Appendix 5 Preparation of Implementation Plan

A5.1 Detailed Cost Breakdown of Consultancy Service

A5.2 Study of STEP Scheme

A5.1

Detailed Cost Breakdown of Consultancy Service

I. ESTIMATED COST FOR DETAILED ENGINEERING DESIGN STAGE

SUMMARY

DESCRIPTION	FOREIGN CURRENCY		LOCAL CURRENCY (PESO)
	YEN COMPONENT	PESO COMPONENT	
FOREIGN CURRENCY PORTION			
A. YEN COMPONENT			
A.1 REMUNERATION COST	**¥ 87,108,000**		
A.1.1 Key Staff (Foreign)	¥ 87,108,000		
A.2 REIMBURSABLE COST	**¥ 13,770,000**		
A.2.1 International Travel Expenses	¥ 750,000		
A.2.2 Per Diem Allowances	¥ 10,200,000		
A.2.3 Communications	¥ 720,000		
A.2.4 Overseas Training	¥ 2,100,000		
B. PESO COMPONENT			
B.1 REMUNERATION COST		**₱ 21,690,000**	
B.1.1 Key Staff (Local)		₱ 10,050,000	
B.1.2 Technical and Administrative Support Staff		₱ 11,640,000	
B.2 REIMBURSABLE COST		**₱ 16,820,000**	
B.2.1 Transport		₱ 5,040,000	
B.2.2 Communications		₱ 720,000	
B.2.3 Office Rental/Operating		₱ 2,520,000	
B.2.4 Office Supplies & Equipment Maintenance		₱ 720,000	
B.2.5 Office Equipment/Furniture		₱ 600,000	
B.2.6 Computer, its related devices and software, etc (L/S)		₱ 1,420,000	
B.2.7 Printing, papers, Reports and Documents		₱ 1,200,000	
B.2.8 Topographic Survey		₱ 1,000,000	
B.2.9 Soil/Geotechnical Survey		₱ 1,200,000	
B.2.10 Environmental Impact Study (L/S)		₱ 2,400,000	
LOCAL CURRENCY PORTION			
C.1 VAT (12% of B.1)			**₱ 2,602,800**
TOTAL	**¥ 100,878,000**	**₱ 38,510,000**	**₱ 2,602,800**

BREAKDOWN OF ESTIMATED COST FOR DETAILED ENGINEERING DESIGN STAGE

FOREIGN CURRENCY PORTION

A. YEN COMPONENT

A.1 REMUNERATION COST

A.1.1 Key Staff (Foreign)	M/M	Billing Rate ¥	AMOUNT (¥)
1 Project Manager	12	¥ 2,562,000	¥ 30,744,000
2 Sr. Bridge Engr	12	2,562,000	30,744,000
3 Sr. Highway Engr	10	2,562,000	25,620,000
Total of A.1	34		**¥ 87,108,000**

A.2 REIMBURSABLE COST

A.2.1 International Travel Expenses		
a) Air Ticket for Expatriate (Japan-Manila-Japan) x 3 round trip x ¥ 200,000/RT	¥	600,000
b) Miscellaneous Travel Expenses in Japan Travelling expenses from airport to origin of Engrs. in Japan and travel processing ¥50,000 x 3 RT	¥	150,000
A.2.2 Per Diem Allowances Subsistence Allowance for Expatriates 34 man-month x 30 days @ ¥10,000	¥	10,200,000
A.2.3 Communications International Communication 12 months @ ¥60,000	¥	720,000
A.2.4 Overseas Training Two (2) Officials of Government and one (1) engineer from Consultant International travel (MNL-Japan-MNL) ¥200,000 x 3 RT	¥	600,000
Expenses in Japan inclusive transportation, accommodation, miscellaneous expenses, allowance, etc. ¥ 50,000/day x 10 days x 3 person	¥	1,500,000
Total of A.2	**¥**	**13,770,000**

Appendix 6 Debt Analysis for GC and STEP Loans

A6.1 Debt Analysis for GC and STEP Loans

A6.1

Debt Analysis for GC and STEP Loans

APPENDIX 6

DEBT ANALYSIS FOR GC AND STEP LOANS

6.1 DEBT ANALYSIS

DPWH would be liable to pay back principal and interest to JICA once the Government of the Philippines (GOP) had borrowed Japan's ODA loan under the scheme of either General Condition (GC) or STEP loans. This section numerates debt burden GOP would have to bear to compare pecuniary size in both cases of GC and STEP loans.

6.1.1 Indicative Loan Amounts and Terms and Condition

Loan amounts presumably set for the analysis are 6239.7 JPY million and 7,502.7 JPY million for respective of GC and STEP Loans. The estimates of assumptive loan amount are the aggregate of lesser amounts of either eligible portion[1] or 85 percent of total financial costs. **(Table A6.1.1-1**)

Table A6.1.1-1 Assumptive Loan Amounts by Scheme (JPY Million)

	GC Loan			STEP Loan		
	Financial Cost	Eligible Portion	85 % of Total Cost	Financial Cost	Eligible Portion	85 % of Total Cost
Total Cost excluding Rodriguez	6,239.7	6,052.6	5,303.1	7,502.7	6,529.2	6,377.3

Source JICA Study Team

Of the 85 percent worth cost estimates of JPY 5,303.1 million and JPY 6,377.3 million for respective of General Condition (GC) and STEP loans, indicative loan amounts for the current analysis have, by rounding down and up, been set at JPY 5,300 million and JPY 6,400 million for respective of GC and STTEP loans. In the meantime, Terms and conditions of JPN ODA lending by category are summarized herewith. (**Table A6.1.1-2)**

Table A6.1.1-2 Middle Income Countries Terms and Conditions by Loan Type

	GC	STEP
Loan Amount (JPY mil)	5,300	6,400
Disbursement Period (years)	6	5
Repayment Period	25	40
Of which Grace Period	7	10
Interest Rate (%)[2]	1.4	0.2
Commitment Charge (%)	0.1	0.1

Source JICA Study Team

[1] Eligible portion of JICA loan eradicates, by rule, land acquisition, taxes and duties, an administration costs from total financial costs.

[2] While the interest rate applicable to consultant cost is 0.01%, current analysis applies unit interest rates of 1.4 percent and 0.2 percent for GC and STEP loans to provide with conservative estimation.

6.1.2 Results

In the light of borrowings of JPY 5,300 million (GC loan) and JPY 6,400 million (STEP loan) by loan alternative, the aggregate amount of debt services stand at JPY 6,350 million and JPY 6,670 million for GC and STEP loans, respectively. The largest debt payments of loans take place in the 8th and 11th year of amortization schedule, with JPY 357.0 million and JPY 222.3. million for GC and STEP loans, respectively. It would be noteworthy that the present value of the aggregate of principal repayment, commitment charge and interest payment incurred to STEP loan accounts only for 39.6 percent of that of GC loan (discount rate at 15 %).

Amortization schedules of GC and STEP loans are depicted as **Figures A6.1.1-1, A6.1.1-2,** as well as that of comparison of two type of loans in **A6.1.1-3**.

Preparatory Survey for
Metro Manila Interchange Construction
Project (VI)

Public Consultation Meeting

03 March 2012
Barangay Tatalon, Quezon City

Department of Public Works and Highways (DPWH)

JICA Study Team
Katahira & Engineers International
Oriental Consultants
Nippon Engineering Consultants

Agenda

1. Opening of the Meeting
2. JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)
   2.1 Alternative Schemes of Interchange
   2.2 Environmental and Social Considerations
3. Discussion
   Comments and suggestions by stakeholders
4. Closing of the Meeting

Objective of This Meeting

- To explain the outline of F/S conducted by JICA Study Team;
- To explain the alternative schemes of Interchange;
- To obtain comments/suggestion of stakeholders on the Project and Environmental and Social considerations.

Comments/suggestion of stakeholders will be taken into account in the Project and the ESIA study

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

C-3(G. Araneta Ave.)/ E. Rodriguez Ave. Interchange

Three Alternatives of Flyover

- Scheme 1
  - Thru Flyover and Elevated Thru Road Plus Service Road
- Scheme 2:
  - Thru Flyover Only
- Scheme 3:
  - Thru Flyover and Elevated Thru Road - Service Road No Change

C-3/Rodriguez Ave. Interchange

At Grade

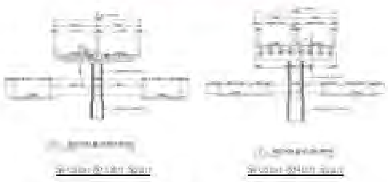
Scheme-2: Flyover

(Thru Flyover Only)

Profile

Scheme-2: Flyover

(Thru Flyover Only)



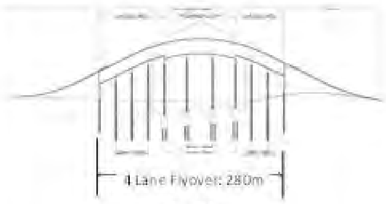
Typical Cross Section

Scheme-3: Flyover

(Lower Elevation of Flyover and Elevated Thru Road)

Scheme-3: Flyover

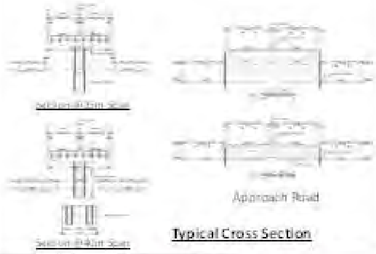
(Lower Elevation of Flyover and Elevated Thru Road)



Profile

Scheme-3: Flyover

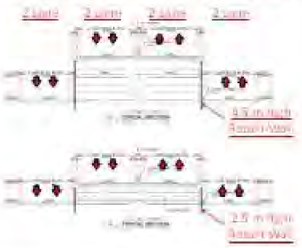
(Thru Flyover and Elevated Thru Road - Service Road No Change)



Typical Cross Section

Scheme-3: Flyover

(Thru Flyover and Elevated Thru Road - Service Road No Change)



Comparison of Alternatives

	Scheme 1	Scheme 2	Scheme 3
Cost	Expensive ([illegible])	Cheapest ([illegible])	Most expensive ([illegible])
Construction Duration	Longest ([illegible] months)	Shortest ([illegible] months)	Short ([illegible] months)
Construction Performance	Elevated service road greatest impact on traffic during construction	Less impact on traffic during construction	Traffic management during construction more difficult than S2
Traffic Condition	* No access for vehicle to frontage properties * No access to side road [illegible]	* No improvement against flood (overflow)	*No overflow *No side road access, but vehicle access to frontage properties
Environment and Social Conditions	*Land acquisition and building demolition *People each side of C-1 disconnected *Poor access for residents to frontage properties	*Minimal land acquisition	*Minimal land acquisition *People each side of C-3 disconnected from each other
Recommend	△	○	◎

Schedule of Project Implementation

- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case projects are implemented, the following is scheduled:

- Loan Agreement in March 2013.
- Selection of Consultant will start in April 2013.
- Detailed Design will start in the End of 2013.
- Construction will start in the Middle of 2016.

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Environmental Impact Assessment (EIA)

- In accordance with Philippines Environmental Impact Assessment System (PD No.1586 (1978)), documents such as Environmental Impact Statement or Initial Environmental Examination Report required for Environmental Compliance Certificate (ECC) will be prepared by DPWH with assistance of JICA Study Team.
- In addition, because of requirement of Japanese ODA Loan, JICA requests DPWH to comply with "JICA Guidelines for Environmental and Social Considerations (2010)".

JICA Guidelines for Environmental and Social Considerations (April 2010)

- Environmental impacts that may be caused by projects must be assessed and examined in the earliest possible planning stage. Alternatives or mitigation measures to avoid or minimize adverse impacts must be examined and incorporated into the project plan.
- Involuntary resettlement and loss of means of livelihood are to be avoided when feasible by exploring all viable alternatives. When, after such an examination, avoidance is proved unfeasible, effective measures to minimize impact and to compensate for losses must be agreed upon with the people who will be affected.

Process of EIA/RAP Study for Interchange Project

- Proposal of Alternative Schemes

↓

- Analysis of Alternatives
- Evaluation of Potential Impacts

Scoping

Today

↓ Public Consultation Meeting

- Final Proposed Scheme of Interchange
- EIA & RAP study results
  - Mitigation measures and monitoring plan
  - Eligibility & Compensation: Entitlement matrix

↓ Public Consultation Meeting

- Final EIA & RAP Reports

End of March

Potential Impacts: Positive(+) Negative(-)

Natural Environment & Human Health		
Items	Potential Impacts	Mitigation Measures
Flora & Fauna	(-) Cutting trees where necessary	Replant trees
Landscape	(-) Deteriorate local aesthetic views	Design consideration
Flooding	(+) Elevated road: No overflow during flooding due to heavy storms	Drain pipe culverts under the road
Air quality	(+) Reduction of traffic congestion → Abatement of air pollutants emission	Estimated by future traffic volume
Noise & Vibration	(-) Noise emitted from vehicles	Noise barriers, Plant trees
Waste	(-) Constructed waste	Reduce, Reuse, Recycle
Water & Soil pollution	(-) Discharge and leakage from construction machines and vehicles	Strictly control

Potential Impacts: Positive(+) Negative(-)

Social Environment		
Items	Potential Impacts	Mitigation Measures
Land Acquisition	(-) Minimal ROW acquisition due to improvement of I/C (no need for demolition & resettlement)	Minimal ROW acquisition by design consideration
Local Economy	(+) Workers are locally employed (-) Business activity temporarily disturbed	To be surveyed
Local Conflict	(-) Misallocation of benefit and damage among communities	Consultation with Barangays
Pedestrian access	(-) [illegible]	[illegible]
Traffic Safety	(-) Construction: Congestion, accident increase (+) [illegible]	[illegible]
Sanitation	(-) Unfavorable sanitary condition of construction workers	Provision of toilets & Training campaign

Baseline Environmental Surveys

- In order to predict and assess the impacts, and consider the mitigation measures, the following surveys are carrying out to understand the present conditions:
  1) Ambient air quality
  2) Noise level

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Social Considerations

Resettlement Action Plan (RAP)

- The Social Impact Assessment in the form of RAP (Resettlement Action Plan) will be undertaken based on the LARRIPP (Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy) which is applied to all infrastructure projects implemented by the DPWH, whether foreign or locally funded.
- LARRIPP includes: a) legal framework; b) eligibility, compensation & other entitlements; c) public participation & consultation; d) institutional arrangements; and e) monitoring mechanism
- Also RAP shall comply with "JICA Guidelines (2010)".

Socio-economic Survey

- There will be no demolition of buildings and involuntary resettlement due to the I/C project.

However,

- Business activities are likely to be affected during construction.

↓

- Socio-economic surveys shall be conducted.

Socio-economic Survey

Type of Survey	Contents
Census Survey	All occupants in construction area shall be counted to confirm the number of PAPs.
Assets & Land Survey	Item and magnitude of PAPs assets affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Socio-economic Survey

- Socio-economic Survey has been undertaken since First day of February, 2012
- This date is the Cut-off Date.

  Persons not covered at the time of census-taking will not eligible for claims of compensation entitlements.

- Your cooperation to the surveys will be much appreciated.

Next Public Consultation Meeting

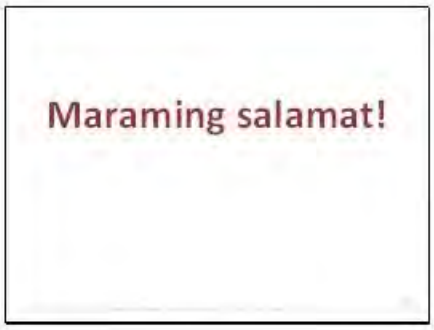
Objectives

To explain:

1) Final Scheme of the Interchange
2) Main Results of the EIA & RAP Study

Date

End of March



3) Third Public Consultation Meeting

Barangay	Tatalon
Date	March 28, 2012 / 03:00PM-04:30PM
Venue	Barangay Conference Hall, Tatalon, Quezon City

Preparatory Survey for
Metro Manila Interchange Construction
Project (VI)

Public Consultation Meeting

28 March 2012
Barangay Dona Imelda, Quezon City

Department of Public Works and Highways (DPWH)

JICA Study Team
Katahira & Engineers International
Oriental Consultants
Nippon Engineering Consultants

Agenda

1. Opening of the Meeting
2. Results of Preparatory Survey for Metro Manila Interchange Construction Project (VI)
   2.1 Selected Scheme of Interchange
   2.2 Environmental and Social Considerations
3. Discussion
   Comments and suggestions by stakeholders
4. Closing of the Meeting

Objective of This Meeting

- To explain the selected scheme of interchange;
- To comply with PEISS and JICA Guidelines
- To obtain comments/suggestion of stakeholders on the Project and Environmental and Social considerations.

Comments/suggestion of stakeholders will be taken into account in the Project and the ESIA study

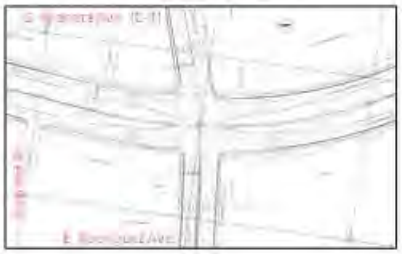
Intersection Plan



Schedule of Project Implementation

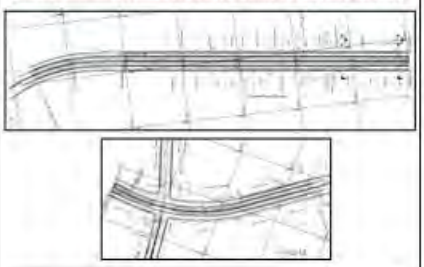
- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case project is implemented in the following schedule

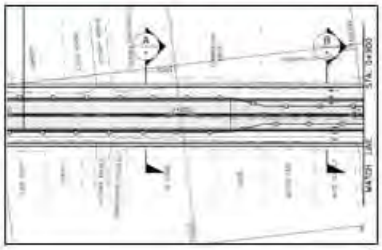
JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Traffic Management Plan

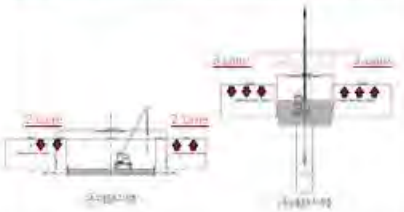
Traffic Management Plan During Construction



Traffic Management Plan During Construction



Traffic Management Plan During Construction



JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Trees	• Pay careful attention to trees on central islands/roadsides. • Plant native species of trees along the roadsides.
Air quality	• Provide proper construction machines and heavy vehicles in order to reduce the emission of exhaust gas. • Maintain construction machines and heavy vehicles properly. Stop unnecessary idling. • Keep down dust by watering during the dry season. • Reduce the emission of air pollutants by utilizing low-emission construction machines and vehicles.
Noise & Vibration	• Inform construction schedule to resident in advance. • Control construction works at night. • Use low-noise construction machines and heavy vehicles.

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Waste	• Prepare proper construction plan to minimize waste generated from construction work. • Implement proper management and disposal of construction waste. • Train construction workers on environmental conservation.
Water & Soil pollution	• Provide proper construction machines and heavy vehicles and maintain them properly. • Avoid the improper land mound to prevent soil erosion from the construction sites, especially during rainy season. • Install a protector and drainage facilities to prevent soil erosion caused by surface runoff during a storm. • Treat properly wastewater from asphalt washing and concrete pavement work.

Mitigation/Enhancement Measures

II. Operation Phase

Natural Environment & Human Health	
Trees	•Monitor the growth of trees and plants on central reserves and sidewalks.
Air quality	•Due to increase of travel speed and decrease of travel distance of vehicles, the flyover would reduce air pollutant (NO2, SO2, TSP) emissions if compared to the without project case.
Noise & Vibration	•Install noise barriers where necessary. •Plant trees on sidewalks. •To consider traffic regulations on controlling the lane for heavy vehicles to reduce noise and vibration.

Mitigation/Enhancement Measures

Typical Noise Mitigation Measures

Mitigation measures	Function	Effectiveness
Noise Barriers	Noise barriers reduce noise by diffraction.	About 10 dB
Low Noise pavement	Small porous in the asphalt pavement surface absorb the noise generated by friction between the car tires and road surface.	About 3dB
Environmental Buffer Zone (Vegetation)	Trees are planted to create green spaces and reduce noise by distance from noise sources.	5~10dB

Source: [illegible]

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Social Environment	
Land Acquisition	• Minimize ROW acquisition by design consideration
Local Economy	• (+) Hire unskilled labor (>50%) and skilled labor (>30%) • (-) Disturbance on business activities: Disseminate information on a construction plan (schedule, traffic management plan) and compensate if necessary
Traffic Safety	• Traffic Management Plan • Provide adequate education and training to construction workers regarding traffic safety. • Deploy the traffic control men and install information boards at appropriate position to avoid traffic jam/accident.
Sanitation	• Portable toilets & training campaign for construction workers to prevent infectious diseases

Entitlement Matrix (Draft) (1/2)

Type of Loss: STRUCTURES (Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
More than 20% of the total [illegible] where less than 20% [illegible] remaining structure no longer functional [illegible] continued use	AF with TCT or tax declaration (Tax declaration can be [illegible] to full title)	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost • Rental subsidy for the time between the submission of complete documents and the release of payment on land
	AF without TCT	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost • Rental subsidy for the time between the submission of complete documents and the release of payment on land

DPWH (2007) Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy, 3rd edition

Entitlement Matrix (Draft) (2/2)

Type of Loss: STRUCTURES (Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
Less than 20% of the total [illegible] where the remaining structure can still function and is viable for continued use	AF with TCT or tax declaration (Tax declaration can be [illegible] to full title)	• Compensation for affected portion of the structure
	AF without TCT	• Compensation for affected portion of the structure

DPWH (2007) Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy, 3rd edition

Socio-Economic Survey

Type of Survey	Contents
Census Survey	All occupants in project area shall be counted in order to confirm the number of PAPs.
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production systems, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Environmental Impact Assessment (EIA)

- Initial Environmental Examination (IEE) Report will be prepared including:
  - ✓Environmental Management Plan
  - ✓Social Development Program
  - ✓Abbreviated Resettlement Action Plan
- Final IEE Report will be submitted to DENR, in order to obtain the Environmental Compliance Certificate (ECC).

Maraming salamat!

Discussion

Comments / suggestions will be much appreciated

Schedule of Project Implementation

- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case projects are implemented, the following is scheduled:

- Loan Agreement in March 2013.
- Selection of Consultant will start in April 2013.
- Detailed Design will start in the End of 2013.
- Construction will start in the Middle of 2016.

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Environmental Impact Assessment (EIA)

- In accordance with Philippines Environmental Impact Assessment System (PD No.1586 (1978)), documents such as Environmental Impact Statement or Initial Environmental Examination Report required for Environmental Compliance Certificate (ECC) will be prepared by DPWH with assistance of JICA Study Team.
- In addition, because of requirement of Japanese ODA Loan, JICA requests DPWH to comply with "JICA Guidelines for Environmental and Social Considerations (2010)".

JICA Guidelines for Environmental and Social Considerations (April 2010)

- Environmental impacts that may be caused by projects must be assessed and examined in the earliest possible planning stage. Alternatives or mitigation measures to avoid or minimize adverse impacts must be examined and incorporated into the project plan.
- Involuntary resettlement and loss of means of livelihood are to be avoided when feasible by exploring all viable alternatives. When, after such an examination, avoidance is proved unfeasible, effective measures to minimize impact and to compensate for losses must be agreed upon with the people who will be affected.

Today

↓ Public Consultation Meeting

- Final Proposed Scheme of Interchange
- EIA & RAP study results
  - Mitigation measures and monitoring plan
  - Eligibility & Compensation, Entitlement matrix

↓ Public Consultation Meeting

End of March

- Final EIA & RAP Reports

Potential Impacts: Positive(+) Negative(-)

Natural Environment & Human Health		
Items	Potential Impacts	Mitigation Measures
Flora & Fauna	(-) Cutting a few trees, where necessary	Replant trees
Landscape	(-) Deteriorate local aesthetics values	[illegible]
Air quality	(+) Reduction of traffic congestion → Abatement of air pollutants emission	[illegible] traffic volume
Noise & Vibration	(-) Noise emitted from vehicles	Noise barriers, Plant trees
Waste	(-) Construction waste	3R (Reduce, Reuse, Recycle)
Water & Soil pollution	(-) Discharge and leakage from construction machines and vehicles	[illegible]

Potential Impacts: Positive(+) Negative(-)

Social Environment		
Items	Potential Impacts	Mitigation Measures
Local Economy	(+) Employment: workers are locally employed (-) Business activity: temporary disturbed	[illegible]
Local Conflict	[illegible]	Consultation with [illegible]
Pedestrian access	[illegible]	[illegible]
Traffic Safety	(-) Construction: congestion/ accident [illegible] (+) Operation: improve traffic safety	[illegible]
Sanitation	[illegible]	[illegible]

Baseline Environmental Surveys

- In order to predict and assess the impacts, and consider the mitigation measures, the following surveys are carrying out to understand the present conditions:
  1) Ambient air quality
  2) Noise level

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Social Considerations

Resettlement Action Plan (RAP)

- The Social Impact Assessment in the form of RAP (Resettlement Action Plan) will be undertaken based on the LARRIPP (Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy) which is applied to all infrastructure projects implemented by the DPWH, whether foreign or locally funded.
- LARRIPP includes: a) legal framework; b) eligibility, compensation & other entitlements; c) public participation & consultation; d) institutional arrangements; and e) monitoring mechanism
- Also RAP shall comply with "JICA Guidelines (2010)".

Socio-economic Survey

- There will be no land acquisition and resettlement due to the I/C project.

However,

- Business activities are likely to be affected during construction.

↓

- Socio-economic surveys shall be conducted.

Socio-economic Survey

Type of Survey	Contents
Census Survey	All occupants in construction area shall be counted to confirm the number of PAPs.
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household baseline information on livelihoods and standard of living shall be surveyed.

Socio-economic Survey

- Socio-economic Survey has been undertaken since First day of February, 2012.
- This date is the Cut-off Date.
  Persons not covered at the time of census taking will not eligible for claims of compensation entitlements.
- Your cooperation to the surveys will be much appreciated.

Next Public Consultation Meeting

Objectives

To explain:

1) Final Scheme of the Interchange
2) Main Results of the EIA & RAP Study

Date

End of March

Maraming salamat!

3) Third Public Consultation Meeting

Barangay	Bahay Toro
Date	March 28, 2012, 9:00AM - 12:00NN
Venue	Brgy. Bahay Toro Covered Court

Attendees

No	Name	Designation
1	Casiano S. Dela Cruz-	Punong Brgy./Brgy. A. Samson
2	Evaristo T. Trinidad	Co-Rep/Congressional Lanes
3	Beth M. Gonzales	Market Inspector/354 EDSA
4	Sheryll P. Minon	Office Staff/354 Roosevelt
5	Ritchelda G. Ramones	Census/Bahay Toro
6	Elizabeth Bongcales	Street Sweeper/Bahay Toro
7	Amelita D. Tumaquip	Disaster/Sitio Militar
8	Gerlie Rigos	Clean and Green/Proj. 8
9	Criselda Sablayan	Clean & Green/Bahay Toro
10	Lenier Cuadra	Pook Masagana
11	Ophelia Torrijas	Disaster/Sitio Militar
12	Evangeline M. Bareo	Disaster/Sitio Militar
13	Benita V. Jenplonuevo	Disaster/Sitio Militar
14	Theodoria B. Lagusla	Census/Proj. 8
15	Jojo T. de Guzman	General Manager/Walter Mart
16	Ferdie Gasin	Manager/Walter Mart
17	Rogelio Oliveros	Kagawad/Brgy. A. Samson
18	Danilo Baetiong	Kagawad/Brgy. A. Samson
19	Brenda Aguilar	Bahay Toro
20	Randolph N. Soliman	Service Manager/Bahay Toro
21	Erlinda T. Umipig	Street Sweeper/Bahay Toro
22	Francisco Jutba Jr.	Villarica
23	Danilo Agustin	Pres.-ABCON/Congressional
24	Roberto Laurenciano	Bahay Toro
25	Fernando Gana	Head,HR Dept./Bahay Toro
26	Rowena Dorosan	Bahay Toro
27	Dante Maldo	Bahay Toro
28	Art Castillo	Manager/EDSA Congressional
29	Conrad Benalde	Employee/EDSA-Congressional
30	Rey Oliveros	Kagawad/Brgy. A. Samson
31	Allan Alday	Kagawad/Brgy. R. Magsaysay
32	Rudolf Francis Macorol	Office Clerk/Congressional Lanes
33	Engr. Roy Cruz	DPWH-UPRO
34	Dolores M. Viloria	DPWH-ESSO
35	Koyo Ogasawara	JICA Study Team
36	Francisco A. Kalalo Jr.	JICA Study Team

Preparatory Survey for
Metro Manila Interchange Construction
Project (VI)

Public Consultation Meeting

28 March 2012
Barangay Bahay Toro, Quezon City

Department of Public Works and Highways (DPWH)

JICA Study Team
Katahira & Engineers International
Oriental Consultants
Nippon Engineering Consultants

Agenda

1. Opening of the Meeting
2. Results of Preparatory Survey for Metro Manila Interchange Construction Project (VI)
   2.1 Selected Scheme of Interchange
   2.2 Environmental and Social Considerations
3. Discussion
   Comments and suggestions by stakeholders
4. Closing of the Meeting

Objective of This Meeting

- To explain the selected scheme of interchange;
- To comply with PEISS and JICA Guidelines
- To obtain comments/suggestion of stakeholders on the Project and Environmental and Social considerations.

Comments/suggestion of stakeholders will be taken into account in the Project and the ESIA study.

EDSA - Roosevelt/Congressional Interchange

Intersection Plan

Schedule of Project Implementation

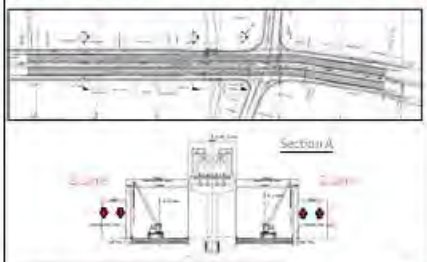
- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case project is implemented, the following is scheduled:

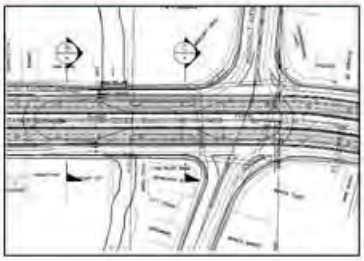
JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Traffic Management Plan

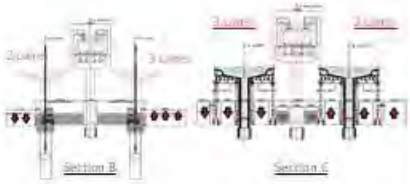
Traffic Management Plan During Construction



Traffic Management Plan During Construction



Traffic Management Plan During Construction



JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Trees	• Pay careful attention to trees on central islands, roadsides. • Plant native species of trees along the roadsides.
Air quality	• Provide proper construction machines and heavy vehicles in order to reduce the emission of exhaust gas. • Maintain construction machines and heavy vehicles properly. Stop unnecessary idling. • Keep down dust by watering during the dry season. • Reduce the emission of air pollutants by utilizing low-emission construction machines and vehicles.
Noise & Vibration	• Inform construction schedule to resident in advance. • Control construction work at night. • Use low-noise construction machines and heavy vehicles.

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Waste	• Prepare proper construction plan to minimize waste generated from construction work. • Implement proper management and disposal of construction waste. • Train construction workers on environmental conservation.
Water & Soil pollution	• Provide proper construction machines and heavy vehicles and maintain them properly. • Avoid the improper land mound to prevents soil erosion from the construction sites, especially during rainy season. • Install a protector and drainage facilities to prevents soil erosion caused by surface runoff during a storm. • Treat properly wastewater from asphalt washing and concrete pavement work.

Mitigation/Enhancement Measures

II. Operation Phase

Natural Environment & Human Health	
Trees	• Monitor the growth of trees and plants on central reserves and sidewalks.
Air quality	• Due to increase of travel speed and decrease of travel distance of vehicles, the flyover would reduce air pollutant (NO2, SO2, TSP) emissions if compared to the without project case.
Noise & Vibration	• Install noise barriers where necessary. • Plant trees on sidewalks. • To consider traffic regulations on controlling the lane for heavy vehicles to reduce noise and vibration.

Mitigation/Enhancement Measures

Typical Noise Mitigation Measures

Mitigation measures	Function	Effectiveness
Noise Barriers	Noise barriers reduce noise by diffraction.	About 10 dB
Low Noise pavement	Small porous in the asphalt pavement surface absorb the noise generated by friction between the car tires and road surface.	About 3 dB
Environmental Buffer Zone (Vegetation)	Trees are planted to create green spaces and reduce noise by distance from noise sources.	5~10 dB

Source: [illegible]

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Social Environment	
Land Acquisition	• Minimize ROW acquisition by design consideration
Local Economy	• (+) Hire unskilled labor (>50%) and skilled labor (>30%) • (-) Disturbance on business activities: Disseminate information on a construction plan (schedule, traffic management plan) and compensate if necessary
Traffic Safety	• Traffic Management Plan • Provide adequate education and training to construction workers regarding traffic safety • Deploy the traffic control men and install information boards at appropriate position to avoid traffic jam/accident
Sanitation	• Portable toilets & training campaign for construction workers to prevent infectious diseases

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Social Considerations

Project Affected Persons (PAPs)

Project Affected Structure

No	Baranguy	Name	Type of Stalls	
			Fruits Stand	Merchandise
1	Katipunan	Pol Marcillan		√
2	Katipunan	Josie Cayabyab		√
3	Katipunan	Bobby Millar	√	
4	Katipunan	Rey Madabo	√	√
5	Katipunan	Gemalyn Rogel	√	√

Note:
The Cut-off Date for eligibility for compensation was set on 1st February 2012.

Other Structures/Facilities

No	Kinds of Posts	Brgy. Katipunan	Brgy. Ramon Magsaysay	TOTAL
1	Utility Post (inside pink line)	62		62
2	Utility Post (outside pink line)	28		28
3	Lamp Post (outside pink line)	3	3	6
4	Control Board	3	3	6
5	Signboard	1		1
6	Foot Bridge	2	2	4
7	Informative Sign	2		2
8	Extension [illegible]	13		13
9	Brgy. Outpost	1	1	2
10	Bridge		1	1

12	Marker Post	2	2	4
13	Billboard (ST)		2	2

Affected Trees

Baranguy Katipunan

Species	No. of Trees	Diameter (cms)	Height (m)	Volume (cu.m)	Amount
Balite (inside pink line) (s)	19				-
Bonggangvilla (s) Center Island	26				-
TOTAL	45				0.00

Baraguy Ramon Magsaysay

Species	No. of Trees	Diameter (cms)	Height (m)	Volume (cu.m)	Amount
Bongambilia (m)	25				-
Mahogany (m)	4				-
Mahogany (FG)	1				-
Balete (s)	14				-
TOTAL	44				0.00

Entitlement Matrix (Draft) (1/2)

Type of Loss: STRUCTURES
(Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
More than 20% of the total landholding loss or where less than 20% loss but the remaining structure no longer function as intended or no longer viable for continued use	AF with TCT or tax declaration (Tax declaration can be legalized to full title)	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost • Rental subsidy for the time between the submission of complete documents and the release of payment on land
	AF without TCT	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost • Rental subsidy for the time between the submission of complete documents and the release of payment on land

DPWH (2007)
[illegible]

Entitlement Matrix (Draft) (2/2)

Type of Loss: STRUCTURES
(Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
Less than 20% of the total landholding loss where the remaining structure can still function and is viable for continued use	AF with TCT or tax declaration (Tax declaration can be legalized to full title)	• Compensation for affected portion of the structure
	AF without TCT	• Compensation for affected portion of the structure

DPWH (2007)
[illegible]

Socio-Economic Survey

Type of Survey	Contents
Census Survey	All occupants in project area shall be counted in order to confirm the number of PAPs.
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Environmental Impact Assessment (EIA)

- Initial Environmental Examination (IEE) Report will be prepared including:
  - ✓Environmental Management Plan
  - ✓Social Development Program
  - ✓Abbreviated Resettlement Action Plan
- Final IEE Report will be submitted to DENR, in order to obtain the Environmental Compliance Certificate (ECC).

Maraming salamat!

Discussion

Comments / suggestions will be much appreciated

Operation & Maintenance	*Painting for steel members	*Required periodic inspection and O&M [illegible]
Environ and Social Conditions	*ROW acquisition *Noise/Fumes more emission than Sch.2	*No ROW acquisition *Aesthetic view is better than Sch1 *Dumping site for excavated soil
Recommend	○	◎

Schedule of Project Implementation

- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case project is implemented, the following is scheduled

- Loan Agreement in March 2013.
- Selection of Consultant will start in April 2013.
- Detailed Design will start in the End of 2013.
- Construction will start in the Middle of 2016.

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Environmental Impact Assessment (EIA)

- In accordance with Philippines Environmental Impact Assessment System (PD No.1586 (1978)), documents such as Environmental Impact Statement or Initial Environmental Examination Report required for Environmental Compliance Certificate (ECC) will be prepared by DPWH with assistance of JICA Study Team.
- In addition, because of requirement of Japanese ODA Loan, JICA requests DPWH to comply with "JICA Guidelines for Environmental and Social Considerations (2010)".

JICA Guidelines for Environmental and Social Considerations (April 2010)

- Environmental impacts that may be caused by projects must be assessed and examined in the earliest possible planning stage. Alternatives or mitigation measures to avoid or minimize adverse impacts must be examined and incorporated into the project plan.
- Involuntary resettlement and loss of means of livelihood are to be avoided when feasible by exploring all viable alternatives. When, after such an examination, avoidance is proved unfeasible, effective measures to minimize impact and to compensate for losses must be agreed upon with the people who will be affected.

Process of EIA/RAP Study for Interchange Project

- Proposal of Alternative Schemes

↓

- Analysis of Alternatives
- Evaluation of Potential Impacts

Scoping

Today

↓ Public Consultation Meeting

- Final Proposed Scheme of Interchange
- EIA & RAP study results
  - Mitigation measures and monitoring plan
  - Eligibility & Compensation, Entitlement matrix

↓ Public Consultation Meeting

Early April

- Final EIA & RAP Reports

Potential Impacts: Positive(+) Negative(-)

Natural Environment & Human Health		
Items	Potential Impacts	Mitigation Measures
Flora & Fauna	(-) Cutting trees where necessary	Replant trees
Air quality	(+) Reduction of traffic congestion → Abatement of air pollutants emission	Estimated by future traffic flow
Noise & Vibration	(-) Noise emitted from vehicles: Tunnel, boundary, [illegible]	Install noise barrier, Plant trees
Landscape	(-) Flyover: Deteriorate aesthetic view	Design consideration
Flooding	(-) Tunnel: Flooding during heavy storms	Pump and sump pit
Waste	(-) Construction waste (-) Tunnel: excavated waste soil	Reduce/Reuse, Proper Disposal
Water & Soil pollution	(-) Discharge and leakage from construction machines and vehicles	Strictly control

Baseline Environmental Surveys

- In order to predict and assess the impacts, and consider the mitigation measures, the following surveys are carrying out to understand the present conditions:
  1) Ambient air quality
  2) Noise level

Potential Impacts: Positive(+) Negative(-)

Social Environment		
Items	Potential Impacts	Mitigation Measures
Land Acquisition	(-) Minimal ROW acquisition due to improvement of IC (but No demolition & resettlement) (-) EDSA Tunnel: Require ROW (400m²) for pump drainage system	Minimize ROW acquisition by design consideration
Local Economy	(+) Workers are locally employed (-) Business activity temporary disturbed	To be assessed
Local Conflict	(-) Ill redistribution of benefits and damage among communities	Consultation with Barangays
Traffic Safety	(-) Construction: Congestion/accident increase (+) Operation: improve traffic safety	• Traffic Management Plan • Advance notice
Sanitation	(-) Unfavorable due to increase of construction workers	Portable toilets & Training Campaign

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Social Considerations

Resettlement Action Plan (RAP)

- The Social Impact Assessment in the form of RAP (Resettlement Action Plan) will be undertaken based on the LARRIPP (Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy) which is applied to all infrastructure projects implemented by the DPWH, whether foreign or locally funded.
- LARRIPP includes: a) legal framework; b) eligibility, compensation & other entitlements; c) public participation & consultation; d) institutional arrangements; and e) monitoring mechanism.
- Also RAP shall comply with "JICA Guidelines (2010)".

Socio-economic Survey

- There will be no demolition of buildings and involuntary resettlement due to the I/C projects, although required additional ROW.

However,

- Business activities are likely to be affected during construction.

↓

- Socio-economic surveys shall be conducted.

Socio-economic Survey

Type of Survey	Contents
Census Survey	All occupants in construction area shall be counted to confirm the number of PAPs.
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Socio-economic Survey

- Socio-economic Survey has been undertaken since First day of February, 2012.
- This date is the Cut-off Date.

  Persons not covered at the time of census taking will not eligible for claims of compensation entitlements.

- Your cooperation to the surveys will be much appreciated.

Next Public Consultation Meeting

Objectives

To explain:

1) Final Scheme of the Interchange
2) Main Results of the EIA & RAP Study

Date

Early April

Maraming salamat!

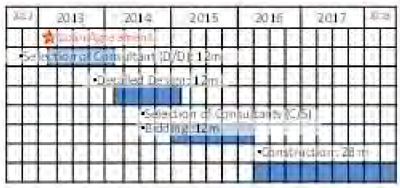
Schedule of Project Implementation

- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012



JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental Considerations

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Trees	•Pay careful attention to trees on central islands/roadsides. •Plant native species of trees along the roadsides.
Air quality	•Provide proper construction machines and heavy vehicles in order to reduce the emission of exhaust gas. •Maintain construction machines and heavy vehicles properly. Stop unnecessary idling. •Keep down dust by watering during the dry season. •Reduce the emission of air pollutants by utilizing low-emission construction machines and vehicles.
Noise & Vibration	•Inform construction schedule to residents in advance. •Control construction works at night. •Use low-noise construction machines and heavy vehicles.

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Waste	• Prepare proper construction plan to minimize waste generated from construction work. • Implement proper management and disposal of construction waste. • Train construction workers on environmental conservation.
Water & Soil pollution	• Provide proper construction machines and heavy vehicles and maintain them properly. • Avoid the improper land moving to prevent soil erosion from the construction sites, especially during rainy season. • Install a protector and drainage facilities to prevent soil erosion caused by surface runoff during a storm. • Treat properly wastewater from asphalt wearing and concrete pavement work.

Mitigation/Enhancement Measures

II. Operation Phase

Natural Environment & Human Health	
Trees	• Monitor the growth of trees and plants on central reserves and sidewalks.
Air quality	• Due to increase of travel speed and decrease of travel distance of vehicles, the flyover would reduce air pollutant (NO_2, SO_2, TSP) emissions if compared to the without project case.
Noise & Vibration	• Install noise barriers where necessary. • Plant trees on sidewalks. • To consider traffic regulations on controlling the lane for heavy vehicles to reduce noise and vibration.

Mitigation/Enhancement Measures

Typical Noise Mitigation Measures

Mitigation measures	Function	Effectiveness
Noise Barriers	Noise barriers reduce noise by diffraction	About 10 dB
Low Noise pavement	Small porous in the asphalt pavement surface absorb the noise generated by friction between the car tires and road surface.	About 3 dB
Environmental Buffer Zone (Vegetation)	Trees are planted to create green spaces and reduce noise by distance from noise sources.	5~10 dB

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Social Environment	
Land Acquisition	• Minimize ROW acquisition by design consideration.
Local Economy	• (+) Hire unskilled labor (>90%) and skilled labor (>30%). • (-) Disturbance to business activities. Disseminate information on a construction plan (schedule, traffic management plan) and compensate if necessary.
Traffic Safety	• Traffic Management Plan • Provide adequate education and training to construction workers regarding traffic safety. • Deploy the traffic control men and install information boards at appropriate position to avoid traffic jam/accident.
Sanitation	• Portable toilets & training campaign for construction workers to prevent infectious diseases.

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Social Considerations

Land Acquisition

- Additional ROW requirement for Sump pit : About 50 sq.m within the Veterans Medical Center Golf Course.

Project Affected Structures

Marginally Affected Extension (Pavement) in Brgy. Pag-Asa

Entitlement Matrix (Draft) (1/2)

Type of Loss: STRUCTURES
(Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
More than 20% of the total (residential) loss or where less than 20% loss but the remaining structure no longer function as intended or no longer viable for continued use	AF with TCT or tax declaration (Tax declaration can be legalized to full title)	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost. • Rental subsidy for the time between the submission of complete documents and the release of payment for land.
	AF without TCT	AF will be entitled to: • Cash compensation for entire structure at 100% of replacement cost. • Rental subsidy for the time between the submission of complete documents and the release of payment on land.

Entitlement Matrix (Draft) (2/2)

Type of Loss: STRUCTURES
(Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
[illegible]	AP with TCT or tax declaration [illegible]	• Compensation for affected portion of the structure
	AP without TCT	• Compensation for affected portion of the structure

[illegible]

Socio-Economic Survey

Type of Survey	Contents
Census Survey	All occupants in project area shall be counted in order to confirm the number of PAPs
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Environmental Impact Assessment (EIA)

- Initial Environmental Examination (IEE) Report will be prepared including:
  - ✓Environmental Management Plan
  - ✓Social Development Program
  - ✓Abbreviated Resettlement Action Plan
- Final IEE Report will be submitted to DENR, in order to obtain the Environmental Compliance Certificate (ECC).

Maraming salamat!

Discussion

Comments / suggestions will be much appreciated

Preparatory Survey for
Metro Manila Interchange Construction
Project (VI)

Public Consultation Meeting

13 March 2012
Barangay Ugong Norte, Quezon City

Department of Public Works and Highways (DPWH)

JICA Study Team

Agenda

1. Opening of the Meeting
2. JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)
   - 2.1 Alternative Schemes of Interchange
   - 2.2 Environmental and Social considerations
3. Discussion
   Comments and suggestions by stakeholders
4. Closing of the Meeting

Objective of This Meeting

- To explain the outline of F/S conducted by JICA Study Team;
- To explain the alternative schemes of Interchange;
- To obtain comments/suggestion of stakeholders on the Project and Environmental and Social considerations.

Comments/suggestion of stakeholders will be taken into account in the Project and the ESIA study

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

C-5/Green Meadows/ Acropolis/Calle Industria

Three Alternatives:

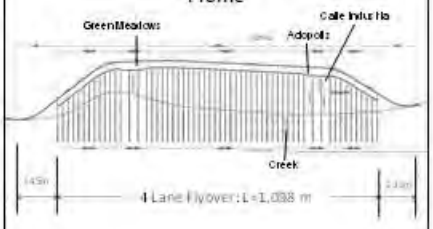
- Scheme 1: Flyover
- Scheme 2: Tunnel
- Scheme 3: Flyover and Tunnel

Scheme-1: Flyover

4 Lane Flyover: 1,098 m
Approach Road: 276.4 m

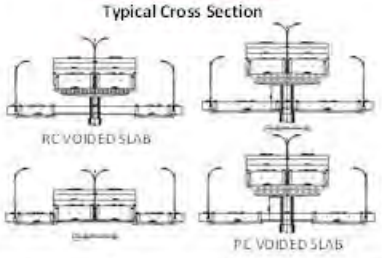
Scheme-1: Flyover

Profile



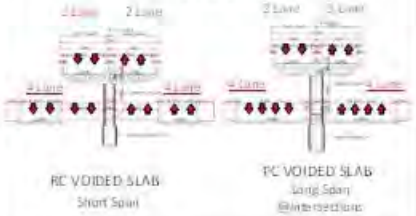
Scheme-1: Flyover

Typical Cross Section



Scheme-1: Flyover

Typical Cross Section

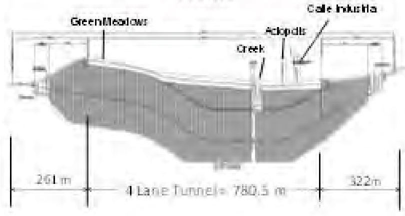


Scheme-2: Tunnel

4 Lane Tunnel: 780.5 m
Approach Road: 583.5 m

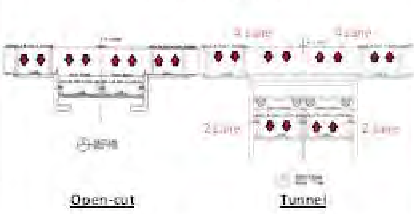
Scheme-2: Tunnel

Profile



Scheme-2: Tunnel

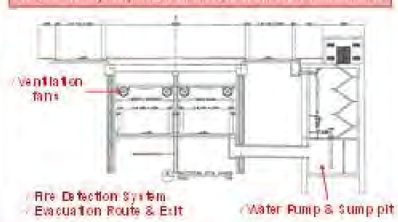
Typical Cross Section



Scheme-2: Tunnel

Typical Cross Section: Tunnel

Require Daily Inspection and Operation & Maintenance

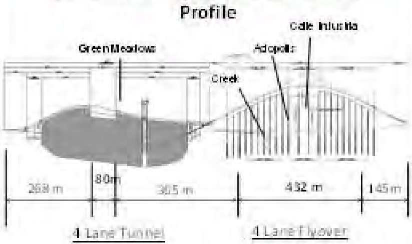


Scheme -3: Flyover and Tunnel

4 Lane Flyover : 432 m
Approach Road: 314 m
4 Lane Tunnel: 80 m
Underpass section : 465 m

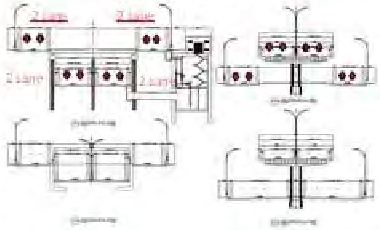
Scheme-3: Flyover and Tunnel

Profile



Scheme-3: Flyover and Tunnel

Typical Cross Section



Scheme -3: Flyover and Tunnel

Typical Cross Section

Require Periodical Inspection and O & M

Comparison of Alternatives

	Scheme 1 Flyover	Scheme 2 Tunnel	Scheme 3 Flyover & Tunnel
Cost	Cheap (103%)	Most expensive (276%)	Cheapest (100%)
Construction Duration	Short (24 months)	Longer (33 months)	Short (24 months)
Construction performance	Easier	Harder due to existing roads & excavated waste soil	Construction of Tunnel and Flyover Simultaneously
Operation & Maintenance	No need for O&M	Permanent O&M system is required	Periodic O&M system is required
Traffic Condition	Can provide 4-lanes each at grade	Can provide 4-lanes each at grade	Only provide 2-lanes, Longer vertical alignment
Environment and Social Conditions	Noisy	*Noise & exhaust fumes [illegible] *Aesthetic view is preserved *Extra ROW for Sump pit	Noisy Extra ROW for sump pit
Recommendation	◎	△	○

Schedule of Project Implementation

- Preparatory survey: Nov. 2011 to Nov. 2012
- Project Evaluation by GOJ: from Dec. 2012

In case projects are implemented, the following is scheduled:

- Loan Agreement in March 2013.
- Selection of Consultant will start in April 2013.
- Detailed Design will start in the End of 2013.
- Construction will start in the Middle of 2016.

JICA Preparatory Survey for Metro Manila Interchange Construction Project (VI)

Environmental and Social Considerations

Environmental Impact Assessment (EIA)

- In accordance with Philippines Environmental Impact Assessment System (PD No.1586 (1978)), documents such as Environmental Impact Statement or Initial Environmental Examination Report required for Environmental Compliance Certificate (ECC) will be prepared by DPWH with assistance of JICA Study Team.
- In addition, because of requirement of Japanese ODA Loan, JICA requests DPWH to comply with "JICA Guidelines for Environmental and Social Considerations (2010)".

JICA Guidelines for Environmental and Social Considerations (April 2010)

- Environmental impacts that may be caused by projects must be assessed and examined in the earliest possible planning stage. Alternatives or mitigation measures to avoid or minimize adverse impacts must be examined and incorporated into the project plan.
- Involuntary resettlement and loss of means of livelihood are to be avoided when feasible by exploring all viable alternatives. When, after such an examination, avoidance is proved unfeasible, effective measures to minimize impact and to compensate for losses must be agreed upon with the people who will be affected.

Process of EIA Study for Interchange Project

- Proposal of Alternative Schemes

↓

- Analysis of Alternatives
- Evaluation of Potential Impacts

Scoping

Today

↓ Public Consultation Meeting

- Final Proposed Scheme of Interchange
- EIA study results
  - Environmental Management Program
    - Mitigation Measures and Monitoring Plans

↓ Public Consultation Meeting

- Final EIA Report

End of March

Potential Impacts: Positive(+) Negative(-)

Natural Environment & Human Health		
Items	Potential Impacts	Mitigation Measures
Flora & Fauna	(-) Cutting 3 trees on the central reserve	Plant trees
Air quality	(+) Reduction of traffic congestion → Abatement of air pollutants emission	Predicted by [illegible] traffic flow
Noise & Vibration	(-) Noise emitted from vehicles; Tunnel: less noisy [illegible]	Noise barriers; [illegible]
Landscape	(-) Flyover: Obstructing aesthetic view	Design consideration
Flooding	(-) Tunnel: flooding due to heavy storms	Pumps and sump pit
Waste	(-) Construction waste; Tunnel: Excavated waste soil	3R (Reduce, Reuse, Recycle)
Water & Soil pollution	(-) Drainage and leakage from construction machines and vehicles	Strictly control

Potential Impacts: Positive(+) Negative(-)

Social Environment		
Items	Potential Impacts	Mitigation Measures
Land Acquisition	(-) Tunnel: Require ROW (400 sq.m) for pump station and sump pit	To be surveyed
Local Economy	(+) Workers are locally employed	
Local Conflict	(-) If misdistribution of benefit and damage among communities	Consultation with Barangays officials
Traffic Safety	(-) Construction: Congested and accident increase (+) Operation: improve traffic safety	Advance notice on construction plan and detour routes
Sanitation	(-) Unfavorable due to increase of construction workers	Portable toilets & Training Campaign

Baseline Environmental Surveys

- In order to predict and assess the impacts, and consider the mitigation measures, the following surveys are carrying out to understand the present conditions:
  1) Ambient air quality
  2) Noise level

Maraming salamat!

Discussion

Comments / suggestions will be much appreciated

Environmental & Social Considerations

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Trees	• Pay careful attention to trees on central island/roadsides. • Plant native species if there along the roadsides.
Air quality	• Provide proper construction machines and heavy vehicles in order to reduce the emission of exhaust gas. • Maintain construction machines and heavy vehicles properly. Stop unnecessary idling. • Keep down dust by watering during the dry season. • Reduce the emission of air pollutants by utilizing low emission construction machines and vehicles.
Noise & Vibration	• Inform construction schedule to residents in advance. • Control construction works at night. • Use low-noise construction machines and heavy vehicles.

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Natural Environment & Human Health	
Waste	• Prepare proper construction plan to minimize waste generated from construction work. • Implement proper management and disposal of construction waste. • Train construction workers on environmental conservation.
Water & Soil pollution	• Provide proper construction machines and heavy vehicles and maintain them properly. • Avoid the improper land mound to prevent soil erosion from the construction site, especially during rainy season. • Install a protector and drainage facilities to prevent soil erosion caused by surface runoff during a storm. • Treat properly wastewater from asphalt wearing and concrete pavement work.

Mitigation/Enhancement Measures

II. Operation Phase

Natural Environment & Human Health	
Trees	• Monitor the growth of trees and plants on central reserves and sidewalks.
Air quality	• Due to increase of travel speed and decrease of travel distance of vehicles, the flyover would reduce air pollutant (NO_x, SO_2, TSP) emissions if compared to the without project case.
Noise & Vibration	• Install noise barriers where necessary. • Plant trees on sidewalks. • To consider traffic regulations on controlling the level for heavy vehicles to reduce noise and vibration.

Mitigation/Enhancement Measures

Typical Noise Mitigation Measures

Mitigation measures	Function	Effectiveness
Noise Barriers	Noise barriers reduce noise by diffraction.	About 10 dB
Low Noise pavement	Small porous in the asphalt pavement surface absorb the noise generated by friction between the car tires and road surface.	About 3 dB
Environmental Buffer Zone (Vegetation)	Trees are planted to create green spaces and reduce noise by distance from noise sources.	5~10 dB

Mitigation/Enhancement Measures

I. Pre-Construction and Construction Phases

Social Environment	
Land Acquisition	• Minimize ROW acquisition by design consideration.
Local Economy	• (-) Hire unskilled labor (>50%) and skilled labor (>30%). • (-) Disturbance on business activities. Disseminate information on a construction plan (schedule, traffic management plan) and compensate if necessary.
Traffic Safety	• Traffic Management Plan. • Provide adequate education and training to construction workers regarding traffic safety. • Deploy the traffic control men and install information boards at appropriate position to avoid traffic jam/accident.
Sanitation	• Portable toilets & training campaign for construction workers to prevent infectious diseases.

(Classified as residential/Commercial/Industrial)

Application	Entitled Person	Compensation/ Entitlements
Less than 20% of the total landholding lost or where the remaining structures can still function and is viable for continued use	AP with TCT or tax declaration (Tax declaration can be legalized to full title)	• Compensation for affected portion of the structure
	AP without TCT	• Compensation for affected portion of the structure

DPWH (2007)
Land Acquisition, Resettlement, Rehabilitation and Indigenous Peoples' Policy, 3rd edition

Socio-Economic Survey

Type of Survey	Contents
Census Survey	All occupants in project area shall be counted in order to confirm the number of PAPs
Assets & Land Survey	Item and magnitude of PAPs asset affected by the project physically and economically shall be evaluated.
Livelihood & Living Survey	Standard characteristics of the household including description of production system, labor, household, baseline information on livelihoods and standard of living shall be surveyed.

Environmental Impact Assessment (EIA)

- Initial Environmental Examination (IEE) Report will be prepared including:
  - ✓Environmental Management Plan
  - ✓Social Development Program
- Final IEE Report will be submitted to DENR, in order to obtain the Environmental Compliance Certificate (ECC).

Maraming salamat!

Discussion

Comments / suggestions will be much appreciated

A7.3

JICA Environmental Checklist

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
1 Permits and Explanation	(1) EIA and Environmental Permits	(a) Have EIA reports been already prepared in official process? (b) Have EIA reports been approved by authorities of the host country's government? (c) Have EIA reports been unconditionally approved? If conditions are imposed on the approval of EIA reports, are the conditions satisfied? (d) In addition to the above approvals, have other required environmental permits been obtained from the appropriate regulatory authorities of the host country's government?	(a) Y (b) N (c) - (d) -	(a) The Initial Environmental Examination (IEE) report for each interchange project has been prepared in June 2012. (b) DPWH will submit the IEEs to the Environmental Management Bureau (EMB) in August 2012 to obtain the Environmental Compliance Certificate (ECC) by the middle of September 2012. (c) Not yet. (d) Not yet. The ECC may prescribe the required permits/documents.
	(2) Explanation to the Local Stakeholders	(a) Have contents of the project and the potential impacts been adequately explained to the Local stakeholders based on appropriate procedures, including information disclosure? Is understanding obtained from the Local stakeholders? (b) Have the comment from the stakeholders (such as local residents) been reflected to the project design?	(a) Y (b) Y	(a) Three rounds of public consultation meetings were held at each project site of proposed interchanges. The objectives of 3 round meetings were as follows. • 1st round: To disseminate the outline of the interchange projects; • 2nd round: To explain the alternative schemes of interchange, draft scoping of EIA and RAP preparation; • 3rd round: To explain the selected scheme of interchange and the main results of EIA and RAP studies (b) Comments raised by local communities and stakeholders in the public consultation meetings had been recorded and carefully considered during the preparation of IEE reports and also Abbreviated Resettlement Action Plans (ARAPs).
	(3) Examination of Alternatives	(a) Have alternative plans of the project been examined with social and environmental considerations?	(a) Y	(a) Project alternatives for four interchanges were analyzed. The alternatives including a zero option (without-the-project) case were comparatively evaluated not only from the viewpoints of environmental and social considerations but also from technical and economical viewpoints.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
2 Pollution Control	(1) Air Quality	(a) Is there a possibility that air pollutants emitted from the project related sources, such as vehicles traffic will affect ambient air quality? Does ambient air quality comply with the country's air quality standards? Are any mitigating measures taken? (b) Where industrial areas already exist near the route, is there a possibility that the project will make air pollution worse?	(a) Y (b) N	(a) As the traffic flow will increase due to the opening of the C-3 Missing Link in 2018, emissions of air pollutants (TSP, SO_2, NO_2) will increase in the without-project case. However, the emissions of air pollutants will decrease if the flyover is installed. The present air pollutant concentrations are below the maximum limits of the National Ambient Air Quality Guideline Values of the Philippine Clean Air Act of 1999. Therefore, ambient air quality in the future will comply with the Philippine air quality standards. (b) Refer to (a).
	(2) Water Quality	(a) Is there a possibility that soil runoff from the bare lands resulting from earthmoving activities, such as cutting and filling will cause water quality degradation in downstream water areas? (b) Is there a possibility that surface runoff from roads will contaminate water sources, such as groundwater? (c) Do effluents from various facilities, such as parking areas/service areas comply with the country's effluent standards and ambient water quality standards? Is there a possibility that the effluents will cause areas not to comply with the country's ambient water quality standards?	(a) N (b) N (c) -	(a) The flyover will be installed over the existing intersection. There will be no risk of water quality degradation due to the soil runoff from the bare lands. (b) The flyover will be installed over the existing intersection. Groundwater is not locally utilized. Pile driving will not affect groundwater flow. (c) No parking areas/service areas are planned in the interchanges.
	(3) Wastes	(a) Are wastes generated from the project facilities, such as parking areas/service areas, properly treated and disposed of in accordance with the country's regulations?	(a) Y	(a) There will be no parking areas/service areas in these interchange projects. Road garbage will be properly treated and disposed of in accordance with the regulations of the Philippines.
	(4) Noise and Vibration	(a) Do noise and vibrations from the vehicle and train traffic comply with the country's standards?	(a) N	(a) Reduction of traffic congestion is expected to contribute to noise abatement. As the traffic flow will increase, noise level will increase in the vicinity of the interchange. Therefore, the proper noise abatement measures should be

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
				taken into account along the roads close to the residential areas • Trees should be planted in the central reserves and sidewalks where possible. • Based on the monitoring results of noise levels after opening the flyover, installation of noise barriers should be considered where necessary. • Regular monitoring of noise levels along the interchange should be conducted. • Install warning signs on road for horn ban, speed control and lane restriction. • Regular maintenance on road to keep road surface good condition. • Develop a mechanism to record and respond to monitoring results and complaints.
3 Natural Environment	(1) Protected Areas	(a) Is the project site located in protected areas designated by the country's laws or international treaties and conventions? Is there a possibility that the project will affect the protected areas?	(a) N	1) There are no protected areas in the vicinity of the project areas.
	(2) Ecosystem	(a) Does the project site encompass primeval forests, tropical rain forests, ecologically valuable habitats (e.g., coral reefs, mangroves, or tidal flats)? (b) Does the project site encompass the protected habitats of endangered species designated by the country's laws or international treaties and conventions? (c) If significant ecological impacts are anticipated, are adequate protection measures taken to reduce the impacts on the ecosystem? (d) Are adequate protection measures taken to prevent impacts, such as disruption of migration	(a) N (b) N (c) N (d) N (e) N (f) N	(a) The project sites are located at the existing intersections in the urbanized areas. There are no ecologically valuable habitats. (b) The project sites are located at the existing intersections in the urbanized areas. There are no habitats of the protected species. (c) Refer to (a). (d) Refer to (a). (e) Native plant species will be used for re-vegetation, where necessary. (f) Not applicable.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
		routes, habitat fragmentation, and traffic accident of wildlife and livestock? (e) Is there a possibility that installation of roads will cause impacts, such as destruction of forest, poaching, desertification, reduction in wetland areas, and disturbance of ecosystems due to introduction of exotic (non-native invasive) species and pests? Are adequate measures for preventing such impacts considered? (f) In cases the project site is located at undeveloped areas, is there a possibility that the new development will result in extensive loss of natural environments?		
	(3) Hydrology	(a) Is there a possibility that alteration of topographic features and installation of structures, such as tunnels will adversely affect surface water and groundwater flows?	(a) N	(a) Impacts on surface water and groundwater flows caused by the interchange projects will be negligible.
	(4) Topography and Geology	(a) Is there any soft ground on the route that may cause slope failures or landslides? Are adequate measures considered to prevent slope failures or landslides, where needed? (b) Is there a possibility that civil works, such as cutting and filling will cause slope failures or landslides? Are adequate measures considered to prevent slope failures or landslides? (c) Is there a possibility that soil runoff will result from cut and fill areas, waste soil disposal sites, and borrow sites? Are adequate measures taken to prevent soil runoff?	(a) N (b) N (c) Y	(a) There is no soft ground at the interchange project sites. (b) There is no large-scale filling and cutting work. (c) Proper mitigation measures will prevent soil runoff. Mitigation measures: The proper design of road drainage system; Stabilization of the soil along the roadside and in the road reserve through re-vegetation; Use of diversion channels and silt traps to minimize erosion of soil materials into waterway; and etc. Furthermore, All excavations and earth movements should be done in the dry seasons, as far as possible.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
4 Social Environment	(1) Resettlement	(a) Is involuntary resettlement caused by project implementation? If involuntary resettlement is caused, are efforts made to minimize the impacts caused by the resettlement? (b) Is adequate explanation on compensation and resettlement assistance given to affected people prior to resettlement? (c) Is the resettlement plan, including compensation with full replacement costs, restoration of livelihoods and living standards developed based on socioeconomic studies on resettlement? (d) Are the compensations going to be paid prior to the resettlement? (e) Are the compensation policies prepared in document? (f) Does the resettlement plan pay particular attention to vulnerable groups or people, including women, children, the elderly, people below the poverty line, ethnic minorities, and indigenous peoples? (g) Are agreements with the affected people obtained prior to resettlement? (h) Is the organizational framework established to properly implement resettlement? Are the capacity and budget secured to implement the plan? (i) Are any plans developed to monitor the impacts of resettlement? (j) Is the grievance redress mechanism established?	(a) Y (b) Y (c) Y (d) Y (e) Y (f) Y (g) - (h) Y (i) Y (j) Y	(a) ARAPs were prepared for each interchange project. ➢ C-3/E. Rodriguez Avenue: No land acquisition and resettlement. ➢ EDSA/Roosevelt/Congressional Interchange: No land acquisition and resettlement. ➢ EDSA-North/West/Mindanao Interchange: About 50 sq. m of ROW is required for sump pit within the Veterans Medical Center Golf Course in order to avoid flooding of the underpass from North to Mindanao Ave. ➢ C-5/Green Meadows/Acropolis/Calle Industria Interchange: No land acquisition and resettlement. (b) Three rounds of public consultation meetings were held for the communities at each interchange project sites. (c) ARAPs were prepared based on JICA Guidelines and World Bank OP 4.12 for each interchange project. (d) The compensations will be paid according to the implementation schedule shown in ARAP. (e) Eligibility and entitlement matrix were presented in ARAPs. (f) Vulnerable groups and persons were identified based on the socioeconomic studies and countermeasures for them are prepared respectively. (g) There will be no resettlement at all four interchange projects. (h) The organization framework was prepared in ARAPs. PMO and DPWH/ESSO plays a key role to implement the resettlement and has experience in handling resettlements work properly assisted by World Bank etc. Also DPWH has a lot of sociologists who are familiar with resettlement (i) Proper internal and external monitoring plan are prepared in ARAPs. (j) The grievance redress mechanism was established in ARAPs.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
	(2) Living and Livelihood	(a) Where roads are newly installed, is there a possibility that the project will affect the existing means of transportation and the associated workers? Is there a possibility that the project will cause significant impacts, such as extensive alteration of existing land uses, changes in sources of livelihood, or unemployment? Are adequate measures considered for preventing these impacts? (b) Is there any possibility that the project will adversely affect the living conditions of the inhabitants other than the target population? Are adequate measures considered to reduce the impacts, if necessary? (c) Is there any possibility that diseases, including infectious diseases, such as HIV will be brought due to immigration of workers associated with the project? Are adequate considerations given to public health, if necessary? (d) Is there any possibility that the project will adversely affect road traffic in the surrounding areas (e.g., increase of traffic congestion and traffic accidents)? (e) Is there any possibility that roads will impede the movement of inhabitants? (f) Is there any possibility that structures associated with roads (such as bridges) will cause a sun shading and radio interference?	(a) N (b) N (c) N (d) N (e) Y (f) Y	(a) The project sites are located at the existing intersections in the urbanized areas and the flyovers and underpasses will be built. Therefore, the project will not affect any existing public transportation, and also not cause any significant changes in sources of livelihood and unemployment. (b) The project may not adversely affect the living conditions of the inhabitants other than the target population (c) Since workers will be locally employed in accordance with Republic Act No. 6685, no influx of workers from other areas is expected. (d) Since the interchange projects will improve the traffic of the existing intersections, any adverse impacts are not anticipated after opening the interchanges. (e) The traffic improvement projects contribute to improving safety and convenience of the communities. ➢ C-3/E. Rodriguez Avenue: Community severance due to the elevated thru road might not be anticipated because several pedestrian accesses will be provided along the additional approach. ➢ EDSA/Roosevelt/Congressional Interchange: Pedestrian access might be become slightly inconvenient because of the permanent removal of one bridge near the Muñoz station. Monitoring and consultations with local community should be conducted after opening the interchanges. (f) The flyovers may cause partial sunlight blocking. However, sun shading is considered to be minor impact. There will be no interference of radio waves due to the interchange projects.
	(3) Heritage	(a) Is there a possibility that the project will damage the local archeological, historical, cultural, and religious heritage? Are adequate measures	(a) N	(a) There are no local archeological, historical, cultural, and religious heritages.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
		considered to protect these sites in accordance with the country's laws?		
	(4) Landscape	(a) Is there a possibility that the project will adversely affect the local landscape? Are necessary measures taken?	(a) Y	(a) The flyovers may cause deterioration of local aesthetic view. Mitigation measures are as follows: • Design consideration to avoid heavy-looking structure of flyover, and; • Plant trees where possible.
	(5) Ethnic Minorities and Indigenous Peoples	(a) Are considerations given to reduce impacts on the culture and lifestyle of ethnic minorities and indigenous peoples? (b) Are all of the rights of ethnic minorities and indigenous peoples in relation to land and resources to be respected?	(a) N (b) -	(a) There are no ethnic minorities and indigenous peoples in the project areas. (b) Not Applicable.
	(6) Working Conditions	(a) Is the project proponent not violating any laws and ordinances associated with the working conditions of the country which the project proponent should observe in the project? (b) Are tangible safety considerations in place for individuals involved in the project, such as the installation of safety equipment which prevents industrial accidents, and management of hazardous materials? (c) Are intangible measures being planned and implemented for individuals involved in the project, such as the establishment of a safety and health program, and safety training (including traffic safety and public health) for workers etc.? (d) Are appropriate measures being taken to ensure that security guards involved in the project not to violate safety of other individuals involved, or local residents?	(a) Y (b) Y (c) Y (d) Y	(a) DPWH shall observe the Philippines Occupational Safety and Health Standards (As Amended), 1992 associated with the working condition in the project. On the contrary, such laws and regulations shall be strictly observed and implemented. (b) DPWH shall ensure safety measures for the individuals involved in the project; this provision shall be incorporated in the Health and Safety Management Plan that shall be established as part of the contracts between the proponent and the contractor. (c) Safety instruction for new recruits, safety meetings and safety patrols shall be undertaken periodically. (d) DPWH shall ensure that security guards shall not violate the safety of other individuals involved or local residents; this provision shall also be incorporated as part of the Health and Safety Management Plan to be established by the contractor with approval of the project proponent.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
5 Others	(1) Impacts during Construction	(a) Are adequate measures considered to reduce impacts during construction (e.g., noise, vibrations, turbid water, dust, exhaust gases, and wastes)? (b) If construction activities adversely affect the natural environment (ecosystem), are adequate measures considered to reduce impacts? (c) If construction activities adversely affect the social environment, are adequate measures considered to reduce impacts?	(a) Y (b) Y (c) Y	(a) Noise, turbid water and wastes are expected to generate during construction. Adequate measures against these impacts should be adopted consistent with the Impact Management Plan in IEERs. On the other hand, there is no standard regarding vibration in the Philippines. The adoption of low vibration methods shall be considered in the selection of construction equipment and construction methods. (b) The proposed interchanges will be built on the present intersections. The present land use in the area along proposed railway is mainly residential and commercial area. No negative impact on natural environment is expected. (c) Road safety measures during the construction and operation phases to control road accidents are proposed. • The routes for construction vehicles shall be determined through the meeting with stakeholders, MMDA and LGUs. • Disseminate information on a construction plan (schedule, traffic restriction section, and etc.) through the media such as radio and paper. • Provide adequate education and training to construction workers regarding traffic safety. • Deploy the traffic enforcers and flagmen at critical construction points to ensure safety of motorists. • Illuminated warning signs and barricades shall be installed along the construction area to prevent untoward accidents. • Adequate lighting shall be installed within the construction area to provide illumination during nighttime. • Perimeter fence shall be installed within the construction area, especially around excavation areas to prevent untoward accidents. • Personnel will be assigned at every detour road's points of entry and exit to regulate traffic flow.

Environmental Checklist: 7. Roads

Category	Environmental Item	Main Check Items	Yes: Y No: N	Confirmation of Environmental Considerations (Reasons, Mitigation Measures)
	(2) Monitoring	(a) Does the proponent develop and implement monitoring program for the environmental items that are considered to have potential impacts? (b) What are the items, methods and frequencies of the monitoring program? (c) Does the proponent establish an adequate monitoring framework (organization, personnel, equipment, and adequate budget to sustain the monitoring framework)? (d) Are any regulatory requirements pertaining to the monitoring report system identified, such as the format and frequency of reports from the proponent to the regulatory authorities?	(a) Y (b) Y (c) Y (d) Y	(a) A Environmental Monitoring Plan (EMP) has been drawn up for each interchange project for construction and operation as stipulated in Department of Environment and Natural Resources (DENR) Administrative Order No. 30, Series of 2003 (DAO 2003-30). (b) DPWH shall conduct regular self-monitoring of specific parameters indicated in the EMP through its environmental unit (ESSO). The ESSO shall submit a semi-annual monitoring report within January and July of each year. (c)&(d) A Multi-Partite Monitoring Team (MMT) must be formed immediately after the issuance of the ECC in the Detail Design Stage. The Compliance Monitoring and Validation Report (CMVR) shall be submitted semi-annually to the concerned EMB Regional Office, with the Proponent's CMR/SMR as attachment. Moreover, the second CMVR shall preferably present a qualitative desk-validation of the trend analysis report and cumulative environmental performance of the Proponent.
6 Note	Reference to Checklist of Other Sectors	(a) Where necessary, pertinent items described in the Forestry Projects checklist should also be checked (e.g., projects including large areas of deforestation). (b) Where necessary, pertinent items described in the Power Transmission and Distribution Lines checklist should also be checked (e.g., projects including installation of power transmission lines and/or electric distribution facilities).	(a) Y (b)Y	(a) There will be no large areas of deforestation. However, a permit to cut shall be secured by the Contractor from the DENR prior to cutting of trees along the road sides and in the central reserve. (b) The interchange projects do not include installation of power transmission lines and/or electric distribution facilities.
	Note on Using Environmental Checklist	(a) If necessary, the impacts to transboundary or global issues should be confirmed, if necessary (e.g., the project includes factors that may cause problems, such as transboundary waste treatment, acid rain, destruction of the ozone layer, or global warming).	(a) N	(a) All the interchange projects will contribute in mitigating CO_2 emission. When the C-3 Missing Link opens in 2018, CO_2 emissions of the without MMICP cases will increase from 15% to 108% due to the increase in traffic volume at the intersections. However, annual CO2 emissions in the with-project cases will become about 6 to 24% smaller than the without cases.

1) Regarding the term “Country's Standards” mentioned in the above table, in the event that environmental standards in the country where the project is located diverge significantly from international standards, appropriate environmental considerations are required to be made. In cases where local environmental regulations are yet to be established in some areas, considerations should be made based on comparisons with appropriate standards of other countries (including Japan's experience).
2) Environmental checklist provides general environmental items to be checked. It may be necessary to add or delete an item taking into account the characteristics of the project and the particular circumstances of the country and locality in which it is located.

Appendix 8 C-3 Missing Link

A8.1

DPWH Comparative Study

COMPARATIVE COST

Alignment	Length (meters)	Number of Lane	COST ROW	COST CIVIL WORKS	TOTAL COST	If All Viaduct Cost (B) (300,000.00/m/lane)	
1) Original	5,500	6 lane at grade	LAND 4.788 IMPV'T. 4.000	3.704	12.492	4 lanes 6 lanes	6.60 9.90
2) 1st Alignment	7,300	4 lanes combination at grade/viaduct	LAND 5.482 IMPV'T. 4.500	5.500 (including double decker)	15.482	4 lanes 6 lanes	8.76 13.14
3) a.1) 2nd Alignment waterway along San Juan & Pasig River	5,400	4 lanes combination at grade/viaduct	LAND 2.560 IMPV'T. 2.200	6.000	10.760	4 lanes 6 lanes	6.48 9.72
a.2) Same with a.1 but will pass the river bank of San Juan and Pasig River	5,400	4 lanes combination at grade/viaduct	LAND 3.328 IMPV'T. 2.860	6.000	12.188	4 lanes 6 lanes	6.48 9.72
b.1) PIOC-TPLEX (up to J.P. Rizal St.)	4,800	4 lanes combination at grade/viaduct	LAND 3.400 IMPV'T. 2.300	5.400	11.100	4 lanes 6 lanes	5.76 8.64
b.2) PIOC-TPLEX (Connecting to South Ave.)	5,400	4 lanes combination at grade/viaduct	LAND 3.800 IMPV'T. 2.600	6.000	12.400	4 lanes 6 lanes	6.48 9.72

NOTE: In the absence of detailed Criteria, "2nd alignment a.2" is recommended.

A8.1-1

COMPARATIVE ANALYSIS

Alignment	Advantage	Disadvantage
1) Original	1. Less curvature on the alignment. 2. Ramp is accessible in Shaw Blvd., Boni Ave. and J.P. Rizal St. if viaduct/at grade interchange will be required. 3. Less construction duration.	1. Bigger cost on ROW with lesser existing road to be widened. 2. No support yet from the local Government and RDC.
2) 1st Alignment	1. Longer existing road to be widened minimizing effect on properties to be affected. 2. Ramp is accessible in Shaw Blvd. Boni Ave and J. P. Rizal St. if Viaduct/at grade interchange will be required. 3. With support of Local Government on the MOA signed then by the Mayors' concerned.	1. Bigger maintenance cost on structure. 2. Bigger civil works cost in view of its length (longest among the alternatives). 3. Very near the Makati-Mandaluyong bridge at Coronado St. which has shorter access going to Makati via Makati Ave. to Buendia Ave.

COMPARATIVE ANALYSIS

Alignment	Advantage	Disadvantage
3) a.1) 2nd Alignment along waterway of San Juan & Pasig River	1. Lesser ROW cost, majority of the alignment will pass the waterway of San Juan and Pasig Rivers. 2. Limited access (through traffic) highway from N. Domingo St. to J.P. Rizal St.	1. Bigger civil works cost, the river will be used as access in the construction. 2. The alignment will have many curvatures that will affect the design speed, safety for a standard highway with limited access. 3. Viable access ramp in Shaw Blvd. & J.P. Rizal St only.
a.2) Same with a.1 but will pass the river bank of San Juan and Pasig River.	1. Alignment will pass the river bank which will not obstruct the river. 2. River easement could be used, the Government shall exercise Easement Law.	1. May require anchoring if the foundation will be near the river. 2. More properties to be affected.
b.1) PIOC-TPLEX (up to J.P. Rizal St.)	1. Less ROW and civil works Cost, being the shortest among the alternatives. 2. Utilize the existing roads to minimize disturbance to affected properties.	1. Up to J.P. Rizal & Pasong Tamo intersection only not utilizing South Avenue defined as the alignment for C-3. 2. The alignment will have many curvatures that will affect the design speed, safety etc. for a standard highway with limited access.
b.2) PIOC-TPLEX (Connecting to Gil Puyat Ave.)	1. It will connect with Gil Puyat Avenue via part of Pasong Tamo Ave. & Kalayaan Avenue 2. It will utilize the widen part of A.P Reyes Avenue.	1. It will pass highly urbanized area in Pasong Tamo Avenue. 2. Sharp Curve at Pasong Tamo Kalayaan, South Avenue.

file

C-3 SOUTHERN SECTION

The project will connect the missing links of C-3 at the cities of San Juan, Mandaluyong, and Makati to complete the existing C-3 Corridor
It will greatly contribute in relieving the traffic congestion in EDSA and our major road network

ALIGNMENT	LENGTH (METERS)	ROW ACQUISITION (AREA IN SQ.M.)	DETAILED DESCRIPTION	ESTIMATED PROJECT COST (In Billion Pesos) ROW	CIVIL WORKS	TOTAL PROJECT	ADVANTAGE	DISADVANTAGE	ALL VIADUCT (300,000.00/ lM/Lane)	COST (B)
1. ORIGINAL ALIGNMENT The project starts from Buendia Ave./Ayala Ave. Intersection in Makati City goes northward utilizing South Avenue Trabajo St. crosses Pasig River J.P. Rizal St. P. Cruz St., follows Gilang Bakal, crosses Shaw Blvd. in Mandaluyong City then connect to F. Manalo St. and ends at N. Domingo/G. Araneta Intersection in San Juan City.	5,500	187,000.00	Six lanes divided at grade Highway	LAND 4,788 IMPROVEMENT 4,809	3,704	12,482	1. Less curvature on the alignment 2. Ramp is accessible in Shaw Blvd., Boni Ave., and J.P. Rizal St. If viaduct/at grade interchange will be required. 3. Less construction duration.	1. Bigger cost on ROW with heavier polluting road to be widened. 2. No Support yet from the Local Government Unit and RDC. (Regional Development Council)	4 lanes 6 lanes	6.6 9.9
2. 1ST REVISED ALIGNMENT The plan is for the adoption of the original alignment from N. Domingo St. To Katerlong St. in San Juan City then in a new alignment running elevated over Maytunas creek to connect with 9 de Febrero St. then passes San Francisco St., turn right to Coronado St. and will follow the original plan crossing Pasig River up to the intersection at Buendia Ave./ Ayala Ave. Intersection via Trabajo St. and South Ave. in Makati City.	7,300	219,000	Four lanes divided at grade with double deck along Maytunas creek.	LAND 5,482 IMPROVEMENT 4,500	5.9 (including double decker)	15,882	1. Longer existing road to be widened minimizing row cost. 2. Ramp is accessible in Shaw Blvd., Boni Ave. and J.P.Rizal St. If Viaducted/at grade interchange will be required. 3. With support of Local Government on the MOA signed by then Mayor's concerned. 4. Ramp is accessible in Shaw Blvd., Boni Ave., and J.P. Rizal St.	1. Bigger maintenance cost on structure. 2. Bigger civil works cost in view of its length (longest) among the alternatives). 3. Very near the Makati-Mandaluyong bridge at Coronado St. which has shorter access going to Makati via Makati Ave. to Buendia Ave.	4 lanes 6 lanes	6.76 13.14
3. 2ND REALIGNMENT a.1 This alignment will be a viaduct that starts at Buendia Ave. towards South Ave. and Trabajo St. adjacent to the perimeter of the previous Santa Ana racetrack and utilize the waterway at Pasig River then crosses the Pasig River near Lambingan Bridge and passes the waterway of San Juan river near Near Paradores in San Juan City and turns left near F. Manalo St. towards the end of the project at N. Domingo St. and G. Araneta. On and off ramps will be provided in the design to all major streets that will cross this alignment.	7,400	100,900	Four lanes divided combination of at grade and viaduct along water way of Juan and Pasig River	LAND 2,560 IMPROVEMENT 2,200	6.48 (VIADUCT)	11.24	1. Lesser ROW cost, majority of the alignment will pass the river bank of San Juan and Pasig Rivers. 2. Limited access. (through traffic) highway from N. Domingo St. to J.P. Rizal St.	1. Bigger civil works cost, the river will be used as access in the construction. 2. The alignment will have many curvatures that will affect the design speed, safety for a standard highway with limited access. 3. Viable access ramp in Shaw Blvd. & J.P. Rizal St only. 4. May require river dredging	4 lanes 6 lanes	6.48 9.72
a.2 Same alignment with a 1 but will pass the river bank of San Juan and Pasig River.	5,400	130,000.00		LAND 3,328 IMPROVEMENT 2,880	6.48 (VIADUCT)	12.688	1. Alignment will pass the river bank which will not obstruct the river 2. River easement could be used, the Government shall exercise Easement Law.	1. May require anchoring if the foundation will be near the river 2. More properties to be affected.	4 lanes 6 lanes	6.48 9.72
b. This alignment as proposed by PNCC-TPLEX, will start in the intersection with J.P. Rizal St./Quirino Rocas Ave. (Pasong Tamo)/A.P. Reyes Ave. at the eastern side of the previous Santa Ana Racetrack in Makati City and along side the southern bank of Pasig river in Santa Ana, City of Manila cross Pasig River near Lambingan Bridge and Old Paradores Extension, follows F. Blumentritt St. in San Juan City then turn left at N. Domingo St. And ends at the intersection with G. Araneta Avenue.	4,600	82,000	Four lanes divided combination of at grade and viaduct along bank of San Juan and Pasig Rivers.	LAND 3.20 IMPROVEMENT 1.90	5.76	10.86	1. Less ROW and civil works cost, being the shortest among the alternatives. 2. Utilize the existing roads to minimize disturbance to affected properties.	1. Up to J.P. Rizal & Pasong Tamo intersection only not utilizing South Avenue defined as the alignment for C-3. 2. The alignment will have many curvatures that will affect the design speed, safety etc. for a standard highway with limited access.	4 lanes 6 lanes	5.76 8.64

NOTE : In the absence of detailed Criteria, "2nd alignment a.2" is recommended.

DDHV - Directional design hour volume			

LOS	Description
A	Free flow, with low volumes and high speeds. Drivers are virtually unaffected by the presence of others. Little or no restriction in maneuverability and speed.
B	The level of comfort and convenience provided is somewhat less that at LOS A. Zone of stable flow with operating speeds beginning to be restricted somewhat by traffic conditions. Drivers will have reasonable freedom to maneuver within the traffic stream from LOS A.
C	Still in zone of stable flow, but speed and maneuverability are most closely controlled by higher volumes. Most of the drivers are restricted in the freedom to select their own speed, lane changing, or overtaking maneuvers. The level of comfort and convenience declines noticeably at this level.
D	Approaches unstable flow. Speed and freedom to maneuver are severely restricted, and driver experiences a generally poor level of comfort and convenience. Small increases in traffic flow will generally cause operational problems.
E	Flow is unstable, and there may be stoppages of momentary condition. Represents operating conditions at or near capacity level. All speeds are reduced to allow but relatively uniform value. Freedom to maneuver within the traffic stream is extremely restricted, and it is generally accomplished by forcing a vehicle to “give way” to accommodate such maneuver.
F	Forced or breakdown flow. The amount of traffic approaching a point exceeds the amount that can traverse the points. Queues form behind such locations. Operation within the queue is characterized by stop-and-go waves, and is extremely unstable. It is the point at which arrival flow causes the queue to form

A9.5

Detailed Cost Breakdown of Tunnel

3) Summary of Scheme-1 Entire Section of Both Directions

Main tunnel (3-lane) : 15.5km x 2 directions

Entrance/Exit at both end (2-lane) : 7.3 km x 2-directions

	Quantity	Unit	Unit Price (1,000yen)	Cost (100 million yen)	Cost (100 million peso)	Remarks
1. Construction Cost						
A. Direct cost				4,549	2,431	
Main tunnel 3-lane@31km, 2-lanes @12.6 km)	6,462,000	m3	43	2,779	1,486	
Ramp Tunnel	20	location	4,800,000	960	513	Both end are counted 2 ramp per location due to 2-lane
Shield shaft	12	location	610,000	73	39	
Ventilation shaft	7	location	6,852,000	480	256	
Facilities	1	l.s.		257	137	
B. Genral Cost				90	48	
Traffic Management (1% of A)				45	24	
Utility Relocation (1% of A)				45	24	
C. Indirect cost (30% of A+B)				1,392	744	
D. Sub total (A + B +C)				6,031	3,223	
E. VAT (12% of D)				724	387	
F. Construction cost (D+E)				6,755	3,610	
G. Consultancy Cost (10% of F)				676	361	
H. Land acquisition including compensation	1	l.s.		586	313	
for structures						
I. Contingency Cost (5% of F+G)				372	199	
Total Cost (F+G+H+I)				**8,389**	**4,483**	

3-1 Shied

① Established unit cost is 56.00 yen / m3 based on table below which includes indirect cost.

Convert to direct cost only: 56,000 yen ÷ 1.30 = 43,076 yen/m3 ➔ 43,000 yen/m3

(1.30: rate of indirect cost)

Description	Area (m2)		Length (m)	Volume of excavation (m3)	Unit Cost (1,000 yen)	Cost (1,000 yen)
3 lane tunnel	7.31x7.31x3.141	167.84	31,000	5,203,126	43	223,734,418
2 lane tunnel	5.64x5.64x 3.141	99.91	12,600	1,258,916	43	54,133,388
Total	-	-	-	6,462,042	-	277,867,806

② Reference Projects in Japan

Reference projects in Japan for establishment of unit cost of tunnel are based on Tunnel Annual Book in Japan by Tunnel Engineering Association (May 2011) shown in table below.

Unit Cost of excavation by shield.

Railway						
Completion Year	**Length (m)**	**Area of excavation (m3)**	**Volume of excavation (m3)**	**Construction Cost (million Yen)**	**Unit Cost (1,000 yen)**	**Remarks**
2013	1,441	86.5	124,647	7,012	56	Soutetsu Line, Nishitani Tunnel Contractor: Taisei
Road						
2013	8,030	123.7	993,311	43,700	44	Tokyo Urban Expressway, Shinagawa line north direction. shield tunnel Contractor: Kajima
2011	7,967	123.7	985,518	45,000	46	Tokyo Urban Expressway Shinagawa-ő́i direction shield tunnel Contractor: Taisei
2012	624	63.3	39,499	4,869	123	Osaka Prefecture Yamatogawa line, ramp shield tunnel Contractor: Morimoto
2013	3,802	123.5	469,547	33,075	70	Osaka Prefecture Yamatogawa line, main shield tunnel Contractor:Daitetsu
Average Unit Cost/m3			3,196,551	180,559	56	-

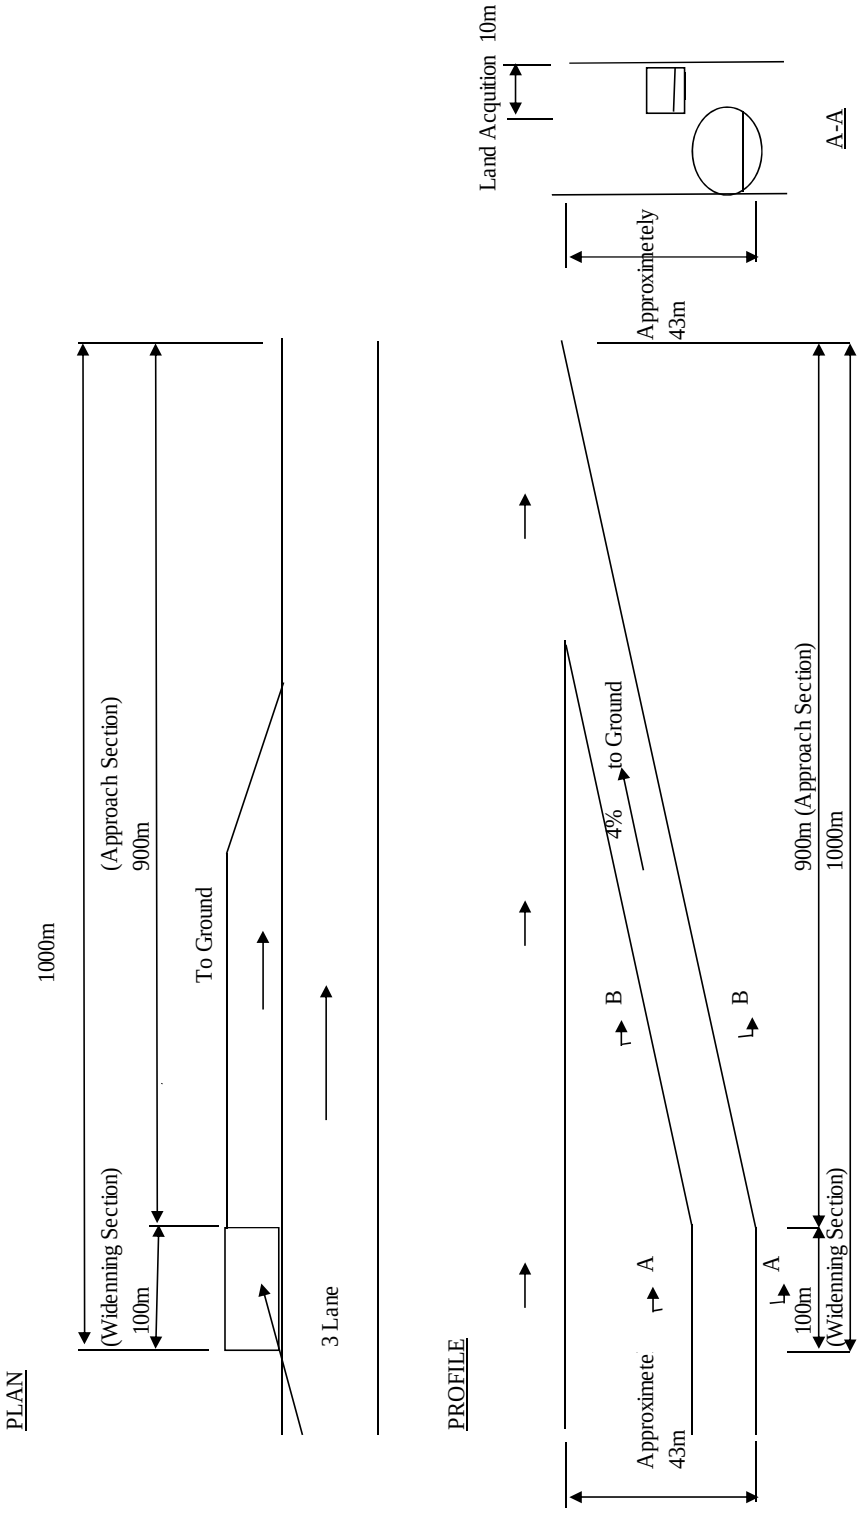
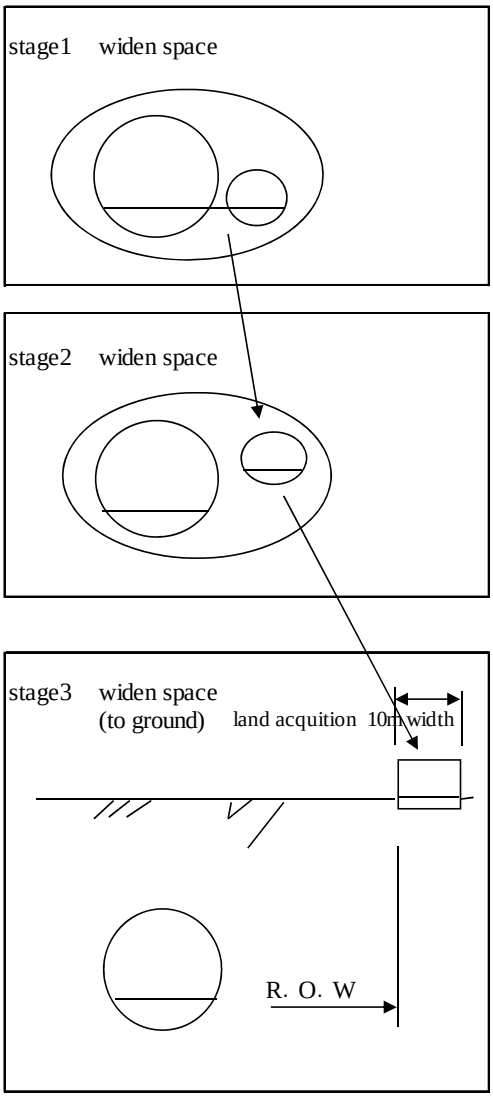
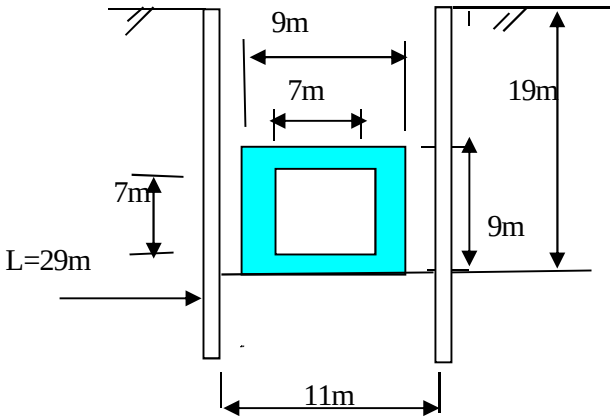
3-2 Ramp Tunnel



A-A



B-B



Quantity

A-A Section

area	length	volume
(m2)	(m)	(m3)
250	100	25,000

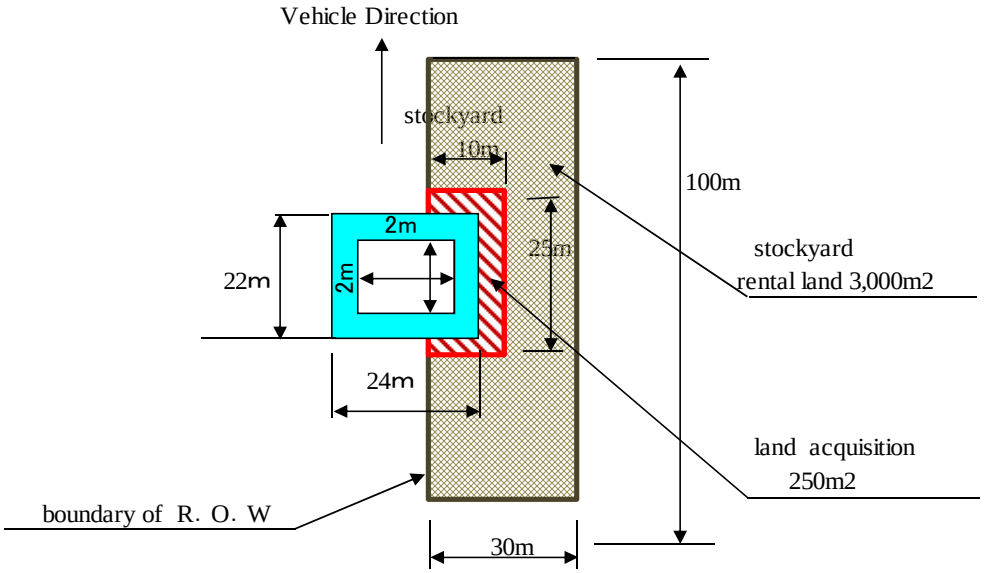
B-B Section

Soil excavation	11m x 19m x 900m	188,100m2
Concrete structure	32m2 x 900m	28,800m2
Protection of soil	29m x 900 m x 2	52,100m2

Estimate Cost

Description	Unit price (~~¥~~)	Quantity	Estimate lost (~~¥~~1,000)
A-A Section	50,000	25,000m3	1,250,000
B-B Section			
Soil excavation	5,400	188,100m3	1,015,740
Concrete structure	30,000	28,800m3	864,000
Protection for soil	32,000	52,200m2	1,670,400
Total estimate cost/1 rump	-		4,800,140
Total estimate cost for 20 rumps	-		96,002,800

3-3 Shield Shaft

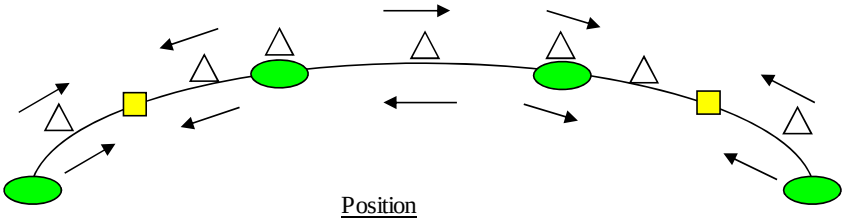


Quantity

Soil excavation (22m x 24 m x 43m)	22,704	m3
Concrete(168m2 x 43m)	7224	m3
Temporary retaining well (24m + 26m) x 2 x 60m)	6,000	m2
Temporary steel deck (24m x 26m)	624	m2

Cost

Description	**Unit Price (~~¥~~)**	**Quantity**	**Estimate Cost (~~¥~~1000)**
Soil excavation	5,400	22,704m3	122,602
Concrete	30,000	7,224m3	216,720
Temporary retaining well	40,000	6,000m2	240,000
Temporary steel deck	50,000	624m2	31,200
Total estimate cost /shaft	-	-	610,552
Total estimate cost for 12 shaft	-	-	7,326,260



Position

	Ventilation Shaft (shield start)	2 x 4=8 Locations
	Ventilation Shaft (shield arrive)	2 x 2=4 Locations
	Ventilation (Shaft)	7 Locations
	Direction of shield machine excavation	

3-4 Ventilation

① Equipment

Unit cost of ventilation will be established based on completed projects in Japan.

770,000,000¥/km (3 lane road ϕ 13.32m)

2 lane and 1 lane tunnel shall be equivalent with area of each tunnel.

Description	Tunnel area (m2)	Actual length	Transfer ration	Length
3lane road (r=6.66)	6.66m x 6.66m x 3.141 = 139.32m2	31.0km	1	31.0km
2lane road (r=5.04)	5.04m x 5.04m x 3.141 = 79.78m2	12.6 km	0.573	7.2 km
1lane road(r=3.36)	3.36m x .6.36m x 3.141 = 35.46m2	16.0km	0.255	4.1 km
Total equivalent length	-			42.3 km
Total of 7-locations	-	-	-	32,561,894,000 yen
1-location	-	-	-	4,651,699,000 yen

② Ventilation and Civil Works Underground

Room for ventilation machine

Room for electrical and high voltage electric

Room for generator

Room for utilities control

Room for communication equipment

Room for fire extinguisher pump

Room for water tank

Room for dust collect facilities

Room for air-condition

And other minor facilities

Civil works are construct duct under tunnels and foundation and wall of ventilation shaft.

Description	Cost (¥ 1,000)
Civil works	900,000
Building construction	800,000
Total (1-locaion)	1,700,000

③ Duct for connection between tunnel and ventilation
Estimate cost per location: 500,000,000 yen

④ Total Estimate Cost per location (million yen)

4,652 + 1,700 + 500 = 6,852 million yen

3-5 Tunnel Facilities

① Facilities

Unit cost of tunnel facilities will be established based on constructed projects in Japan.

(refer to table below)

560,000,000 ¥ /km (3lane road ϕ 13.32m)

2 lane and 1 lane tunnel shall be equivalent with area of each tunnel

Unit: ¥ 1,000

Description	Tunnel Area (m2)	Length (km)	Transfer ration	Length (km)	Unit Cost	Cost
3lane tunnel (r=6.66)	6.66 x 6.66 x 3.141=139.32	31.0	1	31	560,000	17,360,000
2lane tunnel (r=5.04)	5.04x5.04 x3.141=79.78	12.6	0.573	7.2	560,000	4,040,836
1lane tunnel (r=3.36)	3.36x3.36 x3.141=35.46	16.0	0.255	4.1	560,000	2,280,542
Total estimate cost	-	-	-	42.3	-	23,618,378

Summary of Tunnel Facilities

1. Emergency call and warning devices	1. Emergency phone system 2. Push button emergency call unit 3. Fire detector 4. Emergency alarm
2. Fire control equipments	1. Fire extinguisher 2. Fire hydrant
3. Excavation facilities	1. Sign board 2. Smoke ventilation or emergency exit
4. Other facilities	1. Hydrant cock and Siamese connection 2. Radio communication facility 3. Radio repeat or loudspeaker communication facility 4. Water spray system 5. CCTV facility 6. Pipe for utility of tunnel 7. Lightening for tunnel 8. Distributor of electricity 9. Generator of electricity

② Asphalt Pavement

Unit : Yen 1000

Description	Actual length (m)	Width (m)	Area (m2)	Unit cost	Cost
3lane tunnel	31,000	11.0	341,000	4	1,364,000
2lane tunnel	12,600	7.5	94,500	4	378,000
1lane tunnel	16,000	4.0	64,000	4	256,000
Total			499,500		1.998,000

③ Total estimate cost (Million Yen)

23,681+1,998 = 25,679 million yen

3-6 Land Acquisition and Land Rental

① Land acquisition including compensation for building and houses

Unit: P1, 000

Description	Location	Area/location (m2)	Area (m2)	Unit price	cost
Ramp	12	10,000	120,000	200	24,000,000
Shaft for shield	12	250	3,000	200	600,000
Ventilation	7	2,100	14,700	200	2,940,000
Total	31	-	137,700	-	27,540,000

② Rental land including compensation for buildings and houses

Unit: P 1.000

Description	Location	Area/location (m2)	Area (m2)	Unit price	Cost
Shaft for shield	12	3,000	36,000	100	3,600,000

③ Total Rough Estimated Cost

27,540 + 3,600 = 31,140 million pesos ⟶ 58,574 million yen

4) Summary of Scheme-2: Package 1 of Scheme-1

Main tunnel (3-lane) : 4.7km x 2 directions

Entrance/Exit at both end (2-lane) : 3.9 km x 2-directions

	Quantity	Unit	Unit Price (1,000yen)	Cost (100 million yen)	Cost (100 million peso)	Remarks
1. Construction Cost						
A. Direct cost				1,688	902	
Main tunnel 3-lane@4.7km, 2-lanes @3.4 km)	2,257,000	m3	43	971	519	167.84m^2 x 9,400m + 99.91 m^2 x 6,800m = 2,257,084 m^3
Ramp Tunnel	8	location	4,800,000	384	205	Count 4-ramps at south entrance/exit due to 2-lane
Shield shaft	6	location	610,000	37	20	
Ventilation shaft	3	location	6,852,000	206	110	
Facilities	1	l.s.		90	48	
B. Genral Cost				34	18	
Traffic Management (1% of A)				17	9	
Utility Relocation (1% of A)				17	9	
C. Indirect cost (30% of A+B)				517	276	
D. Sub total (A + B +C)				2,239	1,196	
E. VAT (12% of D)				269	144	
F. Construction cost (D+E)				2,508	1,340	
G. Consultancy Cost (10% of F)				251	134	
H. Land acquisition including compensation	1	l.s.		214	114	
for structures						
I. Contingency Cost (5% of F+G)				138	74	
Total Cost (F+G+H+I)				**3,111**	**1,662**	

4.1 Tunnel Facilities

① Unit cost of tunnel facilities will be established based on constructed projects in Japan.
(refer to table below)
560,000,000 ¥/km (3lane road ϕ 13.32m)
2 lane and 1 lane tunnel shall be equivalent with area of each tunnel

Unit: ¥1, 000

Description	Actual length (km)	Transfer ration	Length (km)	Unit Cost	Cost
3lane tunnel (r=6.66)	9.4	1	9.4	560,000	5,264,000
2lane tunnel (r=5.04)	6.8	0.573	3.9	560,000	2,180,768
1lane tunnel (r=3.36)	6.0	0.255	1.5	560,000	855,203
Total			14.8		8,299,972

Summary of Tunnel Facilities

1. Emergency call and warning devices	1. Emergency phone system 2. Push button emergency call unit 3. Fire detector 4. Emergency alarm
2. Fire control equipments	1. Fire extinguisher 2. Fire hydrant
3. Excavation facilities	1. Sign board 2. Smoke ventilation or emergency exit
4. Other facilities	1. Hydrant cock and Siamese connection 2. Radio communication facility 3. Radio repeat or loudspeaker communication facility 4. Water spray system 5. CCTV facility 6. Pipe for utility of tunnel 7. Lightening for tunnel 8. Distributor of electricity 9. Generator of electricity

② Asphalt Pavement Unit: ¥1000

Description	Actual length (m)	Width (m)	Area (m2)	Unit cost	Cost
3lane tunnel	9,400	11.0	103,400	4	413,600
2lane tunnel	6,800	7.5	51,000	4	204,000
1lane tunnel	6,000	4.0	24,000	4	96,000
Total			178,400		713,600

③ Total estimate cost (million yen)

8,300 + 714 = 9,014 million yen

4-2 Land acquisition and Land Rental

① Land acquisition including compensation for building and houses

Unit: P1, 000

Description	Location	Area/location (m2)	Area (m2)	Unit price	Cost
Ramp area	4	10,000	40,000	200	8,000,000
Shaft for shield	6	250	1,500	200	300,000
Ventilation	3	2,100	6,300	200	1,260,000
Total	13	-	47,800		9,560,000

② Rental land including compensation for buildings and houses

Unit: P 1.000

Description	Location	Area/location (m2)	Area (m2)	Unit price	Cost
Shaft for shield	6	3,000	18,000	100	1,800,000

③ Total Rough Estimated Cost (million Peso)

9,560 + 1,800 = 11,360 million peso ⟶ 21,368 million yen

5) Summary of Scheme-3: Only one(1) Direction of Scheme-1

Main tunnel (3-lane) : 15.5km

Entrance/Exit at both end (2-lane) : 7.3 km 1-directions

	Quantity	Unit	Unit Price (1,000yen)	Cost (100 million yen)	Cost (100 million peso)	Remarks
1. Construction Cost						
A. Direct cost				2,377	1,271	
Main tunnel 3-lane@15.5km, 2-lanes @6.3 km)	3,231,000	m3	43	1,389	743	67.84 m^2 x 15,500m + 99.91 m2 x 6,300m
Ramp Tunnel	10	location	4,800,000	480	257	Count 4 ramps at north/south entrance /exit due to 2-lane
Shield shaft	6	location	610,000	37	20	
Ventilation shaft	5	location	6,852,000	343	183	
Facilities	1	l.s.		128	68	
B. Genral Cost				48	26	
Traffic Management (1% of A)				24	13	
Utility Relocation (1% of A)				24	13	
C. Indirect cost (30% of A+B)				728	389	
D. Sub total (A + B +C)				3,153	1,686	
E. VAT (12% of D)				378	202	
F. Construction cost (D+E)				3,531	1,888	
G. Consultancy Cost (10% of F)				353	189	
H. Land acquisition including compensation	1	l.s.		304	162	
for structures						
I. Contingency Cost (5% of F+G)				194	104	
Total Cost (F+G+H+I)				**4,382**	**2,343**	

5-1 Tunnel Facilities

① Facilities

Unit cost of tunnel facilities will be established based on constructed projects in Japan.
(refer to table below)
560,000,000 ¥ /km (3lane road ϕ 13.32m)
2 lane and 1 lane tunnel shall be equivalent with area of each tunnel

Unit: ¥1,000

Description	Actual length (km)	Transfer ration	Length (km)	Unit Cost	Cost
3lane tunnel (r=6.66)	15.5	1	15.5	560,000	8,680,000
2lane tunnel (r=5.04)	6.3	0.573	3.6	560,000	2,020,418
1lane tunnel (r=3.36)	8.0	0.255	2.0	560,000	1,140,271
Total	-	-	21.1		11,840,689

Summary of Tunnel Facilities

1. Emergency call and warning devices	1. Emergency phone system 2. Push button emergency call unit 3. Fire detector 4. Emergency alarm
2. Fire control equipments	1. Fire extinguisher 2. Fire hydrant
3. Excavation facilities	1. Sign board 2. Smoke ventilation or emergency exit
4. Other facilities	1. Hydrant cock and Siamese connection 2. Radio communication facility 3. Radio repeat or loudspeaker communication facility 4. Water spray system 5. CCTV facility 6. Pipe for utility of tunnel 7. Lightening for tunnel 8. Distributor of electricity 9. Generator of electricity

② Asphalt Pavement Unit: ¥1000

Description	Actual length (m)	Width (m)	Area (m2)	Unit cost	Cost
3lane tunnel	15,500	11.0	170,500	4	682,000
2lane tunnel	6,300	7.5	47,250	4	189,000
1lane tunnel	8,000	4.0	32,000	4	128,000
Total			249,750		999,000

③ Total estimate cost (million yen)

11,841 + 999 = 12,840 million yen

5-2 Land acquisition and Land Rental

① Land acquisition including compensation for building and houses

Unit: P1, 000

Description	Location	Area/location (m2)	Area (m2)	Unit price	cost
Ramp	6	10,000	60,000	200	12,000,000
Shaft for shield	6	250	1,500	200	300,000
Ventilation	4.9	2,100	10,290	200	2,058,000
Total	17		71,790		14,358,000

② Rental land including compensation for buildings and houses

Unit: P 1.000

Description	Location	Area/location	Area (m2)	Unit price	Cost
Shaft for shield	6	3,000	18,000	100	1,800,000

③ Total Rough Estimated Cost (million Peso)

14,358 + 1,800 = 16,158 million Peso⟶ 30,393 million yen

6) Summary of Scheme-4: Construct 2-lane Tunnel both direction

Main tunnel (2-lane) : 22.8 km 2-directions

	Quantity	Unit	Unit Price (1,000yen)	Cost (100 million yen)	Cost (100 million peso)	Remarks
1. Construction Cost						
A. Direct cost				3,360	1,797	
Main tunnel 2-lane@22.8km)	4,356,000	m3	43	1,873	1,002	99.91 m2 x 43,600 m
Ramp Tunnel	20	location	4,800,000	960	513	
Shield shaft	6	location	610,000	37	20	
Ventilation shaft	4	location	7,790,000	312	167	
Facilities	1	l.s.		178	95	
B. Genral Cost				68	36	
Traffic Management (1% of A)				34	18	
Utility Relocation (1% of A)				34	18	
C. Indirect cost (30% of A+B)				1,028	550	
D. Sub total (A + B +C)				4,456	2,383	
E. VAT (12% of D)				535	286	
F. Construction cost (D+E)				4,991	2,669	
G. Consultancy Cost (10% of F)				499	267	
H. Land acquisition including compensation	1	l.s.		523	278	
for structures						
I. Contingency Cost (5% of F+G)				275	147	
Total Cost (F+G+H+I)				**6,288**	**3,361**	

6.1 Ventilation

① Equipment

Unit cost of ventilation will be established based on completed projects in Japan.

770,000,000¥/km (3 lane road ϕ 13.32m)

2 lane and 1 lane tunnel shall be equivalent with area of each tunnel.

Unit: ¥1, 000

Description	Actual length(km)	Transfer ration	Length(km)	Unit cost	Unit cost
3lane road	0.0	1	0.0	770,000	.0
2lane road	43.6	0.573	25.0	770,000	19,236,000
1lane road	16.0	0.255	4.1	770,000	3,141,600
Total cost of 4-locations	-	-	29.0		22,377,000
Cost per location	-	-	-		5,590,000

② Ventilation and Civil Works Underground

Room for ventilation machine
Room for electrical and high voltage electric
Room for generator
Room for utilities control
Room for communication equipment
Room for fire extinguisher pump
Room for water tank
Room for dust collect facilities
Room for air-condition
And other minor facilities

Civil works are duct under tunnels and foundation and wall of ventilation shaft

Description	Cost (¥ 1,000)
Civil works	900,000
Building construction	800,000
Total (1-locaion)	1,700,000

③ Duct for connection between tunnel and ventilation

Estimate cost per location: 500,000,000 yen

④ Total Estimate Cost per location (Million Yen)

5,590 + 1,700 + 500 = 7,790 million yen

6-2 Tunnel Facilities

① Facilities

Unit cost of tunnel facilities will be established based on constructed projects in Japan.

(refer to table below)

560,000,000 ₩ /km (3lane road ϕ 13.32m)

2 lane and 1 lane tunnel shall be equivalent with area of each tunnel

Unit: P1, 000

Description	Actual length(km)	Transfer ratio	Length(km)	Unit cost	Unit cost
3lane tunnel (r=6.66)	0.0	1	0.0	560,000	0
2lane tunnel(r=5.04)	43.6	0.573	25.0	560,000	13,983,000
1lane tunnel(r=3.36)	16.0	0.255	4.1	560,000	2,280,000
Total	-	-	29.1	-	16,263,000

Summary of Tunnel Facilities

1. Emergency call and warning devices	1. Emergency phone system 2. Push button emergency call unit 3. Fire detector 4. Emergency alarm
2. Fire control equipments	1. Fire extinguisher 2. Fire hydrant
3. Excavation facilities	1. Sign board 2. Smoke ventilation or emergency exit
4. Other facilities	1. Hydrant cock and Siamese connection 2. Radio communication facility 3. Radio repeat or loudspeaker communication facility 4. Water spray system 5. CCTV facility 6. Pipe for utility of tunnel 7. Lightening for tunnel 8. Distributor of electricity 9. Generator of electricity

② Asphalt Pavement

Unit: Yen 1000

Description	Actual length (m)	Width (m)	Area (m2)	Unit cost	Cost
3lane tunnel	0	11.0	0	4	0
2lane tunnel	43,600	7.5	327,000	4	1,308,000
1lane tunnel	16,00	4.0	64,000	4	256,000
Total			391,000		1,564,000

③ Total estimate cost (million yen)

16,263 + 1,564 = 17,827 million yen

6-3 Land Acquisition and Land Rental

① Land acquisition including compensation for building and houses

Unit: P1, 000

Description	Location	Area/location (m2)	Area (m2)	Unit price	Cost
Ramp	12	10,000	120,000	200	24,000,000
Shaft for shield	6	250	1,500	200	300,000
Ventilation	4	2,100	8,400	200	1,680,000
Total	22	-	129,900	-	25,980,000

② Rental land including compensation for buildings and houses

Unit: P 1.000

Description	Location	Area/location	Area (m2)	Price unit	cost
Shaft for shield	6	3,000	18,000	100	1,800,000

③ Total Rough Estimated Cost

25,980 + 1,800 = 27,780 million peso⟶ 52,254 million yen

7) Summary of Scheme-5: Only one(1) Direction of Scheme 4

Main tunnel (2-lane) : 22.8 km 1-direction

	Quantity	Unit	Unit Price (1,000yen)	Cost (100 million yen)	Cost (100 million peso)	Remarks
1. Construction Cost						
A. Direct cost				1,743	933	
Main tunnel 2-lane@22.8km)	2,178,000	m3	43	937	501	99.91 m2 x 22,800 m
Ramp Tunnel	10	location	4,800,000	480	257	
Shield shaft	3	location	610,000	18	10	
Ventilation shaft	2.8	location	7,790,000	218	117	
Facilities	1	l.s.		90	48	
B. Genral Cost				34	18	
Traffic Management (1% of A)				17	9	
Utility Relocation (1% of A)				17	9	
C. Indirect cost (30% of A+B)				533	285	
D. Sub total (A + B +C)				2,310	1,236	
E. VAT (12% of D)				277	148	
F. Construction cost (D+E)				2,587	1,384	
G. Consultancy Cost (10% of F)				259	138	
H. Land acquisition including compensation	1	l.s.		277	147	
for structures						
I. Contingency Cost (5% of F+G)				142	76	
Total Cost (F+G+H+I)				**3,265**	**1,745**	

7.1 Tunnel Facilities

① Facilities

Unit cost of tunnel facilities will be established based on constructed projects in Japan.

(refer to table below)

560,000,000 ¥ /km (3lane road ϕ 13.62m)

2 lane and 1 lane tunnel shall be equivalent with area of each tunnel

Unit: ¥1,000

Description	Actual length (km)	Transfer ration	Length (km)	Unit Cost	Cost
3lane tunnel (r=6.66)	0.0	1	0	560,000	0
2lane tunnel (r=5.04)	21.8	0.573	12.5	560,000	6,991,287
1lane tunnel (r=3.36)	8.0	0.255	2.0	560,000	1,140,271
Total			14.5		8,131,558

Summary of Tunnel Facilities

1. Emergency call and warning devices	1. Emergency phone system 2. Push button emergency call unit 3. Fire detector 4. Emergency alarm
2. Fire control equipments	1. Fire extinguisher 2. Fire hydrant
3. Excavation facilities	1. Sign board 2. Smoke ventilation or emergency exit
4. Other facilities	1. Hydrant cock and Siamese connection 2. Radio communication facility 3. Radio repeat or loudspeaker communication facility 4. Water spray system 5. CCTV facility 6. Pipe for utility of tunnel 7. Lightening for tunnel 8. Distributor of electricity 9. Generator of electricity

② Asphalt Pavement

Unit: ¥1000

	Actual length (km)	width	Area (m2)	Unit cost	Cost
3lane road	0	11.0	0	4	0
2lane road	21,800	7.5	163.500	4	654,000
1lane road	16,000	4.0	64,000	4	256,000
Total			227,500		910,000

③ Total estimate cost (million yen)

8,131+ 910= 9,042 million yen

7-2 Land acquisition and Land Rental

① Land acquisition including compensation for building and houses

Unit: P1, 000

Description	Location	Area/location (m2)	Area (m2)	Unit price	cost
Ramp	6	10,000	60,000	200	12,000,000
Shaft for shield	3	250	750	200	150,000
Ventilation	4	2,100	8,400	200	1,680,000
Total	13	-	69,150	-	3,830,000

② Rental land including compensation for buildings and houses

Unit: P 1.000

Description	Location	Area/location	Area (m2)	Unit price	Cost
Shaft for shield	3	3,000	9,000	100	900,000

③ Total Rough Estimated Cost (million Peso)

13,830 + 900 = 14,730 million peso⟶ 27,707 million yen
