

Olympic Candidate File of 2016 Rio

Extensive and realistic testing will ensure readiness

Rio 2016 will take advantage of testing to refine and finalize plans. Thus, the testing plan, which includes competition, non-competition and functional testing, allows for successive unit, system and integration tests, as follows:

- Unit tests will assess focused or stand-alone operations, such as venue-specific transport operations, or operations of a specific transport facility (e.g. the media hub)
- System tests will focus on an entire system (e.g. the athletes' transport system). In this case, system command and control, depot operations, mall operations and the integration with venues will be fully tested
- Integration tests will involve multiple systems: for example, combined testing of public transport operations to assess performance of rail modes, BRTs and their interconnections. Furthermore, Games transport and traffic command and control, including the management of emergencies, will be thoroughly tested through a series of operational readiness exercises.

All testing will assess and refine client services, organizational learning, workforce readiness, operating plans, procedures, communication flows and technology. Suitable test events have already been identified and will be conducted during the last two years prior to Games-time, for example, system and integration testing will capitalize on the 2014 FIFA World Cup.

15.22 GAMES-TIME RESPONSIBILITIES

CLEAR RESPONSIBILITIES AND ACCOUNTABILITIES

OTTD's Traffic and Transport Coordination Center (TTCC) will provide coordination and communications for spectator and workforce transport, and traffic operations during Games-time. Rio 2016's Games Transport Operation Center (GTOC) will assume full responsibility for managing Games Family transport. The respective responsibilities are:

TTCC

- Coordinate spectator and workforce transport
- Coordinate traffic management
- Prioritize Games Family vehicles while keeping Rio moving
- Manage the response to possible incidents and emergencies related to traffic and public transport
- Provide a central point for monitoring, communicating and coordinating information regarding all transport, traffic and security operations.

GTOC

- Communicate with IOC management
- Provide central command and control for real-time Games Family operations
- Provide exceptions and emergency management for Games Family transport
- Liaise with the Sports Command Center
- Collaborate with Main Operations Center (MOC) on appropriate transport issues and crisis management
- Collaborate with the SENASP Games Command and Control Center on security exceptions management
- Report to MOC, including related input for media and public communications.

To successfully perform this responsibility TTCC will take advantage of the infrastructure and organization of the city's new Traffic and Transport Control Center (CCO) (refer to question 15.23). The GTOC staff will include top executives of all Games Family systems, venue transport and security. Coordination between TTCC and GTOC will be provided by reciprocal representation in each control center.

Special coordination processes and mechanisms, aligned with the highest security standards, will be set up between the TTCC, the GTOC, the SENASP Games Security Command and Control Center and the MOC to support exceptions management and effective and efficient response to emergencies. The response will be guided by robust contingency plans, and the MOC will be constantly updated.

5. Comparative Analysis of Olympic Cities

Olympic Candidate File of 2016 Rio and Transport Strategic Plan

15.23 INFORMATION AND COMMUNICATION

COMMITTED INVESTMENT IN TRAFFIC MANAGEMENT

Rio is committed to the efficient use of technology to manage traffic and already operates an integrated Traffic Control Management Center (CTA) covering critical areas of the city.

A guaranteed two-phased upgrade program that exceeds USD110 million investment is currently being implemented. This program

is summarized in the table below. On completion of phase two, traffic conditions will be remotely monitored and controlled throughout the planned Olympic Lanes, traffic-related information will be communicated over the internet to media and commuters, and all city control centers - including those of public transport and motorways - will be integrated under a new Traffic and Transport Control Center (CCO).

KEY DATA ON THE CITY ITS UPGRADE PROGRAM

	Completion date	Junctions managed	Monitoring cameras	Traffic loops	Variable Message Signs (VMS)	Licence plate identification (OCR)	Control Centers
Current Infrastructure		1,100	93	200	-	-	1
Upgrade - Phase 1	Oct 2009	-	73	120	13	61	Upgrade program
Upgrade - Phase 2	2014	1,500	100	1,000	10	302	1 Traffic and Transport Control Center (CCO)
Total		2,600	266	1,320	23	363	2

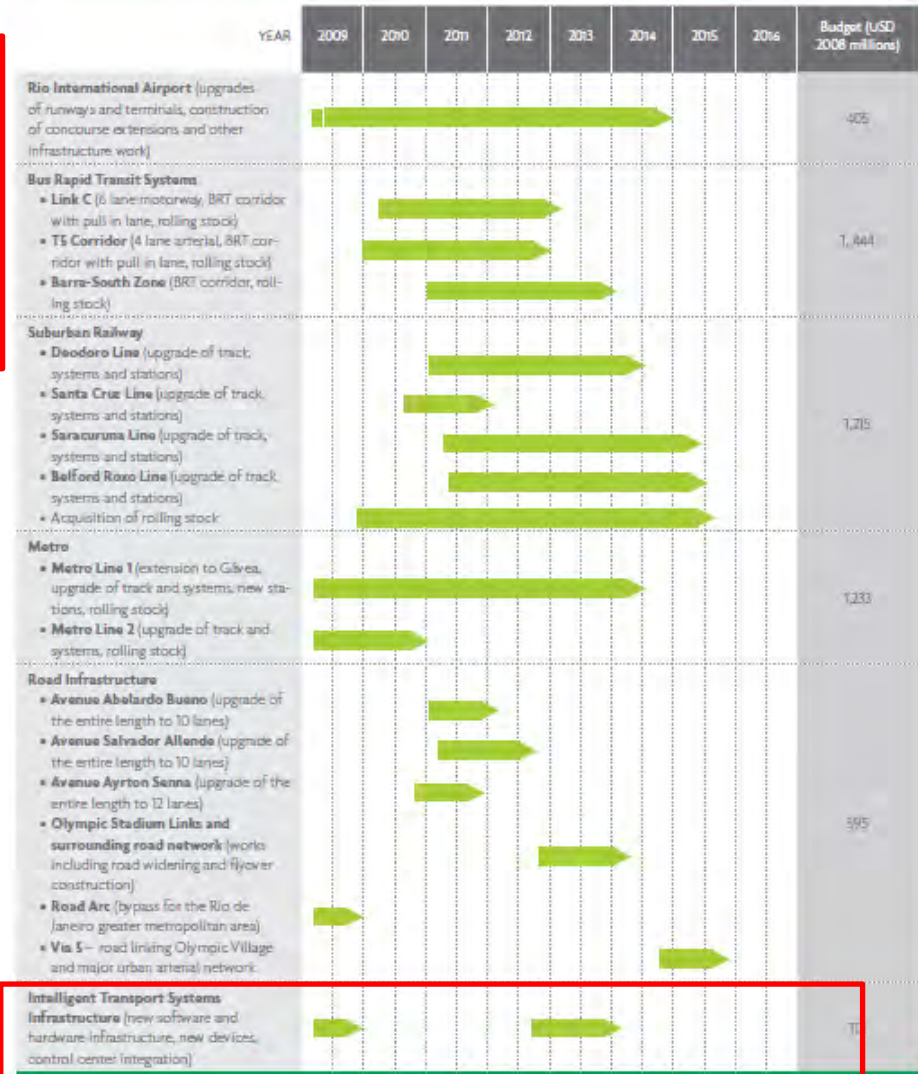

This infrastructure will provide all required real-time information and will form a solid basis to support the Games traffic and transport management hierarchy described in question 15.22. Responses to expected and unexpected incidents will be enacted under the umbrella of CCO.

link and Variable Message Systems) and through radio and television broadcasting. Complementary to this, transport guides, a special website and information kiosks will be available to facilitate the daily route planning of all people impacted by Olympic and Paralympic Games.

Information to spectators and city commuters will be provided in real-time using the CCO infrastructure (for example, internet

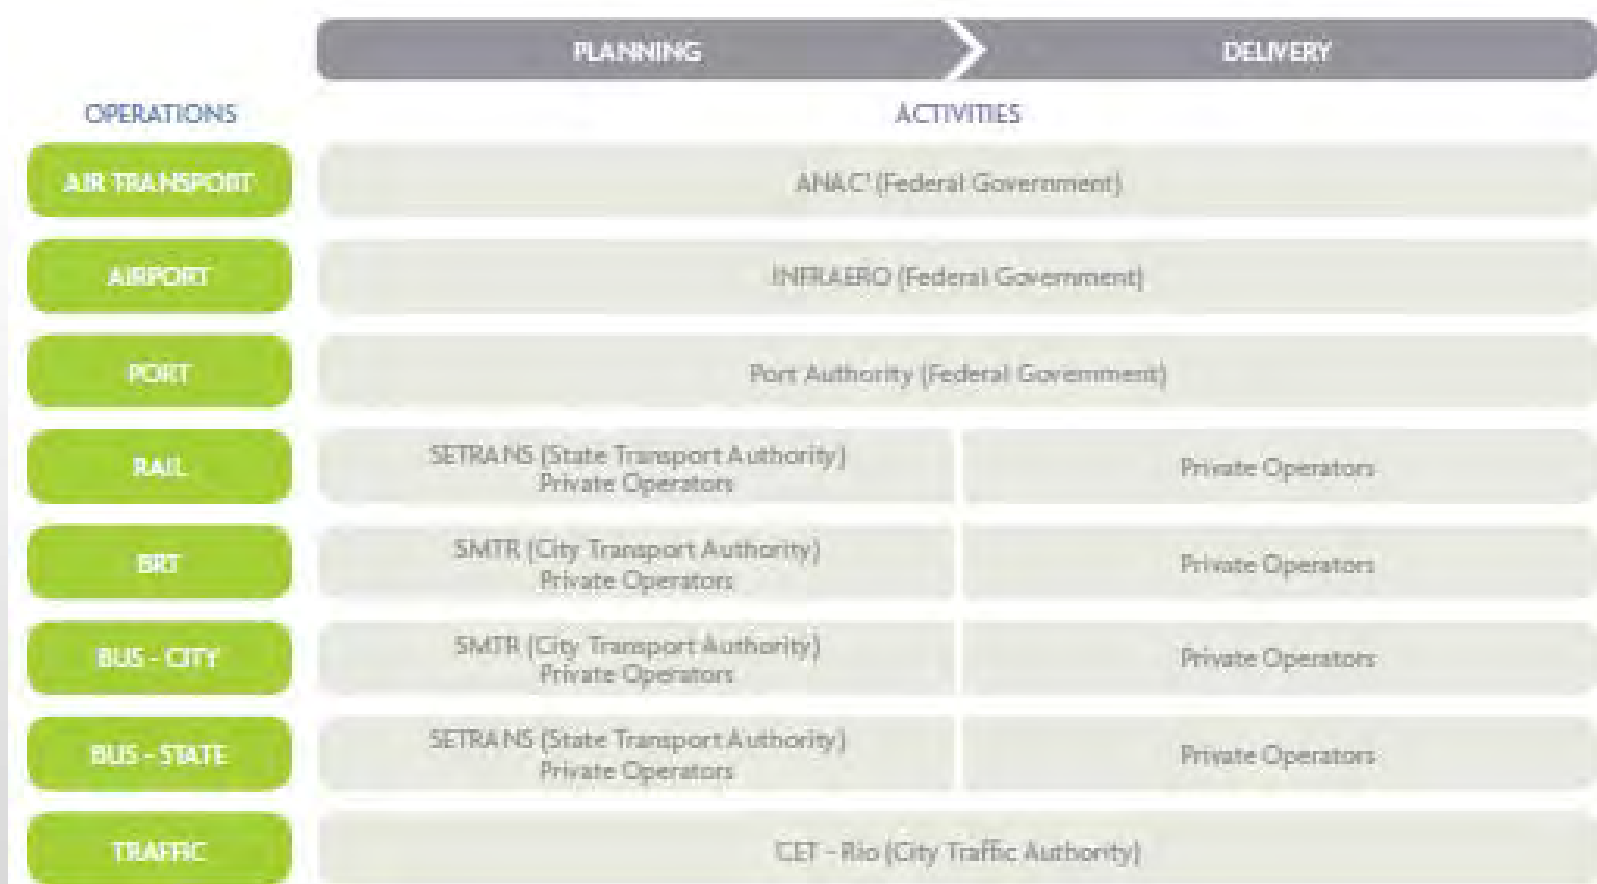

FIGURE 4.1: PLANNED TRANSPORT INVESTMENTS

5. Comparative Analysis of Olympic Cities

Olympic Candidate File of 2016 Rio and Transport Strategic Plan

5. Comparative Analysis of Olympic Cities

Summary of Transport Aspect of Olympic Cities

					
Main Olympic Area	89 km ²	128 km ²	159 km ²	155 km ²	511 km ²
Population	4.6 Million	3 Million	7.5 Million	8.2 Million	6.3 Million
Main Transit for Olympic Transport	Rail/Metro Bus	Metro/Tram Bus	Rail/Metro Bus	Metro - improvement- Bus	4 BRT Metro –line4- Rail-new vehicle
Dedicated Lane Buses	Some	3 Routes	34 Routes 285.7km	240km	More than 150km
ITS	-Traffic Control Center, Field Equipment and systems -R\$65million -Co-Operation with Security Transit and Olympic Stadium Management	-Traffic Control Center, Field Equipment and systems -Co-Operation with Security, Transit and Olympic Stadium Management	-Traffic Control Center, Field Equipment and systems -Co-Operation with Security, Transit and Olympic Stadium Management	-Traffic Control Center, Field Equipment and systems -Co-Operation with Security, Transit and Olympic Stadium Management	-Traffic Control Center, Field Equipment and systems -Co-Operation with <i>Security</i>, <i>Transit</i> and <i>Olympic Stadium</i> Management Progress?

Issues and Key

-Size of Olympic Area

Rio 2016 has Largest and Widest Main Olympic Area

⇒ Minimizing Travel Time with Traffic/Transportation/Transit Mgmt

-Core of Venues

It will generate traffic of Spectators and Athletes Participants

⇒ How to assure the linkage of each Venue and Accommodation

-Main Transit

Main Transit for Spectators is BRTs connecting with Metro and Rail in Other Cities; Metro or Tram or Rail

⇒ Secure Smooth Traffic On the Road

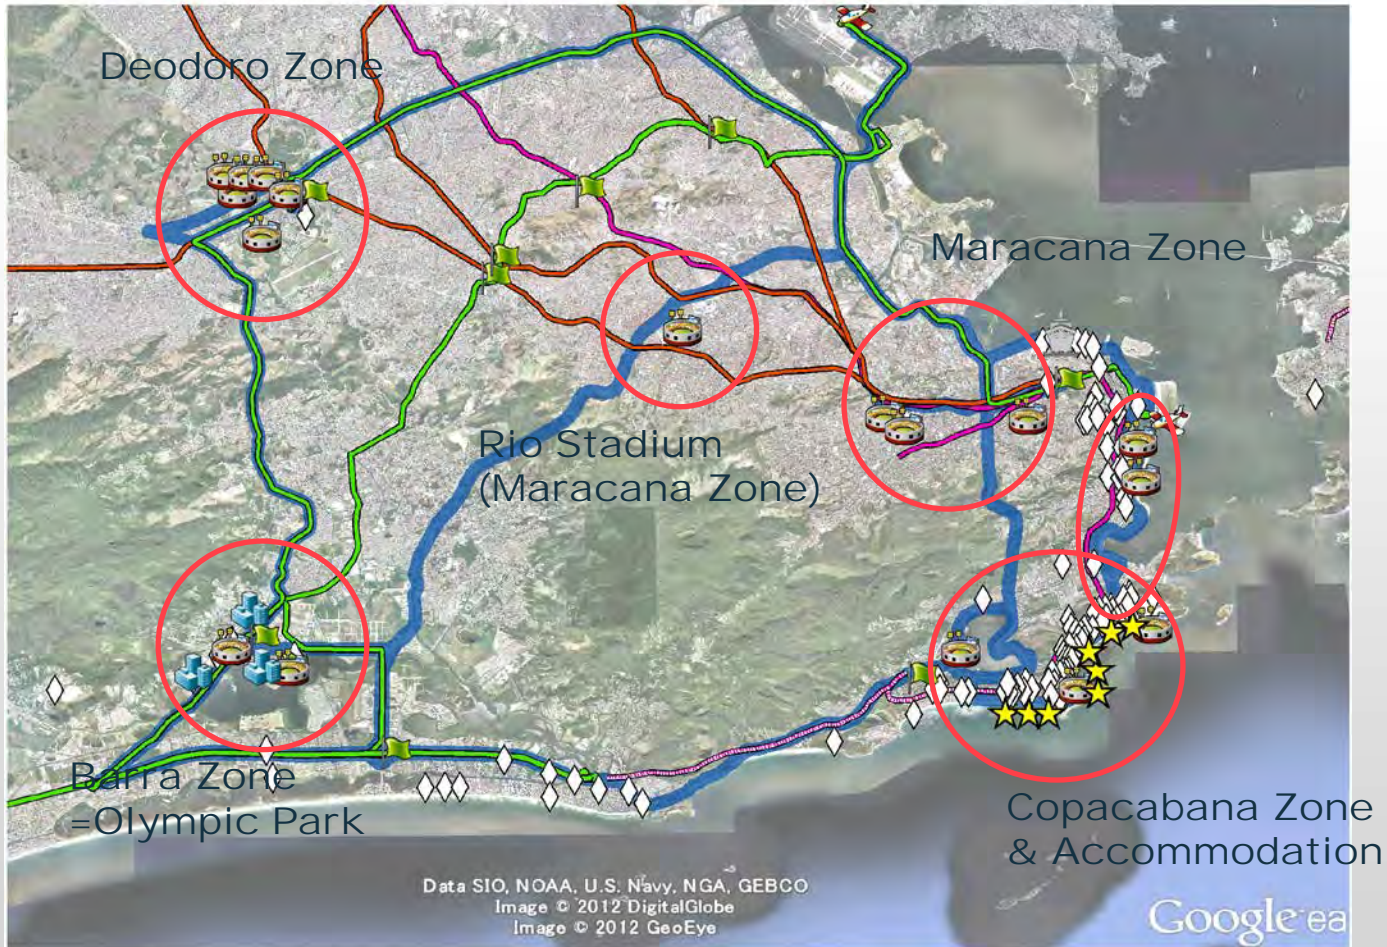

⇒ Ensure Connection of Different Mode

⇒ Traffic/Transport/Transit Operators Cooperation is most important

5. Comparative Analysis of Olympic Cities

2. Demand Characteristics for Rio 2016

Olympic Main Area

5. Comparative Analysis of Olympic Cities

Key Issues (Summary)

Background traffic characteristics (based on PDTU and travel speed survey)

Internal Demand in the Rio City by car and bus

Car Demand between Rio City and Other Cities

Congestion Points are concentrated in Olympic Area

Olympic demand characteristics (based on Transport Strategic Plan)

Overlap between background and Olympic demands

Games Family will be 78,000 in whole period

Spectators will be more than 60,000 per hour in maximum

5. Comparative Analysis of Olympic Cities

Games Family Demand

- 78,000 visitors in total
- 850 buses, 2,900 sedans and coach service

Client	Number	Accommodation
Athletes and Team Officials	15,500	Olympic Village
Technical Officials	3,500	Barra
Media	22,000	Barra Media Village
T1 - T3 (IOC member etc.)	5,000	Games Family Hotel (Copacabana)
Marketing Partners	32,000	Various

- Olympic Lanes
- ★ Games Family Hotel
- ▭ Parking Space
- ▬ Depot

5. Comparative Analysis of Olympic Cities

Peak Spectators Demand by Zone

- More than 60,000 spectators in a peak one hour
- Barra and Maracana

Hotel
House

Source: Atualização do Plano Estratégico de Transportes para os Jogos Olímpicos e Paraolímpicos de 2016 (provided by SMTR)

5. Comparative Analysis of Olympic Cities

Transportation System around the venues in Barra Zone

Venue
RIO OLYMPIC PARK
RIOCENTRO

Peak demand: about 45,000 per hour

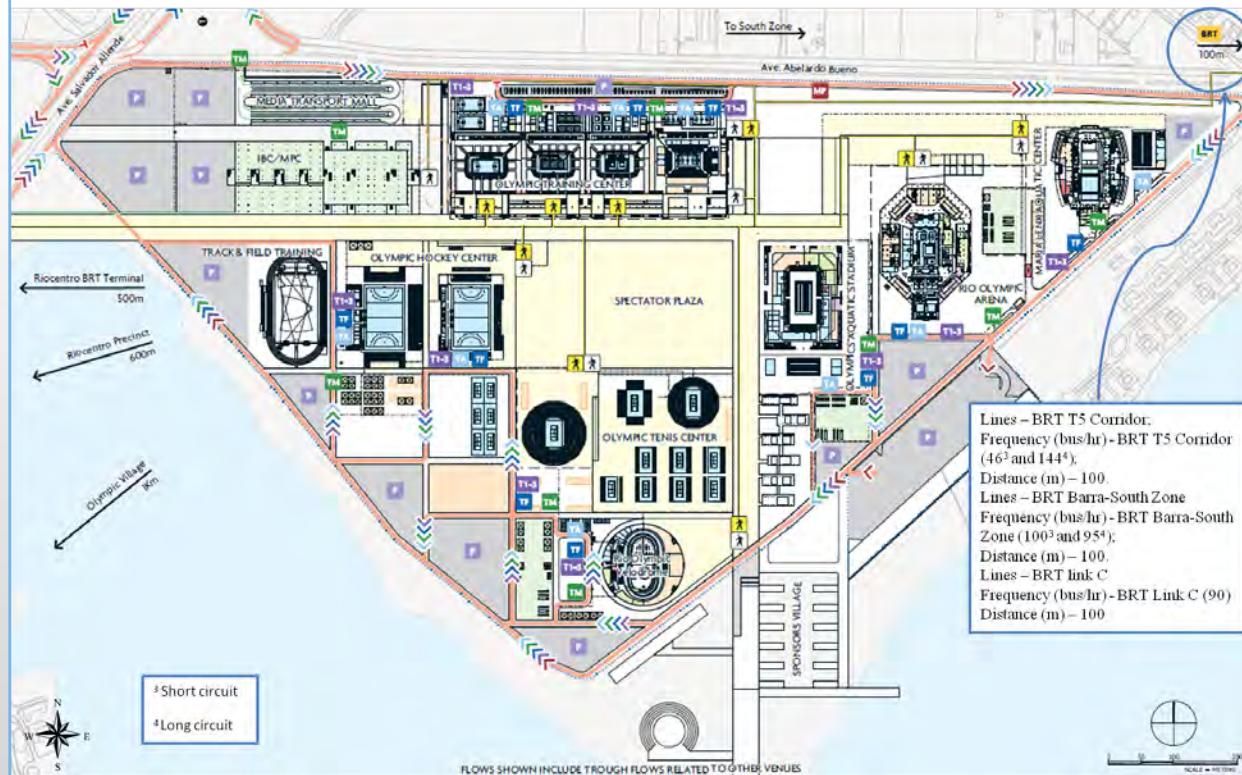

Demand Characteristics

- **Many Competition venues are located (Olympic Park)**
→ Event information and Access information are necessary for Spectators
- **Accommodation for athletes is located (Olympic Village)**
→ Traveler information is necessary at accommodation area
- **Spectators access by BRT**
→ To ensure smooth BRT operation and Games Family Transportation

5. Comparative Analysis of Olympic Cities

Transportation System for Rio Olympic Park (example)

Venue	RIO OLYMPIC PARK
Gross Seat	OTC – Hall 1 (Basketball) – 6,000
	OTC – Hall 2 (Judo) – 10,000
	OTC – Hall 2 (Taekwondo) – 10,000
	OTC – Hall 3 (Wrestling) – 10,000
	OTC – Hall 4 (Handball) – 12,000
	Olympic Hockey Center – 15,000
	Olympic Tennis Center – 19,750
	Rio Olympic Velodrome (Cycling - Track) – 5,000
	Maria Lenk Aquatic Center (Diving) – 6,500
	Maria Lenk Aquatic Center (Water Polo) – 6,500
	Olympic Aquatics Stadium (Swimming, Synchronized Swimming) – 18,000
	Rio Olympic Arena (Gymnastics Artistic, Rhythmic) – 12,000
	Rio Olympic Arena (Trampoline) – 12,000

Source: Transport Strategic Plan for the Rio 2016 Olympic and Paralympic Games

5. Comparative Analysis of Olympic Cities

Transportation System around the venues in Maracana Zone

Venue
MARACANÃ
Sambódromo
São Januário Stadium

Peak demand: 50,000 – 60,000 per hour

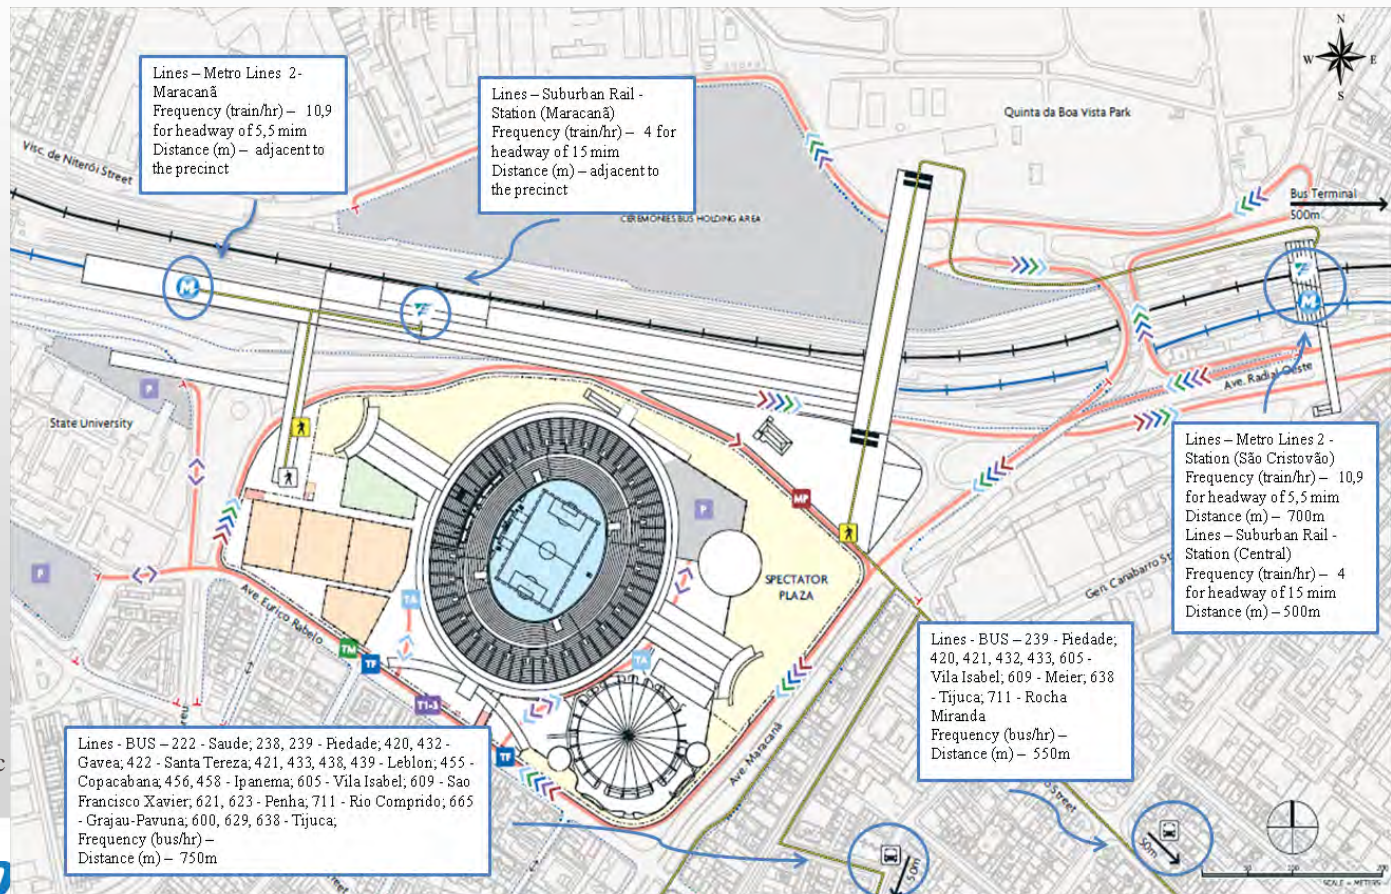

Demand Characteristics

- **Large stadium for Ceremonies and football match (Capacity: 90,000) and large event venue**
 - Crowd management is necessary
- **Metro station, SuperVIA station and local bus stops are located**
 - Integrate transport operation info. and provide traveler info.

5. Comparative Analysis of Olympic Cities

Transportation System for Maracata Stadium (example)

Venue	MARACANÃ STADIUM and MARACANÃZINHO ARENA
Gross Seat	Maracanã Stadium (Football Finals) – 90,000 Maracanãzinho Arena (Volleyball) – 12,000 Maracanã Stadium (Opening and Closing Ceremonies) – 90,000

Source: Transport Strategic Plan for the Rio 2016 Olympic and Paralympic Games

5. Comparative Analysis of Olympic Cities

Proposals

- Traffic Management (Background and Games Family Demand)

1. Travel Time information along Olympic Lanes
2. Traffic control along the BRT corridor (especially TransOlympica, TransOeste)
ex. Priority signal control and BRT fleet operation
3. Information of parking occupation

- Transport Management (Spectators Demand) Customized for each Zone

1. Approaching and operation info. of public transport
2. Integration and information exchange between modes

- Event Management

1. Event information for hotel guests
2. Event information of multi venues in Barra zone and Copacabana zones
3. Assess information from stations to venues

5. Comparative Analysis of Olympic Cities

Important Integration Points for Olympic Transport

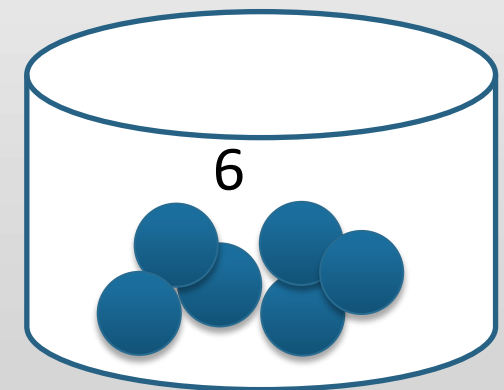

6. Policy Setting for ITS Master Plan

is aligned ISO 14813-1 User Service Reference, means its adaptive ISO 14813-1

7. ITS Architecture

-User Services Bundles and Service Packages-

Ex)1.6 Traffic Control

The Traffic Control user service provides for the integration and adaptive control of the freeway and surface street systems to improve the flow of traffic, give preference to transit and other high occupancy vehicles, and minimize congestion while maximizing the movement of people and goods. This service gathers data from the transportation system, fuses it into usable information, and uses it to determine the optimum assignment of right-of-way to vehicles and pedestrians. The real-time traffic information collected by the Traffic Control service is also disseminated for use by many other user services.

7. Functional Requirement of ITS

Key Issues

- **Information Integration and Utilization**
- **Operational Integration**
- **Disseminate ITS Equipment**
- **Further Expansion**

ITS Projects for RMRJ

-Keywords;

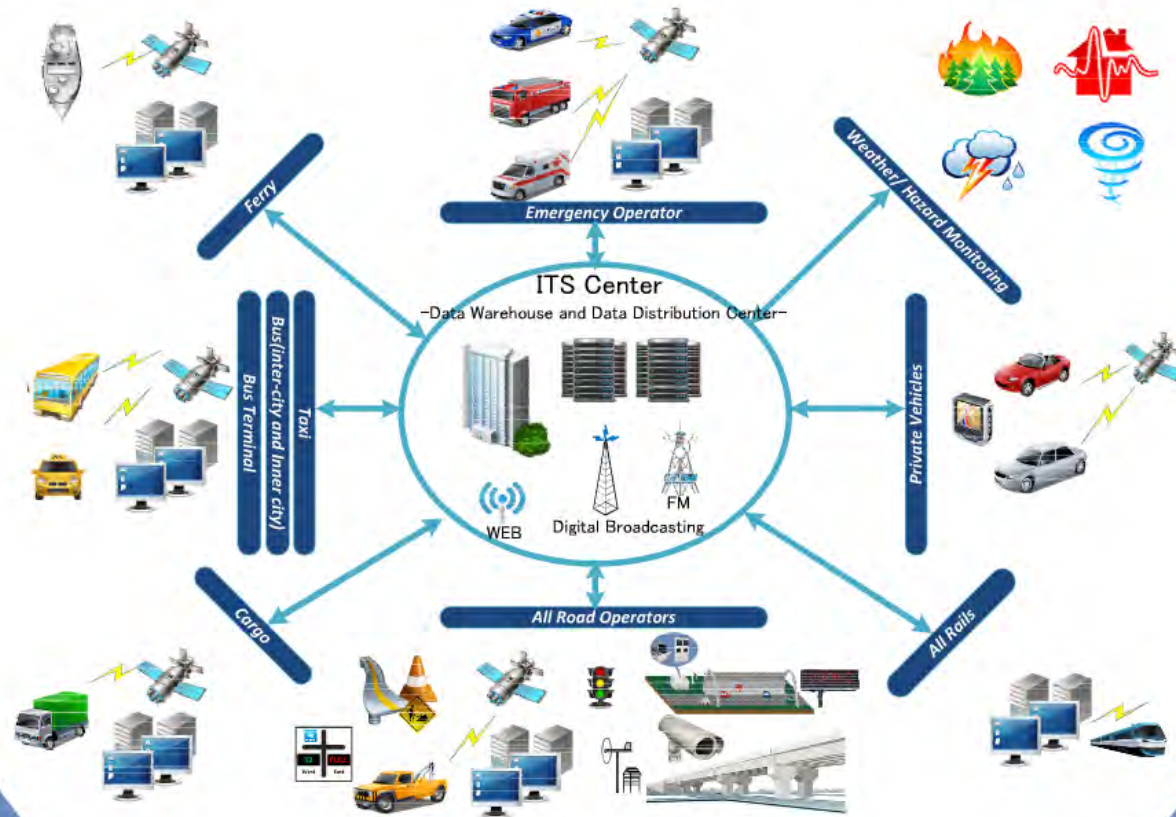

**Integration, Information Exchange, Utilization,
Dissemination, Cooperation**

-ITS Projects are consisted of several Service Packages

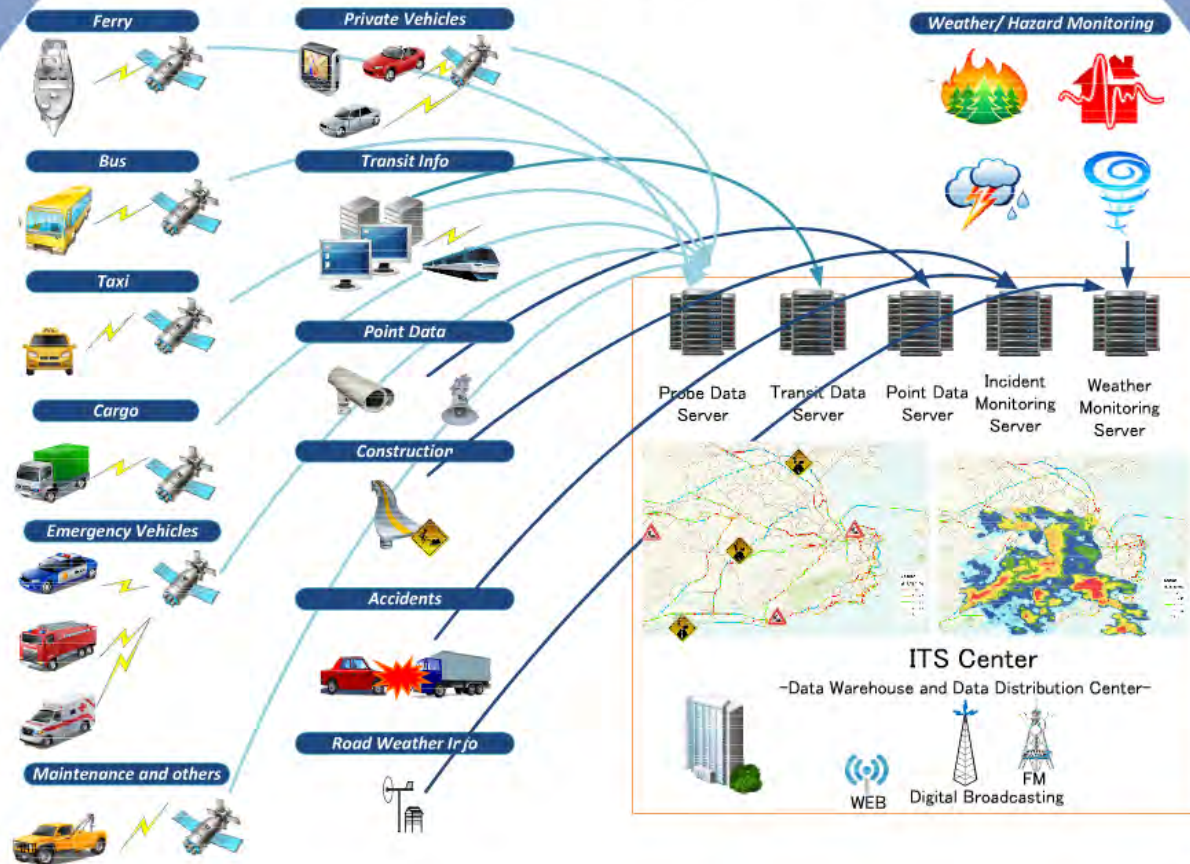

See also The Handout named -ITS PROJECT ARCHITECTURE-

ITS CENTER

for information integration and dissemination

REAL TIME TRAFFIC/ TRANSPORT CONDITION INFORMATION PROCESSING

OLYMPIC SECURITY and TRANSPORT COORDINATION

Security Monitoring/Emergency Control

CICC

Entire Traffic Condition and Transit Operational Condition info from ITS Center

COR

Entire Traffic Condition and Transit Operational Condition Info from ITS Center

Entire Traffic Condition Delay and Passenger Occupancy Ratio of BRT

CET-RIO and Rio Onibus shall cooperate in same place for securing comfortable transport/transit

Signal ↔ BRT

Next Bus Info at Bus Stop and Terminal from ITS Center

Dissemination of All Modes of Transportation Information

ITS Center

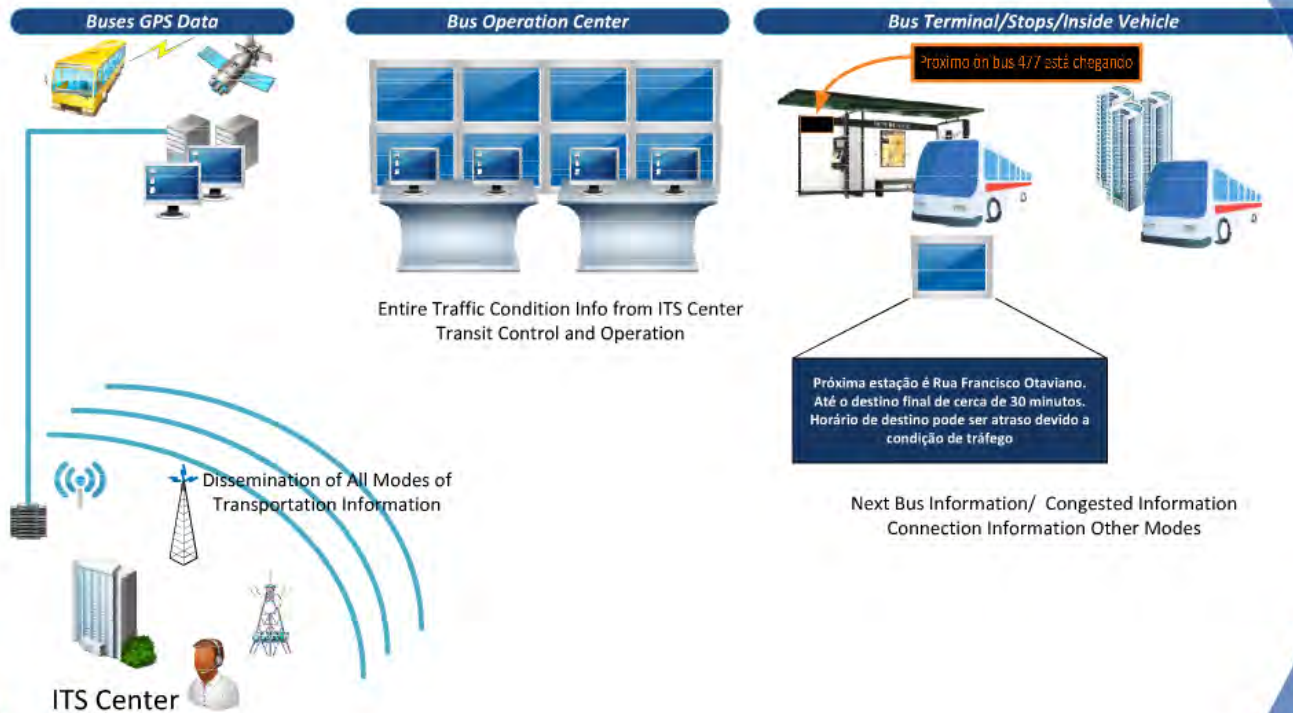

Next Bus, Train or METRO Information Exchange And Provision is necessary for Users

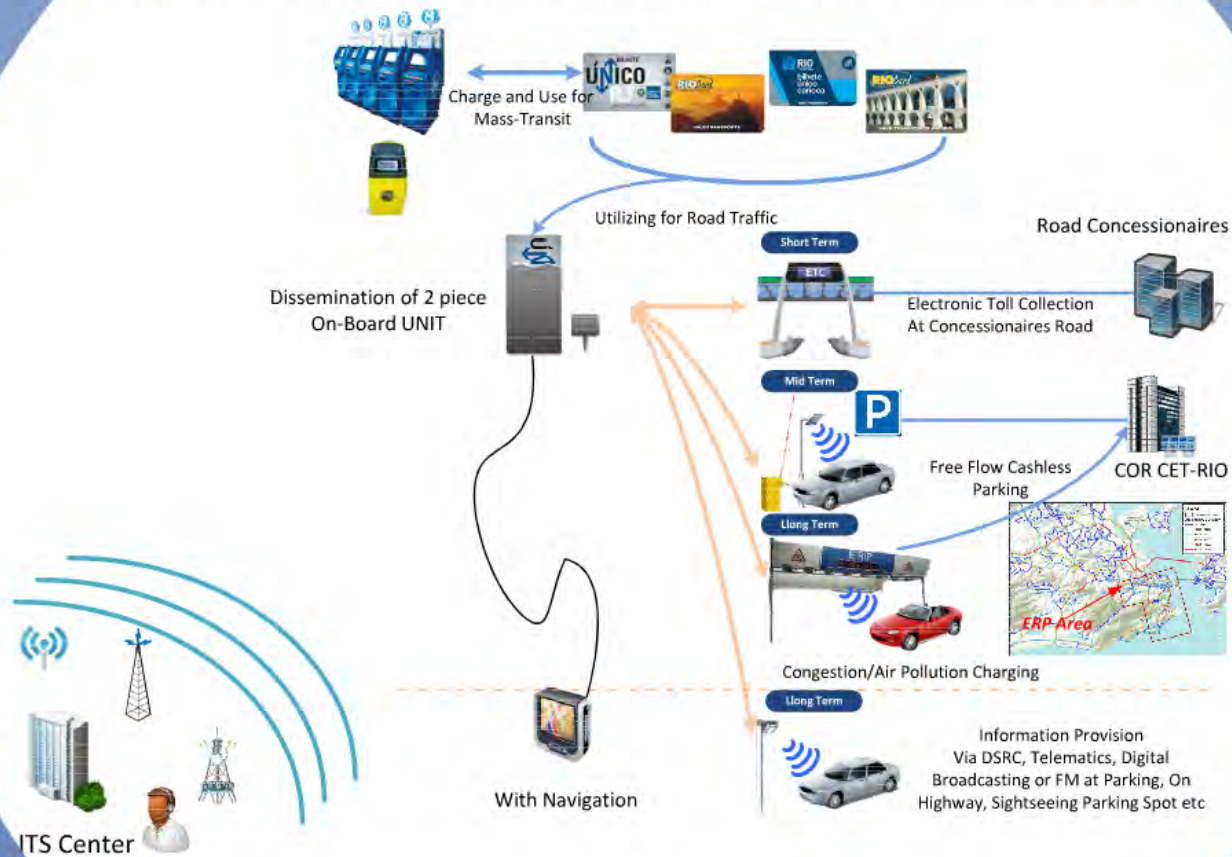

Train Approaching Info Shall be provisioned at each platform

!! Need to be Improved Connection between Traffic Operators and Transit Operators !!

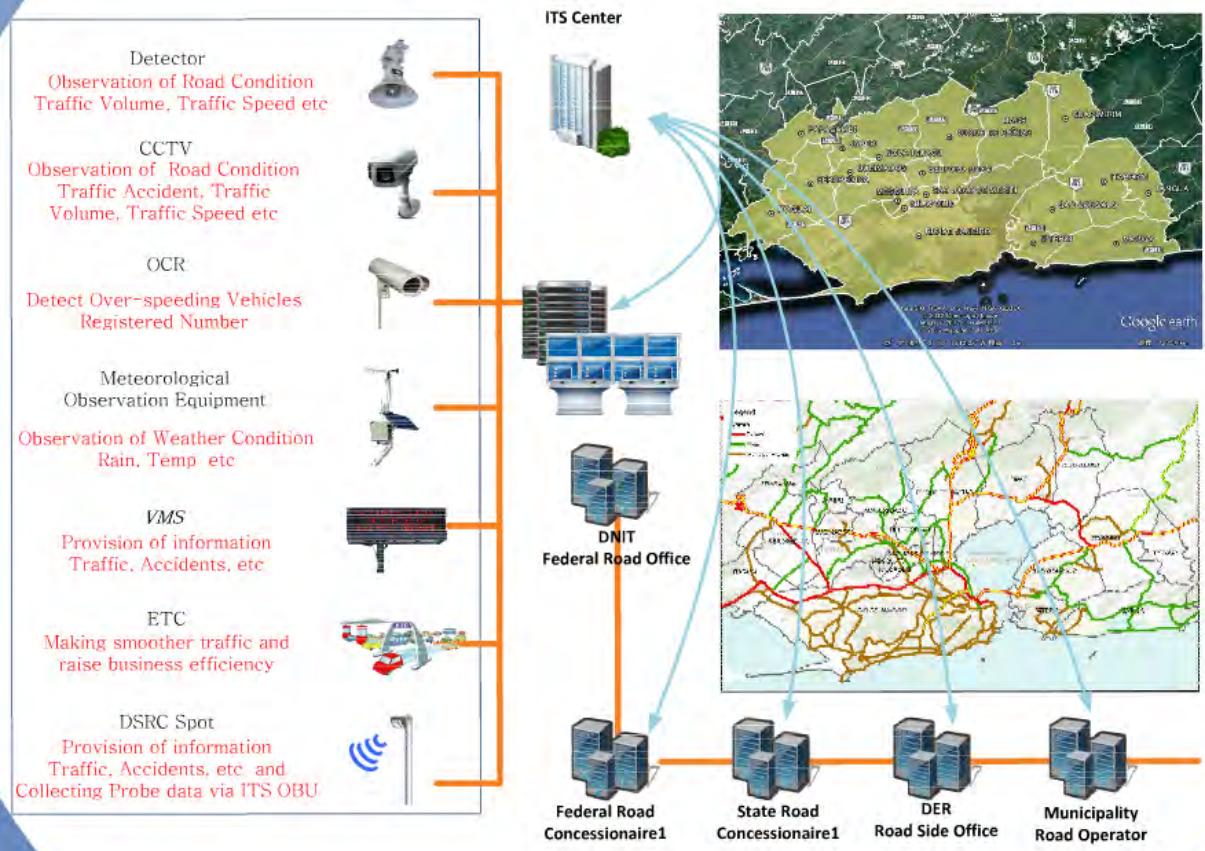

BUS CONDITION INFORMATION PROVISION

DISSEMINATION of ON-BOARD UNIT for MORE INTEGRATED TRANSPORT

INFORMATION EXCHANGE of ROAD OPERATORS

INFORMATION EXCHANGE VIA ITS CENTER BETWEEN MUNICIPALITIES

Municipality
Traffic/Transit Operator
Rio de Janeiro
Municipality
CET-RIO(at COR)
SMTR
Bus Operators

Municipality
Traffic/Transit Operator
Sao Concalo
Bus Operators

Municipality
Traffic/Transit Operator
Duque de Caxias
Bus Operators

Municipality
Traffic/Transit Operator
Nova Iguacu
Bus Operators

Municipality
Traffic/Transit Operator
NITTRANS
Bus Operators

Municipality
Traffic/Transit Operator
Belford Roxo
Bus Operators

...

Further Deployment

- Adaptive Signal Control**
For Smoother Traffic
- OCR for Enforcement and Monitoring Traffic Condition**
- CCTV for Infrastructure Monitoring**
- MOE for Weather and Air Monitoring**
- VMS for Information Provision**
- Concentrated Infrastructure Monitoring**
- Work Zone Monitoring** for Safer Road Work and Information Provision
- Maintenance Vehicle Monitoring**
- Bus Related ITS** for Vehicle tracking, Bus Location info, Passenger Counting, IC-card
- Taxi Dispatching for** Response to Taxi Customers, Monitoring Traffic Condition
- TOC** for smoother Traffic/Transit Operation

IMPROVEMENT of TRAFFIC/TRANSIT OPERATION CENTER WITH DEPLOYING ESSENTIAL ITS EQUIPMENT at RIO MUNICIPALITY AREA

Further Deployment

<p>Adaptive Signal Control For More Smoother Traffic</p> <p>ITAKA is already installed 30 locations, more expansion is needed for more smoother traffic</p> <p>30/2265 1400/2265</p>	<p>Concentrated Infrastructure Monitoring</p> <p>Accuracy improvement for detecting incidents</p> <p>Existing Improved</p>
<p>VMS for More Information Provision</p> <p>Gathered information from several systems shall disseminate via VMSs</p> <p>34 100</p>	<p>MOE for Weather and Air Monitoring</p> <p>Road side weather information shall be gathered operators to provision road side weather information to users</p> <p>None Installed</p>
<p>CCTV for Infrastructure Monitoring</p> <p>CCTVs for ITAKA are installed 120, Other 585 CCTVs installed already. Utilizing CCTVs Motion Picture Analysis Software shall be added</p> <p>585+120 585+350</p>	<p>DYNAMIC LANE MANEGAMENT For More Utilization of Existing Road Network</p> <p>Traffic Detector shall deploy to count traffic volume to determine lane direction dynamically</p> <p>10 location Manual Dynamic Operation</p>
<p>OCR for Enforcement and Monitoring Traffic Condition</p> <p>OCR and other systems are separated. The data shall be utilized as centralized management for traffic metering, real time point speed data monitoring</p> <p>387 487</p>	<p>Bus Related ITS for Bus Location Info, Passenger Counting, Travel Time Info.</p> <p>Bus related information disseminate via ITS Center. BRT Operation shall be integrated traffic operation for comfortable journey</p> <p>Not integrated sufficient information Need to be improved</p>
<p>Work Zone Monitoring for Safer Road Work and Information Provision SECONSERVA</p> <p>All of Work Zone Information shall be gathered in advance and disseminate information users and operators</p> <p>None Prepared</p>	<p>Taxi Dispatching for Response to Taxi Customers, Monitoring Traffic Condition</p> <p>GPS data shall be utilized for monitoring current traffic condition on time</p> <p>Some operators already installed Utilization</p>
<p>Parking Availability Information Provision SECONSERVA and Private Companies</p> <p>Parking Availability Information shall be collect and provision via VMS, Web, Car Navigation</p> <p>None Prepared</p>	<p>Rail Crossing Management for More Safer and Secure Traffic With SUPERVIA</p> <p>Rail Crossing shall be controlled by Rail Operator and also coordinated with Traffic Operator</p> <p>None Prepared</p>

IMPROVEMENT of TRAFFIC/TRANSIT OPERATIONAL CENTER with DEPLOYING ESSENTIAL ITS EQUIPMENT at MUNICIPALITIES in RMRJ

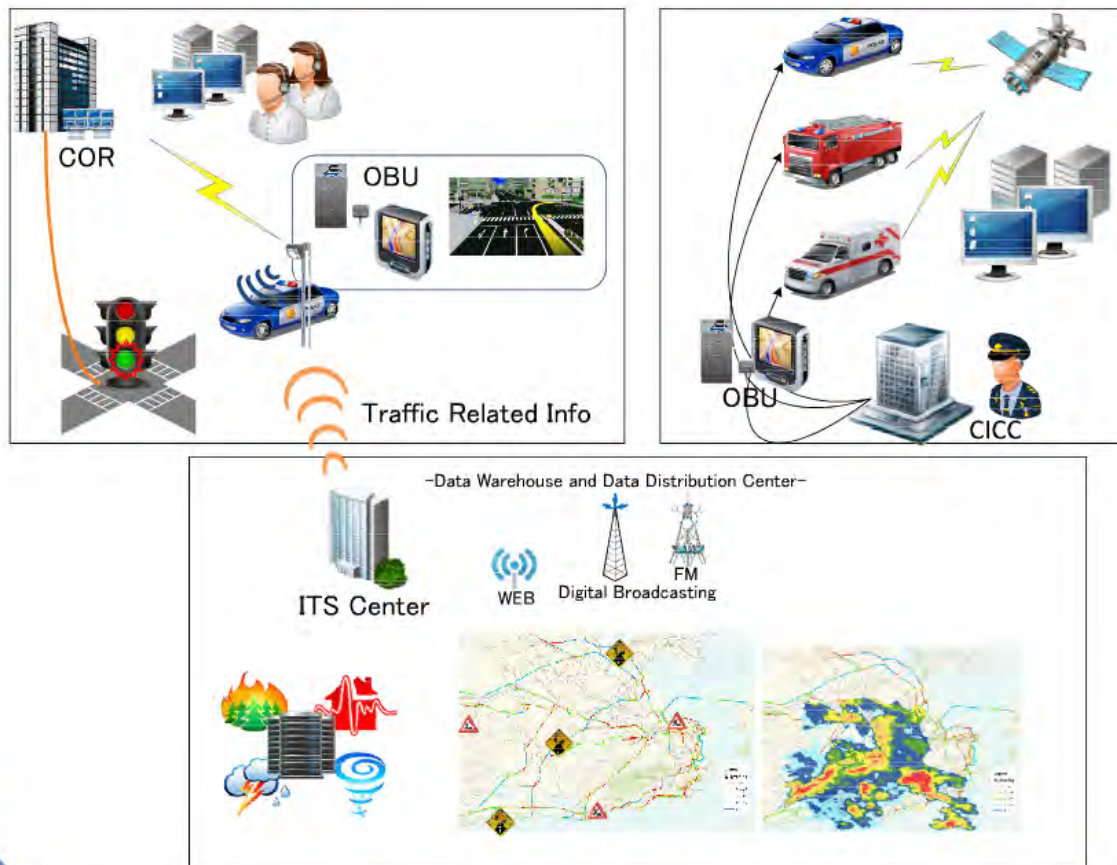

NITTRANS and other municipalities almost same condition

Further Deployment

 <p>Adaptive Signal Control For More Smoother Traffic</p> <p>None Should be Prepared</p>	 <p>MOE for Weather and Air Monitoring</p> <p>Road side weather information shall be gathered operators to provision road side weather information to users</p> <p>None Should be Prepared</p>
 <p>VMS for More Information Provision</p> <p>None Should be Prepared</p>	 <p>DYNAMIC LANE MANEGAMENT For More Utilization of Existing Road Network</p> <p>Traffic Detector shall deploy to count traffic volume to determine lane direction dynamically</p> <p>None To be determined</p>
 <p>CCTV for Infrastructure Monitoring</p> <p>None Should be Prepared</p>	 <p>Bus Related ITS for Bus Location info, Passenger Counting, Travel Time Info. Bus related information disseminate via ITS Center. BRT Operation shall be integrated traffic operation for comfortable journey</p> <p>None Should be Prepared</p>
 <p>OCR for Enforcement and Monitoring Traffic Condition</p> <p>None Should be Prepared</p>	 <p>Taxi Dispatching for Response to Taxi Customers, Monitoring Traffic Condition</p> <p>GPS data shall be utilized for monitoring current traffic condition on time</p> <p>None Should be Prepared</p>
 <p>Work Zone Monitoring for Safer Road Work and Information Provision All of Work Zone Information shall be gathered in advance and disseminate information users and operators</p> <p>None Should be Prepared</p>	 <p>TOC for smoother Traffic/Transit Operation Improvement of Traffic Operation Control center need to be improved. Transit Operation Center shall be established in near future</p> <p>Not Sufficient Exchange and integration</p>
 <p>Parking Availability Information Provision Parking Availability Information shall be collect and provision via VMS, Web, Car Navigation</p> <p>None Prepared</p>	 <p>Rail Crossing Management for More Safer and Secure Traffic With SUPERVIA Rail Crossing shall be controlled by Rail Operator and also coordinated with Traffic Operator</p> <p>None Prepared</p>

EMERGENCY VEHICLE OPERATING MANAGEMENT

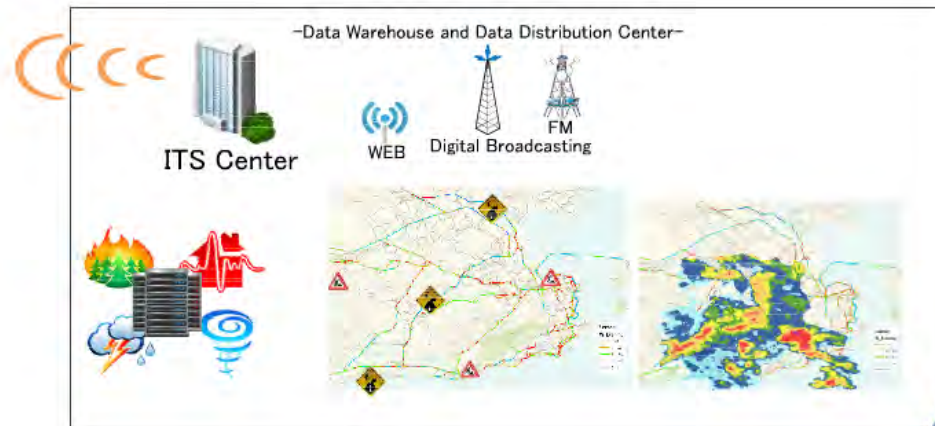

COMMERCIAL VEHICLE OPERATION and MANAGEMENT

Weigh in Motion

**More ITS Projects will be
considered in next phase**

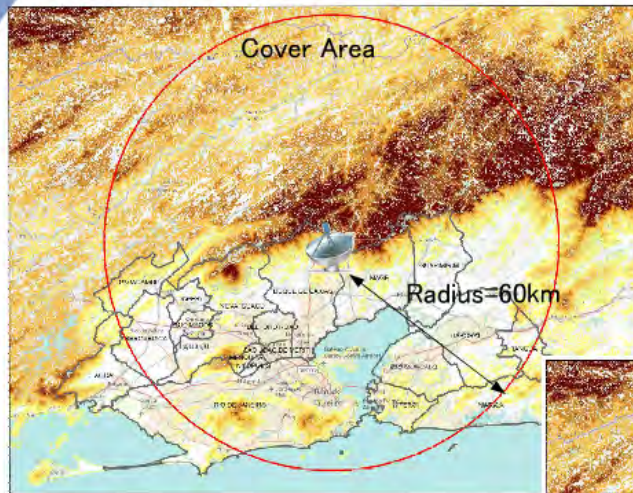

Information Provision via On-Board UNIT

ADVANCED VEHICLE SAFETY SYSTEMS

DEPLOYMENT of X-BAND RADARS for GRASPING PRECISE SPOT WEATHER

10. Deployment Schedule

ITS Project Name	2013				2014				2015				2016				2017				2018				2019			
	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q
1 ITS Center	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
2 Real Time Traffic/Transport Condition Information Processing	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
3 Olympic Security and Transport Coordination Center	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
4 Bus Condition Information Provision	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
5 Dissemination of On-Board UNIT for more Integrated Transport	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
6 Information Exchange of Road Operator					PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
7 Information Exchange via ITS Center between Municipalities	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment							
8 Improvement of Traffic/Transit Operational Center with Essential ITS Equipment at Rio de Janeiro Municipality Area	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
9 Improvement of Traffic/Transit Operational Center with Essential ITS Equipment at Other Municipality Area in RMRJ					PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
10 Emergency Vehicle Operating Management	PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
11 Commercial Vehicle Operation and Management					PQ,TENDERING/ DD				Construction/Deployment				Construction/Deployment				Construction/Deployment				Construction/Deployment							
12 Advanced Vehicle Safety Systems	Car Maker's Technological Development Field																											
13 Deployment of X-band Radar	Need to confirm development policy for weather monitoring in RMRJ																											

- Construction/Deployment :Priority Project
- Construction/Deployment :Secondary Project
- :Further Expansion and Integration for Interaction Projects

11. Economical Evaluation

Evaluated Projects

-ITS Center

-Olympic Security and Transport Coordination Center

-BRT Priority System

-Bus Condition Information Provision

-Bus Location System

-Dissemination of On-Board Unit for more Integrated Transport

-ETC and ERP

RED Caption; Evaluated Systems

11. Economical Evaluation -Methodology-

The impact of each system will emerge as;

- Reduction of Travel Time Cost **-TTC-**
- Reduction of Vehicle Operating Cost **-VOC-**

Simulation cases are;

if systems are installed or not **-with project, without project-**

DCF Method is applied for analyzing economic impact of ITS

DCF; Discount Cash Flow

11. Economical Evaluation -Simulation-

11. Economical Evaluation -Result-

PROJECTS	NPV	B/C	EIRR
ITS CENTER	233.13	4.92	43.0%
BRT PRIORITY SYSTEM	216.13	6.64	61.9%
BUS LOCATION INFORMATION PROVISION	197.80	4.21	32.7%
ETC	75.28	5.89	52.0%
ERP	724.09	6.18	23.2%

NPV;Net Present Value

B/C; Cost Benefit

EIRR;Economic Internal Rate Return

12. Short Term ITS Projects for RIO Olympic

ITS Project Name	2013				2014				2015				2016				2017				2018				2019							
	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q				
1 ITS Center					PQ,TENDERING/ DD				Construction/Deployment																							
2 Real Time Traffic/Transport Condition Information Processing					PQ,TENDERING/ DD				Construction/Deployment																							
3 Olympic Security and Transport Coordination Center					PQ,TENDERING/ DD				Construction/Deployment																							
4 Bus Condition Information Provision					PQ,TENDERING/ DD				Construction/Deployment																							
5 Dissemination of On-Board UNIT for more Integrated Transport					PQ,TENDERING/ DD				Construction/Deployment																							
6 Information Exchange of Road Operator									PQ,TENDERING/ DD												Construction/Deployment											
7 Information Exchange via ITS Center between Municipalities					PQ,TENDERING/ DD				Construction/Deployment												PQ,TENDERING/ DD				Construction/Deployment							
8 Improvement of Traffic/Transit Operational Center with Essential ITS Equipment at Rio de Janeiro Municipality Area					PQ,TENDERING/ DD				Construction/Deployment																							
9 Improvement of Traffic/Transit Operational Center with Essential ITS Equipment at Other Municipality Area in RMRJ									PQ,TENDERING/ DD												Construction/Deployment											
10 Emergency Vehicle Operating Management					PQ,TENDERING/ DD				Construction/Deployment												Construction/Deployment											
11 Commercial Vehicle Operation and Management									PQ,TENDERING/ DD												Construction/Deployment											
12 Advanced Vehicle Safety Systems									Car Maker's Technological Development Field																							
13 Deployment of X-band Radar									Need to confirm development policy for weather monitoring in RMRJ																							

Construction/Deployment :Priority Project
Construction/Deployment :Secondary Project
 :Further Expansion and Integration for Interaction Projects

Short Term ITS Projects are;
 1,2,3,4,5,7,8 and 10

Conclusion

- integration/Information Exchange
- Operational Integration for Road Transit and Traffic Operation
- Interoperability for Security, Transport, Transit
- Economic Effect of ITS is High
- 8 ITS Projects Selected as Short Term

Short of Time!! BUT Keep Calm and Carry On
