct that the work be carried out by nominating such Subcontractors in accordance with GC 5. [*Nominated Subcontractors*] against a Provisional Sum to be included in the Bidding Documents for that purpose.~~

~~(3) If not and unless otherwise stated or named in the Contract, the Contractor should be required to appoint a qualified and specialist Subcontractor, qualification criteria shall be given in the Bidding Document and prior Engineer's consent shall be obtained in accordance with GC 4.4 [*Subcontractors*] for any Subcontractor that meets such criteria.~~

JC1D: GC 5 [Nominated Subcontractors]を採用することに違和感を覚えます。Implementing Agency はまず Contract Document 作成のコンサルタントにその設計業務を実施させ（従って必要な地質調査・室内試験等も行わせることになり、これが contract Data として開示されることになります）、その結果を入札図書に開示し、応札者にはそれらの情報に基づいて、自らの解釈で設計を行い、実施に当たってはエンジニアの介在が必要になる、と考えています。GC 5 の採用提案は、その設計下請けの設計に対する品質に問題があるとしたとき、発注者に責任が及ぶことも考えられます。
For GC 5. [Nominated Subcontractors] on (2). For using GC 5 [Nominated Subcontractors], something feels wrong with my idea. Because, the Implementing Agency firstly have the consultant who prepares the Contract Document perform the design work and disclose the results in the tender documents. The bidder designs based on this information. The proposal to adopt GC 5 may also be

liable to the Employer if there is a problem with the quality of the design subcontracting
NK: Deleted.

7.2 土留め工

7.2.1 一般事項

(1) 本節で使用する用語の定義は以下のとおりである。

(z) 土留め工とは、明り掘削を行う場合に、周辺の地山の崩壊を防ぐことを目的として設けられる仮設構造物をいい、土留め壁と土留め支保工からなる。

→E General Requirements Annex 1.1 A1.1.2.へ規定済み。→(NK の方針:(a)の J 記述は削除し E 7.2.1(2)の記述へ変更する)

(aa) 土留め壁は、親杭横矢板壁、 鋼矢板壁、鋼管矢板壁、柱列式連続地中壁、地中連続壁等をいう。

→E 7.2.1(3)に規定済み。→(NK の方針:E 7.2.1(3)(a)～(e)の方が各工法を例示的に記載しているので(b)の J 記述に代えて E 7.2.1(3)(a)～(e)の記述を採用する)

(bb) 土留め支保工は、腹起し、切りばり、火打ち、中間杭等からなる切りばり支保工、グラウンドアンカー支保工等をいう。

→E 7.2.1(3)に土留め工の構造／構成について規定済み

(2) 土質に見合った勾配を保って掘削できる場合を除き、掘削の深さが1.5mを超える場合には、原則として、土留め工を施すものとする。

→規定なし。(MD insists aall sides shall be supported, even a 1m excavation can cause destabilisation and danger と、1.5m の数字を規定することへの違和感からの削除提案 →(NK の方針:過去の現場災害事例に基づき規定検討してきた経緯があり規定を残すべき。)

7.2.2 計画及び設計時の留意事項

請負者は、土留め工の計画及び設計に当たり、次の事項に留意しなければならない。→E 7.2.1(3)に規定済み

(1) 設置する箇所の地山の地質、地層、土質、き裂、含水量、湧水、地下水及び埋設物等の状態に応じた土留め工の設置を計画すること。

→E 7.2.2(1)に規定済み(但し英語版での規定内容は、リスク、contingency、その他情報等も含め計画すること、とより網羅的に記載)→(NK の方針:E

7.2. EARTHWORK SUPPORT

7.2.1. General

(1) Refer to JSSS Annex 1.1: [*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation and the avoidance of any damage to property.

(3) Earthwork Support can include for example the provision of:

(a) Timberwork including sheeting, planking, strutting and support systems;
(b) Steel sheet piling including shoring, strutting and support systems;
(c) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;
(d) Sloping or battering sides of excavations; and
(e) Ground improvement, slope stabilisation, injection, ground freezing and the like.

7.2. EARTHWORK SUPPORT

JC1O: BS8002: Code of practice for earth retaining structures では、"Earth Retaining Structure"と記載している。[Temporary Earth Retaining Structure]とすればどうか。
BS 8002 stated "Earth Retaining Structure". How about calling it as [Temporary Earth Retaining Structure]?

MM: 7.2 EARTHWORK SUPPORT
JICA:How about calling it "Temporary" Earth Retaining Structure? (Same for Cofferdam),
NK: Change will be made.
Result: No need to change (see also the definition)
Definition is as follows:
A1.1.2
(7) "Earthwork Support" means the permanent or temporary structural support arrangements to prevent the collapse or weakening of the surfaces of any excavation including for example basement, pit, trench or slope excavation.

7.2.1. General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation and the avoidance of any damage to property.

(3) Earthwork Support can include for example the provision of:

JC1O: Capital Letter ではない。
It should not be capitalized term.
NK: Defined in A1.1.2, so capitalized.

(f) Timberwork including sheeting, planking, strutting and support systems;
(g) Steel sheet piling including shoring, strutting and support systems;
(h) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;
(i) Sloping or battering sides of excavations; and
(j) Ground improvement, slope stabilisation, injection, ground freezing and the like.
(k) Ground Anchor

JC1D: (f)Ground Anchor が必要かと考えます。I think (f) is

6.2 EARTHWORK SUPPORT

6.2.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Earthwork Support.

(2) The Contractor must protect the structural integrity of ground, buildings, structures, roads, railways, waterways, services and adjacent surfaces that may be affected by excavation or Earthwork Support works and ensure the safety of all persons, whilst they are working in, under or adjacent to any excavation and the avoidance of any damage to property.

(3) Earthwork Support can include for example the provision of:

(l) Timberwork including sheeting, planking, strutting and support systems;
(m) Steel sheet piling including shoring, strutting and support systems;
(n) Specialist support systems such as diaphragm walling, steel pipe piling, contiguous piling, soldier piling and lagging, and the like;
(o) Sloping or battering sides of excavations; and
(p) Ground improvement, slope stabilisation, injection, ground freezing and the like.
(q) Ground Anchor

7.2.2(1)の記述を残す。)

(2) 隣接する建築物への影響(地盤沈下、地下水位の変異等)については、本契約で別途定める規定を遵守し必要な対策を講じること。
→E 7.2.2(3)に規定済み→(NK の方針:E 記述の方が影響対象の例示が多く E 記述に合わせる)

(3) 土留め工周辺の土質に応じてボイリング、ヒービングに対する掘削の安全性を、設計時に確認すること。→E 7.2.2(2)に規定済み

(4) 土留め工の設計では、設計書、設計計算書、設計図、組立図、材料仕様書、モニタリング計画を作成すること。組立図には、矢板、中間杭、腹おこし、切りばり、グラウンドアンカー等の部材の配置、寸法及び材質並びに取付けの時期及び順序が示されなければならない。

(5) 土留め工の設計書には、本仕様書 7.2.3 に示すモニタリング計画を含めること。

※迫田様:上記(4)の記述内容は、第 4 案暫定セット版と「ファイル名:20191117_7.2 Earth Retaining (R1)」で異なっているようです。恐縮ですが、(5)の規定内容と併せて、最新の見解に基づき、当該箇所の NK 対応方針コメントをお願いします。

7.2.3 モニタリング計画

請負者は、施工中の土留め工の安全を確保し、周辺の地盤や建物等への影響をすみやかに察知するために、変位や挙動の目視点検及び計器計測によるモニタリング計画を、次に従い作成し、土留め工を管理しなければならない。

このモニタリング計画には、下記に示すモニタリングの実施方法について具体的に記述しなければならない。
→E 7.2.3 (1)(a)に規定済み

(1) モニタリングの実施

(cc) 目視点検

目視点検の対象及び項目は、次表及び土留め

7.2.2. Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like and the prevention of any damaging effect upon excavations and Earthwork Support.

(3) Affect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) Vibration from site operations (e.g. piling) or adjacent traffic or railways and the like.

(5) Access and working space necessary to execute the Permanent Works.

necessary.

NK: Add as commented.

MM(20200220) : 2. 英文第 8 章土工工事
(2) 深さ 1.5m 以上の掘削では、原則土留め工を設置することを規定する。
2. Chapter 8 Excavation Works
(2) In principle, excavation more than 1.5m high shall be specified to provide earth retaining.

NK: Added as (4)

7.2.2. Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

NK: (2)から(4)の規定に対し、JC で"発注者が指定すべき"とコメントあります。
(2)から(4)は設計上考慮すべき項目を列挙しています。これらは、GC4.18 の具体的項目です。

GC4.18 Protection of the Environment
The Contractor shall take all reasonable steps to protect the environment (both on and off the Site) and to limit damage and nuisance to people and property resulting from pollution, noise and other results of his operations.

本款の序文に、契約に規定が無い限り、土留めを設計することと規定しています。JC のコメントに対応するために、(6)に Particular Safety Specification の規定を設計に考慮することを追記します。
Added (6).

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

JC1O: 入札時点の Site Information だけしか記載されていない。"Any relevant site information that the Contractor has encountered or obtained during the execution of the Works"を追記しては。(Comment in English is in MM below.)

MM: Sub-Clause 7.2.2. Planning and Design
JICA: Only site information at the time of bidding is described. How about adding "Any relevant site information that the contractor has encountered or obtained during the execution of the Works".
NK: Other investigation is necessary after commencement and this will be added
Result: NK to add further requirements deriving from Contractor's further studies since commencement.

(2) Ground water and potential of liquefaction, boiling or piping, heave and the like and the prevention of any damaging effect upon

(4) The Contractor shall provide earth retaining for the excavation equal to or deeper than 1.5 m in principle other than the case that excavation can be made with safe slopes depending on the soil conditions.

6.2.2 Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design all Earthwork Support so that it is fit for the purpose for which it is intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) Ground water level and potential of liquefaction, boiling or piping, heave and the like and the prevention of any damaging effect upon excavations and Earthwork Support.

工の特性に応じたものとし、それらを含む点検表を作成し、毎日点検すること。
←E 7.2.3 (1)(b)に規定済み

点検対象	点検項目
土留め壁	壁体天端の蛇行や上下方向の変位 壁体の亀裂、たわみ、はらみ出し 壁体からの漏水、土砂流出 接手部のずれ
土留め支保工	腹起しのたわみ、ねじれ 中間杭の沈下、浮き上がり、ねじれ 切ばりの上下・水平方向の変位、ねじれ 接手、交差部のずれ、ボルトの破損やゆるみ
周辺地盤	舗装面・地表面の亀裂、陥没 敷石・縁石の目地の開き
掘削底面	底面からの湧水、噴砂、 底面のふくれ上がり、湧水の濁り
周辺構造物	構造物の亀裂、傾斜
土留め工内の	埋設物の変位、埋設物の接続部のずれ

←上表は E Table 7.2.1 に規定済み

7.2.3. Inspection and Monitoring

Refer to JSSS 0 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

excavations and Earthwork Support).

JC1D: 地下水位の低下が可能か否か、これは発注者が指定すべき。
Whether or not the groundwater level can be lowered shall be specified by the Employer.

NK: 本款の序文で請負者が設計で考慮すべき事項は次であるとして(1)以下を規定している。ここで地下水位を下げて良いとは規定していない。考慮すべき事項の一つが地下水である。記述は変更しない。ただし、地下水位とするために Ground water level へ変更します。
The first sentence mentioned to take account of all factors including (1) and others. There is not mentioned whether ground water level can be lowered. One of factors to be considered is ground water level. The term of ground water is replaced with ground water level.

JC1D: これも発注者が規定すべき。
These shall also be stipulated by the Employer.

NK: これらの項目は、設計上考慮すべき事項である。(6)を追記します。

(3) Affect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

JC1D: 発注者が許容値を規定すべき。
The Employer shall specify the allowable value.

NK: (2)と同上である。 Ditto as (2).

(4) Vibration from site operations (e.g. piling) or adjacent traffic or railways and the like.

JC1D: 発注者が許容値を規定すべき。
The Employer shall specify the allowable value.

NK: (2)と同上である Ditto as (2).

(5) Access and working space necessary to execute the Permanent Works.

JC1D: GC 4.13 Rights of Way and Facilities の初めの文節において、発注者が準備するべき。また、”Site”は working areas も含めて、発注者が準備するべき。
In the first clause of GC 4.13 Rights of Way and Facilities, it shall be prepared by the Employer. Also, “Site” shall be prepared by the Employer, including working areas.

NK1: (5)は設計で考慮すべき項目である。契約で提供された現場内でどのように土留めを行うかのために、アクセスと作業スペースを考慮することと規定しており、変更する必要は無いと考えます。
(5) specifies two factors to be taken account in the design. Those shall be designed in the Site provided by the Employer. We consider not necessary to modify (5).

7.2.3. Inspection and Monitoring

Refer to JSSS ()[*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

NK: JSSS 1.3.11 [Inspection and Monitoring of TW] stipulate as

(3) Affect by the Earthwork Support on existing buildings, structures, roads, railways, ground, substrata, surfaces, paving and the like such as displacement, heave or groundwater fluctuation.

(4) Vibration from site operations (e.g. piling) or adjacent traffic or railways and the like.

(5) Access and working space necessary to execute the Permanent Works.

(6) Values of ground water level fluctuation , vibration, displacement and other damage and nuisance to people, property and existing structures, etc. not to exceed specified in the Particular Safety Specification.

6.2.3 Inspection and Monitoring

Refer to JSSS 1.3.11 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.
The Contractor shall prepare Inspection and

(dd) 計器計測

(i) 別途契約書で定めがある場合はそれに従い、定めがない場合については、次表を参照のうえ、計器計測の計画を作成すること。←E 7.2.3 (2)(a)及び(b)に規定済み

計測対象	計測項目
土留め壁	土留め壁の変位、土留め壁の応力、土留め壁に作用する土圧、水圧
土留め支保工	切ばりの軸力又は土留めアンカーの軸力
掘削底面	掘削底面の変位、水圧、湧水量

(1) Visual Inspection and Monitoring

(a) The Contractor shall prepare a Visual Inspection checklist depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the checklist; and

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

follows:

1.37.11 For further information on monitoring the performance of Temporary Works, refer to JSSS 6.1.3. [Inspection and Monitoring of Temporary Works].

NK: Referring to the JC comment to (2) below, the preparation of Inspection and Monitoring Plan and include in Safety Plan are added to the above sentence.

(1) Visual Inspection and Monitoring

JC1O: visual monitoring でよいのでは。
The title of "Visual Monitoring" seems better.

MM: Sub-Clause 7.2.3 Inspection and Monitoring

JICA: I hope "Visual Monitoring" is fine.

NK (MD): Please let me know if it is not, I am editing the specification only and I assume that it represented your agreed requirements. Please check as necessary.

Result: Leave as it is

NK1: The following is comparison of terms "inspection" and "monitoring"

1) GC 4.20 Employer's Equipment and Free-Issue Materials
The Contractor shall then visually inspect them, and shall promptly give notice to the Engineer
GC 20.1 Contractor's Claims
the Engineer may, after receiving any notice under this Sub-Clause, monitor the record-keeping and/or instruct the Contractor to
from internet, their difference is as follows:
2) https://wikidiff.com/monitoring/inspection
inspection is act of examining something, often closely while monitoring is the act of listening, carrying out surveillance on, and/or recording the emissions of one's own or allied forces for the purpose of maintaining and improving procedural standards and security, or for reference, as applicable.
3) https://dictionary.cambridge.org/dictionary/english/inspection
Inspection: the act of looking at something carefully, or an official visit to a building or organization to check that everything is correct and legal:
Monitoring: to watch and check a situation carefully for a period of time in order to discover something about it:
Visual Inspection は目視、Monitoring は監視と考え、(1) は Visual Inspection に変更します。

(a) The Contractor shall prepare a Visual Inspection checklist depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the checklist; and

JC1O: Visual monitoring では？Is it Visual monitoring?

NK1: Same as (1) above.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

JC1O: (b) is modified to "Sample Items of visual monitoring are given in the following table."

NK1: The difference between terms of examples and sample is as follows:
http://www.differencebetween.net/language/words-language/difference-between-example-and-sample/
Both "example" and "sample" imply a part and also act like representatives of a whole. An example, by definition, is a noun that shows and mirrors other things. ... On the other hand, a sample is a small part of something much bigger. Unlike an

Monitoring Plan of visual inspection and instrument monitoring in accordance with this 6.2.3 and include the Inspection and Monitoring Plan in the Safety Plan for the Earth Support.
In addition to the above, the Inspection and Monitoring Plan shall be prepared for the Earth Support, other structures and locations are specified to be specially monitored in the Particular Safety Plan,

(1) Visual Inspection ~~and Monitoring~~

(a) The Contractor shall prepare a Visual Inspection ~~checklist~~ Plan depending on the characteristics of the Site and the required Earthwork Support and carry out regular inspections based upon the content of the ~~checklist~~ Plan ; and

(b) Examples of Inspection Objects and Inspection ~~Types~~ Items are given in the following Table.

周辺地盤	周辺地盤の変位、地下水位
周辺構造物	構造物の変位
地下埋設物	地下埋設物の変位

←上表は E Table 7.2.2 に規定済み

(ii) 計器及び計測方法は計測の目的に合ったものを選定すること。

←E 7.1.3 (4)(a)に規定済み

(iii) 計測位置は、その計測目的に合致し、安全管理上必要と思われる箇所で、土留め工設置期間を通じて連続的に観測が可能な箇所とし、必要な数とすること。

←E 7.1.3 (4)(b)に規定済み

(2) ~~モニタリングに基づく管理~~

(ee) 目視点検による管理

~~目視点検で異常が見つかったときは、以下(b)の計器計測結果との照合、計測方法の見直し、あるいは緊急的な対策の実施等、異常の程度に応じ、必要な対策を実施すること。~~

→規定なし。(下記参照)

(ff) ~~計器計測による管理~~

~~本契約で別途に計器計測項目の管理値の定めがあるときはそれを基に、定めがない場合は設計上で許容された変位・応力等を基に管理限界値をまず設定し、必要に応じ、以下に示すような段階的な管理値を定めること。計測値が各管理値に達した場合は、その管理値に応じた対策を実施すること。~~

←下記(i)～(iii)は E 7.1.3 (5)(b)に規定済み

(iv) 一次管理値(観測の強化と二次管理値以上の値に達した場合の対策方法の検討・準備を開始する基準値)

(v) 二次管理値(作業をいったん中断し、対策を開始する基準値)

(vi) 管理限界値(直ちに作業を中止し、作業員の立ち入りを禁止し、施工方法の見直しを含めた抜本的な対策を行う基準値)

→7.2.3 (1)(b)(ii)～(2)(b)(iii)まで規定がない理由:英語版 7.1.3 (1)～(4)へ転記済(by MD 氏)との見解より。

→NK の方針: 7.2 節「土留め工」、7.3 節「仮締切工」については、日本語版セット版で「点検、モニタリング計画」を規定しているが、MD 氏は、英語版で同手続きに係る共通事項は E 7.1.3 で纏めて規定する提案をしている。この提案に基づき規定することを提案する。

7.2.4 土留め工の施工時の安全管理上の措置

→(1)～(7)含めて規定なし。(下記参照)

請負者は、土留め工の作業時には、下記の安全管理上の措置を講じなければならない。

(1) 土留め工の設計条件、設計内容等を十分理解した作業主任に作業を直接指揮させること。

Table 7.2.1: Visual Inspection Checklist

	Inspection Object	Inspection Type
1	Earthwork Support: Faces	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent Ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent Buildings or Structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

example, a sample is random and not specific.

The term of "Examples" is left and the "Type" is replaced with "Items".

Table 7.2.1: Visual Inspection Checklist

	Inspection Object JC::Locations? NK: No Change	Inspection Type JC: Monitoring Items? NK: Replaced.
1	Earthwork Support: Faces JC: Retaining Walls/Piles? NK: As explained in 7.2.1 (3), the term of Earthwork Support is used.	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles and strutting JC: Walings and Struts? NK: added walings.	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
3	Base of Excavation JC: Excavated Floor? NK: leave it as it is.	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent Ground, paving and roads JC: Surrounding Ground and Surface? NK: leave it as it is..	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs →Collapse?? Sinking?(by JC) NK: delete "collapse" because feel something wrong.
5	Neighbouring or adjacent Buildings or Structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

Table 6.2.1: Visual Inspection ~~Checklist~~ Items

	Inspection Object	Inspection ~~Type~~ Items
1	Earthwork Support: Faces, sheeting and piling	Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Water leakage, mud inflow. Opening of joints or gaps in Earthwork Support.
2	Earthwork Support: Piles, walings and strutting	Deflection, twist of struts and waling and other members. Settlement, floatation and twist of piles Vertical or horizontal displacement, of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
4	Neighbouring or adjacent ground, paving and roads	Cracks, collapse, subsidence of pavement or ground surfaces, Opening of joints in paving and kerbs
5	Neighbouring or adjacent Buildings or Structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement or leakage of or damage to underground utilities

(2) 上記 7.2.2(4)の材料仕様書に請負者が計画した品質の材料を使用するものとし、ひび割れ、変形又は腐食等のある不適切な材料を使用してはならない。

(3) 土留め工の組立ては、組立図に示された順序に基づいて行うこと。組立図と異なる施工を行う場合は、安全性の確認を行ったうえで、作業計画書を変更すること。

(4) 建設機械を用いて土留め壁または土留め支保工を施工する場合は本仕様書 4.14.1[建設機械作業の一般的留意事項]に規定の措置を講じること。

(5) 新たな掘削等の施工段階に進む前には、先の掘削における所定の部材が定められた位置に取り付けられていること及び土留め工が安定していることを確認すること。

(6) 土留め板は、掘削後すみやかに掘削面との間に隙間のないようにはめ込み、隙間が出来た時は、裏込め、くさび等で隙間の無いように固定すること。

(7) 土留め板の背面より漏水がある場合は、土砂の流出を防ぐ措置を講ずること。

→(1)～(7)含めて規定がない理由：I do not think that the following is necessary. However, some items can be used and I have created a new item below for this.
とのコメントにて英文 7.2.4(1)(2)のみの規定を提案している。

→NK の方針：施工時の安全事項に係る規定（作業場での注意事項）を残すこととし、英文 7.2.4(1)(2)に加え、上記（和文）のうち (2)、(5)、 (6)、(7)の規定を残すことを提案する。

7.2.5 切りばり支保工の作業での安全上の措置

請負者は、切りばり支保工の作業にあたっては、次の安全上の措置を講じなければならない。

(1) 切りばり及び腹おこしは、脱落を防止するため、矢板、杭等に確実に取り付けること。
→E 7.2.5 (2)に規定済み

(2) 圧縮材（火打ちを除く）の継手は突合せ継手とし、部材全体が一つの直線となるようにすること。木材を圧縮材として用いる場合は、2 個以上の添え物を用いて真すぐに継ぐこと。
→E 7.2.5 (3)に規定済み

(2) Instrument Monitoring

(a) Unless otherwise stated in the Contract, the Contractor shall prepare an Instrument Monitoring checklist depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the content of the checklist.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

(2) Instrument Monitoring

(a) Unless otherwise stated in the Contract, the Contractor shall prepare an Instrument Monitoring checklist depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the content of the checklist.

JC1O: 契約の記載がなければ、コントラクターは計器計測の準備をすることから記載が始まっている。
その前に、重要な仮設に関しては、契約に記載がなくても、Visual and Instrument Monitoring の計画を作成し、エンジニアに提出しなければならない。次のように

(a) the Contractor shall prepare an Instrument Monitoring checklist ....."

It is stipulated "Unless otherwise stated in the Contract, the Contractor are to prepare for instrument measurement."

Prior to this sentence, it is necessary to stipulate that for important temporary constructions, a plan for Visual and Instrument Monitoring shall be prepared and submitted to the Engineer, even if not stated in the contract as (a) the Contractor shall prepare an Instrument Monitoring checklist .....".

JC1: 英語の表現がおかしい。
English expression seems inappropriate.

NK: Unless otherwise stated in the Contract…の規定を、次のように解釈します。契約に規定が無い限り、請負者は、現場の特定、地盤条件、必要な土留めの樹生興に応じた計測によるモニタリングの計画を作成し、モニタリングを実施しなくてはならない。(ongoing の意味は不明のため MD 氏へ問いあわせます。)
提案の"even if not stated in the contract"と同じ意味と考えます。
JC で提案の特別に重要な仮設構造物の選定は、現規定では請負者の判断次第となりますので、Particular Safety Plan で規定することが必要と考えます。
We consider that the sentence of "Unless otherwise stated in the Contract" and JC's proposed sentence "even if not stated in the contract…" are almost same meaning.
The proposed "important temporary constructions" need to be specified in the Particular Safety Plan.

NK: JC のコメントを考慮し、本款の出だしに Inspection and Monitoring Plan の作成と、エンジニアに提出される Safety Plan に含めることを追加して規定します。及び特別にモニタリングすべき構造物は、PSS に規定することを規定します。
Considering the JC comment, at the beginning of this Clause, it is added that Inspection and Monitoring Plan shall be prepared and included in the Safety Plan.
The important TW to be monitored is specified in the PSS.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

(2) Instrument Monitoring

(a) ~~Unless otherwise stated in the Contract,~~ the Contractor shall prepare an Instrument Monitoring ~~checklist~~ Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ~~ongoing~~ monitoring based upon the content of the ~~checklist~~ Plan.

MD: May we know what the "ongoing" means.

(b) Examples of ~~I~~ inspection ~~O~~ objects and ~~I~~ inspection ~~Types~~ ~~I~~ items are given in

(3) 切りばり又は火打ちの接続部及び切りばりと切りばりとの交さ部は、当て板をあててボルトにより緊結し、溶接により接合する等の方法により堅固なものとすること。
→E 7.2.5 (4)に規定済み

(4) 中間杭を備えた土留め支保工にあっては、切りばりを当該中間杭に確実に取り付けること。
→E 7.2.5 (5)に規定済み

(5) 切りばりを土留め工の部材以外の建築物の柱等で支持する場合にあっては、当該支持物は、これにかかる荷重に耐えうるものとすること。
→E 7.2.5 (6)に規定済み

(6) 土留め壁と腹おこしの隙間は充填を行うこと。また、腹おこしと切りばりの接合部はスチフナー等で補強を行うこと。→E 7.2.5 (7)(隙間充填)及び(8)(接合部補強)へ分けて規定済み

7.2.6 グラウンドアンカー工の作業での安全上の措置

請負者は、グラウンドアンカー工の作業にあたっては、次の安全上の措置を講じなければならない。

(1) ボーリングマシンの組立て、解体、変更又は移動の作業、ボーリングマシンによる削孔作業、アンカー(テンドン)鋼材の緊張作業、グラウト材の注入等の作業を行うときは、作業の方法、手順、安全上の措置を定め、これらを作業者に周知し、かつ、作業主任の直接の指揮の下に作業を行うこと

(2) ボーリングマシンの操作は、指定の者以外の者にさせないこと。→E 7.2.6 (1)に規定済み

(3) アンカー(テンドン)鋼材の緊張作業中、鋼材の破断等による作業員の危険を防止するため、緊張ジャッキの後方を立ち入り禁止とする等の安全措置を講じること。→E 7.2.6 (2)に規定済み

Table 7.2.2: Instrument Monitoring Checklist

	Object	Inspection Type
1	Earthwork Support: Faces	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles and strutting	Axial force of strut, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
4	Neighbouring or adjacent Ground, paving and roads	Displacement of neighbouring or adjacent ground, ground water level
5	Neighbouring or adjacent Buildings or Structures	Displacement: cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

JC1O: (b) may be modified to "Sample Items of Instrument monitoring are given in the following table."
NK: As explained in 7.2.3 (b), NK suggest example is used.

Table 7.2.2: Instrument Monitoring Checklist

	~~Inspection~~ Monitoring Object JC::Locations? NK: No Change	~~Inspection~~ Monitoring Items ~~Type~~ JC: Monitoring Items? NK: Replaced.
1	Earthwork Support: Faces JC: Walings/Struts ? NK: Added sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles and strutting JC: Retaining Walls/Piles? NK: Replaced.	Axial force of strut, other supports and ground anchors.
3	Base of Excavation JC: Excavated Bottom/Floor ? NK: leave it as it is.	Displacement of base of excavation Water pressure of spring of water, water inflow
4	Neighbouring or adjacent Ground, paving and roads JC: Surrounding Ground and Surface? NK: leave it as it is..	Displacement of neighbouring or adjacent ground, ground water level
5	Neighbouring or adjacent Buildings or Structures JC: Surrounding Ground and Surface? NK: leave it as it is.	Displacement,~~: cracks, weakening,~~ subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

the following Table.

Table 6.2.2: Instrument Monitoring ~~Checklist~~ Items

	Object	Inspection ~~Type~~ Items
1	Earthwork Support: Faces, sheeting and piling	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Earthwork Support: Piles, walings and strutting	Axial force of walings, struts, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation, Water pressure of spring of water, water inflow
4	Neighbouring or adjacent ground, paving and roads	Displacement of neighbouring or adjacent ground, Ground water level
5	Neighbouring or adjacent buildings or structures	Displacement; ~~cracks, weakening,~~ subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement of~~, damage or leakage to~~ underground utilities

(4) グラウト材の注入作業の前に、圧送ホース及び継ぎ手の破損の有無を点検すること。 →E 7.2.6 (3)に規定済み (5) 作業に必要な安全帽、保護メガネ、手袋、安全靴等の保護具を、作業員に着用させること。 →規定なし。(It is not necessary unless it is special PPE as it is a general requirement which otherwise will need to be included everywhere.) →(NK の方針:過去の MD 氏指摘どおりと判断するため削除する。)		**7.2.4. General ~~Safety and Construction~~ requirements** JC1O: 削除. To be deleted. NK: deleted. (1) Excavations shall be protected from and kept free of ground water and surface water at all times. (2) Earthwork Support works shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time. JC1O: excavated wall?? NK: the term of face is left as it is as it is used in HSE as follows: https://www.hse.gov.uk/quarries/hardtarget/tips.htm *Tips and excavation* *The faces of excavations have to be kept stable.*	**6.2.4 General ~~Safety and Construction~~ Requirements** (1) Excavations shall be protected from and kept free of ground water and surface water at all times. (2) Earthwork Support works shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.
7.2.7 悪天候及び地震時の点検 →(1)、(2)を含め英文に規定なし。(2.7 Adverse Weather Requirements 2.7.2 Preventive Measures)で纏めて規定すべきとの MD 氏提案と思料。→(NK の方針:先提案どおりとし J 7.2.7 は削除することを提案する。) 請負者は、本仕様書 2.7[悪天候及び地震時の対策]に規定の悪天候又は地震後には、土留め工の作業に関して次の措置を講じなければならない。 (1) 土留め工又は土留め工内の作業を開始する前には、7.2.3 (2) (a)[目視点検によるモニタリング]に規定の目視による点検及び同(b)[計器計測によるモニタリング]による計測値のチェックを行うこと。 (2) 土留め工に異常を認めたときは、直ちに補強し、又は補修すること。	**7.2.4. General Safety and Construction requirements** (1) Excavations shall be protected from and kept free of ground water and surface water at all times. (2) Earthwork Support works shall proceed progressively so that no excavated faces are left without support or at risk of weakening or collapse at any time.	**7.2.5. Safety Measures for Shoring** JC1O: ここで言っているのは腹起しとストラットなので、Walings and Struts という表現でいい。 MM: Sub-Clause 7.2.5.Safety Measures for Shoring JICA:(1) Change shoring to include "Walings and Struts" throughout. NK: Will be changed; suggest this clause already covers it, (should be "waling and strutting"). Result: Leave as it is. NK: (1) defines shoring include walings, strutting and others, so the title is left as it is. Unless otherwise stated in the Contract: (1) "Shoring" shall include waling, shoring, strutting and like support.	**6.2.5 Safety Measures for Shoring** Unless otherwise stated in the Contract: (1) "Shoring" shall include waling, shoring, strutting and like support.
7.2.8 土砂及び器材等の置き方 (1) 土留め支保工の肩の部分に掘り出した土砂又は器材等を置く場合には，落下しない措置を講じること。→E 7.2.7 (1)に規定済み	Unless otherwise stated in the Contract: (1) "Shoring" shall include waling, shoring, strutting and like support.	JC1O: 表題を変更すれば削除 If the title is changed, delete it. NK: Title is not changed, so (1) is left. (2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.	(2) Shoring all be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.
	(2) Shoring shall be securely installed and fixed to Earthwork Support to prevent detachment and any movement or failure.	JC1O: Walings and Struts ? NK: Title is not changed, so (2) is left.	
	(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.	(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates. JC1O: 木製は日本では使用せず。削除しても MM: Sub-Clause 7.2.5 (4) JICA: Since wooden is not used in Japan, can it be deleted? NK: This is not for use in Japan and timber is widely used Result: Leave as it is	(3) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.
	(4) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).	(4) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel). (5) Intermediate piles shall be securely and rigidly supported with shoring.	(4) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).
(2) 設計で考慮された荷重以上の器材等を土留め工			

の付近に置かないこと。→E 7.2.7 (2)に規定済み	(5) Intermediate piles shall be securely and rigidly supported with shoring.	JC1O: It is stated that the intermediate piles will be secured, but "Shouldn't it be a statement that Struts should be securely installed?" NK: Modified.	(5) ~~Intermediate piles~~ Struts shall be securely and rigidly supported by ~~shoring~~ intermediate piles, when the intermediate piles are provided.
	(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.	(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.	(6) When shoring is fixed to or relies on an existing structure or building, the Contractor shall ascertain that the structure or building is able to withstand the applied load.
	(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges.	(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable wedges. NK1O: Retaining Walls/Piles and Walings shall be contacted with suitable materials としては I propose to modify as "Retaining Walls/Piles and Walings shall be contacted with suitable materials"? NK: Modified.	(7) Gaps between Earthwork Support and shoring shall be securely packed with suitable ~~wedges~~. materials.
	(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.	(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners. JC1O: Since wooden material is not used in Japan, can it be deleted? NK: leaved it as it is.	(8) Connections of shoring shall be reinforced with bolted (timber) or welded (steel) stiffeners.
	7.2.6. Safety Measures for Ground Anchor Work Unless otherwise stated in the Contract: (1) Prevent anyone other than designated personnel from operating the boring machine. (2) Prevent anyone from accessing the rear of the tension jack to prevent workers from injury through breaking of the anchor tendon during tensioning.	**7.2.6. Safety Measures for Ground Anchor Work** Unless otherwise stated in the Contract: (1) Prevent anyone other than designated personnel from operating the boring machine. JC1O: replace designated with permitted? NK: leave as it is as designate means assign a job or role to (someone) and almost same as permit. JC1O: replace machine with equipment? NK: BS 8081 Code of practice for grouted anchors use the terms as follows: Machine: drilling machine, Equipment: mixers, pumps. Boring machine is left as it is.	**6.2.6 Safety Measures for Ground Anchor Work** Unless otherwise stated in the Contract: (1) Prevent anyone other than designated personnel from operating the boring machine.
	(3) Check for any damage in the grout pressure hoses and joints before commencing any grout injection.	(2) Prevent anyone from accessing the rear of the tension jack to prevent workers from injury through breaking of the anchor tendon during tensioning. JC1O: 意味が多分通じない。 I think (2) cannot be understood. NK: (2) is the stipulation in the Japanese set-version. OSHA stipulation is as follows: *OSHA Subpart Q—Concrete and Masonry Construction* *§1926.701 General requirements.* *(c) Post-tensioning operations. (1) No employee (except those essential to the post-tensioning operations) shall be permitted to be behind the jack during tensioning operations.* NK ask MD to review this stipulation. (3) Check for any damage in the grout ~~pressure~~ hoses and joints before commencing any grout injection. JCO: deleted.	*(2) Prevent anyone from accessing the rear of the tension jack to prevent workers from injury through breaking of the anchor tendon during tensioning.* Alternative: Prevent anyone (except those essential to the post-tensioning operations) from accessing behind the jack during tensioning operations of the anchor tendon. (3) Check for any damage in the grout ~~pressure~~ hoses and joints before commencing any

	7.2.7. Adjacent Goods, Excavated Spoil and the like (1) The Contractor shall, when placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling. (2) The Contractor shall not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.	**7.2.7. Adjacent Goods, Excavated Spoil and the like** (1) The Contractor shall, when placing any Goods, excavated spoil and the like on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling. JC1O: 捨て土ではないので。 I guess that the term to be used is not "spoil" but "excavated materials". NK1: BS defines as follows: *BS 6100-3: Building and civil engineering – Vocabulary – Part 3: Civil engineering – General* *03 23023 spoil: excavated material that is unsuitable or surplus to requirements* Replace with material as spoil is part of excavated material. JC1O: 全体に and the like を多用しているが、要注意です。 and the like は同様の次項を並列した際に使用。この場合は単に etc.では？ Although "and the like" is often used throughout JSSS, but be careful. "and the like" is used when similar next terms are arranged in parallel. In this case simply in etc.? MM: Sub-Clause 7.2.7. Adjacent Goods, Excavated Spoil and the like JICA: Although "and the like" is often used throughout, but be careful. "and the like" is used when similar next terms are arranged in parallel. In this case simply in etc.? NK: This is a common phrase in contract and specification wording and has common interpretation that there are further similar things that are to be included. Et cetera (etc.) does not necessarily have the same meaning, it depends what precedes it and should not be generally used is Specifications. Result: explained and understood by JICA, no change required JC1O: Is English expression of (1) appropriate? NK: Change the description to emphasize the points for placing goods and excavated soil as the place on the shoulder of the excavated walls during earth retaining work, not "on the ground surface". (2) The Contractor shall not place any Goods, excavated spoil, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support. JC1O: Same comments as (1) above. NK: modified.	grout injection. **6.2.7 Adjacent Goods, Excavated ~~spoil~~ material and the like** (1) The Contractor shall, when placing any Goods, excavated ~~spoil~~ material and the like on the ground surface at the top and adjacent to any excavation, take measures to prevent it from falling. (2) The Contractor shall not place any Goods, excavated ~~spoil~~material, backfill material and the like where the weight exceeds the load considered in the design of the Earthwork Support.
7.3 仮締切工 **7.3.1 一般事項** 仮締切工とは、現場内へ外部から入り込む水を遮断するために設置する仮設構造物をいい、本節では、土	**7.3. COFFERDAMS** **7.3.1. General** (1) Refer to JSSS Annex 1.1: [*Definitions and Abbreviations*] for the definition of	**7.3. TEMPORARY COFFERDAMS** JC1O: Temporary Cofferdam としては？ I propose to modify to "Temporary Cofferdam". NK: Referring to the definition of the term of "cofferdam" in BS and US Army Corps of Engineers, the cofferdams are	**6.3 COFFERDAMS**

堤、ケーソン、一重鋼矢板、二重鋼矢板、切梁式鋼矢板等を扱う。
→上記下線部（設置する目的）は General Requirements Annex 1.1 A1.1.2.にて規定済み（下記参照）。対象とする締切工の種類は E 7.3.1(2)に規定済み。
"Cofferdam" shall mean a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
→（NK の方針：英語版(1)(2)のスタイルで記述する。）

7.3.2 計画及び設計時の留意事項

請負者は、仮締切工の計画及び設計に当たり、本仕様書「7.2 土留め工」の 7.2.2[計画及び設計時の留意事項]に準拠するとともに、次の事項に留意しなければならない。

→E 7.3.2 に規定済み。（但し英語版での記述：Unless otherwise stated in the Contract, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all factors including:）→（NK の方針：英語版では、各所の款の冒頭で左記記述を多用している。請負者は、JSSS の全ての内容を遵守することを求めているので参照先の節／款番号を示す規定法でなく、（上記）英語記述内容にて規定する方針とする。）

(1) Site Data に示される気象、海象、地震等のデータを十分考慮すること。
→E 7.3.2 (1)に規定済み。（但し英語版での規定内容は、リスク、contingency、その他情報等も含め計画すること、とより網羅的に記載）
→（NK の方針：より網羅的に記述している E 7.3.2(1)の記述を残す。）

Cofferdam.
(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

7.3.2. Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

(2) The effect of any vibration from site operations (e.g. driven piling).

(3) Access and working space necessary to execute the Permanent Works.

temporary structure:
BS ISO 6707-1 3.1.2.24 cofferdam
structure (3.1.1.4), usually temporary, that is built to support the surrounding ground (3.4.2.1) or to exclude water or soil (3.4.2.2) sufficiently to permit work within it to proceed safely without excessive pumping.
US Army Corps of Engineers EM 385-1-1 Manual
APPENDIX Q Definitions
Cofferdam: a temporary structure used to keep water (and earth) out of an excavation during construction of the permanent structure.
The title is left as it is.

7.3.1. General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam.
(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

7.3.2. Planning and Design

Unless otherwise stated in the Contract, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all factors including:

JC1: temporary cofferdam では？Capital letter でしょうか？
Are "Cofferdams" "temporary cofferdam"?
Is "Cofferdams" capitalized term?
NK: "Cofferdams" is defined in Annex A1.1.2 as follows, so capitalized term is used as it is.:
(3) "Cofferdam" means a temporary enclosing wall constructed in water, to permit the enclosed area to be pumped out and used as safe and accessible working space.
Not modified.

JC1O: relevant factors として下さい。
Please replace "factors" with "relevant factors"
NK1: Modified.

JC1O: 下記事項を including としてすべて名詞止にするのは難しいのでは。内容が複雑すぎます。
It seems difficult to include the following factors which are described in form of noun-type stop (ending a sentence with a noun or noun phrase). This paragraph is too complex to understand.
NK1: We considers they can be understood, but we will ask MD to review this comment.

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in accordance with GC 4.10 [*Site Data*].

JC1O: 入札時点の Site Information だけしか記載されていな

6.3.1 General

(1) Refer to JSSS Annex 1.1:[*Definitions and Abbreviations*] for the definition of Cofferdam.
(2) Cofferdams are generally constructed as earth dykes, caissons, steel sheet piling, double steel sheet piles, steel beam piles and the like.

6.3.2 Planning and Design

Unless otherwise stated in the Contract/Particular Safety Specification, the Contractor shall design Cofferdams so that they are fit for the purpose for which they are intended and take account of all relevant factors including:

(1) All relevant site data which may have been provided by the Employer in the Bidding Documents and any relevant site information that the Contractor has encountered or obtained during the execution of the Works together with all necessary further information as to risks, contingencies and other circumstances which the Contractor shall be deemed to have obtained in

		い。”Any relevant site information that the Contractor has encountered or obtained during the execution of the Works”を追記しては。 Only Site Information at the time of bidding is described. How about adding, ”Any relevant site information that the Contractor has encountered or obtained during the execution of the Works” NK: Added.	accordance with GC 4.10 [*Site Data*].
(2) 河川流量、水位、潮位、波高、余裕高、地震荷重、想定される外力等の設計条件について契約書の別の定めに従うこと。 **→E 7.3.2 (4)に規定済み。(但し、英語版に「地震荷重、想定される外力等」の記述がない)** **→(NK の方針:「地震荷重、想定される外力等」を追記する。)**	(4) River or tidal flow rates, highest and lowest water levels and tidal levels, wave height, required freeboard and any other relevant river, lake or marine conditions.	(2) The effect of any vibration from site operations (e.g. driven piling). JCD: Allowable value should be specified in the contract documents. For Blasting, there are regulatory values such as Restriction on Peak Particle Velocity and Vibration Amplitude, and for Noise, there are level on “max”, “sound pressure level (85 dBA)” and “peak sound level (110 dB)”. NK1: The requirement shall be specified in the Particular Safety Specification (PSS). The User Guide will advise the Employer to specify their requirement in the PSS. A phrase regarding the PSS is added at the first sentence and a stipulation is added at the end of 6.3.2 regarding the specified values in the PSS.	(2) The effect of any vibration from site operations (e.g. driven piling)
(3) 既設堤防の開削を行い設置する仮締切の天端の高さは、施工期間中に想定される最大水量に耐えうるものにする。 **→規定なし。→理由:E 7.3.2 (4)で highest and lowest water levels を考慮、と規定していたから、とも解釈されるが本項目は規定すべきと考える。** **→(NK の方針:本項目を英文に加える。)**	(5) Marine traffic.	(3) Access and working space necessary to execute the Permanent Works. JC1O: 削除 Permanent だけではないので Delete it. Because not only permanent. NK1: deleted. JC1D: This is an issue to be considered by the Employer. Planning access roads to meet the Contractor's own requirements is not just a provision of cofferdam. NK1: Replied in (2) of 7.3.2.	(3) Access and working space necessary to execute the ~~Permanent~~ Works.
	(6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.	(4) River or tidal flow rates, highest and lowest water levels and tidal levels, wave height, required freeboard and any other relevant river, lake or marine conditions. JC1: 要言葉の整理 Terms shall be reviewed and organized. NK1: modified. JC1D: 発注者が考慮すべき事 This is an issue to be considered by the Employer. NK1: NK1: Replied in (2) of 7.3.2.	(4) ~~River or tidal flow rates, highest and lowest water levels and tidal levels, wave height, required freeboard~~ River discharge, water levels, tide levels, wave height, free board, seismic load, external force and any other relevant river, lake or marine conditions.
(4) 既設堤防に接続して仮締切工を設定する場合で河積の減少が予想される場合においては、既設堤防の接続部の法面保護、接続部からの漏水、吸出し防止工を検討する。対策工については、別途契約書で定めがある場合はそれに従い、定めがない場合はエンジニアの指示に従うこと。 **→E 7.3.2 (7)に規定済み**	(7) Reduction of river cross sectional area, resultant increased flow rates and suction effects with a consequent requirement for protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.	(5) Marine traffic. JC1D: Working Site establishment on the surface of water to deal with other vessels’ traffic, shall be given in the contract documents prepared by the Employer. NK1: NK1: Replied in (2) of 7.3.2.	(5) Marine traffic.
		(6) Avoidance of any damage by piling operations and the protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like. 		約図書に明記されるべき Objects (structures, etc.) to be considered for impact and their allowable values should be clearly specified in contract documents. NK1: Replied in (2) of 7.3.2.	like.
		(7) Reduction of river cross sectional area, resultant increased flow rates and suction effects with a consequent requirement for protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like. JC1O: 種々の次項を一緒に記載しているので分からない。 Since various items are described together, they cannot be understood. NK: Modified. JC1D:河川工事に伴う有効流量断面積の減少は請負者の責任ではなく、その工事計画段階で対処されなければならない。従って、対処方法を契約図書で明示しなければならない。 Reduction of the effective flow area due to river works is not the responsibility of the Contractor, but must be dealt with at the construction planning stage. Therefore, the countermeasures must be clearly stated in the contract documents. NK1: NK think all above JC comments have been already defined in (1) underlined. So, NK leave it as it is.	(7) ~~Reduction of river cross sectional area, resultant increased flow rates and suction effects with a consequent requirement for protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.~~ Reduction of river cross sectional area, increased flow rates and protection and improvement of the structural integrity of existing river or canals, banks, dykes and the like.
(5) 切ばりで支保する仮締切工では、洪水、波浪等により切ばり、腹起し等の取付部がゆるまないよう堅固な構造とすること。 **→E 7.3.2 (8)に規定済み**	(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.	(8) Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints. JC1O: 理解不能 cannot understand. NK: Modified.	(8) ~~Effects of tides, wave action, flooding and the like, the consequent need for additional shoring and avoidance of loosening of shoring and joints.~~ Rigid structural design of Cofferdams in case of structures consisting of sheet piling, walings, struts by jointing between struts, walings and others not to be loosened by floods, waves, etc.
(6) 浸水等の緊急時に備え、仮締切工からの避難のためにはしご、階段等の 2 つ以上の避難路を設置すること、及び救命浮器、救命胴衣、救命浮輪、ロープ等の救命用具の設置場所を計画すること。 **→E 7.3.2 (9)に規定済み**	(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of water penetration.	JC1: Cofferdam 設計時の与条件であり、前項(4)の条件に伴う動荷重も含めての指摘と考える。freeboard は発生する気象条件から発生する波高を推算し、前項(4)の highest water level にそれを加算し、かつ freeboard を考慮する等の規定がスペックで規定されるべきである。 This is a condition given during the design of the Cofferdam, and is considered to be an indication including the dynamic load associated with the condition in (4) above. Freeboard should estimate the wave height generated from the meteorological conditions, add it to the highest water level in the previous section (4), and incorporate provisions such as consideration of the freeboard into the specifications. NK1: Replied in (2) of 7.3.2.	
	(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats. (11) Measures for safe dismantling and removal.	(9) Provision of at least two safe escape routes from the working areas by means of ladders, stairs, etc. to evacuate in the case of water penetration. JC1O: 言葉の整理が必要 Need to organize terms. NK1: modified. JC1O: Replacement of terms:	(9) Provision of at least two ~~safe escape routes~~ emergency evacuation routes from the working ~~areas~~ place by means of ladders, stairs, etc. to evacuate in the case of danger of collapsing of or inundation in the Cofferdam.

7.3.3 モニタリング計画

請負者は、施工中の仮締切工の安全を確保し、周辺の地盤、既設構造物等への影響をすみやかに察知するために、変位や挙動の目視点検及び計器計測によるモニタリング計画を作成し、仮締切工を管理しなければならない。**→E 7.3.3 (1)(a)に規定済み**

モニタリング計画で計画すべきモニタリングの実施及びモニタリングにもとづく管理については、本仕様書「7.2 土留め工」の 7.2.3[モニタリング計画]に準拠して計画しなければならない。
→E 7.1.3[Inspection and Monitoring of TW]へ TM のモニタリングとして規定済み。

→（NK の方針：Refer to JSSS 0 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

モニタリング計画の点検項目及び計測項目は、7.2.3(1)及び(2)に規定の項目に準拠するとともに、仮締切工及び掘削底面の遮水に関する項目を含まなくてはならない。**→E 7.3.3 (1)(b)に規定済み**

→(7.3.3 の規定に関する NK の方針：Inspection and Monitoring **に関する E 7.2.3 の構成と合わせ、E 7.3.3 の構成は英語版の構成と規定内容を残すことを提案する。）**

7.3.3. Inspection and Monitoring

Refer to JSSS 0 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring
(a) The Contractor shall prepare a Visual Inspection checklist depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the checklist.

(b) Examples of Inspection Objects and

For “safe escape routes”. →emergency evacuation routes.
For “working areas”. →working place.
NK1: modified.

JC1O: 水がちょろちょろの浸潤で避難する訳がない。danger of collapse of cofferdam では？
For “water penetration”. There is no reason to evacuate because of the penetration of water. ”danger of collapse of cofferdam” is better.
NK1: modified.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.
(11) Measures for safe dismantling and removal.
(12) Water pollution prevention measure

JC1D: 契約図書規定されるべき。
(12) shall be specified in contract documents.
NK1: Water pollution shall be stipulated in specification for environment but not in JSSS, so not added.

NK1: as mentioned for (2), addition of (12) is made. (NK1: The requirement shall be specified in the Particular Safety Specification (PSS). The User Guide will advise the Employer to specify their requirement in the PSS.
A phrase regarding the PSS is added at the first sentence and a stipulation is added at the end of 6.3.2 regarding the specified values in the PSS.)

7.3.3. Inspection and Monitoring

Refer to JSSS 0 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.

(1) Visual Inspection and Monitoring
(a) The Contractor shall prepare a Visual Inspection checklist depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the checklist.

JC1O: この表現はおかしい。reflected では？
This expression of “depending on” seems to be incorrect, I think. “reflected” is correct?
NK1: depending on は、～に応じの意味があります。
It has meaning of “to be decided by or to change according to the stated thing:” so leaved it as it is.

JC1O: inspections →monitoring?
NK1: NK leave it as it is.

~~water penetration~~.

(10) Provision of life-saving equipment including buoyancy jackets, lifebuoy, ropes and (where necessary) standby boats.
(11) Measures for safe dismantling and removal.
(12) Values of vibration, displacement and other damage and nuisance to people, property and existing structures, etc. not to exceed specified in the Particular Safety Specification

6.3.3 Inspection and Monitoring

Refer to JSSS 1.3.11 [*Inspection and Monitoring of TW*] for general requirements, specific requirements for work in this Section are stated below.
The Contractor shall prepare Inspection and Monitoring Plan of visual inspection and instrument monitoring in accordance with this 6.3.3 and include the Inspection and Monitoring Plan in the Safety Plan for the Cofferdams.
In addition to the above, the Inspection and Monitoring Plan shall be prepared for the Cofferdams, other structures and locations are specified to be specially monitored in the Particular Safety Plan,
(1) Visual Inspection ~~and Monitoring~~
(a) The Contractor shall prepare a Visual Inspection ~~checklist~~ Plan t depending on the characteristics of the Cofferdam and carry out regular inspections based upon the content of the c~~checklist~~ Plan .

Inspection Types are given in the following Table.

Table 7.3.1: Visual Inspection Checklist

	Inspection Object	Inspection Type
1	Cofferdam Generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Shoring and strutting	Deflection, twist of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction.
5	Neighbouring or adjacent Structures	Cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

(2) Instrument Monitoring

(a) Unless otherwise stated in the Contract, the Contractor shall prepare an Instrument Monitoring checklist depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the

NK1: Inspection check list is replaced with Inspection check plan.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

JC1O: Propose to replace (b) with Sample Items of Visual monitoring are given in the following table.
NK1: as replied in 7.2.3 (1) (b), modified.

Table 7.3.1: Visual Inspection Checklist

	Inspection Object JC::Locations? NK: No Change	Inspection Type JC: Monitoring Items? NK: Replaced.
1	Cofferdam Generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Shoring and strutting JC: Different from Cofferdam item	Deflection, twist of struts and waling and other members. Opening of joints or breakage of cross members, or breakage and loosening of bolts. NK: For Cofferdam constructed woth sheet piles, struts, etc.
3	Base of Excavation JC: Different from Cofferdam item	Water spring and ground water flow. Sand boiling. Heaving of the base. Liquefaction. NK: Excavation in ground surrounded by Cofferdams
5	Neighbouring or adjacent Structures JC: Different from Cofferdam item	Cracks, weakening, subsidence, deformation and tilting of structures NK: Cofferdams are constructed in water and on land along water for construction works. The neighbouring or adjacent structures are existing in the water or on the land.
6	Underground Utilities JC: Different from Cofferdam item	Displacement, damage or leakage to underground utilities NK: Existence of underground utilities in Cofferdams may be rare, so deleted..

(2) Instrument Monitoring

(a) Unless otherwise stated in the Contract, the Contractor shall prepare an Instrument Monitoring checklist depending on the characteristics of the

(b) Examples of Inspection Objects and Inspection ~~Types~~ Items are given in the following Table.

Table 6.3.1: Visual Inspection ~~Checklist~~ Items

	Inspection Object	Inspection ~~Type~~ Items
1	Cofferdam Generally	Water seepage. Ability and capacity of pumping arrangements to maintain safe working conditions. Meander/horizontal displacement and vertical displacement along top. Crack, deflection and swelling. Opening of joints.
2	Piles, shoring and strutting	Deflection, twist of piles, struts and waling and other members. Opening of joints or breakage of piles, cross members, or breakage and loosening of bolts.
3	Base of Excavation	Water spring and ground water flow. Sand boiling. Heaving of the base. ~~Liquefaction.~~
5	Neighbouring or adjacent Structures	Cracks, weakening, subsidence, deformation and tilting of structures
~~6~~	~~Underground Utilities~~	~~Displacement, damage or leakage to underground utilities~~

(2) Instrument Monitoring

(a) ~~Unless otherwise stated in the Contract,~~

7.3.4 仮締切工の施工時及び使用時の安全管理上の措置

請負者は、仮締切工の施工及び仮締切工の中での作業を安全に行うために、本仕様書 7.2.4[土留め工の施工時の安全管理上の措置]に準拠した安全管理の措置及び下記の措置を講じなければならない。

(1) 仮締切工の切ばり支保工の作業にあたっては、本仕様書 7.2.5[切りばり支保工の作業での安全上の措置]に準拠した安全上の措置を講じること。→E 7.3.4 上段の(1)～(5)に支保工施工時の留意点として具体項目を規定済み→(NK の方針:J 7.3.2 で参照先の款番号等の記載は行わない提案とした点を踏襲し、英語版 E 7.3.4 上段の(1)～(5)の規定を残す。

(2) 異常事態時の連絡方法、避難方法、避難路、避難場所等の注事事項を、仮締切工の入口、仮締切工の中の作業場所等の請負者の要員が容易に認知できる見やすい場所に掲示すること。
→E 7.3.4 下段の(2)に規定済み(英語版での「救命具の設置場所、脱出艇」など、掲示する内容は少々異なっている)

(3) 一般の船舶等が航行する場所では、契約書の別の定めに従い、一般船舶等との衝突や接触を防止するための措置を講じること。また、夜間や濃霧時の船舶等の仮締切工への衝突を防止するために、警告灯等を配置するなどの措置を講じること。→E 7.3.4 (3)に規定済み(内容は少々異なっている)→(NK の方針:E 7.3.4 (3)より当該規定(3)の記述が具体的であり、日本語版の規定内容を残す。)

(4) 仮締切工からの異常な漏水又は仮締切工の内側の地盤からの異常な湧水がある場合は、作業員を避難させ、安全を確認したうえで、補強等の安全対策を講じた後でなければ、仮締切工内の作業を行わないこと。→E 7.3.4 (4)及び(5)に規定済み

7.3.5 悪天候及び地震時の点検

→規定なし。(2.7 Adverse Weather Requirements 2.7.2 Preventive Measures)で纏めて規定すべきとの MD 氏提案と思料。→(NK の方針:削除する。)

~~請負者は、悪天候及び地震時には、本仕様書 7.2.7[悪天候及び地震時の点検]に準拠した安全上の措置を講~~

content of the checklist.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

Table 7.3.2: Instrument Monitoring Checklist

	Object	Inspection Type
1	Cofferdam Generally	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Shoring and strutting	Axial force of strut, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring or adjacent structures	Displacement: cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

7.3.4. General Safety and Construction Requirements

Unless otherwise stated in the Contract:

(1) Shoring shall be securely installed and fixed to Cofferdam to prevent detachment and any movement or failure.

(2) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(3) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(4) Gaps between Cofferdam and shoring shall be securely packed with suitable wedges.

(5) Connections of shoring shall be reinforced

Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the content of the checklist.

JC1O: As commented above.
NK1: as replied to (1) above.

(b) Examples of Inspection Objects and Inspection Types are given in the following Table.

JC1O: As commented above.
NK1: as replied to (1) above.

Table 7.3.2: Instrument Monitoring Checklist

JC1O: 前述の表を参照
As commented in 7.2.2.
NK1: modified.

	Object	Inspection Type
1	Cofferdam Generally	Displacement, stress of Earthwork Support Earth pressure and water pressure acting on Earthwork Support
2	Shoring and strutting	Axial force of strut, other supports and ground anchors.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring or adjacent structures	Displacement: cracks, weakening, subsidence, deformation and tilting of structures
6	Underground Utilities	Displacement, damage or leakage to underground utilities

7.3.4. General Safety and Construction Requirements

Unless otherwise stated in the Contract:

(1) Shoring shall be securely installed and fixed to Cofferdam to prevent detachment and any movement or failure.

(2) All members acting in compression (excluding diagonal struts) shall be butt-jointed, and timber shoring shall be jointed with two or more doubling plates.

(3) Connecting parts of shoring or diagonal shoring or intersections, shall be reinforced with backing plates and bolts (timber) and welding with reinforcing plates (steel).

(4) Gaps between Cofferdam and shoring shall be securely packed with suitable wedges.

(5) Connections of shoring shall be reinforced with welded stiffeners.

JC1O: 土留めの項目で仮締切とは異なる。

the Contractor shall prepare an Instrument Monitoring ~~checklist~~ Plan depending on the characteristics of the Site, the ground conditions and the required Earthwork Support and carry out ongoing monitoring based upon the content of the ~~checklist~~ Plan.

(b) Examples of ~~I~~ inspection ~~O~~ objects and ~~I~~ inspection ~~Types~~ ~~I~~ items are given in the following Table.

Table 6.3.2: Instrument Monitoring ~~Checklist~~ Items

	Monitoring Object	~~Inspection~~ Monitoring ~~Type~~ Items
1	Cofferdam Generally	Displacement, stress of ~~Earthwork Support~~ Cofferdams Earth pressure and water pressure acting on ~~Earthwork Support~~ Cofferdams
2	Shoring and strutting	Axial force of strut and other supports ~~and ground anchors~~.
3	Base of Excavation	Displacement of base of excavation Water pressure of spring of water, water inflow
5	Neighbouring or adjacent structures	Displacement,~~: cracks, weakening,~~ subsidence, deformation and tilting of structures
~~6~~	~~Underground Utilities~~	~~Displacement, damage or leakage to underground utilities~~

6.3.4 General ~~Safety and Construction~~ Requirements

Unless otherwise stated in the Contract/Particular Safety Specification, the Contractor shall comply with the following requirements:

(1) Construct the Cofferdams with shoring by the same method stipulated in JSSS 6.2.5 [Safety Measures for Shoring] for Earthwork Support.

~~じなければならない。~~	with welded stiffeners.	These are requirements for retaining and not related to the Cofferdam. NK1: Cofferdams also require strutting and shoring. Modified to refer to the construction method of the Earthwork Support. JC1D: 施工品質・設計に属する規定で、安全規定とは異なる、と考えます。 The above requirements are belonging to construction quality and design, and differs from the safety requirement. NK1: Some other sections also specify same to ensure construction safety, so it is suggested that above description is left after modification.	
	In addition, the Contractor shall: (1) Train all Contractor's Personnel as necessary so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.	In addition, the Contractor shall: (1) Train all Contractor's Personnel as necessary so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely. JCD1: Cofferdam 内での一般土木作業員に対するトレーニングとは何か？ 作業員は安全が確保されていることを前提に作業に入るのであり、作業員個々に Cofferdam の健全性に留意するような要求は違和感がある。請負者が作業中止基準を定め退避指示を発令することが通常である。 What is training for general civil workers in Cofferdam? Workers start works on the premise that safety is ensured, and I feel strange for each worker to pay attention to the soundness of Cofferdam stipulate in this (1). It is common for the Contractor to set work stop criteria and issue evacuation order. NK1:作業員に対して、通常より、Cofferdam 内で発生し得る危険事項について説明、注意喚起を促す目的の規定です。現状の記述を残すことを提案します。 This stipulate that the Contractor shall explain the risks in the Cofferdams and make workers pay attentions to the risk. NK propose to leave it as it is.	(2) Train all Contractor's Personnel to work in the Cofferdams ~~as necessary~~ so that they are aware of all risks and countermeasures including water leakage, adverse weather, severe waves or adverse river or marine conditions, so that they can work safely and when necessary, evacuate the working areas efficiently and safely.
7.3.6 急激な水位上昇時の安全措置 →英文に規定なし。→理由：Most of the following is not necessary as it is already covered above in 7.3.4 and other sections. Marine records can be kept. →（NK 方針：MD 氏は E 7.3.4 で規定済未との理由で J 7.3.6 項は削除する提案としている。冒頭文、下記(1)及び(2)は英語版に対応する規定がある点を確認したので、英語版構成を残す。） 請負者は、洪水、高潮、津波等による急激な水位上昇による仮締切工の破壊、仮締切工からの漏水や越流水による仮締切工内の浸水等の危険に備え、次の措置を講じなければならない。 →E 7.3.5 (1)に規定済み（英語版では、急激な水位上昇によるリスク評価、アセス結果を Safety Plan へ盛り込む等の記述としており、内容は少々異なっている）→（NK の方針：Safety Plan へリスク評価、アセス結果を記述する英語版の記述を残す。） (1) 緊急事態対応計画の作成と訓練 本仕様書 1.10[緊急事態対応計画及び緊急通報体制]	(2) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like. (3) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.	(2) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like. (3) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog. JC1D: 水域内での作業水域確保の規定は、発注者からの出されるべきである。 The Employer shall issue requirements to secure working areas in the water. NK1: これは一般的な規定であり、特別な規定は PSS に規定することとする。 This is general safety requirement. The PSS will specify particular requirement when necessary.	(3) Display visible and clear warning notices of all hazards and advisory notices giving directions and information, including emergency contacts, emergency escape routes, directions to and locations of life-saving equipment, assembly areas, escape boats and the like. (4) Implement measures to prevent collisions with marine or river traffic, including warning signs and lights during the night or in heavy rain mist or fog.

の策定に当たっては、急激な水位上昇を対象にした緊急事態対応計画を作成すること。また、本仕様書 1.10 (3)に規定する訓練を行うこと。 **→日本語版のように 1.10 節参照等の参照先の節番号指定等はしていないが、E 7.3.5 (2)及び(3)に相当する規定済み** **→(NK の方針:参照先の款番号の記載は行わない提案とするので、英語版規定 E 7.3.5 (1)～(3)の規定を残す。)** (2) 情報の収集と対応 (a) 本仕様書 2.7.2[悪天候及び地震に備えた準備と点検]にもとづき、日ごろから急激な水位上昇等の緊急時に備えた準備と点検を行うこと。**→「急激な水位上昇を想定した場合」のみならず、仮締切工施工に際して E 7.3.4 後半(1)に規定済み** 緊急時の準備には、情報の伝達手段・退避場所・避難ルートについて予め定め、請負者の要員に周知することを含めること。**→E 7.3.4 後半(2)に規定済み** (b) 本仕様書 2.7.3[気象及び地震情報の収集と対応]に準じて、気象、洪水、海象、津波、仮締切工箇所及び周辺の水位等の情報の収集と対応を行うこと。情報の収集に当たっては、発注者からの協力を得て普段から情報をもつ関係者から直接情報を得られるようにすること。 **→E 7.3.6 に規定済み→(NK の方針:E 7.3.6 の規定を残す。)** (3) 作業の中止**→規定なし。(下記参照)** 請負者は、急激な水位上昇のおそれがある場合には、次の措置を講じること。 (a) 急激な水位上昇が予想される場合は、緊急事態対応計画に従い、作業中止、安全な場所への退避、緊急通報体制の確認を含めた対応の準備を行うこと。 **→規定なし。(NK 方針は下記) E 7.3.4 (4)に作業エリア内で水漏れが確認された場合の退避規定はあるが、E 7.3.4 (4)には水位上昇が予想される場合の退避規定等はない。** **→(NK の方針:下記参照)** (b) 仮締切工の設計洪水水位に近づいたとき、危険のおそれのある急激な水位の上昇と判断する時、又は水位の上昇による仮締切工の異常が発見されたときは、ただちに作業を中止し、作業員を安全な場所へ退避させること。 **→規定なし。(NK 方針は下記) E 7.3.1 (1)で、河川、海洋の悪条件を含むリスクと対策について請負者の要員に認識させ作業に従事させる旨の記述はあるが、「水位上昇が予想される時」等、具体の記述はない。** **→(NK の方針:下記参照)**	(4) Evacuate Contractor's Personnel whenever there is any danger due to water leakage through cofferdams or from the ground within the working area. (5) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use". **7.3.5. Adverse Changes in Water Level.** (1) The Contractor shall be aware of and assess any risk due to adverse and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (2) This shall include procedures for monitoring water levels as described below. (3) Measures for this shall include: (a) Monitoring conditions (b) Training of all Contractor's Personnel; (c) Communications; (d) Instructions to Contractor's Personnel for evacuation; (e) Stop work in accordance with JSSS 1.10 [*HSO – Scope of Duties*] ; and (f) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.	(4) Evacuate Contractor's Personnel whenever there is any danger due to water leakage through cofferdams or from the ground within the working area. JC1D: 請負者が締め切り内全体の安全の確認をする体制確立を規定すべきではないか。誰が退避支持を出すのか、規定すべき。 The Contractor should establish a system to confirm the safety of the Cofferdams. The parson in charge to issue the evacuation order should be specified. NK1: Modified. (5) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use". **7.3.5. Adverse Changes in Water Level.** JC1O: adverse change の場合は避難しかないので、ここは文脈から Sudden Increase of Water Level では In the case of adverse change, evacuation is the only solution, isn't it? Is it proper to replace the title with Sudden Increase of Water Level? NK1: 水位が仮締切の天端より相当低い時は水位の急上昇は危険ではない。仮締切を越流するような急上昇を対象とした場合、現タイトルでよいのでは。 The sudden rise of water level is not dangerous when water level is much lower the top of Cofferdam. The measures for the sudden rise of water level which will overtop the Cofferdam are specified below. So, the title is not changed. JC1D: 前項 7.3.2 (4)及び(8)の状況を超える状況とは、台風やそれに伴う洪水、津波などを想定される。 The situation that exceeds the situation of 7.3.2 (4) and (8) in the preceding paragraph is assumed to be a typhoon, flood, tsunami, etc. NK1: Yes. JC1I: 全体として文章のつながりが不明瞭。(2) の described below はどこを指しているのか。(3) の Monitoring conditions は measure なのか、等。 Overall , the connection of sentences is unclear. For example, which does the "described below" in (2) point? Are the "Monitoring conditions" in (3) measures? NK: For "described below", change it to "shown in 7.3.6". For "Monitoring Condition", NK specifically describes shown on the right cell. (1) The Contractor shall be aware of and assess any risk due to adverse and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. (2) This shall include procedures for monitoring water levels as described below.	(5) Establish a system and appoint a person to issue order to evacuate Contractor's Personnel whenever there is any danger due to water leakage through or overtopping on Cofferdams or from the ground within the working area. (6) Implement repair and improvement measures to ensure the safety of Contractor's Personnel and prevent any personnel from re-entering the Cofferdam until it has been inspected by the HSO and certified by him to be "Safe for Use". **6.3.5 Adverse ~~Changes in~~ Sudden Rise of Water Level** (1) The Contractor shall be aware of and assess any risk due to adverse and sudden rise in water level above the design basis for the highest water level and prepare for this as applicable in the Safety Plan. To MD: Can you stipulate in another way as I cannot understand

(c) 作業を再開する前には、仮締切工の異常の有無を、エンジニアとともに確認すること。異常が認められたときは直ちに補修すること。
→規定なし。(下記参照)

→J 7.3.6 (3)の規定がない理由:MD 氏は、Relevant parts of the following are included above, the remainder is not necessary としている。
→(NK の方針:"remainder"の対象である E 7.3.4 後半の(1)では、異常時に、必要に応じて請負者の要員を避難させる旨の記述に留まっており、作業中止の判断が必要な具体的なケースの記載まで至ってないと考えるので、上記(3)は英語版へ残すことを提案する。)

7.3.6. Monitoring Water Level and Other Conditions

(3) Measures for this shall include:
(a) Monitoring conditions

JC1D: Monitoring conditions とは何か。ここでは水位計、潮位標(tidal gauge)、さらには自記風向風速計、自記気圧計などが想定される。high standard を要求するのであれば、発注者が規定すべき。
What are monitoring conditions? A water gauge, a tidal gauge, a self-recording anemometer, a self-recording barometer, and the like are assumed. If high standards are required, the Employer should specify it.
NK1: Modified. This is general safety requirement. The PSS will specify particular requirement when necessary.

(b) Training of all Contractor's Personnel;

JC1D: procedures for monitoring water levels から乖離している
deviates from procedures for monitoring water levels
NK1: Training is specified in 6.3.4 (2), so (b) is deleted.

(c) Communications;

JC1D: 水域管理者との Communication でしょうか?
Communication with water area managers?
NK1: No. The communication is between persons in charge of monitoring of the water level, responsible for the safety in the Cofferdams, issuing evacuation order and workers in the Cofferdam.

(d) Instructions to Contractor's Personnel for evacuation;
(e) Stop work in accordance with JSSS 1.10 [*HSO – Scope of Duties*] ; and
(f) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.

JC1D: procedures for monitoring water levels から乖離している。
The stipulation of (b)-(f) deviates from procedures for monitoring water levels.
NK1: (3) specifies measures for adverse sudden rise of water level. It is not only monitoring water level but also other measures given as (b) to (f). Modified.

7.3.6. Monitoring Water Level and Other Conditions

JC1D: 前項 7.3.5 (a)でコメント済み。high standard を要求するのであれば、契約図書で具体的に明記すべき。
Commented in the previous section 7.3.5 (a). If a high standard is required, it should be clearly stated in the contract documents.
NK1: This is general safety requirement. The PSS will specify particular requirement when necessary.

In addition to the requirements of JSSS 2.1.6. [*Monitoring and Records*] and unless otherwise stated in the Contract, the Contractor shall monitor

"above the design basis" and "as applicable in the Safety Plan"

(2) This shall include procedures for monitoring water levels as described ~~below.~~in JSSS 7.3.6.

To MD: "This" means the safety Plan? I want to stipulate what "This" means.

(3) Measures for ~~this~~ the adverse sudden rise of water level shall include:
(a) Monitoring ~~conditions~~ of water levels with equipment at the Site and obtaining forecasting information of water levels;

(b) ~~Training of all Contractor's Personnel;~~

(c) Communications among persons in charge of monitoring of water levels, responsible for the works in the Cofferdams, the HSO and workers in the Cofferdam;

(d) Instructions to Contractor's Personnel for evacuation;
(e) Stop work in accordance with JSSS 1.10 [*HSO – Scope of Duties*] ; and
(f) Resume work when water level has subsided and after inspection and certification by the HSO that it is safe to do so.

6.3.6 Monitoring Water Level and Other Conditions

In addition to the requirements of JSSS ~~2.1.6.~~ 2.1.7 [*Monitoring and Records*] and unless otherwise

	In addition to the requirements of JSSS 2.1.6. [*Monitoring and Records*] and unless otherwise stated in the Contract, the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day, tidal data, speed and direction of waterflow, wave height, wind speed and direction. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.	and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day, tidal data, speed and direction of waterflow, wave height, wind speed and direction. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis. JC1D: 自記記録方式の波高計、潮位計、水位計、流速計、濁度計は求められるのは、異常気象・海象等の force majeure あるいは unforeseeable physical condition 判定のための資料として必要であれば、発注者でその規格を規定すべきである。請負者の自己判断によることはばらつきが生じ好ましくない。 If the Employer needs data for decision of force majeure or unforeseeable physical conditions such as abnormal weather and sea conditions, the employer shall specify the specification of self-recording wave height meter, tide gauge, water gauge, current meter, and turbidity meter. The self-determination by the Contractor is not preferable because the specification may vary. NK1: This is general safety requirement. The PSS will specify particular requirement when necessary.	stated in the Contract/Particular Safety Specification, the Contractor shall monitor and keep records of all climatic, river and/or marine conditions in the direct vicinity of any Cofferdam including for example, the water level at various times throughout the day, tidal data, speed and direction of waterflow, wave height, wind speed and direction. The Contractor shall provide all instruments and facilities to obtain the data and submit reports to the Engineer on a daily basis and compile on weekly basis.
7.4 通路	**7.4. WALKWAYS, LADDERS AND STEPLADDERS**	**7.4. WALKWAYS, LADDERS AND STEPLADDERS** JC1O: Pedestrial Walkway とした方が分かりやすいのでは。Singapore やカナダの事例ではそうなっています。 Is it easy to understand to use “Pedestrian Walkway”? This term is used in Singapore and Canada. NK1: Considering the following information, NK leaves as they are as walkways are used only for pedestrian. NK1: JSSS Chap 2 (Issue 3) 2.5.7 (1) defines them as follows: *JSSS 2.5.7 Temporary Access Around the Site* *(1) Walkways and Passageways* *“Walkways” mean pedestrian footpaths at ground level / working places(NK added) or ramped for the use of Contractor’s Personnel.* *“Passageways” are the same as walkways but are covered by a roof and maybe also have sides in order to protect all personnel from falling objects or adjacent activities.* OSHA defines and stipulates as follows: *Subpart L—Scaffolds §1926.450 Scope, application and definitions applicable to this subpart.* *Walkway means a portion of a scaffold platform used only for access and not as a work level.* *§1926.851 Stairs, passageways, and ladders.* *(a) Only those stairways, passageways, and ladders, designated as means of access to the structure of a building, shall be used. Other access ways shall be entirely closed at all times.* HSE use the terms as follows: *HSE L24 (Second edition) 2013 Approved Code of Practice and guidance: Workplace (Health, Safety and Welfare) Regulations 1992 123 To prevent slips and trips:* *・ keep walkways and work areas clear of obstructions;* *Regulation 25 Facilities for rest and to eat meals Disabled persons 25A Where necessary, those parts of the workplace*	**6.4 WALKWAYS, LADDERS AND STEPLADDERS**

7.4.1 一般 (1) この節では、作業場に通ずる場所及び作業場内に設置する作業者が移動のために使用する通路、架設通路、移動はしご、脚立、非常口、避難通路について規定する。→E 7.4.1 (1)に規定済み	**7.4.1. General** (1) This Section comprises safety measures relating to the movement or persons to and around the Site and includes temporary pedestrian walkways, bridges, portable ladders and stepladders.	*(including in particular doors, passageways, stairs, showers, washbasins, lavatories and workstations) used* **7.4.1. General** (1) This Section comprises safety measures relating to the movement or persons to and around the Site and includes temporary pedestrian walkways, bridges, portable ladders and stepladders. JC1D: "the movement"とは何の movement でしょうか？ What does the "the movement" mean? What is doing movement? NK1: movement of the persons. Modified. NK: (2) is added as general requirement moved from 6.4.2 (9).	**6.4.1 General** (1) This Section comprises safety measures relating to the movement ~~or~~ of persons to and around the Site and includes temporary ~~pedestrian~~ walkways, pedestrian bridges, portable ladders and stepladders.
(2) 請負者は、作業場に通ずる場所及び作業場内に、通路を設ける場合は、本仕様書 1.3.4「安全衛生詳細計画書」(1)の安全衛生詳細計画書に記載すべき事項に、次の事項を追加して、安全衛生詳細計画書を作成しなければならない。 →E 7.4.1 (4)に規定済み。(但し Safety Plan の規定箇所が変更となっている) →(NK の方針:英語版の記述を残す。) (a) 通路の設置場所、設置期間 (b) 架設通路の構造・材質及び主要寸法(高さ及び長さがそれぞれ 10m 以上のものに限る) (c) 通路と建設機械の作業場所との分離 (d) 通路と車両の運行経路の分離 →(a)～(d)は E 7.4.1 (4)に規定済み	(2) For temporary steps and staircase structures the requirements of JSSS 7.5 [*Scaffolding*] shall apply. (3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply. (4) Details of the following shall be included in the Safety Plan required by JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*] and JSSS (6) [*Safety Plan for TW*]: (a) Locations and available periods of walkways to be provided; (b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more; (c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and (d) Locations of emergency exits and evacuation routes.	(2) For temporary steps and staircase structures the requirements of JSSS 7.5 [*Scaffolding*] shall apply. (3) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply. (4) Details of the following shall be included in the Safety Plan required by JSSS 1.6 [*Contractor's Safety Plan - Temporary Works*] and JSSS (6) [*Safety Plan for TW*]: (a) Locations and available periods of walkways to be provided; (b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more; JC1D: bridge type? pedestrian walkway on a platform? NK1: 架設通路の意味です。Leave it as it is. (c) Types of temporary walls, barriers or other separation between walkways and working areas, roads or footpaths on or around the Site; and JC1O: 英語が分からない。 Cannot understand what this sentence means. NK1: Modified and restricted walkways on the Site. (d) Locations of emergency exits and evacuation routes. JC1O: emergency evacuation routes でいいのでは。 Is "emergency evacuation routes" better? NK1: Leaved it as it is.	(2) The Contractor shall provide Contractor's Personnel the facilities of walkways, pedestrian bridges, ramps, portable ladders and stepladders, stairs and ladders, and the like to enable them to get to their work location in a safe and convenient manner. (3) For temporary steps and staircase structures the requirements of JSSS ~~7.5~~ 6.5 [*Scaffolding*] shall apply. (4) For Fall prevention from walkways, ladders and stepladders the requirements of JSSS 2.5 [*Fall Prevention*] shall apply. (5) Details of the following shall be included in the Safety Plan required by JSSS ~~1.6~~ 1.7 [*Contractor's Safety Plan ~~- Temporary Works~~*] and JSSS (6) [*Safety Plan for TW*]: To MD: I want to ask you to modify this referring to Issue 7 for (6). (a) Locations and available periods of walkways to be provided; (b) Drawings of walkway structures, indicating structure type, materials and main dimensions for bridge type walkways where the height and length is 10m or more; (c) Types of temporary walls, barriers or other separation between walkways and working areas or roads ~~or footpaths~~ on ~~or around~~ the Site; and (d) Locations of emergency exits and evacuation routes.
7.4.2 通路の設定 請負者は、通路の設置について、次に示す措置を講じなければならない。	**7.4.2. Walkways** The Contractor shall:	**7.4.2. Walkways** The Contractor shall: (1) Provide designated walkways to, in and around the various workplaces at the Site to	**6.4.2 Walkways** The Contractor shall: (1) Designate or Provide designated walkways ~~to,~~ in and around the various workplaces at

(1) 作業場に通ずる場所及び作業場内には、作業者が使用するための次の措置を講じた安全な通路を設け、かつ、これを常時有効に保持すること。 →E 7.4.2 (1)に規定済み	(1) Provide designated walkways to, in and around the various workplaces at the Site to ensure the safe and secure movement of all persons at all times.	ensure the safe and secure movement of all persons at all times. JC1O: To modify it to "designate pedestrian walkways. NK1: Both seems OK. NK asks MD to consider the comment.	the Site to ensure the safe and secure movement of all persons at all times. To MD, please review which is proper.
(2) 前項(1)の通路で主要なものには、これを保持するため、通路であることを示す表示を行うこと。 →E 7.4.2 (2)に規定済み	(2) Provide and maintain clear signage with adequate lighting so that all users are aware of the locations and routes and can safely use same and so that all Contractor's Personnel engaged in adjacent working operations are aware of and avoid entering such locations and routes.	(2) Provide and maintain clear signage with adequate lighting so that all users are aware of the locations and routes and can safely use same and so that all Contractor's Personnel engaged in adjacent working operations are aware of and avoid entering such locations and routes. JC1O: 英語不明。 Cannot understand this sentence means. NK: Modified.	(2) Provide and maintain clear signage ~~with adequate lighting~~ so that all users are aware of the locations and routes of the walkways and can safely use them. ~~same and so that all Contractor's Personnel engaged in adjacent working operations are aware of and avoid entering such locations and routes.~~
(3) 通路には、正常の通行を妨げない程度に、採光又は照明の方法を講じること。ただし、常時通行の用に供しない地下室等で通行する作業者に、適当な照明具を所持させるときは、この限りでない。 →E 7.4.2 (2)に規定済み。(地下室等を通行する作業者に関する例外規定はしていない。)→ (3)として追記する。	(3) Provide potable lighting such as head torches, lanterns, hand-held torches or the like for workers where considered necessary by the HSO,	(3) Provide potable lighting such as head torches, lanterns, hand-held torches or the like for workers where considered necessary by the HSO. JC1O: 日本語のスペックと内容が違う。 (3) is different from the Japanese JSSS version. NK1: Adjust back to Japanese-set Ver. shown as on the right cell. JC1D: 安衛則 541 条では、坑道・常時通行の用に供しない場所で労働者に適当な照明具を所持させるときは、照明設備は除外としている。ここではそれを HSO の判断にゆだねているが、適切か？又、坑道などでは停電時対応の非常灯が設備されていても、cap lamp(防爆型)の携行を求める鉱山法もあり得るが。 Article 541 of the Jap. Regulation precludes the use of lighting equipment when workers are required to have appropriate lighting equipment in tunnels or places not used for regular pass. However, (3) is left to the discretion of the HSO, is it appropriate? In addition, even if an emergency light is installed in a mine tunnel or the like in case of a power outage, there is a mine law that requires carrying a cap lamp (explosion-proof type). NK1: Modified (2) and (3) to simply specify.	(3) Provide and maintain adequate lighting on the walkways except when potable lighting such as head torches, lanterns, hand-held torches or the like is provided for workers where considered necessary by the HSO.
(4) 通路は、用途に応じた幅とすること。 →E 7.4.2 (4)に規定済み。(但し英語版では使途に応じた耐荷重も満たすこと、と併せて規定している。)→(NK の方針:英語版の規定とする)	(4) Ensure that walkways have sufficient dimensions and load capability for the intended purpose.	(4) Ensure that walkways have sufficient dimensions and load capability for the intended purpose. JC1O: Propose replace with dimensions with width NK leave it as it is.	(4) Ensure that walkways have sufficient dimensions and load capability for the intended purpose.
(5) 通路には、通行する者の視界を妨げる障害物を置いてはならない。→E 7.4.2 (5)に規定済み	(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.	(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.	(5) Ensure that there are no obstacles in walkways and that surfaces are level and safe, maintain all in a clean and orderly condition to avoid any falls, slips and injury.
