# 7.2.5 Deployment Plan for ITS Projects Equipment

- (1) Equipment to Deploy
- 1) ITS Physical Architecture

The ITS Physical Architecture of the National ITS Architecture 7.0 as shown in Figure 7-17 was utilized in considering a deployment plan. The figure shows the framework of centers, field, travelers, and vehicles, and the method of communication between these subsystems.

Source: The National ITS Architecture 7.0

# Figure 7-17 ITS Physical Architecture

# 2) Equipment to Deploy for ITS

In considering ITS equipment, the relation of its services and targets should be defined by setting "which equipment is used?" and "who is using it?". Hence, these connections, the information collection and provision, operation and control, and supervision as the targets and road traffic, land public transport (passengers), land freight transport, and safety and security as the services, were defined. The result is shown in Figure 7-18. Based on the results of the above, the ITS services and facilities necessary for each target were examined. The results are shown from Figure 7-19 to Figure 7-29.

| Target                                |   | Туре                   |
|---------------------------------------|---|------------------------|
| Road Traffic                          | Automobile, Motorcycle  | Information Collection |
| Land Public Transport<br>(Passengers) | Taxi<br>Bus and BRT<br>Rail, Metro , Cable Car<br>Boat          | Information Provision  |
| Land Freight<br>Transport             | Truck<br>Rail   | Operation / Control    |
| Safety and<br>Security                | Police<br>Civil Defense<br>Fire Brigade and Rescue<br>Ambulance | Supervision            |

# (2) Concept of Deployment

Based on the results of the connection of targets and services, how to deploy the ITS facilities required by each target was considered. The results are shown in Tables 7-2 to 7-12.

1) For Road Traffic (Automobile, Motorcycle)

# Table 7-2 Concept of Deployment (Road Traffic)

|    | Equipment                  | Methodology of Deployment  |
|----|----------------------------|--|
| 1  | Landslide Detection        | - Arterial road with high risk of landslide  |
| 2  | Road Flood Detection       | - Points where flooding occurred because of rain and waves   |
| 3  | Weather Monitoring         | <ul> <li>With landslide and flood detection</li> <li>Area-wise condition is monitored by meteorological organization</li> </ul>  |
| 4  | Wind Speed Meter           | <ul><li>Points where road closure occurred because of strong winds</li><li>On bridges</li></ul>  |
| 5  | Visibility Meter           | - Arterial road where thick fog occurred in high frequency   |
| 6  | Traffic Counter            | <ul><li>Points with high traffic volume</li><li>Considering traffic flow characteristics</li></ul>   |
| 7  | Speed Monitoring           | <ul> <li>Equipment for surveillance is already installed in the whole<br/>Rio City</li> <li>Points with high accident risk shall be added</li> </ul>   |
| 8  | CCTV                       | <ul> <li>Points with high disaster and accident risks because of rain, wind, wave, fog, and landslide (with landslide detection, flood detection, rain gauge, wind speed meter, and visibility meter)</li> <li>Points with high accident risk</li> <li>Inside tunnels</li> </ul>               |
| 9  | GPS (Probe)                | - Target number of samples is 3–5 vehicles per hour per link   |
| 10 | VMS                        | <ul> <li>Intersections before the roads with high disaster and accident risks</li> <li>Main intersections and junctions and entrance of freeway</li> <li>Border of cities</li> <li>Before congestion points</li> <li>Regular interval along arterial road</li> <li>Around car parks</li> </ul> |
| 11 | Traffic Signal             | <ul><li>Priority signals along main bus and BRT routes</li><li>Adaptive control signals in congested areas</li></ul>   |
| 12 | Operation Center           | <ul><li>Federal, state, municipality</li><li>Metropolitan Region</li></ul>   |
| 13 | Traffic Information Center | - Linked with operation and media centers  |
| 14 | ETC Gate / ERP Gantry      | <ul><li>At the gates of toll roads</li><li>All roads on the border of road pricing</li></ul>   |

# 2) For Land Public Transport (Passengers) (Taxi)

# Table 7-3 Concept of Deployment (Land Public Transport - Taxi)

|   | Equipment            | Methodology of Deployment |  |  |  |
|---|----------------------|---------------------------|--|--|--|
| 1 | GPS (Probe)          | - All vehicles            |  |  |  |
| 2 | Electronic Ticketing | - All vehicles            |  |  |  |
| 3 | Control Center       | - Each company            |  |  |  |

Source: JICA Study Team

3) For Land Public Transport (Passengers) (Bus and BRT)

|   | Equipment                    | Methodology of Deployment   |  |  |  |  |
|---|------------------------------|---|--|--|--|--|
| 1 | CCTV (Terminals)             | <ul> <li>All terminals</li> <li>Number of cameras in one terminal is based on the current condition of Novo Rio Terminal</li> </ul>   |  |  |  |  |
| 2 | CCTV (Bus)                   | - All vehicles (Now, all buses of Rio Onibus and BRTs have cameras)   |  |  |  |  |
| 3 | GPS (Probe)                  | - All vehicles (Now, all buses of Rio Onibus and BRTs have GPS)   |  |  |  |  |
| 4 | VMS / Monitor<br>(Terminals) | <ul> <li>In waiting rooms of all terminals</li> <li>Number of VMSs in one terminal is based on the current condition of the Novo Rio Terminal</li> </ul>  |  |  |  |  |

# (3) Deployment Plan

Based on the results shown in the preceding tables and interviews with road administrators, the current situation of with/without ITS facilities and management condition was organized. The placement of the new ITS facilities and ITS deployment plan for each individual service were considered.

# 1) For Road Traffic (Automobile, Motorcycle) – Related Meteorological

# i) Current Condition

Many road administrators do not have ITS equipment for disaster and weather sensing systems. The concession company only has weather monitoring and wind speed meters.

# ii) Methodology

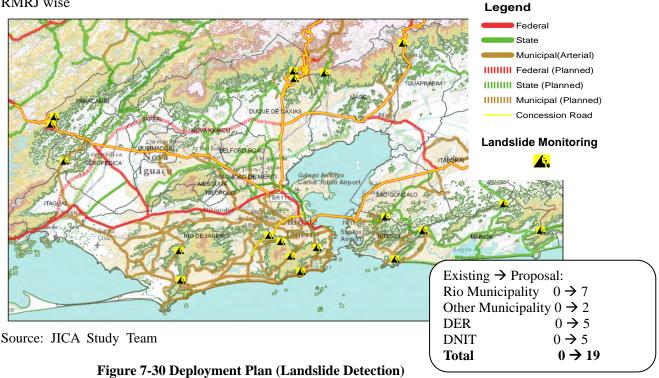

The methodology of deployment of ITS facilities is shown in Table 7-14. And in the next section, the deployment plan of each facility based on the results described above is shown.

|   | Equipment            | Methodology of Deployment  |
|---|----------------------|--|
| 1 | Landslide Detection  | Deploy a detector at a section with slope or hills by considering contour data     |
| 2 | Road Flood Detection | (To be confirmed based on historical data of road flooding)                        |
| 3 | Weather Monitoring   | Deploy at the same point as a landslide detector and in a blank zone of monitoring |
| 4 | Wind Speed Meter     | Deploy on a bridge   |
| 5 | Visibility Meter     | Deploy at a section of more than 500 m in height                                   |

 Table 7-24 Current Condition (Land Public Transport)

# ii) Methodology

The methodology of deployment of ITS facilities is shown in Table 7-25. And in the next section, the deployment plan of each facility based on the results described above is shown.

|   | Equipment                    | Methodology of Deployment   |
|---|------------------------------|---|
| 1 | CCTV (Terminals)             | All terminals at the same level as Novo Rio   |
| 2 | CCTV (Buses)                 | All vehicles at the same level as BRT vehicles  |
| 3 | GPS (Probe)                  | All vehicles at the same level as BRT vehicles  |
| 4 | VMS / Monitor<br>(Terminals) | All terminals at the same level as Novo Rio   |
| 5 | VMS / Monitor<br>(Stops)     | Sheltered bus stops along arterial roads in the municipality of Rio<br>For RMRJ, estimated from the population of Rio and RMRJ<br>For BRT, keep the current condition   |
| 6 | VMS / Monitor<br>(Buses)     | Bus lines operated in tourist areas<br>At least one VMS or monitor shall be required in a bus   |
| 7 | Electronic Ticketing         | For the buses of Rio Onibus , keep the current condition<br>All vehicles for municipal buses except the municipality of Rio<br>Card for cashless payment shall be integrated  |
| 8 | Control Center               | Integrated control center is required in each region or union   |
| 9 | Monitoring<br>Center         | Integrated control center is required to cover all type of buses<br>Monitoring centers for ANTT, DETRO, and municipalities are required to be<br>developed or improved<br>Information exchange between traffic operators and other transport operators<br>(details shall be mentioned in the master plan) |

## ii) Methodology

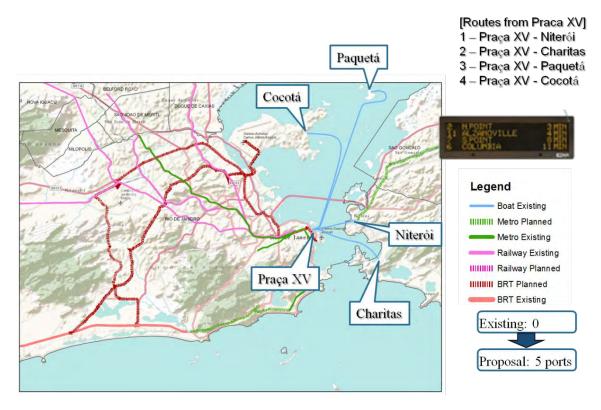

The methodology of deployment ITS facility is shown in Table 7-35. And in the next section, the deployment plan of each facility based on the results described above is shown.

|   | Equipment            | Methodology of Deployment   |
|---|----------------------|---|
| 1 | GPS (Boat)           | Keep in current condition   |
| 2 | CCTV (Port)          | Keep in current condition   |
| 3 | VMS/Monitor (Port)   | Deploy in the port in order to provide arrival/departure information and information of other modes |
| 4 | Electronic Ticketing | Keep in current condition   |
| 5 | Control Center       | Integrated center is required to cover all modes (details shall be mentioned in the                 |
| 6 | Monitoring Center    | master plan)  |

## 8) Land Freight Transport (Truck and Rail)

## i) Current Condition

The concession company owns and manages the ITS facilities for (truck and rail) land freight transport.

|   | Equipment                 | Federal          | State | Municipality<br>of Rio | Other<br>Municipalities | Concession<br>Company |
|---|---------------------------|------------------|-------|------------------------|-------------------------|-----------------------|
| 1 | GPS (Truck)               | -                | -     | -                      | -                       | Yes                   |
| 2 | Control Center            | -                | -     | -                      | -                       | Yes                   |
| 3 | Security Lock             | -                | -     | -                      | -                       | Yes                   |

| 6 | Safety at the<br>Crossing | Not<br>enough    | -     | -                      | -                       | -                     |

### Table 7-36 Current Condition (Land Freight Transport)

Source: JICA Study Team

## ii) Methodology

The methodology of deployment ITS facility is shown in Table 7-37. And in the next section, the deployment plan of each facility based on the results described above is shown.

|   | Equipment          | Methodology of Deployment   |
|---|--------------------|---|
| 1 | GPS (Truck)        | Leave it to private companies. Information exchange shall be necessary.   |
| 2 | Control Center     | Leave it to private companies. Information exchange shall be necessary.   |
| 3 | Security Lock      | Leave it to private companies. Information exchange shall be necessary.   |
| 4 | Monitoring Center  | Based on ANTT needs   |
| 5 | Weighing Point     | Deploy on a section at the border of the metropolitan region to monitor the weight of in-bound cargo. Deploy on a road which is maintained intensively like the bridge and flyover. |
| 6 | Safety at Crossing | All crossings   |

## 7.2.6 Rough Cost Estimates

## (1) Cost Estimation Policy

When requirements are not specified in the early stages of the project, a rough order of magnitude estimate is used as a solution in estimating capital cost. The rough order of magnitude estimate is the least accurate estimate, and it is -50% to +50% accurate. In this master plan study, the rough order of magnitude estimate is brought to conduct the rough cost estimates of each ITS project.

## (2) Summary of the Result of Cost Estimates

Table 7-38 below shows a list of the ITS projects. The conditions and assumptions used as basis of the rough cost estimates are shown in sub-clauses (3) and (4).

| No. | ITS Project Name  | Amount<br>(R\$)                                | Amount<br>(¥)  |
|-----|---|--|----------------|
| 1   | ITS Center  | 59.900.000                                     | 2,371,000,000  |
| 2   | Real Time Traffic/Transport Condition Information Processing  | 45.900.000                                     | 1,815,000,000  |
| 3   | Olympic Security and Transport Coordination Center  | 48.900.000                                     | 1,936,000,000  |
| 4   | Bus Condition Information Provision   | 122.300.000                                    | 4,840,000,000  |
| 5   | Dissemination of On-board Unit for More Integrated Transport  | 344.900.000                                    | 13,643,000,000 |
| 6   | Information Exchange of Road Operators  | 55.400,000                                     | 2,193,000,000  |
| 7   | Information Exchange via ITS Center between Municipalities  | 58.100.000                                     | 2,299,000,000  |
| 8   | Improvement of Traffic/Transit Operation Center with Essential ITS Equipment in Rio Municipal Area            | 245.600.000                                    | 9,716,000,000  |
| 9   | Improvement of Traffic/Transit Operation Center with Essential ITS Equipment in Other Municipal Areas in RMRJ | 204.700.000                                    | 8,096,000,000  |
| 10  | Emergency Operating Management  | 18.500.000                                     | 733,000,000    |
| 11  | Commercial Vehicle Operation and Management   | 17.600.000                                     | 696,000,000    |
| 12  | Advanced Vehicle Safety Systems   | Depends on the maker's technolo<br>development |                |
| 13  | Deployment of X-band Radars   | 4.600.000                                      | 182,000,000    |

### Table 7-38 Rough Cost Estimates of ITS Projects

- (3) Conditions of Cost Estimates
- 1) Common conditions and assumptions

The rough cost estimate is conducted based on the following common conditions and assumptions:

- Equipment cost is based on the consultant's experience;
- Installation cost is 10% of the equipment cost;
- Consultancy service is taken into consideration from the viewpoint of proper design, and schedule and quality management of implementation during the design and procurement stages;
- Consultancy service cost is 10% of the sum of the equipment and installation costs.
- 2) Conditions and assumptions for individual ITS projects in the ITS master plan

The conditions and assumptions for individual ITS projects are summarized in Table 7-39 below.

| No. | ITS Project Name   | Conditions and Assumptions   |  |  |  |  |  |  |  |
|-----|--|--|--|--|--|--|--|--|--|
| 1   | ITS Center<br>Real Time  | <ul> <li>System for collecting and providing information</li> <li>Target organizations/agencies: 33 (refer to Table 7-40)</li> <li>Including construction cost for the ITS Center building which has a total floor space of approximately 1,200 m<sup>2</sup> (40 m x 30 m)</li> <li>System for processing and unifying data</li> </ul>  |  |  |  |  |  |  |  |
|     | Traffic/Transport<br>Condition Information<br>Processing                     |  |  |  |  |  |  |  |  |
| 3   | Olympic Security and<br>Transport Coordination<br>Center                     | <ul> <li>Sharing of security information between COR and CICC toward hosting of large-scale events such as Olympic Games and World Cup</li> <li>System for information exchange between traffic and bus operators (introduction of PTPS (Public Transportation Priority System))</li> <li>System for information exchange among mass transportation operators such as bus, metro, and train operators</li> </ul>   |  |  |  |  |  |  |  |
| 4   | Bus Condition<br>Information Provision                                       | <ul> <li>Bus location system (obtain location of bus, information provision at bus stop and inside of bus)</li> <li>Next bus information panel: 500 sets (assuming 500, which have the largest number of passengers of all bus stops, 2,134 in the municipality of Rio and 7,800 in municipalities other than Rio)</li> <li>Information display in bus terminal: 44 sets</li> <li>Information display in bus: 3,000 vehicles (assuming 3,000 of all buses, 9,000 in the municipality of Rio and 7,800 in municipalities other than Rio)</li> <li>Bus operation center: three centers (introduction of operation centers same as RIO ONIBUS to three unions: Transonibus, Setransduc, Setrerj)</li> <li>Bus GPS: 9,000 sets (all buses in municipalities other than Rio)</li> </ul> |  |  |  |  |  |  |  |
| 5   | Dissemination of<br>On-board Unit for<br>More Integrated<br>Transport System | <ul> <li>Distribution of On-board Unit: 200,000 sets</li> <li>ETC: 8 sets</li> <li>ERP: 35 sets</li> <li>Free Flow Cashless System: 50 parking areas (where there is high ratio of utilization)</li> <li>DSRC antenna: 25 sets (assuming the number of antennas which will be procured by the Ministry of Public Management, Home Affairs, Posts and Telecommunications in Japan)</li> </ul>   |  |  |  |  |  |  |  |

## 7.2.7 Economic Analysis

Economic analysis was conducted for each proposed ITS menu. The analysis utilized the macro/meso/micro simulation and the effect of "with" or "without" ITS menu was calculated and evaluated.

- (1) Economic Costs
- 1) Project Costs

In this study, the project cost utilized the result of rough cost estimates given in Subsection 6.2.5. The project costs consist of the equipment cost, installation cost, and consultancy services cost.

### 2) Operating Costs

The operating costs consist of the annual operating routine costs commencing after construction and opening to traffic. In this study, the operating costs utilized 10% of the project costs, because the information on operating costs could not be calculated.

- (2) Quantification of Economic Benefits (Direct Benefits)
- 1) Methodology of economic analysis

In this evaluation, the following are two kinds of direct benefits estimated quantitatively:

- Savings on vehicle operating costs (VOC benefit)
- Savings on passenger travel time costs (TTC benefit)

The accident reduction benefit was not estimated due to lack of necessary information on the costs and number of accidents per vehicle/km per accident type, such as fatality, injury, and damage to properties.

## 2) With and Without Project Comparison Method

The economic benefits were estimated based on the so-called "with and without project comparison method". The "with project" situation means that one of the proposed projects is implemented, while the "without project" means that none of the projects are implemented.

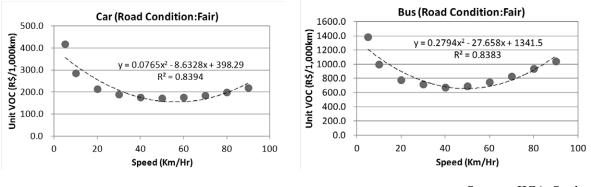

3) Vehicle Operating Cost (VOC)

VOC consists of the following components:

- i) Fuel cost;
- ii) Lubricant oil cost;
- iii) Tire cost;
- iv) Maintenance cost;
- v) Depreciation cost;
- vi) Interest cost;
- vii) Crew cost of commercial vehicles; and
- viii) Overhead cost.

In this study, the VOC utilized the results of the Feasibility Study on the Improvement of Transport System in the Metropolitan Area of Belem in the Federative Republic of Brazil (October 2003). The current VOC was estimated by multiplying the GDP per capita growth rate in Brazil. The unit VOCs (Rs/km) was calculated originally for two types, namely, car and bus.

All cost components of VOC were aggregated and the relationships between travel speed and unit VOC were estimated as shown in Figure 7-57 below.

Source: JICA Study Team

Figure 7-57 Travel Speed and Unit VOC in 2011 Prices

## 4) Travel Time Cost (TTC)

The savings on passenger travel time cost is another important component of economic benefit. The Feasibility Study on the Improvement of Transport System in the Metropolitan Area of Belem in the Federative Republic of Brazil (October 2003) estimated the values of time of car passengers at R\$10.9/hour/person for work trip, and R\$35.7/hour/person for work trip for bus passengers (2002 prices). Based on these time values, the current (2011) and future (2015, 2020) time values were estimated using the consumer price index (CPI) growth rate. The current and future TTC of cars and buses are shown in Table 7-41.

Table 7 41 TTC in 2011 Driese

|     | Table | /-41 1 1 C III 2011 1 | Frices |
|-----|-------|-----------------------|--------|
|     | 2011  | 2016                  | 2021   |
| Car | 35.7  | 40.2                  | 45.2   |
| Bus | 116.6 | 131.5                 | 148.2  |

(Unit: R\$/hour/person)

### 5) Formulas for Benefit Estimation

The economic benefits (VOC savings and TTC savings) were estimated by applying the above unit VOCs and value of time to the results of the macro/meso/micro simulation results. The formulas for benefit calculation are shown below:

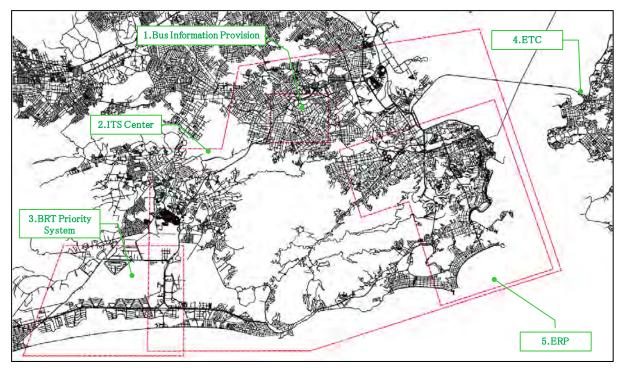

$$VOC(B) = \sum_{n} \sum_{m} \left[ (Q_{w/o})_{n,m} \times (L^{m}) \times (UVOC_{n}) \right] - \sum_{n} \sum_{m} \left[ (Q_{with})_{n,m} \times (L^{m}) \times (UVOC_{n}) \right]$$
$$Time(B) = \sum_{n} \sum_{m} \left[ (Q_{w/o})_{n,m} \times TIM(W/O)_{m} \times TV_{n} \right] - \sum_{n} \sum_{m} \left[ (Q_{with})_{n,m} \times TIM(WITH)_{m} \times TV_{n} \right]$$

| Where: | VOC (B)            | : Total VOC saving benefit  |
|--------|--------------------|---|
|        | $(Q_{w/o})_{n.m}$  | : Traffic volume of vehicle type ( <i>n</i> ), on Link ( <i>m</i> ) in "without" project case |
|        | $L^m$              | : Length of link ( <i>m</i> )   |
|        | $UVOC_n$           | : Unit VOC of vehicle type ( <i>n</i> )   |
|        | $(Q_{with})_{n.m}$ | : Traffic volume of vehicle type ( <i>n</i> ), on Link ( <i>m</i> ) in "with" project case    |
|        | Time (B)           | : Total time saving benefit   |
|        | $TIM(W/O)_m$       | : Travel time on Link (m) in "without" project case   |
|        | $TIM(WITH)_m$      | : Travel time on Link (m) in "with" project case  |
|        | $TV_n$             | : Travel time value of vehicle type ( <i>n</i> )  |

## 6) Benefit Estimation using Macro/Meso/Micro Simulation

In order to estimate the effect of the proposed project, the macro/meso/micro simulation was conducted based on the assumed effective area of each project. The analysis software used was AIMSUN, traffic simulation software. The projects conducting estimation are: 1.Bus Information Provision, 2. ITS Center, 3. BRT Priority System, 4. ETC, and 5. ERP. The road network and OD data required for the analysis is the same as traffic demand analysis. Except for the ERP project (ERP project was assumed to be conducted in 2021), the traffic situation was analyzed by the case of with/without project in 2016 and 2021. The indicator of economic analysis on each project (traffic volume, travel speed travel distance, and etc.) was estimated, and the effect of implementation was grasped. The condition of estimation in each project is shown in Table 7-42, and the area of analysis is shown in Figure 7-58.

| Project Name                 | Simulation Condition                |        |
|------------------------------|-------------------------------------|--------|
|                              | With/Without                        | Method |
| 1. Bus Information Provision | Bus Location System/None            | Meso   |
| 2. ITS Center                | Provide Congestion Information/None | Meso   |
| 3. BRT Priority System       | Installed BRT Priority Signal/None  | Micro  |
| 4. ETC                       | Installed ETC/None                  | Micro  |
| 5. ERP                       | Entrance Restriction by ERP / None  | Macro  |

### 7) Estimated Economic Benefits

The estimated economic benefits are shown in Table 7-43.

The benefits of all the projects are in positive values, therefore, all the proposed projects are very effective, especially ETC and ERP.

| Year      | Without/With Project         | VOC   | TTC    | Total  |  |  |  |  |
|-----------|------------------------------|-------|--------|--------|--|--|--|--|
| 1. Bus In | 1. Bus Information Provision |       |        |        |  |  |  |  |

|    | -       | Benefit/cost ratio (B/C)                            |               | = 8.86                            |  |  |  |  |
|    | -       | Net present value (NPV)                             |               | = R\$290 million                  |  |  |  |  |
|    | 4.I     | ETC   |               |                                   |  |  |  |  |
|    | -       | Economic internal rate of return                    | n (EIRR)      | = 51.9%                           |  |  |  |  |
|    | -       | Benefit/cost ratio (B/C)                            |               | = 5.89                            |  |  |  |  |
|    | -       | Net present value (NPV)                             |               | = R\$72 million                   |  |  |  |  |
|    | 51      | ERP   |               |                                   |  |  |  |  |
|    | -       | Economic internal rate of return                    | n (EIRR)      | = 23.2%                           |  |  |  |  |
|    | -       | Benefit/cost ratio (B/C)                            |               | = 6.18                            |  |  |  |  |
|    | -       | Net present value (NPV)                             |               | = R\$695 million                  |  |  |  |  |
|    |         | _   |               |                                   |  |  |  |  |

The above results indicate that all the projects are economically feasible with EIRR higher than the opportunity cost of capital (>12%), B/C higher than unity (>1.0), and positive values of NPV (> 0). This is because the ITS project is not a large-scale infrastructure and is low cost compared to normal public works, such as bridge construction. Also, the effect of these projects is high; therefore, the benefit is high. The cost-benefit streams are shown in Table 7-44 to Table 7-48.

|       | Cost Benefit (Million R\$) |                      |                   |        |                   |                  | Benefit (N          | (fillion R\$)    |                |

(4) Sensitivity Analysis in Economic Evaluation

In order to check the strength of all the proposed projects, economic feasibility and sensitivity analyses were carried out using different cost and benefit values within a probable range against the base case. The prepared cases for the sensitivity analysis are as follows:

- Project costs go up by: +10%, +15%, and +20%;
- Project benefits go down by: -10%, -15%, and -20%; and
- Different combinations of the above changes in costs and benefits.

Summarized results of the sensitivity analysis are shown from Table 7-49 to Table 7-53.

| Table 7-49 Results  | of Sensitivity A   | Analysis (EIRR):   | Bus Information | Provision  |
|---------------------|--------------------|--------------------|-----------------|------------|

Source: JICA Study Team

The results of the sensitivity analysis showed the strength of the project's economic feasibility. Even if the project costs went up by 20% and the economic benefits went down by 20% simultaneously, the project will maintain values of EIRR higher than the opportunity cost of capital (> 12%).

### (5) Conclusions of the Initial Economic Evaluation

The conclusions derived from the initial economic evaluation are summarized as follows:

- i) All proposed projects are economically feasible.
- ii) Since the benefit of TTC is especially high, the proposed project is effective as an improvement measure of traffic congestion (improvement of traffic speed, delay time, etc.).
- iii) It is assumed that higher effects are expected by conducting these projects.

### 7.2.8 Implementation Schedule

The implementation schedule of ITS projects is also described in previous sections; hence, the JICA Study Team summarized the schedule of all the projects. However, the milestone of ITS projects for Rio de Janeiro is the Rio 2016 Olympic and Paralympic Games. The short-term projects shall focus on the Rio de Janeiro municipal area to archive the success of the Olympic Games.

However, the objectives of ITS are not only for the Olympic Games, but also for the traffic/transit management for daily life. For example, the target area of the ITS Center is the Rio de Janeiro Metropolitan Area and is not just short term. Hence, the implementation schedule was developed considering four major aspects like: 1. Olympic period, 2. Rio de Janeiro municipal area, 3. Information integration and existing system utilization, and 4. Security and transport. The implementation schedule is shown below.

| ITS Project Name   |    | 2013        | 2014          |       |             | 2015   | 5       |         | 20      | )16   |        |          | 2017     |         |         | 2018  |       |        | 2019  | ,      |
